IsQueuePositionEnabled	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Specifies whether queue position (displaying the customer's place in line while they wait for an agent) is enabled for this Embedded Chat deployment (<code>true</code>) or not (<code>false</code>).</p>
NavBarColor	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Value of the <code>NavBarColor</code> field in the <code>EmbeddedServiceBranding</code> setup object.</p>
NavBarTextColor	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description This field is used to set the text color for the header.</p>
OfflineCaseBackgroundImg	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description URL of the image used for the background for the offline support case form in Embedded Chat.</p>
PrechatBackgroundImg	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description URL of the image used for the background for the pre-chat form in Embedded Chat.</p>
PrimaryColor	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Value of the <code>PrimaryColor</code> field in the <code>EmbeddedServiceBranding</code> setup object.</p>
SecondaryColor	<p>Type string</p> <p>Properties Filter, Group, Nillable Sort</p> <p>Description Value of the <code>SecondaryColor</code> field in the <code>EmbeddedServiceBranding</code> setup object.</p>
SecondaryNavBarColor	<p>Type string</p> <p>Properties Filter, Group, Nillable Sort</p> <p>Description This field is used to set the color of a secondary header.</p>
ShouldHideAuthDialog	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Specifies whether the prompt that the customer log in again during a flow should be hidden (<code>true</code>) or not (<code>false</code>). When it's hidden, the customer is taken directly to your login page.</p>
ShouldShowExistingAppointment	<p>Type boolean</p>

Field	Details
	<p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Specifies whether to display a button on the home screen for customers to access their existing appointments (<code>true</code>) or not (<code>false</code>) for embedded Appointment Management (beta).</p>
ShouldShowNewAppointment	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Specifies whether to display a button on the home screen for customers to create a new appointment (<code>true</code>) or not (<code>false</code>) for embedded Appointment Management (beta).</p>
Site	<p>Type string</p> <p>Properties Filter, Group, Nillable Sort</p> <p>Description Value of the <code>site</code> field in the <code>EmbeddedServiceConfig</code> setup object.</p>
SmallCompanyLogoImg	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description URL of the logo image used with Embedded Chat.</p>
WaitingStateBackgroundImg	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description URL of the image used for the background image in Embedded Chat while the customer waits to be connected with a support agent.</p>
Width	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>Width of the embedded component.</p>

 **Note:** Any changes you make to the image fields override what you've entered in Setup. We recommend setting your image URLs in Setup.

EmbeddedServiceLabel

Represents a customized label in Embedded Chat or embedded Appointment Management. This object is available in API version 44.0 and later.

Supported SOAP Calls

`describeSObjects()`, `query()`

Supported REST HTTP Methods

GET

Fields

Field	Details
CustomLabelName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The developer name for the custom label.</p>
DurableId	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The unique name containing <code>EmbeddedServiceConfig.labelKey</code>.</p>
EmbeddedServiceConfigDeveloperName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>Developer name for the EmbeddedServiceConfig.</p>
LabelKey	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>The type of label for this embedded component. The value corresponds to the label within a label group (substate of chat state or page type).</p>

Employee

Represents an employee within a company or organization. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, you must be assigned a Workplace Command Center permission set license and the Provides access to Workplace Command Center features system permission.

Fields

Field	Details
AboutMe	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Information about the employee, such as areas of interest or skills. Values can be provided on Employee's profile page. This field is available even if Chatter is disabled.</p>
AlternateEmail	<p>Type</p> <p>email</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The employee's alternate email address.</p>
Availability	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The employee's availability status. Possible values are:</p> <ul style="list-style-type: none"> • In The Office • Out Of Office • Out Sick • PTO • Volunteering Time Off • Working Remotely
AvailabilityEndDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The end date of the Employee's availability, inclusive of the date.</p>
AvailabilityStartDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The start date of the Employee's availability, inclusive of the date.</p>
BannerPhotoUrl	<p>Type url</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Read only. The URL for the employee's banner photo. Available in API v51.0 and later.</p>

Field	Details
CurrentWellnessStatus	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The employee's current wellness status. Possible values are:</p> <ul style="list-style-type: none"> • Available To Work • Remote Work Only • Unavailable • Unknown
DateOfBirth	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The employee's date of birth.</p>
Email	<p>Type email</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The employee's email address. This field is unique within your organization.</p>
EmployeeNumber	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Required. The employee's employment ID for the organization they were hired into. This field is unique within your organization.</p>
EmployeeStatus	<p>Type picklist</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The employee's current work status. Possible values are:</p>

Field	Details
	<ul style="list-style-type: none"> • Active • Inactive • Leave • Terminated
EmploymentType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The employee's full-time or part-time status. Possible values are:</p> <ul style="list-style-type: none"> • Full-Time • Part-Time
FirstName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The employee's first name.</p>
FullPhotoUrl	<p>Type url</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Read only. The URL for the employee's profile photo. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo isn't guaranteed to return a photo. Query this field for the URL of the most recent photo. Available in API v51.0 and later.</p>
Gender	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The employee's gender. Possible values are:</p> <ul style="list-style-type: none"> • Female • Male

Field	Details
	<ul style="list-style-type: none"> • Non-Binary / Non-Conforming • Other • Prefer Not to State • Transgender Female • Transgender Male
HomeAddress	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description The employee's home address.</p>
HomeCity	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The city for the employee's home address.</p>
HomeCountry	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The county for the employee's home address.</p>
HomeGeocodeAccuracy	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The level of accuracy of an employee's home address geographical coordinates compared with its physical address. A geocoding service typically provides this value based on the address's latitude and longitude coordinates.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Address • Block • City • County • ExtendedZip

Field	Details
	<ul style="list-style-type: none"> NearAddress Neighborhood State Street Unknown Zip
HomeLatitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with HomeLongitude to specify the precise geolocation of the employee's home address. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.</p>
HomeLongitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with HomeLatitude to specify the precise geolocation of the employee's home address. Acceptable values are numbers between -180 and 180 with up to 15 decimal places.</p>
HomePhone	<p>Type phone</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The employee's home phone number.</p>
HomePostalCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The postal code for the employee's home address.</p>
HomeState	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description The state for the employee's home address.</p>
HomeStreet	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The street for the employee's home address.</p>
IndividualId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A reference to the Individual record that this employee is assigned to.</p>
InternalOrganizationUnitId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A reference to the InternalOrganizationUnit this employee is assigned to.</p>
JobProfile	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The employee's job profile at the company.</p>
LastName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The employee's last name.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
LocationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A reference to the Location that this employee is assigned to.</p>
ManagerId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A reference to the Employee record of the employee's manager.</p>
MediumPhotoUrl	<p>Type url</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Read only. The URL for the medium-sized employee's profile photo. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo isn't guaranteed to return a photo. Query this field for the URL of the most recent photo. Available in API v51.0 and later.</p>
MiddleName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The employee's middle name.</p>

Field	Details
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description A compound field of <code>Employee.FirstName</code>, <code>Employee.MiddleName</code>, and <code>Employee.LastName</code>.</p>
NameSuffix	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The employee's suffix.</p>
OutOfOfficeMessage	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The message portion of the employee availability. This message can provide reasons or details about the change in availability. The maximum length of this string is 40 characters.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the user who currently owns this record. Default value is the user logged in to the API to perform the create operation.</p>
PreferredFirstName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The name the employee prefers to be called.</p>
PreferredPronoun	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The employee's preferred pronoun.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • He/Him/His • Other/Ask Me • She/Her/Hers • They/Them/Theirs
RelatedPersonId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Links an employee to a person account with a unique value. Reserved for future use. Don't edit it.</p>
SmallPhotoUrl	<p>Type</p> <p>url</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Read only. The URL for the small-sized employee's profile photo. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo isn't guaranteed to return a photo. Query this field for the URL of the most recent photo. Available in API v51.0 and later.</p>
StatusAsOf	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Create, Filter, Sort, Update</p> <p>Description</p> <p>Required. Start date of the employee's current status.</p>
StatusEndDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>Planned end date for the employee's status.</p>

Field	Details
TimeZone	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The time zone which the employee's work hours fall within.</p>
UserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Lookup field to associate an Employee record with a user in the org. The field is optional and unique.</p>
WorkPhone	<p>Type phone</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The employee's formatted work phone number including country code and extension.</p>
WorkerType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Required. The type of worker for the employee. Possible values are:</p> <ul style="list-style-type: none"> • Alumnus • Contractor • Employee • Intern • Temporary
WorkingHoursEnd	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The end time of the employee's working hours.</p>

Field	Details
WorkingHoursStart	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The start time of the employee's working hours.</p>

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

EmployeeHistory (API version 49.0)

History is available for tracked fields of the object.

EmployeeOwnerSharingRule

Sharing rules are available for the object.

EmployeesShare (API version 49.0)

Sharing is available for the object.

EmployeeCrisisAssessment

Represents a crisis assessment of an Employee. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts. For Work.com, when an employee responds to a wellness survey, an EmployeeCrisisAssessment record is created based on an employee's answers.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, you must be assigned a Workplace Command Center permission set license and the Provides access to Workplace Command Center features system permission.

Fields

Field	Details
Assessment	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The employee's COVID-19 status at the time of the assessment. Possible values are:</p> <ul style="list-style-type: none"> • COVID-19 Immune or Recovered • COVID-19 No Symptoms • COVID-19 Symptoms or Exposed • COVID-19 Test Negative • COVID-19 Test Positive • Declined
AssessmentDate	<p>Type dateTime</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The date of the assessment. Required</p>
AssessmentNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The assessment record number.</p>
CrisisId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The Crisis that this assessment is associated with.</p>
EmployeeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description Required. The Employee that this assessment is associated with.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the user who currently owns this record. Default value is the user logged in to the API to perform the create operation.</p>
SourceAssessment	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The record in the source system that drove this assessment.</p>
SourceSystem	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The source system that drove this assessment.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

EmployeeCrisisAssessmentHistory (API version 49.0)

History is available for tracked fields of the object.

EmployeeCrisisAssessmentOwnerSharingRule

Sharing rules are available for the object.

EmployeeCrisisAssessmentShare (API version 49.0)

Sharing is available for the object.

EmpUserProvisioningProcess

Represents an employee-user provisioning process. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object requires a Workplace Command Center add-on license, or an Employee Experience add-on license.

Fields

Field	Details
EndTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date and time that the user provisioning process ended.</p>
ErrorRecordCount	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The number of records that encountered an error during the user provisioning process.</p>

Field	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time when the user provisioning process was last referenced, with a precision of one second.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time when the user provisioning process was last viewed, with a precision of one second.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name of the user provisioning process.</p>
ProcessStatus	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The status of the user provisioning process. Possible values are:</p> <ul style="list-style-type: none">• Aborted• Cancelled• Failed• Finished• Initializing• Processing• Queued
StartTime	<p>Type dateTime</p>

Field	Details
	<p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date and time that the user provisioning process started.</p>
SuccessRecordCount	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The number of records that were successfully provisioned during the user provisioning process.</p>
TotalRecordCount	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The total number of records in the user provisioning process.</p>

Usage

Use the EmpUserProvisioningProcess to view the status of an employee-user provisioning process.

EmpUserProvisionProcessErr

Represents an employee-user provisioning process error. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object requires a Workplace Command Center add-on license, or an Employee Experience add-on license.

Fields

Field	Details
EmployeeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the employee record associated with the error. This is a relationship field.</p> <p>Relationship Name Employee</p> <p>Relationship Type Lookup</p> <p>Refers To Employee</p>
ErrorCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The error code if the provisioning isn't successful.</p>
ErrorMessage	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description If an error occurred, this field contains the error message.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time when the error was last referenced, with a precision of one second.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The date and time when the error was last viewed, with a precision of one second.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description</p> <p>The name of the error.</p>
ProvisioningProcessId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The ID of the associated user provisioning process.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>ProvisioningProcess</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>EmpUserProvisioningProcess</p>

Usage

Use the EmpUserProvisionProcessErr to view the errors for an employee-user provisioning process.

EngagementChannelType

Represents a channel through which a customer can be reached for communication. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ContactPointType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The contact point type of the channel.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Email • MailingAddress • Phone • Social • Web
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Required. Name of the communication subscription consent record.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description The ID of the account owner associated with this customer. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

EngagementChannelTypeFeed

Feed tracking is available for the object.

EngagementChannelTypeHistory

History is available for tracked fields of the object.

EngagementChannelTypeOwnerSharingRule

Sharing rules are available for the object.

EngagementChannelTypeShare

Sharing is available for the object.

EnhancedLetterhead

Represents an enhanced letterhead that can be associated with a Lightning email template that doesn't use the Salesforce Merge Language (SML). This object is available in API version 46.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description Description of the contents of the header and footer.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Date and time when this enhanced letterhead was last used.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Date and time when this enhanced letterhead was last viewed.</p>
LetterheadFooter	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The contents of the enhanced letterhead's footer.</p>
LetterheadHeader	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The contents of the enhanced letterhead's header.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the enhanced letterhead, such as Standard Company Letterhead.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

EnhancedLetterheadFeed

Feed tracking is available for the object.

Entitlement

Represents the customer support an account or contact is eligible to receive. This object is available in API version 18.0 and later. Entitlements may be based on an asset, product, or service contract.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the Account associated with the entitlement.</p>
AssetId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Required. ID of the Asset associated with the entitlement. Must be a valid asset ID.</p>
BusinessHoursId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Required. ID of the BusinessHours associated with the entitlement. Must be a valid business hours ID.</p>
CasesPerEntitlement	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The total number of cases the entitlement supports.</p> <p>This field is only available if <code>IsPerIncident</code> is <code>true</code>.</p>
ContractLineItemId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Required. ID of the ContractLineItem associated with the entitlement. Must be a valid ID.</p>
EndDate	<p>Type</p> <p>date</p> <p>Properties</p> <p>Create, Filter, Nillable, Update</p> <p>Description</p> <p>The last day the entitlement is in effect.</p>
IsPerIncident	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Update</p> <p>Description</p> <p>Indicates whether the entitlement is limited to supporting a specific number of cases (<code>true</code>) or not (<code>false</code>).</p>
LastReferencedDate	<p>Type</p> <p>date</p> <p>Properties</p> <p>Filter, Nillable, Sort, Update</p> <p>Description</p> <p>The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type</p> <p>date</p> <p>Properties</p> <p>Filter, Nillable, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Update</p> <p>Description</p> <p>Required. Name of the entitlement.</p>
SvcApptBookingWindowsId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Nillable, Update</p> <p>Description</p> <p>The operating hours that the entitlement's work orders should respect. The label in the user interface is <code>Operating Hours</code>. Available only if Field Service is enabled.</p>
RemainingCases	<p>Type</p> <p>int</p> <p>Properties</p> <p>Create, Filter, Nillable, Update</p> <p>Description</p> <p>The number of cases the entitlement can support. This field decreases in value by one each time a case is created with the entitlement.</p> <p>This field is only available if <code>IsPerIncident</code> is selected.</p>
RemainingWorkOrders	<p>Type</p> <p>int</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The number of agreed work orders remaining to be created.</p>
ServiceContractId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Nillable, Update</p>

Field	Details
	<p>Description Required. ID of the ServiceContract associated with the entitlement. Must be a valid ID.</p>
SlaProcessId	<p>Type reference</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description ID of the SlaProcess associated with the entitlement. This field is available in version 19.0 and later.</p>
StartDate	<p>Type date</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description The first date the entitlement is in effect.</p>
Status	<p>Type picklist</p> <p>Properties Filter, Nillable</p> <p>Description Status of the entitlement, such as <code>Expired</code>.</p>
SvcAptBookingWindows	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Nillable, Update</p> <p>Description The operating hours of the entitlement. This field is visible only if Field Service is enabled.</p>
Type	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Nillable, Update</p> <p>Description The type of entitlement, such as <code>Web</code> or <code>phone support</code>.</p>

Field	Details
WorkOrdersPerEntitlement	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Total number of work orders available for this entitlement.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

EntitlementChangeEvent (API version 44.0)

Change events are available for the object.

EntitlementFeed (API version 23.0)

Feed tracking is available for the object.

EntitlementHistory

History is available for tracked fields of the object.

SEE ALSO:

[EntitlementContact](#)

[SlaProcess](#)

EntitlementContact

Represents a Contact eligible to receive customer support via an Entitlement. This object is available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Fields

Field	Details
ContactId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p>

Field	Details
	<p>Description Required. ID of the Contact associated with the entitlement. Must be a valid ID.</p>
EntitlementId	<p>Type reference</p> <p>Properties Create, Filter</p> <p>Description Required. ID of the Entitlement associated with the entitlement contact. Must be a valid ID.</p>
IsDeleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Nillable</p> <p>Description Required. Name of the entitlement contact.</p>

Usage

Use to query and manage entitlement contacts.

SEE ALSO:

[Entitlement](#)

EntitlementTemplate

Represents predefined terms of customer support for a product (Product2). This object is available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only Salesforce admins, users with access to the Case, Entitlement, or Work Order objects, and users with the View Setup and Configuration permission can access this object.

Fields

Field	Details
BusinessHoursId	<p>Type reference</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description ID of the BusinessHours associated with the entitlement template. Must be a valid business hours ID.</p>
CasesPerEntitlement	<p>Type int</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description The total number of cases the entitlement template supports. This field is only available if <code>IsPerIncident</code> is <code>true</code>.</p>
IsPerIncident	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Update</p> <p>Description Indicates whether the entitlement template is limited to supporting a specific number of cases (<code>true</code>) or not (<code>false</code>).</p>
Name	<p>Type string</p> <p>Properties Create, Filter, idLookup, Update</p> <p>Description Required. Name of the entitlement template.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. <p>Available in version 34.0 and later.</p>
SlaProcessId	<p>Type reference</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description ID of the SlaProcess associated with the entitlement template. This field is available in API version 19.0 and later.</p>
Term	<p>Type int</p> <p>Properties Create, Defaulted on create, Filter, Nillable, Update</p> <p>Description Number of days that the entitlement template is valid.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description The type of entitlement template, such as Web or phone support.</p>

Usage

Use this object to manage entitlement templates.

EntityHistory

Represents historical information about an object's changed field values. This object is only available to users with the "View All Data" permission. This object is unavailable beginning with API version 8.0. Use the object-specific [History](#) objects instead.

Supported Calls

`describeSObjects()`, `getUpdated()`, `getDeleted()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Fields

Field	Details
FieldName	<p>Type picklist</p> <p>Properties Filter, Restricted picklist</p> <p>Description ID of the standard or custom field.</p>
IsDeleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>
NewValue	<p>Type anyType</p> <p>Properties Nillable</p> <p>Description New value of the modified field.</p>
OldValue	<p>Type anyType</p> <p>Properties Nillable</p> <p>Description Previous value of the modified field.</p>

Field	Details
ParentId	<p>Type reference</p> <p>Properties Filter</p> <p>Description ID of the object that contains the field.</p>
ParentSubjectType	<p>Type picklist</p> <p>Properties Filter, Restricted picklist</p> <p>Description The kind of object that contains the field.</p>

Usage

In API version 7.0 and later, this object works with Case, Contract, and Solution objects:

- This object is always read-only in the online application.
- When a field is modified, this object records both the old and new field values. There are exceptions to this behavior for certain fields such as long text areas and multi-select picklists. These fields appear in this object to indicate that the field was changed, but the old and new values are not recorded.
- Two rows are added to this object when foreign key fields change. One row contains the foreign key object names that display in the online application. For example, "Jane Doe" is recorded as the name of a contact. The other row contains the actual foreign key ID that is only returned to and visible from the API.
- Up to a total of twenty fields (standard or custom) can be tracked for a given object.
- In the online application, you can specify which fields are tracked or not tracked at any time.
- As soon as tracking is turned on for a field, all changes to its value are recorded in the database.
- Turning off tracking for a field stops further changes from being recorded, but the history data is not deleted.
- Be advised that deleting a custom field also permanently deletes the history data for that custom field.

EntityMilestone

Represents a required step in a customer support process on a work order. The Salesforce user interface uses the term "object milestone." This object is available in API version 37.0 and later.

 **Note:** Milestones on cases use the [CaseMilestone](#) object type.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`

Special Access Rules

- As of Summer '20 and later, only Salesforce admins, users with access to the Case, Entitlement, or Work Order objects, and users with the View Setup and Configuration permission can access this object.
- Entitlement management must be enabled.
- Work orders or Field Service must be enabled.

Fields

Field Name	Details
ActualElapsedTimeInDays	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The number of days that it took to complete a milestone. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time)</p> <p> Note: To display this field, select Enable stopped time and actual elapsed time on the Entitlement Settings page and add the field to the object milestone page layout.</p>
ActualElapsedTimeInHrs	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The number of hours that it took to complete a milestone. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time)</p> <p> Note: To display this field, select Enable stopped time and actual elapsed time on the Entitlement Settings page and add the field to the object milestone page layout.</p>
ActualElapsedTimeInMins	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of minutes that it took to complete a milestone. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time)</p> <p> Note: To display this field, select Enable stopped time and actual elapsed time on the Entitlement Settings page and add the field to the object milestone page layout.</p>

Field Name	Details
BusinessHoursId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The business hours on the milestone. If business hours aren't specified, the entitlement process business hours are used. If business hours are also not specified on the entitlement process, the business hours on the record are used.</p>
CompletionDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description The date and time the milestone was completed.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
ElapsedTimeInDays	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The number of days it took to complete a milestone, including time during which the milestone was stopped. Automatically calculated to include the business hours on the record. Elapsed time is calculated only after the Completion Date field is populated. $(\text{Elapsed Time}) - (\text{Stopped Time}) = (\text{Actual Elapsed Time})$.</p>
ElapsedTimeInHrs	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The number of hours it took to complete a milestone, including time during which the milestone was stopped. Automatically calculated to include the</p>

Field Name	Details
	business hours on the record. Elapsed time is calculated only after the Completion Date field is populated. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time).
ElapsedTimeInMins	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of minutes it took to complete a milestone, including time during which the milestone was stopped. Automatically calculated to include the business hours on the record. Elapsed time is calculated only after the Completion Date field is populated. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time).</p>
IsCompleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Icon (✔) that indicates a milestone completion.</p>
IsViolated	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Icon (⚠) that indicates a milestone violation.</p>
MilestoneTypeId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the milestone (for instance, First Response).</p>
Name	<p>Type string</p> <p>Properties Filter, Group, Sort, Update</p> <p>Description The name of the milestone.</p>

Field Name	Details
ParentEntityId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the record—for example, a work order—that contains the milestone.</p>
SlaProcessId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The entitlement process associated with the milestone.</p>
StartDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description The date and time that milestone tracking started.</p>
StoppedTimeInDays	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The number of days that an agent has been blocked from completing a milestone. For example, an agent may be waiting for a customer to reply with more information.</p> <p> Note: To display this field, select Enable stopped time and actual elapsed time on the Entitlement Settings page and add the field to the object milestone page layout.</p>
StoppedTimeInHrs	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The number of hours that an agent has been blocked from completing a milestone. For example, an agent may be waiting for a customer to reply with more information.</p>

Field Name	Details
	<p> Note: To display this field, select Enable stopped time and actual elapsed time on the Entitlement Settings page and add the field to the object milestone page layout.</p>
StoppedTimeInMins	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of minutes that an agent has been blocked from completing a milestone. For example, an agent may be waiting for a customer to reply with more information.</p> <p> Note: To display this field, select Enable stopped time and actual elapsed time on the Entitlement Settings page and add the field to the object milestone page layout.</p>
TargetDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time to complete the milestone.</p>
TargetResponseInDays	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The number of days to complete the milestone. Automatically calculated to include the business hours on the record.</p>
TargetResponseInHrs	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The number of hours to complete the milestone. Automatically calculated to include the business hours on the record.</p>
TargetResponseInMins	<p>Type int</p>

Field Name	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of minutes to complete the milestone. Automatically calculated to include the business hours on the record.</p>
TimeRemainingInDays	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The days that remain before a milestone violation. Automatically calculated to include the business hours on the record.</p>
TimeRemainingInHrs	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The hours that remain before a milestone violation. Automatically calculated to include the business hours on the record.</p>
TimeRemainingInMins	<p>Type string</p> <p>Properties Group, Nillable, Sort</p> <p>Description The minutes that remain before a milestone violation. Automatically calculated to include the business hours on the record.</p>
TimeSinceTargetInDays	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The days that have elapsed since a milestone violation. Automatically calculated to include the business hours on the record.</p>
TimeSinceTargetInHrs	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The hours that have elapsed since a milestone violation. Automatically calculated to include the business hours on the record.</p>
TimeSinceTargetInMins	<p>Type</p> <p>string</p> <p>Properties</p> <p>Group, Nillable, Sort</p> <p>Description</p> <p>The minutes that have elapsed since a milestone violation. Automatically calculated to include the business hours on the record.</p>

Usage

When you create an entitlement process, you select its type based on the type of record that you want the process to run on: Case or Work Order. Processes created before Summer '16 use the Case type. When a Work Order entitlement process runs on a work order, the resulting milestones on the work order are object milestones. Conversely, when a Case entitlement process runs on a case, the resulting milestones are case milestones, a separate standard object.

Tip: If an entitlement has an entitlement process associated with it, don't use the entitlement for multiple types of support records. An entitlement process works only on records that match the process's type. For example, when a Case entitlement process is applied to an entitlement, the process runs only on cases associated with that entitlement. If a work order is also associated with the entitlement, the process doesn't run on the work order. To ensure that the milestones you set up work as expected, associate a customer's work orders and cases with different entitlements.

Customize page layouts, validation rules, and more for object milestones from the Object Milestones node in Setup under Entitlement Management.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

EntityMilestoneFeed

Feed tracking is available for the object.

EntityMilestoneHistory

History is available for tracked fields of the object.

EntitySubscription

Represents a subscription for a user following a record or another user. This object is available in API version 34.0 and later.

A user can subscribe to a record or to another user. Changes to the record and updates from the users are displayed in the Chatter feed on the user's home page, which is a useful way to stay up-to-date with other users and with changes made to records in Salesforce.

Feeds are available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
NetworkId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the Experience Cloud site where the user is following the record or user. This field is available in API version 26.0 and later, if digital experiences is enabled for your org.</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. ID of the record or user which the user is following. This is a polymorphic relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To Account, Accreditation, ActivationTarget, ActivationTrgtIntOrgAccess, ApiAnomalyEventStore, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskIndDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CodeSet, CollaborationGroup, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, ConsumptionSchedule, Contact, ContactEncounter, ContactEncounterParticipant, ContentDocument, Contract,</p>

Field	Details
	CoverageBenefit, CoverageBenefitItem, CredentialStuffingEventStore, CreditMemo, CreditMemoLine, Dashboard, DashboardComponent, DataStream, DelegatedAccount, DocumentChecklistItem, EngagementChannelType, EnhancedLetterhead, EnrollmentEligibilityCriteria, Event, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, Identifier, Image, IndividualApplication, Invoice, InvoiceLine, Lead, Location, MarketSegment, MarketSegmentActivation, MemberPlan, MessagingSession, MktCalculatedInsight, OperatingHours, Opportunity, Order, OrderItem, OtherComponentTask, PartyConsent, PersonEducation, PersonLanguage, PersonLifeEvent, PersonName, PlanBenefit, PlanBenefitItem, Product2, ProductFulfillmentLocation, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, ProviderSearchSyncLog, PurchaserPlan, PurchaserPlanAssn, ReceivedDocument, Report, ReportAnomalyEventStore, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SessionHijackingEventStore, Shift, Shipment, ShipmentItem, Site, SkillRequirement, SocialPost, Solution, Task, ThreatDetectionFeedback, Topic, User, Visit, VisitedParty, Visitor, VoiceCall, VolunteerProject, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup, WorkTypeGroupMember
SubscriberId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. ID of the user who is following the record or user. This is a relationship field.</p> <p>Relationship Name Subscriber</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>

Usage

Consider this when following records and users:

- Users can only follow records that they can see.
- Users can see which records other users are following, unless they don't have access to the records.
- Administrators and users with the "Modify All Users" permission can configure a user to follow records that the user has read access to.
- Administrators and users with the "Modify All Users" permission can configure users to stop following records.

- Following topics is available in API version 29.0 and later. For this reason, a topic ID is now a supported value for the `ParentId` field.
- If you deactivate a user, any `EntitySubscription` where the user is associated with the `ParentId` or `SubscriberId` field, meaning all subscriptions both to and from the user, are soft deleted. If the user is reactivated, the subscriptions are restored. However, if you deactivate multiple users at once and these users follow each other, their subscriptions are hard deleted. In this case, the user-to-user `EntitySubscription` is deleted twice (double deleted). Such subscriptions can't be restored upon user reactivation.

When using `query()` with `EntitySubscription`,

- Note the following SOQL restriction. No SOQL limit if logged-in user has "View All Data" permission. If not, specify a `LIMIT` clause of 1,000 records or fewer.
- A query using a `WHERE` clause can only filter by fields on the `EntitySubscription` object.
- If user sharing is enabled and the querying user is not an administrator, a SOQL query must be constrained either by the `ParentId` or `SubscriberId`. Otherwise, the query behavior at run time is undefined, meaning the result set can be incomplete or inconsistent from invocation to invocation. For an unconstrained query, the sharing check limits imposed on a non-administrative user are likely to be exceeded before the query completes, because access checks are run against both parent and subject, for each row of the result set. We recommend using the Connect REST API to query `EntitySubscription` data instead of running a SOQL query.
- Users without the "View All Data" permission
 - Need read access on the object associated with the `ParentId` field to see which users are following records for the object.
 - Can use an `ORDER BY` clause in a query only to order by fields on the `EntitySubscription` object. For example, if the subscription relates to an `Account` record, the query can `ORDER BY ParentId`, but it can't `ORDER BY Account.Name`.
 - Don't always get all matching subscriptions when running a query. For these users, a query evaluates visibility criteria on a maximum of 500 records to reduce the prospect of long-running queries. If a user runs a query to see the CEO's subscriptions, it might scan a large number of records. The query only returns matches within the first 500 records scanned. It is possible that there are more subscriptions that are visible to the user, but they are not returned. To mitigate this, we recommend using a `WHERE` clause, if possible, to reduce the scope of the query.

Sample—SOQL

The following SOQL query returns subscriptions for all the accounts that a subscriber is following that have more than 10 employees:

```
SELECT Id
FROM EntitySubscription
WHERE SubscriberId = '005U0000000Rg2CIAS'
AND ParentId IN (
  SELECT Id FROM Account
  WHERE NumberOfEmployees > 10
)
LIMIT 200
```

SEE ALSO:

[Custom Object__Feed](#)

EnvironmentHubMember

Represents a member organization in the Environment Hub. This object is available in API version 29.0 and later.

 **Note:** You can create only 20 member orgs per day. If you need to create additional orgs, log a support case in the [Salesforce Partner Community](#). For product, specify **Platform**. For topic, specify **AppExchange & Managed Packages**.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`

Fields

Field Name	Details
Description	<p>Type textarea</p> <p>Properties Nillable, Update</p> <p>Description A brief description of this org.</p>
DisplayName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description The name that the user has specified for this member org.</p>
EnvironmentHubId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description The Org ID of this member's Environment Hub org.</p>
Instance	<p>Type String</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Name of the instance where the Environment Hub member org resides.</p>
IsFedIdSsoMatchAllowed	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>Indicates if single sign-on (SSO) has been enabled based on matching the Federation ID. The default is <code>false</code>.</p>
IsSandbox	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Indicates if the member org is a sandbox (<code>true</code>) or not (<code>false</code>). This field is available in API version 36.0 and later.</p>
MemberEntity	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, idLookup, Sort</p> <p>Description</p> <p>The unique Org ID of the member org for this record.</p>
MemberType	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>The type of member org for this record. Possible values include <code>Branch Org</code>, <code>Patch Org</code>, <code>Release Org</code>, <code>Sandbox Org</code>, <code>Trialforce Management Org</code>, and <code>Trialforce Source Org</code>.</p> <p> Note: Only one member type at a time is stored. Member type is determined according to this hierarchy: (1) Sandbox, (2) Release, (3) Trialforce Source Org (TSO), (4) Patch, (5) Branch, and (6) Trialforce Management Org (TMO). For example, if an org is both a sandbox and a TMO, the value of <code>MemberType</code> is <code>Sandbox Org</code>.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Defaulted on create, Filter, idLookup, Sort</p> <p>Description</p> <p>The name of the member org for this record.</p>
OrgEdition	<p>Type</p> <p>picklist</p>

Field Name	Details
	<p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The org's edition, for example, Enterprise Edition or Unlimited Edition.</p>
OrgStatus	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The licensing or creation status of this org. Possible values include <code>Active</code>, <code>Demo</code>, <code>Deleted</code>, <code>Free</code>, <code>Inactive</code>, and <code>Trial</code>.</p>
Origin	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The method by which this org was added to the Environment Hub. Possible values are <code>autoDiscovered</code>, <code>userAdded</code>, and <code>provisioned</code>.</p>
SSOMappedUsers	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The total number of mapped users in this member org. This field is available in API version 36.0 and later.</p>
ServiceProviderId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the service provider for this member org. This field is available in API version 36.0 and later.</p>
ShouldAddRelatedOrgs	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field Name	Details
	<p>Description Status of the connection of related orgs to the hub. Possible values are <code>done</code>, <code>notRequested</code>, <code>pending</code>, and <code>requested</code>.</p>
<code>ShouldEnableSSO</code>	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort, Update</p> <p>Description If SSO should be enabled when this member org is added. The default is <code>false</code>.</p>
<code>SsoStatus</code>	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Sort, Update</p> <p>Description If SSO has been enabled for this org. Possible values are:</p> <ul style="list-style-type: none"> • <code>Enabled</code>—Single sign-on is enabled. • <code>Disabled</code>—Single sign-on is disabled. • <code>Pending</code>—Single sign-on is in the process of being enabled. • <code>Failed</code>—Single sign-on enablement failed. Contact Salesforce support for assistance.
<code>SsoUsernameFormula</code>	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description The custom formula for matching users in the hub and member orgs.</p>

Usage

Use this object to access and modify settings of member orgs in the Environment Hub.

Event

Represents an event in the calendar. In the user interface, event and task records are collectively referred to as activities.

[other]: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

 Note:

- An `EventRelation` object can't be related to a child event, and child events don't include the invitee related list.
- `query()`, `delete()`, and `update()` aren't allowed with events related to more than one contact in API versions 25.0 and earlier.
- `create()` and `update()` aren't available for read-only fields on Lightning Experience event series.
- `upsert()` and `undelete()` aren't supported for syncing changes made to events through the API using the feature Lightning Sync.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
<code>AcceptedEventInviteeIds</code>	<p>Type JunctionIdList</p> <p>Properties Create, Update</p> <p>Description A string array of contact or lead IDs who accepted this event. This <code>JunctionIdList</code> is linked to the <code>AcceptedEventRelation</code> child relationship.</p> <p> Warning: Adding a <code>JunctionIdList</code> field name to the <code>fieldsToNull</code> property deletes all related junction records. This action can't be undone.</p>
<code>AccountId</code>	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents the ID of the related account. The <code>AccountId</code> is determined as follows.</p> <p>If the value of <code>whatId</code> is any of the following objects, then Salesforce uses that object's <code>AccountId</code>.</p> <ul style="list-style-type: none"> • Account • Opportunity • Contract • Custom object that is a child of Account <p>If the value of the <code>whatId</code> field is any other object, and the value of the <code>whoId</code> field is a contact object, then Salesforce uses that contact's <code>AccountId</code>. (If your org uses Shared Activities, Salesforce uses the <code>AccountId</code> of the primary contact.)</p>

Field	Details
	<p>Otherwise, Salesforce sets the value of the <code>AccountId</code> field to <code>null</code>.</p> <p>For information on IDs, see ID Field Type.</p> <p>This is a relationship field.</p> <p>Relationship Name Account</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
ActivityDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Contains the event's due date if the <code>IsAllDayEvent</code> flag is set to <code>true</code>. This field is a date field with a timestamp that is always set to midnight in the Coordinated Universal Time (UTC) time zone. Don't attempt to alter the timestamp to account for time zone differences. Label is Due Date Only.</p> <p>This field is required in versions 12.0 and earlier if the <code>IsAllDayEvent</code> flag is set to <code>true</code>.</p> <p>The value for this field and <code>StartDateTime</code> must match, or one of them must be <code>null</code>.</p>
ActivityDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Contains the event's due date if the <code>IsAllDayEvent</code> flag is set to <code>false</code>. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. Label is Due Date Time.</p> <p>This field is required in versions 12.0 and earlier if the <code>IsAllDayEvent</code> flag is set to <code>false</code>.</p> <p>The value for this field and <code>StartDateTime</code> must match, or one of them must be <code>null</code>.</p>
ClientGuid	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The client globally unique identifier identifies the external API client used to create the event. Label is Client GUID.</p>
CurrencyIsoCode	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
DeclinedEventInviteeIds	<p>Type</p> <p>JunctionIdList</p> <p>Properties</p> <p>Create, Update</p> <p>Description</p> <p>A string array of contact, lead, or user IDs who declined this event. This <code>JunctionIdList</code> is linked to the <code>DeclinedEventRelation</code> child relationship.</p> <p> Warning: Adding a <code>JunctionIdList</code> field name to the <code>fieldsToNull</code> property deletes all related junction records. This action can't be undone.</p>
Description	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Create, Nillable, Update</p> <p>Description</p> <p>Contains a text description of the event. Limit: 32,000 characters.</p>
Division	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description</p> <p>A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.</p>
DurationInMinutes	<p>Type</p> <p>int</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Contains the event length, in minutes. Even though this field represents a temporal value, it's an integer type—not a Date/Time type.</p> <p>Required in versions 12.0 and earlier if <code>IsAllDayEvent</code> is false.</p> <p>In versions 13.0 and later, this field is optional, depending on the following:</p> <ul style="list-style-type: none"> • If <code>IsAllDayEvent</code> is true, you can supply a value for either <code>DurationInMinutes</code> or <code>EndTime</code>. Supplying values in both fields is allowed if the values add up to the same amount of time. If both fields are <code>null</code>, the duration defaults to one day. • If <code>IsAllDayEvent</code> is false, a value must be supplied for either <code>DurationInMinutes</code> or <code>EndTime</code>. Supplying values in both fields is allowed if the values add up to the same amount of time. <p>If the multiday event feature is enabled, then API versions 13.0 and later support values greater than 1440 for the <code>DurationInMinutes</code> field. API versions 12.0 and earlier can't access event objects whose <code>DurationInMinutes</code> is greater than 1440. For more information, see Multiday Events.</p> <p>Depending on your API version, errors with the <code>DurationInMinutes</code> and <code>EndTime</code> fields may appear in different places.</p> <ul style="list-style-type: none"> • Versions 38.0 and before—Errors always appear in the <code>DurationInMinutes</code> field. • Versions 39.0 and later—If there's no value for the <code>DurationInMinutes</code> field, errors appear in the <code>EndTime</code> field. Otherwise, they appear in the <code>DurationInMinutes</code> field.
EndDate	<p>Type date</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Read-only. Available in versions 46.0 and later. This field supplies the date value that appears in the <code>EndTime</code> field. This field is a date field with a timestamp that is always set to midnight in the Coordinated Universal Time (UTC) time zone.</p>
EndTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Available in versions 13.0 and later. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate.</p> <p>This field is optional, depending on the following:</p>

Field	Details
	<ul style="list-style-type: none"> If <code>IsAllDayEvent</code> is true, you can supply a value for either <code>DurationInMinutes</code> or <code>EndTime</code>. Supplying values in both fields is allowed if the values add up to the same amount of time. If both fields are <code>null</code>, the duration defaults to one day. If <code>IsAllDayEvent</code> is false, a value must be supplied for either <code>DurationInMinutes</code> or <code>EndTime</code>. Supplying values in both fields is allowed if the values add up to the same amount of time. <p>Depending on your API version, errors with the <code>DurationInMinutes</code> and <code>EndTime</code> fields may appear in different places.</p> <ul style="list-style-type: none"> Versions 38.0 and before—Errors always appear in the <code>DurationInMinutes</code> field. Versions 39.0 and later—If there's no value for the <code>DurationInMinutes</code> field, errors appear in the <code>EndTime</code> field. Otherwise, they appear in the <code>DurationInMinutes</code> field.
EventSubtype	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Provides standard subtypes to facilitate creating and searching for events. This field isn't updateable.</p>
EventWhoIds	<p>Type JunctionIdList</p> <p>Properties Create, Update</p> <p>Description A string array of contact or lead IDs used to create many-to-many relationships with a shared event. <code>EventWhoIds</code> is available when the shared activities setting is enabled. The first contact or lead ID in the list becomes the primary <code>whoId</code> if you don't specify a primary <code>whoId</code>. If you set the <code>EventWhoIds</code> field to null, all entries in the list are deleted and the value of <code>whoId</code> is added as the first entry.</p> <p> Warning: Adding a <code>JunctionIdList</code> field name to the <code>fieldsToNull</code> property deletes all related junction records. This action can't be undone.</p>
GroupEventType	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Read-only. Available in API versions 19.0 and later. The possible values are:</p> <ul style="list-style-type: none"> 0 (Non-group event)—An event with no invitees.

Field	Details
	<ul style="list-style-type: none"> 1 (Group event)—An event with invitees. 2 (Proposed event)—An event created when a user requests a meeting with a contact, lead, or person account using the Salesforce user interface. When the user confirms the meeting, the proposed event becomes a group event. You can't create, edit, or delete proposed events in the API. This value is no longer used in API version 41.0 and later. 3 (IsRecurrence2 Series Pattern)—An event representing an event series recurrence pattern in Lightning Experience.
IsAllDayEvent	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the <code>ActivityDate</code> field (<code>true</code>) or the <code>ActivityDateTime</code> field (<code>false</code>) is used to define the date or time of the event. Label is All-Day Event. See also DurationInMinutes and EndDateTime.</p>
IsArchived	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the event has been archived.</p>
IsChild	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the event is a child of another event (<code>true</code>) or not (<code>false</code>). For a child event, you can update <code>IsReminderSet</code> and <code>ReminderDateTime</code> only. You can query and delete a child event. If the objects related to the child event are different from those objects related to the parent event (this difference is possible if you use API version 25.0 or earlier) and one of the objects related to the child event is deleted, the objects related to the parent event are updated to ensure data integrity.</p>
IsClientManaged	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the event is managed by an external client. If the value of this field is false, the event isn't owned or managed by an external client, and Salesforce can be used to update</p>

Field	Details
	<p>it. If the value is true, Salesforce can be used to change only noncritical fields on the event. Label is Is Client Managed.</p>
IsGroupEvent	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the event is a group event—that is, whether it has invitees (<code>true</code>) or not (<code>false</code>).</p>
IsPrivate	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether users other than the creator of the event can (<code>false</code>) or can't (<code>true</code>) see the event details when viewing the event user's calendar. However, users with the View All Data or Modify All Data permission can see private events in reports and searches, or when viewing other users' calendars. Private events can't be associated with opportunities, accounts, cases, campaigns, contracts, leads, or contacts. Label is Private.</p>
IsRecurrence	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether a Salesforce Classic event is scheduled to repeat itself (<code>true</code>) or only occurs one time (<code>false</code>). This field is read-only when updating records, but not when creating them. If this field value is <code>true</code>, then <code>RecurrenceEndDateOnly</code>, <code>RecurrenceStartDateTime</code>, <code>RecurrenceType</code>, and any recurrence fields associated with the given recurrence type must be populated. Label is Create recurring series of events.</p>
IsRecurrence2	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Read-only. This field available in API version 44.0 and later. Indicates whether a Lightning Experience event is scheduled to repeat (<code>true</code>) or only occurs one time (<code>false</code>). If this field value is true, then <code>Recurrence2PatternText</code> and <code>Recurrence2PatternVersion</code> must be populated. Label is Repeat.</p>

Field	Details
<code>IsRecurrence2Exception</code>	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Read-only. This field available in API version 44.0 and later. Indicates whether an individual event in a Lightning Experience event series has a recurrence pattern that's different from the rest of the series, making it an exception.</p>
<code>IsRecurrence2Exclusion</code>	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Read-only. This field available in API version 44.0 and later. Indicates when updates to a Lightning Experience event series recurrence pattern have been made, but affect future event occurrences only. For past event occurrences, <code>IsRecurrence2Exclusion</code> is set to <code>true</code>, excluding past occurrences from the series recurrence pattern.</p>
<code>IsReminderSet</code>	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the activity is a reminder (<code>true</code>) or not (<code>false</code>).</p>
<code>IsVisibleInSelfService</code>	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether an event associated with an object can be viewed in the Customer Portal (<code>true</code>) or not (<code>false</code>). If your org has enabled digital experiences, events marked <code>IsVisibleInSelfService</code> are visible to any external user in the Experience Cloud site, as long as the user has access to the record the event was created on. This field is available when</p> <ul style="list-style-type: none"> Customer Portal or partner portal is enabled <p>OR</p> <ul style="list-style-type: none"> Digital experiences is enabled and you have Customer Portal or partner portal licenses
<code>Location</code>	<p>Type string</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Contains the location of the event.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Contains the ID of the user or public calendar who owns the event. Label is Assigned to ID. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Calendar, User</p>
Recurrence2PatternStartDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Read-only. This field available in API version 44.0 and later. Indicates the date and time when the Lightning Experience event series begins. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate.</p>
Recurrence2PatternText	<p>Type textarea</p> <p>Properties Create, Nillable</p> <p>Description The RRULE that describes the recurrence pattern for Lightning Experience event series. Supports a subset of the RFC 5545 standard for internet calendaring and scheduling. See the Event Series section in this topic for usage examples. This field has a maximum length of 512 characters. This field is available in API version 44.0 and later, and has the <code>Create</code> property in API version 52.0 and later.</p>

Field	Details
Recurrence2PatternTimeZone	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description This field available in API version 44.0 and later. Indicates the time zone in which the Lightning Experience event series was created or updated. This field uses standard Java TimeZone IDs. For example, America/Los_Angeles.</p>
Recurrence2PatternVersion	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort,</p> <p>Description Read-only. This field available in API version 44.0 and later. Indicates the standard specifications for Lightning Experience event series recurrence patterns. The only possible value is 1 (RFC 5545 v4 RRULE)—RFC 5545 is a standard set of specifications for internet calendaring and scheduling that <code>IsRecurrence2</code> adheres to for series recurrence patterns. RFC 5545 specifications for series recurrence patterns are called RRULES. For examples of rrule usage, see the Event Series section in this topic.</p>
RecurrenceActivityId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Read-only. Not required on create. Contains the ID of the main record of the Salesforce Classic recurring event. Subsequent occurrences have the same value in this field.</p>
RecurrenceDayOfMonth	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Indicates the day of the month on which the event repeats.</p>
RecurrenceDayOfWeekMask	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Indicates the day or days of the week on which the Salesforce Classic recurring event repeats. This field contains a bitmask. The values are as follows:</p> <ul style="list-style-type: none"> • Sunday = 1 • Monday = 2 • Tuesday = 4 • Wednesday = 8 • Thursday = 16 • Friday = 32 • Saturday = 64 <p>Multiple days are represented as the sum of their numerical values. For example, Tuesday and Thursday = 4 + 16 = 20.</p>
RecurrenceEndDateOnly	<p>Type</p> <p>date</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Indicates the last date on which the event repeats. For multiday Salesforce Classic recurring events, this date is the day on which the last occurrence starts. This field is a date field with a timestamp that is always set to midnight in the Coordinated Universal Time (UTC) time zone. Don't attempt to alter the timestamp to account for time zone differences.</p>
RecurrenceInstance	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>Indicates the frequency of the Salesforce Classic event's recurrence. For example, 2nd or 3rd.</p>
RecurrenceInterval	<p>Type</p> <p>int</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Indicates the interval between Salesforce Classic recurring events.</p>
RecurrenceMonthOfYear	<p>Type</p> <p>picklist</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Indicates the month in which the Salesforce Classic recurring event repeats.</p>
RecurrenceStartDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Indicates the date and time when the Salesforce Classic recurring event begins. The value must precede the <code>RecurrenceEndDateOnly</code>. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate.</p>
RecurrenceTimeZoneSidKey	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Indicates the time zone associated with a Salesforce Classic recurring event. For example, "UTC-8:00" for Pacific Standard Time.</p>
RecurrenceType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Indicates how often the Salesforce Classic event repeats. For example, daily, weekly, or every nth month (where "nth" is defined in <code>RecurrenceInstance</code>).</p>
ReminderDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Represents the time when the reminder is scheduled to fire, if <code>IsReminderSet</code> is set to <code>true</code>. If <code>IsReminderSet</code> is set to <code>false</code>, then the user may have deselected the reminder checkbox in the Salesforce user interface, or the reminder has already fired at the time indicated by the value.</p>

Field	Details
ShowAs	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Indicates how this event appears when another user views the calendar: Busy, Out of Office, or Free. Label is Show Time As.</p>
StartTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Indicates the start date and time of the event. Available in versions 13.0 and later.</p> <p>If the Event <code>IsAllDayEvent</code> flag is set to true (indicating that it's an all-day Event), then the event start date information is contained in the <code>StartTime</code> field. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate.</p> <p>If the Event <code>IsAllDayEvent</code> flag is set to false (indicating that it isn't an all-day event), then the event start date information is contained in the <code>StartTime</code> field. The time portion is always transferred in the Coordinated Universal Time (UTC) time zone. You need to translate the time portion to or from a local time zone for the user or the application, as appropriate.</p> <p>If this field has a value, then <code>ActivityDate</code> and <code>ActivityDateTime</code> must either be <code>null</code> or match the value of this field.</p>
Subject	<p>Type combobox</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The subject line of the event, such as Call, Email, or Meeting. Limit: 255 characters.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Indicates the event type, such as Call, Email, or Meeting.</p>

Field	Details
UndecidedEventInviteeIds	<p>Type JunctionIdList</p> <p>Properties Create, Update</p> <p>Description A string array of contact, lead, or user IDs who are undecided about this event. This <code>JunctionIdList</code> is linked to the <code>UndecidedEventRelation</code> child relationship.</p> <p> Warning: Adding a <code>JunctionIdList</code> field name to the <code>fieldsToNull</code> property deletes all related junction records. This action can't be undone.</p>
WhatCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Available if your organization has enabled Shared Activities. Represents the count of related <code>EventRelations</code> pertaining to the <code>whatId</code>. The count of the <code>whatId</code> must be 1 or less.</p>
WhatId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The <code>whatId</code> represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. <code>whatIds</code> are polymorphic. Polymorphic means a <code>whatId</code> is equivalent to the ID of a related object. The label is <code>Related To ID</code>.</p> <p>This is a polymorphic relationship field.</p> <p>Relationship Name What</p> <p>Relationship Type Lookup</p> <p>Refers To Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember,</p>

Field	Details
	<p>CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CommSubscriptionConsent, ContactEncounter, ContactEncounterParticipant, ContactRequest, Contract, CoverageBenefit, CoverageBenefitItem, CreditMemo, DelegatedAccount, DocumentChecklistItem, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, ListEmail, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PartyConsent, PersonLifeEvent, PlanBenefit, PlanBenefitItem, ProcessException, Product2, ProductItem, ProductRequest, ProductRequestLineItem, ProductTransfer, PurchaserPlan, ReceivedDocument, ResourceAbsence, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, Shift, Shipment, ShipmentItem, Solution, Visit, VisitedParty, VolunteerProject, WorkOrder, WorkOrderLineItem</p>

If whoId is set to null, an arbitrary ID from the existing EventWhoIds list is promoted to the primary position.</p> <p>This is a polymorphic relationship field.</p> <p>Relationship Name Who</p>

Field	Details
	<p>Relationship Type Lookup</p> <p>Refers To Contact, Lead</p>

Usage

Use Event to manage calendar appointments.

Querying and Filtering Events

Queries on events are denied before they time out if they involve amounts of data that are deemed too large. In such cases, the exception code `OPERATION_TOO_LARGE` is returned. If you receive `OPERATION_TOO_LARGE`, refactor your query to return or scan a smaller amount of data.

When querying for events with a specific due date, you must filter on both the `ActivityDateTime` and `ActivityDate` fields. For example to find all events with a due date of February 14, 2003, you need two filters:

- One filter with the `ActivityDate` field equal to the Coordinated Universal Time (UTC) time zone on February 14, 2003.
- One filter with the `ActivityDate` field greater than or equal to midnight on February 14, 2003 in the user's local time zone AND less than or equal to midnight on February 15, 2003 in the user's local time zone.

Alternatively, in version 13.0 and later, you can find events with a specific due date by filtering on `StartTime`. For example, to find all events with a due date of February 14, 2003, filter with the `StartTime` greater than or equal to midnight on February 14, 2003 in the user's local time zone AND less than or equal to midnight on February 15, 2003 in the user's local time zone.

The `EventId` field of an `EventRelation` object always points to the master record. An invitee on a group event can query the `EventRelation` object to view the master record.

Multiday Events

- Multiday events are available in version 13.0 and later. Also, in earlier versions SOQL queries don't return multiday events.
- Multiday events are enabled through the user interface from Setup by entering *Activity Settings* in the *Quick Find* box, then selecting **Activity Settings**.
- If the multiday event feature is enabled, then API versions 13.0 and later support values greater than 1440 for the `DurationInMinutes` field. API versions 12.0 and earlier can't access event objects whose `DurationInMinutes` is greater than 1440.
- Multiday events can't exceed 14 days.

Event Series and Recurring Events

In Lightning Experience, events with multiple occurrences are called event series, and are indicated when the `IsRecurrence2` field is set to `true`. In Salesforce Classic, events with multiple occurrences are called recurring events, and are indicated when the `IsRecurrence` field is set to `true`. Both fields can't be set to true for the same event.

- Lightning Experience event series are available in API version 44.0 and later as read-only fields. Recurrence patterns, specified by the `Recurrence2PatternText` field, are creatable in API version 52.0 and later. Salesforce Classic recurring events are available in version 7.0 and later. In earlier versions, SOQL queries don't return any Lightning Experience event series.
- After an event is created, you can't change the values of `IsRecurrence2` or `IsRecurrence` from `true` to `false` or vice versa.
- You can't set fields associated with `IsRecurrence2` for events where `IsRecurrence` is set to `true`, or vice versa.

- For Lightning Experience event series where `IsRecurrence2` is `true`, if you'd like to delete a single or all remaining events, use the REST API call. For Salesforce Classic recurring events where `IsRecurrence` is `true`, all past and future events in the series are removed when you delete the recurring event series through the API. However, when you delete the recurring event series through the user interface, only future occurrences are removed.
- When creating a Salesforce Classic recurring event series, the duration of the event must be 24 hours or less. When the Salesforce Classic recurring event series is created, you can extend the length of individual occurrences beyond 24 hours if Multiday events are enabled; see **Multiday Events**.
- For Salesforce Classic recurring events, `RecurrenceStartDateTime`, `RecurrenceEndDateOnly`, `RecurrenceType`, and any properties associated with the given recurrence type (see the Recurrence Field Usage for Salesforce Classic Recurring Events table) must be populated.
- When updating a Salesforce Classic recurring event series, it's not possible to update the `EventRelation` for the event series object and the `EventRelation` for the series object occurrences at the same time.
- Lightning Experience event series have no series ID, so it's not possible to locate other occurrences in the series. In Salesforce Classic recurring events, you can use `RecurrenceActivityId` to locate other occurrences.
- For both Lightning Experience event series and Salesforce Classic recurring events, when a series repeats every day, month, or year, you can only schedule occurrences one time per day, month, or year. The every week option lets you schedule occurrences multiple days per week.

[Limits for Lightning Experience event series](#) and [limits for Salesforce Classic recurring events](#) also apply.

Lightning Experience Event Series and Recurring Events

Use the `Recurrence2PatternText` field to specify the recurrence pattern for Lightning Experience event series. These recurrence patterns, called reference rules or "RRULES", support a subset of the RFC 5545 standards. This table includes common RRULE examples.

Recurrence Pattern	RRULE Example
Every day for five days	<code>RRULE:FREQ=DAILY;INTERVAL=1;COUNT=5</code>
Every Monday, Tuesday, Wednesday, Thursday, and Friday with no end date	<code>RRULE:FREQ=WEEKLY;INTERVAL=1;BYDAY=MO,TU,WE,TH,FR</code>
Every two weeks on Monday and Friday for 10 occurrences	<code>RRULE:FREQ=WEEKLY;INTERVAL=2;BYDAY=MO,FR;COUNT=10</code>
Monthly on the first day of the month until January 1, 2020	<code>RRULE:FREQ=MONTHLY;INTERVAL=1;BYMONTHDAY=1;UNTIL=20200101T000000Z</code>
Yearly on July 4th for three years (in this example, specify the date using <code>StartDateTime</code>)	<code>RRULE:FREQ=YEARLY;INTERVAL=1;BYMONTH=7;BYMONTHDAY=4;COUNT=3</code>
Daily until January 1 2022 with no end date	<code>RRULE:FREQ=DAILY;UNTIL=20220101T000000Z</code>
Every third Friday of the month with no end date	<code>RRULE:FREQ=MONTHLY;BYSETPOS=3;BYDAY=FR</code>

The RRULE defined by `Recurrence2PatternText` supports a subset of the RFC 5545 standard for internet calendaring and scheduling. Supported RRULE parts include `FREQ`, `BYMONTH`, `BYMONTHDAY`, `BYDAY`, `WKST`, `BYSETPOS`, `INTERVAL`, `UNTIL`, and `COUNT`.

When the event record is saved, the RRULE might be modified to follow the required format:

- The RRULE parts are placed in the following order: `FREQ`, `BYMONTH`, `BYMONTHDAY`, `BYDAY`, `WKST`, `BYSETPOS`, `INTERVAL`, `UNTIL`, and `COUNT`.
- Any missing default values are inserted. For example, if the RRULE doesn't include `INTERVAL`, then `INTERVAL=1` is added.
- The RRULE is prefaced with `RRULE:` if that preface is missing.

RRULE Part	Supported RFC 5545 Implementation
FREQ	<p>Required. Indicates the type of recurrence rule. Allowed values are:</p> <ul style="list-style-type: none"> • DAILY— supported parts include FREQ, INTERVAL, UNTIL, and COUNT. • WEEKLY—supported parts include INTERVAL, UNTIL, COUNT, BYDAY, and WKST. BYDAY is required, but can't be preceded by a number. <p>For example, to indicate weekly on Tuesday and Thursday until September 1 2023, use RRULE:FREQ=WEEKLY;UNTIL=20230901T000000Z;BYDAY=TU,TH</p> <ul style="list-style-type: none"> • MONTHLY—supported patterns include: <ul style="list-style-type: none"> – BYMONTHDAY <p>For example, to indicate monthly on the third day of the month use: RRULE:FREQ=MONTHLY;BYMONTHDAY=3</p> – BYDAY and BYSETPOS <p>For example, to indicate the last weekday of the month, use RRULE:FREQ=MONTHLY;BYDAY=MO,TU,WE,TH,FR;BYSETPOS=-1</p> – BYDAY, where the BYDAY values are specified with a numeric value <p>For example, to indicate monthly on the first Friday for 10 occurrences, use RRULE:FREQ=MONTHLY;COUNT=10;BYDAY=1FR</p> • YEARLY—supported patterns include: <ul style="list-style-type: none"> – BYMONTH, BYDAY, and BYSETPOS <p>For example, to indicate every year on the second Friday of January, use RRULE:FREQ=YEARLY;BYMONTH=1;BYDAY=FR;BYSETPOS=2</p> – BYMONTH and BYMONTHDAY <p>For example, to indicate every year on October 31st, use RRULE:FREQ=YEARLY;BYMONTH=10;BYMONTHDAY=31</p> <p>For example, to create a maintenance pattern such as twice in May, and Sept on 7th and 15th; and once in June/July/Aug on 1st, use two RRULEs: RRULE:FREQ=MONTHLY;BYMONTH=5,9;BYMONTHDAY=7,15 RRULE:FREQ=MONTHLY;BYMONTH=6,7,8;BYMONTHDAY=1</p>
BYMONTH	The month. Valid values are 1 to 12.
BYMONTHDAY	The day of the month. Valid values are 1 to 31. If BYMONTHDAY is 31 and the month has fewer than 31 days, the event is created on the last day of the month.
BYDAY	<p>A comma-separated list of days of the week. Valid values are SU, MO, TU, WE, TH, FR, SA. For RRULES with yearly or monthly frequency, BYDAY must be one of:</p> <ul style="list-style-type: none"> • a single day • weekend days • week days • every day of the week

RRULE Part	Supported RFC 5545 Implementation
	<p>Each BYDAY value can be preceded by an integer that indicates the nth occurrence of a specific day within the monthly or yearly RRULE. Allowed values are -1, 1, 2, 3, and 4. You can't use different numbers in the BYDAY values. For example, this RRULE is not supported:</p> <pre>RRULE:FREQ=MONTHLY;INTERVAL=2;COUNT=10;BYDAY=1SU,-1SU</pre> <p>If BYDAY values are prefaced with a number, the RRULE can't include BYSETPOS.</p>
WKST	<p>Specifies the day on which the workweek starts. Valid values are MO, TU, WE, TH, FR, SA, and SU. Default value is based on the user's locale.</p>
BYSETPOS	<p>A comma-separated list of values that correspond to the nth occurrence within the set of recurrence instances specified by the rule. Valid values are -1, 1, 2, 3, or 4. Default value is 1.</p> <p>For example, to indicate the last weekday of the month, use:</p> <pre>RRULE:FREQ=MONTHLY;BYDAY=MO,TU,WE,TH,FR;BYSETPOS=-1</pre>
INTERVAL	<p>The repetition interval. Valid values are:</p> <ul style="list-style-type: none"> • an integer between 1 and 999 if FREQ=DAILY • an integer between 1 and 99 if FREQ=WEEKLY or FREQ=MONTHLY • 1 if FREQ=YEARLY <p>Default value is 1.</p>
UNTIL	<p>Specifies the datetime in UTC format when the recurrence rule stops. The supported format is yyyyMMddTHH:mm:ssZ, for example: 20210419T083000Z.</p> <p>An RRULE can't contain both UNTIL and COUNT. A recurring event without either UNTIL or COUNT repeats indefinitely.</p>
COUNT	<p>The number of occurrences. Allowed values are 1 to 999.</p> <p>An RRULE can't contain both UNTIL and COUNT. A recurring event without either UNTIL or COUNT repeats indefinitely.</p>
BYWEEKNO	<p>Specifies a comma-separated list of values that specify weeks of the year. Valid values are:</p> <ul style="list-style-type: none"> • 1 to 53 • -53 to -1 <p>For example, to indicate specific weeks in a year, use: <code>RRULE:BYWEEKNO=20,-20</code>.</p> <p>This rule part cannot be used when the FREQ rule part is set to anything other than YEARLY. For example, 3 represents the third week of the year.</p> <p>Note: Assuming a Monday week start, week 53 can only occur when Thursday is January 1 or if it is a leap year and Wednesday is January 1.</p>
BYYEARDAY	<p>Specifies a comma-separated list of values that specify days of the year. Valid values are:</p> <ul style="list-style-type: none"> • 1 to 366 • -366 to -1 <p>For example, to indicate specific days in a year, use: <code>RRULE:BYYEARDAY=1,100,200</code>; or, <code>RRULE:BYYEARDAY=1,-2</code></p>

Salesforce Classic Event Series and Recurring Events

This table describes the usage of recurrence fields for Salesforce Classic recurring events. Each recurrence type must have all of its properties set. All unused properties must be set to null.

RecurrenceType Value	Properties	Example Pattern
RecursDaily	RecurrenceInterval	Every second day
RecursEveryWeekday	RecurrenceDayOfWeekMask	Every weekday - can't be Saturday or Sunday
RecursMonthly	RecurrenceDayOfMonth RecurrenceInterval	Every second month, on the third day of the month
RecursMonthlyNth	RecurrenceInterval RecurrenceInstance RecurrenceDayOfWeekMask	Every second month, on the last Friday of the month
RecursWeekly	RecurrenceInterval RecurrenceDayOfWeekMask	Every three weeks on Wednesday and Friday
RecursYearly	RecurrenceDayOfMonth RecurrenceMonthOfYear	Every March on the 26th day of the month
RecursYearlyNth	RecurrenceDayOfWeekMask RecurrenceInstance RecurrenceMonthOfYear	The first Saturday in every October

Attendees, Invitees, and Resources

The field `GroupEventType` indicates that event participants are included on an event. You can add a resource to an event only when the resource is available. The only attendance status that can be assigned to resources is Accepted. Events can't be saved when resources you've added aren't available.

JunctionIdList

To create an event using `JunctionIdList`, IDs are pulled from the related contacts and both the event and the `EventRelation` records are created in one API call. If the `EventRelation` fails, the event is rolled back because it's all done in a single API call.

```
public void createEventNew(Contact[] contacts) {
    String[] contactIds = new String[contacts.size()];
    for (int i = 0; i < contacts.size(); i++) {
        contactIds[i] = contacts[i].getID();
    }
    Event event = new Event();
    event.setSubject("New Event");
    event.setEventWhoIds(contactIds);
    SaveResult[] results = null;
    try {
        results = connection.create(new Event[] {
            task
        });
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

Syncing Events with Lightning Sync

Attendee statuses (Accepted or Maybe, Declined, or No Response) sync from Microsoft® Exchange or Google to Salesforce, but not from Salesforce to Exchange or Google. Be wary of creating API flows that update attendee status in Salesforce for users set up to sync both ways. Eventually the original Exchange or Google status overrides the update made in Salesforce.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

EventChangeEvent (API version 44.0)

Change events are available for the object.

EventFeed (API version 20.0)

Feed tracking is available for the object.

[Archived Activities](#)

[Object Basics](#)

EventLogFile

Represents event log files for event monitoring. The event monitoring product gathers information about your Salesforce org's operational events, which you can use to analyze usage trends and user behavior. This object is available in API version 32.0 and later. The `Interval` and `Sequence` fields are available only in API version 37.0 and later.

You can interact with event monitoring data by querying fields on the `EventLogFile` object (like `EventType` and `LogDate`). `CreateDate` tracks when the log file was generated. To view the underlying event data, query the `LogFile` field. The `EventType` determines the schema of this field. For more information, see [EventLogFile Supported Event Types](#).

 **Note:** Log data schema for each `EventType` can change. With each new release, use the `LogFileFieldNames` and `LogFileFieldTypes` fields to validate the schema changes. In the unlikely case in which no log files are generated for 24 hours, contact Salesforce Customer Support.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Special Access Rules

Accessing this object requires View Event Log Files and API Enabled user permissions. Users with View All Data permission can view event log files.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ApiVersion	<p>Type double</p> <p>Properties Filter, Sort</p> <p>Description The specific API version for this log file. This field is available in API version 30.0 and later.</p>
EventType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The event type—API, Login, Report, URI, and so forth. Use to determine which files were generated for your org. For the corresponding <code>LogFile</code> schema, see EventLogFile Supported Event Types.</p>
Interval	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The generation schedule for the event log file. Possible values are:</p> <ul style="list-style-type: none"> • Daily • Hourly <p>This field is available in API version 37.0 and later.</p>
LogDate	<p>Type dateTime</p> <p>Properties Filter, Sort</p> <p>Description The date and time of the log file's creation. For daily event log files, tracks usage activity for a 24-hour period, from 12:00 a.m. to 11:59 p.m. UTC time. For hourly event log files, indicates the hour in which the log file was generated. For example, for events that occur between 11:00 AM and 12:00 PM on 3/7/2016, this field's value is 2016-03-07T11:00:00.000Z.</p> <p> Note: For hourly event log files, we recommend using <code>CreatedDate</code> to query the date and time that an <code>EventLogFile</code> object was created.</p>

Field	Details
LogFile	<p>Type base64</p> <p>Description Encoded file data in .csv format. The EventType field defines the schema for this data.</p>
LogFileContentType	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The content type of the log file; always .csv.</p>
LogFileFieldNames	<p>Type string</p> <p>Properties Nillable</p> <p>Description The ordered list of fields in the log file data.</p> <p> Note: LogFileFieldNames and LogFileFieldTypes are specific to each EventType. For example, LogFileFieldNames has a different value for an API EventType and a Login EventType.</p>
LogFileFieldTypes	<p>Type string</p> <p>Properties Nillable</p> <p>Description The ordered list of field types in the log file data (String, Id, and so forth).</p> <p> Note: LogFileFieldNames and LogFileFieldTypes are specific to each EventType. For example, LogFileFieldTypes has a different value for an API EventType and a Login EventType.</p>
LogFileLength	<p>Type double</p> <p>Properties Filter, Sort</p> <p>Description The log file length in bytes. You can use this field to plan storage needs for your log files.</p>
Sequence	<p>Type int</p>

Field	Details
	<p>Properties Filter, Group, Sort</p> <p>Description The number for the portion of the event log file data captured in an hour. For 24-hour event log file generation, the value of this field is 0. For hourly event log files, the initial value is 1. This value increases by 1 when events are added in the same hour after the latest event log file is created. The value resets to 1 in the subsequent hour. For example, you have activity between 2:00 and 3:00 PM. Two-log files are generated that contain the event log data for that hour, with <code>Sequence</code> values of 1 and 2. For event log data that occurs at 3:01 PM, the <code>Sequence</code> value resets to 1. This field is available in API version 37.0 and later.</p>

EventLogFile Supported Event Types

The `EventType` field in the EventLogFile object supports these events. Some common fields, such as `CPU_TIME` and `RUN_TIME`, can have null or zero values depending on how the events are generated for a given feature. Sometimes, three quotation marks appear around event data containing special characters in the CSV file. The third quotation mark is necessary for tools and applications to parse the field data at the correct field value boundary.

EventLogFile Supported Event Types

The `EventType` field in the EventLogFile object supports these events. Some common fields, such as `CPU_TIME` and `RUN_TIME`, can have null or zero values depending on how the events are generated for a given feature. Sometimes, three quotation marks appear around event data containing special characters in the CSV file. The third quotation mark is necessary for tools and applications to parse the field data at the correct field value boundary.

We generate some text messages in quotes, as in "example message". To preserve the original value, we add two more quotes and the final value looks like ""example message"" in the CSV file.

 **Note:** The Insecure External Assets, Login, and Logout events are available in supported Salesforce editions at no additional cost. Contact Salesforce to purchase the remaining event types.

Apex Callout Event Type

Apex Callout events contain details about callouts (external requests) during Apex code execution.

Apex Execution Event Type

Apex Execution events contain details about Apex classes that are used.

Apex REST API Event Type

Apex REST API events capture information about every Apex REST API request.

Apex SOAP Event Type

Apex SOAP events contain details about custom SOAP web service calls.

Apex Trigger Event Type

Apex Trigger events contain details about triggers that fire in an organization.

Apex Unexpected Exception Event Type

The Apex Unexpected Exception event type captures information about unexpected exceptions in Apex code execution. This event type is available in the EventLogFile object in API version 45.0 and later.

[API Total Usage](#)

API Total usage events contain details about Platform SOAP API, Platform REST API, and Bulk API requests (for API versions up to and including v30.0).

[Asynchronous Report Run Event Type](#)

Asynchronous Report Run events are created for reporting requests that are scheduled. This category includes dashboard refreshes, asynchronous reports, schedule reports, and analytics snapshots.

[Aura Request Event Type](#)

Aura Request events contain details of requests to Apex methods from Aura and Lightning web components. For example, you can benchmark request time or identify the URI of an unsuccessful request.

[Bulk API Event Type](#)

Bulk API events contain details about Bulk API requests.

[Bulk API 2.0 Event Type](#)

BulkApi2 events contain details about Bulk API 2.0 requests.

[Change Set Operation Event Type](#)

Change Set Operation events contain information from change set migrations.

[Concurrent Long-Running Apex Limit Event Type](#)

Concurrent Long-Running Apex Limit events contain information about long-running concurrent Apex requests in your org that Salesforce terminated after reaching your org's concurrency limit. Requests with an established Apex context that execute for 5 seconds are counted towards your org's limit of concurrent long-running requests. (Asynchronous requests don't count towards the limit.) When there are more than 10 long-running requests (org default limit), additional long-running requests are terminated. This event type is available in the EventLogFile object in API version 45.0 and later.

[Console Event Type](#)

Console events contain information about the performance and use of Salesforce Consoles. The Console events are logged whenever a Console tab is opened with a sidebar component. Outside of that, when Console tabs are opened, a regular view record detail event is served just like in Salesforce Classic.

[Content Distribution Event Type](#)

Content Distribution events contain information about content distributions and deliveries to users.

[Content Document Link Event Type](#)

Content Document Link events contain sharing information for content documents.

[Content Transfer Event Type](#)

Content Transfer events contain information about content transfer events, such as downloads, uploads, and previews. This information includes events performed on files and attachments to records.

[Continuation Callout Summary Event Type](#)

Continuation Callout Summary events contain information about all of the asynchronous callouts performed during a transaction, their response status codes, execution times, and URL endpoint destinations. This event type is available in the EventLogFile object in API version 43.0 and later.

[CORS Violation Record Event Type](#)

CORS Violation Record events capture information about Cross-Origin Resource Sharing (CORS) violations. Cross-origin requests to Lightning apps are blocked unless the request comes from a URL listed in your CORS allowlist.

[Dashboard Event Type](#)

Dashboard events contain details about dashboards that users view.

[Document Attachment Downloads Event Type](#)

Document Attachment Downloads events contain details of document and attachment downloads.

[External Cross-Org Callout Event Type](#)

External Cross-Org Callout events represent external data callouts via the cross-org adapter for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

[External Custom Apex Callout Event Type](#)

External Custom Apex Callout events represent external data callouts via custom adapters for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

[External OData Callout Event Type](#)

External OData Callout events represent external data callouts via the OData 2.0 and OData 4.0 adapters for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

[Flow Execution Event Type](#)

Flow Execution events contain information about flows that were executed including details such as total execution time, number of interviews, and number of errors.

[Insecure External Assets Event Type](#)

Insecure External Assets events contain information about external assets. External assets include images or videos accessed by users over an insecure HTTP protocol. The event lists all your Salesforce pages that contain assets hosted insecurely on third-party sites that users loaded with a Chrome, Firefox, Microsoft Edge, or Safari browser. The `INSECURE_URI` field contains the URI being used to load the asset insecurely. The Insecure External Assets event type is available in the EventLogFile object in API version 42.0 and later.

[Knowledge Article View Event Type](#)

Knowledge Article View events contain user activity with your knowledge base.

[Lightning Error Event Type](#)

Lightning Error events represent errors that occurred during user interactions with Lightning Experience and the Salesforce mobile app. This event type is available in the EventLogFile object in API version 39.0 and later.

[Lightning Interaction Event Type](#)

Lightning Interaction events track user actions in Lightning Experience and the Salesforce mobile app, such as the user clicking, tapping, or scrolling on a page. This event type is available in the EventLogFile object in API version 39.0 and later.

[Lightning Page View Event Type](#)

Lightning Page View events represent information about the page on which the event occurred in Lightning Experience and the Salesforce mobile app. A Lightning Page View event tracks the page a user visited, how long the user spent on the page, and the load time for the page. This event type is available in the EventLogFile object in API version 39.0 and later.

[Lightning Performance Event Type](#)

Lightning Performance events track trends in Lightning Experience and Salesforce mobile app performance. This event type is available in the EventLogFile object in API version 39.0 and later.

[Login Event Type](#)

Login events contain details about your org's user login history.

[Login As Event Type](#)

Login As events contain details about what a Salesforce admin did while logged in as another user.

[Logout Event Type](#)

Logout events contain details of user logouts.

[Metadata API Operation Event Type](#)

Metadata API Operation events contain details of Metadata API retrieval and deployment requests.

[Multiblock Report Event Type](#)

Multiblock Report events contain details about Joined Report reports.

[Named Credential Event Type](#)

The Named Credential event type captures information about Apex callouts that use named credentials as their endpoints. Use this event type to audit the installed managed packages that use named credentials. If you don't recognize the package namespace in the named credential event log file, then you can investigate whether a security breach has occurred. This event type is available in the EventLogFile object in API version 53.0 and later.

[One Commerce Usage Event Type](#)

One Commerce Usage events capture information about your Commerce instance. This event type is available in the EventLogFile object in API version 51.0 and later.

[Package Install Event Type](#)

Package Install events contain details about package installation in the organization.

[Platform Encryption Event Type](#)

Platform Encryption event contains information about tenant secret and derived encryption key usage. This event type is available in API versions 41.0 and later.

[Queued Execution Event Type](#)

Queued Execution events contain details about queued executions—for example, batch Apex.

[Report Event Type](#)

Report events contain information about what happened when a user ran a report. This event type includes all activity that's in the Report Export event type, plus more. For example, it has user activity for reports exported as both Formatted Report and Details Only output.

[Report Export Event Type](#)

Report Export events contain details about reports that a user exported. For example, this event type captures when a user exports a report as Details Only output. But it doesn't capture reports that users export as Formatted Report or XLSX Detail output. For that data, see the Report event type.

[REST API Event Type](#)

REST API events contain details about REST-specific requests.

[Sandbox Event Type](#)

Sandbox events contain details about sandbox copies.

[Search Event Type](#)

Search events contain details about the user's search query. All searches within the app, including Experience Cloud sites, are included. However, unauthenticated users won't have a unique Salesforce user ID.

[Search Click Event Type](#)

Search Click events contain details about the user's interaction with the search results. All searches within the app, including Experience Cloud sites, are included. However, unauthenticated users won't have a unique Salesforce user ID.

[Sites Event Type](#)

Sites events contain details of Site.com requests. Requests can originate from the browser (UI).

[SOAP API Event Type](#)

SOAP API events contain details about your org's SOAP API request activity.

[Time-Based Workflow Event Type](#)

Time-Based Workflow events contain details about queue activity monitoring.

[Transaction Security Event Type](#)

Transaction Security events contain details about policy execution.

[URI Event Type](#)

URI events contain details about user interaction with the web browser UI.

[Visualforce Request Event Type](#)

Visualforce Request events contain details of Visualforce requests. Requests can originate from the browser (UI).

[Wave Change Event Type](#)

Wave Change events represent route or page changes made in the Tableau CRM user interface. A Wave Change event type is captured every time the user opens a new Tableau CRM asset or tab or switches between tabs. Wave Change events are logged when opening new tabs and switching back to previously opened tabs.

[Wave Download Event Type](#)

Wave Download events represent downloads made from lens explorations and dashboard widgets in the Tableau CRM user interface. A Wave Download event type is captured when a user downloads images (.png), Microsoft® Excel® data (.xls), or comma-separated values (.csv) files.

[Wave Interaction Event Type](#)

Wave Interaction events represent route or page changes made in the Tableau CRM user interface. A Wave Interaction event type is captured when a tab is closed. It also collates the interaction statistics over the life of the tab, including total open time, read time, and so on. These statistics are aggregated as you go to other tabs and return, and logged only once when the tab is closed.

[Wave Performance Event Type](#)

Wave Performance events help you track trends in your Analytics performance.

SEE ALSO:

[EventLogFile](#)

Apex Callout Event Type

Apex Callout events contain details about callouts (external requests) during Apex code execution.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.</p>
CPU_TIME	<p>Type Number</p>

	<p>Description</p> <p>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.</p>
EVENT_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The type of event. The value is always <code>ApexCallout</code>.</p>
LOGIN_KEY	<p>Type</p> <p>String</p> <p>Description</p> <p>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.</p> <p>For example: <code>GeJCSym5eyvtEK2I</code>.</p>
METHOD	<p>Type</p> <p>String</p> <p>Description</p> <p>The HTTP method of the callout.</p> <p>Example</p> <p>For example: <code>GET</code>, <code>POST</code>, <code>PUT</code>, and so on.</p>
ORGANIZATION_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the organization.</p> <p>For example: <code>00D000000000123</code>.</p> <p>Example</p>
REQUEST_ID	<p>Type</p> <p>String</p> <p>Description</p> <p>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>.</p> <p>For example: <code>3nWgxWbDKWWDIk0FKfF5DV</code>.</p>
REQUEST_SIZE	<p>Type</p> <p>Number</p>

	<p>Description</p> <p>The size of the callout request body, in bytes.</p>
RESPONSE_SIZE	<p>Type</p> <p>Number</p> <p>Description</p> <p>The size of the callout response, in bytes.</p>
RUN_TIME	<p>Type</p> <p>Number</p> <p>Description</p> <p>Not used for this event type. Use the <code>TIME</code> field instead.</p>
SESSION_KEY	<p>Type</p> <p>String</p> <p>Description</p> <p>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.</p> <p>For example: <code>d7DEq/ANa7nNZZVD</code>.</p>
SUCCESS	<p>Type</p> <p>Boolean</p> <p>Description</p> <p>1 if the request was successful, and 0 if not.</p>
TIME	<p>Type</p> <p>Number</p> <p>Description</p> <p>The amount of time that the request took in milliseconds (ms).</p>
TIMESTAMP	<p>Type</p> <p>String</p> <p>Description</p> <p>The access time of Salesforce services in GMT.</p> <p>For example: <code>20130715233322.670</code>.</p>
TIMESTAMP_DERIVED	<p>Type</p> <p>DateTime</p> <p>Description</p> <p>The access time of Salesforce services in ISO8601-compatible format (<code>YYYY-MM-DDTHH:MM:SS.sssZ</code>).</p>

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

TYPE

Type

String

Description

The type of Apex callout.

For example: REST or AJAX.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

URL

Type

String

Description

The callout endpoint URL.

Example

www.salesforce.com

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 005900000000I1SNIA0.

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Apex Execution Event Type

Apex Execution events contain details about Apex classes that are used.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CALLOUT_TIME	<p>Type Number</p> <p>Description Time spent waiting on webservice callouts, in milliseconds.</p>
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". If the user's session context isn't available, this field returns a blank value.</p>
CPU_TIME	<p>Type Number</p> <p>Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.</p>
DB_TOTAL_TIME	<p>Type Number</p> <p>Description Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to <code>CPU_TIME</code> to determine whether performance issues are occurring in the database layer or in your own code.</p>

ENTRY_POINT

Type

String

Description

The entry point for this Apex execution.

Example

- `GeneralCloner.cloneAndInsertRecords`
- `VF- /apex/CloneUser`

EVENT_TYPE

Type

String

DescriptionThe type of event. The value is always `ApexExecution`.

EXEC_TIME

Type

Number

Description

The end-to-end Apex execution time (in milliseconds).

IS_LONG_RUNNING_REQUEST

Type

Boolean

Description

Indicates whether the request is counted against your org's concurrent long-running Apex request limit (`true`) or not (`false`).

-  **Note:** Asynchronous Apex jobs (batch, queueable, scheduled, and future), background processes, and bulk API requests are not counted against the concurrent long-running limit.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: `GeJCsym5eyvtEK2I`.

NUMBER_SOQL_QUERIES

Type

Number

Description

The number of SOQL queries that were executed during the event.

This value is the aggregate across all namespaces, and can exceed the per-namespace limits. For test executions, the aggregate total value across all test methods executed in the request is used. If you are using this value to track limit consumption, consider filtering out test execution quiddities (indicated by the QUIDDITY field).

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D000000000123.

QUIDDITY

Type

String

Description

The type of outer execution associated with this event.

Example

- A–ACS Batch Apex
 - B–Bulk API and Bulk API 2.0
 - BA–Start method of a Batch Apex job
 - C–Scheduled Apex
 - CI–Commerce Integration
 - DL– Discoverable Login page
 - E–Inbound Email Service
 - F–Future
 - FC–Function Callback
 - H–Apex REST
 - I–Invocable Action
 - K–Quick Action
 - L–Lightning
 - M–Remote Action
 - P–Bulk Apex jobs running in parallel
 - PI–Post install script for a managed package
 - Q–Queueable
 - QTXF–Transaction Finalizer for Queueable
 - R–Synchronous uncategorized (which is where all transactions not specified elsewhere end up)
 - S–QueryLocator Batch Apex (Batch Apex jobs run faster when the start method returns a QueryLocator object that doesn't include related records via a subquery. See Batch Apex Best Practices in [Using Batch Apex.](#))
-

- TA—Tests Async
- TD—Tests Deployment
- TS—Tests Synchronous
- V—Visualforce
- W—SOAP Webservice
- X—Execute Anonymous

 **Note:** Implementations of the Process.Plugin interface use the quiddity value **R**.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

Requests with a value over five seconds are considered long-running requests for the purposes of the Concurrent Long-Running Apex Limit.

 **Note:** HTTP callout processing time isn't included when calculating the 5-second limit. We pause the timer for the callout and resume it when the callout completes.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.SSSZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Apex REST API Event Type

Apex REST API events capture information about every Apex REST API request.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#). For information about Apex REST, see [Introduction to Apex REST](#).

Fields

Field	Details
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.</p>
CPU_TIME	<p>Type Number</p> <p>Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.</p>
DB_BLOCKS	<p>Type Number</p> <p>Description Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.</p>
DB_CPU_TIME	<p>Type Number</p> <p>Description The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.</p>
DB_TOTAL_TIME	<p>Type Number</p> <p>Description The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.</p>

ENTITY_NAME

Type

Set

Description

API objects that are accessed.

For example: Account, Opportunity, Contact, and so on.

EVENT_TYPE

Type

String

Description

The type of event. The value is always `ApexRestApi`.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: `GeJCsym5eyvtEK2I`.

MEDIA_TYPE

Type

String

Description

The media type of the response.

METHOD

Type

String

Description

The HTTP method of the request.

For example: `GET`, `POST`, `PUT`, and so on.

NUMBER_FIELDS

Type

Number

Description

The number of fields or columns, where applicable.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: `00D000000000123`.

REQUEST_SIZE

Type

Number

Description

The size of the callout request body, in bytes.

REQUEST_STATUS

Type

String

Description

The status of the request for a page view or user interface action.

Possible values are:

- **S**—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
 - **F**—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
 - **U**—Undefined
 - **A**—Authorization Error
 - **R**—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
 - **N**—Not Found. 404 error.
-

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

RESPONSE_SIZE

Type

Number

Description

The size of the callout response, in bytes.

ROWS_PROCESSED

Type

Number

Description

The number of rows that were processed in the request.

For example: 150.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

STATUS_CODE

Type

Number

Description

The HTTP status code for the response.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_AGENT

Type

Number

Description

The numeric code for the type of client used to make the request (for example, the browser, application, or API).

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

USER_TYPE

Type

String

Description

The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared

with users below them in the customer portal role hierarchy.

- **PowerPartner**—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- **SelfService**—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- **Standard**—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

Apex SOAP Event Type

Apex SOAP events contain details about custom SOAP web service calls.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLASS_NAME	<p>Type String</p> <p>Description The Apex class name. If the class is part of a managed package, this string includes the package namespace.</p>
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.</p>
CLIENT_NAME	<p>Type String</p>

	<p>Description</p> <p>The name of the client that's using Salesforce services. This field is an optional parameter that can be passed in API calls. If blank, the caller didn't specify a client in the CallOptions header.</p>
CPU_TIME	<p>Type</p> <p>Number</p> <p>Description</p> <p>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.</p>
DB_TOTAL_TIME	<p>Type</p> <p>Number</p> <p>Description</p> <p>Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.</p>
EVENT_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The type of event. The value is always ApexSoap.</p>
LIMIT_USAGE_PERCENT	<p>Type</p> <p>Number</p> <p>Description</p> <p>The percentage of Apex SOAP calls that were made against the organization's limit.</p>
LOGIN_KEY	<p>Type</p> <p>String</p> <p>Description</p> <p>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.</p> <p>For example: GeJCSym5eyvtEK2I.</p>
METHOD_NAME	<p>Type</p> <p>String</p> <p>Description</p> <p>The name of the calling Apex method.</p>

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D000000000123.

QUERY

Type

String

Description

The SOQL query, if one was performed.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgXWbDKWWDIk0FKfF5DV.

REQUEST_STATUS

Type

String

Description

The status of the request for a page view or user interface action.

Possible values are:

- S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
 - F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
 - U—Undefined
 - A—Authorization Error
 - R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
 - N—Not Found. 404 error.
-

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

Requests with a value over five seconds are considered long-running requests for the purposes of the Concurrent Long-Running Apex Limit.

 **Note:** HTTP callout processing time isn't included when calculating the 5-second limit. We pause the timer for the callout and resume it when the callout completes.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

	<p>Description</p> <p>The 15-character ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00530000009M943</p>
USER_ID_DERIVED	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00590000000I1SNIA0.</p>
USER_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The category of user license.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • <code>CsnOnly</code>—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • <code>CspLitePortal</code>—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • <code>CustomerSuccess</code>—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • <code>Guest</code>—Users whose access is limited so that your customers can view and interact with your site without logging in. • <code>PowerCustomerSuccess</code>—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • <code>PowerPartner</code>—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • <code>SelfService</code>—Users whose access is limited because they're organization customers and access the application through a self-service portal.

- **Standard**—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Apex Trigger Event Type

Apex Trigger events contain details about triggers that fire in an organization.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.</p>
CPU_TIME	<p>Type Number</p> <p>Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.</p>
DB_TOTAL_TIME	<p>Type Number</p> <p>Description Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.</p>
ENTITY_NAME	<p>Type String</p>

	<p>Description The name of the object affected by the trigger.</p>
EVENT_TYPE	<p>Type String</p> <p>Description The type of event. The value is always <code>ApexTrigger</code>.</p>
EXEC_TIME	<p>Type Number</p> <p>Description The end-to-end Apex execution time (in milliseconds).</p>
LOGIN_KEY	<p>Type String</p> <p>Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: <code>GeJCSym5eyvtEK2I</code>.</p>
ORGANIZATION_ID	<p>Type Id</p> <p>Description The 15-character ID of the organization. For example: <code>00D000000000123</code>.</p>
REQUEST_ID	<p>Type String</p> <p>Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>. For example: <code>3nWgxWbDKWWDIk0FKfF5DV</code>.</p>
REQUEST_STATUS	<p>Type String</p> <p>Description The status of the request for a page view or user interface action. Possible values are:</p>

- S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- U—Undefined
- A—Authorization Error
- R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- N—Not Found. 404 error.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

Requests with a value over five seconds are considered long-running requests for the purposes of the Concurrent Long-Running Apex Limit.

Note: HTTP callout processing time isn't included when calculating the 5-second limit. We pause the timer for the callout and resume it when the callout completes.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

TRIGGER_ID

Type

String

Description

The 15-character ID of the trigger that was fired.

TRIGGER_NAME

Type

String

Description

For triggers coming from managed packages, TRIGGER_NAME includes a namespace prefix separated with a . character. If no namespace prefix is present, the trigger is from an unmanaged trigger.

Examples:

- examplePackage.managedExampleTrigger - Managed trigger from the examplePackage namespace
 - unmanagedExampleTrigger - Unmanaged trigger
-

TRIGGER_TYPE

Type

String

Description

The type of this trigger.

Possible Values

- AfterInsert
 - AfterUpdate
 - BeforeInsert
 - BeforeUpdate
-

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

USER_TYPE

Type

String

Description

The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.

- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

[EventLogFile](#)

Apex Unexpected Exception Event Type

The Apex Unexpected Exception event type captures information about unexpected exceptions in Apex code execution. This event type is available in the EventLogFile object in API version 45.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
EVENT_TYPE	<p>Type String</p> <p>Description The type of event. The value is always <code>ApexUnexpectedException</code>.</p>
EXCEPTION_MESSAGE	<p>Type Text</p> <p>Description The type of exception.</p> <p>Example Divide by 0</p>
EXCEPTION_TYPE	<p>Type String</p> <p>Description The type of exception.</p> <p>Example System.MathException</p>
ORGANIZATION_ID	<p>Type Id</p>

Field	Details
	<p>Description</p> <p>The 15-character ID of the organization.</p> <p>For example: 00D000000000123.</p>
REQUEST_ID	<p>Type</p> <p>String</p> <p>Description</p> <p>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.</p> <p>For example: 3nWgXWbDKWWDIk0FKfF5DV.</p>
STACK_TRACE	<p>Type</p> <p>Text</p> <p>Description</p> <p>The stack trace for the exception.</p> <p> Note: If the exception is thrown from a managed package, STACK_TRACE is omitted.</p> <p>Example</p> <pre>Class.OpportunityUtility.insert: line 22, column 1 AnonymousBlock: line 1, column 1</pre>
TIMESTAMP	<p>Type</p> <p>String</p> <p>Description</p> <p>The access time of Salesforce services in GMT.</p> <p>For example: 20130715233322.670.</p>
TIMESTAMP_DERIVED	<p>Type</p> <p>DateTime</p> <p>Description</p> <p>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.SSSZ).</p> <p>For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.</p>

API Total Usage

API Total usage events contain details about Platform SOAP API, Platform REST API, and Bulk API requests (for API versions up to and including v30.0).

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
API_FAMILY	<p>Type String</p> <p>Description The API family. For example, REST, SOAP, or Bulk.</p>
API_RESOURCE	<p>Type String</p> <p>Description The API method or resource. For example, <code>describeSObjects</code> for SOAP, or <code>/v21.0/subjects/Account/001xx000003DGQW</code> for REST.</p>
API_VERSION	<p>Type Number</p> <p>Description The API version. For example, 21.</p>
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.</p>
CLIENT_NAME	<p>Type String</p> <p>Description The name of the client making the API request. Includes values passed via the Sforce-Call-Options header.</p>
CONNECTED_APP_ID	<p>Type String</p>

	<p>Description</p> <p>The ID of the connected app making the API request.</p> <p>If the connected app ID includes the prefix <i>0H4</i>, append it to the connected app ID in the My Domain URL to access app details (<i>https://MyDomainName.my.salesforce.com/0H4xxxxxxxxxxx</i>). If, however, the connected app ID uses the prefix <i>888</i>, contact Salesforce Customer Support for app details.</p>
COUNTS_AGAINST_API_LIMIT	<p>Type</p> <p>Boolean</p> <p>Description</p> <p>Whether the request counted against the API limit (<i>true</i>) or not (<i>false</i>).</p>
EVENT_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The type of event. The value is always <i>ApiTotalUsage</i>.</p>
HTTP_METHOD	<p>Type</p> <p>String</p> <p>Description</p> <p>The HTTP method. For example, <i>GET</i>.</p>
ORGANIZATION_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the organization.</p> <p>For example: <i>00D000000000123</i>.</p>
REQUEST_ID	<p>Type</p> <p>String</p> <p>Description</p> <p>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <i>REQUEST_ID</i>.</p> <p>For example: <i>3nWgxWbDKWWDIk0FKfF5DV</i>.</p>
TIMESTAMP	<p>Type</p> <p>String</p> <p>Description</p> <p>The access time of Salesforce services in GMT.</p>

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the API.

For example: 00530000009M943

Asynchronous Report Run Event Type

Asynchronous Report Run events are created for reporting requests that are scheduled. This category includes dashboard refreshes, asynchronous reports, schedule reports, and analytics snapshots.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
AVERAGE_ROW_SIZE	<p>Type Number</p> <p>Description The average row size of all rows in the Asynchronous Report Run event, in bytes. A large average size, coupled with a high ROW_COUNT, can indicate that a user is downloading information for fraudulent purposes. For example, a salesperson who downloads all sales leads before departing for a competitor.</p> <p>Example 700</p>
CLIENT_IP	<p>Type String</p>

Description

The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP".
For example: 96.43.144.26.

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

DASHBOARD_ID

Type

String

Description

The 15-character ID of the dashboard that was run.

DB_TOTAL_TIME

Type

Number

Description

The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.

DB_BLOCKS

Type

Number

Description

Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.

DB_CPU_TIME

Type

Number

Description

The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.

DISPLAY_TYPE

Type

String

	<p>Description</p> <p>The report display type, indicating the run mode of the report.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • D—Dashboard • S—Show Details • H—Hide Details
ENTITY_NAME	<p>Type</p> <p>String</p> <p>Description</p> <p>The name of the object affected by the trigger.</p>
EVENT_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The type of event. The value is always <code>AsynchronousReportRun</code>.</p>
LOGIN_KEY	<p>Type</p> <p>String</p> <p>Description</p> <p>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.</p> <p>For example: <code>GeJCSym5eyvtEK2I</code>.</p>
NUMBER_BUCKETS	<p>Type</p> <p>Number</p> <p>Description</p> <p>The number of buckets that were used in the report.</p>
NUMBER_COLUMNS	<p>Type</p> <p>Number</p> <p>Description</p> <p>The number of columns in the report.</p>
NUMBER_EXCEPTION_FILTERS	<p>Type</p> <p>Number</p> <p>Description</p> <p>The number of exception filters that are used in the report.</p>
ORGANIZATION_ID	<p>Type</p> <p>Id</p>

Description

The 15-character ID of the organization.

For example: 00D000000000123.

ORIGIN

Type

String

Description

The context in which the report executed, such as from a UI (Classic, Lightning, Mobile), through an API (synchronous, asynchronous, Apex), or through a dashboard.

Possible Values

- `ReportOpenedFromMobileDashboard`: Report executed when a user clicked a dashboard component on a mobile device and drilled down to a report.
 - `DashboardComponentUpdated`: Report executed when a user refreshed a dashboard component.
 - `DashboardComponentPreviewed`: Report executed from a Lightning dashboard component preview.
 - `ReportRunUsingSynchronousApi`: Report executed from a synchronous API.
 - `ReportRunUsingAsynchronousApi`: Report executed from an asynchronous API.
 - `ReportRunUsingApexSynchronousApi`: Report executed from the synchronous Apex API.
 - `ReportRunUsingApexAsynchronousApi`: Report executed from the asynchronous Apex API.
 - `ReportExported`: Report executed from a printable view or report export that was not asynchronous nor an API export.
 - `ReportRunFromClassic`: Report executed from the Run Report option of Salesforce Classic.
 - `ReportRunFromMobile`: Report executed from the Run Report option of the mobile Salesforce app.
 - `ReportRunFromLightning`: Report executed from the Run option in Lightning Experience from a non-mobile browser.
 - `ReportRunFromRestApi`: Report executed from the REST API.
 - `ReportPreviewed`: Report executed when a user got preview results while using the report builder.
 - `ReportScheduled`: Report was scheduled.
 - `ProbeQuery`: Report executed from a probe query.
-

- `ReportRunFromReportingSnapshot`: Report executed through Snapshot Analytics.
- `ReportExportedAsynchronously`: Report was exported asynchronously.
- `ReportExportedUsingExcelConnector`: Report was exported using the Excel connector.
- `ChartRenderedOnVisualforcePage`: Report executed from a rendered chart on a VisualForce Page.
- `ChartRenderedInEmbeddedAnalyticsApp`: Report executed from a rendered chart in an embedded Analytics app.
- `ReportRunAndNotificationSent`: Report executed through the notifications API.
- `ChartRenderedOnHomePage`: Report executed from a rendered chart on the home page.
- `ReportResultsAddedToWaveTrending`: Report executed when a user trended a report in Tableau CRM.
- `ReportAddedToCampaign`: Report was added from an Add to Campaign action.
- `ReportResultsAddedToEinsteinDiscovery`: Report executed synchronously from Einstein Discovery.
- `Unknown`: Report execution origin is unknown.
- `Test`: Report execution resulted from a test.

RENDERING_TYPE

Type

String

Description

Describes the format of the report output in Salesforce Classic. If the report was exported in Lightning Experience, this field is blank.

Possible Values

- w: Web (HTML)
- E: Email
- P: Printable
- X: Excel
- C: Comma-separated values (CSV)
- J: JavaScript Object Notation (JSON)
- D: Dummy data

REPORT_ID

Type

Id

Description

The 15-character ID of the report that was run.

REPORT_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the report that was run.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

REQUEST_STATUS

Type

String

Description

The status of the request for a page view or user interface action.

Possible values are:

- `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- `U`—Undefined
- `A`—Authorization Error
- `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- `N`—Not Found. 404 error.

ROW_COUNT

Type

Number

Description

The number of rows that were processed in the Asynchronous Report Run event. High row counts, coupled with a high `AVERAGE_ROW_SIZE`, can indicate that a user is downloading information for fraudulent purposes. For example, a salesperson who downloads all sales leads before departing for a competitor.

Example

150

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZVD.

SORT

Type

String

Description

The sort column and order that was used in the report.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

USER_TYPE

Type

String

Description

The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.

- **SelfService**—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- **Standard**—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

[EventLogFile](#)

Aura Request Event Type

Aura Request events contain details of requests to Apex methods from Aura and Lightning web components. For example, you can benchmark request time or identify the URI of an unsuccessful request.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
ACTION_MESSAGE	<p>Type String</p> <p>Description The action (Apex method) names and times for all the actions in the request in the format:</p> <pre>action1Name=action1Time;action2Name=action2Time...</pre>
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.</p>
CPU_TIME	<p>Type Number</p> <p>Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.</p>

DB_TOTAL_TIME

Type

Number

Description

The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.

EVENT_TYPE

Type

String

Description

The type of event. The value is always `AuraRequest`.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: `GeJCSym5eyvtEK2I`.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: `00D000000000123`.

Example

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: `3nWgxWbDKWWDIk0FKfF5DV`.

REQUEST_METHOD

Type

String

Description

The HTTP method of the request, such as GET or POST.

REQUEST_STATUS

Type

String

Description

The status of the request for a page view or user interface action.

Possible values are:

- S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- U—Undefined
- A—Authorization Error
- R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- N—Not Found. 404 error.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555z. Timezone is GMT.

URI

Type

String

Description

The URI of the resource that's receiving the request.

For example: /aura.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_AGENT

Type

Number

Description

The numeric code for the type of client used to make the request (for example, the browser, application, or API).

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

USER_TYPE

Type

String

Description

The category of user license.

Possible values are:

- `csnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.

- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Bulk API Event Type

Bulk API events contain details about Bulk API requests.

Note: This event type does not include Bulk API 2.0 requests. For information about the BulkApi2 event type, see [Bulk API 2.0 Event Type](#) on page 1493.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
-------	---------

BATCH_ID

Type

String

Description

The 15-character ID of the Bulk API batch.

CLIENT_IP

Type

String

Description

The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

ENTITY_TYPE

Type

String

Description

The type of entity that the Bulk API used.

EVENT_TYPE

Type

String

Description

The type of event. The value is always BulkApi.

JOB_ID

Type

String

Description

The 15-character ID of the Bulk API job.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCSym5eyvtEK2I.

MESSAGE

Type

EscapedString

Description

Any success or error message that's associated with the request.

NUMBER_FAILURES

Type

Number

Description

The number of failures that were returned with the request.

OPERATION_TYPE

Type

String

Description

The type of Bulk API operation that was performed.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D000000000123.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgXWbDKWWDIk0FKfF5DV.

ROWS_PROCESSED

Type

Number

Description

The number of rows that were processed in the request.

For example: 150.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

	<p>Description</p> <p>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.</p> <p>For example: d7DEq/ANa7nNZZVD.</p>
SUCCESS	<p>Type</p> <p>Boolean</p> <p>Description</p> <p>Whether the batch was successful.</p>
TIMESTAMP	<p>Type</p> <p>String</p> <p>Description</p> <p>The access time of Salesforce services in GMT.</p> <p>For example: 20130715233322.670.</p>
TIMESTAMP_DERIVED	<p>Type</p> <p>DateTime</p> <p>Description</p> <p>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).</p> <p>For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.</p>
URI	<p>Type</p> <p>String</p> <p>Description</p> <p>The URI of the page that's receiving the request.</p> <p>For example: /home/home.jsp.</p>
URI_ID_DERIVED	<p>Type</p> <p>ID</p> <p>Description</p> <p>The 18-character case insensitive ID of the URI of the page that's receiving the request.</p>
USER_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00530000009M943</p>

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 005900000000I1SNIA0.

Bulk API 2.0 Event Type

BulkApi2 events contain details about Bulk API 2.0 requests.

Note: This event type does not include Bulk API requests. For information about the BulkApi event type, see [Bulk API Event Type](#) on page 1489.

You can monitor the following Bulk API 2.0 parameters:

- The type of data processed via Bulk API 2.0 operations, and how much of that data was processed.
- Bulk API 2.0 limits.
- For jobs, track how long it takes to complete, database, and CPU usage.
- Understand users and the operations they performed.
- Detailed errors and failures.

BulkApi2 events represent the steps in the Bulk API 2.0 workflow and changes in job state.

For a Bulk API 2.0 **Ingest** job, an event is emitted when a job is marked:

- created
 - Note: For multi-part requests, there is no “created” event emitted, only an uploadComplete event.
- uploadComplete
- inProgress
- with a processing update
- complete
- aborted
- deleted

For a Bulk API 2.0 **Query** job, an event is emitted when a job is marked:

- created
- uploadComplete
- inProgress
- with a processing update
- complete
- aborted

- deleted

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.</p>
CPU_TIME	<p>Type Number</p> <p>Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.</p>
ENTITY_TYPE	<p>Type String</p> <p>Description The type of entity that Bulk API 2.0 used. For example, <code>Account</code> or <code>Contact</code>.</p>
EVENT_TYPE	<p>Type String</p> <p>Description The type of event. The value is always <code>BulkApi2</code>.</p>
JOB_ID	<p>Type String</p> <p>Description The 15-character ID of the Bulk API 2.0 job.</p>
JOB_STATUS	<p>Type String</p> <p>Description The job's current status.</p>
LOGIN_KEY	<p>Type String</p>

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: GeJCsym5eyvtEK2I.

OPERATION_TYPE

Type

String

Description

The type of Bulk API 2.0 operation that was performed.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D00000000123.

RECORDS_FAILED

Type

Number

Description

The total number of records that failed.

For example: 150.

RECORDS_PROCESSED

Type

Number

Description

Number of records processed for this event.

For example: 980.

Note: The number of records processed is reported differently for ingest and query jobs.

For *ingest* jobs:

- Events with a status of `InProgress` report (if applicable) the number of records processed.

For *query* jobs:

- Events with a status of `JobComplete` or `InProgress` report (if applicable) the number of records processed.

RESULT_SIZE_MB

Type

Number

Description

Number of megabytes returned in query. Empty for ingest jobs.

For example: 670.

Note: RESULT_SIZE_MB currently does not emit events, but is shown here as a placeholder for future enhancement.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgZWbDKWWDIk0FKfF5DV.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case-safe ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case-safe ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

Change Set Operation Event Type

Change Set Operation events contain information from change set migrations.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CHANGE_SET_NAME	Type String Description The name of the change set.
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CPU_TIME	Type Number

	<p>Description</p> <p>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.</p>
EVENT_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The type of event. The value is always <code>ChangeSetOperation</code>.</p>
LOGIN_KEY	<p>Type</p> <p>String</p> <p>Description</p> <p>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.</p> <p>For example: <code>GeJCSym5eyvtEK2I</code>.</p>
OPERATION	<p>Type</p> <p>String</p> <p>Description</p> <p>The operation that's being performed.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • DELETE • DEPLOY • UPLOAD • VALIDATE
ORGANIZATION_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the organization.</p> <p>For example: <code>00D000000000123</code>.</p>
REQUEST_ID	<p>Type</p> <p>String</p> <p>Description</p> <p>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>.</p> <p>For example: <code>3nWgxWbDKWWDIk0FKfF5DV</code>.</p>

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZVD.

TARGET_ORG_ID

Type

Id

Description

The 15-character ID of the organization that's receiving the change set.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.SSSZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

	<p>Description</p> <p>The 18-character case insensitive ID of the URI of the page that's receiving the request.</p>
USER_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00530000009M943</p>
USER_ID_DERIVED	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00590000000I1SNIA0.</p>

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Concurrent Long-Running Apex Limit Event Type

Concurrent Long-Running Apex Limit events contain information about long-running concurrent Apex requests in your org that Salesforce terminated after reaching your org's concurrency limit. Requests with an established Apex context that execute for 5 seconds are counted towards your org's limit of concurrent long-running requests. (Asynchronous requests don't count towards the limit.) When there are more than 10 long-running requests (org default limit), additional long-running requests are terminated. This event type is available in the EventLogFile object in API version 45.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
EVENT_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The type of event. The value is always <code>ConcurrentLongRunningApexLimit</code>.</p>
NUMBER_REQUESTS	<p>Type</p> <p>Number</p>

Field	Details
	<p>Description</p> <p>Count of requests with an established Apex context executing for longer than 5 seconds in your org.</p>
ORGANIZATION_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the organization.</p> <p>For example: 00D000000000123.</p>
REQUEST_ID	<p>Type</p> <p>String</p> <p>Description</p> <p>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>.</p> <p>For example: 3nWgxWbDKWWDIk0FKfF5DV.</p>
REQUEST_URI	<p>Type</p> <p>String</p> <p>Description</p> <p>URI of the long-running Apex request that Salesforce terminated.</p> <p>Example</p> <p>/apex/ApexClassName</p>
REQUESTS_LIMIT	<p>Type</p> <p>Number</p> <p>Description</p> <p>Maximum count of requests with an established Apex context that can execute for longer than 5 seconds. When <code>NUMBER_REQUESTS</code> reaches this limit, then additional long-running Apex requests are terminated. (Asynchronous requests don't count towards the limit.) The default limit is 10.</p> <p>Example</p> <p>10</p>
TIMESTAMP	<p>Type</p> <p>String</p> <p>Description</p> <p>The access time of Salesforce services in GMT.</p> <p>For example: 20130715233322.670.</p>
TIMESTAMP_DERIVED	<p>Type</p> <p>DateTime</p>

Field	Details
	<p>Description</p> <p>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.SSSZ).</p> <p>For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.</p>
USER_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00530000009M943</p>

Usage

For example, you can monitor Concurrent Long-Running Apex Limit log counts to get a benchmark or plot a count by hour. To identify where the limit was exceeded, see the REQUEST_URI field. Then, cross-reference this data with [Apex Execution event](#) data where the average RUN_TIME exceeds 5 seconds. To identify synchronous requests only, cross-reference event data with the QUIDDITY field in Apex Execution event data. For example, QUIDDITY NOT IN (A,BA,F,Q,S) and CALLOUT_TIME (>5000).

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

[Salesforce Developers Blog: Designing Force.com Applications That Avoid Hitting Concurrent Request Limits](#)

Console Event Type

Console events contain information about the performance and use of Salesforce Consoles. The Console events are logged whenever a Console tab is opened with a sidebar component. Outside of that, when Console tabs are opened, a regular view record detail event is served just like in Salesforce Classic.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	<p>Type</p> <p>String</p> <p>Description</p> <p>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP".</p> <p>For example: 96.43.144.26.</p>

COMPONENT_ID	Type Id
	Description The 15-character ID of the component.
COMPONENT_ID_DERIVED	Type Id
	Description The 18-character, case-insensitive ID of the component.
CONSOLE_ID	Type Id
	Description The 15-character ID of the console.
CONSOLE_ID_DERIVED	Type Id
	Description The 18-character, case-insensitive ID of the console.
CPU_TIME	Type Number
	Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DB_TOTAL_TIME	Type Number
	Description The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.
EVENT_TYPE	Type String
	Description The type of event. The value is always Console.
LICENSE_CONTEXT	Type String

Description

The license context in which a user is using a console.

Example

service, salesandservice, sales

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: GeJCsym5eyvtEK2I.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D000000000123.

RECORD_ID

Type

Id

Description

The 15-character ID of the record that's associated with the console.

RECORD_ID_DERIVED

Type

Id

Description

The 18-character, case-insensitive ID of the record that's associated with the console.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

REQUEST_STATUS

Type

String

Description

The status of the request for a page view or user interface action.

Possible values are:

- S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- U—Undefined
- A—Authorization Error
- R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- N—Not Found. 404 error.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

USER_TYPE

Type

String

Description

The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.

- **Guest**—Users whose access is limited so that your customers can view and interact with your site without logging in.
- **PowerCustomerSuccess**—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- **PowerPartner**—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- **SelfService**—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- **Standard**—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

Content Distribution Event Type

Content Distribution events contain information about content distributions and deliveries to users.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
ACTION	<p>Type String</p> <p>Description The action that's used when a delivery is viewed.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • VIEW • INSERT • UPDATE

DELIVERY_ID

Type

Id

Description

The 15-character ID of the content delivery.

DELIVERY_LOCATION

Type

String

Description

The location of the delivery.

EVENT_TYPE

Type

String

DescriptionThe type of event. The value is always `ContentDistribution`.

ORGANIZATION_ID

Type

Id

DescriptionThe 15-character ID of the organization.
For example: 00D000000000123.

RELATED_ENTITY_ID

Type

Id

Description

The 15-character ID of the record that's associated with the delivery distribution.

REQUEST_ID

Type

String

DescriptionThe unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: 3nWgXWbDKWWDIk0FKfF5DV.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.SSSZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

VERSION_ID

Type

Id

Description

The 15-character ID of the content version.

Content Document Link Event Type

Content Document Link events contain sharing information for content documents.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field**Details**

DOCUMENT_ID

Type

Id

	<p>Description The 15-character ID of the document that's being shared.</p>
EVENT_TYPE	<p>Type String</p> <p>Description The type of event. The value is always <code>ContentDocumentLink</code>.</p>
ORGANIZATION_ID	<p>Type Id</p> <p>Description The 15-character ID of the organization. For example: 00D000000000123.</p>
REQUEST_ID	<p>Type String</p> <p>Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>. For example: 3nWgxWbDKWWDIk0FKfF5DV.</p>
SHARED_WITH_ENTITY_ID	<p>Type Id</p> <p>Description Who the document was shared with.</p>
SHARING_OPERATION	<p>Type String</p> <p>Description The type of sharing operation on the document.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • INSERT • UPDATE • DELETE
SHARING_PERMISSION	<p>Type String</p> <p>Description What permissions the document was shared with.</p>

Possible Values

- v: Viewer
- c: Collaborator
- I: Inferred—that is, the sharing permissions were inferred from a relationship between the viewer and document. For example, a document’s owner has a sharing permission to the document itself. Or, a document can be a part of a content collection, and the viewer has sharing permissions to the collection rather than explicit permissions to the document directly.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

USER_ID

Type

Id

Description

The 15-character ID of the user who’s using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who’s using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

Continuation Callout Summary Event Type

Continuation Callout Summary events contain information about all of the asynchronous callouts performed during a transaction, their response status codes, execution times, and URL endpoint destinations. This event type is available in the EventLogFile object in API version 43.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or the [REST API Developer's Guide](#).

Fields

Field	Details
CONTINUATION_ID	<p>Type</p> <p>String</p> <p>Description</p> <p>A unique ID identifying a sequence of events within a request.</p>

Field	Details
	<p>Example SFDC-Continuation-14e3cg85-961d-389e-7bz1-3d171543162a</p>
DURATION	<p>Type Number</p> <p>Description Total duration of continuation, in milliseconds.</p>
EVENT_TYPE	<p>Type String</p> <p>Description The type of event. The value is always <code>ContinuationCalloutSummary</code>.</p>
ORGANIZATION_ID	<p>Type Id</p> <p>Description The 15-character ID of the organization. For example: 00D000000000123.</p>
ORIGIN_REQUEST_ID	<p>Type Id</p> <p>Description The ID of the request that initiated a callout.</p> <p>Example TID:5lLoVKlztX_rDDJcp7</p>
REQUEST_FORM_SIZE	<p>Type String</p> <p>Description Continuation request form size, in bytes. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values.</p>
REQUEST_ID	<p>Type String</p> <p>Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>. For example: 3nWgxWbDKWWDIk0FKfF5DV.</p>
RESPONSE_SIZE	<p>Type String</p>

Field	Details
	<p>Description</p> <p>The size of the callout response, in bytes. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values.</p>
STATUS_CODE	<p>Type</p> <p>String</p> <p>Description</p> <p>The HTTP status or internal code returned by the remote endpoint. A status code of 200 indicates that the request was successful. Other status code values indicate the type of problem that was encountered. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values.</p> <p>Examples</p> <ul style="list-style-type: none"> • 2000—The timeout was reached, and the server didn't get a chance to respond. • 2001—There was a connection failure. • 2002—Exceptions occurred. • 2003—The response hasn't arrived (which also means that the Apex asynchronous callout framework hasn't resumed). • 2004—The response size is too large (greater than 1 MB).
SUCCESS	<p>Type</p> <p>Boolean</p> <p>Description</p> <p>Indicates whether the continuation was successful (1) or not (0).</p>
TIMESTAMP	<p>Type</p> <p>String</p> <p>Description</p> <p>The access time of Salesforce services in GMT.</p> <p>For example: 20130715233322.670.</p>
TIMESTAMP_DERIVED	<p>Type</p> <p>DateTime</p> <p>Description</p> <p>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.SSSZ).</p> <p>For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.</p>
URL	<p>Type</p> <p>String</p> <p>Description</p> <p>The callout endpoint URL. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values.</p>

Field	Details
	<p>Example</p> <p>http://prod.location.amazonaws.com:1000/orders/order/_search</p>
USER_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00530000009M943</p>
USER_ID_DERIVED	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00590000000I1SNIA0.</p>
VF_CONTROLLER_SIZE	<p>Type</p> <p>String</p> <p>Description</p> <p>Continuation Visualforce controller size, in bytes. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values.</p>

[EventLogFile](#)

CORS Violation Record Event Type

CORS Violation Record events capture information about Cross-Origin Resource Sharing (CORS) violations. Cross-origin requests to Lightning apps are blocked unless the request comes from a URL listed in your CORS allowlist.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
EVENT_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The type of event. The value is always CorsViolation.</p>

HOST

Type

String

Description

The URL of the requested Salesforce resource.

If JavaScript code at `https://www.example.com` requests a resource from

`https://www.salesforce.com`, the origin is

`https://www.example.com` and the host is

`https://www.salesforce.com`.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D000000000123.

ORIGIN

Type

String

Description

The URL of the site making the cross-origin request to Salesforce.

If JavaScript code at `https://www.example.com` requests a resource from

`https://www.salesforce.com`, the origin is

`https://www.example.com` and the host is

`https://www.salesforce.com`.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.SSSZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

Dashboard Event Type

Dashboard events contain details about dashboards that users view.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.</p>
CPU_TIME	<p>Type Number</p> <p>Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.</p>
DASHBOARD_COMPONENT_ID	<p>Type Id</p> <p>Description The 15-character ID of the dashboard component.</p>
DASHBOARD_ID	<p>Type String</p> <p>Description The 15-character ID of the dashboard that was run.</p>
DASHBOARD_ID_DERIVED	<p>Type String</p>

	<p>Description</p> <p>The 18-character case insensitive ID of the dashboard that was run.</p>
DASHBOARD_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The type of dashboard.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • R: Run as running user • C: Run as context user • S: Run as specific user
EVENT_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The type of event. The value is always <code>Dashboard</code>.</p>
IS_SCHEDULED	<p>Type</p> <p>Boolean</p> <p>Description</p> <p>The value is <code>true</code> if the dashboard is a scheduled dashboard.</p>
IS_SUCCESS	<p>Type</p> <p>Boolean</p> <p>Description</p> <p>1 if the dashboard component ran successfully, 0 if it didn't.</p>
LOGIN_KEY	<p>Type</p> <p>String</p> <p>Description</p> <p>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.</p> <p>For example: <code>GeJCsym5eyvtEK2I</code>.</p>
ORGANIZATION_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the organization.</p> <p>For example: <code>00D000000000123</code>.</p>

REPORT_ID	<p>Type Id</p> <p>Description The 15-character ID of the report that was run.</p>
REPORT_ID_DERIVED	<p>Type Id</p> <p>Description The 18-character case insensitive ID of the report that was run.</p>
REQUEST_ID	<p>Type String</p> <p>Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxBbDKWWDIk0FKfF5DV.</p>
RUN_TIME	<p>Type Number</p> <p>Description The amount of time that the request took in milliseconds.</p>
SESSION_KEY	<p>Type String</p> <p>Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.</p>
TIMESTAMP	<p>Type String</p> <p>Description The access time of Salesforce services in GMT. For example: 20130715233322.670.</p>
TIMESTAMP_DERIVED	<p>Type DateTime</p> <p>Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).</p>

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

Document Attachment Downloads Event Type

Document Attachment Downloads events contain details of document and attachment downloads.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field

Details

ENTITY_ID

Type

Id

Description

The 15-character ID of the entity that's associated with the document or attachment.

EVENT_TYPE

Type

String

Description

The type of event. The value is always DocumentAttachmentDownloads.

FILE_TYPE

Type

String

Description

The type of the file or attachment.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.
For example: 00D000000000123.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgXWbDKWWDIk0FKfF5DV.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

External Cross-Org Callout Event Type

External Cross-Org Callout events represent external data callouts via the cross-org adapter for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer Guide](#).

 **Note:** For the cross-org adapter for Salesforce Connect, event monitoring currently doesn't track search callouts.

Fields

Field**Details**

ACTION

Type

String

Description

Action performed by the callout.

Possible Values

- query
 - upsert
 - delete
-

Field	Details
ENTITY	<p>Type String</p> <p>Description Name of the external object being accessed.</p> <p>Example Order</p>
EVENT_TYPE	<p>Type String</p> <p>Description Type of event. Value is always <code>ExternalCrossOrgCallout</code>.</p>
EXECUTE_MS	<p>Type Number</p> <p>Description How long it took (in milliseconds) for Salesforce to prepare and execute the query. Available in API version 42.0 and later.</p> <p>Example 1</p>
FETCH_MS	<p>Type Number</p> <p>Description How long it took (in milliseconds) to retrieve the query results from the external system. Available in API version 42.0 and later.</p> <p>Example 452</p>
FILTER	<p>Type Text</p> <p>Description Field expressions to filter which rows to return. Corresponds to <code>WHERE</code> in SOQL queries.</p> <p>Example <code>WHERE CustomerId='123456'</code></p>
HAVING	<p>Type Text</p> <p>Description Reserved for future use.</p>
LIMIT	<p>Type Number</p>

Field	Details
	<p>Description Maximum number of rows to return for a query. Corresponds to <code>LIMIT</code> in SOQL queries.</p> <p>Example 200</p>
MESSAGE	<p>Type String</p> <p>Description Error or warning message associated with the failed query callout. Value is always empty for upsert and delete callouts.</p> <p>Example System.UnexpectedException: Query is either selecting too many fields or the filter conditions are too complicated</p>
OFFSET	<p>Type Number</p> <p>Description Number of rows to skip when paging through a result set. Corresponds to <code>OFFSET</code> in SOQL queries. If a SOQL query doesn't define an <code>OFFSET</code>, the value is -1.</p> <p>Example 0 (default)</p>
ORDERBY	<p>Type String</p> <p>Description Field or column to use for sorting query results, and whether to sort the results in ascending (default) or descending order. Corresponds to <code>ORDER BY</code> in SOQL queries.</p> <p>Examples</p> <ul style="list-style-type: none"> • ORDER BY ShipName • ORDER BY ShipName DESC
ORGANIZATION_ID	<p>Type Id</p> <p>Description 15-character ID of the organization.</p> <p>Example 00D000000000123</p>
REQUEST_ID	<p>Type String</p>

Field	Details
	<p>Description Unique ID of a transaction. A transaction can contain one or more events. All events in a transaction have the same REQUEST_ID.</p> <p>Example 4A13-HSKv3CKs-0FKfceaV</p>
ROWS	<p>Type Number</p> <p>Description Total number of records in the result set. Value is always 0 for upsert and delete callouts.</p> <p>Example 200</p>
ROWS_FETCHED	<p>Type Number</p> <p>Description Reserved for future use.</p>
SELECT	<p>Type String</p> <p>Description Comma-separated list of fields being queried. Corresponds to <code>SELECT</code> in SOQL queries.</p> <p>Example SELECT Id,Name,CustomerID,OrderDate</p>
STATUS	<p>Type Boolean</p> <p>Description Whether the query was successful. Value is always empty for upsert and delete callouts.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • 1—Success • 0—Failed
SUBQUERIES	<p>Type Number</p> <p>Description The number of subqueries that the query is split into.</p>
THROUGHPUT	<p>Type Number</p>

Field	Details
	<p>Description Reserved for future use.</p>
TIMESTAMP	<p>Type String</p> <p>Description The access time of Salesforce services in GMT. For example: 20130715233322.670.</p>
TIMESTAMP_DERIVED	<p>Type DateTime</p> <p>Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.</p>
TOTAL_MS	<p>Type Number</p> <p>Description How long it took (in milliseconds) to prepare and execute the query and to retrieve the query results.</p> <p>Example 453</p>
USER_ID	<p>Type Id</p> <p>Description 15-character ID of the user accessing the external system.</p> <p>Example 00530000009M943</p>
USING_MRU	<p>Type Boolean</p> <p>Description Reserved for future use.</p>

External Custom Apex Callout Event Type

External Custom Apex Callout events represent external data callouts via custom adapters for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer Guide](#).

Fields

Field	Details
ACTION	<p>Type String</p> <p>Description Action performed by the callout.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • query • upsert • delete
ENTITY	<p>Type String</p> <p>Description Name of the external object being accessed.</p> <p>Example Order</p>
EVENT_TYPE	<p>Type String</p> <p>Description Type of event. Value is always <code>ExternalCustomApexCallout</code>.</p>
EXECUTE_MS	<p>Type Number</p> <p>Description How long it took (in milliseconds) for Salesforce to prepare and execute the query. Available in API version 42.0 and later.</p> <p>Example 102</p>
FETCH_MS	<p>Type Number</p> <p>Description How long it took (in milliseconds) to retrieve the query results from the external system. Available in API version 42.0 and later.</p>

Field	Details
	<p>Example 607</p>
FILTER	<p>Type Text</p> <p>Description Field expressions to filter which rows to return. Corresponds to <code>WHERE</code> in SOQL queries.</p> <p>Example Filter:[columnName=CustomerID, columnValue=537, subfilters=null, tableName=Order, type=EQUALS]</p>
LIMIT	<p>Type Number</p> <p>Description Maximum number of rows to return for a query. Corresponds to <code>LIMIT</code> in SOQL queries.</p> <p>Example 200</p>
MESSAGE	<p>Type String</p> <p>Description Error or warning message associated with the failed call.</p> <p>Example System.UnexpectedException: Query is either selecting too many fields or the filter conditions are too complicated</p>
OFFSET	<p>Type Number</p> <p>Description Number of rows to skip when paging through a result set. Corresponds to <code>OFFSET</code> in SOQL queries.</p> <p>Example 0 (default)</p>
ORDERBY	<p>Type String</p> <p>Description Field or column to use for sorting query results, and whether to sort the results in ascending (default) or descending order. Corresponds to <code>ORDER BY</code> in SOQL queries.</p> <p>Examples (Order:[columnName=OrderDate, direction=ASCENDING, tableName=Order])</p>

Field	Details
ORGANIZATION_ID	<p>Type Id</p> <p>Description 15-character ID of the organization.</p> <p>Example 00D000000000123</p>
REQUEST_ID	<p>Type String</p> <p>Description Unique ID of a transaction. A transaction can contain one or more events. All events in a transaction have the same REQUEST_ID.</p> <p>Example 4A13-HSKv3CKs-0FKfceaV</p>
ROWS	<p>Type Number</p> <p>Description Total number of records in the result set. The value is always -1 if the custom adapter's <code>DataSource.Provider</code> class doesn't declare the <code>QUERY_TOTAL_SIZE</code> capability.</p> <p>Example 200</p>
ROWS_FETCHED	<p>Type Number</p> <p>Description Number of rows fetched by the callout. Available in API version 42.0 and later.</p> <p>Example 200</p>
SELECT	<p>Type String</p> <p>Description Comma-separated list of fields being queried. Corresponds to <code>SELECT</code> in SOQL queries.</p> <p>Example (ColumnSelection:[aggregation=NONE, columnName=Name, tableName=Order], ColumnSelection:[aggregation=NONE, columnName=CustomerID, tableName=Order], ColumnSelection:[aggregation=NONE, columnName=OrderDate, tableName=Order])</p>
STATUS	<p>Type Boolean</p>

Field	Details
	<p>Description Whether the query was successful.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • 1—Success • 0—Failed • Empty—Failed with no logged status or message
THROUGHPUT	<p>Type Number</p> <p>Description Number of records retrieved in one second.</p> <p>Example 302.57</p>
TIMESTAMP	<p>Type String</p> <p>Description The access time of Salesforce services in GMT. For example: 20130715233322.670.</p>
SUBQUERIES	<p>Type Number</p> <p>Description Reserved for future use.</p>
TIMESTAMP_DERIVED	<p>Type DateTime</p> <p>Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.SSSZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.</p>
TOTAL_MS	<p>Type Number</p> <p>Description How long it took (in milliseconds) to prepare and execute the query and to retrieve the query results.</p> <p>Example 709</p>

Field	Details
USER_ID	<p>Type Id</p> <p>Description 15-character ID of the user accessing the external system.</p> <p>Example 00530000009M943</p>

External OData Callout Event Type

External OData Callout events represent external data callouts via the OData 2.0 and OData 4.0 adapters for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer Guide](#).

Fields

Field	Details
ACTION	<p>Type String</p> <p>Description Action performed by the callout.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • query • upsert • delete
BYTES	<p>Type Number</p> <p>Description Size of the result set in bytes.</p>
ENTITY	<p>Type String</p> <p>Description Name of the external object being accessed.</p>

Field	Details
	<p>Example Order</p>
EVENT_TYPE	<p>Type String</p> <p>Description Type of event. Value is always ExternalODataCallout.</p>
EXECUTE_MS	<p>Type Number</p> <p>Description How long it took (in milliseconds) for Salesforce to prepare and execute the query. Available in API version 42.0 and later.</p> <p>Example 21</p>
EXPAND	<p>Type String</p> <p>Description Reserved for future use.</p>
FETCH_MS	<p>Type Number</p> <p>Description How long it took (in milliseconds) to retrieve the query results from the external system. Available in API version 42.0 and later.</p> <p>Example 127</p>
FILTER	<p>Type Text</p> <p>Description Field expressions to filter which rows to return. Corresponds to WHERE in SOQL queries and \$filter in OData queries.</p> <p>Example CustomerId eq 12345</p>
LIBRARY	<p>Type String</p> <p>Description Reserved for future use.</p>

Field	Details
LIMIT	<p>Type Number</p> <p>Description Maximum number of rows to return for a query. Corresponds to <code>LIMIT</code> in SOQL queries and <code>\$top</code> in OData queries.</p> <p>Example 200</p>
MESSAGE	<p>Type String</p> <p>Description Error or warning message associated with the failed call.</p> <p>Example The OData query result was too large, so the external data didn't load.</p>
NEXT_LINK	<p>Type String</p> <p>Description OData next link that the callout used to request a subsequent page of rows. A next link is provided in a previous response from the OData producer when the response includes only part of the result set.</p> <p>Available in API version 42.0 and later. However, this field isn't supported for the OData 2.0 adapter on orgs created before Spring '18.</p> <p>Example <code>http://services.example.org/Warehouse.svc/Orders?\$count=true&\$select=CustomerID,OrderID,RequiredDate,ShippedDate&\$top=301&\$skiptoken=10447</code></p>
OFFSET	<p>Type Number</p> <p>Description Number of rows to skip when paging through a result set.</p> <p>Corresponds to <code>OFFSET</code> in SOQL queries and <code>\$skip</code> in OData queries.</p> <p>Example 10</p>
ORDERBY	<p>Type String</p> <p>Description Field or column to use for sorting query results, and whether to sort the results in ascending (default) or descending order. Corresponds to <code>ORDER BY</code> in SOQL queries and <code>\$orderby</code> in OData queries.</p>

Field	Details
	<p>Examples</p> <ul style="list-style-type: none"> • ShipName • ShipName desc
ORGANIZATION_ID	<p>Type Id</p> <p>Description 15-character ID of the organization.</p> <p>Example 00D000000000123</p>
PARENT_CALLOUT	<p>Type String</p> <p>Description If the callout requested a subsequent page of rows, this field identifies the initial callout whose request resulted in the multi-page result set. Available in API version 42.0 and later. However, this field isn't supported for the OData 2.0 adapter on orgs created before Spring '18.</p> <p>Example 4EoZtuBzzRIXSk-ysRdf1F-1</p>
PROVIDER_TYPE	<p>Type String</p> <p>Description Whether the OData 2.0 or OData 4.0 adapter made the callout.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • OData—OData 2.0 adapter • OData4—OData 4.0 adapter
RATE_LIMIT_USAGE_PERCENT	<p>Type Number</p> <p>Description Consumed percentage of the org's limit of OData callouts per hour.</p> <p>Example 2.5—2.5% of the hourly callout limit has been consumed</p>
REQUEST_ID	<p>Type String</p> <p>Description Unique ID of a transaction. A transaction can contain one or more events. All events in a transaction have the same REQUEST_ID.</p>

Field	Details
	<p>Example 4A13-HSKv3CKs-0FKfceaV</p>
REQUESTS	<p>Type Number</p> <p>Description Reserved for future use.</p>
ROWS	<p>Type Number</p> <p>Description Total number of records in the result set. Available in API version 42.0 and later.</p> <p>Example 830</p>
ROWS__FETCHED	<p>Type Number</p> <p>Description Number of records fetched by the callout. The records fetched by a callout can be a subset of a large result set. Available in API version 42.0 and later. However, this field isn't supported for the OData 2.0 adapter on orgs created before Spring '18.</p> <p>Example 200</p>
SEARCH	<p>Type String</p> <p>Description Search query string. Corresponds to condition expressions in SOSL.</p> <p>Example contains(CustomerID,'10248') eq true or contains(ShipName,'10248') eq true</p>
SELECT	<p>Type String</p> <p>Description Comma-separated list of fields being queried. Corresponds to <code>SELECT</code> in SOQL queries and <code>\$select</code> in OData queries.</p> <p>Example CustomerID,OrderDate,OrderID,ShipCity,ShipCountry</p>
STATUS	<p>Type Boolean</p>

Field	Details
	<p>Description Whether the query was successful.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • 1—Success • 0—Failed
THROUGHPUT	<p>Type Number</p> <p>Description Number of records retrieved in one second. Available in API version 42.0 and later. However, this field isn't supported for the OData 2.0 adapter on orgs created before Spring '18.</p> <p>Example 3025.67</p>
TIMESTAMP	<p>Type String</p> <p>Description The access time of Salesforce services in GMT. For example: 20130715233322.670.</p>
TIMESTAMP_DERIVED	<p>Type DateTime</p> <p>Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.</p>
TOTAL_MS	<p>Type Number</p> <p>Description How long it took (in milliseconds) to prepare and execute the query and to retrieve the query results.</p>
USER_ID	<p>Type Id</p> <p>Description 15-character ID of the user accessing the external system.</p>

Field	Details
	<p>Example</p> <p>00530000009M943</p>

Flow Execution Event Type

Flow Execution events contain information about flows that were executed including details such as total execution time, number of interviews, and number of errors.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
EVENT_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The type of event. The value is always <code>FlowExecution</code>.</p>
TIMESTAMP	<p>Type</p> <p>String</p> <p>Description</p> <p>The time that the flow was executed in GMT.</p> <p>For example: <code>20210606032436.520</code>.</p>
REQUEST_ID	<p>Type</p> <p>String</p> <p>Description</p> <p>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>.</p> <p>For example: <code>TID:000000000000c00fff</code>.</p>
ORGANIZATION_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the organization.</p> <p>For example: <code>00D000000000123</code>.</p>

Field	Details
USER_ID	<p>Type Id</p> <p>Description The 15-character ID of the user who executed the flow through the UI or the API. For example: 00530000009M943</p>
PROCESS_TYPE	<p>Type String</p> <p>Description The type of the flow. Valid values are:</p> <ul style="list-style-type: none"> • Appointments—A flow for Lightning Scheduler. This value is available in API version 44.0 and later. • AutoLaunchedFlow—A flow that doesn't require user interaction. • CheckoutFlow—A flow used in Lightning B2B Commerce to create a checkout in a store. This value is available in API version 48.0 and later. • ContactRequestFlow—A flow that lets customers request that customer support get back to them. This flow is used to create contact request records. This value is available in API version 45.0 and later. • CustomerLifecycle—A Salesforce Surveys flow that lets you associate survey questions with different stages in customer lifecycles. This value is available in API version 49.0 and later and only when the Customer Lifecycle Designer license is enabled. • CustomEvent—A process that is invoked when it receives a platform event message. In the UI, it's an event process. This value is available in API version 41.0 and later. • FieldServiceMobile—A flow for the Field Service mobile app. This value is available in API version 39.0 and later. • FieldServiceWeb—A flow for embedded Appointment Booking. Its UI label is Field Service Embedded Flow. This value is available in API version 41.0 and later. • Flow—A flow that requires user interaction because it contains one or more screens or local actions, choices, or dynamic choices. In the UI and Salesforce Help, it's a screen flow. Screen flows can be launched from the UI, such as with a flow action, Lightning page, or web tab. • FSClending—A flow for Financial Services Cloud Mortgage. This value is available in API version 46.0 and later. • FSClending—A flow for login. This value is available in API version 51.0 and later. • InvocableProcess—A process that can be invoked by another process or the Invocable Actions resource in REST API. This value is available in API version 38.0 and later. • LoyaltyManagementFlow—A flow for the Loyalty Management app and can be invoked by loyalty program processes. This value is available in API version 54.0 and later. • RoutingFlow—A flow for Salesforce Omni-Channel routing and other business logic. This value is available in API version 52.0 and later.

Field	Details
	<ul style="list-style-type: none"> • <code>Survey</code>—A flow for Salesforce Surveys. From the UI, this type of flow is created in Survey Builder. This value is available in API version 42.0 and later. • <code>SurveyEnrich</code>—A Salesforce Surveys flow that uses the Survey Data Mapper. From the UI, this type of flow is created in the Survey Builder and requires an associated survey flow type. This value is available in API version 49.0 or later and only when the Customer Lifecycle Designer license is enabled. • <code>Workflow</code>—A process that is invoked when a record is created or edited. In the UI and Salesforce Help, it's a record change process. <p>These values are reserved for future use.</p> <ul style="list-style-type: none"> • <code>ActionCadenceFlow</code> • <code>ActionPlan</code> • <code>AppProcess</code> • <code>CartAsyncFlow</code> • <code>DigitalForm</code> • <code>Journey</code> • <code>JourneyBuilderIntegration</code> • <code>LoginFlow</code> • <code>ManagedContentFlow</code> • <code>OrchestrationFlow</code> • <code>RecommendationStrategy</code> • <code>SalesEntryExperienceFlow</code> • <code>TransactionSecurityFlow</code> • <code>UserProvisioningFlow</code>
FLOW_VERSION_ID	<p>Type Id</p> <p>Description The ID of the flow version that was executed.</p>
FLOW_LOAD_TIME	<p>Type Number</p> <p>Description The time in milliseconds to load the flow's metadata.</p>
TOTAL_EXECUTION_TIME	<p>Type Number</p> <p>Description The total time in milliseconds to start and finish all flow interviews.</p>
NUMBER_OF_INTERVIEWS	<p>Type Number</p>

Field	Details
	<p>Description</p> <p>The number of flow interviews that started after the flow version was executed.</p>
NUMBER_OF_ERRORS	<p>Type</p> <p>Number</p> <p>Description</p> <p>The number of errors for all flow interviews after the flow version was executed.</p>
TIMESTAMP_DERIVED	<p>Type</p> <p>DateTime</p> <p>Description</p> <p>The time that the flow was executed in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).</p> <p>For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.</p>

Insecure External Assets Event Type

Insecure External Assets events contain information about external assets. External assets include images or videos accessed by users over an insecure HTTP protocol. The event lists all your Salesforce pages that contain assets hosted insecurely on third-party sites that users loaded with a Chrome, Firefox, Microsoft Edge, or Safari browser. The `INSECURE_URI` field contains the URI being used to load the asset insecurely. The Insecure External Assets event type is available in the EventLogFile object in API version 42.0 and later.

Assets over HTTP can be manipulated through man-in-the-middle and other types of attacks. These attacks can trick users into sending their Salesforce credentials to malicious sites. Always use HTTPS in your custom code and templates for any asset you're loading from external sites.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or the [REST API Developer's Guide](#).

Fields

Field	Details
ASSET_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>Type of insecure asset.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • Base URI • Connect • Font • Frame Ancestor: External page that embeds the Salesforce page in an iframe • Frame • Image

Field	Details
	<ul style="list-style-type: none"> • Media • Object • Other • Plugin Types • Script • Style
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.</p>
CPU_TIME	<p>Type Number</p> <p>Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.</p>
DOCUMENT_URI	<p>Type String</p> <p>Description URL of the page that contains the insecure asset, excluding the query parameter.</p> <p>Example https://company.my.salesforce.com/00XXXXXXXXXX</p>
EVENT_TYPE	<p>Type String</p> <p>Description The type of event. The value is always <code>InsecureExternalAssets</code>.</p>
INSECURE_URI	<p>Type String</p> <p>Description Insecure external asset URL being used to load an asset insecurely. For example, loading Javascript libraries using <code>http://ajax.googleapis.com/</code> in your custom code will log an Insecure External Asset Event with the <code>INSECURE_URI</code> field set to this URL. Find this reference in your code and update it to use <code>https://ajax.googleapis.com/</code> instead.</p> <p>Example http://pbs.twimg.com/profile_images/5699091412070816/Z4Stwts_normal.jpeg</p>

Field	Details
LOGIN_KEY	<p>Type String</p> <p>Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.</p> <p>For example: GeJCSym5eyvtEK2I.</p>
ORGANIZATION_ID	<p>Type String</p> <p>Description The 15-character ID of the org.</p> <p>Example 00D000000000123</p>
REQUEST_ID	<p>Type String</p> <p>Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.</p> <p>For example: 3nWgxBbDKWWDIk0FKfF5DV.</p>
RUN_TIME	<p>Type Number</p> <p>Description The amount of time that the request took in milliseconds.</p>
SESSION_KEY	<p>Type String</p> <p>Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.</p> <p>For example: d7DEq/ANa7nNZZVD.</p>
TIMESTAMP	<p>Type String</p> <p>Description The access time of Salesforce services in GMT.</p> <p>For example: 20130715233322.670.</p>
TIMESTAMP_DERIVED	<p>Type DateTime</p>

Field	Details
	<p>Description</p> <p>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.SSSZ).</p> <p>For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.</p>
TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>Type of Salesforce page.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • <code>Appserver</code>: Page without My Domain subdomain (for example, <code>https://na44.salesforce.com</code>) • <code>Communities</code>: Customer Experience Cloud site • <code>Email</code>: Email preview • <code>Login</code>: Login page (for example, <code>https://login.salesforce.com</code>) • <code>Mydomain</code>: Page on My Domain subdomain (for example, <code>https://mycompany.my.salesforce.com</code>) • <code>Sites</code>: Customer site • <code>Static</code>: Static content (for example, <code>https://sfdcstatic.com</code>) • <code>Unknown</code>: other type of page
UNIQUE_ID	<p>Type</p> <p>String</p> <p>Description</p> <p>The 32-character ID of the event log file in which the insecure external asset event data is found.</p> <p>Example</p> <p>44e128a5-ac7a-4c9a-be4c-224b6bf81b20</p>
URI	<p>Type</p> <p>String</p> <p>Description</p> <p>The URI of the page that's receiving the request.</p> <p>For example: <code>/home/home.jsp</code>.</p>
URI_ID_DERIVED	<p>Type</p> <p>ID</p> <p>Description</p> <p>The 18-character case insensitive ID of the URI of the page that's receiving the request.</p>

Field	Details
USER_ID	<p>Type Id</p> <p>Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943</p>
USER_ID_DERIVED	<p>Type Id</p> <p>Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.</p>

Usage

UNIQUE_ID is used by Salesforce Customer Support to troubleshoot any issues that occur.

Knowledge Article View Event Type

Knowledge Article View events contain user activity with your knowledge base.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
ARTICLE_ID	<p>Type Id</p> <p>Description The 15-character ID of the article. For example: 00Dxx0000001gEb.</p>
ARTICLE_STATUS	<p>Type Character</p> <p>Description Possible values are:</p> <ul style="list-style-type: none"> • D—Draft

- O—Online
- A—Archived

ARTICLE_VERSION

Type

Number

Description

Article version number.

For example: 2.

ARTICLE_VERSION_ID

Type

Id

Description

The 15-character ID of the article version.

For example: ka0R00000005rt6.

CONTEXT

Type

String

Description

Context of the request.

Description

Possible values are:

- Apex
 - API
 - empty string
-

ENTITY

Type

String

Description

Entity requested.

For example: Knowledge__kav.

EVENT_TYPE

Type

String

Description

The type of event. The value is always KnowledgeArticleView.

LANGUAGE

Type

String

Description

iso-code of the language.

For example: en_US/

	Example
LAST_VERSION	<p>Type Boolean</p> <p>Description True if it is the last version.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • True • False
ORGANIZATION_ID	<p>Type Id</p> <p>Description The 15-character ID of the organization.</p> <p>For example: 00D000000000123.</p>
REQUEST_ID	<p>Type String</p> <p>Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.</p> <p>For example: 3nWgxWbDKWWDIk0FKfF5DV.</p>
SESSION_ID	<p>Type String</p> <p>Description Session ID of the request.</p> <p>For example: gV7pCSW2vGaaJNFi3GSpuPIjNbKVbSxRvx34LJsIvuc=.</p> <p>Example</p>
TIMESTAMP	<p>Type String</p> <p>Description The access time of Salesforce services in GMT.</p> <p>For example: 20130715233322.670.</p>
TIMESTAMP_DERIVED	<p>Type DateTime</p>

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.SSSZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_TYPE

Type

Character

Description

User type of the request.

Possible values are:

- A—App
- C—Customer Portal
- P—Partner Portal
- G—guest
-

Lightning Error Event Type

Lightning Error events represent errors that occurred during user interactions with Lightning Experience and the Salesforce mobile app. This event type is available in the EventLogFile object in API version 39.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field**Details**

APP_NAME

Type

String

Description

The name of the application that the user accessed.

BROWSER_NAME

Type

String

Field	Details
	<p>Description The name of the browser that the user accessed.</p> <p>Example Chrome, IE, Safari, Gecko</p>
BROWSER_VERSION	<p>Type String</p> <p>Description The version of the browser that the user accessed in <code>major.minor version</code> format. Some browsers don't provide a minor version.</p>
CLIENT_GEO	<p>Type String</p> <p>Description The geolocation of the client in the form of <code><Country>/<State Province></code>.</p> <p>Example United States/California</p>
CLIENT_ID	<p>Type String</p> <p>Description The API client ID.</p>
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: <code>96.43.144.26</code>.</p>
COMPONENT_NAME	<p>Type String</p> <p>Description The internal name of the standard component that generated the error. The Salesforce developer assigned the name when the standard component was created.</p> <p>Examples</p> <ul style="list-style-type: none"> • SaveEdit • Lead.CCPM_sendSMS • ChangeOwnerOne

Field	Details
CONNECTION_TYPE	<p>Type String</p> <p>Description The type of connection.</p> <p>Possible Values</p> <ul style="list-style-type: none">• CDMA1x• CDMA• EDGE• EVDO0• EVDOA• EVDOB• GPRS• HRPD• HSDPA• HSUPA• LTE• WIFI
DEVICE_ID	<p>Type String</p> <p>Description The unique identifier used to identify a device when tracking events. <code>DEVICE_ID</code> is a generated value that's created when the mobile app is initially run after installation.</p>
DEVICE_MODEL	<p>Type String</p> <p>Description The name of the device model.</p> <p>Example iPad, iPhone</p>
DEVICE_PLATFORM	<p>Type String</p> <p>Description The type of application experience in <code>name:experience:form</code> format.</p> <p>Possible Values Name</p> <ul style="list-style-type: none">• APP_BUILDER• CUSTOM• S1

Field	Details
	<ul style="list-style-type: none"> SFX <p>Experience</p> <ul style="list-style-type: none"> BROWSER HYBRID <p>Form</p> <ul style="list-style-type: none"> DESKTOP PHONE TABLET
DEVICE_SESSION_ID	<p>Type Id</p> <p>Description The unique identifier of the user's session based on page load time. If the user reloads a page, it starts a new session.</p> <p>Example 321a1ddfaf924803a075f1e69fc87bc06f53ccd0</p>
EVENT_TYPE	<p>Type String</p> <p>Description The type of event. The value is always <code>LightningError</code>.</p>
LOGIN_KEY	<p>Type String</p> <p>Description The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring.</p> <p>Example GeJCsym5eyvtEK2l</p>
ORGANIZATION_ID	<p>Type String</p> <p>Description The 15-character ID of the org.</p> <p>Example 00D000000000123</p>
OS_NAME	<p>Type String</p> <p>Description The operating system name, derived from <code>USER_AGENT</code>.</p>

Field	Details
	<p>Example Android, iOS, OSX, Windows</p>
OS_VERSION	<p>Type String</p> <p>Description The operating system version, derived from USER_AGENT.</p>
PAGE_APP_NAME	<p>Type String</p> <p>Description The internal name of the application that the user accessed from the App Launcher.</p> <p>Example LightningSales</p>
PAGE_CONTEXT	<p>Type String</p> <p>Description Context of the page where the event occurred.</p> <p>Example clients:cardsContainer</p>
PAGE_ENTITY_ID	<p>Type Id</p> <p>Description The unique entity identifier of the event.</p> <p>Example 001300000013zJAAAZ</p>
PAGE_ENTITY_TYPE	<p>Type String</p> <p>Description The entity type of the event.</p> <p>Example Task, Account</p>
PAGE_START_TIME	<p>Type Number</p> <p>Description The time when the page was initially loaded, measured in milliseconds.</p> <p>Example 1471564788642</p>

Field	Details
PAGE_URL	<p>Type String</p> <p>Description Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with PAGE_URL.</p> <p>Example /sObject/0064100000JXITSAA5/view</p>
REQUEST_ID	<p>Type String</p> <p>Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.</p> <p>Example 3nWgxWbDKWWDIk0FKff5DV</p>
SDK_APP_TYPE	<p>Type String</p> <p>Description The mobile SDK application type.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • HYBRID • HYBRIDLOCAL • HYBRIDREMOTE • NATIVE • REACTNATIVE
SDK_APP_VERSION	<p>Type String</p> <p>Description The mobile SDK application version number.</p> <p>Example 5.0</p>
SDK_VERSION	<p>Type String</p> <p>Description The mobile SDK version number.</p> <p>Example 2.1.0</p>

Field	Details
SESSION_KEY	<p>Type String</p> <p>Description The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When a user logs out and logs in again, a new session is started.</p> <p>Example cdd09305cb6babf34059e27f70e47f1b11dec868</p>
TIMESTAMP	<p>Type String</p> <p>Description The access time of Salesforce services in GMT. For example: 20130715233322.670.</p>
TIMESTAMP_DERIVED	<p>Type DateTime</p> <p>Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.</p>
UI_EVENT_ID	<p>Type String</p> <p>Description ID of the Lightning event type.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • ltng:error • ltng:interaction • ltng:pageView • ltng:performance
UI_EVENT_SEQUENCE_NUM	<p>Type Number</p> <p>Description An auto-incremented sequence number of the current event since the session started.</p>
UI_EVENT_SOURCE	<p>Type String</p> <p>Description The source of the error event.</p>

Field**Details****Examples**

Here are some examples of error flags returned in this field.

- AuraError
- Error
- InvalidStateError
- RangeError
- ReferenceError
- SecurityError
- SyntaxError
- TypeError
- unknown

UI_EVENT_TIMESTAMP

Type

Number

Description

The time at which this event occurred, measured in milliseconds.

Example

1479769912796

UI_EVENT_TYPE

Type

String

Description

The type of interaction.

Examples

- crud — Created, read, updated, or deleted the record.
- reads — Read multiple records.

USER_AGENT

Type

String

Description

The numeric code for the type of client used to make the request (for example, browser, application, or API) as a string.

USER_ID

Type

String

Description

The 15-character ID of the user accessing Salesforce services through the UI or API.

Example

00530000009M943

Field	Details
USER_ID_DERIVED	<p>Type Id</p> <p>Description The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API.</p> <p>Example 0059000000001SNIA0</p>
USER_TYPE	<p>Type String</p> <p>Description The category of user license of the user accessing Salesforce services through the UI or API.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • A: Automated Process • b: High Volume Portal • C: Customer Portal User • D: External Who • F: Self Service • G: Guest • I: Package License Manager • N: Salesforce to Salesforce • n: CSN Only • O: Power Custom • o: Custom • P: Partner • p: Customer Portal Manager • S: Standard • x: Salesforce Administrator

[EventLogFile](#)

Lightning Interaction Event Type

Lightning Interaction events track user actions in Lightning Experience and the Salesforce mobile app, such as the user clicking, tapping, or scrolling on a page. This event type is available in the EventLogFile object in API version 39.0 and later.

Warning: The Lightning Interaction Event type is a best effort logging of user interactions but is not intended to meet privacy and security audit requirements. Not all interactions or CRUD operations are tracked and data loss may occur.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

DURATION	<p>Type Number</p> <p>Description The duration in milliseconds since the page start time.</p> <p> Warning: This field is being deprecated.</p>
EVENT_TYPE	<p>Type String</p> <p>Description The type of event. The value is always <code>LightningInteraction</code>.</p>
GRANDPARENT_UI_ELEMENT	<p>Type String</p>

Field	Details
	<p>Description Grandparent scope of the page element where the event occurred.</p>
LOGIN_KEY	<p>Type String</p> <p>Description The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring.</p> <p>Example GeJCsym5eyvtEK2l</p>
ORGANIZATION_ID	<p>Type String</p> <p>Description The 15-character ID of the org.</p> <p>Example 00D000000000123</p>
OS_NAME	<p>Type String</p> <p>Description The operating system name, derived from USER_AGENT.</p> <p>Example Android, iOS, OSX, Windows</p>
OS_VERSION	<p>Type String</p> <p>Description The operating system version, derived from USER_AGENT.</p>
PAGE_APP_NAME	<p>Type String</p> <p>Description The internal name of the application that the user accessed from the App Launcher.</p> <p>Example LightningSales</p>
PAGE_CONTEXT	<p>Type String</p> <p>Description Context of the page where the event occurred.</p>

Field	Details
	<p>Example clients:cardsContainer</p>
PAGE_ENTITY_ID	<p>Type Id</p> <p>Description The unique entity identifier of the event.</p> <p>Example 0013000000I3zJAAAZ</p>
PAGE_ENTITY_TYPE	<p>Type String</p> <p>Description The entity type of the event.</p> <p>Example Task, contacts</p>
PAGE_START_TIME	<p>Type Number</p> <p>Description The time when the page was initially loaded, measured in milliseconds.</p> <p>Example 1471564788642</p>
PAGE_URL	<p>Type String</p> <p>Description Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with PAGE_URL.</p> <p>Example /sObject/0064100000JXITSAA5/view</p>
PARENT_UI_ELEMENT	<p>Type String</p> <p>Description Parent scope of the page element where the event occurred.</p>
RECORD_ID	<p>Type String array</p>

Field	Details
	<p>Description</p> <p>The IDs of one or more records that the user interacted with. For more information on the user interaction, see <code>UI_EVENT_TYPE</code> and <code>UI_EVENT_SOURCE</code> fields.</p> <p>Example</p> <p>["5004100000JaGGLAA3", "5004100000Dn79CAAR", "50041000007KeugAAC"]</p>
RECORD_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The type of record object that the user interacted with.</p> <p>Examples</p> <ul style="list-style-type: none"> • Account • Opportunity
RELATED_LIST	<p>Type</p> <p>String</p> <p>Description</p> <p>The type of related list that the user clicked.</p> <p>Example</p> <p>Opportunity</p>
REQUEST_ID	<p>Type</p> <p>String</p> <p>Description</p> <p>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>.</p> <p>Example</p> <p>3nWgxWbDKWWDIk0FKF5DV</p>
SDK_APP_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The mobile SDK application type.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • HYBRID • HYBRIDLOCAL • HYBRIDREMOTE • NATIVE • REACTNATIVE

Field	Details
SDK_APP_VERSION	<p>Type String</p> <p>Description The mobile SDK application version number.</p> <p>Example 5.0</p>
SDK_VERSION	<p>Type String</p> <p>Description The mobile SDK version number.</p> <p>Example 2.1.0</p>
SESSION_KEY	<p>Type String</p> <p>Description The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When the user logs out and logs in again, a new session is started.</p> <p>Example cdd09305cb6babf34059e27f70e47f1b11dec868</p>
TARGET_UI_ELEMENT	<p>Type String</p> <p>Description The target page element where the event occurred.</p> <p>Example label bBody truncate, tabitem-link</p>
TIMESTAMP	<p>Type String</p> <p>Description The access time of Salesforce services in GMT. For example: 20130715233322.670.</p>
TIMESTAMP_DERIVED	<p>Type DateTime</p> <p>Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).</p>

Field	Details
	For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
UI_EVENT_ID	<p>Type String</p> <p>Description Id of the Lightning event type.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • ltng:error • ltng:interaction • ltng:pageView • ltng:performance
UI_EVENT_SEQUENCE_NUM	<p>Type Number</p> <p>Description An auto-incremented sequence number of the current event since the session started.</p>
UI_EVENT_SOURCE	<p>Type String</p> <p>Description The user action on the record or records in <code>RECORD_ID</code>. This field's value indicates whether the user's action was on a single record or multiple records. For example, <code>read</code> indicates that one record was read (such as on a record detail page); <code>reads</code> indicates that multiple records were read (such as in a list view).</p> <p>Examples</p> <ul style="list-style-type: none"> • click • create • delete • hover • read • update
UI_EVENT_TIMESTAMP	<p>Type Number</p> <p>Description The time at which this event occurred, measured in milliseconds.</p> <p>Example 1479769912796</p>
UI_EVENT_TYPE	<p>Type String</p>

Field	Details
	<p>Description The type of interaction with the records in RECORD_ID.</p> <p>Examples</p> <ul style="list-style-type: none"> • crud — Created, read, updated, or deleted the record. • reads — Read multiple records.
USER_AGENT	<p>Type String</p> <p>Description The numeric code for the type of client used to make the request (for example, the browser, application, or API) as a string.</p>
USER_ID	<p>Type String</p> <p>Description The 15-character ID of the user accessing Salesforce services through the UI or API.</p> <p>Example 00530000009M943</p>
USER_ID_DERIVED	<p>Type Id</p> <p>Description The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API.</p> <p>Example 0059000000011SNIA0</p>
USER_TYPE	<p>Type String</p> <p>Description The category of user license of the user accessing Salesforce services through the UI or API.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • A: Automated Process • b: High Volume Portal • C: Customer Portal User • D: External Who • F: Self Service • G: Guest • L: Package License Manager • N: Salesforce to Salesforce

Field	Details
	<ul style="list-style-type: none"> • n: CSN Only • o: Power Custom • o: Custom • P: Partner • p: Customer Portal Manager • s: Standard • x: Salesforce Administrator

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Lightning Page View Event Type

Lightning Page View events represent information about the page on which the event occurred in Lightning Experience and the Salesforce mobile app. A Lightning Page View event tracks the page a user visited, how long the user spent on the page, and the load time for the page. This event type is available in the EventLogFile object in API version 39.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
APP_NAME	<p>Type String</p> <p>Description The name of the application that the user accessed.</p>
BROWSER_NAME	<p>Type String</p> <p>Description The name of the browser that the user accessed.</p> <p>Example Chrome, IE, Safari, Gecko</p>
BROWSER_VERSION	<p>Type String</p> <p>Description The version of the browser that the user accessed in <code>major.minor version</code> format. Some browsers don't provide a minor version.</p>

Field	Details
CLIENT_GEO	<p>Type String</p> <p>Description The geolocation of the client in the form of <Country>/<State Province>.</p> <p>Example United States/California</p>
CLIENT_ID	<p>Type String</p> <p>Description The API client ID.</p>
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.</p>
CONNECTION_TYPE	<p>Type String</p> <p>Description The type of connection.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • CDMA1x • CDMA • EDGE • EVDO0 • EVDOA • EVDOB • GPRS • HRPD • HSDPA • HSUPA • LTE • WIFI
DEVICE_ID	<p>Type String</p>

Field	Details
	<p>Description</p> <p>The unique identifier used to identify a device when tracking events. <code>DEVICE_ID</code> is a generated value that's created when the mobile app is initially run after installation.</p>
<code>DEVICE_MODEL</code>	<p>Type</p> <p>String</p> <p>Description</p> <p>The name of the device model.</p> <p>Example</p> <p>iPad, iPhone</p>
<code>DEVICE_PLATFORM</code>	<p>Type</p> <p>String</p> <p>Description</p> <p>The type of application experience in <code>name:experience:form</code> format.</p> <p>Possible Values</p> <p>Name</p> <ul style="list-style-type: none"> • <code>APP_BUILDER</code> • <code>CUSTOM</code> • <code>S1</code> • <code>SFX</code> <p>Experience</p> <ul style="list-style-type: none"> • <code>BROWSER</code> • <code>HYBRID</code> <p>Form</p> <ul style="list-style-type: none"> • <code>DESKTOP</code> • <code>PHONE</code> • <code>TABLET</code>
<code>DEVICE_SESSION_ID</code>	<p>Type</p> <p>Id</p> <p>Description</p> <p>The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started.</p> <p>Example</p> <p>321a1ddfaf924803a075f1e69fc87bc06f53ccd0</p>
<code>DURATION</code>	<p>Type</p> <p>Number</p>

Field	Details
	<p>Description</p> <p>The duration in milliseconds since the page start time.</p> <p> Warning: This field is being deprecated. Use <code>EFFECTIVE_PAGE_TIME</code> instead.</p>
<code>EFFECTIVE_PAGE_TIME</code>	<p>Type</p> <p>Number</p> <p>Description</p> <p>Indicates how many milliseconds it took for the page to load before a user could interact with the page's functionality. Multiple factors can affect effective page time, such as network speed, hardware performance, or page complexity. If an effective page time greater than 60 seconds is detected, the value of this field is set to null.</p>
<code>EVENT_TYPE</code>	<p>Type</p> <p>String</p> <p>Description</p> <p>The type of event. The value is always <code>LightningPageView</code>.</p>
<code>GRANDPARENT_UI_ELEMENT</code>	<p>Type</p> <p>String</p> <p>Description</p> <p>The grandparent scope of the page element where the event occurred.</p>
<code>LOGIN_KEY</code>	<p>Type</p> <p>String</p> <p>Description</p> <p>The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring.</p> <p>Example</p> <p>GeJCSym5eyvtEK2l</p>
<code>ORGANIZATION_ID</code>	<p>Type</p> <p>String</p> <p>Description</p> <p>The 15-character ID of the org.</p> <p>Example</p> <p>00D000000000123</p>
<code>OS_NAME</code>	<p>Type</p> <p>String</p> <p>Description</p> <p>The operating system name, derived from <code>USER_AGENT</code>.</p>

Field	Details
	<p>Example Android, iOS, OSX, Windows</p>
OS_VERSION	<p>Type String</p> <p>Description The operating system version, derived from USER_AGENT.</p>
PAGE_APP_NAME	<p>Type String</p> <p>Description The internal name of the application that the user accessed from the App Launcher.</p> <p>Example LightningSales</p>
PAGE_CONTEXT	<p>Type String</p> <p>Description The name of the component hosting the main content of the page.</p> <p>Example clients:cardsContainer</p>
PAGE_ENTITY_ID	<p>Type Id</p> <p>Description The unique entity identifier of the event.</p> <p>Example 001300000013zJAAAZ</p>
PAGE_ENTITY_TYPE	<p>Type String</p> <p>Description The entity type of the event.</p> <p>Example Task, contacts</p>
PAGE_START_TIME	<p>Type Number</p> <p>Description The time when the page was initially loaded, measured in milliseconds.</p> <p>Example 1471564788642</p>

Field	Details
PAGE_URL	<p>Type String</p> <p>Description Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with PAGE_URL.</p> <p>Example /sObject/0064100000JXITSAA5/view</p>
PARENT_UI_ELEMENT	<p>Type String</p> <p>Description The parent scope of the page element where the event occurred.</p>
PREVPAGE_APP_NAME	<p>Type String</p> <p>Description The internal name of the previous application that the user accessed from the App Launcher.</p> <p>Example LightningSales</p>
PREVPAGE_CONTEXT	<p>Type String</p> <p>Description The context of the previous page where the event occurred.</p> <p>Example clients:cardsContainer</p>
PREVPAGE_ENTITY_ID	<p>Type Id</p> <p>Description The unique previous page entity identifier of the event.</p>
PREVPAGE_ENTITY_TYPE	<p>Type String</p> <p>Description The previous page entity type of the event.</p> <p>Example Task, contacts</p>
PREVPAGE_URL	<p>Type String</p>

Field	Details
	<p>Description The relative URL of the previous Lightning Experience or Salesforce mobile app page that the user opened.</p> <p>Example /sObject/006410000</p>
REQUEST_ID	<p>Type String</p> <p>Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.</p> <p>Example 3nWgxWbDKWWDiK0FKF5DV</p>
SDK_APP_TYPE	<p>Type String</p> <p>Description The mobile SDK application type.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • HYBRID • HYBRIDLOCAL • HYBRIDREMOTE • NATIVE • REACTNATIVE
SDK_APP_VERSION	<p>Type String</p> <p>Description The mobile SDK application version number.</p> <p>Example 5.0</p>
SDK_VERSION	<p>Type String</p> <p>Description The mobile SDK version number.</p> <p>Example 2.1.0</p>
SESSION_KEY	<p>Type String</p>

Field	Details
	<p>Description The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When the user logs out and logs in again, a new session is started.</p> <p>Example cdd09305cb6babf34059e27f70e47f1b11dec868</p>
TARGET_UI_ELEMENT	<p>Type String</p> <p>Description The target page element where the event occurred.</p> <p>Example label bBody truncate, tabitem-link</p>
TIMESTAMP	<p>Type String</p> <p>Description The access time of Salesforce services in GMT. For example: 20130715233322.670.</p>
TIMESTAMP_DERIVED	<p>Type DateTime</p> <p>Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.</p>
UI_EVENT_ID	<p>Type String</p> <p>Description Id of the Lightning event type.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • ltng:error • ltng:interaction • ltng:pageView • ltng:performance
UI_EVENT_SEQUENCE_NUM	<p>Type Number</p> <p>Description An auto-incremented sequence number of the current event since the session started.</p>

Field	Details
UI_EVENT_SOURCE	<p>Type String</p> <p>Description This field is being deprecated and is mostly null, except in mobile app views where it indicates the page type of views where the context is "native."</p>
UI_EVENT_TIMESTAMP	<p>Type Number</p> <p>Description The time at which this event occurred, measured in milliseconds.</p> <p>Example 1479769912796</p>
USER_AGENT	<p>Type String</p> <p>Description The numeric code for the type of client used to make the request (for example, the browser, application, or API) as a string.</p>
USER_ID	<p>Type String</p> <p>Description The 15-character ID of the user accessing Salesforce services through the UI or API.</p> <p>Example 00530000009M943</p>
USER_ID_DERIVED	<p>Type Id</p> <p>Description The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API.</p> <p>Example 0059000000011SNIA0</p>
USER_TYPE	<p>Type String</p> <p>Description The category of user license of the user accessing Salesforce services through the UI or API.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • a: Automated Process • b: High Volume Portal

Field	Details
	<ul style="list-style-type: none"> • C: Customer Portal User • D: External Who • F: Self Service • G: Guest • L: Package License Manager • N: Salesforce to Salesforce • n: CSN Only • O: Power Custom • o: Custom • P: Partner • p: Customer Portal Manager • S: Standard • X: Salesforce Administrator

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Login Event Type

Login events contain details about your org's user login history.

Note: Login Event Type is used by EventLogFile (ELF). It is not a real-time event. For the LoginEvent real-time event, which is part of Real-Time Event Monitoring (RTEM), see [LoginEvent](#) in the *Platform Events Developer Guide*.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
API_TYPE	<p>Type String</p>

Description

The type of API request.

Possible values are:

- D—Apex Class
- E—SOAP Enterprise
- I—SOAP Cross Instance
- M—SOAP Metadata
- O—Old SOAP
- P—SOAP Partner
- S—SOAP Apex
- T—SOAP Tooling
- X—XmlRPC
- F—Feed
- L—Live Agent
- P—SOAP ClientSync

API_VERSION

Type

String

Description

The version of the API that's being used.

For example: 36.0.

AUTHENTICATION_METHOD_REFERENCE

Type

String

Description

The authentication method used by a third-party identification provider for an OpenID Connect single sign-on protocol. This field is available in API version 51.0 and later.

BROWSER_TYPE

Type

String

Description

The identifier string returned by the browser used at login.

Example values are:

- Go-http-client/1.1
- Mozilla/5.0 (Macintosh; Intel Mac OS X 10.12; rv%3A50.0) Gecko/20100101 Firefox/50.0
- Mozilla/5.0 (Macintosh; Intel Mac OS X 10_11_6) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/51.0.2704.84 Safari/537.36

CIPHER_SUITE

Type

String

Description

The TLS cipher suite used for the login. Values are OpenSSL-style cipher suite names, with hyphen delimiters. For more information, see [OpenSSL Cryptography and SSL/TLS Toolkit](#).

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

CLIENT_IP

Type

String

Description

The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.

DB_TOTAL_TIME

Type

Number

Description

The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.

EVENT_TYPE

Type

String

Description

The type of event. The value is always `Login`.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: GeJCSym5eyvtEK2I.

LOGIN_STATUS

Type

String

Description

The status of the login attempt. For successful logins, the value is LOGIN_NO_ERROR. All other values indicate errors or authentication issues. For details, see [Login Event Type — LOGIN_STATUS Values](#) on page 1589.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D000000000123.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgXWbDKWWDIk0FKfF5DV.

REQUEST_STATUS

Type

String

Description

The status of the request for a page view or user interface action.

Possible values are:

- S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- U—Undefined
- A—Authorization Error
- R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- N—Not Found. 404 error.

RUN_TIME

Type

Number

SESSION_KEY	<p>Description The amount of time that the request took in milliseconds.</p>
SOURCE_IP	<p>Type String</p> <p>Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For Login Event Type, this field is usually null because the event is captured before a session is created.</p> <p>Example d7DEq/ANa7nNZZVD</p>
TIMESTAMP	<p>Type IP</p> <p>Description The source IP of the login request.</p>
TIMESTAMP_DERIVED	<p>Type String</p> <p>Description The access time of Salesforce services in GMT. For example: 20130715233322.670.</p>
TLS_PROTOCOL	<p>Type DateTime</p> <p>Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.</p>
TLS_PROTOCOL	<p>Type String</p> <p>Description The TLS protocol used for the login.</p> <p>Example There are 3 possible values.</p> <ul style="list-style-type: none"> • 1.0 • 1.1 • 1.2

URI	<p>Type String</p> <p>Description The URI of the page that's receiving the request. For example: /home/home.jsp.</p>
URI_ID_DERIVED	<p>Type ID</p> <p>Description The 18-character case insensitive ID of the URI of the page that's receiving the request.</p>
USER_ID	<p>Type Id</p> <p>Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943</p>
USER_ID_DERIVED	<p>Type Id</p> <p>Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.</p>
USER_NAME	<p>Type String</p> <p>Description The username that's used for login.</p>
USER_TYPE	<p>Type String</p> <p>Description The category of user license. Possible values are:</p> <ul style="list-style-type: none"> • <code>CsnOnly</code>—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • <code>CspLitePortal</code>—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.

- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

[Login Event Type — LOGIN_STATUS Values](#)

When users attempt to log in to your org, the success or failure of their login attempts is tracked in event log file data. Specifically, the `LOGIN_STATUS` field in the Login event type contains the result of these login attempts. The data in `LOGIN_STATUS` can help you determine whether your users' login attempts were successful. This field is available in the Login event type in the EventLogFile object in API version 39.0 and later.

LOGIN_ERROR_AVANTGO_DISABLED	
LOGIN_ERROR_AVANTGO_TRIAL_EXP	
LOGIN_ERROR_CLIENT_NO_ACCESS	
LOGIN_ERROR_CLIENT_REQ_UPDATE	Failed: Client update required
LOGIN_ERROR_CSS_FROZEN	
LOGIN_ERROR_CSS_PW_LOCKOUT	
LOGIN_ERROR_DUPLICATE_USERNAME	
LOGIN_ERROR_EXPORT_RESTRICTED	Restricted country
LOGIN_ERROR_GLOBAL_BLOCK_DOMAIN	Restricted domain
LOGIN_ERROR_HT_DOWN	
LOGIN_ERROR_HTTP_METHOD_INVALID	Failed: Invalid HTTP method
LOGIN_ERROR_INSECURE_LOGIN	Failed: Login over insecure channel
LOGIN_ERROR_INVALID_GATEWAY	Invalid gateway
LOGIN_ERROR_INVALID_ID_FIELD	
LOGIN_ERROR_INVALID_PASSWORD	Invalid password
LOGIN_ERROR_LOGINS_EXCEEDED	Maximum logins exceeded
LOGIN_ERROR_MUST_USE_API_TOKEN	Failed: API security token required
LOGIN_ERROR_MUTUAL_AUTHENTICATION	Mutual authentication failed
LOGIN_ERROR_NETWORK_INACTIVE	Invalid - Experience Cloud site offline
LOGIN_ERROR_NO_HT_ACCESS	
LOGIN_ERROR_NO_NETWORK_ACCESS	No Experience Cloud site access
LOGIN_ERROR_NO_NETWORK_INFO	
LOGIN_ERROR_NO_PORTAL_ACCESS	Invalid profile association
LOGIN_ERROR_NO_SET_COOKIES	

API Error Code	Details (If Available)
LOGIN_ERROR_OFFLINE_DISABLED	Offline disabled
LOGIN_ERROR_OFFLINE_TRIAL_EXP	Offline trial expired
LOGIN_ERROR_ORG_CLOSED	Organization closed
LOGIN_ERROR_ORG_DOMAIN_ONLY	Restricted domain
LOGIN_ERROR_ORG_IN_MAINTENANCE	Organization is in maintenance
LOGIN_ERROR_ORG_INACTIVE	Organization is inactive
LOGIN_ERROR_ORG_IS_DOT_ORG	Organization is a DOT
LOGIN_ERROR_ORG_LOCKOUT	Organization locked
LOGIN_ERROR_ORG_SIGNING_UP	
LOGIN_ERROR_ORG_SUSPENDED	Organization suspended
LOGIN_ERROR_OUTLOOK_DISABLED	Outlook integration disabled
LOGIN_ERROR_PAGE_REQUIRES_LOGIN	
LOGIN_ERROR_PASSWORD_EMPTY	
LOGIN_ERROR_PASSWORD_LOCKOUT	Password lockout
LOGIN_ERROR_PORTAL_INACTIVE	Invalid - Portal disabled
LOGIN_ERROR_RATE_EXCEEDED	Login rate exceeded
LOGIN_ERROR_RESTRICTED_DOMAIN	Restricted IP
LOGIN_ERROR_RESTRICTED_TIME	Restricted time
LOGIN_ERROR_SESSION_TIMEOUT	
LOGIN_ERROR_SSO_PWD_INVALID	Invalid password
LOGIN_ERROR_SSO_SVC_DOWN	Your company's authentication service is down
LOGIN_ERROR_SSO_URL_INVALID	The Single Sign-On Gateway URL is invalid
LOGIN_ERROR_STORE	
LOGIN_ERROR_STORE_DOWN	
LOGIN_ERROR_SWITCH_SFDC_INSTANCE	
LOGIN_ERROR_SWITCH_SFDC_LOGIN	
LOGIN_ERROR_SYNOFFLINE_DISBLD	Failed: Mobile disabled
LOGIN_ERROR_SYSTEM_DOWN	
LOGIN_ERROR_UNKNOWN_ERROR	Login invalid
LOGIN_ERROR_USER_API_ONLY	Failed: API-only user

API Error Code	Details (If Available)
LOGIN_ERROR_USER_FROZEN	User is frozen
LOGIN_ERROR_USER_INACTIVE	User is inactive
LOGIN_ERROR_USER_NON_MOBILE	Failed: Mobile license required
LOGIN_ERROR_USER_STORE_ACCESS	
LOGIN_ERROR_USERNAME_EMPTY	
LOGIN_ERROR_WIRELESS_DISABLED	Wireless disabled
LOGIN_ERROR_WIRELESS_TRIAL_EXP	Wireless trial expired
LOGIN_LIGHTNING_LOGIN	Lightning Login required
LOGIN_NO_ERROR	
LOGIN_OAUTH_API_DISABLED	Failed: OAuth API access disabled
LOGIN_OAUTH_CONSUMER_DELETED	Failed: Consumer Deleted
LOGIN_OAUTH_DS_NOT_EXPECTED	Failed: Activation secret not expected

LOGIN_OAUTH_INVALID_TOKEN	Failed: Invalid Token
LOGIN_OAUTH_INVALID_VERIFIER	Failed: Invalid Verifier
LOGIN_OAUTH_INVALID_VERSION	Failed: Version Not Supported
LOGIN_OAUTH_MISSING_DS	Activation secret missing
LOGIN_OAUTH_NO_CALLBACK_URL	Failed: Invalid Callback URL
LOGIN_OAUTH_NO_CONSUMER	Missing Consumer Key Parameter
LOGIN_OAUTH_NO_TOKEN	Missing OAuth Token Parameter
LOGIN_OAUTH_NONCE_REPLAY	Failed: Nonce Replay Detected

API Error Code	Details (If Available)
LOGIN_OAUTH_PACKAGE_MISSING	Package for this consumer is not installed in your organization
LOGIN_OAUTH_PACKAGE_OLD	Installed package for this consumer is out of date
LOGIN_OAUTH_UNEXPECTED_PARAM	Failed: Unexpected parameter
LOGIN_ORG_TRIAL_EXP	Trial Expired
LOGIN_READONLY_CANNOT_VALIDATE	
LOGIN_SAML_INVALID_AUDIENCE	Failed: Audience Invalid
LOGIN_SAML_INVALID_CONFIG	Failed: Configuration Error/Perm Disabled
LOGIN_SAML_INVALID_FORMAT	Failed: Assertion Invalid
LOGIN_SAML_INVALID_IN_RES_TO	Failed: InResponseTo Invalid
LOGIN_SAML_INVALID_ISSUER	Failed: Issuer Mismatched
LOGIN_SAML_INVALID_ORG_ID	Failed: Invalid Organization Id
LOGIN_SAML_INVALID_PORTAL_ID	Failed: Invalid Portal Id
LOGIN_SAML_INVALID_RECIPIENT	Failed: Recipient Mismatched
LOGIN_SAML_INVALID_SESSION_LEVEL	
LOGIN_SAML_INVALID_SIGNATURE	Failed: Signature Invalid
LOGIN_SAML_INVALID_SITE_URL	Failed: Invalid Site URL
LOGIN_SAML_INVALID_STATUS	Failed: Status Invalid
LOGIN_SAML_INVALID_SUB_CONFIRM	Failed: Subject Confirmation Error
LOGIN_SAML_INVALID_TIMESTAMP	Failed: Assertion Expired
LOGIN_SAML_INVALID_USERNAME	Failed: Username Or SSO Id Invalid
LOGIN_SAML_INVALID_VERSION	
LOGIN_SAML_MISMATCH_CERT	Failed: Signature Invalid/Configured Certificate Mismatch
LOGIN_SAML_MISSING_ORG_ID	Failed: Missing Organization Id for Portal login
LOGIN_SAML_MISSING_PORTAL_ID	Failed: Missing Portal Id
LOGIN_SAML_PROVISION_ERROR	Failed: SAML Provision Error
LOGIN_SAML_REPLAY_ATTEMPTED	Failed: Replay Detected
LOGIN_SAML_SITE_INACTIVE	Failed: Specified Site is Inactive
LOGIN_TWOFACOR_REQ	Multi-factor (formerly called two-factor) is required

Usage

Use LOGIN_STATUS to determine whether your users' login attempts were successful. For example, you can determine whether a departed employee attempted to log in successfully or unsuccessfully.

A	B	C	D	E	F	G	H	I	J	K
EVENT_TYPE	CLIENT_IP	URI	SESSION_KEY	LOGIN_KEY	REQUEST_STATUS	USER_NAME	TIMESTAMP_DERIVED	USER_ID_DERIVED	URI_ID_DERIVED	LOGIN_STATUS
Login	1.2.3.4	/my/uri/path/005B0000000GSwO	sidHash_basic	loginHash_basic	requestStatus_common	userName_L	2015-01-01T00:00:00.000	001xx0000000useAAA	005B0000000GSwOIAW	LOGIN_NO_ERROR

Login As Event Type

Login As events contain details about what a Salesforce admin did while logged in as another user.

Note: Login Event Type is used by EventLogFile (ELF). It is not a real-time event. For the LoginEvent real-time event, which is part of Real-Time Event Monitoring (RTEM), see [LoginEvent](#) in the *Platform Events Developer Guide*.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.</p>
CPU_TIME	<p>Type Number</p> <p>Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.</p>
DELEGATED_USER_ID	<p>Type Id</p>

	<p>Description</p> <p>The 15-character ID of the user who's using Salesforce services through the UI or API. In this case, the user who's doing the impersonation.</p>
DELEGATED_USER_ID_DERIVED	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or API. In this case, the user who's doing the impersonation.</p>
DELEGATED_USER_NAME	<p>Type</p> <p>String</p> <p>Description</p> <p>The username of the user who's using Salesforce services through the UI or API. In this case, the user who's doing the impersonation.</p>
EVENT_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The type of event. The value is always <code>LoginAs</code>.</p>
LOGIN_KEY	<p>Type</p> <p>String</p> <p>Description</p> <p>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.</p> <p>For example: <code>GeJCSym5eyvtEK2I</code>.</p>
ORGANIZATION_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the organization.</p> <p>For example: <code>00D000000000123</code>.</p>
REQUEST_ID	<p>Type</p> <p>String</p> <p>Description</p> <p>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>.</p>

For example: 3nWgxBbDKWWDIk0FKfF5DV.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Logout Event Type

Logout events contain details of user logouts.

Note: Login Event Type is used by EventLogFile (ELF). It is not a real-time event. For the LoginEvent real-time event, which is part of Real-Time Event Monitoring (RTEM), see [LoginEvent](#) in the *Platform Events Developer Guide*.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
API_TYPE	Type String Description The type of API request. Possible values are: <ul style="list-style-type: none"> • D—Apex Class • E—SOAP Enterprise • I—SOAP Cross Instance • M—SOAP Metadata • O—Old SOAP • P—SOAP Partner • S—SOAP Apex • T—SOAP Tooling • X—XmlRPC

Possible values are:

- D—Apex Class
 - E—SOAP Enterprise
 - I—SOAP Cross Instance
 - M—SOAP Metadata
 - O—Old SOAP
 - P—SOAP Partner
 - S—SOAP Apex
 - T—SOAP Tooling
 - X—XmlRPC
-

- f—Feed
- l—Live Agent
- p—SOAP ClientSync

API_VERSION

Type

String

Description

The version of the API that's being used.

For example: 36.0.

APP_TYPE

Type

Number

Description

The application type that was in use upon logging out.

Example Values

- 1000: Application
- 1007: SFDC Application
- 1014: Chat
- 2501: CTI
- 2514: OAuth
- 3475: SFDC Partner Portal

BROWSER_TYPE

Type

String

Description

The identifier string returned by the browser used at login.

Example values are:

- Go-http-client/1.1
- Mozilla/5.0 (Macintosh; Intel Mac OS X 10.12; rv%3A50.0) Gecko/20100101 Firefox/50.0
- Mozilla/5.0 (Macintosh; Intel Mac OS X 10_11_6) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/51.0.2704.84 Safari/537.36

CLIENT_IP

Type

String

Description

The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP".

For example: 96.43.144.26.

CLIENT_VERSION

Type

Number

Description

The version of the client that was in use upon logging out.

EVENT_TYPE

Type

String

Description

The type of event. The value is always Logout.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: GeJCSym5eyvtEK2I.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D000000000123.

PLATFORM_TYPE

Type

Number

Description

The code for the client platform. If a timeout caused the logout, this field is null.

Example Values

- 1000: Windows
- 1008: Windows 2003
- 1013: Windows 8.1
- 1015: Windows 10
- 2003: Macintosh/Apple OSX
- 4000: Linux
- 5005: Android
- 5006: iPhone
- 5007: iPad
- 5200: Android 10.0

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxBbDKWWDIk0FKfF5DV.

RESOLUTION_TYPE

Type

Number

Description

The screen resolution of the client. If a timeout caused the logout, this field is null.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

SESSION_LEVEL

Type

String

Description

The security level of the session that was used when logging out.

Possible Values

- 1: Standard Session
- 2: High-Assurance Session

SESSION_TYPE

Type

String

Description

The session type that was used when logging out.

Possible Values

- A: API
- I: APIOnlyUser
- N: ChatterNetworks
- z: ChatterNetworksAPIOnly
- C: Content
- P: OauthApprovalUI

- O: OAuth2
- T: SiteStudio
- R: SitePreview
- S: SubstituteUser
- B: TempContentExchange
- G: TempOAuthAccessTokenFrontdoor
- Y: TempVisualforceExchange
- F: TempUIFrontdoor
- U: UI
- E: UserSite
- V: Visualforce
- W: WDC_API

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.SSSZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

USER_INITIATED_LOGOUT

Type

Boolean

Description

The value is 1 if the user intentionally logged out of the organization by clicking the **Logout** button. If the user's session timed out due to inactivity or another implicit logout action, the value is 0.

USER_TYPE

Type

String

Description

The category of user license of the user that logged out.

Possible Values

- A: Automated Process
- b: High Volume Portal
- C: Customer Portal User
- D: External Who
- F: Self-Service
- G: Guest
- I: Package License Manager
- N: Salesforce to Salesforce
- n: CSN Only
- O: Power Custom
- o: Custom
- P: Partner
- p: Customer Portal Manager
- S: Standard
- x: Salesforce Administrator

OPERATION

Type

String

Description

The operation that's being performed.

Possible Values

- meta_deploy
- meta_list
- meta_retrieve
- meta_synchronous_create
- meta_synchronous_read
- meta_synchronous_upsert

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D000000000123.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

Multiblock Report Event Type

Multiblock Report events contain details about Joined Report reports.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.</p>
CPU_TIME	<p>Type Number</p> <p>Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.</p>
DB_TOTAL_TIME	<p>Type Number</p> <p>Description The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.</p>
EVENT_TYPE	<p>Type String</p> <p>Description The type of event. The value is always <code>MultiblockReport</code>.</p>
HAS_CHART	<p>Type Boolean</p> <p>Description True if the report has a chart.</p>
LOGIN_KEY	<p>Type String</p>

	<p>Description</p> <p>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.</p> <p>For example: GeJCsym5eyvtEK2I.</p>
MASTER_REPORT_ID	<p>Type</p> <p>String</p> <p>Description</p> <p>The 15-character ID of the master report.</p>
ORGANIZATION_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the organization.</p> <p>For example: 00D000000000123.</p>
REQUEST_ID	<p>Type</p> <p>String</p> <p>Description</p> <p>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.</p> <p>For example: 3nWgxWbDKWWDIk0FKfF5DV.</p>
REQUEST_STATUS	<p>Type</p> <p>String</p> <p>Description</p> <p>The status of the request for a page view or user interface action.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

	<p>Description</p> <p>The 15-character ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00530000009M943</p>
USER_ID_DERIVED	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00590000000I1SNIA0.</p>
USER_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The category of user license.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • CsnOnly—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • CspLitePortal—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • CustomerSuccess—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • Guest—Users whose access is limited so that your customers can view and interact with your site without logging in. • PowerCustomerSuccess—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • PowerPartner—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • SelfService—Users whose access is limited because they're organization customers and access the application through a self-service portal.

- **Standard**—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

[EventLogFile](#)

Named Credential Event Type

The Named Credential event type captures information about Apex callouts that use named credentials as their endpoints. Use this event type to audit the installed managed packages that use named credentials. If you don't recognize the package namespace in the named credential event log file, then you can investigate whether a security breach has occurred. This event type is available in the EventLogFile object in API version 53.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CALLER_PACKAGE_NAMESPACE	<p>Type String</p> <p>Description If an Apex callout using a Named Credential endpoint is initiated from a package, then this field contains the package's namespace. If the callout isn't initiated from a package, then this field is empty.</p> <p>Example Acme</p>
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.</p>
CPU_TIME	<p>Type Number</p> <p>Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.</p>

Field	Details
EVENT_TYPE	<p>Type String</p> <p>Description The type of event. The value is always <code>NamedCredential</code>.</p>
LOGIN_KEY	<p>Type String</p> <p>Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.</p> <p>For example: <code>GeJCsym5eyvtEK2I</code>.</p>
NAMED_CREDENTIAL_NAME	<p>Type String</p> <p>Description The name of the named credential that's the endpoint of the Apex callout.</p> <p>Example <code>My_Named_Credential</code></p>
ORGANIZATION_ID	<p>Type Id</p> <p>Description The 15-character ID of the org.</p> <p>Example <code>00D0000000000123</code></p>
REQUEST_ID	<p>Type String</p> <p>Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>.</p> <p>For example: <code>3nWgxWbDKWWDIk0FKfF5DV</code>.</p>
RUN_TIME	<p>Type Number</p> <p>Description The amount of time that the request took in milliseconds.</p>
SESSION_KEY	<p>Type String</p>

Field	Details
	<p>Description</p> <p>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.</p> <p>For example: d7DEq/ANa7nZZVD.</p>
TIMESTAMP	<p>Type</p> <p>String</p> <p>Description</p> <p>The access time of Salesforce services in GMT.</p> <p>For example: 20130715233322.670.</p>
TIMESTAMP_DERIVED	<p>Type</p> <p>DateTime</p> <p>Description</p> <p>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).</p> <p>For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.</p>
URI	<p>Type</p> <p>String</p> <p>Description</p> <p>The URI of the page that's receiving the request.</p> <p>For example: /home/home.jsp.</p>
URI_ID_DERIVED	<p>Type</p> <p>ID</p> <p>Description</p> <p>The 18-character case-safe ID of the URI of the page that's receiving the request.</p>
USER_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00530000009M943</p>
USER_ID_DERIVED	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 18-character case-safe ID of the user who's using Salesforce services through the UI or the API.</p>

Field	Details
	For example: 00590000000I1SNIA0.

One Commerce Usage Event Type

One Commerce Usage events capture information about your Commerce instance. This event type is available in the EventLogFile object in API version 51.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
BROWSER_DEVICE_TYPE	<p>Type Number</p> <p>Description A code used to identify the browser and device type. The code is in the format "BBVVXYZ," with the following signification:</p> <ul style="list-style-type: none"> • BB — Two digits that indicate the browser type. <ul style="list-style-type: none"> - IE: "10" - CHROME: "13" - FIREFOX: "11" - SAFARI: "14" - OPERA: "15" - ANDROID_WEBKIT: "16" - NETSCAPE: "17" - OTHER_WEBKIT: "18" - OTHER_GECKO: "19" - OTHER_KHTML: "20" - OTHER_MOBILE: "21" - SALESFORCE_DESKTOP: "22" - BLACKBERRY: "23" - GOOD_ACCESS: "24" - EDGE: "25"

Field	Details
	<ul style="list-style-type: none"> - SALESFORCE_MOBILE: "26" • WW—Three digits that indicate version, leading zeroes. • XYZ—Browser-type specific flags or options. Each digit in XYZ represents a different flag depending on the BrowserType: <ul style="list-style-type: none"> - X=1: If the parser recognizes a "touch" browser. Here, touch means the older touch native client, not that the device supports touch. - Y=1: If the parser recognizes a browser in compatibility mode. Only for IE. - Z=1: If the browser is recognized as MOBILE. - Z=2: If the browser is recognized as PHONE. - Z=3: If the browser is recognized as TABLET. - Z=4: If the browser is a recognized as MEDIA PLAYER. - Z=6: Only for Opera Mini.
B2B_EDITION	<p>Type String</p> <p>Description Edition of B2B Commerce. Edition can include Lightning (LB2B), CCRZ, or future flavors.</p>
B2B_VERSION	<p>Type String</p> <p>Description This field is optional. For the managed package, then B2B_VERSION includes Major, Minor, Patch revision numbers. For Lightning B2B_VERSION includes the optional service version.</p>
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". If the user's session context isn't available, this field returns a blank value.</p>
CONTEXT_ID	<p>Type String</p>

Field	Details
	<p>Description</p> <p>The <code>contextId</code> (Key Business Domain Value) in which the operation is done. For example, for Cart, the <code>contextId</code> is <code>cartId</code>.</p>
CONTEXT_MAP	<p>Type</p> <p>String</p> <p>Description</p> <p>This field is optional. It holds a JSON string with additional operational context.</p>
CORRELATION_ID	<p>Type</p> <p>String</p> <p>Description</p> <p>This field holds correlations, such as client to server and other asynchronous calls to B2B subsystems.</p>
COUNT	<p>Type</p> <p>String</p> <p>Description</p> <p>The number of records impacted by this operation.</p>
CPU_TIME	<p>Type</p> <p>Number</p> <p>Description</p> <p>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.</p>
DB_TOTAL_TIME	<p>Type</p> <p>Number</p> <p>Description</p> <p>Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to <code>CPU_TIME</code> to determine whether performance issues are occurring in the database layer or in your own code.</p>
EFFECTIVE_ACCOUNT_ID	<p>Type</p> <p>String</p> <p>Description</p> <p>The B2B Effective Account ID in context of the operation.</p>

Field	Details
ERROR_CODE	<p>Type String</p> <p>Description The API error code that appears when an operation fails. If there is no error the value is <code>null</code>.</p>
ERROR_MESSAGE	<p>Type String</p> <p>Description Error message that appears when an operation fails. If there is no error the value is <code>null</code>.</p>
EVENT_TYPE	<p>Type String</p> <p>Description The type of event. The value is always <code>OneCommerceUsage</code>.</p>
IS_RETRY	<p>Type String</p> <p>Description The field is <code>True</code> if the operation resulted in a retry, otherwise it's <code>False</code>. Understanding the frequency of operation retries helps determine the health of a service. The default value is <code>False</code>.</p>
LOGIN_KEY	<p>Type String</p> <p>Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: <code>GeJCsym5eyvtEK2I</code>.</p>
ORGANIZATION_ID	<p>Type Id</p> <p>Description The 15-character ID of the organization. For example: <code>00D000000000123</code>.</p>
OPERATION	<p>Type String</p>

Field	Details
	<p>Description The name of the B2B service. For example: CreateCart or KeywordSearch.</p>
OPERATION_STAGE	<p>Type String</p> <p>Description This field is optional. Used to capture more granular operation level stages.</p>
OPERATION_STATE	<p>Type String</p> <p>Description This field is optional. An enum for the state of the operation. For example: CartLocked, OrderCancelled, InProgress, New, Update, and Pending.</p>
OPERATION_STATUS	<p>Type String</p> <p>Description Enum with the outcome of the operation. For example: Success or Fail.</p>
OPERATION_TIME	<p>Type String</p> <p>Description Total time of the operation in milliseconds.</p>
OS_VERSION	<p>Type String</p> <p>Description Code used to identify the operating system and version. The value is equal to 9999 for an unknown platform.</p>
REQUEST_ID	<p>Type String</p> <p>Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.</p>

Field	Details
REQUEST_STATUS	<p>Type String</p> <p>Description The status of the request for a page view or user interface action.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error.
RUN_TIME	<p>Type Number</p> <p>Description The amount of time that the request took in milliseconds.</p> <p>Requests with a value over five seconds are considered long-running requests for the purposes of the Concurrent Long-Running Apex Limit.</p> <p> Note: HTTP callout processing time isn't included when calculating the 5-second limit. We pause the timer for the callout and resume it when the callout completes.</p>
SERVICE_NAME	<p>Type String</p> <p>Description Enum of B2B Services.</p> <p>For example: <code>Cart</code>, <code>Pricing</code>, <code>Products</code>, <code>Order</code>, <code>Search</code>, and so on.</p>
SESSION_KEY	<p>Type String</p>

Field	Details
	<p>Description</p> <p>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.</p> <p>For example: d7DEq/ANa7nNZzVD.</p>
TIMESTAMP	<p>Type</p> <p>String</p> <p>Description</p> <p>The access time of Salesforce services in GMT.</p> <p>For example: 20130715233322.670.</p>
TIMESTAMP_DERIVED	<p>Type</p> <p>DateTime</p> <p>Description</p> <p>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).</p> <p>For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.</p>
URI	<p>Type</p> <p>String</p> <p>Description</p> <p>The URI of the page that's receiving the request.</p> <p>For example: /home/home.jsp.</p>
URI_ID_DERIVED	<p>Type</p> <p>ID</p> <p>Description</p> <p>The 18-character case insensitive ID of the URI of the page that's receiving the request.</p>
USER_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00530000009M943</p>
USER_ID_DERIVED	<p>Type</p> <p>Id</p>

Field	Details
	<p>Description</p> <p>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 005900000000I1SNIA0.</p>
USER_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The category of user license.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • <code>CsnOnly</code>—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • <code>CspLitePortal</code>—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • <code>CustomerSuccess</code>—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • <code>Guest</code>—Users whose access is limited so that your customers can view and interact with your site without logging in. • <code>PowerCustomerSuccess</code>—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • <code>PowerPartner</code>—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • <code>SelfService</code>—Users whose access is limited because they're organization customers and access the application through a self-service portal. • <code>Standard</code>—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.
WEBSTORE_ID	<p>Type</p> <p>String</p>

Field	Details
	<p>Description</p> <p>This field is optional. The ID of the webstore associated with the store (site).</p>
WEBSTORE_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The type of webstore.</p> <p>For example: B2B, B2C, and OMS.</p>

- EXPORT
- UNINSTALL
- VALIDATE_PACKAGE
- INIT_EXPORT_PKG_CONTROLLER

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D000000000123.

PACKAGE_NAME

Type

String

Description

The name of the package that's being installed.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.SSSZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

Platform Encryption Event Type

Platform Encryption event contains information about tenant secret and derived encryption key usage. This event type is available in API versions 41.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
ACTION	<p>Type String</p> <p>Description The name and type of the event.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • TS Imported: A tenant secret generated by the Shield Key Management Service (KMS), or customer-supplied key material, imported by a customer. • TS Generated: A tenant secret generated by the Shield Key Management Service (KMS). • Key Derived: An encryption key derived from a tenant secret for encryption or decryption. • TS Wrapped: A tenant secret generated by the Shield Key Management Service (KMS), or customer-supplied key material, encrypted for storage. • Key Delivered: A data encryption key delivered for encryption or decryption. • TS Stored: A tenant secret generated by the Shield Key Management Service (KMS), or customer-supplied key material, stored encrypted in the database. • TS Read: An encrypted tenant secret generated by the Shield Key Management Service (KMS), or encrypted customer-supplied key material, that is loaded for encryption or decryption. • TS Unwrapped: An encrypted tenant secret generated by the Shield Key Management Service (KMS), or encrypted customer-supplied key material, unwrapped for use by the KMS. • TS Exported: An encrypted tenant secret exported by a customer. • TS Destroyed: A tenant secret and related data encryption key destroyed by a customer.
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP".</p>

For example: 96.43.144.26.

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

EVENT_TYPE

Type

String

Description

The type of event. The value is always PlatformEncryption.

KEY_ID

Type

String

Description

The 15-character ID of the tenant secret.

Example

02GD000000096Cb

KEY_ID_DERIVED

Type

String

Description

The 18-character ID of the derived encryption key.

Example

02GD000000096CbMAI

KEY_TYPE

Type

String

Description

The type of tenant secret.

Possible Values

- Data
- DeterministicData
- EinsteinAnalytics
- SearchIndex

LOGIN_KEY

Type

String

	<p>Description</p> <p>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.</p> <p>For example: GeJCSym5eyvtEK2I.</p>
METHOD	<p>Type</p> <p>String</p> <p>Description</p> <p>The string that identifies a change in tenant secret Active state. For example, tenant secrets become active when they are created, and are made inactive when they are exported.</p> <p>Examples</p> <ul style="list-style-type: none"> • TS Exported: User ID • TS Generated: HSM or BYOK • TS Unwrapped: Tenant Secret or BYOK
ORGANIZATION_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the organization.</p> <p>For example: 00D000000000123.</p>
REQUEST_ID	<p>Type</p> <p>String</p> <p>Description</p> <p>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.</p> <p>For example: 3nWgxWbDKWWDIk0FKfF5DV.</p>
RUN_TIME	<p>Type</p> <p>Number</p> <p>Description</p> <p>The amount of time that the request took in milliseconds.</p>
SESSION_KEY	<p>Type</p> <p>String</p> <p>Description</p> <p>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.</p> <p>For example: d7DEq/ANa7nNZZVD.</p>

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 005900000000I1SNIA0.

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Queued Execution Event Type

Queued Execution events contain details about queued executions—for example, batch Apex.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.</p>
CPU_TIME	<p>Type Number</p> <p>Description The CPU time in milliseconds that it took to complete the batch apex request. This field indicates the amount of activity taking place in the app server layer, allowing you to identify pieces of Apex or Visualforce code that need refactoring.</p>
DB_TOTAL_TIME	<p>Type Number</p> <p>Description The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.</p>
ENTRY_POINT	<p>Type String</p>

Field	Details
	<p>Description The name of the Apex class that serves as the execution point for the batch job.</p> <p>Example TaskPhoneExtensionBatchUpdate</p>
EVENT_TYPE	<p>Type String</p> <p>Description The type of event. The value is always <code>QueuedExecution</code>.</p>
JOB_ID	<p>Type String</p> <p>Description The ID of the batch Apex job.</p> <p>Example 7073000000IDquo</p>
LOGIN_KEY	<p>Type String</p> <p>Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: <code>GeJCsym5eyvtEK2I</code>.</p>
ORGANIZATION_ID	<p>Type Id</p> <p>Description The 15-character ID of the organization. For example: <code>00D000000000123</code>.</p>
REQUEST_ID	<p>Type String</p> <p>Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>. For example: <code>3nWgxWbDKWWDIk0FKfF5DV</code>.</p>
REQUEST_STATUS	<p>Type String</p>

Field	Details
	<p>Description</p> <p>The status of the request for a page view or user interface action.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error.
RUN_TIME	<p>Type</p> <p>Number</p> <p>Description</p> <p>The amount of time that the request took in milliseconds.</p>
SESSION_KEY	<p>Type</p> <p>String</p> <p>Description</p> <p>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.</p> <p>For example: d7DEq/ANa7nNZZVD.</p>
TIMESTAMP	<p>Type</p> <p>String</p> <p>Description</p> <p>The access time of Salesforce services in GMT.</p> <p>For example: 20130715233322.670.</p>
TIMESTAMP_DERIVED	<p>Type</p> <p>DateTime</p> <p>Description</p> <p>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).</p>

Field	Details
	<p>For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.</p>
URI	<p>Type String</p> <p>Description The URI of the page that's receiving the request. For example: /home/home.jsp.</p>
URI_ID_DERIVED	<p>Type ID</p> <p>Description The 18-character case insensitive ID of the URI of the page that's receiving the request.</p>
USER_ID	<p>Type Id</p> <p>Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943</p>
USER_ID_DERIVED	<p>Type Id</p> <p>Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.</p>
USER_TYPE	<p>Type String</p> <p>Description The category of user license. Possible values are:</p> <ul style="list-style-type: none"> • <code>csnOnly</code>—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • <code>CspLitePortal</code>—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.

Field	Details
	<ul style="list-style-type: none"> • <code>CustomerSuccess</code>—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • <code>Guest</code>—Users whose access is limited so that your customers can view and interact with your site without logging in. • <code>PowerCustomerSuccess</code>—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • <code>PowerPartner</code>—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • <code>SelfService</code>—Users whose access is limited because they're organization customers and access the application through a self-service portal. • <code>Standard</code>—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

[EventLogFile](#)

Report Event Type

Report events contain information about what happened when a user ran a report. This event type includes all activity that's in the Report Export event type, plus more. For example, it has user activity for reports exported as both Formatted Report and Details Only output.

 **Note:** Exporting a report directly from the report result captures the event in both the Report and Report Export logs.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
<code>AVERAGE_ROW_SIZE</code>	Type Number

Description

The average row size of all rows in the Report event, in bytes. A large average size, coupled with a high `ROW_COUNT`, can indicate that a user is downloading information for fraudulent purposes. For example, a salesperson who downloads all sales leads before departing for a competitor.

Example

700

CLIENT_IP

Type

String

Description

The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

DB_BLOCKS

Type

Number

Description

Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.

DB_CPU_TIME

Type

Number

Description

The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.

DB_TOTAL_TIME

Type

Number

Description

The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to

determine whether performance issues are occurring in the database layer or in your own code.

DISPLAY_TYPE

Type

String

Description

The report display type, indicating the run mode of the report.

Possible values are:

- D—Dashboard
- S—Show Details
- H—Hide Details

ENTITY_NAME

Type

String

Description

The name of the object affected by the trigger.

EVENT_TYPE

Type

String

Description

The type of event. The value is always Report.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: GeJCsym5eyvtEK2I.

NUMBER_BUCKETS

Type

Number

Description

The number of buckets that were used in the report.

NUMBER_COLUMNS

Type

Number

Description

The number of columns in the report.

NUMBER_EXCEPTION_FILTERS

Type

Number

	<p>Description</p> <p>The number of exception filters that are used in the report.</p>
<p>ORGANIZATION_ID</p>	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the organization.</p> <p>For example: 00D000000000123.</p>
<p>ORIGIN</p>	<p>Type</p> <p>String</p> <p>Description</p> <p>The context in which the report executed, such as from a UI (Classic, Lightning, Mobile), through an API (synchronous, asynchronous, Apex), or through a dashboard.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • ReportOpenedFromMobileDashboard: Report executed when a user clicked a dashboard component on a mobile device and drilled down to a report. • DashboardComponentUpdated: Report executed when a user refreshed a dashboard component. • DashboardComponentPreviewed: Report executed from a Lightning dashboard component preview. • ReportRunUsingSynchronousApi: Report executed from a synchronous API. • ReportRunUsingAsynchronousApi: Report executed from an asynchronous API. • ReportRunUsingApexSynchronousApi: Report executed from the synchronous Apex API. • ReportRunUsingApexAsynchronousApi: Report executed from the asynchronous Apex API. • ReportExported: Report executed from a printable view or report export that was not asynchronous nor an API export. • ReportRunFromClassic: Report executed from the Run Report option of Salesforce Classic. • ReportRunFromMobile: Report executed from the Run Report option of the mobile Salesforce app. • ReportRunFromLightning: Report executed from the Run option in Lightning Experience from a non-mobile browser. • ReportRunFromRestApi: Report executed from REST API.

- **ReportPreviewed**: Report executed when a user got preview results while using the report builder.
- **ReportScheduled**: Report was scheduled.
- **ProbeQuery**: Report executed from a probe query.
- **ReportRunFromReportingSnapshot**: Report executed through Snapshot Analytics.
- **ReportExportedAsynchronously**: Report was exported asynchronously.
- **ReportExportedUsingExcelConnector**: Report was exported using the Excel connector.
- **ChartRenderedOnVisualforcePage**: Report executed from a rendered chart on a VisualForce Page.
- **ChartRenderedInEmbeddedAnalyticsApp**: Report executed from a rendered chart in an embedded Analytics app.
- **ReportRunAndNotificationSent**: Report executed through the notifications API.
- **ChartRenderedOnHomePage**: Report executed from a rendered chart on the home page.
- **ReportResultsAddedToWaveTrending**: Report executed when a user trended a report in Tableau CRM.
- **ReportAddedToCampaign**: Report was added from an Add to Campaign action.
- **ReportResultsAddedToEinsteinDiscovery**: Report executed synchronously from Einstein Discovery.
- **Unknown**: Report execution origin is unknown.
- **Test**: Report execution resulted from a test.

 RENDERING_TYPE
Type

String

Description

Describes the format of the report output in Salesforce Classic. If the report was exported in Lightning Experience, this field is blank.

Possible Values

- w: Web (HTML)
 - E: Email
 - P: Printable
 - X: Excel
 - C: Comma-separated values (CSV)
 - J: JavaScript Object Notation (JSON)
 - D: Dummy data
-

REPORT_ID

Type

Id

Description

The 15-character ID of the report that was run.

REPORT_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the report that was run.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

REQUEST_STATUS

Type

String

Description

The status of the request for a page view or user interface action.

Possible values are:

- S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
 - F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
 - U—Undefined
 - A—Authorization Error
 - R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
 - N—Not Found. 404 error.
-

ROW_COUNT

Type

Number

Description

The number of rows that were processed in the Report event. High row counts, coupled with a high

AVERAGE_ROW_SIZE, can indicate that a user is downloading information for fraudulent purposes. For example,

a salesperson who downloads all sales leads before departing for a competitor.

Example

150

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

SORT

Type

String

Description

The sort column and order that was used in the report.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

USER_TYPE

Type

String

Description

The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared

with users below them in the customer portal role hierarchy.

- **PowerPartner**—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- **SelfService**—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- **Standard**—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

Usage

Example: Identify Large Report Exports by User

Get Report event type data from the EventLogFile object using REST:

```
/services/data/v40.0/query?q=SELECT+Id+,+EventType+,+LogFile+,+LogDate+,+LogFileLength+FROM+EventLogFile+WHERE+
  LogDate+>+Yesterday+AND+EventType+=+'Report '
```

After you download the report data to a ReportData database table, query it and filter on reports that were exported with high row counts and size:

```
SELECT USER_ID FROM ReportData WHERE (RENDERING_TYPE=C OR RENDERING_TYPE=X OR
  RENDERING_TYPE=P) AND ROW_COUNT>150000 AND AVERAGE_ROW_SIZE>1500
```

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Report Export Event Type

Report Export events contain details about reports that a user exported. For example, this event type captures when a user exports a report as Details Only output. But it doesn't capture reports that users export as Formatted Report or XLSX Detail output. For that data, see the Report event type.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	Type String

	<p>Description</p> <p>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP".</p> <p>For example: 96.43.144.26.</p>
CLIENT_INFO	<p>Type</p> <p>String</p> <p>Description</p> <p>Information about the client that's using Salesforce services.</p>
CPU_TIME	<p>Type</p> <p>Number</p> <p>Description</p> <p>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.</p>
EVENT_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The type of event. The value is always ReportExport.</p>
LOGIN_KEY	<p>Type</p> <p>String</p> <p>Description</p> <p>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.</p> <p>For example: GeJCsym5eyvtEK2I.</p>
ORGANIZATION_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the organization.</p> <p>For example: 00D000000000123.</p>
REPORT_DESCRIPTION	<p>Type</p> <p>String</p> <p>Description</p> <p>Information about the report that was run.</p>

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgXWbDKWWDIk0FKfF5DV.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 2013071523322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

	<p>Description</p> <p>The 18-character case insensitive ID of the URI of the page that's receiving the request.</p>
<p>USER_ID</p>	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00530000009M943</p>
<p>USER_ID_DERIVED</p>	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00590000000I1SNIA0.</p>

EVENT_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The type of event. The value is always RestApi.</p>
LOGIN_KEY	<p>Type</p> <p>String</p>

	<p>Description</p> <p>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.</p> <p>For example: GeJCsym5eyvtEK2I.</p>
MEDIA_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The media type of the response.</p>
METHOD	<p>Type</p> <p>String</p> <p>Description</p> <p>The HTTP method of the request.</p> <p>For example: GET, POST, PUT, and so on.</p>
NUMBER_FIELDS	<p>Type</p> <p>Number</p> <p>Description</p> <p>The number of fields or columns, where applicable.</p>
ORGANIZATION_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the organization.</p> <p>For example: 00D000000000123.</p>
REQUEST_SIZE	<p>Type</p> <p>Number</p> <p>Description</p> <p>The size of the callout request body, in bytes.</p>
REQUEST_STATUS	<p>Type</p> <p>String</p> <p>Description</p> <p>The status of the request for a page view or user interface action.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • s—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.

- F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- U—Undefined
- A—Authorization Error
- R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- N—Not Found. 404 error.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

RESPONSE_SIZE

Type

Number

Description

The size of the callout response, in bytes.

ROWS_PROCESSED

Type

Number

Description

The number of rows that were processed in the request.

For example: 150.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

STATUS_CODE

Type

Number

	<p>Description The HTTP status code for the response.</p>
TIMESTAMP	<p>Type String</p> <p>Description The access time of Salesforce services in GMT. For example: 20130715233322.670.</p>
TIMESTAMP_DERIVED	<p>Type DateTime</p> <p>Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.</p>
URI	<p>Type String</p> <p>Description The URI of the page that's receiving the request. For example: /home/home.jsp.</p>
URI_ID_DERIVED	<p>Type ID</p> <p>Description The 18-character case insensitive ID of the URI of the page that's receiving the request.</p>
USER_AGENT	<p>Type Number</p> <p>Description The numeric code for the type of client used to make the request (for example, the browser, application, or API).</p>
USER_ID	<p>Type Id</p> <p>Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943</p>

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 005900000000I1SNIA0.

USER_TYPE

Type

String

Description

The category of user license.

Possible values are:

- `ConOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CSPLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.

- **Standard**—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

Sandbox Event Type

Sandbox events contain details about sandbox copies.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CURRENT_SANDBOX_ORG_ID	<p>Type Id</p> <p>Description The 15-character ID of the current sandbox organization.</p>
EVENT_TYPE	<p>Type String</p> <p>Description The type of event. The value is always <code>Sandbox</code>.</p>
ORGANIZATION_ID	<p>Type Id</p> <p>Description The 15-character ID of the organization. For example: 00D000000000123.</p>
PENDING_SANDBOX_ORG_ID	<p>Type Id</p> <p>Description The 15-character ID of the target sandbox org.</p>
REQUEST_ID	<p>Type String</p>

	<p>Description</p> <p>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>.</p> <p>For example: 3nWgxBbDKWWDIk0FKfF5DV.</p>
SANDBOX_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the sandbox organization.</p>
STATUS	<p>Type</p> <p>String</p> <p>Description</p> <p>The status of the sandbox copy.</p>
TIMESTAMP	<p>Type</p> <p>String</p> <p>Description</p> <p>The access time of Salesforce services in GMT.</p> <p>For example: 20130715233322.670.</p>
TIMESTAMP_DERIVED	<p>Type</p> <p>DateTime</p> <p>Description</p> <p>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).</p> <p>For example: 2015-07-27T11:32:59.555z. Timezone is GMT.</p>
USER_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00530000009M943</p>
USER_ID_DERIVED	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.</p>

For example: 005900000000I1SNIA0.

Search Event Type

Search events contain details about the user's search query. All searches within the app, including Experience Cloud sites, are included. However, unauthenticated users won't have a unique Salesforce user ID.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
EVENT_TYPE	<p>Type String</p> <p>Description The type of event. The value is always <code>Search</code>.</p>
NUM_RESULTS	<p>Type Number</p> <p>Description Number of results returned by the search query.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • 0 • 25 • 1000
ORGANIZATION_ID	<p>Type Id</p> <p>Description The 15-character ID of the organization. For example: 00D000000000123.</p>
PREFIXES_SEARCHED	<p>Type String</p> <p>Description Space-separated list of key prefixes that were searched.</p> <p>Example 001 006 ka0</p>

QUERY_ID

Type

String

Description

Unique ID of the search query.

Example

-2vx8relit08r

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgXWbDKWWDIk0FKfF5DV.

SEARCH_QUERY

Type

String

Description

The first 100 characters of the search query.

Example

Salesforce

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.SSSZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

USER_ID

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 005900000000I1SNIA0.

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Search Click Event Type

Search Click events contain details about the user's interaction with the search results. All searches within the app, including Experience Cloud sites, are included. However, unauthenticated users won't have a unique Salesforce user ID.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLICKED_RECORD_ID	<p>Type String</p> <p>Description The 15-character ID of the result the user clicked in the search results page.</p> <p>Example a07B00000031pRV</p>
EVENT_TYPE	<p>Type String</p> <p>Description The type of event. The value is always <code>SearchClick</code>.</p>
ORGANIZATION_ID	<p>Type Id</p> <p>Description The 15-character ID of the organization. For example: 00D000000000123.</p>
QUERY_ID	<p>Type String</p> <p>Description Unique ID of the search query.</p> <p>Example -2vx8reIit08r</p>

RANK

Type

Number

Description

Ranking of the result clicked in the search results page.

Example

2

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

USER_ID

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Sites Event Type

Sites events contain details of Site.com requests. Requests can originate from the browser (UI).

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.</p>
CPU_TIME	<p>Type Number</p> <p>Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.</p>
DB_TOTAL_TIME	<p>Type Number</p> <p>Description The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.</p>
EVENT_TYPE	<p>Type String</p> <p>Description The type of event. The value is always <code>Sites</code>.</p>
HTTP_HEADERS	<p>Type String</p> <p>Description The HTTP headers that were sent in the request.</p>
HTTP_METHOD	<p>Type String</p>

	<p>Description The HTTP method of the request. For example: GET, POST, PUT, and so on.</p>
IS_API	<p>Type Boolean</p> <p>Description True if this page was an API or Web Services request.</p>
IS_ERROR	<p>Type Boolean</p> <p>Description True if this page was an error page.</p>
IS_FIRST_REQUEST	<p>Type Boolean</p> <p>Description 1 if this page is the first Visualforce transaction in the request, or 0 if it isn't.</p>
IS_GUEST	<p>Type Boolean</p> <p>Description True if this page was a guest (unauthenticated) request.</p>
IS_SECURE	<p>Type Boolean</p> <p>Description True if this request is secure.</p>
LOGIN_KEY	<p>Type String</p> <p>Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.</p>
ORGANIZATION_ID	<p>Type Id</p> <p>Description The 15-character ID of the organization. For example: 00D000000000123.</p>

PAGE_NAME

Type

String

Description

The name of the Visualforce page that was requested.

QUERY

Type

String

Description

The SOQL query, if one was performed.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

REQUEST_STATUS

Type

String

Description

The status of the request for a page view or user interface action.

Possible values are:

- S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
 - F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
 - U—Undefined
 - A—Authorization Error
 - R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
 - N—Not Found. 404 error.
-

REQUEST_TYPE

Type

String

Description

The request type.

Possible values are:

- page—a normal request for a page
-

- `content_UI`—a content request for a page that originated in the user interface
- `content_apex`—a content request initiated by an Apex call
- `PDF_UI`—a request for a page in PDF format through the user interface
- `PDF_apex`—a request for PDF format by an Apex call (usually a Web Service call)

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: `d7DEq/ANa7nNZZVD`.

SITE_ID

Type

Id

Description

The 15-character ID of the Site.com site.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: `20130715233322.670`.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).

For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.

URI

Type

String

URI_ID_DERIVED	<p>Description</p> <p>The URI of the page that's receiving the request.</p> <p>For example: /home/home.jsp.</p>
USER_ID	<p>Type</p> <p>ID</p> <p>Description</p> <p>The 18-character case insensitive ID of the URI of the page that's receiving the request.</p>
USER_ID_DERIVED	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00530000009M943</p>
USER_TYPE	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00590000000I1SNIA0.</p>
USER_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The category of user license.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • <code>CsnOnly</code>—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • <code>CspLitePortal</code>—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • <code>CustomerSuccess</code>—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • <code>Guest</code>—Users whose access is limited so that your customers can view and interact with your site without logging in.

- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

SOAP API Event Type

SOAP API events contain details about your org's SOAP API request activity.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
<code>API_TYPE</code>	<p>Type String</p> <p>Description The type of API request. Possible values are:</p> <ul style="list-style-type: none"> • <code>D</code>—Apex Class • <code>E</code>—SOAP Enterprise • <code>I</code>—SOAP Cross Instance • <code>M</code>—SOAP Metadata • <code>O</code>—Old SOAP • <code>P</code>—SOAP Partner • <code>S</code>—SOAP Apex

- T—SOAP Tooling
- X—XmlRPC
- F—Feed
- L—Live Agent
- P—SOAP ClientSync

API_VERSION

Type

String

Description

The version of the API that's being used.

For example: 36.0.

CLIENT_IP

Type

String

Description

The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP".

For example: 96.43.144.26.

CLIENT_NAME

Type

String

Description

The name of the client that's using Salesforce services. This field is an optional parameter that can be passed in API calls. If blank, the caller didn't specify a client in the CallOptions header.

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

DB_BLOCKS

Type

Number

Description

Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.

DB_CPU_TIME

Type

Number

	<p>Description</p> <p>The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.</p>
DB_TOTAL_TIME	<p>Type</p> <p>Number</p> <p>Description</p> <p>The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.</p>
ENTITY_NAME	<p>Type</p> <p>Set</p> <p>Description</p> <p>Objects that are accessed by the API request.</p> <p>For example: Account, Opportunity, Contact, and so on.</p>
EVENT_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The type of event. The value is always API.</p>
LOGIN_KEY	<p>Type</p> <p>String</p> <p>Description</p> <p>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.</p> <p>For example: GeJCSym5eyvtEK2I.</p>
METHOD_NAME	<p>Type</p> <p>String</p> <p>Description</p> <p>The name of the calling Apex method.</p>
ORGANIZATION_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the organization.</p> <p>For example: 00D000000000123.</p>

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgXWbDKWWDIk0FKFF5DV.

REQUEST_SIZE

Type

Number

Description

The size of the callout request body, in bytes.

REQUEST_STATUS

Type

String

Description

The status of the request for a page view or user interface action.

Possible values are:

- S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- U—Undefined
- A—Authorization Error
- R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- N—Not Found. 404 error.

RESPONSE_SIZE

Type

Number

Description

The size of the callout response, in bytes.

ROWS_PROCESSED

Type

Number

Description

The number of rows that were processed in the request.

For example: 150.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

	<p>Description</p> <p>The 15-character ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00530000009M943</p>
USER_ID_DERIVED	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00590000000I1SNIA0.</p>
USER_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The category of user license.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • <code>CsnOnly</code>—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • <code>CspLitePortal</code>—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • <code>CustomerSuccess</code>—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • <code>Guest</code>—Users whose access is limited so that your customers can view and interact with your site without logging in. • <code>PowerCustomerSuccess</code>—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • <code>PowerPartner</code>—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • <code>SelfService</code>—Users whose access is limited because they're organization customers and access the application through a self-service portal.

- **Standard**—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Time-Based Workflow Event Type

Time-Based Workflow events contain details about queue activity monitoring.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or the [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.</p>
CPU_TIME	<p>Type Number</p> <p>Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.</p>
DATA	<p>Type String</p> <p>Description The record details of time queue activity.</p>
EVENT_TYPE	<p>Type String</p> <p>Description The type of event. The value is always <code>TimeBasedWorkflow</code>.</p>

LOG_GROUP_ID

Type

String

Description

Marks log records that are committed or rolled back.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: GeJCsym5eyvtEK2I.

NUMBER_OF_RECORDS

Type

Number

Description

The number of processed records.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D000000000123.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

TYPE

Type

String

Description

The type of time-based workflow event.

- **UIDEL**—An entry was deleted from the Time-Based Workflow page in Setup.
 - **ERRDEL**—An entry was deleted from the workflow queue, because there was an error reading the record that triggered the workflow rule. The associated time-dependent actions weren't processed.
 - **DELETE**—An entry was deleted from the workflow queue, because it's no longer relevant. For example, the criteria are no longer met by the associated record. If the evaluation date for the entry changed, the entry is re-added with the updated evaluation date.
 - **PROC**—An entry was deleted from the workflow queue after processing a time-dependent action.
-

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

	<p>Description</p> <p>The 18-character case insensitive ID of the URI of the page that's receiving the request.</p>
USER_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00530000009M943</p>
USER_ID_DERIVED	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00590000000I1SNIA0.</p>

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Transaction Security Event Type

Transaction Security events contain details about policy execution.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	<p>Type</p> <p>String</p> <p>Description</p> <p>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP".</p> <p>For example: 96.43.144.26.</p>
CPU_TIME	<p>Type</p> <p>Number</p>

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

EVALUATION_TIME_MS

Type

Number

Description

The time in milliseconds used to evaluate the policy.

EVENT_TIMESTAMP

Type

String

Description

The time at which the Transaction Security event was generated in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). This value can be earlier than TIMESTAMP_DERIVED by the amount of time taken to log the event.

For example:

2015-07-27T11:32:59.555Z.

EVENT_TYPE

Type

String

Description

The type of event. The value is always TransactionSecurity.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: GeJCSym5eyvtEK2I.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D00000000123.

POLICY_ID

Type

Id

Description

The 15-character ID of the policy being evaluated.

For example: 00530000009M943

POLICY_ID_DERIVED

Type

Id

Description

The 18-character case-insensitive ID of the policy being evaluated.

For example:

00590000000I1SNIA0

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example:

3nWgxWbDKWWDIk0FKfF5DV.

RESULT

Type

String

Description

The outcome of evaluating the policy.

For example: TRIGGEREDzzz or

NOT TRIGGERED.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example:

20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example:

2015-07-27T11:32:59.555Z.

Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example:

00590000000I1SNIA0.

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

URI Event Type

URI events contain details about user interaction with the web browser UI.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.</p>
CPU_TIME	<p>Type Number</p> <p>Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.</p>

DB_BLOCKS

Type

Number

Description

Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.

DB_CPU_TIME

Type

Number

Description

The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.

DB_TOTAL_TIME

Type

Number

Description

The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.

EVENT_TYPE

Type

String

Description

The type of event. The value is always URI.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: GeJCsym5eyvtEK2I.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D000000000123.

REFERRER_URI

Type

String

	<p>Description</p> <p>The referring URI of the page that's receiving the request.</p>
REQUEST_ID	<p>Type</p> <p>String</p> <p>Description</p> <p>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.</p> <p>For example: 3nWgXWbDKWWDIk0FKfF5DV.</p>
REQUEST_STATUS	<p>Type</p> <p>String</p> <p>Description</p> <p>The status of the request for a page view or user interface action.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error.
RUN_TIME	<p>Type</p> <p>Number</p> <p>Description</p> <p>The amount of time that the request took in milliseconds.</p>
SESSION_KEY	<p>Type</p> <p>String</p> <p>Description</p> <p>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.</p> <p>For example: d7DEq/ANa7nNZZVD.</p>

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request. For more granular URI information for Lightning Experience and the Salesforce app, see the Lightning Error, Lightning Interaction, Lightning Page View, and Lightning Performance event types.

Examples

`/aura` (Lightning Experience), `/lightning` (Lightning Experience and the Salesforce app), `/home/home.jsp` (Salesforce Classic)

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 005900000000I1SNIA0.

USER_TYPE

Type

String

Description

The category of user license.

Possible values are:

- **CsnOnly**—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
 - **CspLitePortal**—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
 - **CustomerSuccess**—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
 - **Guest**—Users whose access is limited so that your customers can view and interact with your site without logging in.
 - **PowerCustomerSuccess**—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
 - **PowerPartner**—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
 - **SelfService**—Users whose access is limited because they're organization customers and access the application through a self-service portal.
 - **Standard**—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.
-

Visualforce Request Event Type

Visualforce Request events contain details of Visualforce requests. Requests can originate from the browser (UI).

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.</p>
CONTROLLER_TYPE	<p>Type Number</p> <p>Description The type of controller that's used by the requested Visualforce page.</p> <p>Possible Values</p> <ul style="list-style-type: none"> • 0: NOT_SPECIFIED • 1: STANDARD • 2: STANDARD_SET • 3: CUSTOM • 4: JAVA • 5: SPRING
CPU_TIME	<p>Type Number</p> <p>Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.</p>
DB_BLOCKS	<p>Type Number</p> <p>Description Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.</p>

DB_CPU_TIME

Type

Number

Description

The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.

DB_TOTAL_TIME

Type

Number

Description

The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.

EVENT_TYPE

Type

String

Description

The type of event. The value is always `VisualforceRequest`.

HTTP_METHOD

Type

String

Description

The HTTP method of the request.

For example: `GET`, `POST`, `PUT`, and so on.

IS_AJAX_REQUEST

Type

Boolean

Description

The value is `true` if the request is a partial page request.

IS_FIRST_REQUEST

Type

Boolean

Description

1 if this page is the first Visualforce transaction in the request, or 0 if it isn't.

LOGIN_KEY

Type

String

	<p>Description</p> <p>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.</p> <p>For example: GeJCsym5eyvtEK2I.</p>
MANAGED_PACKAGE_NAMESPACE	<p>Type</p> <p>String</p> <p>Description</p> <p>If the page is part of a managed package, the namespace of that package.</p>
ORGANIZATION_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the organization.</p> <p>For example: 00D000000000123.</p>
PAGE_NAME	<p>Type</p> <p>String</p> <p>Description</p> <p>The name of the Visualforce page that was requested.</p>
QUERY	<p>Type</p> <p>String</p> <p>Description</p> <p>The query string used to access the requested Visualforce page.</p> <p>Example</p> <p>Let's assume that the requested Visualforce page (/apex/myAccountDetailPage?id=001xx000003GYv6AAG) shows details of the account whose ID is in the URL. The value of <code>QUERY</code> in this case is <code>?id=001xx000003GYv6AAG</code>.</p>
REQUEST_ID	<p>Type</p> <p>String</p> <p>Description</p> <p>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>.</p> <p>For example: 3nWgxWbDKWWDIk0FKfF5DV.</p>
REQUEST_SIZE	<p>Type</p> <p>Number</p>

	<p>Description</p> <p>The size of the request body, in bytes. Value is -1 if the request body content is larger than 2GB, or if the request has no body (for example, a typical GET request).</p>
REQUEST_STATUS	<p>Type</p> <p>String</p> <p>Description</p> <p>The status of the request for a page view or user interface action.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error.
REQUEST_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The request type.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • page—a normal request for a page • content_UI—a content request for a page that originated in the user interface • content_apex—a content request initiated by an Apex call • PDF_UI—a request for a page in PDF format through the user interface • PDF_apex—a request for PDF format by an Apex call (usually a Web Service call)
RESPONSE_SIZE	<p>Type</p> <p>Number</p> <p>Description</p> <p>The size of the response, in bytes.</p>

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_AGENT

Type

Number

	<p>Description</p> <p>The numeric code for the type of client used to make the request (for example, the browser, application, or API).</p>
<p>USER_ID</p>	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00530000009M943</p>
<p>USER_ID_DERIVED</p>	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00590000000I1SNIA0.</p>
<p>USER_TYPE</p>	<p>Type</p> <p>String</p> <p>Description</p> <p>The category of user license.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • <code>CsnOnly</code>—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • <code>CspLitePortal</code>—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • <code>CustomerSuccess</code>—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • <code>Guest</code>—Users whose access is limited so that your customers can view and interact with your site without logging in. • <code>PowerCustomerSuccess</code>—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.

- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

`VIEW_STATE_SIZE`

Type

Number

Description

The size of the Visualforce view state, in bytes.

SEE ALSO:

[EventLogFile Supported Event Types](#)[EventLogFile](#)

Wave Change Event Type

Wave Change events represent route or page changes made in the Tableau CRM user interface. A Wave Change event type is captured every time the user opens a new Tableau CRM asset or tab or switches between tabs. Wave Change events are logged when opening new tabs and switching back to previously opened tabs.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field**Details**`ANALYTICS_MODE`**Type**

String

Description

The location in which the dashboard is displayed. In the Salesforce mobile app, embedded dashboards are logged as `embedded` first. When a user interacts with the dashboard, a full screen dashboard is displayed to allow for user interaction, and is logged as `mobileNative`.

Possible values are:

- `studio`—Analytics Studio
-

- `tab`—Analytics tab
- `embedded`— Embedded in Aura or Lightning.
- `mobileNative`— Tableau CRM mobile app for iOS/Android or Salesforce mobile app for iOS/Android

CLIENT_IP

Type

String

Description

The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".

For example: 96.43.144.26.

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

EVENT_TYPE

Type

String

Description

The type of event. The value is always `WaveChange`.

IS_MOBILE

Type

Boolean

Description

If `true`, the dashboard is displayed in the Tableau CRM mobile app for iOS and Android, in the Salesforce mobile app for iOS and Android, or in a mobile browser.

IS_NEW

Type

Boolean

Description

The field indicates that this action opens a new tab or goes back to a previously

opened tab. If the change routes to a new page, the value of this field is true. If it routes to an existing page, this field is false.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: GeJCSym5eyvtEK2I.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D000000000123.

PAGE_CONTEXT

Type

String

Description

The context of the page in which the dashboard is displayed. In the Salesforce mobile app, embedded dashboards are logged as `aura` first. When a user interacts with the dashboard, a full screen dashboard is displayed to allow for user interaction, and is logged as `iOS` or `android`.

Possible values are:

- `aura`—Lightning Components
- `vf`—Visualforce
- `iOS`—Tableau CRM or Salesforce mobile app for iOS
- `android`—Tableau CRM or Salesforce mobile app for Android

RECORD_ID

Type

String

	<p>Description The Salesforce ID of the Tableau CRM object.</p>
REOPEN_COUNT	<p>Type Number</p> <p>Description If IS_NEW is false, the number of times that an existing page opens.</p>
REQUEST_ID	<p>Type String</p> <p>Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxBbDKWWDIk0FKfF5DV.</p>
RUN_TIME	<p>Type Number</p> <p>Description The amount of time that the request took in milliseconds.</p>
SESSION_KEY	<p>Type String</p> <p>Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.</p>
TAB_ID	<p>Type String</p> <p>Description The ID of the particular Analytics tab in the user interface. For example: dashboard-0FKB000000Ec64GDK.</p>

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example:

20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example:

2015-07-27T11:32:59.555Z.

Timezone is GMT.

TYPE

Type

String

Description

The Tableau CRM object type.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943.

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example:

00590000000I1SNIA0.

WAVE_SESSION_ID

Type

String

Description

The ID of a particular session of Tableau CRM. Use this field to determine which log lines originated from a particular session.

WAVE_TIMESTAMP

Type

Number

Description

The time at which this log line was generated.

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Wave Download Event Type

Wave Download events represent downloads made from lens explorations and dashboard widgets in the Tableau CRM user interface. A Wave Download event type is captured when a user downloads images (.png), Microsoft® Excel® data (.xls), or comma-separated values (.csv) files.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field**Details**

ASSET_ID

Type

ID

Description

The ID of the asset the user downloads from.

Field	Details
ASSET_TYPE	<p>Type String</p> <p>Description The type of the asset the user downloads from.</p> <p>Values</p> <ul style="list-style-type: none"> • Lens—A <i>lens</i> is a view into a dataset used in an exploratory mode or to get insight to a specific business question. The lens can be saved and shared independently. It can also be clipped to a dashboard. • Dashboard—A <i>dashboard</i> is a curated set of charts, metrics, and tables based on the data in one or more lenses.
CLIENT_IP	<p>Type String</p> <p>Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".</p> <p>Example 96.43.144.26</p>
CPU_TIME	<p>Type Number</p> <p>Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.</p>
DATASET_IDS	<p>Type String</p> <p>Description Comma-separated list of IDs of utilized data sets.</p>
DOWNLOAD_FORMAT	<p>Type String</p> <p>Description The data format of the export.</p> <p>Values</p> <ul style="list-style-type: none"> • png—Image • csv—Comma-separated values • xls—Microsoft Excel
EVENT_TYPE	<p>Type String</p>

Field	Details
	<p>Description The type of event. The value is always <code>WaveDownload</code>.</p>
LOGIN_KEY	<p>Type String</p> <p>Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.</p> <p>Example <code>GeJCsym5eyvtEK2l</code></p>
NUMBER_OF_RECORDS	<p>Type Number</p> <p>Description The number of records exported.</p>
ORGANIZATION_ID	<p>Type Id</p> <p>Description The 15-character ID of the organization.</p> <p>Example <code>00D000000000123</code></p>
REQUEST_ID	<p>Type String</p> <p>Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>.</p> <p>Example <code>3nWgxWbDKWWDik0FKff5DV</code></p>
RUN_TIME	<p>Type Number</p> <p>Description The amount of time that the request took in milliseconds.</p>
SESSION_KEY	<p>Type String</p> <p>Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.</p>

Field	Details
	<p>Example d7DEq/ANa7nNZZVD</p>
TIMESTAMP	<p>Type String</p> <p>Description The access time of Salesforce services in GMT. For example: 20130715233322.670.</p>
TIMESTAMP_DERIVED	<p>Type DateTime</p> <p>Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.</p>
URI	<p>Type String</p> <p>Description The URI of the page that's receiving the request.</p> <p>Example /home/home.jsp</p>
URI_ID_DERIVED	<p>Type ID</p> <p>Description The 18-character case insensitive ID of the URI of the page that's receiving the request.</p>
USER_ID	<p>Type Id</p> <p>Description The 15-character ID of the user who's using Salesforce services through the UI or the API.</p> <p>Example 00530000009M943</p>
USER_ID_DERIVED	<p>Type Id</p> <p>Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.</p>

Field	Details
	<p>Example</p> <p>00590000000I1SNIA0</p>
USER_TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The type of Salesforce user.</p>
WAVE_SESSION_ID	<p>Type</p> <p>String</p> <p>Description</p> <p>The ID of a particular session of Tableau CRM. Use this field to determine which log lines originated from a particular session.</p>
WAVE_TIMESTAMP	<p>Type</p> <p>Number</p> <p>Description</p> <p>The time at which this log line was generated.</p>

Wave Interaction Event Type

Wave Interaction events represent route or page changes made in the Tableau CRM user interface. A Wave Interaction event type is captured when a tab is closed. It also collates the interaction statistics over the life of the tab, including total open time, read time, and so on. These statistics are aggregated as you go to other tabs and return, and logged only once when the tab is closed.

 **Note:** Because Wave Interaction events are logged only when the tab or browser window is closed, these events might not match Wave Change events exactly if a user allows their Salesforce session to time out before closing.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	<p>Type</p> <p>String</p> <p>Description</p> <p>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP".</p> <p>For example: 96.43.144.26.</p>

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

EVENT_TYPE

Type

String

Description

The type of event. The value is always `WaveInteraction`.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: `GeJCsym5eyvtEK2I`.

NUM_CLICKS

Type

Number

Description

The number of clicks performed on a page in the Tableau CRM user interface.

NUM_SESSIONS

Type

Number

Description

The number of times a user returned to a particular page.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: `00D000000000123`.

READ_TIME

Type

Number

Description

The amount of time a user spent on a particular tab.

RECORD_ID	<p>Type String</p> <p>Description The Salesforce ID of the Tableau CRM object.</p>
REQUEST_ID	<p>Type String</p> <p>Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgXWbDKWWDIk0FKfF5DV.</p>
RUN_TIME	<p>Type Number</p> <p>Description The amount of time that the request took in milliseconds.</p>
SESSION_KEY	<p>Type String</p> <p>Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.</p>
TAB_ID	<p>Type String</p> <p>Description The ID of the particular Analytics tab in the user interface.</p> <p>Example dashboard-0FKB000000Ec64GDK</p>
TIMESTAMP	<p>Type String</p> <p>Description The access time of Salesforce services in GMT. For example: 20130715233322.670.</p>
TIMESTAMP_DERIVED	<p>Type DateTime</p>

	<p>Description</p> <p>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.SSSZ).</p> <p>For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.</p>
TOTAL_TIME	<p>Type</p> <p>Number</p> <p>Description</p> <p>The total amount of time a tab was open in milliseconds.</p>
TYPE	<p>Type</p> <p>String</p> <p>Description</p> <p>The Tableau CRM object type.</p>
URI	<p>Type</p> <p>String</p> <p>Description</p> <p>The URI of the page that's receiving the request.</p> <p>For example: /home/home.jsp.</p>
URI_ID_DERIVED	<p>Type</p> <p>ID</p> <p>Description</p> <p>The 18-character case insensitive ID of the URI of the page that's receiving the request.</p>
USER_ID	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 15-character ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00530000009M943</p>
USER_ID_DERIVED	<p>Type</p> <p>Id</p> <p>Description</p> <p>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.</p> <p>For example: 00590000000I1SNIA0.</p>

WAVE_SESSION_ID

Type

String

Description

The ID of a particular session of Tableau CRM. Use this field to determine which log lines originated from a particular session.

WAVE_TIMESTAMP

Type

Number

Description

The time at which this log line was generated.

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Wave Performance Event Type

Wave Performance events help you track trends in your Analytics performance.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field**Details**

CLIENT_IP

Type

String

Description

The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from Salesforce Workbench or AppExchange) is shown as "Salesforce.com IP".
For example: 96 . 43 . 144 . 26.

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

EPT

Type

Number

Description

The experienced page time in milliseconds.

EVENT_TYPE

Type

String

Description

The type of event. The value is always WavePerformance.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: GeJCsym5eyvtEK2I.

NAME

Type

String

Description

The asset title or query string.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D000000000123.

QUERY_ID

Type

String

Description

This field is deprecated in API version 50.0. The number of queries can be determined using the Uri Event type logs, referenced [here](#) on page 1674

RECORD_ID

Type

String

Description

The Salesforce ID of the Tableau CRM object.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TAB_ID

Type

String

Description

The ID of the particular Analytics tab in the user interface.

Example

dashboard-0FKB0000000Ec64GDK

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

TYPE

Type

String

Description

The Tableau CRM object type.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

WAVE_SESSION_ID

Type

String

Description

The ID of a particular session of Tableau CRM. Use this field to determine which log lines originated from a particular session.

WAVE_TIMESTAMP

Type

Number

Description

The time at which this log line was generated.

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

EventRelation

Represents a person (a user, lead, or contact) or a resource (such as a conference room) invited to an event. This object lets you add or remove invitees from an event and use the API to manage invitees' responses to invitations. If Shared Activities is enabled, EventRelation can also represent other objects that are related to an event. EventRelation does not support triggers, workflow, or data validation rules.

EventRelation allows a variable number of relationships and handles deleted events differently, depending on whether Shared Activities is enabled.

A non-recurring event can have up to 1,000 invitees. A recurring event can have up to 100 invitees.

If Shared Activities Isn't Enabled

- EventRelation records only represent invitees (contacts, users, and resources).
- An event can be related to one contact or lead.

If Shared Activities Is Enabled

- EventRelation records can represent:
 - Invitees (`IsInvitee` is set to `true`)
 - OR
 - Related contacts or lead (`IsParent` is set to `true`)
- An event can be related to up to 50 contacts or one lead. These people may or may not be invitees. The number of allowed invitees is not affected by the number of related contacts. If a contact or lead is also an invitee, there is one EventRelation record for that person with `IsInvitee` and `IsParent` are set to `true`.
- An event can be related to a lead, contact, resource, account, or opportunity.
- An event can be related to a custom object that has the `HasActivities` attribute set to `true`.
- If you delete an event, then relations between the event and any specified contacts, leads, and other records are also deleted.
- If you delete the EventRelation record representing a relation then the corresponding relation field may be cleared on the event.
- If you delete the EventRelation record representing the `WhoId` on an event, then another `Who`, if any, from the event's `EventWhoIds` field will be promoted to the `WhoId`.
- If you restore a deleted event, relations between the event and any specified contacts, leads, and records are also restored. The `WhoId`, `WhatId`, and `AccountId` field values are recalculated using the field values on EventRelation.

Whether or not Shared Activities is enabled, an event can be related to one other kind of record, such as an account, an opportunity, or a custom object.

Note:

- With API versions 26.0 and later, the EventRelation object replaces the EventAttendee object, and the EventAttendee object is no longer visible. You can still query the EventAttendee object using packages that support API versions 25.0 and earlier, or by using Apex.
- An EventRelation object can't be created for a child event.
- EventRelation includes deactivated users.
- In API versions 25.0 and earlier, you can't use `query()`, `delete()`, or `update()` with events related to more than one contact.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
AccountId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Contains the Account ID of the relation. For information on IDs, see ID Field Type. <code>AccountId</code> is visible when Shared Activities is enabled.</p>
EventId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Contains the ID of the event. This value can't be changed after it's been specified. This is a relationship field.</p> <p>Relationship Name Event</p> <p>Relationship Type Lookup</p> <p>Refers To Event</p>
IsDeleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <code>Deleted</code>.</p>
IsInvitee	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the relation is an invitee.</p> <ul style="list-style-type: none"> <code>IsInvitee</code> is visible while Shared Activities is being enabled, after it has been enabled, and while it is being disabled.

Field	Details
	<ul style="list-style-type: none"> • <code>IsInvitee</code> defaults to <code>true</code> while Shared Activities is being enabled, after it has been enabled, and while it is being disabled if <code>IsInvitee</code>, <code>IsParent</code>, and <code>IsWhat</code> are not set. This configuration ensures compatibility when Shared Activities isn't enabled and <code>EventRelation</code> represents event invitees only. • <code>IsInvitee</code> defaults to <code>false</code> when Shared Activities is enabled if <code>IsParent</code> is set to <code>true</code>.
<code>IsParent</code>	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description <code>IsParent</code> is visible only when Shared Activities is enabled. When <code>false</code>, indicates that the relation is an invitee (a contact, lead, or user). When <code>true</code>, indicates that the relation is a Who or What, as determined by <code>IsWhat</code> field.</p>
<code>IsWhat</code>	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description <code>IsWhat</code> is visible only when Shared Activities is enabled. The value is relevant only if <code>IsParent</code> is <code>true</code>. When <code>IsWhat</code> is <code>true</code>, the relation specified by <code>RelationId</code> is a What (an account, opportunity, custom object, etc.). When <code>IsWhat</code> is <code>false</code>, the relation specified by <code>RelationId</code> is a Who (a contact, lead, or user).</p>
<code>RelationId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Contains the ID of the person (User, Contact, or Lead) or the resource invited to an event. When Shared Activities is enabled, <code>RelationId</code> can also contain the ID of an account, opportunity, or other object related to an event. This value can't be changed after it's been specified. This is a polymorphic relationship field.</p> <p>Relationship Name Relation</p> <p>Relationship Type Lookup</p>

Field	Details
	<p>Refers To Calendar, Contact, Lead, User</p>
RespondedDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Indicates the most recent date and time when the invitee responded to an invitation to an event.</p>
Response	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Contains optional text that the invitee can enter when responding to an invitation to an event.</p>
Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Indicates the invitee status with one of the following values:</p> <ul style="list-style-type: none"> • New: Invitee has received the invitation but hasn't yet responded. This value is the default. • Declined: Invitee has declined the invitation. • Accepted: Invitee has accepted the invitation. <p> Note: Uninvited and Maybe aren't currently supported.</p>

Usage

- Invitee related lists display slightly different content. In the Salesforce mobile app, the invitee related list includes invitees only, whereas in the full site, it also includes the event owner. To reproduce the full site functionality in the Salesforce mobile app, use the following API queries.

If you use Shared Activities in your Salesforce org, use this query:

```
SELECT RelationId FROM EventRelation WHERE isInvitee = true AND eventId='[Event_Id]'
```

where *Event_Id* is the child event's ID.

If you don't use Shared Activities, use this query:

```
SELECT RelationId FROM EventRelation WHERE eventId=' [Event_Id] '
```

These queries get the main event's relations and display them for the given child event. To further filter the results, add a WHERE clause.

Assigning resource attendance status

You can add a resource to an event only when the resource is available. The only attendance status that can be assigned to resources is Accepted. Events can't be saved when resources you've added aren't available.

Create an invitee if Shared Activities is enabled (or during the process of enabling it or rolling back)

If the invitee is already a contact or lead, update `IsInvitee` to `true`.

If the invitee is not already a contact or lead, create an `EventRelation` object for the invitee with `IsInvitee` set to `true`.

Create an invitee if Shared Activities is not enabled

Create an `EventRelation` object for the invitee.

Insert a contact or lead relation

```
EventRelation er = new EventRelation(EventId = '00UD0000005zjH',
    RelationId = '003D000000Q8aeV', isParent = true, isInvitee = false);
insert er;
```

Determine what events a given invitee is attending

To determine all the events that a particular person is attending during a given time period (for example, next week), you can have a client application query the `Event` object for a given date range, iterate through the results, and, for each event, query the `EventRelation` object to determine whether the particular person (`RelationId`) has accepted an invitation to that event.

Insert an invitee relation

If `isParent`, `isWhat` and `IsInvitee` are not set, and `RelationId` is a contact, lead, user, or calendar, `IsInvitee` defaults to `true`. This means if an `EventRelation` isn't specifically inserted as a relation to a contact or lead, it's treated as an Invitee relation by default.

```
EventRelation er = new EventRelation(EventId = '00UD0000005zjH',
    RelationId = '003D000000Q8adV');
insert er;
```

Query relations to a contact or a lead

```
List<EventRelation> whoRelations = [SELECT Id, Relation.Name FROM
    EventRelation WHERE EventId = '00UD0000005zjD' AND isParent = true AND isWhat =
    false];
```

Query invitee relations

```
List<EventRelation> inviteeRelations = [SELECT Id, Relation.Name FROM
    EventRelation WHERE EventId = '00UD0000005zjD' AND isInvitee = true];
```

Update an invitee relation to a contact or lead invitee relation

```
EventRelation er = [SELECT Id FROM EventRelation WHERE EventId =
    '00UD0000005zjD' AND isInvitee = true and isParent = false LIMIT 1];
er.isParent = true;
update er;
```

Update a contact or lead relation to a contact or lead invitee relation

```
EventRelation er = [SELECT Id FROM EventRelation WHERE EventId =
  '00UD0000005zjD' AND isParent = true and isInvitee = false LIMIT 1];
er.isInvitee = true;
update er;
```

Reproduce invitee related list functionality in the Salesforce mobile app

Invitee related lists display slightly different content in the Salesforce mobile app and the full site. In the app, the invitee related list includes invitees only, whereas in the full site, it also includes the event owner.

If you use Shared Activities in your Salesforce org, use the following query to reproduce the full site functionality in the Salesforce mobile app:

```
SELECT RelationId FROM EventRelation WHERE isInvitee = true AND eventId='[Event_Id]'
```

where *Event_Id* is the child event's ID.

If you don't use Shared Activities, use this query:

```
SELECT RelationId FROM EventRelation WHERE eventId='[Event_Id]'
```

These queries get the main event's relations and display them for the given child event. To further filter the results, add a `WHERE` clause.

Send email notifications

To send email notifications for a given event, query `EventRelation` for the event, iterate through the list, examine the status, and send email notifications to every person who accepted the invitation.

Syncing Events with Lightning Sync

Attendee statuses (Accepted or Maybe, Declined, or No Response) sync from Microsoft® Exchange or Google to Salesforce, but not from Salesforce to Exchange or Google. Be wary of creating API flows that update attendee status in Salesforce for users set up to sync both ways. Eventually the original Exchange or Google status overrides the update made in Salesforce.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

EventRelationChangeEvent (API version 44.0)

Change events are available for the object.

SEE ALSO:

[Event](#)

[EventWhoRelation](#)

[Object Basics](#)

EventBusSubscriber

Represents a trigger, process, or flow that's subscribed to a platform event or a change data capture event. Doesn't include CometD subscribers.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

EventBusSubscriber is read only and can only be queried. As of Summer '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field	Details
ExternalId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the subscriber. For example, the trigger ID.</p>
LastError	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The error message that the last thrown <code>EventBus.RetryableException</code> contains. This field applies to Apex triggers only. Available in API version 43.0 and later.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the subscribed item, such as the trigger or process name. If the subscribed item's name is "Process", at least one flow Pause element is subscribed to the event.</p>
Position	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The replay ID of the last event that the subscriber processed.</p>

Field	Details
Retries	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of times the trigger was retried due to throwing the <code>EventBus.RetryableException</code>. This field applies to Apex triggers only. Available in API version 43.0 and later.</p>
Status	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Indicates the status of the subscriber. Can be one of the following values:</p> <ul style="list-style-type: none"> • Running—The subscriber is actively listening to events. If you modify the subscriber, the subscription continues to process events. • Error—The subscriber was disconnected and stopped receiving published events. A trigger reaches this state when it exceeds the number of maximum retries with the <code>EventBus.RetryableException</code>. Trigger assertion failures and unhandled exceptions don't cause the error state. We recommend limiting the retries to fewer than nine times to avoid reaching this state. When you fix and save the trigger, or for a managed package trigger, if you redeploy the package, the trigger resumes automatically from the tip, starting from new events. Also, you can resume a trigger subscription in the subscription detail page that you access from the platform event page. • Suspended—The subscriber is disconnected and can't receive events because a Salesforce admin suspended it or due to an internal error. You can resume a trigger subscription in the subscription detail page that you access from the platform event page. To resume a process, deactivate it and then reactivate it. If you modify the subscriber, the subscription resumes automatically from the tip, starting from new events. <p>For more information, see View and Manage an Event's Subscribers on the Platform Event's Detail Page in the <i>Platform Events Developer Guide</i>.</p>
Tip	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The replay ID of the last published event.</p> <p> Note: For high-volume platform events and change events, the value for Tip isn't available and is always -1.</p>

Field	Details
Topic	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the subscription channel that corresponds to a platform event or change event. For a platform event, the topic name is the event name appended with __e, such as MyEvent__e. For a change event, the topic is the name of the change event, such as AccountChangeEvent.</p>
Type	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The subscriber type (<code>ApexTrigger</code>). If the subscriber is a process or flow Pause element, the type is blank.</p>

Usage

Use `EventBusSubscriber` to query details about subscribers to a platform event. You can get all subscribers for a particular event by filtering on the `Topic` field, as follows.

```
SELECT ExternalId, Name, Position, Status, Tip, Type
FROM EventBusSubscriber
WHERE Topic='Low_Ink__e'
```

EventTag

Associates a word or short phrase with an Event.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ItemId	<p>Type reference</p>

Field Name	Details
	<p>Properties Create, Filter</p> <p>Description ID of the tagged item.</p>
Name	<p>Type string</p> <p>Properties Create, Filter</p> <p>Description Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.</p>
TagDefinitionId	<p>Type reference</p> <p>Properties Filter</p> <p>Description ID of the parent TagDefinition object that owns the tag.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Restricted picklist</p> <p>Description Defines the visibility of a tag. Valid values:</p> <ul style="list-style-type: none"> • <code>Public</code>—The tag can be viewed and manipulated by all users in an organization. • <code>Personal</code>—The tag can be viewed or manipulated only by a user with a matching <code>OwnerId</code>.

Usage

EventTag stores the relationship between its parent TagDefinition and the Event being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

EventWhoRelation

Represents the relationship between an event and a lead or contacts. This derived object is a filtered version of the [EventRelation](#) on page 1701 object; that is, `IsParent` is `true` and `IsWhat` is `false`. It doesn't represent relationships to invitees or to accounts, opportunities, or other objects. This object is available in API versions 29.0 and later.

EventWhoRelation allows a variable number of relationships: one lead or up to 50 contacts. Available only if you've enabled Shared Activities for your organization.

 **Note:** EventWhoRelation objects aren't created for child events.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
EventId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates the ID of the event.</p>
RelationId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates the ID of the contacts or lead related to the event.</p>
Type	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates whether the person related to the event is a contact or lead.</p>

Usage

Apex example that queries relations to a contact or lead

```
List<EventWhoRelation> whoRelations = [SELECT Id, Relation.Name FROM
EventWhoRelation WHERE EventId = '00UD0000005z1jD'];
```

SEE ALSO:

[Event](#)

[EventRelation](#)

Expense

Represents an expense linked to a work order. Service resource technicians can log expenses, such as tools or travel costs. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the account associated with the linked work order.</p>
Amount	<p>Type currency</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The amount of the expense.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field	Details
	<p>Description Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description A description for the expense.</p>
Discount	<p>Type percent</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The percentage deducted from the <code>Subtotal</code> price. Available in version 51.0 and later.</p>
ExpenseEndDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description If the expense was incurred over multiple days, the Expense End Date is the last day that the expense covers.</p>
ExpenseNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The number that uniquely identifies the expense.</p>
ExpenseStartDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description If the expense was incurred over multiple days, the Expense Start Date is the first day that the expense covers.</p>

Field	Details
ExpenseType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The type of expense. Possible values are:</p> <ul style="list-style-type: none"> • Billable • Non-Billable <p>The default value is <code>Billable</code>.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the user who owns the expense record.</p>
Quantity	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The number of items purchased in this record. Available in version 51.0 and later.</p>
Subtotal	<p>Type currency</p>

Field	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The subtotal price calculated as the product of <code>Quantity</code> and <code>UnitPrice</code>. Available in version 51.0 and later.</p> <p>This is a calculated field.</p>
<code>Title</code>	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A title that identifies the expense.</p> <p>This field is available in API version 50.0 and later.</p>
<code>TotalPrice</code>	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total price of the transaction which is equal to the discounted subtotal: <code>Subtotal - (Discount * Subtotal)</code>. Available in version 51.0 and later.</p> <p>This is a calculated field.</p>
<code>TransactionDate</code>	<p>Type date</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The day that the expense was incurred, or the payment date for the expense.</p>
<code>UnitPrice</code>	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The price of one item on the record. Available in version 51.0 and later.</p>
<code>WorkOrderId</code>	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the work order associated with the expense.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ExpenseFeed

Feed tracking is available for the object.

ExpenseHistory

History is available for tracked fields of the object.

ExpenseOwnerSharingRule

Sharing rules are available for the object.

ExpenseShare

Sharing is available for the object.

ExpenseReport

Represents a report that summarizes expenses. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization.</p>
Description	<p>Type textarea</p>

Field	Details
	<p>Properties Create, Nillable, Update</p> <p>Description A description for the expense report.</p>
ExpenseReportNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description An auto-generated number identifying the expense report.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the user who owns the expense report record.</p>
Title	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A title that identifies the expense report.</p>

Field	Details
TotalExpenseAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The sum of all expense entries in the report. This is a calculated field.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ExpenseReportFeed

Feed tracking is available for the object.

ExpenseReportHistory

History is available for tracked fields of the object.

ExpenseReportShare

Sharing is available for the object.

ExpenseReportEntry

Represents an entry in an expense report. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Amount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The amount of the expense.</p>
CurrencyIsoCode	<p>Type picklist</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization.</p>
ExpenseId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The expense that corresponds to the expense report entry.</p>
ExpenseReportEntryNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description An auto-generated number identifying the expense report entry.</p>
ExpenseReportId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The expense report that's associated with the expense report entry.</p>
ExpenseType	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The type of expense. Possible values are:</p> <ul style="list-style-type: none"> • Billable • Non-Billable <p>The default value is Billable.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
Title	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>A title that identifies the expense.</p>
TransactionDate	<p>Type</p> <p>date</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The day that the expense was incurred, or the payment date for the expense.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[ExpenseReportEntryFeed](#)

Feed tracking is available for the object.

[ExpenseReportEntryHistory](#)

History is available for tracked fields of the object.

ExpressionFilter

Represents a logical expression that's used to control the execution of macro instructions. This object is available in API version 46.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ContextId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. The ID of the MacroInstruction object that contains the expression.</p>
FilterConditionLogic	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Optional. The filter conditions to use and the order in which to apply them. For example, '1 AND 2' evaluates condition 1 and then condition 2.</p>
FilterDescription	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Optional. A description of the filter expression that helps to explain the logic to users. For example, 'Applies to New cases.'</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description Optional. A label for the expression.</p>

Usage

The ExpressionFilter object is used with the `IF` and `ELSEIF` operations in a [MacroInstruction](#). It lets you specify a logical expression that determines whether macro instructions are executed. The object indicates whether any or all conditions must be true.

To represent the conditions that are evaluated, this object uses one or more [ExpressionFilterCriteria](#) child objects. The ExpressionFilter to be used with each criteria is specified in the ExpressionFilterCriteria's ExpressionFilterId field.

For example, to represent the following conditional statement, the ExpressionFilter object specifies the FilterConditionLogic field as 1 AND 2, where 1 and 2 are ExpressionFilterCriteria objects. In this example, condition 1 is Case.Status EQUALS New, and condition 2 is Case.Origin EQUALS Phone.

```
IF (Case.Status EQUALS New) AND (Case.Origin EQUALS Phone)
    Select Email QuickAction
    Set Subject...
    Set To...
    Set Body...
    Submit
ENDIF
```

ExpressionFilterCriteria

Represents a condition in an expression that's used to control the execution of macro instructions. This object is available in API version 46.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ExpressionFilterId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. The ID of the ExpressionFilter object that references this condition.</p>
FilterTarget	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Required. The target object or field used in the condition. For example, to create a condition that applies to new cases, use <code>Case.Status</code> as the <code>FilterTarget</code>.</p>
FilterTargetValue	<p>Type string</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Optional. The value that's compared to the value of the FilterTarget. For example, to create a condition that applies to new cases, use <code>New</code> as the <code>FilterTargetValue</code>.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description Optional. A label for the condition.</p>
Operation	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Required. Specifies the operator used to compare the target field and the target value. For example, to create a condition that applies to new cases, use <code>EQUALS</code> for the <code>Operation</code> field, as in <code>Case.Status EQUALS New</code>.</p> <ul style="list-style-type: none"> • <code>EQUALS</code> • <code>NOTEQUALS</code> • <code>CONTAINS</code> • <code>NOTCONTAIN</code>
SortOrder	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Required. The order in which the criteria are evaluated.</p>

Usage

ExpressionFilterCriteria is a child object of the [ExpressionFilter](#) object. Use these objects with the `IF` and `ELSEIF` operations in a [MacroInstruction](#) to control instruction execution. Each condition in a ExpressionFilterCriteria compares a target object or field to a value using a condition operator; for example, `Case.Status EQUALS New`.

ExternalAccountHierarchy

Represents the external account hierarchy, which works like a role-based hierarchy. Use ExternalAccountHierarchy to allow partner and customer users to share data with other external accounts in their hierarchy. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

You must have a Partner or Customer Community Plus license.

Fields

Field	Details
AccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the account in the external account hierarchy.</p>
CurrencyISOCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Possible values are:</p> <ul style="list-style-type: none"> • GBP— British Pound • USD— U.S. Dollar <p>The default value is USD.</p>
Description	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The description of the external account hierarchy.</p>

Field	Details
HierarchyType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description Possible values are:</p> <ul style="list-style-type: none"> • CustomerPortal — Customer • Partner <p>The default value is Partner.</p>
IsAccessibleToParent	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Allows data to be shared with parent account in the account hierarchy. The default value is true.</p>
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description When true, the hierarchy is turned on. The default value is false.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>

Field	Details
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the external account hierarchy.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the account owner.</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the parent account.</p>

ExternalAccountHierarchyHistory

Represents the history of changes to values in the fields of an external account hierarchy. This object is available in API version 50.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

You must have a Partner or Customer Community Plus license.

Fields

Field	Details
DataType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Possible values are:</p> <ul style="list-style-type: none"> • Address • AnyType • AutoNumber • Base64 • BitVector • Boolean • Content • Currency • DataCategoryGroupReference • DateOnly • DateTime • Division • Double • DynamicEnum • Email • EncryptedBase64 • EncryptedText • EntityId • EnumOrId • ExternalId • Fax • File • HtmlMultiLineText • HtmlStringPlusClob • InetAddress • Json • Location • MultiEnum • MultiLineText • Namespace • Percent

Field	Details
	<ul style="list-style-type: none"> • PersonName • Phone • Raw • RecordType • SfdcEncryptedText • SimpleNamespace • StringPlusClob • Switchable_PersonName • Text • TimeOnly • Url • YearQuarter
ExternalAccountHierarchyId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the external account hierarchy.</p>
Field	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Possible values are:</p> <ul style="list-style-type: none"> • Account • HierarchyType - Hierarchy Type • IsAccessibleToParent - Is Accessible to Parent • IsActive - Is Hierarchy Active • Name • Owner • Parent • Created - Created. • FeedEvent - Feed Event • IndividualMerged - Individual Merged • Locked - Record Locked • OwnerAccepted - Owner (Accepted) • OwnerAssignment - Owner (Assignment)

Field	Details
	<ul style="list-style-type: none"> • Unlocked - Record unlocked
NewValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The updated value of the changed field.</p>
OldValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The previous value of the changed field.</p>

ExternalDataSource

Represents an external data source, which defines connection details for integration with data and content that are stored outside the Salesforce org. This object is available in API version 27.0 and later.

 **Note:** All credentials stored within this entity are encrypted under a framework that is consistent with other encryption frameworks on the platform. Salesforce encrypts your credentials by auto-creating org-specific keys. Credentials encrypted using the previous encryption scheme have been migrated to the new framework.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field Name	Details
AuthProviderId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>Salesforce ID of the authentication provider, which defines the service that provides the login process and approves access to the external system.</p> <p>Only users with the “Customize Application” and “Manage AuthProviders” permissions can view this field.</p> <p>This field is available in API version 39.0 and later.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>AuthProvider</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>AuthProvider</p>
CustomConfiguration	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Nullable</p> <p>Description</p> <p>A JSON-encoded configuration string that defines parameters specific to the type of external data source.</p>
DeveloperName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Sort</p> <p>Description</p> <p>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object’s name in a managed package and the changes are reflected in a subscriber’s organization.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
Endpoint	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Nullable</p>

Field Name	Details
	<p>Description</p> <p>The URL of the external system, or if that URL is defined in a named credential, the named credential URL.</p> <p>A named credential URL contains the scheme <code>callout:</code>, the name of the named credential, and an optional path. For example: <code>callout:My_Named_Credential/some_path</code>. You can append a query string to a named credential URL. Use a question mark (?) as the separator between the named credential URL and the query string. For example: <code>callout:My_Named_Credential/some_path?format=json</code>.</p>
<code>isWritable</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Lets the Lightning Platform and users in this org create, update, and delete records for external objects associated with the external data source. The external object data is stored outside the org. By default, external objects are read only.</p> <p>Available only for Salesforce Connect external data sources. Available in API version 35.0 and later. However, with the cross-org adapter for Salesforce Connect, you can set this field to <code>true</code> only in API version 39.0 and later.</p>
<code>Language</code>	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Restricted picklist, Sort</p> <p>Description</p> <p>The language of the <code>MasterLabel</code>.</p>
<code>MasterLabel</code>	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Sort</p> <p>Description</p> <p>Master label for the external data source. This internal label doesn't get translated.</p>
<code>NamespacePrefix</code>	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can</p>

Field Name	Details
	refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation.
PrincipalType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Specifies whether the org uses one set (<code>NamedUser</code>), multiple sets (<code>PerUser</code>), or no (<code>Anonymous</code>) credentials to access the external system. Each set of credentials corresponds to a login account on the external system. Corresponds to <code>Identity Type</code> in the user interface.</p>
Protocol	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Specifies whether to use OAuth, password authentication, or no authentication to access the external system.</p> <p>Some types of external data sources support only one value.</p> <ul style="list-style-type: none"> • For cloud-based Files Connect external systems, select Oauth 2.0. • For on-premises systems, select Password Authentication. • For Simple URL data sources, select No Authentication.
Repository	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Used for SharePoint Online. An optional name of the repository in the data source. Not applicable to all data source types.</p>
Type	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Specifies the adapter that connects to the external system.</p>

Usage

Define an external data source to connect to data or content that's stored outside the Salesforce org. Then create external objects, which map to the external system's data and behave similarly to custom objects.

-  **Note:** Some external data source fields rely on per-user authentication to connect with an external system. If an admin edits one of these fields, then the previously authenticated credentials can get invalidated, requiring individual users to reauthenticate.

SEE ALSO:

[ExternalDataUserAuth](#)

[NamedCredential](#)

ExternalDataUserAuth

Stores authentication settings for a Salesforce user to access an external system. The external system must be defined in an external data source or a named credential that's configured to use per-user authentication. This object is available in API version 27.0 and later.

-  **Note:** All credentials stored within this entity are encrypted under a framework that is consistent with other encryption frameworks on the platform. Salesforce encrypts your credentials by auto-creating org-specific keys. Credentials encrypted using the previous encryption scheme have been migrated to the new framework.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
<code>AuthProviderId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Salesforce ID of the authentication provider, which defines the service that provides the login process and approves access to the external system. Only users with the "Customize Application" and "Manage AuthProviders" permissions can view this field. This field is available in API version 39.0 and later. This is a relationship field.</p> <p>Relationship Name AuthProvider</p> <p>Relationship Type Lookup</p>

Field Name	Details
	<p>Refers To AuthProvider</p>
ExternalDataSourceId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Salesforce ID of the external data source or named credential that defines the external system. This is a polymorphic relationship field.</p> <p>Relationship Name ExternalDataSource</p> <p>Relationship Type Lookup</p> <p>Refers To ExternalDataSource, NamedCredential</p>
Password	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Password portion of the credentials for the Salesforce user to access the external system.</p>
Protocol	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Specifies whether to use OAuth, password authentication, or no authentication when the user accesses the external system.</p>
UserId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the Salesforce user who's accessing the external system. This is a relationship field.</p>

Field Name	Details
	<p>Relationship Name User</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
Username	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Username portion of the credentials for the Salesforce user to access the external system.</p>

Usage

These authentication settings enable a Salesforce user to access an external system. The external system is defined in Salesforce as one of the following.

- External data source—Provides access to external objects, whose data is stored outside the Salesforce organization.
- Named credential—Enables the user’s actions to trigger authenticated callouts to the endpoint that’s specified in the named credential.

If you grant users access to the external data source or named credential via permission sets or profiles, those users can manage their own authentication settings. See “Store Authentication Settings for External Systems” in the Salesforce Help.

SEE ALSO:

[ExternalDataSource](#)

[NamedCredential](#)

ExternalSocialAccount

Represents a managed social media account on a social network such as Facebook or Twitter. This object is available in API version 29.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
AuthorizedBy	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Name of the Radian6 user who added the social account to Radian6.</p>
DataSourceId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the Radian6 data source for the social account.</p>
DefaultResponseAccountId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the managed social account to use by default when responding. This is a relationship field.</p> <p>Relationship Name DefaultResponseAccount</p> <p>Relationship Type Lookup</p> <p>Refers To ExternalSocialAccount</p>
DeveloperName	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The unique name of the record in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. This field is automatically generated but you can supply your own value if you create the record using the API.</p>

Field Name	Details
	<p> Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance may slow while Salesforce generates one for each record.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
ExternalAccountId	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the social account on the social network.</p>
ExternalPictureURL	<p>Type url</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description URL to the picture of the social account on the social network.</p>
IsActive	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Specifies whether the social account is active or not.</p>
IsAuthenticated	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Specifies whether the social account is authenticated or not.</p>
IsCaseCreationEnabled	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Specifies whether case creation for the social account is enabled or not.</p>

Field Name	Details
IsDataSourceActive	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Specifies whether the data source is active or not.</p>
Language	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Specifies the language of the social account.</p>
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description Master label for the social account. This display value is the internal label and does not get translated.</p>
ProfileUrl	<p>Type url</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description URL for the profile.</p>
Provider	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Social network, such as Facebook or Twitter, of the social account.</p>
ProviderUserId	<p>Type string</p> <p>Properties Filter, Group, Sort</p>

Field Name	Details
	Description User ID for the social network of the social account.
RuleId	Type string Properties Filter, Group, Nillable, Sort Description ID of the Radian6 rule for the account.
SocialPropertyId	Type string Properties Filter, Group, Nillable, Sort Description ID of the Radian6 social property for the account.
TopicId	Type string Properties Filter, Group, Nillable, Sort Description ID of the topic for the social account.
UniqueName	Type string Properties Filter, Group, Nillable, Sort Description Unique name for the social account.
Username	Type string Properties Filter, Group, Nillable, Sort Description Username for the social account.

Usage

Although available, many of the Radian6-related fields are no longer accurate or used. We recommend using [Social Engagement Resources](#) in *Connect REST API Developer Guide*.

FeedAttachment

Represents an attachment to a feed item, such as a file attachment or a link. Use FeedAttachment to add various attachments to one feed item. This object is available in API version 36.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `isEnabled()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- You can read, create, update, or delete a FeedAttachment only if you have the corresponding access to the associated FeedItem.
- Inline images aren't creatable, updatable, or deletable through SOAP API.

Fields

Field Name	Details
FeedEntityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the associated feed entity that contains this attachment.</p>
RecordId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the record that this feed attachment contains. For inline images, RecordId is a ContentDocument ID. For content attachments, RecordId is a ContentVersion ID, For feed items, RecordId is a FeedItem ID.</p>
Title	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>The title of this feed attachment. When <code>Type</code> is <code>Link</code>, <code>Title</code> value is the label for the attachment link. Otherwise, <code>Title</code> value isn't used.</p>
Type	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Restricted picklist, Sort</p> <p>Description</p> <p>The type of this feed attachment. Valid values are:</p> <ul style="list-style-type: none"> 0 <code>Content</code>—A content attachment. 1 <code>InlineImage</code>—An inline image. The system creates an inline image attachment when an image is added to the body of the associated <code>FeedItem</code>. You can't add an inline image directly using <code>FeedAttachment</code>. 2 <code>Link</code>—A link. 3 <code>FeedEntity</code>—A feed entity, for example, a post that is shared. Available in API version 39 and later in Lightning Experience. 4 <code>ChatterExtension</code>—a Rich Publisher App that's integrated with the Chatter publisher. 5 <code>Record</code>—A record.
Value	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>The string value of this <code>FeedAttachment</code>. This field is optional. If the feed attachment is a <code>Link</code> <code>FeedAttachment</code>, the value is the link URL string.</p>

Usage

- This Apex example shows how to add an attachment to a Lead using API version 36.0 and later. First, post a feed item.

```
//create and insert post
FeedItem post = new FeedItem();
post.Body = 'HelloThere';
post.ParentId = 'ID_OF_LEAD_ENTITY';
post.Title = 'FileName';
insert post;
```

Then insert the attachment.

```
//create and associate a content attachment to the post
FeedAttachment feedAttachment = new FeedAttachment();
```

```

feedAttachment.FeedEntityId = post.Id;
feedAttachment.RecordId = 'ID_OF_CONTENT_VERSION';
feedAttachment.Title = 'FileName';
feedAttachment.Type = 'CONTENT';
insert feedAttachment;

```

- You can create only one link attachment (`FeedAttachment` of type `Link`) per feed item.
- If the feed item type is one of the following, you can add content or link feed attachments to a `FeedItem`.
 - `AdvancedTextPost`
 - `TextPost`
 - `ContentPost`
 - `LinkPost`
 - `QuestionPost`
- When a `FeedAttachment` is added or removed from a feed item, Salesforce updates the type of the feed item to its most appropriate value, as follows.
 - If all content feed attachments are removed from a feed item of type `ContentPost`, the type of this feed item is updated to `TextPost`.
 - Conversely, if a content feed attachment is added to a feed item of type `TextPost`, the type of this feed item is updated to `ContentPost`.
 - If all link feed attachments are removed from a feed item of type `LinkPost`, the type of this feed item is updated to `TextPost`.
 - Conversely, if a link feed attachment is added to a feed item of type `TextPost`, the type of this feed item is updated to `LinkPost`.
 - The type of all other feed items, such as `QuestionPost` or `AdvancedTextPost` feed items, doesn't change when any feed attachments are added or removed.
 - If a content feed attachment is added to a feed item of type `LinkPost`, the feed item type is updated to `ContentPost`.
 - If all content attachments are removed from a feed item of type `ContentPost`, but there's also a link attachment, the feed item type is updated to `LinkPost`.
- Users without administrator privileges can't retrieve a `FeedAttachment` by its ID in a SOQL query. They can retrieve attachments by specifying the associated `FeedEntityId`, as follows:

```

SELECT Id FROM FeedAttachment WHERE FeedEntityId = 'some_feedItem_id'

```

- Alternatively, retrieve attachments by using a SOQL query on `FeedItem` with a subquery on the `FeedAttachments` child relationship, as follows.

```

SELECT Body, (SELECT RecordId, Title, Type, Value FROM FeedAttachments)
FROM FeedItem
WHERE Id = 'some_feedItem_id'

```

- `FeedAttachment` is not a triggerable object. You can access feed attachments in `FeedItem` *update* triggers by retrieving them through a SOQL query. For a trigger example, and to learn about trigger considerations for `FeedAttachment`, see [Triggers for Chatter Objects](#) in the *Apex Developer Guide*.

FeedComment

Represents a comment added to a feed by a user. This object is available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Note the following when working with feed comments.

- You must have read access to the feed's parent type to see a FeedComment record.
- You must be able to access the feed to add a comment.
- If the comment is related to a user record, the user can delete the comment. For example, if John Smith makes a comment on Sasha Jones' profile feed, Sasha can delete the comment.
- If the context user has the Insert System Field Values for Chatter Feeds user permission, the `create` field property is available on `CreatedBy` and `CreatedDate` system fields. During migration, the context user can set these fields to the original post's author and creation date. The fields can't be updated after migration.

You can delete all feed items you created. To delete feed items you didn't create, you must have one of these permissions:

- Modify All Data
- Modify All on the object associated with the feed and delete permission on the parent feed
- Moderate Chatter

Note: Users with the Moderate Chatter permission can delete only the feed items and comments they can see.

- Manage Unlisted Groups
Only users with this permission can delete items in unlisted groups.

Fields

Field	Details
<code>CommentBody</code>	<p>Type textarea</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The text in the comment.</p>
<code>CommentType</code>	<p>Type picklist</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The type of comment:</p> <ul style="list-style-type: none"> • <code>ContentComment</code>—an uploaded file on a comment • <code>TextComment</code>—a direct text entry on a comment <p>Before API version 24.0, a text entry was required on a comment. As of version 24.0, a text entry is optional if the <code>CommentType</code> is <code>ContentComment</code>.</p>
FeedItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the feed item containing the comment.</p>
HasEntityLinks	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the feed <code>CommentBody</code> includes at least one link to a record.</p> <p> Note: This field is available starting in API version 43.0.</p>
InsertedById	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the <code>InsertedBy</code> value is set to the ID of the context user.</p> <p>This is a relationship field.</p> <p>Relationship Name InsertedBy</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>

Field	Details
IsRichText	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the feed <code>CommentBody</code> contains rich text. If you post a rich text feed comment using SOAP API, set <code>IsRichText</code> to <code>true</code> and escape HTML entities from the body. Otherwise, the comment is rendered as plain text.</p> <p>Rich text supports the following HTML tags:</p> <ul style="list-style-type: none">• <code><p></code> <p> Tip: Though the <code>
</code> tag isn't supported, you can use <code><p>&nbsp;&nbsp; </p></code> to create lines.</p> <ul style="list-style-type: none">• <code><a></code>• <code></code>• <code><code></code>• <code><i></code>• <code><u></code>• <code><s></code>• <code></code>• <code></code>• <code></code>• <code></code> <p>The <code></code> tag is accessible only through the API and must reference files in Salesforce similar to this example: <code></code></p> <p> Note: This attribute is available as of API version 38.0. In API version 38.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 37.0 and prior, all rich text appears as a plain-text representation.</p>
IsVerified	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Determines whether a comment on a question is marked as Company Verified.</p> <p>This field is available in API version 41.0 and later.</p>
LastEditById	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the user who last edited the feed comment.</p>
LastEditDate	<p>Type datetime</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description The date the feed comment was last edited.</p>
ParentId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of a record associated with the feed comment. For example, if you are commenting on a change to a field on Account, <code>ParentId</code> is set to the account ID.</p>
RelatedRecordId	<p>Type reference</p> <p>Properties Create, Group, Nillable, Sort</p> <p>Description ID of the ContentVersion record associated with a <code>ContentComment</code>. This field is null for all comments except <code>ContentComment</code>. For example, set this field to an existing ContentVersion ID and set the <code>CommentType</code> to <code>ContentComment</code>.</p>
Revision	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The number of times the comment was revised.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Group, Nillable, Restricted picklist, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Specifies whether this feed comment is published and visible to all who can access the parent feed item. To change a comment's status, the comment's parent feed item must be in a published state. This field is available in API version 38.0 and later.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • <code>Published</code>—The comment is visible to all who can access the parent feed item. • <code>PendingReview</code>—The comment is visible to its author. Users see the parent feed item and have View All Data or Can Approve Feed Post and Comment permission also see the comment. The author can delete the comment as can users who see the comment and have Can Approve Feed Post and Comment or Modify All Data permission. If the parent feed item is published, the author can edit the comment. Users who see the comment and have Can Approve Feed Post and Comment or Modify All Data permission can also edit the comment. Users with Can Approve Feed Post and Comment or Modify All Data permission can change comment status from Published to PendingReview and from PendingReview to Published. <p>Some actions are blocked when a feed comment is pending review:</p> <ul style="list-style-type: none"> – Select as Best—When a feed comment that is marked as best answer becomes unpublished, it's removed as the best answer. If the comment is published, its best answer status is not restored. – Like and unlike
SystemModstamp	<p>Type</p> <p>datetime</p> <p>Properties</p> <p>Defaulted on create, Filter</p> <p>Description</p> <p>Date and time when a user or automated process (such as a trigger) last modified this record. In this context, "trigger" refers to Salesforce code that runs to implement standard functionality, and not an Apex trigger. <code>SystemModstamp</code> is a read-only system field, available in FeedComment as of API version 37.0.</p>
ThreadChildrenCount	<p>Type</p> <p>int</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The count of comments associated with this parent feed object. The feed object can be either a Feed Item or a Feed Comment. The count shows how many comments are directly subordinate to the parent. This field is available on the object when Allow discussion threads is selected in the Administration Workspace. This field is available in API version 44.0 and later.</p>

Field	Details
ThreadLastUpdatedDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description The date and time the thread on this comment was last updated. This field is available on the object when Allow discussion threads is selected in the Administration Workspace. This field is available in API version 44.0 and later.</p>
ThreadLevel	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The identifier that shows the level of this Feed Comment in a thread. By default, there are a maximum of three levels in a thread. The <code>ThreadLevel</code> value shows in which of the three levels this comment falls. This field is available on the object when Allow discussion threads is selected in the Administration Workspace. This field is available in API version 44.0 and later.</p>
ThreadParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The identifier of the feed item that is the parent of this comment. This field is available on the object when Allow discussion threads is selected in the Administration Workspace. This field is available in API version 44.0 and later. This is a relationship field.</p> <p>Relationship Name ThreadParent</p> <p>Relationship Type Lookup</p> <p>Refers To FeedComment</p>

Usage

- As of API version 23.0 and later, if you have View All Data permission, you can query FeedComment records directly without an ID filter. If you don't have View All Data permission, you can't query FeedComment records directly, with or without an ID filter.

For example, the following query returns general information about a feed:

```
SELECT ID, CreatedDate, CreatedById, CreatedBy.FirstName,
       CreatedBy.LastName, ParentId, Parent.Name, Body
FROM FeedItem
WHERE CreatedDate > LAST_MONTH
ORDER BY CreatedDate DESC, Id DESC
```

- You can search for text in comments using SOSL. For example, the following Java class uses `search()` to find the string "foo" in any field of a record:

```
public void searchSample() {
    try {
        SearchResult sr = connection.search("find {foo} in all fields " +
            "returning feedcomment(Id, FeedItemId, CommentBody)");
        // Put the results into an array of SearchRecords
        SearchRecord[] records = sr.getSearchRecords();
        // Check the length of the returned array of records to see
        // if the search found anything
        if (records != null && records.length > 0) {
            System.out.println("Found " + records.length + " comments: ");
            // Display each comment
            for (SearchRecord record : records) {
                FeedComment comment = (FeedComment) record.getRecord();
                System.out.println(comment.getId() + ": " +
                    comment.getCommentBody());
            }
        } else {
            System.out.println("No records were found for the search.");
        }
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

- If you use an Apex trigger to modify the `Body` of a `FeedComment` object, all mentions hyperlinks are converted to plain text. The mentioned users don't get email notifications.

 **Note:** This object is hard deleted. It isn't sent to the Recycle Bin.

SEE ALSO:

[Custom Object__Feed](#)

FeedItem

`FeedItem` represents an entry in the feed, such as changes in a record feed, including text posts, link posts, and content posts. This object is available in API version 21.0 and later. This object replaces `FeedPost`.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

- You can delete all feed items you created. To delete feed items you didn't create, you must have one of these permissions:
 - Modify All Data
 - Modify All on the feed item's parent object, for example, Account for a feed item on an account feed
 - Moderate Chatter

Note: Users with the Moderate Chatter permission can delete only the feed items and comments that they can see.

Only users with this permission can delete items in unlisted groups.

- Guest users can't insert system field values for Chatter feeds. Even if you try to assign the `CanInsertFeedSystemFields` permission to a Guest User, the permission isn't granted.

Only users with the Modify All Data permission can delete a feed item of `Type TrackedChange`.

If the context user has the Insert System Field Values for Chatter Feeds user permission, the `create` field property is available on `CreatedBy` and `CreatedDate` system fields. During migration, the context user can set these fields to the original post's author and creation date. The fields can't be updated after migration.

Fields

Field Name	Details
<code>BestCommentId</code>	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the comment marked as best answer on a question post. This is a relationship field.</p> <p>Relationship Name BestComment</p> <p>Relationship Type Lookup</p> <p>Refers To FeedComment</p>
<code>Body</code>	<p>Type textarea</p>

Field Name

Details

Properties

Create, Nillable, Sort, Update

Description

The body of the feed item. Required when `Type` is `TextPost` or `AdvancedTextPost`. Optional when `Type` is `ContentPost` or `LinkPost`.

Although a value for `Body` is not required for the `ContentPost` type, an attachment is required. If an attachment isn't present, the type changes to `TextPost` or `AdvancedTextPost`, depending on the API version. `TextPost` and `AdvancedTextPost` do require a value for `Body`.

Tip: See the [IsRichText](#) field for a list of HTML tags supported in the body of rich text posts.

CommentCount

Type

int

Properties

Filter, Group, Sort

Description

The number of comments associated with this feed item.

Tip: In a feed that supports pre-moderation, `CommentCount` isn't updated until a comment is published. For example, say that you comment on a post that already has one published comment and your comment triggers moderation. Now there are two comments on the post, but the count says there's only one. In a moderated feed, comments aren't counted until approved by an admin or someone with `Can Approve Feed Post and Comment` or `Modify All Data`.

Feed moderation has implications on how you retrieve feed comments. In a moderated feed, rather than retrieving comments by looping through `CommentCount`, go through pagination until the end of comments is returned.

ConnectionId

Type

reference

Properties

Filter, Group, Nillable, Sort

Description

When a `PartnerNetworkConnection` modifies a record that is tracked, the `CreatedBy` field contains the ID of the system administrator. The `ConnectionId` contains the ID of the `PartnerNetworkConnection`. Available if `Salesforce to Salesforce` is enabled for your org.

Field Name	Details
ContentData	<p>Type base64</p> <p>Properties Create, Nillable</p> <p>Description This field was removed in API version 35.0, and is available in earlier versions for backward compatibility only. This field is required if <code>Type</code> is <code>ContentPost</code>. Encoded file data in any format, and can't be 0 bytes. Setting this field automatically sets <code>Type</code> to <code>ContentPost</code>.</p>
ContentDescription	<p>Type textarea</p> <p>Properties Create, Nillable, Sort</p> <p>Description This field was removed in API version 35.0, and is available in earlier versions for backward compatibility only. The description of the file specified in <code>ContentData</code>.</p>
ContentFileName	<p>Type string</p> <p>Properties Create, Group, Nillable, Sort</p> <p>Description This field was removed in API version 35.0, and is available in earlier versions for backward compatibility only. The name of the file uploaded to the feed. Setting <code>ContentFileName</code> automatically sets <code>Type</code> to <code>ContentPost</code>.</p>
ContentSize	<p>Type int</p> <p>Properties Group, Nillable, Sort</p> <p>Description This field was removed in API version 35.0, and is available in earlier versions for backward compatibility only. This field is the size of the file (in bytes) uploaded to the feed. This field is read-only and is automatically determined during insert.</p>
ContentType	<p>Type string</p> <p>Properties Group, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>This field was removed in API version 35.0, and is available in earlier versions for backward compatibility only. This field is the MIME type of the file uploaded to the feed. This field is read-only and is automatically determined during insert.</p>
FeedPostId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>This field was removed in API version 22.0, and is available in earlier versions for backward compatibility only.</p> <p>ID of the associated FeedPost. A FeedPost represents the following types of changes in a feed item: changes to tracked fields, text posts, link posts, and content posts.</p>
HasContent	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Indicates whether the feed item has content.</p>

string

Properties

Create, Filter, Group, Nillable, Sort, Update

Description

The title of the feed item. When the `Type` is `LinkPost`, the `LinkUrl` is the URL and this field is the link name. The `Title` field can be updated on posts of `Type` `QuestionPost`.

Type

Type

picklist

Properties

Create, Filter, Group, Nillable, Restricted picklist, Sort

Description

The type of feed item. Except for `ContentPost`, `LinkPost`, and `TextPost`, don't create feed items of other types directly from the API.

- `ActivityEvent`—indirectly generated event when a user or the API adds a `Task` associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a `Task` or `Event` associated with a case record (excluding email and call logging).

For a recurring `Task` with `CaseFeed` disabled, one event is generated for the series only. For a recurring `Task` with `CaseFeed` enabled, events are generated for the series and each occurrence.

- `AdvancedTextPost`—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post.
- `AnnouncementPost`—Not used.
- `ApprovalPost`—generated when a user submits an approval.
- `BasicTemplateFeedItem`—Not used.
- `CanvasPost`—a post made by a canvas app posted on a feed.
- `CollaborationGroupCreated`—generated when a user creates a public group.

Field Name

Details

- `CollaborationGroupUnarchived`—Not used.
- `ContentPost`—a post with an attached file.
- `CreatedRecordEvent`—generated when a user creates a record from the publisher.
- `DashboardComponentAlert`—generated when a dashboard metric or gauge exceeds a user-defined threshold.
- `DashboardComponentSnapshot`—created when a user posts a dashboard snapshot on a feed.
- `LinkPost`—a post with an attached URL.
- `PollPost`—a poll posted on a feed.
- `ProfileSkillPost`—generated when a skill is added to a user's Chatter profile.
- `QuestionPost`—generated when a user posts a question.
- `ReplyPost`—generated when Chatter Answers posts a reply.
- `RypplePost`—generated when a user creates a Thanks badge in WDC.
- `TextPost`—a direct text entry on a feed.
- `TrackedChange`—a change or group of changes to a tracked field.
- `UserStatus`—automatically generated when a user adds a post. Deprecated.

The following values appear in the `Type` picklist for all feed objects but apply only to `CaseFeed`:

- `AttachArticleEvent`—generated event when a user attaches an article to a case.
- `CallLogPost`—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event.
- `CaseCommentPost`—generated event when a user adds a case comment for a case object.
- `ChangeStatusPost`—generated event when a user changes the status of a case.
- `ChatTranscriptPost`—generated event when Chat transcript is saved to a case.
- `EmailMessageEvent`—generated event when an email related to a case object is sent or received.
- `FacebookPost`—generated when a Facebook post is created from a case. Deprecated.
- `MilestoneEvent`—generated when a case milestone is completed or reaches violation status.
- `SocialPost`—generated when a social post is created from a case.

 **Note:** If you set `Type` to `ContentPost`, also specify `ContentData` and `ContentFileName`.

Field Name	Details
Visibility	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Specifies whether this feed item is available to all users or internal users only. This field is available in API version 26.0 and later, if digital experiences is enabled for your org.</p> <p>Visibility can have the following values:</p> <ul style="list-style-type: none"> AllUsers—The feed item is available to all users who have permission to see the feed item. InternalUsers—The feed item is available to internal users only. <p>Note the following exceptions for Visibility:</p> <ul style="list-style-type: none"> For record posts, Visibility is set to InternalUsers for all internal users by default. External users can set Visibility only to AllUsers. Visibility can be updated on record posts. The Update property is supported only for feed items posted on records.

Usage

- When a feed item's IsClosed field is set to true, some actions are blocked and others are blocked to most users. This table sets out the actions that are blocked when a feed item is closed.

Action	Availability on a Closed Conversation
Add a comment	Blocked
Answer a question	Blocked
Vote on a poll	Blocked
Edit a feed item or its comments or answers	Blocked to author; available to admins, moderators, and people with the Close Conversation Threads in Feeds permission Editing is blocked specifically for the feed item title, feed item body, and feed content body fields.
Edit a topic	Available
Delete a feed item or its comments or answers	Blocked to author; available to admins, moderators, and people with the Close Conversation Threads in Feeds permission
Publish a pending review comment (moderation)	Available to admins and moderators

Action	Availability on a Closed Conversation
Like or unlike; upvote or downvote	Available
Select or remove a best answer	Blocked to author; available to admins, moderators, and people with the Close Conversation Threads in Feeds permission
Company verify; remove verification	Available only to people with the Verify Answers to Chatter Questions permission
Flag	Available
Share	Available
Bookmark	Available
Mute and unmute	Available
Escalate to case	Available only to people permitted to escalate a feed item to a case

- This Apex example shows how to add a feed item with an attachment to a lead using API version 36.0 and later. First, post a feed item.

```
//create and insert post
FeedItem post = new FeedItem();
post.Body = 'HelloThere';
post.ParentId = 'ID_OF_LEAD_ENTITY';
post.Title = 'FileName';
insert post;
```

Then insert the attachment.

```
//create and associate a content attachment to the post
FeedAttachment feedAttachment = new FeedAttachment();
feedAttachment.FeedEntityId = post.Id;
feedAttachment.RecordId = 'ID_OF_CONTENT_VERSION';
feedAttachment.Title = 'FileName';
feedAttachment.Type = 'CONTENT';
insert feedAttachment;
```

- If you are using API version 23.0 or later and have View All Data permission, you can directly query for a FeedItem. The following example returns the 20 most recent feed items.

```
SELECT ID, CreatedDate, CreatedById, CreatedBy.FirstName, CreatedBy.LastName, ParentId,
Parent.Name, Body,
(SELECT ID, FieldName, OldValue, NewValue FROM FeedTrackedChanges ORDER BY ID DESC)
FROM FeedItem
WHERE CreatedDate > LAST_MONTH
ORDER BY CreatedDate DESC
```

- If you are using an earlier API version than version 23.0, query FeedItem objects through a feed (such as AccountFeed or OpportunityFeed). The following example returns all feed items for a given account, ordered by date descending:

```
SELECT Id, Type, FeedItem.Body
FROM AccountFeed
WHERE ParentId = AccountId ORDER BY CreatedDate DESC
```

 **Note:** Provide the `ParentId` for API version 22.0 and earlier.

- A feed item of type `UserStatus` is automatically created when a user adds a post to update the status. You can't explicitly create a feed item of type `UserStatus`.
- The `FeedItem` object doesn't support aggregate functions in queries.
- If the context user has the Insert System Field Values for Chatter Feeds user permission, the `create` field property is available on `CreatedBy` and `CreatedDate` system fields. During migration, the context user can set these fields to the original post's author and creation date. The fields can't be updated after migration.
- The size limit for an attachment on a feed is 2 GB.
- You can't use the content fields to update or delete the content.
- You can't filter or update the content fields.
- Deleting a feed item via the API also deletes the associated content. Likewise, undeleting a feed item restores associated content.

 **Note:** This object is hard deleted. It isn't sent to the Recycle Bin.

- After uploading to a feed, it is possible for an attachment or document to be deleted, marked private, or hidden by sharing rules. In this case, all content fields in a `FeedItem` object appear as `null` in a SOQL query.
- You can't explicitly create or delete a [FeedTrackedChange](#) record.
- Imagine that you insert a feed item or feed comment of Type `ContentPost` on a [User](#) or [Group](#) to create a file. Then the `NetworkScope` field value of the feed item is passed to the file.
- If you use an Apex trigger to modify the `Body` of a `FeedItem` object, all mentions hyperlinks are converted to plain text. The mentioned users don't get email notifications.
- If you insert rich text into the feed item body, make sure that the case of the opening and closing HTML tags matches. For example, `This is bold text` generates an error.
- To check file sharing with Apex triggers, write triggers on `ContentDocumentLink` instead of `FeedItem`. For an example, see [ContentDocumentLink](#).
- In API version 36.0 and later, use [FeedAttachment](#) to attach one or more content items to a feed item. As a result of support for multiple attachments through `FeedAttachment`, all fields related to content attachments have been removed. These fields are: `ContentData`, `ContentDescription`, `ContentFileName`, `ContentSize`, and `ContentType`.
- For all API versions of `FeedItem`, you can't query a `FeedItem` object using the `System Modstamp` filter.

FeedLike

Indicates that a user has liked a feed item. This object is available in API version 21.0 and later.

`FeedLike` records represent likes on posts and not likes on comments. Likes on comments can't be queried via the API. A `FeedLike` is a child object of an associated `FeedItem`, `FeedTrackedChange`, or object feed, such as `AccountFeed`.

Supported Calls

`create()`, `delete()`, `describeSObjects()`

Special Access Rules

If the context user has the Insert System Field Values for Chatter Feeds user permission, the `create` field property is available on `CreatedBy` and `CreatedDate` system fields. During migration, the context user can set these fields to the original post's author and creation date. The fields can't be updated after migration.

Fields

Field Name	Details
FeedItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the feed item that the user liked.</p>
FeedEntityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of a feed item or feed comment the user liked. If the user liked a comment, <code>FeedEntityId</code> is set to the ID of the comment. If the user liked a feed item, <code>FeedEntityId</code> is set to the ID of the feed item. This field is optional. The default value is the ID of the feed item.</p>
InsertedById	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the <code>InsertedBy</code> value is set to the ID of the context user. This is a relationship field.</p> <p>Relationship Name InsertedBy</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>

Usage

You can't query FeedLike records directly. They can only be queried via the entity feed, such as AccountFeed.

FeedLike records represent likes on posts and not likes on comments. Likes on comments can't be queried via the API.

FeedPollChoice

Shows the choices for a poll posted in the feed. This object is available in API version 29.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To delete feed items they didn't create, users must have one of these permissions:

- Modify All Data
- Modify All on the parent object, for example on Account for a poll on an AccountFeed
- Moderate Chatter

 **Note:** Users with the Moderate Chatter permission can delete only the feed items and comments they can see.

Only users with this permission can delete items in unlisted groups.

Fields

Field Name	Details
ChoiceBody	<p>Type textarea</p> <p>Properties Group</p> <p>Description A choice in the poll.</p>
FeedItemId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the feed item for the poll.</p>
Position	<p>Type int</p>

Field Name	Details
	<p>Properties Group, Sort</p> <p>Description Shows the position of the poll choice.</p>

Usage

Use this object to query all of the choices associated with a particular poll. To view how people voted on the poll, see the FeedPollVote object.

FeedPollVote

Shows how users voted on a poll posted in the feed. This object is available in API version 29.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ChoiceId	<p>Type reference</p> <p>Properties Filter, Group</p> <p>Description Indicates which choice a user selected on a poll posted in a feed. This is a relationship field.</p> <p>Relationship Name Choice</p> <p>Relationship Type Lookup</p> <p>Refers To FeedPollChoice</p>
FeedItemId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p>

Field Name	Details
	<p>Description</p> <p>ID of the feed item for the poll.</p>

Usage

Use this object to query how users voted on a particular poll.

FeedPost

FeedPost represents the following types of changes in a record feed, such as AccountFeed: text posts, link posts, and content posts. This object is available in API version 18.0 through 21.0. FeedPost is no longer available in later versions. Starting with API version 21.0, use FeedItem to represent text posts, link posts, and content posts in feeds.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `search()`

Special Access Rules

You can delete all feed items you created. To delete feed items you didn't create, you must have one of these permissions:

- "Modify All Data"
- "Modify All" on the object associated with the feed and delete permission on the parent feed
- "Moderate Chatter"

Note: Users with the "Moderate Chatter" permission can delete only the feed items and comments they can see.

- Manage Unlisted Groups

Only users with this permission can delete items in unlisted groups.

Only users with the Modify All Data permission can delete a feed item of `Type TrackedChange`.

If the context user has the Insert System Field Values for Chatter Feeds user permission, the `create` field property is available on `CreatedBy` and `CreatedDate` system fields. During migration, the context user can set these fields to the original post's author and creation date. The fields can't be updated after migration.

Fields

Field	Details
Body	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort</p>

Field	Details
	<p>Description The content of the FeedPost. Required when <code>Type</code> is <code>TextPost</code> or <code>AdvancedTextPost</code>. Optional when <code>Type</code> is <code>ContentPost</code> or <code>LinkPost</code>.</p>
<code>ContentData</code>	<p>Type base64</p> <p>Properties Create, Nillable</p> <p>Description This field is required if <code>Type</code> is <code>ContentPost</code>. Encoded file data in any format, and can't be 0 bytes. Setting this field automatically sets <code>Type</code> to <code>ContentPost</code>.</p>
<code>ContentDescription</code>	<p>Type string</p> <p>Properties Create, Nillable, Sort</p> <p>Description The description of the file specified in <code>ContentData</code>.</p>
<code>ContentFileName</code>	<p>Type string</p> <p>Properties Create, Group, Nillable, Sort</p> <p>Description This field is required if <code>Type</code> is <code>ContentPost</code>. The name of the file uploaded to the feed. Setting <code>ContentFileName</code> automatically sets <code>Type</code> to <code>ContentPost</code>.</p>
<code>ContentSize</code>	<p>Type int</p> <p>Properties Group, Nillable, Sort</p> <p>Description This field is the size of the file (in bytes) uploaded to the feed. This field is read-only and is automatically determined during insert.</p>
<code>ContentType</code>	<p>Type string</p> <p>Properties Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>This field is the MIME type of the file uploaded to the feed. This field is read-only and is automatically determined during insert.</p>
FeedItemId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Sort</p> <p>Description</p> <p>ID of the feed containing the FeedPost.</p>
InsertedById	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Sort</p> <p>Description</p> <p>ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the <code>InsertedBy</code> value is set to the ID of the context user.</p>
IsDeleted	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Indicates whether the record has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). This field is a standard system field.</p>
LinkUrl	<p>Type</p> <p>url</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort</p> <p>Description</p> <p>The URL of a <code>LinkPost</code>.</p>
ParentId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p>

Field	Details
	<p>Description</p> <p>ID of the object type to which the FeedPost is related. For example, set this field to a <code>UserId</code> to post to someone's profile feed, or an <code>AccountId</code> to post to a specific account.</p>
Title	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The title of the FeedPost. When the <code>Type</code> is <code>LinkPost</code>, the <code>Body</code> is the URL and the <code>Title</code> is the label for the link.</p>
Type	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description</p> <p>The type of FeedPost:</p> <ul style="list-style-type: none"> • <code>UserStatus</code>—automatically generated when a user updates their status • <code>TrackedChange</code>—ignore • <code>TextPost</code>—a direct text entry on a feed • <code>LinkPost</code>—a URL posting on a feed • <code>ContentPost</code>—an uploaded file on a feed <p> Note: If you set <code>Type</code> to <code>ContentPost</code>, you must specify <code>ContentData</code> and <code>ContentFileName</code>.</p>

Usage

- You can't directly query for a FeedPost. FeedPosts are always associated with a feed item, so you can query for them through the feeds. The following example returns all feed items for a given account, ordered by date descending:

```
SELECT Id, Type, FeedPost.Body
FROM AccountFeed
WHERE ParentId = AccountId ORDER BY CreatedDate DESC
```

- A FeedPost of type `UserStatus` is automatically created when a user adds a post to update the current status. You can't explicitly create a FeedPost of type `UserStatus`.
- The size limit for an attachment on a profile, news, or record feed is 2 GB.
- You can't use the content fields to update or delete the content.
- You can't filter or update the content fields.

- Deleting a FeedPost via the API also deletes the associated content and FeedPost objects. Likewise, undeleting a FeedPost restores associated content and FeedPost objects.

 **Note:** This object is hard deleted. It isn't sent to the Recycle Bin.

- After uploading to a feed, it is possible for an attachment or document to be deleted, marked private, or hidden by sharing rules. In this case, all content fields in FeedPost appear as `null` in a SOQL query.
- You can't explicitly create or delete a FeedTrackedChange record.

FeedRevision

Holds the revision history of a specific feed item or comment, including a list of attributes that changed for each revision. This object is available in API version 34.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field Name	Details
<code>Action</code>	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Holds the type of modification to the underlying feed item or comment attribute. <code>Action</code> can have the value <code>Changed</code>.</p>
<code>EditedAttribute</code>	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Identifies the part of the feed item or comment which was modified. A single revision can have many edited attributes.</p>
<code>FeedEntityId</code>	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description Identifies the modified feed item or comment.</p>

Field Name	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the Experience Cloud site in which a user modified the feed item or comment. This field is only available, if digital experiences is enabled for your org.</p>
Revision	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The revision number of the feed item or comment.</p>
Value	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description Identifies the value of the <code>EditedAttribute</code> field before the update.</p>

Usage

This object tracks the changes made to a feed item or feed comment and stores a list of attributes that changed for each revision.

- To query the FeedRevision object, users need the View All Data permission or supply a WHERE clause on the `FeedEntityId`.

feedSignal

Attach feed signals, like `UpDownVote`, `UserVerified`, and `Verified`, to a feed post or comment. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`

Fields

Field	Details
FeedEntityId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the Feed entity.</p>
FeedItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the feed post or comment. Possible values are:</p> <ul style="list-style-type: none"> • FeedItem • FeedComment
InsertedById	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of user who inserted the signal. This is a relationship field.</p> <p>Relationship Name InsertedBy</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
SignalType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The type of signal. Possible values are:</p> <ul style="list-style-type: none"> • UpDownVote • UserVerified • Verified

Field	Details
SignalValue	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The value of the signal. For example, for <code>UpDownVote</code>, the value specifies whether the signal is an upvote or a downvote.</p>

FeedTrackedChange

Represents an individual field change or set of field changes. A `FeedTrackedChange` is a child object of a record feed, such as `AccountFeed`. This object is available in API version 18.0 and later.

Supported Calls

`describeSObjects()`

Fields

Field	Details
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Defaulted on create, Group, Restricted picklist, Sort</p> <p>Description Available only for organizations with the multicurrency feature enabled. Contains the ISO currency code for the field, if <code>FieldName</code> is a currency field.</p>
FeedItemId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the parent feed that tracks the field change.</p>
FieldName	<p>Type string</p> <p>Properties Group, Sort</p>

Field	Details
	<p>Description</p> <p>The name of the field that was changed.</p> <p> Note: This field also tracks other events that are not related to an individual field for a parent feed. These events occur as the parent record advances through its pipeline. For example, a value of <code>LeadConverted</code> indicates that a lead has been converted to an opportunity. For a full list of values, see Tracking of Special Events.</p>
newValue	<p>Type</p> <p>anyType</p> <p>Properties</p> <p>Nullable, Sort</p> <p>Description</p> <p>The new value of the field that was changed.</p>
OldCurrencyIsoCode	<p>Type</p> <p>string</p> <p>Properties</p> <p>Group, Nullable, Sort</p> <p>Description</p> <p>Available only for organizations with the multicurrency feature enabled. Contains the ISO currency code for the <code>OldValue</code> field, if <code>FieldName</code> is a currency field.</p>
OldValue	<p>Type</p> <p>anyType</p> <p>Properties</p> <p>Nullable, Sort</p> <p>Description</p> <p>The last value of the field before it was changed.</p>

Usage

A user can subscribe to a record or to another user. Changes to the record and updates from the users are displayed in the Chatter feed on the user's home page, which is a useful way to stay up-to-date with other users and with changes made to records in Salesforce. Feeds are available in API version 18.0 and later.

If you move a custom field to the Recycle Bin, all FeedTrackedChange records that track historical changes to the custom field are automatically deleted and are not restored if the custom-field is undeleted.

The following sections outline the difference between standard feeds and custom feeds.

Standard Feeds

A standard feed is a record feed, such as `AccountFeed`. `FeedTrackedChange` records for standard feeds can only be queried via the parent feed object.

Note the following when working with standard feed items:

- Feed items for standard feeds are read only in the API.
- A `FeedTrackedChange` record is visible when you have read access on the record feed, and when the field is visible in the field-level security settings.

Custom Feeds

If you want more control over the information provided in a record feed, such as `AccountFeed`, you can create a custom feed. A custom feed can replace or augment an existing record feed. For example, you might want to:

- Disable the standard account record feed and use an Apex trigger to generate `FeedTrackedChange` records for the events that you want to track in the feed instead.
- Augment the standard contact record feed by writing an API client that inserts feed items for events that are not tracked in the standard feed.

Tracking of Special Events

The `FieldName` field also tracks other events that are not related to an individual field for a parent feed. These events occur as the parent record advances through its pipeline. For example, a value of `LeadConverted` indicates that a lead has been converted to an opportunity.

Valid values for the `FieldName` field for multiple objects:

- `created`
- `ownerAccepted`
- `ownerAssignment`

Additional valid values for the `FieldName` field for individual objects:

Account

- `accountCreatedFromLead`
- `accountMerged`
- `accountUpdatedByLead`
- `personAccountUpdatedByLead`

Case

- `closed`
- `ownerEscalated`

Contact

- `contactCreatedFromLead`
- `contactMerged`
- `contactUpdatedByLead`

Contract

- `contractActivation`
- `contractApproval`
- `contractConversion`
- `contractExpiration`
- `contractTermination`

Lead

- `leadConverted`
- `leadMerged`

Opportunity

- `opportunityCreatedFromLead`

SEE ALSO:

[Custom Object__Feed](#)

FieldHistoryArchive

Represents field history values for all objects that retain field history. `FieldHistoryArchive` is a big object, available only to users with the “Retain Field History” permission. This object is available in API version 29.0 and later.

Each instance of the `FieldHistoryArchive` object represents a single change in the value of a field. `FieldHistoryArchive` stores history for both standard and custom fields.

The `Field` field returns the name of the field unless the parent field or object is deleted, in which case it returns the field ID. You can use the ID to retrieve the old field and object name from the `FieldNameAfterArchival` and `ParentNameAfterArchival` fields, respectively.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field Name	Details
<code>ArchiveFieldName</code>	<p>Type string</p> <p>Properties Nillable</p> <p>Description The name of the field at the time the data was archived. If the field name changed, the name is sometimes not the same for all records related to a single field.</p>

Field Name	Details
ArchiveParentName	<p>Type string</p> <p>Properties Nillable</p> <p>Description The name of the parent object at the time the data was archived. If the object name changed, the name is sometimes not the same for all records related to a single field.</p>
ArchiveParentType	<p>Type string</p> <p>Properties Nillable</p> <p>Description The type of the field at the time the data was archived. If the field type changed, the type is sometimes not the same for all records related to a single field.</p>
ArchiveTimestamp	<p>Type dateTime</p> <p>Properties Nillable</p> <p>Description The date and time at which the data was archived.</p>
CreatedById	<p>Type reference</p> <p>Properties Nillable</p> <p>Description The user ID of the user who created the original record.</p>
CreatedDate	<p>Type dateTime</p> <p>Properties Nillable, Sort</p> <p>Description The date and time at which the original record was created.</p>
Field	<p>Type picklist</p> <p>Properties Restricted picklist</p>

Field Name**Details****Description**

The name of the field that was changed. If the field is deleted from the parent object, the `Field` field contains the field ID instead.

FieldHistoryType

Type

picklist

Properties

Filter, Nillable, Restricted picklist, Sort

Description

The name of the object that contains the field history. Possible values are:

- Account
- Article
- Asset
- Campaign
- Case
- Contact
- Contract
- ContractLineItem
- Crisis
- Employee
- EmployeeCrisisAssessment
- Entitlement
- Individual
- InternalOrganizationUnit
- Knowledge
- Lead
- Opportunity
- Order
- OrderItem
- Pricebook2
- PricebookEntry
- Product2
- ServiceAppointment
- ServiceContract
- Solution
- WorkOrder
- WorkOrderLineItem

Field Name	Details
HistoryId	<p>Type reference</p> <p>Properties Filter, Sort</p> <p>Description The ID of the relevant history object (for example, AccountHistory). This field is available in versions 42.0 and later.</p>
Id	<p>Type ID</p> <p>Properties Defaulted on create, Filter, idLookup</p> <p>Description The ID of the archived record. It's useful to have a field's ID for fields that you've deleted. (Field names aren't retained in history when you delete fields from Salesforce.)</p>
NewValue	<p>Type anyType</p> <p>Properties Nillable</p> <p>Description The new value of the modified field.</p>
OldValue	<p>Type anyType</p> <p>Properties Nillable</p> <p>Description The previous value of the modified field.</p>
ParentId	<p>Type reference</p> <p>Properties Filter, Sort</p> <p>Description The ID of the object that contains the field (the parent object).</p>

Usage

When sorting fields, order them as follows:

1. FieldHistoryType ASC
2. ParentID ASC
3. CreatedDate DESC

SEE ALSO:

[Developer Guide:Big Objects Implementation Guide](#)

FieldChangeSnapshot

Use this virtual object to learn which opportunities' close dates changed during the specified time period. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To use FieldChangeSnapshot, set up historical trend reporting for opportunities in your org. You must also have the Pipeline Inspection user permission and the Pipeline Inspection setting enabled.

Fields

Field	Details
CurrentValueDateOnly	<p>Type date</p> <p>Properties Filter, Group, Nillable</p> <p>Description The current value of a date field on the opportunity.</p>
FieldName	<p>Type string</p> <p>Properties Filter, Group</p> <p>Description The name of the field to get the change history for. Possible values are:</p> <ul style="list-style-type: none"> • CloseDate
ParentId	<p>Type reference</p>

Field	Details
	<p>Properties Filter, Group</p> <p>Description The ID of the opportunity to get the change history for. This is a relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To Opportunity</p>
ValidFrom	<p>Type dateTime</p> <p>Properties Filter</p> <p>Description The date and time that specifies the beginning of the time period.</p>
ValidTo	<p>Type dateTime</p> <p>Properties Filter</p> <p>Description The date and time that specifies the end of the time period.</p>

Usage

Use FieldChangeSnapshot to learn about the first change made to the specified opportunity during the specified time period. Subsequent changes are not returned.

 **Example:** Suppose that last week you changed an opportunity's close date to June 1, 2021. Assuming the opportunity had the ID '006R0000XXXXXXXXXX', the following query would return the CurrentValueDateOnly of June 1, 2021:

```
Select CurrentValueDateOnly from FieldChangeSnapshot where ParentID =
'006R0000XXXXXXXXXX' and FieldName = 'CloseDate' and ValidTo = LAST_WEEK AND ValidFrom
= LAST_WEEK and CurrentValueDateOnly < 2021-07-01
```

FieldPermissions

Represents the enabled field permissions for the parent PermissionSet. This object is available in API version 24.0 and later.

To grant a user access to a field, associate a FieldPermissions record with a PermissionSet that's assigned to a user. FieldPermissions records are only supported in PermissionSet, not in Profile.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

In API version 49.0 and later, only users with the View Setup and Configuration permission can access this object.

Fields

In API version 50.0 and later, for lookup field inserts and queries, you can leave off the `Id` in the field name *or* include it. The rows returned always use the API name. For example:

```
Select SubjectType, Field From FieldPermissions where Field='Contact.Account'
```

and

```
Select SubjectType, Field From FieldPermissions where Field='Contact.AccountId'
```

both return

```
Contact, Contact.AccountId
```

Field Name	Details
Field	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The field's API name. This name must be prefixed with the <code>SubjectType</code>. For example, <code>Merchandise__c.Description__c</code></p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The <code>Id</code> of the field's parent PermissionSet. This is a relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p>

Field Name	Details
	<p>Refers To PermissionSet</p>
PermissionsEdit	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description If <code>true</code>, users assigned to the parent PermissionSet can edit this field. Requires <code>PermissionsRead</code> for the same field to be <code>true</code>.</p>
PermissionsRead	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description If <code>true</code>, users assigned to the parent PermissionSet can view this field. A FieldPermissions record must have at minimum <code>PermissionsRead</code> set to <code>true</code>, or it will be deleted.</p>
SubjectType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The object's API name. For example, <code>Merchandise__c</code>.</p>

Usage

FieldPermissions work similarly to ObjectPermissions. However, FieldPermissions includes a `Field` attribute to return the name of the field.

For example, the following query returns all FieldPermissions records that have at least the "Read" permission. The results include the field, object, and permission set names.

```
SELECT SubjectType, Field, PermissionsRead, Parent.Name
FROM FieldPermissions
WHERE PermissionsRead = True
```

Include the field's parent object when querying FieldPermissions. For example, to find all rows that match the Account object's `Type` field, create the following query:

```
SELECT Id, SubjectType, Field
FROM FieldPermissions
WHERE Field = 'Account.Type' AND SubjectType = 'Account'
```

To find which permission sets are backed by profiles with the Account object, you can use a query like the following example:

```
SELECT Id, ParentId, SubjectType, Field, PermissionsEdit, PermissionsRead, Parent.Name
FROM FieldPermissions
WHERE SubjectType = 'Account' and Parent.IsOwnedByProfile = true
ORDER BY SubjectType, Field
```

Both `SubjectType` and `Field` must be included in the `SELECT` line of the query. Provide the full API name of the field in the form of `SubjectType.Field` when querying for a field.

Note: When using the `FieldPermission` object to download records, depending on the SOQL query you use, you might not receive all expected records. Results can also appear incomplete. However, all records do download; fields that don't support field security and rows for entities not visible to the org are hidden.

Special Properties for Field Permissions

The auto-number and formula fields have special rules for how field permissions work. Both have `FieldPermissions` records, but inserting and updating is limited to `PermissionsRead`. `PermissionsEdit` isn't allowed for either field type, since these fields must be read-only for users.

The following field types don't return a `FieldPermissions` record because they are assumed to always be readable.

- `Id`
- `CreatedById`
- `CreatedDate`
- `IsDeleted`
- `LastModifiedById`
- `LastModifiedDate`
- `SystemModStamp`

The following field types don't return a `FieldPermissions` record because they are assumed to always be readable and writable.

- `OwnerId`
- Master-detail custom (relationship) fields
- Universally required custom fields

As a result, the following query returns no records, even though users do have some access to some of the fields.

```
SELECT Field, SubjectType, PermissionsRead
FROM FieldPermissions
WHERE Field='Id'
```

To determine if a field can return a `FieldPermissions` record, you can call a `describeObject()` on the field. For example, `describeObject('Merchandise__c')`, returns all the properties of the `Merchandise` custom object, including field properties. If you use a field whose `permissionable` property is `false` (like the field types listed in this section), you can't query, insert, update, or delete field permissions records, because they don't exist.

Working with Custom Activity Fields

While tasks and events are considered separate objects, they share a common set of activity custom fields. As a result, when a custom task field is created, a custom event field is also created, and vice versa. You can display the custom field on the event layout, task layout, or both event and task layouts.

Although custom activity fields are shared between tasks and events, you see separate FieldPermissions records for the task and event. However, changes made to one field permission record are automatically made to the other. For example, if you create a custom activity field, assign field permissions to it in a permission set, and run the following query, the query returns two records with the same permission value.

```
SELECT Field, Id, ParentId, PermissionsEdit, PermissionsRead, SubjectType
FROM FieldPermissions
WHERE SubjectType = 'event' OR SubjectType = 'task'
```

If you then update one of the records with another set of field permission values and run the query, the same permission values for both records are returned.

Nesting Field Permissions

You can nest FieldPermissions in a PermissionSet query. For example, the following returns any permission sets where “Edit Read Only Fields” is true. Also, the result set includes both the “Read” and “Edit” field permission on the Merchandise object. Get similar results by nesting the SOQL with a field permission query using the relationship name for field permissions: FieldPerms.

```
SELECT PermissionsEditReadOnlyFields,
(SELECT SubjectType, Field, PermissionsRead, PermissionsEdit
FROM FieldPerms
WHERE SubjectType = 'Merchandise__c')
FROM PermissionSet
WHERE PermissionsEditReadOnlyFields = true
```

As a result, it's possible to traverse the relationship between the PermissionSet and any child-related objects (in this case, FieldPermissions). You can do this from the PermissionSet object by using the child relationship (ObjectPerms, FieldPerms, and so on) or from the child object by referencing the PermissionSet with `Parent.permission_set_attribute`.

It's important to consider when to use a conditional WHERE statement to restrict the result set. To query based on an attribute on the permission set object, nest the SOQL with the child relationship. However, to query based on an attribute on the child object, you must reference the permission set parent attribute in your query.

The following two queries return the same columns with different results, based on whether you use the child relationship or parent notation.

```
SELECT PermissionsEditReadOnlyFields,
(SELECT SubjectType, Field, PermissionsRead, PermissionsEdit
FROM FieldPerms
WHERE SubjectType = 'Merchandise__c')
FROM PermissionSet
WHERE PermissionsEditReadOnlyFields = true
```

Versus:

```
SELECT SubjectType, Field, PermissionsRead, PermissionsEdit, Parent.Name,
Parent.PermissionsEditReadOnlyFields
FROM FieldPermissions
WHERE SubjectType='Merchandise__c'
```

[PermissionSet](#)

[ObjectPermissions](#)

FieldSecurityClassification

Represents a field's data sensitivity value selected from the SecurityClassification picklist. This object is available in API version 46.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To view this object, you need the Customize Application or Modify Data Classification permission.

Fields

Field Name	Details
ApiName	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The API name of the data sensitivity picklist value. Default values:</p> <ul style="list-style-type: none"> • Public • Internal • Confidential • Restricted • MissionCritical
Description	<p>Type textarea</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The description of the data sensitivity picklist value.</p>
IsHighRiskLevel	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates that fields with this picklist value contain data highly sensitive to your company.</p>

Field Name	Details
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The data sensitivity picklist value. Default values:</p> <ul style="list-style-type: none"> • Public • Internal • Confidential • Restricted • MissionCritical
SortOrder	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The value's position in the picklist.</p>

Usage

Use this object to return information about data sensitivity values in the SecurityClassification picklist. This object is read-only, but you can update the SecurityClassification picklist using the [StandardValueSet](#) Metadata API type.

FieldServiceMobileSettings

Represents a configuration of settings that control the Field Service iOS and Android mobile app experience. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
BgGeoLocationAccuracy	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The accuracy of geolocation tracking of services resources while the app is running in the background. Lowering accuracy reduces battery consumption for mobile devices. Available in API version 41.0 and later. Picklist options:</p> <ul style="list-style-type: none"> • Medium—Accurate to within about 100 meters. • Coarse—Accurate to within about 1 kilometer. • Very Coarse—Accurate to within about 3 kilometers. <p>The default value is Coarse.</p>
BgGeoLocationMinUpdateFreqMins	<p>Type int</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The frequency of geolocation polling of services resources while the app is running in the background. Less frequent polling decreases battery consumption for mobile devices. The label in the UI is Minimum Update Frequency of Geo Location in Minutes (Background). Available in API version 41.0 and later.</p>
BrandInvertedColor	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The color of toasts and the contrast color of the floating action button.</p>
ContrastInvertedColor	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The color of secondary backgrounds in the UI.</p>
ContrastPrimaryColor	<p>Type string</p>

Field Name	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The color of primary text.</p>
ContrastQuaternaryColor	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The color of secondary lines that delineate different areas of the UI.</p>
ContrastQuinaryColor	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The color of primary backgrounds in the UI.</p>
ContrastSecondaryColor	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The color of secondary text.</p>
ContrastTertiaryColor	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The color of the icons on the settings screen and of primary lines that delineate different areas of the UI.</p>
DefaultListViewDeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The API name of the default service appointment list view on the schedule screen.</p>

Field Name	Details
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The API name of the set of field service mobile settings.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
FeedbackPrimaryColor	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The color of error messages.</p>
FeedbackSecondaryColor	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The color of success messages.</p>
FeedbackSelectedColor	<p>Type string</p> <p>Properties Create, Defaulted on create, Group, Sort, Update</p> <p>Description The color indicating the user's current selection.</p>
FutureDaysInDatePicker	<p>Type int</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The number of days into the future that a user can select from the date picker on the schedule screen.</p>
GeoLocationAccuracy	<p>Type picklist</p>

Field Name	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The accuracy of service resource geolocation tracking. Lowering accuracy reduces battery consumption for mobile devices. Picklist values:</p> <ul style="list-style-type: none"> • Fine—Accurate to within 10 meters. • Medium—Accurate to within 100 meters. • Coarse—Accurate to within 1 kilometer. <p>The default value is Medium.</p>
GeoLocationMinUpdateFreqMins	<p>Type int</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The minimum number of minutes between attempts to poll geolocation.</p>
IsAssignmentNotification	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Controls whether service appointment notifications are sent when the service resource is assigned the appointment. Default is false. This field is available in API version 46.0 and later.</p>
IsDefault	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates that the set of field service mobile settings is the default set that is automatically assigned to users. You can't make a different settings record the default, but you can modify the default settings record. Default is false. Available in API version 41.0 and later.</p>
IsDispatchNotification	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>Controls whether service appointment notifications are sent when the service resource is dispatched for the appointment. Default is <code>false</code>. This field is available in API version 46.0 and later.</p>
<code>IsSendLocationHistory</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Controls whether geolocation tracking of services resources is enabled. Default is <code>false</code>.</p>
<code>IsShowEditFullRecord</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Controls whether users can edit records with the field service mobile app. Default is <code>false</code>.</p>
<code>IsTimeSheetEnabled</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Controls whether users can access time sheets on their mobile devices (Beta). Default is <code>false</code>.</p>
<code>IsTimeZoneEnabled</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Controls whether the time zone of timesheet entries on the mobile app is recorded. The current time zone is recorded in the <code>LocationTimeZone</code> field of the <code>TimeSheetEntry</code> object. Default is <code>false</code>. Available in API version 50.0 and later.</p>
<code>IsUseSalesforceMobileActions</code>	<p>Type</p> <p>boolean</p>

Field Name	Details
	<p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Reserved for future use.</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The localization preference for a user. The format is a two letter language code and, if there's a dialect, followed by the two letter dialect, for example, <code>fr</code> for French, and <code>fr_BE</code> for Belgian French</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The label in the UI for the set of field service mobile settings. Available in API version 41.0 and later.</p>
MetadataCacheTimeDays	<p>Type int</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The number of days that org metadata, such as layouts, is kept in the app's local cache of memory.</p>
NavbarBackgroundColor	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The color of the top bar in the app.</p>
NavbarInvertedColor	<p>Type string</p> <p>Properties Create, Defaulted on create, Group, Sort, Update</p>

Field Name	Details
	<p>Description The secondary color of the tap bar in the app.</p>
PastDaysInDatePicker	<p>Type int</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The number of days into the past that a user can select from the date picker on the schedule screen.</p>
PrimaryBrandColor	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The main branding color used throughout the UI.</p>
QuickStatusChangeFlowName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The name of an existing Field Service flow with a Quick Status Change action to change the work order or service appointment status or both. This applies to flows invoked on the mobile app only. This field is available in API version 51.0 and later.</p>
RecordDataCacheTimeMins	<p>Type int</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The number of minutes that record data is kept in the app's local cache of memory.</p>
SecondaryBrandColor	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The color of action buttons.</p>

Field Name	Details
TimeIntervalSetupMins	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Controls the spacing of picklist options for time values such as when creating resource absences.</p>
UpdateScheduleTimeMins	<p>Type int</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The minimum number of minutes between attempts to update a user's schedule.</p> <p> Note: The user's schedule might not refresh on this cadence if the user's device isn't connected to a network or doesn't have adequate battery life.</p>

Usage

Field Service Mobile settings allow you to create sets of settings to apply to different field service mobile users. The settings apply to both the Android and iOS versions of the app.

For example, suppose you want to accommodate workers that are color blind, or who work in dark or bright conditions. You can choose different branding options for different workers to suit their needs, and assign them to their profiles.

FieldServiceOrgSettings

Represents the org settings for Field Service, such as Appointment Assistant settings. If Field Service is enabled, the org contains one read-only record of this object. This object is available in API version 51.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To see this object, Field Service must be enabled. For specified fields in the table, Appointment Assistant must also be enabled.

Fields

Field	Details
ApptAssistantExpiration	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The expiry time in minutes of when the customer stops seeing the mobile worker's location. Appointment Assistant must also be enabled to see this field.</p>
ApptAssistantInfoUrl	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The page URL that enables Appointment Assistant. Appointment Assistant must also be enabled to see this field.</p>
ApptAssistantRadiusUnit	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The unit of the radius of the service appointment that prompts the Last Mile event for Appointment Assistant. Appointment Assistant must also be enabled to see this field.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Kilometer • Meter • Mile • Yard
ApptAssistantRadiusValue	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The radius of the service appointment that prompts the Last Mile event for Appointment Assistant. Appointment Assistant must also be enabled to see this field.</p>
ApptAssistantStatus	<p>Type picklist</p>

Field	Details
	<p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The value that prompts the En Route event for Appointment Assistant. Appointment Assistant must also be enabled to see this field.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Canceled • Cannot Complete • Completed • Dispatched • In Progress • None • Scheduled • TestSharing <p>The default value is 'None'.</p>
DeveloperName	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The unique name of the object in the API.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
Language	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The language of the field service org settings.</p> <p>The format for the values is a two-letter language code in small letters, for example, <code>fr</code> for French. If the language has regional dialects, add the two-letter country code in capital letters, for example, use <code>fr_BE</code> for Belgian French.</p>
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Sort</p>

Field	Details
	<p>Description</p> <p>The label of the field service org settings.</p>

FiscalYearSettings

Settings to define a custom or standard fiscal year for your organization. This object has a parent-child relationship with the Period object.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only partner users and standard users can access this object.

Fields

Field	Details
Description	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Description of the setting.</p>
EndDate	<p>Type</p> <p>date</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>End date of the fiscal year.</p>
IsStandardYear	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Indicates whether the fiscal year is a standard calendar year (<code>true</code>) or a custom fiscal year (<code>false</code>).</p>

Field	Details
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description A name for the fiscal year. Limit: 80 characters.</p>
PeriodId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the associated fiscal period.</p>
PeriodLabelScheme	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The numbering scheme used for fiscal periods.</p>
PeriodPrefix	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The prefix of fiscal periods. For example, if <i>p</i> is the prefix, then the first period is "P1."</p>
QuarterLabelScheme	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The numbering scheme used for fiscal quarters.</p>
QuarterPrefix	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p>

Field	Details
	Description The prefix of fiscal quarters. For example, if "Q" is the prefix, then the fourth quarter would be "Q4."
StartDate	Type date Properties Filter, Group, Nillable, Sort Description Start date of the fiscal year.
WeekLabelScheme	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The numbering scheme used for weeks.
WeekStartDay	Type int Properties Filter, Group, Nillable, Sort Description The name of the day that starts the week, for example Monday or Sunday
YearType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates one of two types of fiscal years, Standard or Custom. Standard denotes the standard Gregorian calendar, while Custom means a fiscal year with a custom structure.

SEE ALSO:

[Period](#)[Object Basics](#)

FlexQueueItem

Represents an asynchronous Apex job in the Apex flex queue. Provides information about the job type and flex queue position of the `AsyncApexJob`. This object is available in API version 36.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

The `enableAsyncRequiresViewSetup` field on the `ApexSettings` metadata type controls the activation of the critical update “Require View Setup permission to enqueue async Apex Jobs”. In API version 49.0 and later, when the field is set to `true`, users must have the View Setup and Configuration permission to access this object.

Fields

Field Name	Description
<code>AsyncApexJobId</code>	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of an AsyncApexJob that’s waiting in the flex queue. This is a relationship field.</p> <p>Relationship Name AsyncApexJob</p> <p>Relationship Type Lookup</p> <p>Refers To AsyncApexJob</p>
<code>FlexQueueItemId</code>	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The primary key for this <code>FlexQueueItem</code>.</p>
<code>JobPosition</code>	<p>Type int</p>

Field Name	Description
	<p>Properties Filter, Group, Sort</p> <p>Description The position in the flex queue of the waiting job. The highest-priority job in the queue is at position 0.</p>
JobType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of the job. Valid values are:</p> <ul style="list-style-type: none"> • ApexToken • BatchApex • BatchApexWorker • Future • Queueable • ScheduledApex • SharingRecalculation • TestRequest • TestWorker <p>Currently, queries are supported only on BatchApex jobs.</p>

Usage

To find the position of an AsyncApexJob in the flex queue, query JobPosition. For example:

```
SELECT JobPosition FROM FlexQueueItem WHERE JobType = 'BatchApex' AND AsyncApexJobId = '707xx000000DABC'
```

To find the job at a given position, query AsyncApexJobId. For example:

```
SELECT AsyncApexJobId FROM FlexQueueItem WHERE JobType = 'BatchApex' AND JobPosition = '2'
```

To find all batch jobs in the flex queue, query JobType. To get other information about the jobs, include AsyncApexJob in your query. For example:

```
SELECT JobType, JobPosition, AsyncApexJob.ApexClass.Name, AsyncApexJob.CreatedDate, AsyncApexJob.CreatedBy FROM FlexQueueItem WHERE JobType='BatchApex' AND AsyncApexJob.ApexClass.Name LIKE '%BatchAJob%' ORDER BY JobPosition DESC
```

FlowDefinitionView

Represents the description of a flow definition. This object is available in API version 46.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
ActiveVersionId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the active flow version.</p>
ApiName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The API name of the flow definition.</p>
Builder	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the tool that created this flow. Possible values are:</p> <ul style="list-style-type: none">• Cloud Flow Designer• Flow Builder• Swing Designer <p>This field is available in API version 47.0 and later.</p>
Description	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Flow definition information, specified by the org's admin.</p>

Field	Details
DurableId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the flow definition.</p>
InstalledPackageName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the installed package that includes this flow definition. This field is available in API version 47.0 and later.</p>
IsActive	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the latest version of the flow definition is the active flow version. This field is available in API version 47.0 and later.</p>
IsOutOfDate	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the active flow version is the latest version of the flow definition. This field is available in API version 47.0 and later.</p>
IsSwingFlow	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the flow is built with Desktop Flow Designer. This field is available in API version 49.0 and later.</p>
IsTemplate	<p>Type boolean</p>

Field	Details
	<p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the process or flow is a template. When installed from managed packages, processes and flows can't be viewed or cloned by subscribers because of intellectual property (IP) protection. But when those processes and flows are templates, subscribers can open them in a builder, clone them, and customize the clones.</p> <p>This field is available in API version 47.0 and later.</p>
Label	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The label of the flow definition.</p>
LastModifiedBy	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Name of the user who last updated this flow definition.</p> <p>This field is available in API version 47.0 and later.</p>
LatestVersionId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the latest flow version, regardless of the flow's status.</p>
ManageableState	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Indicates the manageable state of the flow that is contained in a package. Possible values are:</p> <ul style="list-style-type: none"> • beta • deleted • deprecated

Field	Details
	<ul style="list-style-type: none"> • deprecatedEditable • installed • installedEditable • released • unmanaged <p>This field is available in API version 47.0 and later.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix associated with the flow definition.</p>
ProcessType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The type of the flow. Valid values are:</p> <ul style="list-style-type: none"> • Appointments—A flow for Lightning Scheduler. This value is available in API version 44.0 and later. • AutoLaunchedFlow—A flow that doesn't require user interaction. • CheckoutFlow—A flow used in Lightning B2B Commerce to create a checkout in a store. This value is available in API version 48.0 and later. • ContactRequestFlow—A flow that lets customers request that customer support get back to them. This flow is used to create contact request records. This value is available in API version 45.0 and later. • CustomerLifecycle—A Salesforce Surveys flow that lets you associate survey questions with different stages in customer lifecycles. This value is available in API version 49.0 and later and only when the Customer Lifecycle Designer license is enabled. • CustomEvent—A process that is invoked when it receives a platform event message. In the UI, it's an event process. This value is available in API version 41.0 and later. • FieldServiceMobile—A flow for the Field Service mobile app. This value is available in API version 39.0 and later. • FieldServiceWeb—A flow for embedded Appointment Booking. Its UI label is Field Service Embedded Flow. This value is available in API version 41.0 and later. • Flow—A flow that requires user interaction because it contains one or more screens or local actions, choices, or dynamic choices. In the UI and Salesforce

Field

Details

Help, it's a screen flow. Screen flows can be launched from the UI, such as with a flow action, Lightning page, or web tab.

- `FSClending`—A flow for Financial Services Cloud Mortgage. This value is available in API version 46.0 and later.
- `FSClending`—A flow for login. This value is available in API version 51.0 and later.
- `InvocableProcess`—A process that can be invoked by another process or the Invocable Actions resource in REST API. This value is available in API version 38.0 and later.
- `LoyaltyManagementFlow`—A flow for the Loyalty Management app and can be invoked by loyalty program processes. This value is available in API version 54.0 and later.
- `RoutingFlow`—A flow for Salesforce Omni-Channel routing and other business logic. This value is available in API version 52.0 and later.
- `Survey`—A flow for Salesforce Surveys. From the UI, this type of flow is created in Survey Builder. This value is available in API version 42.0 and later.
- `SurveyEnrich`—A Salesforce Surveys flow that uses the Survey Data Mapper. From the UI, this type of flow is created in the Survey Builder and requires an associated survey flow type. This value is available in API version 49.0 or later and only when the Customer Lifecycle Designer license is enabled.
- `Workflow`—A process that is invoked when a record is created or edited. In the UI and Salesforce Help, it's a record change process.

These values are reserved for future use.

- `ActionCadenceFlow`
- `ActionPlan`
- `AppProcess`
- `CartAsyncFlow`
- `DigitalForm`
- `Journey`
- `JourneyBuilderIntegration`
- `LoginFlow`
- `ManagedContentFlow`
- `OrchestrationFlow`
- `RecommendationStrategy`
- `SalesEntryExperienceFlow`
- `TransactionSecurityFlow`
- `UserProvisioningFlow`

 **Note:** This value has significant impact on validation when saving the flow and on the flow's runtime behavior. Don't change this value unless you understand the flow properties of the specified type.

Field	Details
	<p>Across flow versions, you can change the type only from <code>Flow</code> to <code>AutoLaunchedFlow</code> or vice versa. Before you change the flow type, make sure that the flow contains only elements, resources, and functionality that the new flow type supports.</p>
<code>TriggerObjectOrEventId</code>	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description ID of the object or platform event that triggers this flow. This field is available in API version 53.0 and later. This is a relationship field.</p> <p>Relationship Name TriggerObjectOrEvent</p> <p>Relationship Type Lookup</p> <p>Refer To EntityDefinition</p>
<code>TriggerObjectOrEventLabel</code>	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The label of the object or platform event that triggers this flow. This field is available in API version 53.0 and later.</p>
<code>TriggerType</code>	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Specifies what causes the flow to run. If you exclude this field, the flow has no trigger and starts only when a user or app launches the flow. Valid value is:</p> <ul style="list-style-type: none"> • <code>PlatformEvent</code>—The flow starts when a platform event message is received. This value is available in API version 49.0 and later. • <code>RecordAfterSave</code>—The flow starts after a record is saved. This value is available in API version 49.0 and later. • <code>RecordBeforeSave</code>—Creating and/or updating a record triggers an autolaunched flow to make additional updates to that record before it's saved to the database. This value is available in API version 48.0 and later.

Field	Details
	<ul style="list-style-type: none"> <code>Scheduled</code>—The flow starts at the scheduled time. This value is available in API version 47.0 and later. <p>Available only when <code>processType</code> is <code>AutoLaunchedFlow</code>. This field is available in API version 47.0 and later.</p>

Usage

Use this object to query information about flow definitions.

FlowInterview

Represents a flow interview. A *flow interview* is a running instance of a flow.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To delete a flow interview, you must have the “Manage Flow” user permission. All other calls require the “Run Flows” user permission or the `Flow User` field enabled on the user detail page. If **Override default behavior and restrict access to enabled profiles or permission sets** is selected for an individual flow, access to that specific flow and its interviews is given to users by profile or permission set.

Fields

Field Name	Details
<code>CurrentElement</code>	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The flow element at which the interview is currently paused.</p>
<code>Guid</code>	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Globally unique identifier for the interview.</p>

Field Name	Details
InterviewLabel	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Label for the interview. This label helps users and administrators differentiate interviews from the same flow.</p> <p>In the user interface, this label appears in the Paused Flow Interviews component on the user's Home tab and in the list of paused flow interviews in Setup.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name for the interview.</p>
OwnerId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the user who owns the interview. Only this user or an admin can resume the interview.</p> <p>This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
PauseLabel	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Information about why the interview was paused. This string is entered by the user who paused the flow interview. The label is Why Paused.</p>

Field Name	Details
WasPausedFromScreen	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Whether or not the flow interview was paused by a user from a flow Screen element. This field is available in API version 46.0 and later.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

FlowInterviewOwnerSharingRule

Sharing rules are available for the object.

FlowInterviewShare

Sharing is available for the object.

FlowInterviewOwnerSharingRule

Represents the rules for sharing a FlowInterview with users other than the owner. This object is available in API version 33.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
AccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description A value that represents the type of sharing being allowed. The possible values are:</p> <ul style="list-style-type: none"> • Read • Edit—In API version 42.0 and later, when Let users resume shared flow interviews is enabled for your org, users can resume all flow interviews that they have edit access to.

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description A description of the sharing rule. Maximum size is 1000 characters.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to Rule Name in the user interface.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p>
GroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID representing the source group.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to Label on the user interface.</p>
UserOrGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p>

Field	Details
	<p>Description</p> <p>The ID representing the target user or group that's given access.</p>

Usage

Use this object to manage the sharing rules for FlowInterview records. General sharing uses this object.

In API version 42.0 and later, when **Let users resume shared flow interviews** is enabled for your org, users can resume all flow interviews that they have edit access to. When that setting is disabled, only the owner or a flow admin can resume a flow interview. To disable this setting, go to your org's Process Automation Settings in Setup.

FlowInterviewShare

Represents a sharing entry on a FlowInterview. This object is available in API version 33.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field	Details
AccessLevel	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description</p> <p>Level of access that the User or Group has to the FlowInterview. The possible values are:</p> <ul style="list-style-type: none"> • <code>Read</code> • <code>Edit</code>—In API version 42.0 and later, when Let users resume shared flow interviews is enabled for your org, users can resume all flow interviews that they have edit access to. • <code>All</code>—This value is not valid for creating or deleting records.
ParentId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p>

Field	Details
	<p>Description ID of the FlowInterview associated with this sharing entry. This is a relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To FlowInterview</p>
RowCause	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Reason that this sharing entry exists. You can only write to this field when its value is either omitted or set to <code>Manual</code> (default). Valid values include:</p> <ul style="list-style-type: none"> • <code>Manual</code>—The User or Group has access because a user with “All” access manually shared the FlowInterview with them. • <code>Owner</code>—The User is the owner of the FlowInterview. • <code>Rule</code>—The User or Group has access via a FlowInterview sharing rule. • <code>GuestRule</code>—The User or Group has access via a FlowInterview guest user sharing rule.
UserOrGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the User or Group that has been given access to the FlowInterview. This field can't be updated. This is a polymorphic relationship field.</p> <p>Relationship Name UserOrGroup</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>

Usage

This object lets you determine which users and groups can view and edit flow interviews that are owned by other users.

In API version 42.0 and later, when **Let users resume shared flow interviews** is enabled for your org, users can resume all flow interviews that they have edit access to. When that setting is disabled, only the owner or a flow admin can resume a flow interview. To disable this setting, go to your org's Process Automation Settings in Setup.

FlowRecordRelation

Represents a relationship between a record and a flow interview. When a flow interview is paused, Salesforce uses the `$Flow.CurrentRecord` global variable in the flow to associate the interview with a record. Available in API version 42.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The auto-generated ID of this relation.</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The flow interview that the record is related to. This is a relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To FlowInterview</p>

Field Name	Details
RelatedRecordId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The record that the flow interview is related to. Make sure that this field contains only one ID, and that the ID is for a valid object. Custom objects and most standard objects are supported. This is a relationship field.</p> <p>Relationship Name RelatedRecord</p> <p>Relationship Type Lookup</p> <p>Refers To Account, AccountContactRole, AccountPartner, Accreditation, ActivationTarget, ActivationTrgtIntOrgAccess, Address, AlternativePaymentMethod, Announcement, ApexTestQueueItem, AppAnalyticsQueryRequest, AppUsageAssignment, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskIndDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, AssociatedLocation, AsyncApexJob, Attachment, AuthorizationForm, AuthorizationFormConsent, AuthorizationFormDataUse, AuthorizationFormText, Award, BackgroundOperation, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, CalendarView, Campaign, CampaignMember, CardPaymentMethod, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CaseContactRole, CaseSolution, CodeSet, CodeSetBundle, CollaborationGroup, CollaborationGroupMember, CollaborationGroupMemberRequest, CollaborationGroupRecord, CollaborationInvitation, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, ConferenceNumber, ConsumptionRate, ConsumptionSchedule, Contact, ContactEncounter, ContactEncounterParticipant, ContactPointAddress, ContactPointConsent, ContactPointEmail, ContactPointPhone, ContactPointTypeConsent, ContactRequest, ContentDistribution, ContentDocument, ContentDocumentLink, ContentDocumentSubscription, ContentFolder, ContentFolderLink,</p>

Field Name	Details
	VideoCallParticipant, VideoCallRecording, Visit, VisitedParty, Visitor, VoiceCall, VoiceCallRecording, VoiceVendorLine, VolunteerProject, WaveAutoInstallRequest, WaveCompatibilityCheckItem, WorkAccess, WorkBadge, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkThanks, WorkType, WorkTypeGroup, WorkTypeGroupMember

FlowStageRelation

Represents a relationship between a paused flow interview and its stages. When a flow interview is paused, Salesforce creates a FlowStageRelation record for each stage that's set to the `$Flow.CurrentStage` or `$Flow.ActiveStages` global variable. Available in API version 43.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Fields

Field	Details
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The auto-generated ID of this relation.</p>
ParentId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The flow interview that the record is related to. This is a relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To FlowInterview</p>

Field	Details
StageLabel	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Label for the stage. If the stage is translated, the label respects the language of the user who is querying the label.</p>
StageOrder	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description The order of this stage when the flow interview was paused. This order may differ from the order in the stage definition.</p> <ul style="list-style-type: none"> • If the type is Active, the order corresponds to the order of the stage in <code>\$Flow.ActiveStages</code>. • If the type is Current and corresponds to an active stage, the order matches the order of the active stage. • If the type is Current and doesn't correspond to an active stage, the order is 0.
StageType	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Type of stage. The valid values are:</p> <ul style="list-style-type: none"> • Current: Identifies that the stage is set to <code>\$Flow.CurrentStage</code>. • Active: Identifies that the stage is set to <code>\$Flow.ActiveStages</code>.

Usage

You can use the FlowStageRelation records to represent the paused interview and its active and current stages visually.

For example, an Online Purchasing flow interview starts with several stages in `$Flow.ActiveStages`. If the interview is paused, Salesforce creates a FlowStageRelation record for each stage in `$Flow.ActiveStages` or `$Flow.CurrentStage`.

StageLabel	StageType	StageOrder
Review Cart	Active	0
Shipping Details	Active	1

StageLabel	StageType	StageOrder
Billing Details	Active	2
Payment Details	Active	3
Order Confirmation	Active	4
Shipping Details	Current	1

FlowVariableView

Represents a variable within the flow version. This object is available in API version 46.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
ApiName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The API name of the flow variable.</p>
DataType	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The data type of the flow variable. Valid values are:</p> <ul style="list-style-type: none"> • Apex—This value is available in API version 46.0 and later. • Boolean • Currency • Date • DateTime—This value is available in API version 30.0 and later. • Number • Multipicklist—This value is available in API version 34.0 and later. • Picklist—This value is available in API version 34.0 and later. • String

Field	Details
	<ul style="list-style-type: none"> sObject
Description	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Flow variable information, specified by the org's admin.</p>
DurableId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The Id of the flow variable.</p>
FlowVersionViewId	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The Id of the flow version. This is a relationship field.</p> <p>Relationship Name FlowVersionView</p> <p>Relationship Type Lookup</p> <p>Refers To FlowVersionView</p>
IsCollection	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether or not the flow variable is a collection of values.</p>
IsInput	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p>

Field	Details
	<p>Description</p> <p>Indicated whether or not the flow variable is available for input.</p>
IsOutput	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Indicates whether or not the flow variable is available for output.</p>
ObjectType	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>If the data type is sObject, this field indicates which object.</p>

Usage

Use this object to query information about flow variables. A query must be filtered by `FlowVersionViewId` to get results. Only variables with `IsInput` or `IsOutput` marked as true are visible.

FlowVersionView

Represents the version of a flow definition. This object is available in API version 46.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
ApiVersion	<p>Type</p> <p>double</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The API version for the flow definition. Every flow version has an API version specified at creation.</p>

Field	Details
	This field is available in API version 50.0 and later.
ApiVersionRuntime	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The API version for running the flow. This value determines which versioned run-time behavior improvements are adopted by the flow version.</p> <p>If not specified when the flow or flow version is created, the latest available API version is used as the API version for running the flow. When an existing flow is saved as a new flow or flow version, the existing flow's run-time API version is used in the new flow or flow version.</p> <p>This field is available in API version 50.0 and later.</p>
Description	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Flow version information, specified by the org's admin.</p>
DurableId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the flow version.</p>

Field	Details
	<p>Refers To FlowDefinitionView</p>
IsTemplate	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the process or flow is a template. When installed from managed packages, processes and flows can't be viewed or cloned by subscribers because of intellectual property (IP) protection. But when those processes and flows are templates, subscribers can open them in a builder, clone them, and customize the clones. Available in API version 46.0 and later. Default: false</p>
Label	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The label of the flow version.</p>
ProcessType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The type of the flow. Valid values are:</p> <ul style="list-style-type: none"> • Appointments—A flow for Lightning Scheduler. This value is available in API version 44.0 and later. • AutoLaunchedFlow—A flow that doesn't require user interaction. • CheckoutFlow—A flow used in Lightning B2B Commerce to create a checkout in a store. This value is available in API version 48.0 and later. • ContactRequestFlow—A flow that lets customers request that customer support get back to them. This flow is used to create contact request records. This value is available in API version 45.0 and later. • CustomerLifecycle—A Salesforce Surveys flow that lets you associate survey questions with different stages in customer lifecycles. This value is available in API version 49.0 and later and only when the Customer Lifecycle Designer license is enabled.

Field	Details
	<ul style="list-style-type: none"> • <code>CustomEvent</code>—A process that is invoked when it receives a platform event message. In the UI, it's an event process. This value is available in API version 41.0 and later. • <code>FieldServiceMobile</code>—A flow for the Field Service mobile app. This value is available in API version 39.0 and later. • <code>FieldServiceWeb</code>—A flow for embedded Appointment Booking. Its UI label is Field Service Embedded Flow. This value is available in API version 41.0 and later. • <code>Flow</code>—A flow that requires user interaction because it contains one or more screens or local actions, choices, or dynamic choices. In the UI and Salesforce Help, it's a screen flow. Screen flows can be launched from the UI, such as with a flow action, Lightning page, or web tab. • <code>FSClending</code>—A flow for Financial Services Cloud Mortgage. This value is available in API version 46.0 and later. • <code>FSClending</code>—A flow for login. This value is available in API version 51.0 and later. • <code>InvocableProcess</code>—A process that can be invoked by another process or the Invocable Actions resource in REST API. This value is available in API version 38.0 and later. • <code>LoyaltyManagementFlow</code>—A flow for the Loyalty Management app and can be invoked by loyalty program processes. This value is available in API version 54.0 and later. • <code>RoutingFlow</code>—A flow for Salesforce Omni-Channel routing and other business logic. This value is available in API version 52.0 and later. • <code>Survey</code>—A flow for Salesforce Surveys. From the UI, this type of flow is created in Survey Builder. This value is available in API version 42.0 and later. • <code>SurveyEnrich</code>—A Salesforce Surveys flow that uses the Survey Data Mapper. From the UI, this type of flow is created in the Survey Builder and requires an associated survey flow type. This value is available in API version 49.0 or later and only when the Customer Lifecycle Designer license is enabled. • <code>Workflow</code>—A process that is invoked when a record is created or edited. In the UI and Salesforce Help, it's a record change process.
	<p>These values are reserved for future use.</p> <ul style="list-style-type: none"> • <code>ActionCadenceFlow</code> • <code>ActionPlan</code> • <code>AppProcess</code> • <code>CartAsyncFlow</code> • <code>DigitalForm</code> • <code>Journey</code> • <code>JourneyBuilderIntegration</code> • <code>LoginFlow</code> • <code>ManagedContentFlow</code>

Field	Details
	<ul style="list-style-type: none"> • <code>OrchestrationFlow</code> • <code>RecommendationStrategy</code> • <code>SalesEntryExperienceFlow</code> • <code>TransactionSecurityFlow</code> • <code>UserProvisioningFlow</code> <p> Note: This value has significant impact on validation when saving the flow and on the flow's runtime behavior. Don't change this value unless you understand the flow properties of the specified type.</p> <p>Across flow versions, you can change the type only from <code>Flow</code> to <code>AutoLaunchedFlow</code> or vice versa. Before you change the flow type, make sure that the flow contains only elements, resources, and functionality that the new flow type supports.</p>
RunInMode	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The mode that the flow runs in. Valid values are:</p> <ul style="list-style-type: none"> • <code>DefaultMode</code> — The flow version runs in system or user context, depending on how the flow is launched. • <code>SystemModeWithSharing</code> — The flow version always runs in system mode with sharing. The flow respects org-wide default settings, role hierarchies, sharing rules, manual sharing, teams, and territories. But it doesn't respect object permissions, field-level access, or other permissions of the running user.
Status	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The flow's status.</p> <ul style="list-style-type: none"> • <code>Active</code> • <code>Draft</code> • <code>Obsolete</code> • <code>InvalidDraft</code>
VersionNumber	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	Description The flow's version number.

Usage

Use this object to query information about flow versions. A query must be filtered by `DurableId` or `FlowDefinitionViewId` to get results.

Folder

Represents a repository for a Dashboard, Document, EmailTemplate, Macro, QuickText, or Report. Only one type of item can be contained in a folder.

Supported Calls

`create()`, `delete()`, `describeSOjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

- You must have the “Modify All Data” permission to create, update, or delete document folders and email template folders.
- Guest and Customer Portal users can’t access this object.
- To query this object, no special permissions are needed.
- As of API version 35.0, when a folder is shared with a role, it is only visible to users in that role. Superior roles in the role hierarchy don’t gain visibility.
- If analytics folder sharing is turned on, then users need these permissions to create and manage report folders and dashboard folders:
 - “Create Dashboard Folders”
 - “Create Report Folders”
- To use folders for macros and quick text, enable folders for these objects in Setup on the Macro Settings and Quick Text Settings pages.

Fields

Field	Details
<code>AccessType</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	<p>Description</p> <p>Required. Indicates who can access the Folder. Available values include:</p> <ul style="list-style-type: none"> • <code>Hidden</code>—Folder is hidden from everyone. • <code>Public</code>—Folder is accessible by all users. • <code>Shared</code>—Folder is accessible only by a User in a particular Group or UserRole. The API doesn't allow you to view, insert, or update which group or Role the Folder is shared with. <p> Note: If analytics folder sharing is turned on for your organization, then this field is present but not used.</p>
<code>DeveloperName</code>	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is Folder Unique Name.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p>
<code>IsReadOnly</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Indicates whether this Folder is read-only (<code>true</code>) or editable (<code>false</code>). Label is <i>Read Only</i>.</p> <p> Note: If analytics folder sharing is turned on for your organization, then this field is present but not used.</p>
<code>Name</code>	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p>Description</p> <p>Label of the folder as it appears in the user interface. Label is Document Folder Label.</p>

Field	Details
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the parent object, if any.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description Required. Type of objects contained in the Folder. This field can't be updated. Available values include:</p> <ul style="list-style-type: none"> Dashboard Document Email (for Salesforce Classic email templates) EmailTemplate (for Lightning email templates) Macro QuickText Report

Usage

Only one type of item can be contained in a folder, either Dashboard, Document, EmailTemplate, Macro, QuickText, or Report.

SEE ALSO:

[Object Basics](#)

FolderedContentDocument

Represents the relationship between a parent and child ContentFolderItem in a ContentWorkspace.

Supported Calls

`describeSObjects()`

Fields

Field Name	Details
<code>ContentDocumentId</code>	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the ContentDocument that can be in a folder. This is a relationship field.</p> <p>Relationship Name ContentDocument</p> <p>Relationship Type Lookup</p> <p>Refers To ContentDocument</p>
<code>ContentSize</code>	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description File size of the ContentDocument.</p>
<code>FileExtension</code>	<p>Type string</p>

Field Name	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description File extension of the ContentDocument.</p>
FileType	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description File type of the ContentDocument.</p>
IsFolder	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates that the FolderedContentDocument is a folder, rather than a file.</p>
ParentContentFolderId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the ContentFolder the ContentDocument resides in. This is a relationship field.</p> <p>Relationship Name ParentContentFolder</p> <p>Relationship Type Lookup</p> <p>Refers To ContentFolder</p>
Title	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description Name of the file or folder in a ContentFolder.</p>

ForecastingAdjustment

This object represents an individual forecast manager's adjustment for a subordinate's or child territory's forecast via a ForecastingItem. Available in API versions 26 and greater. This object is separate from the ForecastingOwnerAdjustment object, which represents forecast users' adjustments of their *own* forecasts, including territory forecasts they own.

 **Note:** This information only applies to Collaborative Forecasts.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
AdjustedAmount	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The revenue amount of an individual forecast item, after an adjustment.</p>
AdjustedQuantity	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The quantity amount of an individual forecast item, after an adjustment. This field is available in API version 28 and later.</p>
AdjustmentNote	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>A text note providing information about the adjustment. The maximum length is 140 characters. This field does not appear in reports.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description</p> <p>The currency code of the adjustment. If omitted, the default is the importing user's personal currency.</p>
ForecastCategoryName	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>The category within the sales cycle that an opportunity is assigned to based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted, and Closed. You can add a Most Likely category and can customize forecast category names in single category rollups. The forecast categories display information for that specific category; for example, Best Case only reflects amounts in the Best Case category.</p>
ForecastingItemCategory	<p>Type picklist</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description</p> <p>This field indicates which type of forecast rollup the manager adjustment belongs to. Depending on whether your organization uses individual forecast category rollups or cumulative forecast rollups, you have these possible values for the <code>ForecastingItemCategory</code> field.</p> <p>Individual forecast category rollups:</p> <ul style="list-style-type: none"> • PipelineOnly - Rollup from Pipeline opportunities only. • BestCaseOnly - Rollup from Best Case opportunities only. Adjustable. • MostLikelyOnly - Rollup from Most Likely opportunities only. Adjustable. • CommitOnly - Rollup from Commit opportunities only. Adjustable. <p>Cumulative forecast rollups:</p> <ul style="list-style-type: none"> • OpenPipeline - Rollup from Pipeline + Best Case + Most Likely + Commit opportunities.

Field Name

Details

- BestCaseForecast - Rollup from Best Case + Most Likely + Commit + Closed opportunities. Adjustable.
- MostLikelyForecast - Rollup from Most Likely + Commit + Closed opportunities. Adjustable.
- CommitForecast - Rollup from Commit + Closed opportunities. Adjustable.

Either cumulative or individual forecast category rollups:

- ClosedOnly - Rollup from Closed opportunities only.

The `ForecastingItemCategory` field differs from the `ForecastCategoryName` field.

- The `ForecastCategoryName` field represents the forecast category of the *underlying opportunities* rolling up to forecast amounts. In organizations using cumulative forecast rollups, the `ForecastCategoryName` field can be null because the cumulative forecast amounts include opportunities from multiple forecast categories.
- The new `ForecastingItemCategory` field represents the *type of rollup* a forecast amount or adjustment is from. In organizations using individual forecast category columns, it contains the individual forecast rollup categories. In organizations using cumulative forecast rollups, it contains the cumulative rollup categories.

When inserting manager adjustments, the values you insert for `ForecastCategoryName` and `ForecastingItemCategory` must be compatible with each other. In organizations using cumulative forecast rollups, the `ForecastCategoryName` is nillable. The following pairs are valid.

Individual forecast category rollups:

- `ForecastCategoryName: BestCase,`
`ForecastingItemCategory: BestCaseOnly`
- `ForecastCategoryName: MostLikely,`
`ForecastingItemCategory: MostLikelyOnly`
- `ForecastCategoryName: Commit,`
`ForecastingItemCategory: CommitOnly`

Cumulative forecast category rollups:

- `ForecastCategoryName:null, ForecastingItemCategory: BestCaseForecast`
- `ForecastCategoryName:null, ForecastingItemCategory: MostLikelyForecast`
- `ForecastCategoryName:null, ForecastingItemCategory: CommitForecast`

`ForecastingTypeId`
Type

reference

Field Name	Details
	<p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the related ForecastingType.</p>
ForecastingItemId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the related ForecastingItem.</p>
IsAmount	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description True indicates that the adjustment is made in a revenue amount. If false, then <code>IsQuantity</code> must be true. This field is available in API version 28 and later.</p>
IsQuantity	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description True indicates that the adjustment is made in a quantity amount. If false, then <code>IsAmount</code> must be true. This field is available in API version 28 and later.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description The ID of the forecast owner.</p>
PeriodId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>Period ID for the adjustment. Read only.</p>
ProductFamily	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The Product Family for the adjustment. Read only. This field is available in API version 29 and later.</p>
StartDate	<p>Type</p> <p>date</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The start of the adjustment, expressed as month and year. The date can include any day in a given month. Stored using the first date of the month.</p>
Territory2Id	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The ID of the territory to forecast on. Available in API version 43 and later.</p>

Usage

Use this object to obtain a manager's adjustment detail for a specified ForecastingItem. The ForecastingAdjustment object is visible to all users, but only forecast managers and users above them in the forecast hierarchy can read or write ForecastingAdjustment records.

Note: Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The ForecastingQuota, ForecastingAdjustment, ForecastingOwnerAdjustment, ForecastingItem, and ForecastingFact objects can all have records with different ForecastingTypeId values. Use the ForecastingType object to determine the ID for each forecast type and then filter ForecastingQuota, ForecastingAdjustment, ForecastingItem, or ForecastingFact records as necessary.

SEE ALSO:

[ForecastingItem](#)

[ForecastingQuota](#)

ForecastingDisplayedFamily

Represents the table in Forecasts Settings where an admin selects the product families that users can forecast on in Lightning Experience. This object is available in API version 40.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
<code>DisplayPosition</code>	<p>Type int</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The order in which product families are displayed on the forecasts page. Each value is unique to a product family.</p>
<code>ProductFamily</code>	<p>Type picklist</p> <p>Properties Filter, Group, Sort</p> <p>Description The product family available to forecast on. Each product family is unique.</p>

ForecastingFact

This is a read-only object linking a ForecastingItem with its opportunities, such as opportunities that share the same owner or forecast category and have a closing date within the period of the forecasting item. Available in API versions 26 and greater.

 **Note:** This information only applies to Collaborative Forecasts.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
ForecastCategoryName	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description A forecast category is the category within the sales cycle to which an opportunity is assigned based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted (not included in forecasts), and Closed. Salesforce admins can customize the forecast category names.</p>
ForecastedObjectId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Contains the Split ID of the forecasted OpportunitySplit object if the forecast data source is opportunity splits or the OpportunityLineItem ID of the forecasted opportunity if the data source is product families. If the data source is product families and the opportunity has no line item, this field is Null. If the forecast data source is opportunities, this field is Null. This field is available in API version 29 and later. Read only.</p>
ForecastingItemId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the ForecastingItem.</p>
ForecastingTypeId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the related ForecastingType.</p>

Field Name	Details
OpportunityId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The opportunity ID.</p>
OwnerId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the opportunity owner.</p>
PeriodId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Period ID for the forecast.</p>
Territory2Id	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the territory to forecast on. Available in API version 43 and later.</p>

Usage

Use this object to get information about opportunities linked to forecasting items.

Note: Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the `ForecastingType`

object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

SEE ALSO:

[ForecastingAdjustment](#)

[ForecastingItem](#)

[ForecastingQuota](#)

ForecastingFilter

Represents the custom filter for including or excluding recordtype data from opportunity forecasts. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The developer name of the forecasting filter.</p>
ForecastingTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the forecast type. Can be linked only to forecast types created in Summer '21 and later.</p>
ForecastingTypeSourceId	<p>Type reference</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the forecast type source. Can be linked only to forecast type sources created in Summer '21 or later and with a forecast source definition with source object of 'Opportunity.'</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Language of the forecasting filter.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The label for this object, which displays in Setup. The master label is in the default language locale for the organization. If there's no default language locale, the label is in en_US.</p>

ForecastingFilterCondition

Represents the custom filter condition logic for including or excluding recordtype data from opportunity forecasts. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `update()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
DeveloperName	<p>Type string</p> <p>Properties Create, Update</p> <p>Description The developer name of the forecasting filter condition.</p>
Language	<p>Type reference</p> <p>Properties Create, Nillable, Update</p> <p>Description Language of the forecasting filter condition.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Update</p> <p>Description The label for this object, which displays in Setup. The master label is in the default language locale for the organization. If there's no default language locale, the label is in en_US.</p>
ForecastingFilterId	<p>Type reference</p> <p>Properties Create</p> <p>Description The ID of the Forecasting Filter.</p>
FieldName	<p>Type string</p> <p>Properties Create</p> <p>Description Name of the opportunity field to be filtered.</p>

Field Name	Details
Operation	<p>Type string</p> <p>Properties Create</p> <p>Description The operation (equals or not-equals) of the filter condition.</p>
Value	<p>Type string</p> <p>Properties Create</p> <p>Description The value of the filter condition.</p>

ForecastingItem

This is a read-only object used for individual forecast amounts. Users see amounts based on their perspectives and forecast roles. The amounts users see include one of the following when forecasting in revenue: `AmountWithoutAdjustments`, `AmountWithoutManagerAdjustment`, `ForecastAmount`, `OwnerOnlyAmount`. The amounts users see include one of the following when forecasting in quantity: `QuantityWithoutAdjustments`, `QuantityWithoutManagerAdjustment`, `ForecastQuantity`, `OwnerOnlyQuantity`. Available in API versions 26 and greater.

Additionally, note that users:

- with the “View All Forecasts” permission have access to all `ForecastingItem` fields.
- without the “View All Forecasts” permission have access to all fields for their own subordinates and child territories.

Other users can see the `ForecastingItem` object, but not its records.

 **Note:** This information only applies to Collaborative Forecasts.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
AmountWithoutAdjustments	<p>Type double</p> <p>Properties Filter, Sort, Nillable</p> <p>Description The sum of a person's owned revenue opportunities and the person's subordinates' and child territories' opportunities, without adjustments. Subordinates include everyone reporting up to a person in the role-based forecast hierarchy. This amount is visible only on reports.</p>
AmountWithoutManagerAdjustment	<p>Type double</p> <p>Properties Filter, Sort, Nillable</p> <p>Description The forecast number as seen by the forecast owner. This is the sum of the owner's revenue opportunities and the owner's subordinates' and child territories' opportunities, including adjustments made by the forecast owner on the owner's or subordinates' and child territories' forecasts. It doesn't include adjustments made by forecast managers above the owner in the forecast hierarchy.</p>
AmountWithoutOwnerAdjustment	<p>Type double</p> <p>Properties Filter, Sort, Nillable</p> <p>Description The forecast amount as seen by the forecast owner without the owner's adjustment. This is the sum of the subordinate's and child territories' opportunities, including adjustments made by their manager or by the subordinate themselves, plus the rollup of the owner's own opportunities. <i>It doesn't include adjustments made by the forecast owner.</i></p>
ForecastAmount	<p>Type double</p> <p>Properties Filter, Sort, Nillable</p> <p>Description The revenue forecast from the forecast manager's perspective and the sum of the owner's and subordinates' and child territories' opportunities, including all forecast adjustments.</p>

Field Name	Details
ForecastCategoryName	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description A forecast category is the category within the sales cycle to which an opportunity is assigned based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted (not included in forecasts), and Closed. Salesforce admins can add a Most Likely category and can customize the forecast category names in single category rollups.</p>
ForecastQuantity	<p>Type double</p> <p>Properties Filter, Sort, Nillable</p> <p>Description The quantity forecast from the forecast manager's perspective and the sum of the owner's and subordinates' opportunities, including all forecast adjustments. This field is available in API version 28 and later.</p>
ForecastingItemCategory	<p>Type picklist</p> <p>Properties Filter, Group, Sort</p> <p>Description This field indicates which type of forecast rollup the forecasting item belongs to. Depending on whether your organization uses individual forecast category rollups or cumulative forecast rollups, you have these possible values for the <code>ForecastingItemCategory</code> field.</p> <p>Individual forecast category rollups:</p> <ul style="list-style-type: none"> • PipelineOnly - Rollup from Pipeline opportunities only. • BestCaseOnly - Rollup from Best Case opportunities only. Adjustable. • MostLikelyOnly - Rollup from Most Likely opportunities only. Adjustable. • CommitOnly - Rollup from Commit opportunities only. Adjustable. <p>Cumulative forecast rollups:</p> <ul style="list-style-type: none"> • OpenPipeline - Rollup from Pipeline + Best Case + Most Likely + Commit opportunities. • BestCaseForecast - Rollup from Best Case + Most Likely + Commit + Closed opportunities. Adjustable. • MostLikelyForecast - Rollup from Most Likely + Commit + Closed opportunities. Adjustable.

Field Name

Details

- CommitForecast - Rollup from Commit + Closed opportunities. Adjustable.

Either cumulative or individual forecast category rollups:

- ClosedOnly - Rollup from Closed opportunities only.

The `ForecastingItemCategory` field differs from the `ForecastCategoryName` field.

- The `ForecastCategoryName` field represents the forecast category of the *underlying opportunities* rolling up to forecast amounts. In organizations using cumulative forecast rollups, the `ForecastCategoryName` field can be null because the cumulative forecast amounts include opportunities from multiple forecast categories.
- The new `ForecastingItemCategory` field represents the *type of rollup* a forecast amount or adjustment is from. In organizations using individual forecast category columns, it contains the individual forecast rollup categories. In organizations using cumulative forecast rollups, it contains the cumulative rollup categories.

ForecastingTypeId

Type

reference

Properties

Filter, Group, Sort

Description

The ID of the related ForecastingType.

HasAdjustment

Type

boolean

Properties

Defaulted on create, Filter, Group, Sort

Description

A flag that indicates if the forecasting item includes a *manager* adjustment. This flag is true only when the item includes an adjustment and the user performing the query has read access to the adjustment.

HasOwnerAdjustment

Type

boolean

Properties

Defaulted on create, Filter, Group, Sort

Description

A flag that indicates if the forecasting item includes an *owner* adjustment. This flag is true only when the item includes an adjustment and the user performing the query has read access to the adjustment. Available in API versions 33 and greater.

Field Name	Details
IsAmount	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description True indicates that the adjustment is made in a revenue amount. If false, then <code>IsQuantity</code> must be true. This field is available in API version 28 and later.</p>
IsQuantity	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description True indicates that the adjustment is made in a quantity amount. If false, then <code>IsAmount</code> must be true. This field is available in API version 28 and later.</p>
IsUpToDate	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description A flag indicating whether or not a specific forecasting item reflects current information. For example, if users are making adjustments which are in process, the item won't be up-to-date.</p>
OwnerId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the forecast owner.</p>
OwnerOnlyAmount	<p>Type double</p> <p>Properties Filter, Sort, Nillable</p> <p>Description The sum of a person's revenue opportunities, without adjustments.</p>

Field Name	Details
OwnerOnlyQuantity	<p>Type double</p> <p>Properties Filter, Sort, Nillable</p> <p>Description The sum of a person's quantity opportunities, without adjustments. This field is available in API version 28 and later.</p>
ParentForecastingItemId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the ForecastingItem that the current item rolls up to.</p>
PeriodId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Period ID for the forecast.</p>
ProductFamily	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The product family of the forecast item. This field is available in API version 29 and later. Read only.</p>
Territory2Id	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the territory to forecast on. Available in API version 43 and later.</p>
QuantityWithoutAdjustments	<p>Type double</p>

Field Name	Details
	<p>Properties Filter, Sort, Nillable</p> <p>Description The sum of a person's owned quantity opportunities and also his or her subordinates' opportunities, without adjustments. Subordinates include everyone reporting up to a person in the forecast hierarchy. This field is available in API version 28 and later.</p>
QuantityWithoutManagerAdjustment	<p>Type double</p> <p>Properties Filter, Sort, Nillable</p> <p>Description The forecast number as seen by the forecast owner. This is the sum of the owner's quantity opportunities and subordinates' opportunities, including adjustments made on the subordinates' forecasts. It doesn't include adjustments made by forecast managers above the owner in the forecast hierarchy. This field is available in API version 28 and later.</p>
QuantityWithoutOwnerAdjustment	<p>Type double</p> <p>Properties Filter, Sort, Nillable</p> <p>Description The forecast quantity as seen by the forecast owner without the owner's adjustment. This is the sum of the subordinate's opportunities, including adjustments made by their manager or by the subordinate themselves, plus the rollup of the owner's own opportunities. <i>It doesn't include adjustments made by the forecast owner.</i> This field is available in API version 38.0 and later.</p>
SubordinateOverrides	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description The total number of adjustments made to a forecast down the hierarchical chain. For example, User A has a forecast without adjustments. If User A adjusts User B's forecast, User A's <code>SubordinateOverrides</code> value is 1. Then if User B adjusts User C's forecast, User A's <code>SubordinateOverrides</code> value is 2. If User A removes his adjustment from User B's forecast, User A's <code>SubordinateOverrides</code> value is 1. This field is available in API version 38.0 and later.</p>

Usage

Use this object to obtain individual forecast amounts, either with or without adjustments, based on a user's perspective and forecast role. The `ForecastingItem` object is visible to all users, but only forecast managers and users above them in the forecast hierarchy can read or write `ForecastingAdjustment` records.

-  **Note:** Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the `ForecastingType` object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

SEE ALSO:

[ForecastingAdjustment](#)

[ForecastingFact](#)

[ForecastingQuota](#)

ForecastingOwnerAdjustment

This object represents an individual forecast user's adjustment of their *own* forecast, including territory forecasts they own, via a `ForecastingItem`. Available in API versions 33 and greater. This object is separate from the `ForecastingAdjustment` object, which represents managers' adjustments of *subordinates'* and child territories' forecasts.

-  **Note:** This information only applies to Collaborative Forecasts.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
<code>CurrencyIsoCode</code>	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field Name**Details****Description**

The currency code of the adjustment. If omitted, the default is the importing user's personal currency.

ForecastCategoryName

Type

picklist

Properties

Create, Filter, Group, Nillable, Restricted picklist, Sort

Description

The category within the sales cycle that an opportunity is assigned to based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted, and Closed. You can add a Most Likely category and can customize forecast category names in single category rollups. The forecast categories display information for that specific category; for example, Best Case only reflects amounts in the Best Case category.

ForecastingItemCategory

Type

picklist

Properties

Create, Filter, Group, Sort

Description

This field indicates which type of forecast rollup the owner adjustment belongs to. Depending on whether your organization uses individual forecast category rollups or cumulative forecast rollups, you have these possible values for the `ForecastingItemCategory` field.

Individual forecast category rollups:

- PipelineOnly - Rollup from Pipeline opportunities only.
- BestCaseOnly - Rollup from Best Case opportunities only. Adjustable.
- MostLikelyOnly - Rollup from Most Likely opportunities only. Adjustable.
- CommitOnly - Rollup from Commit opportunities only. Adjustable.

Cumulative forecast rollups:

- OpenPipeline - Rollup from Pipeline + Best Case + Most Likely + Commit opportunities.
- BestCaseForecast - Rollup from Best Case + Most Likely + Commit + Closed opportunities. Adjustable.
- MostLikelyForecast - Rollup from Most Likely + Commit + Closed opportunities. Adjustable.
- CommitForecast - Rollup from Commit + Closed opportunities. Adjustable.

Either cumulative or individual forecast category rollups:

- ClosedOnly - Rollup from Closed opportunities only.

Field Name

Details

The `ForecastingItemCategory` field differs from the `ForecastCategoryName` field.

- The `ForecastCategoryName` field represents the forecast category of the *underlying opportunities* rolling up to forecast amounts. In organizations using cumulative forecast rollups, the `ForecastCategoryName` field can be null because the cumulative forecast amounts include opportunities from multiple forecast categories.
- The new `ForecastingItemCategory` field represents the *type of rollup* a forecast amount or adjustment is from. In organizations using individual forecast category columns, it contains the individual forecast rollup categories. In organizations using cumulative forecast rollups, it contains the cumulative rollup categories.

When inserting owner adjustments, the values you insert for `ForecastCategoryName` and `ForecastingItemCategory` must be compatible with each other. In organizations using cumulative forecast rollups, the `ForecastCategoryName` is nillable. These are the valid pairs.

Individual forecast category rollups:

- `ForecastCategoryName: BestCase, ForecastingItemCategory: BestCaseOnly`
- `ForecastCategoryName: Commit, ForecastingItemCategory: CommitOnly`

Cumulative forecast category rollups:

- `ForecastCategoryName:null, ForecastingItemCategory: BestCaseForecast`
- `ForecastCategoryName:null, ForecastingItemCategory: CommitForecast`

ForecastingItemId

Type

reference

Properties

Filter, Group, Sort

Description

The ID of the related ForecastingItem.

ForecastingTypeId

Type

reference

Properties

Create, Filter, Group, Nillable, Sort

Description

The ID of the related ForecastingType.

Field Name	Details
ForecastOwnerId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the forecast owner.</p>
IsAmount	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description True indicates that the adjustment is made in a revenue amount. If false, then <code>IsQuantity</code> must be true.</p>
IsQuantity	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description True indicates that the adjustment is made in a quantity amount. If false, then <code>IsAmount</code> must be true.</p>
OwnerAdjustedAmount	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The revenue amount of an individual forecast item, after an adjustment.</p>
OwnerAdjustedQuantity	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The quantity amount of an individual forecast item, after an adjustment.</p>
OwnerAdjustmentNote	<p>Type textarea</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A text note providing information about the adjustment. The maximum length is 140 characters. This field does not appear in reports.</p>
PeriodId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Period ID for the adjustment. Read only.</p>
ProductFamily	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The Product Family for the adjustment. Read only.</p>
StartDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The start of the adjustment, expressed as month and year. The date can include any day in a given month. Stored using the first date of the month.</p>
Territory2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the territory to forecast on. Available in API version 43 and later.</p>

Usage

Use this object to obtain a user's adjustment detail for a specified ForecastingItem in their own forecast.

 **Note:** Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the `ForecastingType` object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

ForecastingQuota

This object represents an individual user's or territory's quota for a specified time period. The "Manage Quotas" user permission is required for creating, updating, or deleting quotas. (Users can only edit their subordinates' or child territories' quotas, not their own.) The "View All Forecasts" permission is required to View any user's forecast, regardless of the forecast hierarchy. Available in API versions 25 and greater. Forecast managers can view the forecasts of subordinates and territories below them in the forecast hierarchy.

 **Note:** This information only applies to Collaborative Forecasts.

Supported Calls

`create()`, `delete()`, `describeSOjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
<code>CurrencyIsoCode</code>	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The currency code of the quota. If omitted, the default is the importing user's personal currency.</p>
<code>ForecastingTypeId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the related <code>ForecastingType</code>.</p>

Field Name	Details
IsAmount	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description True indicates that the adjustment is made in a revenue amount. If false, then <code>IsQuantity</code> must be true. This field is available in API version 28 and later.</p>
IsQuantity	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description True indicates that the adjustment is made in a quantity amount. If false, then <code>IsAmount</code> must be true. This field is available in API version 28 and later.</p>
PeriodId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Period ID for the quota. Read only.</p>
ProductFamily	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The product family for the quota. This field is available in API version 29 and later.</p>
Territory2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the territory to forecast on. Available in API version 43 and later.</p>
QuotaAmount	<p>Type currency</p>

Field Name	Details
	<p>Properties Create, Filter, Sort, Update</p> <p>Description The revenue quota amount for an individual user or territory and for a specific period.</p>
QuotaOwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID that identifies the quota owner.</p>
QuotaQuantity	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The quantity quota amount for an individual user and for a specific period. This field is available in API version 28 and later.</p>
StartDate	<p>Type date</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The start of the quota, expressed as month and year. The date can include any day in a given month. Stored using the first date of the month.</p>

Usage

Use this object to get an individual user's or territory's quota for a specified time period.

Note: Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the `ForecastingType`

object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

Usage

Use this object to let any stakeholder at your company view and adjust forecast managers' forecasts.

ForecastingSourceDefinition

Represents the object, measure, date type, and hierarchy that a forecast uses to project sales. This object is available in API version 52.0 and later.

 **Note:** The information in this topic applies only to forecast types created in Summer '21 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
CategoryField	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Name of the forecast category that is associated with the forecast type. Possible values are:</p> <ul style="list-style-type: none"> • <code>Opportunity.ForecastCategoryName</code>
DateField	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Field that is used for the forecast type's date type. For example, the CloseDate field on Opportunity is used for opportunity close date-based forecast types. Possible values are:</p> <ul style="list-style-type: none"> • <code>Opportunity.CloseDate</code> • <code>OpportunityLineItem.ServiceDate</code> • <code>OpportunityLineItemSchedule.ScheduleDate</code>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The developer name of the forecasting source definition.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>

Example: Use Megawatts__c to forecast energy consumption.</p>
SourceObject	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p>

Field	Details
	<p>Description</p> <p>Object associated with this forecasting source definition.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Opportunity • OpportunityLineItem • OpportunityLineItemSchedule • OpportunitySplit • Product2
Territory2Field	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>For a territory-based forecast type, indicates the field that is used for territory information.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Opportunity.Territory2Id <p>For user role-based forecast types, this value is null.</p>
UserField	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>Specifies who owns the forecast.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Opportunity.OwnerId • OpportunitySplit.SplitOwnerId

Usage

Use ForecastingSourceDefinition to define a forecast type's structure. A forecasting source definition is joined via ForecastingTypeSource to ForecastingType.

In this example, a user role-based forecast type called Custom Amount Forecast is based on the Amount and Close Date fields on opportunities.

```
ForecastingType type = new sforce.SObject("ForecastingType");
type.DeveloperName = "Custom_Amount_Forecast";
type.MasterLabel = "Custom Amount Forecast";
type.IsAmount = true;
```

```

type.IsQuantity = false;
type.RoleType = "R";
type.DateType = "OpportunityCloseDate";
String typeId = insert(type);

ForecastingSourceDefinition sourceDefinition = new
sforce.SObject("ForecastingSourceDefinition")
sourceDefinition.DeveloperName = "Custom Amount Source";
sourceDefinition.MasterLabel = "Custom_Amount_Source";
sourceDefinition.SourceObject = "Opportunity";
sourceDefinition.MeasureField = "Opportunity.Amount";
sourceDefinition.DateField = "Opportunity.CloseDate";
sourceDefinition.UserField = "Opportunity.OwnerId";
sourceDefinition.CategoryField = "Opportunity.ForecastCategoryName";
String sourceDefinitionId = insert(sourceDefinition);

ForecastingTypeSource typeSource = new sforce.SObject("ForecastingTypeSource");
typeSource.MasterLabel = "Custom Amount Type Source";
typeSource.DeveloperName = "Custom_Amount_Type_Source";
typeSource.ForecastingTypeId = typeId;
typeSource.ForecastingSourceDefinitionId = sourceDefinitionId;
typeSource.SourceGroup = 1;
insert(typeSource);

```

ForecastingType

This object is used to identify the forecast type associated with `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingQuota`, `ForecastingFact`, and `ForecastingItem` objects. Available in API versions 30.0 and greater.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
<code>CanDisplayQuotas</code>	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p>

Field Name	Details
	<p>Description</p> <p>Whether a forecast type can show quota information. Available in API version 38.0 and later.</p>
DateType	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description</p> <p>The date type that forecast amounts are based on.</p> <p>These values are available for forecast types that were available before Summer '21.</p> <ul style="list-style-type: none"> • <code>OpportunityCloseDate</code>: Base forecasts on opportunity close dates. • <code>ProductDate</code>: Base forecasts on opportunity product line item dates, if available. • <code>ScheduleDate</code>: Base forecasts on opportunity product schedule dates, if available. <p>These values are available in API version 52.0 and later in Performance Edition and in Unlimited Edition with the Sales Cloud.</p> <ul style="list-style-type: none"> • <code>OLIMeasureCloseDateOnly</code>: Base forecasts on opportunity close dates. • <code>ProductDateOnly</code>: Base forecasts on opportunity product line item dates, if available. • <code>ScheduleDateOnly</code>: Base forecasts on opportunity product schedule dates, if available.
DeveloperName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>The name of the forecasting type.</p> <p>The <code>DeveloperName</code> is called <code>name</code> in the Metadata API and Forecasting Type in custom reports.</p>

Field Name	Details
LastActivatedDate	<p>Type datetime</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description The date when a forecast type was activated. Read only. Available in API version 53.0 and later.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Controlling label for this Forecasting Type value. This display value is the internal label that doesn't get translated.</p>
OpportunitySplitTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description Indicates whether the forecasting type has a split type, and if so, the name the split type. Available in API version 41.0 and later.</p>
RoleType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description Indicates whether the role type has a forecasting type, and if so, which forecasting type. Possible values are \mathbb{R} (user role-based forecasting type), \mathbb{T} (Territory1-based forecasting type; not used), and \mathbb{Y} (Territory2-based forecasting type). Available in API version 41.0 and later.</p>
Territory2ModelId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description Indicates whether the forecasting type has a Territory2 model, and if so, the name of the Territory2 model. Available in API version 41.0 and later.</p>

Usage

Use this object to identify the forecast type of `ForecastingAdjustment`, `ForecastingQuota`, `ForecastingFact`, and `ForecastingItem` objects.

ForecastingTypeSource

Maps a forecasting source definition to a forecast type. This object is available in API version 52.0 and later.

 **Note:** The information in this topic applies only to forecast types created in Summer '21 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The developer name of the forecasting type source.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
ForecastingSourceDefinitionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the forecasting source definition.</p>
ForecastingTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the forecast type. Can be linked only to forecast types created in Summer '21 and later.</p>
Language	<p>Type picklist</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Language of the forecasting type source.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. Controlling label for this forecasting type source.</p>
ParentSourceDefinitionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description For forecast types not based on the Opportunity object and not based on a custom measure, this value represents the parent ForecastingSourceDefinition of the linked ForecastingSourceDefinition.</p> <ul style="list-style-type: none"> • Opportunity Product is the parent of Opportunity. • Opportunity Split is the parent of Opportunity. • Line Item Schedule is the parent of Opportunity Product.
RelationField	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Represents the field linking the source objects of the parent ForecastingSourceDefinition to the child ForecastingSourceDefinition.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • OpportunityLineItem.OpportunityId • OpportunityLineItem.Product2Id • OpportunityLineItemSchedule.OpportunityLineItemId • OpportunitySplit.OpportunityId
SourceGroup	<p>Type int</p> <p>Properties Create, Filter, Group, Sort</p>

Field	Details
	<p>Description</p> <p>Required. Represents a grouping of forecasting source definitions.</p>

Usage

Use this object to define a forecast type's structure. This junction object links `ForecastingSourceDefinition` to `ForecastingType`.

For an example, see [ForecastingSourceDefinition](#).

ForecastingUserPreference

Represents the forecasting selections that a user has made, such as display options, date range, forecasting type, and currency.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
<code>ExternalId</code>	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>A unique system-generated numerical identifier for the user.</p>
<code>ForecastingDisplayedTypeId</code>	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Group, Sort, Update</p> <p>Description</p> <p>An identifier for the forecasting type that's displayed.</p>

Field Name	Details
ForecastingPeriodDuration	<p>Type int</p> <p>Properties Create, Group, Nillable, Sort, Update</p> <p>Description How long the forecasting period lasts.</p>
ForecastingPeriodType	<p>Type picklist</p> <p>Properties Create, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The forecasting period's type. Valid values include: Month, Quarter, Week, or Year</p>
ForecastingStartPeriod	<p>Type int</p> <p>Properties Create, Group, Nillable, Sort, Update</p> <p>Description The date when the forecasting period begins.</p>
ForecastingViewCurrency	<p>Type string</p> <p>Properties Create, Group, Nillable, Sort, Update</p> <p>Description The currency shown on the forecasts page.</p>
IsForecastingHideZeroRows	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Group, Sort, Update</p> <p>Description Whether the forecasts page shows zero-value rows.</p>
IsForecastingShowQuantity	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Group, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>Whether the forecasts page shows forecast quantity.</p>
IsHideForecastingGuidedTour	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Group, Sort, Update</p> <p>Description</p> <p>Whether the forecasts page shows the guided tour.</p>
IsHideForecastingQuotaColumn	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Group, Sort, Update</p> <p>Description</p> <p>Whether the forecasts page shows a quota column.</p>
IsShowForecastingChangeSignals	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Group, Sort, Update</p> <p>Description</p> <p>Whether the forecasts page shows changes in the last 7 days.</p>
IsShowForecastingQuotaAttainment	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Group, Sort, Update</p> <p>Description</p> <p>Whether the forecasts page shows quota attainment information.</p>

FormulaFunction

Represents a function used when building a formula, including examples and uses. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
CategoryId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the FormulaFunctionCategory. This is a relationship field.</p> <p>Relationship Name Category</p> <p>Relationship Type Lookup</p> <p>Refers To FormulaFunctionCategory</p>
Description	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Description of the formula function.</p>
DurableId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Unique identifier for the field. Always retrieve this value before using it, as the value isn't guaranteed to stay the same from one release to the next. To simplify queries, use this field.</p>
ExampleString	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Describes the function and what arguments you can use with it.</p>
IsAllowedInEntityContext	<p>Type boolean</p>

Field	Details
	<p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether you can use the formula function on an Entity (<code>true</code>) or not (<code>false</code>). For example, you cannot use the PRIORVALUE function in a custom Account formula field. The default value is <code>false</code>. This field is removed in API version 48.0 and later. Use the FormulaFunctionAllowedType on page 1877 object instead.</p>
IsAllowedInFlowContext	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the formula function is allowed in a Flow (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. This field is removed in API version 48.0 and later. Use the FormulaFunctionAllowedType on page 1877 object instead.</p>
IsAllowedInVisualforceContext	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the formula function is allowed in Visualforce (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. This field is removed in API version 48.0 and later. Use the FormulaFunctionAllowedType on page 1877 object instead.</p>
Label	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The formula function label that appears in the user interface.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the formula function.</p>

Usage

Query `FormulaFunction` to search for available formula functions, such as `AND ()`, `ISBLANK ()`, `MAX ()`, `MIN ()`, and others.

FormulaFunctionAllowedType

Represents the functions that are supported in the given formula context. This object is available in API version 48.0 and later.

Supported Calls

`describeSObjects ()`, `query ()`

Fields

Field	Details
DurableId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Unique identifier for the field. Always retrieve this value before using it, as the value isn't guaranteed to stay the same from one release to the next. To simplify queries, use this field.</p>
FunctionId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Unique identifier for the supported function. This is a relationship field.</p> <p>Relationship Name Function</p> <p>Relationship Type Lookup</p> <p>Refers To FormulaFunction</p>
Type	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p>

Field	Details
	<p>Description</p> <p>The name of the formula type in which the function is supported.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • FLOW • VALIDATION • VISUALFORCE

FormulaFunctionCategory

Represents the category to which a formula belongs when building a formula. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
DurableId	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Unique identifier for the field. Always retrieve this value before using it, as the value isn't guaranteed to stay the same from one release to the next. To simplify queries, use this field.</p>
Label	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Label of the FormulaFunctionCategory that appears in the user interface.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Name of the FormulaFunctionCategory.</p>

Usage

Query `FormulaFunctionCategory` to search for categories of available formula functions, such as `Math`, `Logical`, `Date and Time`, and others.

FulfillmentOrder

Represents a group of products and delivery charges on a single order that share the same fulfillment location, delivery method, and recipient. The `FulfillmentOrderLineItems` belonging to a `FulfillmentOrder` are associated with `OrderItemSummary` objects belonging to a single `OrderSummary`. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs.

Fields

Field	Details
<code>AccountId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the Account or Person Account associated with the <code>FulfillmentOrder</code>. It represents the shopper in the storefront.</p>
<code>BillToContactId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the Contact associated with the <code>FulfillmentOrder</code>. It represents the shopper in the storefront when not using person accounts. This field is available in API version 49.0 and later.</p>
<code>CurrencyIsoCode</code>	<p>Type picklist</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description ISO code for the currency of the OrderSummary associated with the FulfillmentOrder. The default value is USD.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar <p>This field is available in API version 49.0 and later.</p>
DeliveryMethodId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description ID of the DeliveryMethod used for this FulfillmentOrder.</p>
FulfilledFromLocationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the Location handling this FulfillmentOrder.</p>
FulfilledToAddress	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description Address of the recipient.</p>
FulfilledToCity	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Recipient address city.</p>

Field	Details
FulfilledToCountry	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Recipient address country.</p>
FulfilledToEmailAddress	<p>Type email</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Email address of the recipient.</p>
FulfilledTo GeocodeAccuracy	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Accuracy of the geocode for the recipient address. Possible values are:</p> <ul style="list-style-type: none"> • Address • Block • City • County • ExtendedZip • NearAddress • Neighborhood • State • Street • Unknown • Zip
FulfilledToLatitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with FulfilledToLongitude to specify the precise geolocation of the recipient address. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.</p>

Field	Details
FulfilledToLongitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with FulfilledToLatitude to specify the precise geolocation of the recipient address. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.</p>
FulfilledToName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Name on the recipient address.</p>
FulfilledToPhone	<p>Type phone</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Phone number of the recipient.</p>
FulfilledToPostalCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Recipient address postal code.</p>
FulfilledToState	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Recipient address state.</p>
FulfilledToStreet	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description Recipient address street.</p>
FulfillmentOrderNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description ID of the FulfillmentOrder.</p>
GrandTotalAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total, including adjustments and tax, of the products and delivery charges on the FulfillmentOrder. This amount includes all FulfillmentOrderLineItems associated with the FulfillmentOrder. This amount is equal to TotalAmount + TotalTaxAmount.</p>
InvoiceId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the Invoice associated with the FulfillmentOrder.</p>
IsReship	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the FulfillmentOrder is for a reshipment. The default value is false. This field is available in API version 53.0 and later.</p>
IsSuspended	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the FulfillmentOrder is suspended. The default value is false.</p>

Field	Details
ItemCount	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Sum of the quantities of the FulfillmentOrderLineItems included in the FulfillmentOrder.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.</p>
OrderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the original Order that generated the FulfillmentOrder.</p>
OrderSummaryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the OrderSummary associated with the FulfillmentOrder.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description</p> <p>ID of the User who currently owns this FulfillmentOrder. Default value is the User logged in to the API to perform the create.</p>
Status	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Status of the FulfillmentOrder. Each status corresponds to one status category, shown here in parentheses. You can customize the status picklist to represent your business processes, but the status category picklist is fixed because processing is based on those values. If you customize the status picklist, include at least one status value for each status category.</p> <p>Default values are:</p> <ul style="list-style-type: none"> • Allocated (Activated) • Assigned (Fulfilling) • Cancelled (Cancelled) • Draft (Draft) • Fulfilled (Closed) • Pickpack (Fulfilling)
StatusCategory	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Restricted picklist, Sort</p> <p>Description</p> <p>Status category of the FulfillmentOrder. Processing of the FulfillmentOrder depends on this value. Each status category corresponds to one or more statuses.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • ACTIVATED—Activated • CANCELLED—Cancelled • CLOSED—Closed • DRAFT—Draft • FULFILLING—Fulfilling
TaxLocaleType	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p>

Field	Details
	<p>Description</p> <p>The system used to handle tax on the original Order associated with the FulfillmentOrder. Gross usually applies to taxes like value-added tax (VAT), and Net usually applies to taxes like sales tax.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • <code>Gross</code> (displays most prices and taxes as combined values) • <code>Net</code> (displays most prices and taxes as separate values) <p>This field is available in API version 49.0 and later.</p>
TotalAdjustmentAmount	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Total amount of the price adjustments applied to the products on the FulfillmentOrder. This value only includes adjustments to FulfillmentOrderLineItems of type code Product.</p>
TotalAdjustmentAmtWithTax	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Total amount of the price adjustments applied to the products on the FulfillmentOrder, inclusive of tax. This value only includes adjustments to FulfillmentOrderLineItems of type code Product. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount.</p> <p>This field is available in API version 49.0 and later.</p>
TotalAdjustmentTaxAmount	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Tax on the TotalAdjustmentAmount.</p>
TotalAmount	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p>

Field	Details
	<p>Description Adjusted total, not including tax, of the FulfillmentOrderLineItems, including products and delivery charges, on the FulfillmentOrder.</p>
TotalDeliveryAdjustAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total amount of the price adjustments applied to the delivery charges on the FulfillmentOrder. This value only includes adjustments to FulfillmentOrderLineItems of type code Charge.</p>
TotalDeliveryAdjustAmtWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total amount of the price adjustments applied to the delivery charges on the FulfillmentOrder, inclusive of tax. This value only includes adjustments to FulfillmentOrderLineItems of type code Charge. This amount is equal to TotalDeliveryAdjustAmount + TotalDeliveryAdjustTaxAmount. This field is available in API version 49.0 and later.</p>
TotalDeliveryAdjustTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Tax on the TotalDeliveryAdjustAmount.</p>
TotalDeliveryAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total of the delivery charges on the FulfillmentOrder. This value only includes FulfillmentOrderLineItems of type code Charge.</p>
TotalDeliveryAmtWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>Total amount of the delivery charges on the FulfillmentOrder, inclusive of tax. This value only includes FulfillmentOrderLineItems of type code Charge. This amount is equal to TotalDeliveryAmount + TotalDeliveryTaxAmount.</p> <p>This field is available in API version 49.0 and later.</p>
TotalDeliveryTaxAmount	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Tax on the TotalDeliveryAmount.</p>
TotalProductAmount	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Total price of the products on the FulfillmentOrder. This value only includes FulfillmentOrderLineItems of type code Product.</p>
TotalProductAmtWithTax	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Total price of the products on the FulfillmentOrder, inclusive of tax. This value only includes FulfillmentOrderLineItems of type code Product. This amount is equal to TotalProductAmount + TotalProductTaxAmount.</p> <p>This field is available in API version 49.0 and later.</p>
TotalProductTaxAmount	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Tax on the TotalProductAmount.</p>
TotalTaxAmount	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p>

Field	Details
	<p>Description Tax on the TotalAmount.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Type of the FulfillmentOrder. Each type corresponds to one type category, shown here in parentheses. You can customize the type picklist to represent your business processes, but the type category picklist is fixed because processing is based on those values. If you customize the type picklist, include at least one type value for each type category.</p> <p>Default values are:</p> <ul style="list-style-type: none"> • Download (Digital) • Email (Digital) • In Store Pickup (Physical) • Retail Store (Physical) • Supplier (Drop Ship) • Warehouse (Physical)
TypeCategory	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Type category of the FulfillmentOrder. Processing of the FulfillmentOrder depends on this value. Each type category corresponds to one or more types.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • DIGITAL—Digital • DROPSHIP—Drop Ship • PHYSICAL—Physical

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[FulfillmentOrderFeed](#)

Feed tracking is available for the object.

[FulfillmentOrderOwnerSharingRule](#)

Sharing rules are available for the object.

FulfillmentOrderShare

Sharing is available for the object.

SEE ALSO:

[FulfillmentOrderLineItem](#)

[Order](#)

[OrderSummary](#)

FulfillmentOrderItemAdjustment

Represents a price adjustment on a FulfillmentOrderLineItem. Corresponds to an OrderItemAdjustmentLineSummary associated with the corresponding OrderItemSummary. This object is available in API version 48.0 and later.

This object is used for calculations and doesn't have a default record page.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs.

Fields

Field	Details
Amount	<p>Type currency</p> <p>Properties Create, Filter, Sort</p> <p>Description Amount, not including tax, of the adjustment.</p>
CampaignName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Campaign associated with the adjustment.</p>
CouponName	<p>Type string</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Coupon associated with the adjustment.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description ISO code for the currency of the FulfillmentOrderLineItem to which the adjustment applies. The default value is USD. Possible values are:</p> <ul style="list-style-type: none"> • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar <p>This field is available in API version 49.0 and later.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Text description of the adjustment.</p>
FulfillmentOrderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the FulfillmentOrder associated with the FulfillmentOrderLineItem to which the adjustment applies.</p>
FulfillmentOrderItemAdjustmentNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description ID of the FulfillmentOrderLineItemAdjustment.</p>

Field	Details
FulfillmentOrderLineItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the FulfillmentOrderLineItem to which this adjustment applies.</p>
OrderItemAdjustmentLineSummaryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the OrderItemAdjustmentLineSummary associated with the adjustment.</p>
PromotionName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Promotion associated with the adjustment.</p>
TotalAmtWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total amount of the adjustment, inclusive of tax. This amount is equal to Amount + TotalTaxAmount. This field is available in API version 49.0 and later.</p>
TotalTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	Description Tax on the Amount.

FulfillmentOrderItemTax

Represents the tax on a FulfillmentOrderLineItem or FulfillmentOrderItemAdjustment. Corresponds to an OrderItemTaxLineItemSummary. This object is available in API version 48.0 and later.

This object is used for calculations and doesn't have a default record page.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs.

Fields

Field	Details
Amount	Type currency Properties Create, Filter, Sort Description Amount of tax represented by the FulfillmentOrderItemTax.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort

Field	Details
	<p>Description</p> <p>ISO code for the currency of the FulfillmentOrderLineItem to which the tax applies. The default value is USD.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar <p>This field is available in API version 49.0 and later.</p>
Description	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Create, Nillable, Update</p> <p>Description</p> <p>Description of the FulfillmentOrderItemTax.</p>
FulfillmentOrderId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>ID of the associated FulfillmentOrder.</p>
FulfillmentOrderItemAdjustId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>If this object represents tax on an adjustment, this value is the ID of the FulfillmentOrderItemAdjustment to which the tax applies. If this value is null, the adjustment applies to a FulfillmentOrderLineItem.</p>
FulfillmentOrderItemTaxNumber	<p>Type</p> <p>string</p> <p>Properties</p> <p>Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description</p> <p>ID of the FulfillmentOrderItemTax.</p>

Field	Details
FulfillmentOrderLineItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description If this object represents tax on a FulfillmentOrderLineItem, this value is the ID of that FulfillmentOrderLineItem. If this object represents tax on an adjustment, this value is the ID of the FulfillmentOrderLineItem to which the adjustment applies.</p>
OrderItemTaxLineItemSummaryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the OrderItemTaxLineItemSummary associated with the OrderItemSummary that corresponds to the FulfillmentOrderLineItem to which the tax applies.</p>
Rate	<p>Type percent</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Tax rate used to calculate the Amount.</p>
TaxEffectiveDate	<p>Type date</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Date on which the Amount was calculated. Important due to tax rate changes over time.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Indicates whether the Amount is actual or estimated. Possible values are:</p> <ul style="list-style-type: none"> • Actual

Field	Details
	<ul style="list-style-type: none"> Estimated

FulfillmentOrderLineItem

Represents a product or delivery charge belonging to a FulfillmentOrder. Corresponds to an OrderItemSummary. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs.

Fields

Field	Details
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description ISO code for the currency of the FulfillmentOrder associated with the FulfillmentOrderLineItem. The default value is USD. Possible values are:</p> <ul style="list-style-type: none"> DKK—Danish Krone EUR—Euro GBP—British Pound USD—U.S. Dollar <p>This field is available in API version 49.0 and later.</p>

Field	Details
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Description of the FulfillmentOrderLineItem.</p>
EndDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description End date of the FulfillmentOrderLineItem.</p>
FulfillmentOrderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the FulfillmentOrder associated with the FulfillmentOrderLineItem.</p>
FulfillmentOrderLineItemNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description ID of the FulfillmentOrderLineItem.</p>
GrossUnitPrice	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description Unit price, including tax, of the FulfillmentOrderLineItem. This value is equal to TotalPrice + TotalTaxAmount. This field is available in API version 49.0 and later.</p>
IsReship	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p>

Field	Details
	<p>Description</p> <p>Indicates whether the FulfillmentOrderLineItem belongs to a reshipment. The default value is false.</p> <p>This field is available in API version 53.0 and later.</p>
OrderItemId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>ID of the original OrderItem for the OrderItemSummary associated with the FulfillmentOrderLineItem.</p>
OrderItemSummaryId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>ID of the OrderItemSummary associated with the FulfillmentOrderLineItem.</p>
OriginalQuantity	<p>Type</p> <p>double</p> <p>Properties</p> <p>Create, Filter, Sort</p> <p>Description</p> <p>Original quantity of the FulfillmentOrderLineItem.</p>
Product2Id	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>ID of the product represented by the FulfillmentOrderLineItem.</p>
Quantity	<p>Type</p> <p>double</p> <p>Properties</p> <p>Create, Filter, Sort, Update</p> <p>Description</p> <p>Current quantity of the FulfillmentOrderLineItem. Equal to the original quantity minus any canceled quantity.</p>

Field	Details
QuantityUnitOfMeasure	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description Unit of measure of the quantity, for example: unit, gallon, ton, or case.</p>
ReshipReason	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description If the FulfillmentOrderLineItem belongs to a reshipment, the reason for the reshipment. Default values are:</p> <ul style="list-style-type: none"> • Damaged • Lost • Unknown • Wrong Item <p>This field is available in API version 53.0 and later.</p>
ServiceDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description Service or start date of the FulfillmentOrderLineItem.</p>
TotalAdjustmentAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total of any price adjustments applied to the FulfillmentOrderLineItem.</p>
TotalAdjustmentAmountWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total amount of the price adjustments applied to the FulfillmentOrderLineItem, inclusive of tax. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount.</p>

Field	Details
	This field is available in API version 49.0 and later.
TotalAdjustment TaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Tax on the TotalAdjustmentAmount.</p>
TotalAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total, including adjustments and tax, of the FulfillmentOrderLineItem.</p>
TotalLineAmount	<p>Type currency</p> <p>Properties Create, Defaulted on create, Filter, Nillable, Sort</p> <p>Description Total, not including adjustments or tax, of the FulfillmentOrderLineItem.</p>
TotalLineAmountWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total price of the FulfillmentOrderLineItem, inclusive of tax. This amount is equal to TotalLineAmount + TotalLineTaxAmount. This field is available in API version 49.0 and later.</p>
TotalLineTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Tax on the TotalLineAmount.</p>
TotalPrice	<p>Type currency</p>

Field	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description Total, including adjustments but not tax, of the FulfillmentOrderLineItem. Equal to UnitPrice times Quantity.</p>
TotalTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Tax on the TotalPrice.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description Type of the FulfillmentOrderLineItem. Matches the type of the associated OrderItemSummary. Delivery Charge indicates that the FulfillmentOrderLineItem represents a delivery charge. Order Product indicates that it represents any other type of product, service, or charge. Each type corresponds to one type code, shown here in parentheses. Possible values are:</p> <ul style="list-style-type: none"> • Delivery Charge • Order Product
TypeCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description Type code of the FulfillmentOrderLineItem. Matches the type code of the associated OrderItemSummary. Processing depends on this value. Charge indicates that the FulfillmentOrderLineItem represents a delivery charge. Product indicates that it represents any other type of product, service, or charge. Each type category corresponds to one or more types. Possible values are:</p> <ul style="list-style-type: none"> • Charge • Product
UnitPrice	<p>Type currency</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Nillable, Sort</p> <p>Description Unit price of the FulfillmentOrderLineItem.</p>

FunctionConnection

Represents a connection between an org and Salesforce Functions. This object is available in API version 52.0 and later.

In API version 53.0, the name of this object was changed from SffunctionsConnection to FunctionConnection.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Error	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The error string, if any, for the connection between the org and Salesforce Functions.</p>
FunctionsAccountLoginOrg	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The Salesforce Functions account login org.</p>

Field	Details
FunctionsAccountName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The Salesforce Functions account name.</p>
FunctionsAccountUuid	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The unique Salesforce Functions account UUID. This is a generated ID that is not in Salesforce object ID format.</p>
Sequence	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, Sort</p> <p>Description Sequence number for the record.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The status of the connection between the org and Salesforce Functions. Possible values are:</p> <ul style="list-style-type: none">• Attempted• None• TrustedBiDirection• TrustedUniDirection <p>The default value is 'None'. <code>TrustedBiDirection</code> indicates the connection is fully established.</p>

Usage

FunctionConnection is not intended for direct use and should be treated as a read-only object that represents the current connection information between your org and Salesforce Functions. To create and manage connections between your org and Salesforce Functions use the steps and commands described in the [Salesforce Functions developer documentation](#).

FunctionConnection is not supported in Trialforce templates or org snapshots.

FunctionInvocationRequest

Represents invocation information for a Salesforce Function. This object is available in API version 51.0 and later.

When a Salesforce Function is invoked using the Apex `functions.Function` invoke methods, a FunctionInvocationRequest record is created that contains information on the status and results of the invocation.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `undelete()`, `update()`

Fields

Field	Details
CallbackStatus	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The status of the callback for asynchronous invocations. This field is new in API version 52.0. Possible values are:</p> <ul style="list-style-type: none"> • <code>Completed</code> - Not used for the Salesforce Functions beta. • <code>Enqueued</code> - The Function has completed (either successfully or unsuccessfully), and the callback has been enqueued for asynchronous execution in the Salesforce org. • <code>Failed</code> - Not used for the Salesforce Functions beta. • <code>PendingResponse</code> - The Function has not yet completed, so the callback has not been called yet. <p>The default value is 'PendingResponse'.</p>
ExecutionTime	<p>Type long</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description The execution time of the Function in milliseconds.</p>

Field	Details
ExtendedResponse	<p>Type textarea</p> <p>Properties Nillable, Update</p> <p>Description JSON object with additional information about the result of the Function execution.</p>
FunctionName	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description Name of the Function that was invoked. This name is case-sensitive and uses the format "project name-function name"</p>
OwnerId	<p>Type reference</p> <p>Properties Filter, Group, Sort, Update</p> <p>Description The owner of the FunctionInvocationRequest. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ResponseBody	<p>Type base64</p> <p>Properties Nillable, Update</p> <p>Description Response body of the invoked Function.</p>
ResponseContentType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field	Details
	<p>Description Content type of the response body of the invoked Function. For example, the content type could be <code>application/json</code>, <code>text/csv</code>, or various other values depending on what the Function returned.</p>
ResponseLength	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Length of the response body.</p>
ResponseName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description Name of response, not currently used.</p>
ResponseUncompressedLength	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description Uncompressed length of the Function response, if the response content was compressed.</p>
StackTrace	<p>Type textarea</p> <p>Properties Nillable, Update</p> <p>Description If there was an error invoking the function, this field contains the Function stack trace.</p>
Status	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Status of the invoked Function. Functions that are invoked asynchronously can be in a queued <code>InProgress</code> state before they are invoked. Possible values are:</p>

Field	Details
	<ul style="list-style-type: none"> <code>Dispatched</code> - Not used for the Salesforce Functions beta. <code>Error</code> - The Function failed to execute due to either an error starting the Function, or an error while the Function was running. <code>FunctionInProgress</code> - The Function invocation has been sent to the Salesforce Functions compute environment, and is running. <code>InProgress</code> - The Function invocation request has been enqueued. <code>New</code> - The Function invocation request has been created, but not enqueued yet. <code>Success</code> - The Function has completed execution. For status on whether the callback has been called, see the <code>CallbackStatus</code> field. <p>The default value is 'New'.</p>

Usage

Treat `FunctionInvocationRequest` records as read-only records used to get information about a specific Function invocation. To invoke Functions, use the Apex `functions.Function` class invoke methods.

`FunctionInvocationRequest` is not supported in Trialforce templates or org snapshots.

FunctionReference

Represents a deployed Salesforce Function associated with an org. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
<code>Description</code>	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The description of the Function.</p>
<code>FunctionName</code>	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The developer name of the Function. This name is case sensitive and uses the format "project name-function name". This field is unique within your organization.</p>
Language	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>The language code for the Function, such as "en_US".</p>
MasterLabel	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>The master label for the Function.</p>

Usage

Treat FunctionReference records as read-only records used to get information about a specific Function associated with your org. To invoke Functions, use the Apex `functions.Function` class invoke methods. To deploy and associate Functions with your org, use Salesforce CLI commands associated with Functions, as described in the [Salesforce Functions developer documentation](#).

FunctionReference is not supported in Trialforce templates or org snapshots.

GtwyProvPaymentMethodType

The gateway provider payment method type allows integrators and payment providers to choose an active payment to receive an order's payment data rather than allowing the Salesforce Order Management platform to select a default payment method. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field	Details
Comments	<p>Type</p> <p>textarea</p>

Field	Details
	<p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Users can provide additional details about the gateway provider payment method type record. Supports a maximum of 1000 characters.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, Salesforce generates one for each record, which slows performance.</p>
GtwyProviderPaymentMethodType	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Links the Salesforce payment method to the payment method used in the Salesforce Order Management storefront. Your payment gateway integration uses this field when finding a payment method to link to a payment.</p> <p>The value of <code>GtwyProviderPaymentMethodType</code> must match the payment method value sent to the order's Payment Instrument in Salesforce Order Management.</p> <p>Listed below are several examples of payment method values that Salesforce could receive from Salesforce Order Management.</p> <ul style="list-style-type: none"> • <code>CREDIT_CARD</code> • <code>BASIC_CREDIT</code> • <code>CreditCard</code> • <code>GooglePay</code> • <code>ApplePay</code>
Language	<p>Type picklist</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Language of the payment gateway integration.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Required. The gateway provider payment method type name that appears in the user interface.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Namespace of the payment gateway integration classes.</p>
PaymentGatewayProviderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Specifies the payment gateway provider that Salesforce Order Management should use when processing payments. One payment gateway provider can be related to multiple payment method types. This is a relationship field.</p> <p>Relationship Name PaymentGatewayProvider</p> <p>Relationship Type Lookup</p>

Field	Details
	<p>Refers To PaymentGatewayProvider</p>
PaymentMethodType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Specifies the type of payment method used on an order in Salesforce Order Management. Possible values are:</p> <ul style="list-style-type: none"> • AlternativePaymentMethod • CardPaymentMethod • DigitalWallet
RecordTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the record type entity related to the gateway provider payment method type. This is a relationship field.</p> <p>Relationship Name RecordType</p> <p>Relationship Type Lookup</p> <p>Refers To RecordType</p>

Usage

The Salesforce Order Management payment record must have a `ProcessorId` field with the same value as the payment gateway's `ExternalReferenceId` field. The gateway provider payment method type record must have a `PaymentMethodType` field that looks up to the payment method that you want to associate to your payment. Finally, the payment gateway and gateway provider payment method type must have matching `PaymentGatewayProviderId` fields. When you've established these relationships, the payment record can infer your payment method from the gateway provider payment method type record.

Goal

The Goal object represents the components of a goal such as its name, description, and status.

 **Note:** The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
CompletionDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The completion date of the goal.</p>
Description	<p>Type textarea</p>

Field Name	Details
	<p>Properties Create, Nillable, Update</p> <p>Description The description of the goal. The maximum length is 65,535 characters.</p>
DueDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The date the goal is due.</p>
ImageUrl	<p>Type url</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The URL for the goal image. The image must be stored in Documents and set as externally available. Applicable only to Goal objects of Type: Goal.</p>
IsKeyCompanyGoal	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the goal is a key company goal.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp that indicates when a user last viewed a record that is related to this goal.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The timestamp that indicates when a user last viewed this goal. If this value is null, this record might have been only referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>The name of the goal. The maximum length is 255 characters.</p>
OwnerId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>ID of the user who owns the goal.</p>
Progress	<p>Type</p> <p>percent</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The progress of the goal measured as a percentage.</p>
StartDate	<p>Type</p> <p>date</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The start date of the goal.</p>
Status	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>The status of the goal.</p> <p>Possible values:</p> <ul style="list-style-type: none"> • Draft

Field Name	Details
	<ul style="list-style-type: none"> Published Completed Canceled Not Completed

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

GoalFeed

Feed tracking is available for the object.

GoalHistory

History is available for tracked fields of the object.

GoalOwnerSharingRule

Sharing rules are available for the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

GoalShare

Sharing is available for the object.

GoalLink

Represents the relationship between two goals. This is a many-to-many relationship, meaning that each goal can link to many other goals.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, Sort</p> <p>Description The auto-generated name of the goal link.</p>

Field Name	Details
ParentGoalId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the parent goal.</p>
SubgoalId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the subgoal.</p>

GoogleDoc

Represents a link to a Google Document. This object is available in API version 14.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available in **All** Editions except **Database.com** for Google Apps Premier Edition accounts. See the Salesforce online help for more information.

Fields

Field	Details
Name	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The name of the Google document.</p>
Owner	<p>Type reference</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Nillable, Update</p> <p>Description The ID of the user who currently owns this Google Document. Default value is the user logged in to the API to perform the create.</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter</p> <p>Description Required. ID of the attachment's parent object. The following objects are supported as parents of Google documents: Account, Asset, Campaign, Case, Contact, Contract, Custom Object Behavior, Lead, Opportunity, Product2, and Solution.</p>
Url	<p>Type string</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description The URL of the Google document.</p>

Group

A set of User records.

Groups are sets of users. They can contain individual users, other groups, the users in a particular role or territory, or the users in a particular role or territory plus all the users below that role or territory in the hierarchy.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `search()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
DefaultDivision	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description This record's default division. Only applicable if divisions are enabled.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. This name is unique by group type and corresponds to Group Name in the user interface.</p> <p>This field is available in API version 24.0 and later.</p> <p> Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance may slow while Salesforce generates one for each record.</p> <p>Only your Salesforce org's internal users can access this field.</p>
DoesIncludeBosses	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the managers have access (<code>true</code>) or do not have access (<code>false</code>) to records shared with members of the group. This field is only available for public groups. This field is available in API version 18.0 and later.</p>
DoesSendEmailToMembers	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Indicates whether the email is sent (<code>true</code>) or not sent (<code>false</code>) to the group members. The email is sent to queue members as well.</p>
Email	<p>Type</p> <p>email</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Email address for a group of type Case. Applies only for a case queue.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p>Description</p> <p>Required. Name of the group. Corresponds to Label on the user interface.</p>
OwnerId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Sort</p> <p>Description</p> <p>ID of the user who owns the group.</p> <p>This is a polymorphic relationship field.</p> <p>Relationship Name</p> <p>Owner</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>Organization, User</p>
QueueRoutingConfig	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Delete, Query, Retrieve, Update</p> <p>Description</p> <p>The ID of the queue routing configuration associated with the queue.</p>
RelatedId	<p>Type</p> <p>reference</p>

Field

Details

Properties

Filter, Group, Nillable, Sort

Description

Represents the ID of the associated groups. For groups of type "Role," the ID of the associated UserRole. The `RelatedId` field is polymorphic.

This is a polymorphic relationship field.

Relationship Name

Relationship Type

Lookup

Refers To

User, UserRole

Type

Type

picklist

Properties

Create, Filter, Group, Restricted picklist, Sort

Description

Required. Type of the group. One of the following values:

- `AllCustomerPortal`—Public group that includes all Customer Portal or Customer Community Plus users. This type is only available when a Customer Portal or a Customer Site is enabled for your org.
- `ChannelProgramGroup`—Public group for partners in a channel program.
- `CollaborationGroup`—Chatter group.
- `Manager`—Public group that includes a user's direct and indirect managers. This group is read-only.
- `ManagerAndSubordinatesInternal`—Public group that includes a user and the user's direct and indirect reports. This group is read-only.
- `Organization`—Public group that includes all the User records in the organization. This group is read-only.
- `Participant`—Compliant Data Sharing group that includes internal users who have the Use Compliant Data Sharing permission. A group can contain other participant groups only, or a group can contain both internal users with the Use Compliant Data Sharing permission and other participant groups. This value is only available when Compliant Data Sharing is enabled for your org.
- `PRMOrganization`—Public group that includes all the partners in an organization that has the partner site or portal feature enabled.
- `Queue`—Public group that includes all the User records that are members of a queue.
- `Regular`—Standard public group. When you `create()` a group, its type must be `Regular`, unless a partner site or portal is enabled for the organization, in which case the type can be `Regular` or `PRMOrganization`.

Field	Details
	<ul style="list-style-type: none"> • <code>Role</code>—Public group that includes all the User records in a particular UserRole. • <code>RoleAndSubordinates</code>—Public group that includes all the User records in a particular UserRole and all the User records in any subordinate UserRole. • <code>RoleAndSubordinatesInternal</code>—Public group that includes all the User records in an internal UserRole, excluding customer and partner roles, and all the User records in any subordinate internal UserRole. • <code>Territory</code>—Public group that includes all the User records in an organization that has the territory feature enabled. • <code>TerritoryAndSubordinates</code>—Public group that includes all the User records in a particular UserRole and all the User records in any subordinateUserRole in an organization that has the territory feature enabled. <p>Only <code>Personal</code>, <code>Regular</code>, and <code>Queue</code> can be used when creating a group. The other values are reserved.</p>

Usage

Unlike users, this object can be deleted.

Only public groups are accessible via the API. Personal groups are not available.

In API version 34.0 and later, you can query a group using `Related.Name` to retrieve the group's name. `Related.Name` is supported for public groups, user roles, territories, manager groups, and user names.

In API version 13.0 and later, if you delete a public group, it is deleted even if it has been used in sharing, consistent with the behavior for UserRole. In versions before 13.0, such sharing prevents the record from being deleted.

SEE ALSO:

[GroupMember](#)

[Object Basics](#)

GroupMember

Represents a User or Group that is a member of a public group.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
GroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. ID of the Group. This is a relationship field.</p> <p>Relationship Name Group</p> <p>Relationship Type Lookup</p> <p>Refers To Group</p>
UserOrGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. ID of the User or Group that is a direct member of the group.</p>

Usage

A record exists for every User or Group who is a direct member of a public group whose `Type` field is set to Regular. User records that are indirect members of Regular public groups are not listed as group members. A User can be an indirect member of a group if he or she is in a UserRole above the direct group member in the hierarchy, or if he or she is a member of a group that is included as a subgroup in that group.

If you attempt to create a record that matches an existing record, system simply returns the existing record.

SEE ALSO:

[Object Basics](#)

GuestBuyerProfile

Represents a store's guest buyer profile, which allows unauthenticated buyers to browse the store. This object is available in API version 51.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Fields

Field	Details
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Currency displayed to the guest buyer when they're viewing the store. Possible values are:</p> <ul style="list-style-type: none"> • USD—U.S. Dollar
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Detailed description of the profile. Includes information like which store the profile is used in.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The last date and time when one or more of the fields were modified</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The last date and time when one or more of the fields were viewed</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The name of the guest buyer profile. Including a reference to the store helps with later identification.</p>

HashtagDefinition

HashtagDefinition represents hashtag (#) topics in public Chatter posts and comments. Public posts and comments include those on profiles and in public groups, but not those on records or in private groups. This object is available in API version 26.0 and later.

 **Important:** Starting in Spring '16, API access to HashtagDefinition is disabled across all API versions. Any integrations relying on API queries to this object stop working. You can continue to use hashtags in posts and comments, and the hashtags continue to create corresponding topics. We recommend that you redirect all API queries and reports using the HashtagDefinition object to use the Topic object instead. For more information, see [Retiring the Legacy HashtagDefinition Object—FAQs](#).

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field Name	Details
HashtagCount	<p>Type</p> <p>int</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The number of times a hashtag topic is used.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The string of characters following the hashtag (#) in a hashtag topic.</p>
NameNorm	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The string of characters following the hashtag (#) in a hashtag topic, normalized to remove capitalization and punctuation.</p>
NetworkId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Identifier of the community to which the HashtagDefinition belongs. This field is available only if digital experiences is enabled in your org.</p>

Usage

Use this object to identify public hashtag topics and see how often they're used.

[Topic](#)

HealthCareDiagnosis

Represents information related to industry-standard healthcare diagnosis codes.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Category	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Indicates the category for this diagnosis such as newborn, pediatric, maternity, or adult.</p>

Field Name	Details
Code	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Industry-standard diagnosis code.</p>
CodeDescription	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Description of the diagnosis code.</p>
CodeType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description Type of diagnosis code represented in the record such as ICD-9 or ICD-10.</p>
EffectiveDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Start date for the code.</p>
EndDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description End date for the code.</p>
Gender	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>Indicates whether this diagnosis is for males, females, or all genders.</p>
IsActive	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Indicates whether the diagnosis code is available for use.</p>
IsComplicationOrComorbidity	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Indicates whether this diagnosis is used to represent a complication or comorbidity.</p>
IsHospitalAcquiredCondition	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Indicates whether this diagnosis represents a condition acquired while in the hospital.</p>
IsMajorComplicationOrComorbidity	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Indicates whether this diagnosis is used to represent a major complication or comorbidity.</p>
IsPresentOnAdmissionExempt	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>Indicates whether diagnosis code is exempt from the diagnosis present on admission requirement.</p>
IsPrimaryDiagnosis	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether diagnosis code can be used as primary diagnosis only, or can be used in any diagnosis sequence.</p>
IsUnacceptablePrincipalDxIpAdmit	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether diagnosis code is an unacceptable principal diagnosis for inpatient admission per Medicare Code Edits.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>The name of the code that displays in search and lookup fields. Salesforce recommends using the code along with the description to populate this field. For example, use <Code>: <Description> or <Code>-<Description> such as (E08.37X9 - Diabetes mellitus due to underlying condition).</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the user who owns this record. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

Holiday

Represents a period of time during which your customer support team is unavailable. Business hours and escalation rules associated with business hours are suspended during any holidays with which they are affiliated.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

All users, even those without the "View Setup and Configuration" user permission, can view holidays via the API.

Fields

Field	Details
ActivityDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description If the Holiday <code>IsAllDay</code> flag is set to <code>true</code> (indicating that it is an all-day holiday), then the holiday due date information is contained in the <code>ActivityDate</code> field. This field is a date field with a timestamp that is always set to midnight in the Coordinated Universal Time (UTC) time zone. The timestamp is not relevant, and you should not attempt to alter it to account for any time zone differences.</p>
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Text description of the holiday.</p>
EndTimeInMinutes	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The end time of the holiday in minutes.</p>
IsAllDay	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the duration of the holiday is all day (<code>true</code>) or not (<code>false</code>).</p>
IsRecurrence	<p>Type boolean</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the holiday is scheduled to repeat itself (<code>true</code>) or only occurs once (<code>false</code>). This is a read only field on update, but not on create. If this field value is <code>true</code>, then any recurrence fields associated with the given recurrence type must be populated.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the holiday.</p>
RecurrenceDayOfMonth	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The day of the month on which the holiday repeats.</p>
RecurrenceDayOfWeekMask	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The day or days of the week on which the holiday repeats. This field contains a bitmask. For each day of the week, the values are as follows:</p> <ul style="list-style-type: none"> • Sunday = 1 • Monday = 2 • Tuesday = 4 • Wednesday = 8 • Thursday = 16 • Friday = 32 • Saturday = 64 <p>Multiple days are represented as the sum of their numerical values. For example, Tuesday and Thursday = $4 + 16 = 20$.</p>
RecurrenceEndDateOnly	<p>Type date</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The last date on which the holiday repeats. For multiday recurring events, this is the day on which the last occurrence starts.</p>
RecurrenceInstance	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The frequency of the recurring holiday. For example, 2nd or 3rd.</p>
RecurrenceInterval	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The interval between recurring holidays.</p>
RecurrenceMonthOfYear	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The month of the year on which the event repeats.</p>
RecurrenceStartDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The date when the recurring holiday begins. Must be a date and time before <code>RecurrenceEndDateOnly</code>.</p>
RecurrenceType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Indicates how often the holiday repeats. For example, daily, weekly, or every Nth month (where "Nth" is defined in <code>RecurrenceInstance</code>).</p>

Field	Details
StartTimeInMinutes	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The start time of the holiday in minutes.</p>

Usage

Use this object to view and update holidays, which specify dates and times at which associated business hours and escalation rules are suspended.

IconDefinition

Represents the icon-related metadata for a custom tab. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field Name	Details
ContentType	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The tab icon's content type, for example, "image/png."</p>
DurableId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description A unique virtual Salesforce ID for the icon.</p>
Height	<p>Type int</p>

Field Name	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The tab icon's height in pixels. If the icon content type is an SVG type, height and width values are not used.</p>
TabDefinitionId	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The TabDefinition ID. This is a relationship field.</p> <p>Relationship Name TabDefinition</p> <p>Relationship Type Lookup</p> <p>Refers To TabDefinition</p>
Theme	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The icon's theme.</p>
Url	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The fully qualified URL for this icon.</p>
Width	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field Name**Details****Description**

The tab icon's width in pixels. If the icon content type is an SVG type, height and width values are not used.

Idea

Represents an idea on which users are allowed to comment and vote, for example, a suggestion for an enhancement to an existing product or process. This object is available in API version 12 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Note: For other standard objects, the `describeLayout()` call returns the `recordTypeMappings` section that contains the layout ID and picklist values for each record type. However, the `recordTypeMappings` section and the fields it includes are not available for the Idea object.

When performing a SOSL search on Idea objects, IdeaComment objects are also searched.

Fields

Field**Details**

AttachmentBody

Type

base64

Properties

Create, Nillable, Update

Description

File data for the attachment. This field is available in API version 28.0 and later.

AttachmentContentType

Type

picklist

Properties

Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Description

Type of the attachment. This field is available in API version 28.0 and later.

AttachmentLength

Type

int

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description Size of the attachment in bytes. This field is available in API version 28.0 and later.</p>
AttachmentName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Name of the attachment. This field is available in API version 28.0 and later.</p>
Body	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Description of the Idea.</p>
Categories	<p>Type multipicklist</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description Customizable multi-select picklist used to organize Ideas into logical groupings.</p> <p> Note: This field is only available if your organization has the <code>Categories</code> field enabled. This field is enabled by default in organizations created after API version 14 was released. If the <code>Categories</code> field is enabled, API versions 13 and earlier do not have access to either the <code>Categories</code> or <code>Category</code> fields.</p>
Category	<p>Type picklist</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description Customizable picklist of values used to organize Ideas into logical groupings.</p> <p> Note: This field is not available if your organization has the multi-select <code>Categories</code> field enabled.</p>
CommunityId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Sort</p> <p>Description The zone ID associated with the idea. Once you create an idea, you can't change the zone ID associated with that idea.</p> <p> Note: API version 12 does not support zone ID. If you create an idea in version 12, your idea is automatically posted to the oldest zone that you have permission to access.</p> <p>This is a relationship field.</p> <p>Relationship Name Community</p> <p>Relationship Type Lookup</p> <p>Refers To Community</p>
CreatorFullPhotoUrl	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description URL of the user's profile photo. This field is available in API version 28.0 and later.</p>
CreatorName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Name of the user who posted the idea or commented on the idea. This field is available in API version 28.0 and later.</p>
CreatorSmallPhotoUrl	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description URL of the user's thumbnail photo. This field is available in API version 28.0 and later.</p>
CurrencyIsoCode	<p>Type picklist</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
IdeaThemeID	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Identifies the idea theme associated with the idea.</p>
IsDeleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>
IsHtml	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Read-only. If this value is <code>true</code>, your organization has the Ideas HTML editor enabled, and the <code>Idea Body</code> may contain HTML. If this value is <code>false</code>, the HTML editor is disabled and the <code>Idea Body</code> only contains regular text.</p>
IsMerged	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Read only. Indicates whether the idea has been merged with a parent idea (<code>true</code>) or not (<code>false</code>). You can't vote for or add comments to a merged idea.</p> <p> Note: In API version 27, <code>IsMerged</code> replaces <code>IsLocked</code>. Existing formula fields that use <code>IsLocked</code> must be edited to use <code>IsMerged</code>.</p>
LastCommentDate	<p>Type dateTime</p>

Field	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The date and time the last comment (child IdeaComment object) was added.</p>
LastCommentId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Read only. The ID of the last comment (child IdeaComment object). This is a relationship field.</p> <p>Relationship Name LastComment</p> <p>Relationship Type Lookup</p> <p>Refers To IdeaComment</p>
LastReferencedDate	<p>Type date</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type date</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
NumComments	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The number of comments (child IdeaComment objects) that users have submitted for the given idea.</p>

Field	Details
ParentIdeaId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID associated with this idea's parent idea. When multiple ideas are merged together, one idea becomes the parent (master) of the other ideas. The <code>ParentIdeaId</code> is automatically set when you merge ideas.</p> <p>This is a relationship field.</p> <p>Relationship Name ParentIdea</p> <p>Relationship Type Lookup</p> <p>Refers To Idea</p>
RecordTypeId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the record type assigned to this object.</p> <p>This is a relationship field.</p> <p>Relationship Name RecordType</p> <p>Relationship Type Lookup</p> <p>Refers To RecordType</p>
Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Customizable picklist of values used to specify the status of an idea.</p>
Title	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The descriptive title of the idea.</p>
VoteScore	<p>Type</p> <p>double</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The internal score of the Idea, used to sort Ideas on the Popular tab in the application user interface. The internal algorithm that determines the score gives older votes less weight than newer votes, simulating exponential decay. The score itself does not display in the application user interface.</p> <p> Note: Unlike other fields of type double, you can't use a SOQL aggregate function with this field.</p>
VoteTotal	<p>Type</p> <p>double</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>An Idea's total number of points. Each vote a user makes is worth ten points, therefore the value of this field is ten times the number of votes an idea has received.</p> <p> Note: Unlike other fields of type double, you can't use a SOQL aggregate function with this field.</p>

 **Note:** If you are importing Idea data and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself..

Usage

Use this object to track ideas, which are written suggestions on which users can vote and comment.

SEE ALSO:

[IdeaComment](#)

[Vote](#)

IdeaComment

Represents a comment that a user has submitted in response to an idea.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

 **Note:** When performing a SOSL search on IdeaComment objects, Idea objects are also searched.

Fields

Field	Field Type
<code>CommentBody</code>	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Body of the submitted comment.</p>
<code>CommunityId</code>	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The zone ID associated with the idea. Once you create an idea, you can't change the zone ID associated with that idea.</p> <p> Note: API version 12 does not support zone ID. If you create an idea in version 12, your idea is automatically posted to the oldest zone that you have permission to access.</p>
<code>CreatorFullPhotoUrl</code>	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description URL of the user's profile photo. This field is available in API version 28.0 and later.</p>
<code>CreatorName</code>	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Name of the user who posted the idea or commented on the idea. This field is available in API version 28.0 and later.</p>

Field	Field Type
CreatorSmallPhotoUrl	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description URL of the user's thumbnail photo. This field is available in API version 28.0 and later.</p>
IdeaId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the idea on which this comment was made. This is a relationship field.</p> <p>Relationship Name Idea</p> <p>Relationship Type Lookup</p> <p>Refers To Idea</p>
IsHtml	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Read-only. If this value is <code>true</code>, your organization has the Ideas HTML editor enabled, and the <code>CommentBody</code> field may contain HTML. If this value is <code>false</code>, the HTML editor is disabled and the <code>CommentBody</code> field only contains regular text.</p>
UpVotes	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Total number of up votes for the question.</p>

 **Note:** If you import these records, and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself.

Usage

Use this object to track comments on ideas, which are users' text responses to ideas.

SEE ALSO:

[Idea](#)

[Vote](#)

IdeaReputation

Represents a collection of statistics and scores derived from a user's activity within an Ideas zone or internal organization. This object is available in API version 28.0 and later.

Supported Calls

`query()`, `retrieve()`,

Fields

Field	Details
<code>CommentCount</code>	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of comments a user has created in a zone or the internal organization. This number excludes comments the user creates on his or her own idea.</p>
<code>CommentsReceivedCount</code>	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of comments a user has received in a zone or the internal organization.</p>
<code>ContextId</code>	<p>Type reference</p> <p>Properties Filter, Group, Namepointing, Nillable, Sort</p> <p>Description The ID of the zone or internal organization.</p>

Field	Details
DownVotesGivenCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of down votes a user has given in a zone or the internal organization.</p>
DownVotesReceivedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of down votes a user has received in a zone or the internal organization.</p>
IdeaCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of ideas a user has created in a zone or the internal organization.</p>
ReputationLevel	<p>Type string</p> <p>Properties Nillable</p> <p>Description The reputation level that a user has achieved based on their score in a zone or within an organization.</p>
Score	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total score of a user's activity within a zone or within an organization.</p>
UpVotesGivenCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The number of up votes a user has given in a zone or the internal organization. This number doesn't include the default vote the system applies when the user creates the idea.</p>
UpVotesReceivedCount	<p>Type</p> <p>int</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The number of up votes a user has received in a zone or the internal organization.</p>
UserId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Sort</p> <p>Description</p> <p>The user ID associated with the reputation.</p>

Usage

Use to query a user's reputation within a zone.

IdeaReputationLevel

Represents a reputation level within an Ideas zone or internal organization and is used by the system to calculate reputation. You can create up to 25 levels per zone or internal organization. This object is available in API version 28.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
ContextId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Namepointing, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>The ID of the zone or internal organization.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Name of the reputation level. The name must be unique within the zone or internal organization. Maximum size is 50 characters.</p>
Threshold	<p>Type</p> <p>int</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Minimum number of points for this level. The threshold must be unique within the zone or internal organization and must be greater than or equal to zero.</p>

Usage

Use to create or edit reputation levels for an Ideas zone or internal organization.

IdeaTheme

Represents an invitation to zone members to submit ideas that are focused on a specific topic. This object is available in API version 26 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`,

Fields

Field Name	Details
Categories	<p>Type</p> <p>multipicklist</p> <p>Properties</p> <p>Create, Filter, Nillable, Update</p>

Field Name	Details
	<p>Description Customizable multi-select picklist used to organize ideas and idea themes into logical groupings.</p>
CommunityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort,</p> <p>Description The zone ID associated with the idea theme.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Description of the idea theme.</p>
EndDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Date marking the end of the idea theme.</p>
LastReferencedDate	<p>Type date</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>

Field Name	Details
StartDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Date that the idea theme begins.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description Customizable picklist of values used to specify the status of the idea theme.</p>
Title	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Namefield, Sort, Update</p> <p>Description Title of the idea theme.</p>

Usage

Use the object to track ideas that are submitted to an idea theme.

IdpEventLog

Represents the Identity Provider Event Log. This log records both problems and successes with inbound SAML or OpenID Connect authentication requests from another app provider. It also records outbound SAML responses when Salesforce is acting as an identity provider. This object is available in API version 39.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
AppId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the app provider seeking authentication.</p>
AuthSessionId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the authentication session.</p>
ErrorCode	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The error code for the authentication issue.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • AppAccessDenied—Error: App access denied • AppBlocked—Error: App blocked • ClientUnapproved—Error: Invalid grant • CodeExpired—Error: Expired authorization code • ForceAuthNLogout—User logged out due to forced authentication request • InternalError—Error: Internal Error • InvalidAuthnRequest—Error: Unable to parse AuthnRequest from service provider • InvalidClientCredentials—Error: Invalid client credentials • InvalidCode—Error: Invalid authorization code • InvalidDeviceId—Error: Invalid device ID • InvalidIdpEndpoint—Error: Invalid Identity Provider Endpoint URL • InvalidIssuer—Error: Invalid Issuer • InvalidScope—Error: Invalid scope(s) • InvalidSessionLevel—Error: Invalid session level • InvalidSettings—Error: IdP certificate is invalid or does not exist • InvalidSignature—Error: Invalid Signature

Field	Details
	<ul style="list-style-type: none"> • <code>InvalidSp</code>—Error: Misconfigured or invalid service provider • <code>InvalidSpokeSp</code>—Error: Invalid spoke SP settings • <code>InvalidUserCredentials</code>—Error: Invalid user credentials • <code>NoAccess</code>—Error: User does not have access to this service provider • <code>NoCustomAttrValue</code>—Error: User does not have a value for the subject custom attribute • <code>NoCustomField</code>—Error: Custom field not found • <code>NoSpokeId</code>—Error: No Spoke ID found • <code>NoSubdomain</code>—Error: Org has not configured My Domains yet • <code>NoUserFedId</code>—Error: User does not have a Federation Identifier selected • <code>OAuthError</code>—OAuth Error • <code>Success</code> • <code>UnableToResolve</code>—Error: Unable to resolve request into a Service Provider • <code>UnknownError</code>—Unknown Error
<code>IdentityUsed</code>	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The identity (username) of the user being authenticated.</p>
<code>InitiatedBy</code>	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The code describing how the authentication request was initiated. Possible values are:</p> <ul style="list-style-type: none"> • <code>IdP</code>—IdP-Initiated SAML • <code>OAuthAuthorize</code>—OAuth Authorization • <code>OAuthTokenExchange</code>—OAuth Token Exchange • <code>SP</code>—SP-Initiated SAML
<code>OptionsHasLogoutUrl</code>	<p>Type boolean</p> <p>Properties Filter</p>

Field	Details
	<p>Description</p> <p>Whether a logout URL has been assigned to the app. This URL is where users are redirected when they log out.</p>
SamLEntityUrl	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Sort</p> <p>Description</p> <p>The authentication URL of the SAML provider.</p>
SsoType	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>The type of SSO. Options are:</p> <ul style="list-style-type: none"> • 0–SAML • 1–OpenID Connect
Timestamp	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The date and time on which the event occurred.</p>
UserId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The ID of the user seeking authentication.</p>

IframeWhiteListUrl

Represents a list of trusted external domains that you allow to frame your Embedded Service, Surveys, and Visualforce pages. This object is available in API version 45.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
Context	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The type of content in the iframe. Valid values are:</p> <ul style="list-style-type: none"> • <code>EmbeddedService</code>—Available in API version 51.0 and later. • <code>Surveys</code> • <code>VisualforcePages</code>
Url	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The unique domain that is allowed to frame your Visualforce pages and surveys. Accepts these formats: <code>example.com</code>, <code>*example.com</code>, and <code>https://example.com</code>.</p>

Usage

To use this object for framing Visualforce pages, on Session Settings in Setup, select **Enable clickjack protection for customer Visualforce pages** either **with headers disabled** or **with standard headers**. These options both allow framing of Visualforce pages on trusted external domains and provide clickjack protection.

Alternatively, you can customize session settings via the SecuritySettings Metadata API type. To use the `IframeWhiteListUrl` object, set either the `enableClickjackNonsetupUser` or `enableClickjackNonsetupUserHeaderless` field to `true`. For more information, see [SecuritySettings](#) in the Metadata API Developer Guide.

Image

Represents the details of an image. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AlternateText	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Accessibility text to explain the image in words.</p>
CapturedAngle	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Angle at which the image was captured.</p>
ContentDocumentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Unique identifier of the content document where image is stored. This is a relationship field.</p> <p>Relationship Name ContentDocument</p> <p>Relationship Type Lookup</p> <p>Refers To ContentDocument</p>
ImageClass	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The image category.</p>

Field	Details
	<p>Possible values are:</p> <ul style="list-style-type: none"> • FOOD • LOGOS • OBJECTS • SCENES
ImageClassObjectType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The type of image. Used in Einstein Object Detection to identify whether the image is used to detect objects or build a model.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • DETECTION—Actual Image • FEEDBACK • TRAINING
ImageViewType	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Orientation of the image.</p>
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates if an image is active. The default value is False. An active image can be used for building or updating a model in Einstein Object Detection.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date on which the image was last referenced.</p>

Field	Details
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date on which the image was last viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description Name of the record.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Unique identifier of the record owner. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
Title	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Title of the image.</p>
Url	<p>Type url</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Public URL of the image file.</p>

Incident

An Incident is any unplanned business interruption that has wide-sweeping impacts and requires an urgent fix. This object contains the details of the incident, documenting the history of the incident from registration to closure. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Category	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The type of incident.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description A description of the incident. This field can store up to 32 KB of data, but only the first 255 characters appear in reports.</p>
DetectedDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date and time (in UTC) when the incident was first detected.</p>
EndDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date and time (in UTC) when the incident ended.</p>

Field	Details
Impact	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The incident's impact. Possible values are:</p> <ul style="list-style-type: none"> • High • Low • Medium <p>The default value is 'High'.</p>
IncidentNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The unique, system-generated number for the incident.</p>
IsMajorIncident	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the incident is business-critical. If set to <code>true</code>, the incident is widespread and business-critical. The default value is <code>false</code>.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time (in UTC) when the current user last accessed this record, a list view, or another related record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The date and time (in UTC) when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
OwnerId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>A polymorphic relationship field that represents the user or group assigned to resolve the incident.</p> <p>Relationship Name</p> <p>Owner</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>Group, User</p>
ParentIncidentId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The unique ID of an incident above one or more related incidents in an incident hierarchy. This is a relationship field.</p> <p>Relationship Name</p> <p>ParentIncident</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>Incident</p>
Priority	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>The impact and urgency of the incident.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Critical

Field	Details
	<ul style="list-style-type: none"> • High • Low • Moderate <p>The default value is 'Critical'.</p>
PriorityOverrideReason	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The reason why a priority should be changed or edited.</p>
ReportedMethod	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Indicates how the incident was reported to customer service.</p>
ResolutionDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date and time (in UTC) when the incident was resolved.</p>
ResolutionSummary	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description A description of possible steps to resolve the incident.</p>
ResolvedById	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The unique ID of the user who resolved the incident. This is a relationship field.</p>

Field	Details
	<p>Relationship Name ResolvedBy</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
StartDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date and time (in UTC) when the incident began.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Any custom or granular stages a customer may want to track. Possible values are:</p> <ul style="list-style-type: none"> Completed In Progress New Open Problem Created Resolved <p>The default value is 'New'.</p>
StatusCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The incident's status. Possible values are:</p> <ul style="list-style-type: none"> Completed InProgress New Open

Field	Details
	<ul style="list-style-type: none"> • ProblemCreated • Resolved <p>The default value is 'New'.</p>
SubCategory	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The type of incident. One level deeper than Category. Administrators set field values.</p>
Subject	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description A brief description of the incident.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The type of incident, for example, question or problem. Administrators set field values.</p>
Urgency	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description A measure of how long the resolution can be delayed until an incident, problem, or change has a significant business impact.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • High • Low • Medium <p>The default value is 'High'.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

IncidentChangeEvent on page 3972

Change events are available for the object.

IncidentFeed on page 3944

Feed tracking is available for the object.

IncidentHistory on page 3956

History is available for tracked fields of the object.

IncidentOwnerSharingRule on page 3961

Sharing rules are available for the object.

IncidentShare on page 3967

Sharing is available for the object.

Individual

Represents a customer's data privacy and protection preferences. Data privacy records based on the Individual object store your customers' preferences. Data privacy records are associated with related leads, contacts, person accounts, and users. This object is available in API version 42.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `merge()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- This object is available if Data Protection and Privacy is enabled.

Fields

Field Name	Details
BirthDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The customer's birthdate.</p>
CanStorePiiElsewhere	<p>Type boolean</p>

Field Name	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indication that you can store the customer's personally identifiable information (PII) outside of their legislation area. For example, you could store an EU citizen's PII data in the US.</p>
ChildrenCount	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The number of children the customer has.</p>
ConsumerCreditScore	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The person's credit score (for example, 740).</p>
ConsumerCreditScoreProviderName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The name of the company that provided the credit score.</p>
ConvictionsCount	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The number of convictions for the customer.</p>
DeathDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The customer's death date.</p>

Field Name	Details
FirstName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The customer's first name. Maximum size is 40 characters.</p>
HasOptedOutGeoTracking	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Preference to not track geolocation on mobile devices.</p>
HasOptedOutProcessing	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Preference to not process personal data, which can include collecting, storing, and sharing personal data.</p>
HasOptedOutProfiling	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Preference to not process data for predicting personal attributes, such as interests, behavior, and location.</p>
HasOptedOutSolicit	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Preference to not solicit products and services.</p>
HasOptedOutTracking	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p>Description Preference to not track customer web activity and whether the customer opens email sent through Salesforce.</p>
IndividualsAge	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Indicates whether the customer is considered to be a minor.</p>
InfluencerRating	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A measure of the person's influence, irrespective of how we do business with them.</p>
IsHomeOwner	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the customer owns a home.</p>
LastName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The customer's last name. Maximum size is 80 characters.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record.</p>
MasterRecordId	<p>Type reference</p>

Field Name**Details****Properties**

Filter, Group, Nillable, Sort

Description

If this object was deleted as the result of a merge, this field contains the ID of the record that was kept. If this object was deleted for any other reason, or hasn't been deleted, the value is `null`.

This is a relationship field.

Relationship Name

MasterRecord

Relationship Type

Lookup

Refers To

Individual

MilitaryService

Type

picklist

Properties

Create, Filter, Group, Nillable, Sort, Update

Description

Indicates whether the customer has served in the military.

Name

Type

string

Properties

Filter, Group, Sort

Description

Concatenation of `FirstName` and `LastName`. Maximum size is 203 characters, including whitespaces.

Occupation

Type

string

Properties

Create, Filter, Group, Nillable, Sort, Update

Description

The customer's occupation. Maximum size is 150 characters.

OwnerId

Type

reference

Properties

Create, Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	<p>Description The ID of the owner of the account associated with this customer. This is a relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
Salutation	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The title for addressing the customer, such as Dr. or Mrs.</p>
SendIndividualData	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Preference to export personal data for delivery to the customer.</p>
ShouldForget	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Preference to delete records and personal data related to this customer.</p>
Website	<p>Type url</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The URL for the customer's website.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

IndividualChangeEvent (API version 47.0)

Change events are available for the object.

IndividualHistory

History is available for tracked fields of the object.

IndividualShare

Sharing is available for the object.

IndividualHistory

Represents the history of changes to values in the fields of a data privacy record, based on the Individual object. This object is available in versions 42.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

- This object is available if Data Protection and Privacy is enabled.
- The Individual object isn't available to Customer Community, Partner Community, and Customer Portal users.

Fields

Field Name	Details
DataType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Data type of the field that was changed.</p>
Field	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The name of the changed field.</p>

Field Name	Details
IndividualId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the data privacy record. Label is Individual ID. This is a relationship field.</p> <p>Relationship Name Individual</p> <p>Relationship Type Lookup</p> <p>Refers To Individual</p>
NewValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The updated value of the changed field.</p>
OldValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The previous value of the changed field.</p>

Usage

Use this object to identify changes to data privacy records.

This object respects field-level security on the parent object.

IndividualShare

Represents a list of access levels to a data privacy record along with an explanation of the access level. For example, if you have access to a record because you own it, the `IndividualAccessLevel` is `All` and `RowCause` is `Owner`. This object is available in API version 42.0 and later.

Supported Calls

`create()`, `delete()`, `describeSOjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- This object is available if Data Protection and Privacy is enabled.
- The Individual object isn't available to Customer Community, Partner Community, and Customer Portal users.

Fields

Field Name	Details
<code>IndividualAccessLevel</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Level of access that the user or group has to the data privacy record. The possible values include:</p> <ul style="list-style-type: none"> • Read • Edit • All (Except for create or update.) <p>Set this field to an access level that's higher than your default access level for individuals.</p>
<code>IndividualId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the Individual associated with this sharing entry. This field isn't available for updates. This is a relationship field.</p> <p>Relationship Name Individual</p> <p>Relationship Type Lookup</p> <p>Refers To Individual</p>
<code>RowCause</code>	<p>Type picklist</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Reason that this sharing entry exists. Write to this field when its value is omitted or set to <code>Manual</code> (default). We give you some of the many possible values, including:</p> <ul style="list-style-type: none"> • <code>Manual</code>—The User or Group has access because a user with “All” access manually shared the data privacy record with them. • <code>Owner</code>—The User is the owner of the data privacy record. • <code>Rule</code>—The User or Group has access to the data privacy record via an Individual sharing rule. • <code>LuImplicit</code>—The User has access to records owned by high-volume Experience Cloud site users via a share group.
UserOrGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the User or Group that has been given access to the data privacy record. This field isn’t available for updates. This is a polymorphic relationship field.</p> <p>Relationship Name UserOrGroup</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>

Usage

This object lets you determine which users and groups can view or edit Individual records owned by other users.

InternalOrganizationUnit

Represents an organization that an Employee belongs to. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, you must be assigned a Workplace Command Center permission set license and the Provides access to Workplace Command Center features system permission.

Fields

Field	Details
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A description of the organization the Employee is working in.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
OrganizationCode	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Required. The code of the organization the Employee is working in.</p>

Field	Details
OrganizationName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The name of the organization the Employee is working in.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the user who currently owns this record. Default value is the user logged in to the API to perform the create operation.</p>
ParentOrganizationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A reference to the parent organization.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

InternalOrganizationUnitHistory (API version 49.0)

History is available for tracked fields of the object.

InternalOrganizationUnitOwnerSharingRule

Sharing rules are available for the object.

InternalOrganizationUnitShare (API version 49.0)

Sharing is available for the object.

Invoice

Represents a financial document describing the total amount a buyer must pay for goods or services provided. This object is available in API version 48.0 and later.

Users can edit non-posted invoices. Posted invoices can't be deleted. Once an invoice is posted, users can make payments against it to reduce its balance.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

Special Access Rules

To access these entities, your org must have a Salesforce Order Management license. These entities are available only in Lightning Experience.

Fields

Field	Details
Balance	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The outstanding balance for this invoice. Equal to the invoice's total amount with tax, ignoring payments and adjustments.</p>
BillToContactId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description Inherited from the account's Bill to Account. This is a relationship field.</p> <p>Relationship Name BillToContact</p> <p>Relationship Type Lookup</p> <p>Refers To Contact</p>
BillingAccountId	<p>Type reference</p> <p>Properties Filter, Group, Sort, Update</p>

Field	Details
	<p>Description The customer account for this invoice. This is a relationship field.</p> <p>Relationship Name BillingAccount</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
Description	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description Users can add more information about this invoice. Maximum of 1000 characters.</p>
DocumentNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description System-generated number that is used to organize financial documents. Can be sequential or random.</p>
DueDate	<p>Type date</p> <p>Properties Filter, Group, Sort, Update</p> <p>Description The customer must pay the invoice by the due date. Unpaid invoices past the due date may be sent to collections.</p>
InvoiceDate	<p>Type date</p> <p>Properties Filter, Group, Sort, Update</p> <p>Description The date that the invoice was posted. Used with payment terms to determine the invoice's DueDate. For example, an invoice with an InvoiceDate of 04/01 and Net 30 payment terms would have a DueDate of 05/01.</p>

Field	Details
InvoiceNumber	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description System-created unique ID for this invoice.</p>
OwnerId	<p>Type reference</p> <p>Properties Filter, Group, Sort, Update</p> <p>Description The user who owns an invoice record. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ReferenceEntityId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the order or order summary that created this invoice. This is a relationship field.</p> <p>Relationship Name ReferenceEntity</p> <p>Relationship Type Lookup</p> <p>Refers To Order</p>
Status	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The state of the invoice.</p>

Field	Details
	<p>Possible values are:</p> <ul style="list-style-type: none"> • <code>Cancelled</code>: Reserved for future use. • <code>Draft</code>: Reserved for future use. • <code>ErrorPosting</code>: Reserved for future use. • <code>Pending</code>: Reserved for future use. • <code>Posted</code>: Reserved for future use.
<code>TotalAdjustmentAmount</code>	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The sum of the invoice's adjustment line amounts.</p>
<code>TotalAmount</code>	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The sum <code>TotalAmount</code> values on the invoice's lines.</p>
<code>TotalAmountWithTax</code>	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The sum of <code>TotalAmountWithTax</code> values on the invoice's lines.</p>
<code>TotalChargeAmount</code>	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The sum of the invoice's charges.</p>
<code>TotalTaxAmount</code>	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The sum of <code>TaxAmount</code> values on the invoice lines.</p>

InvoiceLine

Represents the amount that a buyer must pay for a product, service, or fee. Invoice lines are created based on the amount of an order line. This object is available in API version 48.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

Special Access Rules

To access these entities, your org must have a Salesforce Order Management license. These entities are available only in Lightning Experience.

Fields

Field	Details
AdjustmentAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Sum of adjustments made to the invoice line.</p>
ChargeAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description Sum of charges made to the invoice line.</p>
Description	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description Description of the invoice line.</p>
GroupReferenceEntityItemId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description Grouping field for adjustment line items. This is a relationship field.</p> <p>Relationship Name GroupReferenceEntityItem</p> <p>Relationship Type Lookup</p> <p>Refers To OrderItem</p>
InvoiceId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The invoice that contains this invoice line. This is a relationship field.</p> <p>Relationship Name Invoice</p> <p>Relationship Type Lookup</p> <p>Refers To Invoice</p>
InvoiceLineEndDate	<p>Type date</p> <p>Properties Filter, Group, Sort, Update</p> <p>Description For invoice lines made from a time-based service, the end date of the billing for the service.</p>
InvoiceLineStartDate	<p>Type date</p> <p>Properties Filter, Group, Sort, Update</p> <p>Description For invoice lines made from a time-based service, the first date of the billing for the service.</p>
InvoiceStatus	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description State of the invoice line. Inherited from the invoice's status.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the invoice line.</p>
Product2Id	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description The product that was charged or ordered to create the invoice line. This is a relationship field.</p> <p>Relationship Name Product2</p> <p>Relationship Type Lookup</p> <p>Refers To Product2</p>
Quantity	<p>Type double</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description Number of units of the order product that created the invoice line.</p>
ReferenceEntityItemId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description The order item or adjustment item that created the invoice line. This is a relationship field.</p>

Field	Details
	<p>Relationship Name ReferenceEntityItem</p> <p>Relationship Type Lookup</p> <p>Refers To OrderItem</p>
ReferenceEntityItemType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The type of transaction that created the invoice line. Possible values are:</p> <ul style="list-style-type: none"> • DeliveryCharge • OrderProduct
ReferenceEntityItemTypeCode	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The type of object that created the invoice line. Possible values are:</p> <ul style="list-style-type: none"> • Charge • Product
RelatedLineId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description The original invoice line that was adjusted or taxed.</p> <p>Relationship Name RelatedLine</p> <p>Relationship Type Lookup</p> <p>Refers To InvoiceLine</p>

Field	Details
TaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description Total tax for the invoice line.</p>
TaxCode	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description The code used to calculate tax rate for the invoice line.</p>
TaxEffectiveDate	<p>Type date</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description The date used to calculate the invoice line's TaxAmount.</p>
TaxName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description User-defined name for the applied tax.</p>
TaxRate	<p>Type percent</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description Percentage value used for calculating tax.</p>
TotalAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total amount of the invoice line before any applicable tax.</p>

Field	Details
TotalAmountWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total amount of tax for this invoice line, with tax included. Sum of TotalAmount and TaxAmount.</p>
Type	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Shows the type of transaction for the invoice line. Possible values are:</p> <ul style="list-style-type: none"> • Adjustment • Charge • Tax
UnitPrice	<p>Type currency</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description Price for one unit of the item on the invoice line.</p>

JobProfile

Represents a job profile used for shift scheduling. This object is available in API versions 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled in your org.

Fields

Field	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time when the current user last viewed a related record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time when the current user last viewed this record.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the job profile.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the owner of the job profile.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[JobProfileFeed](#)

Feed tracking is available for the object.

[JobProfileHistory](#)

History is available for tracked fields of the object.

[JobProfileOwnerSharingRule](#)

Sharing rules are available for the object.

[JobProfileShare](#)

Sharing is available for the object.

JobProfileQueueGroup

JobProfileQueueGroup defines the mapping between Queue and JobProfile, and configurations for Omni-Channel Planning. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Org must have the Workforce Engagement, Workforce Engagement Configuration, and Omni org preferences enabled. User must have the Workforce Engagement Analyst or Planner user permission set.

Fields

Field	Details
AnswerTime	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The answer time (in seconds) for a specific group.</p>
CapacityPerJobProfile	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The max number of work units that an agent can handle for a specific job profile.</p>
GroupCapacity	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The distributed number of work units among groups to which a specific job profile is associated.</p>
GroupId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Identifies the group or queue record. This is a relationship field.</p> <p>Relationship Name Group</p> <p>Relationship Type Lookup</p> <p>Refers To Group</p>
JobProfileId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Identifies the job profile record. This is a relationship field.</p> <p>Relationship Name JobProfile</p> <p>Relationship Type Lookup</p> <p>Refers To JobProfile</p>
JobProfileShrinkage	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The shrinkage for a specific job profile.</p>
Priority	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The priority of a group per job profile.</p>

Field	Details
ServiceLevelAgreementPerc	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The expected SLA percentage for a specific group.</p>
WorkType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description A type of group, indicating whether a queue is synchronous or asynchronous. Possible values are:</p> <ul style="list-style-type: none"> • A—Async • S—Sync <p>The default value is 'S'.</p>

Knowledge__Feed

Represents the feed for a knowledge article. This object is available in API version 39.0 and later.

For additional information about feeds, see [FeedItem](#) on page 1750.

 **Note:** By default, the prefix for this object name is `Knowledge` and that is the value shown in this reference. However, this prefix can be modified by changing the **Object Name** for the `Knowledge__kav` object in Object Manager.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Lightning Knowledge must be enabled in your org.

Fields

Field	Details
BestCommentId	<p>Type reference</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the comment marked as best answer on a question post.</p>
Body	<p>Type textarea</p> <p>Properties Nillable, Sort</p> <p>Description The body of the feed item. Required when <code>Type</code> is <code>TextPost</code> or <code>AdvancedTextPost</code>. Optional when <code>Type</code> is <code>ContentPost</code> or <code>LinkPost</code>.</p> <p>Although a value for <code>Body</code> is not required for the <code>ContentPost</code> type, an attachment is required. If an attachment isn't present, the type changes to <code>TextPost</code> or <code>AdvancedTextPost</code>, depending on the API version. <code>TextPost</code> and <code>AdvancedTextPost</code> do require a value for <code>Body</code>.</p> <p> Tip: See the <code>IsRichText</code> field for a list of HTML tags supported in the body of rich text posts.</p>
CommentCount	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description The number of comments associated with this feed item.</p> <p> Tip: In a feed that supports pre-moderation, <code>CommentCount</code> isn't updated until a comment is published. For example, say that you comment on a post that already has one published comment and your comment triggers moderation. Now there are two comments on the post, but the count says there's only one. In a moderated feed, comments aren't counted until approved by an admin or someone with <code>Can Approve Feed Post and Comment</code> or <code>Modify All Data</code>.</p> <p>Feed moderation has implications on how you retrieve feed comments. In a moderated feed, rather than retrieving comments by looping through <code>CommentCount</code>, go through pagination until the end of comments is returned.</p>
InsertedById	<p>Type reference</p> <p>Properties Group, Nillable, Sort</p>

Field	Details
LinkUrl	<p>Type url</p> <p>Properties Nillable, Sort</p> <p>Description The URL of a <code>LinkPost</code>.</p>
ParentId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the Knowledge article to which the feed item is related.</p>
RelatedRecordId	<p>Type reference</p> <p>Properties Group, Nillable, Sort</p> <p>Description ID of the <code>ContentVersion</code> record associated with a <code>ContentPost</code>. For WDC thanks posts, it's the ID of the <code>WorkThanks</code> object associated with a <code>RypplePost</code>. This field is typically null for all posts except <code>ContentPost</code> and <code>RypplePost</code>.</p> <p>For example, set this field to an existing <code>ContentVersion</code> ID and post it to a feed with <code>Type</code> set to <code>ContentPost</code>.</p>
Title	<p>Type string</p> <p>Properties Group, Nillable, Sort</p> <p>Description The title of the feed item. When the <code>Type</code> is <code>LinkPost</code>, the <code>LinkUrl</code> is the URL and this field is the link name. The <code>Title</code> field can be updated on posts of <code>Type</code> <code>QuestionPost</code>.</p>
Type	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The type of feed item. Except for <code>ContentPost</code>, <code>LinkPost</code>, and <code>TextPost</code>, don't create feed items of other types directly from the API.</p>

Field

Details

- **ActivityEvent**—indirectly generated event when a user or the API adds a [Task](#) associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a [Task](#) or [Event](#) associated with a case record (excluding email and call logging).

For a recurring [Task](#) with [CaseFeed](#) disabled, one event is generated for the series only. For a recurring [Task](#) with [CaseFeed](#) enabled, events are generated for the series and each occurrence.

- **AdvancedTextPost**—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post.
- **AnnouncementPost**—Not used.
- **ApprovalPost**—generated when a user submits an approval.
- **BasicTemplateFeedItem**—Not used.
- **CanvasPost**—a post made by a canvas app posted on a feed.
- **CollaborationGroupCreated**—generated when a user creates a public group.
- **CollaborationGroupUnarchived**—Not used.
- **ContentPost**—a post with an attached file.
- **CreatedRecordEvent**—generated when a user creates a record from the publisher.
- **DashboardComponentAlert**—generated when a dashboard metric or gauge exceeds a user-defined threshold.
- **DashboardComponentSnapshot**—created when a user posts a dashboard snapshot on a feed.
- **LinkPost**—a post with an attached URL.
- **PollPost**—a poll posted on a feed.
- **ProfileSkillPost**—generated when a skill is added to a user's Chatter profile.
- **QuestionPost**—generated when a user posts a question.
- **ReplyPost**—generated when Chatter Answers posts a reply.
- **RypplePost**—generated when a user creates a Thanks badge in WDC.
- **TextPost**—a direct text entry on a feed.
- **TrackedChange**—a change or group of changes to a tracked field.
- **UserStatus**—automatically generated when a user adds a post. Deprecated.

The following values appear in the `Type` picklist for all feed objects but apply only to [CaseFeed](#):

- **AttachArticleEvent**—generated event when a user attaches an article to a case.
- **CallLogPost**—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event.
- **CaseCommentPost**—generated event when a user adds a case comment for a case object.
- **ChangeStatusPost**—generated event when a user changes the status of a case.
- **ChatTranscriptPost**—generated event when Chat transcript is saved to a case.

Field	Details
	<ul style="list-style-type: none"> • <code>EmailMessageEvent</code>—generated event when an email related to a case object is sent or received. • <code>FacebookPost</code>—generated when a Facebook post is created from a case. Deprecated. • <code>MilestoneEvent</code>—generated when a case milestone is completed or reaches violation status. • <code>SocialPost</code>—generated when a social post is created from a case. <p> Note: If you set <code>Type</code> to <code>ContentPost</code>, also specify <code>ContentData</code> and <code>ContentFileName</code>.</p>

Knowledge__ka

Provides access to the concrete object that represents a Knowledge article, the parent object for article versions. This object is available in API version 39.0 and later.

 **Note:** By default, the prefix for this object name is `Knowledge` and that is the value shown in this reference. However, this prefix can be modified by changing the **Object Name** for the `Knowledge__kav` object in Object Manager.

This object is derived from [KnowledgeArticle](#) on page 2009.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `undelete()`

Special Access Rules

Lightning Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the `Knowledge User` feature license.

Fields

Field	Details
<code>ArchivedById</code>	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the user who archived the article.</p>
<code>ArchivedDate</code>	<p>Type dateTime</p>

Field	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The date when the article was archived.</p>
ArticleNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The unique number automatically assigned to the article when it's created. You can't change the format or value for this field.</p>
CaseAssociationCount	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description The number of cases attached to the article.</p>
FirstPublishedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the article was first published.</p>
LastPublishedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the article was last published.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>

Field	Details
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
MasterLanguage	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The article's original language. Only accessible if your knowledge base supports multiple languages.</p>
MigratedToFromArticle	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID for the corresponding pre- or post-migration article. Contains values only in orgs that migrate from Knowledge in Salesforce Classic to Lightning Knowledge. This field is available in API version 45.0 and later.</p>
TotalViewCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Total number of views for this article. This field is available in API version 39.0 and later.</p>

Knowledge__kav

Provides access to the concrete object that represents a Knowledge article version. This object is available in API version 39.0 and later.

Note: By default, the prefix for this object name is `Knowledge` and that is the value shown in this reference. However, this prefix can be modified by changing the **Object Name** for the `Knowledge__kav` object in Object Manager.

This object is derived from [KnowledgeArticleVersion](#) on page 2012.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Lightning Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the `Knowledge User` feature license.

Fields

Field	Details
<code>ArchivedById</code>	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the user who archived the article.</p>
<code>ArchivedDate</code>	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date the article version was archived.</p>
<code>ArticleArchivedById</code>	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the user who archived the article.</p>
<code>ArticleArchivedDate</code>	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date the article was archived.</p>
<code>ArticleCaseAttachCount</code>	<p>Type int</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of cases where this article is attached.</p>
ArticleCreatedById	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the user who created the article.</p>
ArticleCreatedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date the article was created.</p>
ArticleMasterLanguage	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The article's original language. Only accessible if your knowledge base supports multiple languages.</p>
ArticleNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, Sort</p> <p>Description The unique number automatically assigned to the article when it's created. You can't change the format or value for this field.</p>
ArticleTotalViewCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Total number of views for the article.</p>

Field	Details
AssignedById	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the user who assigned the article.</p>
AssignedToId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the user assigned to the article.</p>
AssignmentDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date the article was assigned to a user.</p>
AssignmentDueDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The due date when an article is assigned.</p>
AssignmentNote	<p>Type textarea</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Notes to the assignee from the user who assigned the article.</p>
FirstPublishedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the article was first published.</p>

Field	Details
IsLatestVersion	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the article is the most current version. (<code>true</code>) or not (<code>false</code>). This field can be <code>true</code> on the online or published version, a draft version in the master language, a draft version in a translation, and the latest archived version. However, you can't filter by (<code>PublishState='Online'</code>) and (<code>IsLatestVersion=false</code>) because the online version is also the latest version. This field is available in API version 24.0 and later.</p>
IsMasterLanguage	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the article has one or more translations associated with it (<code>true</code>) or not (<code>false</code>).</p>
IsOutOfDate	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the source article has been updated since this translated version was created (<code>true</code>) or not (<code>false</code>).</p>
IsVisibleInApp	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Required. Indicates whether the article is visible in the Articles tab (<code>true</code>) or not (<code>false</code>).</p>
IsVisibleInCsp	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Required. Indicates whether the article is visible in the Customer Portal (<code>true</code>) or not (<code>false</code>).</p>

Field	Details
IsVisibleInPkb	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Required. Indicates whether the article is visible in the public knowledge base (<code>true</code>) or not (<code>false</code>).</p>
IsVisibleInPrm	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Required. Indicates whether the article is visible in the partner portal (<code>true</code>) or not (<code>false</code>).</p>
KnowledgeArticleId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the article independent from its version. The value for this field is retrieved from the <code>Id</code> field of the KnowledgeArticle object.</p>
Language	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The language that the article is written in, such as <code>French</code> or <code>Chinese (Traditional)</code>.</p> <p>Querying or searching articles in SOSL require that you specify the <code>Language</code> field in the <code>WHERE</code> clause. The language must be the same for all article types.</p> <p>Before API version 47.0, you must include the <code>Language</code> field to filter queries on Knowledge article versions. In API version 47.0 and later, you can filter queries on Knowledge article versions with or without <code>Language</code> depending on what you are querying.</p>
LastPublishedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the article was last published.</p>

Field	Details
MasterVersionId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the source article, if the article is the translation of a source article. Only accessible if your knowledge base supports multiple languages.</p>
MigratedToFromArticleVersion	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID for the corresponding pre- or post-migration article version. Contains values only in orgs that migrate from Classic to Lightning Knowledge. Available in API version 43.0 and later.</p>
OwnerId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the article's owner.</p>
PublishStatus	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description The publication status for the article:</p> <ul style="list-style-type: none"> • Draft: any draft articles. • Online: articles published in Salesforce Knowledge. • Archived: archived articles. <p>A user must have the “Manage Articles” permission enabled to use Online.</p> <p>Article queries and searches in SOQL or SOSL require that you specify either the PublishStatus or the Id field in the WHERE clause. You can search for only one publication status per article type in a single SOSL query. When searching for articles with a PublishStatus of Archived, also check that IsLatestVersion equals false in your WHERE clause.</p>

Field	Details
RecordTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Indicates the API Name that describes the type of article. Use the record type to determine the article structure and other settings for different types of content.</p>
SourceId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the source from which the article was created (Case or Reply).</p>
Summary	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Summary of the article. Maximum size is 1000 characters.</p>
Title	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, idLookup, Sort, Update</p> <p>Description Required. Article's title. Maximum size is 255 characters.</p>
TranslationCompletedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Date and time when the article was last translated. Only accessible if your knowledge base supports multiple languages.</p>
TranslationExportedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description Date and time when the article was last exported for translation. Only accessible if your knowledge base supports multiple languages.</p>
TranslationImportedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Date and time when the article was last imported for translation. Only accessible if your knowledge base supports multiple languages.</p>
UrlName	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Required. Represents the article's URL. Can contain alphanumeric characters and hyphens but can't begin or end with a hyphen. This value should be unique regardless of context. (For example, a unique value allows you to get expected results when running an Apex test with <code>SeeAllData</code> set to <code>false</code>.) <code>UrlName</code> is case-sensitive and its maximum size is 255 characters.</p>
ValidationStatus	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group</p> <p>Description Shows whether the content of the article has been validated. Possible values are <code>Validated</code> and <code>Not Validated</code>. The default value is <code>Not Validated</code>. This field is available in API version 24.0 or later.</p>
VersionNumber	<p>Type int</p> <p>Properties Group, Sort</p> <p>Description The number assigned to a version of an article. This field is available in API version 24.0 and later.</p>

Knowledge__DataCategorySelection

Represents a data category that classifies an article. This object is available in API version 39.0 and later.

 **Note:** By default, the prefix for this object name is `Knowledge` and that is the value shown in this reference. However, this prefix can be modified by changing the **Object Name** for the `Knowledge__kav` object in Object Manager.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Lightning Knowledge must be enabled in your org.

Fields

Field	Details
<code>DataCategoryGroupName</code>	<p>Type datacategorygroupreference</p> <p>Properties Create</p> <p>Description Unique name of the data category group which has categories associated with the article.</p>
<code>DataCategoryName</code>	<p>Type datacategorygroupreference</p> <p>Properties Create</p> <p>Description Unique name of the data category associated with the article.</p>
<code>ParentId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the article associated with the data category selection.</p>

Usage

Every article in Salesforce Knowledge can be categorized. A data category selection represents a category that has been selected to classify an article. You can use this object to query and manage article categorization in your organization. Client applications can create a categorization for an article with a Draft status. They can also delete and query article categorizations.

Note: When using this object to classify an article, you can't select both a category (for example USA) and one of its descendants (California) or ascendant categories (North America). In this case, only the first category is selected.

KnowledgeableUser

Represents a user identified as knowledgeable about a specific topic, and ranks them relative to other knowledgeable users. This object is available in API version 31.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
NetworkId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the Experience Cloud site the topic exists in. This field is available only if digital experiences is enabled for your org.</p>
RawRank	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Rank of this user's knowledge on the topic relative to other users.</p>
TopicId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description Unique ID for the topic in Salesforce.</p>

Field Name	Details
UserId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description Unique ID for the user in Salesforce.</p>

KnowledgeArticle

Provides read-only access to an article and the ability to delete the master article. This object is available in API version 19.0 and later.

Unlike KnowledgeArticleVersion, the ID of a KnowledgeArticle record is identical irrespective of the article's version (status).

[Knowledge__ka](#) on page 1996 is derived from this object.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the `Knowledge User` feature license.

Fields

Field Name	Details
ArchivedById	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the user who archived the article.</p>
ArchivedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the article was archived.</p>

Field Name	Details
ArticleNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The unique number automatically assigned to the article when it's created. You can't change the format or value for this field.</p>
CaseAssociationCount	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description The number of cases attached to the article.</p>
FirstPublishedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the article was first published.</p>
LastPublishedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the article was last published.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
MasterLanguage	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Restricted picklist, Sort</p> <p>Description</p> <p>The article's original language. Only accessible if your knowledge base supports multiple languages.</p>
MigratedToFromArticle	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The ID for the corresponding pre- or post-migration article. Contains values only in orgs that migrate from Knowledge in Salesforce Classic to Lightning Knowledge. This field is available in API version 45.0 and later.</p>
TotalViewCount	<p>Type</p> <p>int</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Total number of views for this article. This field is available in API version 39.0 and later.</p>

Usage

Use this object to query or retrieve articles. KnowledgeArticle can be used in a SOQL clause, but doesn't provide access to the fields from the article. Provides read-only access to an article and the ability to delete the master article.

Usage for SOQL with KnowledgeArticle

To expose the `migrated_to_from_id` column on **KnowledgeArticle** and **KnowledgeArticleVersion** to the sObject API: expose **MigratedToFromArticle** in **KnowledgeArticle**.

For SOQL:

- To filter by `MigratedToFromArticle`, remove any other filters.
- When filtering by `MigratedToFromArticle`, use the '=' or 'IN' operator.

- When filtering by `MigratedToFromArticle`, the value can't be null or empty.

SEE ALSO:

[Knowledge](#)

[KnowledgeArticleVersion](#)

KnowledgeArticleVersion

Provides a global view of standard article fields across all types of articles depending on their version. This object is available in API version 18.0 and later.

Use this object to:

- Query or search generically across multiple types of articles.
- Filter on a specific version.
- Update standard fields, those fields that are updateable, in draft versions.

When you query on the archived article, the results include both the article and the article's archived versions.

[Knowledge__kav](#) on page 1998 is derived from this object.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`

 **Note:**

- You can only update draft versions.
- You can't update draft translations with the `knowledgeManagement` REST API.
- For Lightning Knowledge, to create, update, or delete a Knowledge article version, use the call on `Knowledge__kav`. For example, to delete, use `Knowledge__kav.delete()`.
- For Knowledge in Salesforce Classic, to create, update, or delete a Knowledge article version, use the call on `ArticleType__kav`, where `ArticleType` is the name of the article's type. For example, to delete, use `ArticleType__kav.delete()`.

Special Access Rules

Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the `Knowledge User` feature license.

Fields

Field Name	Details
<code>ArchivedById</code>	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description The ID of the user who archived the article.</p>
ArchivedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date the article version was archived.</p>
ArticleArchivedById	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the user who archived the article.</p>
ArticleArchivedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date the article was archived.</p>
ArticleCaseAttachCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of cases where this article is attached.</p>
ArticleCreatedById	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the user who created the article.</p>
ArticleCreatedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description The date the article was created.</p>
ArticleMasterLanguage	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The article's original language. Only accessible if your knowledge base supports multiple languages.</p>
ArticleNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, Sort</p> <p>Description The unique number automatically assigned to the article when it's created. You can't change the format or value for this field.</p>
ArticleTotalViewCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Total number of views for the article.</p>
ArticleType	<p>Type string</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates the API Name of the article type. The <code>ArticleType</code> is assigned to the article when it's created. You can't change the value of this field. This field is available in orgs using Knowledge in Salesforce Classic in API version 26.0 and later.</p>
AssignedById	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the user who assigned the article.</p>

Field Name	Details
AssignedToId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the user assigned to the article.</p>
AssignmentDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date the article was assigned to a user.</p>
AssignmentDueDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The due date when an article is assigned.</p>
AssignmentNote	<p>Type textarea</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Notes to the assignee from the user who assigned the article.</p>
FirstPublishedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the article was first published.</p>
IsLatestVersion	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p>

Field Name	Details
	<p>Description</p> <p>Indicates whether the article is the most current version. (<code>true</code>) or not (<code>false</code>). This field can be <code>true</code> on the online or published version, a draft version in the master language, a draft version in a translation, and the latest archived version. However, you can't filter by (<code>PublishState='Online'</code>) and (<code>IsLatestVersion=false</code>) because the online version is also the latest version. This field is available in API version 24.0 and later.</p>
IsMasterLanguage	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Indicates whether the article has one or more translations associated with it (<code>true</code>) or not (<code>false</code>). Only accessible if your knowledge base supports multiple languages.</p>
IsOutOfDate	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Indicates whether the source article has been updated since this translated version was created (<code>true</code>) or not (<code>false</code>). Only accessible if your knowledge base supports multiple languages.</p>
IsVisibleInApp	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Required. Indicates whether the article is visible in the Articles tab (<code>true</code>) or not (<code>false</code>).</p>
IsVisibleInCsp	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Required. Indicates whether the article is visible in the Customer Portal (<code>true</code>) or not (<code>false</code>).</p>
IsVisibleInPkb	<p>Type</p> <p>boolean</p>

Field Name	Details
	<p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Required. Indicates whether the article is visible in the public knowledge base (<code>true</code>) or not (<code>false</code>).</p>
IsVisibleInPrm	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Required. Indicates whether the article is visible in the partner portal (<code>true</code>) or not (<code>false</code>).</p>
KnowledgeArticleId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the article independent from its version. The value for this field is retrieved from the <code>Id</code> field of the KnowledgeArticle object.</p>
Language	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The language that the article is written in, such as <code>French</code> or <code>Chinese (Traditional)</code>. Querying or searching articles in SOSL require that you specify the <code>Language</code> field in the <code>WHERE</code> clause. The language must be the same for all article types. Before API version 47.0, you must include the <code>Language</code> field to filter queries on Knowledge article versions. In API version 47.0 and later, you can filter queries on Knowledge article versions with or without <code>Language</code> depending on what you are querying.</p>
LastPublishedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the article was last published.</p>

Field Name	Details
MasterVersionId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the source article, if the article is the translation of a source article. Only accessible if your knowledge base supports multiple languages.</p>
MigratedToFromArticleVersion	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID for the corresponding pre- or post-migration article version. Contains values only in orgs that migrate from Classic to Lightning Knowledge. Available in API version 43.0 and later.</p>
OwnerId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the article's owner.</p>
PublishStatus	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description The publication status for the article:</p> <ul style="list-style-type: none"> • Draft: any draft articles. • Online: articles published in Salesforce Knowledge. • Archived: archived articles. <p>A user must have the "Manage Articles" permission enabled to use Online.</p> <p>Article queries and searches in SOQL or SOSL require that you specify either the PublishStatus or the Id field in the WHERE clause. You can search for only one publication status per article type in a single SOSL query. When searching for articles with a PublishStatus of Archived, also check that IsLatestVersion equals false in your WHERE clause.</p>

Field Name	Details
SourceId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the source from which the article was created (Case or Reply).</p>
Summary	<p>Type textarea</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Summary of the article. Maximum size is 1000 characters.</p>
Title	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description Required. Article's title. Maximum size is 255 characters.</p>
TranslationCompletedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Date and time when the article was last translated. Only accessible if your knowledge base supports multiple languages.</p>
TranslationExportedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Date and time when the article was last exported for translation. Only accessible if your knowledge base supports multiple languages.</p>
TranslationImportedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>Date and time when the article was last imported for translation. Only accessible if your knowledge base supports multiple languages.</p>
UrlName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, idLookup, Sort</p> <p>Description</p> <p>Required. Represents the article's URL. Can contain alphanumeric characters and hyphens but can't begin or end with a hyphen. This value should be unique regardless of context. (For example, a unique value allows you to get expected results when running an Apex test with <code>SeeAllData</code> set to <code>false</code>.) <code>UrlName</code> is case-sensitive and its maximum size is 255 characters.</p>
ValidationStatus	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Defaulted on create, Filter, Group</p> <p>Description</p> <p>Shows whether the content of the article has been validated. Possible values are <code>Validated</code> and <code>Not Validated</code>. The default value is <code>Not Validated</code>. This field is available in API version 24.0 or later.</p>
VersionNumber	<p>Type</p> <p>int</p> <p>Properties</p> <p>Group, Sort</p> <p>Description</p> <p>The number assigned to a version of an article. This field is available in API version 24.0 and later.</p>

Usage

Use this object to query, retrieve, or search for articles across all types of articles depending on their version. You can update draft master articles. Also, you can delete articles that aren't drafts. Client applications can use `KnowledgeArticleVersion` with `describeDataCategoryGroups()` and `describeDataCategoryGroupStructures()` to return the category groups and the category structure associated with Salesforce Knowledge.

To access an article independent of its version, use the `KnowledgeArticle` object.

In Lightning Knowledge, the type of article is determined by the `RecordType` field on the concrete derived object (for example, [Knowledge__kav](#) on page 1998). For Knowledge in Salesforce Classic, the type of article is determined by the `ArticleType` field and the concrete derived object uses the prefix of the article type name (for example, `FAQ__kav` for the FAQ article type).

SOQL Samples

The following SOQL clause uses KnowledgeArticleVersion to query all published articles from all articles complying with the classification specified in the WITH DATA CATEGORY clause:

```
SELECT Title, Summary
FROM KnowledgeArticleVersion
WHERE PublishStatus='Online'
AND Language = 'en_US'
WITH DATA CATEGORY Geography__c ABOVE_OR_BELOW europe__c AND Product__c BELOW All__c
```

The following SOQL clause for Lightning Knowledge uses the Offer record type to limit the query to all draft articles:

```
SELECT Id, Title
FROM Knowledge__kav
WHERE PublishStatus='Draft'
AND Language = 'en_US'
AND RecordTypeId = '<specify RecordTypeId for Offer here>'
WITH DATA CATEGORY Geography__c AT (france__c,usa__c) AND Product__c ABOVE dsl__c
```

The following SOQL clause for Salesforce Classic uses the Offer article type to limit the query to all draft articles:

```
SELECT Id, Title
FROM Offer__kav
WHERE PublishStatus='Draft'
AND Language = 'en_US'
WITH DATA CATEGORY Geography__c AT (france__c,usa__c) AND Product__c ABOVE dsl__c
```

The following SOQL clause uses KnowledgeArticleVersion to query the IDs of all archived versions of a particular article:

```
SELECT Id
FROM KnowledgeArticleVersion
WHERE PublishStatus='Archived'
AND IsLatestVersion=false
AND KnowledgeArticleId='kA1D00000001PQ6KAM'
```

SOQL and SOSL with KnowledgeArticleVersion

- Filter on a single value of PublishStatus for best results. To find all versions of each article, omit the PublishStatus filter, but do filter on one or more primary key IDs. To retrieve all archived versions for a given article, specify a SOQL filter where IsLatestVersion is false.
- In API version 46.0 and earlier, queries without a filter on PublishStatus return published articles by default. In API version 47.0 and later, draft, published, and archived articles are returned when Lightning Knowledge is enabled.
- To support security, only users with the “View Draft Articles” permission see articles whose PublishStatus value is Draft. Similarly, only users with the “View Archived Articles” permission see articles whose PublishStatus value is Archived.
- Archived article versions are stored in the **Knowledge__kav** object. To query archived article versions, specify the article Id and set IsLatestVersion='0'.
- You can't use binding variables in Apex SOQL statements with KnowledgeArticleVersion objects. For example, the following SOQL statement causes a compilation error.

```
final String PUBLISH_STATUS_ONLINE = 'Online';
List<Knowledge__kav> articles = [
SELECT Id FROM Knowledge__kav
```

```
WHERE PublishStatus = :PUBLISH_STATUS_ONLINE  
];
```

Instead, use dynamic SOQL as follows. See [Dynamic SOQL](#) in *Apex Developer Guide*.

```
final String PUBLISH_STATUS_ONLINE = 'Online';  
final String q = 'SELECT Id, PublishStatus FROM Knowledge__kav  
WHERE PublishStatus = :PUBLISH_STATUS_ONLINE';  
List<Knowledge__kav> articles = Database.query(q);
```

Other Usage for SOQL and SOSL with KnowledgeArticleVersion

To expose the *migrated_to_from_id* on **KnowledgeArticle** and **KnowledgeArticleVersion** to the sObject API: expose **MigratedToFromArticleVersion** in **KnowledgeArticleVersion**.

- For SOQL:
 - To filter by **MigratedToFromArticleVersion**, remove any other filters.
 - When filtering by **MigratedToFromArticleVersion**, use the '=' or 'IN' operator.
 - When filtering by **MigratedToFromArticleVersion**, the value can't be null or empty.
- SOSL doesn't support **MigratedToFromArticleVersion**.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

KnowledgeArticleVersionHistory

History is available for tracked fields of the object.

SEE ALSO:

[Knowledge](#)

[KnowledgeArticle](#)

[KnowledgeArticleViewStat](#)

[KnowledgeArticleVoteStat](#)

KnowledgeArticleVersionHistory

Enables read-only access to the full history of an article. This object is available in API version 25.0 and later.

Knowledge__VersionHistory is derived from this object. To access this derived object, [turn on field history tracking](#) for Knowledge objects.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

Knowledge must be enabled in your org. This object respects field, entity, and record-level security. You must have at least “Read” permission on the article type or the field to access its history. For data category security, Salesforce determines access based on the categorization of the online version of an article. If there is no online version, then security is applied based on the archived version, followed by the security of the draft version.

Fields

Field Name	Details
<code>DataType</code>	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of data that is tracked in the history table. This field is available in API version 50.0 and later.</p>
<code>EventType</code>	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of event that is tracked in the history table.</p>
<code>FieldName</code>	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Name of the tracked field.</p>
<code>Language</code>	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The language that the article is written in, such as <code>French</code> or <code>Chinese (Traditional)</code>. Querying or searching articles in SOSL requires that you specify the <code>Language</code> field in the WHERE clause. The language must be the same for all article types.</p>

Field Name	Details
NewValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The new value of the field that was changed.</p>
OldValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The most recent value of the field before it was changed.</p>
ParentId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the article.</p>
ParentObjectType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of object that contains the field.</p>
VersionId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID assigned to a version of the article.</p>
VersionNumber	<p>Type int</p> <p>Properties Filter, Group, Sort</p>

Field Name**Details****Description**

The number assigned to a version of an article. This field is available in API version 24.0 and later.

Usage

Use this object to query events in the history of an article. For example, you can retrieve the number of edits a particular user has made to an article, how many times the article has been published, and so on.

KnowledgeArticleViewStat

Provides statistics on the number of views for the specified article across all article types. This object is read-only and available in API version 20.0 and later.

Knowledge__ViewStat is derived from this object.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Knowledge must be enabled in your org. Users must have access to the published version of an article to retrieve its views. For more information on published article version, see the `PublishStatus` field in `KnowledgeArticleVersion`.

Fields

Field Name**Details**

Channel

Type

picklist

Properties

Filter, Group, Restricted picklist, Sort

Description

The channel where the article is viewed:

- `AllChannels` for article views across all channels.
- `App` for the internal Salesforce Knowledge application.
- `Pkb` for article views in public knowledge base.
- `Csp` for Customer Portal.
- `Ppm` for article view in partner portal.

Field Name	Details
NormalizedScore	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Article's weighted views in the selected channel. The article with most views has a score of 100. Other article views are then calculated relative to this highest view score. For example, if the best read article has 2000 views and another has 1000. The first one gets a score of 100 while the second gets 50.</p>
ParentId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the viewed article. This corresponds to a KnowledgeArticle record.</p>
ViewCount	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description The number of unique views an article has received in the selected channel. An article with a high number of views may not always have a high normalized score. The normalized score for an article is calculated based on views over time, with more recent views earning a higher score. This field is available in API version 27.0 and later.</p>

Usage

Use this object to query or retrieve statistics for article views.

Alternatively, client applications can use the article type `API Name` followed by `__ViewStat` to query or retrieve most viewed articles from a specific article type.

SOQL Samples

The following SOQL clause uses KnowledgeArticleViewStat to query all the article views in Salesforce Knowledge and return the related articles:

```
SELECT Id, NormalizedScore, Parent.Id
FROM KnowledgeArticleViewStat where Channel = 'App'
ORDER BY NormalizedScore
```

Use the following clause to restrict your query to Offer articles for the `Offer` article type:

```
SELECT Id, NormalizedScore, Parent.Id
      FROM Offer__ViewStat where Channel = 'App'
      ORDER BY NormalizedScore
```

SEE ALSO:

[Knowledge](#)

[KnowledgeArticle](#)

[KnowledgeArticleVersion](#)

[KnowledgeArticleVoteStat](#)

KnowledgeArticleVoteStat

Provides the weighted rating for the specified article on a scale of 1 to 5 across all article types. This object is read-only and available in API version 20.0 and later.

`Knowledge__VoteStat` is derived from this object.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Knowledge must be enabled in your org. Users must have access to the published version of an article to retrieve its votes. For more information on published article version, see the `PublishStatus` field in `KnowledgeArticleVersion`

Fields

Field Name	Details
<code>Channel</code>	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The channel where the article is rated:</p> <ul style="list-style-type: none"> • <code>AllChannels</code> for article views across all channels. • <code>App</code> for the internal Salesforce Knowledge application. • <code>Pkb</code> for article views in public knowledge base. • <code>Csp</code> for Customer Portal. • <code>Prm</code> for article view in partner portal.

Field Name	Details
NormalizedScore	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Article's weighted score on a scale of 1 to 5. A higher score means more votes. Articles without recent votes trend towards an average rating of three stars.</p>
ParentId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The rated article. This corresponds to a KnowledgeArticle record.</p>

Usage

Use this object to query or retrieve the rating for an article.

Alternatively, client applications can use the article type `API Name` followed by `__VoteStat` to query or retrieve the rating for an article for a specific article type.

SOQL Samples

See KnowledgeArticleViewStat.

LandingPage

Represents a Pardot landing page. A landing page is a web page that a visitor reaches after clicking a link or advertisement. Landing pages can be created in Pardot Classic and synced to Salesforce or created on the Landing Page object in Pardot Lightning App. This object is available in API version 42.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, your org must use Pardot and users need the CRM User or Sales User permission set. To create, update, or delete a builder landing page, the Use Pardot Content Experience permission set is required.

Fields

Field Name	Details
CampaignId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the related campaign.</p>
ContentLastSaved	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time of the last time someone changed and saved the landing page Name, Campaign, Content, IsHideFromSearchEngineIndex, or Vanity URL fields. This field is available in API version 53.0 and later.</p>
ContentLastSavedById	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The user who last changed and saved the Content body. This is a relationship field. This field is available in API version 53.0 and later.</p> <p>Relationship Name ContentLastSaved</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
FallbackUrl	<p>Type string</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The URL used to redirect viewers after the landing page is unpublished. This field is available in API version 54.0 and later.</p>
FooterCode	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description <Script>, <style>, and <link> code added before the landing page's closing body tag. This field is available in API version 54.0 and later.</p>
FormErrorRate	<p>Type percent</p> <p>Properties Filter, Group, Sort</p> <p>Description The percentage of errors made on the landing page form. Calculated as total errors divided by total views.</p>
FormSubmissionRate	<p>Type percent</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The percentage of form submissions based on the total number of landing page views.</p>
HeaderCode	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description <Script>, <style>, and <link> code added to the head tag of the landing page. This field is available in API version 54.0 and later.</p>
IsHideFromSearchEngineIndex	<p>Type boolean</p>

Field Name	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the landing page is hidden from search engine indexing. Default value is <code>false</code>. This field is available in API version 53.0 and later.</p>
LastPublished	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time of the last time someone published the landing page. This field is available in API version 53.0 and later.</p>
LastPublishedById	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The user who last published the landing page. This is a relationship field. This field is available in API version 53.0 and later.</p> <p>Relationship Name LastPublished</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Indicates when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The date and time when the current user last viewed this record. If this value is null, this record might only have been referenced (see <code>LastReferencedDate</code>) and not viewed. This field is available in API version 53.0 and later.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Sort</p> <p>Description</p> <p>The name of the landing page.</p>
PublicLink	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The URL where the landing page is available. This field is available in API version 53.0 and later.</p>
Source	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>Indicates where the landing page was created. Default value is <code>Salesforce</code>. This field is available in API version 53.0 and later.</p>
Status	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>Indicates the state of the landing page: <code>Draft</code>, <code>Published</code>, or <code>Published (Changes Pending)</code>. Default value is <code>Draft</code>. This field is available in API version 53.0 and later.</p>
TotalFormErrors	<p>Type</p> <p>int</p>

Field Name	Details
	<p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The total number of times a visitor or prospect enters an invalid email address or leaves a required field blank on a landing page form.</p>
TotalFormSubmissions	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The number of times a form on the landing page has been submitted.</p>
TotalTrackedLinkClicks	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The number of times prospects clicked a link on the landing page's thank you page.</p>
TotalViews	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The total number of times visitors and prospects viewed your landing page. This total includes multiple views from the same person.</p>
UniqueFormErrors	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The number of individual visitors and prospects who made an error on the form. This metric doesn't include multiple errors from the same person.</p>
UniqueFormSubmissions	<p>Type int</p>

Field Name	Details
	<p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The number of individual visitors who submitted a form on the landing page. This metric doesn't include multiple submissions from the same person.</p>
UniqueTrackedLinkClicks	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The number of times a prospect clicked a link on the landing page's thank you page. This metric doesn't include multiple clicks of the same link.</p>
UniqueViews	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The number of individual visitors and prospects who viewed your landing page. This metric doesn't include multiple views from the same person.</p>
VanityUrl	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The custom path that's appended to tracker domains to create a vanity URL. This field doesn't support scheme or domain values. This field is available in API version 53.0 and later.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[LandingPageChangeEvent](#) (API version 44.0)

Change events are available for the object.

[LandingPageFeed](#)

Feed tracking is available for the object.

Lead

Represents a prospect or lead.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `merge()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ActionCadenceAssigneeId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the sales rep designated to work the lead through their assigned sales cadence. This field is available in API version 48.0 if you enabled High Velocity Sales.</p>
ActionCadenceId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the lead's assigned sales cadence. This field is available in API version 48.0 if you enabled High Velocity Sales.</p>
ActivityMetricId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the related activity metric. This field is available in API version 48.0 if you enabled High Velocity Sales.</p>
Address	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description The compound form of the address. Read-only. For details on compound address fields, see Address Compound Fields.</p>

Field	Details
AnnualRevenue	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Annual revenue for the lead's company.</p>
City	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description City for the lead's address.</p>
CleanStatus	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Indicates the record's clean status compared with Data.com. Values include: Matched, Different, Acknowledged, Not Found, Inactive, Pending, Select Match, or Skipped.</p> <p>Several values for CleanStatus appear with different labels on the lead record.</p> <ul style="list-style-type: none"> • Matched appears as In Sync • Acknowledged appears as Reviewed • Pending appears as Not Compared
Company	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The lead's company.</p> <p> Note: If person account record types have been enabled, and if the value of Company is null, the lead converts to a person account.</p>
CompanyDunsNumber	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The Data Universal Numbering System (D-U-N-S) number, which is a unique, nine-digit number assigned to every business location in the Dun & Bradstreet database that has a unique, separate, and distinct operation. Industries and companies use D-U-N-S numbers as a global standard for business identification and tracking. Maximum size is 9 characters.</p> <p> Note: This field is only available to organizations that use Data.com Prospector or Data.com Clean.</p>
ConnectionReceivedId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.</p>
ConnectionSentId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.</p>
ConvertedAccountId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Object reference ID that points to the account into which the lead converted. This is a relationship field.</p> <p>Relationship Name ConvertedAccount</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
ConvertedContactId	<p>Type reference</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description Object reference ID that points to the contact into which the lead converted. This is a relationship field.</p> <p>Relationship Name ConvertedContact</p> <p>Relationship Type Lookup</p> <p>Refers To Contact</p>
ConvertedDate	<p>Type date</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Date on which this lead was converted.</p>
ConvertedOpportunityId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Object reference ID that points to the opportunity into which the lead has been converted. This is a relationship field.</p> <p>Relationship Name ConvertedOpportunity</p> <p>Relationship Type Lookup</p> <p>Refers To Opportunity</p>
Country	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The lead's country.</p>

Field	Details
CountryCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ISO country code for the lead's address.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The lead's description.</p>
Division	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.</p>
Email	<p>Type email</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The lead's email address.</p>
EmailBouncedDate	<p>Type dateTime</p>

Field	Details
	<p>Properties Filter, Nillable, Sort, Update</p> <p>Description If bounce management is activated and an email sent to the lead bounced, the date and time of the bounce.</p>
EmailBouncedReason	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description If bounce management is activated and an email sent to the lead bounced, the reason for the bounce.</p>
Fax	<p>Type phone</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The lead's fax number.</p>
FirstCallDateTime	<p>Type datetime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time of the first call placed to the lead. This field is available in API version 48.0 if you enabled High Velocity Sales.</p>
FirstEmailDateTime	<p>Type datetime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time of the first email sent to the lead. This field is available in API version 48.0 if you enabled High Velocity Sales.</p>
FirstName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description The lead's first name up to 40 characters.</p>
HasOptedOutOfEmail	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Update</p> <p>Description Indicates whether the lead doesn't want to receive email from Salesforce (<code>true</code>) or does (<code>false</code>). Label is Email Opt Out.</p>
HasOptedOutOfFax	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the lead doesn't want to receive faxes from Salesforce (<code>true</code>) or does (<code>false</code>). Label is FaxOpt Out.</p>
GeocodeAccuracy	<p>Type picklist</p> <p>Properties Create, Filter, Group, Retrieve, Query, Restricted picklist, Nillable, Sort, Update</p> <p>Description Accuracy level of the geocode for the address. For details on geolocation compound fields, see Compound Field Considerations and Limitations.</p>
IndividualId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the data privacy record associated with this lead. This field is available if you enabled Data Protection and Privacy in Setup.</p> <p>Relationship Name Individual</p> <p>Relationship Type Lookup</p> <p>Refers To Individual</p>

Field	Details
Industry	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Industry in which the lead works.</p>
IsConverted	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the lead has been converted (<code>true</code>) or not (<code>false</code>). Label is Converted.</p>
IsDeleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>
IsUnreadByOwner	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description If true, lead has been assigned, but not yet viewed. See Unread Leads for more information. Label is Unread By Owner.</p>
Jigsaw	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description References the ID of a contact in Data.com. If a lead has a value in this field, it means that a contact was imported as a lead from Data.com. If the contact (converted to a lead) wasn't imported from Data.com, the field value is null. Maximum size is 20 characters. Available in API version 22.0 and later. Label is Data.com Key.</p> <p> Important: The <code>Jigsaw</code> field is exposed in the API to support troubleshooting for import errors and reimporting of corrected data. Don't modify the value in the <code>Jigsaw</code> field.</p>

Field	Details
LastActivityDate	<p>Type date</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Value is the most recent of either:</p> <ul style="list-style-type: none"> • Due date of the most recent event logged against the record. • Due date of the most recently closed task associated with the record.
LastName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. Last name of the lead up to 80 characters.</p>
LastReferencedDate	<p>Type datetime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type datetime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
Latitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>Longitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between -90 and 90 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.</p>

Field	Details
Longitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>Latitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between -180 and 180 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.</p>
LeadSource	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The lead's source.</p>
MasterRecordId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description If this record was deleted as the result of a merge, this field contains the ID of the record that was kept. If this record was deleted for any other reason, or has not been deleted, the value is <code>null</code>.</p> <p> Note: When using Apex triggers to determine which record was deleted in a merge event, this field's value is the ID of the record that remains in <code>Trigger.old</code>. In <code>Trigger.new</code>, the value is <code>null</code>.</p> <p>This is a relationship field.</p> <p>Relationship Name MasterRecord</p> <p>Relationship Type Lookup</p> <p>Refers To Lead</p>
MiddleName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description The lead's middle name up to 40 characters. To enable this field, ask Salesforce Customer Support for help.</p>
MobilePhone	<p>Type phone</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The lead's mobile phone number.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description Concatenation of <code>FirstName</code>, <code>MiddleName</code>, <code>LastName</code>, and <code>Suffix</code> up to 203 characters, including whitespaces.</p>
NumberOfEmployees	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Number of employees at the lead's company. Label is Employees.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the lead's owner. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>

Field	Details
PartnerAccountId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the partner account for the partner user that owns this lead. Available if Partner Relationship Management is enabled or if digital experiences is enabled and you have partner portal licenses.</p> <p> Note: If you're uploading leads using API version 15.0 or earlier, and one of the leads in the batch has a partner user as the owner, the <code>Partner Account</code> field on all leads in the batch is set to that partner user's account regardless of whether the partner user is the owner. In version 16.0, the <code>Partner Account</code> field is set to the appropriate account for the partner user that owns the lead. If the owner of the lead isn't a partner user, this field remains empty.</p>
Phone	<p>Type phone</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The lead's phone number.</p>
PhotoUrl	<p>Type url</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Path to be combined with the URL of a Salesforce instance (<i>Example:</i> <code>https://yourInstance.salesforce.com/</code>) to generate a URL to request the social network profile image associated with the lead. Generated URL returns an HTTP redirect (code 302) to the social network profile image for the lead.</p> <p>Empty if Social Accounts and Contacts isn't enabled or if Social Accounts and Contacts has been disabled for the requesting user.</p>
PostalCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Postal code for the address of the lead. Label is Zip/Postal Code.</p>

Field	Details
Rating	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Rating of the lead.</p>
RecordTypeId	<p>Type reference</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description ID of the record type assigned to this object.</p>
Salutation	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Salutation for the lead.</p>
ScoreIntelligenceId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the intelligent field record that contains lead score.</p>
State	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description State for the address of the lead.</p>
StateCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ISO state code for the lead's address.</p>

Field	Details
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Status code for this converted lead. Status codes are defined in <code>Status</code> and represented in the API by the <code>LeadStatus</code> object.</p>
Street	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Street number and name for the address of the lead.</p>
Suffix	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The lead's name suffix up to 40 characters. To enable this field, ask Salesforce Customer Support for help.</p>
Title	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Title for the lead, such as CFO or CEO.</p>
Website	<p>Type url</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Website for the lead.</p>

 **Note:** If you import lead data and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself..

Converted Leads

Leads have a special state to indicate that they have been converted into an account, a contact, and an opportunity. Your client application can convert leads via the `convertLead()` call. Users can also convert leads in Salesforce. After a lead has been converted, it's read-only. However, you can query converted lead records. Only users with the View and Edit Converted Leads permission can update converted lead records.

Leads have several fields that indicate their converted status. These special fields are set when converting the lead in the user interface.

- `ConvertedAccountId`
- `ConvertedContactId`
- `ConvertedDate`
- `ConvertedOpportunityId`
- `IsConverted`
- `Status`

 **Note:** If person account record types have been enabled, and if the value of `Company` is null, the lead converts to a person account.

Unread Leads

Leads have a special state to indicate that they have not been viewed or edited by the lead owner. In Salesforce, this is helpful for users to know which leads have been assigned to them but which they have not touched yet. `IsUnreadByOwner` is `true` if the lead owner has not yet viewed or edited the lead, and `false` if the lead owner has viewed or edited the lead at least one time.

Lead Status Picklist

Each `status` value corresponds to either a converted or unconverted status in the lead status picklist, as defined in the user interface. To obtain the lead status values in the picklist, a client application can query `LeadStatus`.

You can't convert a lead via the API by changing `status` to one of the converted lead status values. When you convert qualified leads into an account, contact, and opportunity, you can select one of the converted status types for the lead. Leads with a converted status type are no longer available in the Leads tab, although you can include them in reports.

Usage

To update a lead or to convert one with `convertLead()`, log in to your client application with the "Edit" permission on leads.

When you create, update, or upsert a lead, your client application can have the lead assigned to multiple user records based on assignment rules that have been configured in Salesforce.

To use this feature, your client application needs to set either of the following options (but not both) in the `AssignmentRuleHeader` used in create or update:

Field	Field Type	Details
<code>assignmentRuleId</code>	reference	ID of the assignment rule to use. Can be an inactive assignment rule. If unspecified and <code>useDefaultRule</code> is <code>true</code> , then the default assignment rule is used. To find the ID for a given assignment rule, query the <code>AssignmentRule</code> object (specifying <code>RuleType="leadAssignment"</code>), iterate through the returned

Field	Field Type	Details
		AssignmentRule records, find the one you want to use, retrieve its ID, and then specify its ID in this field in the AssignmentRuleHeader.
useDefaultRule	boolean	Specifies whether to use the default rule for rule-based assignment (<code>true</code>) or not (<code>false</code>). Default rules are assigned in the user interface.

Java Sample

The following Java sample shows how to automatically assign a newly created lead.

```
package wsc;

import com.sforce.soap.enterprise.Connector;
import com.sforce.soap.enterprise.EnterpriseConnection;
import com.sforce.ws.ConnectionException;
import com.sforce.ws.ConnectorConfig;
import com.sforce.soap.enterprise.subject.Lead;
import com.sforce.soap.enterprise.QueryResult;
import com.sforce.soap.enterprise.SaveResult;
import com.sforce.soap.enterprise.subject.SObject;

public class LeadAssignment {

    static final String USERNAME = "REPLACE USER NAME";
    static final String PASSWORD = "REPLACE PASSWORD";
    static EnterpriseConnection connection;

    static LeadAssignment _leadAssignment;

    // Main
    public static void main(String[] args)
    {
        // Establish connection and login
        ConnectorConfig config = new ConnectorConfig();
        config.setUsername(USERNAME);
        config.setPassword(PASSWORD);
        try {
            connection = Connector.newConnection(config);
            System.out.println("Logged in, endpoint: " + config.getAuthEndpoint());
        } catch (ConnectionException e1) {
            e1.printStackTrace();
        }
    }

    // Create lead
    _leadAssignment = new LeadAssignment();
    try {
        _leadAssignment.CreateLead();
    } catch (Exception e) {
        e.printStackTrace();
    }
}
```

```

    // Logout
    try {
        connection.logout();
        System.out.println("Logged out");
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}

public void CreateLead() throws ConnectionException
{
    // Create a new Lead and assign various properties
    Lead lead = new Lead();

    lead.setFirstName("Joe");
    lead.setLastName("Smith");
    lead.setCompany("ABC Corporation");
    lead.setLeadSource("API");
    // The lead assignment rule will assign any new leads that
    // have "API" as the LeadSource to a particular user

    // In this sample we will look for a particular rule and if found
    // use the id for the lead assignment. If it is not found we will
    // instruct the call to use the current default rule. You can't use
    // both of these values together.
    QueryResult qr = connection.query("SELECT Id FROM AssignmentRule WHERE Name = " +
                                     "'Mass Mail Campaign' AND SubjectType = 'Lead'");
    if (qr.getSize() == 0) {
        connection.setAssignmentRuleHeader(null, true);
    } else {
        connection.setAssignmentRuleHeader(qr.getRecords()[0].getId(), false);
    }

    // Every operation that results in a new or updated lead will
    // use the specified rule until the header is removed from the
    // connection.
    SaveResult[] sr = connection.create(new SObject[] {lead});
    for (int i=0;i<sr.length;i++) {
        if (sr[i].isSuccess()) {
            System.out.println("Successfully created lead with id of: " +
                               sr[i].getId() + ".");
        } else {
            System.out.println("Error creating lead: " +
                               sr[i].getErrors()[0].getMessage());
        }
    }

    // This call effectively removes the header, the next lead will
    // be assigned to the default lead owner.
    connection.clearAssignmentRuleHeader();
}
}

```

C# Sample

The following C# sample shows how to automatically assign a newly created lead.

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;
using System.ServiceModel;
using LeadSample.sforce;

namespace LeadSample
{
    class LeadAssignment
    {
        private static SoapClient client;
        private static SoapClient apiClient;
        private static SessionHeader header;
        private static LoginResult loginResult;
        private static readonly string Username = "REPLACE USERNAME";
        private static readonly string Password = "REPLACE PASSWORD AND SECURITY TOKEN";

        // Create the proxy binding and login
        private LeadAssignment()
        {
            client = new SoapClient();

            try
            {
                loginResult = client.login(null, Username, Password);
            }
            catch (Exception e)
            {
                Console.WriteLine("Unexpected login error: " + e.Message);
                Console.WriteLine(e.StackTrace);
                return;
            }
            // Access API endpoint and create new client
            header = new SessionHeader();
            header.sessionId = loginResult.sessionId;
            apiClient = new SoapClient("Soap", loginResult.serverUrl);
        }

        [STAThread]
        static void Main(string[] args)
        {
            LeadAssignment leadAssignment = new LeadAssignment();
            try
            {
                leadAssignment.CreateLead();
            }

LeadCleanInfo

Stores the metadata Data.com Clean uses to determine a lead record's clean status. Helps you automate the cleaning or related processing of lead records.

 **Note:** When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see [Data.com Prospector and Clean Retirement](#).

Lead Clean Info provides a snapshot of the data in your Salesforce lead record and its matched Data.com record at the time the Salesforce record was cleaned.

Lead Clean Info includes a number of bit vector fields, whose component fields each correspond to individual object fields and provide related data or status information about those fields. For example, the bit vector field `IsDifferent` has an `IsDifferentTitle` field. If the `IsDifferentTitle` field's value is `False`, that means the `Title` field value is *the same* on the Salesforce lead record and its matched Data.com record.

LeadCleanInfo bit vector fields include:

- `CleanedBy` indicates who (a user) or what (a Clean job) cleaned the lead record.
- `IsDifferent` indicates whether or not a field on the lead record has a value that differs from the corresponding field on the matched Data.com record.
- `IsFlaggedWrong` indicates whether or not a field on the lead record has a value that is flagged as wrong to Data.com.
- `IsReviewed` indicates whether or not a field on the lead record is in a `Reviewed` state, which means that the value was reviewed but not accepted..

Their individual bits are defined here

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Fields

Field Name	Details
Address	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description The compound form of the address. Read-only. See Address Compound Fields for details on compound address fields.</p>

DataDotComId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID Data.com maintains for the contact associated with the lead.</p>
Email	<p>Type email</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The lead's email address.</p>
FirstName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The lead's first name.</p>
Industry	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The industry the lead belongs to.</p>
IsDifferentAnnualRevenue	<p>Type boolean</p>

Field Name	Details
	<p>Properties Filter</p> <p>Description Indicates whether the lead's <code>AnnualRevenue</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentCity</code>	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates whether the lead's <code>City</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentCompanyDunsNumber</code>	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates whether the lead's <code>Company D-U-N-S Number</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentCompanyName</code>	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates whether the lead's <code>Company Name</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentCountry</code>	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates whether the lead's <code>Country</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentCountryCode</code>	<p>Type boolean</p>

Field Name	Details
	<p>Properties Filter</p> <p>Description Indicates whether the account's <code>Country Code</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentDandBCompanyDunsNumber</code>	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates whether the lead's <code>D&B Company D-U-N-S Number</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentEmail</code>	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates whether the lead's <code>Email</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentFirstName</code>	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates whether the lead's <code>First Name</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentIndustry</code>	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates whether the lead's <code>Industry</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentLastName</code>	<p>Type boolean</p>

Field Name	Details
	<p>Properties Filter</p> <p>Description Indicates whether the lead's <code>Last Name</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentNumberOfEmployees</code>	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates whether the lead's <code>No. of Employees</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentPhone</code>	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates whether the lead's <code>Phone</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentPostalCode</code>	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates whether the lead's <code>Postal Code</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentState</code>	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates whether the lead's <code>State</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentStateCode</code>	<p>Type boolean</p> <p>Properties Filter</p>

Field Name	Details
	<p>Description</p> <p>Indicates whether the account's <code>State Code</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentStreet</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter</p> <p>Description</p> <p>Indicates whether the lead's <code>Street</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentTitle</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter</p> <p>Description</p> <p>Indicates whether the lead's <code>Title</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsFlaggedWrongAddress</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>Indicates whether the lead's <code>Address</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).</p>
<code>IsFlaggedWrongAnnualRevenue</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>Indicates whether the lead's <code>Annual Revenue</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).</p>
<code>IsFlaggedWrongCompanyDunsNumber</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p>

Field Name	Details
	<p>Description</p> <p>Indicates whether the lead's <code>Company D-U-N-S Number</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).</p>
<code>IsFlaggedWrongCompanyName</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>Indicates whether the lead's <code>Company Name</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).</p>
<code>IsFlaggedWrongEmail</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>Indicates whether the lead's <code>Email</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).</p>
<code>IsFlaggedWrongIndustry</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>Indicates whether the lead's <code>Industry</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).</p>
<code>IsFlaggedWrongName</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>Indicates whether the lead's <code>Name</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).</p>
<code>IsFlaggedWrongNumberOfEmployees</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p>

Field Name	Details
	<p>Description</p> <p>Indicates whether the lead's <code>No. of Employees</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).</p>
<code>IsFlaggedWrongPhone</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>Indicates whether the lead's <code>Phone</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).</p>
<code>IsFlaggedWrongTitle</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>Indicates whether the lead's <code>Title</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).</p>
<code>IsInactive</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Indicates whether the lead has been reported to Data.com as <i>Inactive</i> (<code>true</code>) or not (<code>false</code>).</p>
<code>IsReviewedAddress</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>Indicates whether the lead's <code>Address</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).</p>
<code>IsReviewedAnnualRevenue</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p>

Field Name	Details
	<p>Description</p> <p>Indicates whether the lead's Annual Revenue field value is in a Reviewed state (<code>true</code>) or not (<code>false</code>).</p>
IsReviewedCompanyDunsNumber	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>Indicates whether the lead's Company D-U-N-S Number field value is in a Reviewed state (<code>true</code>) or not (<code>false</code>).</p>
IsReviewedCompanyName	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>Indicates whether the lead's Company Name field value is in a Reviewed state (<code>true</code>) or not (<code>false</code>).</p>
IsReviewedDandBCompanyDunsNumber	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>Indicates whether the lead's D&B Company D-U-N-S Number field value is in a Reviewed state (<code>true</code>) or not (<code>false</code>).</p>
IsReviewedEmail	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>Indicates whether the lead's Email field value is in a Reviewed state (<code>true</code>) or not (<code>false</code>).</p>
IsReviewedIndustry	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p>

Field Name	Details
	<p>Description Indicates whether the lead's <code>Industry</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).</p>
<code>IsReviewedName</code>	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Indicates whether the lead's <code>Name</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).</p>
<code>IsReviewedNumberOfEmployees</code>	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Indicates whether the lead's <code>No. of Employees</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).</p>
<code>IsReviewedPhone</code>	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Indicates whether the lead's <code>Phone</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).</p>
<code>IsReviewedTitle</code>	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Indicates whether the lead's <code>Title</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).</p>
<code>LastMatchedDate</code>	<p>Type dateTime</p> <p>Properties Filter, Sort</p> <p>Description The date the lead record was last matched and linked to a Data.com record.</p>

Field Name	Details
LastName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The lead's last name.</p>
LastStatusChangedById	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of who or what last changed the record's <code>Clean Status</code> field value: a Salesforce user or a Clean job.</p>
LastStatusChangedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date on which the record's <code>Clean Status</code> field value was last changed.</p>
Latitude	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Used with <code>Longitude</code> to specify the precise geolocation of a billing address. Data not currently provided.</p>
LeadId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The unique, system-generated ID assigned when the lead record was created.</p>
Longitude	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description Used with <code>Latitude</code> to specify the precise geolocation of a billing address. Data not currently provided.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, Sort, Update</p> <p>Description Field label is Lead Clean Info Name. The name of the lead. Maximum size is 255 characters.</p>
NumberOfEmployees	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of employees working at the lead.</p>
Phone	<p>Type phone</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The phone number for the lead.</p>
PostalCode	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Details for the billing address of the lead.</p>
State	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Details for the billing address of the lead.</p>
Street	<p>Type textarea</p>

Field Name	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description Details for the billing address of the lead.</p>
Title	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The lead's title.</p>

Usage

Developers can create triggers that read the Lead Clean Info fields to help automate the cleaning or related processing of lead records.

LeadDailyMetric

Represents the daily engagement metrics for a lead. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

High Velocity Sales must be enabled.

Fields

Field	Details
AllCallsCallBackLater	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of calls in the day for this lead with the call result Call Back Later.</p>
AllCallsLeftVoicemail	<p>Type int</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of calls in the day for this lead with the call result Left Voicemail.</p>
AllCallsMeaningfulConnect	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of calls in the day for this lead with the call result Meaningful Connect.</p>
AllCallsNotInterested	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of calls in the day for this lead with the call result Not Interested.</p>
AllCallsUncategorized	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of calls in the day for this lead with no call result specified.</p>
AllCallsUnqualified	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of calls in the day for this lead with the call result Unqualified.</p>
AllEmailsBouncedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The total of hard and soft bounced emails for this lead in the day. This is a calculated field.</p>

Field	Details
AllEmailsDeliveredCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of successfully delivered emails for this lead in the day. This is a calculated field.</p>
AllEmailsHardBouncedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of hard bounced emails for this lead in the day.</p>
AllEmailsOutOfOfficeCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of emails that triggered an out of office reply for this lead in the day.</p>
AllEmailsSentCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of emails sent to this lead in the day. This is a calculated field.</p>
AllEmailsSoftBouncedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of emails soft bounced for this lead in the day.</p>
AllEmailsTrackedSentCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description The number of emails sent to this lead with engagement tracking enabled in the day.</p>
AllEmailsUntrackedSentCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of emails sent to this lead without engagement tracking enabled in the day.</p>
AllTotalCallsCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The total number of calls to this contact with all call results in the day. This is a calculated field.</p>
DailyCutOffTimeStamp	<p>Type dateTime</p> <p>Properties Filter, Sort</p> <p>Description The time of day when each 24 hour metrics period starts and ends.</p>
Date	<p>Type date</p> <p>Properties Filter, Group, Sort</p> <p>Description The date on which the engagement occurred.</p>
DateInt	<p>Type int</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The date on which the engagement occurred, in yyyyymmdd format.</p>
IsLocked	<p>Type boolean</p>

Field	Details
	<p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the daily metric record is locked or not. The default value is <code>false</code>.</p>
LeadId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the related lead. This is a relationship field.</p> <p>Relationship Name Lead</p> <p>Relationship Type Lookup</p> <p>Refers To Lead</p>
MayEdit	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the daily metric record can be edited or not. The default value is <code>false</code>.</p>
UniqueEmailsLinkClickedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of individual emails in which the lead clicked a link in the day.</p>
UniqueEmailsOpenedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of individual emails opened by the lead in the day.</p>

Field	Details
UniqueEmailsRepliedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of individual emails replied to by the lead in the day.</p>

LeadMonthlyMetric

Represents the monthly engagement metrics for a lead. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

High Velocity Sales must be enabled.

Fields

Field	Details
AllCallsCallBackLater	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of calls in the month for this lead with the call result Call Back Later.</p>
AllCallsLeftVoicemail	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of calls in the month for this lead with the call result Left Voicemail.</p>
AllCallsMeaningfulConnect	<p>Type int</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of calls in the month for this lead with the call result Meaningful Connect.</p>
AllCallsNotInterested	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of calls in the month for this lead with the call result Not Interested.</p>
AllCallsUncategorized	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of calls in the month for this lead with no call result specified.</p>
AllCallsUnqualified	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of calls in the month for this lead with the call result Unqualified.</p>
AllEmailsBouncedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The total of hard and soft bounced emails for this lead in the month. This is a calculated field.</p>
AllEmailsDeliveredCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of successfully delivered emails for this lead in the month. This is a calculated field.</p>

Field	Details
AllEmailsHardBouncedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of hard bounced emails for this lead in the month.</p>
AllEmailsOutOfOfficeCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of emails that triggered an out of office reply for this lead in the month.</p>
AllEmailsSentCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of emails sent to this lead in the month. This is a calculated field.</p>
AllEmailsSoftBouncedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of emails soft bounced for this lead in the month.</p>
AllEmailsTrackedSentCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of emails sent to this lead with engagement tracking enabled in the month.</p>
AllEmailsUntrackedSentCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description The number of emails sent to this lead without engagement tracking enabled in the month.</p>
AllTotalCallsCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The total number of calls to this lead with all call results in the month. This is a calculated field.</p>
IsLocked	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the monthly metric record is locked or not. The default value is <code>false</code>.</p>
LeadId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the related lead. This is a relationship field.</p> <p>Relationship Name Lead</p> <p>Relationship Type Lookup</p> <p>Refers To Lead</p>
MayEdit	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the monthly metric record can be edited or not. The default value is <code>false</code>.</p>

Field	Details
Month	<p>Type date</p> <p>Properties Filter, Group, Sort</p> <p>Description The month in which the engagement occurred.</p>
MonthInt	<p>Type int</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The month in which the engagement occurred, in yyyy-mm format.</p>
UniqueEmailsLinkClickedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of individual emails in which the lead clicked a link in the month.</p>
UniqueEmailsOpenedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of individual emails opened by the lead in the month.</p>
UniqueEmailsRepliedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of individual emails replied to by the lead in the month.</p>

LeadOwnerSharingRule

Represents the rules for sharing a lead with users other than the owner.

 **Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to Rule Name in the user interface. This field is available in API version 24.0 and later.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p>
GroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p>

Field	Details
	<p>Description</p> <p>The ID representing the source group. Leads owned by users in the source group trigger the rule to give access.</p>
LeadAccessLevel	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description</p> <p>A value that represents the type of sharing being allowed. The possible values are:</p> <ul style="list-style-type: none"> • Read • Edit
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to Label on the user interface.</p>
UserOrGroupId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The ID representing the target user or group. The target user or group is being given access.</p>

Usage

Use these objects to manage the sharing rules for leads. General sharing and Territory-related sharing use this object.

 **Note:** The original territory management feature is now unavailable. For more information, see [The Original Territory Management Module Will Be Retired in the Summer '21 Release](#). The information in this topic applies to the original territory management feature only, and not to Enterprise Territory Management.

LeadShare

Represents a sharing entry on a Lead.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users with access to the Lead object can access this object.

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field	Details
<code>IsDeleted</code>	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>
<code>LeadAccessLevel</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Level of access that the User or Group has to the Lead. The possible values are:</p> <ul style="list-style-type: none"> • Read

Field	Details
	<ul style="list-style-type: none"> • <code>Edit</code> • <code>All</code> This value is not valid when creating or updating these records. <p>This field must be set to an access level that is higher than the organization's default access level for leads.</p>
<code>LeadId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the Lead associated with this sharing entry. This field can't be updated. This is a relationship field.</p> <p>Relationship Name Lead</p> <p>Relationship Type Lookup</p> <p>Refers To Lead</p>
<code>RowCause</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Reason that this sharing entry exists. You can only write a value in this field when its value is either omitted or set to <code>Manual</code> (default). You can create a value for this field in API versions 32.0 and later with the correct organization-wide sharing settings. Values include:</p> <ul style="list-style-type: none"> • <code>Manual</code>—The User or Group has access because a user with "All" access manually shared the Lead with them. • <code>Owner</code>—The User is the owner of the Lead. • <code>Rule</code>—The User or Group has access via a Lead sharing rule. • <code>GuestRule</code>—The User or Group has access via a Lead guest user sharing rule. • <code>LpuImplicit</code>—The User has access to records owned by high-volume Experience Cloud site users via a share group. • <code>ARImplicit</code>—The User, who belongs to a partner or customer account, has access to the Lead via an account relationship data sharing rule.
<code>UserOrGroupId</code>	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the User or Group that has been given access to the Lead. This field can't be updated. This is a polymorphic relationship field.</p> <p>Relationship Name UserOrGroup</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>

Usage

This object allows you to determine which users and groups can view or edit leads owned by other users.

If you attempt to create a record that matches an existing record, the existing record is returned.

LeadStatus

Represents the status of a Lead, such as Open, Qualified, or Converted.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ApiName	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, idLookup, Sort</p> <p>Description Uniquely identifies a picklist value so it can be retrieved without using an id or primary label.</p>
IsConverted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether this lead status value represents a converted lead (<code>true</code>) or not (<code>false</code>). Multiple lead status values can represent a converted lead.</p>
IsDefault	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether this is the default lead status value (<code>true</code>) or not (<code>false</code>) in the picklist.</p>
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Label for this lead status value. This display value is the internal label that does not get translated.</p>
SortOrder	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Number used to sort this value in the lead status picklist. These numbers are not guaranteed to be sequential, as some previous lead status values might have been deleted.</p>

Usage

This object represents a value in the lead status picklist (see Lead Status Picklist). The lead status picklist provides additional information about the status of a Lead, such as whether a given status value represents a converted Lead. Query this object to retrieve the set of values in the lead status picklist, and then use that information while processing Lead objects to determine more information about a

given lead. For example, the application could test whether a given lead is converted based on its Status value and the value of the `IsConverted` property in the associated LeadStatus record.

SEE ALSO:

[LeadOwnerSharingRule](#)

[LeadShare](#)

LeadTag

Associates a word or short phrase with a Lead.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ItemId	<p>Type reference</p> <p>Properties Create, Filter</p> <p>Description ID of the tagged item.</p>
Name	<p>Type string</p> <p>Properties Create, Filter</p> <p>Description Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.</p>
TagDefinitionId	<p>Type reference</p> <p>Properties Filter</p> <p>Description ID of the parent TagDefinition object that owns the tag.</p>

Field Name	Details
Type	<p>Type picklist</p> <p>Properties Create, Filter, Restricted picklist</p> <p>Description Defines the visibility of a tag. Valid values:</p> <ul style="list-style-type: none"> • <code>Public</code>—The tag can be viewed and manipulated by all users in an organization. • <code>Personal</code>—The tag can be viewed or manipulated only by a user with a matching <code>OwnerId</code>.

Usage

LeadTag stores the relationship between its parent TagDefinition and the Lead being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

LearningContent

Represents a Trailhead or Sales Enablement (myTrailhead) module assigned to a user. This object is available in API version 54.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

 **Important:** This object is used only with Workforce Engagement.

- The org must have a Workforce Engagement license.
- The org must have a Sales Enablement (myTrailhead) license.
- The user must have at least one Workforce Engagement permission set assigned to them: Workforce Engagement Admin, Workforce Engagement Analyst, Workforce Engagement Planner, Workforce Engagement Agent.

Fields

Field	Details
AvailablePointCount	<p>Type int</p> <p>Properties Group, Nillable</p> <p>Description The maximum points that a user can earn on their profile by completing the module. This value is the sum of points that the content creator assigns to the module's units.</p>
ContainsAssessmentType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist</p> <p>Description Specifies the type of assessment that the content's units include. Possible values are:</p> <ul style="list-style-type: none"> • MultipleChoiceQuiz—All the content's units have multiple-choice quizzes. • HandsOnChallenge—At least one unit has a hands-on challenge.
ContentType	<p>Type picklist</p> <p>Properties Group, Nillable, Restricted picklist</p> <p>Description The type of content assigned to the user. Possible values are:</p> <ul style="list-style-type: none"> • Module—The content is a Trailhead or Sales Enablement (myTrailhead) module
ContentUrl	<p>Type url</p> <p>Properties Group, Nillable</p> <p>Description The absolute URL to the content, such as https://purple.ny.trailhead.com/en/content/sales-enablement/modules/purple-also-sales-strategies</p>
Description	<p>Type string</p> <p>Properties Nillable</p>

Field	Details
	<p>Description The module's description.</p>
DurationCount	<p>Type int</p> <p>Properties Group, Nillable</p> <p>Description The total time, in minutes, for a learner to complete all units in the module. This value is the sum of the estimated times that the content creator assigns to the module's units.</p>
ExternalId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The GUID that Trailhead uses to reference the module.</p>
ImageUrl	<p>Type url</p> <p>Properties Group, Nillable</p> <p>Description The absolute URL to the module's badge art image file.</p>
IsPublic	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group</p> <p>Description Indicates whether the content is public Trailhead content (<code>true</code>) or private Sales Enablement (myTrailhead) content (<code>false</code>). The default value is <code>false</code>.</p>
Title	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description The module's title.</p>

[PersonTraining](#)

LegalEntity

Represents the way an organization is structured. An organization can be a single legal entity or it can comprise more than one legal entity. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CompanyName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The name of the company that this legal entity represents.</p>
Description	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The description of the legal entity.</p>
LastReferencedDate	<p>Type datetime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>

Field	Details
LastViewedDate	<p>Type datetime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.</p>
LegalEntityAddress	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description The address of the company that this legal entity represents. This is a compound field of type Address and combines these fields: LegalEntityCity, LegalEntityCountry, LegalEntityGeocodeAccuracy, LegalEntityLatitude, LegalEntityLongitude, LegalEntityPostalCode, LegalEntityState, and LegalEntityStreet. For more information, see Address Compound Fields.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the legal entity.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the record owner.</p>
Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The status of the legal entity. Possible values are:</p> <ul style="list-style-type: none"> • Active

Field	Details
	<ul style="list-style-type: none"> Inactive

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

LegalEntityFeed

Feed tracking is available for the object.

LegalEntityHistory

History is available for tracked fields of the object.

LegalEntityOwnerSharingRule

Sharing rules are available for the object.

LegalEntityShare

Sharing is available for the object.

LicenseDefinitionCustomPermission (Developer Preview)

Represents a licensed custom permission that controls access to a license's features when included in a custom permission set license definition. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access LicenseDefinitionCustomPermission, you must have the Partner Licensing Platform developer preview enabled. To participate in this developer preview, submit a participation request via the [Partner Licensing Platform Developer Preview](#) Partner Community group.

-  **Note:** The Partner Licensing Platform is available as a developer preview. The Partner Licensing Platform isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. All commands, parameters, and other features are subject to change or deprecation at any time, with or without notice. Don't implement functionality developed with these commands or tools in your production package.

Fields

Field	Details
LicenseDefinitionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description ID of the custom permission set license definition that contains the licensed custom permission. This is a relationship field.</p> <p>Relationship Name LicenseDefinition</p> <p>Relationship Type Lookup</p> <p>Refers To PermissionSetLicenseDefinition</p>
LicensedCustomPermissionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description ID of the licensed custom permission that you're including in the permission set license definition. On the CustomPermission object, the <code>isLicensed</code> field must equal true. This is a relationship field.</p> <p>Relationship Name LicensedCustomPermission</p> <p>Relationship Type Lookup</p> <p>Refers To CustomPermission</p>

Usage

For more information on permission set licenses, see [Partner Licensing Platform \(Developer Preview\)](#) in the *ISVforce Developer Guide*.

LightningExperienceTheme

Represents information for a theme in Lightning Experience. This object is available in API Version 42.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
DefaultBrandingSetId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the default branding set. This is a relationship field.</p> <p>Relationship Name DefaultBrandingSet</p> <p>Relationship Type Lookup</p> <p>Refers To BrandingSet</p>
Description	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The description of the theme. Limit: 1,000 characters.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique name of the theme in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The label corresponds to the theme name in the user interface. Limit: 70 characters.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
Language	<p>Type picklist</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Required. Language of the label. Possible values are:</p> <ul style="list-style-type: none"> • da (Danish) • de (German) • en_US (English) • es (Spanish) • es_MX (Spanish - Mexico) • fi (Finnish) • fr (French) • it (Italian) • ja (Japanese) • ko (Korean) • nl_NL (Dutch) • no (Norwegian) • pt_BR (Portuguese (Brazil)) • ru (Russian) • sv (Swedish) • th (Thai) • zh_CN (Chinese - Simplified) • zh_TW (Chinese - Traditional)
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The name of the theme. Specify up to 70 characters.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values.</p>

Field	Details
	<ul style="list-style-type: none"> In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
<code>ShouldOverrideLoadingImage</code>	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether a custom image overrides the Salesforce loading image (<code>true</code>) or not (<code>false</code>).</p>

LightningOnboardingConfig

Represents the feedback provided when users switch from Lightning Experience to Salesforce Classic. Admins can customize the question, how frequently the form appears, and where the feedback is stored in Chatter from the Adoption Assistance page in Lightning Experience Setup. Available in API version 47.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

See [Switch to Salesforce Classic Feedback Form](#) in Salesforce Help for more details.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
<code>CollaborationGroupId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the Chatter Group where the user feedback is posted. This is a relationship field.</p>

Field	Details
	<p>Relationship Name CollaborationGroup</p> <p>Relationship Type Lookup</p> <p>Refers To CollaborationGroup</p>
CustomQuestion	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Text of the custom question added by the admin. Maximum of 1,000 characters.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
FeedbackFormDaysFrequency	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The number of days between showing the feedback form when a user switches. A value of 0 indicates that the form is shown for every switch. Maximum of 30.</p>
IsCustom	<p>Type boolean</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates if a feedback form includes a custom question <code>yes</code> or not <code>no</code>.</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Indicates the language used in the org where the feedback form was created.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The label for the prompt. Maximum of 80 characters.</p>
PromptDelayTime	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Indicates the amount of time in seconds to delay between instances of all prompts, both org- and Salesforce-created. Minimum of 0 hours and 0 minutes. Maximum of 99 hours and 59 minutes.</p>
SendFeedbackToSalesforce	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates if the user feedback can be shared with Salesforce. If <code>yes</code>, share the feedback with Salesforce. If <code>no</code>, the feedback is only shared in the Chatter Group chosen when customizing the form. The default value is <code>false</code>.</p>

LightningToggleMetrics

Represents users who switched from Lightning Experience back to Salesforce Classic. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Not available in sandbox orgs.

Fields

Field Name	Details
Action	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description User switched from Lightning Experience to Salesforce Classic or from Salesforce Classic to Lightning Experience.</p>
MetricsDate	<p>Type date</p> <p>Properties Filter, Group, Sort</p> <p>Description Date user switched.</p>
RecordCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Number of user switches.</p>
UserId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description UserId of user who switched. This is a relationship field.</p> <p>Relationship Name User</p>

Field Name	Details
	Relationship Type Lookup
	Refers To User

LightningUsageByAppTypeMetrics

Represents number of users on Lightning Experience and Salesforce Mobile. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Not available in sandbox orgs.

Fields

Field Name	Details
AppExperience	Type string
	Properties Filter, Group, Nillable, Sort
	Description User's app (Lightning Experience or Salesforce Mobile).
MetricsDate	Type date
	Properties Filter, Group, Sort
	Description Date user accessed Lightning Experience or Salesforce Mobile.
UserId	Type reference
	Properties Filter, Group, Sort

Field Name	Details
	<p>Description UserId for user accessing Lightning Experience or Salesforce Mobile. This is a relationship field.</p> <p>Relationship Name User</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>

LightningUsageByBrowserMetrics

Represents Lightning Experience usage grouped by user's browser. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Not available in sandbox orgs.

Fields

Field Name	Details
Browser	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Browser used to access Lightning Experience.</p>
MetricsDate	<p>Type date</p> <p>Properties Filter, Group, Sort</p> <p>Description Date user accessed Lightning Experience.</p>

Field Name	Details
PageName	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description Page user viewed in Lightning Experience.</p>
TotalCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Total number of pages accessed in Lightning Experience.</p>

LightningUsageByPageMetrics

Represents standard pages users viewed most frequently in Lightning Experience. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Not available in sandbox orgs.

Fields

Field Name	Details
MetricsDate	<p>Type date</p> <p>Properties Filter, Group, Sort</p> <p>Description Date user viewed page in Lightning Experience.</p>
PageName	<p>Type string</p>

Field Name	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description Name of page user viewed.</p>
TotalCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Total number of pages viewed.</p>
UserId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description Userid of user who viewed page. This is a relationship field.</p> <p>Relationship Name User</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>

LightningUsageByFlexiPageMetrics

Represents custom pages users viewed most frequently in Lightning Experience. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Not available in sandbox orgs.

Fields

Field Name	Details
FlexiPageNameOrId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Name or Id of custom page user viewed in Lightning Experience.</p>
FlexiPageType	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description Custom page type.</p>
MetricsDate	<p>Type date</p> <p>Properties Filter, Group, Sort</p> <p>Description Date user viewed page in Lightning Experience.</p>
TotalCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Total number of custom pages viewed.</p>

LightningExitByPageMetrics

.Represents standard pages users switched from Lightning Experience to Salesforce most frequently. This object is available in API version 44.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Not available in sandbox orgs.

Fields

Field Name	Details
MetricsDate	<p>Type date</p> <p>Properties Filter, Group, Sort</p> <p>Description Date user viewed page in Lightning Experience.</p>
PageName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Name of page user viewed.</p>
RecordCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Total number of pages where the switch occurred.</p>
UserId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description UserId of user who viewed page. This is a relationship field.</p> <p>Relationship Name User</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>

LinkedArticle

Represents a knowledge article that is attached to a work order, work order line item, or work type. This object is available in API version 37.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Knowledge must be enabled in your org. Field Service must be enabled. Only users that have access to the Knowledge article and the parent record linked to it can access this object.

In Knowledge in Salesforce Classic, only Field Service objects such as Work Order, Work Type, and Work Order Line Item are supported for linked articles. In Lightning Knowledge, other social objects such as Chat, Messaging, Voice Call, and Social Post are supported for linked articles.

Fields

Field Name	Details
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
KnowledgeArticleId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the Knowledge article attached to the record. The label in the user interface is Knowledge Article ID.</p>
KnowledgeArticleVersionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The version of the Knowledge article attached to the record. This field lists the title of the attached version and links to the version. The label in the user interface is Article Version.</p> <p>When you attach an article to a work order, that version of the article stays associated with the work order, even if later versions are published. If needed, you can detach and reattach an article to a work order to link the latest version.</p>
LinkedEntityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the record that the Knowledge article is attached to. The label in the user interface is Linked Record ID.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The title of the article. The label in the user interface is Article Title.</p>
RecordTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the article's record type, if used. This field is only available for Lightning Knowledge.</p>
Type	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description (Read only) The type of record that the Knowledge article is attached to. For example, work order. The label in the user interface is Linked Object Type.</p>

Usage

Admins can customize linked articles' page layouts, fields, validation rules, and more from the Linked Articles page in Setup.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

LinkedArticleFeed

Feed tracking is available for the object.

LinkedArticleHistory

History is available for tracked fields of the object.

LinkedArticleFeed

Represents the comment feed on a linked article. This object is available in API version 39.0 and later.

For additional information about feeds, see [FeedItem](#) on page 1750.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Knowledge must be enabled in your org.

Fields

Field	Details
<code>BestCommentId</code>	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the comment marked as best answer on a question post.</p>
<code>Body</code>	<p>Type textarea</p> <p>Properties Nillable, Sort</p> <p>Description The body of the feed item. Required when <code>Type</code> is <code>TextPost</code> or <code>AdvancedTextPost</code>. Optional when <code>Type</code> is <code>ContentPost</code> or <code>LinkPost</code>.</p> <p>Although a value for <code>Body</code> is not required for the <code>ContentPost</code> type, an attachment is required. If an attachment isn't present, the type changes to <code>TextPost</code> or <code>AdvancedTextPost</code>, depending on the API version. <code>TextPost</code> and <code>AdvancedTextPost</code> do require a value for <code>Body</code>.</p>

Field	Details
	<ul style="list-style-type: none"> • <code></code> <p>The <code></code> tag is accessible only through the API and must reference files in Salesforce similar to this example: <code></code></p> <p> Note: In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation.</p>
LikeCount	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description The number of likes associated with this feed item.</p>
LinkUrl	<p>Type url</p> <p>Properties Nillable, Sort</p> <p>Description The URL of a <code>LinkPost</code>.</p>
ParentId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the object type to which the feed item is related. For example, set this field to a <code>UserId</code> to post to someone's profile feed, or an <code>AccountId</code> to post to a specific account.</p>
RelatedRecordId	<p>Type reference</p> <p>Properties Group, Nillable, Sort</p> <p>Description ID of the <code>ContentVersion</code> record associated with a <code>ContentPost</code>. For WDC thanks posts, it's the ID of the <code>WorkThanks</code> object associated with a <code>RypplePost</code>. This field is typically null for all posts except <code>ContentPost</code> and <code>RypplePost</code>.</p> <p>For example, set this field to an existing <code>ContentVersion</code> ID and post it to a feed with <code>Type</code> set to <code>ContentPost</code>.</p>

Field	Details
Title	<p>Type string</p> <p>Properties Group, Nillable, Sort</p> <p>Description The title of the feed item. When the <code>Type</code> is <code>LinkPost</code>, the <code>LinkUrl</code> is the URL and this field is the link name. The <code>Title</code> field can be updated on posts of <code>Type</code> <code>QuestionPost</code>.</p>
Type	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The type of feed item. Except for <code>ContentPost</code>, <code>LinkPost</code>, and <code>TextPost</code>, don't create feed items of other types directly from the API.</p> <ul style="list-style-type: none"> • <code>ActivityEvent</code>—indirectly generated event when a user or the API adds a <code>Task</code> associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a <code>Task</code> or <code>Event</code> associated with a case record (excluding email and call logging). For a recurring <code>Task</code> with <code>CaseFeed</code> disabled, one event is generated for the series only. For a recurring <code>Task</code> with <code>CaseFeed</code> enabled, events are generated for the series and each occurrence. • <code>AdvancedTextPost</code>—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post. • <code>AnnouncementPost</code>—Not used. • <code>ApprovalPost</code>—generated when a user submits an approval. • <code>BasicTemplateFeedItem</code>—Not used. • <code>CanvasPost</code>—a post made by a canvas app posted on a feed. • <code>CollaborationGroupCreated</code>—generated when a user creates a public group. • <code>CollaborationGroupUnarchived</code>—Not used. • <code>ContentPost</code>—a post with an attached file. • <code>CreatedRecordEvent</code>—generated when a user creates a record from the publisher. • <code>DashboardComponentAlert</code>—generated when a dashboard metric or gauge exceeds a user-defined threshold. • <code>DashboardComponentSnapshot</code>—created when a user posts a dashboard snapshot on a feed. • <code>LinkPost</code>—a post with an attached URL. • <code>PollPost</code>—a poll posted on a feed. • <code>ProfileSkillPost</code>—generated when a skill is added to a user's Chatter profile.

Field	Details
	<ul style="list-style-type: none"> • <code>QuestionPost</code>—generated when a user posts a question. • <code>ReplyPost</code>—generated when Chatter Answers posts a reply. • <code>RypplePost</code>—generated when a user creates a Thanks badge in WDC. • <code>TextPost</code>—a direct text entry on a feed. • <code>TrackedChange</code>—a change or group of changes to a tracked field. • <code>UserStatus</code>—automatically generated when a user adds a post. Deprecated. <p>The following values appear in the <code>Type</code> picklist for all feed objects but apply only to <code>CaseFeed</code>:</p> <ul style="list-style-type: none"> • <code>AttachArticleEvent</code>—generated event when a user attaches an article to a case. • <code>CallLogPost</code>—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event. • <code>CaseCommentPost</code>—generated event when a user adds a case comment for a case object. • <code>ChangeStatusPost</code>—generated event when a user changes the status of a case. • <code>ChatTranscriptPost</code>—generated event when Chat transcript is saved to a case. • <code>EmailMessageEvent</code>—generated event when an email related to a case object is sent or received. • <code>FacebookPost</code>—generated when a Facebook post is created from a case. Deprecated. • <code>MilestoneEvent</code>—generated when a case milestone is completed or reaches violation status. • <code>SocialPost</code>—generated when a social post is created from a case. <p> Note: If you set <code>Type</code> to <code>ContentPost</code>, also specify <code>ContentData</code> and <code>ContentFileName</code>.</p>

LinkedArticleHistory

Represents the history of changes made to tracked fields on a linked article. This object is available in API version 37.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

Knowledge must be enabled in your org.

Fields

Field Name	Details
DataType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Data type of the field that was changed.</p>
Field	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The name of the field that was changed.</p>
LinkedArticleId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the tracked linked article. The history is displayed on the detail page for this record.</p>
NewValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The new value of the field that was changed.</p>
OldValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The value of the field before it was changed.</p>

ListEmail

Represents a list email sent from Salesforce, or sent from Pardot and synced to Salesforce. When the list email is sent, the recipients are generated by combining recipients in ListEmailIndividualRecipients and ListEmailRecipientSource. Duplicate and other invalid recipients are removed. The result is the recipients who are sent any given list email. Has a one-to-many relationship with ListEmailRecipientSource and ListEmailIndividualRecipient. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ActionCadenceStepId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the action cadence step that generated a list email record. Used for automated emails in HVS. Users must have the High Velocity Sales Cadence Creator or High Velocity Sales User permission enabled. This field is available in API version 54.0 and later.</p> <p>Relationship Name ActionCadenceStep</p> <p>Relationship Type Lookup</p> <p>Refers To ActionCadenceStep</p>
CampaignId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the related campaign. This field is available in API version 42.0 and later. This is a relationship field.</p>

Field	Details
	<p>Relationship Name Campaign</p> <p>Relationship Type Lookup</p> <p>Refers To Campaign</p>
ClickThroughRate	<p>Type percent</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The percentage of visitors who click links contained in emails delivered (sent minus bounces) to them. Multiple clicks for a same link are counted. This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
ClickToOpenRatio	<p>Type percent</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The number of unique clicks divided by unique HTML opens. This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
DeliveryRate	<p>Type percent</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The percentage of the emails that were delivered compared to the number that bounced (soft and hard). Note: this data includes emails that were delivered to the recipient's spam folder. This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
EmailContentId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The ID of the email content record associated with the list email.</p> <p>This field is available in API version 50.0 or later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
FromAddress	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Create, Filter, Update</p> <p>Description</p> <p>Read-only except when list email is in draft state. Validated against user's addresses.</p>
FromName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Read-only except when list email is in draft state. Validated against user's addresses. This field is null for emails sent from Pardot.</p>
HasAttachment	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Read-only. Defaulted on create and update. Value is <code>true</code> if the list email has an attachment. This field is null for emails sent from Pardot.</p>
HtmlBody	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Create, Nillable, Update</p> <p>Description</p> <p>The body of the list email. This field is null for emails sent from Pardot.</p> <p>List emails can contain up to 32,000 characters for the body. These limits include visible characters and other characters in the email, including markup.</p>
IsTracked	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p>

Field	Details
	<p>Description</p> <p>Indicates if email tracking was on when the list email was sent. This field is blank for emails sent from Pardot and synced to Salesforce. This field is null for emails sent from Pardot.</p>
LastReferencedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The timestamp that indicates when the current user last viewed a record that is related to this list email. This field is null for emails sent from Pardot.</p>
LastViewedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. This field is null for emails sent from Pardot.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p>Description</p> <p>Read-only except when list email is in draft state.</p>
OpenRate	<p>Type</p> <p>percent</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The percentage of unique HTML opens compared to the total number of emails delivered (sent minus bounces).</p> <p>This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
OptOutRate	<p>Type</p> <p>percent</p> <p>Properties</p> <p>Filter, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The percentage of users that have opted out compared to the total number of emails sent.</p> <p>This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description References Group and User. This field is null for emails sent from Pardot.</p> <p>This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ProgramName	<p>Type string</p> <p>Properties Filter, Group, Nillable</p> <p>Description</p> <p>The name of an Engagement Studio program where an automated email originates. Reserved for future use.</p> <p>This field is available in API version 46.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
ScheduledDate	<p>Type dateTime</p> <p>Properties CreateFilter, Nillable, Sort, Update</p> <p>Description Read-only. If null and <code>Status</code> is set to Scheduled, defaults to created time.</p>
SentVia	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p>

Field	Details
	<p>Description</p> <p>Indicates whether the email was sent from Salesforce or Pardot. The allowed values are <code>Salesforce</code> or <code>Pardot</code> or <code>MessagingService</code>.</p> <p>This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
SpamComplaintRate	<p>Type percent</p> <p>Properties Filter, Nillable, Sort</p> <p>Description</p> <p>The percentage of spam complaints compared to the total number emails sent.</p> <p>This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description</p> <p>Read-only except when list email is in draft state.</p> <p>Changing the status to Scheduled causes the list email to be sent.</p> <p>Valid values:</p> <ul style="list-style-type: none"> • Draft • Scheduled • Sent • Limit Error • Cancelled
Subject	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description</p> <p>Read-only except when list email is in draft state. This field is null for emails sent from Pardot.</p> <p>List emails can contain up to 3,000 characters for the subject. These limits include visible characters and other characters in the email, including markup.</p>
TextBody	<p>Type textarea</p>

Field	Details
	<p>Properties Create, Nillable, Update</p> <p>Description Read-only except when list email is in draft state. This field is null for emails sent from Pardot.</p>
TotalDelivered	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The total number of emails minus hard and soft bounces. Note: this data includes emails that were delivered to the recipient's spam folder. This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
TotalHardBounced	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The total number of emails that permanently bounced back to the sender because the address is invalid. A hard bounce can occur because the domain name doesn't exist or because the recipient is unknown. This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
TotalOpens	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The total number of times a prospect's email client loaded the images in the HTML version of the email. We also record an open if the prospect clicks a link within the HTML or text email without downloading images. A click indicates that they viewed the message. Some email clients (Outlook, Apple Mail, Thunderbird) don't display images by default. Pardot counts an open each time the images load. This field is available in API version 41.0 and later. To access this field. users need the High Velocity Sales User permission set or your org must use Pardot and users need the CRM User or Sales User permission set.</p>

Field	Details
TotalOutOfOffice	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The total number of replies received with an out of office message. This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the Salesforce Engage permission set.</p>
TotalReplies	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The total number of replies received. This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the Salesforce Engage permission set.</p>
TotalSent	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description Read-only. The total number of list emails sent, including bounced, opted-out, and invalid To: addresses.</p>
TotalSoftBounced	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The total number of times a recipient's mail server acknowledged the email, but returned it to the sender. Sometimes it is because the recipient's mailbox is full or the mail server is temporarily unavailable. A soft bounce message can sometimes be deliverable at another time. After 5 soft bounces, Pardot opts the prospect out of emails. This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
TotalSpamComplaints	<p>Type int</p>

Field	Details
	<p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The total number of prospects that reported the email as spam. This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
TotalTrackedLinkClicks	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The number of times prospects clicked a link in the email. This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
Type	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist</p> <p>Description The type of email sent: list email or automated email. Reserved for future use. This field is available in API version 46.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
UniqueClickThroughRate	<p>Type percent</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The percentage of visitors who clicked a link contained in an email. This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
UniqueOpens	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The number of prospects who loaded the images in the HTML version of the email. The Unique Opens category counts each recipient one time only, even if the prospect loaded images several times.</p> <p>This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
UniqueOptOuts	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Unique opt-outs represents the total number of prospects that have clicked the link to unsubscribe or opted out of all emails in the Email Preference Center. These prospects are removed from future email sends.</p> <p>This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
UniqueReplies	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The total number of unique replies.</p> <p>This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the Salesforce Engage permission set.</p>
UniqueTrackedLinkClicks	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The number of times a prospect clicked a link in the email. This metric doesn't include multiple clicks of the same link.</p> <p>This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

AccountChangeEvent (API version 44.0)

Change events are available for the object.

ListEmailOwnerSharingRule

Sharing rules are available for the object.

ListEmailShare

Sharing is available for the object.

ListEmailIndividualRecipient

For a list email in Salesforce, represents a recipient. Each record represents a link from a list email to exactly one recipient for that list email. Recipients can be contacts, leads, or campaign members. Has a one-to-many relationship with ListEmail. This object is available in API version 44.0 and later.

The visibility and accessibility of this object is inherited from the related list email.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ActionCadenceStepTrackerId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Understand which action cadence step tracker the list email individual recipient is related to. Used for automated emails in HVS. Users must have the High Velocity Sales Cadence Creator or High Velocity Sales User permission enabled. This field is available in API version 54.0 and later.</p> <p>Relationship Name ActionCadenceStepTracker</p> <p>Relationship Type Lookup</p> <p>Refers To ActionCadenceStepTracker</p>

Field	Details
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Possible values are:</p> <ul style="list-style-type: none"> • EUR (Euro) • INR (Indian Rupee) • USD (US Dollars)
ListEmailId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The related list email record. Required on record creation; read-only otherwise. This is a relationship field.</p> <p>Relationship Name ListEmail</p> <p>Relationship Type Lookup</p> <p>Refers To ListEmail</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The auto-generated name of the list email recipient source.</p>
RecipientId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description the contact, lead, person account, or campaign member ID of the individual list email recipient. This is a relationship field.</p> <p>Relationship Name Recipient</p>

Field	Details
	Relationship Type Lookup
	Refers To CampaignMember, Contact, Lead

Usage

ListEmailRecipientSource

For a list email in Salesforce, represents the dynamically defined sources of recipient email addresses. Each record represents a link to a single list view or campaign that is examined when the list email is sent. Has a one-to-many relationship with ListEmail. This object is available in API version 41.0 and later.

The visibility and accessibility of this object is inherited from the related list email.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `getDeleted()`, `getUpdated()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ListEmailId	Type reference
	Properties Create, Filter, Group, Sort
	Description The related list email record. Required on record creation; read-only otherwise. This is a relationship field.
	Relationship Name ListEmail
	Relationship Type Lookup
	Refers To ListEmail
Name	Type string

Field	Details
	<p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The auto-generated name of the list email recipient source.</p>
SourceListId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The id of a list view to send the list email to. Read-only except when list email is in draft state. This is a polymorphic relationship field.</p> <p>Relationship Name SourceList</p> <p>Relationship Type Lookup</p> <p>Refers To Campaign, ListView, Topic</p>
SourceType	<p>Type reference</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Required. Read-only except when list email is in draft state. Valid values:</p> <ul style="list-style-type: none"> • Include

ListView

Represents a list view. A list view specifies a set of records for an object, based on specific criteria. This object is available in API version 32.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`

Fields

Name	Details
DeveloperName	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The fully qualified developer name of the list view.</p>
IsSqlCompatible	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Whether the list view can be used with SOQL.</p>
LastModifiedBy	<p>Type User</p> <p>Properties Filter, Sort</p> <p>Description The name of the user who last modified the list view.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time when the list view was last referenced, with a precision of one second.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time when the list view was last viewed, with a precision of one second.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p>

Name	Details
	<p>Description The name of the list view.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace of the list view.</p>
SubjectType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The API name of the sObject for the list view.</p>

ListViewChart

Represents a graphical chart that's displayed on Salesforce for Android, iOS, and mobile web list views. The chart aggregates data that is filtered based on the list view that's currently displayed. This object is available in API version 33.0 and later and is accessible by portal users.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Name	Description
AggregateField	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Query, Restricted picklist, Retrieve, Sort, Update</p> <p>Description The field that's used for calculating data on each group. <code>AggregateField</code> can't be the same as <code>GroupingField</code>.</p>
AggregateType	<p>Type picklist</p>

Name	Description
	<p>Properties Create, Filter, Group, Query, Restricted picklist, Retrieve, Sort, Update</p> <p>Description The type of calculations to run on each group. The supported <code>AggregateType</code> values are <code>Count</code>, <code>Sum</code>, and <code>Avg</code>.</p>
ChartType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Query, Restricted picklist, Retrieve, Sort, Update</p> <p>Description The type of chart to create. The supported chart types are horizontal bar chart, vertical bar chart, and donut chart.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Query, Retrieve, Sort, Update</p> <p>Description The fully qualified developer name of the chart.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
GroupingField	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Query, Restricted picklist, Retrieve, Sort, Update</p> <p>Description The field that's used to divide the data into collections. The field must be supported by SOQL <code>GROUP BY</code> functionality. <code>GroupingField</code> can't be the same as <code>AggregateField</code>.</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The language of the <code>MasterLabel</code>.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Query, Retrieve, Sort, Update</p>

Name	Description
	<p>Description The label for the chart.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Filter, Group, Query, Retrieve, Sort, Update</p> <p>Description The ID of the user who owns the chart. This is a relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
SubjectType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Query, Restricted picklist, Retrieve, Sort</p> <p>Description The API name of the sObject for the chart.</p>

ListViewChartInstance

Retrieves metadata for all standard and custom charts for a given entity in context of a given list view. This object is available in API versions 34.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field Name	Details
AggregateField	<p>Type string</p>

Field Name	Details
	<p>Properties Filter, Group, Sort</p> <p>Description The field that's used for calculating data on each group. <code>AggregateField</code> can't be the same as <code>GroupingField</code>.</p>
AggregateType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of calculations to run on each group. The supported <code>AggregateType</code> values are <code>Count</code>, <code>Sum</code>, and <code>Avg</code>.</p>
ChartType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of chart to create. The supported chart types are horizontal bar chart, vertical bar chart, and donut chart.</p>
DataQuery	<p>Type textarea</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The SOQL query that can be executed to fetch the data for drawing a chart.</p>
DataQueryWithoutUserFilters	<p>Type textarea</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The SOQL query that can be executed to fetch the data for drawing a chart, without user filters. Available in API v43.0 and later.</p>
DeveloperName	<p>Type string</p> <p>Properties Filter, Group, Sort</p>

Field Name

Details

Description

API name of the chart. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.

Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.

ExternalId

Type

string

Properties

Filter, Group, Nillable, Sort

Description

Reserved for future use.

GroupingField

Type

string

Properties

Filter, Group, Sort

Description

The field that's used to divide the data into collections. The field has to be supported by SOQL `GROUP BY` functionality. `GroupingField` can't be the same as `AggregateField`.

IsDeletable

Type

boolean

Properties

Defaulted on create, Filter, Group, Sort

Description

Indicates if the chart can be deleted.

IsEditable

Type

boolean

Properties

Defaulted on create, Filter, Group, Sort

Description

Indicates if the chart can be edited. Standard charts are not editable.

Field Name	Details
IsLastViewed	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates if a chart is the last viewed by a user.</p>
Label	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The display name of the chart.</p>
ListViewChartId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the chart created by a user. For standard charts, this is null. This is a relationship field.</p> <p>Relationship Name ListViewChart</p> <p>Relationship Type Lookup</p> <p>Refers To ListViewChart</p>
ListViewContextId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the list view in context of which the chart is generated. Required to query <code>ListViewChartInstance</code>. This is a relationship field.</p> <p>Relationship Name ListViewContext</p> <p>Relationship Type Lookup</p>

Field Name	Details
	<p>Refers To ListView</p>
SourceEntity	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description API name of the entity to which the chart is related. Required to query ListViewChartInstance.</p>

Usage

Example 1. Retrieve all custom and standard charts for Account entity for All Accounts list view

```
SELECT AggregateField, AggregateType, ChartType, DataQuery, DeveloperName, ExternalId, GroupingField, Id, IsDeletable, IsEditable, IsLastViewed, Label, ListViewChartId, ListViewContextId, SourceEntity FROM ListViewChartInstance WHERE SourceEntity='Account' and ListViewContextId='00BR0000000U8Hr'
```

Example 2. Retrieve metadata for a specific custom chart by ID for Account entity and All Accounts list view

```
SELECT AggregateField, AggregateType, ChartType, DataQuery, DeveloperName, ExternalId, GroupingField, Id, IsDeletable, IsEditable, IsLastViewed, Label, ListViewChartId, ListViewContextId, SourceEntity FROM ListViewChartInstance WHERE SourceEntity='Account' and ListViewContextId='00BR0000000U8Hr' and ListViewChartId='0DdR00000004CBxKAM'
```

Example 3. Retrieve metadata for a specific standard chart by its developer name for Account entity and All Accounts list view

```
SELECT AggregateField, AggregateType, ChartType, DataQuery, DeveloperName, ExternalId, GroupingField, Id, IsDeletable, IsEditable, IsLastViewed, Label, ListViewChartId, ListViewContextId, SourceEntity FROM ListViewChartInstance WHERE SourceEntity='Account' and ListViewContextId='00BR0000000U8Hr' and DeveloperName='AccountsByIndustry'
```

LiveAgentSession

This object is automatically created for each Chat session and stores information about the session. This object is available in API versions 28.0 and later.

 **Note:** Standard fields for the LiveAgentSession object can only be modified if your administrator has given you editing permissions for these records.

Supported Calls

create(), delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(), search(), undelete(), update()

Fields

Field Name	Details
AgentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description ID of the agent associated with the session.</p>
ChatReqAssigned	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The number of chat requests that were assigned to an agent during a session.</p>
ChatReqDeclined	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The number of chat requests that were declined by an agent during a session.</p>
ChatReqEngaged	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The number of chats in which an agent was engaged during a session.</p>
ChatReqTimedOut	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The number of chat requests that timed out in an agent's queue during a session.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description The date and time that the session record was last referenced.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time that the session record was last viewed.</p>
LoginTime	<p>Type dateTime</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The date and time an agent logged in during the session.</p>
LogoutTime	<p>Type dateTime</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The date and time an agent logged out during a session.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookupSort</p> <p>Description The name of the session.</p>
NumFlagLoweredAgent	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The number of assistance flags lowered by the agent.</p>
NumFlagLoweredSupervisor	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description The number of assistance flags lowered by the supervisor.</p>
NumFlagRaised	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The number of assistance flags raised by the agent.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the owner of the session record.</p>
TimeAtCapacity	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The amount of time an agent spent with the maximum number of chats in his or her queue.</p>
TimeIdle	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The amount of time an agent spent idle during the session.</p>
TimeInAwayStatus	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The amount of time an agent spent with a status of "Away" during a session.</p>
TimeInChats	<p>Type int</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The amount of time an agent spent engaged in chats during a session.</p>
TimeInOnlineStatus	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The amount of time an agent spent with a status of "Online" during a session.</p>

Usage

Use this object to query and manage chat session records.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

LiveAgentSessionHistory

History is available for tracked fields of the object.

LiveAgentSessionOwnerSharingRule

Sharing rules are available for the object.

LiveAgentSessionShare

Sharing is available for the object.

LiveAgentSessionHistory

This object is automatically created for each Chat session and stores information about changes made to the session. This object is available in API versions 28.0 and later.

 **Note:** Standard fields for the LiveAgentSession object can only be modified if your administrator has given you editing permissions for these records.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Fields

Field Name	Details
DataType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Data type of the field that was changed.</p>
Field	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The name of the field that was changed in a session record.</p>
LiveAgentSessionId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the session record that was changed.</p>
NewValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The new value of the field that was changed.</p>
OldValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The original value of the field that was changed.</p>

Usage

Use this object to identify changes to chat session records.

LiveAgentSessionShare

This object is automatically created for each Chat session and stores information about the session. This object is available in API versions 28.0 and later.

Note: Standard fields for the LiveAgentSession object can only be modified if your administrator has given you editing permissions for these records.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field Name	Details
AccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Level of access that the User or Group has to the LiveAgentSession. The possible values are:</p> <ul style="list-style-type: none"> Read Edit All (This value is not valid for <code>create()</code> or <code>update()</code> calls.) <p>This value must be set to an access level that is higher than the organization's default access level for chat transcripts.</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the parent object, if any.</p>
RowCause	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p>

Field Name	Details
	<p>Description</p> <p>Reason that this sharing entry exists. You can create a value for this field in API versions 32.0 and later with the correct organization-wide sharing settings.</p> <p>Values can include:</p> <ul style="list-style-type: none"> • <code>Manual</code>—The User or Group has access because a user with “All” access manually shared the <code>LiveAgentSession</code> with them. • <code>Owner</code>—The User is the owner of the <code>LiveAgentSession</code> or is in a role above the <code>LiveAgentSession</code> owner in the role hierarchy.
<code>UserOrGroupId</code>	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>ID of the user or group that has been given access to the <code>LiveAgentSession</code>.</p>

Usage

This object lets you determine which users and groups can view and edit `LiveAgentSession` records owned by other users.

If you attempt to create a new record that matches an existing record, the `create()` call updates any modified fields and returns the existing record.

LiveChatBlockingRule

Represents a rule for blocking chat visitors' IP addresses from starting new chats with agents. This object is available in API version 34.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Fields

Field Name	Details
<code>Description</code>	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Nillable</p>

Field Name	Details
	<p>Description</p> <p>The description of the blocking rule—for example, the reason why the given IP address or range of addresses is being banned from starting new chats.</p>
DeveloperName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
FromIpAddress	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The IP address of the user that you want to block, or the beginning of the range of IP addresses you want to block. If you want to block a range of IP addresses, indicate the end of the range in the <code>ToIpAddress</code> field. If you don't indicate an IP address in the <code>ToIpAddress</code> field, the only IP address that will be blocked is the IP address in the <code>FromIpAddress</code> field.</p>
Language	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>The language of the blocking rule.</p>
MasterLabel	<p>Type</p> <p>string</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Sort</p> <p>Description Label for the blocking rule.</p>
ToIpAddress	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description (Optional) The end of the range of IP addresses that you want to block. The range begins with and includes the IP address in the <code>FromIpAddress</code> field, and it ends with and includes the IP address in the <code>ToIpAddress</code> field.</p>

Usage

Use this object to query and manage rules for blocking customers from starting new chats with agents.

LiveChatObjectAccessConfig

Represents the action you can perform on a specified object by the Chat API. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, enable Chat. To see the list of objects you can find or create in the UI using this API, enable the "Turns on findOrCreate in chat API" permission. You can find this permission in the Chat Settings page of the Setup UI.

Fields

Field	Details
AccessType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The API action you can perform on the object specified in <code>SubjectType</code>.</p>

Field	Details
	<p>Possible values are:</p> <ul style="list-style-type: none"> • Create • Find
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the associated LiveChatObjectAccessDefinition record. This is a relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To LiveChatObjectAccessDefinition</p>
SubjectType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The object that the action specified by <code>AccessType</code> applies to. Possible values are all standard objects.</p>

SEE ALSO:

[LiveChatObjectAccessDefinition](#)

LiveChatObjectAccessDefinition

Represents the parent record for one or more LiveChatObjectAccessConfig objects. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, enable Chat. To see the list of objects you can find or create in the UI using this API, enable the "Turns on findOrCreate in chat API" permission. You can find this permission in the Chat Settings page of the Setup UI.

Fields

Field	Details
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. The name:</p> <ul style="list-style-type: none"> • must be 40 characters or fewer • must begin with a letter • can contain only underscores and alphanumeric characters • can't include spaces • can't end with an underscore • can't contain 2 consecutive underscores <p>In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The combined language and locale ISO code, which controls the language for labels displayed in an application.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • da—Danish • de—German • en_US—English • es—Spanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese

Field	Details
	<ul style="list-style-type: none"> • ko—Korean • nl_NL—Dutch • no—Norwegian • pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish • th—Thai • zh_CN—Chinese (Simplified) • zh_TW—Chinese (Traditional)
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The label for this object's record. This display value is the internal label that doesn't get translated.</p>

LiveChatButton

Represents a button that allows visitors to request chats with Chat users. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `query()`, `update()`, `retrieve()`

Fields

Field Name	Details
Animation	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The type of animation used when an automated chat invitation appears on-screen. For automated chat invitations only. Available in API version 29.0 and later.</p>
AutoGreeting	<p>Type textarea</p>

Field Name	Details
	<p>Properties Create, Filter, Nillable, Sort</p> <p>Description The text that is automatically sent from an agent to a visitor when a chat session starts.</p> <p> Note: A greeting message in the <code>AutoGreeting</code> field of the <code>LiveChatButton</code> object overrides individual users' greeting messages in the <code>AutoGreeting</code> field in the <code>LiveChatUserConfig</code> object.</p>
<code>ChasitorIdleTimeout</code>	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The amount of time a customer has to respond to an agent message before the chat times out.</p>
<code>ChasitorIdleTimeoutWarning</code>	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The amount of time a customer has to respond to an agent message before a warning appears and a timer begins a countdown. This value must be shorter than the <code>ChasitorIdleTimeout</code> value (we recommend at least 30 seconds shorter).</p>
<code>ChatPageId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The record ID of the custom Visualforce page that contains the custom chat window code.</p>
<code>CustomAgentName</code>	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The custom name of the agent associated with the button. Available in API version 29.0 and later.</p>

Field Name	Details
	<p> Note: A custom agent name in the <code>CustomAgentName</code> field of the <code>LiveChatButton</code> object overrides individual users' custom agent name in the <code>CustomAgentName</code> field in the <code>LiveChatUserConfig</code> object.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
HasQueue	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description Determines whether to allow incoming chat requests to queue until an agent is available.</p>
InviteEndPosition	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The position on-screen where an automated chat invitation's animation ends.</p> <p> Note: You don't need to select an end position for your automated chat invitation if you use a custom animation.</p> <p>For automated chat invitations only. Available in API version 29.0 and later.</p>
InviteImageId	<p>Type reference</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The record ID of the static image resource displayed on your automated chat invitation. For automated chat invitations only. Available in API version 29.0 and later.</p>
InviteStartPosition	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The position on-screen where an automated chat invitation's animation begins.</p> <p> Note: You don't need to select a start position for your automated chat invitation if you use a custom animation.</p> <p>For automated chat invitations only. Available in API version 29.0 and later.</p>
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description For automated chat invitations, specifies whether an automated chat invitation is active and able to be sent to customers (<code>true</code>) or not (<code>false</code>). For chat buttons, this is set to <code>true</code> by default.</p>
Language	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The language of the chat.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Label for the chat button.</p>
NumberOfReroutingAttempts	<p>Type int</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description Specifies the number of times a chat request can be rerouted to available agents if all agents reject the chat request.</p>
OfflineImageId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The record ID of the static image resource that is displayed when the button is offline (inactive).</p>
OnlineImageId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The record ID of the static image resource that is displayed when the button is online (active).</p>
OptionsHasChasitorIdleTimeout	<p>Type boolean</p> <p>Properties Create, Filter</p> <p>Description Specifies whether Customer Time-Out is enabled.</p>
OptionsHasInviteAfterAccept	<p>Type boolean</p> <p>Properties Create, Filter</p> <p>Description Specifies whether an automated chat invitation can be sent to a customer after that customer has accepted a prior automated chat invitation (<code>true</code>) or not (<code>false</code>). For automated chat invitations only. Available in API version 29.0 and later.</p>
OptionsHasInviteAfterReject	<p>Type boolean</p>

Field Name	Details
	<p>Properties Create, Filter</p> <p>Description Specifies whether an automated chat invitation can be sent to a customer after that customer has rejected a prior automated chat invitation (<code>true</code>) or not (<code>false</code>). For automated chat invitations only. Available in API version 29.0 and later.</p>
OptionsHasRerouteDeclinedRequest	<p>Type boolean</p> <p>Properties Create, Filter</p> <p>Description Specifies whether a chat request that has been rejected by all available agents should be rerouted to available agents again (<code>true</code>) or not <code>false</code>.</p>
OptionsIsAutoAccept	<p>Type boolean</p> <p>Properties Create, Filter</p> <p>Description Specifies whether a chat request should be automatically accepted by the agent it's assigned to (<code>true</code>) or not <code>false</code>). For chat buttons and automated chat invitations with <code>RoutingType</code> set to <code>Most Available</code> or <code>Least Active</code>. Available in API version 30.0 and later.</p>
OptionsIsInviteAutoRemove	<p>Type boolean</p> <p>Properties Create, Filter</p> <p>Description Specifies whether an automated chat invitation should be automatically removed from the screen after a certain amount of time (<code>true</code>) or not (<code>false</code>). For automated chat invitations only. Available in API version 29.0 and later.</p>
OverallQueueLength	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The maximum number of chat requests allowed to queue.</p>

Field Name	Details
PerAgentQueueLength	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The maximum number of chat requests allowed to queue for each agent with the required skill.</p>
PostchatPageId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The record ID of the custom Visualforce page displayed when the chat ends.</p>
PostchatUrl	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The URL the user is directed to after the chat ends.</p>
PrechatFormPageId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The record ID of the custom Visualforce page displayed before the chat begins.</p>
PrechatFormUrl	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The URL the user is directed to before the chat begins.</p>
PushTimeout	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The number of seconds an agent has to answer a chat request before it's routed to the next available agent.</p>
QueueId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The record ID of the queue used for this chat button.</p>
RoutingConfigurationId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The record ID of the routing configuration used for this chat button.</p>
RoutingType	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Restricted picklist, Sort</p> <p>Description</p> <p>How chat requests are routed to agents. The values are:</p> <ul style="list-style-type: none"> • Choice—Incoming chat requests are added to the queue in Live Agent in the Salesforce console and are available to any agent with the required skill. • Least Active—Incoming chats are routed to the agent with the required skill who has the fewest active chats. • Most Available—Incoming chats are routed to the agent with the required skill and the greatest difference between chat capacity and active chat sessions. For example, if Agent A and Agent B each have a chat capacity of five, and Agent A has three active chat sessions while Agent B has one, incoming chats will be routed to Agent B. • Omni—Incoming chats are routed using Omni-Channel queues.
SiteId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The record ID of the site used for loading static resources and custom Visualforce pages.</p>

Field Name	Details
SkillId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The record ID of the skill used to route incoming chat requests. To associate multiple skills with a chat button, reference one skill in the <code>SkillId</code> field and use <code>LiveChatButtonSkill</code> junction objects for the remaining skills.</p>
TimeToRemoveInvite	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The number of seconds an automated invitation stays on-screen before it is automatically removed. For automated chat invitations only. Available in API version 29.0 and later.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The type of element to display to customers (either a chat button or an automated invitation).</p>
WindowLanguage	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The language used for standard chat windows. Custom chat windows use the language of the user's browser.</p>

Usage

Use this object to query and manage chat buttons and automated chat invitations.

LiveChatButtonDeployment

Associates an automated chat invitation with a specific deployment. This object is available in API versions 28.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Fields

Field Name	Details
ButtonId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the automated invitation associated with the deployment.</p>
DeploymentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the deployment that will feature the automated invitation.</p>

Usage

Use this object to associate automated chat invitations with specific deployments.

LiveChatButtonSkill

Represents all the skills available to a LiveChatButton except the one currently assigned. To retrieve the skill currently assigned, query LiveChatButton. This object is available in API version 25.0 and later.

Supported Calls

`create()`, `delete()`, `update()`, `query()`

Fields

Field Name	Details
ButtonID	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p>

Field Name	Details
	<p>Description The record ID of the button.</p>
SkillID	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The record ID of the skill.</p>

Usage

Use this object to assign a specific skill to a specific button for multi-skill routing. For example:

```
String myButtonId = "button_Id";
String myButtonDevName = "button_DeveloperName";
List<String> skillIds = new List<String>();

//Get one skill ID from button
for(LiveChatButton lcb : [SELECT SkillId FROM LiveChatButton WHERE DeveloperName =:
myButtonDevName]) {
    skillIds.add(lcb.SkillId);
}
//Get remaining skills from LiveChatButtonSkill join object
for(LiveChatButtonSkill lcbs : [SELECT SkillID FROM LiveChatButtonSkill WHERE ButtonId =:
myButtonId]) {
    skillIds.add(lcbs.SkillId);
}
//Retrieve all skills into a single list
List<Skill> skills = [SELECT Id, DeveloperName FROM Skill WHERE Id IN :SkillIds];
```

LiveChatDeployment

Represents the general settings for deploying Live Agent on a website. This object is available in API version 24.0 and later.

Supported Calls

create(), query(), update(), retrieve()

Fields

Field Name	Details
BrandingId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The record ID of the static image resource that's displayed in the chat window.</p>
ConnectionTimeoutDuration	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description Indicates the amount of time before the chat times out, in seconds.</p>
ConnectionWarningDuration	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description Indicates the amount of time before a time-out warning is displayed to the agent, in seconds.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>

Field Name	Details
Domains	<p>Type textarea</p> <p>Properties Create, Filter (unavailable in API version 25.0 and later), Nillable, Sort (unavailable in API version 25.0 and later)</p> <p>Description A comma-separated list of domains the deployment is allowlisted for. Leave this blank to allow the deployment to be used on any domain.</p>
HasTranscriptSave	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description Determines whether visitors can download and save transcripts from the chat window.</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The language of the deployment.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The name of the deployment</p>
MobileBrandingId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The record ID of the static image resource displayed in the mobile version of the chat window.</p>
OptionsHasPrechatApi	<p>Type boolean</p>

Field Name	Details
	<p>Properties Create, Filter</p> <p>Description Determines whether developers can access the Pre-Chat API.</p>
SiteId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The record ID of the site used for loading static resources.</p>
WindowTitle	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The text displayed in the title bar of the browser window used to launch the chat window.</p>

Usage

Use this object to query and manage live chat deployments.

LiveChatSensitiveDataRule

Represents a rule for masking or deleting data of a specified pattern. Written as a regular expression (regex). This object is available in API version 35.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `update()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field Name	Details
ActionType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The action to take on the text (remove or replace) when the sensitive data rule is triggered.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The description of the sensitive data rule—for example, “Block social security numbers.”</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object’s name in a managed package and the changes are reflected in a subscriber’s organization.</p> <p> Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance slows down while Salesforce generates one for each record.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
EnforceOn	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>Determines the roles on which the rule is enforced. The value is determined using bitwise OR operation. There are seven possible values:</p> <ol style="list-style-type: none"> 1. Rule enforced on Agent 2. Rule enforced on Visitor 3. Rule enforced on Agent and Visitor 4. Rule enforced on Supervisor 5. Rule enforced on Agent and Supervisor 6. Rule enforced on Visitor and Supervisor 7. Rule enforced on Agent, Visitor, and Supervisor
IsEnabled	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Specifies whether a sensitive data rule is active (<code>true</code>) or not (<code>false</code>). Default value (if none is provided) is <code>false</code>.</p>
Language	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>The language of the sensitive data rule.</p>
MasterLabel	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Label for the sensitive data rule.</p>
NamespacePrefix	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15</p>

Field Name	Details
	<p>characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
Pattern	<p>Type textarea</p> <p>Properties Create, Update</p> <p>Description The pattern of text blocked by the rule. Written as a JavaScript regular expression (regex).</p>
Priority	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Indicates the priority level of a Chat.</p>
Replacement	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The string of characters that replaces the blocked text (if <code>ActionType Replace</code> is selected).</p>

Usage

Use this object to mask or delete data of specified patterns, such as credit card, social security, phone and account numbers, or even profanity.

LiveChatTranscript

This object is automatically created for each Live Agent chat session and stores information about the session. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Abandoned	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The amount of time in seconds an incoming chat request remained unanswered by an agent before the chat was disconnected by the customer.</p>
AccountId	<p>Type ID</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the account associated with the chat transcript.</p>
AverageResponseTimeOperator	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The agent's average response time (in seconds) to chat messages from the visitor.</p>
AverageResponseTimeVisitor	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The visitor's average response time (in seconds) to chat messages from the agent.</p>

Field Name	Details
Body	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The contents of the chat.</p>
Browser	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The browser the visitor used for the chat.</p>
BrowserLanguage	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The language of the visitor's browser.</p>
CaseID	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the case associated with the chat transcript.</p>
ChatDuration	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The total duration of the chat in seconds.</p>
ChatKey	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The session ID of the chat before it is persisted. <code>ChatKey</code> can be used with advanced integrations in the Salesforce console. This field is available in API version 25.0 and later.</p>
ContactID	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The ID of the contact associated with the chat transcript.</p>
EndedBy	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>The way the chat was ended: by the operator, the visitor, or the system.</p>
EndTime	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>The time the chat ended.</p>
IpAddress	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>The visitor's IP address.</p>
IsChatbotSession	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Whether the visitor is chatting with a Chatbot (<code>true</code>) or not (<code>false</code>).</p>
LastReferencedDate	<p>Type</p> <p>date</p>

Field Name	Details
	<p>Properties Filter, Nillable, Sort, Update</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type date</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
LeadID	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the lead associated with the chat transcript.</p>
LiveChatButtonID	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the LiveChatButton the chat session originated from.</p>
LiveChatDeploymentID	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the LiveChatDeployment the chat session originated from.</p>
LiveChatVisitorID	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the visitor associated with the chat transcript.</p>

Field Name	Details
Location	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The best-guess approximation of the visitor's location.</p>
MaxResponseTimeOperator	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The maximum time in seconds it took an agent to respond to a chat visitor's message.</p>
MaxResponseTimeVisitor	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The maximum time in seconds it took a customer to respond to an agent's message.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name of the transcript.</p>
OperatorMessageCount	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The number of messages sent by agent(s) during the chat.</p>
OwnerID	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p>Description The ID of the operator who participated in the chat last; for missed chats, this is a system user.</p>
Platform	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The visitor's operating system platform.</p>
ReferrerUri	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Where the chat request originated.</p>
RequestTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The time the visitor requested the chat.</p>
ScreenResolution	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The visitor's screen resolution.</p>
SkillId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The record ID of the primary Skill associated with the LiveChatButton the chat session originated from. To associate multiple skills with a LiveChatTranscript, use LiveChatTranscriptSkill junction objects.</p>

Field Name	Details
StartTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The time the chat started.</p>
Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The final status of the chat: completed, missed, dropped or blocked.</p>
SupervisorTranscriptBody	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The text body of the supervisor's chat transcript.</p>
UserAgent	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The visitor's user agent string.</p>
VisitorMessageCount	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The number of messages sent by the visitor during the chat.</p>
VisitorNetwork	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The network or service provider the chat visitor used for the chat.</p>

Field Name	Details
WaitTime	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The total amount of time in seconds a chat request was waiting to be accepted by an agent.</p>

Usage

Use this object to query and manage live chat transcripts.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

LiveChatTranscriptChangeEvent (API version 44.0)

Change events are available for the object.

LiveChatTranscriptFeed (API version 47.0)

Feed tracking is available for the object.

LiveChatTranscriptHistory

History is available for tracked fields of the object.

LiveChatTranscriptOwnerSharingRule (API version 29.0)

Sharing rules are available for the object.

LiveChatTranscriptShare

Sharing is available for the object.

LiveChatTranscriptEvent

Captures specific events that occur over the lifetime of a chat. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
AgentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the agent associated with the event.</p>
Detail	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description Details associated with the event.</p>
LastReferencedDate	<p>Type date</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type date</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
LiveChatTranscriptId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the live chat transcript associated with the event.</p>
Name	<p>Type string</p>

Field Name	Details
	<p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name of the event.</p>
Time	<p>Type dateTime</p> <p>Properties Create, Filter, Sort</p> <p>Description The time at which the event happened.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The kind of event that occurred.</p> <ul style="list-style-type: none"> • Accept—Accepted • AgentBlocked—Blocked by Agent • AlertCriticalWaitChat—Critical Wait Alert Time Reached • CancelBlocked—Cancel (Blocked) • CancelNoAgent—Cancel (No Agent) • CancelNoQueue—Cancel (No Queue) • CancelVisitor—Canceled by Visitor • ChasitorIdleTimeout—Visitor Idle Time-Out • ChasitorIdleTimeoutWarningCleared—Visitor Idle Time-Out Warning Cleared • ChasitorIdleTimeoutWarningTriggered—Visitor Idle Time-Out Warning Appeared • ChatRequest—Chat Requested • ChatResumedAfterTransfer—Chat resumed • ChatbotEndChat—Chatbot end chat • ChatbotEndedChatByAction—Conversation ended by automated action • ChatbotEstablished—Accepted by Chatbot • ChatbotNotEstablished—Chatbot Request Failed • ChoiceRoute—Routed (Choice) • ClearCriticalWaitChat—Critical Wait Alert Cleared • ConferenceRequest—Chat Conference Requested

Field Name

Details

- `ConferenceRequestCanceled`—Chat Conference Canceled
- `ConferenceRequestDeclined`—Chat Conference Declined
- `ConnectionTimeout`—Visitor connection timed out. Available in API version 38.0 and later.
- `ConnectionWarning`—Warning that visitor hasn't been connected for some time and that the connection times out soon. Available in API version 38.0 and later.
- `DeclineManual`—Decline (Manual)
- `DeclineTimeout`—Decline (Timeout)
- `EndAgent`—Ended by Agent
- `EndVisitor`—Ended by Visitor
- `Enqueue`—Queued
- `FileCanceledAgent`—File Transfer Canceled by Agent
- `FileCanceledChasitor`—File Transfer Canceled by Visitor
- `FileTransferFailure`—File Transfer Failure
- `FileTransferRequested`—File Transfer Requested by Agent
- `FileTransferSuccess`—File Transfer Success
- `FileTransferToChasitor`—File Transfer Initiated by Agent
- `FlagLoweredAgent`—Flag Lowered by Agent
- `FlagLoweredSupervisor`—Flag Lowered by Supervisor
- `FlagRaised`—Flag Raised
- `LeaveAgent`—Agent Left
- `LeaveVisitor`—Visitor Left
- `OperatorJoinedConference`—Agent Joined Conference
- `OperatorLeftConference`—Agent Left Conference
- `Other`
- `PushAssignment`—Routed (Push)
- `SensitiveDataAgent`—Sensitive data blocked (Agent)
- `SensitiveDataSupervisor`—Sensitive data blocked (Supervisor)
- `SensitiveDataVisitor`—Sensitive data blocked (Visitor)
- `Transfer`—Transfer Accepted
- `TransferCancelled`—Transfer Request Canceled
- `TransferDeclined`—Transfer Request Declined
- `TransferRequest`—Transfer Requested
- `TransferToBotFailed`—Transfer to bot failed
- `TransferToButtonFailed`—Transfer to button failed
- `TransferToQueueFailed`—Transfer to queue failed
- `TransferredToBot`—Transferred to bot
- `TransferredToButton`—Transferred to button

Field Name	Details
	<ul style="list-style-type: none"> • TransferredToQueue—Transferred to queue • TransferredToSbrSkill—Transferred to skill • TransferredToSbrSkillFailed—Transfer to skill failed • Unassigned

Usage

Use this object to query and manage live chat transcript events.

 **Note:** LiveChatTranscriptEvent records are inserted after the chat is closed and the LiveTranscript record updated). However, the trigger on the LiveChatTranscriptEvent sObject fires separately on each LiveChatTranscriptEvent record within the same transaction.

All the LiveChatTranscriptEvent records are inserted in a single transaction but one by one. For example, the trigger is executed for each individual record.

```
trigger LCTE on LiveChatTranscriptEvent (before insert) {
    // Trigger.New will have only 1 record at a time and trigger will execute for
    individual record
    for(LiveChatTranscriptEvent l : Trigger.New)
        system.debug(l.Type + '>>' +l.Detail);
}
```

To avoid hitting any governors and limits, design your functionality considering this behavior. You can execute the logic by filtering the records based on the `Type` field of LiveChatTranscriptEvent.

LiveChatTranscriptShare

Represents a sharing entry on a LiveChatTranscript object. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `retrieve()` `update()`, `upsert()`

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field Name	Details
AccessLevel	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>Level of access that the User or Group has to the LiveChatTranscript. The possible values are:</p> <ul style="list-style-type: none"> • Read • Edit • All (This value is not valid for <code>create()</code> or <code>update()</code> calls.) <p>This value must be set to an access level that is higher than the organization's default access level for live chat transcripts.</p>
ParentId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>ID of the parent object, if any</p>
RowCause	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Restricted picklist, Sort</p> <p>Description</p> <p>Reason that this sharing entry exists.</p> <p>You can create a value for this field in API versions 32.0 and later with the correct organization-wide sharing settings.</p> <p>Values may include:</p> <ul style="list-style-type: none"> • Manual—The User or Group has access because a user with "All" access manually shared the LiveChatTranscript with them. • Owner—The User is the owner of the LiveChatTranscript or is in a role above the LiveChatTranscript owner in the role hierarchy.
UserOrGroupID	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>ID of the User or Group that has been given access to the LiveChatTranscript .</p>

Usage

This object lets you determine which users and groups can view and edit LiveChatTranscript records owned by other users.

If you attempt to create a new record that matches an existing record, the `create()` call updates any modified fields and returns the existing record.

LiveChatTranscriptSkill

Represents a join between LiveChatTranscript and Skill. This object is available in API version 25.0 and later.

Supported Calls

`create()`, `delete()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`

Fields

Field Name	Details
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name of the transcript.</p>
SkillId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The record ID of the skill.</p>
TranscriptId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The record ID of the transcript.</p>

Usage

Use this object to assign a specific skill to a specific transcript for multi-skill routing.

LiveChatUserConfig

Represents a setting that controls the console settings for Chat users. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field Name	Details
AutoGreeting	<p>Type textarea</p> <p>Properties Create, Nillable</p> <p>Description The text that is automatically sent from an agent to a visitor when a chat session starts.</p>
Capacity	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description Limits the amount of active chat sessions an agent can engage in.</p>
CriticalWaitTime	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The amount of time before a chat flashes to alert an agent to answer it.</p>
CustomAgentName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The custom name of the agent associated with the Live Agent configuration.</p>
DeveloperName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
HasLogoutSound	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Determines whether a sound plays when an agent logs out of the console.</p>
HasNotifications	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Determines whether desktop notifications are enabled for the configuration. Available in API version 25.0 and later.</p>
HasRequestSound	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort</p>

Field Name	Details
	<p>Description</p> <p>Determines whether a sound plays when a chat request comes in.</p>
HasSneakPeek	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Determines whether an agent sees a real-time preview of the messages typed by a visitor.</p>
HasTransferConferenceGreeting	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Determines whether to enable sending an autogreeting when you transfer to another agent or invite an agent to a conference chat.</p> <p>The default value is <code>false</code>. Available in API version 53.0 and later.</p>
IsAutoAwayOnDecline	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Determines whether agents' status is automatically changed to Away when they decline a chat request. Available in API version 26.0 and later.</p>
Language	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>The language of the configuration.</p>
MasterLabel	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The name of the configuration.</p>

Field Name	Details
OptionsHasAgentFileTransfer	<p>Type boolean</p> <p>Properties Create, Filter</p> <p>Description Determines whether agents can initiate a file transfer from a chat customer. Available in API version 31.0 and later.</p>
OptionsHasAgentSneakPeek	<p>Type boolean</p> <p>Properties Create, Filter</p> <p>Description Determines whether Sneak Peek is enabled for agents. Available in API version 29.0 and later.</p>
OptionsHasAssistanceFlag	<p>Type boolean</p> <p>Properties Create, Filter</p> <p>Description Determines whether assistance flags are enabled for agents. Available in API version 29.0 and later.</p>
OptionsHasChatConferencing	<p>Type boolean</p> <p>Properties Create, Filter</p> <p>Description Determines whether agents can invite other agents into a customer chat. Available in API version 34.0 and later.</p>
OptionsHasChatMonitoring	<p>Type boolean</p> <p>Properties Create, Filter</p> <p>Description Determines whether supervisors can view agents' ongoing chats. Available in API version 29.0 and later.</p>
OptionsHasChatTransferToAgent	<p>Type boolean</p>

Field Name	Details
	<p>Properties Create, Filter</p> <p>Description Specifies whether an agent can transfer a chat directly to another agent. Available in API version 36.0 and later.</p>
OptionsHasChatTransferToButton	<p>Type boolean</p> <p>Properties Create, Filter</p> <p>Description Specifies whether an agent can transfer a chat to an agent assigned to a particular chat button. Available in API version 36.0 and later.</p>
OptionsHasChatTransferToSkill	<p>Type boolean</p> <p>Properties Create, Filter</p> <p>Description Specifies whether an agent can transfer a chat to agents assigned to a particular skill. Available in API version 36.0 and later.</p>
OptionsHasTransferConferenceGreeting	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Specifies whether an agent can transfer a chat to an autogreeting or conference greeting. Available in API version 53.0 and later.</p>
OptionsHasVisitorBlocking	<p>Type boolean</p> <p>Properties Create, Filter</p> <p>Description Determines whether an agent can block IP addresses of troublesome visitors. Available in API version 34.0 and later.</p>
OptionsHasWhisperMessage	<p>Type boolean</p> <p>Properties Create, Filter</p>

Field Name	Details
	<p>Description</p> <p>Determines whether supervisors can send private messages to agents within an agent's chat with a customer. Available in API version 29.0 and later.</p>
OptionsIsAutoAwayOnPushTimeout	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Filter</p> <p>Description</p> <p>Determines whether an agent's status automatically changes to Away if the agent doesn't respond to a chat request within the specified push time-out limit. Available in API version 34.0 and later.</p>
SupervisorDefaultAgentStatus	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>The default agent status by which to filter agents in the Agent Status list in the supervisor panel.</p>
SupervisorDefaultButtonId	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>The default button ID by which to filter agents in the Agent Status list in the supervisor panel.</p>
SupervisorDefaultSkillId	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>The default skill ID by which to filter agents in the Agent Status list in the supervisor panel.</p>

Usage

Use this object to query and manage agent configurations in Chat.

LiveChatUserConfigProfile

Represents a join between LiveChatUserConfig and Profile. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field Name	Details
LiveChatUserConfigId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The record ID of the agent configuration</p>
ProfileId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The record ID of the profile</p>

Usage

Use this object to assign specific agent configurations to specific user profiles.

LiveChatUserConfigUser

Represents a join between Live Chat User Config and User. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field Name	Details
LiveChatUserConfigId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The record ID of the agent configuration</p>
UserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The record ID of the user</p>

Usage

Use this object to assign specific agent configurations to specific users.

LiveChatVisitor

Represents a website visitor who has started or tried to start a chat session. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
LastReferencedDate	<p>Type date</p> <p>Properties Filter, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type</p> <p>date</p> <p>Properties</p> <p>Filter, Nillable, Sort, Update</p> <p>Description</p> <p>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Autonumber, Defaulted on create, Filter, Sort</p> <p>Description</p> <p>The name of the visitor</p>
SessionKey	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The session key used to uniquely identify the visitor.</p>

Usage

Use this object to query and manage live chat visitors.

Location

Represents a warehouse, service vehicle, work site, or other element of the region where your team performs field service work. In API version 49.0 and later, you can associate activities with specific locations. Activities, such as the tasks and events related to a location, appear in the activities timeline when you view the location detail page. Also in API version 49.0 and later, Work.com users can view Employees as a related list on Location records. In API version 51.0 and later, this object is available for Omnichannel Inventory and represents physical locations where inventory is available for fulfilling orders.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

At least one of these features must be enabled:

- Commerce Store
- Contact Tracing for Employees
- Employee Experience
- Field Service
- Fulfillment Orders
- Health Cloud
- Industries Insurance
- Industries Visit
- Locations
- Omnichannel Inventory
- Public Sector
- Retail Execution
- Work.com

Fields

Field Name	Details
CloseDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Date the location closed or went out of service.</p>
ConstructionEndDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Date construction ended at the location.</p>
ConstructionStartDate	<p>Type date</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Date construction began at the location.</p>
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A brief description of the location.</p>
DrivingDirections	<p>Type string</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Directions to the location.</p>
ExternalReference	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Identifier of a location.</p>
IsInventoryLocation	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the location stores parts.</p> <p> Note: This field must be selected if you want to associate the location with product items.</p>
IsMobile	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the location moves. For example, a truck or tool box.</p>

Field Name	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the location was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date the location was last viewed.</p>
Latitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The latitude of the location.</p>
Location	<p>Type location</p> <p>Properties Nillable</p> <p>Description The geographic location.</p>
LocationLevel	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The location's position in a location hierarchy. If the location has no parent or child locations, its level is 1. Locations that belong to a hierarchy have a level of 1 for the root location, 2 for the child locations of the root location, 3 for their children, and so forth.</p>
LocationType	<p>Type picklist</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Picklist of location types. It has no default values, so you must populate it before creating any location records.</p>
LogoId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A ContentAsset representing a logo for the location. This field is available in API version 50.0 and later. This is a relationship field.</p> <p>Relationship Name Logo</p> <p>Relationship Type Lookup</p> <p>Refers To ContentAsset</p>
Longitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The longitude of the location.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the location. For example, Service Van #4.</p>
OpenDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Date the location opened or came into service.</p>

Field Name	Details
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The location's owner or driver. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ParentLocationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The location's parent location. For example, if vans are stored at a warehouse when not in service, the warehouse is the parent location. This is a relationship field.</p> <p>Relationship Name ParentLocation</p> <p>Relationship Type Lookup</p> <p>Refers To Location</p>
PossessionDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The date the location was purchased.</p>
RemodelEndDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description Date when remodel construction ended at the location.</p>
RemodelStartDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Date when remodel construction started at the location.</p>
RootLocationId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description (Read Only) The top-level location in the location's hierarchy. This is a relationship field.</p> <p>Relationship Name RootLocation</p> <p>Relationship Type Lookup</p> <p>Refers To Location</p>
ShouldSyncWithOci	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the location should sync its data with Omnichannel Inventory. The default value is <code>false</code>. This field is available in API version 51.0 and later.</p>
TimeZone	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Picklist of available time zones.</p>

Field Name	Details
VisitorAddressId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Lookup to an account's or client's address. This is a relationship field.</p> <p>Relationship Name VisitorAddress</p> <p>Relationship Type Lookup</p> <p>Refers To Address</p>

Usage

Before creating any location records, add at least one value to the Location Type picklist. LocationType is a required field.

To track your inventory in Salesforce, create product items, which represent the stock of a particular product a particular location. For example, create a product item that represents the 500 bolts you have in stock at your Warehouse A location. Each product item must be associated with a location.

To get a more granular picture of your field service operation, associate locations with service territories. For example, if a warehouse is located in a particular service territory, add it as a service territory location.

! **Important:** "Location" in Salesforce can also refer to the geolocation compound field found on many standard objects. When referencing the Location object in your Apex code, always use `Schema.Location` instead of `Location` to prevent confusion with the standard Location compound field. If referencing both the Location object and the Location field in the same snippet, you can differentiate between the two by using `System.Location` for the field and `Schema.Location` for the object.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

LocationChangeEvent (API version 48.0)

Change events are available for the object.

LocationFeed

Feed tracking is available for the object.

LocationHistory

History is available for tracked fields of the object.

LocationOwnerSharingRule

Sharing rules are available for the object.

LocationShare

Sharing is available for the object.

SEE ALSO:

[LocationGroup](#)

[LocationGroupAssignment](#)

LocationGroup

Represents a group of Omnichannel Inventory locations, providing an aggregate view of inventory availability across those locations. Omnichannel Inventory can create an inventory reservation for an order at the location group level, then assign the reservation to one or more locations in the group as needed. This object is available in API version 51.0 and later.

You can define location groups according to the logic of your business needs. For example, a location group can represent the warehouses in a geographic region, or it can include the fulfillment centers associated with a particular online storefront.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Omnichannel Inventory orgs.

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Description of the location group.</p>
ExternalReference	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Used when OCI is integrated with B2C Commerce to associate the location group with an inventory list in B2C Commerce. This value must match the inventory list ID in B2C Commerce.</p>

Field	Details
IsEnabled	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the location group is in use. If set to <i>false</i>, then inventory functions ignore this location group and its data isn't synchronized with OCI. The default value is <i>true</i>.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.</p>
LocationGroupName	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the location group.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the user who currently owns this location group. Default value is the API user that created the record.</p>
ShouldSyncWithOci	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	Description Specifies whether to synchronize inventory data for this location group with Omnichannel Inventory. The default value is <code>true</code> .

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[LocationGroupFeed](#)

Feed tracking is available for the object.

[LocationGroupHistory](#)

History is available for tracked fields of the object.

[LocationGroupOwnerSharingRule](#)

Sharing rules are available for the object.

[LocationGroupShare](#)

Sharing is available for the object.

SEE ALSO:

[Location](#)

[LocationGroupAssignment](#)

LocationGroupAssignment

Represents the assignment of a location to a location group. This object is available in API version 51.0 and later.

You can assign a location to multiple location groups, which associates it with one location group assignment for each location group that it's assigned to. Each location group assignment represents the relationship between one location and one location group, so a location or location group can be associated with multiple location group assignments.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Omnichannel Inventory orgs.

Fields

Field	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.</p>
LocationExternalReference	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The external reference of the associated location.</p>
LocationGroupAssignment	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name of the location group assignment.</p>
LocationGroupExternalReference	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The external reference of the associated location group.</p>
LocationGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p>

Field	Details
	<p>Description (Master-Detail) The associated location group.</p>
LocationGroupName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The location group name of the associated location group.</p>
LocationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description (Master-Detail) The associated location.</p>
LocationName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the associated location.</p>

[LocationGroup](#)

LocationTrustMeasure

Represents the COVID safety protocols that your business follows. For example, enforcement of masks, social distancing, cleanliness, and capacity limits. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description A brief description of the safety protocol. For example, "Employees and customers are required to wear a mask in the store."</p>
ImageUrl	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A public image URL to display for the LocationTrustMeasure object.</p>
IsVisibleInPublic	<p>Type boolean</p> <p>Properties Create, defaulted on create, Filter, Group, Sort, Update</p> <p>Description If true, displays the LocationTrustMeasure object on your site. If false, hides the LocationTrustMeasure object on your site.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date on which the record was last viewed.</p>
LocationExternalReference	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description An ID assigned to the LocationTrustMeasure objects for a particular location.</p>
LocationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique ID for the location associated with the LocationTrustMeasure.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description An auto-assigned name for the LocationTrustMeasure.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the owner for this record.</p>
SortOrder	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The order in which to display LocationTrustMeasure objects on your site.</p>
Title	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The name of the safety protocol. For example, Enforcement of Masks.</p>

LocWaitlistMsgTemplate

Represents a junction object connecting LocationWaitlist to MessagingTemplate. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date on which the record was last viewed.</p>
LocationWaitlistId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Reference to the LocationWaitlist record.</p>
MessagingTemplateId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Reference to the MessagingTemplate record.</p>

Field	Details
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of this record.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the owner for this record.</p>
Type	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The status of the queue. Possible values are:</p> <ul style="list-style-type: none"> • <code>approaching</code>—In Progress • <code>confirmation</code>—Confirmed • <code>inactive</code>—Inactive • <code>ready</code>—Ready • <code>removed</code>—Removed

LocationWaitlist

Represents a queue created for a specific location. Multiple queues can be created for a single location. For example, you can have a queue for each sales agent or a standard queue and a queue for vulnerable groups. The specific party of people in a queue is represented by `LocationWaitlistedParty`. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
BusinessHoursId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A reference to the BusinessHours record that contains the hours the business is open.</p>
ClosedDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The time a queue is closed.</p>
CumulativeGuestCount	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The total number of guests allowed.</p>
CumulativeGuestGroupCount	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The total number of groups allowed.</p>
CurrentGuestCount	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The current number of guests.</p>
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	Description A brief description of this record.
GuestCapacity	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The total capacity of guests.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date on which the record was last viewed.
MaxPartySize	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The maximum size of a group.
MessagingChannelId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The messaging channel ID.
Name	Type string

Field	Details
	<p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the group.</p>
OpenDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The time a queue is open.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the owner for this record.</p>
PartyReminderDelayMinutes	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The number of minutes between when a party is notified and when they receive a reminder.</p>
PlaceId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The location ID for this record.</p>
ResourceCapacity	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The capacity for this resource.</p>
ResourceOccupancyCount	<p>Type int</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The occupancy count for this resource.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The status of the queue. Possible values are:</p> <ul style="list-style-type: none"> • closed • open • paused

LocationWaitlistedParty

Represents a specific party of people waiting in a queue. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A brief description of this queue.</p>
EntryDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p>Description The date and time a party is added to the queue.</p>
EstimatedWaitHours	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The estimated hours of wait time for a party.</p>
EstimatedWaitMinutes	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The estimated minutes of wait time for a party.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date on which the record was last viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the group.</p>
OwnerId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the owner for this record.</p>
PartySize	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The size of the queued party.</p>
PartyStatus	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The state of a party in the queue. Possible values are:</p> <ul style="list-style-type: none">• canceled• entered• exited• ready• waiting
SignUpDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date and time when a party signed up for the queue.</p>
WaitlistId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID for the queue.</p>

LoginEvent

The documentation has moved to [LoginEvent](#) in the *Platform Events Developer Guide*.

LoginGeo

Represents the geographic location of the user's IP address for a login event. Due to the nature of geolocation technology, the accuracy of geolocation fields (for example, country, city, postal code) may vary. This object is available in API version 34.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Only users with Manage Users permissions can access this object.

Fields

Field	Details
City	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The city where the user's IP address is physically located. This value is not localized.</p>
Country	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The country where the user's IP address is physically located. This value is not localized.</p>
CountryIso	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ISO 3166 code for the country where the user's IP address is physically located. For more information, see Country Codes - ISO 3166</p>

Field	Details
Latitude	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The latitude where the user's IP address is physically located.</p>
LoginTime	<p>Type dateTime</p> <p>Properties Filter, Sort</p> <p>Description Time of the login attempt, in GMT time zone.</p>
Longitude	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The longitude where the user's IP address is physically located.</p>
PostalCode	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The postal code where the user's IP address is physically located. This value is not localized.</p>
Subdivision	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the subdivision where the user's IP address is physically located. In the U.S., this value is usually the state name (for example, Pennsylvania). This value is not localized.</p>

Usage

The API allows you to do many powerful queries. A few examples are:

Sample Query	Query String
Query showing the country for a login event, where Id=LoginGeoId from AuthSession	<pre>SELECT Country FROM LoginGeo WHERE Id = 'OLE#####'</pre>
Query showing the city and postal code for a login event, where Id=LoginGeoId from LoginHistory	<pre>SELECT City, PostalCode FROM LoginGeo WHERE Id = 'OSO#####'</pre>

LoginHistory

Represents the login history for all successful and failed login attempts for organizations and enabled portals. This object is available in API version 21.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

With one exception, only users with Manage Users permissions can access this object. The exception is that, in API version 37.0 and later, all users can retrieve their own login history records.

Fields

Field	Details
ApiType	<p>Type string</p> <p>Properties Group, Nillable, Sort</p> <p>Description Indicates the API type, for example <code>Soap Enterprise</code>. Label is API Type.</p>
ApiVersion	<p>Type string</p> <p>Properties Group, Nillable, Sort</p> <p>Description Displays the API version used by the client. Label is API Version.</p>
Application	<p>Type string</p>

Field	Details
	<p>Properties Group, Nillable, Sort</p> <p>Description The application used to access the organization. Label is Application.</p>
AuthMethodReference	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The authentication method used by a third-party identification provider for an OpenID Connect single sign-on protocol. This field is available in API version 51.0 and later. Label is Authentication Method Reference.</p>
AuthenticationServiceId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The 18-character ID for an authentication service for a login event. For example, you can use this field to identify the SAML or authentication provider configuration with which the user logged in. This field is available in API version 34.0 and later. Label is Authentication Service Id.</p>
Browser	<p>Type string</p> <p>Properties Group, Nillable, Sort</p> <p>Description The current browser version. Label is Browser.</p>
CipherSuite	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The TLS cipher suite used for the login. Values are OpenSSL-style cipher suite names, with hyphen delimiters. For more information, see OpenSSL Cryptography and SSL/TLS Toolkit. This field is available in API version 37.0 and later.</p>
ClientVersion	<p>Type string</p>

Field	Details
	<p>Properties Group, Nillable, Sort</p> <p>Description Version of the API client. Label is Client Version.</p>
CountryIso	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ISO 3166 code for the country where the user's IP address is physically located. For more information, see Country Codes - ISO 3166. This field is available in API version 37.0 and later.</p>
LoginGeoId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The 18-character ID for the record of the geographic location of the user for a successful or unsuccessful login event. The accuracy of geolocation fields like country, city, or postal code can vary because of the nature of the technology. This field is available in API version 34.0 and later.</p>
LoginTime	<p>Type dateTime</p> <p>Properties Filter, Sort</p> <p>Description Time zone is based on GMT. Label is Login Time.</p>
LoginType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of login used to access the session.</p> <ul style="list-style-type: none"> • AppExchange-AppExchange • Application-Application • Certificate-Certificate-based login • ChatterCommunityPortalUnPwd-Chatter Communities External User

Field	Details
	<ul style="list-style-type: none"> • ChatterCommunityThirdPartySso-Chatter Communities External User Third Party SSO • EmployeeLoginToCommunity-Employee Login to Community • LightningLogin-Lightning Login • NetworksPortalApiOnly-Networks Portal API Only • Oauth, Remote Access Client-Remote Access Client • Oauth2, Remote Access 2.0-Remote Access 2.0 • OtherApi-Other Apex API • Partner-Partner Product • PasswordlessLogin-Passwordless Login • Portal-Customer Service Portal • PrmPortalThirdPartySso-Partner Portal Third-Party SSO • PrmPortal-Partner Portal • Saml-SAML Idp Initiated SSO • SamlChatterNetworks-SAML Chatter Communities External User SSO • SamlCspPortal-SAML Customer Service Portal SSO • SamlPrmPortal-SAML Partner Portal SSO • SamlSite-SAML Site SSO • Saml2-SAML Sfdc Initiated SSO • SelfService-SelfService • ThirdPartySso-Third Party SSO <p>Label is Login Type.</p>
LoginUrl	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description URL from which the login request is coming. Label is Login URL.</p>
NetworkId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the Experience Cloud site that the user is logging in to. This field is available in API version 31.0 and later, if Salesforce Experience Cloud sites are enabled for your org.</p>

Field	Details
OptionsIsGet	<p>Type boolean</p> <p>Properties Filter</p> <p>Description The HTTP method used for the session login is a GET request.</p>
OptionsIsPost	<p>Type boolean</p> <p>Properties Filter</p> <p>Description The HTTP method used for the session login is a POST request.</p>
Platform	<p>Type string</p> <p>Properties Group, Nillable, Sort</p> <p>Description Operating system on the login machine. Label is Platform.</p>
SourceIp	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description IP address of the machine from which the login request is coming. The address can be an IPv4 or IPv6 address in API version 23.0 or later. In API version 22.0 or earlier, the address is an IPv4 address, and IPv6 addresses are null. Label is Source IP.</p>
Status	<p>Type string</p> <p>Properties Group, Nillable, Sort</p> <p>Description Displays the status of the attempted login. Status is either success or a reason for failure. Label is Status.</p>
TlsProtocol	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p>

Field	Details
	<p>Description</p> <p>The TLS protocol used for the login. Possible values are:</p> <ul style="list-style-type: none"> • TLS 1.0 • TLS 1.1 • TLS 1.2 • TLS 1.3 • Unknown <p>This field is available in API version 37.0 and later.</p>
UserId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>ID of the user logging in. Label is User ID.</p>

Usage

Not all fields are filterable. You can only filter on the following fields:

- AuthenticationServiceId
- CipherSuite
- CountryIso
- Id
- LoginTime
- LoginType
- LoginUrl
- NetworkId
- OptionsIsGet
- OptionsIsPost
- TlsProtocol
- UserId

The API allows you to do many powerful queries. A few examples are:

Sample Query	Query String
Simple query showing UserId & LoginTime for each user	<code>SELECT UserId, LoginTime from LoginHistory;</code>
Query showing logins only after a specified date and time	<code>SELECT UserId, LoginTime from LoginHistory WHERE LoginTime > 2010-09-20T22:16:30.000Z;</code>

Sample Query	Query String
Query showing logins for a specific time interval	<pre>SELECT UserId, LoginTime from LoginHistory WHERE LoginTime > 2010-09-20T22:16:30.000Z AND LoginTime < 2010-09-21T22:16:30.000Z;</pre>
Query showing the authentication service for a SAML login event, where Id=AuthenticationServiceId from LoginHistory	<pre>SELECT name, issuer, samlVersion FROM SamlSsoConfig WHERE Id = 'OLE#####'</pre>
Query showing the authentication service for an authentication provider login event, where Id=AuthenticationServiceId from LoginHistory	<pre>SELECT Type, DeveloperName FROM AuthProvider WHERE Id = 'OSO#####'</pre>

LoginIp

Represents a validated IP address. This object is available in version 28.0 and later.

Supported Calls

`describeSObjects()`, `delete()`, `query()`, `retrieve()`

Fields

Field	Details
ChallengeMethod	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The challenge method used to confirm the user's identity. Possible values include the following.</p> <ul style="list-style-type: none"> • Email • SMS • TOTP_CHOICE: The user chooses multi-factor authentication. • TOTP_ONLY: The user is required to use multi-factor authentication.
ChallengeSentDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time that the user was authenticated.</p>

Field	Details
IsAuthenticated	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description If <code>true</code>, the user has already been authenticated.</p>
SourceIp	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The IP address the user logged in from.</p>
UsersId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the user associated with this item. This is a relationship field.</p> <p>Relationship Name Users</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>

Usage

At every login, the IP address of the login request is checked against the validated IP addresses using `LoginIp`. A match means the login IP address is a known IP address. If there's no match, the address is unknown, and the user is asked to confirm their identity.

LogoutEventStream

The documentation has moved to [LogoutEventStream](#) in the *Platform Events Developer Guide*.

LookedUpFromActivity

This read-only object is displayed as a related list on an activity record (an event or a task); the list contains records that have custom lookup relationships from the activity to another object. This object is not queryable.

Supported Calls

`describeSObjects()`

Fields

Field Name	Details
<code>AccountId</code>	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates the ID of the related account, which is determined as follows:</p> <ul style="list-style-type: none"> The account associated with the <code>whatId</code>, if it exists; or The account associated with the <code>whoId</code>, if it exists; otherwise <code>null</code> <p>For information on IDs, see Field Types</p> <p>This is a relationship field.</p> <p>Relationship Name Account</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
<code>ActivityDate</code>	<p>Type date</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates one of the following:</p> <ul style="list-style-type: none"> The due date of a task The date of an event if <code>IsAllDayEvent</code> is set to <code>true</code> <p>This field has a time stamp that is always set to midnight in the Universal Time Coordinated (UTC) time zone. The time stamp doesn't represent the time of the</p>

Field Name	Details
	activity; don't attempt to alter it to accommodate time zone differences. Label is <code>Date</code> .
<code>ActivityDateTime</code>	<p>Type dateTime</p> <p>Properties Aggregate, Filter, Nillable, Sort</p> <p>Description Contains the event's due date if the <code>IsAllDayEvent</code> flag is set to <code>false</code>. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. Label is Due Date Time. The value for this field and <code>StartDateTime</code> must match, or one of them must be <code>null</code>.</p>
<code>ActivitySubtype</code>	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Provides standard subtypes to facilitate creating and searching for specific activity subtypes. This field isn't updateable. <code>ActivitySubtype</code> values:</p> <ul style="list-style-type: none"> • Task • Email • Call • Event • List Email
<code>ActivityType</code>	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents one of the following values: <code>Call</code>, <code>Email</code>, <code>Meeting</code>, or <code>Other</code>. Label is <code>Type</code>. These are default values, and can be changed. <code>ActivityType</code> is the union of <code>TaskType</code> and <code>EventType</code>. If the same activity appears in both dynamic picklists, duplicate activities appear. <code>TaskType</code> and <code>EventType</code> can each have a <code>Call</code> type. Internally, they are distinct from each other.</p>

Field Name	Details
CallDisposition	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents the result of a given call; for example, “we’ll call back,” or “call unsuccessful.” Limit is 255 characters.</p>
CallDurationInSeconds	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Duration of the call in seconds.</p>
CallObject	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Name of a call center. Limit is 255 characters.</p>
CallType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The type of call being answered: Inbound, Internal, or Outbound.</p>
CompletedDateTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time the task was saved with a Closed status.</p> <ul style="list-style-type: none"> • For insert, if the task is saved with a Closed status the field is set. If the task is saved with an Open status the field is set to NULL. • For update, if the task is saved with a new Closed status, the field is reset. If the task is saved with a new non-closed status, the field is reset to NULL. If the task is saved with the same closed status (that is, unchanged) there is no change to the field.

Field Name

Details

Note: The status is a dynamic enum. If the Closed mapping is changed it won't cause an update of existing tasks. Only new insert/update operations are affected.

Description

Type

textarea

Properties

Nillable

Description

Contains a description of the event or task. Limit is 32 KB.

DurationInMinutes

Type

int

Properties

Filter, Group, Nillable, Sort

Description

Indicates the duration of the event or task.

EndDateTime

Type

dateTime

Properties

Filter, Nillable, Sort

Description

Indicates the end date and time of the event or task. Available in versions 27.0 and later. This field is optional, depending on the following:

- If `IsAllDayEvent` is true, you can supply a value for either `DurationInMinutes` or `EndDateTime`. Supplying values in both fields is allowed if the values add up to the same amount of time. If both fields are `null`, the duration defaults to one day.
- If `IsAllDayEvent` is false, a value must be supplied for either `DurationInMinutes` or `EndDateTime`. Supplying values in both fields is allowed if the values add up to the same amount of time.

IsAllDayEvent

Type

boolean

Properties

Defaulted on create, Filter, Group, Sort

Description

If the value of this field is set to `true`, then the activity is an event spanning a full day, and the `ActivityDate` defines the date of the event. If the value of this field is set to `false`, then the activity may be an event spanning less than a full day, or it may be a task. Label is `All-Day Event`.

Field Name	Details
IsClosed	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether a task is closed; value is always <code>false</code>. This field is set indirectly by setting <code>Status</code> on the task—each picklist value has a corresponding <code>IsClosed</code> value. Label is <code>Closed</code>.</p>
IsHighPriority	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates a high-priority task. This field is derived from the <code>Priority</code> field.</p>
IsReminderSet	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether a reminder is set for an activity (<code>true</code>) or not (<code>false</code>).</p>
IsTask	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description If the value of this field is set to <code>true</code>, then the activity is a task; if the value is set to <code>false</code>, then the activity is an event. Label is <code>Task</code>.</p>
IsVisibleInSelfService	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description If the value of this field is set to <code>true</code>, then the activity can be viewed in the self-service portal. Label is <code>Visible in Self-Service</code>.</p>
Location	<p>Type string</p>

Field Name	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description If the activity is an event, then this field represents the location of the event. If the activity is a task, then the value is null.</p>
OwnerId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates the ID of the user or group who owns the activity. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Calendar, Group, User</p>
Priority	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description Indicates the priority of a task, such as high, normal, or low.</p>
ReminderDateTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Represents the time at which a reminder is scheduled to fire if <code>IsReminderSet</code> is set to <code>true</code>. If <code>IsReminderSet</code> is set to <code>false</code>, then either the user has deselected the reminder checkbox in the user interface or the reminder has already fired at the time indicated by the value.</p>
StartDateTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field Name**Details****Description**

Indicates the start date and time of the event. Available in versions 13.0 and later.

The `StartDateTime` field contains the event start date.

However, if the event's `IsAllDayEvent` flag is set to `true` (indicating an all-day event), then the time stamp in the `StartDateTime` field is always set to midnight in the Coordinated Universal Time (UTC) time zone. Don't attempt to alter the time stamp to account for any time zone differences.

If the event's `IsAllDayEvent` flag is set to `false`, then you must translate the time portion of the time stamp in the `StartDateTime` field to or from a local time zone for the user or the application, as appropriate, and the translation must be in the Coordinated Universal Time (UTC) time zone.

If this field has a value, then `ActivityDate` and `ActivityDateTime` either must be `null` or must match the value of this field.

Status

Type

picklist

Properties

Defaulted on create, Filter, Group, Nillable, Sort

Description

Indicates the current status of a task, such as in progress or complete. Each predefined status field sets a value for `IsClosed`.

Subject

Type

combobox

Properties

Filter, Nillable, Sort

Description

Contains the subject of the task or event.

WhatId

Type

reference

Properties

Filter, Group, Nillable, Sort

Description

The `WhatId` represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. `WhatIds` are polymorphic. Polymorphic means a `WhatId` is equivalent to the ID of a related object. The label is `Related To ID`.

This is a polymorphic relationship field.

Lookup

Field Name	Details
	<p>Refers To</p> <p>Contact, Lead</p>

Usage

Query activities related to an object

1. Optionally, issue a describe call against the object whose activities you wish to query, to get a suggestion of the correct SOQL to use.
2. Issue a SOQL relationship query with a main clause that references the object, and an inner clause that references the activity custom lookup relationship; for example:

```
SELECT id, name,
(SELECT id, subject from sponsoredact__r)
FROM Contact
```

In this example `sponsoredact__r` is a user defined relationship list.

The user interface enforces sharing rules, filtering out related-list items that a user doesn't have permission to see.

The following restrictions on users who don't have "View All Data" permission help prevent performance issues:

- In the main clause of the relationship query, you can reference only one record. For example, you can't filter on all records where the account name starts with 'A'; instead, you must reference a single account record.
- In the inner clause of the query, you can't use `WHERE`.
- In the inner clause of the query, you must specify a limit of 500 or fewer on the number of rows that are returned in the list.
- You must sort on `ActivityDate` in descending order and `LastModifiedDate` in descending order; you can display nulls last. For example: `ORDER BY ActivityDate DESC NULLS LAST, LastModifiedDate DESC`.

Macro

Represents a macro, which is a set of instructions that tells the system to perform one or more tasks. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field	Details
Description	<p>Type</p> <p>textarea</p>

Field	Details
	<p>Properties Create, Nillable, Update</p> <p>Description Description of what this macro does.</p>
FolderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Returns the ID of the folder that contains the macro. Available in API version 44.0 and later.</p>
FolderName	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Name of the folder that contains the macro. Available in API version 44.0 and later.</p>
IsAlohaSupported	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Specifies whether the macro is supported in Salesforce Classic.</p>
IsLightningSupported	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Specifies whether the macro is supported in Lightning Experience.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time that the macro record was last referenced.</p>
LastViewedDate	<p>Type dateTime</p>

Field	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The date and time that the macro record was last viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the macro.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the owner of the session record.</p>
StartingContext	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The object the macro performs actions on. In Salesforce Classic, macros are supported on objects with both feed-based layouts and quick actions. In Lightning Experience, macros are supported on standard and custom objects that allow quick actions and have a customizable page layout.</p>

Usage

A macro definition consists of a Macro object and several associated [MacroInstruction](#) objects.

First, create a Macro object. Then, create MacroInstructions that specify objects, operations, conditions, and targets for the macro.

A macro contains an ordered list of macro instructions whose index field, `sortOrder`, is 0-based. If there's an incorrect sequence of macro instructions, the macro doesn't execute.

If you update a macro definition or add or remove instructions from a macro, make sure that the `sortOrder` field that defines the execution order is correct. To delete an entire macro definition, invoke the delete operation on the Macro object.

The table describes the supported macro instruction targets and how they relate to each other.

Note: Strings indicated by `<brackets>` are variables. The variable description describes the required type. For example, `Tab.<EntityApiName>` requires the entity name. If your custom entity name is `MyCustomObject`, your target API is `Tab.MyCustomObject__c`.

If a macro instruction listed in the table supports an implicit operation, you can use that operation as a direct child instruction without explicitly specifying a target. The hyphens used in the table illustrate the hierarchical relationship between targets. A target isn't available if its parent isn't.

Table 1: Macro Instruction Target Grammar and Hierarchy

Target API Name	Supported Operations
Tab.<EntityApiName>	SELECT, CLOSE (implicit)
- QuickAction.<EntityApiName>.<QuickActionName>	SELECT, SUBMIT (implicit)
- - Field.<QATargetEntityApiName>.<FieldApiName>	SET
- - Field.<QATargetEntityApiName>.<MultilineTextFieldApiName>.cursor	INSERT
- - Field.<QATargetEntityApiName>.<SinglelineTextFieldApiName>.end	INSERT
- QuickAction.Case.Email	SELECT, SUBMIT (implicit)
- - Field.EmailMessage.<FieldApiName>	SET
- - Field.EmailMessage.<MultilineTextFieldApiName>.cursor	INSERT
- - Field.EmailMessage.<SinglelineTextFieldApiName>.end	INSERT
- - Field.EmailTemplate	SET
- SidebarCmp.Knowledge	SELECT
- - SearchAction.KnowledgeArticle	SELECT
- - - Field.SearchString	SET, INSERT
- - - Command.Search	SUBMIT
- - SearchResult.KnowledgeArticle.MostRecentItem	SELECT
- - - Command.AttachToRecord	SUBMIT
- - - Command.InsertToEmail	SUBMIT
- - - Command.AttachToEmailAsPDF	SUBMIT

Example: This example describes a macro that opens a quick action, sets some fields in the quick action, and submits the quick action.

```

0. SELECT Tab.Case
1.   SELECT QuickAction.Case.Email
2.     SET Field.EmailMessage.Subject
3.     SET Field.EmailMessage.ToAddress
4.     INSERT Field.EmailMessage.HtmlBody.cursor
5.     SUBMIT

```

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MacroChangeEvent (API version 48.0)

Change events are available for the object.

MacroHistory

History is available for tracked fields of the object.

MacroOwnerSharingRule

Sharing rules are available for the object.

MacroShare

Sharing is available for the object.

MacroInstruction

Represents an instruction in a macro. An instruction can specify the object that the macro interacts with, the context or publisher that the macro works within, the operation or action that the macro performs, and the target of the macro's actions.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
MacroId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the macro that contains this instruction.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, Sort</p> <p>Description Name of the instruction.</p>
Operation	<p>Type picklist</p>

Field Name**Details****Properties**

Create, Filter, Group, Restricted picklist, Sort, Update

Description

The action that the macro instruction performs. Valid values are:

- Select
- Set
- Insert
- Submit
- Close

To create macro instructions that execute conditionally, these values are available in API version 46.0 and later.

- IF
- ELSEIF
- ELSE
- ENDIF

SortOrder

Type

int

Properties

Create, Filter, Group, Sort, Update

Description

Order of this instruction in the macro.

Target

Type

picklist

Properties

Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Description

The object that's the target of the operation. For example, the target for the active case tab (Tab.Case) or a quick action, like the Send Email action on the case object (QuickAction.Case.SendEmail).

In Lightning Experience, macros are supported on standard and custom objects that allow quick actions and have a customizable page layout.

In Salesforce Classic, macros are supported on objects with feed-based layouts and quick actions.

You can specify relative dates and times for the following targets.

- DateTime
- Date
- Time
- DueDate

Field Name	Details
	<ul style="list-style-type: none"> • Birthday
Value	<p>Type string</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Value of a field. If the operation is Select, then the value is null, because the operation selects the object on which the macro performs an action. An instruction can contain both a <code>Value</code> field and a <code>ValueRecord</code> field, but only one of these fields can have a value. The other field value must be null.</p> <p>To create relative dates and times, specify a valid Salesforce formula, prefaced by <code>MacroFormula</code>. For example, the following formula creates a date that is 1 day from now:</p> <pre>MacroFormula:NOW() + 1</pre> <p>You can't edit custom relative formulas in the Macro Builder.</p>
ValueRecord	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the value or record. The <code>ValueRecord</code> can be either a value or a record, but not both. An instruction can contain both a <code>Value</code> field and a <code>ValueRecord</code> field, but only one of these fields can have a value. The other field value must be null.</p>

Usage

MacroInstructions can specify objects, operations, conditions, and targets. For example, a macro containing these instructions performs a quick action that sends an email.

```
Select Email QuickAction
Set Subject...
Set To...
Set Body...
Submit
```

You can create conditional macros using `IF`, `ELSEIF`, `ELSE`, and `ENDIF` as operations. In a conditional statement, the [ExpressionFilter](#) and [ExpressionFilterCriteria](#) objects are used to control which instructions execute. The `ExpressionFilter` object lets you define a logical expression with one or more conditions. It uses a child object, `ExpressionFilterCriteria`, to represent each condition that is evaluated.

For example, consider the following conditional statement and macro instructions.

```

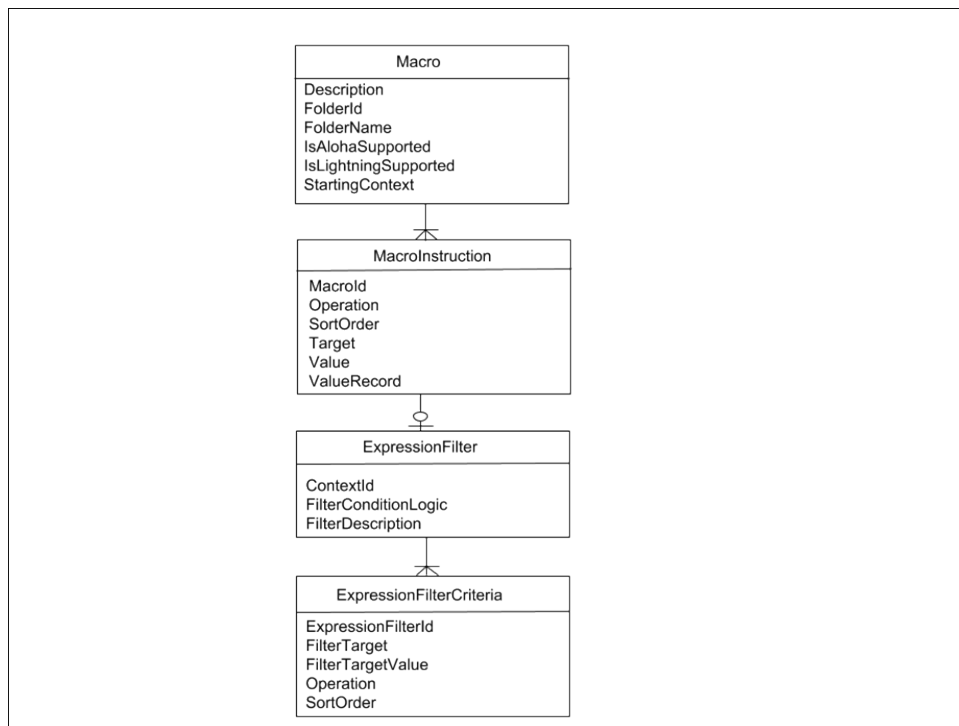

IF (Case.Status EQUALS New) AND (Case.Origin EQUALS Phone)
  Select Email QuickAction
  Set Subject...
  Set To...
  Set Body...
  Submit
ELSE
  Select Update Case Detail
  Update Case Description...
  Submit
ENDIF

```

The ExpressionFilter object includes a FilterConditionLogic field containing 1 AND 2, where 1 and 2 are ExpressionFilterCriteria objects. The SortOrder field in the ExpressionFilterCriteria object maps condition 1 to Case.Status EQUALS New, and condition 2 to Case.Origin EQUALS Phone. If the conditional statement evaluates to true, then the instructions in the IF block are executed; otherwise, the instructions in the ELSE block are executed.

Any number of macro instructions can be present inside an IF, ELSEIF, or ELSE block. In addition, conditions can be nested.

Data Model

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MacroInstructionChangeEvent (API version 48.0)

Change events are available for the object.

MacroUsage

Represents macro usage on a record, including which macro was used, who used it, and how they used it. This object is available in API version 47.0 and later.

Supported Calls

describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()

Special Access Rules

This object is always read-only.

Fields

Field	Details
AppContext	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Context in which the macro was run. Possible values are:</p> <ul style="list-style-type: none"> • Aloha—Salesforce Classic • Lightning—Lightning Experience • Unknown
ConditionCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Number of conditional instructions contained in the macro at execution.</p>
ContextRecord	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the record on which the macro was run.</p>

Field	Details
DurationInMs	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The execution time, in milliseconds, for the macro.</p>
ExecutedInstructionCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of macro instructions that ran successfully. If the macro completed successfully, this value is the same as <code>InstructionCount</code>.</p>
ExecutionEndTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The time at which macro execution completed.</p>
ExecutionState	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The end state of macro execution. Possible values are</p> <ul style="list-style-type: none">• SUCCESS• FAILURE• CANCELED
FailureReason	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description If <code>ExecutionState</code> is failure, this field stores the reason for the failure. Possible values are:</p> <ul style="list-style-type: none">• ACCESS• GENERIC

Field	Details
	<ul style="list-style-type: none"> • TIMEOUT • UNSUPPORTED
FolderId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the folder containing the macro at the time it was used.</p>
InstructionCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of instructions in the macro at the start of execution.</p>
IsFromBulk	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description If true, the macro was run as a bulk macro. When a bulk macro is run on multiple records, usage is recorded per record.</p>
MacroID	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the macro.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description Name of the macro.</p>
OwnerId	<p>Type reference</p>

Field	Details
	<p>Properties Filter, Group, Sort</p> <p>Description ID of the group or user that owns the macro.</p>
UserId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the user that ran the macro.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

MacroUsageOwnerSharingRule

Sharing rules are available for the object.

MacroUsageShare

Sharing is available for the object.

MailmergeTemplate

Represents a mail merge template (a Microsoft Word document) used for performing mail merges for your organization.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- All users can view this object, but you need the “Customize Application” permission to modify it.
- Customer Portal users can’t access this object.

Fields

Field	Details
Body	<p>Type base64</p>

Field	Details
	<p>Properties Create</p> <p>Description Required. Microsoft Word document to use as a mail merge template. Due to limitations with Microsoft Word mail merge templates, your client application can specify the Body field when creating these records, but not when updating them. Limit: 5 MB.</p>
BodyLength	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Length of the Microsoft Word document.</p>
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Required. Text description of this mail merge template. Limit: 255 characters.</p>
Filename	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. File name of the Microsoft Word document that was uploaded as a mail merge template. Limit: 255 characters in length.</p>
IsDeleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>
LastUsedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description Date and time when this MailmergeTemplate was last used.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Required. Name of this mail merge template.</p>
SecurityOptionsAttachmentHasFlash	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Required. True if Flash Injection was detected in the attachment.</p>
SecurityOptionsAttachmentHasXSSThreat	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Required. True if a cross site scripting threat was detected in the attachment.</p>
SecurityOptionsAttachmentScannedforFlash	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Required. True if the attachment has been scanned for Flash Injection.</p>
SecurityOptionsAttachmentScannedForXSS	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Required. True if the attachment has been scanned for a cross site scripting threat.</p>

Usage

Use this object to manage mail merge templates for your organization.

SEE ALSO:

[Object Basics](#)

MaintenanceAsset

Represents an asset covered by a maintenance plan in field service. Assets can be associated with multiple maintenance plans.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
AssetId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The asset associated with the maintenance asset.</p>
ContractLineItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Contract line item associated with the maintenance asset. This field can only list a contract line item that is associated with the asset, and whose parent service contract is associated with the parent maintenance plan.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The date when the maintenance asset was last modified. Its label in the user interface is Last Modified Date.</p>
LastViewedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The date when the product request was last viewed.</p>
MaintenanceAssetNumber	<p>Type</p> <p>string</p> <p>Properties</p> <p>Autonumber, Defaulted on create, Filter, Sort</p> <p>Description</p> <p>An auto-assigned number that identifies the maintenance asset.</p>
MaintenancePlanId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>Maintenance plan associated with the maintenance asset.</p>
NextSuggestedMaintenanceDate	<p>Type</p> <p>date</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The suggested date of service for the maintenance asset's first work order (not the date the work order is created). This corresponds to the work order's SuggestedMaintenanceDate. If left blank when the maintenance asset is created, this field inherits its initial value from the related maintenance plan.</p> <p>This field auto-updates after each batch is generated. Its label in the user interface is Date of the first work order in the next batch.</p>
WorkTypeId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>Work type associated with the maintenance asset. Work orders generated from the maintenance plan inherit its work type's duration, required skills and products, and linked articles. Maintenance assets covered by the plan use the same work type, though you can update them to use a different one.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MaintenanceAssetChangeEvent (API version 48.0)

Change events are available for the object.

MaintenanceAssetFeed

Feed tracking is available for the object.

MaintenanceAssetHistory

History is available for tracked fields of the object.

MaintenancePlan

Represents a preventive maintenance schedule for one or more assets in field service.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
AccountId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The associated account, which typically represents the customer receiving the maintenance service.</p>

Field Name	Details
ContactId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The associated contact.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description A brief description of the plan.</p>
DoesAutoGenerateWorkOrders	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Turns on auto-generation of work order batches for a maintenance plan and prohibits the manual generation of work orders via the Generate Work Orders action. If this option is selected, a new batch of work orders is generated for the maintenance plan on the <code>NextSuggestedMaintenanceDate</code> listed on each maintenance asset, or on the maintenance plan if no assets are included. If a <code>GenerationHorizon</code> is specified, the date of generation is that many days earlier.</p>
DoesGenerateUponCompletion	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description If both this option and <code>DoesAutoGenerateWorkOrders</code> are set to true, a new batch of work orders isn't generated until the last work order generated from the maintenance plan is completed. A work order is considered completed when its status falls into one of the following status categories: Cannot Complete, Canceled, Completed, or Closed.</p> <p>If a maintenance plan covers multiple assets, work orders are generated per asset. If a maintenance asset's final work order is completed late, its work order generation is delayed, which may cause a staggered generation schedule between maintenance assets.</p>

Field Name	Details
EndDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The last day the maintenance plan is valid.</p>
Frequency	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description (Required) Amount of time between work orders. The unit is specified in the <code>FrequencyType</code> field.</p>
FrequencyType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description (Required) The unit of frequency:</p> <ul style="list-style-type: none"> • Days • Weeks • Months • Years <p>For example, to perform monthly maintenance visits you need a work order for each visit, so enter 1 as the <code>Frequency</code> and select Months.</p>
GenerationHorizon	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Moves up the timing of batch generation if <code>DoesAutoGenerateWorkOrders</code> is set to true. A generation horizon of 5 means the new batch of work orders is generated 5 days before the maintenance asset's (or maintenance plan's, if there are no assets) <code>NextSuggestedMaintenanceDate</code>. The generation horizon must be a whole number.</p>
GenerationTimeframe	<p>Type int</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Sort, Update</p> <p>Description (Required) How far in advance work orders are generated in each batch. The unit is specified in the <code>GenerationTimeframeType</code> field.</p>
<code>GenerationTimeframeType</code>	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description (Required) The generation timeframe unit:</p> <ul style="list-style-type: none"> • Days • Weeks • Months • Years <p>For example, if you need work orders for six months, enter 6 and select Months.</p>
<code>LastReferencedDate</code>	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
<code>LastViewedDate</code>	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
<code>LocationId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Where the service takes place.</p>

Field Name	Details
MaintenancePlanNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, Sort</p> <p>Description (Read Only) An auto-assigned number that identifies the maintenance plan.</p>
MaintenancePlanTitle	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A name for the maintenance plan.</p>
MaintenanceWindowEndDays	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Days after the suggested service date on the work order that its service appointment can be scheduled.</p>
MaintenanceWindowStartDays	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Days before the suggested service date on the work order that its service appointment can be scheduled.</p> <p>The maintenance window start and end fields affect the Earliest Start Permitted and Due Date fields on the maintenance plan's work orders' service appointments. For example, if you enter 3 for both the maintenance window start and end, the Earliest Start Permitted and the Due Date will be 3 days before and 3 days after, respectively, the Suggested Maintenance Date on each work order. If the maintenance window fields are left blank, the service appointment date fields list their work order's suggested maintenance date.</p>
NextSuggestedMaintenanceDate	<p>Type date</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field Name

Details

Description

The suggested date of service for the first work order (not the date the work order is created). This corresponds to the work order's `SuggestedMaintenanceDate`. You can use this field to enforce a delay before the first maintenance visit (for example, if monthly maintenance should begin one year after the purchase date). Its label in the user interface is Date of the first work order in the next batch.

For example, if you want the first maintenance visit to take place on May 1, enter May 1. When you generate work orders, the earliest work order will list a suggested maintenance date of May 1, and the dates on the later work orders will be based on the `GenerationTimeframe` and `Frequency`.

Important: Maintenance assets also list a

`NextSuggestedMaintenanceDate`, which is initially inherited from the maintenance plan. If the plan has maintenance assets, this date auto-updates on the maintenance assets after each batch is generated, but doesn't update on the maintenance plan itself because batch timing is calculated at the maintenance asset level. If the plan doesn't have maintenance assets, this date auto-updates on the maintenance plan after each batch is generated.

OwnerId

Type

reference

Properties

Create, Defaulted on create, Filter, Group, Sort, Update

Description

The owner of the maintenance plan.

ServiceContractId

Type

reference

Properties

Create, Filter, Group, Nillable, Sort, Update

Description

The service contract associated with the maintenance plan. The service contract can't be updated if any child maintenance asset is associated with a contract line item from the service contract.

StartDate

Type

date

Properties

Create, Filter, Group, Sort, Update

Description

The first day the maintenance plan is valid.

Field Name	Details
SvcApptGenerationMethod	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The service appointment generation method.</p> <ul style="list-style-type: none"> • One service appointment per work order • One service appointment per work order line item <p>If your existing maintenance plans have work orders or work order line items associated with them, you can't change their generation methods. To change pre-existing maintenance plan generation methods, either delete the work orders and regenerate them or delete the maintenance plan and recreate it with the needed generation methods.</p> <p>If Work Order Generation Method is set to One work order per asset, you can't set a Service Appointment Generation Method.</p> <p>If Work Order Generation Method is set to One work order line item per asset, you must select a Service Appointment Generation Method.</p>
WorkOrderGenerationMethod	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The work order generation method.</p> <ul style="list-style-type: none"> • One work order per asset • One work order line item per asset <p>If your existing maintenance plans have work orders or work order line items associated with them, you can't change their generation methods. To change pre-existing maintenance plan generation methods, either delete the work orders and regenerate them or delete the maintenance plan and recreate it with the needed generation methods.</p> <p>If Work Order Generation Method is left as None, the generation is defaulted to one work order per asset.</p> <p>When One work order line item per asset is set, and all maintenance assets have the same Next Suggested Maintenance Date on the maintenance plan, they are grouped in one work order. However, if maintenance assets have different Next Suggested Maintenance Dates, multiple work orders are created for each date.</p> <p>If Work Order Generation Method is set to One work order per asset, you can't set a Service Appointment Generation Method.</p>

Field Name	Details
WorkOrderGenerationStatus	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description (Read Only) Indicates the status of work order generation:</p> <ul style="list-style-type: none"> • NotStarted—the default value, work order generation has not started • InProgress—work order generation is underway • Completed—work order generation is complete • Unsuccessful—it was not possible to generate work orders <p>You can generate only one batch at a time.</p>
WorkTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The associated work type. Work orders generated from the maintenance plan inherit its work type's duration, required skills and products, and linked articles. Maintenance assets covered by the plan use the same work type, though you can update them to use a different one.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MaintenancePlanChangeEvent (API version 48.0)

Change events are available for the object.

MaintenancePlanFeed

Feed tracking is available for the object.

MaintenancePlanHistory

History is available for tracked fields of the object.

MaintenancePlanOwnerSharingRule

Sharing rules are available for the object.

MaintenancePlanShare

Sharing is available for the object.

MaintenanceWorkRule

Represents the recurrence pattern for a maintenance record. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the line item was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the line item was last viewed.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description Name of this maintenance work rule.</p>
NextSuggestedMaintenanceDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The next date on which this rule will generate maintenance items.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The assigned owner of the maintenance work rule.</p>

Field	Details
ParentMaintenancePlanId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The maintenance plan associated with the maintenance work rule.</p>
ParentMaintenanceRecordId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The maintenance record this work rule applies to.</p>
RecordsetFilterCriteriaId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the recordset filter criteria associated with this maintenance work rule. Available in API version 52.0 and later.</p>
RecurrencePattern	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The RRULE that defines the pattern of recurrence for this work order rule.</p>
SortOrder	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The sort order that applies to this work order rule.</p>
Title	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The title of this work order rule.</p>
Type	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>The type of maintenance work rule. Available values are:</p> <ul style="list-style-type: none"> • <code>Criteria-based</code> • <code>Calendar-based</code> (default) <p>Available in API version 52.0 and later.</p>
WorkTypeId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The ID of the work type that this work order rule generates.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[MaintenanceWorkRuleFeed](#)

Feed tracking is available for the object.

[MaintenanceWorkRuleHistory](#)

History is available for tracked fields of the object.

[MaintenanceWorkRuleOwnerSharingRule](#)

Sharing rules are available for the object.

[MaintenanceWorkRuleShare](#)

Sharing is available for the object.

ManagedContentInfo

Allows the creation of relationship to Product using ProductMedia. This object is available in API version 49.0 and later.

Supported Calls

`describeSObjects()`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access a web store.

Usage

The CMS content import process returns a ManageContentInfo ID for each piece of content. The ManagedContentInfo entity has a 1:1 relationship with ProductMedia. To create this relationship, ProductMedia must be associated with a Product entity, for example, Product > ProductMedia > ManagedContentInfo. Use the ID to associate content uploaded through the API with the ProductMedia entity

MarketingForm

Represents a Pardot marketing form that has been synched to Salesforce. Use forms on your website and landing pages to collect information about visitors and turn anonymous visitors into identified prospects. This object is available in API version 42.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Special Access Rules

To access this object, your org must use Pardot and users need the CRM User or Sales User permission set.

Fields

Field Name	Details
CampaignId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the related campaign.</p>
ErrorRate	<p>Type percent</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The percentage of views that led to an error.</p>
LastReferencedDate	<p>Type dateTime</p>

Field Name	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp that indicates when the current user last viewed a record that is related to this form.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time when the current user last viewed this record. If this value is null, this record might only have been referenced (see <code>LastReferencedDate</code>) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The name of the marketing form.</p>
SubmissionRate	<p>Type percent</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The percentage of the views that led to a form submission.</p>
TotalErrors	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The total number of times a form error prevented a submission.</p>
TotalSubmissions	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The total number of times the form was successfully submitted.</p>
TotalTrackedLinkClicks	<p>Type</p> <p>int</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The total number of link clicks from your thank you page.</p>
TotalViews	<p>Type</p> <p>int</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The total number of times your form has been viewed. Includes multiple views from the same visitor.</p>
Type	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description</p> <p>Specifies the type of marketing form record, either a form or form handler.</p>
UniqueErrors	<p>Type</p> <p>int</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The number of errors generated by separate visitors.</p>
UniqueSubmissions	<p>Type</p> <p>int</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The total number of unique submissions. Removes multiple submissions from the same prospect.</p>

Field Name	Details
UniqueTrackedLinkClicks	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The total number of unique link clicks from your thank you page. Removes multiple clicks from the same prospect.</p>
UniqueViews	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The number of form views by separate visitors.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MarketingFormEvent (API version 44.0)

Change events are available for the object.

MarketingFormFeed

Feed tracking is available for the object.

MarketingLink

Represents a Pardot marketing link record, either a custom redirect or a file, that has been synced to Salesforce. This object is available in API version 42.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Special Access Rules

To access this object, your org must use Pardot and users need the CRM User or Sales User permission set.

Fields

Field Name	Details
CampaignId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the related campaign.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp that indicates when the current user last viewed a record that is related to this marketing link.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time when the current user last viewed this record. If this value is null, this record might only have been referenced (see <code>LastReferencedDate</code>) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The name of the marketing link.</p>
TargetUrl	<p>Type url</p> <p>Properties Filter, Group, Sort</p> <p>Description The target URL of the marketing link.</p>

Field Name	Details
TotalTrackedLinkClicks	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The total number of clicks for the redirect. Includes clicks from visitors and identified prospects. When a person clicks the link multiple times, each click is counted in this number.</p>
Type	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description Specifies the type of marketing link record, either a custom redirect or file.</p>
UniqueTrackedLinkClicks	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The number of unique clicks for the redirect. Includes clicks from visitors and identified prospects. Only the first click is counted in this number.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MarketingFormEvent (API version 44.0)

Change events are available for the object.

MarketingLinkFeed

Feed tracking is available for the object.

MatchingRule

Represents a matching rule that is used to identify duplicate records. This object is available in API version 33.0 and later.

A matching rule compares field values to determine whether a record is similar enough to existing records to be considered a duplicate. For example, a matching rule can specify that if the `Email` and `Phone` values of two records match exactly, the records are possible duplicates. Your organization uses matching rules with duplicate rules to define what happens when duplicates are identified.

If the rule is for a Person Account, `SubjectSubType` is automatically set to `PersonAccount`.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
BooleanFilter	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Specifies filter logic conditions.</p>
Description	<p>Type textarea</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The description of the matching rule.</p>
DeveloperName	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The developer name for the matching rule.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
Language	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The language selected for your organization.</p>
MasterLabel	<p>Type string</p>

Field Name	Details
	<p>Properties Filter, Group, Sort</p> <p>Description The name of the matching rule.</p>
MatchEngine	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The match engine used by the matching rule.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix for matching rules for your organization.</p>
RuleStatus	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description Required. The activation status of the matching rule. Values are:</p> <ul style="list-style-type: none"> • <i>Inactive</i> • <i>Deactivating</i> • <i>DeactivationFailed</i> • <i>Active</i> • <i>Activating</i> • <i>ActivationFailed</i> <p> Important: The only valid values you can declare when deploying a package are <i>Active</i> and <i>Inactive</i>.</p>
SubjectSubtype	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Read-only. Indicates if the matching rule is defined for the <code>Person</code> subtype of <code>Account</code>. Valid values are:</p>

Field Name	Details
	<ul style="list-style-type: none"> • PersonAccount • None <p>If the rule is for a Person Account, <code>SubjectSubType</code> is automatically set to <code>PersonAccount</code>.</p>
SubjectType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The object for the matching rule.</p>

Usage

Use the Salesforce API to retrieve and view details about `MatchingRule` and `MatchingRuleItem`. Use the Salesforce Metadata API to create, update, or delete these objects.

MatchingRuleItem

Represents criteria used by a matching rule to identify duplicate records. This object is available in API version 33.0 and later.

A matching rule item determines which field the matching rule uses to identify a duplicate record. It also determines the method used to compare value that two records have for the field. For example, a matching rule item might specify that the `Email` field values of two records must match exactly in order for the records to be considered duplicates.

When a matching rule has multiple matching rule items, it means that multiple fields must match in order for the records to be identified as dupliates.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
BlankValueBehavior	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description Specifies how blank fields affect whether the fields being compared are considered matches. Valid values are:</p> <ul style="list-style-type: none"> • <i>MatchBlanks</i> • <i>NullNotAllowed</i> (default)
Field	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Indicates which field to compare when determining if a record is similar enough to an existing record to be considered a match.</p>
MatchingMethod	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Defines how the fields are compared. Choose between the exact matching method and various fuzzy matching methods. Valid values are:</p> <ul style="list-style-type: none"> • <i>Exact</i> • <i>FirstName</i> • <i>LastName</i> • <i>CompanyName</i> • <i>Phone</i> • <i>City</i> • <i>Street</i> • <i>Zip</i> • <i>Title</i> <p>For details on each matching method, see “Matching Methods Used with Matching Rules” in the Salesforce Help.</p>

Field Name	Details
MatchingRuleId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID for the matching rule. This is a relationship field.</p> <p>Relationship Name MatchingRule</p> <p>Relationship Type Lookup</p> <p>Refers To MatchingRule</p>
SortOrder	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description The order of the matching rule items for a matching rule.</p>

Usage

Use the Salesforce SOAP API to retrieve and view details about MatchingRule and MatchingRuleItem. Use the Salesforce Metadata API to create, update, or delete these objects.

MediaChannel

Defines a web page, a TV program, or a publication. A media channel may contain one to many Ad Spaces, into which Ad Servers can place or serve up ad creatives. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AvailableLanguages	<p>Type multipicklist</p> <p>Properties Create, Filter, Nillable, Restricted picklist, Update</p> <p>Description Captures the language of the media contents hosted on the Media Channel.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • English • Hindi • German • Spanish • French
MediaType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Indicates the media type.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Digital • Other • Outdoor • Print • Radio • TV
PricingCategory	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Categorizes the Media Channel as Premium or Standard from an advertising pricing perspective. 'Premium' is an evaluation based on traffic, Nielsen ratings or Comscore rank.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Premium • Standard
PublicationFrequency	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>Captures the frequency of the Media Channel publication</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Daily • Monthly • Other • Quarterly • Weekly
PublisherId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Captures the Publisher field of the Media Channel record.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>PublisherId__r</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>Account</p>
PublisherPrimaryContactId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Captures the primary contact details of the publisher.</p>

Field	Details
	This is a relationship field.
	Relationship Name PublisherPrimaryContactId__r
	Relationship Type Lookup
	Refers To Contact

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MessagingChannel

Represents a communication channel that an end user can use to send a message to an agent. A communication channel can be an SMS number, a Facebook page, or another supported messaging channel. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field Name	Details
BusinessHoursId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The operating hours for your business, when agents are available. Available only in orgs that use Einstein Bots. This is a relationship field.</p> <p>Relationship Name BusinessHours</p> <p>Relationship Type Lookup</p> <p>Refers To BusinessHours</p>
ConsentType	<p>Type picklist</p>

Field Name	Details
	<p>Properties Create, defaultedOnCreate, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The type of consent, or opt-in, that is required to message users on this channel. This field is available in API version 48.0 and later. Possible values are:</p> <ul style="list-style-type: none"> • DoubleOptIn • ExplicitOptIn • ImplicitOptIn (default value) <p>The property <code>defaultedOnCreate</code> has been removed in API version 51.0 and later. Now the consent type is defaulted to <code>ImplicitOptIn</code> when the consent type isn't set on create only for channels that support consents.</p>
ConversationEndResponse	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Automated response to the customer when the agent ends the conversation. (Optional)</p>
CriticalWaitTime	<p>Description Reserved for future use. This field has been deprecated as of API version 52.0.</p>
Description	<p>Description Reserved for future use.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The developer name for the messaging channel. This value is a concatenation of the messaging platform key and the message type.</p>
DoubleOptInPrompt	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Automated response to the end user to prompt them to doubly opt in to receiving messages.</p>

Field Name	Details
EngagedResponse	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Automated response to the customer when the conversation is accepted by the agent. (Optional)</p>
InitialResponse	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description First automated response to the customer for a new conversation. (Optional)</p>
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether a channel is active and can receive messages.</p>
IsAuthenticated	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether a user is authenticated to a voice assistant.</p>
IsLinkedRecordOpenedAsSubTab	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether to show the contact as a subtab.</p>
IsoCountryCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>Two-letter ISO 3166-1 alpha-2 code for the country that the phone number is associated with. For example, the code for United States is <code>US</code>.</p>
<code>IsRequireDoubleOptIn</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Indicates whether double opt-in is required (<code>true</code>) or not (<code>false</code>) for this Messaging channel.</p>
<code>IsRestrictedToBusinessHours</code>	<p>Description</p> <p>Reserved for future use.</p>
<code>IsUserMatchByExternalIdOnly</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Indicates whether to restrict matching on customer by external ID only (and not use the full name). This field has been deprecated as of API version 52.0.</p>
<code>Language</code>	<p>Description</p> <p>Reserved for future use.</p>
<code>LinkingPreference</code>	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>Preference for linking a new user that sends a message using this channel. Currently supports contact linking.</p>
<code>MasterLabel</code>	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p>Description</p> <p>Unique name for the <code>MessagingChannel</code>.</p>

Field Name	Details
MessageType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Type of message. Possible values are:</p> <ul style="list-style-type: none"> • Facebook • Phone • Text • Voice • WhatsApp
MessagingPlatformKey	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Unique key for a channel that the end user can message.</p>
OfflineAgentsResponse	<p>Description Reserved for future use.</p>
OptInPrompt	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Automated response to the end user to prompt them to explicitly opt in to receiving messages. Available in API version 49.0 and earlier.</p>
OptInResponse	<p>Type textarea</p> <p>Properties Create, Defaulted on create, Nillable, Update</p> <p>Description Automated response to the end user when they opt in to messaging. Available in API versions 48.0 and 49.0. Use the <code>OptInConfirmation</code> field of the MsgChannelLanguageKeyword on page 2324 object instead.</p>

Field Name	Details
OptOutResponse	<p>Type textarea</p> <p>Properties Create, Defaulted on create, Nillable, Update</p> <p>Description Automated response to the end user when they opt out of messaging. Available in API version 48.0 only. Use the <code>OptOutConfirmation</code> field of the MsgChannelLanguageKeyword object instead.</p>
OutsideBusinessHoursResponse	<p>Description Reserved for future use.</p>
RoutingConfigurationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Specifies which Omni-Channel routing configuration to use. This field is required when <code>RoutingType</code> is <code>OmniSkills</code>. To learn more, see Create Routing Configurations.</p>
RoutingType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Type used to support Omni-Channel's different routing methods.</p> <ul style="list-style-type: none"> • <code>OmniQueue</code> (queue-based routing) • <code>OmniSkills</code> (skills-based routing) <p>When this value isn't set, <code>OmniQueue</code> is used.</p>
TargetQueueId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Queue in which incoming conversations are placed while waiting for an agent to accept. This is a relationship field.</p>

Field Name	Details
	<p>Relationship Name TargetQueue</p> <p>Relationship Type Lookup</p> <p>Refers To Group</p>
TargetUserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Messaging User or agent for the conversation. Available in API version 50.0 and earlier.</p>

MessagingChannelSkill

Junction object that represents an association between MessagingChannel and Skill. This object is available in API version 45.0 and later. For example, when we want to use Omni-Channel skills-based routing in Live message, this object maintains the mapping between the messaging channel and the skill.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
MessagingChannelId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the MessagingChannel on page 2268. This is a relationship field.</p> <p>Relationship Name MessagingChannel</p> <p>Relationship Type Lookup</p>

Field Name	Details
	Refers To MessagingChannel
SkillId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the Skill on page 3298. This is a relationship field. Relationship Name Skill Relationship Type Lookup Refers To Skill

MessagingConfiguration

Represents the details for a Messaging configuration. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
DeveloperName	Type string Properties Filter, Group, Sort Description The API name for this Messaging configuration.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	Type picklist

Field	Details
	<p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The language of this Messaging configuration.</p>
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The label for the Messaging configuration.</p>
MessagingServiceUrl	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The URL for the Messaging service.</p>
ProvisioningServiceUrl	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The URL for the provisioning service.</p>

MessagingDeliveryError

Represents a log of triggered outbound failures to verify when a triggered outbound has failed. This object is available in API version 44.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CorrelationIdentifier	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>
CreatedById	<p>Type reference</p> <p>Properties Defaulted on createFilter, Group, Sort</p> <p>Description ID of the user who created the error.</p>
CreatedDate	<p>Type dateTime</p> <p>Properties Defaulted on create, Filter, Sort</p> <p>Description Date the error was created.</p>
DestinationPhoneNumber	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The recipient of the phone call.</p>
FailureReason	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The provided reason for why the message failed.</p>
FlowEntity	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>
FullMessage	<p>Type textarea</p>

Field	Details
	Description Plain error text.
Id	Type id Properties Defaulted on create, Filter, Group, idLookup, Sort Description Identifier of the error.
IsDeleted	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the error has been deleted.
LastModifiedById	Type reference Properties Defaulted on create, Filter, Group, Sort Description The ID of the user who last modified the error log.
LastModifiedDate	Type dateTime Properties Defaulted on create, Filter, Sort Description Date when the Messaging error log was last modified.
MessagingChannelId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the MessagingChannel on page 2268. This is a relationship field. Relationship Name MessagingChannel

Field	Details
	<p>Relationship Type Lookup</p> <p>Refers To MessagingChannel</p>
MessagingEndUserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Identifier for the Messaging user. This is a relationship field.</p> <p>Relationship Name MessagingEndUser</p> <p>Relationship Type Lookup</p> <p>Refers To MessagingEndUser</p>
MessagingTemplateId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the Messaging template used. This is a relationship field.</p> <p>Relationship Name MessagingTemplate</p> <p>Relationship Type Lookup</p> <p>Refers To MessagingTemplate</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Namefield, Sort</p> <p>Description Name of the error. Maximum length is 80 characters.</p>

Field	Details
SystemModstamp	<p>Type dateTime</p> <p>Properties Defaulted on create, Filter, Sort</p> <p>Description System modification time for the Messaging delivery error log.</p>
Type	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The kind of event that occurred.</p> <ul style="list-style-type: none"> • Error (Default) • Warning

MessagingEndUser

Represents a single address—such as a phone number or Facebook page—communicating with a single Messaging channel. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the account associated with this Messaging end user.</p>
ContactId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the associated Contact.</p>
HasInitialResponseSent	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether an initial response has been sent to the Messaging end user (<code>true</code>) or not (<code>false</code>).</p>
IsFullyOptedIn	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Sort</p> <p>Description Indicates whether the Messaging end user has opted in to receiving messages (<code>true</code>) or not (<code>false</code>). This field compares the related messaging channel's consent requirement to the user's consent status; if the user's status meets the channel's required consent level, <code>IsFullyOptedIn</code> is set to <code>true</code>. Available in API version 48.0 and later.</p>
IsOptedOut	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the Messaging end user has opted out of receiving messages. Available in API version 48.0 and earlier. Use <code>MessagingConsentStatus</code> and <code>IsFullyOptedIn</code> instead.</p>
IsoCountryCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ISO country code associated with the Messaging end user.</p>
LastReferencedDate	<p>Type dateTime</p>

Field	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
Locale	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description Reserved for future use.</p>
MessageType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description Type of message. Possible values are:</p> <ul style="list-style-type: none"> • Facebook • Phone • Text • WhatsApp • Voice
MessagingChannelId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the Messaging channel associated with the Messaging end user. This is a relationship field.</p> <p>Relationship Name MessagingChannel</p>

Field	Details
	<p>Relationship Type Lookup</p> <p>Refers To MessagingChannel</p>
MessagingConsentStatus	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The consent status of the messaging user. This field is available in API version 48.0 and later. Possible values are:</p> <ul style="list-style-type: none"> • DoublyOptedIn • ExplicitlyOptedIn • ImplicitlyOptedIn • OptedOut
MessagingPlatformKey	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The phone number or Facebook page ID associated with this Messaging end user.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the Messaging end user.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the owner associated with this Messaging end user. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p>

Field	Details
	<p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ProfilePictureUrl	<p>Type url</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The URL of the Messaging end user's profile picture.</p>

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

[MessagingEndUserHistory](#)

History is available for tracked fields of the object.

[MessagingEndUserOwnerSharingRule](#)

Sharing rules are available for the object.

[MessagingEndUserShare](#)

Sharing is available for the object.

MessagingLink

Represents the link between a Messaging Channel and where it's shared. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
EntityType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Possible values are:</p> <ul style="list-style-type: none"> Account Case Contact CustomEntityDefinition—Custom Object Definition Lead Opportunity
MessagingChannelId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>MessagingChannel</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>MessagingChannel</p>
RecordTypeId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>RecordType</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>RecordType</p>
ShouldAttemptAutoLink	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
ShouldPromptCreate	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

MessagingSession

Represents a session on a Messaging channel. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AcceptTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The time when an agent accepts an incoming Messaging session.</p>
AgentMessageCount	<p>Type int</p> <p>Properties Nillable</p> <p>Description The number of messages sent by the agent during the session.</p>
AgentType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The type of agent that is assigned to the Messaging session. Possible values are:</p> <ul style="list-style-type: none"> • Agent • Bot

Field	Details
	<ul style="list-style-type: none"> • <code>BotToAgent</code>—Bot & Agent • <code>System</code>—Used for triggered outbound messages
<code>CaseId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the case associated with this Messaging session.</p>
<code>ChannelEndUserFormula</code>	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description A concatenation of the Messaging channel and Messaging user.</p>
<code>ChannelGroup</code>	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The group of the associated Messaging channel.</p>
<code>ChannelIntent</code>	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The intent of the associated Messaging channel.</p>
<code>ChannelKey</code>	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The unique identifier for the associated Messaging channel.</p>
<code>ChannelLocale</code>	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description The locale of the associated Messaging channel.</p>
ChannelName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the associated Messaging channel.</p>
ChannelType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The type of the associated Messaging channel. Possible values are:</p> <ul style="list-style-type: none"> • Facebook • Phone • Text • Voice • WhatsApp
EndTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description The time when the Messaging session ended.</p>
EndUserId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the end user's account record. This is a relationship field.</p> <p>Relationship Name EndUserAccount</p> <p>Relationship Type Lookup</p>

Field	Details
	<p>Refers To Account</p>
EndUserContactId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the end user's contact record. This is a relationship field.</p> <p>Relationship Name EndUserContact</p> <p>Relationship Type Lookup</p> <p>Refers To Contact</p>
EndUserMessageCount	<p>Type int</p> <p>Properties Nillable</p> <p>Description The number of messages sent by the Messaging end user.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
LeadId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the Lead associated with this Messaging session.</p>
MessagingChannelId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the Messaging channel associated with this Messaging session. This is a relationship field.</p> <p>Relationship Name MessagingChannel</p> <p>Relationship Type Lookup</p> <p>Refers To MessagingChannel</p>
MessagingEndUserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the Messaging end user associated with this Messaging session. This is a relationship field.</p> <p>Relationship Name MessagingEndUser</p> <p>Relationship Type Lookup</p> <p>Refers To MessagingEndUser</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name of this Messaging session.</p>

Field	Details
OpportunityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the opportunity record associated with this Messaging session.</p>
Origin	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description The origin of this Messaging session. Possible values are:</p> <ul style="list-style-type: none"> • AgentInitiated • ConversationClose • ConversationControlLost—Third-party bot resumes control from Salesforce bot or agent • Help • InboundInitiated • OptIn—Opt In Status Change • OptOut—Opt Out Status Change • TriggeredOutbound <p> Note: Messaging sessions can't be created using Apex code. They can be created only through customer initiation or by using Process Builder, flows, or the Start Conversation action.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the owner associated with this Messaging session. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>

Field	Details
PreviewDetails	<p>Type string</p> <p>Properties Nillable</p> <p>Description The preview shown to an agent for this Messaging session.</p>
SessionKey	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The identifier for the Messaging session.</p>
StartTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description The time when the Messaging session started.</p>
Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The status of the Messaging session. Possible values are:</p> <ul style="list-style-type: none">• Active• Ended• New• Waiting <p>The additional values <code>Error</code>, <code>Inactive</code>, and <code>Paused</code> are visible from the API but not in use.</p>
TargetUserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the target user associated with this Messaging session. This is a relationship field.</p>

Field	Details
	<p>Relationship Name TargetUser</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

[MessagingSessionFeed](#)

Feed tracking is available for the object.

[MessagingSessionHistory](#)

History is available for tracked fields of the object.

[MessagingSessionOwnerSharingRule](#)

Sharing rules are available for the object.

[MessagingSessionShare](#)

Sharing is available for the object.

MessagingTemplate

Represents a Messaging template used to send pre-formatted messages. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The description of the Messaging template.</p>

Field	Details
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The API name for the Messaging template.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The language of the Messaging template.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The label of the Messaging template.</p>
Message	<p>Type textarea</p> <p>Properties Create, Update</p> <p>Description The body text of the Messaging template.</p>

MetadataPackage

Represents a package that has been developed in the org you're logged in to. Applies to unlocked, unmanaged, first-generation, and second-generation managed packages.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The name of the package.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description For first-generation and second-generation managed packages, and unlocked packages with namespaces, this field is the namespace prefix assigned to the package. For unmanaged packages, or no-namespace unlocked packages, this field is blank.</p>
PackageCategory	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The type of package. Valid values are:</p> <ul style="list-style-type: none"> • <code>Application</code> (internal use only) • <code>Module</code> (internal use only) • <code>Package</code>—Represents either an unmanaged package or a first-generation managed package. • <code>Package2</code>—Represents either an unlocked package or a second-generation managed package. <p>The default value is <code>Package</code>.</p> <p>This field is available in API version 49.0 and later.</p>

Usage

Here are examples of the types of API queries you can perform.

Query	String
Show all managed and unmanaged packages in the org	<pre>SELECT Name, NamespacePrefix FROM MetadataPackage</pre>
Show only managed packages in the org	<pre>SELECT Name, NamespacePrefix FROM MetadataPackage WHERE NamespacePrefix <> ''</pre>

MetadataPackageVersion

Represents a package version (managed or unmanaged) that has been uploaded from the org you're logged in to.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
BuildNumber	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The build number of the version. For example, if you upload two beta versions, they have build numbers 1 and 2. Then, when you upload a non-beta version, the build number is 3. When you upload a new version, the build number resets to 1.</p>
IsDeprecated	<p>Type boolean</p> <p>Properties Filter, Group, Sort</p> <p>Description Indicates whether the package version is deprecated. Available in API version 46.0 and later.</p>
MajorVersion	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The first number in a package version number. A version number either has an <code>x.y</code> format or an <code>x.y.z</code> format. The <code>x</code> represents the major version, <code>y</code> the minor version, and <code>z</code> the patch version.</p>
MetadataPackageId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The 18-character package ID starting with 033.</p>
MinorVersion	<p>Type</p> <p>int</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The second number in a package version number. A version number either has an <code>x.y</code> format or an <code>x.y.z</code> format. The <code>x</code> represents the major version, <code>y</code> the minor version, and <code>z</code> the patch version.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, idLookup, Sort</p> <p>Description</p> <p>The name of the package version.</p>
PatchVersion	<p>Type</p> <p>int</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The third number in a package version number, if present. A version number either has an <code>x.y</code> format or an <code>x.y.z</code> format. The <code>x</code> represents the major version, <code>y</code> the minor version, and <code>z</code> the patch version.</p>
ReleaseState	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p>

Field Name**Details****Description**

If the package version is a beta version, the value is Beta. Otherwise, the value is Released.

Usage

Here are examples of the types of API queries you can perform.

Query**String**

Get all package versions for the package that has a MetadataPackageID of 033D00000001xQlIAI

```
SELECT Id, Name, ReleaseState,
MajorVersion, MinorVersion, PatchVersion
FROM MetadataPackageVersion WHERE
MetadataPackageId = '033D00000001xQlIAI'
```

Get the package version for the package with a specific MetadataPackageID and a major version greater than 1

```
SELECT Id FROM MetadataPackageVersion WHERE
MetadataPackageId ='033D00000001xQlIAI'
AND MajorVersion > 1
```

Get released package versions for the package with a specific MetadataPackageID

```
SELECT Id FROM MetadataPackageVersion WHERE
MetadataPackageId = '033D00000001xQlIAI'
AND ReleaseState = 'Released'
```

Java Code Sample

Suppose you want to push version 3.4.6 of your package to all orgs. Let's write some code to identify the orgs eligible for the upgrade. This example demonstrates how to generate the list of subscriber orgs eligible to be upgraded to version 3.4.6 of a package.

This code sample uses the Web Services Connector (WSC).

```
// Finds all Active subscriber orgs that have the package installed
String PACKAGE_SUBSCRIBER_ORG_KEY_QUERY = "Select OrgKey from PackageSubscribers where
OrgStatus = 'Active' and InstalledStatus = 'I'";

// Finds all MetadataPackageVersions lower than the version given, including the list
// of subscribers for each version
String METADATA_PACKAGE_VERSION_QUERY = "Select Id, Name, ReleaseState, (%s) from"
+ " MetadataPackageVersion where MetadataPackageId = '%s' AND ReleaseState = 'Released'"
+ " AND (MajorVersion < 3 OR (MajorVersion = 3 and MinorVersion < 4))"
+ " OR (MajorVersion = 3 and MinorVersion = 4 and PatchVersion < 6)";

// conn is an EnterpriseConnection instance initialized with a ConnectionConfig object
// representing a connection to the developer org of the package
QueryResult results = conn.query(String.format(METADATA_PACKAGE_VERSION_QUERY,
PACKAGE_SUBSCRIBER_ORG_KEY_QUERY));

// This list will hold all of the PackageSubscriber objects that are eligible for upgrade
// to the given version
```

```

List<PackageSubscriber> subscribers = new ArrayList<>();
for (SObject mpvso : results.getRecords()) {

    // Cast the sObject to a MetadataPackageVersion
    MetadataPackageVersion mpv = (MetadataPackageVersion) mpvso;

    // Add subscribers to our list
    if (mpv.getPackageSubscribers() != null) {
        for (SObject pssso : mpv.getPackageSubscribers().getRecords()) {
            subscribers.add((PackageSubscriber) pssso);
        }
    }
}

```

Next Step

Create a push request using PackagePushRequest.

Metric

The Metric object represents the components of a goal metric such as its name, metric type, and current value.

Note: The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
CompletionDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The completion date of the metric.</p>
CurrentValue	<p>Type double</p> <p>Properties Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p>Description The current value of the metric.</p>

Field Name	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The description of the metric. The maximum length is 65,535 characters.</p>
DueDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The due date of the metric.</p>
GoalId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the goal the metric is related to.</p>
InitialValue	<p>Type double</p> <p>Properties Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p>Description The initial value of the metric.</p>
IsCompletionMetric	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Read only. If <code>true</code>, the metric measures whether or not the metric is finished. If <code>false</code>, the metric measures how much is finished compared to a targeted value.</p>
LastComment	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>A comment that provides more context about the metric, such as its status or progress. The maximum length is 255 characters.</p>
LastReferencedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The timestamp that indicates when a user last viewed a record that is related to this metric.</p>
LastViewedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The timestamp that indicates when a user last viewed this metric. If this value is null, this record might have been only referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>The name of the metric.</p>
OwnerId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>ID of the user who owns the metric.</p>
Progress	<p>Type</p> <p>percent</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Read only. The overall progress of the metric.</p>

Field Name	Details
RecordTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the related record type.</p>
StartDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The start date of the metric.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The status of the metric. Possible values include:</p> <ul style="list-style-type: none"> • Not Started • On Track • Behind • Critical • Completed • Postponed • Canceled • Not Completed
TargetValue	<p>Type double</p> <p>Properties Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p>Description The target value of the metric.</p>
Weight	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>The weight of the metric. The sum of the weights should equal 100%.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

MetricFeed

Feed tracking is available for the object.

MetricHistory

History is available for tracked fields of the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

MetricOwnerSharingRule

Sharing rules are available for the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

MetricShare

Sharing is available for the object.

MetricDataLink

The link between the metric and the data source, such as a report.

 **Note:** The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
DatasourceFieldName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>The field name of the data source, such as a report summary field.</p>

Field Name	Details
DataSourceId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the data source.</p>
LastSynchronizationTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The last time the data was synchronized.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, Sort</p> <p>Description The name given to the data link record.</p>
TargetId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the metric that the data is linked to.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[MetricDataLinkHistory](#)

History is available for tracked fields of the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

MetricsDataFile

Represents a data file containing usage metrics on all installations of a managed package in a Salesforce instance. This object is available in API version 30.0 and later.

 **Note:** Usage Metrics is now unavailable. For more information, see [Usage Metrics Retirement](#). Enable [AppExchange App Analytics](#) in your security-reviewed managed packages to retrieve usage data about how subscribers interact with your AppExchange solutions. You can use these details to identify attrition risks, inform feature development decisions, and improve user experience. To enable App Analytics, follow the instructions in [Request AppExchange App Analytics](#).

Supported Calls

`query()`, `delete()`

Fields

Field Name	Details
<code>MetricsDataFile</code>	<p>Type base64</p> <p>Properties Filter, Query, Sort</p> <p>Description A text file containing the usage data encoded in Base 64.</p>
<code>MetricsDataFileContentType</code>	<p>Type string</p> <p>Properties Filter, Query, Sort</p> <p>Description The format of the data file. Currently, the only allowed value is <code>text/csv</code>.</p>
<code>MetricsDataFileLength</code>	<p>Type int</p> <p>Properties Filter, Query, Sort</p> <p>Description The size of the data file in bytes.</p>
<code>MetricsRunDate</code>	<p>Type dateTime</p> <p>Properties Filter, Query, Sort</p> <p>Description The date when the usage metrics collection job was run.</p>
<code>MetricsEndDate</code>	<p>Type dateTime</p>

Field Name	Details
	<p>Properties Filter, Query, Sort</p> <p>Description The end time and date for the data collection.</p>
MetricsStartDate	<p>Type dateTime</p> <p>Properties Filter, Query, Sort</p> <p>Description The start time and date for the data collection.</p>
MetricsType	<p>Type picklist</p> <p>Properties Filter, Query, Sort</p> <p>Description The type of data being collected. The possible values are <code>CustomObject</code> and <code>Visualforce</code>.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Query, Sort</p> <p>Description The namespace prefix of the package for which data is being collected.</p>
SendingInstance	<p>Type string</p> <p>Properties Filter, Query, Sort</p> <p>Description The server instance from which this data was collected, for example, "na8."</p>

Usage

Use this object to access customer usage metrics for a managed package. Each record contains one day's data, on either custom objects or Visualforce pages, for all organizations in a Salesforce instance that have the package installed. The following data is collected each day.

- **Custom objects** — the number of records stored in each custom object.

- **Visualforce pages** — the number of times each Visualforce page was accessed, the number of unique users who accessed it, and the average loading time (in milliseconds).

The custom objects data is a snapshot that reflects the state of the organization at the time the database was sampled, while the Visualforce data covers usage over a 24-hour period.

This feature is intended for API access only. The owner of the package must write a secondary process to retrieve the metrics data from the reporting organization, and export it to another system for analysis.

The usage metrics data for all production organizations in a given instance is merged and written into a text file in a specified format one time each day. If an instance doesn't have any organizations with the package installed or any organizations that accessed Visualforce pages in the package, a blank record is created for that day, with `MetricsDataFileLength` set to zero.

In a record for custom objects, each row of the text file contains usage data in the following order.

- Organization ID
- Organization name
- Organization edition
- Organization status
- Name of the custom object
- Number of records of the custom object on the specified day

The custom object count is a snapshot captured one time each day. Here's a section of a sample data file for custom objects. It shows there were 3500 and 1500 records in the `Alpha` and `Beta` custom objects, respectively, in the specified customer organization on the specified day.

```
"00Dxx0000001gbk","org1","Enterprise Edition","TRIAL","Alpha", "3500"
"00Dxx0000001gbk","org1","Enterprise Edition","TRIAL","Beta", "1500"
```

In a record for Visualforce pages, each row of the text file contains usage data in the following order.

- Organization ID
- Organization name
- Organization edition
- Organization status
- Package version number
- Name of the Visualforce page
- Number of times the page was accessed
- Number of unique users who accessed the page
- Average loading time of the page, in milliseconds

The Visualforce counts for each organization measure the number of times the page was viewed in the duration between the start and end times. Here's a section of a sample data file for Visualforce pages.

```
"00Dxx0000001gbk","org1","Enterprise Edition","TRIAL","1.0","/apex/gm12__f1","1","1","66.0"
"00Dxx0000001gbk","org1","Enterprise Edition","TRIAL","1.0","/apex/gm12__f2","1","1","128.0"
"00Dxx0000001gbk","org1","Enterprise Edition","TRIAL","1.0","/apex/gm12__f3","1","1","107.0"
"00Dxx0000001gbf","org1","Enterprise Edition","TRIAL","1.0","/apex/gm12__f1","5","1","73.6"
"00Dxx0000001gbf","org1","Enterprise Edition","TRIAL","1.0","/apex/gm12__f2","1","1","72.0"
"00Dxx0000001gbf","org1","Enterprise Edition","TRIAL","1.0","/apex/gm12__f3","7","1","50.8"
```

MilestoneType

Represents a milestone (required step in a customer support process). This object is available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only Salesforce admins, users with access to the Case, Entitlement, or Work Order objects, and users with the View Setup and Configuration permission can access this object.

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description A description of the milestone.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, idLookup, Update</p> <p>Description The name of the milestone.</p>
RecurrenceType	<p>Type picklist</p> <p>Properties Create, Update</p> <p>Description The type of recurrence for the milestone.</p>

Usage

Use this object to query and manage the milestone type for CaseMilestone records.

SEE ALSO:

[CaseMilestone](#)

[SlaProcess](#)

MLField

Represents a single field in a data definition. This object is available in API version 50.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
Entity	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The object that contains the field.</p>
Field	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The name of the field.</p>

MIntentUtteranceSuggestion

Represents a customer input, used for training purposes in the feedback loop process of a conversation. Admins can add these inputs to the intent training model. This object is available in API version 51.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
ConfigId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p>
IntentSuggestion	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The recommended intent.</p>
ReviewStatus	<p>Type picklist</p> <p>Properties Filter, Group, Restricted Picklist, Sort</p> <p>Description Possible values are: Ignore, New</p>
Utterance	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The text input from the end user.</p>
UtteranceCount	<p>Type integer</p> <p>Properties Filter, Group, Sort</p> <p>Description A count of the Utterance field.</p>

MLPredictionDefinition

Represents a prediction definition that specifies details about the prediction. This object is available in API version 50.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ApplicationId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The unique ID of the parent AI Application.</p>
DeveloperName	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
Language	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The language of the prediction. Possible values are:</p> <ul style="list-style-type: none"> • <code>da</code>—Danish • <code>de</code>—German • <code>en_US</code>—English • <code>es</code>—Spanish • <code>es_MX</code>—Spanish (Mexico) • <code>fi</code>—Finnish • <code>fr</code>—French • <code>it</code>—Italian

Field	Details
	<ul style="list-style-type: none"> • ja—Japanese • ko—Korean • nl_NL—Dutch • no—Norwegian • pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish • th—Thai • zh_CN—Chinese (Simplified) • zh_TW—Chinese (Traditional)
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description Label that identifies the prediction throughout the Salesforce user interface.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Specifies the namespace of the prediction, if installed with a managed package.</p>
PredictionField	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Field that the prediction is based on.</p>
PushbackField	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Field that the prediction writes scores to.</p>
Status	<p>Type picklist</p>

Field	Details
	<p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The status of the prediction. Possible values are:</p> <ul style="list-style-type: none"> • Disabled • Draft • Enabled
Type	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of model that returns the prediction values. Possible values are:</p> <ul style="list-style-type: none"> • BinaryClassification • DeepLearningIntentClassification • DeepLearningNameEntityRecognition • GlobalDeepLearningIntentClassification • GlobalDeepLearningNameEntityRecognition • LanguageDetection • MulticlassClassification • Regression • ScoringSpecificOutcome

MLRecommendationDefinition

For internal use only.

MobileSecurityPolicy

Enables mobile security policies on the Salesforce mobile app with Enhanced Mobile Security. This object is available in API version 50.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Accessing this object requires the Enhanced Mobile App Security add-on subscriptions and the Enforce Enhanced Mobile App Security user permission.

Fields

Field	Details
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
EffectiveDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date a mobile security policy is enforced.</p>
IsEnabled	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description A value indicating whether a mobile security policy is enabled. The default value is 'false'.</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The two-to five-character code that represents the language and locale ISO.</p>
MasterLabel	<p>Type string</p>

Field	Details
	<p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The label of the mobile security policy.</p>
MobilePlatform	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The mobile operating system. Possible values are:</p> <ul style="list-style-type: none"> • Android • iOS
RuleValue	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Value of the mobile security policy rule.</p>
RuleValueType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The type of mobile security policy rule. Possible values are:</p> <ul style="list-style-type: none"> • Boolean • Text • TextList
SeverityLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The severity level of a mobile security policy. Possible values are:</p>

Field	Details
	<ul style="list-style-type: none"> • Critical • Error • Info • Warn
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The type of mobile security policy. Possible values are:</p> <ul style="list-style-type: none"> • AllowedDeviceList—Allowed Device List • Block3dTouch—Block 3D Touch • BlockCalendar—Block Calendar • BlockCamera—Block Camera • BlockContacts—Block Contacts • BlockCustomKeyboard—Block Custom Keyboard • BlockFileBackup—Block File Backup • BlockMicrophone—Block Microphone • BlockOsSharing—Block OS Share Actions • BlockedDeviceList—Blocked Device List • BrowserUriScheme—Mobile Browser URI Scheme • CheckBiometric—Check Biometric Login Data • DevicePasscode—Require Device Passcode • DisableUrlCaching—Disable URL Caching • JailbrokenDevice—Block Jailbroken Device • LogCertPin—Log Certificate Pinning • LogEmail—Log Email • LogPhonecall—Log Phone Call • LogPolicyResult—Log Security Policy Evaluation Result • LogScreenshot—Log Screenshot • LogTextmessage—Log SMS • LogoutAfterRestart—Log Out User After Device Restart • LogoutOnBiometricChange—Log Out User After Changing Biometric Login Data • MalwareDetection—Malware Detection • ManInMiddle—Block Man In The Middle Attack • MaxOffline—Maximum Days Offline Without Policy Refresh

Field	Details
	<ul style="list-style-type: none"> • <code>MaximumAppVersion</code>—Maximum Application Version • <code>MaximumOsVersion</code>—Maximum OS Version • <code>MinimumAppVersion</code>—Minimum Application Version • <code>MinimumOsVersion</code>—Minimum OS Version • <code>MinimumSecurityPatchVersion</code>—Minimum Security Patch Version • <code>PhonecallUriScheme</code>—Phone Call Application Handler • <code>Screenshot</code>—Block Screenshot

MobileSecurityUserMetric

Represents the metrics for users who have Enhanced Mobile Security policies enforced. This object is available in API version 51.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Accessing this object requires the Enhanced Mobile App Security add-on subscriptions and the Enforce Enhanced Mobile App Security user permission.

Fields

Field	Details
<code>MetricsDate</code>	<p>Type date</p> <p>Properties Filter, Group, Sort</p> <p>Description The date the metrics were collected.</p>
<code>UserCount</code>	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The number of users who have mobile security policies enforced.</p>

Usage

A user with the Manage Enhanced Mobile App Security permission can run this SOQL query.

```
SELECT MetricsDate, UserCount
FROM MobileSecurityUserMetric
ORDER BY MetricsDate DESC
```

MobileSettingsAssignment

Represents the assignment of a particular field service mobile settings configuration to a user profile. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
FieldServiceMobileSettingsId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of a set of field service mobile settings.</p>
ProfileId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the profile to associate with the set of field service mobile settings.</p>

MobSecurityCertPinConfig

Configuration of mobile security certificate pinning on the Salesforce mobile app with Enhanced Mobile Security. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Accessing this object requires the Enhanced Mobile App Security add-on subscriptions and the Enforce Enhanced Mobile App Security user permission.

Fields

Field	Details
CertificateHash	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique identifier for the certificate.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API.</p>
DomainName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique name of the domain.</p>
EffectiveDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date when enforcing certificate pinning is enforced.</p>
IsEnabled	<p>Type boolean</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The default value is False.</p>
IsSubdomainIncluded	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The default value is False.</p>
Language	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The two-to five-character code that represents the language and locale ISO.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The master label of the mobile security pin.</p>
MobilePlatform	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The mobile operating system. Possible values are:</p> <ul style="list-style-type: none">• Android• iOS
SeverityLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The severity level of a mobile security policy.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Critical • Error • Info • Warn
Type	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description</p> <p>The type of pin</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • AuthServer—Authentication Server • Resource—Resource

MobSecurityCertPinEvent

The event of mobile security certificate pinning on the Salesforce mobile app with Enhanced Mobile Security. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `describeSObjects()`

Special Access Rules

Accessing this object requires the Enhanced Mobile App Security add-on subscriptions and the Enforce Enhanced Mobile App Security user permission.

Fields

Field	Details
AppPackageIdentifier	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create</p>

Field	Details
	<p>Description The unique identifier for the certificate.</p>
AppVersion	<p>Type string</p> <p>Properties Create</p> <p>Description The version of the app.</p>
CertPinResults	<p>Type json</p> <p>Properties Create</p> <p>Description The results of certificate pinning.</p>
DeviceIdentifier	<p>Type string</p> <p>Properties Create</p> <p>Description The hardware IDs or IDs to uniquely identify a mobile device.</p>
DeviceModel	<p>Type string</p> <p>Properties Create</p> <p>Description The model of the mobile device.</p>
EventDate	<p>Type dateTime</p> <p>Properties Create, Nillable</p> <p>Description The date of the certificate pinning event.</p>
EventDescription	<p>Type string</p> <p>Properties Create, Nillable</p>

Field	Details
	Description The description of the certificate pinning event.
EventIdentifier	Type string Properties Create, Nillable Description The ID of the certificate pinning event.
EventUuid	Type string Properties Nillable Description The universally unique identifier of the event.
OsName	Type string Properties Create Description The name of the operating system.
OsVersion	Type string Properties Create Description The version of the operating system.
ReplayId	Type string Properties Nillable Description The position of the event in the event stream.
UserId	Type reference Properties Create

Field	Details
	<p>Description This is polymorphic relationship field.</p> <p>Relationship Name User</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
WebkitVersion	<p>Type string</p> <p>Properties Create, Nillable</p> <p>Description The version of the web browser engine developed by Apple.</p>

MsgChannelLanguageKeyword

Represents the consent configuration for a Messaging channel. This object is available in API version 48.0 and later.

Supported Calls

`describeSObjects()`, `delete()`, `query()`, `retrieve()`, `search()`

Fields

Field	Details
CustomKeywords	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description The keywords a Messaging end user can send to receive the Custom Response.</p>
CustomResponse	<p>Type textarea</p> <p>Properties Nillable</p>

Field	Details
	<p>Description The automated response sent when a Messaging end user sends a Custom Keyword.</p>
DoubleOptInKeywords	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description The keywords a Messaging end user can send to doubly opt in to receiving messages.</p>
HelpKeywords	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description The keywords a Messaging end user can send to request help during a Messaging session.</p>
HelpResponse	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description The automated response sent when a Messaging end user requests help.</p>
MasterLanguage	<p>Type textarea</p> <p>Properties</p> <p>Description The language used for this consent configuration.</p>
MessagingChannelId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the associated Messaging channel. This is a relationship field.</p> <p>Relationship Name MessagingChannel</p> <p>Relationship Type Lookup</p>

Field	Details
	Refers To MessagingChannel
OptInConfirmation	Type textarea Properties Nillable Description The automated response sent when a Messaging end user opts in to receiving messages.
OptInKeywords	Type textarea Properties Nillable Description The keywords a Messaging end user can send to explicitly opt in to receiving messages.
OptOutConfirmation	Type textarea Properties Nillable Description The automated response sent when a Messaging end user opts out of receiving messages.
OptOutKeywords	Type textarea Properties Nillable Description The keywords a Messaging end user can send to opt out of receiving messages.

MyDomainDiscoverableLogin

Represents configuration settings when the My Domain login page type is Discovery. Login Discovery provides an identity-first login experience, where the login page contains the identifier field only. Based on the identifier entered, a handler determines how to authenticate the user. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
ApexHandlerId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the Apex handler that contains the Discovery authentication logic. This is a relationship field.</p> <p>Relationship Name ApexHandler</p> <p>Relationship Type Lookup</p> <p>Refers To ApexClass</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
ExecuteApexHandlerAsId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the user who is executing the handler. Requires Manage User permission. This is a relationship field.</p> <p>Relationship Name ExecuteApexHandlerAs</p>

Field Name	Details
	<p>Relationship Type Lookup</p> <p>Refers To User</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The language of the <code>MasterLabel</code>. Possible values are:</p> <ul style="list-style-type: none"> • <code>da</code> (Danish) • <code>de</code> (German) • <code>en_US</code> (English) • <code>es</code> (Spanish) • <code>es_MX</code> (Spanish - Mexican) • <code>fi</code> (Finnish) • <code>fr</code> (French) • <code>it</code> (Italian) • <code>ja</code> (Japanese) • <code>ko</code> (Korean) • <code>nl_NL</code> (Dutch) • <code>no</code> (Norwegian) • <code>pt_BR</code> (Portuguese - Brazilian) • <code>ru</code> (Russian) • <code>sv</code> (Swedish) • <code>th</code> (Thai) • <code>zh_CN</code> (Chinese - Simplified) • <code>zh_TW</code> (Chinese - Traditional)
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The name of the action link group template.</p>
UsernameLabel	<p>Type string</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Login prompt on login page when the My Domain login page type is Discovery. It supports localization with custom labels.</p>

Usage

Use this object to access the My Domain Login Discovery Page, which is a login page type that prompts users to identify themselves with an email address, phone number, or custom identifier. My Domain Login Discovery performs an interview-based login process, where users are first prompted to provide identity and then authenticated. For example, users receive a verification code that they enter to complete the login process.

MutingPermissionSet

Represents a set of disabled permissions and is used in conjunction with PermissionSetGroup. This object is available in API version 46.0 and later.

Use a muting permission set with a permission set group to mute certain permissions. For instance, you have a subscriber org using a managed package that contains a permission set group. To use the existing permission set group, the subscriber org can disable specific permissions with a muting permission set. Or, perhaps you have a permission set group that contains several permission sets managed by different departments. Use a muting permission set to disable specific permissions based on your organization's needs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Manage Session Permission Set Activations
- Assign Permission Sets

Fields

Field Name	Details
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field Name

Details

Description

The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.

-  **Note:** When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance can slow while Salesforce generates one for each record.
-  **Note:** Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.

Language

Type

picklist

Properties

Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Description

The language of the muting permission set.

Possible values are:

- da (Danish)
- de (German)
- en_US (English)
- es (Spanish)
- es_MX (Spanish - Mexican)
- fi (Finnish)
- fr (French)
- it (Italian)
- ja (Japanese)
- ko (Korean)
- nl_NL (Dutch)
- no (Norwegian)
- pt_BR (Portuguese - Brazilian)
- ru (Russian)
- sv (Swedish)
- th (Thai)
- zh_CN (Chinese - Simplified)
- zh_TW (Chinese - Traditional)

Field Name	Details
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The muting permission set label for the aggregated, disabled permissions.</p>

Usage

Use MutingPermissionSet to disable specified permissions within a permission set group.

Name

Non-queryable object that provides information about foreign key traversals when the foreign key has more than one parent.

This object is used to retrieve information from related records where the related record may be from more than one object type (a polymorphic foreign key). For example, the owner of a case can be either a user or a group (queue). This object allows retrieval of the owner name, whether the owner is a user or a group (queue). You can use a describe call to access the information about parents for an object, or you can use the `who`, `what`, or `owner` fields (depending on the object) in SOQL queries. This object cannot be directly accessed.

Supported Calls

`describeSObjects()`

Fields

Field	Details
Alias	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The user alias. This field contains a value only if the related record is a user.</p>
Email	<p>Type email</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The email address of the user or group (queue).</p>

Field	Details
FirstName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The first name of the user, contact, or lead.</p>
IsActive	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the related record is an active user (<code>true</code>) or not (<code>false</code>). This field contains a value only if the related record is a user.</p>
LastName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The last name of the user, contact, or lead.</p>
LastReferencedDate	<p>Type datetime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type datetime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
MiddleName	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The middle name of the user, contact, or lead.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Name of the parent of the object queried. If the parent is a user, contact, or lead, the value is a concatenation of the <code>FirstName</code>, <code>MiddleName</code>, <code>LastName</code>, and <code>Suffix</code> fields of the related record.</p>
Phone	<p>Type phone</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The phone number of the user. This field contains a value only if the related record is a user.</p>
Profile	<p>Type reference</p> <p>Properties Filter, Nillable</p> <p>Description The Profile of the user. Only populated if the related record is a user.</p>
ProfileId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the user's Profile. Only populated if the related record is a user. This is a relationship field.</p> <p>Relationship Name Profile</p> <p>Relationship Type Lookup</p> <p>Refers To Profile</p>

Field	Details
Suffix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name suffix of the user, contact, or lead.</p>
Title	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The title of the user, for example CFO or CEO.</p>
Type	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description A list of the types of sObjects that can be an owner of this object. You can use this field to filter on a type of owner, for example, return only the leads owned by a user.</p>
Username	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Contains the name that a user enters to log into the API or the user interface. The value for this field is in the form of an email address, and is only populated if the related record is a user.</p>
UserRole	<p>Type picklist</p> <p>Properties Filter, Nillable</p> <p>Description Name of the Role played by the user. Only populated for user rows.</p>
UserRoleId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	Description The ID of the user role associated with this object. This is a relationship field.
	Relationship Name UserRole
	Relationship Type Lookup
	Refers To UserRole

Usage

To query on relationships where the parent may be more than one type of object, use `who`, `what`, or `owner` relationship fields.

[Object Basics](#)

NamedCredential

Represents a named credential, which specifies the URL of a callout endpoint and its required authentication parameters in one definition. A named credential can be specified as an endpoint to simplify the setup of authenticated callouts. This object is available in API version 33.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Note: All credentials stored within this entity are encrypted under a framework that is consistent with other encryption frameworks on the platform. Salesforce encrypts your credentials by auto-creating org-specific keys. Credentials encrypted using the previous encryption scheme have been migrated to the new framework.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name

AuthProviderId

Details

Type

reference

Properties

Filter, Group, Nillable, Sort

Description

Salesforce ID of the authentication provider, which defines the service that provides the login process and approves access to the external system.

Only users with the “Customize Application” and “Manage AuthProviders” permissions can view this field.

This field is available in API version 39.0 and later.

This is a relationship field.

Relationship Name

AuthProvider

Relationship Type

Lookup

Refers To

AuthProvider

AuthTokenEndpointUrl

Type

textarea

Properties

Nillable

Description

The URL where SON Web Tokens (JWTs) are exchanged for access tokens. This field is available in API version 46.0 and later.

CalloutOptionsAllowMergeFieldsInBody

Type

boolean

Properties

Filter

Description

For Apex callouts, indicates whether the code can use merge fields to populate HTTP request bodies with org data.

This field is available in API version 35.0 and later.

CalloutOptionsAllowMergeFieldsInHeader

Type

boolean

Field Name	Details
	<p>Properties Filter</p> <p>Description For Apex callouts, indicates whether the code can use merge fields to populate HTTP headers with org data. This field is available in API version 35.0 and later.</p>
CalloutOptionsGenerateAuthorizationHeader	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates whether Salesforce automatically generates a standard authorization header for each callout to the named credential–defined endpoint. This field is available in API version 35.0 and later.</p>
DeveloperName	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object’s name in a managed package and the changes are reflected in a subscriber’s organization.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
Endpoint	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description The root URL of the endpoint.</p>

Field Name	Details
JwtAudience	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description External service or other allowed recipients for the JSON Web Token. Written as JSON, with a quoted string for a single audience and an array of quoted strings for multiple audiences. Single audience example: "aud1". Multiple audiences example: ["aud1", "aud2", "aud3"]. This field is available in API version 46.0 and later.</p>
JwtFormulaSubject	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Formula string calculating the JSON Web Token's subject. API names and constant strings, in single quotes, can be included. Allows a dynamic Subject unique per user requesting the token. For example, 'User='+\$User.Id. Use this field when <code>PrincipalType</code> is set to <code>PerUser</code>. Corresponds to <code>PerUserSubject</code> in the user interface. This field is available in API version 46.0 and later.</p>
JwtIssuer	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Specify who issued the JSON Web Token using a case-sensitive string. This field is available in API version 46.0 and later.</p>
JwtTextSubject	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Static text, without quotes, that specifies the JSON Web Token subject. Use this field when <code>PrincipalType</code> is set to <code>NamedUser</code>. Corresponds to <code>NamedPrincipalSubject</code> in the user interface. This field is available in API version 46.0 and later.</p>

Field Name	Details
JwtValidityPeriodSeconds	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of seconds that the JSON Web Token is valid. This field is available in API version 46.0 and later.</p>
Language	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The language of the <code>MasterLabel</code>.</p>
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The label for the named credential. This display value is the internal label that doesn't get translated.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation.</p>
PrincipalType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Tracks users who are accessing the external system. <code>Anonymous</code> implies that a user identity isn't specified for</p>

Field Name	Details
	external system access. Named <code>Principal</code> uses one user identity for all users to access the external system.

Usage

Use the `NamedCredential` object to query named credentials in your organization.

 **Note:** Some named credential fields rely on per-user authentication to connect with an external system. If an admin edits one of these fields, then the previously authenticated credentials can get invalidated, requiring individual users to reauthenticate.

[ExternalDataSource](#)

NamespaceRegistry

Represents a namespace that you can link to scratch orgs that were created from your org's Dev Hub. You use the namespace when developing, packaging, and releasing an app. You can't create this object with the API. Use the **Link Namespace** action in the Dev Hub graphical interface to insert a `NamespaceRegistry` record. This object is available in API version 41.0 and later.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Fields

Field Name	Details
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, Sort</p> <p>Description The name of this namespace registry entry.</p>
NamespaceOrg	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The org ID of the Developer Edition org where you've registered the namespace you want to link.</p>
NamespacePrefix	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Sort</p> <p>Description</p> <p>The namespace prefix that you want to link to the scratch org.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

NamespaceRegistryFeed

Feed tracking is available for the object.

NamespaceRegistryHistory

History is available for tracked fields of the object.

NavigationLinkSet

Represents the navigation menu in an Experience Cloud site. A navigation menu consists of items that users can click to go to other parts of the site. This object is available in API version 35.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

`create()`, `delete()`, `update()`, and `upsert()` are available in API version 45.0 and later.

Special Access Rules

Navigation menus are available only in Experience Cloud sites created using Experience Builder templates. To use navigation menus in LWR templates, you must build a custom navigation menu component.

Fields

Field Name

Details

DeveloperName

Type

string

Properties

Create, Filter, Group, Sort, Update

Create and Update are available in API version 45.0 and later.

Description

The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.

Language

Type

picklist

Properties

Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Create, Defaulted on create, Nillable, and Update are available in API version 45.0 and later.

Description

Language for the navigation menu. Valid values are:

- Chinese (Simplified): zh_CN
- Chinese (Traditional): zh_TW
- Danish: da
- Dutch: nl_NL
- English: en_US
- Finnish: fi
- French: fr
- German: de
- Italian: it
- Japanese: ja
- Korean: ko
- Norwegian: no
- Portuguese (Brazil): pt_BR
- Russian: ru
- Spanish: es

Field Name	Details
	<ul style="list-style-type: none"> Spanish (Mexico): <code>es_MX</code> Spanish (Mexico) defaults to Spanish for customer-defined translations. Swedish: <code>sv</code> Thai: <code>th</code> The Salesforce user interface is fully translated to Thai, but Help is in English.
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update Create and Update are available in API version 45.0 and later.</p> <p>Description Label for the navigation menu.</p>
NetworkId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort Create is available in API version 45.0 and later. Update is available in API versions 45.0 to 47.0.</p> <p>Description ID of the Experience Cloud site.</p>

NavigationMenuItem

Represents a single menu item in a NavigationLinkSet. Use this object to create, delete, or update menu items in your Experience Cloud site's navigation menu. This object is available in API version 35.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Navigation menus are available only in Experience Cloud sites created using Experience Builder templates. To use navigation menus in LWR templates, you must build a custom navigation menu component.

Fields

Field Name	Details
AccessRestriction	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Determines if the menu item is available to guest users who aren't required to log in to the Experience Cloud site.</p>
DefaultListViewId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description If the value of the <code>Type</code> field is <code>SalesforceObject</code>, the value is the ID of the default list view for the object.</p>
DraftRowID	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the draft navigation menu item. The ID is unique within your organization.</p>
Label	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The text that appears in the navigation menu for this item.</p>
NavigationLinkSetId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The navigation menu that this item is included in.</p>
ParentId	<p>Type reference</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The parent navigation menu.</p>
Position	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The location of the menu item in the navigation menu.</p>
Status	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description Represents if the navigation menu item is published or not. The values can only be DRAFT, LIVE, or null. In API versions 42 and earlier, if the Status field is not set, the field defaults to LIVE. When queried and Status is not part of the query filter, only the NavigationMenuItem objects with a status of LIVE return. In API versions 43 and later, if the Status field is not set, the field defaults to DRAFT. When queried and Status is not part of the query filter, all NavigationMenuItem objects return regardless of status.</p>
Target	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description If <code>Type</code> is ExternalLink or InternalLink, the target is the URL that the link points to. For ExternalLink, your entry looks like this: <code>https://salesforce.com</code>. For InternalLink, use a relative URL, such as <code>/contactsupport</code>.</p>
TargetPrefs	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description If <code>Type</code> is ExternalLink, determines whether a navigation menu item opens in the same tab.</p>

Field Name	Details
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The type of navigation menu item. The available values are:</p> <ul style="list-style-type: none"> • SalesforceObject—Available objects include accounts, cases, contacts, and custom objects. • ExternalLink—Links to a URL outside of your Experience Cloud site. For example, <i>https://salesforce.com</i>. • Event—An event, such as logging in, logging out, or switching accounts. Event is internal only and can't be used in custom components. • GlobalAction—Enables users to create object records, but the new record has no relationship with other records. • InternalLink—Links to a relative URL inside your Experience Cloud site. For example, <i>/contactsupport</i>. • NavigationalTopic—A dropdown list with links to the navigational topics in your Experience Cloud site. • SystemLink—A system link, such as a link to Experience Builder, Workspaces, or Salesforce setup.

Usage

You can add up to 20 navigation menu items. You can translate navigation menu items using the Translation Workbench.

NavigationMenuItemLocalization

Represents the translated value of a navigation menu item in an Experience Cloud site. This object is available in API version 36.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Navigation menus are available only in Experience Cloud sites created using Experience Builder templates. To use navigation menus in LWR templates, you must build a custom navigation menu component.

Fields

Field Name	Details
Language	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The language of the translated navigation menu item. The picklist contains the following supported languages:</p> <ul style="list-style-type: none"> • Chinese (Simplified): zh_CN • Chinese (Traditional): zh_TW • Danish: da • Dutch: nl_NL • English: en_US • Finnish: fi • French: fr • German: de • Italian: it • Japanese: ja • Korean: ko • Norwegian: no • Portuguese (Brazil): pt_BR • Russian: ru • Spanish: es • Spanish (Mexico): es_MX Spanish (Mexico) defaults to Spanish for customer-defined translations. • Swedish: sv • Thai: th The Salesforce user interface is fully translated to Thai, but Help is in English.
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the namespacePrefix__componentName notation.</p> <p>The namespace prefix can have one of the following values.</p>

Field Name	Details
	<ul style="list-style-type: none"> In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the navigation menu item that this translated value applies to.</p>
Value	<p>Type string</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The translated text for the navigation menu item. Label is Translation Text.</p>

Network

Represents an Experience Cloud site. Salesforce Experience Cloud lets you create branded spaces for your employees, customers, and partners. You can customize and create experiences, whether they're communities, sites, or portals, to meet your business needs, then transition seamlessly between them. Experience Cloud sites let you share information, records, and files with coworkers and stakeholders all in one place. This object is available in API version 26.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

Special Access Rules

This object is available only when your org has digital experiences enabled.

Fields

Field Name	Details
AllowedExtensions	<p>Type textarea</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description Specifies the types of files allowed in your site. This list of file types lets you control what members upload and also prevents spammers from polluting your site with inappropriate files. Available in API version 36.0 and later.</p> <p>Separate file types with a comma (for example: <i>jpg, docx, txt</i>). You can enter lowercase and uppercase letters. You can enter up to 1,000 characters. To allow all file types, leave this field empty.</p>
CaseCommentEmailTemplateId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the email template used when submitting a comment on a case. This field is available in API version 28.0 and later.</p>
ChangePasswordEmailTemplateId	<p>Type reference</p> <p>Properties Filter, Group, Sort, Update</p> <p>Description ID of the email template used when notifying users that their password has been reset.</p>
ChgEmailVerNewEmailTemplateId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the email template used when notifying users that their email address has been changed. This email is sent to the user's new email address.</p>
ChgEmailVerOldEmailTemplateId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description ID of the email template used when notifying users that their email address has been changed. This email is sent to the user's old email address.</p>
Description	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description Description of the site.</p>
DeviceActEmailTemplateId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the email template used when users log in from an unrecognized browser, app, or IP address. The email contains a one-time password that users enter to verify their identity. This field is available in API version 53.0 and later.</p>
EmailFooterLogoId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the Document object that displays as an image in the footer of Chatter emails.</p>
EmailFooterText	<p>Type string</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description Text that displays in the footer of Chatter emails.</p>
EmailSenderAddress	<p>Type email</p> <p>Properties Filter, Group, Sort</p> <p>Description Read only. Email address from which emails are sent.</p>

Field Name

Details

Note: To change the `EmailSenderAddress` value, you must first specify `NewSenderAddress`, which triggers the sending of an address change verification email. After you complete the address verification process, `EmailSenderAddress` changes to the specified `NewSenderAddress`.

EmailSenderName

Type

string

Properties

Filter, Group, Sort, Update

Description

Name from which emails are sent.

FirstActivationDate

Type

date

Properties

Filter, Group, Nillable, Sort

Description

The date the site was first activated.

This field is available in API version 34.0 and later. If the site was activated or inactive before the release of API version 34.0, this field returns the date that the site was first created.

ForgotPasswordEmailTemplateId

Type

reference

Properties

Filter, Group, Sort, Update

Description

ID of the email template used when users forget their password.

LockoutEmailTemplateId

Type

reference

Properties

Filter, Group, Nillable, Sort, Update

Description

ID of the email template used when users try to reset their password after locking themselves out because of too many login attempts.

This field is available in API version 43.0 and later.

MaxFileSizeKb

Type

int

Field Name	Details
	<p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description Specifies the maximum file size (in KBs) that members can upload in your site. Available in API version 36.0 and later.</p> <p>Enter a number between 3072 KB and your org's maximum file size. To use the default limit of 2 GB, leave this field empty.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the site.</p>
NewSenderAddress	<p>Type email</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description Email address that has been entered as the new value for <code>EmailSenderAddress</code> but hasn't been verified yet. After a user has requested to change the sender email address and has successfully responded to the verification email, the <code>NewSenderAddress</code> value overwrites the value in <code>EmailSenderAddress</code>. This value becomes the email address from which emails are sent.</p> <p> Note:</p> <ul style="list-style-type: none"> • If verification is pending for a new email address and you set <code>NewSenderAddress</code> to null, the verification request is canceled. • <code>NewSenderAddress</code> is automatically set to null after <code>EmailSenderAddress</code> has been set to the new verified address. • If verification is pending for a new email address, and you specify a different new address for this field, only the latest value is retained and used for verification.
OptionsActionOverrideEnabled	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Override the action that occurs when users click a default button, like New or Edit, with a Lightning component. For example, show a custom window instead</p>

Field Name	Details
	<p>of the one that Salesforce provides. Assign action overrides in the Object Manager. In the UI, this setting is available in the Administration Workspace, under Administration > Preferences under Experience Management</p> <p>This field is available in API version 49.0 and later.</p>
OptionsAllowInternalUserLogin	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Specifies whether internal users can log in with their internal credentials on the site login page.</p> <p>This field is available in API version 37.0 and later.</p>
OptionsAllowMembersToFlag	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Determines whether users can flag posts, comments, or files as inappropriate.</p> <p>This field is available in API version 29.0 and later. The ability to flag files is available in version 30.0 and later.</p>
OptionsDirectMessagesEnabled	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Controls the availability of direct messages in an Experience Builder site. This field is available in API version 39.0 and later.</p>
OptionsEnableTalkingAboutStats	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Determines whether site users see how many people are discussing a topic. The number of people discussing the topic appears as the user types the topic and the system gives topic suggestions.</p> <p>This field is available in API version 41.0 and later.</p>

Field Name	Details
OptionsEnableTopicAssignmentRules	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description When true, displays knowledgeable people in key areas, for example, on Topic Detail pages.</p>
OptionsExperienceBundleBasedSiteOverrideEnabled	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description When true, the Service Not Available Page is an auto-generated Experience Builder-based page. When false, the Service Not Available page uses a static resource page that is set in Workspaces > Administration > Pages. The default value is true. Available in API version 52.0 and later.</p>
OptionsGatherCustomerSentimentData	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description When true, collects data about user likes, upvotes, and downvotes.</p>
OptionsGuestChatterEnabled	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Specifies whether guest users can access public Chatter groups in the site without logging in.</p>
OptionsGuestFileAccessEnabled	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description When true, lets guest users view asset files and CMS content that's available to the site. Guest users can access shared asset files and published CMS content that's made for external use, even if it isn't used. Shared asset files include images that are associated with topics, recognition badges, branding, and account</p>

Field Name	Details
	branding. This preference is automatically enabled if public access is enabled at the page or site level in Experience Builder.
OptionsGuestMemberVisibility	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description When true, lets guest users see who else is part of the site, including non-guest users. In the UI, this setting appears in the Administration Workspace under Administration > Preferences . Available in API version 47.0 and later.</p>
OptionsInvitationsEnabled	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Determines whether users can invite others to the site.</p>
OptionsKnowledgeableEnabled	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Determines whether users can see knowledgeable people for topics and endorse people for topics.</p>
OptionsMemberVisibility	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Controls user visibility on a per-site basis. If true, the See other members of this site preference is enabled for the selected site. This field is available in API version 45.0 and later.</p>
OptionsMobileImageOptimizationEnabled	<p>Type boolean</p> <p>Properties Filter, Update</p>

Field Name	Details
	<p>Description</p> <p>If true, file asset images are optimized for mobile display. This field is available in API version 45.0 and later.</p>
OptionsNetworkSentimentAnalysis	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>If true, enables sentiment analysis in a site. In the UI, this setting is available in the Administration Workspace, under Administration > Preferences. This field is available in API version 40.0 and later.</p>
OptionsNicknameDisplayEnabled	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>Determines whether user nicknames display instead of their first and last names in most places in the site.</p> <p>A few restrictions to keep in mind about nickname display:</p> <ul style="list-style-type: none"> • Records and user lookups on records show full names. Keep in mind, though, that you can control record and user visibility with sharing rules. • Mobile notifications in the Salesforce mobile app show full names. You can turn off mobile notifications in the app to avoid this display. • Searches by first, last, and full names aren't restricted and return matches, but the search results display only nicknames. Global search auto-complete recommendations show any first, last, and full names that the user has searched by or accessed via a record or another location. The recent items list also shows first, last, and full under the same conditions.
OptionsPrivateMessagesEnabled	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>Determines whether users can send and receive Chatter messages in the site.</p>
OptionsProfileBasedLayoutsForKnowledgeSearchEnabled	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p>

Field Name	Details
	<p>Description</p> <p>When true, provides a grid layout for Knowledge search results. With grid layout in place, you can edit search profile layouts on the Knowledge object to show and hide different search result fields for different profiles. When you enable the standard grid layout, search-term highlighting isn't available. This field is available in API version 51.0 and later.</p>
OptionsRecognitionBadgingEnabled	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>Determines whether Recognition Badges is enabled for the site.</p>
OptionsReputationEnabled	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>Determines if reputation is calculated and displayed for members. This field is available in API version 31.0 and later.</p>
OptionsReputationRecordConversationsDisabled	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>Disables the feed on reputation records.</p>
OptionsSelfRegistrationEnabled	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>Determines whether customers and partners can self-register to join the site. Customers and partners are users with External Identity, Community, Customer Portal, or partner portal licenses. If <code>true</code>, displays a Not a member? link on the login page that points to the default self-registration page. This field is available in API version 28.0 and later.</p>
OptionsSendWelcomeEmail	<p>Type</p> <p>boolean</p>

Field Name	Details
	<p>Properties Filter, Update</p> <p>Description Determines whether a welcome email is sent when a new user is added to the site.</p>
OptionsShowAllNetworkSettings	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Determines whether settings in Experience Management that were hidden based on how you set up your site are visible or remain hidden. This field is available in API version 33.0 and later.</p>
OptionsSiteAsContainerEnabled	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Determines whether the site is an Experience Builder site (<code>true</code>) or a Salesforce Tabs + Visualforce site (<code>false</code>). This field is available in API version 29.0 and later.</p>
OptionsThreadedDiscussionsEnabled	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates whether threaded discussions are enabled for the site. Available in API version 44.0 and later.</p>
OptionsTopicSuggestionsEnabled	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Enables topic suggestions when users write posts. This field is available in API version 41.0 and later. The ability to flag files is available in version 30.0 and later.</p>

Field Name	Details
OptionsUpDownVoteEnabled	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Determines whether up and down voting is enabled for the site. This field is available in API version 41.0 and later.</p>
SelfRegMicroBatchSubErrorEmailTemplateId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the profile assigned to users who self-register using micro-batchng. Only applies if self-registration using micro-batching is enabled for the site. This field is available in API version 54.0 and later.</p>
SelfRegProfileId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the profile assigned to users who self-register. Only applies if self-registration is enabled for the site. This field is available in API version 29.0 and later.</p>
Status	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Status of the site. Available values are:</p> <ul style="list-style-type: none"> • <code>Live</code>—The site is online and members can access it. Label is <code>Published</code>. • <code>DownForMaintenance</code>—The site was previously published, but was taken offline. Members with the Create and Set Up Experiences permission can still access the setup for offline sites regardless of profile or membership. Members aren't able to access offline sites, but they still appear in the user interface dropdown menu as <code>SiteName (Offline)</code>. Label is <code>Offline</code>.

Field Name	Details
	<ul style="list-style-type: none"> UnderConstruction—The site hasn't yet been published. When a user's profile is associated with the site, and they have Create and Set Up Experiences permission, they can access sites in this status. After a site is published, it can never be in this status again. Label is Preview.
UrlPathPrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description The UrlPathPrefix is a unique string at the end of the URL for the site. For example, in the site URL <i>MyDomainName.my.site.com/customers</i>, <i>customers</i> is the UrlPathPrefix.</p> <p> Note: If you're not using enhanced domains, your org's Experience Cloud sites URL is different. For details, see My Domain URL Formats in Salesforce Help.</p>
VerificationEmailTemplateId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the email template used when users must verify their identity, for example, when they log in without a password. This field is available in API version 44.0 and later.</p>
WelcomeEmailTemplateId	<p>Type reference</p> <p>Properties Filter, Group, Sort, Update</p> <p>Description ID of the email template used when sending welcome emails to new members.</p>

Usage

Use this object to find, view, and update sites in your org. If you're assigned the Modify All Data, View All Data, or Create and Set Up Experiences permission, you can view all sites in the org. Users without these permissions see only the Preview or Published sites that they're members of. If you're assigned the Create and Set Up Experiences permission, you can customize site settings.

NetworkActivityAudit

Represents an audit trail of moderation actions in Experience Cloud sites. This object is available in API version 30.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only when your org has digital experiences enabled.

Fields

Field Name	Details
Action	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The moderation action a member performed on a post, comment, or file in an Experience Cloud site.</p> <p>Values are:</p> <ul style="list-style-type: none"> Flagged as Inappropriate—A member flagged a post, comment, or file as inappropriate. Flagged as Spam - A member flagged a post, comment, or file as spam. Unflagged—A member removed the flag from a post, comment, or file. RemovedFlags—A moderator removed all flags from a post, comment, or file. DeletedFlaggedItem—A moderator deleted a flagged post, comment, message, or file. DeletedPendingReviewItem—A moderator deleted a post or comment with pending status. ModerationRuleFlag—A moderation rule flagged member-generated content. ModerationRuleBlock—A moderation rule blocked member-generated content. ModerationRuleReplace—A moderation rule replaced member-generated content. ModerationRuleReview—A moderation rule sent member-generated content to be reviewed and approved by a moderator.

Field Name	Details
	<ul style="list-style-type: none"> • ModerationRuleFreeze—A moderation rule froze a member because they created content too frequently within a specific time frame. • ModerationRuleNotify—A moderation rule notified moderators because a member created content too frequently within a specific time frame.
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Notes entered by the user.</p> <p>If the entity being tracked is a file, records the version number of the file when it was flagged.</p>
EntityCreatedById	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the user that created the entity being tracked.</p>
EntityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the entity that is being tracked. The following entities are tracked: ChatterMessage, ContentDocument, ContentVersion, FeedComment, and FeedItem.</p>
EntityType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The key prefix of the entity being tracked.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p>Description The ID of the item being tracked.</p>
NetworkId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the Experience Cloud site where the moderation action was performed.</p>
ParentEntityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the parent of the entity on which an action was performed. The following entities are tracked: CollaborationGroup, DirectMessage, and User.</p>
ParentEntityType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The key prefix of the parent of the entity being audited.</p>

Usage

Use this object to view an audit trail of moderation activity for your Experience Cloud sites. You must have the Modify All Data permission to access this object.

Users with Moderate Experiences Feeds, Moderate Experiences Files, or View All Data can view the audit trail using reports in the Salesforce user interface.

NetworkAffinity

Represents a junction object that associates a user profile with a Network object, that is, with an Experience Cloud site. Use NetworkAffinity to assign a default Experience Cloud site to a user profile. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To work with the NetworkAffinity object, you must have View Setup or Customize Application permission.

Fields

Field Name	Details
NetworkId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the default Experience Cloud site associated with a user profile.</p>
ProfileId	<p>Type reference</p> <p>Properties CreateFilter, Group, Sort, Update</p> <p>Description ID of the user profile the default Experience Cloud site is assigned to.</p>

Usage

The default Experience Cloud site allows you to stamp site-agnostic email notifications to all users with that profile with the selected site's branding. The default Experience Cloud site also becomes the target destination for email notification links. Site-agnostic email notifications include notifications about records, such as cases, accounts, and opportunities.

The `NetworkId` field is not updatable through the Apex, REST API, or SOAP API. If you want to change the value for `NetworkId`, you must delete the record and create one with the right value.

NetworkDiscoverableLogin

Represents the Login Discoverable page from where customers and partners log in to an Experience Cloud site. Customers and partners are users with an External Identity license or any communities license for Experience Cloud. This object is available in API version 44.0 and later

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
ApexHandlerId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the Apex handler created by the Login Discovery page type.</p>
ExecuteApexHandlerAsId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the user who is executing the handler.</p>
NetworkId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update Unique</p> <p>Description The ID of <code>NetworkId</code> is unique within your org.</p>
UsernameLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Log in prompt on login page when the login page type is Login Discovery.</p>

Usage

Use this object to access the Login Discovery Page, which is a login page type that prompts users to identify themselves with an email address, phone number, or custom identifier. DiscoverableLogin performs an interview-based login process, where users are first prompted to provide identity and then authenticated. For example, users receive a verification code that they enter to complete the login process.

Note: The NetworkDiscoverableLogin object is created when **Login Discovery Page** is selected as the login page type on the Login & Registration (L&R) page. If you later switch to another login page type, such as a Visualforce Page or Experience Builder Page, the object isn't deleted. The object persistence means you can't delete the Apex class associated with the

NetworkDiscoverableLogin object. To delete the Apex class, return to the L&R page and change the login page type back to **Login Discovery page**. Select another Apex class, and then you can delete the first one.

NetworkFeedResponseMetric

Represents an object that stores the date and time values of question posts. It captures information for question creation, answer creation, and when an answer is marked as best answer. This object is available in API version 51.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

The `NetworkFeedResponseMetric` object is available only if both `NetworksEnabled` and `ChatterEnabled` org preferences are enabled.

Fields

Field	Details
<code>BestCommentDateTime</code>	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Represents the date and time a user created an answer that was later marked as best answer.</p>
<code>BestCommentId</code>	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents the comment that was marked as the best answer.</p>
<code>FeedItemCreatedById</code>	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description Represents the user who created the feed item.</p>
<code>FeedItemDateTime</code>	<p>Type dateTime</p>

Field	Details
	<p>Properties Filter, Sort</p> <p>Description Represents the date and time when the feed Item was created.</p>
FeedItemId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description Represents the unique ID of the question post.</p>
FirstCommentDateTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Represents the date and time when the first comment was created.</p>
FirstCommentId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represent the first comment on a feed Item.</p>
MarkedAsBestCommentDateTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Represents the date and time the user marked the answer as best answer.</p>
NetworkId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description Represents where the feed item was created.</p>
ParentRecordId	<p>Type reference</p>

Field	Details
	<p>Properties Filter, Group, Sort</p> <p>Description Represents the parent record. Parent records can include records like user, account, or group.</p>

NetworkMember

Represents a member of an Experience Cloud site. Members can be either users in your company or external users with portal profiles. This object is available in API version 26.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

Special Access Rules

This object is available only when your org has digital experiences enabled.

Fields

Field Name	Details
DefaultGroupNotificationFrequency	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Required. The default frequency for sending the member's group email notifications when the member joins groups in the Experience Cloud site. The valid values are:</p> <ul style="list-style-type: none"> • P—Email on every post • D—Daily digests • W—Weekly digests • N—Never <p>The default value is W. In sites, the <code>Email on every post</code> option is disabled once more than 10,000 members choose this setting for the group. All members who had this option selected are automatically switched to <code>Daily digests</code>. However, this field is not currently enabled. These values are reserved for future use.</p>

Field Name	Details
DigestFrequency	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Required. The frequency for sending the member's personal email digest for the Experience Cloud site. The valid values are:</p> <ul style="list-style-type: none">• D—Daily• W—Weekly• N—Never <p>The default value is D. However, daily and weekly personal digests aren't currently available in sites. These values are reserved for future use.</p>
LastChatterActivityDate	<p>Type date</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The last time the member posted or commented in the Experience Cloud site.</p>
MemberId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of a person who is a member of an Experience Cloud site.</p>
NetworkId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the Experience Cloud site that the member is part of.</p>
PreferencesDisableAllFeedsEmail	<p>Type boolean</p> <p>Properties Filter, Update</p>

Field Name	Details
	<p>Description</p> <p>When <code>false</code>, the member can automatically receive email for updates in the Experience Cloud site, based on the types of feed emails and digests the member has enabled.</p>
PreferencesDisableBestAnswerEmail	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>When <code>false</code>, the member automatically receives email when someone selects their answer to a post as best. Available in API 46.0 and later.</p>
PreferencesDisableBookmarkEmail	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>When <code>false</code>, the member automatically receives email every time someone comments on a feed item after the member has bookmarked it.</p>
PreferencesDisableChangeCommentEmail	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>When <code>false</code>, the member automatically receives email every time someone comments on a change the member has made, such as an update to their profile.</p>
PreferencesDisableDirectMessageEmail	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter, Update</p> <p>Description</p> <p>When <code>false</code>, the member automatically receives email every time someone sends them a direct message in the Experience Cloud site.</p>
PreferencesDisableEndorsementEmail	<p>Type</p> <p>boolean</p>

Field Name	Details
	<p>Properties Filter, Update</p> <p>Description When <code>false</code>, the member automatically receives email every time someone endorses them for a topic.</p>
PreferencesDisableFollowersEmail	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description When <code>false</code>, the member automatically receives email every time someone in the Experience Cloud site starts following the member.</p>
PreferencesDisableItemFlaggedEmail	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description When <code>false</code>, the user automatically receives email every time a member flags a post or comment. This setting only applies for community moderators (with the Moderate Experiences Feeds permission) and group owners or managers. This field is available in API version 29.0 and later.</p>
PreferencesDisableLaterCommentEmail	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description When <code>false</code>, the member automatically receives email every time someone comments on a feed item after the member has commented on the feed item.</p>
PreferencesDisableLikeEmail	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description When <code>false</code>, the member automatically receives email every time someone comments on a feed item after the member has liked the feed item.</p>

Field Name	Details
PreferencesDisableMarketingCloudEmail	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description When <code>false</code>, the member automatically receives marketing emails sent by Journey Builder. Available in API version 41.0 and later.</p>
PreferencesDisableMentionsPostEmail	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description When <code>false</code>, the member automatically receives email every time the member is mentioned in posts.</p>
PreferencesDisableMessageEmail	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description When <code>false</code>, the member automatically receives email every time the member is sent a Chatter message.</p>
PreferencesDisableProfilePostEmail	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description When <code>false</code>, the member automatically receives email every time someone posts to the member's profile.</p>
PreferencesDisableSharePostEmail	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description When <code>false</code>, the member automatically receives email every time the member's post is shared.</p>
PreferencesDisCommentAfterLikeEmail	<p>Type boolean</p>

Field Name	Details
	<p>Properties Filter, Update</p> <p>Description When <code>false</code>, the member automatically receives email every time someone comments on a post the member has liked.</p>
PreferencesDisMentionsCommentEmail	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description When <code>false</code>, the member automatically receives email every time the member is mentioned in comments.</p>
PreferencesDisProfPostCommentEmail	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description When <code>false</code>, the member automatically receives email every time someone comments on posts on the member's profile.</p>
ReputationPoints	<p>Type double</p> <p>Properties Filter, Sort, Update</p> <p>Description The number of reputation points the user has accumulated by performing actions in the Experience Cloud site.</p>

Usage

Use this object to query members of a certain Experience Cloud site and to update their email notification settings. If you have Modify All Data, View All Data, or Create and Set Up Experiences, you can view all members of any Experience Cloud site, regardless of your own membership. If you have Modify All Data or Create and Set Up Experiences, you can also update any member's email settings. Users without these permissions can update their own email settings and can see members of the Experience Cloud sites that they're also members of.

Tip: You can directly update reputation points for a member via the Salesforce API. You can also use Apex triggers to send custom notifications based on changes to reputation points.

NetworkMemberGroup

Represents a group of members in an Experience Cloud site. Members can be either users in your internal org or external users assigned portal profiles. An administrator adds members to an Experience Cloud site by adding a profile or a permission set, and any user with the profile or permission set becomes a member of the site. This object is available in API version 26.0 and later.

 **Note:** If a Chatter customer (from a customer group) is assigned a permission set that is also associated with an Experience Cloud site, the Chatter customer won't be added to the site.

Prior to API version 27.0, this object was called NetworkProfile.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

 **Note:** The `upsert()` call is not supported for this object.

Special Access Rules

This object is available only when your org has digital experiences enabled.

Fields

Field Name	Details
<code>AssignmentStatus</code>	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The status of a profile or permission set within an Experience Cloud site. Values are:</p> <ul style="list-style-type: none"> • <code>Added</code>—Users with this profile or permission set are members. • <code>Waiting for Add</code>—The profile or permission set was added to the Experience Cloud site, but the async process hasn't completed yet. After the process is complete, the status is updated to <code>Added</code>. • <code>Waiting for Remove</code>—Use this status to remove all the members belonging to a profile or permission set and remove a profile or permission set from an Experience Cloud site.
<code>NetworkId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p>

Field Name	Details
	<p>Description</p> <p>The ID of the Experience Cloud site that this group of members is associated with.</p>
ParentId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The ID of the profile or permission set associated with the Experience Cloud site.</p>

Usage

Use this object to view the profiles or permission sets associated with a particular Experience Cloud site. Profiles and permission sets are added and removed asynchronously, so you can also check the status of a profile or permission set that was updated in a site.

If you have Modify All Data, View All Data, or Create and Set Up Experiences, you can view all profiles or permission sets for any Experience Cloud site in the org, regardless of your membership. If you have Modify All Data or Create and Set Up Experiences, you can also add profiles or permission sets. Users without these permissions can only find profiles and permission sets for Experience Cloud sites that they're members of.

Sample Code

```
// Create a new NetworkMemberGroup with a profile as the ParentId
NetworkMemberGroup nmgInsert = new NetworkMemberGroup();
nmg.setNetworkId("0DBD0000000029o");
nmg.setParentId("00eD0000000z1Ww");
SaveResult[] results = connection.create(new SObject[] { nmgInsert });

// Update an existing NetworkMemberGroup to be removed from the Network
NetworkMemberGroup nmgUpdate = new NetworkMemberGroup();
nmg.setId("0DLD000000003enOAA");
nmg.setAssignmentStatus("WaitingForRemove");
SaveResult[] results = connection.update(new SObject[] { nmgUpdate });
```

NetworkModeration

Represents a flag on an item in a community. This object is available in API version 30.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object is available only when your org has digital experiences enabled.

Fields

Field Name	Details
EntityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the post, comment, or file that was flagged.</p>
ModerationType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description Determines the type of flag applied to an item. Values are:</p> <ul style="list-style-type: none"> • FlagAsInappropriate • FlagAsSpam
NetworkId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the community in which the item was flagged.</p>
Visibility	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Nillable, Sort</p> <p>Description Determines visibility of a flagged item. Values are:</p> <ul style="list-style-type: none"> • SelfAndModerators—The user who flagged the item and any moderators can see the flagged item. This is the default value. • ModeratorsOnly—Only moderators can see the flagged item. If ModeratorsOnly is selected, only moderators can set flags using the API.

Usage

Use this object to view the items flagged for moderation within a community. Additionally, users with “Moderate Feeds” and “Modify All Data” can remove flags.

Flags on items are created either when a member manually flags an item in a community (if flagging is enabled for that community), or when a trigger automatically flags an item because the item met the trigger criteria.

NetworkPageOverride

Represents information about custom pages used to override the default pages in Experience Cloud sites. You can create Experience Builder or Visualforce pages and override the default pages in a site. Using custom pages allows you to create a more personalized experience for your users. This object is available in API version 34.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Only users with the Create and Setup Experiences permission can update this object.
- You can't override the Change Password Page with a page created using Experience Builder. You can only override it with a Visualforce page.

Fields

Field Name	Details
<code>NetworkId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the Experience Cloud site where a custom page is used to override a default page.</p>
<code>OverrideSetting</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The type of the page used to override a default page in the Experience Cloud site. <code>OverrideSetting</code> can take the following values:</p> <ul style="list-style-type: none"> • <code>Standard</code>—The standard page that comes by default with the site.

Field Name	Details
	<ul style="list-style-type: none"> • Configurable—The page created when the Configurable Self-Reg registration page type or the Login Discovery login page type is selected. • Designer—A custom page created using Experience Builder. • Visualforce—A custom page created using Visualforce.
OverrideType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The name of the default page in the Experience Cloud site that you want to override with a custom page. <code>OverrideType</code> can take the following values:</p> <ul style="list-style-type: none"> • LoginRequired • ChangePassword • ForgotPassword • SelfReg • Home

NetworkSelfRegistration

Represents the account that self-registering Experience Cloud users are associated with by default. Self-registering users in an Experience Cloud site are required to be associated with an account, which the administrator must specify while setting up self-registration for the site. If an account isn't specified, Salesforce creates person accounts (when enabled) for self-registering users. This object is available in API version 34.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
AccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>The ID of the account that self-registering users in the Experience Cloud site are associated with.</p>
ApexHandlerId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The ID of the Apex handler created by Configurable Self-Reg registration page type.</p>
ExecuteApexHandlerAsId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The ID of the user who is executing the configurable self-registration handler.</p>
NetworkId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>The ID of <code>NetworkId</code> is unique within your org.</p> <p> Note: You can use only one account per Experience Cloud site to assign self-registering users.</p>
OptionsIncludePassword	<p>Type Boolean</p> <p>Properties Create, Filter, Update</p> <p>Description</p> <p>Option on Configurable Self-Reg registration page. If true, the Include Password field is selected.</p>
OptionsShowEmail	<p>Type Boolean</p> <p>Properties Create, Filter, Update</p>

Field Name	Details
	Description Option on Configurable Self-Reg registration page. If true, the Email field appears on the self-registration form.
OptionsShowFirstName	Type Boolean Properties Create, Filter, Update Description Option on the Configurable Self-Reg registration page. If true, the First Name field appears on the self-registration form.
OptionsShowLastName	Type Boolean Properties Create, Filter, Update Description Option on the Configurable Self-Reg registration page. If true, the Last Name field appears on the self-registration form.
OptionsShowMobilePhone	Type Boolean Properties Create, Filter, Update Description Option on the Configurable Self-Reg registration page. If true, the Mobile field appears on the self-registration form.
OptionsShowNickname	Type Boolean Properties Create, Filter, Update Description Option on the Configurable Self-Reg registration page. If true, the Nickname field appears on the self-registration form.
OptionsShowUsername	Type Boolean Properties Create, Filter, Update

Field Name	Details
	<p>Description</p> <p>Option on the Configurable Self-Reg registration page. If true, the Username field appears on the self-registration form.</p>
VerificationMethod	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>The type of verification method that a user must supply when registering, which can be:</p> <ul style="list-style-type: none"> • SyncEmail—User must supply an email address to verify identity. • SMS—User must supply a phone number to verify identity.

NetworkUserHistoryRecent

Represents an Experience Cloud site user's history of accessed records. This object is available in API version 42.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `undelete()`

Special Access Rules

Only users with the Modify All Data permission can view and delete these data.

Fields

Field	Details
AccessTimestamp	<p>Type</p> <p>datetime</p> <p>Properties</p> <p>Create, Filter, Sort</p> <p>Description</p> <p>The time at which the record was accessed.</p>
ActionType	<p>Type</p> <p>picklist</p>

Field	Details
	<p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Indicates the action type taken by the user. The possible values are:</p> <ul style="list-style-type: none"> • Read • Write
DomainName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The domain used to access the record.</p>
FeedCommentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Feed comment accessed by the user.</p>
FeedItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Feed item accessed by the user.</p>
NetworkId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description ID of the Experience Cloud site used to access the record or comment.</p>
NetworkUserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description User's Experience Cloud site user ID to access the record or comment.</p>

Field	Details
RecordId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The record that was accessed.</p>
RecordKeyPrefix	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Record's ID key prefix.</p>
Url	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The URL from which the user accessed the record.</p>
UserType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The type of user who accessed this record. The possible values include:</p> <ul style="list-style-type: none"> • Standard • Partner • Customer Portal Manager • Customer Portal User • Guest • High Volume Portal • CSN Only • Self Service

Usage

Use the NetworkUserHistoryRecent object to delete comments, posts, or record access by Experience Cloud site users who would like all such activity to be removed.

Note

Represents a note, which is text associated with a custom object or a standard object, such as a Contact, Contract, or Opportunity.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Body	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Body of the note. Limited to 32 KB.</p>
IsDeleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>
IsPrivate	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description If <code>true</code>, only the note owner or a user with the “Modify All Data” permission can view the note or query it via the API. Note that if a user who does not have the “Modify All Data” permission sets this field to <code>true</code> on a note that they do not own, then they can no longer query, delete, or update the note. Label is Private.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the user who owns the note.</p>

Field	Details
	This is a relationship field.
	Relationship Name Owner
	Relationship Type Lookup
	Refers To User

ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. ID of the object associated with the note. This is a polymorphic relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareMetricTarget, CareObservationComponent, CarePgmProvHealthcareProvider, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareTaxonomy, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, Contact, Contract, CreditMemo, DelegatedAccount, EngagementChannelType, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, Lead, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PersonEducation, PersonLifeEvent, Product2, ProductRequest, ProductRequestLineItem, PurchaserPlan, ReceivedDocument, ServiceAppointment, ServiceResource, Shift, SocialPost, Visit, VisitedParty, Visitor, VolunteerProject, WorkOrder, WorkOrderLineItem</p>
----------	--

Title	<p>Type string</p>
-------	-------------------------------

Field	Details
	<p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Title of the note.</p>

Usage

Use this object to manage notes for an object.

SEE ALSO:

[Object Basics](#)

NoteAndAttachment

This read-only object contains all notes and attachments associated with an object.

Supported Calls

`describeSObjects()`

Fields

Field	Details
<code>IsDeleted</code>	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>
<code>IsNote</code>	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the object contains a note (<code>true</code>) or an attachment (<code>false</code>).</p>
<code>IsPrivate</code>	<p>Type boolean</p>

Field	Details
	<p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description If <code>true</code>, only the note owner or a user with the “Modify All Data” permission can view the note or query it via the API. Note that if a regular user who does not have “Modify All Data” permission sets this field to <code>true</code> on a note that they do not own, then they can no longer query, delete, or update that note. Label is Private.</p>
OwnerId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the user who owns the note and attachment. This is a relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
ParentId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the parent object. This is a polymorphic relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareMetricTarget, CareObservationComponent, CarePgmProvHealthcareProvider, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider,</p>

Field	Details
	CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareTaxonomy, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, Contact, Contract, CreditMemo, DelegatedAccount, EngagementChannelType, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, Lead, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PersonEducation, PersonLifeEvent, Product2, ProductRequest, ProductRequestLineItem, PurchaserPlan, ReceivedDocument, ServiceAppointment, ServiceResource, Shift, SocialPost, Visit, VisitedParty, Visitor, VolunteerProject, WorkOrder, WorkOrderLineItem
Title	<p>Type string</p> <p>Properties Filter, Nillable, Group, Sort</p> <p>Description Title of the note.</p>

Usage

Use this object to list all notes and attachments for an object.

To retrieve notes and attachments, issue a describe call on an object, which returns a query result for each activity since the record was created. You can't directly query this object.

SEE ALSO:

[Note](#)

[Attachment](#)

NoteTag

Associates a word or short phrase with a Note.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ItemId	<p>Type reference</p> <p>Properties Create, Filter</p> <p>Description ID of the tagged item.</p>
Name	<p>Type string</p> <p>Properties Create, Filter</p> <p>Description Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.</p>
TagDefinitionId	<p>Type reference</p> <p>Properties Filter</p> <p>Description ID of the parent TagDefinition object that owns the tag.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Restricted picklist</p> <p>Description Defines the visibility of a tag. Valid values:</p> <ul style="list-style-type: none"> • <code>Public</code>—The tag can be viewed and manipulated by all users in an organization. • <code>Personal</code>—The tag can be viewed or manipulated only by a user with a matching <code>OwnerId</code>.

Usage

NoteTag stores the relationship between its parent TagDefinition and the Note being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

OAuthCustomScope

Represents a permission defining the protected data that a connected app can access from an external entity when Salesforce is the OAuth authorization provider.

An OAuth custom scope tells an external entity about a connected app's permissions to access protected data. The OAuth custom scope that you create in your Salesforce org corresponds to the same custom scope defined in your external entity, and assigned to the resource.

For example, you define an Order Status custom scope in your external entity that allows access to customer order status data in your order system's API. In Salesforce, you create an OAuth custom scope that you also name Order Status. You assign this custom scope to the connected app requesting access to the order status API. When the external entity receives the connected app's request to access a customer's order status, it validates the connected app's access token and Order Status scope. With a successful validation, the app can access the customer order status information in the order system's API.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

You must have the "Manage Connected Apps" permission to access this object.

Fields

Field Name	Details
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The description of the permission provided to the connected app by the scope. The custom scope's description must be unique, can only include alphanumeric characters, and can be up to 60 characters long.</p> <p>You can enter a custom label in place of a description. An advantage of using a custom label is that you can maintain reusable text in a single location and translate the text into multiple languages. See Custom Labels.</p> <p> Note: The description formatting requirements that apply to custom scopes also apply to custom labels.</p>
DeveloperName	<p>Type string</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Use when referring to the OAuth custom scope from a program. This label must be unique, and can include only alphanumeric characters and underscores.</p>
IsPublic	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the object is included in the connected app's OpenID Connect discovery endpoint. For more information, see OpenID Connect Discovery Endpoint.</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Indicates the default language defined for the developing org.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The master label for the custom scope record. This label must be unique, and can include only alphanumeric characters and underscores.</p>

OauthCustomScopeApp

Represents the name of the connected app to which the custom scope is assigned. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
OAuthCustomScopeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The name of the connected app to which the custom scope is assigned. If the connected app is part of a package, include the package's namespace prefix with the connected app's name. Use the following format: <namespace_prefix>__<connected_app>. Use two underscores (__) between the namespace prefix and connected app's name. This is a relationship field.</p> <p>Relationship Name OAuthCustomScope</p> <p>Relationship Type Lookup</p> <p>Refers To OAuthCustomScope</p>

OAuthToken

Represents an OAuth access token for connected app authentication. Use this object to create a user interface for token management. This object is available in API version 32.0 and later.

A connected app integrates an application with Salesforce using APIs. Connected apps use standard SAML and OAuth protocols to authenticate, provide single sign-on, and provide tokens for use with Salesforce APIs. In addition to standard OAuth capabilities, connected apps allow Salesforce admins to set various security policies and have explicit control over who can use the corresponding apps. Each time that a user grants access to an application, the application obtains a new access token.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

Users with the Customize Application permission see all tokens for all users in the org. Otherwise, you see only your own tokens.

Fields

Field Name	Details
AccessToken	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The refresh token for authorization.</p>
AppMenuItemId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The unique ID for the App Picker menu item that's associated with this OAuth token. This is a relationship field.</p> <p>Relationship Name AppMenuItem</p> <p>Relationship Type Lookup</p> <p>Refers To AppMenuItem</p>
AppName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The label for the connected app that's associated with this OAuth token.</p>
DeleteToken	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description A token that can be used at the revoke OAuth token endpoint to remove this token.</p>

Field Name	Details
Id	<p>Type ID</p> <p>Properties Defaulted on create, Filter, Group, idLookup, Sort</p> <p>Description Reserved for future use. Currently, the value is always <code>null</code>.</p>
LastUsedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The most recent date when the OAuth token was used.</p>
RequestToken	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The authorization code that was used to request the corresponding AccessToken. With this authorization code, you can revoke the corresponding AccessToken by passing the DeleteToken.</p>
UseCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description How often the token has been used.</p>
UserId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The owner of the token. This is a relationship field.</p> <p>Relationship Name User</p>

Field Name	Details
	Relationship Type Lookup
	Refers To User

Usage

To delete an AccessToken, send a request to the revoke OAuth token endpoint with the DeleteToken as the parameter. For example, the URL `https://MyDomainName.my.salesforce.com/services/oauth2/revoke?token=(the DeleteToken)` causes the deletion of the token.

In API version 34.0 and later, this object was enhanced to help manage high instance counts. A `query()` call returns up to 500 rows. A `queryMore()` call returns 500 more, up to 2500 total. No more records are returned after 2500. To make sure that you don't miss any records, issue a `COUNT()` query in a `SELECT` clause for OAuthToken. This query gives you the total number of records. If there are more than 2500 records, divide your query by filtering on fields, like `UserId`, to return subsets of less than 2500 records.

ObjectPermissions

Represents the enabled object permissions for the parent PermissionSet. This object is available in API version 24.0 and later.

To grant a user access to an object, associate an ObjectPermissions record with a PermissionSet that's assigned to a user. ObjectPermissions records are only supported in PermissionSet, not in Profile.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
ParentId	Type reference
	Properties Create, Filter, Group, Sort
	Description The Id of this object's parent PermissionSet . This is a relationship field.

Field Name	Details
	<p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To PermissionSet</p>
PermissionsCreate	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description If <code>true</code>, users assigned to the parent PermissionSet can create records for this object. Requires <code>PermissionsRead</code> for the same object to be <code>true</code>.</p>
PermissionsDelete	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description If <code>true</code>, users assigned to the parent PermissionSet can delete records for this object. Requires <code>PermissionsRead</code> and <code>PermissionsEdit</code> for the same object to be <code>true</code>.</p>
PermissionsEdit	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description If <code>true</code>, users assigned to the parent PermissionSet can edit records for this object. Requires <code>PermissionsRead</code> for the same object to be <code>true</code>.</p>
PermissionsModifyAllRecords	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description If <code>true</code>, users assigned to the parent PermissionSet can edit all records for this object, regardless of sharing settings. Requires <code>PermissionsRead</code>, <code>PermissionsDelete</code>, <code>PermissionsEdit</code>, and <code>PermissionsViewAllRecords</code> for the same object to be <code>true</code>.</p>

Field Name	Details
PermissionsRead	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description If <code>true</code>, users assigned to the parent PermissionSet can view records for this object.</p>
PermissionsViewAllRecords	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description If <code>true</code>, users assigned to the parent PermissionSet can view all records for this object, regardless of sharing settings. Requires <code>PermissionsRead</code> for the same object to be <code>true</code>.</p>
SubjectType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The object's API name. For example, <code>Merchandise__c</code>.</p>

Permission Dependencies

Some user permissions have dependencies on object permissions. For example, if a permission set has the “Transfer Leads” permission, it also has “Read” and “Create” on the leads object.

You can query from `ObjectPermissions` up to the parent `PermissionSet` object. For example:

```
SELECT Parent.Name, Parent.PermissionsTransferAnyLead, PermissionsRead, PermissionsCreate
FROM ObjectPermissions
WHERE SubjectType = 'Lead'
```

Determining Object Access with “Modify All Data”

When using SOQL to query object permissions, be aware that some object permissions are enabled because a user permission requires them.

The exception to this rule is when “Modify All Data” is enabled. While it enables all object permissions, it doesn’t physically store any object permission records in the database. As a result, unlike object permissions that are required by a user permission—such as “View All Data” or “Import Leads”—the query still returns permission sets with “Modify All Data,” but the object permission record will contain an invalid ID that begins with “000”. This ID indicates that the object has full access due to “Modify All Data” and the object permission record can’t be updated or deleted. To remove full access from these objects, disable “Modify All Data” and then delete the resulting

object permission record. This ensures that when using SOQL to find all the objects that have full access, it returns all objects that have this access regardless of whether it's due to "Modify All Data" or because an administrator set full access.

For example, the following will return all permission sets that have "Read" on the Merchandise__c object, regardless of whether it's explicitly defined on the object or implicitly defined through "Modify All Data."

```
SELECT Id, Parent.label, SubjectType, PermissionsRead,
       Parent.PermissionsModifyAllData, ParentId
FROM ObjectPermissions
WHERE PermissionsRead = true and SubjectType = 'Merchandise__c'
```

Nesting Object Permissions

You can nest ObjectPermissions in a PermissionSet query. For example, the following returns any permission sets where "Transfer Leads" is true. Additionally, the result set will include the "Read" object permission on leads. This is done by nesting the SOQL with an object permission query using the relationship name for object permissions: ObjectPerms.

```
SELECT Id, Name, PermissionsTransferAnyLead,
       (SELECT Id, PermissionsRead from ObjectPerms where SubjectType='Lead')
FROM PermissionSet
WHERE PermissionsTransferAnyLead = true
```

As a result, it's possible to traverse the relationship between the PermissionSet and any child-related objects (in this case, ObjectPermissions). You can do this from the PermissionSet object by using the child relationship (ObjectPerms, FieldPerms, and so on) or from the child object by referencing the PermissionSet with `Parent.permission_set_attribute`.

It's important to consider when to use a conditional WHERE statement to restrict the result set. To query based on an attribute on the permission set object, nest the SOQL with the child relationship. However, to query based on an attribute on the child object, you must reference the permission set parent attribute in your query.

The following two queries return the same columns with different results, based on whether you use the child relationship or parent notation.

```
SELECT Id, Name, PermissionsModifyAllData,
       (SELECT Id, SubjectType, PermissionsRead from Objectperms)
FROM PermissionSet
WHERE PermissionsModifyAllData=true
```

versus:

```
SELECT Id, SubjectType, PermissionsRead, Parent.Id, Parent.Name,
       Parent.PermissionsModifyAllData
FROM ObjectPermissions
WHERE SubjectType='Merchandise__c'
```

[FieldPermissions](#)

ObjectTerritory2AssignmentRule

Represents a territory assignment rule that's associated with an object, such as Account. ObjectTerritory2AssignmentRuleItem can only be created or deleted if the BooleanFilter field on its corresponding ObjectTerritory2AssignmentRule is null. Available only if Enterprise Territory Management has been enabled for your organization.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only standard users can access this object. If a territory model is in `Active` state, any standard user can view that model, including its territories, assignment rules, assigned records, and assigned users. Users cannot view territory models in other states (such as `Planning` or `Archived`).

Fields

Field Name	Details
BooleanFilter	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Represents advanced filter conditions that were specified for the rule in the online application. For example, "(1 AND 2) OR 3."</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The field label in the user interface is <code>Unique Name</code>.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p>

Field Name	Details
	 Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the rule is active (true) or inactive (false). Via the API, active rules run automatically when object records are created and edited. The exception is when the value of the IsExcludedFromRealign field on an object record is <code>true</code>, which prevents record assignment rules from evaluating that record.</p>
Language	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The language of the label in the user interface.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The user interface label for the territory type.</p>
ObjectType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The object that the rule is defined for. For API version 31, Account only.</p>
Territory2ModelId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the territory model.</p>

ObjectTerritory2AssignmentRuleItem

A single row of selection criteria for an ObjectTerritory2AssignmentRule object. ObjectTerritory2AssignmentRuleItem can only be created or deleted if the `BooleanFilter` field on its corresponding ObjectTerritory2AssignmentRule object is a `null` value. Available only if Enterprise Territory Management has been enabled for your organization.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only standard users can access this object. If a territory model is in `Active` state, any standard user can view that model, including its territories and assignment rules. For territories in an active model, any standard user can view assigned records and assigned users subject to your organization's sharing settings. Users cannot view territory models in other states (such as `Planning` or `Archived`).

Fields

Field Name	Details
Field	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The standard or custom object field that the rule item will operate on.</p>
Operation	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The criterion to apply for the rule item. For example: <i>equals</i> or <i>starts with</i>.</p>
RuleId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the associated ObjectTerritory2AssignmentRule.</p>

Field Name	Details
SortOrder	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The order in which this row is evaluated in relation to other ObjectTerritoryAssignmentRuleItem objects for the given ObjectTerritoryAssignmentRule. This field is required for assignment rule items, which are used in the Boolean conditions in assignment rule formulas.</p>
Value	<p>Type string</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The field value or values to evaluate. For example: if the field is <code>Billing ZIP/Postal Code</code>, a value might be <code>94105</code>.</p>

ObjectTerritory2Association

Represents an association (by assignment) between a territory and an object record, such as an account.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Available only if Enterprise Territory Management has been enabled for your Salesforce org.

As of Summer '20 and later, only standard and partner users can access this object. If a territory model is in `Active` state, any standard or partner user can view that model, including its territories and assignment rules. For territories in an active model, any standard or partner user can view assigned records and assigned users subject to your org's sharing settings. Users can't view territory models in other states (such as `Planning` or `Archived`).

Fields

Field Name	Details
AssociationCause	<p>Type picklist</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The means by which the record was associated with the territory. User interface field label is <code>Method</code>.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • <code>Territory2AssignmentRule</code>—Territory assignment rule association • <code>Territory2Manual</code>—Manual association
ObjectId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the object assigned to the territory. For API version 30.0 and later, Account only.</p> <p>This is a polymorphic relationship field.</p> <p>Relationship Name Object</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
SubjectType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The type of the object.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • <code>Account</code>
Territory2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the territory that the record is assigned to.</p> <p>This is a relationship field.</p>

Field Name	Details
	Relationship Name Territory2
	Relationship Type Lookup
	Refers To Territory2

For internal use only.

OmniSupervisorConfig

Represents the Omni-Channel supervisor configuration for an assigned group of supervisors. This object is available in API version 41.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With</p>

Field	Details
	<p>this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p>
<code>IsTimelineHidden</code>	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description If set to <code>true</code>, hides the agent timeline from the supervisors assigned to this supervisor configuration. The default value is <code>false</code>. This field is available in API version 53.0 and later.</p>
<code>Language</code>	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The language of this supervisor configuration.</p>
<code>MasterLabel</code>	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description A unique label name for this supervisor configuration. The name must begin with a letter. The name can contain alphanumeric characters and underscores. The name can't contain spaces, two consecutive underscores, or end with an underscore. The name appears as Omni Supervisor Configuration Name in the UI.</p>
<code>SkillVisibility</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Determines which work items based on skills are visible to the supervisors assigned to this supervisor configuration. Possible values are:</p> <ul style="list-style-type: none"> <code>AllSkills</code> — Show work items with all skill requirements selected in this supervisor configuration.

Field	Details
	<ul style="list-style-type: none"> <code>AnySkill</code> — Show work items with at least one skill requirement selected in this supervisor configuration. <p>This field is available in API version 53.0 and later.</p>

OmniSupervisorConfigGroup

Represents the group of agents who are visible to the supervisors of an Omni-Channel supervisor configuration. The group, if visible, appears in the Agents tab of Omni Supervisor. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
GroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description A unique identifier for the group of agents that's made visible to the supervisors who are assigned to the Omni-Channel supervisor configuration. This is a relationship field.</p> <p>Relationship Name Group</p> <p>Relationship Type Lookup</p> <p>Refers To Group</p>
OmniSupervisorConfigId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Sort</p> <p>Description A unique identifier for the Omni-Channel supervisor configuration. This is a relationship field.</p> <p>Relationship Name OmniSupervisorConfig</p> <p>Relationship Type Lookup</p> <p>Refers To OmniSupervisorConfig</p>

OmniSupervisorConfigProfile

Represents the supervisor profiles to which an Omni-Channel supervisor configuration applies. User-level configurations override profile-level configurations. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
OmniSupervisorConfigId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description A unique identifier for the Omni-Channel supervisor configuration. This is a relationship field.</p> <p>Relationship Name OmniSupervisorConfig</p>

Field	Details
	<p>Relationship Type Lookup</p> <p>Refers To OmniSupervisorConfig</p>
ProfileId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description A unique identifier for the profile that's associated with this Omni-Channel supervisor configuration. A profile can be associated with only one Omni-Channel supervisor configuration. This field is unique within your org. This is a relationship field.</p> <p>Relationship Name Profile</p> <p>Relationship Type Lookup</p> <p>Refers To Profile</p>

OmniSupervisorConfigQueue

Represents the queues that are visible to the supervisors of an Omni-Channel supervisor configuration. The queue, if visible, appears in the Queues Backlog and Assigned Work tabs of Omni Supervisor. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

Only authenticated internal and external users can access this object.

Fields

Field	Details
OmniSupervisorConfigId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description om A unique identifier for the Omni-Channel supervisor configuration. This is a relationship field.</p> <p>Relationship Name OmniSupervisorConfig</p> <p>Relationship Type Lookup</p> <p>Refers To OmniSupervisorConfig</p>
QueueId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description A unique identifier for the queue that's made visible to the supervisors who are assigned to the Omni-Channel supervisor configuration. This is a relationship field.</p> <p>Relationship Name Queue</p> <p>Relationship Type Lookup</p> <p>Refers To Group</p>

OmniSupervisorConfigSkill

Represents the skills that are visible to the supervisors of an Omni-Channel supervisor configuration. These skills, if visible, appear in the Skills Backlog tab of Omni Supervisor. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

Only authenticated internal and external users can access this object.

Fields

Field	Details
OmniSupervisorConfigId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description A unique identifier for the Omni-Channel supervisor configuration. This is a relationship field.</p> <p>Relationship Name OmniSupervisorConfig</p> <p>Relationship Type Lookup</p> <p>Refers To OmniSupervisorConfig</p>
SkillId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description A unique identifier for the skill that's made visible to the supervisors who are assigned to the Omni-Channel supervisor configuration. This is a relationship field.</p> <p>Relationship Name Skill</p> <p>Relationship Type Lookup</p> <p>Refers To Skill</p>

OmniSupervisorConfigUser

Represents the users to which an Omni-Channel supervisor configuration applies. User-level configurations override profile-level configurations. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
OmniSupervisorConfigId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description A unique identifier for the Omni-Channel supervisor configuration. This is a relationship field.</p> <p>Relationship Name OmniSupervisorConfig</p> <p>Relationship Type Lookup</p> <p>Refers To OmniSupervisorConfig</p>
UserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description A unique identifier for the user associated with this Omni-Channel supervisor configuration. A user can be associated with only one Omni-Channel supervisor configuration. This field is unique within your org. This is a relationship field.</p> <p>Relationship Name User</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>

OmniUiCard

For internal use only.

OpenActivity

This read-only object is displayed in a related list of open activities—future events and open tasks—related to an object. It includes activities for all contacts related to the object. OpenActivity fields for phone calls are only available if your organization uses Salesforce CRM Call Center.

Supported Calls

`describeSObjects()`

Fields

Field	Details
<code>AccountId</code>	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates the ID of the related account, which is determined as follows:</p> <ul style="list-style-type: none"> • The account associated with the <code>whatId</code>, if it exists; or • The account associated with the <code>whoId</code>, if it exists; otherwise • <code>null</code> <p>For information on IDs, see ID Field Type.</p> <p>This is a relationship field.</p> <p>Relationship Name Account</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
<code>ActivityDate</code>	<p>Type date</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates one of the following:</p>

Field	Details
	<ul style="list-style-type: none"> • The due date of a task • The date of an event if <code>IsAllDayEvent</code> is set to <code>true</code> <p>This field has a time stamp that is always set to midnight in the Universal Time Coordinated (UTC) time zone. The time stamp doesn't represent the time of the activity; don't attempt to alter it to accommodate time zone differences. Label is <code>Date</code>.</p>
<code>ActivityDateTime</code>	<p>Type dateTime</p> <p>Properties Aggregate, Filter, Nillable, Sort</p> <p>Description Contains the event's due date if the <code>IsAllDayEvent</code> flag is set to <code>false</code>. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. Label is Due Date Time.</p> <p>The value for this field and <code>StartDateTime</code> must match, or one of them must be <code>null</code>.</p>
<code>ActivitySubtype</code>	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Provides standard subtypes to facilitate creating and searching for specific activity subtypes. This field isn't updateable.</p> <p><code>ActivitySubtype</code> values:</p> <ul style="list-style-type: none"> • Task • Email • Call • Event • List Email
<code>ActivityType</code>	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents one of the following values: <code>Call</code>, <code>Email</code>, <code>Meeting</code>, or <code>Other</code>. Label is <code>Type</code>. These are default values, and can be changed.</p> <p><code>ActivityType</code> is the union of <code>TaskType</code> and <code>EventType</code>. If the same activity appears in both dynamic picklists, duplicate activities appear.</p>

Field	Details
	<p>TaskType and EventType can each have a Call type. Internally, they are distinct from each other.</p>
AlternateDetailId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of a record the activity is related to which contains more details about the activity. For example, an activity can be related to an EmailMessage record. This is a relationship field.</p> <p>Relationship Name AlternateDetail</p> <p>Relationship Type Lookup</p> <p>Refers To EmailMessage</p>
CallDisposition	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents the result of a given call, for example, "we'll call back," or "call unsuccessful." Limit is 255 characters.</p>
CallDurationInSeconds	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Duration of the call in seconds.</p>
CallObject	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Name of a call center. Limit is 255 characters.</p>

Field	Details
CallType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The type of call being answered: Inbound, Internal, or Outbound.</p>
CompletedDateTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time the task was saved with a Closed status. This value is always null.</p>
ConnectionReceivedId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates the ID of the PartnerNetworkConnection that shared this record with your organization. This field is available only if your organization has enabled Salesforce to Salesforce and only in API versions 28.0 and later.</p>
ConnectionSentId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates the ID of the PartnerNetworkConnection that your organization shared this record with. This field is available only if your organization has enabled Salesforce to Salesforce, and only in API versions 28.0 and later. The value is always null. You can use the PartnerNetworkRecordConnection object to forward records to connections.</p>
Description	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description Contains a description of the event or task. Limit is 32 KB.</p>
DurationInMinutes	<p>Type int</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates the duration of the event or task.</p>
EndDateTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Indicates the end date and time of the event or task. Available in versions 27.0 and later. This field is optional, depending on the following:</p> <ul style="list-style-type: none"> • If <code>IsAllDayEvent</code> is true, you can supply a value for either <code>DurationInMinutes</code> or <code>EndDateTime</code>. Supplying values in both fields is allowed if the values add up to the same amount of time. If both fields are <code>null</code>, the duration defaults to one day. • If <code>IsAllDayEvent</code> is false, a value must be supplied for either <code>DurationInMinutes</code> or <code>EndDateTime</code>. Supplying values in both fields is allowed if the values add up to the same amount of time.
IsAllDayEvent	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description If the value of this field is set to <code>true</code>, then the activity is an event spanning a full day, and the <code>ActivityDate</code> defines the date of the event. If the value of this field is set to <code>false</code>, then the activity may be an event spanning less than a full day, or it may be a task. Label is <code>All-Day Event</code>.</p>
IsClosed	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether a task is closed; value is always <code>false</code>). This field is set indirectly by setting <code>Status</code> on the task—each picklist value has a corresponding <code>IsClosed</code> value. Label is <code>Closed</code>.</p>
IsDeleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p>

Field	Details
	<p>Description</p> <p>Indicates whether the activity has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <code>Deleted</code>.</p>
<code>IsHighPriority</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Indicates a high-priority task. This field is derived from the <code>Priority</code> field.</p>
<code>IsReminderSet</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Indicates whether a reminder is set for an activity (<code>true</code>) or not (<code>false</code>).</p>
<code>IsTask</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>If the value of this field is set to <code>true</code>, then the activity is a task; if the value is set to <code>false</code>, then the activity is an event. Label is <code>Task</code>.</p>
<code>IsVisibleInSelfService</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>If the value of this field is set to <code>true</code>, then the activity can be viewed in the self-service portal. Label is <code>Visible in Self-Service</code>.</p>
<code>Location</code>	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>If the activity is an event, then this field represents the location of the event. If the activity is a task, then the value is <code>null</code>.</p>

Field	Details
OwnerId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates the ID of the user or group who owns the activity. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Calendar, Group, User</p>
PrimaryAccountId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Contains the <code>AccountId</code> value from the activity record. Available in API versions 30.0 and later to organizations that use Shared Activities.</p>
PrimaryWhoId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Contains the <code>whoId</code> value from the activity record. Available in API versions 30.0 and later to organizations that have enabled Shared Activities.</p>
Priority	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description Indicates the priority of a task, such as high, normal, or low.</p>
ReminderDateTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>Represents the time at which a reminder is scheduled to fire if <code>IsReminderSet</code> is set to <code>true</code>. If <code>IsReminderSet</code> is set to <code>false</code>, then either the user has deselected the reminder checkbox in the user interface or the reminder has already fired at the time indicated by the value.</p>
Status	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Indicates the current status of a task, such as in progress or complete. Each predefined status field sets a value for <code>IsClosed</code>. To obtain picklist values, query <code>TaskStatus</code>.</p>
Subject	<p>Type</p> <p>combobox</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Contains the subject of the task or event.</p>
WhatId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The <code>WhatId</code> represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. <code>WhatIds</code> are polymorphic. Polymorphic means a <code>WhatId</code> is equivalent to the ID of a related object. The label is <code>Related To ID</code>.</p> <p>This is a polymorphic relationship field.</p> <p>Relationship Name</p> <p>What</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee,</p>

Field	Details
	CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CommSubscriptionConsent, ContactEncounter, ContactEncounterParticipant, ContactRequest, Contract, CoverageBenefit, CoverageBenefitItem, CreditMemo, DelegatedAccount, DocumentChecklistItem, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, ListEmail, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PartyConsent, PersonLifeEvent, PlanBenefit, PlanBenefitItem, ProcessException, Product2, ProductItem, ProductRequest, ProductRequestLineItem, ProductTransfer, PurchaserPlan, ReceivedDocument, ResourceAbsence, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, Shift, Shipment, ShipmentItem, Solution, Visit, VisitedParty, VolunteerProject, WorkOrder, WorkOrderLineItem
WhoId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The Whold represents a human such as a lead or a contact. Wholds are polymorphic. Polymorphic means a Whold is equivalent to a contact's ID or a lead's ID. The label is <code>Name ID</code>. If Shared Activities is enabled, the value of this field is the ID of the related lead or primary contact. If you add, update, or remove the Whold field, you might encounter problems with triggers, workflows, and data validation rules that are associated with the record. The label is <code>Name ID</code>. This is a polymorphic relationship field.</p> <p>Relationship Name Who</p> <p>Relationship Type Lookup</p> <p>Refers To Contact, Lead</p>

Usage

Query activities that are related to an object

1. Optionally, issue a describe call against the object whose activities you want to query, to get a suggestion of the correct SOQL query to use.

- Issue a SOQL relationship query with a main clause that references the object and an inner clause that references the activity history. For example:

```
SELECT
  (SELECT ActivityDate, Description
   FROM OpenActivities)
FROM Account
WHERE Name Like 'XYZ%'
```

The user interface enforces sharing rules, filtering out related-list items that a user doesn't have permission to see.

The following constraints on users who don't have the "View All Data" permission help prevent performance issues.

- In the main clause of the relationship query, you can reference only one record. For example, you can't filter on all records where the account name starts with "A." Instead, you must reference a single account record.

```
SELECT
  (SELECT ActivityDate, Description
   FROM OpenActivities
   ORDER BY ActivityDate ASC NULLS LAST, LastModifiedDate DESC
   LIMIT 500)
FROM Account
WHERE Name = 'Acme'
LIMIT 1
```

- In the inner clause of the query, you can't use `WHERE`.
- In the inner clause of the query, you must specify a limit of 500 or fewer on the number of rows that are returned in the list.
- In the inner clause of the query, you must sort on `ActivityDate` in ascending order and `LastModifiedDate` in descending order. You can optionally display nulls last. For example: `ORDER BY ActivityDate ASC NULLS LAST, LastModifiedDate DESC`.

[Task](#)

OperatingHours

Represents the hours in which a service territory, service resource, or account is available for field service work in Field Service and Lightning Scheduler. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The description of the operating hours. Add any details that aren't included in the name.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the operating hours record was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the operating hours record was last viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the operating hours. For example, <i>Summer Hours, Winter Hours, or Peak Season Hours</i>.</p>
TimeZone	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The time zone which the operating hours fall within.</p>

Usage

By default, only System Administrators can view, create, and assign operating hours.

Service territory members—which are service resources who can work in the territory—automatically use their service territory’s operating hours. If a resource needs different operating hours than their territory, create separate operating hours for them from the Operating Hours tab. Then, select the desired hours in the `Operating Hours` lookup field on the service territory member detail page.

To view a service resource’s operating hours for a particular territory, navigate to their Service Territories related list and click the Member Number for the territory. This takes you to the service territory member detail page, which lists the member’s operating hours and dates during which they belong to the territory.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

OperatingHoursFeed

Feed tracking is available for the object.

OperatingHoursHistory

Represents the history of changes made to tracked fields on an operating hours record. This object is available in API version 38.0 and later.

Supported Calls

`getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

Field Service must be enabled in your organization, and field tracking for operating hours fields must be configured.

Fields

Field Name	Details
<code>DataType</code>	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Data type of the field that was changed.</p>
<code>Field</code>	<p>Type picklist</p>

Field Name	Details
	<p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The name of the field that was changed.</p>
NewValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The new value of the field that was changed.</p>
OldValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The value of the field before it was changed.</p>
TimeSlotId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the operating hours record being tracked. The history is displayed on the detail page for this record.</p>

OperatingHoursHoliday

Represents the day or hours for which a service territory and service resources exclusive to the service territory are unavailable in Salesforce Scheduler. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Salesforce Scheduler must be enabled.

Fields

Field	Details
DateAndTime	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description (Read-Only) The date or time for the holiday.</p>
HolidayId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the holiday that's related to the operating hours indicated in the OperatingHoursId field. This is a relationship field.</p> <p>Relationship Name Holiday</p> <p>Relationship Type Lookup</p> <p>Refers To Holiday</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time that the current user last viewed a record related to this object.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this object.</p>
OperatingHoursHolidayNumber	<p>Type string</p>

Field	Details
	<p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description (Read-Only) An auto-generated number identifying the operating hours holiday.</p>
OperatingHoursId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the operating hours that's related to the holiday indicated in the HolidayId field. This is a relationship field.</p> <p>Relationship Name OperatingHours</p> <p>Relationship Type Lookup</p> <p>Refers To OperatingHours</p>

Opportunity

Represents an opportunity, which is a sale or pending deal.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Field Type
AccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the account associated with this opportunity. This is a relationship field.</p>

Field	Field Type
	<p>Relationship Name Account</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
AgeInDays	<p>Type int</p> <p>Properties Aggregate, Filter, Group, Nillable, Sort</p> <p>Description The number of days since the opportunity was created, calculated by the current date minus the <code>created_date</code> field. This field is available in API version 52.0 and later if you enabled Pipeline Inspection.</p>
Amount	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Estimated total sale amount. For opportunities with products, the amount is the sum of the related products. Any attempt to update this field, if the record has products, will be ignored. The update call will not be rejected, and other fields will be updated as specified, but the Amount will be unchanged.</p>
CampaignId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of a related Campaign. This field is defined only for those organizations that have the campaign feature Campaigns enabled. The User must have read access rights to the cross-referenced Campaign object in order to create or update that campaign into this field on the opportunity. This is a relationship field.</p> <p>Relationship Name Campaign</p> <p>Relationship Type Lookup</p> <p>Refers To Campaign</p>

Field	Field Type
CloseDate	<p>Type date</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. Date when the opportunity is expected to close.</p>
ConnectionReceivedId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.</p>
ConnectionSentId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.</p>
ContactId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the contact associated with this opportunity, set as the primary contact. Read-only field that is derived from the opportunity contact role, which is created at the same time the opportunity is created. This field can only be populated when it's created, and can't be updated. To update the value in this field, change the <code>IsPrimary</code> flag on the OpportunityContactRole associated with this opportunity. Available in API version 46.0 and later.</p>
ContractId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Field Type
	<p>Description ID of the contract that's associated with this opportunity.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p> <p>If the organization has multicurrency and a Pricebook2 is specified on the opportunity (i.e., the <code>Pricebook2Id</code> field is not blank), then the currency value of this field must match the currency of the PricebookEntry records that are associated with any opportunity line items it has.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Text description of the opportunity. Limit: 32,000 characters.</p>
ExpectedRevenue	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Read-only field that is equal to the product of the opportunity <code>Amount</code> field and the <code>Probability</code>. You can't directly set this field, but you can indirectly set it by setting the <code>Amount</code> or <code>Probability</code> fields.</p>
Fiscal	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description If fiscal years are not enabled, the name of the fiscal quarter or period in which the opportunity <code>CloseDate</code> falls. Value should be in YYYY Q format, for example, '2006 1' for first quarter of 2006.</p>
FiscalQuarter	<p>Type int</p>

Field	Field Type
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents the fiscal quarter. Valid values are 1, 2, 3, or 4.</p>
FiscalYear	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents the fiscal year, for example, 2006.</p>
ForecastCategory	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Restricted picklist field. It is implied, but not directly controlled, by the <code>StageName</code> field. You can override this field to a different value than is implied by the <code>StageName</code> value. The values of this field are fixed enumerated values. The field labels are localized to the language of the user performing the operation, if localized versions of those labels are available for that language in the user interface.</p> <p>In API version 12.0 and later, the value of this field is automatically set based on the value of the <code>ForecastCategoryName</code> and can't be updated any other way. The field properties <code>Create</code>, <code>Defaulted on create</code>, <code>Nillable</code>, and <code>Update</code> are not available in version 12.0.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • <code>BestCase</code> • <code>Closed</code> • <code>Forecast</code> • <code>MostLikely</code> • <code>Omitted</code> • <code>Pipeline</code>
ForecastCategoryName	<p>Type picklist</p> <p>Properties <code>Create</code>, <code>Defaulted on create</code>, <code>Filter</code>, <code>Group</code>, <code>Nillable</code>, <code>Restricted picklist</code>, <code>Sort</code>, <code>Update</code></p> <p>Description The name of the forecast category. It is implied, but not directly controlled, by the <code>StageName</code> field. You can override this field to a different value than is implied by the <code>StageName</code> value. Available in API version 12.0 and later.</p>

Field	Field Type
	<p>Possible values are:</p> <ul style="list-style-type: none"> • Best Case • Closed • Commit • Most Likely • Omitted • Pipeline
HasOpenActivity	<p>Type boolean</p> <p>Properties Defaulted on create, Group,</p> <p>Description Indicates whether an opportunity has an open event or task (<code>true</code>) or not (<code>false</code>). Available in API version 35.0 and later.</p>
HasOpportunityLineItem	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Read-only field that indicates whether the opportunity has associated line items. A value of <code>true</code> means that Opportunity line items have been created for the opportunity. An opportunity can have opportunity line items only if the opportunity has a price book. The opportunity line items must correspond to PricebookEntry objects that are listed in the opportunity Pricebook2. However, you can insert opportunity line items on an opportunity that does not have an associated Pricebook2. For the first opportunity line item that you insert on an opportunity without a Pricebook2, the API automatically sets the <code>Pricebook2Id</code> field, if the opportunity line item corresponds to a PricebookEntry in an active Pricebook2 that has a <code>CurrencyIsoCode</code> field that matches the <code>CurrencyIsoCode</code> field of the opportunity. If the Pricebook2 is not active or the <code>CurrencyIsoCode</code> fields do not match, then the API returns an error. You can't update the <code>Pricebook2Id</code> or <code>PricebookId</code> fields if opportunity line items exist on the Opportunity. You must delete the line items before attempting to update the <code>PricebookId</code> field.</p>
HasOverdueTask	<p>Type boolean</p> <p>Properties Defaulted on create, Group,</p> <p>Description Indicates whether an opportunity has an overdue task (<code>true</code>) or not (<code>false</code>). Available in API version 35.0 and later.</p>

Field	Field Type
IqScore	<p>Type int</p> <p>Properties Aggregate, Filter, Group, Nillable, Sort</p> <p>Description The likelihood, measured on a scale of 1 to 99, that an opportunity will be won. Einstein Opportunity Scoring must be enabled. Available in API version 41.0 and later. Label is Opportunity Score.</p>
IsClosed	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Directly controlled by <code>StageName</code>. You can query and filter on this field, but you can't directly set it in a create, upsert, or update request. It can only be set via <code>StageName</code>. Label is Closed.</p>
IsDeleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>
IsExcludedFromTerritory2Filter	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Used for Filter-Based Opportunity Territory Assignment (Pilot in Spring '15 / API version 33). Indicates whether the opportunity is excluded (<code>True</code>) or included (<code>False</code>) each time the APEX filter is executed.</p>
IsPriorityRecord	<p>Type boolean</p> <p>Properties Defaulted on create, Group</p> <p>Description Shows whether the user has marked the opportunity as important (<code>True</code>) or not (<code>False</code>). The default value is <code>false</code>. Available in API version 53.0 and later.</p>

Field	Field Type
IsSplit	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Read-only field that indicates whether credit for the opportunity is split between opportunity team members. Label is <code>IsSplit</code>. This field is available in versions 14.0 and later for organizations that enabled Opportunity Splits during the pilot period.</p> <p> Warning: This field should not be used. However, it's documented for the benefit of pilot customers who find references to <code>IsSplit</code> in code.</p>
IsWon	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Directly controlled by <code>StageName</code>. You can query and filter on this field, but you can't directly set the value. It can only be set via <code>StageName</code>. Label is Won.</p>
LastActivityDate	<p>Type date</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Value is one of the following, whichever is the most recent:</p> <ul style="list-style-type: none"> • Due date of the most recent event logged against the record. • Due date of the most recently closed task associated with the record.
LastActivityInDays	<p>Type int</p> <p>Properties Aggregate, Filter, Group, Nillable, Sort</p> <p>Description The number of days since the last completed event or task for the record, calculated by the current date minus the <code>last_activity</code> field. If the <code>last_activity</code> field is null, this field is null. This field is available in API version 52.0 and later if you enabled Pipeline Inspection.</p>
LastAmountChangedHistoryId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Field Type
	<p>Description ID of the OpportunityHistory record that contains information about when the opportunity Amount field was last updated in Winter '21 or later. Information includes the date and time of the change and the user who made the change. Available in API version 50.0 and later.</p> <p>This is a relationship field.</p> <p>Relationship Name LastAmountChangedHistory</p> <p>Relationship Type Lookup</p> <p>Refers To OpportunityHistory</p>
LastCloseDateChangedHistoryId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the OpportunityHistory record that contains information about when the opportunity Close Date field was last updated in Winter '21 or later. Information includes the date and time of the change and the user who made the change. Available in API version 50.0 and later.</p> <p>This is a relationship field.</p> <p>Relationship Name LastCloseDateChangedHistory</p> <p>Relationship Type Lookup</p> <p>Refers To OpportunityHistory</p>
LastReferencedDate	<p>Type datetime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastStageChangeDate	<p>Type datetime</p> <p>Properties Aggregate, Filter, Nillable, Sort</p>

Field	Field Type
	<p>Description</p> <p>The date of the last change made to the <code>stage</code> field on this opportunity record. This field is available in API version 52.0 and later.</p>
<code>LastStageChangeInDays</code>	<p>Type</p> <p><code>int</code></p> <p>Properties</p> <p>Aggregate, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The number of days since the last change was made to the <code>stage</code> field on the opportunity record, calculated by the current date minus the <code>last_stage_change_date</code> field. If the <code>last_stage_change_date</code> is null, then this field contains the value for <code>AgeInDays</code>. This field is available in API version 52.0 and later if you enabled Pipeline Inspection.</p>
<code>LastViewedDate</code>	<p>Type</p> <p><code>datetime</code></p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
<code>LeadSource</code>	<p>Type</p> <p><code>picklist</code></p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Source of this opportunity, such as Advertisement or Trade Show.</p>
<code>Name</code>	<p>Type</p> <p><code>string</code></p> <p>Properties</p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p>Description</p> <p>Required. A name for this opportunity. Limit: 120 characters.</p>
<code>NextStep</code>	<p>Type</p> <p><code>string</code></p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p>

Field	Field Type
	<p>Description Description of next task in closing opportunity. Limit: 255 characters.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the User who has been assigned to work this opportunity. If you update this field, the previous owner's access becomes Read Only or the access specified in your organization-wide default for opportunities, whichever is greater. If you have set up opportunity teams in your organization, updating this field has different consequences depending on your version of the API:</p> <ul style="list-style-type: none"> • For API version 12.0 and later, sharing records are kept, as they are for all objects. • For API version before 12.0, sharing records are deleted. • For API version 16.0 and later, users must have the "Transfer Record" permission in order to update (transfer) account ownership using this field. <p>This is a relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
PartnerAccountId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the partner account for the partner user that owns this opportunity. Available if Partner Relationship Management is enabled or if digital experiences is enabled and you have partner portal licenses.</p> <p> Note: If you are uploading opportunities using API version 15.0 or earlier, and one of the opportunities in the batch has a partner user as the owner, the <code>Partner Account</code> field on all opportunities in the batch is set to that partner user's account regardless of whether the partner user is the owner. In version 16.0, the <code>Partner Account</code> field is set to the appropriate account for the partner user that owns the opportunity. If the owner of the opportunity is not a partner user, this field remains empty.</p>

Field	Field Type
Pricebook2Id	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of a related Pricebook2 object. The <code>Pricebook2Id</code> field indicates which Pricebook2 applies to this opportunity. The <code>Pricebook2Id</code> field is defined only for those organizations that have products enabled as a feature. You can specify values for only one field (<code>Pricebook2Id</code> or <code>PricebookId</code>)—not both fields. For this reason, both fields are declared nillable.</p> <p>This is a relationship field.</p> <p>Relationship Name Pricebook2</p> <p>Relationship Type Lookup</p> <p>Refers To Pricebook2</p>
PricebookId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Nillable, Update</p> <p>Description Unavailable as of version 3.0. As of version 8.0, the Pricebook object is no longer available. Use the <code>Pricebook2Id</code> field instead, specifying the ID of the Pricebook2 record.</p>
Probability	<p>Type percent</p> <p>Properties Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p>Description Percentage of estimated confidence in closing the opportunity. It is implied, but not directly controlled, by the <code>StageName</code> field. You can override this field to a different value than what is implied by the <code>StageName</code>.</p> <p> Note: If you're changing the <code>Probability</code> field through the API using a partner WSDL call, or an Apex <code>before</code> trigger, and the value may have several decimal places, we recommend rounding the value to a whole number. For example, the following Apex in a <code>before</code> trigger uses the <code>round</code> method to change the field value: <code>o.probability = o.probability.round();</code></p>
PushCount	<p>Type int</p>

Field	Field Type
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of times an opportunity's close date has been pushed out by one calendar month. For example, moving a close date from April to May counts as one push, but moving from April 1 to April 30 doesn't count. The total is not decreased when the close date is moved in. Available in API version 53.0 and later.</p>
RecordTypeId	<p>Type reference</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description ID of the record type assigned to this object.</p>
StageName	<p>Type picklist</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. Current stage of this record. The <code>StageName</code> field controls several other fields on an opportunity. Each of the fields can be directly set or implied by changing the <code>StageName</code> field. In addition, the <code>StageName</code> field is a picklist, so it has additional members in the returned <code>describeSObjectResult</code> to indicate how it affects the other fields. To obtain the stage name values in the picklist, query the <code>OpportunityStage</code> object. If the <code>StageName</code> is updated, then the <code>ForecastCategoryName</code>, <code>IsClosed</code>, <code>IsWon</code>, and <code>Probability</code> are automatically updated based on the stage-category mapping.</p>
SyncedQuoteID	<p>Type reference</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description Read only in an Apex trigger. The ID of the Quote that syncs with the opportunity. Setting this field lets you start and stop syncing between the opportunity and a quote. The ID has to be for a quote that is a child of the opportunity.</p>
Territory2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Field Type
	<p>Description</p> <p>The ID of the territory that is assigned to the opportunity. Available only if Enterprise Territory Management has been enabled for your organization.</p> <p> Note: Users who have full access to an opportunity's account can assign any territory from the active model to the opportunity. Users who do <i>not</i> can assign only a territory that is also assigned to the opportunity's account. The same restriction applies to territory assignments made via Apex in system mode.</p>
TotalOpportunityQuantity	<p>Type</p> <p>double</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>Number of items included in this opportunity. Used in quantity-based forecasting.</p>
Type	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Type of opportunity. For example, Existing Business or New Business. Label is Opportunity Type.</p>

 **Note:** If you are importing Opportunity data and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself..

Usage

Use the Opportunity object to manage information about a sale or pending deal. You can also sync this object with a child Quote. To update an Opportunity, your client application needs "Edit" permission on opportunities. You can create, update, delete, and query Attachment records associated with an opportunity via the API. To split credit for an opportunity among multiple opportunity team members, use the OpportunitySplit object.

Client applications can also create or update opportunity objects by converting a Lead with `convertLead()`.

 **Note:** On opportunities and opportunity products, the workflow rules, validation rules, and Apex triggers fire when an update to a child opportunity product or schedule causes an update to the parent record. This means your custom application logic is enforced when there are updates to the parent record, ensuring higher data quality and compliance with your organization's business policies.

Sample Code—Java

This code starts the sync between an object and a child quote.

```
public void startQuoteSync() {
    Opportunity opp = new Opportunity();
    opp.setId(new ID("006D000000CpOSy"));
    opp.setSyncedQuoteId(new ID("0Q0D000000002Oz"));
    // Invoke the update call and save the results
    try {
        SaveResult[] saveResults = binding.update(new SObject[] {opp});
        // check results and do more processing after the update call ...
    }
    catch (Exception ex) {
        System.out.println("An unexpected error has occurred." + ex.getMessage());
        return;
    }
}
```

This code stops the sync between an object and a child quote.

```
public void stopQuoteSync() {
    Opportunity opp = new Opportunity();
    opp.setId(new ID("006D000000CpOSy"));
    opp.setFieldsToNull(new String[] {"SyncedQuoteId"});
    // Invoke the update call and save the results
    try {
        SaveResult[] saveResults = binding.update(new SObject[] {opp});
        // check results and do more processing after the update call ...
    }
    catch (Exception ex) {
        System.out.println("An unexpected error has occurred." + ex.getMessage());
        return;
    }
}
```

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

OpportunityChangeEvent (API version 44.0)

Change events are available for the object.

OpportunityFeed (API version 18.0)

Feed tracking is available for the object.

OpportunityHistory

History is available for tracked fields of the object.

OpportunityOwnerSharingRule

Sharing rules are available for the object.

OpportunityShare

Sharing is available for the object.

Additional Considerations

If you are using `before` triggers to set `Stage` and `Forecast Category` for an opportunity record, the behavior is as follows:

- If you set `Stage` and `Forecast Category`, the opportunity record contains those exact values.
- If you set `Stage` but not `Forecast Category`, the `Forecast Category` value on the opportunity record defaults to the one associated with trigger `Stage`.
- If you reset `Stage` to a value specified in an API call or incoming from the user interface, the `Forecast Category` value should also come from the API call or user interface. If no value for `Forecast Category` is specified and the incoming `Stage` is different than the trigger `Stage`, the `Forecast Category` defaults to the one associated with trigger `Stage`. If the trigger `Stage` and incoming `Stage` are the same, the `Forecast Category` is not defaulted.

If you are cloning an opportunity with products, the following events occur in order:

1. The parent opportunity is saved according to the [order of execution](#).
2. The opportunity products are saved according to the [order of execution](#).

 **Note:** If errors occur on an opportunity product, you must return to the opportunity and fix the errors before cloning. If any opportunity products contain unique custom fields, you must null them out before cloning the opportunity.

OpportunityCompetitor

Represents a competitor on an Opportunity.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
<code>CompetitorName</code>	Type combobox

Field	Details
	<p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Name of the competitor.</p>
IsDeleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>
OpportunityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. ID of the associated Opportunity. This is a relationship field.</p> <p>Relationship Name Opportunity</p> <p>Relationship Type Lookup</p> <p>Refers To Opportunity</p>
Strengths	<p>Type string</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Description of the competitor's strengths. Limit: 1,000 characters.</p>
Weaknesses	<p>Type string</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Description of the competitor's weaknesses. Limit: 1,000 characters.</p>

Usage

Use this object to manage competitors on an Opportunity, associating multiple competitors on a opportunity and specifying the strengths and weaknesses of each competitor.

SEE ALSO:

[Opportunity](#)

OpportunityContactRole

Represents the role that a Contact plays on an Opportunity.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
ContactId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description ID of an associated Contact. The API applies user access rights to the associated Opportunity for this object, but not to the associated Contact. The API may return rows from a query on this object that include this field's values for contacts to which the user does not have sufficient access rights. It may also return values for this field for contacts that have been deleted. In either case, the client must perform a query on the contact table for this field's value to determine whether the Contact is accessible to the user and has not been deleted.</p> <p>This is a relationship field.</p> <p>Relationship Name Contact</p> <p>Relationship Type Lookup</p> <p>Refers To Contact</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the org. This field is available in API version 47.0.</p>
Division	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description</p> <p>A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.</p>
IsDeleted	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter</p> <p>Description</p> <p>Indicates whether the record has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). The <code>IsDeleted</code> flag is usable only when the parent record is deleted to the recycle bin, and not when the <code>OpportunityContactRole</code> record is deleted directly. Label is Deleted.</p>
IsPrimary	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Indicates whether the associated Contact plays the primary role on the Opportunity (<code>true</code>) or not (<code>false</code>). Each Opportunity has only one primary contact. Label is Primary.</p>
OpportunityId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>Required. ID of an associated Opportunity. This field is non-nullable, and it cannot be updated. You must provide a value for this field when creating new records. You can't change it after it has been created.</p> <p>This is a relationship field.</p>

Field	Details
	<p>Relationship Name Opportunity</p> <p>Relationship Type Lookup</p> <p>Refers To Opportunity</p>
Role	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Name of the role played by the associated Contact on the Opportunity, such as Business User or Decision Maker.</p>

Usage

Use the Opportunity Contact Role object to manage information about contacts and roles related to opportunities. Records of this type appear in the user interface in the Opportunity Contact Role related list and on the Opportunity detail page.

Although allowed, we do not recommend that you create multiple relationships between the same Opportunity and a Contact.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

OpportunityContactRoleChangeEvent (API version 45.0)

Change events are available for the object.

SEE ALSO:

[Object Basics](#)

OpportunityContactRoleSuggestionInsight

Represents a suggestion for a new opportunity contact role. Available in API versions 45.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getDeleted()`, `query()`, `retrieve()`

Special Access Rules

To add or decline opportunity contact role suggestions, users need a Sales Cloud Einstein license, edit access on opportunities, and read or edit access on contacts. As of the Spring '20 release, Pardot and High Velocity Sales users no longer have access to this object.

Fields

Field Name	Details
ContactId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the related contact record.</p>
CreatedRecordId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the created opportunity contact role record.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
Division	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description The division of the suggested opportunity contact role.</p>
LastOperationUserId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the user who last performed a related operation.</p>

Field Name	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.</p>
OpportunityId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the related opportunity.</p>
RationaleLabel	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The reason why this is a suggested opportunity contact role.</p>
Role	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The role of the suggested opportunity contact role.</p>
Status	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p>

Field Name**Details****Description**

The status of the suggested contact. Possible values include:

- New
- Pending
- Added
- Declined

Usage

This object is read-only and isn't supported in workflows, triggers, or process builder.

OpportunityFieldHistory

Represents the history of changes to the values in the fields of an opportunity. This object is available in versions 13.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

The name of the field that was changed.

IsDeleted

Type

boolean

Field	Details
	<p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>
OpportunityId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the Opportunity. Label is Opportunity ID. This is a relationship field.</p> <p>Relationship Name Opportunity</p> <p>Relationship Type Lookup</p> <p>Refers To Opportunity</p>
NewValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The new value of the field that was changed.</p>
OldValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The latest value of the field before it was changed.</p>

Usage

Use this object to identify changes to any fields on an Opportunity. The OpportunityHistory object represents the history of a change to the Amount, Probability, Stage, or Close Date fields of an Opportunity.

This object respects field level security on the parent object.

SEE ALSO:

[Opportunity](#)

OpportunityHistory

Represents the stage history of an Opportunity.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Fields

Field	Details
Amount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Estimated total sale amount.</p>
CloseDate	<p>Type date</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Date when the opportunity is expected to close.</p>
ExpectedRevenue	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Calculated revenue based on the <code>Amount</code> and <code>Probability</code> fields.</p>
ForecastCategory	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p>

Field	Details
	<p>Description</p> <p>Category that determines the column in which an opportunity is totaled in a forecast. Label is To ForecastCategory.</p> <ul style="list-style-type: none"> • BestCase • Closed • Forecast • MostLikely • Omitted • Pipeline
IsDeleted	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter</p> <p>Description</p> <p>Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>

PrevAmount	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The value in the opportunity's Amount field before the update of the opportunity.</p> <p> Note: In OpportunityHistory records created before Winter '21, the value is null.</p> <p>Available in API version 50.0 and later.</p>

Field	Details
PrevCloseDate	<p>Type date</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The value in the opportunity's Close Date field before the update of the opportunity.</p> <p> Note: In OpportunityHistory records created before Winter '21, the value is null.</p> <p>Available in API version 50.0 and later.</p>
Probability	<p>Type percent</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Percentage of estimated confidence in closing the opportunity.</p>
StageName	<p>Type picklist</p> <p>Properties Filter, Group, Sort</p> <p>Description Name of the current stage of the opportunity (for example, Prospect or Proposal).</p>

Usage

This object represents the history of a change to the `Amount`, `Probability`, `Stage`, or `Close Date` fields of an Opportunity. The `OpportunityFieldHistory` object represents the history of a change to any of the fields of an Opportunity. To obtain information about how a particular opportunity is progressing, query the `OpportunityHistory` records associated with a given Opportunity. Please note that if an opportunity's `Amount`, `Probability`, `Stage`, or `Close Date` fields have not changed, nothing will be returned in the `OpportunityHistory` objects. In this case, query the `OpportunityFieldHistory` records associated with a given Opportunity to get more information about changes to the opportunity.

This object is read-only. The system generates a new record whenever a user or client application changes the value of any of the above fields; the then-current values of all of these major fields are saved in the newly-generated object.

This object respects field-level security on the parent object.

 **Note:** The record is automatically deleted if its parent Opportunity is deleted.

SEE ALSO:

[Opportunity](#)

OpportunityInsight

Represents an individual insight (deal prediction, follow-up reminder, or key moment) related to an opportunity record.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `query()`, `retrieve()`

Special Access Rules

To see an insight related to a specific opportunity, users need a Sales Cloud Einstein license and access to the opportunity record. As of the Spring '20 release, Pardot and High Velocity Sales users no longer have access to this object.

Fields

Field Name	Details
ActualHeardWithinDays	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of days it has been since a prospect has responded for insights of type <code>Prospect</code> has not responded and No communication.</p>
CloseDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The close date of the related opportunity for insights of type <code>Opportunity</code> is overdue and <code>Opportunity</code> is unlikely to close in time.</p>
CompetitorName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description This field has been deprecated as of API version 45.0.</p>
ContactName	<p>Type string</p>

Field Name	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description This field is not in use as of API version 46.0.</p>
ContactTitle	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description This field is not in use as of API version 46.0.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
Division	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description The division of the related record.</p>
ExpectedHeardWithinDays	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The expected number of days it takes to hear back from a prospect for insights of type Prospect has not responded and No communication.</p>
LastHeard	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the related prospect was last heard from for insights of type Prospect has not responded.</p>

Field Name	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.</p>
OpportunityId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the related opportunity record.</p>
Rationale	<p>Type string</p> <p>Properties Filter, Group, Nillable</p> <p>Description The explanation for an insight, providing more background information and details that are specific to the org.</p>
Reason	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The reason why a specific insight type is appearing. Relevant to the following insights:</p> <ul style="list-style-type: none">• Opportunity is unlikely to close in time• Opportunity slowing• Opportunity boosting

Field Name	Details
	<ul style="list-style-type: none"> • Time-consuming opportunity
TaskDue	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date that a task associated with the related opportunity record is due.</p>
Title	<p>Type string</p> <p>Properties Filter, Group, Nillable</p> <p>Description The title of the insight.</p>
TrendType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The trend type of the insight. Possible values include:</p> <ul style="list-style-type: none"> • Negative • Positive • Informational
Type	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of insight. Possible values include:</p> <ul style="list-style-type: none"> • Opportunity is unlikely to close in time • Prospect has not responded • Opportunity slowing • Opportunity boosting • Time-consuming opportunity • No communication • Re-engaged opportunity • Opportunity has an overdue task

Field Name	Details
	<ul style="list-style-type: none"> Opportunity is overdue Opportunity has no open activity Unusual opportunity amount

Usage

This object is read-only and isn't supported in workflows, triggers, or process builder.

OpportunityLineItem

Represents an opportunity line item, which is a member of the list of Product2 products associated with an Opportunity.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The user must have the "Edit" permission on Opportunity records to create or update opportunity line items on an opportunity.

Fields

Field	Details
<code>CanUseQuantitySchedule</code>	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the opportunity product can have a quantity schedule (<code>true</code>) or not (<code>false</code>). This field is read-only.</p>
<code>CanUseRevenueSchedule</code>	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the opportunity product can have a revenue schedule (<code>true</code>) or not (<code>false</code>). This field is read-only.</p>

Field	Details
ConnectionReceivedId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.</p>
ConnectionSentId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p> <p>If the organization has multicurrency enabled, and a Pricebook2 is specified on the parent opportunity (that is, the <code>Pricebook2Id</code> field is not blank on the opportunity referenced by this object's <code>OpportunityId</code>), then the value of this field must match the currency of the <code>CurrencyIsoCode</code> field on the PricebookEntry records that are associated with this object.</p>
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Text description of the opportunity line item. Limit: 80 characters.</p>
Discount	<p>Type percent</p> <p>Properties Create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Discount for the product as a percentage.</p> <p>When updating these records:</p> <ul style="list-style-type: none"> • If you specify <code>Discount</code> without specifying <code>TotalPrice</code>, the <code>TotalPrice</code> is adjusted to accommodate the new <code>Discount</code> value, and the <code>UnitPrice</code> is held constant. • If you specify both <code>Discount</code> and <code>Quantity</code>, you must also specify either <code>TotalPrice</code> or <code>UnitPrice</code> so the system knows which one to automatically adjust.
<code>HasQuantitySchedule</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Read-only. Indicates whether a quantity schedule has been created for this object (<code>true</code>) or not (<code>false</code>).</p>
<code>HasRevenueSchedule</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Indicates whether a revenue schedule has been created for this object (<code>true</code>) or not (<code>false</code>).</p> <p>If this object has a revenue schedule, the <code>Quantity</code> and <code>TotalPrice</code> fields can't be updated. In addition, the <code>Quantity</code> field can't be updated if this object has a quantity schedule. Update requests aren't rejected but the updated values are ignored.</p>
<code>HasSchedule</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>If either <code>HasQuantitySchedule</code> or <code>HasRevenueSchedule</code> is <code>true</code>, this field is also <code>true</code>.</p>
<code>LastReferencedDate</code>	<p>Type</p> <p>datetime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The timestamp for when the current user last viewed a record related to this record. Available in API version 50.0 and later.</p>
LastViewedDate	<p>Type</p> <p>datetime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. Available in API version 50.0 and later.</p>
ListPrice	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Corresponds to the <code>UnitPrice</code> on the <code>PricebookEntry</code> that is associated with this line item, which can be in the standard price book or a custom price book. A client application can use this information to show whether the unit price (or sales price) of the line item differs from the price book entry list price.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The opportunity line item name (known as "Opportunity Product" in the user interface). This read-only field is available in API version 30.0 and later.</p>
OpportunityId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>Required. ID of the associated Opportunity.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>Opportunity</p> <p>Relationship Type</p> <p>Lookup</p>

Field	Details
	<p>Refers To Opportunity</p>
PricebookEntryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description Required. ID of the associated PricebookEntry. Exists only for those organizations that have Products enabled as a feature. In API versions 1.0 and 2.0, you can specify values for either this field or <code>ProductId</code>, but not both. For this reason, both fields are declared nillable. In API version 3.0 and later, you must specify values for this field instead of <code>ProductId</code>. This is a relationship field.</p> <p>Relationship Name PricebookEntry</p> <p>Relationship Type Lookup</p> <p>Refers To PricebookEntry</p>
ProductId	<p>Type reference</p> <p>Properties Create, Filter, Nillable</p> <p>Description ID of the related Product record. This field is unavailable as of version 3.0 and is only provided for backward compatibility. The Product object is unavailable beginning with version 8.0. Use the <code>PricebookEntryId</code> field instead, specifying the ID of the PricebookEntry record. This is a relationship field.</p> <p>Relationship Name Product2</p> <p>Relationship Type Lookup</p> <p>Refers To Product2</p>
Product2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The ID of the related Product2 record. This is a read-only field available in API version 30.0 and later.</p> <p>Use the <code>PricebookEntryId</code> field instead, specifying the ID of the PricebookEntry record.</p>
ProductCode	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>This read-only field is available in API version 30.0 and later. It references the value in the ProductCode field of the related Product2 record.</p>
Quantity	<p>Type</p> <p>double</p> <p>Properties</p> <p>Create, Filter, Sort, Update</p> <p>Description</p> <p>Read-only if this record has a quantity schedule, a revenue schedule, or both a quantity and a revenue schedule.</p> <p>When updating these records:</p> <ul style="list-style-type: none"> • If you specify <code>Quantity</code> without specifying the <code>UnitPrice</code>, the <code>UnitPrice</code> value will be adjusted to accommodate the new <code>Quantity</code> value, and the <code>TotalPrice</code> will be held constant. • If you specify both <code>Discount</code> and <code>Quantity</code>, you must also specify either <code>TotalPrice</code> or <code>UnitPrice</code> so the system can determine which one to automatically adjust.
RecalculateTotalPrice	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Changes behavior of OpportunityLineItem calculations when a line item has child schedule rows for the <code>Quantity</code> value. When enabled, if the rollup quantity changes, then the quantity rollup value is multiplied against the sales price to change the total price. Product2 flag must be set to true.</p>
ServiceDate	<p>Type</p> <p>date</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Date when the product revenue will be recognized and the product quantity will be shipped.</p> <ul style="list-style-type: none"> • Opportunity Close Date—<code>ServiceDate</code> is ignored. • Product Date—<code>ServiceDate</code> is used if not null. • Schedule Date—<code>ServiceDate</code> is used if not null and there are no revenue schedules present for this line item, that is, there are no <code>OpportunityLineItemSchedule</code> records with a field <code>Type</code> value of Revenue that are children of this record.
SortOrder	<p>Type</p> <p>int</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Number indicating the sort order selected by the user. Client applications can use this to match the sort order in Salesforce.</p>
Subtotal	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Difference between standard and discounted pricing. Converted currency amounts when the opportunity's currency is different from the user's currency.</p>
TotalPrice	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>This field is available only for backward compatibility. It represents the total price of the <code>OpportunityLineItem</code>.</p> <p>If you do not specify <code>UnitPrice</code>, this field is required. If you specify <code>Discount</code> and <code>Quantity</code>, this field or <code>UnitPrice</code> is required. When updating these records, you can change either this value or the <code>UnitPrice</code>, but not both at the same time.</p> <p>This field is nillable, but you can't set both <code>TotalPrice</code> and <code>UnitPrice</code> to null in the same update request. To insert the <code>TotalPrice</code> via the API (given only a unit price and the quantity), calculate this field as the unit price multiplied by the quantity. This field is read-only if the opportunity line item has a revenue schedule. If the opportunity line item does not have a schedule or only has quantity schedule, this field can be updated.</p>
UnitPrice	<p>Type</p> <p>currency</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p>Description The unit price for the opportunity line item. In the Salesforce user interface, this field's value is calculated by dividing the total price of the opportunity line item by the quantity listed for that line item. Label is Sales Price.</p> <p>This field or <code>TotalPrice</code> is required. You can't specify both.</p> <p>If you specify <code>Discount</code> and <code>Quantity</code>, this field or <code>TotalPrice</code> is required.</p>

Usage

An Opportunity can have associated OpportunityLineItem records only if the Opportunity has a Pricebook2. An OpportunityLineItem must correspond to a Product2 that is listed in the opportunity's Pricebook2. For information about inserting OpportunityLineItem for an opportunity that does not have an associated Pricebook2 or any existing line items, see [Effects on Opportunities](#).

This object is defined only for orgs with products enabled as a feature. If the products feature isn't enabled, this object doesn't appear in the `describeGlobal()` call, and you can't use `describeSObjects()` or query the OpportunityLineItem object.

For a visual diagram of the relationships between OpportunityLineItem and other objects, see [Product and Schedule Objects](#).

Note:

- If the multicurrency option is enabled, the `CurrencyIsoCode` field is present. It can't be modified, and is always set to the value of the `CurrencyIsoCode` of the parent Opportunity.
- If customizable product schedules are enabled, you can use custom fields in default schedules and customize their layout. But if you've applied validation rules or Apex triggers, they're bypassed when they're first inserted.

Effects on Opportunities

Opportunities with associated OpportunityLineItem records are affected in the following ways:

- Creating an OpportunityLineItem increments the Opportunity `Amount` value by the `TotalPrice` of the OpportunityLineItem. Additionally, inserting an OpportunityLineItem increments the `ExpectedRevenue` on the opportunity by the `TotalPrice` times the opportunity `Probability`.
- The Opportunity `Amount` becomes a read-only field when the opportunity has line items. The API ignores any attempt to update this field on an opportunity with line items. Update requests are not rejected, but the updated value is ignored.
- You can't update the `PricebookId` field or the `CurrencyIsoCode` field on the opportunity if line items exist. The API rejects any attempt to update these fields on an opportunity with line items.
- When you create or update an OpportunityLineItem, the API verifies that the line item corresponds to a PricebookEntry in the Pricebook2 that is associated with the opportunity. If the opportunity does not have an associated Pricebook2, the API automatically sets the price book on the opportunity if the line item corresponds to a PricebookEntry in an active Pricebook2, and if the PricebookEntry has a `CurrencyIsoCode` field that matches the `CurrencyIsoCode` field of the opportunity. If the Pricebook2 is not active or the `CurrencyIsoCode` fields do not match, an error is returned.
- The Opportunity `HasOpportunityLineItem` field is set to `true` when an OpportunityLineItem is inserted for that Opportunity.

- When OpportunityLineItem records are directly deleted, they aren't sent to the recycle bin and can't be undeleted. The `getDeleted()` call shows deleted OpportunityLineItem records until they are purged, which is usually within the same day or the next day.

SEE ALSO:

[OpportunityLineItemSchedule](#)

OpportunityLineItemSchedule

Represents information about the quantity, revenue distribution, and delivery dates for a particular OpportunityLineItem.

In API version 38.0 and later, when an OpportunityLineItem record is created for a product with a previously established schedule, an OpportunityLineItemSchedule record is also created.

In API version 46.0 and later, this object supports custom fields, validation rules, and Apex triggers. Deleting a schedule now also invokes delete triggers. If customizable product schedules are enabled, you can use custom fields in default schedules and customize their layout. But if you've applied validation rules or Apex triggers, they're bypassed when they're first inserted.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Nillable, Restricted picklist, Update</p> <p>Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. This field is available in version 10.0 and later.</p>
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Text description of the opportunity line item schedule. Limit: 80 characters. Label is Comments.</p>
OpportunityLineItemId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter</p> <p>Description Required. ID of the associated OpportunityLineItem.</p>
Quantity	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Required. The total number of units to be scheduled in a quantity schedule.</p>
Revenue	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The revenue that should be recognized, or the quantity that should be shipped, or both - depending upon the value of <code>Type</code>.</p>
ScheduleDate	<p>Type date</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The date the associated OpportunityLineItem is to be scheduled for an event: delivery, shipping, or any other date you wish to track.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The type of the schedule. Required when inserting an OpportunityLineItemSchedule. Valid values include <code>Quantity</code>, <code>Revenue</code>, or <code>Both</code>.</p>

Allowed Type Field Values

The allowed `Type` values for an OpportunityLineItemSchedule depend on the product-level schedule preferences and whether the line item has any existing schedules. The following criteria must be met:

- The Product2 on which the OpportunityLineItem is based must have the appropriate `CanUseRevenueSchedule` or `CanUseQuantitySchedule` fields (or both) set to `true`.
- When you create a schedule for a line item that does not have any existing schedules, you can specify any valid value.
- If you create a schedule for a line item that already has existing schedules, the new schedule must be consistent with the existing schedules. The following matrix outlines the allowable values:

Value of HasRevenueSchedule on line item	Value of HasQuantitySchedule on line item	Allowable Type Values
false	false	Revenue, Quantity, both
false	true	Quantity
true	false	Revenue
true	true	both

Allowed Quantity and Revenue Field Values

The allowable `Quantity` and `Revenue` field values depend on the value of the `Type` field:

Type Value	Allowable Quantity Value	Allowable Revenue Value
Revenue	Null	Non-null
Quantity	Non-null	Null
both	Non-null	Non-null

The `Quantity` and `Revenue` fields have the following restrictions when this object is updated:

- For a schedule of `Type Quantity`, you can't update a null `Revenue` value to non-null. Likewise for a schedule of `Type Revenue`, you can't update a null `Quantity` value to non-null.
- You can't null out the `Quantity` field for a schedule of `Type Quantity`. Likewise you can't null out the `Revenue` field for a schedule of `Type Revenue`.
- You can't null out either the `Revenue` or `Quantity` fields for a schedule of type `Both`.

Usage

OpportunityLineItemSchedule supports two types of schedules:

- `Quantity` schedules
- `Revenue` schedules

The user must have edit access rights on the Opportunity in order to create or update line item schedules on that opportunity.

Products and Schedules Must Be Enabled

The `OpportunityLineItemSchedule` object is defined only for those organizations that have the products and schedules features enabled. If the organization does not have the products and schedules features, the `OpportunityLineItemSchedule` object is not returned in a describe, and you can't describe or query `OpportunityLineItemSchedule` records.

Effects on Opportunities and Opportunity Line Items

`OpportunityLineItemSchedule` records affect opportunities and opportunity line items in the following ways:

- Inserting an `OpportunityLineItemSchedule` of `Type` "Revenue" or "Quantity" increments the `TotalPrice` field on the `OpportunityLineItem` by the `OpportunityLineItemSchedule Revenue` amount. Inserting an `OpportunityLineItemSchedule` of `Type` `Quantity` or `Both` increments the `Quantity` field on the `OpportunityLineItem` by the `OpportunityLineItemSchedule Quantity` amount.
- Creating an `OpportunityLineItemSchedule` record affects the original opportunity:
 1. The `Opportunity Amount` is incremented the by `OpportunityLineItemSchedule revenue` amount
 2. The `Opportunity ExpectedRevenue` is incremented by the line item schedule amount multiplied by the `Opportunity Probability`
- Deleting an `OpportunityLineItemSchedule` has a similar effect on the related `OpportunityLineItem` and `Opportunity`. Deleting an `OpportunityLineItemSchedule` decrements the `OpportunityLineItem TotalPrice` by the deleted `OpportunityLineItemSchedule Quantity` or `Revenue` amount. The `Opportunity Amount` is also decremented by the `OpportunityLineItemSchedule Quantity` or `Revenue` amount, and the `Opportunity ExpectedRevenue` is reduced by `OpportunityLineItemSchedule Quantity` or `Revenue` amount multiplied by the `Opportunity Probability`.

Deleting an Opportunity Line Item Schedule

Deleting the last remaining schedule will set the corresponding `HasQuantitySchedule` or `HasRevenueSchedule` flags (or both) to `false` on the parent line item.

OpportunityOwnerSharingRule

Represents a rule for sharing an opportunity with users other than the owner.

- 📌 **Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to Rule Name in the user interface. This field is available in API version 24.0 and later.</p> <p> Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance slows down while Salesforce generates one for each record.</p>
GroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID representing the source group. Opportunities owned by users in the source group trigger the rule to give access.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to Label on the user interface.</p>

Field	Details
OpportunityAccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description A value that represents the type of sharing being allowed. The possible values are:</p> <ul style="list-style-type: none"> • Read • Edit
UserOrGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID representing the target user or group. The target user or group is being given access.</p>

Usage

Use this object to manage the sharing rules for opportunities. General sharing and Territory-related sharing use this object.

 **Note:** The original territory management feature is now unavailable. For more information, see [The Original Territory Management Module Will Be Retired in the Summer '21 Release](#). The information in this topic applies to the original territory management feature only, and not to Enterprise Territory Management.

[Case](#)

[Metadata API Developer Guide: SharingRules](#)

OpportunityPartner

This object represents a partner relationship between an Account and an Opportunity. An OpportunityPartner record is created automatically when a Partner record is created for a partner relationship between an account and an opportunity.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
AccountToId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the partner Account in the partner relationship. This is a relationship field.</p> <p>Relationship Name AccountTo</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
IsPrimary	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the account is the opportunity's primary partner (<code>true</code>) or not (<code>false</code>). Label is Primary.</p>
OpportunityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the Opportunity that is in the partner relationship. This is a relationship field.</p> <p>Relationship Name Opportunity</p> <p>Relationship Type Lookup</p> <p>Refers To Opportunity</p>
ReversePartnerId	<p>Type reference</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the account in a partner relationship.</p>
Role	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The UserRole that the Account has on the Opportunity. For example, Reseller or Manufacturer.</p>

Creating an Account-Opportunity Partner Relationship

When you create a partner relationship between an account and an opportunity (when you create a Partner record and specify the `OpportunityId` field), the API automatically creates an OpportunityPartner record with the corresponding values:

- The value of the Partner field `AccountToId` maps to the value of the OpportunityPartner field `AccountToId`.
- The values of the `OpportunityId`, `Role`, and `IsPrimary` fields in both records are the same.
- If you set the `IsPrimary` value to 1 (`true`) upon insert of a new OpportunityPartner, the `IsPrimary` value is automatically set to 0 (`false`) for any existing primary partners for that opportunity.

This mapping allows the API to manage the records and their relationships efficiently.

SEE ALSO:

[Partner](#)

[AccountPartner](#)

OpportunityShare

Represents a sharing entry on an Opportunity.

Supported Calls

`describeSObjects()`, `create()`, `delete()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users with access to the Opportunity object can access this object.

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field	Details
IsDeleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>
OpportunityAccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Level of access that the user or group has to the opportunity. The possible values are:</p> <ul style="list-style-type: none"> • Read • Edit • All—This value is not valid when creating, updating, or deleting records. <p>This field must be set to an access level that's higher than the org's default access level for opportunities.</p>
OpportunityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the opportunity associated with this sharing entry. This field can't be updated. This is a relationship field.</p> <p>Relationship Name Opportunity</p> <p>Relationship Type Lookup</p> <p>Refers To Opportunity</p>
RowCause	<p>Type picklist</p>

Field**Details****Properties**

Create, Filter, Group, Nillable, Restricted picklist, Sort

Description

Reason that this sharing entry exists. You can write to this field when its value is either omitted or set to `Manual` (default). You can create a value for this field in API versions 32.0 and later with the correct organization-wide sharing settings.

Valid values include:

- `Owner`—The User is the owner of the opportunity.
- `Manual`—The User or Group has access because a user with “All” access manually shared the opportunity with the user or group.
- `Rule`—The User or Group has access via an opportunity sharing rule.
- `GuestRule`—The User or Group has access via an opportunity guest user sharing rule.
- `ImplicitChild`—The User or Group has access to the opportunity on the account associated with this opportunity.
- `LpuImplicit`—The User has access to records owned by high-volume Experience Cloud site users via a share group.
- `ARImplicit`—The User, who belongs to a partner or customer account, has access to the opportunity via an account relationship data sharing rule.
- `Sales Team`—The User has access to the opportunity because the user is on the opportunity sales team for the opportunity. The `OpportunityTeamMember` object sets the access level. See `OpportunityTeamMember` for more information.
- `Territory`—The forecast manager has access because they are assigned to a territory above the territory that is assigned the opportunity.

UserOrGroupId

Type

reference

Properties

Create, Filter, Group, Sort

Description

ID of the user or group that has been given access to the opportunity. This field can't be updated.

This is a polymorphic relationship field.

Relationship Name

UserOrGroup

Relationship Type

Lookup

Refers To

Group, User

Usage

This object allows you to determine which users and groups can view or edit opportunities owned by other users.

If you attempt to create a record that matches an existing record, any modified fields are updated, the system returns the existing record.

If an opportunity is shared in multiple ways with a user, you don't always see multiple sharing records. If a user has access to an opportunity for one or more of the following RowCause values, the records in the OpportunityShare object are compressed into one record with the highest level of access.

- Manual
- Owner

[Object Basics](#)

OpportunitySplit

OpportunitySplit credits one or more opportunity team members with a portion of the opportunity amount. This object is available in API version 16.0 and later for pilot customers, and version 28.0 and later for others.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
OpportunityId	<p>Type reference</p> <p>Properties Create, FilterGroup, Sort</p> <p>Description ID of the opportunity for which the split is being created. Label is <code>Opportunity ID</code>.</p>
Split	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, Sort</p> <p>Description Read-only. Automatically-generated number identifying the split within the opportunity.</p>

Field	Details
SplitAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Monetary amount of the split. Label is Split Amount.</p>
SplitNote	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Enter any notes or comments about the split. Character limit is 255. Label is Split Note.</p>
SplitOwnerId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The opportunity owner. Label is User ID.</p>
SplitPercentage	<p>Type percent</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description Split percentage that this team member will receive. If the split type is validated to a 100% total, this number can range from 0 to 100. If the total isn't validated, this number can range from 0 to 1,000. Label is Split (%).</p>
SplitTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Auto-generated, numeric ID for the split type defined by the OpportunitySplitType object. This field is available in API version 28 and later.</p>

Field	Details
	If this field is blank, the system automatically specifies the default split type for the opportunity amount, which is validated to 100%.

Usage

Use the OpportunitySplit object to manage splits for an opportunity.

If you change the opportunity owner using the API, the old owner remains on the opportunity team with either Read-only access, or the level of access specified in your organization-wide defaults.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

OpportunitySplitChangeEvent (API version 48.0)

Change events are available for the object.

OpportunitySplitType

OpportunitySplitType provides unique labels and behavior for each split type. This object is available in API version 28.0 and later.

There are two default split types: revenue splits, which must total 100%, and overlay splits, which can total any percentage.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

Fields

Field Name	Details
Description	<p>Type textarea</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Describes the purpose of the split type, providing context to future developers.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field Name

Details

Description

Required. The unique name of the object in the API. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.

Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.

IsActive

Type

boolean

Properties

Create, Defaulted on create, Filter, Group, Sort, Update

Description

Enables or disables the split type.

IsTotalValidated

Type

boolean

Properties

Create, Defaulted on create, Filter, Group, Sort

DescriptionIf `true`, the split must total 100%. If `false`, the split can total any percentage.

Language

Type

picklist

Properties

Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Description

Indicates language of split labels in the user interface.

ManageableState

Type

ManageableState enumerated list

Properties

Filter, Group, Nillable, Restricted picklist, Sort

Description

Indicates the manageable state of the specified component that is contained in a package:

- beta
- deleted
- deprecated

	<ul style="list-style-type: none"> • deprecatedEditable • installed • installedEditable • released • unmanaged <p>This field is available in API version 38.0 and later.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The user-interface label for the split type.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. <p>This field can't be accessed unless the logged-in user has the Customize Application permission.</p>
SplitEntity	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The containing record type, such as an opportunity. Available in API version 30 and later.</p>

Field Name	Details
SplitField	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description Indicates which currency field of the opportunity object is split. Available in API version 30 and later.</p>
SplitDataStatus	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Indicates the status of the split type. Available in API version 30 and later.</p>

OpportunityStage

Represents the stage of an Opportunity in the sales pipeline, such as New Lead, Negotiating, Pending, Closed, and so on.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ApiName	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description Uniquely identifies a picklist value so it can be retrieved without using an id or master label.</p>
DefaultProbability	<p>Type percent</p> <p>Properties Filter, Nillable, Sort,</p>

Field	Details
	<p>Description</p> <p>The default percentage estimate of the confidence in closing a specific opportunity for this opportunity stage value. Label is Probability (%).</p>
Description	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Description of this opportunity stage value. Limit: 255 characters.</p>
ForecastCategory	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Restricted picklist, Sort</p> <p>Description</p> <p>The default forecast category for this opportunity stage value. The forecast category automatically determines how opportunities are tracked and totaled in a forecast.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • BestCase • Closed • Forecast • MostLikely • Omitted • Pipeline
ForecastCategoryName	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Restricted picklist, Sort</p> <p>Description</p> <p>Available in API version 12.0 and later. The default forecast category value for this opportunity stage value.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Best Case • Closed • Commit • Most Likely • Omitted • Pipeline

Field	Details
IsActive	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether this opportunity stage value is active (<code>true</code>) or not (<code>false</code>). Inactive opportunity stage values are not available in the picklist and are retained for historical purposes only.</p>
IsClosed	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether this opportunity stage value represents a closed opportunity (<code>true</code>) or not (<code>false</code>). Multiple opportunity stage values can represent a closed opportunity. Label is Closed.</p>
IsWon	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether this opportunity stage value represents a won opportunity (<code>true</code>) or not (<code>false</code>). Multiple opportunity stage values can represent a won opportunity. Label is Won.</p>
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Master label for this opportunity stage value. This display value is the internal label that does not get translated. Limit: 255 characters.</p>
SortOrder	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Number used to sort this value in the opportunity stage picklist. These numbers are not guaranteed to be sequential, as some previous opportunity stage values might have been deleted.</p>

Usage

This object represents a value in the opportunity stage picklist, which provides additional information about the stage of an Opportunity, such as its probability or forecast category. Query this object to retrieve the set of values in the opportunity stage picklist, and then use that information while processing Opportunity records to determine more information about a given opportunity. For example, the application could test whether a given opportunity is won or not based on its `StageName` value and the value of the `IsWon` property in the associated OpportunityStage object.

This object is read-only via the API.

SEE ALSO:

[Object Basics](#)

OpportunityTag

Associates a word or short phrase with an Opportunity.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ItemId	<p>Type reference</p> <p>Properties Create, Filter</p> <p>Description ID of the tagged item.</p>
Name	<p>Type string</p> <p>Properties Create, Filter</p> <p>Description Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.</p>
TagDefinitionId	<p>Type reference</p> <p>Properties Filter</p>

Field Name	Details
	<p>Description</p> <p>ID of the parent TagDefinition object that owns the tag.</p>
Type	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Restricted picklist</p> <p>Description</p> <p>Defines the visibility of a tag.</p> <p>Valid values:</p> <ul style="list-style-type: none"> • <code>Public</code>—The tag can be viewed and manipulated by all users in an organization. • <code>Personal</code>—The tag can be viewed or manipulated only by a user with a matching <code>OwnerId</code>.

Usage

OpportunityTag stores the relationship between its parent TagDefinition and the Opportunity being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

OpportunityTeamMember

Represents a User on the opportunity team of an Opportunity.

See also UserTeamMember, which represents a User who is on the default opportunity team of another user.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
CurrencyIsoCode	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Restricted picklist</p>

Field	Details
	<p>Description</p> <p>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the org.</p>
IsDeleted	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter</p> <p>Description</p> <p>Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p> <p> Note: An OpportunityTeamMember record that is deleted is not moved to the Recycle Bin and cannot be undeleted, unless the record was cascade-deleted when deleting a related Opportunity. For directly deleted OpportunityTeamMember records, don't use the <code>isDeleted</code> field to detect deleted records in SOQL queries or <code>queryAll()</code> calls. Instead, use <code>getDeleted()</code>.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The team member name. This read-only field is available in API version 30.0 and later.</p>
OpportunityAccessLevel	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Nillable, Restricted picklist</p> <p>Description</p> <p>Opportunity access level for this team member. Valid values:</p> <ul style="list-style-type: none"> • Read • Edit <p>This field is supported in triggers, but not in workflows or validation rules. It is editable in API version 36.0 and later.</p>
OpportunityId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter</p> <p>Description</p> <p>Required. ID of the Opportunity associated with this opportunity team. This field can't be updated.</p>

Field	Details
PhotoURL	<p>Type URL</p> <p>Properties Filter, Nillable, Sort, Group</p> <p>Description Read only. Retrieves the users Chatter photo URL. This field is available in API version 32.0 and later.</p>
TeamMemberRole	<p>Type picklist</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description Role that the team member has on the opportunity. The org's admin sets the valid values in the Opportunity Team Roles picklist. Label is Team Role.</p>
Title	<p>Type string</p> <p>Properties Filter, Nillable, Sort, Group</p> <p>Description Read only. Retrieves the user's title. This field is available in API version 36.0 and later.</p>
UserId	<p>Type reference</p> <p>Properties Create, Filter</p> <p>Description Required. ID of the User who is a member of the opportunity team. This field can't be updated.</p>

Usage

If you create a record for this object and it matches an existing record, the system updates any modified fields and returns the existing record.

In the user interface, users can set up an opportunity team for the opportunities they own. The opportunity team includes other users that are working on the opportunity with them. This object is available only in organizations that have enabled team selling.

 **Note:** The behavior for changing ownership of opportunities is different using the user interface when the previous owner is on an opportunity team. For example, when you change the owner of an opportunity using the API, the previous owner's access becomes Read Only or the access specified in your organization-wide default for opportunities, whichever is greater. However,

performing this same action in the user interface allows you to select the access level for the previous owner when the previous owner is on an opportunity team.

[UserTeamMember](#)

Order

Represents an order associated with a contract or an account.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
AccountId	<p>Type reference</p> <p>Properties Create, Filter, Nillable, Group, Sort, Update</p> <p>Description Required. ID of the Account associated with this order. Can only be updated when the order's <code>Status Code</code> value is <i>Draft</i>.</p> <p>This is a relationship field.</p> <p>Relationship Name Account</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
ActivatedById	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the User who activated this order.</p> <p>This is a relationship field.</p>

Field Name	Details
	<p>Relationship Name ActivatedBy</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
ActivatedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description Date and time when the order was activated.</p>
BillingAddress	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description</p>
BillingCity	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description City for the billing address for this order. Maximum size is 40 characters.</p>
BillingCountry	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Country for the billing address for this order. Maximum size is 80 characters.</p>
BillingCountryCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ISO country code for the billing address for this order.</p>

Field Name	Details
BillingEmailAddress	<p>Type email</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Email address for this order's billing address. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce on Lightning Experience License. This field is available in API v48.0 and later.</p>
BillingGeocodeAccuracy	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Accuracy level of the geocode of the address.</p>
BillingLatitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>BillingLongitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.</p>
BillingLongitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>BillingLatitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between -180 and 180 with up to 15 decimal places.</p>
BillingPhoneNumber	<p>Type phone</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Phone number for this order's billing address.</p>

Field Name	Details
	<p>To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce on Lightning Experience License.</p> <p>This field is available in API v48.0 and later.</p>
BillingPostalCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Postal code for the billing address for this order. Maximum size is 20 characters.</p>
BillingState	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description State for the billing address for this order. Maximum size is 80 characters.</p>
BillingStateCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ISO state code for the order's billing address.</p>
BillingStreet	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Street address for the billing address.</p>
BillToContactId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the contact that the order is billed to.</p>
CompanyAuthorizedById	<p>Type reference</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the user who authorized the account associated with the order. This is a relationship field.</p> <p>Relationship Name CompanyAuthorizedBy</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
CompanyAuthorizedDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The date on which your organization authorized the order.</p>
ContractId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the contract associated with this order. Can only be updated when the order's <code>StatusCode</code> value is <i>Draft</i>. This is a relationship field.</p> <p>Relationship Name Contract</p> <p>Relationship Type Lookup</p> <p>Refers To Contract</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Three-letter ISO 4217 currency code.</p>

Field Name	Details
CustomerAuthorizedById	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the contact who authorized the order. This is a relationship field.</p> <p>Relationship Name CustomerAuthorizedBy</p> <p>Relationship Type Lookup</p> <p>Refers To Contact</p>
CustomerAuthorizedDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Date on which the contact authorized the order.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Description of the order.</p>
EffectiveDate	<p>Type date</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Date at which the order becomes effective. Label is Order Start Date.</p>
EndDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Date at which the order ends. Label is Order End Date.</p>

Field Name	Details
GrandTotalAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Sum of OrderTotalAmount and OrderTotalTaxAmount. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce on Lightning Experience License. This field is available in API v48.0 and later.</p>
IsReductionOrder	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description Read-only. Determines whether an order is a reduction order. Label is Reduction Order.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Name for this order.</p>

Field Name	Details
OpportunityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID for the opportunity that's associated with this order.</p>
OrderedDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date and time that the order was placed. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce on Lightning Experience License. This field is available in API v48.0 and later.</p>
OrderNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description Order number assigned to this order (not the unique, system-generated ID assigned during creation). Maximum size is 30 characters.</p>
OrderReferenceNumber	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Order reference number assigned to this order. Maximum size is 80 characters.</p>
OriginalOrderId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description Optional. ID of the original order that a reduction order is reducing, if the reduction order is reducing a single order. Label is Original Order. Editable only if <code>isReductionOrder</code> is <code>true</code>. If the reduction order is reducing more than one order, leave blank.</p>

Field Name	Details
	<p>This is a relationship field.</p> <p>Relationship Name OriginalOrder</p> <p>Relationship Type Lookup</p> <p>Refers To Order</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Required. ID of the User or queue that owns this order. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
PoDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Date of the purchase order.</p>
PoNumber	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Number identifying the purchase order. Maximum is 80.</p>
Pricebook2Id	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description Required. ID of the price book associated with this order. This is a relationship field.</p> <p>Relationship Name Pricebook2</p> <p>Relationship Type Lookup</p> <p>Refers To Pricebook2</p>
QuoteId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the quote that's associated with this order. If you set QuoteId to null, QuoteLineItemId on all of the order's child order products is set to null.</p>
RecordTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the record type assigned to this order.</p>
RelatedOrderId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The original order that a change order was created from. To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce on Lightning Experience License. This field is available in API v48.0 and later.</p>
SalesChannelId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description Reference to a sales channel entity.</p> <p>To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce on Lightning Experience License.</p> <p>This field is available in API v48.0 and later.</p>
ShippingAddress	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description Shipping address for the order.</p>
ShippingCity	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description City of the shipping address. Maximum size is 40 characters.</p>
ShippingCountry	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Country of the shipping address. Maximum size is 80 characters.</p>
ShippingCountryCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ISO country code for the order's shipping address.</p>
ShippingGeocodeAccuracy	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Accuracy level of the geocode of the shipping address.</p>

Field Name	Details
ShippingLatitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>ShippingLongitude</code> to specify the precise geolocation of a shipping address. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.</p>
ShippingLongitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>ShippingLatitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between -180 and 180 with up to 15 decimal places.</p>
ShippingPostalCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Postal code of the shipping address. Maximum size is 20 characters.</p>
ShippingState	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description State of the shipping address. Maximum size is 80 characters.</p>
ShippingStateCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ISO state code for the order's shipping address.</p>
ShippingStreet	<p>Type textarea</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Street address of the shipping address. Maximum of 255 characters.</p>
ShipToContactId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the contact that the order is shipped to.</p>
Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Picklist of values that indicate order status. Each value is within one of two status categories defined in <i>StatusCode</i>. For example, the status picklist might contain <i>Draft</i>, <i>Ready for Review</i>, and <i>Ready for Activation</i> values with a <i>StatusCode</i> of <i>Draft</i>.</p>
StatusCode	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The status category for the order. An order can be either <i>Draft</i> or <i>Activated</i>. Label is Status Category.</p>
TaxLocaleType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The type of tax calculation that Salesforce uses for the order's order items. VAT regions use gross tax, which includes tax in all sale amounts. US regions use net tax, which calculates tax separately from the initial sale amount and then adds the sale and tax amounts together in a total.</p> <p>Use <code>TaxLocaleType</code> to determine which types of tax fields to show on your order. If <code>TaxLocaleType</code> is null, the order shows all tax fields.</p>

By default, the <code>Type</code> field doesn't perform any actions or show any values.</p>

Usage

The `Status` field specifies the current state of an order. Status strings represent its current state (*Draft* or *Activated*).

When a client application creates an order, the `Status Code` must be *Draft* and the `Status` must be any value that corresponds to a `Status Code` of *Draft*. The application can then activate an order by updating it and setting the value in its `Status` field to an *Activated* state; however, the `Status` field is the only field you can update when activating the order.

After an order is activated, your client application can change the `Status` back to the *Draft* state—but only if the order doesn't have any child reduction order products. Your client application can delete orders when the `Status` is *Draft* but not when its `Status` is *Activated*.

Client applications can use the API to create, update, delete, and query any Attachment associated with an order.

Orders Without Price Books

If your organization manages products and Price books in an external platform, you can use Salesforce API to create orders and order items without values for their Price book and Price book entry fields. This feature is available only for Salesforce orgs with the B2B Commerce, B2B Commerce Starter, B2B Commerce Growth, or B2B Commerce Plus packages. Admins enable orders without Price books by going to Salesforce Order Settings and selecting the Optional Price Book setting.

In a standard order, Salesforce prompts the sales rep to select a Price book when they add the first order product to the order. The sales rep can then add order products that have price book entries in the selected price book. In an order without a Price book, Salesforce hides the order's Add Products button and Edit Products button so that sales reps must manage their products and price books using their external system.

You can create orders without Price books only by creating an order with Salesforce API and leaving the `Pricebook2Id` field null. Orders without Price books follow several different guidelines compared to standard orders.

- Orders without price books don't support reduction orders or change orders.
- Order products without price book entries require list prices.

- Orders without price books support only order items without price book entries. Orders with price books support only order items with price book entries.
-  **Important:** Orders without Price books are supported with B2B licenses only. Salesforce Order Management requires price books for orders and price book entries for order products.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

OrderChangeEvent (API version 44.0)

Change events are available for the object.

OrderFeed (API version 29.0)

Feed tracking is available for the object.

OrderHistory

History is available for tracked fields of the object.

OrderOwnerSharingRule

Sharing rules are available for the object.

SEE ALSO:

[OrderHistory](#)

[OrderItem](#)

[OrderSummary](#)

[SalesChannel](#)

OrderAdjustmentGroup

Group containing a set of adjustments applied to an order. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

Fields

Field	Details
AdjustmentBasisReferenceId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description References the specific coupon applied. This is a polymorphic relationship field.</p> <p>Relationship Name AdjustmentBasisReference</p> <p>Relationship Type Lookup</p> <p>Refers To Coupon This field is available in API version 54.0 and later.</p>
AdjustmentCauseId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description References the specific promotions applied. This is a polymorphic relationship field.</p> <p>Relationship Name AdjustmentCause</p> <p>Relationship Type Lookup</p> <p>Refers To Promotion This field is available in API version 52.0 and later.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Description of the order adjustment group.</p>

Field	Details
GrandTotalAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The sum of all total amounts of all adjustments in this group, including tax.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description User-defined name of the order adjustment group.</p>
OrderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the order related to the adjustments in this order adjustment group.</p>
RelatedAdjustmentGroupId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the original order's adjustment group. Useful for reference in change order scenarios.</p>
TotalAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total of all order adjustments in this order adjustment group, excluding tax.</p>
TotalTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total tax for all order adjustments in this order adjustment group.</p>

Field	Details
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Shows the type of adjustment made. Possible values are:</p> <ul style="list-style-type: none"> • Header: — The adjustment was applied to the order's balance, and then distributed among the order products in the adjustment group. • SplitLine— The adjustment was applied to order product balances for the order products in the adjustment group.

OrderAdjustmentGroupSummary

Represents the current properties and state of a group of related price adjustments. Associated with a set of `OrderItemAdjustmentLineSummaries` that apply to `OrderItemSummaries` belonging to one `OrderSummary`. Corresponds to one or more order adjustment group objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

An `OrderAdjustmentGroupSummary` can represent an adjustment to an entire order as a group of adjustments to each of its products. For example, representing "10% off the order" as a set of 10% off adjustments to each product on the order. It can also represent an adjustment that applies to a subset of the products on an order. For example, representing "buy one, get one 50% off" as a 25% off adjustment to each of two products.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce on Lightning Experience license is enabled.

OrderDeliveryGroup

A group of order items that share a delivery method and address. The delivery method and address are used during the fulfillment process, such as shipping as a gift, downloading, picking up in store, or shipping to a standard address This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

Fields

Field	Details
<code>DeliverToAddress</code>	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description The delivery group's order items are delivered to this address. Created based on the values of the other <code>DeliverTo</code> fields.</p>
<code>DeliverToCity</code>	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description City address value. Sent to <code>DeliverToAddress</code>.</p>
<code>DeliverToCountry</code>	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Country address value. Sent to <code>DeliverToAddress</code></p>
<code>DeliverToGeocodeAccuracy</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Geocode accuracy address value. Sent to <code>DeliverToAddress</code>.</p>

Field	Details
DeliverToLatitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Latitude address value. Sent to <code>DeliverToAddress</code>.</p>
DeliverToLongitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Longitude address value. Sent to <code>DeliverToAddress</code>.</p>
DeliverToName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Name of the delivery recipient. Sent to <code>DeliverToAddress</code>.</p>
DeliverToPostalCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Postal Code address value. Sent to <code>DeliverToAddress</code>.</p>
DeliverToState	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description State address value. Sent to <code>DeliverToAddress</code>.</p>
DeliverToStreet	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Street address value. Sent to <code>DeliverToAddress</code>.</p>

Field	Details
DeliveryInstructions	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Text field for users to add other delivery instructions.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description User-defined description for this delivery group.</p>
DesiredDeliveryDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The buyer's target delivery date for the order items included in the delivery group.</p>
EmailAddress	<p>Type email</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The buyer's email address.</p>
GiftMessage	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description An optional gift message that the buyer can define if they're sending the order items as a gift to another recipient. Applies to all order items in the delivery group.</p>
GrandTotalAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description The sum of the group's total delivery amount and total tax amount.</p>
IsGift	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description All items in the delivery group are gifts.</p>
OrderDeliveryGroupNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description Unique number used for referencing this order delivery group.</p>
OrderDeliveryMethodId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the order delivery method related to this order delivery group.</p>
OrderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the parent order for this order delivery group. An order can have multiple order delivery groups.</p>
PhoneNumber	<p>Type phone</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Phone number of the buyer.</p>
PromisedDeliveryDate	<p>Type date</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Merchant-defined date that the items in this group will be delivered to the customer. Usually defined based on an estimated date from the shipping provider.</p>
RelatedDeliveryGroupId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The original delivery group. Used for reference in change order scenarios.</p>
TotalAdjustmentAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The sum of all adjustments made to order items in the order delivery group.</p>
TotalAdjustmentAmtWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The sum of all adjustments made to order items in the order delivery group, including tax. This is a gross tax field. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v49.0 and later.</p>
TotalAdjustmentTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The sum of all adjustments made to tax lines for order items in the order delivery group.</p>
TotalAmount	<p>Type currency</p>

Field	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The sum of all Total Amount fields on order items within this delivery group. On an order item, the total amount equals the quantity multiplied by the unit price, including adjustments and tax.</p>
TotalLineAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The sum of order items of the delivery type. On an order item, the total line amount equals the quantity multiplied by the unit price, before adjustments or tax.</p>
TotalLineAmtWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The sum of all TotalLineAmtWithTax fields on order items within this delivery group. On an order item, the total line amount with tax equals the quantity multiplied by the unit price, plus tax, before adjustments.</p> <p>This is a gross tax field.</p> <p>To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.</p> <p>This field is available in API v49.0 and later.</p>
TotalLineTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The sum of all Total Line Tax Amount fields on order items within this delivery group. On an order item, the total line tax amount equals the total tax for that line.</p>
TotalTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The sum of all Total Tax Amount fields on order items within this order delivery group.</p>

OrderDeliveryGroupSummary

Represents the current properties and state of a group of OrderItemSummaries, belonging to one OrderSummary, to be fulfilled using the same delivery method and delivered to the same address. A single shipment can include them all, but that isn't guaranteed.

Corresponds to one or more order delivery group objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce on Lightning Experience license is enabled.

Fields

Field	Details
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description ISO code for the currency of the OrderSummary associated with the OrderDeliveryGroupSummary. [OrderDeliveryGroup](#)[OrderItemSummary](#)

OrderDeliveryMethod

Shows the customizations and options that a buyer selected for their delivery method. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

Fields

Field	Details
Carrier	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The carrier that the buyer chose for their delivery method. Developers must add values to this field.</p>
ClassOfService	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The carrier class of service that the buyer chose for their delivery method. Developers must add values to this field.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Description of the delivery method.</p>
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Assign new delivery groups to active delivery methods.</p>

Field	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Required. Default name of this record.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The user who owns an order delivery method record.</p>
ProductId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Optional. This product represents a delivery charge order product for a delivery using this delivery method. For example, you could create a product that represents an overnight express charge and assign it to an overnight express delivery method.</p>
ReferenceNumber	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description Reference number for an external delivery method.</p>

OrderHistory

Represents historical information about changes that have been made to the standard fields of the associated order, or to any custom fields with history tracking enabled.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Fields

Field Name	Details
DataType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Data type of the field that was changed.</p>
Field	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Name of the order field that was modified, or a special value to indicate some other modification to the order.</p>
NewValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description New value of the modified order field. Maximum of 255 characters.</p>

Field Name	Details
OldValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description Previous value of the modified order field. Maximum of 255 characters.</p>
OrderId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the order associated with this record. This is a relationship field.</p> <p>Relationship Name Order</p> <p>Relationship Type Lookup</p> <p>Refers To Order</p>

Usage

Order history entries are automatically created each time an order is modified.

Two rows are added to this record when foreign key fields change. One row contains the foreign key object names that display in the online application. For example, Jane Doe is recorded as the name of a Contact. The other row contains the actual foreign key ID that is only returned to and visible from the API.

This object respects field-level security on the parent object.

ListPrice	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort</p> <p>Description</p> <p>List price for the order product. Value is inherited from the associated <code>PriceBookEntry</code> upon order product creation.</p>
OrderDeliveryGroupId	<p>Type</p> <p>reference</p>

Field Name**Details**

	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The delivery group for the order product.</p> <p>To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.</p> <p>This field is available in API v48.0 and later.</p>
OrderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the order that this order product is a child of.</p> <p>This is a relationship field.</p> <p>Relationship Name Order</p> <p>Relationship Type Lookup</p> <p>Refers To Order</p>
OrderItemNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description Automatically generated number that identifies the order product.</p>
OriginalOrderItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description Required if <code>isReductionOrder</code> on the parent order is <code>true</code>.</p> <p>ID of the original order product being reduced.</p> <p>This is a relationship field.</p> <p>Relationship Name OriginalOrderItem</p>

Field Name	Details
	<p>Relationship Type Lookup</p> <p>Refers To OrderItem</p>
PricebookEntryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. ID of the associated PricebookEntry. This field must be specified when creating OrderItem records. It can't be changed in an update. This is a relationship field.</p> <p>Relationship Name PricebookEntry</p> <p>Relationship Type Lookup</p> <p>Refers To PricebookEntry</p>
Product2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the Product2 associated with this OrderItem. This is a relationship field.</p> <p>Relationship Name Product2</p> <p>Relationship Type Lookup</p> <p>Refers To Product2</p>
Quantity	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description Number of units of this order product.</p>

Field Name	Details
QuoteLineItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description ID of the associated quote line item. If this field is specified, the quote line item's Quoteld must match the Quoteld for the order product's parent order.</p>
RelatedOrderItemID	<p>Type reference</p> <p>Properties Filter, Sort, Group</p> <p>Description For change orders, shows the original order product. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.</p>
RoundedLineAmount	<p>Type currency</p> <p>Properties Filter, Sort</p> <p>Description The rounded line amount, before tax and adjustments. Currency with decimal values of 0.5 and higher are rounded to the next-highest whole unit of currency. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.</p>
RoundedLineAmtWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The rounded line amount, including tax. Currency with decimal values of 0.5 and higher are rounded to the next-highest whole unit of currency.</p>

Field Name	Details
	<p>To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.</p> <p>This field is available in API v49.0 and later.</p>
ServiceDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Start date for the order product. Label is Start Date.</p>
TotalAdjustedLineTaxAmount	<p>Type currency</p> <p>Properties Filter, Sort</p> <p>Description Sum of line tax amount and line adjustment tax amounts. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.</p>
TotalAdjustmentAmount	<p>Type currency</p> <p>Properties Filter, Sort</p> <p>Description Roll-up of all the order product's price adjustments. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v48.0 and later.</p>
TotalAdjustmentAmtWithTax	<p>Type currency</p> <p>Properties Filter, Sort</p> <p>Description Roll-up of all the order product's price adjustments, including tax.</p>

Field Name	Details
	<p>This is a gross tax field.</p> <p>To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.</p> <p>This field is available in API v49.0 and later.</p>
TotalAdjustmentDistAmount	<p>Type currency</p> <p>Properties Filter, Sort</p> <p>Description Roll-up of all adjustments on the order. Used only if the OrderAdjustmentGroup has a Type value of Header.</p> <p>To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.</p> <p>This field is available in API v48.0 and later.</p>
TotalAdjustmentDistTaxAmount	<p>Type currency</p> <p>Properties Filter, Sort</p> <p>Description Roll-up of all adjustment tax amounts on the order. Used only if the OrderAdjustmentGroup has a Type value of Header.</p> <p>To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.</p> <p>This field is available in API v48.0 and later.</p>
TotalAdjustmentDistAmtWithTax	<p>Type currency</p> <p>Properties Filter, Sort</p> <p>Description Roll-up of all adjustment tax amounts on the order, including tax. UnitPrice	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Unit price for the order product.</p>

Usage

An order can have associated order product records only if the order has a price book associated with it. An order product must correspond to a product that is listed in the order's price book.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

OrderItemChangeEvent (API version 44.0)

Change events are available for the object.

OrderItemFeed (API version 29.0)

Feed tracking is available for the object.

OrderItemHistory

History is available for tracked fields of the object.

SEE ALSO:

[Order](#)

[OrderItemSummary](#)

OrderItemAdjustmentLineItem

An adjustment that has been made to an order item. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

Fields

Field	Details
AdjustmentBasisReferenceId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description References the specific coupon applied. This is a polymorphic relationship field.</p> <p>Relationship Name AdjustmentBasisReference</p> <p>Relationship Type Lookup</p> <p>Refers To Coupon This field is available in API version 54.0 and later.</p>
AdjustmentCauseId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description References the specific promotions applied. This is a polymorphic relationship field.</p> <p>Relationship Name AdjustmentCause</p> <p>Relationship Type Lookup</p> <p>Refers To Promotion This field is available in API version 52.0 and later.</p>
Amount	<p>Type currency</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The total value of the adjustment line.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Users can add a custom description to the record to provide additional detail.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the adjustment line.</p>
OrderAdjustmentGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The order adjustment group that contains the order item adjustment line item.</p>

Field	Details
OrderId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The parent order of the the order item related to the adjustment line.</p>
OrderItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The order item that the adjustment line applies to.</p>
RelatedAdjustmentLineItemId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The original order item adjustment line. Useful for reference in change order scenarios.</p>
TotalAmtWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Equals <code>TotalPrice + TotalTaxAmount</code> for the order item adjustment line item. This is a gross tax field. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v49.0 and later.</p>
TotalTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total amount of tax applied to the adjustment line.</p>

OrderItemAdjustmentLineSummary

Represents the current properties and state of price adjustments on an OrderItemSummary. Corresponds to one or more order item adjustment line item objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce on Lightning Experience license is enabled.

OrderItemSummary

Represents the current properties and state of a product or charge on an OrderSummary. Corresponds to one or more order item objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce on Lightning Experience license is enabled.

Fields

Field	Details
AdjustedLineAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total, including adjustments but not tax, of the OrderItemSummary.</p>
AdjustedLineAmtWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total price of the OrderItemSummary, inclusive of adjustments and tax. This amount is equal to AdjustedLineAmount + TotalAdjustedLineTaxAmount. This field is available in API version 49.0 and later.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description ISO code for the currency of the OrderSummary associated with the OrderItemSummary. The default value is USD. Possible values are:</p> <ul style="list-style-type: none"> • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar <p>This field is available in API version 49.0 and later.</p>
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Description of the OrderItemSummary. This field can be edited.</p>

Field	Details
EndDate	<p>Type date</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description End date of the OrderItemSummary. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
GrossUnitPrice	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Unit price, including tax, of the OrderItemSummary. This value is equal to UnitPrice + the amount of tax on the UnitPrice. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. This field is available in API version 49.0 and later.</p>
LineNumber	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The order line number assigned to this OrderItemSummary. For example, if this object is the third in the displayed list of OrderItemSummaries belonging to the OrderSummary, this value is 3. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
ListPrice	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description List price of the product represented by this OrderItemSummary.</p>

Field	Details
	<p>If the <code>OrderLifeCycleType</code> field on the associated <code>OrderSummary</code> is set to <code>UNMANAGED</code>, then users with the <code>Edit Unmanaged Order Summaries</code> or <code>B2B Commerce Integrator</code> user permission can modify this field.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the <code>OrderItemSummary</code>.</p>
OrderDeliveryGroupSummaryId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the <code>OrderDeliveryGroupSummary</code> to which this object belongs.</p>
OrderSummaryId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the <code>OrderSummary</code> to which this object belongs.</p>
OriginalOrderItemId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the original order item associated with this summary object. <code>Nillable=true</code> only if the associated order summary is unmanaged. For managed order summaries, <code>nillable=false</code>.</p>
PricebookEntryId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the pricebook entry associated with this <code>OrderItemSummary</code>. This field is available in API version 54.0 and later.</p>

Field	Details
Product2Id	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the product represented by this OrderItemSummary.</p>
ProductCode	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Product code of the product represented by this OrderItemSummary.</p>
Quantity	<p>Type double</p> <p>Properties Filter, Sort</p> <p>Description Current total quantity of products represented by this order item summary. Equal to QuantityOrdered minus (QuantityCanceled and QuantityReturned). If the OrderLifeCycleType field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
QuantityAllocated	<p>Type double</p> <p>Properties Filter, Sort</p> <p>Description Allocated quantity on this order item summary. This quantity is associated with one or more FulfillmentOrderLineItems. If the OrderLifeCycleType field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
QuantityAvailable ToCancel	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description Quantity that can still be canceled on this OrderItemSummary. Equal to QuantityOrdered minus (QuantityCanceled and QuantityAllocated). This value duplicates QuantityAvailableToFulfill.</p>
QuantityAvailableToFulfill	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Quantity available to be fulfilled on this OrderItemSummary. Equal to QuantityOrdered minus (QuantityCanceled and QuantityAllocated). This value duplicates QuantityAvailableToCancel.</p>
QuantityAvailableToReship	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Quantity available to be reshipped on this OrderItemSummary. Equal to QuantityFulfilled minus (QuantityReshipped and QuantityReturnInitiated). This field is available in API version 53.0 and later.</p>
QuantityAvailableToReturn	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Quantity available to be returned on this OrderItemSummary. Equal to QuantityFulfilled minus QuantityReturnInitiated.</p>
QuantityCanceled	<p>Type double</p> <p>Properties Filter, Sort</p> <p>Description Canceled quantity on this OrderItemSummary. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
QuantityFulfilled	<p>Type double</p>

Field	Details
	<p>Properties Filter, Sort</p> <p>Description Fulfilled quantity on this OrderItemSummary. This quantity can no longer be canceled.</p> <p>If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
QuantityNetOrdered	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Quantity available to be allocated on this OrderItemSummary. Equal to QuantityOrdered minus QuantityCanceled.</p>
QuantityOrdered	<p>Type double</p> <p>Properties Filter, Sort</p> <p>Description Ordered quantity on this OrderItemSummary. It includes the originally ordered quantity plus any quantity added to the order later.</p> <p>If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
QuantityReshipped	<p>Type double</p> <p>Properties Filter, Sort</p> <p>Description Reshipped quantity on this OrderItemSummary.</p> <p>If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p> <p>This field is available in API version 53.0 and later.</p>
QuantityReturned	<p>Type double</p> <p>Properties Filter, Sort</p>

Field	Details
	<p>Description</p> <p>Returned quantity on this OrderItemSummary.</p> <p>If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
QuantityReturnInitiated	<p>Type</p> <p>double</p> <p>Properties</p> <p>Filter, Sort</p> <p>Description</p> <p>Quantity returned or pending return on this OrderItemSummary.</p> <p>If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
QuantityShipped	<p>Type</p> <p>double</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>Quantity shipped on this OrderItemSummary.</p> <p>This field is available in API version 52.0 and later.</p>
ReservedAtLocationId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Reserved for future use.</p>
ServiceDate	<p>Type</p> <p>date</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Service or start date of the OrderItemSummary.</p> <p>If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>

Field	Details
Status	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description Status of the OrderItemSummary. The default value is ORDERED. When a quantity value changes, each status formula is evaluated in order. If a formula is true, no more evaluations are performed for that change.</p> <p>Possible values and their formulas, in the order of evaluation, are:</p> <ul style="list-style-type: none"> • RETURNINITIATED—Return Initiated — (Quantity > 0) & (QuantityReturnInitiated = QuantityFulfilled) & (QuantityReturned < QuantityReturnInitiated) • RESHIPPEd—Reshipped — (QuantityReshipped = QuantityFullfilled) & (QuantityFullfilled > 0) & (QuantityReturnInitiated = 0) & (QuantityFullfilled = QuantityOrdered) • RETURNED—Returned — (Quantity = 0) & (QuantityReturned > 0) • CANCELED—Canceled — (Quantity = 0) & (QuantityCancelled > 0) & (QuantityReturned = 0) • FULLFILLED—Fulfilled — (Quantity > 0) & ((QuantityOrdered - QuantityCancelled) <= QuantityFulfilled) • PARTIALLYFULLFILLED—Partially Fulfilled — (QuantityFulfilled > 0) & (QuantityFulfilled < (QuantityOrdered - QuantityCancelled)) • ALLOCATED—Allocated — (Quantity > 0) & (Quantity <= QuantityAllocated) • PARTIALLYALLOCATED—Partially Allocated — (QuantityAllocated > 0) & (QuantityAllocated < Quantity) • ORDERED—Ordered — None of the other formulas apply • PAID—Paid — N/A
StockKeepingUnit	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The stock keeping unit (SKU) of the Product2 associated with the OrderItemSummary. This field is available in API version 49.0 and later.</p>
TotalAdjustedLineTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Tax on the AdjustedLineAmount.</p>

Field	Details
TotalAdjustmentAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total of all price adjustments applied to this OrderItemSummary.</p>
TotalAdjustmentAmtWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total amount of all price adjustments applied to this OrderItemSummary, inclusive of tax. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount. This field is available in API version 49.0 and later.</p>
TotalAdjustmentDistAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total of all order-level price adjustments applied to this OrderItemSummary. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header.</p>
TotalAdjustmentDistAmtWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total amount of the order-level price adjustments applied to this OrderItemSummary, inclusive of tax. This amount is equal to TotalAdjustmentDistAmount + TotalAdjustmentDistTaxAmount. This field is available in API version 49.0 and later.</p>
TotalAdjustmentDistTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Tax on the TotalAdjustmentDistAmount.</p>

Field	Details
TotalAdjustmentTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Tax on the TotalAdjustmentAmount.</p>
TotalAmtWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total price of the OrderItemSummary, inclusive of tax. This amount is equal to TotalPrice + TotalTaxAmount. This field is available in API version 49.0 and later.</p>
TotalLineAdjustmentAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total of all non-order-level price adjustments applied to this OrderItemSummary. This value includes OrderItemAdjustmentLineSummaries that don't belong to an OrderAdjustmentGroupSummary, or that belong to an OrderAdjustmentGroupSummary of type SplitLine.</p>
TotalLineAdjustmentAmtWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total of all non-order-level price adjustments applied to this OrderItemSummary, inclusive of tax. This amount is equal to TotalLineAdjustmentAmount + TotalLineAdjustmentTaxAmount. This field is available in API version 49.0 and later.</p>
TotalLineAdjustmentTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Tax on the TotalLineAdjustmentAmount.</p>

Field	Details
TotalLineAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total, not including adjustments or tax, of the OrderItemSummary. If the OrderLifeCycleType field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
TotalLineAmountWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total unadjusted amount of the OrderItemSummary, inclusive of tax. This amount is equal to TotalLineAmount + TotalLineTaxAmount. This field is available in API version 49.0 and later.</p>
TotalLineTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Tax on the TotalLineAmount.</p>
TotalPrice	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total, including adjustments but not tax, of the OrderItemSummary.</p>
TotalTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Tax on the TotalPrice.</p>

Field	Details
Type	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Type of the OrderItemSummary. Delivery Charge indicates that the OrderItemSummary represents a delivery charge. Order Product indicates that it represents any other type of product, service, or charge. Each type corresponds to one type code, shown here in parentheses.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Delivery Charge (Charge) • Order Product (Product) <p>If the OrderLifeCycleType field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
TypeCode	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Type code of the OrderItemSummary. Charge indicates that the OrderItemSummary represents a delivery charge. Product indicates that it represents any other type of product, service, or charge.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Charge • Product <p>If the OrderLifeCycleType field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
UnitPrice	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Unit price of the product represented by the OrderItemSummary.</p>

Field	Details
	If the <code>OrderLifecycleType</code> field on the associated <code>OrderSummary</code> is set to <code>UNMANAGED</code> , then users with the <code>Edit Unmanaged Order Summaries</code> or <code>B2B Commerce Integrator</code> user permission can modify this field.

OrderItemSummaryChange

Represents a change to an `OrderItemSummary`, usually a reduction in quantity due to a cancel or return. Corresponds to a change order item. This object is available in API version 48.0 and later.

This object is used for calculations and doesn't have a default record page.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is only available in Salesforce Order Management orgs.

Fields

Field	Details
<code>ChangeOrderItemId</code>	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the associated change order item.</p>
<code>ChangeType</code>	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p>

Field	Details
	<p>Description</p> <p>Type of change represented by the OrderItemSummaryChange.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Add (available in API version 54.0 and later) • Cancel • DeliveryChargeAdjustment • ProductAdjustment • Return
CurrencyIsoCode	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description</p> <p>ISO code for the currency of the OrderSummary associated with the OrderItemSummaryChange. The default value is USD.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar <p>This field is available in API version 49.0 and later.</p>
IsPreFulfillment	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Indicates whether the change occurs before the OrderItemSummary has been fulfilled.</p>
OrderItemSummary ChangeNumber	<p>Type</p> <p>string</p> <p>Properties</p> <p>Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description</p> <p>ID of the OrderItemSummaryChange.</p>
OrderItemSummaryId	<p>Type</p> <p>reference</p>

Field	Details
	<p>Properties Filter, Group, Sort</p> <p>Description ID of the OrderItemSummary to which the change applies.</p>
OrderSummaryId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the OrderSummary to which the associated OrderItemSummary belongs.</p>
Reason	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Reason for the change. You can customize this list. The list has one default value:</p> <ul style="list-style-type: none"> Unknown

OrderItemTaxLineItem

The tax amount that has been applied to an order item. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

Fields

Field	Details
Amount	<p>Type currency</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The total amount of the tax line.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Users can add a custom description to the record to provide additional detail.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the tax line.</p>
OrderId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the parent order for the order item related to the tax line</p>
OrderItemAdjustmentLineItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The order item adjustment line item that the tax line applies to.</p>
OrderItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p>

Field	Details
	<p>Description The order item that the tax line applies to.</p>
Rate	<p>Type percent</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The percentage value of the tax. Null if the tax is a flat amount.</p>
RelatedTaxLineItemId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The original order item tax line. Useful for reference in change order scenarios.</p>
TaxEffectiveDate	<p>Type date</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The date used to calculate the effective tax rate. This field may require an update to accommodate different buyer time zones.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Shows whether the amount on the tax line is an estimate or the final calculated amount. Doesn't set a value by default. Users can define automation to set and change the value as needed.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Actual • Estimated

OrderItemTaxLineItemSummary

Represents the current tax on an OrderItemSummary or OrderItemAdjustmentLineSummary. Corresponds to one or more order item tax line items, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce on Lightning Experience license is enabled.

Fields

Field	Details
Amount	<p>Type currency</p> <p>Properties Filter, Sort</p> <p>Description Amount of tax represented by the OrderItemTaxLineItemSummary. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description ISO code for the currency of the OrderSummary associated with the OrderItemTaxLineItemSummary. The default value is USD. Possible values are:</p> <ul style="list-style-type: none"> • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar <p>This field is available in API version 49.0 and later.</p>

Field	Details
Description	<p>Type textarea</p> <p>Properties Nillable, Update</p> <p>Description Description of the OrderItemTaxLineItemSummary. This field can be edited.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the OrderItemTaxLineItemSummary.</p>
OrderItemAdjustmentLineSummaryId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description If this object represents tax on an adjustment, this value is the ID of the OrderItemAdjustmentLineSummary to which the tax applies. If this value is null, the adjustment applies to an OrderItemSummary.</p>
OrderItemSummaryId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description If this object represents tax on an OrderItemSummary, this value is the ID of that OrderItemSummary. If this object represents tax on an adjustment, this value is the ID of the OrderItemSummary to which the adjustment applies.</p>
OrderSummaryId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the OrderSummary that the associated OrderItemSummary or OrderItemAdjustmentLineSummary belongs to.</p>

Field	Details
OriginalOrderItemTaxLineItemId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the original order item tax line item associated with this summary object. Nillable=true only if the associated order summary is unmanaged. For managed order summaries, nillable=false.</p>
Rate	<p>Type percent</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Tax rate used to calculate the Amount. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
TaxEffectiveDate	<p>Type date</p> <p>Properties Filter, Group, Sort</p> <p>Description Date on which the Amount was calculated. Important due to tax rate changes over time. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
Type	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Indicates whether the Amount is actual or estimated. Possible values are:</p> <ul style="list-style-type: none"> • Actual • Estimated

Field	Details
	If the <code>OrderLifeCycleType</code> field on the associated <code>OrderSummary</code> is set to <code>UNMANAGED</code> , then users with the <code>Edit Unmanaged Order Summaries</code> or <code>B2B Commerce Integrator</code> user permission can modify this field.

OrderItemType

Shows whether the order product is a product line or charge line. This object is available in API version 48.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
<code>ApiName</code>	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description Uniquely identifies a picklist value so it can be retrieved without using an id or primary label.</p>
<code>IsDefault</code>	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether this is the default order item type status value (<code>true</code>) or not (<code>false</code>) in the picklist.</p>
<code>MasterLabel</code>	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description Master label for this order item type status value. This display value is the internal label that doesn't get translated.</p>
SortOrder	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Number used to sort this value in the order item status picklist. These numbers aren't guaranteed to be sequential, as some previous contract status values might have been deleted.</p>
TypeCode	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Code indicating the type of order item. Possible values are:</p> <ul style="list-style-type: none"> • <code>Charge</code>—API Name <code>DeliveryCharge</code>. • <code>Product</code>—For API Name <code>Product</code>.

OrderOwnerSharingRule

Represents a rule which determines order sharing access for the order's owners.

 **Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
CreatedById	<p>Type reference</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description ID of the creator of the order owner sharing rule.</p>
CreatedDate	<p>Type dateTime</p> <p>Properties Defaulted on create, Filter, Sort</p> <p>Description Date when the order owner sharing rule was created.</p>
Description	<p>Type string</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Description of the order owner sharing rule. Maximum length is 1,000 characters.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Name of the developer of the order owner sharing rule.</p>
GroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the group whose orders are shared.</p>
Id	<p>Type ID</p> <p>Properties Defaulted on create, Filter, Group, idLookup, Sort</p>

Field	Details
	<p>Description ID of the order owner sharing rule.</p>
LastModifiedById	<p>Type reference</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description ID of the user who last modified the order owner sharing rule.</p>
LastModifiedDate	<p>Type dateTime</p> <p>Properties Defaulted on create, Filter, Sort</p> <p>Description Date when the order owner sharing rule was last modified.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Namefield, Sort, Update</p> <p>Description Name of the order owner sharing rule. Maximum length is 80 characters.</p>
OrderAccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Access level for the order owner sharing rule.</p>
SystemModstamp	<p>Type dateTime</p> <p>Properties Defaulted on create, Filter, Sort</p> <p>Description System modification time for the order owner sharing rule.</p>
UserOrGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p>

Field	Details
	<p>Description</p> <p>ID of the user or group with whom order access is shared.</p>

Usage

Use this object to manage the sharing rules for orders. For example, the following code creates an order owner sharing rule between two public groups, which can also contain portal users.

```
OrderOwnerSharingRule rule = new OrderOwnerSharingRule();
rule.setName("RuleName"); // Set the sharing rule name
rule.setDeveloperName("RuleDeveloperName"); // Set the sharing rule developer name
rule.setGroupId("00Gx0000000000"); // Set the group of users to share records from
rule.setUserOrGroupId("00Gx0000000001"); // Set the group of users to share records to
rule.setOrderAccessLevel("Edit");
connection.create(rule);
```

OrderPaymentSummary

Represents the current properties and state of payments using a single payment method that are applied to one OrderSummary. This object is available in API version 48.0 and later.

[other]: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Unlike most summary objects, an OrderPaymentSummary is not related to a similarly named order payment object. Instead, it combines values from multiple payment objects that use the same payment method and apply to the same OrderSummary.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce on Lightning Experience license is enabled.

Fields

Field	Details
AuthorizationAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Amount of the OrderPaymentSummary that has been authorized.</p>
AuthorizationReversalAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Amount of the AuthorizationAmount that has been reversed.</p>
AvailableToCaptureAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Amount of the OrderPaymentSummary that is available to be captured. Equal to AuthorizationAmount minus (CapturedAmount and PendingCaptureAmount and PendingReverseAuthAmount).</p>
AvailableToRefundAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Amount of the OrderPaymentSummary that is available to be refunded. Equal to CapturedAmount minus (RefundedAmount and PendingCaptureAmount and PendingRefundAmount).</p>
BalanceAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total balance of all payments associated with this summary object.</p>

Field	Details
CapturedAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Amount of the OrderPaymentSummary that has been captured.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for the currency of the OrderSummary associated with the OrderPaymentSummary. Order Management APIs and actions that create an OrderPaymentSummary for an OrderSummary set this value. The default value is USD.</p> <p>Possible values are:</p> <ul style="list-style-type: none">• DKK—Danish Krone• EUR—Euro• GBP—British Pound• USD—U.S. Dollar <p>This field is available in API version 49.0 and later.</p>
FullName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The full name of the payment method user.</p>
LastPaymentGatewayLogId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the most recent payment gateway log associated with the OrderPaymentSummary.</p>
LastPaymentGateway Message	<p>Type string</p> <p>Properties Create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The most recent message received from the payment gateway associated with the OrderPaymentSummary.</p>
LastReferencedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Timestamp for when the current user last viewed a record related to this record.</p> <p>This field is available in API version 49.0 and later.</p>
LastViewedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.</p> <p>This field is available in API version 49.0 and later.</p>
Method	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p>Description</p> <p>Name of the OrderPaymentSummary.</p>
OrderSummaryId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Sort</p> <p>Description</p> <p>ID of the OrderSummary associated with the OrderPaymentSummary.</p>
OwnerId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description The ID of the user who currently owns this OrderPaymentSummary. Default value is the user logged in to the API to perform the create.</p>
PaymentMethodId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the payment method associated with this OrderPaymentSummary.</p>
PendingAuthorizationAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Amount of the OrderPaymentSummary that is pending authorization.</p>
PendingCaptureAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Amount of the OrderPaymentSummary that is pending capture.</p>
PendingRefundAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Amount of the OrderPaymentSummary that is pending refund.</p>
PendingReverseAuthAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Amount of the AuthorizationAmount that is pending reversal.</p>
RefundedAmount	<p>Type currency</p>

Field	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description Amount of the OrderPaymentSummary that has been refunded.</p>
Type	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The payment method type associated with the OrderPaymentSummary. For example, <i>visa</i>, <i>mastercard</i>, <i>check</i>, or <i>giftcard</i>.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[OrderPaymentSummaryFeed](#)

Feed tracking is available for the object.

[OrderPaymentSummaryOwnerSharingRule](#)

Sharing rules are available for the object.

[OrderPaymentSummaryShare](#)

Sharing is available for the object.

[PaymentMethod](#)

OrderShare

Represents a sharing entry on an Order. This object is available in API version 48.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
OrderAccessLevel	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Level of access that the user or group has to the order. Possible values are:</p> <ul style="list-style-type: none"> • All—Owner. This value isn't valid when creating, updating, or deleting records. • Edit—Read/Write • Read—Read Only
OrderId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the order associated with this sharing entry. This field can't be updated. This is a relationship field.</p> <p>Relationship Name Order</p> <p>Relationship Type Lookup</p> <p>Refers To Order</p>
RowCause	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The reason that the user has access to the order.</p>
UserOrGroupId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the user or group that has been given access to the order. This field can't be updated.</p>

Field	Details
	This is a polymorphic relationship field.
	Relationship Name UserOrGroup
	Relationship Type Lookup
	Refers To Group, User

Usage

This object allows you to determine which users and groups can view or edit orders owned by other users.

If you attempt to create a record that matches an existing record, any modified fields are updated, the system returns the existing record.

OrderStatus

Represents the status of the order entity. This object is available in API version 48.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ApiName	Type string Properties Filter, Group, idLookup, Sort Description Uniquely identifies a picklist value so it can be retrieved without using an id or primary label.
IsDefault	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this is the default order status value (<code>true</code>) or not (<code>false</code>) in the picklist.

Field	Details
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Master label for this order status value. This display value is the internal label that doesn't get translated.</p>
SortOrder	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Number used to sort this value in the order status picklist. These numbers aren't guaranteed to be sequential, as some previous contract status values might have been deleted.</p>
StatusCode	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Status of the order. Possible values are:</p> <ul style="list-style-type: none">• Activated• Draft

Usage

This object represents a value in the order status picklist. The order status picklist provides additional information about the status of an Order, such as its current state (`Draft` or `Activated`). You can query these records to retrieve the set of values in the order status picklist, and then use that information while processing Order objects to determine more information about a given order. For example, the application could test whether a given order is activated based on its Status value and the value of the StatusCode property in the associated OrderStatus object.

OrderSummary

Represents the current properties and state of an order. Corresponds to one or more order objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce on Lightning Experience license is enabled.

Fields

Field	Details
<code>AccountId</code>	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the account or person account associated with the OrderSummary. It represents the shopper in the storefront.</p> <p>If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
<code>ActiveProcessExceptionCount</code>	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Total number of active process exceptions on the OrderSummary.</p> <p>This field is available in API version 50.0 and later.</p>
<code>BillingAddress</code>	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description Billing address associated with the OrderSummary.</p> <p>If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
<code>BillingCity</code>	<p>Type string</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Billing address city.</p>
BillingCountry	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Billing address country.</p>
BillingEmailAddress	<p>Type email</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Email address on the billing address.</p>
BillingGeocodeAccuracy	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The accuracy of the geocode for the billing address. Possible values are:</p> <ul style="list-style-type: none"> • Address • Block • City • County • ExtendedZip • NearAddress • Neighborhood • State • Street • Unknown • Zip
BillingLatitude	<p>Type double</p>

Field	Details
	<p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with BillingLongitude to specify the precise geolocation of the billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.</p>
BillingLongitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with BillingLatitude to specify the precise geolocation of the billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.</p>
BillingPhoneNumber	<p>Type phone</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Phone number of the billing address.</p>
BillingPostalCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Billing address postal code.</p>
BillingState	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Billing address state.</p>
BillingStreet	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Billing address street.</p>

Field	Details
BillToContactId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the Contact associated with the OrderSummary. It represents the shopper in the storefront when not using person accounts.</p> <p>If the <code>OrderLifeCycleType</code> field is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p> <p>This field is available in API version 49.0 and later.</p>
BusinessModel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The business model of the OrderSummary.</p> <p>Possible values are:</p> <ul style="list-style-type: none">• B2B• B2C <p>This field is available in API version 53.0 and later.</p>
ChangeOrderId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Reserved for future use.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for the currency of the original Order associated with the OrderSummary. The default value is USD.</p> <p>Possible values are:</p> <ul style="list-style-type: none">• DKK—Danish Krone

Field	Details
	<ul style="list-style-type: none"> • EUR—Euro • GBP—British Pound • USD—U.S. Dollar <p>This field is available in API version 49.0 and later.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Description of the OrderSummary. This field can be edited.</p>
ExternalReferenceIdentifier	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Used internally to prevent duplicate records. On creation, this field is set to "SFDC" + the value returned by System.nanoTime() + a random base64 GUID. This field is available in API version 54.0 and later.</p>
GrandTotalAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total amount, including adjustments and tax, of the OrderSummary.</p>
IsSuspended	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the OrderSummary is suspended. The default value is false. This field is available in API version 50.0 and later.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.</p>
OrderedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Date of the original order associated with this OrderSummary.</p> <p>If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
OrderLifeCycleType	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Restricted picklist, Sort</p> <p>Description</p> <p>Specifies whether the OrderSummary is managed by Salesforce Order Management (MANAGED) or by an external system (UNMANAGED). An unmanaged OrderSummary is stored in Salesforce for reference purposes.</p> <ul style="list-style-type: none"> Some Order Management APIs reject input records that are associated with unmanaged OrderSummaries. Order Management does not update financial bucket fields on some records that are associated with unmanaged OrderSummaries. A user with the EditUnmanagedOrderSummaries or B2BCommerceIntegrator permission can edit certain fields on objects related to unmanaged OrderSummaries that are normally only accessible via APIs. <p>Possible values are:</p> <ul style="list-style-type: none"> MANAGED—Managed UNMANAGED—Unmanaged <p>This field is available in API version 49.0 and later.</p>

Field	Details
OrderNumber	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the OrderSummary.</p>
OrderProductLineCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Total number of unique products ordered on this Order Summary. This field is available in API version 52.0 and later.</p>
OriginalOrderId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the original order associated with this OrderSummary.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the user who currently owns this OrderSummary. Default value is the user logged in to the API to perform the create.</p>
PoDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Purchase order date associated with this OrderSummary. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. This field is available in API version 52.0 and later.</p>

Field	Details
PoNumber	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Purchase order number associated with this OrderSummary. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
Pricebook2Id	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the pricebook associated with this OrderSummary. This field is available in API version 54.0 and later.</p>
RoutingAttempts	<p>Type int</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The number of attempts that have been made to route the order summary to inventory locations. This field is available in API version 51.0 and later.</p>
SalesChannelId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the SalesChannel associated with this OrderSummary. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
SalesStoreId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>ID of the RetailStore or WebStore associated with this OrderSummary.</p> <p>If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p> <p>This field is only available in Salesforce B2B Commerce orgs.</p>
Status	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Status of the order summary. Unlike the Status and Status Category fields on the order and FulfillmentOrder objects, this field is optional.</p> <p>We recommend that you use the same values in this picklist that you use in the Status picklist for the order object.</p>
TaxLocaleType	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>The system used to handle tax on the original Order associated with the OrderSummary. Gross usually applies to taxes like value-added tax (VAT), and Net usually applies to taxes like sales tax.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • <code>GROSS</code> (displays most prices and taxes as combined values) • <code>NET</code> (displays most prices and taxes as separate values) <p>If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p> <p>This field is available in API version 49.0 and later.</p>
TotalAdjDelivery AmtWithTax	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Total amount of all OrderItemSummaries of type code Charge belonging to this OrderSummary, inclusive of item-level adjustments and tax. This amount is equal to TotalAdjustedDeliveryAmount + TotalAdjustedDeliveryTaxAmount.</p>

Field	Details
	This field is available in API version 49.0 and later.
TotalAdjDistAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total of distributed adjustments applied to OrderItemSummaries belonging to this OrderSummary. This amount is equal to TotalProductAdjDistAmount plus TotalDeliveryAdjDistAmount.</p>
TotalAdjDistAmountWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total of distributed adjustments applied to OrderItemSummaries belonging to this OrderSummary, inclusive of tax. This amount is equal to TotalAdjDistAmount plus TotalAdjDistTaxAmount.</p> <p>This field is available in API version 49.0 and later.</p>
TotalAdjDistTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Tax on the TotalAdjDistAmount.</p>
TotalAdjProductAmtWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total amount of all OrderItemSummaries of type code Product belonging to this OrderSummary, inclusive of item-level adjustments and tax. This amount is equal to TotalAdjustedProductAmount plus TotalAdjustedProductTaxAmount.</p> <p>This field is available in API version 49.0 and later.</p>
TotalAdjustedDeliveryAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description Total, including item-level adjustments but not order-level adjustments or tax, of all OrderItemSummaries of type code Charge belonging to this OrderSummary.</p>
TotalAdjustedDeliveryTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Tax on the TotalAdjustedDeliveryAmount.</p>
TotalAdjustedProductAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total, including item-level adjustments but not order-level adjustments or tax, of all OrderItemSummaries of type code Product belonging to this OrderSummary.</p>
TotalAdjustedProductTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Tax on the TotalAdjustedProductAmount.</p>
TotalAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total, including adjustments but not tax, of all OrderItemSummaries belonging to this OrderSummary. Equal to TotalAdjustedProductAmount plus TotalAdjustedDeliveryAmount.</p>
TotalDeliveryAdjDistAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total of all order-level price adjustments applied to OrderItemSummaries of type code Charge belonging to this OrderSummary. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header.</p>

Field	Details
TotalDeliveryAdj DistAmtWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total of all order-level price adjustments applied to OrderItemSummaries of type code Charge belonging to this OrderSummary, inclusive of tax. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header. It is equal to TotalDeliveryAdjDistAmount + TotalDeliveryAdjDistTaxAmount. This field is available in API version 49.0 and later.</p>
TotalDeliveryAdj DistTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Tax on the TotalDeliveryAdjDistAmount.</p>
TotalDeliveryAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Sum of the Total Line Amounts of all OrderItemSummaries of type code Charge belonging to this OrderSummary, not including adjustments or tax. This field is available in API version 54.0 and later.</p>
TotalDeliveryAmount WithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total of all OrderItemSummaries of type code Charge belonging to this OrderSummary, including tax but not including adjustments. It is equal to TotalDeliveryAmount + TotalDeliveryTaxAmount. This field is available in API version 54.0 and later.</p>
TotalDeliveryTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description Tax on the TotalDeliveryAmount. This field is available in API version 54.0 and later.</p>
TotalProductAdj DistAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total of all order-level price adjustments applied to OrderItemSummaries of type code Product belonging to this OrderSummary. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header.</p>
TotalProductAdj DistAmtWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total of all order-level price adjustments applied to OrderItemSummaries of type code Product belonging to this OrderSummary, inclusive of tax. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header. It is equal to TotalProductAdjDistAmount + TotalProductAdjDistTaxAmount. This field is available in API version 49.0 and later.</p>
TotalProductAdj DistTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Tax on the TotalProductAdjDistAmount.</p>
TotalProductAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Sum of the Total Line Amounts of all OrderItemSummaries of type code Product belonging to this OrderSummary, not including adjustments or tax. This field is available in API version 54.0 and later.</p>

Field	Details
TotalProductAmount WithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total of all OrderItemSummaries of type code Product belonging to this OrderSummary, including tax but not including adjustments. It is equal to TotalProductAmount + TotalProductTaxAmount. This field is available in API version 54.0 and later.</p>
TotalProductTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Tax on the TotalProductAmount. This field is available in API version 54.0 and later.</p>
TotalTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total tax on all OrderItemSummaries belonging to this OrderSummary. Equal to TotalAdjustedDeliveryTaxAmount plus TotalAdjustedProductTaxAmount.</p>

HomepageHtml	<p>Type textarea</p> <p>Properties Nillable, Update</p> <p>Description The Home tab custom links and company message for this organization.</p>
InstanceName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Read-only. The name of the instance. Available in API version 31.0 or later.</p>
IsSandbox	<p>Type boolean</p>

Field	Details
	<p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Read-only. Indicates whether the current organization is a sandbox (<code>true</code>) or production (<code>false</code>) instance. Available in API version 31.0 or later.</p>
LanguageLocaleKey	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The same as <code>Language</code>, the two-to-five character code which represents the language and locale ISO code. This controls the language for labels displayed in an application.</p>
LastWebToCaseDate	<p>Type dateTime</p> <p>Properties Filter, Nillable</p> <p>Description The last date that a web form submission was converted to a case.</p>
LastWebToLeadDate	<p>Type dateTime</p> <p>Properties Filter, Nillable</p> <p>Description The last date that a web form submission was converted to a lead.</p>
Latitude	<p>Type double</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description Used with <code>Longitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between -90 and 90 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.</p>
Longitude	<p>Type double</p>

Field	Details
	<p>Properties Filter, Nillable, Sort, Update</p> <p>Description Used with <code>Latitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between -180 and 180 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.</p>
<code>MaxActionsPerRule</code>	<p>Type int</p> <p>Properties Filter, Nillable</p> <p>Description Maximum number of actions per workflow, assignment, escalation, and auto-response rules. This field is unavailable in version 15.0 and later.</p>
<code>MaxRulesPerEntity</code>	<p>Type int</p> <p>Properties Filter, Nillable</p> <p>Description Maximum number of rules per object, inclusive of workflow, assignment, escalation, and auto-response rules. This field is unavailable in version 15.0 and later.</p>
<code>MonthlyPageViewsEntitlement</code>	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of page views allowed for the current calendar month for the sites in your organization. To access this field, Salesforce Sites must be enabled for your organization. This field is generally available in API versions 18.0 and later.</p>
<code>MonthlyPageViewsUsed</code>	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of page views used in the current calendar month for the sites in your organization. To access this field, Salesforce Sites</p>

Field	Details
	<p>must be enabled for your organization. This field is generally available in API versions 18.0 and later.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the organization.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
OrganizationType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Edition of the organization, for example Enterprise Edition or Unlimited Edition.</p>
Phone	<p>Type phone</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description Phone number for the organization.</p>
PostalCode	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description Postal code for the address of the organization. Limit: 20 characters.</p>
PreferencesAutoSelectIndividualOnMerge	<p>Type boolean</p> <p>Properties Filter, Update</p>
PreferencesEventScheduler	<p>Type boolean</p> <p>Properties Update</p> <p>Description Indicates whether opportunities require products (<code>true</code>) or not (<code>false</code>).</p>
PreferencesRequireOpportunityProducts	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Indicates whether opportunities require products (<code>true</code>) or not (<code>false</code>).</p>
PreferencesS1BrowserEnabled	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Indicates whether the Salesforce mobile web is enabled for all users in your organization (<code>true</code>) or is disabled for all users (<code>false</code>). This field is available in API version 29.0 or later.</p>

Field	Details
PreferencesTerminateOldestSession	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Indicates whether the oldest login session is automatically closed when a policy specifying the maximum number of sessions is triggered.</p> <p>This field is available in API version 35.0 or later.</p> <p> Note: As of API version 50.0, this field is removed.</p>
PreferencesTransactionSecurityPolicy	<p>Type boolean</p> <p>Properties Filter, Update</p> <p>Description Indicates whether the Transaction Security feature has been enabled.</p> <p>This field is available in API version 35.0 or later.</p> <p> Note: As of API version 50.0, this field is removed.</p>
PrimaryContact	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description Name of the primary contact for the organization. Limit: 80 characters.</p>
ReceivesAdminInfoEmails	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the organization receives administrator emails (<code>true</code>) or not (<code>false</code>).</p>
ReceivesInfoEmails	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description Indicates whether the organization receives informational email from Salesforce (<code>true</code>) or not (<code>false</code>).</p>
<code>SelfServiceCasePlural</code>	<p>Type string</p> <p>Properties Filter, Nillable, Update</p> <p>Description The plural version of the term used to represent the Case object in the Self-Service portal.</p>
<code>SelfServiceCaseSingle</code>	<p>Type string</p> <p>Properties Filter, Nillable, Update</p> <p>Description The singular version of the term used to represent the Case object in the Self-Service portal.</p>
<code>SelfServiceCaseSubmitRecordTypeId</code>	<p>Type reference</p> <p>Properties Filter, Nillable, Update</p> <p>Description The ID of the record type associated with a case submitted via the Self-Service portal.</p>
<code>SelfServiceDefaultCaseOrigin</code>	<p>Type string</p> <p>Properties Filter, Nillable, Update</p> <p>Description The default origin of a case submitted via the Self-Service portal.</p>
<code>SelfServiceEmailSenderAddress</code>	<p>Type email</p> <p>Properties Filter, Nillable, Update</p> <p>Description The Self-Service email address from which new Self-Service user and password email messages are sent, such as <code>support@acme.com</code>.</p>

Field	Details
<code>SelfServiceEmailSenderName</code>	<p>Type string</p> <p>Properties Filter, Nillable, Update</p> <p>Description The name associated with the email address in the <code>SelfServiceEmailSenderAddress</code> field, such as <code>Acme Customer Support</code>.</p>
<code>SelfServiceEmailUserOnCaseCreationTemplateId</code>	<p>Type reference</p> <p>Properties Filter, Nillable, Update</p> <p>Description The ID of the email template used when email is sent to a Self-Service user when he or she creates a case.</p>
<code>SelfServiceEnabledForResponseRules</code>	<p>Type boolean</p> <p>Properties Filter, Nillable, Update</p> <p>Description Indicates whether the Self-Service portal is enabled for auto-response rules (<code>true</code>) or not (<code>false</code>).</p>
<code>SelfServiceFeatureConfig</code>	<p>Type int</p> <p>Properties Filter, Nillable, Update</p> <p>Description An integer representing the active Self-Service feature configuration for this organization.</p>
<code>SelfServiceLogoutUrl</code>	<p>Type url</p> <p>Properties Filter, Nillable, Update</p> <p>Description The Web page that displays when a Self-Service user logs out of the Self-Service portal.</p>

Field	Details
SelfServiceMaxNumSuggestions	<p>Type int</p> <p>Properties Filter, Nillable, Update</p> <p>Description The maximum number of suggested solutions allowed for a Self-Service case.</p>
SelfServiceNewCommentCheckedByDefault	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Update</p> <p>Description If <code>true</code>, When a customer notification is automatically sent when a new comment is added to a case.</p>
SelfServiceNewCommentTemplateId	<p>Type reference</p> <p>Properties Filter, Nillable, Update</p> <p>Description The ID of the email template used to send a notification to Self-Service users when a public comment is added to one of their cases.</p>
SelfServiceNewPassTemplateId	<p>Type reference</p> <p>Properties Filter, Nillable, Update</p> <p>Description The ID of the email template used when new passwords are generated for Self-Service users.</p>
SelfServiceNewUserTemplateId	<p>Type reference</p> <p>Properties Filter, Nillable, Update</p> <p>Description The ID of the email template used when new Self-Service users are enabled.</p>

Field	Details
SelfServicePageHeight	<p>Type int</p> <p>Properties Filter, Nillable, Update</p> <p>Description The maximum height in pixels of Self-Service pages.</p>
SelfServicePageWidth	<p>Type int</p> <p>Properties Filter, Nillable, Update</p> <p>Description The maximum width in pixels of Self-Service pages.</p>
SelfServiceSelfClosedCaseStatus	<p>Type picklist</p> <p>Properties Filter, Nillable, Update</p> <p>Description The default status for cases closed by Self-Service users.</p>
SelfServiceSolutionCategoryAvailable	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Update</p> <p>Description Indicates whether solution categories are available in the Self-Service portal (<code>true</code>) or not (<code>false</code>).</p>
SelfServiceSolutionCategoryStartNodeId	<p>Type reference</p> <p>Properties Filter, Nillable, Update</p> <p>Description The ID of the top-level category in the Self-Service portal.</p>
SelfServiceSolutionPlural	<p>Type string</p> <p>Properties Filter, Nillable, Update</p>

Field	Details
	Description The plural version of the term used to represent the Solution object in the Self-Service portal.
SelfServiceSolutionSingle	Type string Properties Filter, Nillable, Update Description The singular version of the term used to represent the Solution object in the Self-Service portal.
SelfServiceStyleSheetUrl	Type url Properties Filter, Nillable, Update Description The public URL of your organization's Self-Service portal stylesheet.
SelfServiceWelcomePageConfig	Type int Properties Filter, Nillable, Update Description Integer that represents the welcome page configuration for the Self-Service portal.
SelfServiceWelcomeText	Type string Properties Filter, Nillable, Update Description The custom welcome message displayed at the top of the Self-Service home page when Self-Service users log in. Limit: 32,000 characters.
SignupCountryIsoCode	Type string Properties Filter, Group, Nillable, Sort Description The ISO country code specified by the user for a sign-up request.

Field	Details
State	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description State of the address of the organization. Limit: 80 characters.</p>
StateCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ISO state code for the organization's address.</p>
Street	<p>Type textarea</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description Street address for the organization. Limit: 255 characters.</p>
TrialExpirationDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date that this organization's trial license expires.</p>
TimeZoneSidKey	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Identifies the default time zone of the organization.</p>
UiSkin	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field	Details
	<p>Description The user interface theme selected for the organization.</p>
UsesStartDateAsFiscalYearName	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the calendar year when the fiscal year begins is referred to as the year of the company's fiscal year (<code>true</code>) or not (<code>false</code>). For example, if the fiscal year begins in February 2006, a <code>true</code> value means the fiscal year is FY2006, and a <code>false</code> value means the fiscal year is FY2007.</p>
UsesWebToCase	<p>Type boolean</p> <p>Properties Filter, Nillable, Update</p> <p>Description Indicates whether this organization can use Web-to-Case (<code>true</code>) or not (<code>false</code>).</p>
UsesWebToLead	<p>Type boolean</p> <p>Properties Filter, Nillable, Update</p> <p>Description Indicates whether this organization can use Web-to-Lead (<code>true</code>) or not (<code>false</code>).</p>
WebToCaseAssignedEmailTemplateId	<p>Type reference</p> <p>Properties Filter, Nillable, Update</p> <p>Description The ID of the email template used when a new case is assigned to a user via Web-to-Case.</p>
WebToCaseCreatedEmailTemplateId	<p>Type reference</p> <p>Properties Filter, Nillable, Update</p>

Field	Details
	<p>Description</p> <p>The ID of the email template used when a new case is created via Web-to-Case.</p>
WebToCaseDefaultCreatorId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Nillable, Update</p> <p>Description</p> <p>The ID of the user specified as the default creator of cases created via Web-to-Case.</p>
WebToCaseDefaultOrigin	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The default value for the Case Origin field on cases submitted via Web-to-Case. Limit: 40 characters.</p>

Usage

Query this object to obtain information about an organization's settings. Only one organization object exists per organization.

SEE ALSO:

[Object Basics](#)

OrgDeleteRequest

Represents a request to delete a developer edition (DE) org. This object is available in API version 42.0 and later. It is available only in Developer and Database.com editions.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field Name	Details
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The auto-generated ID of this OrgDeleteRequest object.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description The ID of the user who initiated the org delete request.</p>
RequestType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description Specifies whether you want to deactivate or reactivate the org. When you deactivate an org, you have 30 days to change your mind and reactivate it. After 30 days, the org is locked, and you must contact Salesforce Customer Support to reactivate it. After 60 days, the org is permanently deleted from Salesforce servers.</p> <p>Valid values:</p> <ul style="list-style-type: none">• Deactivate• Reactivate

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[OrgDeleteRequestOwnerSharingRule](#)

Sharing rules are available for the object.

[OrgDeleteRequestShare](#)

Sharing is available for the object.

OrgWideEmailAddress

Represents an organization-wide email address for user profiles.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Only authenticated users with the View Setup and Configuration permission can access this object.

Fields

Field	Details
Address	<p>Type email</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The organization-wide email address.</p>
IsAllowAllProfiles	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description If <code>true</code>, any user profile in your organization can use this object. If <code>false</code>, only specified user profiles can use this object when sending email. If you do not have the appropriate user profile, you can't use this object.</p>
DisplayName	<p>Type string</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The name that is used to identify the sender of the email.</p>

Usage

This object represents an email alias for user profiles. You can pass in the ID to an `OrgWideEmailAddress` record when calling `sendEmail()` for a `SingleEmailMessage`.

OutOfOffice

Represents a user-set value on a profile that shows when the user intends to be out of the office. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `undelete()`, `upsert()`, `update()`

Special Access Rules

In Lightning Experience, lets users set a message next to their name in Chatter to show when they plan to be out of the office. The message appears in Lightning Experience, Salesforce Classic, and mobile views. Messages expire automatically after their end date. You can control whether out-of-office functionality is available to your users. Set it up in the Out of Office section in **Setup > Chatter Settings**.

Only internal users can set an out-of-office message.

Fields

Field Name	Details
EndDate	<p>Type dateTime</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The date of the last day a person is out of the office. After the message expires, it goes away automatically.</p>
IsEnabled	<p>Type boolean</p> <p>Properties Create, Defaulted on create</p> <p>Description Indicates whether an out-of-office message can be displayed for a user. The default value is <code>true</code>.</p>
Message	<p>Type string</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The message portion of the out-of-office message. This text, along with start and end dates, is appended to the user's name in the Salesforce user interface. The maximum length of this string is 40 characters.</p>
StartDate	<p>Type dateTime</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The date of the first day a person is out of the office.</p>
UserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the user associated with the out-of-office message.</p>

Usage

- Maximum message length is 40 characters.
- Users can set only their own out-of-office message. An admin can set an out-of-office message for any user.
- The out-of-office message can be set only for internal users.

OutgoingEmail

For internal use only.

OutgoingEmailRelation

For internal use only.

OwnedContentDocument

Represents a file owned by a user. This object is available in version 30.0 and later.

Supported Calls

`describeSObjects()`

Fields

Field Name	Details
<code>ContentDocumentId</code>	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the document. This is a relationship field.</p> <p>Relationship Name ContentDocument</p> <p>Relationship Type Lookup</p> <p>Refers To ContentDocument</p>
<code>ContentSize</code>	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Size of the document in bytes.</p>
<code>ContentUrl</code>	<p>Type url</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description URL for links and Google Docs. This field is set only for links and Google Docs, and is one of the fields that determine the <code>FileType</code>. This field is available in API version 31.0 and later.</p>
<code>ExternalDataSourceName</code>	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>Name of the external data source in which the document is stored. This field is set only for external documents that are connected to Salesforce.</p> <p>This field is available in API version 32.0 and later.</p>
ExternalDataSourceType	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>Type of external data source in which the document is stored. This field is set only for external documents that are connected to Salesforce.</p> <p>This field is available in API version 35.0 and later.</p>
FileExtension	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>File extension of the document.</p> <p>This field is available in API version 31.0 and later.</p>
FileType	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Type of document, determined by the file extension.</p>
OwnerId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Sort</p> <p>Description</p> <p>ID of the owner of the document.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>Owner</p> <p>Relationship Type</p> <p>Lookup</p>

Field Name	Details
	Refers To User
Title	Type string Properties Filter, Group, idLookup, Sort Description Title of the document.

OwnerChangeOptionInfo

Represents default and optional actions that can be performed when a record's owner is changed. Available in API version 35.0 and later, but to query for change owner metadata, use the OwnerChangeOptionInfo object in Tooling API instead. For more information, see [OwnerChangeOptionInfo](#) in the Tooling API.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Use `EntityId` or `DurableId` when querying this object.

PackageLicense

Represents a license for an installed managed package. This object is available in API version 31.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field Name	Details
AllowedLicenses	Type int

Field Name	Details
	<p>Properties Filter, Group, Sort</p> <p>Description The number of users allowed to use the package.</p>
ExpirationDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time when the package license expires.</p>
IsAvailableForIntegrations	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Reserved for future use.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The namespace prefix associated with the package.</p>
Status	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The status of the license. Possible values are: <code>Active</code>, <code>Expired</code>, <code>Free</code>, and <code>Trial</code>.</p>
UsedLicenses	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description The number of users who have a license to the package.</p>

Usage

Use this object to determine the number of licenses allowed and in use for a managed package installed in your organization.

The following example demonstrates the use of the API to manage licenses for a package. The example defines an Apex class that does the following.

- Retrieves the PackageLicense record for the specified package (identified by its namespace prefix).
- Defines a function that returns a list of all users with the specified profile.
- Creates a UserPackageLicense record for each user with that profile, which has the effect of assigning a license for the package to all users with that profile.
- Returns an error message if the number of users exceeds the number of available licenses.

```
public class AssignPackageLicense {

    static String PACKAGE_NAMESPACE_PREFIX = 'acme_101';
    static String PROFILE_ID = '00exx000000jz1SAAQ';
    public static String exceptionText {get; set;}

    public AssignPackageLicense() {
        exceptionText = 'Initialized';
    }

    static List<User> getUsersWithProfile(){
        String userQuery = 'SELECT Id FROM User WHERE ProfileId = :PROFILE_ID';
        List<User> matchingUsers = new List<User>();
        matchingUsers = [SELECT Id FROM User WHERE ProfileId = :PROFILE_ID];
        return matchingUsers;
    }

    public static void assignLicenseByProfile() {
        //find the PackageLicense Id
        PackageLicense pl = [SELECT Id, NamespacePrefix, AllowedLicenses, UsedLicenses,
            ExpirationDate, Status FROM PackageLicense WHERE
            NamespacePrefix = :PACKAGE_NAMESPACE_PREFIX];
        System.assert(pl != null, 'PackageLicense cannot be null.');
```

```
List<User> usersToAssignLicenses = getUsersWithProfile();
List<UserPackageLicense> firstUPLs = new List<UserPackageLicense>();

//create a new UserPackageLicense record for each user with the specified profile

for (Integer i = 0; i < usersToAssignLicenses.size(); i++){
    UserPackageLicense upl = new UserPackageLicense();
    upl.PackageLicenseId = pl.Id;
    upl.UserId = usersToAssignLicenses[i].Id;
    firstUPLs.add(upl);
}

try {
    //bulk insert
    insert(firstUPLs);
} catch(DmlException e) {
    for (Integer i = 0; i < e.getNumDml(); i++) {
        // process exception here
    }
}
```

Field Name	Details
	<p>Description</p> <p>Valid values are:</p> <ul style="list-style-type: none"> • Error • Warning
ErrorTitle	<p>Type</p> <p>string</p> <p>Properties</p> <p>Nillable, Sort</p> <p>Description</p> <p>The error message title that appears in the API.</p>
ErrorType	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>Valid values are:</p> <ul style="list-style-type: none"> • ApexTestFailure • DeployError • FeatureMissing • IneligibleUpgrade • LimitExceeded • LockingFailure • PACError • UnclassifiedError
PackagePushJobId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Required. The parent push job record ID.</p>

Usage

Suppose that your push upgrade request wasn't successful due to some of its jobs failing. Let's write some code to find out what those errors were.

This code sample uses the Web Services Connector (WSC).

```
// Retrieves all PackagePushError objects associated with the PackagePushJob with the given
// ID
final String PACKAGE_PUSH_ERROR_QUERY = "Select ErrorMessage, ErrorDetails, ErrorTitle,"
+ " ErrorSeverity, ErrorType from PackagePushError where PackagePushJobId = '%s'";

// job is a PackagePushJob instance
QueryResult queryResult = conn.query(String.format(PACKAGE_PUSH_ERROR_QUERY, job.getId()));

StringBuilder errorMessages = new StringBuilder();
errorMessages.append("Errors for PackagePushJob [").append(job.getId()).append("]:")
    .append("\n");

// There can be multiple PackagePushErrors for a given PackagePushJob
for(Object r : queryResult.getRecords()) {
    PackagePushError e = (PackagePushError) r;
    errorMessages.append("Title: ").append(e.getErrorTitle()).append("\n");
    errorMessages.append("Severity: ").append(e.getErrorSeverity()).append("\n");
    errorMessages.append("Type: ").append(e.getErrorType()).append("\n");
    errorMessages.append("Message: ").append(e.getErrorMessage()).append("\n");
    errorMessages.append("Details: ").append(e.getErrorDetails()).append("\n");
    errorMessages.append("\n");
}

String errors = errorMessages.toString();
```

PackagePushJob

Represents an individual push job for upgrading a package in an org from one version to another version. There can be multiple push jobs created for one push request. For example, if you want to upgrade five orgs as part of one push, you have one PackagePushRequest record and five PackagePushJob records.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
DurationSeconds	<p>Type int</p> <p>Properties Group, Nillable</p> <p>Description The length of time in seconds, that the push upgrade took to complete. This field is new in API version 51.0.</p>

Field Name	Details
EndTime	<p>Type dateTime</p> <p>Properties Create, Nillable, Update</p> <p>Description The date and time (UTC) at which the push upgrade ended, in ISO 8601 format. This field is new in API version 51.0.</p>
PackagePushRequestId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Required. The ID of the parent push request record which must have been created.</p>
StartTime	<p>Type dateTime</p> <p>Properties Create, Nillable, Update</p> <p>Description The date and time (UTC) at which the push upgrade actually started, in ISO 8601 format. This field is new in API version 51.0.</p>
Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The status of the job. Valid values are:</p> <ul style="list-style-type: none"> • Canceled • Created (default) • Failed • In Progress • Pending • Succeeded <p>Don't specify this value when you create the push job. The default value of Created is used.</p>
SubscriberOrganizationKey	<p>Type string</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Required. The organization key of the org where the package is upgraded. This references <code>orgKey</code> in <code>PackageSubscriber</code>.</p>

Usage

Suppose that you want to push version 3.4.6 of your package to all orgs. You've already identified the orgs eligible for the upgrade by using `MetadataPackageVersion` and created the push request using `PackagePushRequest`. Now let's write some code to create a push job for each eligible org.

This code sample uses the Web Services Connector (WSC).

```
PackageSubscriber[] subscribers = new PackageSubscriber[];

// ... populate eligible and desired subscribers

// Create the PackagePushJob array
PackagePushJob[] jobs = new PackagePushJob[subscribers.length];

for (int i = 0; i < subscribers.length; i++) {
    // create a job for each subscriber...
    PackagePushJob job = new PackagePushJob();
    // ... associate it to the PackagePushRequest ppr...
    job.setPackagePushRequestId(ppr.getId());
    // ... and add the orgKey
    job.setSubscriberOrganizationKey(subscribers[i].getOrgKey());
    jobs[i] = job;
}

// Save the jobs
SaveResult[] saveResults = conn.create(jobs);

// Add the newly generated id's to the PackagePushJob objects
for (int i = 0; i < saveResults.length; i++) {
    if (saveResults[i].isSuccess()) {
        jobs[i].setId(saveResults[i].getId());
    }
}
```

Or, if you're using REST API, submit a POST request to the `PackagePushJob` sObject endpoint, as in the following example. SOAP API is also supported. This example returns the push job ID (starting with ODX) that is required to query the status of the job.

```
POST
/services/data/v38.0/objects/packagepushjob/
{
  "PackagePushRequestId" : "ODV...",
  "SubscriberOrganizationKey" : "00DR00..."
}
```

Checking the Status of a Push Job

To check the job status, simply query the `Status` field. For example:

```
SELECT Id, Status FROM PackagePushJob WHERE PackagePushRequestId ='0DV...'
```

Here's an example in Java.

```
// Finds the status of the PackagePushJob with the given id
String PACKAGE_PUSH_JOB_STATUS_QUERY = "Select status from PackagePushJob where Id = '%s'";

// job is a PackagePushJob instance
QueryResult queryResult = conn.query(String.format(PACKAGE_PUSH_JOB_STATUS_QUERY,
job.getId()));

// extract the status from the QueryResult
String status = ((PackagePushJob) queryResult.getRecords()[0]).getStatus();

// optionally, update the PackagePushJob instance with the latest status
job.setStatus(status);
```

You can also continuously poll the job status until the job is done. The following Java example polls the status every 10 seconds.

```
// The set of states that indicate a PackagePushJob has completed
final Set<String> TERMINAL_STATES = new HashSet<>();
TERMINAL_STATES.add("Succeeded");
TERMINAL_STATES.add("Failed");
TERMINAL_STATES.add("Canceled");

String status = queryJobStatus(job); // this method returns the status as retrieved in the
previous code sample

// If the status is not one of the completed statuses...
while(!TERMINAL_STATES.contains(status)) {
    Thread.sleep(10 * 1000); // ... wait 10 seconds and try again
    status = queryJobStatus(job);
}
```

PackagePushRequest

Represents the push request for upgrading a package in one or many orgs from one version to another version.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
DurationSeconds	Type int

Field Name	Details
	<p>Properties Group, Nillable</p> <p>Description The length of time in seconds, that the push upgrade took to complete. This field is new in API version 51.0.</p>
EndTime	<p>Type dateTime</p> <p>Properties Create, Nillable, Update</p> <p>Description The date and time (UTC) at which the push upgrade ended, in ISO 8601 format. This field is new in API version 51.0.</p>
PackageVersionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Required. The non-beta, non-deprecated package version that the package is being upgraded to.</p>
ScheduledStartTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date and time (UTC) at which the push request is processed, in ISO 8601 format. Set this value to the earliest time that you want Salesforce to attempt to start the push. As a best practice, schedule pushes at off-peak hours like 1:00 AM Saturday. If you don't specify a value, the push starts when the package push request's Status is set to Pending.</p>
StartTime	<p>Type dateTime</p> <p>Properties Create, Nillable, Update</p> <p>Description The date and time (UTC) at which the push upgrade actually started, in ISO 8601 format. This field is new in API version 51.0.</p>
Status	<p>Type picklist</p>

Field Name**Details****Properties**

Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Description

The status of the push. Valid values are:

- Canceled
- Created (default)
- Failed
- In Progress
- Pending
- Succeeded

Don't specify this value when you create the push request. The default value of Created is used. Later, change the status to Pending to schedule the push upgrade.

Usage

Suppose that you want to push version 3.4.6 of your package to all orgs. You've already identified the orgs eligible for the upgrade by using `MetadataPackageVersion`. Now let's write some code to create a push request, which holds a push job for each eligible org.

This code sample uses the Web Services Connector (WSC).

```
// Create a new PackagePushRequest for the versionId to upgrade to
// (for example, versionId is the "04t..." id of version
// 3.4.6 of the package
PackagePushRequest ppr = new PackagePushRequest();
ppr.setPackageVersionId(versionId);

// Optionally, set the start time of the PackagePushRequest to schedule it to begin
// automatically; scheduledStartTime is a java.util.Calendar instance
ppr.setScheduledStartTime(scheduledStartTime);

// Save the PackagePushRequest
SaveResult[] saveResults = conn.create(new SObject[] { ppr });
if (saveResults[0].isSuccess()) {
    // Add the newly generated Id to the object
    ppr.setId(saveResults[0].getId());
} else {
    for (Error error : saveResults[0].getErrors()) {
        System.out.println(error.getMessage());
    }
}
```

Or, if you're using REST API, submit a POST request to the `PackagePushRequest sObject` endpoint, as in the following example. SOAP API is also supported.

This example returns the push request ID (starting with ODV) that's required to create push jobs.

```
POST
/services/data/v38.0/objects/packagepushrequest/
```

```
{
  "PackageVersionId" : "04t...",
  "ScheduledStartTime" : "2016-08-24T21:00:00"
}
```

As your next step, create a push job for each eligible subscriber you want to upgrade using `PackagePushJob`.

Scheduling the Push Upgrade

To signal that the push upgrade is ready to be processed, change the status of the push request to `Pending`. If you didn't set a `ScheduledStartTime`, the push upgrade starts immediately after you change the status.

See the following Java example.

```
// ppr is the PackagePushRequest instance
ppr.setStatus("Pending");
conn.update(new SObject[] { ppr });
```

If you're using REST API, submit a PATCH request to the `PackagePushRequest` sObject endpoint, as in the following example. SOAP API is also supported.

```
PATCH
/services/data/v38.0/subjects/packagepushrequest/0DV...
{
  "Status" : "Pending"
}
```

Checking the Status of a Push Request

The `PackagePushRequest` status is `Succeeded` if all its associated jobs are successful; it's `Failed` if at least one job failed.

```
// Finds the status of the PackagePushRequest for a given Id
final String PACKAGE_PUSH_REQUEST_STATUS_QUERY = "Select status from PackagePushRequest"
+
  " where Id = '%s'";

// ppr is a PackagePushRequest instance
QueryResult queryResult = conn.query(String.format(PACKAGE_PUSH_REQUEST_STATUS_QUERY,
  ppr.getId()));

// extract the status from the QueryResult
String status = ((PackagePushRequest) queryResult.getRecords()[0]).getStatus();

// optionally, update the PackagePushRequest instance with the latest status
ppr.setStatus(status);
```

You can also check the status of a job by querying the `PackagePushJob`'s `status` field.

Aborting a Push Request

You can abort a package push request by changing its status to `Canceled`.

For example, if you're using the REST API, submit a PATCH request to the `PackagePushRequest` sObject endpoint.

```
PATCH
/services/data/v38.0/subjects/packagepushrequest/0DV...
{
  "Status" : "Canceled"
}
```

The following example is for Java.

```
// ppr is the PackagePushRequest instance
ppr.setStatus("Canceled");
```

You can abort a package push request only if its status is Created or Pending. If the abort succeeds, all associated push jobs are also canceled. If you try to abort when the current PackagePushRequest status is Canceled, Succeeded, Failed, or In Progress, the abort doesn't occur, and an error message is returned.

PackageSubscriber

Represents an installation of a package in an org. This object contains installation information for managed or unlocked packages developed in the org you're logged in to.

One record is created per installation. For example, if 5 orgs installed 2 packages, 10 records are created.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
InstalledStatus	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description If the package is installed in the org, the value is <code>i</code>.</p>
InstanceName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The instance that hosts the subscriber org.</p>
MetadataPackageId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The package ID. Package IDs have a prefix of <code>033</code>. This field is available in API version 49.0 and later.</p>

Field Name	Details
MetadataPackageVersionId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The 18-character package version ID starting with 04t.</p>
OrgKey	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The 18-character ID that represents the Salesforce org.</p>
OrgName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the org where the package is installed.</p>
OrgStatus	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Valid values are:</p> <ul style="list-style-type: none">• Active• Demo• Free• Inactive• Trial <p>Orgs with an OrgStatus of Inactive can't receive push upgrades.</p>
OrgType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p>

Field Name	Details
	<p>Description</p> <p>Valid values are:</p> <ul style="list-style-type: none"> • Production • Sandbox
ParentOrg	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The production org from which a sandbox was created.</p>

Usage

Here are examples of the types of API queries you can perform.

Query	String
Get all package subscriber orgs with a specific package ID	<pre>SELECT Id, OrgKey, OrgStatus, OrgName, OrgType FROM PackageSubscriber WHERE MetadataPackageVersionId = '04t...'</pre>
Get all package subscriber orgs that have an installed package created by the org you're logged in to	<pre>SELECT Id, OrgKey, OrgStatus, OrgName, OrgType FROM PackageSubscriber WHERE InstalledStatus = 'i'</pre>

Filter PackageSubscriber Objects by Instance

If you have packages with many subscribers, querying PackageSubscriber objects can take a while. To improve query performance, add filters to your PackageSubscriber queries, such as an InstanceName filter. InstanceName is a field that represents the instance that the subscriber org is hosted on.

1. Get the org's package and the latest released version of the package.

```
/**
 * Get the MetadataPackage object corresponding to this org's managed package
 */
public MetadataPackage getMetadataPackage() throws ConnectionException {
    // retrieve the managed package, which won't have an empty namespace
    QueryResult result = conn.query("select id from MetadataPackage where namespaceprefix
<> ''");

    return (MetadataPackage) result.getRecords()[0];
}

/**
```

```

* Get the latest MetadataPackageVersion object of the given MetadataPackage
*/
public MetadataPackageVersion getLatestMetadataPackageVersion(MetadataPackage
metadataPackage)
throws ConnectionException {
    // get the latest released version of the given package
    String query = "Select id, ReleaseState, MajorVersion, MinorVersion, PatchVersion,
MetadataPackageId"
    + " From MetadataPackageVersion"
    + " Where MetadataPackageId = '%s' and ReleaseState = 'Released'"
    + " Order by majorversion desc, minorversion desc, patchversion desc";

    QueryResult result = conn.query(String.format(query, metadataPackage.getId()));

    return (MetadataPackageVersion) result.getRecords()[0];
}

```

2. Get eligible subscribers. The following query strings and methods are modified to allow querying for PackageSubscribers filtered by an instance.

```

static final String PACKAGE_SUBSCRIBER_ORG_KEY_QUERY = "Select OrgKey from
PackageSubscribers where OrgStatus = 'Active'"
+ " and InstalledStatus = 'I'"
+ " and InstanceName = '%s'"; // placeholder for instance values

static final String METADATA_PACKAGE_VERSION_QUERY = "Select Id, Name, ReleaseState,
(%) from MetadataPackageVersion"
+ " where MetadataPackageId = '%s' AND ReleaseState = 'Released'"
+ " AND (MajorVersion < %s OR (MajorVersion = %s and MinorVersion < %s))"
+ " OR (MajorVersion = %s and MinorVersion = %s and PatchVersion < %s)";

/**
* Get all PackageSubscribers on the given instance that are eligible to upgrade to the
given
* MetadataPackageVersion
*/
public PackageSubscriber[] getEligibleSubscriberIds(MetadataPackageVersion version,
String instanceName) throws ConnectionException {
    String allPackageId = version.getMetadataPackageId();
    Integer major = version.getMajorVersion();
    Integer minor = version.getMinorVersion();
    Integer patch = version.getPatchVersion();

    return getEligibleSubscriberIds(major, minor, patch, allPackageId, instanceName);
}

```

```

public PackageSubscriber[] getEligibleSubscriberIds(Integer major, Integer minor, Integer
patch, String packageId, String instanceName) throws ConnectionException {
    String subscriberQuery = String.format(PACKAGE_SUBSCRIBER_ORG_KEY_QUERY, instanceName);
    QueryResult results = conn.query(String.format(METADATA_PACKAGE_VERSION_QUERY,
subscriberQuery, packageId, major, major, minor, major, minor, patch));

    return Arrays.stream(results.getRecords()).map(MetadataPackageVersion.class::cast)
        .filter(mpv -> mpv.getPackageSubscribers() != null)

```

```

    .flatMap(mpv -> Arrays.stream(mpv.getPackageSubscribers().getRecords()))
    .map(PackageSubscriber.class::cast)
    .toArray(PackageSubscriber[]::new);
}

```

- Put it all together. The following code sample shows how to use the previous methods to modify the workflow to perform package pushes by instance.

```

String[] instances = { "NA4" }; // Here we list the instances we would like to push to
MetadataPackage metadataPackage = api.getMetadataPackage();
MetadataPackageVersion version = api.getLatestMetadataPackageVersion(metadataPackage);

// do pushes by instance to avoid API timeouts retrieving PackageSubscribers
for (String instanceName : instances) {
    PackageSubscriber[] eligibleSubscribers = api.getEligibleSubscriberIds(version,
instanceName);

// ... proceed with creating PushRequests and PushJobs as before

```

Partner

Represents a partner relationship between two Account records or between an Opportunity record and an Account record.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
AccountFromId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description Required if <code>OpportunityId</code> is null. ID of the main account in a partner relationship between two accounts. Specifying this field when creating a Partner record creates two AccountPartner records, one for each direction of the relationship. If you specify the <code>OpportunityId</code> field, you can't specify this field as well.</p> <p>This is a relationship field.</p>

Field	Details
	<p>Relationship Name AccountFrom</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
AccountToId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. ID of the Partner Account related to either an opportunity or an account. You must specify this field when creating an Opportunity Partner or an Account Partner record. This is a relationship field.</p> <p>Relationship Name AccountTo</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
IsPrimary	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description Valid for Opportunity Partners only. Indicates that the account is the primary partner for the opportunity. Only one account can be marked as primary for an opportunity. If you set this field to 1 (<code>true</code>) upon insert of a new opportunity partner, this field is automatically set to 0 (<code>false</code>) for any other primary partners for that opportunity. Label is Primary.</p>
OpportunityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description Required if <code>AccountFromId</code> is null. ID of the opportunity in a partner relationship between an account and an opportunity. Specifying this field when creating a record creates an</p>

Field	Details
	<p>OpportunityPartner record. If you specify the <code>AccountFromId</code> field, you can't also specify this field.</p> <p>This is a relationship field.</p> <p>Relationship Name Opportunity</p> <p>Relationship Type Lookup</p> <p>Refers To Opportunity</p>
<code>ReversePartnerId</code>	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the account in a partner relationship.</p>
<code>Role</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description UserRole that the account has toward the related opportunity or account, such as consultant or distributor.</p>

Roles

In the Salesforce user interface, system administrators can set up the valid role values and their corresponding reverse role values in the `PartnerRole` object. Each account in the relationship is assigned a `Role` (such as `Consultant` or `Distributor`) designating that account's role toward the related account or opportunity.

Creating an Account-Opportunity Partner Relationship

When you create a partner relationship between an account and an opportunity (when you create a `Partner` record and specify the `OpportunityId` field), the API automatically creates an `OpportunityPartner` record with the corresponding values:

- The value of the `Partner` field `AccountToId` maps to the value of the `OpportunityPartner` field `AccountToId`.
- The values of the `OpportunityId`, `Role`, and `IsPrimary` fields in both records are the same.
- If you set the `IsPrimary` value to 1 (`true`) upon insert of a new `OpportunityPartner`, the `IsPrimary` value is automatically set to 0 (`false`) for any existing primary partners for that opportunity.

This mapping allows the API to manage the records and their relationships efficiently.

Creating an Account-Account Partner Relationship

When you create a partner relationship between two accounts (when you create a Partner record and specify the `AccountFromId`), the API automatically creates two AccountPartner records, one for the forward relationship and one for the reverse. For example, if you create a Partner relationship with "Acme, Inc." as the `AccountFromId` and "Acme Consulting" as the `AccountToId`, the API automatically creates two AccountPartner records:

- The forward relationship AccountPartner with "Acme, Inc." as the `AccountFromId` and "Acme Consulting" as the `AccountToId`.
- The reverse relationship AccountPartner with "Acme Consulting" as the `AccountFromId` and "Acme, Inc." as the `AccountToId`.
- The value of the `Role` field in the reverse relationship AccountPartner is set to the PartnerRole record `ReverseRole` value associated with the value of the `Role` field in the forward relationship AccountPartner.

This mapping allows the API to manage the records and their relationships efficiently.

PartnerFundAllocation

Represents allocated funds from a partner marketing budget for channel partners. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field Name	Details
Amount	<p>Type currency</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description Total amount of the allocation.</p>
BudgetId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p>Description ID of the partner marketing budget.</p>
ChannelPartnerId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description ID of the channel partner.</p>
Description	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Description of the allocation.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the owner of the allocation.</p>

Field Name	Details
Title	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The title of the allocation.</p>
TotalApprovedFcs	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total amount of approved fund claims.</p>
TotalApprovedFrs	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total amount of approved fund requests.</p>
TotalReimbursedFcs	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total amount of reimbursed fund claims.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[PartnerFundAllocationFeed](#)

Feed tracking is available for the object.

[PartnerFundAllocationHistory](#)

History is available for tracked fields of the object.

[PartnerFundAllocationOwnerSharingRule](#)

Sharing rules are available for the object.

[PartnerFundAllocationShare](#)

Sharing is available for the object.

PartnerFundClaim

Represents a claim of funds from the partner marketing budget by a channel partner. This object is available in API version 41.0 and later.

Supported Calls

`create()` `delete()` `describeLayout()` `describeSObjects()` `getDeleted()` `getUpdated()` `query()` `retrieve()` `search()` `update()`, `upsert()`

Fields

Field Name	Details
AllocationId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the partner fund allocation.
Amount	Type currency Properties Create, Filter, Sort, Update Description Amount of the claim.
BudgetId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the partner marketing budget.
ChannelPartnerId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the channel partner.
Description	Type textarea

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Description of the fund claim.</p>

PartnerFundRequest

Represents a request for funds from the partner marketing budget by a channel partner. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()` `describeLayout()` `describeSObjects()`
`getDeleted()` `getUpdated()` `query()` `retrieve()` `search()` `update()`, `upsert()`

Fields

Field Name	Details
Activity	<p>Type picklist</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Activity that is covered by the funds, for example, a trade show or seminar.</p>
AllocationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the partner fund allocation.</p>
Amount	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Approved amount of request.</p>
BudgetId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the partner marketing budget.</p>
ChannelPartnerId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the channel partner.</p>
Description	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Description of the fund request.</p>
DesiredOutcome	<p>Type textarea</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Desired outcome if requested funds are used.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the owner of the fund request.</p>
RequestedAmount	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Amount of the fund request.</p>
Status	<p>Type picklist</p> <p>Properties Create, Filter, Nillable, Group, Restricted picklist, Sort, Update</p> <p>Description Status of the fund request. Values are:</p>

Field Name	Details
	<ul style="list-style-type: none"> • Draft • Approved • Rejected
Title	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Title of the fund request.</p>

PartnerMarketingBudget

Represents a budget that provides funds to channel partners for selling and marketing products and services. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field Name	Details
Amount	<p>Type currency</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description Total amount of the budget.</p>
ChannelPartnerId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the channel partner. This field is available in API version 45.0 and later.</p>
Description	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Description of the budget.</p>
EndDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Date when the budget is no longer available.</p>

Field Name	Details
IsIgnoreValidation	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description When enabled, ignores restrictions related to the child objects connected to the budget. Note that individual totals for allocation amounts, request amounts, and claims amounts cannot exceed the total of their parent budget. Field is default off (false) on create. Once enabled (true), this field cannot be disabled. This field is available in API version 44.0 and later.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the owner of the budget.</p>
StartDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Date when the budget becomes available.</p>

Field Name	Details
Title	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Title of the budget.</p>
TotalAllocatedAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total funds allocated to channel partners or as a fund pool.</p>
TotalApprovedFcs	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total amount of approved fund claims.</p>
TotalApprovedFrs	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total amount of approved fund requests.</p>
TotalReimbursedFcs	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total amount of reimbursed fund claims.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Type of budget. Values are:</p>

Field Name	Details
	<ul style="list-style-type: none"> • Co-Operated Budget—Funds accrue based on a percentage of partner sales. The funds are available based on previous activity. • Marketing Funds—Funds are issued to partners in advance of sales. The funds are awarded based on predicted or expected behavior.

PartnerNetworkConnection

Represents a Salesforce to Salesforce connection between Salesforce organizations.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Winter '21 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
AccountId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the Account associated with this connection.</p>

Field	Details
ConnectionName	<p>Type string</p> <p>Properties Filter, idLookup, Sort</p> <p>Description A descriptive name for the connection. Limit: 295 characters.</p>
ConnectionStatus	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The status of the Salesforce to Salesforce connection. The picklist includes the following values:</p> <ul style="list-style-type: none">• Sent• Received• Pending• Accepted• Rejected• Inactive• Disconnecting• ConnectionSuspended• SubscribeInProgress• UsersInitialSync• BulkSyncMetadata
ConnectionType	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description The type of Salesforce to Salesforce connection. The picklist includes the following values:</p> <ul style="list-style-type: none">• Standard• Replication <p>This field is available in API version 30.0 and later.</p>
ContactId	<p>Type reference</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the Contact associated with this connection.</p>
IsSyncAuditFields	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Specifies whether audit fields are synced between the primary and secondary organization in a replication connection. This field is available in API version 32.0 and later, and is only accessible in Salesforce organizations where Organization Sync is enabled.</p>
IsSyncMetadata	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Specifies whether supported types of metadata are synced from the primary to the secondary organization in a replication connection. This field is available in API version 33.0 and later, and is only accessible in Salesforce organizations where Organization Sync is enabled.</p>
IsSyncUsers	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Specifies whether users with standard Salesforce user licenses are synced between the primary and secondary organization in a replication connection. This field is available in API version 35.0 and later, and is only accessible in Salesforce organizations where Organization Sync is enabled.</p>
PrimaryContactId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the User associated with this connection.</p>

Field	Details
ReplicationRole	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The role of this Salesforce organization in the replication connection. The picklist includes the following values:</p> <ul style="list-style-type: none"> • Primary • Secondary <p>This field is available in API version 30.0 and later, and is only accessible in Salesforce organizations where Organization Sync is enabled.</p>
ResponseDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time that the connection was accepted or rejected.</p>

Usage

Represents Salesforce to Salesforce standard and replication connections. This object is referenced by all objects that have been shared with other organizations, enabling you to determine which connections shared a record with you. If the organization does not have Salesforce to Salesforce enabled, the PartnerNetworkConnection object is not available, and you can't access it via the API.

SEE ALSO:

[PartnerNetworkRecordConnection](#)

PartnerNetworkRecordConnection

Represents a record shared between Salesforce organizations using Salesforce to Salesforce.

Supported Calls

`create()`, `query()`

Special Access Rules

As of Winter '21 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
ConnectionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description Required. ID of the connection a record is shared with.</p>
EndDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Date that sharing of the record was stopped.</p>
LocalRecordId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. ID of the shared record.</p>
ParentRecordId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the parent record of the shared record.</p>
PartnerRecordId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the shared record in the connection's organization.</p>
RelatedRecords	<p>Type string</p> <p>Properties Create, Filter, Nillable, Sort</p>

Field	Details
	<p>Description A comma-separated list of API names for child records to be shared with a parent record.</p>
SendClosedTasks	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description Forwards closed tasks related to the shared record.</p>
SendEmails	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description Sends an email notifying the connection's representative that you have forwarded the record to them. Only new recipients of a record will receive a notification email.</p>
SendOpenTasks	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description Forwards open tasks related to the shared record.</p>
StartDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Date that the shared record was accepted.</p>
Status	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The status of the shared record. One of the following values:</p> <ul style="list-style-type: none"> • Active (received) • Active (sent)

Field	Details
	<ul style="list-style-type: none"> • Connected • Inactive • Inactive (converted) • Inactive (deleted) • Pending (sent)

Usage

When you create a `PartnerNetworkRecordConnection`, you forward a record to a connection.

 **Note:** Attempting to forward a record from an object to which the connection is not subscribed results in an `Invalid Partner Network Status` error.

When you delete a `PartnerNetworkRecordConnection`, you stop sharing a record with a connection.

- To share a record, use the following fields: `LocalRecordID` and `ConnectionId`
- To share a child of a parent record, use the following fields: `LocalRecordID`, `ConnectionId`, and `ParentRecordID`
- To share a child of a parent record and its child records, use the following fields: `LocalRecordID`, `ConnectionId`, `ParentRecordID`, and `RelatedRecords`

If the organization does not have Salesforce to Salesforce enabled, the `PartnerNetworkRecordConnection` object is not available, and you can't access it using the API.

SEE ALSO:

[PartnerNetworkConnection](#)

PartnerNetworkSyncLog

Represents the Org Sync Log tab in Salesforce, where Salesforce administrators can track the replication of record inserts and updates being performed in Organization Sync. The Connection Detail page for the replication connection also displays the Org Sync Log's twenty most recent entries, and provides a link to the log.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Special Access Rules

The Org Sync Log tab can only be added in organizations where Organization Sync has been enabled. To add the tab to the Salesforce user interface, users must also have the "Manage Connections" user permission.

Fields

Field Name	Details
ConnectionEvent	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The action being replicated to the partner organization, such as a record insertion.</p>
ConnectionId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the Salesforce to Salesforce replication connection in which the replication event succeeded or failed.</p>
Description	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description A description of the replication event.</p>
EntityType	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The type of record being inserted or updated.</p>
Error	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The code used to describe the replication failure or success.</p>
LocalRecord	<p>Type string</p> <p>Properties Filter, Group, Sort</p>

Field Name	Details
	<p>Description</p> <p>The record being inserted or updated.</p>
Status	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>An item is added to the Organization Sync Log if it failed to be replicated to the linked organization. This picklist includes the following values:</p> <ul style="list-style-type: none"> Failed: The replication continued to fail after multiple retries, and won't be retried further. Resolved: The replication succeeded after retrying. Retrying: Salesforce is retrying the replication. <p>This field is available in API version 35.0 and later.</p>

PartnerRole

Represents a role for an account Partner, such as consultant, supplier, and so on.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
ApiName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, idLookup, Sort</p> <p>Description</p> <p>Uniquely identifies a picklist value so it can be retrieved without using an id or master label.</p>

Field	Details
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Master label for this partner role value. This display value is the internal label that does not get translated. Limit: 255 characters.</p>
ReverseRole	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Name of the reverse role that corresponds to this partner role. For example, if the role is “subcontractor,” then the reverse role might be “general contractor.” In the user interface, assigning a partner role to an account creates a reverse partner relationship so that both accounts list the other as a partner.</p>
SortOrder	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Number used to sort this value in the partner role picklist. These numbers are not guaranteed to be sequential, as some previous partner role values might have been deleted.</p>

Usage

This object represents a value in the partner role picklist. In the user interface, the partner role picklist provides additional information about the role of a Partner, such as their corresponding reverse role. Query this object to retrieve the set of values in the partner role picklist, and then use that information while processing PartnerRole records to determine more information about a given partner role. For example, the application could determine the reverse role of a given Partner Role value and the value of the ReverseRole property in the associated PartnerRole object.

[Object Basics](#)

PartyConsent

Represents consent preferences for an individual. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Action	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The action that the Individual is consenting to.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • CrossDevice • DataCollection • Reidentification • Segment • ShareData • Target
CaptureContactPointType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Required. Indicates how you captured consent.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Email • MailingAddress • Phone • Social • Web
CaptureDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Required. Date when consent was captured.</p>

Field	Details
CaptureSource	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Required. Indicates how you captured consent. For example, a website or online form.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the party consent record.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the account owner associated with this customer. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p>

Field	Details
	<p>Refers To Group, User</p>
PartyId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. Represents the record based on the Individual object you want to associate consent with. This is a relationship field.</p> <p>Relationship Name Party</p> <p>Relationship Type Lookup</p> <p>Refers To Individual</p>
PrivacyConsentStatus	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Required. Identifies whether the individual associated with this record agrees to this form of contact. Possible values are:</p> <ul style="list-style-type: none"> • NotSeen • OptIn • OptOut • Seen

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PartyConsentChangeEvent

Change events are available for the object.

PartyConsentFeed

Feed tracking is available for the object.

PartyConsentHistory

History is available for tracked fields of the object.

PartyConsentOwnerSharingRule

Sharing rules are available for the object.

PartyConsentShare

Sharing is available for the object.

Payment

Represents a single event where the customer creates a payment. For credit cards, this is a payment capture or payment sale, which won't show up in the end user's credit card statement. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated. Commerce Payments entities are available only in Lightning Experience.

Fields

Field	Details
AccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The account of the customer who made the payment. This is a relationship field.</p> <p>Relationship Name Account</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
Amount	<p>Type currency</p>

Field	Details
	<p>Properties Create, Filter, Sort, Update</p> <p>Description The amount to be debited or captured.</p>
Balance	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total amount – the net applied amount.</p>
CancellationDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date that the payment was voided.</p>
CancellationEffectiveDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date when the cancellation of this payment takes effect.</p>
CancellationGatewayDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The gateway provides this date following a successful cancellation request.</p>
CancellationGatewayRefNumber	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description System-provided unique transaction ID from the payment gateway.</p>
CancellationGatewayResultCode	<p>Type string</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Gateway-specific result code. Must be mapped to a Salesforce-specific result code.</p>
CancellationSfResultCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A Salesforce result code that can be mapped to one or more gateway result codes. We recommend that the payment gateway adapter layer maps gateway-specific codes to the Salesforce result code.</p>
ClientContext	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description Contains caller context for payment APIs. Useful for re-establishing context during an asynchronous payment transaction.</p>
Comments	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Users can provide additional details about the payment record. Supports a maximum of 1000 characters.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Three-letter ISO 4217 currency code associated with the payment group record.</p>
Date	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p>Description The date when this payment record was created.</p>
EffectiveDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date that this payment takes effect.</p>
Email	<p>Type email</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Email address of the user who initiated the payment.</p>
GatewayDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The gateway provides this date for reference following a successful gateway communication.</p>
GatewayRefDetails	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Additional data that can't be stored in other fields on the payment record. You can use this field for transactions following the initial transaction that creates the payment record. You can use any data that isn't normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.</p>
GatewayRefNumber	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Unique transaction ID created by the payment gateway.</p>

Field	Details
GatewayResultCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Gateway-specific result code that must map to a Salesforce-specific result code. One Salesforce result code can map to multiple gateway result codes.</p>
GatewayResultCodeDescription	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Description of the gateway's result code.</p>
ImpactAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Shows the payment's financial impact against the customer's accounts receivable. If the payment is valid, this value is the negative of the payment amount. If the payment is voided, this value is 0.</p>
IpAddress	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The IP address of the user who initiated the payment.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
MacAddress	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The MAC address of the user who initiated the payment.</p>
NetApplied	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Total payment amount of that has been applied, including adjustments.</p>
NetRefundApplied	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Total refund amount that has been applied to the payment, including adjustments.</p>
OrderPaymentSummaryId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Order payment summaries show the balances of each authorization, capture, and refund made against an order.</p>
PaymentAuthorizationId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The authorization record for this payment. If there is a delayed capture (when the capture occurs after the authorization), all captures must be made against a previously successful authorization transaction.</p> <p>This is a relationship field.</p>

Field	Details
	<p>Relationship Name PaymentAuthorization</p> <p>Relationship Type Lookup</p> <p>Refers To PaymentAuthorization</p>
PaymentGatewayId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the payment gateway that processed the payment. Populated from the authorization record if there is delayed payment. This is a relationship field.</p> <p>Relationship Name PaymentGateway</p> <p>Relationship Type Lookup</p> <p>Refers To PaymentGateway</p>
PaymentGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Payment groups organize all the payment transactions that have been made against a record such as an account or contract. Populated from the authorization record if there is delayed payment. This is a relationship field.</p> <p>Relationship Name PaymentGroup</p> <p>Relationship Type Lookup</p> <p>Refers To PaymentGroup</p>
PaymentMethodId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The payment method that the customer used to provide this payment information. This is a relationship field.</p> <p>Relationship Name PaymentMethod</p> <p>Relationship Type Lookup</p> <p>Refers To PaymentMethod</p>
PaymentNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description System-created unique ID for this payment record.</p>
Phone	<p>Type phone</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Phone number of the customer who initiated the payment.</p>
ProcessingMode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description Defines whether the payment has been made outside of the payment platform. Possible values are:</p> <ul style="list-style-type: none"> • External: Transactions happened outside of the Salesforce payments platform. • Salesforce: Salesforce made and recorded an external call to the payment gateway.
SfResultCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Decline: The gateway call failed, but it may still work if the transaction is attempted again. For example, the customer had insufficient funds or briefly lost their connection. • Indeterminate: The gateway didn't respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway. • PermanentFail: The gateway call failed and won't work even if tried again. Gateway calls fail permanently for one of two reasons: <ul style="list-style-type: none"> – Hard Decline: The customer's payment account has been closed or terminated. – Fraud: The gateway recognized the payment or payment method as known fraud. • RequiresReview: The customer bank requires more information before completing the payment. • Success: The gateway call succeeded. • SystemError: Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes. • ValidationError: Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV.
<p>Status</p>	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description</p> <p>Defines the state of this payment.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Canceled: This payment has been unapplied from its target and can no longer be allocated. • Draft: The payment can be edited before posting it and allocating it to a target. • Processed: This payment has been finalized and can be allocated against a target. <p>Users can manually change the Status field's values as follows:</p> <ul style="list-style-type: none"> • Draft to Processed • Processed to Canceled • Draft to Canceled
<p>TotalApplied</p>	<p>Type</p> <p>currency</p>

Field	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The total amount of this payment's balance that has been applied against an invoice.</p>
TotalRefundApplied	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total amount of a refund that has been applied against this payment.</p>
TotalRefundUnapplied	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total amount of a previously applied refund that has since been unapplied from this payment.</p>
TotalUnapplied	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total amount of this payment that was previously applied and then unapplied.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Defines how the customer used this payment. Possible values are:</p> <ul style="list-style-type: none"> • Capture • Sale

Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Defines the state of the payment authorization reversal. Possible values are:</p> <ul style="list-style-type: none"> • <code>Canceled</code>—The payment authorization reversal has been canceled. The parent authorization has returned to its pre-reversal balance. • <code>Draft</code>: The payment authorization reversal can be edited before applying it against the parent authorization. • <code>Processed</code>—The payment authorization reversal has been finalized. <p>Users can manually change the Status field's values as follows:</p> <ul style="list-style-type: none"> • Draft to Processed • Processed to Canceled • Draft to Canceled
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Defines how the customer used the reversal. Possible values are:</p> <ul style="list-style-type: none"> • <code>Capture</code> • <code>Reversal</code> • <code>Sale</code>

PaymentAuthorization

Represents a single payment authorization event where users can capture or reverse a payment against a reserve of funds. This object is available in API version 48.0 and later.

A common type of payment authorization occurs when a user sees a pending transaction against their credit card account.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated. Commerce Payments entities are available only in Lightning Experience.

Fields

Field	Details
AccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Customer account. This is a relationship field.</p> <p>Relationship Name Account</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
Amount	<p>Type currency</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The amount authorized for the payment event.</p>
Balance	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Authorized amount – total processed captured amount – total processed authorization reversal amount. Balance can be positive or negative.</p>
Comments	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p>Description Users can enter comments to provide additional details about the authorization.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Three-letter ISO 4217 currency code associated with the payment authorization record.</p>
Date	<p>Type dateTime</p> <p>Properties Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p>Description By default, the day the authorization record was created. Users can also enter a different date. Editable only when the payment authorization's status is Draft.</p>
EffectiveDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date on which the authorization takes effect. Editable only when the payment authorization's status is Draft.</p>
Email	<p>Type email</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Fraud parameter.</p>
ExpirationDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Authorizations can't be captured after their expiration dates.</p>
GatewayAuthCode	<p>Type string</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Authorization approval code from the payment gateway.</p>
GatewayDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Payment authorization approval code from the payment gateway.</p>

	<p>Description</p> <p>Allows Order Management Services to map an Order Management gateway to a Payments Platform gateway. This field is unique within your organization.</p>
LastReferencedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
MerchantCredentialId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Looks up to the merchant credential setup entity to reference merchant information.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>MerchantCredential</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>NamedCredential</p>
PaymentGatewayName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p>Description</p> <p>User-defined name for the payment gateway.</p>

Field	Details
PaymentGatewayProviderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Looks up to the payment gateway provider, which captures common details and configurations for payment gateways. This is a relationship field.</p> <p>Relationship Name PaymentGatewayProvider</p> <p>Relationship Type Lookup</p> <p>Refers To PaymentGatewayProvider</p>
Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Defines whether the Payments Platform can use this payment gateway for calls to the external payment gateway. Inactive payment gateways can't be used. Possible values are:</p> <ul style="list-style-type: none"> • Active • Inactive

PaymentGatewayLog

Stores information exchanged between the Salesforce payments platform and external payment gateways. Gateway logs can also record payloads from external payment entities. This object is available in API version 48.0 and later.

Deleting or archiving a payment gateway log doesn't impact financial data on other payment entities.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated. Commerce Payments entities are available only in Lightning Experience.

Fields

Field	Details
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
GatewayAuthCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Authorization approval code from the gateway.</p>
GatewayAvsCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Code sent by gateways that use an address verification system.</p>
GatewayDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date and time that of the gateway communication that lead to the creation of this gateway log.</p>
GatewayMessage	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description Information or error messages sent from the gateway.</p>
GatewayRefNumber	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Unique transaction ID created by the payment gateway.</p>
GatewayResultCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Gateway-specific result code. Must be mapped to a Salesforce-specific result code.</p>
GatewayResultCodeDescription	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Description of the gateway's result code. This field is useful for providing more information around why the gateway returned a certain result code.</p>
InteractionStatus	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Describes the result of communication between the payments platform and a payment gateway. Possible values are:</p> <ul style="list-style-type: none"> • Failed • Initiated • NoOp • Success • Timeout
InteractionType	<p>Type picklist</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Describes the type of interaction with the gateway. This field is required for logs created in Salesforce.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Authorization • AuthorizationReversal • Avs • Capture • CheckGiftCardBalance • ReferencedRefund • Sale • Tokenize • Void
IsNotification	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description For asynchronous transactions, shows whether the gateway log belongs to the notification (yes) or the initial transaction (no).</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • No • Yes
OrderPaymentSummaryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Order payment summaries show the balances of each authorization, capture, and refund made against an order.</p>
PaymentGatewayId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description The Payments Platform payment gateway record used for communication with the external payment gateway. This is a relationship field.</p> <p>Relationship Name PaymentGateway</p> <p>Relationship Type Lookup</p> <p>Refers To PaymentGateway</p>
PaymentGatewayLogNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description System-generated unique ID for this payment gateway log record.</p>
ReferencedEntityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Foreign key with DomainSet of PaymentAuth and Payment. This is a polymorphic relationship field.</p> <p>Relationship Name ReferencedEntity</p> <p>Relationship Type Lookup</p> <p>Refers To CardPaymentMethod, Payment, PaymentAuthAdjustment, PaymentAuthorization, Refund</p>
Request	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Raw payload. No sensitive attributes are stored.</p>
Response	<p>Type textarea</p>

Field	Details
	<p>Properties Create, Nillable, Update</p> <p>Description Raw payload.</p>
SfRefNumber	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description If an IdempotencyKey was passed in the API request, its value is stored here in text format.</p>
SfResultCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Decline: The gateway call failed, but it may still work if the transaction is attempted again. For example, the customer had insufficient funds or briefly lost their connection. • Indeterminate: The gateway didn't respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway. • PermanentFail: The gateway call failed and won't work even if tried again. Gateway calls fail permanently for one of two reasons: <ul style="list-style-type: none"> – Hard Decline: The customer's payment account has been closed or terminated. – Fraud: The gateway recognized the payment or payment method as known fraud. • RequiresReview: The customer bank requires more information before completing the payment. • Success: The gateway call succeeded. • SystemError: Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes. • ValidationError: Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV.

PaymentGatewayProvider

Setup entity for payment gateways. Defines the connection to a payment gateway Apex adapter. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Payments entities, your org must have the Payment Platform org permission. This permission is available in the following licenses.

- Salesforce Order Management
- Salesforce B2B
- Salesforce B2C

Commerce Payments entities are available only in Lightning Experience.

Fields

Field	Details
ApexAdapterId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The Apex adapter reference for your payment gateway. This field is unique within your organization. This is a relationship field.</p> <p>Relationship Name ApexAdapter</p> <p>Relationship Type Lookup</p> <p>Refers To ApexClass</p>
Comments	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Users can add comments to provide additional details about a record. Maximum of 1000 characters.</p>
DeveloperName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>(Optional) The username of the developer who configured the payment gateway. For reference only.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
IdempotencySupported	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>Defines whether the Payments Platform will charge the customer/merchant's card multiple times for the same transaction if the same request is made in rapid succession. This can occur when a user clicks a Pay button twice, or if the gateway's server goes down after fulfilling a payment request and the client immediately tries making another payment. If this field has a value of Yes, the Payments Platform ignores identical payment requests made immediately after an original request.</p> <p>Different payment gateways have varying levels of idempotency support. When configuring a new payment gateway integration, plan accordingly.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • No • Yes
Language	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>Customer language used for the payment gateway.</p>
LastViewedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
MasterLabel	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p>Description</p> <p>Specifies the name of the payment gateway provider.</p>
NamespacePrefix	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Namespace for the payment gateway platform.</p>

PaymentGroup

Top-level object that groups of all the payment transactions that have been processed an order or contract. PaymentGroup is a standalone object, so it isn't required for users to execute payment transactions (authorizations, captures, refunds, and sales). This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated. Commerce Payments entities are available only in Lightning Experience.

Fields

Field	Details
PaymentGroupNumber	<p>Type</p> <p>string</p>

Field	Details
	<p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description System-defined unique ID for the payment group.</p>
SourceObjectId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The order or invoice related to all the payment transactions in the payment group. This is a relationship field.</p> <p>Relationship Name SourceObject</p> <p>Relationship Type Lookup</p> <p>Refers To Order</p>

PaymentLineInvoice

Represents a payment allocated to or unallocated from an invoice. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated. Commerce Payments entities are available only in Lightning Experience.

Fields

Field	Details
Amount	<p>Type currency</p>

Field	Details
	<p>Properties Create, Filter, Sort</p> <p>Description Total amount applied or unapplied by this payment line.</p>
AppliedDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description The date that this line was applied to an invoice or payment. If this field is null, it inherits the value of the payment line invoice's Date field.</p>
AssociatedAccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The account for this payment line's target invoice. This is a relationship field.</p> <p>Relationship Name AssociatedAccount</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
AssociatedPaymentLineId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The paymentLine that was unapplied. Populated only when PaymentLineInvoice's Type field has a value of Unapplied. This is a relationship field.</p> <p>Relationship Name AssociatedPaymentLine</p> <p>Relationship Type Lookup</p> <p>Refers To PaymentLineInvoice</p>

Field	Details
Comments	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Users can add comments to provide additional details about a record. Maximum of 1000 characters.</p>
Date	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description The date and time that this payment line was created.</p>
EffectiveDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description Defines the date and time when the payment line application or unapplication becomes effective.</p>
EffectiveImpactAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Shows how this payment invoice line impacts a customer's accounts receivable. This value is positive when PaymentLineInvoice's Type field is Applied, and negative when PaymentLineInvoice's Type is Unapplied. If there's an unapplied line related to this record, EffectiveImpactAmount has a value of 0.</p> <p> Note: EffectiveImpactAmount evaluates only the applied and unapplied line pair. Therefore, the effective impact amount could be different for different lines within the same payment.</p>
HasBeenUnapplied	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p>

Field	Details
	<p>Description</p> <p>Defines whether this payment line has been unapplied from the target invoice. Has a value of NA when PaymentInvoiceLine's Type field has a value of Unapplied. Can be No or Yes if Type has a value of Applied.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • NA • No • Yes
ImpactAmount	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Shows the payment's financial impact against the customer's accounts receivable. If PaymentLineInvoice has a Type of Applied, the ImpactAmount is the negative equivalent of the line's Amount field. Otherwise, ImpactAmount equals Amount.</p>
InvoiceId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>Target invoice for this payment line.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>Invoice</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>Invoice</p>
PaymentBalance	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Total balance of this line's parent payment record following the application or unapplication of this payment line.</p>

Field	Details
PaymentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Parent payment for this payment line. This is a relationship field.</p> <p>Relationship Name Payment</p> <p>Relationship Type Lookup</p> <p>Refers To Payment</p>
PaymentLineInvoiceNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description System-defined unique ID for this payment line.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description Defines whether this payment line has been applied or unapplied to the target invoice. Possible values are:</p> <ul style="list-style-type: none"> • Applied • Unapplied
UnappliedDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description The date that this payment line was unapplied from the target invoice. Populated only when the Type field equals Unapplied. Inherits the value of the Date field.</p>

Usage

Use a payment line to apply all or part of a payment's balance to an invoice. The PaymentLineInvoice object represents the balance taken from the payment and applied toward the invoice. You can apply a payment's balance when you create the payment record or afterward. The payment line must have the same currency as the parent payment.

A payment line has an amount, which represents the total amount taken from the payment, and balance, which represents the remaining amount after the payment line has been applied to an invoice. A payment's amount can't be less than the sum of all of its payment line amounts.

One payment can have multiple payment lines. A payment line must be related to only payment.

You can create multiple payment lines on a payment apply each line to different invoices on the same account, or to invoices on different accounts.

Here's one way you could use Salesforce API to apply a payment to an invoice using a payment line.

PaymentMethod

The method that a buyer uses to compensate the seller of a good or service. Common payment methods include cash, checks, credit or debit cards, money orders, bank transfers, and online payment services. This object is available in API version 48.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

Fields

Field	Details
AccountId	Type reference

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The account entity linked to this payment method. This is a relationship field.</p> <p>Relationship Name Account</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
Comments	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description Users can add comments to provide additional details about a record. Maximum of 1000 characters.</p>
CompanyName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Company name for this payment method. Part of the payment method's address.</p>
ImplementorType	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Shows the type of payment method.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description Unique number assigned to the payment method. Numbers start at 1000 and are read only, but administrators can change the format.</p>

Field	Details
NickName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description User-defined nickname for this payment method.</p>
PaymentMethodAddress	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description Uses address column type. First name and last name are listed as separate fields.</p>
PaymentMethodCity	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Part of the address for this payment method.</p>
PaymentMethodCountry	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Part of the address for this payment method.</p>
PaymentMethodGeocodeAccuracy	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Part of the address for this payment method.</p>
PaymentMethodLatitude	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Part of the address for this payment method.</p>

Field	Details
PaymentMethodLongitude	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Part of the address for this payment method.</p>
PaymentMethodPostalCode	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Part of the address for this payment method.</p>
PaymentMethodState	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Part of the address for this payment method.</p>
PaymentMethodStreet	<p>Type textarea</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Part of the address for this payment method.</p>
Status	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The state of the payment method. Possible values are:</p> <ul style="list-style-type: none"> • Active—The Payments Platform can use the payment method to make payments. • Cancelled—The Payments Platform can no longer use the payment method to make payments. • InActive—The Payments Platform currently can't use the payment method to make payments. Admins can change this value to Active when needed.

PaymentRequest

Represents a financial compensation request for goods or services provided by a third party. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available if the add-on license for Claims Management is enabled.

Fields

Field	Details
ClaimId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The claim associated with the payment request. This is a relationship field.</p> <p>Relationship Name Claim</p> <p>Relationship Type Lookup</p> <p>Refers To Claim</p>
DueDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The due date of the payment request.</p>
EndDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p>Description The end date of services represented in the payment request.</p>
FacilityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The facility associated with the payment request. This is a polymorphic relationship field.</p> <p>Relationship Name Facility</p> <p>Relationship Type Lookup</p> <p>Refers To Account, Location</p>
InsurancePolicyId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The insurance policy associated with the payment request. This is a relationship field.</p> <p>Relationship Name InsurancePolicy</p> <p>Relationship Type Lookup</p> <p>Refers To InsurancePolicy</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p>

Field	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the Payment Request.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the record owner. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ReceivedDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date on which the recipient received the payment request.</p>
ReceivedMethod	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The method in which the payment request was received. Possible values include:</p>

Field	Details
	<ul style="list-style-type: none"> • Electronic Submission • Paper Mail
ReferenceNumber	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description External unique identifier from the submitting party, such as an invoice number.</p>
RemittanceAccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The account that receives the remittance payment for the services. This is a polymorphic relationship field.</p> <p>Relationship Name RemittanceAccount</p> <p>Relationship Type Lookup</p> <p>Refers To Account, InsurancePolicyParticipant</p>
ServiceProviderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The service provider associated with the payment request. This is a polymorphic relationship field.</p> <p>Relationship Name ServiceProvider</p> <p>Relationship Type Lookup</p> <p>Refers To Account, Contact</p>
ServiceRecipientId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The account that receives the services in the payment request. This is a polymorphic relationship field.</p> <p>Relationship Name ServiceRecipient</p> <p>Relationship Type Lookup</p> <p>Refers To Account, Contact, InsurancePolicyParticipant</p>
StartDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The start date of services represented in the payment request.</p>
Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Status of the payment request. Possible values include:</p> <ul style="list-style-type: none"> • Paid • Received
SubmissionType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Type of payment request submission, such as an invoice from a service provider. Possible values include:</p> <ul style="list-style-type: none"> • Invoice • Online Submission

Field	Details
SubmittedDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date on which the service provider submitted the payment request.</p>
SubmittingAccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The billing account that submits the payment to the service recipient. This is a relationship field.</p> <p>Relationship Name SubmittingAccount</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
TotalAdjustmentAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total amount that is adjusted, such as the collection of a copay onsite. This is a calculated field.</p>
TotalRequestedAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total amount requested for reimbursement. This is a calculated field.</p>
TotalServiceAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>Total amount of the services, such as the total services billed.</p> <p>This is a calculated field.</p>

Usage

Use this object to process inbound requests for payments, such as an inbound invoice submitted to an insurance carrier.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PaymentRequestFeed on page 3944

Feed tracking is available for the object.

PaymentRequestHistory on page 3956

History is available for tracked fields of the object.

PaymentRequestOwnerSharingRule on page 3961

Sharing rules are available for the object.

PaymentRequestShare on page 3967

Sharing is available for the object.

PaymentRequestLine

Represents the line item details of the financial compensation request. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available if the add-on license for Claims Management is enabled.

AdjustmentAmount	<p>Type</p> <p>currency</p>

Field	Details
	<p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Adjustment amount for reasons such as copay, deductible, and coinsurance.</p>
AdjustmentReason	<p>Type multipicklist</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description The reason for adjustment. Possible values include:</p> <ul style="list-style-type: none"> • Coinsurance • Copay • Deductible
BenefitName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The name of benefit associated with the payment request line, such as Physical Therapy or Ambulance Transportation.</p>
ClaimItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The claim item associated with the payment request line. This is a relationship field.</p> <p>Relationship Name ClaimItem</p> <p>Relationship Type Lookup</p> <p>Refers To ClaimItem</p>
DiagnosticCodeId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The diagnostic code associated with the payment request line. This is a polymorphic relationship field.</p> <p>Relationship Name DiagnosticCode</p> <p>Relationship Type Lookup</p> <p>Refers To CodeSet, CodeSetBundle</p>
EndDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The end date of services represented in the payment request line.</p>
FacilityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The facility associated with the payment request line. This is a polymorphic relationship field.</p> <p>Relationship Name Facility</p> <p>Relationship Type Lookup</p> <p>Refers To Account, Location</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>

Field	Details
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the Payment Request Line.</p>
PaymentRequestId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The payment request associated with the payment request line. This is a relationship field.</p> <p>Relationship Name PaymentRequest</p> <p>Relationship Type Lookup</p> <p>Refers To PaymentRequest</p>
Quantity	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Number of units the payment request line represents, such as number of days in hospital.</p>
QuantityUnitOfMeasure	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description Unit of measure for the quantity field.</p> <p>Possible values include:</p> <ul style="list-style-type: none"> • Days • Nights • Visits
RequestedAmount	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Amount that the requestor is seeking for payment, which is the service amount minus the adjustment amount.</p>
ServiceAmount	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Total service amount for the payment request line before adjustments.</p>
ServiceCodeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The service code associated with the payment request line. This is a polymorphic relationship field.</p> <p>Relationship Name ServiceCode</p> <p>Relationship Type Lookup</p> <p>Refers To CodeSet, CodeSetBundle</p>
ServiceProviderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description The service provider associated with the payment request line. This is a polymorphic relationship field.</p> <p>Relationship Name ServiceProvider</p> <p>Relationship Type Lookup</p> <p>Refers To Account, Contact</p>
ServiceType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Type of requested service. Possible values include:</p> <ul style="list-style-type: none"> • Device • Medication • Procedure • Repairs
StartDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The start date of services represented in the payment request line.</p>
Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The status of the payment request line. Possible values include:</p> <ul style="list-style-type: none"> • Paid • Partially Paid • Received

Field	Details
UnitPrice	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Unit Price for the quantity and quantity unit of measure.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PaymentRequestLineFeed on page 3944

Feed tracking is available for the object.

PaymentRequestLineHistory on page 3956

History is available for tracked fields of the object.

PendingServiceRouting

Represents a work assignment that's waiting to be routed. This object is available in API version 40.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

Fields

Field	Details
CapacityPercentage	<p>Type percent</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Indicates the amount of work that this item represents as a percentage. Valid values are 0–100.</p>

Field	Details
CapacityWeight	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Indicates the amount of work that this work item represents as a whole number.</p>
CustomRequestedDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Retains the datetime of a work item's initial request, so work items are rerouted using the datetime of the initial work request. When left blank, work items are rerouted using the datetime when they were rerouted.</p>
DropAdditionalSkillsTimeout	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The period of time to wait before a skill marked as additional is dropped from Omni-Channel routing. The case is then routed to the best-matched agent even if they don't have all the skills.</p>
GroupId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the Omni-Channel queue.</p>
IsOwnerChangeInitiated	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether a work item owner change triggered the direct assignment of the work item to the agent. The default value is false.</p>

Field	Details
IsPreferredUserRequired	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether a work item should stay with the preferred user even when the user is not available, The default value is false. This field is available in API version 50.0 and later.</p>
IsPushAttempted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether a push has been attempted. <code>true</code> if an agent was chosen at least once to route this <code>PendingServiceRouting</code>; <code>false</code> otherwise.</p>
IsPushed	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the <code>PendingServiceRouting</code> is pushed to an agent.</p>
IsReadyForRouting	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the work item is ready to be routed to an agent. You can't edit a <code>PendingServiceRouting</code> object that is set to <code>True</code>.</p>
IsStatusChangeInitiated	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether a work item status change triggered the direct assignment of the work item to the agent. The default value is false. This field is available in API version 50.0 and later.</p>
IsTransfer	<p>Type boolean</p>

Field	Details
	<p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether this PendingServiceRouting is a transfer request.</p>
LastDeclinedAgentSession	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Chat Session ID of the agent who last declined this work item.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description Name of the PendingServiceRouting.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the owner of this PendingServiceRouting.</p>
PreferredUserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the preferred user to handle the work.</p>
PushTimeout	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The number of seconds set for push timeout. 0 is returned when push timeout isn't enabled. Available in API version 36.0 and later.</p>

Field	Details
QueueId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the Omni-Channel queue. Due to API changes, QueueId is no longer recommended. Use GroupId instead.</p>
RoutingModel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Type of routing model. For a queue configured with a queue routing configuration, the routing model is <code>ExternalRouting</code> for all external routing <code>PendingServiceRouting</code>.</p>
RoutingPriority	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The order in which work items are routed to agents.</p>
RoutingType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Indicates whether the work item is routed by queue or by skills-based routing. Valid values are <code>QueueBased</code> and <code>SkillsBased</code>.</p>
SecondaryRoutingPriority	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Indicates the secondary routing priority.</p>
Serial	<p>Type int</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description Serial number of the <code>PendingServiceRouting</code>. The serial number is automatically incremented each time the <code>PendingServiceRouting</code> is modified.</p>
<code>ServiceChannelId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the Service Channel.</p>
<code>WorkItemId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the work item.</p>

Usage

When you use `PendingServiceRouting` objects for queue-based routing, the `PendingServiceRouting` objects don't invoke triggers before or after insert, or any action (trigger, workflow rule, validation) that could interfere with the creation of the `PendingServiceRouting` object.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[PendingServiceRoutingOwnerSharingRule](#)

Sharing rules are available for the object.

[PendingServiceRoutingShare](#)

Sharing is available for the object.

PendingServiceRoutingInteractionInfo

Represents `PendingServiceRouting` interaction information that's used when work is routed to an agent. For a screen pop, it specifies which records to open when work is routed to an agent from a specific channel. `PendingServiceRoutingInteractionInfo` is read-only. This object is available in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled. To view this object, you must have the "Manage Flow" user permission.

Fields

Field	Details
IsFocused	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether this record shows on the agent's screen when multiple records open at the same time.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name of the PendingServiceRoutingInteractionInfo.</p>
PendingServiceRoutingId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the PendingServiceRouting on page 2724 from which the AgentWork on page 412 is created. This is a relationship field.</p> <p>Relationship Name PendingServiceRouting</p> <p>Relationship Type Lookup</p> <p>Refers To PendingServiceRouting</p>
PrimaryRecordId	<p>Type reference</p>

Field	Details
	<p>Properties Filter, Group, Sort</p> <p>Description The ID of the object that's routed to the agent through Omni-Channel.</p> <p>Relationship Name PrimaryRecord</p> <p>Relationship Type Lookup</p>
TargetObjectId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The record to open when work is routed to the agent.</p> <p>Relationship Name TargetObject</p> <p>Relationship Type Lookup</p>

Period

Represents a fiscal period defined in FiscalYearSettings.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only Chatter Free users and standard users can access this object.

Fields

Field	Details
EndDate	<p>Type date</p> <p>Properties Filter, Group, Sort</p>

Field	Details
	<p>Description The last date of the fiscal period.</p>
FiscalYearSettingsId	<p>Type reference</p> <p>Properties Filter, Nillable, Group, Sort</p> <p>Description The parent record for this period. This is a relationship field.</p> <p>Relationship Name FiscalYearSettings</p> <p>Relationship Type Lookup</p> <p>Refers To FiscalYearSettings</p>
FullyQualifiedLabel	<p>Type string</p> <p>Properties Group, Nillable</p> <p>Description Represents the period's complete name in the UI. For example, "September FY 2016".</p>
IsForecastPeriod	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the period is associated with Collaborative Forecasts (<code>true</code>) or not (<code>false</code>).</p>
Number	<p>Type int</p> <p>Properties Filter, Nillable, Group, Sort</p> <p>Description If the labeling scheme of your fiscal year's quarters or months is numbered, this field indicates the relative number of the row.</p>

Field	Details
PeriodLabel	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description If the months in your fiscal year use custom names, then this field contains the appropriate name for rows of type Month.</p>
QuarterLabel	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description If the quarters in your fiscal year use custom names, then this field contains the appropriate name for rows of type Quarter.</p>
StartDate	<p>Type date</p> <p>Properties Filter, Group, Sort</p> <p>Description The first date of the fiscal period.</p>
Type	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Indicates whether the period is of type Month, Quarter, Week, or Year. Label is the field value.</p>

Usage

In API version 36.0 and earlier, querying the Period object yields no results. In API version 37.0 and later, a query returns period records.

SEE ALSO:

[FiscalYearSettings](#)

PermissionSet

Represents a set of permissions that's used to grant more access to one or more users without changing their profile or reassigning profiles. This object is available in API version 22.0 and later.

PermissionSet has a read-only child relationship with PermissionSetGroup. PermissionSet contains the aggregated permissions for the group.

You can use permission sets to grant access, but not to deny access.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Manage Session Permission Set Activations
- Assign Permission Sets
- Manage Profiles and Permission Sets

To view the following settings, assignments, and permissions for standard and custom objects in a specified permission set, the View Setup and Configuration permission is required.

- Client settings
- Field permissions
- Layout assignments
- Object permissions
- Permission dependencies
- Permission set tab settings
- Permission set group components
- Record types

Fields

Field Name	Details
Description	<p>Type string</p> <p>Properties Create, Filter, Nillable, Group, Sort, Update</p> <p>Description A description of the permission set. Limit: 255 characters.</p>
HasActivationRequired	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p>Description Indicates whether the permission set requires an associated active session (<code>true</code>) or not (<code>false</code>).</p>
<code>IsCustom</code>	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description If <code>true</code>, the permission set is custom (created by an admin); if <code>false</code>, the permission set is standard and related to a specific permission set license.</p>
<code>IsOwnedByProfile</code>	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description If <code>true</code>, the permission set is owned by a profile. Available in API version 25.0 and later.</p>
<code>Label</code>	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The permission set label, which corresponds to Label in the user interface. Limit: 80 characters.</p>
<code>LicenseId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of either the related <code>PermissionSetLicense</code> or <code>UserLicense</code> associated with this permission set. Available in API version 38.0 and later. Use this field instead of <code>UserLicenseId</code>, which is deprecated and only available up to API Version 37.0. This is a polymorphic relationship field.</p> <p>Relationship Name License</p> <p>Relationship Type Lookup</p> <p>Refers To <code>PermissionSetLicense</code>, <code>UserLicense</code></p>

Field Name	Details
Name	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. Corresponds to API Name in the user interface. Limit: 80 characters.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix for a permission set that's been installed as part of a managed package. If the permission set isn't packaged or is part of an unmanaged package, this value is empty. Available in API version 23.0 and later.</p>
PermissionsPermissionName	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description One field for each permission. If <code>true</code>, users assigned to this permission set have the named permission. The number of fields varies depending on the permissions for the organization and license type.</p> <p> Tip: To get a list of available permissions in the SOAP API, use <code>describeSObjects()</code>.</p>
PermissionSetGroupId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description If the permission set is owned by a permission set group, this field returns the ID of the permission set group. If the permission set isn't owned by a permission set group, this field returns a null value. Available in API version 45.0 and later.</p> <p>This is a relationship field.</p> <p>Relationship Name PermissionSetGroup</p>

Field Name	Details
	<p>Relationship Type Lookup</p> <p>Refers To PermissionSetGroup</p>
ProfileId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description If the permission set is owned by a profile, this field returns the ID of the Profile. If the permission set isn't owned by a profile, this field returns a null value. Available in API version 25.0 and later.</p> <p>This is a relationship field.</p> <p>Relationship Name Profile</p> <p>Relationship Type Lookup</p> <p>Refers To Profile</p>
Type	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Available in API version 46.0 and later.</p>
UserLicenseId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the UserLicense associated with this permission set. This field is nillable in API version 26.0 and later and available up to API version 37.0 In API version 38.0 and later, use <code>LicenseId</code>.</p>

Usage

Use the PermissionSet object to query existing permission sets.

For example, to search for all permission sets that contain the “Modify All Data” permission:

```
SELECT Name, PermissionsModifyAllData
FROM PermissionSet
WHERE PermissionsModifyAllData=true
```

When combined with the PermissionSetAssignment object, you can create a nested query that returns all users assigned to a particular permission like “Modify All Data”:

```
SELECT Name, (SELECT AssigneeId FROM Assignments)
FROM PermissionSet
WHERE PermissionsModifyAllData=true
```

If the permission set isn’t assigned to a user, you can also create or delete a permission set.

User Licenses

The user license controls the permissions that are available in a permission set.

Every permission set can be associated with a user license or permission set license. If you plan to assign a permission set to multiple users with different user and permission set licenses, leave `LicenseId` empty. If only users with one type of license use this permission set, set the `LicenseId` to that single user or permission set license. If you want a permission set associated with a permission set license, then set `LicenseId` to the permission set license. To get the `LicenseId`, run this query:

```
SELECT Id, Name
FROM UserLicense
```

Alternatively, to query a user or profile for the `LicenseId`.

```
SELECT Id, Profile.UserLicenseId
FROM User
```

Child Objects

When using the API, think of each permission set or related set of access controls as an empty container that you fill with permission records.

In the API, a permission set can contain user, object, and field permissions, and setup entity access settings for other settings, such as Apex classes.

- ObjectPermissions and FieldPermissions objects are available in API version 24.0 and later.
- The SetupEntityAccess object is available in API version 25.0 and later.
- The PermissionSetGroupComponent object is available in API version 45 and later.

Only user permissions are managed in the PermissionSet API object; all other permission types are managed in child API objects.

In these child objects, access is stored in a record, while the absence of a record indicates no access. To return a record in a SOQL query, a minimum permission or setting is required for each child object.

Because permissions are stored in related objects, it’s important to understand what questions to ask when using SOQL. For example, let’s say you want to know which permission sets have “Delete” on an object. You also want to know which ones include permissions that allow approval of a return merchandise authorization (where the approval checkbox is controlled with field permissions). Asking the right questions when using SOQL with permission sets ensures that you get the information you need, such as whether to migrate permissions or assign a permission set to a user.

For example, the following returns all permission sets where the “Read” permission is enabled for the Merchandise__c object.

```
SELECT SubjectType, ParentId, PermissionsRead
FROM ObjectPermissions
WHERE PermissionsRead = True AND SubjectType = 'Merchandise__c'
```

You can query for all permission sets that have “Read” on an object. However, you can’t query for permission sets that have no access on an object, because no records exist for that object. For example, the following returns no records because the object must have at least “Read” to return any records.

```
SELECT SubjectType, ParentId, PermissionsRead
FROM ObjectPermissions
WHERE PermissionsRead = False AND SubjectType = 'Merchandise__c'
```

If you have at least the “Read” permission on an object, you can create a conditional query on other permissions in the same object. For example, the following returns any records where the object has at least the “Read” permission but not the “Edit” permission.

```
SELECT ParentId, PermissionsRead, PermissionsEdit
FROM ObjectPermissions
WHERE PermissionsEdit = False AND SubjectType = 'Merchandise__c'
```

To set an object or field permission to no access, delete the record that contains the permission. For example, to disable all object permissions in the Merchandise__c object for a particular permission set, first query to retrieve the ID of the object permission record.

```
SELECT Id
FROM ObjectPermissions
WHERE SubjectType = 'Merchandise__c'
```

Then delete the IDs returned from the query.

Note: If you try to update the object or field permissions by setting all permissions to false, the permission record is automatically deleted. Any subsequent queries for the record ID won’t return results and you must add a new permission record to grant access.

View a Permission Set with Nested Queries

You can build on the PermissionSet object using child relationships that show all of the permissions in a single permission set. For example, the following returns all permission sets and displays the “Transfer Leads” permission, as well as any “Read” permissions on any objects and fields.

```
SELECT Label, PermissionsTransferAnyLead,
(SELECT SubjectType, PermissionsRead FROM ObjectPerms),
(SELECT SubjectType, Field, PermissionsRead FROM FieldPerms)
FROM PermissionSet
```

Associated Profiles

In API version 25.0 and later, every profile is associated with a permission set that stores the profile’s user, object, and field permissions, as well as setup entity access settings. You can query permission sets that are owned by profiles but not modify them.

The following example returns all permission sets, including those owned by a profile.

```
SELECT Id, Label, ProfileId, Profile.Name
FROM PermissionSet
```

The following returns all permission sets except those permissions owned by profiles.

```
SELECT Id, Label, ProfileId, Profile.Name, IsOwnedByProfile
FROM PermissionSet
WHERE IsOwnedByProfile = FALSE
```

Because permission sets have child objects in the API, you can query their values on permission sets owned by a profile. For example, the following returns all enabled object permission records for profiles only.

```
SELECT Id, ParentId, PermissionsRead, ObjectType, Parent.ProfileId
FROM ObjectPermissions
WHERE Parent.IsOwnedByProfile = TRUE
```

Once you have the IDs for permission sets that are owned and not owned by profiles, use the [PermissionSetAssignment](#) object to see if users can access objects or fields via their profile permissions or their permission sets. For example, the following SOQL query returns all users who have the “Read” permission on the Merchandise__c object. It also specifies whether the permission is granted through a profile or permission set.

```
SELECT Assignee.Name, PermissionSet.Id, PermissionSet.isOwnedByProfile
FROM PermissionSetAssignment
WHERE PermissionSetId
IN (SELECT ParentId
FROM ObjectPermissions
WHERE SObjectType = 'Merchandise__c' AND PermissionsRead = true)
```

Note: For permission sets that are owned by profiles, don’t use Name and Label values that are returned in a query. Name and Label values from queries can change.

- [SetupEntityAccess](#)
- [PermissionSetAssignment](#)
- [Profile](#)

PermissionSetAssignment

Represents the association between a User and a PermissionSet. This object is available in API version 22.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Assign Permission Sets
- Manage User

Fields

Field Name	Details
AssigneeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the User to assign the permission set specified in <code>PermissionSetId</code>. This is a relationship field.</p> <p>Relationship Name Assignee</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
ExpirationDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date that the assignment of the permission set expires for the specified user. This field is available in API version 52.0 and later.</p>
IsActive	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the permission set assignment is active (<code>true</code>) or not (<code>false</code>). Defaults to <code>false</code>. This field is available in API version 52.0 and later.</p>
PermissionSetGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description If associated with a permission set group, this is the ID of that group. This field is available in API version 45.0 and later as part of a pilot. Refer to <code>PermissionSetGroup</code> for more information. This is a relationship field.</p>

Field Name	Details
	<p>Relationship Name PermissionSetGroup</p> <p>Relationship Type Lookup</p> <p>Refers To PermissionSetGroup</p>
PermissionSetId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the PermissionSet to assign to the user specified in <code>AssigneeId</code>. This is a relationship field.</p> <p>Relationship Name PermissionSet</p> <p>Relationship Type Lookup</p> <p>Refers To PermissionSet</p>

Usage

Finding Permission Set Assignments

Use the PermissionSetAssignment object to query permission set assignments to find out which permission sets are assigned to which users. Because each user can be assigned to many permission sets and each permission set can be assigned to many users, each PermissionSetAssignment ID represents the association of a single user and single permission set.

For example, to search for all permission sets assigned to a particular user:

```
SELECT Id, PermissionSetId
FROM PermissionSetAssignment
WHERE AssigneeId = '005600000017cKt'
```

To search for all users assigned to a particular permission set:

```
SELECT Id, AssigneeId
FROM PermissionSetAssignment
WHERE PermissionSetId = '0PS30000000000e'
```

You can also create a new permission set assignment, or use delete to remove a permission set that's assigned to a user. To update an assignment, delete an existing assignment and insert a new one.

User Licenses

When assigning a permission set, if the `PermissionSet` has a `UserLicenseId`, its `UserLicenseId` and the Profile `UserLicenseId` must match. To determine a user's license assignment, query the user's profile and then query the profile's license.

For example, to find a user's profile ID:

```
SELECT Id, ProfileId
FROM User
WHERE Id = '005D00000001GMAT'
```

To find a permission set's `UserLicenseId`:

```
SELECT Id, LicenseId
FROM PermissionSet
WHERE Id = '0PS30000000000e'
```

If the IDs match, the assignment succeeds.

To find all the permission sets with no license that are assigned to any user:

```
SELECT Id, Assignee.Name, PermissionSet.Name
FROM PermissionSetAssignment
WHERE PermissionSet.LicenseId = null
```

SEE ALSO:

[PermissionSet](#)

PermissionSetGroup

Represents a group of permission sets and the permissions within them. Use permission set groups to organize permissions based on job functions or tasks. Then, you can package the groups as needed. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObject()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Manage Session Permission Set Activations
- Assign Permission Sets

Fields

Field Name	Details
Description	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The Permission Set Group description.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The permission set group name used in the API.</p>
HasActivationRequired	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the permission set group requires an associated active session (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. This field is available in API version 53.0 and later.</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The Permission Set Group language. Possible values are:</p> <ul style="list-style-type: none">• <code>da</code> (Danish)• <code>de</code> (German)• <code>en_US</code> (English)• <code>es</code> (Spanish)• <code>es_MX</code> (Spanish - Mexican)• <code>fi</code> (Finnish)• <code>fr</code> (French)• <code>it</code> (Italian)• <code>ja</code> (Japanese)

Field Name	Details
	<ul style="list-style-type: none"> • ko (Korean) • nl_NL (Dutch) • no (Norwegian) • pt_BR (Portuguese - Brazilian) • ru (Russian) • sv (Swedish) • th (Thai) • zh_CN (Chinese - Simplified) • zh_TW (Chinese - Traditional)
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The permission set group label for the aggregated permissions.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The permission set group namespace prefix.</p>
Status	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description Indicates permission set group recalculation status.</p> <ul style="list-style-type: none"> • Updated. The group is current. • Outdated. The group requires recalculation. • Updating. The group is in recalculation mode. • Failed. The group recalculation failed.

Usage

Use the PermissionSetGroup object to query existing permission set groups and to find which aggregated permissions are included in the group.

For example, to search for all object permissions in a permission set group named StandardAccountingUsers:

```
SELECT SObjectType
FROM ObjectPermissions
WHERE Parent.PermissionSetGroup.DeveloperName = 'StandardAccountingUsers'
```

To create a permission set group using REST API, you can submit a POST request.

```
POST
/services/data/v45.0/tooling/subjects/PermissionSetGroup/

{
  "DeveloperName": "Sales", "MasterLabel": "sales_label"
}
```

PermissionSetGroupComponent

A junction object that relates the PermissionSetGroup and PermissionSet objects via their respective IDs; enables permission set group recalculation to determine the aggregated permissions for the group. This object is available in API version 45.0 and later.

PermissionSetGroupComponent is a child object of PermissionSet and PermissionSetGroup.

Supported Calls

`create()`, `delete()`, `describeSObject()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only users with the "View Setup and Configuration" permission can access this object.

Fields

Field Name	Details
PermissionSetGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The unique permission set group ID. This is a relationship field.</p> <p>Relationship Name PermissionSetGroup</p> <p>Relationship Type Lookup</p> <p>Refers To PermissionSetGroup</p>

Field Name	Details
PermissionSetId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The unique permission set ID of a permission set in a permission set group. This is a relationship field.</p> <p>Relationship Name PermissionSet</p> <p>Relationship Type Lookup</p> <p>Refers To PermissionSet</p>

Usage

Use the `PermissionSetGroupComponent` object to add members to or delete members from a permission set group, or to query for group members.

PermissionSetLicense

Represents a license that's used to enable one or more users to receive a specified permission without changing their profile or reassigning profiles. You can use permission set licenses to grant access, but not to deny access. This object is available in API version 29.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
DeveloperName	<p>Type string</p> <p>Properties Filter, Group, Sort</p>

Field Name

Details

Description

The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores.

Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.

Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.

ExpirationDate

Type

date

Properties

Filter, Group, Nillable, Sort

Description

The date at which the permission set license expires.

IsAvailableForIntegrations

Type

boolean

Properties

Defaulted on create, Filter, Group, Sort

Description

Indicates whether the permission set license is enabled for integrations (`true`) or not (`false`). When this field is set to `true`, Salesforce integration features can access data. The default value is `false`. This field is read-only in the API and can be edited only in Setup.

If integrations are required for feature functionality and the license isn't enabled for integrations, you receive an error when setting up the session-based permission set or executing the feature. Only enable integrations if necessary for the feature.

Language

Type

picklist

Properties

Filter, Group, Restricted picklist, Sort

Description

The language of the permission set license.

MasterLabel

Type

string

Field Name	Details
	<p>Properties Filter, Group, Sort</p> <p>Description The label of the permission set license. Label is Permission Set License Label.</p>
MaximumPermissionsPermissionName	<p>Type boolean</p> <p>Properties Filter,</p> <p>Description One field for each permission. For example, <code>MaximumPermissionsIdentityConnect</code> corresponds to the “Use Identity Connect” permission. If <code>true</code>, this <code>PermissionSetLicense</code> grants the specified permission. The number of fields varies depending on the permissions available for the organization.</p>
PermissionSetLicenseKey	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description A string that uniquely identifies a particular permission set license.</p>
Status	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The status of a permission set license. If <code>Active</code>, the permission set license is available. If <code>Disabled</code>, the permission set license has expired.</p>
TotalLicenses	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description The total number of this permission set license that are available to your organization.</p>
UsedLicenses	<p>Type int</p>

Field Name**Details****Properties**

Filter, Group, Sort

Description

The number of this permission set license that are currently assigned to users.

Usage

Users with the “View Setup and Configuration” permission can use the PermissionSetLicense object to view the set of currently defined permission set licenses in your organization.

Use the PermissionSetLicense object to query existing permission licenses.

For example, to return a list of all active permission set licenses:

```
SELECT MasterLabel
FROM PermissionSetLicense
WHERE Status = 'Active'
```

When combined with the PermissionSetLicenseAssign object, you can create a nested query that returns all users assigned to a particular permission set license like “Identity Connect”:

```
SELECT MasterLabel, (SELECT AssigneeId FROM PermissionSetLicenseAssignments)
FROM PermissionSetLicense
WHERE MaximumPermissionsIdentityConnect=true
```

SEE ALSO:

[PermissionSetLicenseAssign](#)

PermissionSetLicenseAssign

Represents the association between a User and a PermissionSetLicense. This object is available in API version 29.0 and later.

Note: The relationship name for PermissionSetLicenseAssign is *PermissionSetLicenseAssignments*.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Assign Permission Sets

Fields

Field Name	Details
AssigneeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the User to assign the permission set license specified in <code>PermissionSetLicenseId</code>. This is a relationship field.</p> <p>Relationship Name Assignee</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
PermissionSetLicenseId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the permission set license the user is assigned to. This is a relationship field.</p> <p>Relationship Name PermissionSetLicense</p> <p>Relationship Type Lookup</p> <p>Refers To PermissionSetLicense</p>

Usage

Use the `PermissionSetLicenseAssign` object for querying permission set license assignments to find out which permission set licenses are assigned to which users. Because each user can be assigned to many permission set licenses, each `PermissionSetLicenseAssign` ID represents the association of a single user and single permission set license.

For example, to search for all of the permission sets assigned to a particular user:

```
SELECT Id, PermissionSetLicenseId
FROM PermissionSetLicenseAssign
WHERE AssigneeId = '005D0000001RFek'
```

To search for all users assigned to a particular permission set license:

```
SELECT AssigneeId
FROM PermissionSetLicenseAssign
WHERE PermissionSetLicenseId = '0PLD000000003mwOAA'
```

You can also create a new permission set license assignment, or use delete to remove a permission set license that's been assigned to a user. To update an assignment, delete an existing assignment and insert a new one.

SEE ALSO:

[PermissionSetLicense](#)

PermissionSetLicenseDefinition (Developer Preview)

Represents the definition of a custom permission set license, which entitles specified features in a package. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access `PermissionSetLicenseDefinition`, you must have the Partner Licensing Platform developer preview enabled. To participate in this developer preview, submit a participation request via the [Partner Licensing Platform Developer Preview](#) Partner Community group.

 **Note:** The Partner Licensing Platform is available as a developer preview. The Partner Licensing Platform isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. All commands, parameters, and other features are subject to change or deprecation at any time, with or without notice. Don't implement functionality developed with these commands or tools in your production package.

Fields

Field	Details
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p>

Field	Details
	 Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The two- to five-character code that represents the language and locale ISO. This code controls the language for labels displayed in an application.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Label for this PermissionSetLicenseDefinition value. This display value is the internal label that does not get translated.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

Usage

After the PermissionSetLicenseDefinition is created, it must be referenced in [LicenseDefinitonCustomPermission](#).

For more information on custom permission set licenses, see [Partner Licensing Platform \(Developer Preview\)](#) in the *ISVforce Developer Guide*.

PermissionSetTabSetting

Represents a permission set tab setting. Requires the View Setup permission. Use this object to query all tab settings of the permission set. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only users with "View Setup and Configuration" permission can access this object.

Fields

Field Name	Details
Name	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The tab name.</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The permission set Id. This is a relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To PermissionSet</p>
Visibility	<p>Type picklist</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Indicates whether the tab is visible by default. Possible values are:</p> <ul style="list-style-type: none"> • DefaultOff • DefaultOn

Usage

Use the PermissionSetTabSetting object to find tab setting visibility settings, parent permission sets, and so forth.

For example, to find the visibility setting of a tab named "standard-Lead," do something like the following.

```
SELECT Visibility
FROM PermissionSetTabSetting
WHERE Name = 'standard-Lead'
```

PersonalizationTargetInfo

Represents a target for an audience. This object is available in API version 47.0 and later.

Supported Calls

describeSObjects(), query(), retrieve()

Fields

Field	Details
ContainerId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the Experience Cloud site or org that contains the target.</p>
DraftRowId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the draft PersonalizationTargetInfo.</p>

Field	Details
GroupName	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description Group name of the target. Groups bundle related targets.You can have up to 2,000 groups and 500 targets per group.</p>
PublishStatus	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Publish status of the target. Possible values are:</p> <ul style="list-style-type: none"> • Draft • Live
TargetType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of the target. Possible values are:</p> <ul style="list-style-type: none"> • ExperienceVariation • NavigationLinkSet • Topic • CollaborationGroup • KnowledgeArticle • ContentDocument • ManagedContent • Report • Dashboard • Custom objects <p>You can have up to 2,500 ExperienceVariation targets and 25,000 record targets.</p>
TargetValue	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, Sort</p> <p>Description Value of the target. For ExperienceVariation, this is the developer name of the ExperienceVariation or the record ID for the object.</p>

PersonTraining

Represents an assignment of a learning module in Workforce Engagement. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The org requires a Workforce Engagement license and a Sales Enablement (myTrailhead) license. The user requires at least one Workforce Engagement permission set assigned to them: Workforce Engagement Admin, Workforce Engagement Analyst, Workforce Engagement Planner, or Workforce Engagement Agent.

Workforce Engagement Management uses this object to route training to agents. To assign modules to agents, users with the Learning Manager profile require Read, Create, and View All access to this object. To receive routed modules, users with the Learner profile require Read access to this object.

Fields

Field	Details
AssigneeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A valid user ID for the user who's assigned the training. <code>AssigneeId</code> can't be empty if the <code>Status</code> field is Assigned. We recommend that you set <code>AssigneeId</code> to the value in <code>OwnerId</code>. This is a relationship field.</p> <p>Relationship Name Assignee</p> <p>Relationship Type Lookup</p>

Field	Details
	<p>Refers To User</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the learning module.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The user who owns the person training. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The status of the training. Possible values are:</p> <ul style="list-style-type: none"> • A—Assigned; when the <code>Status</code> is assigned, the <code>AssigneeId</code> field can't be empty. • C—Completed • I—In Progress • N—New • P—Paused <p>The default value is 'N'.</p>
TrainingId	<p>Type string</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the learning module. This is a relationship field.</p> <p>Relationship Name Training</p> <p>Relationship Type Lookup</p> <p>Refers To LearningContent</p>
TrainingType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The type of training. Possible values are:</p> <ul style="list-style-type: none"> • T—Trailhead

Usage

In version 54.0 and later releases, Workforce Engagement uses this object instead of the AgentTraining object to route learning modules to agents. If you set up agent engagement in your org in an earlier release, we rename AgentTraining records as PersonTraining records.

PicklistValueInfo

Represents the active picklist values for a given picklist field. This object is available in API version 40.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
DurableId	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description Unique identifier for the field.</p>
EntityParticleId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents the picklist field to which this value is related.</p> <p>Relationship Name EntityParticle</p> <p>Relationship Type Lookup</p> <p>Refers To EntityParticle</p>
IsActive	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the picklist value is active or not.</p>
IsDefaultValue	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether this value is the default for the picklist field. Only one value can be the default value.</p>
Label	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The label for the picklist value.</p>

Field	Details
ValidFor	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description A set of bits where each bit indicates a controlling value for which this picklist value is valid.</p>
Value	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The API name of the picklist value.</p>

PipelineInspectionListView

Represents a pipeline view or saved filter. A pipeline view specifies a set of opportunity records, based on specific criteria. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, enable the Pipeline Inspection user permission and the Pipeline Inspection setting.. To create and modify list views, users must have the Create and Customize List Views permission. To create and modify public list views, users must have the Manage Public List Views permission.

Fields

Field	Details
DateLiteralType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The date literal associated with the pipeline view, used for filtering by the close date. Possible values are:</p>

Field	Details
	<ul style="list-style-type: none"> • ALL_TIME • NEXT_FISCAL_QUARTER • NEXT_MONTH • NEXT_WEEK • THIS_FISCAL_QUARTER • THIS_MONTH • THIS_WEEK
EndDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The end date used when filtering by a custom time period for close dates.</p>
IsSystemManaged	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the system is managing changes to visibility and delete of a pipeline view (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.</p>
ListViewId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The foreign key to the ListView record. This field is unique within your organization. This is a relationship field.</p> <p>Relationship Name ListView</p> <p>Relationship Type Lookup</p> <p>Refers To ListView</p>
StartDate	<p>Type date</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The start date used when filtering by a custom time period for close dates.</p>
ViewType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The corresponding API name for the pipeline view type. Possible values are:</p> <ul style="list-style-type: none"> • MY_IMPORTANT OPPORTUNITIES • MY_PIPELINE

PlatformAction

PlatformAction is a virtual read-only object. It enables you to query for actions displayed in the UI, given a user, a context, device format, and a record ID. Examples include standard and custom buttons, quick actions, and productivity actions.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
ActionListContext	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Required. The list context this action applies to. Valid values are:</p> <ul style="list-style-type: none"> • ActionDefinition • Assistant • BannerPhoto • Chatter • Dockable

Field	Details
	<ul style="list-style-type: none"> • FeedElement • Flexipage • Global • ListView • ListViewDefinition • ListViewRecord • Lookup • MruList • MruRow • ObjectHomeChart • Photo • Record • RecordEdit • RelatedList • RelatedListRecord
ActionTarget	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description The URL to invoke or describe the action when the action is invoked. If the action is a standard button overridden by a Visualforce page, the ActionTarget returns the URL of the Visualforce page, such as <code>/apex/pagename</code>.</p> <p>This field is available in API version 35.0 and later.</p>
ActionTargetType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The type of the target when this action is triggered. Valid values are:</p> <ul style="list-style-type: none"> • <code>Describe</code>—applies to actions with a user interface, such as quick actions • <code>Invoke</code>—applies to actions with no user interface, such as action links or invocable actions • <code>Visualforce</code>—applies to standard buttons overridden by a Visualforce page
ActionTargetUrl	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description URL to invoke or describe the action when the action is invoked. This field is deprecated in API version 35.0 and later. Use <code>ActionTarget</code> instead.</p>
Category	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Applies only to action links. Denotes whether the action link shows up in the feed item list of actions or the overflow list of actions. Valid values are:</p> <ul style="list-style-type: none"> • Primary • Overflow
ConfirmationMessage	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Applies only to action links. The message to display before the action is invoked. Field is null if no confirmation is required before invoking the action.</p>
DeviceFormat	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Specifies which action icon the PlatformAction query returns. If this field isn't specified, it defaults to Phone. Valid values are:</p> <ul style="list-style-type: none"> • Aloha • Desktop • Phone • Tablet
ExternalId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	Description The unique ID for the PlatformAction. If the action doesn't have an ID, its API name is used.
GroupId	Type reference Properties Filter, Group, Nillable, Sort Description The unique ID of a group of action links.
IconContentType	Type string Properties Filter, Group, Nillable, Sort Description The content type—such as .jpg, .gif, or .png—of the icon for this action. Applies to both custom and standard icons assigned to actions.
IconHeight	Type int Properties Filter, Group, Nillable, Sort Description The height of the icon for this action. Applies only to standard icons.
IconUrl	Type url Properties Filter, Group, Nillable, Sort Description The URL of the icon for this action.
IconWidth	Type int Properties Filter, Group, Nillable, Sort Description The width of the icon for this action. Applies only to standard icons.
InvocationStatus	Type picklist

Field	Details
	<p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The status of the action within the feed item. Applies to action links only. Valid values are:</p> <ul style="list-style-type: none"> Failed New Pending Successful
InvokedById	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the user who most recently invoked this action within the current feed item. Applies to action links only. This is a relationship field.</p> <p>Relationship Name InvokedByUser</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
IsGroupDefault	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Denotes whether this action is the default in an action link group. False for other action types. Applies to action links only.</p>
IsMassAction	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the action can be performed on multiple records. This field is available in API version 38.0 and later.</p>

Field	Details
Label	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The label to display for this action.</p>
PrimaryColor	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The primary color of the icon for this action.</p>
RelatedListRecordId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents the ID of a record in an object's related list. This field is available in API version 38.0 and later.</p>
RelatedSourceEntity	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description When the <code>ActionListContext</code> is <code>RelatedList</code> or <code>RelatedListRecord</code>, this field represents the API name of the related list to which the action belongs.</p>
Section	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The section of the user interface the action resides in. Applicable only to Lightning Experience. Valid values are:</p> <ul style="list-style-type: none">• ActivityComposer• CollaborateComposer• NotesComposer• Page

Field	Details
	<ul style="list-style-type: none"> SingleActionLinks <p>This field is available in API version 35.0 and later.</p>
SourceEntity	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description Required. The object or record with which this action is associated.</p>
Subtype	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The subtype of the action. For quick actions, the subtype is <code>QuickActionType</code>. For custom buttons, the subtype is <code>WebLinkTypeEnum</code>. For action links, subtypes are <code>Api</code>, <code>ApiAsync</code>, <code>Download</code>, and <code>Ui</code>. Standard buttons and productivity actions have no subtype.</p>
TargetObject	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The type of object record the action creates, such as a contact or opportunity. This field is available in API version 41.0 and later.</p>
TargetUrl	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The URL that a custom button or link points to. This field is available in API version 41.0 and later.</p>
Type	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p>

Field	Details
	<p>Description</p> <p>The type of the action. Valid values are:</p> <ul style="list-style-type: none"> • ActionLink—An indicator on a feed element that targets an API, a web page, or a file, represented by a button in the Salesforce Chatter feed UI. • CustomButton—When clicked, opens a URL or a Visualforce page in a window or executes JavaScript. • InvocableAction • ProductivityAction—Productivity actions are predefined and attached to a limited set of objects. Productivity actions include Send Email, Call, Map, View Website, and Read News. Except for the Call action, you can't edit productivity actions. • QuickAction—A global or object-specific action. • StandardButton—A predefined Salesforce button such as New, Edit, and Delete.

Usage

PlatformAction can be described using [describeSObject\(\)](#).

You can directly query for PlatformAction. For example, this query returns all fields for actions associated with each of the records of the listed objects:

```
SELECT ExternalId, ActionTargetType, ActionTargetUrl, ApiName, Category,
       ConfirmationMessage, ExternalId, GroupId, UiTheme, IconUrl, IconContentType,
       IconHeight, IconWidth, PrimaryColor, InvocationStatus, InvokedByUserId,
       IsGroupDefault, Label, LastModifiedDate, Subtype, SourceEntity, Type
FROM PlatformAction
WHERE SourceEntity IN ('001xx000003DGsH', '001xx000003DHBq', 'Task') AND
       ActionListContext = 'Record';
```

 **Note:** To query PlatformAction, provide the ActionListContext and SourceEntity. If you query for ActionListContext with a value of RelatedList, and don't specify a RelatedSourceEntity, the query returns the API name of the related list. In API v43.0 and before, SourceEntity = '**Object API Name**' and ActionListContext = 'ListView' is an invalid combination to fetch quick actions in a SOQL query. Use SourceEntity = '**Object ID**' and ActionListContext = 'ListView' instead.

This query uses multiple ActionListContext values in its WHERE clause to return all actions in the Lightning Experience user interface (DeviceFormat = 'Desktop') for the specified object:

```
SELECT ActionListContext, Label, Type, Subtype, Section, SourceEntity,
       RelatedSourceEntity, ActionTarget, ActionTargetType, ApiName, Category,
       ConfirmationMessage, DeviceFormat, ExternalId, GroupId, IconContentType,
       IconHeight, IconUrl, IconWidth, Id, InvocationStatus, InvokedByUserId,
       IsGroupDefault, LastModifiedDate, PrimaryColor
FROM PlatformAction
WHERE ActionListContext IN ('Record', 'Chatter', 'RelatedList') AND
       SourceEntity = '001xx000003DlvX' AND
       DeviceFormat = 'Desktop'
```

PlatformEventUsageMetric

Contains usage data for event publishing and CometD-client delivery. Usage data is available for the last 24 hours, ending at the last hour, and for historical daily usage. PlatformEventUsageMetric contains separate usage metrics for platform events and change data capture events. This object is available in API version 50.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
EndDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The end date and time in UTC used for querying usage metrics. The date granularity is hourly. To get usage data for the last 24 hours, the end date is the current date in UTC. The time is the current time in UTC rounded down to the previous hour. For example, 11:23 is 11:00 and the date format is: 2020-08-04T11:00:00.000Z To get historical data, the end date in UTC is the end of the date range with hours specified as 0. For example: 2020-08-04T00:00:00.000Z. To query a date range, you can use the > or >= operators. For the date format to use, see Date Formats and Date Literals in the <i>SOQL and SOSL Reference</i>.</p>
ExternalId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description This field is not in use.</p>
Name	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The name of the metric to get usage for. Possible values are:</p>

Field	Details
	<ul style="list-style-type: none"> CHANGE_EVENTS_DELIVERED—Number of change data capture events delivered to CometD clients CHANGE_EVENTS_PUBLISHED—Number of change data capture events published PLATFORM_EVENTS_DELIVERED—Number of platform events delivered to CometD clients PLATFORM_EVENTS_PUBLISHED—Number of platform events published
StartDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The start date and time in UTC used for querying usage metrics. The date granularity is hourly. To get usage data for the last 24 hours, the start date is the previous day in UTC. The time is the current time in UTC rounded down to the previous hour. For example, 11:23 is 11:00 and the date format is: 2020-08-03T11:00:00.000Z To get historical data, the start date is the start of the date range with hours specified as 0. For example: 2020-08-03T00:00:00.000Z. To specify a date range, you can use the > or >= operators. For the date format to use, see Date Formats and Date Literals in the <i>SOQL and SOSL Reference</i>.</p>
Value	<p>Type long</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The usage value for the specified metric and date range.</p>

Usage

For more information, see [Monitor Platform Event Publishing and Delivery Usage](#) in the *Platform Events Developer Guide*.

PlatformStatusAlertEvent

The documentation has moved to [PlatformStatusAlertEvent](#) in the *Platform Events Developer Guide*.

PortalDelegablePermissionSet

PortalDelegablePermissionSet is a base platform object used to store permission sets that can be assigned by a delegated portal/external user admin (DPUA) to portal users. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The unique string used to identify the record.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The language used in the org.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The unique string to identify the record.</p>
PermissionSetId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique ID of the permission set the DPUA profile can assign to other portal users.</p>
ProfileId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description The ID of the DPUA profile.</p>

PresenceConfigDeclineReason

Represents the settings for a decline reason that a presence user provides when declining work. This object is available in API version 37.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `update()`, `query()`, `retrieve()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
PresenceDeclineReasonId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the PresenceDeclineReason record.</p>
PresenceUserConfigId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the PresenceUserConfig record where the decline reasons are added.</p>

PresenceDeclineReason

Represents an Omni-Channel decline reason that agents can select when declining work requests. This object is available in API version 37.0 and later.

! **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `update()`, `query()`, `retrieve()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
Language	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The language of the PresenceDeclineReason.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p>

Field	Details
	<p>Description</p> <p>The label for the PresenceDeclineReason.</p>

PresenceUserConfig

Represents a configuration that determines a presence user's settings. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `update()`, `query()`, `retrieve()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
Capacity	<p>Type</p> <p>int</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The maximum number of work assignments that can be pushed to an agent at a time.</p>
DeveloperName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>

Field	Details
	 Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The language of the presence configuration.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The label of the presence configuration.</p>
OptionsIsAutoAcceptEnabled	<p>Type boolean</p> <p>Properties Create, Filter</p> <p>Description Indicates whether work items that are routed to agents are automatically accepted (<code>true</code>) or not (<code>false</code>). Available only if <code>OptionsIsDeclineEnabled</code> is set to <code>false</code>.</p>
OptionsIsDeclineEnabled	<p>Type boolean</p> <p>Properties Create, Filter</p> <p>Description Indicates whether agents can decline work items that are routed to them (<code>true</code>) or not (<code>false</code>). Available only if <code>OptionsIsAutoAcceptEnabled</code> is set to <code>false</code>.</p>
OptionsIsDeclineReasonEnabled	<p>Type boolean</p> <p>Properties Create, Filter</p> <p>Description Indicates whether agents can select a reason for declining work requests (<code>true</code>) or not (<code>false</code>). This can be selected only if decline reasons are enabled.</p>

Field	Details
<code>OptionsIsDisconnectSoundEnabled</code>	<p>Type boolean</p> <p>Properties Create, Filter</p> <p>Description Indicates whether a sound is played when agents are disconnected from Omni-Channel (<code>true</code>) or not (<code>false</code>).</p>
<code>OptionsIsRequestSoundEnabled</code>	<p>Type boolean</p> <p>Properties Create, Filter</p> <p>Description Indicates whether a sound plays with incoming work requests (<code>true</code>) or not (<code>false</code>). Set to <code>true</code> by default.</p>
<code>PresenceStatusOnDeclineId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the presence status that's automatically assigned to the agent when the agent declines a work item. Available only if <code>OptionsIsDeclineEnabled</code> is set to <code>true</code>.</p>
<code>PresenceStatusOnPushTimeoutId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the presence status that's automatically assigned to the agent when the agent doesn't respond to a work item before push timeout occurs. Available in API version 36.0 and later.</p>

PresenceUserConfigProfile

Represents a configuration that determines the settings that are assigned to presence users who are assigned to a specific profile. User-level configurations override profile-level configurations. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
PresenceUserConfigId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description If an individual user is also assigned a presence configuration through the PresenceUserConfigProfile, this configuration will override that.</p>
ProfileId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the profile that's associated with this presence configuration. A profile can be associated with only one presence configuration.</p>

PresenceUserConfigUser

Represents a configuration that determines the settings that are assigned to a presence user. These user-level configurations override profile-level configurations. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
PresenceUserConfigId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the presence configuration.</p>
UserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the user who's associated with this presence configuration. A user can be associated with only one presence configuration.</p>

PriceAdjustmentSchedule

Represents a series of tiered discounts based on the number of items purchased. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
AdjustmentMethod	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The method for applying tiered pricing. Possible values are:</p>

Field	Details
	<ul style="list-style-type: none"> • <code>Range</code>—All items receive the discount of the highest tier the quantity falls in. • <code>Slab</code>—Items receive the discount defined for the tier they fall in. <p>The default value is <code>Range</code>. Term-based discounts can't be of type <code>Slab</code>. This field is available in API version 51.0 and later.</p> <p> Note: The <code>Slab</code> method is currently functioning in the same way as the <code>Range</code> method.</p>
Description	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Text description of the price adjustment schedule.</p>
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the price adjustment schedule is active (<code>true</code>) or not (<code>false</code>). You can change this field's value as often as necessary. Label is Active. Default value is <code>False</code>.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Indicates whether the price adjustment schedule has been archived (<code>true</code>) or not (<code>false</code>). This field is read-only.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p>

Field	Details
	<p>Description Required. The name of the price adjustment schedule. This field is read-only. Label is Price Adjustment Schedule Name.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The Salesforce ID of the sales rep who owns the price adjustment schedule.</p>

Usage

As you create a PriceAdjustmentSchedule, you associate PriceAdjustmentTiers with it. A PriceAdjustmentSchedule is inactive until at least one PriceAdjustmentTier is added to it. A PriceAdjustmentSchedule comprises all related PriceAdjustmentTiers, with a limit of 25.

To use PriceAdjustmentSchedule, associate it with a PriceBookEntry.

- A PriceBookEntry can be associated with up to five PriceAdjustmentSchedules, but only one PriceAdjustmentSchedule can be associated with a PriceBookEntry.
- When you activate or deactivate a PriceAdjustmentSchedule, its PriceBookEntry association is also activated or deactivated.
- An adjustment to a PriceBookEntry is applied only if the associated PriceAdjustmentSchedule is active.
- After a PriceAdjustmentSchedule is associated with a PriceBookEntry, if multicurrency is enabled, the currencyIsoCode field can't be modified.
- When you associate a PriceAdjustmentSchedule with a PricebookEntry, a junction object PricebookEntryAdjustment is created.

The PriceAdjustmentTier object and the ScheduleType and AdjustmentMethod fields can be modified only when a PriceAdjustmentSchedule is inactive.

SEE ALSO:

[PriceAdjustmentTier](#)

[PricebookEntryAdjustment](#)

PriceAdjustmentTier

Represents a discount tier in a price adjustment schedule. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
LowerBound	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The minimum quantity the discount can be applied to. It must be a positive integer and less than or equal to the upper bound of the tier.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description For internal use only.</p>
PriceAdjustmentScheduleId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the price adjustment schedule that the discount is applied to.</p>
TierType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The unit of the discount. Possible values are:</p> <ul style="list-style-type: none"> • <code>AdjustmentAmount</code>—An amount discounted from an item's list price • <code>AdjustmentPercentage</code>—A percentage discounted from an item's list price
TierValue	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The value of the discount.</p>
UpperBound	<p>Type</p> <p>double</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>The maximum quantity the discount can be applied to. Must be a positive integer. Not inclusive. Set this value one digit higher than the quantity you want the tier to include. For example, if a tier's upper bound is 99, set the value of <code>UpperBound</code> to 100. For the last tier, the value is optional.</p>

Usage

To use `PriceAdjustmentTiers`, associate them with a `PriceAdjustmentSchedule`.

Tiers can't overlap, and no gaps are allowed between tiers.

SEE ALSO:

[PriceAdjustmentSchedule](#)

Pricebook2

Represents a price book that contains the list of products that your org sells.

Note: Price books are represented by `Pricebook2` objects. As of API version 8.0, the `Pricebook` object is no longer available. Requests containing `Pricebook` are refused, and responses don't contain the `Pricebook` object.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Description	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description Text description of the price book.</p>
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the price book is active (<code>true</code>) or not (<code>false</code>). Inactive price books are hidden in many areas in the user interface. You can change this field's value as often as necessary. Label is Active.</p>
IsArchived	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the price book has been archived (<code>true</code>) or not (<code>false</code>). This field is read only.</p>
IsDeleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the price book has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>
IsStandard	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the price book is the standard price book for the org (<code>true</code>) or not (<code>false</code>). Every org has one standard price book—all other price books are custom price books.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Required. Name of this object. This field is read-only for the standard price book. Label is Price Book Name.</p>
ValidFrom	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date and time when a Commerce price book is initially valid. If this field is <code>null</code>, the price book is valid immediately when active. Available in API version 48.0 and later.</p>
ValidTo	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date and time when a Commerce price book is valid to. If this field is <code>null</code>, the price book is valid until it's deactivated. Available in API version 48.0 and later.</p>

Usage

A price book is a list of products that your org sells.

- Each org has one standard price book that defines the standard or generic list price for each product or service that it sells.

- An org can have multiple custom price books to use for specialized purposes, such as for discounts, different channels or markets, or select accounts or opportunities. While your client application can create, delete, and update custom price books, your client application can only update the standard price book.
- For some orgs, the standard price book is the only price needed. If you set up other price books, you can reference the standard price book when setting up list prices in custom price books.

Use this object to query standard and custom price books that have been configured for your org. A common use of this object is to allow your client application to obtain valid Pricebook2 object IDs for use when configuring PricebookEntry records via the API.

Your client application can perform the following tasks on PricebookEntry objects:

- Query
- Create for the standard price book or custom price books.
- Update
- Delete
- Change the `IsActive` field when creating or updating records

PriceBook2, Product2, and PricebookEntry Relationships

In the API:

- Price books are represented by Pricebook2 records (as of version 8.0, the Pricebook object is no longer available).
- Products are represented by Product2 records (as of version 8.0, the Product object is no longer available).
- Each price book contains zero or more entries (represented by PricebookEntry records) that specify the products that are associated with the price book. A price book entry defines the price for which you sell a product at a particular currency.

These objects are defined only for those orgs that have products enabled as a feature. If the org doesn't have the products feature enabled, the Pricebook2 object doesn't appear in the `describeGlobal()` call, and you can't access it via the API.

If you delete a Pricebook2 while a line item references PricebookEntry in the price book, the line item is unaffected, but the Pricebook2 is archived and unavailable from the API.

For a visual diagram of the relationships between Pricebook2 and other objects, see Product and Schedule Objects.

Price Book Setup

The process of setting up a price book via the API usually means:

1. Load product data into Product2 records (creating one Product2 record for each product that you want to add).
2. For each Product2 record, create a PricebookEntry that links the Product2 record to the standard Pricebook2. Define a standard price for a product at a given currency (if you have multicurrency enabled) before defining a price for that product in the same currency in a custom price book.
3. Create a Pricebook2 record to represent a custom price book.
4. For each Pricebook2 record, creating a PricebookEntry for every Product2 that you want to add, specifying unique properties for each PricebookEntry (such as the `UnitPrice` and `CurrencyIsoCode`) as needed.

Code Sample—Java

```
public void pricebookSample() {
    try {
        //Create a custom pricebook
```

```

Pricebook2 pb = new Pricebook2();
pb.setName("Custom Pricebok");
pb.setIsActive(true);
SaveResult[] saveResults = connection.create(new SObject[]{pb});
pb.setId(saveResults[0].getId());

// Create a new product
Product2 product = new Product2();
product.setIsActive(true);
product.setName("Product");
saveResults = connection.create(new SObject[]{product});
product.setId(saveResults[0].getId());

// Add product to standard pricebook
QueryResult result = connection.query(
    "select Id from Pricebook2 where isStandard=true"
);
SObject[] records = result.getRecords();
String stdPbId = records[0].getId();

// Create a pricebook entry for standard pricebook
PricebookEntry pbe = new PricebookEntry();
pbe.setPricebook2Id(stdPbId);
pbe.setProduct2Id(product.getId());
pbe.setIsActive(true);
pbe.setUnitPrice(100.0);
saveResults = connection.create(new SObject[]{pbe});

// Create a pricebook entry for custom pricebook
pbe = new PricebookEntry();
pbe.setPricebook2Id(pb.getId());
pbe.setProduct2Id(product.getId());
pbe.setIsActive(true);
pbe.setUnitPrice(100.0);
saveResults = connection.create(new SObject[]{pbe});
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}

```

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

Pricebook2ChangeEvent (API version 48.0)

Change events are available for the object.

Pricebook2History

History is available for tracked fields of the object.

SEE ALSO:

[Product and Price Book Objects](#)

Pricebook2History

Represents historical information about changes that have been made to the standard fields of the associated Pricebook2, or to any custom fields with history tracking enabled. This object is available in API version 54.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

This object is always read-only.

Fields

Field	Details
Pricebook2Id	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the Pricebook2 associated with this record. This is a relationship field.</p> <p>Relationship Name Pricebook2</p> <p>Relationship Type Lookup</p> <p>Refers To Pricebook2</p>
DataType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Data type of the field that was changed.</p>
Field	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p>

Field	Details
	<p>Description</p> <p>Name of the price book field that was modified, or a special value to indicate some other modification to the price book.</p>
IsDeleted	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). This is a standard system field. Label is Deleted.</p>
NewValue	<p>Type</p> <p>anyType</p> <p>Properties</p> <p>Nullable, Sort</p> <p>Description</p> <p>New value of the modified price book field. Maximum of 255 characters.</p>
OldValue	<p>Type</p> <p>anyType</p> <p>Properties</p> <p>Nullable, Sort</p> <p>Description</p> <p>Previous value of the modified price book field. Maximum of 255 characters.</p>

Usage

Price book history entries are indirectly created each time a price book is modified.

Two rows are added to this record when foreign key fields change. One row contains the foreign key object names that display in the online application. For example, `Jane Doe` is recorded as the name of a Contact. The other row contains the actual foreign key ID that is only returned to and visible from the API.

This object respects field level security on the parent object.

SEE ALSO:

[Pricebook2](#)

PricebookEntry

Represents a product entry (an association between a Pricebook2 and Product2) in a price book.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
ActivePriceAdjustmentQuantity	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The count of active price adjustment schedules associated with the price book entry. This field is available in API version 49.0 and later.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether this price book entry is active (<code>true</code>) or not (<code>false</code>). Although you can never delete PricebookEntry records, your client application can set this flag to <code>false</code>. Inactive PricebookEntry records are hidden in many areas in the user interface. You can change this flag on a PricebookEntry record as often as necessary.</p>
IsArchived	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the PricebookEntry has been archived (<code>true</code>) or not (<code>false</code>). This is set to <code>true</code> when the Product2 record it's associated with is archived, or when the Pricebook2 record is archived. This field is read only. Available in API version 45.0 and later. Label is Archived.</p>

Field	Details
Name	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Name of this PricebookEntry record. This read-only field references the value in the Name field of the Product2 record. Label is Product Name.</p>
Pricebook2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. ID of the Pricebook2 record with which this record is associated. This field must be specified when creating Pricebook2 records. It can't be changed in an update. This is a relationship field.</p> <p>Relationship Name Pricebook2</p> <p>Relationship Type Lookup</p> <p>Refers To Pricebook2</p>
Product2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. ID of the Product2 record with which this record is associated. This field must be specified when creating Product2 records. It can't be changed in an update. This is a relationship field.</p> <p>Relationship Name Product2</p> <p>Relationship Type Lookup</p> <p>Refers To Product2</p>
ProductCode	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description Product code for this record. This read-only field references the value in the ProductCode field of the associated Product2 record.</p>
UnitPrice	<p>Type currency</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description Required. Unit price for this price book entry. You can specify a value only if <code>UseStandardPrice</code> is set to <code>false</code>. Label is List Price.</p>
UseStandardPrice	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether this price book entry uses the standard price defined in the standard Pricebook2 record (<code>true</code>) or not (<code>false</code>). If set to <code>true</code>, then the <code>UnitPrice</code> field is read-only, and the value will be the same as the <code>UnitPrice</code> value in the corresponding PricebookEntry in the standard price book (that is, the PricebookEntry record whose <code>Pricebook2Id</code> refers to the standard price book and whose <code>Product2Id</code> and <code>CurrencyIsoCode</code> are the same as this record). For PricebookEntry records associated with the standard Pricebook2 record, this field must be set to <code>true</code>.</p>

Usage

Use this object to define the association between your organization's products (Product2) and your organization's standard price book or to other, custom-defined price books (Pricebook2). Create one PricebookEntry record for each standard or custom price and currency combination for a product in a Pricebook2.

When creating these records, you must specify the IDs of the associated Pricebook2 record and Product2 record. Once created, your client application can't update these IDs.

This object is defined only for those organizations that have products enabled as a feature. If the organization does not have the products feature enabled, then the PricebookEntry object does not appear in the `describeGlobal()` call, and you can't access it.

If you delete a PriceBookEntry while a line item references it, the line item is unaffected, but the PriceBookEntry will be archived and unavailable from the API. Deleted PriceBookEntry records can't be recovered.

You must load the standard price for a product before you are permitted to load its custom price(s).

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

PricebookEntryHistory

History is available for tracked fields of the object.

SEE ALSO:

[Object Basics](#)

PricebookEntryAdjustment

Read-only junction object created when you associate a price adjustment schedule with a price book entry. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description For internal use only.</p>
PriceAdjustmentScheduleId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the price book entry adjustment.</p>
PricebookEntryId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the price book entry that this price book entry adjustment is associated with.</p>

SEE ALSO:

[PriceAdjustmentSchedule](#)

PrivacyRequest

See details and monitor the status of Data Subject Access Requests made in Privacy Center. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is for Privacy Center customers with the `ReadAllData` or `PrivacyDataAccess` permissions.

Fields

Field	Details
CompletedDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date and time when the request was completed.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>

Field	Details
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the Privacy Request.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the owner of the account associated with this customer. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
RelatedRecord	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The Data Subject Access Request (DSAR) or Right to Be Forgotten request (RTBF) record related to the request.</p>
StartedDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p>Description The date and time when the request was started.</p>
Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Represents the status of the request. Possible values are:</p> <ul style="list-style-type: none"> • Approved • Cancelled • Completed • Created • In Progress • Rejected
TargetRecord	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The record that is listed in the request.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Represents the type of request that was made. Possible values are:</p> <ul style="list-style-type: none"> • DSAR • GlobalOptOut • RTBF

Problem

Problems represent the root cause data of one or more incidents. This object contains all the details of a problem, documenting the history of the problem from detection to closure. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Category	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The type of problem. Administrators set field values.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description A description of the problem. This field can store up to 32 KB of data, but only the first 255 characters appear in reports.</p>
Impact	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The problem's impact. Possible values are:</p> <ul style="list-style-type: none"> • High • Low • Medium <p>The default value is 'High'.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time (in UTC) when the current user last accessed this record, a record related to this record, or a list view.</p>

Field	Details
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time (in UTC) when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view. (LastReferencedDate) but not viewed it.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description This is a polymorphic relationship field that represents the user or group assigned to resolve the problem.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ParentProblemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of a problem above one or more related problems in a problem hierarchy. This is a relationship field.</p> <p>Relationship Name ParentProblem</p> <p>Relationship Type Lookup</p> <p>Refers To Problem</p>
Priority	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The impact and urgency of the problem.</p> <p>Possible values are:</p> <ul style="list-style-type: none">• Critical• High• Low• Moderate <p>The default value is 'Critical'.</p>
PriorityOverrideReason	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The reason why the priority should be changed or edited.</p>
ProblemNumber	<p>Type</p> <p>string</p> <p>Properties</p> <p>Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description</p> <p>The unique, system-generated problem number.</p>
ResolutionDateTime	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>The date and time (in UTC) when the problem was resolved.</p>
ResolutionSummary	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Create, Nillable, Update</p> <p>Description</p> <p>A description of the steps needed to resolve the incident.</p>
ResolvedById	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description The ID of the user who resolved the problem. This is a relationship field.</p> <p>Relationship Name ResolvedBy</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
RootCauseSummary	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description A description of the problem resolution or root cause. This field can store up to 32 KB of data, but only the first 255 characters display in reports.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Any custom or granular stages customers wants to track. This will be a dependent picklist. Possible values are:</p> <ul style="list-style-type: none"> • Closed • Fix in Progress • Known Error • New • Open • Pending Change • Resolved • Root Case Analysis • Work In Progress <p>The default value is 'New'.</p>
StatusCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p>

Field	Details
	<p>Description</p> <p>The status of the problem.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Closed • FixInProgress • KnownError • New • Open • PendingChange • Resolved • RootCauseAnalysis • WorkInProgress <p>The default value is 'New'.</p>
SubCategory	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The type of problem. One level deeper than Category. Administrators set field values.</p>
Subject	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>A brief description of the problem.</p>
Urgency	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>A measure of how long a resolution can be delayed until an incident, problem, or change has a significant business impact.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • High • Low • Medium <p>The default value is 'High'.</p>

ProcessDefinition

Represents the definition of a single approval process.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`

Portal and communities users with the Customer Community Plus and Partner Community licenses can access this object. All users in org with approvals enabled have read access to ProcessDefinition.

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Filter, Nillable, Sort</p> <p>Description A description of this process, with a maximum of 3,000 characters.</p>
DeveloperName	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The external name of the process; the name seen by users.</p>
LockType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of lock applied to the record being approved. When a record is in the approval process, it's always locked, and only an administrator can edit it. However, the currently assigned approver can also be allowed to edit the record.</p> <ul style="list-style-type: none"> • Total • Admin • Owner • Workitem • Node • none

Field	Details
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The unique process name, used internally.</p>
State	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The current state of this process.</p> <ul style="list-style-type: none"> • Active • Inactive • Obsolete
TableEnumOrId	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Specifies the object associated with the approval process, such as Account or Contact.</p>
Type	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description The type of this process.</p> <ul style="list-style-type: none"> • Approval Process—Used to control the action taken for a record. • State-based Process—Used internally to track various control processes, such as for developing Salesforce Knowledge articles.

Usage

Use this object to read the description of an approval process. The definition is read-only.

ProcessException

Represents a processing failure on an order summary. A separate process is required to resolve the failure that caused the process exception before order summary processing can continue. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AttachedToId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description ID of the object associated with the ProcessException. This is a polymorphic relationship field.</p> <p>Relationship Name AttachedTo</p> <p>Relationship Type Lookup</p> <p>Refers To CreditMemo, Invoice, Order, OrderItem, Payment, PaymentAuthorization, Refund, ReturnOrder</p>
CaseId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the case associated with the ProcessException. This is a relationship field.</p> <p>Relationship Name Case</p> <p>Relationship Type Lookup</p> <p>Refers To Case</p>

Field	Details
Category	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description ProcessingException type. You can customize the category picklist to represent your business processes.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Fulfillment • Invoicing • Order Activation • Order Approval • Payment
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Detailed description of the ProcessException.</p>
ExternalReference	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Description of external entities associated with the ProcessException.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description Timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.</p>
Message	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Short description of the ProcessException</p>
OrderSummaryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the OrderSummary associated with the ProcessException. The ProcessException component is displayed on this OrderSummary.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the User who currently owns this ProcessException. Default value is the User logged in to the API to perform the create. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
Priority	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description Resolution priority for the ProcessException. You can customize the priority picklist to represent your business processes.</p>

Field	Details
	<p>Possible values are:</p> <ul style="list-style-type: none"> • High • Low
ProcessExceptionNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The unique name of the ProcessException, formatted as PE-(00000000).</p>
Severity	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description Severity of the ProcessException. Each severity value corresponds to one severity category. You can customize the severity picklist to represent your business processes. If you customize the severity picklist, include at least one severity value for each severity category.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • High • Low
SeverityCategory	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Severity category of the ProcessException. Each severity category corresponds to one or more severity values. The severity category is used to show the severity icon in the ProcessException list view.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • High • Low
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Status of the ProcessException. Each status corresponds to one status category, shown here in parentheses. You can customize the status picklist to represent your business processes. If you customize the status picklist, include at least one status value for each status category.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Ignored (Inactive) • New (Active) • Paused (Inactive) • Resolved (Resolved) • Triage (Active) • Voided (Inactive)
StatusCategory	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Restricted picklist, Sort</p> <p>Description</p> <p>Status category of the ProcessException. Each status category corresponds to one or more statuses.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • ACTIVE • INACTIVE • RESOLVED

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[ProcessExceptionOwnerSharingRule](#)

Sharing rules are available for the object.

[ProcessExceptionShare](#)

Sharing is available for the object.

ProcessInstance

Represents an instance of a single, end-to-end approval process. Use this and the node, step, and workitem process instance objects to create approval history reports.

Note: Exceptions apply to approval history data retrieved with this object and available only via the SOAP API. For each approval process instance that was pending when Summer '14 became available for your organization, some field values are never populated

or are populated only after the approval process instance is next acted upon—such as when a user approves, rejects, or reassigns an approval request—after the Summer '14 rollout.

For approval process instances that were completed before the Summer '14 rollout, all Process Instance fields are automatically populated, with one exception: `CompletedDate` is never populated for approval process instances that were completed before January 1, 2013. For approval process instances that were pending during the Summer '14 rollout, all `ProcessInstance` fields are automatically populated, with two exceptions: `CompletedDate` and `LastActorId` are populated only after the approval process instance is complete.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
<code>CompletedDate</code>	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The completion date and time of the approval process. The <code>ElapsedTimeDay</code>, <code>ElapsedTimeHours</code>, and <code>ElapsedTimeMinutes</code> field values are calculated using <code>CompletedDate</code>.</p>
<code>ElapsedTimeInDays</code>	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total elapsed time in days between when the approval process instance was started and now.</p>
<code>ElapsedTimeInHours</code>	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total elapsed time in hours between when the approval process instance was started and now.</p>
<code>ElapsedTimeInMinutes</code>	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description The total elapsed time in minutes between when the approval process instance was started and now.</p>
LastActorId	<p>Type reference</p> <p>Properties Group, Filter, Nillable, Sort</p> <p>Description The last actor that approved, rejected, or recalled the process. This is a relationship field.</p> <p>Relationship Name LastActor</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
ProcessDefinitionId	<p>Type reference</p> <p>Properties Group, Filter, Sort</p> <p>Description The ID of this approval process instance. This is a relationship field.</p> <p>Relationship Name ProcessDefinition</p> <p>Relationship Type Lookup</p> <p>Refers To ProcessDefinition</p>
Status	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The status of this approval process instance, for example Started, Pending, or Approved.</p>
TargetObjectId	<p>Type reference</p>

Field**Details****Properties**

Filter, Group, Sort

Description

ID of the object affected by this approval process instance.

This is a polymorphic relationship field.

Usage

Use this object to query or retrieve an approval process.

The following SOQL query returns details for all the ProcessInstanceStep records related to individual ProcessInstance records. The nested query references `Steps`, which is the child `relationshipName` for ProcessInstanceStep in the ProcessInstance object.

```
SELECT Id, (SELECT Id, StepStatus, Comments FROM Steps)
FROM ProcessInstance
```

The following SOQL query returns details for all the ProcessInstanceWorkitem records related to individual ProcessInstance records. The nested query references `Workitems`, which is the child `relationshipName` for ProcessInstanceWorkitem in the ProcessInstance object.

```
SELECT Id, (SELECT Id, ActorId, ProcessInstanceId FROM Workitems)
FROM ProcessInstance
```

ProcessInstanceHistory can help provide a unified read-only view of the ProcessInstanceStep and ProcessInstanceWorkitem objects.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProcessInstanceHistory

History is available for tracked fields of the object.

SEE ALSO:

[ProcessInstanceHistory](#)

[ProcessInstanceStep](#)

[ProcessInstanceWorkitem](#)

ProcessInstanceHistory

This read-only object shows all steps and pending approval requests associated with an approval process (ProcessInstance).

Supported Calls

`describeSObjects()`

You can also enable `delete ()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Fields

Field	Details
ActorId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the user who is currently assigned to this ProcessInstance. This is a polymorphic relationship field.</p> <p>Relationship Name Actor</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
Comments	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Comments for a ProcessInstanceStep. This field doesn't apply to ProcessInstanceWorkitem records.</p>
ElapsedTimeInDays	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total time in days between when the approval process instance was started and when it was completed.</p>
ElapsedTimeInHours	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total time in hours between when the approval process instance was started and when it was completed.</p>

Field	Details

Usage

This object helps you replicate the related list functionality of the Salesforce user interface for approval processes. Use `ProcessInstanceHistory` for a unified read-only view of the `ProcessInstanceStep` and `ProcessInstanceWorkitem` objects. You can't query `ProcessInstanceHistory`. Instead, you can query `ProcessInstanceHistory` by including it in a nested query on the parent `ProcessInstance` object. For example, the following SOQL query returns all the `ProcessInstanceHistory` records related to individual `ProcessInstance` records. The nested query references `StepsAndWorkitems`, which is the child `relationshipName` for `ProcessInstanceHistory` in the `ProcessInstance` object.

```
SELECT Id, (SELECT Id, StepStatus, Comments FROM StepsAndWorkitems)
FROM ProcessInstance
```

This object respects field-level security on the parent object.

SEE ALSO:

[ProcessInstance](#)

[ProcessInstanceStep](#)

[ProcessInstanceWorkitem](#)

ProcessInstanceStep

Represents one work item in an approval process (`ProcessInstance`).

 **Note:** Exceptions apply to approval history data retrieved with this object and available only via the SOAP API. For each approval process instance that was pending when Summer '14 became available for your organization, some field values are never populated or are populated only after the approval process instance is next acted upon—such as when a user approves, rejects, or reassigns an approval request—after the Summer '14 rollout.

`ProcessInstanceStep` fields are never populated for approval process instances that were completed before the Summer '14 rollout. For approval process instances that were pending during the Summer '14 rollout, all `ProcessInstanceStep` fields are populated only after the approval process instance is next acted upon after the Summer '14 rollout.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
<code>ActorId</code>	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the user who is currently assigned to this approval step. This is a polymorphic relationship field.</p>

ElapsedTimeInHours	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total time in hours since this step was started.</p>
ElapsedTimeInMinutes	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total time in minutes since this step was started.</p>
OriginalActorId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the user who was originally assigned to this approval step.</p>

Field	Details
	<p>This is a polymorphic relationship field.</p> <p>Relationship Name OriginalActor</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ProcessInstanceId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the ProcessInstance that this approval step belongs to. This is a relationship field.</p> <p>Relationship Name ProcessInstance</p> <p>Relationship Type Lookup</p> <p>Refers To ProcessInstance</p>
StepNodeId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the node currently assigned to this approval step.</p>
StepStatus	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The current status of this approval step.</p> <ul style="list-style-type: none"> • Approved • Fault • Held • NoResponse • Pending

Field	Details
	<ul style="list-style-type: none"> • Reassigned • Rejected • Removed • Started <p>If the approval step requires unanimous approval and one approver rejects the request, the value of this field for the other approvers changes to NoResponse. Likewise, if approval is based on the first response and an approver responds, the value of this field for the other approvers changes to NoResponse.</p>

Usage

Query or retrieve a new step in an approval process (ProcessInstance).

SEE ALSO:

[ProcessInstance](#)

[ProcessInstanceHistory](#)

[ProcessInstanceWorkitem](#)

ProcessInstanceNode

Represents a step in an instance of an approval process. Compare to `ProcessNode`, which describes the step in a process definition. Use this object to retrieve approval history.

 **Note:** Exceptions apply to approval history data retrieved with this object and available only via the SOAP API. For each approval process instance that was pending when Summer '14 became available for your organization, some field values are never populated or are populated only after the approval process instance is next acted upon—such as when a user approves, rejects, or reassigns an approval request—after the Summer '14 rollout.

`ProcessInstanceNode` fields are never populated for approval process instances that were completed before the Summer '14 rollout. For approval process instances that were pending during the Summer '14 rollout, all `ProcessInstanceNode` fields are populated only after the approval process instance is next acted upon after the Summer '14 rollout.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
<code>CompletedDate</code>	<p>Type</p> <p>dateTime</p>

Field	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The completion date and time of this step in the approval process. The <code>ElapsedTimeDay</code>, <code>ElapsedTimeHours</code>, and <code>ElapsedTimeMinutes</code> field values are calculated using <code>CompletedDate</code>.</p>
<code>ElapsedTimeInDays</code>	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total time in days since this step was started.</p>
<code>ElapsedTimeInHours</code>	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total time in hours since this step was started.</p>
<code>ElapsedTimeInMinutes</code>	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total time in minutes since this step was started.</p>
<code>LastActorId</code>	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The last actor that approved or rejected this step. This is a relationship field.</p> <p>Relationship Name LastActor</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>

Field	Details
NodeStatus	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The status of this approval instance, for example Started, Pending, or Approved.</p>
ProcessInstanceId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The approval process this step is part of. This is a relationship field.</p> <p>Relationship Name ProcessInstance</p> <p>Relationship Type Lookup</p> <p>Refers To ProcessInstance</p>
ProcessNodeId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The identifier for this step. This is a relationship field.</p> <p>Relationship Name ProcessNode</p> <p>Relationship Type Lookup</p> <p>Refers To ProcessNode</p>
ProcessNodeName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of this step.</p>

ProcessInstanceWorkitem

Represents a user's pending approval request.

 **Note:** Exceptions apply to approval history data retrieved with this object and available only via the SOAP API. For each approval process instance that was pending when Summer '14 became available for your organization, some field values are never populated or are populated only after the approval process instance is next acted upon—such as when a user approves, rejects, or reassigns an approval request—after the Summer '14 rollout.

ProcessInstanceWorkitem fields are never populated for approval process instances that were completed before the Summer '14 rollout. For approval process instances that were pending during the Summer '14 rollout, all ProcessInstanceWorkitem fields are populated after the approval process instance is next acted upon after the Summer '14 rollout, with three exceptions: `ElapsedTimeInDays`, `ElapsedTimeInHours`, and `ElapsedTimeInMinutes` fields are never populated in ProcessInstanceWorkitem records for which equivalent ProcessInstanceStep records were created before the Summer '14 rollout.

For all other ProcessInstanceWorkitem records, these three fields are populated after the approval process instance is next acted upon after the Summer '14 rollout.

 **Note:** Because ProcessInstanceHistory combines fields from ProcessInstanceStep and ProcessInstanceWorkitem, you may notice incorrect elapsed times of 0 in ProcessInstanceHistory records because the elapsed time fields were never populated in the related ProcessInstanceWorkitem record.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

Fields

Field	Details
<code>ActorId</code>	<p>Type reference</p> <p>Properties Filter, Group, Sort, Update</p> <p>Description ID of the user who is currently responsible for approving an approval request. This is a polymorphic relationship field.</p> <p>Relationship Name Actor</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
<code>ElapsedTimeInDays</code>	<p>Type double</p>

Field	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The total time in days since this approval request was started.</p>
ElapsedTimeInHours	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total time in hours since this approval request was started.</p>
ElapsedTimeInMinutes	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total time in minutes since this approval request was started.</p>
OriginalActorId	<p>Type reference</p> <p>Properties Filter, Group, Sort, Update</p> <p>Description ID of the user who was originally assigned this approval request. This is a polymorphic relationship field.</p> <p>Relationship Name OriginalActor</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ProcessInstanceId	<p>Type reference</p> <p>Properties Filter, Group, Sort, Update</p> <p>Description ID of the ProcessInstance associated with this approval request. This is a relationship field.</p>

Field	Details
	Relationship Name ProcessInstance
	Relationship Type Lookup
	Refers To ProcessInstance

Usage

Use this object to manage a pending approval request for a user.

SEE ALSO:

- [ProcessInstance](#)
- [ProcessInstanceHistory](#)
- [ProcessInstanceStep](#)

ProcessNode

Describes a step in a process definition. Compare to ProcessInstanceNode, which describes the step in a running process.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
Description	Type textarea
	Properties Filter, Nillable, Sort
	Description A description of this node, no longer than 3,000 bytes.
DeveloperName	Type string
	Properties Filter, Group, Sort

Field	Details
	<p>Description The external name of the node; the name seen by users.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The unique node name.</p>
ProcessDefinition	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the object affected by this approval instance. This is a relationship field.</p> <p>Relationship Name ProcessDefinition</p> <p>Relationship Type Lookup</p> <p>Refers To ProcessDefinition</p>

Usage

Use this object to get the description of a process definition.

The following SOQL query returns details for all the ProcessInstanceStep records related to individual ProcessInstance records. The nested query references `Steps`, which is the child `relationshipName` for ProcessInstanceStep in the ProcessInstance object.

```
SELECT Id, (SELECT Id, StepStatus, Comments FROM Steps)
FROM ProcessInstance
```

The following SOQL query returns details for all the ProcessInstanceWorkitem records related to individual ProcessInstance records. The nested query references `Workitems`, which is the child `relationshipName` for ProcessInstanceWorkitem in the ProcessInstance object.

```
SELECT Id, (SELECT Id, ActorId, ProcessInstanceId FROM Workitems)
FROM ProcessInstance
```

ProcessInstanceHistory can help provide a unified read-only view of the ProcessInstanceStep and ProcessInstanceWorkitem objects.

ProducerCommission

Represents a producer's commission for an insurance policy. The commission can be calculated from the commissionable transactions or can be populated from an external system. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CommissionableAmount	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The amount on which the commission is applied. This can be a transaction amount or a portion of the premium.</p>
CommissionAmount	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The calculated commission amount for the insurance policy transaction.</p>
CommissionScheduleId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the associated Commission Schedule, which is the commission calculation tied to the product or producer. This is a relationship field.</p> <p>Relationship Name CommissionSchedule</p> <p>Relationship Type Lookup</p> <p>Refers To CommissionSchedule</p>

Field	Details
InsurancePolicyAssetId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The insured item for which the commission was calculated. This is a relationship field.</p> <p>Relationship Name InsurancePolicyAsset</p> <p>Relationship Type Lookup</p> <p>Refers To InsurancePolicyAsset</p>
InsurancePolicyCoverageId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the policy coverage for which the commission was calculated. This is a relationship field.</p> <p>Relationship Name InsurancePolicyCoverage</p> <p>Relationship Type Lookup</p> <p>Refers To InsurancePolicyCoverage</p>
InsurancePolicyId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The insurance policy for which the commission was calculated. This is a relationship field.</p> <p>Relationship Name InsurancePolicy</p> <p>Relationship Type Lookup</p>

Field	Details
	<p>Refers To InsurancePolicy</p>
InsurancePolicyTransactionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The transaction for which the commission record was created. This is a relationship field.</p> <p>Relationship Name InsurancePolicyTransaction</p> <p>Relationship Type Lookup</p> <p>Refers To InsurancePolicyTransaction</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.</p>
MaxCommissionAmount	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The maximum commission calculated for the product or producer for a commissionable event. Constrains the output from the commission schedule.</p>

Field	Details
MinCommissionAmount	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The minimum commission calculated for the product or producer for a commissionable event. Constrains the output from the commission schedule.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the producer commission.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the record owner. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ParentProducerCommissionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The original commission record that was adjusted or modified. This is a relationship field.</p> <p>Relationship Name ParentProducerCommission</p> <p>Relationship Type Lookup</p>

Field	Details
	<p>Refers To ProducerCommission</p>
PaymentDatetime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date on which the commission was paid.</p>
ProcessingProducerId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The producer who performed the commissionable event. This is a relationship field.</p> <p>Relationship Name ProcessingProducer</p> <p>Relationship Type Lookup</p> <p>Refers To Producer</p>
ProducerId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The producer, broker, brokerage, or other user who receives the commission. This is a polymorphic relationship field.</p> <p>Relationship Name Producer</p> <p>Relationship Type Lookup</p> <p>Refers To Account, Contact, Producer</p>
ProducerProductionCode	<p>Type string</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The production code for the producer who performs the commissionable event.</p>
SourceSystem	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The system from which the producer commission record was sourced.</p>
SourceSystemIdentifier	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The ID of the producer commission record in the source system. This field is unique within your organization.</p>
Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Specifies the status of the commission payment. Possible values are:</p> <ul style="list-style-type: none"> • Disputed • Paid • Pending • Reversed
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Specifies the type of commission paid to a producer, account, or contact for a commissionable transaction. Possible values are:</p> <ul style="list-style-type: none"> • Advance

Field	Details
	<ul style="list-style-type: none"> Bonus Chargeback Commission Contingent Commission

Product2

Represents a product that your org sells.

This object has several fields that are used only for quantity and revenue schedules (for example, annuities). Schedules are available only for orgs that have enabled the products and schedules features. If these features aren't enabled, the schedule fields don't appear in the DescribeSObjectResult, and you can't query, create, or update the fields.

 **Note:** Product2 objects represent products. As of API version 8.0, the Product object is no longer available. Requests that contain Product are refused, and responses don't contain the Product object.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
<code>CanUseQuantitySchedule</code>	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the product can have a quantity schedule (<code>true</code>) or not (<code>false</code>). Label is Quantity Scheduling Enabled.</p>
<code>CanUseRevenueSchedule</code>	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the product can have a revenue schedule (<code>true</code>) or not (<code>false</code>). Label is Revenue Scheduling Enabled.</p>

Field	Details
ConnectionReceivedId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.</p>
ConnectionSentId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the org.</p>
Description	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description A text description of this record. Label is Product Description.</p>
DisplayUrl	<p>Type url</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description URL leading to a specific version of a record in the linked external data source.</p>
ExternalDataSourceId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the related external data source.</p>
ExternalId	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The unique identifier of a record in the linked external data source. For example, <i>ID #123</i>.</p>
Family	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Name of the product family associated with this record. Product families are configured as picklists in the user interface. To obtain a list of valid values, call <code>describeObjects()</code> and process the <code>DescribeSObjectResult</code> for the values associated with the <code>Family</code> field. Label is Product Family.</p>
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether this record is active (<code>true</code>) or not (<code>false</code>). Inactive Product2 records are hidden in many areas in the user interface. You can change the <code>IsActive</code> flag on a Product2 object as often as necessary. Label is Active.</p>
IsArchived	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Describes whether the product is archived. The default value is <code>false</code>.</p>
IsDeleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p>

Field	Details
	<p>Description</p> <p>Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>
LastReferencedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p>Description</p> <p>Required. Default name of this record. Label is Product Name.</p>
NumberOfQuantityInstallments	<p>Type</p> <p>int</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>If the product has a quantity schedule, the number of installments.</p>
NumberOfRevenueInstallments	<p>Type</p> <p>int</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>If the product has a revenue schedule, the number of installments.</p>

Field	Details
ProductClass	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description This field is read-only. Its value is determined by the value of the <code>Type</code> field and whether the product is associated with a ProductAttribute record. It describes whether a product is a simple product, a variation parent, or a product variation. Possible values are:</p> <ul style="list-style-type: none"> <code>Simple</code>—This product has no variations <code>VariationParent</code>—This product is a variation parent. It's the base product for one or more product variations and, though it has its own stock-keeping unit (SKU), isn't a sellable entity. Instead, it's the parent of sellable entities—its variations. <code>Variation</code>—This product is a variation of a parent product. Each variation has its own SKU. <p>When the value of <code>ProductClass = VariationParent</code>, it never changes. The value of <code>ProductClass</code> changes between <code>Simple</code> and <code>Variation</code> when you attach or detach a ProductAttribute record to the product.</p> <p>The default value is <code>Simple</code>. This field is available in API version 50.0 and later. It was introduced in support of commerce implementations.</p>
ProductCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Default product code for this record. Your org defines the product code naming pattern.</p>
QuantityInstallmentPeriod	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description If the product has a quantity schedule, the amount of time covered by the schedule.</p>
QuantityScheduleType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The type of the quantity schedule, if the product has one.</p>

Field	Details
QuantityUnitOfMeasure	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Unit of the product; for example, kilograms, liters, or cases. This field comes with only one value, Each, so consider creating your own. The <code>QuantityUnitOfMeasure</code> field on <code>ProductItem</code> inherits this field's values.</p>
RecalculateTotalPrice	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Changes behavior of <code>OpportunityLineItem</code> calculations when a line item has child schedule rows for the <code>Quantity</code> value. When enabled, if the rollup quantity changes, then the quantity rollup value is multiplied against the sales price to change the total price.</p>
RevenueInstallmentPeriod	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description If the product has a revenue schedule, the time period covered by the schedule.</p>
RevenueScheduleType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The type of the revenue schedule, if the product has one.</p>
StockKeepingUnit	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The SKU for the product. Use in tandem with or instead of the <code>ProductCode</code> field. For example, you can track the manufacturer's identifying code in the <code>Product Code</code> field and assign the product a SKU when you resell it.</p>

Field	Details
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The type of product. The value of Type affects the read-only value of the <code>ProductClass</code> field. Possible values are <code>Base</code> and <code>Null</code>.</p> <ul style="list-style-type: none"> • When <code>Type = Base</code>, then <code>ProductClass = VariationParent</code>. • When <code>Type = Null</code>, then <code>ProductClass = Simple</code>. • If you attach a ProductAttribute record to a product, then the product's <code>ProductClass</code> value changes to <code>Variation</code>. Conversely, when you detach all <code>ProductAttribute</code> records from a product, the <code>ProductClass</code> value changes to <code>Simple</code>. <p>This field is available in API version 50.0 and later. It was introduced in support of commerce implementations.</p>

Schedule Enabled Flags

When enabling the schedules feature, orgs can decide whether to enable quantity schedules, revenue schedules, or both. In addition, you can use the API to control quantity and revenue scheduling at the product level via the `CanUseQuantitySchedule` and `CanUseRevenueSchedule` flags. A value of `true` for either flag indicates that the product and any `OpportunityLineItems` can have a schedule of that type. These flags can be set when creating or updating `Product2` records.

Default Schedule Fields

The remaining schedule fields for this object define default schedules. Default schedule values are used to create an `OpportunityLineItemSchedule` when an `OpportunityLineItem` is created for the `Product`.

The default schedule fields support the following valid values (all fields are also nillable).

Field	Valid Values
<code>RevenueScheduleType</code>	Divide, Repeat
<code>RevenueInstallmentPeriod</code>	Daily, Weekly, Monthly, Quarterly, Yearly
<code>NumberOfRevenueInstallments</code>	Integer between 1 and 150, inclusive.
<code>QuantityScheduleType</code>	Divide, Repeat
<code>QuantityInstallmentPeriod</code>	Daily, Weekly, Monthly, Quarterly, Yearly
<code>NumberOfQuantityInstallments</code>	Integer between 1 and 150, inclusive

When you attempt to set the schedule fields when creating or updating, the API applies cross-field integrity checks. The integrity requirements are:

- If the schedule type is nil, the installment period and number of installments must be nil.
- If the schedule type is set to any value, then the installment period and number of installments must be non-nil.

Any create or update that fails these integrity checks is rejected with an error.

These default schedule fields, `CanUseQuantitySchedule`, and `CanUseRevenueSchedule`, are restricted picklist fields and are available only if the org has the schedules feature enabled.

Usage

Use this object to define the default product information for your org. This object is associated by reference with `Pricebook2` objects via `PricebookEntry` objects. The same product can be represented in different price books as price book entries. In fact, the same product can be represented multiple times (as separate `PricebookEntry` records) in the same price book with different prices or currencies. A product can only have one price for a given currency within the same price book. To be used in custom price books, all standard prices must be added as price book entries to the standard price book.

You can query the products that have been configured for your org. For example, you can allow your client application to obtain valid product IDs for use when configuring `PricebookEntry` records via the API. Your client application can perform the following tasks on `PricebookEntry` objects:

- Query
- Create for the standard price book or custom price books.
- Update
- Delete
- Change the `IsActive` field when creating or updating records

This object is defined only for those orgs that have products enabled as a feature. If the org doesn't have the products feature, this object doesn't appear in the `describeGlobal()` call, and you can't describe or query this object.

If you try to delete a product via the API but there's an opportunity that uses that product, the delete fails. The workaround is to delete the product in the user interface, which gives you an option to archive the product.

 **Note:** On opportunities and opportunity products, the workflow rules, validation rules, and Apex triggers fire when an update to a child opportunity product or schedule causes an update to the parent record. This means your custom application logic is enforced when there are updates to the parent record, ensuring higher data quality and compliance with your organization's business policies.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

Product2ChangeEvent (API version 44.0)

Change events are available for the object.

Product2Feed (API version 18.0)

Feed tracking is available for the object.

Product2History

History is available for tracked fields of the object.

SEE ALSO:

[Object Basics](#)

Product2DataTranslation

Represents the translated values of the data stored within a [Product2](#) record's fields. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- Your organization must be using Enterprise, Performance, Unlimited, or Developer edition.
- Translation Workbench and data translation must be enabled in your org.
- To view this object, you must have the "View Setup and Configuration" permission

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The translated value for the Product2 description.</p>
IsOutOfDate	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the translation is out-of-date (<code>true</code>) or current (<code>false</code>). A translation is out-of-date if the parent Product2 record is updated after the last translation was filed.</p>
Language	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The language for these translated values.</p>
Name	<p>Type string</p>

Field	Details
	<p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The translated value for the Product2 record name. This field is required to translate the text in other fields.</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The record ID of the Product2 associated with the data that is being translated.</p>

Usage

Use this object to translate the data stored in a Product2 record into the different languages supported by Salesforce. If data translation is enabled for custom fields on the Product2 object, additional Product2DataTranslation fields exist for translating the data contained within those fields.

ProductAttribute

Represents the attributes that can be associated with a product. This object is available in API version 50.0 and later.

Supported Calls

create, delete, describeLayout (), describeSObjects (), getDeleted, getUpdated, query (), retrieve (), undelete, update, upsert

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access products.

Fields

Field	Details
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The default value is USD. Possible values are:</p> <ul style="list-style-type: none"> • USD—U.S. Dollar
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description</p> <p>Name of the product attribute set.</p>
ProductId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The ID of the product that the attribute is associated with. This field is unique within your organization.</p>
Sequence	<p>Type</p> <p>int</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The order that product attributes appear in.</p>
VariantParentId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The ID of the variation parent record associated with the product attribute.</p>

ProductAttributeSet

Represents a group of attributes that can be associated with a product. This object is available in API version 50.0 and later.

Supported Calls

create, delete, describeSObjects(), query(), retrieve(), update, upsert

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access products.

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Text description of the product attribute set.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Possible values are:</p> <ul style="list-style-type: none"> • da—Danish • de—German • en_US—English • esSpanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese • ko—Korean • nl_NL—Dutch

Field	Details
	<ul style="list-style-type: none"> • no—Norwegian • pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish • th—Thai • zh_CN—Chinese (Simplified) • zh_TW—Chinese (Traditional)
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Label of the product attribute set.</p>

ProductAttributeSetItem

Represents a set of attributes that can be associated with a product. This object is available in API version 50.0 and later.

Supported Calls

`create`, `delete`, `describeSObjects()`, `query()`, `retrieve()`, `update`, `upsert`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access products.

Fields

Field	Details
Field	<p>Type reference</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The field's API name.</p>
ProductAttributeSetId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the product attribute set.</p>
Sequence	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The order that product attributes appear in.</p>

ProductAttributeSetProduct

Represents the product associated with a set of attributes. This object is available in API version 50.0 and later.

Supported Calls

`create`, `delete`, `describeLayout()`, `describeSObjects()`, `getDeleted`, `getUpdated`, `query()`, `retrieve()`, `undelete`, `update`, `upsert`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access products.

Fields

Field	Details
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The default value is USD. Possible values are:</p> <ul style="list-style-type: none"> • USD—U.S. Dollar
Name	<p>Type string</p>

Field	Details
	<p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name of the product associated with the product attribute set.</p>
ProductAttributeSetId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the product attribute set.</p>
ProductId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the product associated with the product attribute set.</p>

ProductCategory

Represents the category that products are organized in. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access product media.

Fields

Field	Details
CatalogId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p>

Field	Details
	<p>Description The ID of the catalog.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The default value is USD.</p>
Description	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The description of the category.</p>
IsNavigational	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The default value is false.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p>Type string</p>

Field	Details
	<p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the category.</p>
NumberOfProducts	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of products in a category.</p>
ProductCategoryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the category.</p>
SortOrder	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Order that the category is displayed in.</p>

ProductCategoryDataTranslation

Represents the translated values for the data stored within a [ProductCategory](#) record's fields. This object is available in API version 46.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- Your organization must be using Enterprise, Performance, Unlimited, or Developer edition.
- Translation Workbench and data translation must be enabled in your org.
- To view this object, you must have the "View Setup and Configuration" permission

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The translated value for the Product Category description.</p>
IsOutOfDate	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the translation is out-of-date (<code>true</code>) or current (<code>false</code>). A translation is out-of-date if the parent ProductCategory record is updated after the last translation was filed.</p>
Language	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The language for these translated values.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description</p>

Usage

Use this object to translate the data stored in a Product Category record into the different languages supported by Salesforce. If data translation is enabled for custom fields on the ProductCategory object, additional ProductCategoryDataTranslation fields exist for translating the data contained within those fields.

ProductConsumed

Represents an item from your inventory that was used to complete a work order or work order line item in field service.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Note: To create products consumed, you need Read permission on product items.

Note: To delete products consumed, you need Edit, Create, and Read permission on product items.

Fields

Field Name	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Notes and context about the product consumed.</p>
Discount	<p>Type percent</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The discount provided.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description The date when the product consumed was last modified. Its label in the user interface is Last Modified Date.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the product consumed was last viewed.</p>
ListPrice	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The list price of the product.</p>
PricebookEntryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Price book associated with the product consumed. If the work order and the product item's associated product are related to the same price book, the Price Book Entry auto-populates based on the product item.</p>
Product2Id	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Product associated with the product consumed.</p>
ProductConsumedNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, Sort</p> <p>Description (Read Only) Auto-generated number identifying the product consumed.</p>

Field Name	Details
ProductItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description Product item associated with the product consumed. Creating a product consumed record subtracts the quantity consumed from the linked product item's quantity.</p>
ProductName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Name for the product consumed.</p>
QuantityConsumed	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The quantity of products consumed.</p>
QuantityUnitOfMeasure	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Units of the consumed item; for example, kilograms or liters. Quantity Unit of Measure picklist values are inherited from the Quantity Unit of Measure field on products.</p>
Subtotal	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total price of the product items before discount.</p>
TotalPrice	<p>Type currency</p>

Field Name	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The total price paid for the product items.</p>
UnitPrice	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The price per unit of the product consumed.</p>
WorkOrderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Work order that the product was consumed for.</p>
WorkOrderLineItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Work order line item that the product was consumed for.</p>

Usage

When a product is consumed during the completion of a work order, create a product consumed record to track its consumption. You can add products consumed to work orders or work order line items. Track product consumption at the line item level if you want to know which products were used for each line item's tasks.

The way you use products consumed depends on how closely you want to track the state of your inventory in Salesforce. If you want to track the entire lifecycle of items in your inventory, including their storage, transfer, and consumption, link your products consumed records to product items. This approach ensures that your inventory numbers auto-update to reflect the consumption of products from your inventory. If you want to track product consumption only, however, specify a Price Book Entry on each product consumed record and leave the Product Item field blank.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProductConsumedChangeEvent (API version 48.0)

Change events are available for the object.

ProductConsumedFeed

Feed tracking is available for the object.

ProductConsumedHistory

History is available for tracked fields of the object.

ProductEntitlementTemplate

Represents predefined terms of customer support (Entitlement) that users can add to products (Product2).

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only Salesforce admins, users with access to the Case, Entitlement, or Work Order objects, and users with the View Setup and Configuration permission can access this object.

Fields

Field	Details
EntitlementTemplateId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. ID of the entitlement template. Must be a valid ID.</p>
Product2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. ID of the Product2 associated with the entitlement template. Must be a valid ID.</p>

Usage

Use to query and manage entitlement templates.

SEE ALSO:

[Entitlement](#)

ProductItem

Represents the stock of a particular product at a particular location in field service, such as all bolts stored in your main warehouse.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the product item was last modified. Its label in the user interface is Last Modified Date.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the product item was last viewed.</p>
LocationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p>

Field Name	Details
	<p>Description Location associated with the product item. This usually indicates where the product item is stored. This is a relationship field.</p> <p>Relationship Name Location</p> <p>Relationship Type Lookup</p> <p>Refers To Location</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The product item's owner. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
Product2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Product associated with the product item, which represents the type of product in your inventory. This is a relationship field.</p> <p>Relationship Name Product2</p> <p>Relationship Type Lookup</p> <p>Refers To Product2</p>

Field Name	Details
ProductItemNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description (Read Only) Auto-generated number identifying the product item.</p>
ProductName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description A name for the product item. Try to select a name that indicates what is being stored where; for example, Batteries in Warehouse A.</p>
QuantityOnHand	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The quantity at the location. If you want to add a serial number, this value must be 1.</p>
QuantityUnitOfMeasure	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Units of the product item; for example, kilograms or liters. Quantity Unit of Measure picklist values are inherited from the Quantity Unit of Measure field on products.</p>
SerialNumber	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A unique number for identification purposes. If you want to enter a serial number, the Quantity on Hand must be 1.</p>

Usage

Each product item is associated with a product and a location in Salesforce. If a product is stored at multiple locations, the product will be tracked in a different product item for each location.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProductItemChangeEvent (API version 48.0)

Change events are available for the object.

ProductItemFeed

Feed tracking is available for the object.

ProductItemHistory

History is available for tracked fields of the object.

ProductItemOwnerSharingRule

Sharing rules are available for the object.

ProductItemShare

Sharing is available for the object.

ProductItemTransaction

Represents an action taken on a product item in field service. Product item transactions are auto-generated records that help you track when a product item is replenished, consumed, or adjusted.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p>

Field Name	Details
	<p>Description</p> <p>A description of the transaction. The description is blank when the transaction record is created, but can be updated.</p>
LastReferencedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.</p>
ProductItemId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The associated product item.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>ProductItem</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>ProductItem</p>
ProductItemTransactionNumber	<p>Type</p> <p>string</p> <p>Properties</p> <p>Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description</p> <p>(Read Only) Auto-generated number identifying the product item transaction.</p>

Field Name	Details
Quantity	<p>Type double</p> <p>Properties Create, Filter, Sort</p> <p>Description The quantity of the product item involved in the transaction. If inventory was consumed, the quantity is negative.</p>
RelatedRecordId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description (Read Only) The product consumed or product transfer related to the action. If the action wasn't related to consumption or transfer, the related record is blank. This is a polymorphic relationship field.</p> <p>Relationship Name RelatedRecord</p> <p>Relationship Type Lookup</p> <p>Refers To ProductTransfer, Visit</p>
TransactionType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The action that the transaction tracks.</p> <ul style="list-style-type: none"> • Replenished: When a part is stocked at a location. A Replenished transaction is created when a product item is created. • Consumed: When parts are consumed to complete a work order. A Consumed transaction is created when a record is added to the Products Consumed related list on a work order or work order line item. • Adjusted: When there is a discrepancy or a change in consumption. An Adjusted transaction is created when a product item's Quantity on Hand is edited, a product consumed is updated or delete, or a product transfer is deleted. • Transferred: When parts are transferred between locations.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProductItemTransactionFeed

Feed tracking is available for the object.

ProductItemTransactionHistory

History is available for tracked fields of the object.

ProductMedia

Represents the rich media, including images and attachments, that can be added to products. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access product media.

Fields

Field	Details
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The default value is USD. Possible values are:</p> <ul style="list-style-type: none"> • USD—U.S. Dollar
ElectronicMediaGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Unique ID of the media group.</p>
ElectronicMediaId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Unique ID of the media record.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description Name of the media.</p>
ProductId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the product that the media is associated with.</p>
SortOrder	<p>Type int</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The order that product media is displayed in.</p>

Associated Objects

[ProductMediaHistory](#) on page 3956

History is available for tracked fields of the object.

[ProductMediaOwnerSharingRule](#) on page 3961

Sharing rules are available for the object.

[ProductMediaShare](#) on page 3967

Sharing is available for the object.

ProductRequest

Represents an order for a part or parts in field service.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Authenticated external users can create and update ProductRequest objects.

Fields

Field Name	Details
AccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The account associated with the product request. This is a relationship field.</p> <p>Relationship Name Account</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
CareProgramEnrolleeId	<p>Type reference</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the care program enrollee associated with the product request. This field is available from API version 49.0 and later. This is a relationship field.</p> <p>Relationship Name CareProgramEnrollee</p> <p>Relationship Type Lookup</p> <p>Refers To CareProgramEnrollee</p>
CaseId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The case associated with the product request. This is a relationship field.</p> <p>Relationship Name Case</p> <p>Relationship Type Lookup</p> <p>Refers To Case</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization. The label in the user interface is <code>Currency ISO Code</code>.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p>

Field Name	Details
	<p>Description A text field for details not recorded in the provided fields.</p>
DestinationLocationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Where the product is delivered. This is a relationship field.</p> <p>Relationship Name DestinationLocation</p> <p>Relationship Type Lookup</p> <p>Refers To Location</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the product request was last modified. Its label in the user interface is Last Modified Date.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the product request was last viewed.</p>
NeedByDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Date the product must be delivered by.</p>
OwnerId	<p>Type reference</p>

Field Name	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The owner of the shipment. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ProductRequestNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description An auto-assigned number that identifies the shipment.</p>
ShipToAddress	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description The address that the product is to be delivered to.</p>
ShipToCity	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The city that the product is to be delivered to.</p>
ShipToCountry	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The country that the product is to be delivered to.</p>

Field Name	Details
ShipToGeocodeAccuracy	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The accuracy of the geocode for the shipping address.</p>
ShipToLatitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The latitude of the location where the product is to be delivered to.</p>
ShipToLongitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The longitude of the location where the product is to be delivered to.</p>
ShipToPostalCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The postal code of the address where the product is to be delivered to.</p>
ShipToState	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The name of the state where the product is to be delivered to.</p>
ShipToStreet	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The street address where the product is to be delivered to.</p>

Field Name	Details
ShipmentType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The type of shipment. The picklist includes the following values by default:</p> <ul style="list-style-type: none"> • None • Rush • Overnight • Next Business Day • Pick Up
SourceLocationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The location the product is shipped from. This is a relationship field.</p> <p>Relationship Name SourceLocation</p> <p>Relationship Type Lookup</p> <p>Refers To Location</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description Status of the product transfer.</p>
WorkOrderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The work order that the product request is related to. This is a relationship field.</p>

Field Name	Details
	<p>Relationship Name WorkOrder</p> <p>Relationship Type Lookup</p> <p>Refers To WorkOrder</p>
WorkOrderLineItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The work order line item that the product request is related to. This is a relationship field.</p> <p>Relationship Name WorkOrderLineItem</p> <p>Relationship Type Lookup</p> <p>Refers To WorkOrderLineItem</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProductRequestChangeEvent (API version 48.0)

Change events are available for the object.

ProductRequestFeed

Feed tracking is available for the object.

ProductRequestHistory

History is available for tracked fields of the object.

ProductRequestOwnerSharingRule

Sharing rules are available for the object.

ProductRequestShare

Sharing is available for the object.

ProductRequestLineItem

Represents a request for a part in field service. Product request line items are components of product requests.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
AccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The account associated with the product request line item. This is a relationship field.</p> <p>Relationship Name Account</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
CareProgramEnrolleeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the care program enrollee associated with the product request line item. This field is available from API version 49.0 and later. This is a relationship field.</p> <p>Relationship Name CareProgramEnrollee</p> <p>Relationship Type Lookup</p> <p>Refers To CareProgramEnrollee</p>

Product2Id	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>The product associated with the product request line item.</p> <p>This is a relationship field.</p>

Field Name	Details
	<p>Relationship Name Product2</p> <p>Relationship Type Lookup</p> <p>Refers To Product2</p>
ProductRequestLineItemNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description (Read Only) An auto-assigned number that identifies the product request line item.</p>
QuantityRequested	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The amount requested.</p>
QuantityUnitOfMeasure	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Units of the requested product; for example, grams, liters, or units. The picklist values can be customized.</p>
ShipToAddress	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description The physical address where the product is needed.</p>
ShipToCity	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description The city of the address where the product is needed.</p>
ShipToCountry	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The country of the address where the product is needed.</p>
ShipToGeocodeAccuracy	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Accuracy level of the geocode for the address where the product is needed. See Compound Field Considerations and Limitations for details on geolocation compound fields.</p> <p> Note: This field is available in the API only.</p>
ShipToLatitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with Longitude to specify the precise geolocation of the address where the product is needed. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields.</p> <p> Note: This field is available in the API only.</p>
ShipToLongitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with Latitude to specify the precise geolocation of the address where the product is needed. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields.</p>

Field Name	Details
	 Note: This field is available in the API only.
ShipToPostalCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The postal code of the address where the product is needed.</p>
ShipToState	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The state of the address where the product is needed.</p>
ShipToStreet	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The street of the address where the product is needed.</p>
ShipmentType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The type of shipment. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none">• Rush• Overnight• Next Business Day• Pick Up
SourceLocationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Where the product is at the time of the request.</p>

Field Name	Details
	<p>This is a relationship field.</p> <p>Relationship Name SourceLocation</p> <p>Relationship Type Lookup</p> <p>Refers To Location</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The status of the shipment. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"> • Draft • Submitted • Received
WorkOrderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The work order for which the product is needed. This is a relationship field.</p> <p>Relationship Name WorkOrder</p> <p>Relationship Type Lookup</p> <p>Refers To WorkOrder</p>
WorkOrderLineItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The work order line item for which the product is needed. This is a relationship field.</p>

Field Name	Details
	<p>Relationship Name WorkOrderLineItem</p> <p>Relationship Type Lookup</p> <p>Refers To WorkOrderLineItem</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ProductRequestLineItemChangeEvent \(API version 48.0\)](#)

Change events are available for the object.

[ProductRequestLineItemFeed](#)

Feed tracking is available for the object.

[ProductRequestLineItemHistory](#)

History is available for tracked fields of the object.

ProductRequired

Represents a product that is needed to complete a work order or work order line item in field service.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description The date when the product required was last modified. Its label in the user interface is Last Modified Date.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the product required was last viewed.</p>
ParentRecordId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The work order or work order line item that the product is required for. This is a polymorphic relationship field.</p> <p>Relationship Name ParentRecord</p> <p>Relationship Type Lookup</p> <p>Refers To Visit, WorkOrder, WorkOrderLineItem, WorkType</p>
ParentRecordType	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates whether the parent record is a work order or a work order line item.</p>
Product2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The required product. This is a relationship field.</p> <p>Relationship Name Product2</p>

Field Name	Details
	<p>Relationship Type Lookup</p> <p>Refers To Product2</p>
ProductName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the product required.</p>
ProductRequiredNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description (Read only) Auto-generated number identifying the product required.</p>
QuantityRequired	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Quantity required of the product.</p>
QuantityUnitOfMeasure	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Units of the required product; for example, kilograms or liters. Quantity Unit of Measure picklist values are inherited from the Quantity Unit of Measure field on products.</p>

Usage

Required products can be added to work types, work orders, and work order line items to ensure that the assigned service resource arrives with the right equipment.

Adding required products to work types saves you time and keeps your business processes consistent. Work orders and work order line items inherit their work type's required products. For example, if all light bulb replacement jobs require a ladder and a light bulb, add

the ladder and light bulb as required products to your Light Bulb Replacement work type. When it's time to create a work order for a customer's light bulb replacement, applying that work type to the work order adds the required products.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProductRequiredFeed

Feed tracking is available for the object.

ProductRequiredHistory

History is available for tracked fields of the object.

ProductServiceCampaign

Represents a set of activities to be performed on a product service campaign asset, such as a product recall for safety issues or product defects. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Description of the product service campaign.</p>
EndDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The date on which the product service campaign ends.</p>

Field	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time that the asset was last modified. The UI label is Last Modified Date.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time that the asset was last viewed.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The product service campaign's owner. By default, the product service campaign owner is the user who created the product service campaign record. The UI label is Product Service Campaign Owner.</p>
Priority	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The priority of the product service campaign. Possible values are:</p> <ul style="list-style-type: none">• Critical• High• Low• Medium
Product2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the Product2 associated with this campaign. The UI label is Product.</p>

Field	Details
ProductServiceCampaignName	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the product service campaign.</p>
StartDate	<p>Type date</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The date on which the product service campaign starts.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The status of the product service campaign. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"> • New—Product service campaign created, but there hasn't yet been any activity. • In Progress—Product service campaign has begun. • On Hold—Work is paused. • Completed—Work is complete. • Cannot Complete—Work couldn't be completed. • Closed—All work and associated activity is complete. • Canceled—Work is canceled, typically before any work began.
StatusCategory	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The category that each <code>Status</code> value falls into. The <code>StatusCategory</code> field has eight default values: seven values that are identical to the default <code>Status</code> values, and <code>None</code> for statuses without a status category.</p> <p>If you create custom <code>Status</code> values, you must indicate which category it belongs to. For example, if you create a <code>Waiting for Response</code> value, add it the <code>On Hold</code> category. To learn which processes reference <code>StatusCategory</code>, see How are Status Categories Used?</p>

Field	Details
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The type of the product service campaign. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"> • Modification—The asset requires an on-site alteration. • Recall—The asset must be returned to the manufacturer for modification or upgrade. • Service—The asset needs to be serviced. • Upgrade—The asset needs updating.
WorkTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The work type associated with the product service campaign. A customer uses this field as a guide when setting work type for work orders for the product service campaign. Duration, Duration Type, and required skills.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[ProductServiceCampaignFeed](#)

Feed tracking is available for the object.

[ProductServiceCampaignHistory](#)

History is available for tracked fields of the object.

[ProductServiceCampaignOwnerSharingRule](#)

Sharing rules are available for the object.

[ProductServiceCampaignShare](#)

Sharing is available for the object.

ProductServiceCampaignItem

Represents a product service campaign's asset. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
AssetId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The asset associated with the product service campaign. Must be present if <code>Product2Id</code> is not present.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time that the asset was last modified. Its UI label is Last Modified Date.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time that the asset was last viewed.</p>
Product2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the Product2 associated with this campaign. The UI label is Product. Must be present if <code>AssetID</code> is not present.</p>

Field	Details
ProductServiceCampaignId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. The item's parent product service campaign record.</p>
ProductServiceCampaignItemNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The ID of the product service campaign item.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The status of the product service campaign item. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"> • <i>New</i>—Product service campaign item created, but there hasn't yet been any activity. • <i>In Progress</i>—Product service campaign item has begun. • <i>On Hold</i>—Product service campaign item is paused. • <i>Completed</i>—Product service campaign item is complete. • <i>Cannot Complete</i>—Product service campaign item couldn't be completed. • <i>Closed</i>—All product service campaign item and associated activity is complete. • <i>Canceled</i>—Product service campaign item is canceled, typically before any work began.
StatusCategory	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The category that each <i>Status</i> value falls into. The <i>StatusCategory</i> field has eight default values: seven values that are identical to the default <i>Status</i> values, and <i>None</i> for statuses without a status category.</p> <p>If you create custom <i>Status</i> values, you must indicate which category it belongs to. For example, if you create a <i>Waiting for Response</i> value, add it to the <i>On Hold</i></p>

Field	Details
	category. To learn which processes reference <code>StatusCategory</code> , see How are Status Categories Used?

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProductServiceCampaignItemFeed

Feed tracking is available for the object.

ProductServiceCampaignItemHistory

History is available for tracked fields of the object.

ProductServiceCampaignItemOwnerSharingRule

Sharing rules are available for the object.

ProductServiceCampaignItemShare

Sharing is available for the object.

ProductServiceCampaignItemStatus

Represents a status for a product service campaign item in field service. This object is available in API version 51.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
<code>ApiName</code>	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The API name of the status value.</p>
<code>IsDefault</code>	<p>Type boolean</p>

Field	Details
	<p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates that the status value is the default status on product service campaign items when <code>true</code>. Only one status value can be the default.</p>
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The label for the picklist value in the UI.</p>
SortOrder	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The value's position in the dropdown list in the UI.</p>
StatusCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The status category that the value corresponds to. The Status Category field has seven values that are identical to the default Status values.</p>

Usage

The Status field on product service campaign items comes with the following values:

- New—Product service campaign item created, but there hasn't been any activity.
- In Progress—Work has begun.
- On Hold—Work is paused.
- Completed—Work is complete.
- Cannot Complete—Work couldn't be completed.
- Closed—All work and associated activity is complete.
- Canceled—Work is canceled, typically before any work began.

The ProductServiceCampaignItemStatus object corresponds to the Status field. Adding a value to the Status field—for example, Canceled By Supplier—creates a product service campaign item status record, and vice versa.

 **Note:** Product service campaign items also come with a Status Category field whose values are identical to the default status values. If you create custom status values, you must indicate which category it belongs to. For example, if you create a *Customer Absent* value, add it to the *Cannot Complete* category. To learn which processes reference StatusCategory, see [How are Status Categories Used?](#)

ProductServiceCampaignStatus

Represents a status for a product service campaign in field service. This object is available in API version 51.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
ApiName	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The API name of the status value.</p>
IsDefault	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates that the status value is the default status on product service campaigns when <code>true</code>. Only one status value can be the default.</p>
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The label for the picklist value in the UI.</p>

Field	Details
SortOrder	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The value's position in the dropdown list in the UI.</p>
StatusCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The status category that the value corresponds to. The Status Category field has seven values that are identical to the default Status values.</p>

Usage

The Status field on product service campaigns comes with the following values:

- New—Product service campaign created, but there hasn't been any activity.
- In Progress—Work has begun.
- On Hold—Work is paused.
- Completed—Work is complete.
- Cannot Complete—Work couldn't be completed.
- Closed—All work and associated activity is complete.
- Canceled—Work is canceled, typically before any work began.

The ProductServiceCampaignStatus object corresponds to the Status field. Adding a value to the Status field—for example, Canceled By Supplier—creates a product service campaign status record, and vice versa.

 **Note:** Product service campaigns also come with a Status Category field whose values are identical to the default status values. If you create custom status values, you must indicate which category it belongs to. For example, if you create a *Customer Absent* value, add it to the *Cannot Complete* category. To learn which processes reference StatusCategory, see [How are Status Categories Used?](#)

ProductTransfer

Represents the transfer of inventory between locations in field service.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Details not recorded in the provided fields.</p>
DestinationLocationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The place the product is to be delivered. This is a relationship field.</p> <p>Relationship Name DestinationLocation</p> <p>Relationship Type Lookup</p> <p>Refers To Location</p>
ExpectedPickupDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Date the product is expected to be picked up.</p>
IsReceived	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Checkbox identifying that the product was received.</p>

Field Name	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the product request was last modified. Its label in the user interface is Last Modified Date.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the product request was last viewed.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Owner of the product transfer. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
Product2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Lookup field for the product associated with the product transfer. This is a relationship field.</p> <p>Relationship Name Product2</p> <p>Relationship Type Lookup</p>

Field Name	Details
	<p>Refers To Product2</p>
ProductRequestId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Lookup field for the product request associated with the product transfer. This is a relationship field.</p> <p>Relationship Name ProductRequest</p> <p>Relationship Type Lookup</p> <p>Refers To ProductRequest</p>
ProductRequestLineItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Lookup field for the product request line item associated with the product transfer. This is a relationship field.</p> <p>Relationship Name ProductRequestLineItem</p> <p>Relationship Type Lookup</p> <p>Refers To ProductRequestLineItem</p>
ProductTransferNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description An auto-assigned number that identifies the product transfer.</p>
QuantityReceived	<p>Type double</p>

Field Name	Details
	<p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Amount of product received at the destination location.</p>
QuantitySent	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description Amount of product sent from the source location.</p>
QuantityUnitOfMeasure	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The units of the product, for example grams, liters, or units.</p>
ReceivedById	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Lookup field for the contact who received the product at the destination location. This is a polymorphic relationship field.</p> <p>Relationship Name ReceivedBy</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ReturnOrderId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The return order associated with the product transfer. This is a relationship field.</p>

Field Name	Details
	<p>Relationship Name ReturnOrder</p> <p>Relationship Type Lookup</p> <p>Refers To ReturnOrder</p>
ReturnOrderLineItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The return order line item associated with the product transfer. This is a relationship field.</p> <p>Relationship Name ReturnOrderLineItem</p> <p>Relationship Type Lookup</p> <p>Refers To ReturnOrderLineItem</p>
ShipmentExpectedDeliveryDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Lookup field for the shipment related to the product transfer.</p>
ShipmentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Lookup field for the shipment related to the product transfer. This is a relationship field.</p> <p>Relationship Name Shipment</p> <p>Relationship Type Lookup</p> <p>Refers To Shipment</p>

Field Name	Details
ShipmentStatus	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description Lookup field for the shipment related to the product transfer.</p>
ShipmentTrackingNumber	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Lookup field for the shipment related to the product transfer.</p>
ShipmentTrackingUrl	<p>Type url</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Lookup field for the shipment related to the product transfer.</p>
SourceLocationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Lookup field for the source location related to the product transfer. This is a relationship field.</p> <p>Relationship Name SourceLocation</p> <p>Relationship Type Lookup</p> <p>Refers To Location</p>
SourceProductItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Lookup field for the product item related to the product transfer.</p>

Field Name	Details
	<p>Relationship Name SourceProductItem</p> <p>Relationship Type Lookup</p> <p>Refers To ProductItem</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description Status of the product transfer.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProductTransferChangeEvent (API version 48.0)

Change events are available for the object.

ProductTransferFeed

Feed tracking is available for the object.

ProductTransferHistory

History is available for tracked fields of the object.

ProductTransferOwnerSharingRule

Sharing rules are available for the object.

ProductTransferShare

Sharing is available for the object.

ProductWarrantyTerm

Defines the relationship between a product or product family and warranty term. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CoveredProductFamily	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The product family that the warranty term applies to.</p>
CoveredProductId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the product that the warranty term applies to.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the product warranty term was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the product warranty term was last viewed.</p>
ProductWarrantyTermNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The identifier for this product warranty term.</p>
WarrantyTermId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p>

Field	Details
	<p>Description</p> <p>The ID of the warranty term.</p>

Profile

Represents a profile, which defines a set of permissions to perform different operations. Operations can include creating a custom profile or querying, adding, updating, or deleting information.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, Customer Portal and Partner Portal users *can't* access this object.

To view the following settings, assignments, and permissions for standard and custom objects in a specified profile, the View Setup and Configuration permission is required.

- Client settings
- Field permissions
- Layout assignments
- Object permissions
- Permission dependencies
- Permission set tab settings
- Permission set group components
- Record types

As of API version 50.0 and later, only users with correct permissions can view profile names other than their own if the Profile Filtering setting is enabled.

 **Important:** Profile names are also exposed when users with permissions to perform the following tasks take these actions:

- Create a tab or record type with a wizard step that includes the assignment of tabs and record types to profiles.
- Configure a login flow where viewing profile lists is required to make flow associations.
- Set up delegated admins where looking up profiles is needed to identify assignable profiles.
- Administer an org as a delegated customer admin.
- Administer an org as a delegated admin to view and assign profiles of the delegated group.

Fields

Field	Details
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Description of the profile.</p>
IsSsoEnabled	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort, Update</p> <p>Description If <code>true</code>, users assigned to this profile can delegate username and password authentication to a corporate database instead of the user database.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this profile. Available in API version 29.0 and later.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this profile. Available in API version 29.0 and later.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the profile.</p>
Permissions <i>PermissionName</i>	<p>Type boolean</p>

Field	Details
	<p>Properties Create, Filter, Update</p> <p>Description One field for each permission. If <code>true</code>, users assigned to this profile have the named permission. The number of fields varies depending on the permissions for the org and license type.</p> <p> Tip: To get a list of available permissions in SOAP API, use <code>describeSObjects()</code>.</p>
UserLicenseId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the UserLicense associated with this profile. This is a relationship field.</p> <p>Relationship Name UserLicense</p> <p>Relationship Type Lookup</p> <p>Refers To UserLicense</p>
UserType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The category of user license. Each <code>UserType</code> is associated with one or more UserLicense records. Each UserLicense is associated with one or more profiles. In API version 10.0 and later, valid values include:</p> <ul style="list-style-type: none"> • Standard: user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses. Label is Standard. • PowerPartner: User whose access is limited because they're a partner and typically access the application through a partner portal or Experience Cloud site. Label is Partner. • CSPLitePortal: user whose access is limited because they're an org's customer and access the application through a Customer Portal or Experience Cloud site. Label is High Volume Portal. • CustomerSuccess: user whose access is limited because they're an org's customer and access the application through a Customer Portal. Label is Customer Portal User. • PowerCustomerSuccess: user whose access is limited because they're an org's customer and access the application through a Customer Portal. Label is Customer Portal Manager.

Field	Details
	<p>Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the Customer Portal role hierarchy.</p> <ul style="list-style-type: none"> • CsnOnly: user whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. Label is Chatter Free. • Guest: user whose access is limited because they're an unauthenticated user without login credentials. Label is Guest. <p><code>UserType</code> replaces <code>LicenseType</code>, which is unavailable as of API version 10.0. In API versions 8.0 and 9.0 <code>LicenseType</code> is still available with the following valid values:</p> <ul style="list-style-type: none"> • AUL: Lightning Platform user license. Label is Apex Platform. • AUL1: Lightning Platform user license with only one user. Label is Apex Platform One. • Salesforce: Salesforce user license. Label is Salesforce. • PackageManager: user who can create and work with managed packages for AppExchange. Label is Package Manager. • PRM: user whose access is limited because they're a partner and typically accesses the application through a partner portal. Label is Partner. • CustomerUser: user whose access is limited because they're an org's customer and accesses the application through a Customer Portal. Label is Customer Portal User. • CustomerManager: user whose access is limited because they're an org's customer and accesses the application through a Customer Portal. Label is Customer Portal Manager. <p>Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the Customer Portal role hierarchy.</p> <p>In API version 53.0 and later, you can't set the value of <code>UserType</code> using Apex.</p>

Usage

Use the Profile object to create custom profiles that start without any permissions enabled except for required permissions for the profile's user license. While you can use the Profile Metadata type to deploy profiles, we recommend that you use the Profile SOAP API object because it allows you to create empty profiles.

You can also query the set of currently configured user profiles in your org. Your client application can use Profile objects to obtain valid profile IDs for use when querying or modifying users through the API.

In the user interface, profiles can be used to assign user licenses from specific pools (Lightning Platform user license or Salesforce user license, for example). When users are reassigned to profiles with different license types, the number of available licenses in the old license type pool increases, one per user assignment updated. Also, the number of available licenses decreases by the same amount in the new license type pool.

SEE ALSO:

[Object Basics](#)

[PermissionSet](#)

ProfileSkill

Represents a profile skill, which describes a user's professional knowledge. This is a global record for the organization, and users are associated through the ProfileSkillUser object.

 **Note:** For information about Live Agent skills, see the [Skill](#) topic.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Description of the profile skill.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp indicating when the current user last viewed a record related to this profile skill. Available in API version 29.0 and later.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp indicating when the current user last viewed this profile skill. Available in API version 29.0 and later.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p>

Field Name	Details
	<p>Description The name of the profile skill.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The owner of the profile skill. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
UserCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of users with the profile skill.</p>

Usage

Use the ProfileSkill object to look up the attributes of a skill that can be assigned to a user. This is a global object and is not owned by any specific user.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProfileSkillFeed (API version 34.0)

Feed tracking is available for the object.

ProfileSkillHistory

History is available for tracked fields of the object.

ProfileSkillOwnerSharingRule

Sharing rules are available for the object.

ProfileSkillShare

Sharing is available for the object.

ProfileSkillEndorsement

Represents a detail relationship of ProfileSkillUser. An endorsement of a profile skill shows approval and support of another user's publicly declared skill.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name of the profile skill being endorsed.</p>
ProfileSkillUserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the ProfileSkillUser record that is being endorsed. This is a relationship field.</p> <p>Relationship Name ProfileSkillUser</p> <p>Relationship Type Lookup</p> <p>Refers To ProfileSkillUser</p>
UserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The user ID of the person giving the endorsement. This is a relationship field.</p>

Field Name	Details
	<p>Relationship Name User</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>

Usage

Use the ProfileSkillEndorsement object to query about a single endorsement given to a user about a specific skill. Users can't endorse themselves, they can only be endorsed by others unless they are administrators with the "Modify All Data" permission.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProfileSkillEndorsementFeed (API version 34.0)

Feed tracking is available for the object.

ProfileSkillEndorsementHistory

History is available for tracked fields of the object.

ProfileSkillShare

Represents a sharing entry on a ProfileSkill.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field Name	Details
AccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Level of access that the User or Group has to the ProfileSkill. The possible values are:</p>

Field Name	Details
	<ul style="list-style-type: none"> • Read • Edit • All (This value is not valid for <code>create()</code> or <code>update()</code> calls.) <p>This value must be set to an access level that is higher than the organization's default access level for ProfileSkill objects.</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the parent object, if any. This is a relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To ProfileSkill</p>
RowCause	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Reason that this sharing entry exists. You can create a value for this field in API versions 32.0 and later with the correct organization-wide sharing settings. Values may include:</p> <ul style="list-style-type: none"> • <code>Manual</code>—The User or Group has access because a user with "All" access manually shared the ProfileSkill with them. • <code>Owner</code>—The User is the owner of the ProfileSkill or is in a role above the ProfileSkill owner in the role hierarchy.
UserOrGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the User or Group that has been given access to the ProfileSkill. This is a polymorphic relationship field.</p>

Field Name	Details
	Relationship Name UserOrGroup
	Relationship Type Lookup
	Refers To Group, User

Usage

This object is read only. It is visible because of constraints to the ProfileSkill object, but it is ignored and does not control which users and groups can view and edit ProfileSkill records owned by other users.

ProfileSkillUser

Represents a detail relationship of User. The object connects profile skills with users.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
EndorsementCount	Type int

Usage

Use this object to assign specific skills to specific users. ProfileSkillUser appears on the Overview tab on the Chatter profile page. Users can only create a skill mapping for themselves, they can't create skill mappings for others unless they are administrators with the "Modify All Data" permission. Additionally, users can only edit this object if they are the context user and are not editing the `UserId` field.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProfileSkillUserFeed (API version 34.0)

Feed tracking is available for the object.

ProfileSkillUserHistory

History is available for tracked fields of the object.

Promotion

Represents a promotion for B2B stores. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Some of the fields on the Promotion object are available only if the B2B Commerce license is enabled.
