List of SKUs. Specify either a list of up to 20 SKUs or product IDs, but not both.

*fields*

Type: [List<String>](#)

Comma-separated list of field names to return for each product. If the list is empty or not specified, all fields are returned. You can specify any number of fields.

*excludeMedia*

Type: [Boolean](#)

Specifies whether default images are returned for the products (`false`) or not (`true`). The default is `false`.

*excludePrices*

Type: [Boolean](#)

Specifies whether prices are returned for the products (`false`) or not (`true`). The default is `false`.

**Note:** In version 58.0 and later, prices aren't returned for products regardless of this parameter. To get pricing information for products in version 58.0 and later, use the [CommerceStorePricing Class](#).

## Return Value

Type: [ConnectApi.ProductOverviewCollection](#)

**getProducts(webstoreId, effectiveAccountId, ids, skus, fields, excludeMedia)**

Get fields and default images for a list of products.

## API Version

58.0

## Available to Guest Users

58.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ProductOverviewCollection getProducts(String webstoreId, String effectiveAccountId, List<String> ids, List<String> skus, List<String> fields, Boolean excludeMedia)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*effectiveAccountId*

Type: [String](#)

ID of the buyer account or guest buyer profile for which the request is made. If `null`, the default value is determined from context.

*ids*

Type: [List<String>](#)

List of product IDs. Specify either a list of up to 20 product IDs or SKUs, but not both.

*skus*

Type: [List<String>](#)

List of SKUs. Specify either a list of up to 20 SKUs or product IDs, but not both.

*fields*

Type: [List<String>](#)

Comma-separated list of field names to return for each product. If the list is empty or not specified, all fields are returned. You can specify any number of fields.

*excludeMedia*

Type: [Boolean](#)

Specifies whether default images are returned. Specifies whether the media groups and default images of the product are returned (`false`) or not (`true`). If unspecified, defaults to `false`.

## Return Value

Type: [ConnectApi.ProductOverviewCollection](#)

## CommerceCatalogManagement Class

Create or update a composite product. Create a variation product.

## Namespace

[ConnectApi](#)

## CommerceCatalogManagement Methods

These methods are for `CommerceCatalogManagement`. All methods are static.

**compositeCommerceProductCreate (webstoreId, compositeCommerceProductInputRepresentation)**

Create a composite product.

**API Version**

61.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.CompositeCommerceProductOutputRepresentation  
compositeCommerceProductCreate(String webstoreId,  
ConnectApi.CompositeCommerceProductInputRepresentation  
compositeCommerceProductInputRepresentation)
```

**Parameters**

*webstoreId*

Type: [String](#)

ID of the webstore.

*compositeCommerceProductInputRepresentation*

Type: [ConnectApi.CompositeCommerceProductInputRepresentation](#)

Details used to create the composite product.

**Return Value**

Type: [ConnectApi.CompositeCommerceProductOutputRepresentation](#)

**compositeCommerceProductUpdate (webstoreId, productId, compositeCommerceProductInputRepresentation)**

Update a composite product.

**API Version**

61.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.CompositeCommerceProductOutputRepresentation  
compositeCommerceProductUpdate(String webstoreId, String productId,
```

```
ConnectApi.CompositeCommerceProductInputRepresentation  
compositeCommerceProductInputRepresentation)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*productId*

Type: [String](#)

ID of the composite product.

*compositeCommerceProductInputRepresentation*

Type: [ConnectApi.CompositeCommerceProductInputRepresentation](#)

Details used to update the composite product.

## Return Value

Type: [ConnectApi.CompositeCommerceProductOutputRepresentation](#)

```
compositeCommerceVariationCreate (webstoreId,  
compositeCommerceVariationInputRepresentation)
```

Create a variation product.

## API Version

62.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.CompositeCommerceVariationOutputRepresentation  
compositeCommerceVariationCreate (String webstoreId,  
ConnectApi.CompositeCommerceVariationInputRepresentation  
compositeCommerceVariationInputRepresentation)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*compositeCommerceVariationInputRepresentation*

Type: [ConnectApi.CompositeCommerceVariationInputRepresentation](#)

Details used to create the variation product.

## Return Value

Type: [ConnectApi.CompositeCommerceVariationOutputRepresentation](#)

# CommercePromotions Class

Evaluate promotions for Commerce orders. Get coupon code redemption usage.

## Namespace

[ConnectApi](#)

## CommercePromotions Methods

These methods are for `CommercePromotions`. All methods are static.

 **Note:** Don't write an Apex test that calls these `CommercePromotions` APIs within the context of a guest.

### IN THIS SECTION:

[decreaseRedemption\(couponCodeRedemption\)](#)

Get coupon code redemption usage to revert a previously redeemed coupon code.

[evaluate\(salesTransaction\)](#)

Determine which promotions the customer is eligible for based on the store and buyer group, and compute the applicable price adjustments based on the coupons and the items in the cart. This API evaluates only the first 50 active manual promotions and first 50 active automatic promotions, based on priority. This API computes and returns applicable price adjustments, but it does not apply those adjustments to the webcart record. If you want to enable promotions based on shipping, contact Salesforce Customer Support.

[increaseRedemption\(couponCodeRedemption\)](#)

Get coupon code redemption addition (increase) usage.

### **decreaseRedemption (couponCodeRedemption)**

Get coupon code redemption usage to revert a previously redeemed coupon code.

### API Version

58.0

### Available to Guest Users

58.0

### Requires Chatter

No

## Signature

```
public static ConnectApi.CouponCodeRedemptionCollection  
decreaseRedemption (ConnectApi.CouponCodeRedemptionInput couponCodeRedemption)
```

## Parameters

*couponCodeRedemption*

Type: [ConnectApi.CouponCodeRedemptionInput](#) on page 1819

Tracks each coupon code redemption.

## Return Value

Type: [ConnectApi.CouponCodeRedemptionCollection](#) on page 2026

## **evaluate (salesTransaction)**

Determine which promotions the customer is eligible for based on the store and buyer group, and compute the applicable price adjustments based on the coupons and the items in the cart. This API evaluates only the first 50 active manual promotions and first 50 active automatic promotions, based on priority. This API computes and returns applicable price adjustments, but it does not apply those adjustments to the webcart record. If you want to enable promotions based on shipping, contact Salesforce Customer Support.

## API Version

57.0

## Available to Guest Users

57.0

## Requires Chatter

No

## Signature

```
global static ConnectApi.PromotionEvaluation evaluate (ConnectApi.PromotionEvaluateInput  
salesTransaction)
```

## Parameters

*salesTransaction*

Type: [ConnectApi.PromotionEvaluateInput](#)

Find promotions that the customer is eligible for and compute their discounts.

## Return Value

Type: [ConnectApi.PromotionEvaluation](#)

**increaseRedemption (couponCodeRedemption)**

Get coupon code redemption addition (increase) usage.

**API Version**

58.0

**Available to Guest Users**

58.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.CouponCodeRedemptionCollection  
increaseRedemption (ConnectApi.CouponCodeRedemptionInput couponCodeRedemption)
```

**Parameters**

*couponCodeRedemption*

Type: [ConnectApi.CouponCodeRedemptionInput](#) on page 1819

Tracks each coupon code redemption.

**Return Value**

Type: [ConnectApi.CouponCodeRedemptionCollection](#) on page 2026

## CommerceSearch Class

Get sort rules for the live search index. Get product search suggestions. Search products.

## Namespace

[ConnectApi](#)

## CommerceSearch Methods

These methods are for `CommerceSearch`. All methods are static.

**IN THIS SECTION:**

[getSortRules\(webstoreId\)](#)

Get sort rules for the live index.

[getSuggestions\(webstoreId, effectiveAccountId, searchTerm, maxResults\)](#)

Get suggestions for product searches.

[getSuggestions\(webstoreId, effectiveAccountId, searchTerm, maxResults, includeSuggestedProducts, maxSuggestedProducts\)](#)

Get suggestions for product searches.

[searchProducts\(webstoreId, effectiveAccountId, productSearchInput\)](#)

Search products.

### **getSortRules (webstoreId)**

Get sort rules for the live index.

#### API Version

52.0

#### Available to Guest Users

52.0

#### Requires Chatter

No

#### Signature

```
public static ConnectApi.SortRulesCollection getSortRules(String webstoreId)
```

#### Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

#### Return Value

Type: [ConnectApi.SortRulesCollection](#)

### **getSuggestions (webstoreId, effectiveAccountId, searchTerm, maxResults)**

Get suggestions for product searches.

#### API Version

52.0

#### Available to Guest Users

52.0

#### Requires Chatter

No

## Signature

```
public static ConnectApi.ProductSearchSuggestionsResults getSuggestions(String webstoreId, String effectiveAccountId, String searchTerm, Integer maxResults)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*effectiveAccountId*

Type: [String](#)

ID of the buyer account or guest buyer profile for which the request is made. If `null`, the default value is determined from context.

*searchTerm*

Type: [String](#)

Search term with up to 10 characters. If specified, the service returns autocomplete suggestions from the user's recent searches. If unspecified, the service returns suggestions from the user's recent searches.

*maxResults*

Type: [Integer](#)

Maximum number of suggestions. Values are from 1 through 10. If unspecified, defaults to 10.

## Return Value

Type: [ConnectApi.ProductSearchSuggestionsResults](#)

```
getSuggestions(webstoreId, effectiveAccountId, searchTerm, maxResults, includeSuggestedProducts, maxSuggestedProducts)
```

Get suggestions for product searches.

## API Version

58.0

## Available to Guest Users

58.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ProductSearchSuggestionsResults getSuggestions(String webstoreId, String effectiveAccountId, String searchTerm, Integer maxResults, Boolean includeSuggestedProducts, Integer maxSuggestedProducts)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*effectiveAccountId*

Type: [String](#)

ID of the buyer account or guest buyer profile for which the request is made. If `null`, the default value is determined from context.

*searchTerm*

Type: [String](#)

Search term with up to 10 characters. If specified, the service returns autocomplete suggestions from the user's recent searches. If unspecified, the service returns suggestions from the user's recent searches.

*maxResults*

Type: [Integer](#)

Maximum number of suggestions. Values are from 1 through 10. If unspecified, defaults to 10.

*includeSuggestedProducts*

Type: [Boolean](#)

Specifies whether a search term returns product suggestions (`true`) or not (`false`). If unspecified, defaults to `false`. If `true`, the service returns the suggested product IDs.

*maxSuggestedProducts*

Type: [String](#)

Maximum number of product suggestions. Values are from 1 through 10. If unspecified, defaults to 4.

## Return Value

Type: [ConnectApi.ProductSearchSuggestionsResults](#)

### **searchProducts(webstoreId, effectiveAccountId, productSearchInput)**

Search products.

## API Version

52.0

## Available to Guest Users

52.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ProductSearchResults searchProducts(String webstoreId, String effectiveAccountId, ConnectApi.ProductSearchInput productSearchInput)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*effectiveAccountId*

Type: [String](#)

ID of the buyer account or guest buyer profile for which the request is made. If `null`, the default value is determined from context.

*productSearchInput*

Type: [ConnectApi.ProductSearchInput](#)

A [ConnectApi.ProductSearchInput](#) body with either a category ID or search terms.

## Return Value

Type: [ConnectApi.ProductSearchResults](#)

## Usage

Searching products respects buyer View Product entitlements and only users entitled to view product data can access this resource.

# CommerceSearchConnectFamily Class

Search products by search term or category in a webstore.

## Namespace

[ConnectApi](#)

## CommerceSearchConnectFamily Methods

These methods are for [CommerceSearchConnectFamily](#). All methods are static.

### IN THIS SECTION:

[searchProducts\(webstoreId, searchTerm, categoryId, sortRuleId, grouping, fields, refinements, pageParam, pageSize, effectiveAccountId, includeQuantityRule\)](#)

Search products by search term or category in a webstore.

```
searchProducts(webstoreId, searchTerm, categoryId, sortRuleId, grouping,  
fields, refinements, pageParam, pageSize, effectiveAccountId,  
includeQuantityRule)
```

Search products by search term or category in a webstore.

## API Version

58.0

## Available to Guest Users

58.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.CommerceProductSearchResults searchProducts(String webstoreId,
String searchTerm, String categoryId, String sortRuleId, String grouping, List<String>
fields, String refinements, Integer pageParam, Integer pageSize, String
effectiveAccountId, Boolean includeQuantityRule)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*searchTerm*

Type: [String](#)

List of up to 32 space-separated search terms.

*categoryId*

Type: [String](#)

Category ID returns results for products in this category or its subcategories.

*sortRuleId*

Type: [String](#)

ID of the sort rule that specifies the order of products in the search results. If unspecified, the default sort type is relevancy.

*grouping*

Type: [String](#)

Grouping option for search results. If unspecified, the default is the value specified in **Search > Results Display Settings > Results Grouping**.

*fields*

Type: [List<String>](#)

Product fields to return in search results. Search results include fields you have access to.

*refinements*

Type: [String](#)

List up to nine refinements (facets) for search results. Buyers or shoppers can select up to 20 values for each refinement. The `refinements` parameter is encoded as a Base64 string from the JSON representation of [ConnectApi.DistinctValueRefinementInput](#).

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 200. If unspecified, defaults to 20.

*effectiveAccountId*

Type: [String](#)

ID of the buyer account or guest buyer profile for which the request is made. If unspecified, the default value is determined from context.

*includeQuantityRule*

Type: [Boolean](#)

Specifies whether to include purchase quantity rule information for products in search results (`true`) or not (`false`). If unspecified, defaults to `false`.

## Return Value

Type: [ConnectApi.CommerceProductSearchResults](#)

## Usage

Searching products respects buyer View Product entitlements and only users entitled to view product data can access this resource.

# CommerceSearchSettings Class

Get indexes. Get index logs. Create an index of a product catalog.

## Namespace

[ConnectApi](#)

## CommerceSearchSettings Methods

These methods are for `CommerceSearchSettings`. All methods are static.

### IN THIS SECTION:

[createCommerceSearchIndex\(webstoreId, indexBuildType\)](#)

Create an index of a product catalog.

[getCommerceSearchIndex\(webstoreId, indexId\)](#)

Get a Commerce search index.

[getCommerceSearchIndexes\(webstoreId\)](#)

Get Commerce search indexes.

[getCommerceSearchIndexLogs\(webstoreId\)](#)

Get Commerce search index logs.

### **createCommerceSearchIndex(webstoreId, indexBuildType)**

Create an index of a product catalog.

## API Version

57.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.CommerceSearchIndex postCommerceSearchIndex(String webstoreId)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*indexBuildType*

Type: [ConnectApi.CommerceSearchIndexBuildType](#)

Build type of the index. Values are:

- Full
- Incremental

## Return Value

Type: [ConnectApi.CommerceSearchIndex](#)

## Usage

This method creates a live index that replaces the current live index. Any indexes that are in progress are removed when you manually create an index with this method.

## **getCommerceSearchIndex (webstoreId, indexId)**

Get a Commerce search index.

## API Version

52.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.CommerceSearchIndex getSingleCommerceSearchIndex(String webstoreId, String indexId)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*indexId*

Type: [String](#)

ID of the index.

## Return Value

Type: [ConnectApi.CommerceSearchIndex](#)

### **getCommerceSearchIndexes (webstoreId)**

Get Commerce search indexes.

## API Version

52.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.CommerceSearchIndexCollection getCommerceSearchIndexes (String  
webstoreId)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

## Return Value

Type: [ConnectApi.CommerceSearchIndexCollection](#)

### **getCommerceSearchIndexLogs (webstoreId)**

Get Commerce search index logs.

## API Version

57.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.CommerceSearchIndexLogCollection  
getCommerceSearchIndexLogs(String webstoreId)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

## Return Value

Type: [ConnectApi.CommerceSearchIndexLogCollection](#)

# CommerceStorePricing Class

Get product prices.

## Namespace

[ConnectApi](#)

## CommerceStorePricing Methods

These methods are for `CommerceStorePricing`. All methods are static.

### IN THIS SECTION:

[getProductPrice\(webstoreId, productId, effectiveAccountId\)](#)

Get the list and buyer price for a product.

[getProductPrice\(webstoreId, productId, effectiveAccountId, productSellingModelIds\)](#)

Get a product's list and buyer price for specified product selling models.

[getProductPrices\(webstoreId, effectiveAccountId, pricingInput\)](#)

Get the prices for multiple products.

### **getProductPrice(webstoreId, productId, effectiveAccountId)**

Get the list and buyer price for a product.

## API Version

49.0

## Available to Guest Users

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ProductPrice getProductPrice(String webstoreId, String
productId, String effectiveAccountId)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*productId*

Type: [String](#)

ID of the product.

*effectiveAccountId*

Type: [String](#)

ID of the buyer account or guest buyer profile for which the request is made.

## Return Value

Type: [ConnectApi.ProductPrice](#)

## Usage

This method respects buyer entitlements and only users entitled to view product and price data can access it.

If a store is segmented into markets, this API looks at the language parameter appended to the URL to determine the shopper's locale and returns the appropriate values.

## **getProductPrice(webstoreId, productId, effectiveAccountId, productSellingModelIds)**

Get a product's list and buyer price for specified product selling models.

## API Version

56.0

## Available to Guest Users

56.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ProductPrice getProductPrice(String webstoreId, String
productId, String effectiveAccountId, List<String> productSellingModelIds)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*productId*

Type: [String](#)

ID of the product.

*effectiveAccountId*

Type: [String](#)

ID of the buyer account or guest buyer profile for which the request is made.

*productSellingModelIds*

Type: [List<String>](#)

List of product selling model IDs for the product.

## Return Value

Type: [ConnectApi.ProductPrice](#)

## **getProductPrices (webstoreId, effectiveAccountId, pricingInput)**

Get the prices for multiple products.

## API Version

49.0

## Available to Guest Users

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.PricingResult getProductPrices(String webstoreId, String
effectiveAccountId, ConnectApi.PricingInput pricingInput)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*effectiveAccountId*

Type: [String](#)

ID of the buyer account or guest buyer profile for which the request is made. If `null`, the default value is determined from context.

*pricingInput*

Type: [ConnectApi.PricingInput](#)

A `ConnectApi.PricingInput` body with the list of line items to price.

## Return Value

Type: [ConnectApi.PricingResult](#)

## Usage

This method respects buyer entitlements and only users entitled to view product and price data can access it.

If a store is segmented into markets, this API looks at the language parameter appended to the URL to determine the shopper's locale and returns the appropriate values.

# CommerceWishlist Class

Get, create, update, and delete wishlists. Add wishlists to carts. Get wishlist items, add items to wishlists, and delete wishlist items.

## Namespace

[ConnectApi](#)

## CommerceWishlist Methods

These methods are for `CommerceWishlist`. All methods are static.

### IN THIS SECTION:

[addItemToWishlist\(webstoreId, wishlistId, wishlistItemInput\)](#)

Add an item to a wishlist for the context user.

[addItemToWishlist\(webstoreId, effectiveAccountId, wishlistId, wishlistItemInput\)](#)

Add an item to a wishlist.

[addWishlistToCart\(webstoreId, wishlistId\)](#)

Add a wishlist to the active cart for the context user.

[addWishlistToCart\(webstoreId, wishlistId, effectiveAccountId\)](#)

Add a wishlist to the active cart.

[addWishlistToCartWithCartId\(webstoreId, wishlistId, cartId\)](#)

Add a wishlist to a cart.

`addWishlistToCartWithCartId(webstoreId, wishlistId, cartId, effectiveAccountId)`

Add a wishlist to a cart.

`createWishlist(webstoreId, wishlistInput)`

Create a wishlist for the context user.

`createWishlist(webstoreId, effectiveAccountId, wishlistInput)`

Create a wishlist.

`deleteWishlist(webstoreId, wishlistId)`

Delete a wishlist for the context user.

`deleteWishlist(webstoreId, effectiveAccountId, wishlistId)`

Delete a wishlist.

`getWishlist(webstoreId, effectiveAccountId, wishlistId, productFields, sortItemsBy)`

Get a wishlist with product fields sorted by items.

`getWishlist(webstoreId, effectiveAccountId, wishlistId, productFields, pageSize, sortItemsBy)`

Get a wishlist with product fields sorted by items with a specified number of items per page.

`getWishlistItems(webstoreId, effectiveAccountId, wishlistId, productFields, pageParam, sortItemsBy)`

Get a page of sorted wishlist items with product fields.

`getWishlistItems(webstoreId, effectiveAccountId, wishlistId, productFields, pageParam, pageSize, sortItemsBy)`

Get a page of specified size of sorted wishlist items with product fields.

`getWishlistSummaries(webstoreId, effectiveAccountId, includeDisplayedList)`

Get wishlist summaries.

`getWishlistSummaries(webstoreId, effectiveAccountId, includeDisplayedList, productFields, sortItemsBy)`

Get wishlist summaries with product fields sorted by items.

`getWishlistSummaries(webstoreId, effectiveAccountId, includeDisplayedList, productFields, pageSize, sortItemsBy)`

Get wishlist summaries with product fields sorted by items with a specified number of items per page.

`removeWishlistItem(webstoreId, effectiveAccountId, wishlistId, wishlistItemId)`

Remove an item from a wishlist.

`updateWishlist(webstoreId, wishlistId, wishlistUpdateInput)`

Update the name of a wishlist for the context user.

`updateWishlist(webstoreId, effectiveAccountId, wishlistId, wishlistUpdateInput)`

Update the name of a wishlist.

**`addItemToWishlist(webstoreId, wishlistId, wishlistItemInput)`**

Add an item to a wishlist for the context user.

### API Version

49.0

### Requires Chatter

No

## Signature

```
public static ConnectApi.WishlistItem addItemToWishlist(String webstoreId, String wishlistId, ConnectApi.WishlistItemInput wishlistItemInput)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*wishlistId*

Type: [String](#)

ID of the wishlist.

*wishlistItemInput*

Type: [ConnectApi.WishlistItemInput](#)

A [ConnectApi.WishlistItemInput](#) body with the item to add to the wishlist.

## Return Value

Type: [ConnectApi.WishlistItem](#)

## Usage

This method respects buyer View Product entitlements and only users entitled to view product data can access it.

```
addItemToWishlist(webstoreId, effectiveAccountId, wishlistId, wishlistItemInput)
```

Add an item to a wishlist.

## API Version

49.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.WishlistItem addItemToWishlist(String webstoreId, String effectiveAccountId, String wishlistId, ConnectApi.WishlistItemInput wishlistItemInput)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*effectiveAccountId*

Type: [String](#)

ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

*wishlistId*

Type: [String](#)

ID of the wishlist.

*wishlistItemInput*

Type: [ConnectApi.WishlistItemInput](#)

A [ConnectApi.WishlistItemInput](#) body with the item to add to the wishlist.

## Return Value

Type: [ConnectApi.WishlistItem](#)

## Usage

This method respects buyer View Product entitlements and only users entitled to view product data can access it.

### **addWishlistToCart(webstoreId, wishlistId)**

Add a wishlist to the active cart for the context user.

## API Version

49.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.WishlistToCartResult addWishlistToCart(String webstoreId,  
String wishlistId)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*wishlistId*

Type: [String](#)

ID of the wishlist.

## Return Value

Type: [ConnectApi.WishlistToCartResult](#)

## Usage

This method respects buyer View Product entitlements and only users entitled to view product data can access it.

### **addWishlistToCart(webstoreId, wishlistId, effectiveAccountId)**

Add a wishlist to the active cart.

## API Version

49.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.WishlistToCartResult addWishlistToCart(String webstoreId,  
String wishlistId, String effectiveAccountId)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*wishlistId*

Type: [String](#)

ID of the wishlist.

*effectiveAccountId*

Type: [String](#)

ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

## Return Value

Type: [ConnectApi.WishlistToCartResult](#)

## Usage

This method respects buyer View Product entitlements and only users entitled to view product data can access it.

### **addWishlistToCartWithCartId(webstoreId, wishlistId, cartId)**

Add a wishlist to a cart.

## API Version

49.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.WishlistToCartResult addWishlistToCartWithCartId(String webstoreId, String wishlistId, String cartId)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*wishlistId*

Type: [String](#)

ID of the wishlist.

*cartId*

Type: [String](#)

ID of the cart. If `null`, wishlist items are added to the active cart.

## Return Value

Type: [ConnectApi.WishlistToCartResult](#)

## Usage

This method respects buyer View Product entitlements and only users entitled to view product data can access it.

```
addWishlistToCartWithCartId(webstoreId, wishlistId, cartId, effectiveAccountId)
```

Add a wishlist to a cart.

## API Version

49.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.WishlistToCartResult addWishlistToCartWithCartId(String webstoreId, String wishlistId, String cartId, String effectiveAccountId)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*wishlistId*

Type: [String](#)

ID of the wishlist.

*cartId*

Type: [String](#)

ID of the cart. If `null`, wishlist items are added to the active cart.

*effectiveAccountId*

Type: [String](#)

ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

## Return Value

Type: [ConnectApi.WishlistToCartResult](#)

## Usage

This method respects buyer View Product entitlements and only users entitled to view product data can access it.

### **createWishlist(webstoreId, wishlistInput)**

Create a wishlist for the context user.

## API Version

49.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Wishlist createWishlist(String webstoreId,  
ConnectApi.WishlistInput wishlistInput)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*wishlistInput*

Type: [ConnectApi.WishlistInput](#)

A `ConnectApi.WishlistInput` body that includes the wishlist name and items.

### Return Value

Type: `ConnectApi.Wishlist`

### **createWishlist(webstoreId, effectiveAccountId, wishlistInput)**

Create a wishlist.

### API Version

49.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.Wishlist createWishlist(String webstoreId, String effectiveAccountId, ConnectApi.WishlistInput wishlistInput)
```

### Parameters

*webstoreId*

Type: `String`

ID of the webstore.

*effectiveAccountId*

Type: `String`

ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

*wishlistInput*

Type: `ConnectApi.WishlistInput`

A `ConnectApi.WishlistInput` body that includes the wishlist name and items.

### Return Value

Type: `ConnectApi.Wishlist`

### **deleteWishlist(webstoreId, wishlistId)**

Delete a wishlist for the context user.

### API Version

49.0

## Requires Chatter

No

## Signature

```
public static Void deleteWishlist(String webstoreId, String wishlistId)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*wishlistId*

Type: [String](#)

ID of the wishlist.

## Return Value

Type: Void

## **deleteWishlist(webstoreId, effectiveAccountId, wishlistId)**

Delete a wishlist.

## API Version

51.0

## Requires Chatter

No

## Signature

```
public static Void deleteWishlist(String webstoreId, String effectiveAccountId, String wishlistId)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*effectiveAccountId*

Type: [String](#)

ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

*wishlistId*

Type: [String](#)

ID of the wishlist.

## Return Value

Type: Void

**getWishlist(webstoreId, effectiveAccountId, wishlistId, productFields, sortItemsBy)**

Get a wishlist with product fields sorted by items.

## API Version

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Wishlist getWishlist(String webstoreId, String
effectiveAccountId, String wishlistId, String productFields,
ConnectApi.WishlistItemSortOrder sortItemsBy)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*effectiveAccountId*

Type: [String](#)

ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

*wishlistId*

Type: [String](#)

ID of the wishlist.

*productFields*

Type: [String](#)

Comma-separated list of custom product fields. Fields aren't case-sensitive. For example, `ProductCode` and `productcode` return the same results.

*sortItemsBy*

Type: [ConnectApi.WishlistItemSortOrder](#)

Sort order for wishlist items. Values are:

- `CreatedDateAsc`—Sorts by oldest creation date.
- `CreatedDateDesc`—Sorts by most recent creation date.

The default sort order is `CreatedDateDesc`.

## Return Value

Type: [ConnectApi.Wishlist](#)

### **getWishlist(webstoreId, effectiveAccountId, wishlistId, productFields, pageSize, sortItemsBy)**

Get a wishlist with product fields sorted by items with a specified number of items per page.

## API Version

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Wishlist getWishlist(String webstoreId, String effectiveAccountId, String wishlistId, String productFields, Integer pageSize, ConnectApi.WishlistItemSortOrder sortItemsBy)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*effectiveAccountId*

Type: [String](#)

ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

*wishlistId*

Type: [String](#)

ID of the wishlist.

*productFields*

Type: [String](#)

Comma-separated list of custom product fields. Fields aren't case-sensitive. For example, `ProductCode` and `productcode` return the same results.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortItemsBy*

Type: [ConnectApi.WishlistItemSortOrder](#)

Sort order for wishlist items. Values are:

- `CreatedDateAsc`—Sorts by oldest creation date.
- `CreatedDateDesc`—Sorts by most recent creation date.

The default sort order is `CreatedDateDesc`.

## Return Value

Type: [ConnectApi.Wishlist](#)

**`getWishlistItems(webstoreId, effectiveAccountId, wishlistId, productFields, pageParam, sortItemsBy)`**

Get a page of sorted wishlist items with product fields.

## API Version

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.WishlistItemCollection getWishlistItems(String webstoreId,
String effectiveAccountId, String wishlistId, String productFields, String pageParam,
ConnectApi.WishlistItemSortOrder sortItemsBy)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*effectiveAccountId*

Type: [String](#)

ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

*wishlistId*

Type: [String](#)

ID of the wishlist.

*productFields*

Type: [String](#)

Comma-separated list of custom product fields. Fields aren't case-sensitive. For example, `ProductCode` and `productcode` return the same results.

*pageParam*

Type: [String](#)

Specifies the page token to use to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*sortItemsBy*

Type: [ConnectApi.WishlistItemSortOrder](#)

Sort order for wishlist items. Values are:

- `CreatedDateAsc`—Sorts by oldest creation date.
- `CreatedDateDesc`—Sorts by most recent creation date.

The default sort order is `CreatedDateDesc`.

## Return Value

Type: `ConnectApi.WishlistItemCollection`

**`getWishlistItems(webstoreId, effectiveAccountId, wishlistId, productFields, pageParam, pageSize, sortItemsBy)`**

Get a page of specified size of sorted wishlist items with product fields.

## API Version

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.WishlistItemCollection getWishlistItems(String webstoreId,
String effectiveAccountId, String wishlistId, String productFields, String pageParam,
Integer pageSize, ConnectApi.WishlistItemSortOrder sortItemsBy)
```

## Parameters

*webstoreId*

Type: `String`

ID of the webstore.

*effectiveAccountId*

Type: `String`

ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

*wishlistId*

Type: `String`

ID of the wishlist.

*productFields*

Type: `String`

Comma-separated list of custom product fields. Fields aren't case-sensitive. For example, `ProductCode` and `productcode` return the same results.

*pageParam*

Type: `String`

Specifies the page token to use to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 200. If you pass in `null`, the default size is 25.

*sortBy*

Type: `ConnectApi.WishlistItemSortOrder`

Sort order for wishlist items. Values are:

- `CreatedDateAsc`—Sorts by oldest creation date.
- `CreatedDateDesc`—Sorts by most recent creation date.

The default sort order is `CreatedDateDesc`.

## Return Value

Type: `ConnectApi.WishlistItemCollection`

### **getWishlistSummaries(webstoreId, effectiveAccountId, includeDisplayedList)**

Get wishlist summaries.

## API Version

49.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.WishlistsSummary getWishlistSummaries(String webstoreId, String effectiveAccountId, Boolean includeDisplayedList)
```

## Parameters

*webstoreId*

Type: `String`

ID of the webstore.

*effectiveAccountId*

Type: `String`

ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

*includeDisplayedList*

Type: `Boolean`

Specifies whether to include the displayed list (`true`) or not (`false`). If `null`, defaults to `false`.

## Return Value

Type: [ConnectApi.WishlistsSummary](#)

### **getWishlistSummaries(webstoreId, effectiveAccountId, includeDisplayedList, productFields, sortItemsBy)**

Get wishlist summaries with product fields sorted by items.

## API Version

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.WishlistsSummary getWishlistSummaries(String webstoreId, String effectiveAccountId, Boolean includeDisplayedList, String productFields, ConnectApi.WishlistItemSortOrder sortItemsBy)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*effectiveAccountId*

Type: [String](#)

ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

*includeDisplayedList*

Type: [Boolean](#)

Specifies whether to include the displayed list (`true`) or not (`false`).

*productFields*

Type: [String](#)

Comma-separated list of custom product fields. Fields aren't case-sensitive. For example, `ProductCode` and `productcode` return the same results.

If *includeDisplayedList* is `false`, *productFields* is ignored.

*sortItemsBy*

Type: [ConnectApi.WishlistItemSortOrder](#)

Sort order for wishlist items. Values are:

- `CreatedDateAsc`—Sorts by oldest creation date.
- `CreatedDateDesc`—Sorts by most recent creation date.

The default sort order is `CreatedDateDesc`.

If `includeDisplayedList` is `false`, `sortItemsBy` is ignored.

## Return Value

Type: `ConnectApi.WishlistsSummary`

### **`getWishlistSummaries(webstoreId, effectiveAccountId, includeDisplayedList, productFields, pageSize, sortItemsBy)`**

Get wishlist summaries with product fields sorted by items with a specified number of items per page.

## API Version

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.WishlistsSummary getWishlistSummaries(String webstoreId, String effectiveAccountId, Boolean includeDisplayedList, Integer pageSize, String productFields, Integer pageSize, ConnectApi.WishlistItemSortOrder sortItemsBy)
```

## Parameters

*webstoreId*

Type: `String`

ID of the webstore.

*effectiveAccountId*

Type: `String`

ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

*includeDisplayedList*

Type: `Boolean`

Specifies whether to include the displayed list (`true`) or not (`false`).

*productFields*

Type: `String`

Comma-separated list of custom product fields. Fields aren't case-sensitive. For example, `ProductCode` and `productcode` return the same results.

If `includeDisplayedList` is `false`, `productFields` is ignored.

*pageSize*

Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortItemsBy*

Type: `ConnectApi.WishlistItemSortOrder`

Sort order for wishlist items. Values are:

- `CreatedDateAsc`—Sorts by oldest creation date.
- `CreatedDateDesc`—Sorts by most recent creation date.

The default sort order is `CreatedDateDesc`.

If `includeDisplayedList` is `false`, `sortItemsBy` is ignored.

## Return Value

Type: [ConnectApi.WishlistsSummary](#)

**`removeWishlistItem(webstoreId, effectiveAccountId, wishlistId, wishlistItemId)`**

Remove an item from a wishlist.

## API Version

49.0

## Requires Chatter

No

## Signature

```
public static Void removeWishlistItem(String webstoreId, String effectiveAccountId, String wishlistId, String wishlistItemId)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*effectiveAccountId*

Type: [String](#)

ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

*wishlistId*

Type: [String](#)

ID of the wishlist.

*wishlistItemId*

Type: [String](#)

ID of the wishlist item to remove.

## Return Value

Type: `Void`

**updateWishlist(webstoreId, wishlistId, wishlistUpdateInput)**

Update the name of a wishlist for the context user.

**API Version**

50.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.WishlistSummary updateWishlist(String webstoreId, String
wishlistId, ConnectApi.WishlistUpdateInput wishlistUpdateInput)
```

**Parameters**

*webstoreId*

Type: [String](#)

ID of the webstore.

*wishlistId*

Type: [String](#)

ID of the wishlist.

*wishlistUpdateInput*

Type: [ConnectApi.WishlistUpdateInput](#)

A [ConnectApi.WishlistUpdateInput](#) body with the wishlist name to update.

**Return Value**

Type: [ConnectApi.WishlistSummary](#)

**updateWishlist(webstoreId, effectiveAccountId, wishlistId,
wishlistUpdateInput)**

Update the name of a wishlist.

**API Version**

50.0

**Requires Chatter**

No

## Signature

```
public static ConnectApi.WishlistSummary updateWishlist(String webstoreId, String effectiveAccountId, String wishlistId, ConnectApi.WishlistUpdateInput wishlistUpdateInput)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*effectiveAccountId*

Type: [String](#)

ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

*wishlistId*

Type: [String](#)

ID of the wishlist.

*wishlistUpdateInput*

Type: [ConnectApi.WishlistUpdateInput](#)

A [ConnectApi.WishlistUpdateInput](#) body with the wishlist name to update.

## Return Value

Type: [ConnectApi.WishlistSummary](#)

# Communities Class

Get information about Experience Cloud sites in your org.

## Namespace

[ConnectApi](#)

## Communities Methods

These methods are for `Communities`. All methods are static.

### IN THIS SECTION:

[getCommunities\(\)](#)

Get a list of Experience Cloud sites that the context user has access to.

[getCommunities\(communityStatus\)](#)

Get a list of Experience Cloud sites with the specified status that the context user has access to.

[getCommunity\(communityId\)](#)

Get information about an Experience Cloud site.

**getCommunities ()**

Get a list of Experience Cloud sites that the context user has access to.

**API Version**

28.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.CommunityPage getCommunities()
```

**Return Value**

Type: [ConnectApi.CommunityPage](#)

**getCommunities (communityStatus)**

Get a list of Experience Cloud sites with the specified status that the context user has access to.

**API Version**

28.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.CommunityPage getCommunities(ConnectApi.CommunityStatus communityStatus)
```

**Parameters**

*communityStatus*

Type: [ConnectApi.CommunityStatus](#)

*communityStatus*—Status of the Experience Cloud site. Values are:

- Live
- Inactive
- UnderConstruction

**Return Value**

Type: [ConnectApi.CommunityPage](#)

**getCommunity (communityId)**

Get information about an Experience Cloud site.

**API Version**

28.0

**Available to Guest Users**

35.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.Community getCommunity(String communityId)
```

**Parameters**

*communityId*

Type: [String](#)

ID of an Experience Cloud site. You can't specify `null` or `internal`.

**Return Value**

Type: [ConnectApi.Community](#)

## CommunityModeration Class

Get information about flagged feed items and comments in an Experience Cloud site. Add and remove flags from comments and feed items.

### Namespace

[ConnectApi](#)

### CommunityModeration Methods

These methods are for `CommunityModeration`. All methods are static.

All methods in this class require Chatter and are subject to the per user, per namespace, per hour rate limit.

**IN THIS SECTION:**

[addFlagToComment\(communityId, commentId\)](#)

Add a moderation flag to a comment.

[addFlagToComment\(communityId, commentId, visibility\)](#)

Add a moderation flag of the specified visibility to a comment.

[addFlagToComment\(communityId, commentId, type\)](#)

Add a moderation flag of the specified type to a comment.

[addFlagToComment\(communityId, commentId, note\)](#)

Add a moderation flag with a note to a comment.

[addFlagToComment\(communityId, commentId, type, note\)](#)

Add a moderation flag of the specified type with a note to a comment.

[addFlagToComment\(communityId, commentId, type, visibility\)](#)

Add a moderation flag of the specified type and visibility to a comment.

[addFlagToComment\(communityId, commentId, visibility, note\)](#)

Add a moderation flag of the specified visibility with a note to a comment.

[addFlagToComment\(communityId, commentId, type, visibility, note\)](#)

Add a moderation flag of the specified type and visibility with a note to a comment.

[addFlagToFeedElement\(communityId, feedElementId\)](#)

Add a moderation flag to a feed element.

[addFlagToFeedElement\(communityId, feedElementId, visibility\)](#)

Add a moderation flag of the specified visibility to a feed element.

[addFlagToFeedElement\(communityId, feedElementId, type\)](#)

Add a moderation flag of the specified type to a feed element.

[addFlagToFeedElement\(communityId, feedElementId, note\)](#)

Add a moderation flag with a note to a feed element.

[addFlagToFeedElement\(communityId, feedElementId, type, note\)](#)

Add a moderation flag of the specified type with a note to a feed element.

[addFlagToFeedElement\(communityId, feedElementId, type, visibility\)](#)

Add a moderation flag of the specified type and visibility to a feed element.

[addFlagToFeedElement\(communityId, feedElementId, visibility, note\)](#)

Add a moderation flag of the specified visibility with a note to a feed element.

[addFlagToFeedElement\(communityId, feedElementId, type, visibility, note\)](#)

Add a moderation flag of the specified type and visibility with a note to a feed element.

[getFlagsOnComment\(communityId, commentId\)](#)

Get the moderation flags on a comment.

[getFlagsOnComment\(communityId, commentId, visibility\)](#)

Get the moderation flags with specified visibility on a comment.

[getFlagsOnComment\(communityId, commentId, pageSize, pageParam\)](#)

Get a page of moderation flags on a comment.

[getFlagsOnComment\(communityId, commentId, visibility, pageSize, pageParam\)](#)

Get a page of moderation flags with specified visibility on a comment.

[getFlagsOnFeedElement\(communityId, feedElementId\)](#)

Get the moderation flags on a feed element.

[getFlagsOnFeedElement\(communityId, feedElementId, visibility\)](#)

Get the moderation flags with specified visibility on a feed element.

[getFlagsOnFeedElement\(communityId, feedElementId, pageParam, pageSize\)](#)

Get a page of moderation flags on a feed element.

[getFlagsOnFeedElement\(communityId, feedElementId, visibility, pageSize, pageParam\)](#)

Get a page of moderation flags with specified visibility on a feed element.

[removeFlagFromComment\(communityId, commentId, userId\)](#)

Remove a moderation flag from a comment.

[removeFlagFromFeedElement\(communityId, feedElementId, userId\)](#)

Remove a moderation flag from a feed element.

### **addFlagToComment(communityId, commentId)**

Add a moderation flag to a comment.

### API Version

29.0

### Requires Chatter

Yes

### Signature

```
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId)
```

### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*commentId*

Type: [String](#)

ID for a comment.

### Return Value

Type: [ConnectApi.ModerationFlags](#)

### Usage

To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

**addFlagToComment(*communityId*, *commentId*, *visibility*)**

Add a moderation flag of the specified visibility to a comment.

**API Version**

30.0

**Requires Chatter**

Yes

**Signature**

```
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String
commentId, ConnectApi.CommunityFlagVisibility visibility)
```

**Parameters**

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*commentId*

Type: [String](#)

ID for a comment.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types.

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

**Return Value**

Type: [ConnectApi.ModerationFlags](#)

**Usage**

To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

**addFlagToComment(*communityId*, *commentId*, *type*)**

Add a moderation flag of the specified type to a comment.

**API Version**

38.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String  
commentId, ConnectApi.CommunityFlagType type)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*commentId*

Type: [String](#)

ID for a comment.

*type*

Type: [ConnectApi.CommunityFlagType](#)

Type of moderation flag.

- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.

If a type isn't specified, it defaults to `FlagAsInappropriate`.

## Return Value

Type: [ConnectApi.ModerationFlags](#)

## Usage

To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

### **addFlagToComment(communityId, commentId, note)**

Add a moderation flag with a note to a comment.

## API Version

38.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String  
commentId, String note)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*commentId*

Type: [String](#)

ID for a comment.

*note*

Type: [String](#)

A note of up to 4,000 characters about the flag.

## Return Value

Type: [ConnectApi.ModerationFlags](#)

## Usage

To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

### **`addFlagToComment(communityId, commentId, type, note)`**

Add a moderation flag of the specified type with a note to a comment.

## API Version

38.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type, String note)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*commentId*

Type: [String](#)

ID for a comment.

*type*

Type: [ConnectApi.CommunityFlagType](#)

Type of moderation flag.

- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.

If a type isn't specified, it defaults to `FlagAsInappropriate`.

*note*

Type: [String](#)

A note of up to 4,000 characters about the flag.

## Return Value

Type: [ConnectApi.ModerationFlags](#)

## Usage

To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

### **`addFlagToComment(communityId, commentId, type, visibility)`**

Add a moderation flag of the specified type and visibility to a comment.

## API Version

38.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String
commentId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility
visibility)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*commentId*

Type: [String](#)

ID for a comment.

*type*

Type: [ConnectApi.CommunityFlagType](#)

Type of moderation flag.

- `FlagAsInappropriate`—Flag for inappropriate content.

- `FlagAsSpam`—Flag for spam.

If a type isn't specified, it defaults to `FlagAsInappropriate`.

*visibility*

Type: `ConnectApi.CommunityFlagVisibility`

Visibility behavior of a flag for various user types.

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

## Return Value

Type: `ConnectApi.ModerationFlags`

## Usage

To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

### **`addFlagToComment(communityId, commentId, visibility, note)`**

Add a moderation flag of the specified visibility with a note to a comment.

## API Version

38.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String
commentId, ConnectApi.CommunityFlagVisibility visibility, String note)
```

## Parameters

*communityId*

Type: `String`

ID for an Experience Cloud site, `internal`, or `null`.

*commentId*

Type: `String`

ID for a comment.

*visibility*

Type: `ConnectApi.CommunityFlagVisibility`

Visibility behavior of a flag for various user types.

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.

- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

*note*

Type: `String`

A note of up to 4,000 characters about the flag.

## Return Value

Type: `ConnectApi.ModerationFlags`

## Usage

To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

### **`addFlagToComment(communityId, commentId, type, visibility, note)`**

Add a moderation flag of the specified type and visibility with a note to a comment.

## API Version

38.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String
commentId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility
visibility, String note)
```

## Parameters

*communityId*

Type: `String`

ID for an Experience Cloud site, `internal`, or `null`.

*commentId*

Type: `String`

ID for a comment.

*type*

Type: `ConnectApi.CommunityFlagType`

Type of moderation flag.

- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.

If a type isn't specified, it defaults to `FlagAsInappropriate`.

*visibility*Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types.

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

*note*Type: [String](#)

A note of up to 4,000 characters about the flag.

**Return Value**Type: [ConnectApi.ModerationFlags](#)**Usage**

To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

**addFlagToFeedElement (communityId, feedElementId)**

Add a moderation flag to a feed element.

**API Version**

31.0

**Requires Chatter**

Yes

**Signature**

```
public static ConnectApi.ModerationCapability addFlagToFeedElement (String communityId,
String feedElementId)
```

**Parameters***communityId*Type: [String](#)ID for an Experience Cloud site, `internal`, or `null`.*feedElementId*Type: [String](#)

ID of the feed element.

**Return Value**Type: [ConnectApi.ModerationCapability](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

## Usage

To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

### **addFlagToFeedElement(*communityId*, *feedElementId*, *visibility*)**

Add a moderation flag of the specified visibility to a feed element.

## API Version

31.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,  
String feedElementId, ConnectApi.CommunityFlagVisibility visibility)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types. One of these values:

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

## Return Value

Type: [ConnectApi.ModerationCapability](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

## Usage

To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

**addFlagToFeedElement(*communityId*, *feedElementId*, *type*)**

Add a moderation flag of the specified type to a feed element.

**API Version**

38.0

**Requires Chatter**

Yes

**Signature**

```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,  
String feedElementId, ConnectApi.CommunityFlagType type)
```

**Parameters**

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

*type*

Type: [ConnectApi.CommunityFlagType](#)

Type of moderation flag.

- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.

If a type isn't specified, it defaults to `FlagAsInappropriate`.

**Return Value**

Type: [ConnectApi.ModerationCapability](#)

**Usage**

To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

**addFlagToFeedElement(*communityId*, *feedElementId*, *note*)**

Add a moderation flag with a note to a feed element.

**API Version**

38.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,  
String feedElementId, String note)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

*note*

Type: [String](#)

A note of up to 4,000 characters about the flag.

## Return Value

Type: [ConnectApi.ModerationCapability](#)

## Usage

To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

### **addFlagToFeedElement(communityId, feedElementId, type, note)**

Add a moderation flag of the specified type with a note to a feed element.

## API Version

38.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,  
String feedElementId, ConnectApi.CommunityFlagType type, String note)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

*type*

Type: [ConnectApi.CommunityFlagType](#)

Type of moderation flag.

- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.

If a type isn't specified, it defaults to `FlagAsInappropriate`.

*note*

Type: [String](#)

A note of up to 4,000 characters about the flag.

## Return Value

Type: [ConnectApi.ModerationCapability](#)

## Usage

To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

### **`addFlagToFeedElement`(`communityId`, `feedElementId`, `type`, `visibility`)**

Add a moderation flag of the specified type and visibility to a feed element.

## API Version

38.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,  
String feedElementId, ConnectApi.CommunityFlagType type,  
ConnectApi.CommunityFlagVisibility visibility)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

*type*

Type: [ConnectApi.CommunityFlagType](#)

Type of moderation flag.

- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.

If a type isn't specified, it defaults to `FlagAsInappropriate`.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types. One of these values:

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

## Return Value

Type: [ConnectApi.ModerationCapability](#)

## Usage

To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

**`addFlagToFeedElement`(`communityId`, `feedElementId`, `visibility`, `note`)**

Add a moderation flag of the specified visibility with a note to a feed element.

## API Version

38.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,  
String feedElementId, ConnectApi.CommunityFlagVisibility visibility, String note)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types. One of these values:

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

*note*

Type: [String](#)

A note of up to 4,000 characters about the flag.

## Return Value

Type: [ConnectApi.ModerationCapability](#)

## Usage

To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

**`addFlagToFeedElement(communityId, feedElementId, type, visibility, note)`**

Add a moderation flag of the specified type and visibility with a note to a feed element.

## API Version

38.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,  
String feedElementId, ConnectApi.CommunityFlagType type,  
ConnectApi.CommunityFlagVisibility visibility, String note)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*feedElementId*

Type: `String`

ID of the feed element.

*type*

Type: `ConnectApi.CommunityFlagType`

Type of moderation flag.

- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.

If a type isn't specified, it defaults to `FlagAsInappropriate`.

*visibility*

Type: `ConnectApi.CommunityFlagVisibility`

Visibility behavior of a flag for various user types. One of these values:

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

*note*

Type: `String`

A note of up to 4,000 characters about the flag.

## Return Value

Type: `ConnectApi.ModerationCapability`

## Usage

To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

### **getFlagsOnComment(*communityId*, *commentId*)**

Get the moderation flags on a comment.

## API Version

29.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*commentId*

Type: [String](#)

ID for a comment.

## Return Value

Type: [ConnectApi.ModerationFlags](#)

## Usage

To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

### **getFlagsOnComment(*communityId*, *commentId*, *visibility*)**

Get the moderation flags with specified visibility on a comment.

## API Version

30.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*commentId*

Type: [String](#)

ID for a comment.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types.

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.

- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

## Return Value

Type: `ConnectApi.ModerationFlags`

## Usage

To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

### **`getFlagsOnComment(communityId, commentId, pageSize, pageParam)`**

Get a page of moderation flags on a comment.

## API Version

40.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, Integer pageSize, String pageParam)
```

## Parameters

*communityId*

Type: `String`

ID for an Experience Cloud site, `internal`, or `null`.

*commentId*

Type: `String`

ID for a comment.

*pageSize*

Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

*pageParam*

Type: `String`

Page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

## Return Value

Type: `ConnectApi.ModerationFlags`

## Usage

To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

### **getFlagsOnComment(*communityId*, *commentId*, *visibility*, *pageSize*, *pageParam*)**

Get a page of moderation flags with specified visibility on a comment.

## API Version

40.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String
commentId, ConnectApi.CommunityFlagVisibility visibility, Integer pageSize, String
pageParam)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*commentId*

Type: [String](#)

ID for a comment.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types.

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

*pageParam*

Type: [String](#)

Page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

## Return Value

Type: [ConnectApi.ModerationFlags](#)

## Usage

To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

### **getFlagsOnFeedElement(*communityId*, *feedElementId*)**

Get the moderation flags on a feed element.

## API Version

31.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId,  
String feedElementId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

## Return Value

Type: [ConnectApi.ModerationCapability](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

## Usage

To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

### **getFlagsOnFeedElement(*communityId*, *feedElementId*, *visibility*)**

Get the moderation flags with specified visibility on a feed element.

## API Version

31.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId,
String feedElementId, ConnectApi.CommunityFlagVisibility visibility)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types. One of these values:

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

## Return Value

Type: [ConnectApi.ModerationCapability](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

## Usage

To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

**`getFlagsOnFeedElement(communityId, feedElementId, pageParam, pageSize)`**

Get a page of moderation flags on a feed element.

## API Version

40.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId,
String feedElementId, String pageParam, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

*pageParam*

Type: [String](#)

Page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

## Return Value

Type: [ConnectApi.ModerationCapability](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

## Usage

To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

**`getFlagsOnFeedElement`(`communityId`, `feedElementId`, `visibility`, `pageSize`, `pageParam`)**

Get a page of moderation flags with specified visibility on a feed element.

## API Version

40.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId,
String feedElementId, ConnectApi.CommunityFlagVisibility visibility, Integer pageSize,
String pageParam)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types.

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

*pageParam*

Type: [String](#)

Page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

## Return Value

Type: [ConnectApi.ModerationCapability](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

## Usage

To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

### **removeFlagFromComment(*communityId*, *commentId*, *userId*)**

Remove a moderation flag from a comment.

## API Version

29.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationFlags removeFlagFromComment(String communityId,
String commentId, String userId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*commentId*

Type: [String](#)

ID for a comment.

*userId*

Type: [String](#)

ID of the context user for whom the flag is removed. Specify `null` to remove the flag for all users.

## Return Value

Type: Void

## Usage

To remove a moderation flag, the context user must have added the flag or must have the Moderate Experiences Feeds permission.

### **removeFlagFromFeedElement**(communityId, feedElementId, userId)

Remove a moderation flag from a feed element.

## API Version

31.0

## Requires Chatter

Yes

## Signature

```
public static void removeFlagFromFeedElement(String communityId, String feedElementId, String userId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

*userId*

Type: [String](#)

ID of the context user for whom the flag is removed. Specify `null` to remove the flag for all users.

### Return Value

Type: `ConnectApi.ModerationCapability`

If the feed element doesn't support this capability, the return value is `ConnectApi.NotFoundException`.

### Usage

To remove a moderation flag, the context user must have added the flag or must have the Moderate Experiences Feeds permission.

## Retired CommunityModeration Methods

These methods for `CommunityModeration` are retired.

### IN THIS SECTION:

`addFlagToFeedItem(communityId, feedItemId)`

Add a moderation flag to a feed item.

`addFlagToFeedItem(communityId, feedItemId, visibility)`

Add a moderation flag with specified visibility to a feed item.

`getFlagsOnFeedItem(communityId, feedItemId)`

Get the moderation flags on a feed item.

`getFlagsOnFeedItem(communityId, feedItemId, visibility)`

Get the moderation flags with specified visibility on a feed item.

`removeFlagsOnFeedItem(communityId, feedItemId, userId)`

Remove a moderation flag from a feed item.

### **addFlagToFeedItem(communityId, feedItemId)**

Add a moderation flag to a feed item.

### API Version

29.0–31.0

 **Important:** In version 32.0 and later, use `addFlagToFeedElement(communityId, feedElementId)`.

### Requires Chatter

Yes

### Signature

```
public static ConnectApi.ModerationFlags addFlagToFeedItem(String communityId, String feedItemId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*feedItemId*

Type: [String](#)

ID for a feed item.

## Return Value

Type: [ConnectApi.ModerationFlags](#)

## Usage

To add a flag to a feed item, Allow members to flag content must be selected for an Experience Cloud site.

### **addFlagToFeedItem(*communityId*, *feedItemId*, *visibility*)**

Add a moderation flag with specified visibility to a feed item.

## API Version

30.0–31.0

 **Important:** In version 32.0 and later, use [addFlagToFeedElement\(\*communityId\*, \*feedElementId\*, \*visibility\*\)](#).

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationFlags addFlagToFeedItem(String communityId, String feedItemId, ConnectApi.CommunityFlagVisibility visibility)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*feedItemId*

Type: [String](#)

ID for a feed item.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types.

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.

- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

## Return Value

Type: [ConnectApi.ModerationFlags](#)

## Usage

To add a flag to a feed item, Allow members to flag content must be selected for an Experience Cloud site.

### **getFlagsOnFeedItem(*communityId*, *feedItemId*)**

Get the moderation flags on a feed item.

## API Version

29.0–31.0

 **Important:** In version 32.0 and later, use [getFlagsOnFeedElement\(\*communityId\*, \*feedElementId\*\)](#).

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationFlags getFlagsOnFeedItem(String communityId, String feedItemId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*feedItemId*

Type: [String](#)

ID for a feed item.

## Return Value

Type: [ConnectApi.ModerationFlags](#)

## Usage

To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

### **getFlagsOnFeedItem(*communityId*, *feedItemId*, *visibility*)**

Get the moderation flags with specified visibility on a feed item.

## API Version

30.0–31.0

 **Important:** In version 32.0 and later, use [getFlagsOnFeedElement\(communityId, feedElementId, visibility\)](#).

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationFlags getFlagsOnFeedItem(String communityId, String feedItemId, ConnectApi.CommunityFlagVisibility visibility)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*feedItemId*

Type: [String](#)

ID for a feed item.

*visibility*

Type: [ConnectApi.CommunityFlagVisibility](#)

Visibility behavior of a flag for various user types. Values are:

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

## Return Value

Type: [ConnectApi.ModerationFlags](#)

## Usage

To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

## **removeFlagsOnFeedItem(communityId, feedItemId, userId)**

Remove a moderation flag from a feed item.

## API Version

29.0–31.0

 **Important:** In version 32.0 and later, use [removeFlagFromFeedElement\(communityId, feedElementId, userId\)](#).

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ModerationFlags removeFlagsOnFeedItem(String communityId,  
String feedItemId, String userId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*feedItemId*

Type: [String](#)

ID for a feed item.

*userId*

Type: [String](#)

ID of the context user for whom the flag is removed. Specify `null` to remove the flag for all users.

## Return Value

Type: `Void`

## Usage

To remove a moderation flag, the context user must have added the flag or must have the Moderate Experiences Feeds permission.

# ContentHub Class

Access Files Connect repositories and their files and folders.

## Namespace

[ConnectApi](#)

## ContentHub Methods

These methods are for `ContentHub`. All methods are static.

Use `ContentHub` methods to work with Files Connect repositories.

### IN THIS SECTION:

[addRepositoryItem\(repositoryId, repositoryFolderId, file\)](#)

Add a repository item.

[addRepositoryItem\(communityId, repositoryId, repositoryFolderId, file\)](#)

Add a repository item in an Experience Cloud site.

[addRepositoryItem\(repositoryId, repositoryFolderId, file, fileData\)](#)

Add a repository item, including the binary file.

[addRepositoryItem\(communityId, repositoryId, repositoryFolderId, file, fileData\)](#)

Add a repository item, including the binary file, in an Experience Cloud site.

[getAllowedItemTypes\(repositoryId, repositoryFolderId\)](#)

Get the item types that the context user is allowed to create in the repository folder.

[getAllowedItemTypes\(repositoryId, repositoryFolderId, filter\)](#)

Get the item types, filtered by type, that the context user is allowed to create in the repository folder.

[getAllowedItemTypes\(communityId, repositoryId, repositoryFolderId\)](#)

Get the item types that the context user is allowed to create in the repository folder in an Experience Cloud site.

[getAllowedItemTypes\(communityId, repositoryId, repositoryFolderId, filter\)](#)

Get the item types, filtered by type, that the context user is allowed to create in the repository folder in an Experience Cloud site.

[getFilePreview\(repositoryId, repositoryFileId, formatType\)](#)

Get a repository file preview.

[getFilePreview\(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber\)](#)

Get a page or page range of a repository file preview.

[getFilePreview\(communityId, repositoryId, repositoryFileId, formatType\)](#)

Get a repository file preview in an Experience Cloud site.

[getFilePreview\(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber\)](#)

Get a page or page range of a repository file preview in an Experience Cloud site.

[getItemType\(repositoryId, repositoryItemTypeId\)](#)

Get information about an item type associated with a repository.

[getItemType\(communityId, repositoryId, repositoryItemTypeId\)](#)

Get information about an item type associated with a repository in an Experience Cloud site.

[getPreviews\(repositoryId, repositoryFileId\)](#)

Get information about a repository file's supported previews.

[getPreviews\(communityId, repositoryId, repositoryFileId\)](#)

Get information about a repository file's supported previews in an Experience Cloud site.

[getRepositories\(\)](#)

Get a list of repositories.

[getRepositories\(communityId\)](#)

Get a list of repositories in an Experience Cloud site.

[getRepositories\(pageParam, pageSize\)](#)

Get a page of repositories.

[getRepositories\(communityId, pageParam, pageSize\)](#)

Get a page of repositories in an Experience Cloud site.

[getRepository\(repositoryId\)](#)

Get a repository.

[getRepository\(communityId, repositoryId\)](#)

Get a repository in an Experience Cloud site.

[getRepositoryFile\(repositoryId, repositoryFileId\)](#)

Get a repository file.

[getRepositoryFile\(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo\)](#)

Get a repository file with or without permissions information.

[getRepositoryFile\(communityId, repositoryId, repositoryFileId\)](#)

Get a repository file in an Experience Cloud site.

[getRepositoryFile\(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo\)](#)

Get a repository file with or without permissions information in an Experience Cloud site.

[getRepositoryFolder\(repositoryId, repositoryFolderId\)](#)

Get a repository folder.

[getRepositoryFolder\(communityId, repositoryId, repositoryFolderId\)](#)

Get a repository folder in an Experience Cloud site.

[getRepositoryFolderItems\(repositoryId, repositoryFolderId\)](#)

Get repository folder items.

[getRepositoryFolderItems\(communityId, repositoryId, repositoryFolderId\)](#)

Get repository folder items in an Experience Cloud site.

[getRepositoryFolderItems\(repositoryId, repositoryFolderId, pageParam, pageSize\)](#)

Get a page of repository folder items.

[getRepositoryFolderItems\(communityId, repositoryId, repositoryFolderId, pageParam, pageSize\)](#)

Get a page of repository folder items in an Experience Cloud site.

[updateRepositoryFile\(repositoryId, repositoryFileId, file\)](#)

Update the name of a repository file.

[updateRepositoryFile\(repositoryId, repositoryFileId, file, fileData\)](#)

Update the content of a repository file.

[updateRepositoryFile\(communityId, repositoryId, repositoryFileId, file\)](#)

Update the name of a repository file in an Experience Cloud site.

[updateRepositoryFile\(communityId, repositoryId, repositoryFileId, file, fileData\)](#)

Update the content of a repository file in an Experience Cloud site.

**`addRepositoryItem(repositoryId, repositoryFolderId, file)`**

Add a repository item.

### API Version

39.0

### Requires Chatter

No

## Signature

```
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String repositoryId,
String repositoryFolderId, ConnectApi.ContentHubItemInput file)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

## Return Value

Type: [ConnectApi.RepositoryFolderItem](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## Example

This example creates a file without binary content (metadata only) in a Google Drive repository folder. After the file is created, we show the file's ID, name, description, external URL, and download URL.

```
final String gDriveRepositoryId = '0XCxx0000000ODGAY', gDriveFolderId =
'folder:0B01Tys1KmM3sSVJ2bjIzTGFqSWs';

final ConnectApi.ContentHubItemInput newItem = new ConnectApi.ContentHubItemInput();
newItem.itemTypeId = 'document'; //see getAllowTypes for any file item types available
for creation/update
newItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

//Metadata: name field
final ConnectApi.ContentHubFieldValueInput fieldValueInput = new
ConnectApi.ContentHubFieldValueInput();
fieldValueInput.name = 'name';
fieldValueInput.value = 'new folder item name.txt';
newItem.fields.add(fieldValueInput);

//Metadata: description field
final ConnectApi.ContentHubFieldValueInput fieldValueInputDesc = new
ConnectApi.ContentHubFieldValueInput();
fieldValueInputDesc.name = 'description';
fieldValueInputDesc.value = 'It does describe it';
```

```

newItem.fields.add(fieldValueInputDesc);

final ConnectApi.RepositoryFolderItem newFolderItem =
ConnectApi.ContentHub.addRepositoryItem(gDriveRepositoryId, gDriveFolderId, newItem);
final ConnectApi.RepositoryFileSummary newFile = newFolderItem.file;
System.debug(String.format('New file - id: \\\'{0}\\\'', name: \\\'{1}\\\'', description:
\\\'{2}\\\' \n external URL: \\\'{3}\\\'', download URL: \\\'{4}\\\'', new String[]{
newFile.id, newFile.name, newFile.description, newFile.externalDocumentUrl,

**addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)**

Add a repository item in an Experience Cloud site.

**API Version**

39.0

**Requires Chatter**

No

**Signature**

```

public static ConnectApi.RepositoryFolderItem addRepositoryItem(String communityId,
String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file)

```

**Parameters**

*communityId*

Type: [String](#)

ID for an Experience Cloud site, internal, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

## Return Value

Type: [ConnectApi.RepositoryFolderItem](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

### SEE ALSO:

## **addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)**

Add a repository item, including the binary file.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String repositoryId,  
String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput  
fileData)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

*fileData*

Type: [ConnectApi.BinaryInput](#)

The binary file.

## Return Value

Type: `ConnectApi.RepositoryFolderItem`

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## Example

This example creates a file with binary content and metadata in a Google Drive repository folder. After the file is created, we show the file's ID, name, description, external URL, and download URL.

```
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId =
'folder:0B01Tys1KmM3sSVJ2bjIzTGFqSWs';

final ConnectApi.ContentHubItemInput newItem = new ConnectApi.ContentHubItemInput();
newItem.itemTypeId = 'document'; //see getAllowTypes for any file item types available
for creation/update
newItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

//Metadata: name field
final String newFileName = 'new folder item name.txt';
final ConnectApi.ContentHubFieldValueInput fieldValueInput = new
ConnectApi.ContentHubFieldValueInput();
fieldValueInput.name = 'name';
fieldValueInput.value = newFileName;
newItem.fields.add(fieldValueInput);

//Metadata: description field
final ConnectApi.ContentHubFieldValueInput fieldValueInputDesc = new
ConnectApi.ContentHubFieldValueInput();
fieldValueInputDesc.name = 'description';
fieldValueInputDesc.value = 'It does describe it';
newItem.fields.add(fieldValueInputDesc);

//Binary content
final Blob newFileBlob = Blob.valueOf('awesome content for brand new file');
final String newFileMimeType = 'text/plain';
final ConnectApi.BinaryInput fileBinaryInput = new ConnectApi.BinaryInput(newFileBlob,
newFileMimeType, newFileName);

final ConnectApi.RepositoryFolderItem newFolderItem =
ConnectApi.ContentHub.addRepositoryItem(gDriveRepositoryId, gDriveFolderId, newItem,
fileBinaryInput);
final ConnectApi.RepositoryFileSummary newFile = newFolderItem.file;
System.debug(String.format('New file - id: \\\'{0}\'', name: \\\'{1}\'', description:
\\\'{2}\'', \n external URL: \\\'{3}\'', download URL: \\\'{4}\'', new String[]{
```

```
newFile.id, newFile.name, newFile.description, newFile.externalDocumentUrl,  
newFile.downloadUrl));
```

#### SEE ALSO:

### **addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData)**

Add a repository item, including the binary file, in an Experience Cloud site.

#### API Version

39.0

#### Requires Chatter

No

#### Signature

```
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String communityId,  
String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file,  
ConnectApi.BinaryInput fileData)
```

#### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, internal, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

*fileData*

Type: [ConnectApi.BinaryInput](#)

The binary file.

## Return Value

Type: [ConnectApi.RepositoryFolderItem](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

### SEE ALSO:

[setTestAddRepositoryItem\(communityId, repositoryId, repositoryFolderId, file, fileData, result\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **getAllowedItemTypes(repositoryId, repositoryFolderId)**

Get the item types that the context user is allowed to create in the repository folder.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String repositoryId, String repositoryFolderId)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

## Return Value

Type: [ConnectApi.ContentHubAllowedItemTypeCollection](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetAllowedItemTypes\(repositoryId, repositoryFolderId, result\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **getAllowedItemTypes(repositoryId, repositoryFolderId, filter)**

Get the item types, filtered by type, that the context user is allowed to create in the repository folder.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String repositoryId, String repositoryFolderId, ConnectApi.ConnectContentHubItemType filter)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*filter*

Type: [ConnectApi.ContentHubItemType](#)

Item types. Values are:

- `Any`—Includes files and folders.
- `FilesOnly`—Includes files only.
- `FoldersOnly`—Includes folders only.

## Return Value

Type: [ConnectApi.ContentHubAllowedItemTypeCollection](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## Example

This example calls `getAllowedItemTypes(repositoryId, repositoryFolderId, ConnectApi.ContentHubItemType.FilesOnly)` to get the first `ConnectApi.ContentHubItemTypeSummary.id` of a file. The context user can create allowed files in a repository folder in the external system.

```
final ConnectApi.ContentHubAllowedItemTypeCollection allowedItemTypesColl =
ConnectApi.ContentHub.getAllowedItemTypes(repositoryId, repositoryFolderId,
ConnectApi.ContentHubItemType.FilesOnly);
final List<ConnectApi.ContentHubItemTypeSummary> allowedItemTypes =
allowedItemTypesColl.allowedItemTypes;
string allowedFileItemId = null;
if(allowedItemTypes.size() > 0){
    ConnectApi.ContentHubItemTypeSummary allowedItemTypeSummary = allowedItemTypes.get(0);

    allowedFileItemId = allowedItemTypeSummary.id;
}
```

## **getFilePreview(repositoryId, repositoryFileId, formatType)**

Get a repository file preview.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.FilePreview getFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

#### *formatType*

Type: [ConnectApi.FilePreviewFormat](#)

Specifies the format of the file preview. Values are:

- `Jpg`—Preview format is JPG.
- `Pdf`—Preview format is PDF.
- `Svg`—Preview format is compressed SVG.
- `Thumbnail`—Preview format is 240 x 180 PNG.
- `ThumbnailBig`—Preview format is 720 x 480 PNG.
- `ThumbnailTiny`—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you're concerned that feature-rich SVG previews don't work in your org, choose alternative file previews. To use JPG file previews, enter *general* in the Quick Find box in Setup. Select General Settings, and then select **Display alternative file previews**.

## Return Value

Type: [ConnectApi.FilePreview](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## Example

This example calls `getFilePreview(repositoryId, repositoryFileId, ConnectApi.FilePreviewFormat.Thumbnail)` to get the thumbnail format preview along with its respective URL and number of thumbnail renditions. For each thumbnail format, we show every rendition URL available.

```
final String gDriveRepositoryId = '0XCxx0000000ODGAY', gDriveFileId =
'document:1-zcAlBaeoQbo2_yNFihCcK6QJTPmOke-kHFC4TYg3rk'; final ConnectApi.FilePreview
filePreview =
ConnectApi.ContentHub.getFilePreview(gDriveRepositoryId, gDriveFileId,
ConnectApi.FilePreviewFormat.Thumbnail); System.debug(String.format('Preview - URL:
\\\'{0}\\\''', format: '\\\'{1}\\\''', nbr of
renditions for this format: {2}', new String[]{ filePreview.url,
filePreview.format.name(), String.valueOf(filePreview.previewUrls.size())}); for (ConnectApi.FilePreviewUrl
filePreviewUrl : filePreview.previewUrls) {
    System.debug('-----> Rendition URL: ' + filePreviewUrl.previewUrl);
}
```

## SEE ALSO:

[setTestGetFilePreview\(repositoryId, repositoryFileId, formatType, result\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

**getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)**

Get a page or page range of a repository file preview.

### API Version

39.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.FilePreview getFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber)
```

### Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*formatType*

Type: [ConnectApi.FilePreviewFormat](#)

Specifies the format of the file preview. Values are:

- `Jpg`—Preview format is JPG.
- `Pdf`—Preview format is PDF.
- `Svg`—Preview format is compressed SVG.
- `Thumbnail`—Preview format is 240 x 180 PNG.
- `ThumbnailBig`—Preview format is 720 x 480 PNG.
- `ThumbnailTiny`—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you're concerned that feature-rich SVG previews don't work in your org, choose alternative file previews. To use JPG file previews, enter *general* in the Quick Find box in Setup. Select General Settings, and then select **Display alternative file previews**.

*startPageNumber*

Type: [Integer](#)

The starting page number in the range of file preview URLs.

*endPageNumber*

Type: [Integer](#)

The ending page number in the range of file preview URLs.

## Return Value

Type: [ConnectApi.FilePreview](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## **getPreviews(repositoryId, repositoryFileId)**

Get information about a repository file's supported previews.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.FilePreviewCollection getPreviews(String repositoryId, String repositoryFileId)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

## Return Value

Type: [ConnectApi.FilePreviewCollection](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## Example

This example gets all supported preview formats and their respective URLs and number of renditions. For each supported preview format, we show every rendition URL available.

```
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFileId =
'document:1-zcA1BaeoQbo2_yNFihCcK6QJTPmOke-kHFC4TYg3rk';
final ConnectApi.FilePreviewCollection previewsCollection =
ConnectApi.ContentHub.getPreviews(gDriveRepositoryId, gDriveFileId);
for(ConnectApi.FilePreview filePreview : previewsCollection.previews){
    System.debug(String.format('Preview - URL: \\\'{0}\'', format: \\\'{1}\'', nbr of
renditions for this format: {2}'), new String[]{ filePreview.url,
filePreview.format.name(),String.valueOf(filePreview.previewUrls.size())});
    for(ConnectApi.FilePreviewUrl filePreviewUrl : filePreview.previewUrls){
        System.debug('-----> Rendition URL: ' + filePreviewUrl.previewUrl);
    }
}
```

The ID of the repository.

## Return Value

Type: [ConnectApi.ContentHubRepository](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## Example

```
final string repositoryId = '0XCxx000000123GAA';  
final ConnectApi.ContentHubRepository repository =  
ConnectApi.ContentHub.getRepository(repositoryId);
```

## **getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize)**

Get a page of repository folder items.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

## Return Value

Type: [ConnectApi.RepositoryFolderItemsCollection](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## **updateRepositoryFile(repositoryId, repositoryFileId, file)**

Update the name of a repository file.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String repositoryId,  
String repositoryFileId, ConnectApi.ContentHubItemInput file)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

When updating the metadata of a repository file, only the name field can be updated.

## Return Value

Type: [ConnectApi.RepositoryFileDetail](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## Example

This example updates the name of a file in a Google Drive repository. After the file is updated, we show the file's ID, name, description, external URL, download URL.

```
final String gDriveRepositoryId = '0XCxx0000000ODGAY', gDriveFolderId =
'folder:0B01Tys1KmM3sSVJ2bjIzTGFqSWs', gDriveFileId =
'document:1q9OatVpcyYBK-JWzp_PhR75ulQghwFP15zhkamKrRcQ';

final ConnectApi.ContentHubItemInput updatedItem = new ConnectApi.ContentHubItemInput();
updatedItem.itemTypeId = 'document'; //see getAllowTypes for any file item types available
for creation/update
updatedItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

//Metadata: name field
final ConnectApi.ContentHubFieldValueInput fieldValueInputName = new
ConnectApi.ContentHubFieldValueInput();
fieldValueInputName.name = 'name';
fieldValueInputName.value = 'updated file name.txt';
updatedItem.fields.add(fieldValueInputName);

final ConnectApi.RepositoryFileDetail updatedFile =
ConnectApi.ContentHub.updateRepositoryFile(gDriveRepositoryId, gDriveFileId, updatedItem);
System.debug(String.format('Updated file - id: \\\'{0}\\', name: \\\'{1}\\', description:
\\\'{2}\\',\n external URL: \\\'{3}\\', download URL: \\\'{4}\\', new String[]{
updatedFile.id, updatedFile.name, updatedFile.description, updatedFile.externalDocumentUrl,
updatedFile.downloadUrl}));
```

## **setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, result)**

Register a `ConnectApi.ContentHubAllowedItemTypeCollection` object to be returned when the matching `getAllowedItemTypes(repositoryId, repositoryFolderId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

40.0

## Signature

```
public static Void setTestGetAllowedItemTypes(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubAllowedItemTypeCollection result)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*result*

Type: [ConnectApi.ContentHubAllowedItemTypeCollection](#)

Object containing test data.

## Return Value

Type: Void

### SEE ALSO:

[getAllowedItemTypes\(repositoryId, repositoryFolderId\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, filter, result)**

Register a [ConnectApi.ContentHubAllowedItemTypeCollection](#) object to be returned when the matching [getAllowedItemTypes\(repositoryId, repositoryFolderId, filter\)](#) method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

40.0

## Signature

```
public static Void setTestGetAllowedItemTypes(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemType filter, ConnectApi.ContentHubAllowedItemTypeCollection result)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*filter*

Type: [ConnectApi.ContentHubItemType](#)

Item types. Values are:

- `Any`—Includes files and folders.
- `FilesOnly`—Includes files only.
- `FoldersOnly`—Includes folders only.

*result*

Type: [ConnectApi.ContentHubAllowedItemTypeCollection](#)

Object containing test data.

## Return Value

Type: Void

SEE ALSO:

## **setTestGetFilePreview(repositoryId, repositoryFileId, formatType, result)**

Register a `ConnectApi.FilePreview` object to be returned when the matching `getFilePreview(repositoryId, repositoryFileId, formatType)` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

40.0

## Signature

```
public static Void setTestGetFilePreview(String repositoryId, String repositoryFileId,
ConnectApi.FilePreviewFormat formatType, ConnectApi.FilePreview result)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*formatType*

Type: [ConnectApi.FilePreviewFormat](#)

Specifies the format of the file preview. Values are:

- `Jpg`—Preview format is JPG.
- `Pdf`—Preview format is PDF.
- `Svg`—Preview format is compressed SVG.
- `Thumbnail`—Preview format is 240 x 180 PNG.
- `ThumbnailBig`—Preview format is 720 x 480 PNG.
- `ThumbnailTiny`—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you're concerned that feature-rich SVG previews don't work in your org, choose alternative file previews. To use JPG file previews, enter *general* in the Quick Find box in Setup. Select General Settings, and then select **Display alternative file previews**.

*result*

Type: [ConnectApi.FilePreview](#)

Object containing test data.

## Return Value

Type: Void

SEE ALSO:

[getFilePreview\(repositoryId, repositoryFileId, formatType\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **setTestGetFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result)**

Register a `ConnectApi.FilePreview` object to be returned when the matching `getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

40.0

## Signature

```
public static Void setTestGetFilePreview(String repositoryId, String repositoryFileId,
ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber,
ConnectApi.FilePreview result)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*formatType*

Type: [ConnectApi.FilePreviewFormat](#)

Specifies the format of the file preview. Values are:

- `Jpg`—Preview format is JPG.
- `Pdf`—Preview format is PDF.
- `svg`—Preview format is compressed SVG.

- `Thumbnail`—Preview format is 240 x 180 PNG.
- `ThumbnailBig`—Preview format is 720 x 480 PNG.
- `ThumbnailTiny`—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you're concerned that feature-rich SVG previews don't work in your org, choose alternative file previews. To use JPG file previews, enter *general* in the Quick Find box in Setup. Select General Settings, and then select **Display alternative file previews**.

*startPageNumber*

Type: [Integer](#)

The starting page number in the range of file preview URLs.

*endPageNumber*

Type: [Integer](#)

The ending page number in the range of file preview URLs.

*result*

Type: [ConnectApi.FilePreview](#)

Object containing test data.

## Return Value

Type: Void

SEE ALSO:

## **setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize, result)**

Register a `ConnectApi.RepositoryFolderItemsCollection` object to be returned when the matching `getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

40.0

## Signature

```
public static Void setTestGetRepositoryFolderItems(String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize, ConnectApi.RepositoryFolderItemsCollection result)
```

## Parameters

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

*result*

Type: [ConnectApi.RepositoryFolderItemsCollection](#)

Object containing test data.

## Return Value

Type: Void

SEE ALSO:

[getRepositoryFolderItems\(repositoryId, repositoryFolderId, pageParam, pageSize\)](#)

## **setTestGetRepositoryFolderItems (communityId, repositoryId, repositoryFolderId, pageParam, pageSize, result)**

Register a `ConnectApi.RepositoryFolderItemsCollection` object to be returned when the matching `getRepositoryFolderItems (communityId, repositoryId, repositoryFolderId, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

40.0

## Signature

```
public static Void setTestGetRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize, ConnectApi.RepositoryFolderItemsCollection result)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFolderId*

Type: [String](#)

The ID of the repository folder.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

*result*

Type: [ConnectApi.RepositoryFolderItemsCollection](#)

Object containing test data.

## **setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData, result)**

Register a `ConnectApi.RepositoryFileDetail` object to be returned when the matching `updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData)` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

40.0

## Signature

```
public static Void setTestUpdateRepositoryFile(String communityId, String repositoryId,
String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput
fileData, ConnectApi.RepositoryFileDetail result)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*repositoryId*

Type: [String](#)

The ID of the repository.

*repositoryFileId*

Type: [String](#)

The ID of the repository file.

*file*

Type: [ConnectApi.ContentHubItemInput](#)

The item type ID and fields of the item type.

*fileData*

Type: [ConnectApi.BinaryInput](#)

The binary file.

*result*

Type: [ConnectApi.RepositoryFileDetail](#)

Object containing test data.

## Return Value

Type: Void

SEE ALSO:

# ConversationApplicationDefinition Class

Access information about a conversation application definition.

## Namespace

[ConnectApi](#)

## ConversationApplicationDefinition Methods

These methods are for `ConversationApplicationDefinition`. All methods are static.

IN THIS SECTION:

[getConversationApplicationDefinition\(integrationName\)](#)

Get information about an integration's conversation application definition and the associated bot.

### **getConversationApplicationDefinition(integrationName)**

Get information about an integration's conversation application definition and the associated bot.

## API Version

54.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ConversationApplicationDefinitionDetailRepresentation  
getConversationApplicationDefinition(String integrationName)
```

## Parameters

*integrationName*

Type: [String](#)

Name of the conversation application.

## Return Value

Type: [ConnectApi.ConversationApplicationDefinitionDetailRepresentation](#)

## Usage

To access this method, enable the bot feature, and the user must be an admin or have the Manage Bots or Manage Bots Training Data user permissions.

# Datacloud Class

Purchase Data.com contact or company records, and retrieve purchase information.

## Namespace

[ConnectApi](#)

**Note:** When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see [Data.com Prospector and Clean Retirement](#).

### IN THIS SECTION:

[Datacloud Methods](#)

These methods are for `Datacloud`. All methods are static.

## Datacloud Methods

These methods are for `Datacloud`. All methods are static.

### IN THIS SECTION:

[getCompaniesFromOrder\(orderId, pageSize, page\)](#)

Get a list of purchased company records for an order.

[getCompany\(companyId\)](#)

Get a company record.

[getContact\(contactId\)](#)

Get a contact.

[getContactsFromOrder\(orderId, page, pageSize\)](#)

Get a list of purchased contacts for an order.

[getOrder\(orderId\)](#)

Get an order.

[getUsage\(userId\)](#)

Get purchase usage information for a user.

[postOrder\(orderInput\)](#)

Purchase records that are listed in an input file.

### **getCompaniesFromOrder(orderId, pageSize, page)**

Get a list of purchased company records for an order.

#### API Version

32.0

#### Requires Chatter

No

#### Signature

```
public static ConnectApi.DatacloudCompanies getCompaniesFromOrder(String orderId, String
pageSize, String page)
```

#### Parameters

*orderId*

Type: [String](#)

ID of an order.

*page*

Type: [Integer](#)

Number of the page that you want returned.

*pageSize*

Type: [Integer](#)

Number of companies to show on a page. The default *pageSize* is 25.

#### Return Value

Type: [ConnectApi.DatacloudCompanies](#)

**getCompany (companyId)**

Get a company record.

**API Version**

32.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.DatacloudCompany getCompany(String companyId)
```

**Parameters**

*companyId*

Type: [String](#)

ID of a company in the Data.com database.

**Return Value**

Type: [ConnectApi.DatacloudCompany](#)

**getContact (contactId)**

Get a contact.

**API Version**

32.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.DatacloudContact getContact(String contactId)
```

**Parameters**

*contactId*

Type: [String](#)

ID of a contact in the Data.com database.

**Return Value**

Type: [ConnectApi.DatacloudContact](#)

**getContactsFromOrder (orderId, page, pageSize)**

Get a list of purchased contacts for an order.

**API Version**

32.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.DatacloudContacts getContactsFromOrder(String orderId, String page, String pageSize)
```

**Parameters**

*orderId*

Type: [String](#)

ID of an order.

*page*

Type: [Integer](#)

Number of the page that you want returned.

*pageSize*

Type: [Integer](#)

Number of contacts to show on a page. The default *pageSize* is 25.

**Return Value**

Type: [ConnectApi.DatacloudContacts](#)

**getOrder (orderId)**

Get an order.

**API Version**

32.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.DatacloudOrder getOrder(String orderId)
```

## Parameters

*orderId*

Type: [String](#)

ID of an order.

## Return Value

Type: [ConnectApi.DatacloudOrder](#)

## **getUsage (userId)**

Get purchase usage information for a user.

## API Version

32.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.DatacloudPurchaseUsage getUsage(String userId)
```

## Parameters

*userId*

Type: [String](#)

ID of a user.

## Return Value

Type: [ConnectApi.DatacloudPurchaseUsage](#)

## **postOrder (orderInput)**

Purchase records that are listed in an input file.

## API Version

32.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.DatacloudOrder postOrder (ConnectApi.DatacloudOrderInput
orderInput)
```

## Parameters

*orderInput*

Type: [ConnectApi.DatacloudOrderInput](#)

A list that contains IDs for the contacts or companies that you want to see.

## Return Value

Type: [ConnectApi.DatacloudOrder](#)

## Example

```
ConnectApi.DatacloudOrderInput inputOrder=new ConnectApi.DatacloudOrderInput ();
List<String> ids=new List<String> ();
ids.add('1234');
inputOrder.companyIds=ids;
ConnectApi.DatacloudOrder datacloudOrderRep = ConnectApi.Datacloud.postOrder (inputOrder);
```

# EinsteinLLM Class

Get a list of prompt templates and generate LLM responses for prompt templates.

## Namespace

[ConnectApi](#)

## EinsteinLLM Methods

These methods are for `EinsteinLLM`. All methods are static.

### IN THIS SECTION:

[generateMessagesForPromptTemplate\(promptTemplateDevName, promptTemplateGenerationsInput\)](#)

Generates a response using the specified prompt template and input parameters.

[getPromptTemplates\(query, sortBy, offset, pageLimit, fields, type, relatedEntity, isActive\)](#)

Get a list of prompt templates using the specified filters.

### **generateMessagesForPromptTemplate (promptTemplateDevName, promptTemplateGenerationsInput)**

Generates a response using the specified prompt template and input parameters.

## API Version

60.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.EinsteinPromptTemplateGenerationsRepresentation
generateMessagesForPromptTemplate(String promptTemplateDevName,
ConnectApi.EinsteinPromptTemplateGenerationsInput promptTemplateGenerationsInput)
```

## Parameters

*promptTemplateDevName*

Type: [String](#)

Developer name or ID of a prompt template record.

*promptTemplateGenerationsInput*

Type: [ConnectApi.EinsteinPromptTemplateGenerationsInput](#)

Input for generating a response using the specified prompt template.

## Return Value

Type: [ConnectApi.EinsteinPromptTemplateGenerationsRepresentation](#)

## Example

In this example, call `generateMessagesForPromptTemplate(promptTemplateDevName, promptTemplateGenerationsInput)` to resolve a Sales Email prompt template. For more examples, see [Resolve a Prompt Template](#).

```
// Create input
ConnectApi.EinsteinPromptTemplateGenerationsInput promptGenerationsInput = new
ConnectApi.EinsteinPromptTemplateGenerationsInput();
promptGenerationsInput.isPreview = false;

// Build input map
Map<String,ConnectApi.WrappedValue> valueMap = new Map<String,ConnectApi.WrappedValue>();

Map<String, String> recipientEntityRecordIdMap = new Map<String, String>();
recipientEntityRecordIdMap.put('id', '00Qxx000002ToPvEAK');

Map<String, String> senderEntityRecordIdMap = new Map<String, String>();
senderEntityRecordIdMap.put('id', '005xx000001XiWLAA0');

ConnectApi.WrappedValue recipientEntityWrappedValue = new ConnectApi.WrappedValue();
recipientEntityWrappedValue.value = recipientEntityRecordIdMap;

ConnectApi.WrappedValue senderEntityWrappedValue = new ConnectApi.WrappedValue();
senderEntityWrappedValue.value = senderEntityRecordIdMap;
```

```

valueMap.put('Input:Account', recipientEntityWrappedValue);
valueMap.put('Input:Recipient', recipientEntityWrappedValue);
valueMap.put('Input:Sender', senderEntityWrappedValue);

promptGenerationsInput.inputParams = valueMap;

// Set additional configuration values
promptGenerationsInput.additionalConfig = new ConnectApi.EinsteinLlmAdditionalConfigInput();
promptGenerationsInput.additionalConfig.applicationName =
'PromptTemplateGenerationsInvocable';

// Call the service
ConnectApi.EinsteinPromptTemplateGenerationsRepresentation generationsOutput =
ConnectApi.EinsteinLLM.generateMessagesForPromptTemplate('0hfx0000000KTNA2',
promptGenerationsInput);

// Consume response
System.debug('Prompt Testing: ' + generationsOutput.prompt);

```

### **getPromptTemplates(query, sortBy, offset, pageLimit, fields, type, relatedEntity, isActive)**

Get a list of prompt templates using the specified filters.

#### API Version

62.0

#### Requires Chatter

No

#### Signature

```

public static ConnectApi.EinsteinPromptRecordCollectionOutputRepresentation
getPromptTemplates(String query, String sortBy, Integer offset, Integer pageLimit,
List<String> fields, String type, String relatedEntity, Boolean isActive)

```

#### Parameters

*query*

Type: [String](#)

User-entered search string. If `null`, all prompt template records are returned.

*sortBy*

Type: [String](#)

Field to sort the returned prompt template records by, such as `createdDate`. If `null`, records are returned in the order they're retrieved.

*offset*

Type: [Integer](#)

Used for pagination. Number of rows to skip between returned prompt template records. The default value is 0.

*pageLimit*

Type: [Integer](#)

Used for pagination. Maximum number of prompt template records returned per page. The default value is 50.

*fields*

Type: [List<String>](#)

Comma-separated list of prompt template record fields to return, such as `createdDate`. If `null`, all fields are returned.

*type*

Type: [String](#)

Prompt template type to filter records by, such as `einstein_gpt__salesEmail`. If `null`, records of all types are returned.

*relatedEntity*

Type: [String](#)

Related entity to filter records by, such as `Contact`. If `null`, all records with all related entities are returned.

*isActive*

Type: [Boolean](#)

Specifies whether to return active prompt templates only. The default is `false`.

## Return Value

Type: [ConnectApi.EinsteinPromptRecordCollectionOutputRepresentation](#)

## Usage

To get a list of prompt templates, you must have Einstein Generative AI enabled and the Execute Prompt Templates user permission.

## Example

```
ConnectApi.EinsteinPromptRecordCollectionOutputRepresentation promptTemplateList =
ConnectApi.EinsteinLLM.getPromptTemplates('Summarize', 'CreatedDate', 0, 5, null,
'einstein_gpt__flex', null, true);

// Get information from the prompt templates in the list
if (promptTemplateList != null && promptTemplateList.promptRecords != null) {
    for (ConnectApi.EinsteinPromptRecordRepresentation promptTemplate :
promptTemplateList.promptRecords) {
        System.debug('Prompt Template ID: ' + promptTemplate.id);
        for (String fieldName : promptTemplate.fields.keySet()) {
            System.debug('Field Name: ' + fieldName + ', Value: ' +
promptTemplate.fields.get(fieldName).value);
        }
    }
} else {
    System.debug('No prompt templates found.');
```

## EmailMergeFieldService Class

Extract a list of merge fields for an object. A merge field is a field you can put in an email template, mail merge template, custom link, or formula to incorporate values from a record.

### Namespace

[ConnectApi](#)

### EmailMergeFieldService Methods

These methods are for `EmailMergeFieldService`. All methods are static.

IN THIS SECTION:

[getMergeFields\(objectApiNames\)](#)

Extract the merge fields for a specific object.

#### **getMergeFields (objectApiNames)**

Extract the merge fields for a specific object.

#### API Version

39.0

#### Requires Chatter

No

#### Signature

```
public static ConnectApi.EmailMergeFieldInfo getMergeFields (List<String> objectApiNames)
```

#### Parameters

*objectApiNames*

Type: [List<String>](#)

The API names for the objects being referenced.

#### Return Value

Type: [ConnectApi.EmailMergeFieldInfo](#)

## EmployeeProfiles Class

Get, set and crop, and delete employee banner photos and photos.

## Namespace

[ConnectApi](#)

## EmployeeProfiles Methods

These methods are for `EmployeeProfiles`. All methods are static.

### IN THIS SECTION:

[deleteBannerPhoto\(employeeId\)](#)

Delete an employee's banner photo.

[deletePhoto\(employeeId\)](#)

Delete an employee's photo.

[getBannerPhoto\(employeeId\)](#)

Get an employee's banner photo.

[getPhoto\(employeeId\)](#)

Get an employee's photo.

[setBannerPhoto\(employeeId, fileId, versionNumber\)](#)

Set an uploaded file as an employee's banner photo.

[setBannerPhoto\(employeeId, fileUpload\)](#)

Set a file that hasn't been uploaded as an employee's banner photo.

[setBannerPhotoWithAttributes\(employeeId, bannerPhoto\)](#)

Set and crop an uploaded file as an employee's banner photo.

[setBannerPhotoWithAttributes\(employeeId, bannerPhoto, fileUpload\)](#)

Set and crop a file that hasn't been uploaded as an employee's banner photo.

[setPhoto\(employeeId, fileId, versionNumber\)](#)

Set an uploaded file as an employee's photo.

[setPhoto\(employeeId, fileUpload\)](#)

Set a file that hasn't been uploaded as an employee's photo.

[setPhotoWithAttributes\(employeeId, photo\)](#)

Set and crop an uploaded file as an employee's photo.

[setPhotoWithAttributes\(employeeId, photo, fileUpload\)](#)

Set and crop a file that hasn't been uploaded as an employee's photo.

### **deleteBannerPhoto (employeeId)**

Delete an employee's banner photo.

### API Version

51.0

### Requires Chatter

No

### Signature

```
public static Void deleteBannerPhoto(String employeeId)
```

### Parameters

*employeeId*

Type: [String](#)

ID of the employee.

### Return Value

Type: Void

### **deletePhoto (employeeId)**

Delete an employee's photo.

### API Version

51.0

### Requires Chatter

No

### Signature

```
public static Void deletePhoto(String employeeId)
```

### Parameters

*employeeId*

Type: [String](#)

ID of the employee.

### Return Value

Type: Void

### **getBannerPhoto (employeeId)**

Get an employee's banner photo.

### API Version

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.BannerPhoto getBannerPhoto(String employeeId)
```

## Parameters

*employeeId*  
Type: [String](#)  
ID of the employee.

## Return Value

Type: [ConnectApi.BannerPhoto](#)

## **getPhoto (employeeId)**

Get an employee's photo.

## API Version

51.0

## Available to Guest Users

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Photo getPhoto(String employeeId)
```

## Parameters

*employeeId*  
Type: [String](#)  
ID of the employee.

## Return Value

Type: [ConnectApi.Photo](#)

## **setBannerPhoto (employeeId, fileId, versionNumber)**

Set an uploaded file as an employee's banner photo.

### API Version

51.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.BannerPhoto setBannerPhoto(String employeeId, String fileId, Integer versionNumber)
```

### Parameters

*employeeId*

Type: [String](#)

ID of the employee.

*fileId*

Type: [String](#)

ID of the uploaded file to use as the employee banner photo. The file must be an image and be smaller than 2 GB.

*versionNumber*

Type: [Integer](#)

Version number of the file. Specify an existing version number or, to get the latest version, specify `null`.

### Return Value

Type: [ConnectApi.BannerPhoto](#)

### **setBannerPhoto(employeeId, fileUpload)**

Set a file that hasn't been uploaded as an employee's banner photo.

### API Version

51.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.BannerPhoto setBannerPhoto(String employeeId, ConnectApi.BinaryInput fileUpload)
```

## Parameters

*employeeId*

Type: [String](#)

ID of the employee.

*fileUpload*

Type: [ConnectApi.BinaryInput](#)

File to use as the photo. The content type must be usable as an image.

## Return Value

Type: [ConnectApi.BannerPhoto](#)

## Usage

Photos are processed asynchronously and might not be visible right away.

### **setBannerPhotoWithAttributes (employeeId, bannerPhoto)**

Set and crop an uploaded file as an employee's banner photo.

## API Version

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes (String employeeId,  
ConnectApi.BannerPhotoInput bannerPhoto)
```

## Parameters

*employeeId*

Type: [String](#)

ID of the employee.

*bannerPhoto*

Type: [ConnectApi.BannerPhotoInput](#)

A [ConnectApi.BannerPhotoInput](#) object that specifies the ID and version of the file, and how to crop the file.

## Return Value

Type: [ConnectApi.BannerPhoto](#)

## Usage

Photos are processed asynchronously and might not be visible right away.

### **setBannerPhotoWithAttributes(employeeId, bannerPhoto, fileUpload)**

Set and crop a file that hasn't been uploaded as an employee's banner photo.

## API Version

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String employeeId,
ConnectApi.BannerPhotoInput bannerPhoto, ConnectApi.BinaryInput fileUpload)
```

## Parameters

*employeeId*

Type: [String](#)

ID of the employee.

*bannerPhoto*

Type: [ConnectApi.BannerPhotoInput](#)

A [ConnectApi.BannerPhotoInput](#) object specifying the cropping parameters.

*fileUpload*

Type: [ConnectApi.BinaryInput](#)

File to use as the photo. The content type must be usable as an image.

## Return Value

Type: [ConnectApi.BannerPhoto](#)

## Usage

Photos are processed asynchronously and might not be visible right away.

### **setPhoto(employeeId, fileId, versionNumber)**

Set an uploaded file as an employee's photo.

## API Version

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Photo setPhoto(String employeeId, String fileId, Integer
versionNumber)
```

## Parameters

*employeeId*

Type: [String](#)

ID of the employee.

*fileId*

Type: [String](#)

ID of the uploaded file to use as the employee photo. The file must be an image and be smaller than 2 GB.

*versionNumber*

Type: [Integer](#)

Version number of the file. Specify an existing version number or, to get the latest version, specify `null`.

## Return Value

Type: [ConnectApi.Photo](#)

## Usage

Photos are processed asynchronously and might not be visible right away.

### **setPhoto(employeeId, fileUpload)**

Set a file that hasn't been uploaded as an employee's photo.

## API Version

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Photo setPhoto(String employeeId, ConnectApi.BinaryInput
fileUpload)
```

## Parameters

*employeeId*

Type: [String](#)

ID of the employee.

*fileUpload*

Type: [ConnectApi.BinaryInput](#)

File to use as the photo. The content type must be usable as an image.

## Return Value

Type: [ConnectApi.Photo](#)

## Usage

Photos are processed asynchronously and might not be visible right away.

### **setPhotoWithAttributes(employeeId, photo)**

Set and crop an uploaded file as an employee's photo.

## API Version

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Photo setPhotoWithAttributes(String employeeId,  
ConnectApi.PhotoInput photo)
```

## Parameters

*employeeId*

Type: [String](#)

ID of the employee.

*photo*

Type: [ConnectApi.PhotoInput](#)

A [ConnectApi.PhotoInput](#) object specifying the file ID, version number, and cropping parameters.

## Return Value

Type: [ConnectApi.Photo](#)

## Usage

Photos are processed asynchronously and might not be visible right away.

### **setPhotoWithAttributes(employeeId, photo, fileUpload)**

Set and crop a file that hasn't been uploaded as an employee's photo.

## API Version

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Photo setPhotoWithAttributes(String employeeId,  
ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)
```

## Parameters

*employeeId*  
Type: [String](#)  
ID of the employee.

*photo*  
Type: [ConnectApi.PhotoInput](#)  
A [ConnectApi.PhotoInput](#) object specifying the cropping parameters.

*fileUpload*  
Type: [ConnectApi.BinaryInput](#)  
File to use as the photo. The content type must be usable as an image.

## Return Value

Type: [ConnectApi.Photo](#)

## Usage

Photos are processed asynchronously and might not be visible right away.

## Exchanges Class

Preview and submit cart to exchange orders.

## Namespace

[ConnectApi](#)

## Exchanges Methods

These methods are for `Exchanges`. All methods are static.

### IN THIS SECTION:

#### [previewCartToExchangeOrder\(previewCartToExchangeOrderInput\)](#)

Retrieves a preview of an exchange order, taking into account the order summary balance and the difference between the return order and the cart that represents the exchange order.

#### [submitCartToExchangeOrder\(submitCartToExchangeOrderInput\)](#)

Creates an exchange order summary, based on the return order and the cart used for exchanges. The new exchange order summary is attached to the original order summary (created before any exchanges occurred). You can also provide optional payment information and optional information about order summary sequences, which affect the newly created exchange order summary.

### **previewCartToExchangeOrder (previewCartToExchangeOrderInput)**

Retrieves a preview of an exchange order, taking into account the order summary balance and the difference between the return order and the cart that represents the exchange order.

#### API Version

60.0

#### Requires Chatter

No

#### Signature

```
public static ConnectApi.PreviewCartToExchangeOrderOutputRepresentation  
previewCartToExchangeOrder (ConnectApi.PreviewCartToExchangeOrderInputRepresentation  
previewCartToExchangeOrderInput)
```

#### Parameters

*previewCartToExchangeOrderInput*

Type: [ConnectApi.PreviewCartToExchangeOrderInputRepresentation](#) on page 1879

Information required to preview a cart to exchange order.

#### Return Value

Type: [ConnectApi.PreviewCartToExchangeOrderOutputRepresentation](#) on page 2189

### **submitCartToExchangeOrder (submitCartToExchangeOrderInput)**

Creates an exchange order summary, based on the return order and the cart used for exchanges. The new exchange order summary is attached to the original order summary (created before any exchanges occurred). You can also provide optional payment information and optional information about order summary sequences, which affect the newly created exchange order summary.

### API Version

60.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.SubmitCartToExchangeOrderOutputRepresentation  
submitCartToExchangeOrder (ConnectApi.SubmitCartToExchangeOrderInputRepresentation  
submitCartToExchangeOrderInput)
```

### Parameters

*submitCartToExchangeOrderInput*

Type: [ConnectApi.SubmitCartToExchangeOrderInputRepresentation](#) on page 1887

Information required to submit a cart to exchange order.

### Return Value

Type: [ConnectApi.SubmitCartToExchangeOrderOutputRepresentation](#) on page 2251

## ExternalEmailServices Class

Access information about integration with external email services, such as sending email within Salesforce through an external email account.

## Namespace

[ConnectApi](#)

## External Email Services Methods

These methods are for `ExternalEmailService`. All methods are static.

### IN THIS SECTION:

[getUserOauthInfo\(landingPage\)](#)

Get information about whether an external email service has been authorized to send email on behalf of a user.

### **getUserOauthInfo (landingPage)**

Get information about whether an external email service has been authorized to send email on behalf of a user.

### API Version

37.0

## Requires Chatter

No

## Signature

```
public static getUserOauthInfo(String landingPage)
```

## Parameters

*landingPage*

Type: [String](#)

The landing page that the user starts on when they are finished with the OAuth authorization process.

## Return Value

Type: [ConnectApi.UserOauthInfo](#)

SEE ALSO:

[Apex Developer Guide: Testing ConnectApi Code](#)

# ExternalManagedAccount Class

Get externally managed accounts.

## Namespace

[ConnectApi](#)

## ExternalManagedAccount Methods

These methods are for `ExternalManagedAccount`. All methods are static.

IN THIS SECTION:

[getCommunitiesExternalManagedAccounts\(communityId\)](#)

Get externally managed accounts available to the context user across all Experience Cloud sites.

[getCommunitiesExternalManagedAccounts\(communityId, includeMyAccount\)](#)

Get externally managed accounts available to the context user, including the context user's account, across all Experience Cloud sites.

[getExternalManagedAccounts\(webstoreId\)](#)

Get externally managed accounts for a store.

[getExternalManagedAccounts\(webstoreId, includeMyAccount\)](#)

Get externally managed accounts, including the context user's account, for a store.

### **getCommunitiesExternalManagedAccounts (communityId)**

Get externally managed accounts available to the context user across all Experience Cloud sites.

### API Version

50.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.ExternalManagedAccountCollectionOutput  
getCommunitiesExternalManagedAccounts(String communityId)
```

### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

**Note:** Regardless of the ID specified, this method returns externally managed accounts available to the context user across all Experience Cloud sites.

### Return Value

Type: [ConnectApi.ExternalManagedAccountCollectionOutput](#)

### **getCommunitiesExternalManagedAccounts (communityId, includeMyAccount)**

Get externally managed accounts available to the context user, including the context user's account, across all Experience Cloud sites.

### API Version

53.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.ExternalManagedAccountCollectionOutput  
getCommunitiesExternalManagedAccounts(String communityId, Boolean includeMyAccount)
```

### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

**Note:** Regardless of the ID specified, this method returns externally managed accounts available to the context user across all Experience Cloud sites.

*includeMyAccount*

Type: [Boolean](#)

Specifies whether to return the context user's account ([true](#)) or not ([false](#)). The default value is [false](#).

## Return Value

Type: [ConnectApi.ExternalManagedAccountCollectionOutput](#)

### **getExternalManagedAccounts (webstoreId)**

Get externally managed accounts for a store.

## API Version

49.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ExternalManagedAccountCollectionOutput  
getExternalManagedAccounts (String webstoreId)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

## Return Value

Type: [ConnectApi.ExternalManagedAccountCollectionOutput](#)

### **getExternalManagedAccounts (webstoreId, includeMyAccount)**

Get externally managed accounts, including the context user's account, for a store.

## API Version

53.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ExternalManagedAccountCollectionOutput  
getExternalManagedAccounts(String webstoreId, Boolean includeMyAccount)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*includeMyAccount*

Type: [Boolean](#)

Specifies whether to return the context user's account ([true](#)) or not ([false](#)). The default value is [false](#).

## Return Value

Type: [ConnectApi.ExternalManagedAccountCollectionOutput](#)

# FieldService Class

Preview and create shifts from a pattern or filter fields on recordset filter criteria.

## Namespace

[ConnectApi](#)

## FieldService Methods

These methods are for `FieldService`. All methods are static.

### IN THIS SECTION:

[createShiftsFromPattern\(shiftsFromPatternInput, shiftPatternId\)](#)

Create up to 2,000 shifts from a pattern.

[evaluateRecordsetFilterCriteria\(recordsetFilterCriteriaInput\)](#)

Filter records on recordset filter criteria.

[previewShiftsFromPattern\(shiftsFromPatternInput, shiftPatternId\)](#)

Preview up to 2,000 shifts from a pattern.

**`createShiftsFromPattern(shiftsFromPatternInput, shiftPatternId)`**

Create up to 2,000 shifts from a pattern.

## API Version

51.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ShiftsFromPattern
createShiftsFromPattern(ConnectApi.ShiftsFromPatternInput shiftsFromPatternInput, String
shiftPatternId)
```

## Parameters

*shiftsFromPatternInput*

Type: [ConnectApi.ShiftsFromPatternInput](#)

A [ConnectApi.ShiftsFromPatternInput](#) object providing the pattern.

*shiftPatternId*

Type: [String](#)

ID of the shift pattern.

## Return Value

Type: [ConnectApi.ShiftsFromPattern](#)

## **evaluateRecordsetFilterCriteria (recordsetFilterCriteriaInput)**

Filter records on recordset filter criteria.

## API Version

53.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RecordsetFilterCriteriaOutput
evaluateRecordsetFilterCriteria (ConnectApi.RecordsetFilterCriteriaInput
recordsetFilterCriteriaInput)
```

## Parameters

*recordsetFilterCriteriaInput*

Type: [ConnectApi.RecordsetFilterCriteriaInput](#)

An [ConnectApi.RecordsetFilterCriteriaInput](#) object providing a set of recordset filter criteria and records.

## Return Value

Type: [ConnectApi.RecordsetFilterCriteriaOutput](#)

## Usage

Field service must be enabled.

### **previewShiftsFromPattern(shiftsFromPatternInput, shiftPatternId)**

Preview up to 2,000 shifts from a pattern.

## API Version

51.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ShiftsFromPattern
previewShiftsFromPattern (ConnectApi.ShiftsFromPatternInput shiftsFromPatternInput,
String shiftPatternId)
```

## Parameters

*shiftsFromPatternInput*

Type: [ConnectApi.ShiftsFromPatternInput](#)

A [ConnectApi.ShiftsFromPatternInput](#) object providing the pattern.

*shiftPatternId*

Type: [String](#)

ID of the shift pattern.

## Return Value

Type: [ConnectApi.ShiftsFromPattern](#)

## FulfillmentOrder Class

Fulfill orders in Order Management.

## Namespace

[ConnectApi](#)

## FulfillmentOrder Methods

These methods are for `FulfillmentOrder`. All methods are static.

## IN THIS SECTION:

[cancelFulfillmentOrderLineItems\(fulfillmentOrderId, cancelFulfillmentOrderLineItemsInput\)](#)

Cancel FulfillmentOrderLineItems from a FulfillmentOrder. This action doesn't cancel the associated OrderItemSummaries, so reallocate the canceled quantities to a new FulfillmentOrder.

[createFulfillmentOrders\(fulfillmentOrderInput\)](#)

Create one or more FulfillmentOrders and FulfillmentOrderLineItems for an OrderDeliveryGroupSummary, which defines a delivery method and recipient for an OrderSummary. You specify the OrderItemSummaries to allocate, which can be fulfilled from different locations. Specifying multiple fulfillment groups creates one FulfillmentOrder for each location. For each OrderItemSummary, a FulfillmentOrderLineItem is created and assigned to the corresponding FulfillmentOrder.

[createInvoice\(fulfillmentOrderId, invoiceInput\)](#)

Create an invoice for a FulfillmentOrder that doesn't have one.

[createMultipleFulfillmentOrder\(multipleFulfillmentOrderInput\)](#)

Create FulfillmentOrders for multiple OrderDeliveryGroups in a single request.

[createMultipleInvoices\(invoicesInput\)](#)

Create Invoices for multiple FulfillmentOrders.

### **cancelFulfillmentOrderLineItems (fulfillmentOrderId, cancelFulfillmentOrderLineItemsInput)**

Cancel FulfillmentOrderLineItems from a FulfillmentOrder. This action doesn't cancel the associated OrderItemSummaries, so reallocate the canceled quantities to a new FulfillmentOrder.

#### API Version

48.0

#### Requires Chatter

No

#### Signature

```
public static ConnectApi.FulfillmentOrderCancelLineItemsOutputRepresentation
cancelFulfillmentOrderLineItems(String fulfillmentOrderId,
ConnectApi.FulfillmentOrderLineItemsToCancelInputRepresentation
cancelFulfillmentOrderLineItemsInput)
```

#### Parameters

*fulfillmentOrderId*

Type: [String](#)

ID of the FulfillmentOrder.

*cancelFulfillmentOrderLineItemsInput*

Type: [ConnectApi.FulfillmentOrderLineItemsToCancelInputRepresentation](#)

List of FulfillmentOrderLineItems to cancel.

## Return Value

Type: [ConnectApi.FulfillmentOrderCancelLineItemsOutputRepresentation](#)

## Example

```
String fulfillmentOrderId = '0a3xx000000085AAA';
List<ConnectApi.FulfillmentOrderLineItemInputRepresentation> itemToCancelList = new
List<ConnectApi.FulfillmentOrderLineItemInputRepresentation>();

for(FulfillmentOrderLineItem fulfillmentOrderLineItem :
fulfillmentOrder.FulfillmentOrderLineItems) {
    ConnectApi.FulfillmentOrderLineItemInputRepresentation itemToCancel = new
ConnectApi.FulfillmentOrderLineItemInputRepresentation();
    itemToCancel.fulfillmentOrderLineItemId = fulfillmentOrderLineItem.Id;
    itemToCancel.quantity = 1;
    itemToCancelList.add(itemToCancel);
}

ConnectAPI.FulfillmentOrderLineItemsToCancelInputRepresentation input = new
ConnectAPI.FulfillmentOrderLineItemsToCancelInputRepresentation();
input.fulfillmentOrderLineItemsToCancel = itemToCancelList;

ConnectAPI.FulfillmentOrderCancelLineItemsOutputRepresentation result =
ConnectAPI.FulfillmentOrder.cancelFulfillmentOrderLineItems(fulfillmentOrderId, input);
```

## **createFulfillmentOrders (fulfillmentOrderInput)**

Create one or more FulfillmentOrders and FulfillmentOrderLineItems for an OrderDeliveryGroupSummary, which defines a delivery method and recipient for an OrderSummary. You specify the OrderItemSummaries to allocate, which can be fulfilled from different locations. Specifying multiple fulfillment groups creates one FulfillmentOrder for each location. For each OrderItemSummary, a FulfillmentOrderLineItem is created and assigned to the corresponding FulfillmentOrder.

## API Version

48.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.FulfillmentOrderOutputRepresentation
createFulfillmentOrders (ConnectApi.FulfillmentOrderInputRepresentation
fulfillmentOrderInput)
```

## Parameters

*fulfillmentOrderInput*

Type: [ConnectApi.FulfillmentOrderInputRepresentation](#)

OrderItemSummaries to allocate, with location and delivery information.

## Return Value

Type: `ConnectApi.FulfillmentOrderOutputRepresentation`

## Example

```
String orderSummaryId = '10sxx000004CCG';
String fulfillmentType = 'warehouse';

String warehouseFromLocationId = [SELECT Id from Location WHERE LocationType='Warehouse'
LIMIT 1].Id;

ConnectApi.FulfillmentOrderInputRepresentation fulfillmentOrderInput = new
ConnectApi.FulfillmentOrderInputRepresentation();
fulfillmentOrderInput.orderSummaryId = orderSummaryId;

List<OrderDeliveryGroupSummary> orderDeliveryGroupSummaryList = [SELECT Id FROM
OrderDeliveryGroupSummary WHERE OrderSummaryId =: orderSummaryId];

for (OrderDeliveryGroupSummary orderDeliveryGroupSummary: orderDeliveryGroupSummaryList){

    fulfillmentOrderInput.orderDeliveryGroupSummaryId = orderDeliveryGroupSummary.Id;
    List<ConnectApi.FulfillmentGroupInputRepresentation> fulfillmentGroups = new
List<ConnectApi.FulfillmentGroupInputRepresentation>();
    ConnectApi.FulfillmentGroupInputRepresentation fulfillmentGroup = new
ConnectApi.FulfillmentGroupInputRepresentation();
    fulfillmentGroup.fulfilledFromLocationId = warehouseFromLocationId;
    fulfillmentGroup.fulfillmentType = fulfillmentType;

    List<ConnectApi.OrderItemSummaryInputRepresentation> orderItemSummaries = new
List<ConnectApi.OrderItemSummaryInputRepresentation>();

    List<OrderItemSummary> orderItemSummaryList = [Select Id, quantity FROM OrderItemSummary
WHERE OrderSummaryId =: orderSummaryId AND OrderDeliveryGroupSummaryId =:
orderDeliveryGroupSummary.Id];
    for(OrderItemSummary orderItemSummary : orderItemSummaryList){
        ConnectApi.OrderItemSummaryInputRepresentation oisInputRepresentation = new
ConnectApi.OrderItemSummaryInputRepresentation();
        oisInputRepresentation.orderItemSummaryId = orderItemSummary.Id;
        oisInputRepresentation.quantity = orderItemSummary.quantity;
        orderItemSummaries.add(oisInputRepresentation);
    }

    fulfillmentGroup.orderItemSummaries = orderItemSummaries;
    fulfillmentGroups.add(fulfillmentGroup);
    fulfillmentOrderInput.fulfillmentGroups = fulfillmentGroups;
}

ConnectApi.FulfillmentOrderOutputRepresentation result =
ConnectAPI.FulfillmentOrder.createFulfillmentOrders(fulfillmentOrderInput);
```

**createInvoice (fulfillmentOrderId, invoiceInput)**

Create an invoice for a FulfillmentOrder that doesn't have one.

**API Version**

48.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.FulfillmentOrderInvoiceOutputRepresentation createInvoice (String fulfillmentOrderId, ConnectApi.FulfillmentOrderInvoiceInputRepresentation invoiceInput)
```

**Parameters**

*fulfillmentOrderId*

Type: [String](#)

ID of the FulfillmentOrder.

*invoiceInput*

Type: [ConnectApi.FulfillmentOrderInvoiceInputRepresentation](#)

Required input with no data.

**Return Value**

Type: [ConnectApi.FulfillmentOrderInvoiceOutputRepresentation](#)

**Example**

```
String fulfillmentOrderId = '0a3xx000000085AAA';

ConnectApi.FulfillmentOrderInvoiceInputRepresentation input = new
ConnectApi.FulfillmentOrderInvoiceInputRepresentation();
ConnectAPI.FulfillmentOrderInvoiceOutputRepresentation result =
ConnectApi.FulfillmentOrder.createInvoice(fulfillmentOrderId, input);
```

**createMultipleFulfillmentOrder (multipleFulfillmentOrderInput)**

Create FulfillmentOrders for multiple OrderDeliveryGroups in a single request.

**API Version**

50.0

**Requires Chatter**

No

## Signature

```
public static ConnectApi.MultipleFulfillmentOrderOutputRepresentation  
createMultipleFulfillmentOrder (ConnectApi.MultipleFulfillmentOrderInputRepresentation  
multipleFulfillmentOrderInput)
```

## Parameters

*multipleFulfillmentOrderInput*

Type: [ConnectApi.MultipleFulfillmentOrderInputRepresentation](#)

Wraps a list of inputs for creating fulfillment orders.

## Return Value

Type: [ConnectApi.MultipleFulfillmentOrderOutputRepresentation](#)

## **createMultipleInvoices (invoicesInput)**

Create Invoices for multiple FulfillmentOrders.

## API Version

52.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.MultipleFulfillmentOrderInvoicesOutputRepresentation  
createMultipleInvoices (ConnectApi.MultipleFulfillmentOrderInvoicesInputRepresentation  
invoicesInput)
```

## Parameters

*invoicesInput*

Type: [ConnectApi.MultipleFulfillmentOrderInvoicesInputRepresentation](#)

The FulfillmentOrders to create Invoices for.

## Return Value

Type: [ConnectApi.MultipleFulfillmentOrderInvoicesOutputRepresentation](#)

## Knowledge Class

Get information about trending articles in Experience Cloud sites.

## Namespace

[ConnectApi](#)

## Knowledge Methods

These methods are for `Knowledge`. All methods are static.

### IN THIS SECTION:

[getTopViewedArticlesForTopic\(\*communityId\*, \*topicId\*, \*maxResults\*\)](#)

Get the top viewed articles for a topic.

[getTrendingArticles\(\*communityId\*, \*maxResults\*\)](#)

Get trending articles for an Experience Cloud site.

[getTrendingArticlesForTopic\(\*communityId\*, \*topicId\*, \*maxResults\*\)](#)

Get the trending articles for a topic in an Experience Cloud site.

### **getTopViewedArticlesForTopic(*communityId*, *topicId*, *maxResults*)**

Get the top viewed articles for a topic.

### API Version

41.0

### Available to Guest Users

41.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.KnowledgeArticleVersionCollection  
getTopViewedArticlesForTopic(String communityId, String topicId, Integer maxResults)
```

### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, internal, or `null`.

*topicId*

Type: [String](#)

ID of the topic.

*maxResults*

Type: [Integer](#)

The maximum number of articles returned for each topic ID. Values can be from 1 to 25. The default value is 5.

## Return Value

Type: [ConnectApi.KnowledgeArticleVersionCollection](#)

## **getTrendingArticles(*communityId*, *maxResults*)**

Get trending articles for an Experience Cloud site.

## API Version

36.0

## Available to Guest Users

36.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.KnowledgeArticleVersionCollection getTrendingArticles(String communityId, Integer maxResults)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*maxResults*

Type: [Integer](#)

The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

## Return Value

Type: [ConnectApi.KnowledgeArticleVersionCollection](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

[setTestGetTrendingArticles\(\*communityId\*, \*maxResults\*, \*result\*\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

**getTrendingArticlesForTopic(*communityId*, *topicId*, *maxResults*)**

Get the trending articles for a topic in an Experience Cloud site.

**API Version**

36.0

**Available to Guest Users**

36.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.KnowledgeArticleVersionCollection  
getTrendingArticlesForTopic(String communityId, String topicId, Integer maxResults)
```

**Parameters**

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*topicId*

Type: [String](#)

ID of the topic.

*maxResults*

Type: [Integer](#)

The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

**Return Value**

Type: [ConnectApi.KnowledgeArticleVersionCollection](#)

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

## Knowledge Test Methods

These test methods are for `Knowledge`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see [Testing ConnectApi Code](#).

### **setTestGetTrendingArticles(*communityId*, *maxResults*, *result*)**

Register a `ConnectApi.KnowledgeVersionArticleCollection` object to be returned when the matching `ConnectApi.getTrendingArticles` method is called in a test context. Use the method with the same parameters or you receive an exception.

### API Version

36.0

### Signature

```
public static Void setTestGetTrendingArticles(String communityId, Integer maxResults,
ConnectApi.KnowledgeArticleVersionCollection result)
```

### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*maxResults*

Type: [Integer](#)

The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

*result*

Type: [ConnectApi.KnowledgeArticleVersionCollection](#)

Object containing test data.

### Return Value

Type: `Void`

### SEE ALSO:

[getTrendingArticles\(\*communityId\*, \*maxResults\*\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

### **setTestGetTrendingArticlesForTopic(*communityId*, *topicId*, *maxResults*, *result*)**

Register a `ConnectApi.KnowledgeVersionArticleCollection` object to be returned when the matching `ConnectApi.getTrendingArticlesForTopic` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

36.0

## Signature

```
public static Void setTestGetTrendingArticlesForTopic(String communityId, String topicId, Integer maxResults, ConnectApi.KnowledgeArticleVersionCollection result)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*topicId*

Type: [String](#)

ID of the topic.

*maxResults*

Type: [Integer](#)

The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

*result*

Type: [ConnectApi.KnowledgeArticleVersionCollection](#)

Object containing test data.

## Return Value

Type: Void

SEE ALSO:

[getTrendingArticlesForTopic\(communityId, topicId, maxResults\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## LightningScheduler Class

Create and update service appointments.

## Namespace

[ConnectApi](#)

## LightningScheduler Methods

These methods are for `LightningScheduler`. All methods are static.

## IN THIS SECTION:

[createServiceAppointment\(createServiceAppointmentInput\)](#)

Create a service appointment.

[updateServiceAppointment\(updateServiceAppointmentInput\)](#)

Update a service appointment.

**createServiceAppointment (createServiceAppointmentInput)**

Create a service appointment.

## API Version

53.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ServiceAppointmentOutput
createServiceAppointment (ConnectApi.CreateServiceAppointmentInput
createServiceAppointmentInput)
```

## Parameters

*createServiceAppointmentInput*

Type: [ConnectApi.CreateServiceAppointmentInput](#)

Input parameters to create a service appointment.

## Return Value

Type: [ConnectApi.ServiceAppointmentOutput](#)

## Usage

Considerations for using engagement channel types with the `service-appointments` resource:

- Enable **Schedule Appointments Using Engagement Channels** in Salesforce Scheduler Settings in your Salesforce org.
- When you create or modify appointments, shifts must be defined in the scheduling policy. For more information on setting up shifts in the scheduling policy, see [Define Shift Rules in Scheduling Policy](#).

**Note:** Engagement channel types are not supported with operating hours rules in the scheduling policy.

- When you use engagement channel type and shifts to create a service appointment, Salesforce Scheduler considers the default value for the Appointment Type (if not specified). However, Salesforce Scheduler only considers the engagement channel type and Appointment Type is ignored.

## Example

For an account (existing user):

```

ConnectApi.ExtendedFieldInput extendedFieldEmail = new ConnectApi.ExtendedFieldInput();
extendedFieldEmail.name = 'Email';
extendedFieldEmail.value = 'rachael.adams@salesforce.com';

ConnectApi.ExtendedFieldInput extendedFieldPhone = new ConnectApi.ExtendedFieldInput();
extendedFieldPhone.name = 'Phone';
extendedFieldPhone.value = '1234567890';

List<ConnectApi.ExtendedFieldInput> extendedFieldList = new
List<ConnectApi.ExtendedFieldInput>();
extendedFieldList.add(extendedFieldEmail);
extendedFieldList.add(extendedFieldPhone);

ConnectApi.ServiceAppointmentInput serviceAppInput = new
ConnectApi.ServiceAppointmentInput();
serviceAppInput.extendedFields = extendedFieldList;
serviceAppInput.engagementChannelTypeId = '0eFRM0000000Bv2AI';
serviceAppInput.serviceTerritoryId = '0Hhxx0000004C92CAE';
serviceAppInput.workTypeId = '08qxx0000004C92AAE';
serviceAppInput.parentRecordId = '001xx000003GYR1AAO';
serviceAppInput.schedStartTime = DateTime.valueOf('2021-05-28 12:15:00');
serviceAppInput.schedEndTime = DateTime.valueOf('2021-05-28 12:45:00');
serviceAppInput.appointmentMode = 'Group';
serviceAppInput.attendeeLimit = 20;

ConnectApi.AssignedResourcesInput asResourceInput = new ConnectApi.AssignedResourcesInput();
asResourceInput.serviceResourceId = '0Hnxx0000004CAiCAM';
asResourceInput.isRequiredResource = true;
asResourceInput.isPrimaryResource = true;

List<ConnectApi.AssignedResourcesInput> asResourceInputList = new
List<ConnectApi.AssignedResourcesInput>();
asResourceInputList.add(asResourceInput);

ConnectApi.CreateServiceAppointmentInput createInput = new
ConnectApi.CreateServiceAppointmentInput();
createInput.serviceAppointment = serviceAppInput;
createInput.assignedResources = asResourceInputList;

try{
    ConnectApi.ServiceAppointmentOutput appointmentResult =
ConnectApi.LightningScheduler.createServiceAppointment(createInput);
    String serviceAppointmentId = appointmentResult.result.serviceAppointmentId;
    List<String> assignedResourceIds = appointmentResult.result.assignedResourceIds;
}catch(ConnectApi.ConnectApiException ex){
    //Handle Exception
}

```

For a lead (authenticated guest user):

```

ConnectApi.LeadInput leadInput = new ConnectApi.LeadInput();
leadInput.firstName = 'Rachel';
leadInput.lastName = 'Adams';
leadInput.phone = '012-345-6789';
leadInput.email = 'rachel.adams@salesforce.com';
leadInput.company = 'Salesforce';

ConnectApi.ExtendedFieldInput extendedFieldEmail = new ConnectApi.ExtendedFieldInput();
extendedFieldEmail.name = 'Email';
extendedFieldEmail.value = 'rachael.adams@salesforce.com';

ConnectApi.ExtendedFieldInput extendedFieldPhone = new ConnectApi.ExtendedFieldInput();
extendedFieldPhone.name = 'Phone';
extendedFieldPhone.value = '1234567890';

List<ConnectApi.ExtendedFieldInput> extendedFieldList = new
List<ConnectApi.ExtendedFieldInput>();
extendedFieldList.add(extendedFieldEmail);
extendedFieldList.add(extendedFieldPhone);

ConnectApi.ServiceAppointmentInput serviceAppInput = new
ConnectApi.ServiceAppointmentInput();
serviceAppInput.extendedFields = extendedFieldList;
serviceAppInput.engagementChannelTypeId = '0eFRM0000000Bv2AI';
serviceAppInput.serviceTerritoryId = '0Hhxx0000004C92CAE';
serviceAppInput.workTypeId = '08qxx0000004C92AAE';
serviceAppInput.schedStartTime = DateTime.valueOf('2021-05-28 12:15:00');
serviceAppInput.schedEndTime = DateTime.valueOf('2021-05-28 12:45:00');

ConnectApi.AssignedResourcesInput asResourceInput = new ConnectApi.AssignedResourcesInput();
asResourceInput.serviceResourceId = '0Hnxx0000004CAiCAM';
asResourceInput.isRequiredResource = true;
asResourceInput.isPrimaryResource = true;

List<ConnectApi.AssignedResourcesInput> asResourceInputList = new
List<ConnectApi.AssignedResourcesInput>();
asResourceInputList.add(asResourceInput);

ConnectApi.CreateServiceAppointmentInput createInput = new
ConnectApi.CreateServiceAppointmentInput();
createInput.serviceAppointment = serviceAppInput;
createInput.assignedResources = asResourceInputList;
createInput.lead = leadInput;

try{
    ConnectApi.ServiceAppointmentOutput appointmentResult =
ConnectApi.LightningScheduler.createServiceAppointment(createInput);
    String serviceAppointmentId = appointmentResult.result.serviceAppointmentId;
    List<String> assignedResourceIds = appointmentResult.result.assignedResourceIds;
}catch(ConnectApi.ConnectApiException ex){

```

```
//Handle Exception  
}
```

SEE ALSO:

[Service Appointments](#)

### **updateServiceAppointment (updateServiceAppointmentInput)**

Update a service appointment.

### API Version

53.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.ServiceAppointmentOutput  
updateServiceAppointment (ConnectApi.UpdateServiceAppointmentInput  
updateServiceAppointmentInput)
```

### Parameters

*updateServiceAppointmentInput*  
Type: [ConnectApi.UpdateServiceAppointmentInput](#)  
Input parameters to update a service appointment.

### Return Value

Type: [ConnectApi.ServiceAppointmentOutput](#)

### Usage

Considerations for using engagement channel types with the `service-appointments` resource:

- Enable **Schedule Appointments Using Engagement Channels** in Salesforce Scheduler Settings in your Salesforce org.
- When you create or modify appointments, shifts must be defined in the scheduling policy. For more information on setting up shifts in the scheduling policy, see [Define Shift Rules in Scheduling Policy](#).
-  **Note:** Engagement channel types are not supported with operating hours rules in the scheduling policy.
- When you use engagement channel type and shifts to modify an appointment, Salesforce Scheduler considers the default value for the Appointment Type (if not specified). However, Salesforce Scheduler only considers the engagement channel type and Appointment Type is ignored.

## Example

```

ConnectApi.ExtendedFieldInput extendedFieldEmail = new ConnectApi.ExtendedFieldInput();
extendedFieldEmail.name = 'Email';
extendedFieldEmail.value = 'rachel.adams@salesforce.com.example';

ConnectApi.ExtendedFieldInput extendedFieldPhone = new ConnectApi.ExtendedFieldInput();
extendedFieldPhone.name = 'Phone';
extendedFieldPhone.value = '0123456789';

ConnectApi.ExtendedFieldInput extendedFieldStatus = new ConnectApi.ExtendedFieldInput();
extendedFieldStatus.name = 'Status';
extendedFieldStatus.value = 'None';

List<ConnectApi.ExtendedFieldInput> extendedFieldList = new
List<ConnectApi.ExtendedFieldInput>();
extendedFieldList.add(extendedFieldEmail);
extendedFieldList.add(extendedFieldPhone);
extendedFieldList.add(extendedFieldStatus);

ConnectApi.ServiceAppointmentInput serviceAppInput = new
ConnectApi.ServiceAppointmentInput();
serviceAppInput.extendedFields = extendedFieldList;
serviceAppInput.serviceTerritoryId = '0Hhxx0000004C92CAE';
serviceAppInput.workTypeId = '08qxx0000004C92AAE';
serviceAppInput.schedStartTime = DateTime.valueOf('2021-05-28 12:15:00');
serviceAppInput.schedEndTime = DateTime.valueOf('2021-05-28 12:45:00');

ConnectApi.AssignedResourcesInput asResourceInput = new ConnectApi.AssignedResourcesInput();
asResourceInput.serviceResourceId = '0Hhxx0000004CAiCAM';
asResourceInput.isRequiredResource = true;
asResourceInput.isPrimaryResource = true;

//Multi-resource
ConnectApi.AssignedResourcesInput asResourceInputReq = new
ConnectApi.AssignedResourcesInput();
asResourceInputReq.serviceResourceId = '0Hhxx0000004CAGCAM';
asResourceInputReq.isRequiredResource = true;
asResourceInputReq.isPrimaryResource = false;

List<ConnectApi.AssignedResourcesInput> asResourceInputList = new
List<ConnectApi.AssignedResourcesInput>();
asResourceInputList.add(asResourceInput);
asResourceInputList.add(asResourceInputReq);

ConnectApi.UpdateServiceAppointmentInput updateInput = new
ConnectApi.UpdateServiceAppointmentInput();
updateInput.serviceAppointment = serviceAppInput;
updateInput.assignedResources = asResourceInputList;
updateInput.serviceAppointmentId = '08pxx0000004CYqAAM';

try{
    ConnectApi.ServiceAppointmentOutput appointmentResult =
ConnectApi.LightningScheduler.updateServiceAppointment(updateInput);

```

```
String serviceAppointmentId = appointmentResult.result.serviceAppointmentId;
List<String> assignedResourceIds = appointmentResult.result.assignedResourceIds;
} catch (ConnectApi.ConnectApiException ex) {
    //Handle Exception
}
```

## ManagedContent Class

Clone managed content. Create and get managed content. Delete and replace variants. Get channels. Get a managed content space. Publish and unpublish content.

### Namespace

[ConnectApi](#)

## ManagedContent Methods

These methods are for `ManagedContent`. All methods are static.

IN THIS SECTION:

[cloneManagedContentDocument\(contentKeyOrId, ManagedContentCloneInputParam\)](#)

Clone a piece of managed content.

[createManagedContent\(ManagedContentInputParam\)](#)

Create managed content.

[createManagedContentWithMedia\(ManagedContentInputParam, contentData\)](#)

Create managed content with content data.

[deleteManagedContentVariant\(variantId\)](#)

Delete a managed content variant.

[getAllContent\(channelId, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate\)](#)

Get all managed content versions for a channel.

[getAllContent\(channelId, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate, showAbsoluteUrl\)](#)

Get all managed content versions for a channel with absolute URLs.

[getAllDeliveryChannels\(pageParam, pageSize\)](#)

Get managed content delivery channels for the context user.

[getAllManagedContent\(communityId, pageParam, pageSize, language, managedContentType\)](#)

Get all managed content versions for an Experience Cloud site.

[getAllManagedContent\(communityId, pageParam, pageSize, language, managedContentType, showAbsoluteUrl\)](#)

Get all managed content versions for an Experience Cloud site with absolute URLs.

[getContentByContentKeys\(channelId, contentKeys, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate, showAbsoluteUrl\)](#)

Get managed content versions for a channel using a list of content keys.

[getContentByIds\(channelId, managedContentIds, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate\)](#)

Get managed content versions for a channel using a list of managed content IDs.

[getContentByIds\(channelId, managedContentIds, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate, showAbsoluteUrl\)](#)

Get managed content versions for a channel with absolute URLs using a list of managed content IDs.

[getManagedContentByContentKeys\(communityId, contentKeys, pageParam, pageSize, language, managedContentType, showAbsoluteUrl\)](#)

Get managed content versions for an Experience Cloud site using a list of content keys.

[getManagedContentByIds\(communityId, managedContentIds, pageParam, pageSize, language, managedContentType\)](#)

Get managed content versions for an Experience Cloud site using a list of managed content IDs.

[getManagedContentByIds\(communityId, managedContentIds, pageParam, pageSize, language, managedContentType, showAbsoluteUrl\)](#)

Get managed content versions for an Experience Cloud site with absolute URLs using a list of managed content IDs.

[getManagedContentByTopics\(communityId, topics, pageParam, pageSize, language, managedContentType\)](#)

Get managed content versions using a list of content topic names.

[getManagedContentByTopics\(communityId, topics, pageParam, pageSize, language, managedContentType, showAbsoluteUrl\)](#)

Get managed content versions with absolute URLs using a list of content topic names.

[getManagedContentByTopicsAndContentKeys\(communityId, contentKeys, topics, pageParam, pageSize, language, managedContentType, showAbsoluteUrl\)](#)

Get managed content versions using a list of content keys and content topic names.

[getManagedContentByTopicsAndIds\(communityId, managedContentIds, topics, pageParam, pageSize, language, managedContentType\)](#)

Get managed content versions using a list of managed content IDs and content topic names.

[getManagedContentByTopicsAndIds\(communityId, managedContentIds, topics, pageParam, pageSize, language, managedContentType, showAbsoluteUrl\)](#)

Get managed content versions with absolute URLs using a list of managed content IDs and content topic names.

[getManagedContentSpace\(contentSpaceId\)](#)

Get a managed content space.

[publish\(publishInput\)](#)

Publish content.

[replaceManagedContentVariant\(variantId, ManagedContentVariantInputParam\)](#)

Replace a managed content variant.

[replaceManagedContentVariantWithMedia\(variantId, ManagedContentVariantInputParam, contentData\)](#)

Replace a managed content variant, including content data.

[unpublish\(unpublishInput\)](#)

Unpublish content.

**cloneManagedContentDocument (contentKeyOrId, ManagedContentCloneInputParam)**

Clone a piece of managed content.

**API Version**

61.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.ManagedContentDocumentClone cloneManagedContentDocument (String
contentKeyOrId, ConnectApi.ManagedContentDocumentCloneInput
ManagedContentCloneInputParam)
```

**Parameters**

*contentKeyOrId*

Type: [String](#)

Content key or ID of the managed content to clone.

*ManagedContentCloneInputParam*

Type: [ConnectApi.ManagedContentDocumentCloneInput](#)

[ConnectApi.ManagedContentDocumentCloneInput](#) class specifying the details for the cloned content.

**Return Value**

Type: [ConnectApi.ManagedContentDocumentClone](#)

**createManagedContent (ManagedContentInputParam)**

Create managed content.

**API Version**

60.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.ManagedContentDocument
createManagedContent (ConnectApi.ManagedContentDocumentInput ManagedContentInputParam)
```

## Parameters

*ManagedContentInputParam*

Type: [ConnectApi.ManagedContentDocumentInput](#)

A [ConnectApi.ManagedContentDocumentInput](#) input class with information to create managed content.

## Return Value

Type: [ConnectApi.ManagedContentDocument](#)

### **createManagedContentWithMedia (ManagedContentInputParam, contentData)**

Create managed content with content data.

## API Version

60.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentDocument  
createManagedContentWithMedia (ConnectApi.ManagedContentDocumentInput  
ManagedContentInputParam, ConnectApi.BinaryInput contentData)
```

## Parameters

*ManagedContentInputParam*

Type: [ConnectApi.ManagedContentDocumentInput](#)

A [ConnectApi.ManagedContentDocumentInput](#) input class with information to create managed content.

*contentData*

Type: [ConnectApi.BinaryInput](#)

A new binary file of the content data for the managed content.

## Return Value

Type: [ConnectApi.ManagedContentDocument](#)

### **deleteManagedContentVariant (variantId)**

Delete a managed content variant.

## API Version

60.0

## Requires Chatter

No

## Signature

```
public static Void deleteManagedContentVariant(String variantId)
```

## Parameters

*variantId*

Type: [String](#)

ID of the variant to delete.

## Return Value

Type: Void

```
getAllContent(channelId, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate)
```

Get all managed content versions for a channel.

## API Version

48.0

## Available to Guest Users

48.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentVersionCollection getAllContent(String channelId, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean includeMetadata, String startDate, String endDate)
```

## Parameters

*channelId*

Type: [String](#)

ID of the channel.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in `null`, the default size is 25.

*language*Type: [String](#)

Language locale for the managed content, for example, `en_US`. If the requested translation isn't available, the language defaults to the context user's language. If the context user's language isn't available, the language defaults to the content type's original language.

*managedContentType*Type: [String](#)

Developer name of the content type, such as `cms_document` or `cms_image`.

*includeMetadata*Type: [Boolean](#)

Specifies whether to include metadata in the response (`true`) or not (`false`). The default value is `false`.

*startDate*Type: [String](#)

Publish start date in ISO 8601 format, for example, `2011-02-25T18:24:31.000Z`.

*endDate*Type: [String](#)

Publish end date in ISO 8601 format, for example, `2011-02-25T18:24:31.000Z`.

**Return Value**Type: [ConnectApi.ManagedContentVersionCollection](#)**`getAllContent(channelId, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate, showAbsoluteUrl)`**

Get all managed content versions for a channel with absolute URLs.

**API Version**

50.0

**Available to Guest Users**

50.0

**Requires Chatter**

No

## Signature

```
public static ConnectApi.ManagedContentVersionCollection getAllContent(String channelId, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean includeMetadata, String startDate, String endDate, Boolean showAbsoluteUrl)
```

## Parameters

*channelId*

Type: [String](#)

ID of the channel.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in `null`, the default size is 25.

*language*

Type: [String](#)

Language locale for the managed content, for example, `en_US`. If the requested translation isn't available, the language defaults to the context user's language. If the context user's language isn't available, the language defaults to the content type's original language.

*managedContentType*

Type: [String](#)

Developer name of the content type, such as `cms_document` or `cms_image`.

*includeMetadata*

Type: [Boolean](#)

Specifies whether to include metadata in the response (`true`) or not (`false`). The default value is `false`.

*startDate*

Type: [String](#)

Publish start date in ISO 8601 format, for example, `2011-02-25T18:24:31.000Z`.

*endDate*

Type: [String](#)

Publish end date in ISO 8601 format, for example, `2011-02-25T18:24:31.000Z`.

*showAbsoluteUrl*

Type: [Boolean](#)

Specifies whether to show absolute URLs in the output class (`true`) or not (`false`). The default value is `false`.

## Return Value

Type: [ConnectApi.ManagedContentVersionCollection](#)

**getAllDeliveryChannels (pageParam, pageSize)**

Get managed content delivery channels for the context user.

**API Version**

48.0–61.0

In version 62.0 and later, use [getChannels \(pageParam, pageSize\)](#) in the `ManagedContentDelivery` class to get all delivery channels.

**Available to Guest Users**

48.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.ManagedContentChannelCollection getAllDeliveryChannels(Integer pageParam, Integer pageSize)
```

**Parameters**

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25.

**Return Value**

Type: [ConnectApi.ManagedContentChannelCollection](#)

**getAllManagedContent (communityId, pageParam, pageSize, language, managedContentType)**

Get all managed content versions for an Experience Cloud site.

**API Version**

47.0

**Available to Guest Users**

47.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentVersionCollection getAllManagedContent(String communityId, Integer pageParam, Integer pageSize, String language, String managedContentType)
```

## Parameters

*communityId*

Type: [String](#)

ID of the Experience Cloud site.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in `null`, the default size is 25.

*language*

Type: [String](#)

Language locale for the managed content, for example, `en_US`. If the requested translation isn't available, the language defaults to the context user's language. If the context user's language isn't available, the language defaults to the content type's original language.

*managedContentType*

Type: [String](#)

Developer name of the content type, such as `cms_document` or `cms_image`.

## Return Value

Type: [ConnectApi.ManagedContentVersionCollection](#)

```
getAllManagedContent(communityId, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)
```

Get all managed content versions for an Experience Cloud site with absolute URLs.

## API Version

50.0

## Available to Guest Users

50.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentVersionCollection getAllManagedContent(String communityId, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean showAbsoluteUrl)
```

## Parameters

*communityId*

Type: [String](#)

ID of the Experience Cloud site.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in `null`, the default size is 25.

*language*

Type: [String](#)

Language locale for the managed content, for example, `en_US`. If the requested translation isn't available, the language defaults to the context user's language. If the context user's language isn't available, the language defaults to the content type's original language.

*managedContentType*

Type: [String](#)

Developer name of the content type, such as `cms_document` or `cms_image`.

*showAbsoluteUrl*

Type: [Boolean](#)

Specifies whether to show absolute URLs in the output class (`true`) or not (`false`). The default value is `false`.

## Return Value

Type: [ConnectApi.ManagedContentVersionCollection](#)

```
getContentByContentKeys(channelId, contentKeys, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate, showAbsoluteUrl)
```

Get managed content versions for a channel using a list of content keys.

## API Version

51.0

## Available to Guest Users

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentVersionCollection getContentByContentKeys(String
channelId, List<String> contentKeys, Integer pageParam, Integer pageSize, String
language, String managedContentType, Boolean includeMetadata, String startDate, String
endDate, Boolean showAbsoluteUrl)
```

## Parameters

*channelId*

Type: [String](#)

ID of the channel.

*contentKeys*

Type: [List<String>](#)

List of up to 50 content keys for the managed content. A content key is a universally unique identifier (UUID) such as MCA4CCV5QS2BAB5H7YRCRPTCWGZQ.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in `null`, the default size is 25.

*language*

Type: [String](#)

Language locale for the managed content, for example, `en_US`. If the requested translation isn't available, the language defaults to the context user's language. If the context user's language isn't available, the language defaults to the content type's original language.

*managedContentType*

Type: [String](#)

Developer name of the content type, such as `cms_document` or `cms_image`.

*includeMetadata*

Type: [Boolean](#)

Specifies whether to include metadata in the response (`true`) or not (`false`). The default value is `false`.

*startDate*

Type: [String](#)

Publish start date in ISO 8601 format, for example, `2011-02-25T18:24:31.000Z`.

*endDate*

Type: [String](#)

Publish end date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

*showAbsoluteUrl*

Type: [Boolean](#)

Specifies whether to show absolute URLs in the output class ([true](#)) or not ([false](#)). The default value is [false](#).

## Return Value

Type: [ConnectApi.ManagedContentVersionCollection](#)

**getContentByIds(channelId, managedContentIds, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate)**

Get managed content versions for a channel using a list of managed content IDs.

## API Version

48.0

## Available to Guest Users

48.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentVersionCollection getContentByIds(String
channelId, List<String> managedContentIds, Integer pageParam, Integer pageSize, String
language, String managedContentType, Boolean includeMetadata, String startDate, String
endDate)
```

## Parameters

*channelId*

Type: [String](#)

ID of the channel.

*managedContentIds*

Type: [List<String>](#)

Comma-separated list of managed content IDs. HTTP/2 clients support up to 200 IDs. HTTP/1.1 clients don't.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in [null](#) or 0, the first page is returned.

*pageSize*Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in `null`, the default size is 25.

*language*Type: [String](#)

Language locale for the managed content, for example, `en_US`. If the requested translation isn't available, the language defaults to the context user's language. If the context user's language isn't available, the language defaults to the content type's original language.

*managedContentType*Type: [String](#)

Developer name of the content type, such as `cms_document` or `cms_image`.

*includeMetadata*Type: [Boolean](#)

Specifies whether to include metadata in the response (`true`) or not (`false`). The default value is `false`.

*startDate*Type: [String](#)

Publish start date in ISO 8601 format, for example, `2011-02-25T18:24:31.000Z`.

*endDate*Type: [String](#)

Publish end date in ISO 8601 format, for example, `2011-02-25T18:24:31.000Z`.

**Return Value**Type: [ConnectApi.ManagedContentVersionCollection](#)

**`getContentByIds(channelId, managedContentIds, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate, showAbsoluteUrl)`**

Get managed content versions for a channel with absolute URLs using a list of managed content IDs.

*managedContentType*

Type: [String](#)

Developer name of the content type, such as `cms_document` or `cms_image`.

*showAbsoluteUrl*

Type: [Boolean](#)

Specifies whether to show absolute URLs in the output class (`true`) or not (`false`). The default value is `false`.

## Return Value

Type: [ConnectApi.ManagedContentVersionCollection](#)

**`getManagedContentByTopics (communityId, topics, pageParam, pageSize, language, managedContentType)`**

Get managed content versions using a list of content topic names.

## API Version

47.0

## Available to Guest Users

47.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentVersionCollection getManagedContentByTopics (String communityId, List<String> topics, Integer pageParam, Integer pageSize, String language, String managedContentType)
```

## Parameters

*communityId*

Type: [String](#)

ID of the Experience Cloud site.

*topics*

Type: [List<String>](#)

Comma-separated list of up to 15 content topic names.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in `null`, the default size is 25.

*language*

Type: [String](#)

Language locale for the managed content, for example, `en_US`. If the requested translation isn't available, the language defaults to the context user's language. If the context user's language isn't available, the language defaults to the content type's original language.

*managedContentType*

Type: [String](#)

Developer name of the content type, such as `cms_document` or `cms_image`.

## Return Value

Type: [ConnectApi.ManagedContentVersionCollection](#)

**getManagedContentByTopics (communityId, topics, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)**

Get managed content versions with absolute URLs using a list of content topic names.

## API Version

50.0

## Available to Guest Users

50.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentVersionCollection getManagedContentByTopics (String communityId, List<String> topics, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean showAbsoluteUrl)
```

## Parameters

*communityId*

Type: [String](#)

ID of the Experience Cloud site.

*topics*

Type: [List<String>](#)

Comma-separated list of up to 15 content topic names.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in `null`, the default size is 25.

*language*

Type: [String](#)

Language locale for the managed content, for example, `en_US`. If the requested translation isn't available, the language defaults to the context user's language. If the context user's language isn't available, the language defaults to the content type's original language.

*managedContentType*

Type: [String](#)

Developer name of the content type, such as `cms_document` or `cms_image`.

*showAbsoluteUrl*

Type: [Boolean](#)

Specifies whether to show absolute URLs in the output class (`true`) or not (`false`). The default value is `false`.

## Return Value

Type: [ConnectApi.ManagedContentVersionCollection](#)

```
getManagedContentByTopicsAndContentKeys (communityId, contentKeys, topics, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)
```

Get managed content versions using a list of content keys and content topic names.

## API Version

51.0

## Available to Guest Users

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentVersionCollection
getManagedContentByTopicsAndContentKeys(String communityId, List<String> contentKeys,
List<String> topics, Integer pageParam, Integer pageSize, String language, String
managedContentType, Boolean showAbsoluteUrl)
```

## Parameters

*communityId*

Type: [String](#)

ID of the Experience Cloud site.

*contentKeys*

Type: [List<String>](#)

List of up to 50 content keys for the managed content. A content key is a universally unique identifier (UUID) such as MCA4CCV5QS2BAB5H7YRCRPTCWGZQ.

*topics*

Type: [List<String>](#)

Comma-separated list of up to 15 content topic names.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in `null`, the default size is 25.

*language*

Type: [String](#)

Language locale for the managed content, for example, `en_US`. If the requested translation isn't available, the language defaults to the context user's language. If the context user's language isn't available, the language defaults to the content type's original language.

*managedContentType*

Type: [String](#)

Developer name of the content type, such as `cms_document` or `cms_image`.

*showAbsoluteUrl*

Type: [Boolean](#)

Specifies whether to show absolute URLs in the output class (`true`) or not (`false`). The default value is `false`.

## Return Value

Type: [ConnectApi.ManagedContentVersionCollection](#)

**getManagedContentByTopicsAndIds(*communityId*, *managedContentIds*, *topics*, *pageParam*, *pageSize*, *language*, *managedContentType*)**

Get managed content versions using a list of managed content IDs and content topic names.

## API Version

47.0

## Available to Guest Users

47.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentVersionCollection
getManagedContentByTopicsAndIds(String communityId, List<String> managedContentIds,
List<String> topics, Integer pageParam, Integer pageSize, String language, String
managedContentType)
```

## Parameters

*communityId*

Type: [String](#)

ID of the Experience Cloud site.

*managedContentIds*

Type: [List<String>](#)

Comma-separated list of managed content IDs. HTTP/2 clients support up to 200 IDs. HTTP/1.1 clients don't.

*topics*

Type: [List<String>](#)

Comma-separated list of up to 15 content topic names.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in `null`, the default size is 25.

*language*

Type: [String](#)

Language locale for the managed content, for example, `en_US`. If the requested translation isn't available, the language defaults to the context user's language. If the context user's language isn't available, the language defaults to the content type's original language.

*managedContentType*

Type: [String](#)

Developer name of the content type, such as `cms_document` or `cms_image`.

## Return Value

Type: [ConnectApi.ManagedContentVersionCollection](#)

**`getManagedContentByTopicsAndIds`**(`communityId`, `managedContentIds`, `topics`, `pageParam`, `pageSize`, `language`, `managedContentType`, `showAbsoluteUrl`)

Get managed content versions with absolute URLs using a list of managed content IDs and content topic names.

## API Version

50.0

## Available to Guest Users

50.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentVersionCollection
getManagedContentByTopicsAndIds(String communityId, List<String> managedContentIds,
List<String> topics, Integer pageParam, Integer pageSize, String language, String
managedContentType, Boolean showAbsoluteUrl)
```

## Parameters

*communityId*

Type: [String](#)

ID of the Experience Cloud site.

*managedContentIds*

Type: [List<String>](#)

Comma-separated list of managed content IDs. HTTP/2 clients support up to 200 IDs. HTTP/1.1 clients don't.

*topics*

Type: [List<String>](#)

Comma-separated list of up to 15 content topic names.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in `null`, the default size is 25.

*language*

Type: [String](#)

Language locale for the managed content, for example, `en_US`. If the requested translation isn't available, the language defaults to the context user's language. If the context user's language isn't available, the language defaults to the content type's original language.

*managedContentType*

Type: [String](#)

Developer name of the content type, such as `cms_document` or `cms_image`.

*showAbsoluteUrl*

Type: [Boolean](#)

Specifies whether to show absolute URLs in the output class (`true`) or not (`false`). The default value is `false`.

## Return Value

Type: [ConnectApi.ManagedContentVersionCollection](#)

## **getManagedContentSpace (contentSpaceId)**

Get a managed content space.

## API Version

55.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentSpace getManagedContentSpace (String contentSpaceId)
```

## Parameters

*contentSpaceId*

Type: [String](#)

ID of the managed content space.

## Return Value

Type: [ConnectApi.ManagedContentSpace](#)

## **publish (publishInput)**

Publish content.

## API Version

60.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentPublishOutput  
publish (ConnectApi.ManagedContentPublishInput publishInput)
```

## Parameters

*publishInput*

Type: [ConnectApi.ManagedContentPublishInput](#)

A [ConnectApi.ManagedContentPublishInput](#) request body specifying the content to publish.

## Return Value

Type: [ConnectApi.ManagedContentPublishOutput](#)

## **replaceManagedContentVariant (variantId, ManagedContentVariantInputParam)**

Replace a managed content variant.

## API Version

60.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentVariant replaceManagedContentVariant(String  
variantId, ConnectApi.ManagedContentVariantUpdateInput ManagedContentVariantInputParam)
```

## Parameters

*variantId*

Type: [String](#)

ID of the managed content variant to replace.

*ManagedContentVariantInputParam*

Type: [ConnectApi.ManagedContentVariantUpdateInput](#)

A [ConnectApi.ManagedContentVariantUpdateInput](#) input class with information about the managed content variant that is replacing the existing variant.

## Return Value

Type: [ConnectApi.ManagedContentVariant](#)

## **replaceManagedContentVariantWithMedia (variantId, ManagedContentVariantInputParam, contentData)**

Replace a managed content variant, including content data.

## API Version

60.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentVariant  
replaceManagedContentVariantWithMedia(String variantId,  
ConnectApi.ManagedContentVariantUpdateInput ManagedContentVariantInputParam,  
ConnectApi.BinaryInput contentData)
```

## Parameters

*variantId*

Type: [String](#)

ID of the managed content variant to replace.

*ManagedContentVariantInputParam*

Type: [ConnectApi.ManagedContentVariantUpdateInput](#)

A [ConnectApi.ManagedContentVariantUpdateInput](#) input class with information about the managed content variant that is replacing the existing variant.

*contentData*

Type: [ConnectApi.BinaryInput](#)

A new binary file to replace the content data of the managed content variant.

## Return Value

Type: [ConnectApi.ManagedContentVariant](#)

## **unpublish (unpublishInput)**

Unpublish content.

## API Version

60.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentUnpublishOutput  
unpublish (ConnectApi.ManagedContentUnpublishInput unpublishInput)
```

## Parameters

*unpublishInput*

Type: [ConnectApi.ManagedContentUnpublishInput](#)

A [ConnectApi.ManagedContentUnpublishInput](#) request body specifying the content to unpublish.

## Return Value

Type: [ConnectApi.ManagedContentUnpublishOutput](#)

## Retired ManagedContent Methods

These methods for `ManagedContent` are retired.

### IN THIS SECTION:

[getAllDeliveryChannels\(pageParam, pageSize\)](#)

Get managed content delivery channels for the context user.

## **getAllDeliveryChannels (pageParam, pageSize)**

Get managed content delivery channels for the context user.

### API Version

48.0–61.0

In version 62.0 and later, use `getChannels(pageParam, pageSize)` in the `ManagedContentDelivery` class to get all delivery channels.

### Available to Guest Users

48.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.ManagedContentChannelCollection getAllDeliveryChannels(Integer pageParam, Integer pageSize)
```

### Parameters

*pageParam*

Type: `Integer`

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25.

### Return Value

Type: `ConnectApi.ManagedContentChannelCollection`

## ManagedContentChannels Class

Get managed content channels. Create, get, update, or delete a managed content channel.

### Namespace

`ConnectApi`

### ManagedContentChannels Methods

These methods are for `ManagedContentChannels`. All methods are static.

#### IN THIS SECTION:

`deleteManagedContentChannel(channelId)`

Delete a managed content channel.

[getManagedContentChannel\(channelId\)](#)

Get a managed content channel.

[getManagedContentChannels\(pageParam, pageSize, showDetails\)](#)

Get managed content channels.

[patchManagedContentChannel\(channelId, ManagedContentChannelInput\)](#)

Update a managed content channel.

[postManagedContentChannel\(ManagedContentCreateInputParam\)](#)

Create a managed content channel.

### **deleteManagedContentChannel (channelId)**

Delete a managed content channel.

#### **API Version**

62.0

#### **Requires Chatter**

No

#### **Signature**

```
public static void deleteManagedContentChannel (String channelId)
```

#### **Parameters**

*channelId*

Type: [String](#)

ID of the managed content channel to delete.

#### **Return Value**

Type: Void

### **getManagedContentChannel (channelId)**

Get a managed content channel.

#### **API Version**

62.0

#### **Requires Chatter**

No

## Signature

```
public static ConnectApi.ManagedContentChannel getManagedContentChannel(String channelId)
```

## Parameters

*channelId*

Type: [String](#)

ID of the managed content channel.

## Return Value

Type: [ConnectApi.ManagedContentChannel](#)

## **getManagedContentChannels (pageParam, pageSize, showDetails)**

Get managed content channels.

## API Version

62.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentChannelsRepresentation  
getManagedContentChannels(Integer pageParam, Integer pageSize, Boolean showDetails)
```

## Parameters

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25.

*showDetails*

Type: [Boolean](#)

Specifies whether to show the channels' detailed information (`true`) or summary information only (`false`). If you pass in `null`, the default is `false`.

## Return Value

Type: [ConnectApi.ManagedContentChannelsRepresentation](#)

**patchManagedContentChannel (channelId, ManagedContentChannelInput)**

Update a managed content channel.

**API Version**

62.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.ManagedContentChannel patchManagedContentChannel(String  
channelId, ConnectApi.ManagedContentChannelUpdateRepresentation  
ManagedContentChannelInput)
```

**Parameters**

*channelId*

Type: [String](#)

ID of the managed content channel to update.

*ManagedContentChannelInput*

Type: [ConnectApi.ManagedContentChannelUpdateRepresentation](#)

[ConnectApi.ManagedContentChannelUpdateRepresentation](#) input class with the updates.

**Return Value**

Type: [ConnectApi.ManagedContentChannel](#)

**postManagedContentChannel (ManagedContentCreateInputParam)**

Create a managed content channel.

**API Version**

62.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.ManagedContentChannel  
postManagedContentChannel (ConnectApi.ManagedContentChannelCreateRepresentation  
ManagedContentCreateInputParam)
```

## Parameters

*ManagedContentCreateInputParam*

Type: [ConnectApi.ManagedContentChannelCreateRepresentation](#)

[ConnectApi.ManagedContentChannelCreateRepresentation](#) input class describing the managed content channel.

## Return Value

Type: [ConnectApi.ManagedContentChannel](#)

# ManagedContentDelivery Class

Get collection items. Get a managed content channel. Get managed content.

## Namespace

[ConnectApi](#)

## ManagedContentDelivery Methods

These methods are for [ManagedContentDelivery](#). All methods are static.

### IN THIS SECTION:

[getChannels\(pageParam, pageSize\)](#)

Get managed content delivery channels for the context user.

[getCollectionItemsForChannel\(channelId, collectionKeyOrId, language\)](#)

Get collection items for a channel.

[getCollectionItemsForSite\(siteId, collectionKeyOrId, language\)](#)

Get collection items for an Experience Cloud site.

[getManagedContentDeliveryChannel\(channelId\)](#)

Get a managed content delivery channel.

[getManagedContentForChannel\(channelId, contentKeyOrId, showAbsoluteUrl\)](#)

Get a piece of published content for a channel.

[getManagedContentForChannel\(channelId, contentKeyOrId, language, showAbsoluteUrl\)](#)

Get a piece of published content in a specified language for a channel.

[getManagedContentForChannel\(channelId, contentKeyOrId, language, showAbsoluteUrl, referenceDepth, expandReferences, referencesAsList\)](#)

Get a piece of published content in a specified language with references for a channel.

[getManagedContentForSite\(siteId, contentKeyOrId, showAbsoluteUrl\)](#)

Get a piece of published content for an Experience Cloud site.

[getManagedContentForSite\(siteId, contentKeyOrId, language, showAbsoluteUrl\)](#)

Get a piece of published content in a specified language for an Experience Cloud site.

[getManagedContentForSite\(siteId, contentKeyOrId, language, showAbsoluteUrl, referenceDepth, expandReferences, referencesAsList\)](#)

Get a piece of published content in a specified language with references for an Experience Cloud site.

[getManagedContentsForChannel\(channelId, managedContentIds, contentKeys, contentTypeFQN, language, publishStartDate, publishEndDate, includeContentBody, referenceDepth, expandReferences, referencesAsList, pageParam, pageSize, showAbsoluteUrl\)](#)

Get a collection of published contents for a channel.

[getManagedContentsForSite\(siteId, managedContentIds, contentKeys, contentTypeFQN, language, publishStartDate, publishEndDate, includeContentBody, referenceDepth, expandReferences, referencesAsList, pageParam, pageSize, showAbsoluteUrl\)](#)

Get a collection of published contents for an Experience Cloud site.

### **getChannels (pageParam, pageSize)**

Get managed content delivery channels for the context user.

#### API Version

62.0

#### Available to Guest Users

62.0

#### Requires Chatter

No

#### Signature

```
public static ConnectApi.ManagedContentDeliveryChannelsRepresentation getChannels(Integer pageParam, Integer pageSize)
```

#### Parameters

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25.

#### Return Value

Type: [ConnectApi.ManagedContentDeliveryChannelsRepresentation](#)

### **getCollectionItemsForChannel (channelId, collectionKeyOrId, language)**

Get collection items for a channel.

## API Version

56.0

## Available to Guest Users

56.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentCollectionItems
getCollectionItemsForChannel(String channelId, String collectionKeyOrId, String language)
```

## Parameters

*channelId*Type: [String](#)

ID of the channel.

*collectionKeyOrId*Type: [String](#)

Collection key or ID of the collection. A collection key is a unique identifier such as MCA4CCV5QS2BAB5H7YRCRPTCWGZQ.

*language*Type: [String](#)

Language locale for the managed content, for example, en\_US. If the requested translation isn't available, the language defaults to the channel or site's default language. If the channel or site's default language isn't available, the language defaults to the primary language of the content space.

## Return Value

Type: [ConnectApi.ManagedContentCollectionItems](#)

## Example

This example gets a collection of a custom content type that includes references to images and uses the [ConnectApi.ConnectUtilities.unwrapApexWrapper\(\)](#) utility.

```
ConnectApi.ManagedContentCollectionItems collection =
ConnectApi.ManagedContentDelivery.getCollectionItemsForChannel('0apXXXXXXXXXXXXXXXXX', 'MCVXXXXXXXXXXXXXXXXXXXXXXXXX', 'en_US');

System.debug(collection.items); //before ApexWrapper is unwrapped

for (ConnectApi.ManagedContentCollectionItem item : collection.items)
{
    //unwrap ApexWrapper
    Map<String, Object> unwrappedItem =
```

```
(Map<String, Object>) ConnectApi.ConnectUtilities.unwrapApexWrapper(item.body.get('contentBody'));  
  
//replace the wrapped object with the unwrapped object  
item.body.put('contentBody', unwrappedItem);  
}  
  
System.debug(collection.items); //after ApexWrapper is unwrapped
```

### **getCollectionItemsForSite(siteId, collectionKeyOrId, language)**

Get collection items for an Experience Cloud site.

#### API Version

56.0

#### Available to Guest Users

56.0

#### Requires Chatter

No

#### Signature

```
public static ConnectApi.ManagedContentCollectionItems getCollectionItemsForSite(String  
siteId, String collectionKeyOrId, String language)
```

#### Parameters

*siteId*

Type: [String](#)

ID for the Experience Cloud site.

*collectionKeyOrId*

Type: [String](#)

Collection key or ID of the collection. A collection key is a unique identifier such as MCA4CCV5QS2BAB5H7YRCRPTCWGZQ.

*language*

Type: [String](#)

Language locale for the managed content, for example, `en_US`. If the requested translation isn't available, the language defaults to the channel or site's default language. If the channel or site's default language isn't available, the language defaults to the primary language of the content space.

#### Return Value

Type: [ConnectApi.ManagedContentCollectionItems](#)

## Example

This example gets a collection of a custom content type that includes references to images and uses the `ConnectApi.ConnectUtilities.unwrapApexWrapper()` utility.

```
ConnectApi.ManagedContentCollectionItems collection =
ConnectApi.ManagedContentDelivery.getCollectionItemsForSite('ODMXXXXXXXXXXXXXXXXX','MCVXXXXXXXXXXXXXXXXXXXXXXXXX','en_US');

System.debug(collection.items); //before ApexWrapper is unwrapped

for (ConnectApi.ManagedContentCollectionItem item : collection.items)
{
    //unwrap ApexWrapper
    Map<String, Object> unwrappedItem =
    (Map<String, Object>) ConnectApi.ConnectUtilities.unwrapApexWrapper (item.body.get ('contentBody'));

    //replace the wrapped object with the unwrapped object
    item.body.put ('contentBody', unwrappedItem);
}

System.debug(collection.items); //after ApexWrapper is unwrapped
```

### **getManagedContentDeliveryChannel (channelId)**

Get a managed content delivery channel.

#### API Version

62.0

#### Available to Guest Users

62.0

#### Requires Chatter

No

#### Signature

```
public static ConnectApi.ManagedContentDeliveryChannelRepresentation
getManagedContentDeliveryChannel (String channelId)
```

#### Parameters

*channelId*

Type: `String`

ID of the channel.

## Return Value

Type: `ConnectApi.ManagedContentDeliveryChannelRepresentation`

### **getManagedContentForChannel(channelId, contentKeyOrId, showAbsoluteUrl)**

Get a piece of published content for a channel.

## API Version

54.0

## Available to Guest Users

54.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentDeliveryDocument
getManagedContentForChannel(String channelId, String contentKeyOrId, Boolean
showAbsoluteUrl)
```

## Parameters

*channelId*

Type: `String`

ID of the channel.

*contentKeyOrId*

Type: `String`

Content key or ID of the content. A content key is a unique identifier such as MCA4CCV5QS2BAB5H7YRCRPTCWGZQ.

*showAbsoluteUrl*

Type: `Boolean`

For public channels only, specifies whether to return the absolute `unauthenticatedUrl` in the output class. The default value is `false`.

## Return Value

Type: `ConnectApi.ManagedContentDeliveryDocument`

## Usage

This method returns content only if it's published in the default language of the channel. If you request content that isn't published in the default language of the channel, you get a `ConnectApi.NotFoundException`. To get content for a channel in another language use `getManagedContentForChannel(channelId, contentKeyOrId, language,`

`showAbsoluteUrl`) or `getManagedContentForChannel(channelId, contentKeyOrId, language, showAbsoluteUrl, referenceDepth, expandReferences, referencesAsList)` on page 1503.

## Example

This example gets a custom content type with an image reference and uses the `ConnectApi.ConnectUtilities.unwrapApexWrapper()` utility.

```
ConnectApi.ManagedContentDeliveryDocument res =
    ConnectApi.ManagedContentDelivery.getManagedContentForChannel
('0apXXXXXXXXXXXXXXXXX', 'MCLXXXXXXXXXXXXXXXXXXXXXXXXXXXX', true);

//before contentBody field ApexWrapper is unwrapped
system.debug(res.contentBody);

//unwrap contentBody field in res
Map<String, Object> contentBody =
(Map<String, Object>) ConnectApi.ConnectUtilities.unwrapApexWrapper(res.contentBody);

//after contentBody field ApexWrapper is unwrapped, but image field still wrapped
system.debug(contentBody);

//before image field ApexWrapper is unwrapped
system.debug(contentBody.get('Image'));

//unwrap Image field in contentBody
Map<String, Object> Image =
(Map<String, Object>) ConnectApi.ConnectUtilities.unwrapApexWrapper(contentBody.get('Image'));

//after image field ApexWrapper is unwrapped
system.debug(Image);

//replace wrapped primary_image in contentBody with unwrapped version
contentBody.put('Image', Image);

//after contentBody field ApexWrapper is unwrapped, with image field also unwrapped
system.debug(contentBody);
```

## **getManagedContentForChannel(channelId, contentKeyOrId, language, showAbsoluteUrl)**

Get a piece of published content in a specified language for a channel.

### API Version

54.0

### Available to Guest Users

54.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentDeliveryDocument  
getManagedContentForChannel(String channelId, String contentKeyOrId, String language,  
Boolean showAbsoluteUrl)
```

## Parameters

*channelId*

Type: [String](#)

ID of the channel.

*contentKeyOrId*

Type: [String](#)

Content key or ID of the content. A content key is a unique identifier such as MCA4CCV5QS2BAB5H7YRCRPTCWGZQ.

*language*

Type: [String](#)

Language locale for the managed content, for example, `en_US`. The requested language must be added to the channel, otherwise, you get a `ConnectApi.NotFoundException`. If the requested translation isn't available, the language defaults to the channel or site's default language. If the channel or site's default language isn't available, the language defaults to the primary language of the content space.

*showAbsoluteUrl*

Type: [Boolean](#)

For public channels only, specifies whether to return the absolute `unauthenticatedUrl` in the output class. The default value is `false`.

## Return Value

Type: [ConnectApi.ManagedContentDeliveryDocument](#)

```
getManagedContentForChannel(channelId, contentKeyOrId, language,  
showAbsoluteUrl, referenceDepth, expandReferences, referencesAsList)
```

Get a piece of published content in a specified language with references for a channel.

## API Version

54.0

## Available to Guest Users

54.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentDeliveryDocument  
getManagedContentForChannel(String channelId, String contentKeyOrId, String language,  
Boolean showAbsoluteUrl, Integer referenceDepth, Boolean expandReferences, Boolean  
referencesAsList)
```

## Parameters

*channelId*

Type: [String](#)

ID of the channel.

*contentKeyOrId*

Type: [String](#)

Content key or ID of the content. A content key is a unique identifier such as MCA4CCV5QS2BAB5H7YRCRPTCWGZQ.

*language*

Type: [String](#)

Language locale for the managed content, for example, `en_US`. The requested language must be added to the channel, otherwise, you get a `ConnectApi.NotFoundException`. If the requested translation isn't available, the language defaults to the channel or site's default language. If the channel or site's default language isn't available, the language defaults to the primary language of the content space.

*showAbsoluteUrl*

Type: [Boolean](#)

For public channels only, specifies whether to return the absolute `unauthenticatedUrl` in the output class. The default value is `false`.

*referenceDepth*

Type: [Integer](#)

An integer 0–3 specifying the depth of references. If you specify 0, the `references` property of the `ConnectApi.ManagedContentDeliveryDocument` output class is null. If unspecified, the default value is 0.

*expandReferences*

Type: [Boolean](#)

Specifies whether to include details of references (`true`) or summaries of references (`false`) in the output class. If unspecified, the default value is `false`.

*referencesAsList*

Type: [Boolean](#)

Specifies whether to return the references as a list in the `referencesList` property of the `ConnectApi.ManagedContentDeliveryDocument` output class (`true`). If you specify `false`, the references are returned as key value pairs in the `references` property. If unspecified, the default value is `false`.

## Return Value

Type: [ConnectApi.ManagedContentDeliveryDocument](#)

**getManagedContentForSite(siteId, contentKeyOrId, showAbsoluteUrl)**

Get a piece of published content for an Experience Cloud site.

**API Version**

54.0

**Available to Guest Users**

54.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.ManagedContentDeliveryDocument getManagedContentForSite(String
siteId, String contentKeyOrId, Boolean showAbsoluteUrl)
```

**Parameters**

*siteId*

Type: [String](#)

ID for the Experience Cloud site.

*contentKeyOrId*

Type: [String](#)

Content key or ID of the content. A content key is a unique identifier such as MCA4CCV5QS2BAB5H7YRCRPTCWGZQ.

*showAbsoluteUrl*

Type: [Boolean](#)

For public channels only, specifies whether to return the absolute `unauthenticatedUrl` in the output class. The default value is `false`.

**Return Value**

Type: [ConnectApi.ManagedContentDeliveryDocument](#)

**Example**

This example gets a custom content type with an image reference and uses the [ConnectApi.ConnectUtilities.unwrapApexWrapper\(\)](#) utility.

```
ConnectApi.ManagedContentDeliveryDocument res =
    ConnectApi.ManagedContentDelivery.getManagedContentForSite
('0DMXXXXXXXXXXXXXXXXX', 'MCLXXXXXXXXXXXXXXXXXXXXXXXXXXXX', true);

//before contentBody field ApexWrapper is unwrapped
system.debug(res.contentBody);
```

```
//unwrap contentBody field in res
Map<String, Object> contentBody =
  (Map<String, Object>) ConnectApi.ConnectUtilities.unwrapApexWrapper(res.contentBody);

//after contentBody field ApexWrapper is unwrapped, but image field still wrapped
system.debug(contentBody);

//before image field ApexWrapper is unwrapped
system.debug(contentBody.get('Image'));

//unwrap Image field in contentBody
Map<String, Object> Image =
  (Map<String, Object>) ConnectApi.ConnectUtilities.unwrapApexWrapper(contentBody.get('Image'));

//after image field ApexWrapper is unwrapped
system.debug(Image);

//replace wrapped primary_image in contentBody with unwrapped version
contentBody.put('Image', Image);

//after contentBody field ApexWrapper is unwrapped, with image field also unwrapped
system.debug(contentBody);
```

### **getManagedContentForSite(siteId, contentKeyOrId, language, showAbsoluteUrl)**

Get a piece of published content in a specified language for an Experience Cloud site.

#### API Version

54.0

#### Available to Guest Users

54.0

#### Requires Chatter

No

#### Signature

```
public static ConnectApi.ManagedContentDeliveryDocument getManagedContentForSite(String
siteId, String contentKeyOrId, String language, Boolean showAbsoluteUrl)
```

#### Parameters

*siteId*

Type: [String](#)

ID for the Experience Cloud site.

*contentKeyOrId*

Type: [String](#)

Content key or ID of the content. A content key is a unique identifier such as MCA4CCV5QS2BAB5H7YRCRPTCWGZQ.

*language*

Type: [String](#)

Language locale for the managed content, for example, `en_US`. If the requested translation isn't available, the language defaults to the channel or site's default language. If the channel or site's default language isn't available, the language defaults to the primary language of the content space.

*showAbsoluteUrl*

Type: [Boolean](#)

For public channels only, specifies whether to return the absolute `unauthenticatedUrl` in the output class. The default value is `false`.

## Return Value

Type: [ConnectApi.ManagedContentDeliveryDocument](#)

**`getManagedContentForSite(siteId, contentKeyOrId, language, showAbsoluteUrl, referenceDepth, expandReferences, referencesAsList)`**

Get a piece of published content in a specified language with references for an Experience Cloud site.

## API Version

54.0

## Available to Guest Users

54.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentDeliveryDocument getManagedContentForSite(String siteId, String contentKeyOrId, String language, Boolean showAbsoluteUrl, Integer referenceDepth, Boolean expandReferences, Boolean referencesAsList)
```

## Parameters

*siteId*

Type: [String](#)

ID for the Experience Cloud site.

*contentKeyOrId*

Type: [String](#)

Content key or ID of the content. A content key is a unique identifier such as MCA4CCV5QS2BAB5H7YRCRPTCWGZQ.

*language*Type: [String](#)

Language locale for the managed content, for example, `en_US`. If the requested translation isn't available, the language defaults to the channel or site's default language. If the channel or site's default language isn't available, the language defaults to the primary language of the content space.

*showAbsoluteUrl*Type: [Boolean](#)

For public channels only, specifies whether to return the absolute `unauthenticatedUrl` in the output class. The default value is `false`.

*referenceDepth*Type: [Integer](#)

An integer 0–3 specifying the depth of references. If you specify 0, the `references` property of the `ConnectApi.ManagedContentDeliveryDocument` output class is null. If unspecified, the default value is 0.

*expandReferences*Type: [Boolean](#)

Specifies whether to include details of references (`true`) or summaries of references (`false`) in the output class. If unspecified, the default value is `false`.

*referencesAsList*Type: [Boolean](#)

Specifies whether to return the references as a list in the `referencesList` property of the `ConnectApi.ManagedContentDeliveryDocument` output class (`true`). If you specify `false`, the references are returned as key value pairs in the `references` property. If unspecified, the default value is `false`.

**Return Value**Type: [ConnectApi.ManagedContentDeliveryDocument](#)

```
getManagedContentsForChannel(channelId, managedContentIds, contentKeys,
contentTypeFQN, language, publishStartDate, publishEndDate,
includeContentBody, referenceDepth, expandReferences, referencesAsList,
pageParam, pageSize, showAbsoluteUrl)
```

Get a collection of published contents for a channel.

**API Version**

58.0

**Available to Guest Users**

58.0

**Requires Chatter**

No

## Signature

```
public static ConnectApi.ManagedContentDeliveryDocumentCollection
getManagedContentsForChannel(String channelId, List<String> managedContentIds,
List<String> contentKeys, String contentTypeFQN, String language, String
publishStartDate, String publishEndDate, Boolean includeContentBody, Integer
referenceDepth, Boolean expandReferences, Boolean referencesAsList, Integer pageParam,
Integer pageSize, Boolean showAbsoluteUrl)
```

## Parameters

*channelId*

Type: [String](#)

ID of the channel.

*managedContentIds*

Type: [List<String>](#)

Comma-separated list of up to 100 managed content IDs. Specify either managed content IDs or content keys.

*contentKeys*

Type: [List<String>](#)

Comma-separated list of up to 50 content keys. Specify either managed content IDs or content keys.

*contentTypeFQN*

Type: [String](#)

Fully qualified name of the managed content type.

*language*

Type: [String](#)

Language locale for the managed content, for example, `en_US`. If the requested translation isn't available, the language defaults to the configured fallback language or the channel's default language. If the content isn't available in the fallback language and the channel's default language, we return an error.

*publishStartDate*

Type: [String](#)

ISO 8601 formatted publish start date.

*publishEndDate*

Type: [String](#)

ISO 8601 formatted publish end date.

*includeContentBody*

Type: [Boolean](#)

Specifies whether to return the content body (`true`) or the content summary (`false`). If unspecified, the default value is `false`.

*referenceDepth*

Type: [Integer](#)

An integer 0–3 specifying the depth of references. If you specify 0, the `references` property of the `ConnectApi.ManagedContentDeliveryDocumentCollection` output class is null. If unspecified, the default value is 0.

*expandReferences*

Type: [Boolean](#)

Specifies whether to include details of references (`true`) or summaries of references (`false`) in the output class. If unspecified, the default value is `false`.

#### *referencesAsList*

Type: `Boolean`

Specifies whether to return the references as a list in the `referencesList` property of the `ConnectApi.ManagedContentDeliveryDocumentCollection` output class (`true`). If you specify `false`, the references are returned as key value pairs in the `references` property. If unspecified, the default value is `false`.

#### *pageParam*

Type: `Integer`

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

#### *pageSize*

Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25. If you specify `true` for `expandReferences` or `includeContentBody`, the maximum page size you can specify is 25.

#### *showAbsoluteUrl*

Type: `Boolean`

Specifies whether to show absolute URLs in the output class (`true`) or not (`false`). The default value is `false`.

## Return Value

Type: `ConnectApi.ManagedContentDeliveryDocumentCollection`

## Example

This example gets Event custom content type records and uses the `ConnectApi.ConnectUtilities.unwrapApexWrapper()` utility.

```
ConnectApi.ManagedContentDeliveryDocumentCollection resCol =
    ConnectApi.ManagedContentDelivery.getManagedContentsForChannel('0apXXXXXXXXXXXXXXXXX',
    null, new List<String>{'MCLXXXXXXXXXXXXXXXXXXXXXXXXX'}, 'Event', null, null, null, true,
    3, true, false, null, 25, true);

Map<String, Object> contentBodyMap = new Map<String, Object>();

for (ConnectApi.AbstractManagedContentDeliveryDocument res1 : resCol.contents)
{
    //cast the abstract object as the ManagedContentDeliveryDocument subclass that contains
    contentBody
    ConnectApi.ManagedContentDeliveryDocument res =
    (ConnectApi.ManagedContentDeliveryDocument) res1;

    //before contentBody field ApexWrapper is unwrapped
    system.debug(res.contentBody);

    //unwrap contentBody field in res
    Map<String, Object> contentBody =
    (Map<String, Object>) ConnectApi.ConnectUtilities.unwrapApexWrapper(res.contentBody);

    //after contentBody field ApexWrapper is unwrapped, but image field still wrapped
```

```

system.debug(contentBody);

//before image field ApexWrapper is unwrapped
system.debug(contentBody.get('Image'));

//unwrap Image field in contentBody
Map<String, Object> Image =
(Map<String, Object>)ConnectApi.ConnectUtilities.unwrapApexWrapper(contentBody.get('Image'));

//after image field ApexWrapper is unwrapped
system.debug(Image);

//replace wrapped primary_image in contentBody with unwrapped version
contentBody.put('Image', Image);

//after contentBody field ApexWrapper is unwrapped, with image field also unwrapped
system.debug(contentBody);

//put unwrapped contentBody in map
contentBodyMap.put(res.contentKey, contentBody);
}

//check unwrapped contentBody map
System.debug(contentBodyMap);

```

**getManagedContentsForSite(siteId, managedContentIds, contentKeys, contentTypeFQN, language, publishStartDate, publishEndDate, includeContentBody, referenceDepth, expandReferences, referencesAsList, pageParam, pageSize, showAbsoluteUrl)**

Get a collection of published contents for an Experience Cloud site.

#### API Version

58.0

#### Available to Guest Users

58.0

#### Requires Chatter

No

#### Signature

```

public static ConnectApi.ManagedContentDeliveryDocumentCollection
getManagedContentsForSite(String siteId, List<String> managedContentIds, List<String>
contentKeys, String contentTypeFQN, String language, String publishStartDate, String

```

`publishEndDate`, `Boolean` `includeContentBody`, `Integer` `referenceDepth`, `Boolean` `expandReferences`, `Boolean` `referencesAsList`, `Integer` `pageParam`, `Integer` `pageSize`, `Boolean` `showAbsoluteUrl`)

## Parameters

*siteId*

Type: `String`

ID for the Experience Cloud site.

*managedContentIds*

Type: `List<String>`

Comma-separated list of up to 100 managed content IDs. Specify either managed content IDs or content keys.

*contentKeys*

Type: `List<String>`

Comma-separated list of up to 50 content keys. Specify either managed content IDs or content keys.

*contentTypeFQN*

Type: `String`

Fully qualified name of the managed content type.

*language*

Type: `String`

Language locale for the managed content, for example, `en_US`. If the requested translation isn't available, the language defaults to the configured fallback language or the channel's default language. If the content isn't available in the fallback language and the channel's default language, we return an error.

*publishStartDate*

Type: `String`

ISO 8601 formatted publish start date.

*publishEndDate*

Type: `String`

ISO 8601 formatted publish end date.

*includeContentBody*

Type: `Boolean`

Specifies whether to return the content body (`true`) or the content summary (`false`). If unspecified, the default value is `false`.

*referenceDepth*

Type: `Integer`

An integer 0–3 specifying the depth of references. If you specify 0, the `references` property of the `ConnectApi.ManagedContentDeliveryDocumentCollection` output class is null. If unspecified, the default value is 0.

*expandReferences*

Type: `Boolean`

Specifies whether to include details of references (`true`) or summaries of references (`false`) in the output class. If unspecified, the default value is `false`.

*referencesAsList*Type: [Boolean](#)

Specifies whether to return the references as a list in the `referencesList` property of the `ConnectApi.ManagedContentDeliveryDocumentCollection` output class (`true`). If you specify `false`, the references are returned as key value pairs in the `references` property. If unspecified, the default value is `false`.

*pageParam*Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25. If you specify `true` for `expandReferences` or `includeContentBody`, the maximum page size you can specify is 25.

*showAbsoluteUrl*Type: [Boolean](#)

Specifies whether to show absolute URLs in the output class (`true`) or not (`false`). The default value is `false`.

**Return Value**Type: [ConnectApi.ManagedContentDeliveryDocumentCollection](#)**Example**

This example gets custom content type Event records and uses the `ConnectApi.ConnectUtilities.unwrapApexWrapper()` utility.

```
ConnectApi.ManagedContentDeliveryDocumentCollection resCol =
    ConnectApi.ManagedContentDelivery.getManagedContentsForSite('ODMXXXXXXXXXXXXXXXXX', null,
        new List<String>{'MCLXXXXXXXXXXXXXXXXXXXXXXXXXXXX'}, 'Event', null, null, null, true, 3,
        true, false, null, 25, true);

Map<String, Object> contentBodyMap = new Map<String, Object>();

for (ConnectApi.AbstractManagedContentDeliveryDocument res1 : resCol.contents)
{
    //cast the abstract object as the ManagedContentDeliveryDocument subclass that contains
    contentBody
    ConnectApi.ManagedContentDeliveryDocument res =
    (ConnectApi.ManagedContentDeliveryDocument) res1;

    //before contentBody field ApexWrapper is unwrapped
    system.debug(res.contentBody);

    //unwrap contentBody field in res
    Map<String, Object> contentBody =
    (Map<String, Object>) ConnectApi.ConnectUtilities.unwrapApexWrapper(res.contentBody);

    //after contentBody field ApexWrapper is unwrapped, but image field still wrapped
    system.debug(contentBody);
}
```

```

//before image field ApexWrapper is unwrapped
system.debug(contentBody.get('Image'));

//unwrap Image field in contentBody
Map<String, Object> Image =
(Map<String, Object>) ConnectApi.ConnectUtilities.unwrapApexWrapper (contentBody.get('Image'));

//after image field ApexWrapper is unwrapped
system.debug(Image);

//replace wrapped primary_image in contentBody with unwrapped version
contentBody.put('Image', Image);

//after contentBody field ApexWrapper is unwrapped, with image field also unwrapped
system.debug(contentBody);

//put unwrapped contentBody in map
contentBodyMap.put(res.contentKey, contentBody);
}

//check unwrapped contentBody map
System.debug(contentBodyMap);

```

## Retired ManagedContentDelivery Methods

These methods for `ManagedContentDelivery` are retired.

### IN THIS SECTION:

#### [getManagedContentChannel\(channelId\)](#)

Get a managed content delivery channel.

#### [getManagedContentsForChannel\(channelId, managedContentIds, contentKeys, contentTypeFQN, language, publishStartDate, publishEndDate, includeContentBody, referenceDepth, expandReferences, referencesAsList, pageParam, pageSize\)](#)

Get a collection of published contents for a channel.

#### [getManagedContentsForSite\(siteId, managedContentIds, contentKeys, contentTypeFQN, language, publishStartDate, publishEndDate, includeContentBody, referenceDepth, expandReferences, referencesAsList, pageParam, pageSize\)](#)

Get a collection of published contents for an Experience Cloud site.

### **getManagedContentChannel(channelId)**

Get a managed content delivery channel.

### API Version

54.0–61.0

In version 62.0 and later, use [getManagedContentDeliveryChannel\(channelId\)](#) to get a managed content delivery channel.

### Available to Guest Users

54.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.ManagedContentChannelDetail getManagedContentChannel(String channelId)
```

### Parameters

*channelId*

Type: [String](#)

ID of the channel.

### Return Value

Type: [ConnectApi.ManagedContentChannelDetail](#)

```
getManagedContentsForChannel(channelId, managedContentIds, contentKeys, contentTypeFQN, language, publishStartDate, publishEndDate, includeContentBody, referenceDepth, expandReferences, referencesAsList, pageParam, pageSize)
```

Get a collection of published contents for a channel.

### API Version

55.0—57.0

In version 58.0 and later, use [getManagedContentsForChannel\(channelId, managedContentIds, contentKeys, contentTypeFQN, language, publishStartDate, publishEndDate, includeContentBody, referenceDepth, expandReferences, referencesAsList, pageParam, pageSize, showAbsoluteUrl\)](#).

### Available to Guest Users

55.0—57.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.ManagedContentDeliveryDocumentCollection getManagedContentsForChannel(String channelId, List<String> managedContentIds,
```

```
List<String> contentKeys, String contentTypeFQN, String language, String  
publishStartDate, String publishEndDate, Boolean includeContentBody, Integer  
referenceDepth, Boolean expandReferences, Boolean referencesAsList, Integer pageParam,  
Integer pageSize)
```

## Parameters

*channelId*

Type: [String](#)

ID of the channel.

*managedContentIds*

Type: [List<String>](#)

Comma-separated list of up to 100 managed content IDs. Specify either managed content IDs or content keys.

*contentKeys*

Type: [List<String>](#)

Comma-separated list of up to 50 content keys. Specify either managed content IDs or content keys.

*contentTypeFQN*

Type: [String](#)

Fully qualified name of the managed content type.

*language*

Type: [String](#)

Language locale for the managed content, for example, `en_US`. If the requested translation isn't available, the language defaults to the configured fallback language or the channel's default language. If the content isn't available in the fallback language and the channel's default language, we return an error.

*publishStartDate*

Type: [String](#)

ISO 8601 formatted publish start date.

*publishEndDate*

Type: [String](#)

ISO 8601 formatted publish end date.

*includeContentBody*

Type: [Boolean](#)

Specifies whether to return the content body (`true`) or the content summary (`false`). If unspecified, the default value is `false`.

*referenceDepth*

Type: [Integer](#)

An integer 0–3 specifying the depth of references. If you specify 0, the `references` property of the `ConnectApi.ManagedContentDeliveryDocumentCollection` output class is null. If unspecified, the default value is 0.

*expandReferences*

Type: [Boolean](#)

Specifies whether to include details of references (`true`) or summaries of references (`false`) in the output class. If unspecified, the default value is `false`.

*referencesAsList*Type: [Boolean](#)

Specifies whether to return the references as a list in the `referencesList` property of the `ConnectApi.ManagedContentDeliveryDocumentCollection` output class (`true`). If you specify `false`, the references are returned as key value pairs in the `references` property. If unspecified, the default value is `false`.

*pageParam*Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25. If you specify `true` for `expandReferences` or `includeContentBody`, the maximum page size you can specify is 25.

**Return Value**Type: [ConnectApi.ManagedContentDeliveryDocumentCollection](#)

**`getManagedContentsForSite(siteId, managedContentIds, contentKeys, contentTypeFQN, language, publishStartDate, publishEndDate, includeContentBody, referenceDepth, expandReferences, referencesAsList, pageParam, pageSize)`**

Get a collection of published contents for an Experience Cloud site.

**API Version**

55.0—57.0

In version 58.0 and later, use [getManagedContentsForSite\(siteId, managedContentIds, contentKeys, contentTypeFQN, language, publishStartDate, publishEndDate, includeContentBody, referenceDepth, expandReferences, referencesAsList, pageParam, pageSize, showAbsoluteUrl\)](#).

**Available to Guest Users**

55.0—57.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.ManagedContentDeliveryDocumentCollection
getManagedContentsForSite(String siteId, List<String> managedContentIds, List<String>
contentKeys, String contentTypeFQN, String language, String publishStartDate, String
publishEndDate, Boolean includeContentBody, Integer referenceDepth, Boolean
expandReferences, Boolean referencesAsList, Integer pageParam, Integer pageSize)
```

## Parameters

*siteId*

Type: [String](#)

ID for the Experience Cloud site.

*managedContentIds*

Type: [List<String>](#)

Comma-separated list of up to 100 managed content IDs. Specify either managed content IDs or content keys.

*contentKeys*

Type: [List<String>](#)

Comma-separated list of up to 50 content keys. Specify either managed content IDs or content keys.

*contentTypeFQN*

Type: [String](#)

Fully qualified name of the managed content type.

*language*

Type: [String](#)

Language locale for the managed content, for example, `en_US`. If the requested translation isn't available, the language defaults to the configured fallback language or the channel's default language. If the content isn't available in the fallback language and the channel's default language, we return an error.

*publishStartDate*

Type: [String](#)

ISO 8601 formatted publish start date.

*publishEndDate*

Type: [String](#)

ISO 8601 formatted publish end date.

*includeContentBody*

Type: [Boolean](#)

Specifies whether to return the content body (`true`) or the content summary (`false`). If unspecified, the default value is `false`.

*referenceDepth*

Type: [Integer](#)

An integer 0–3 specifying the depth of references. If you specify 0, the `references` property of the `ConnectApi.ManagedContentDeliveryDocumentCollection` output class is null. If unspecified, the default value is 0.

*expandReferences*

Type: [Boolean](#)

Specifies whether to include details of references (`true`) or summaries of references (`false`) in the output class. If unspecified, the default value is `false`.

*referencesAsList*

Type: [Boolean](#)

Specifies whether to return the references as a list in the `referencesList` property of the `ConnectApi.ManagedContentDeliveryDocumentCollection` output class (`true`). If you specify `false`, the references are returned as key value pairs in the `references` property. If unspecified, the default value is `false`.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25. If you specify `true` for *expandReferences* or *includeContentBody*, the maximum page size you can specify is 25.

## Return Value

Type: [ConnectApi.ManagedContentDeliveryDocumentCollection](#)

# ManagedContentSpaces Class

Get channels in a managed content space. Add or remove channels from a managed content space.

## Namespace

[ConnectApi](#)

## ManagedContentSpaces Methods

These methods are for `ManagedContentSpaces`. All methods are static.

### IN THIS SECTION:

[getManagedContentSpaceChannels\(contentSpaceId, pageParam, pageSize\)](#)

Get channels for a managed content space.

[patchManagedContentSpaceChannels\(contentSpaceId, spaceChannels\)](#)

Add or remove channels from a managed content space.

### **getManagedContentSpaceChannels (contentSpaceId, pageParam, pageSize)**

Get channels for a managed content space.

### API Version

62.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.ManagedContentSpaceChannelsRepresentation  
getManagedContentSpaceChannels(String contentSpaceId, Integer pageParam, Integer  
pageSize)
```

## Parameters

*contentSpaceId*

Type: [String](#)

ID of the managed content space.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25. Items are sorted by the last modified date.

## Return Value

Type: [ConnectApi.ManagedContentSpaceChannelsRepresentation](#)

### **patchManagedContentSpaceChannels (contentSpaceId, spaceChannels)**

Add or remove channels from a managed content space.

## API Version

62.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedContentSpaceChannelsRepresentation  
patchManagedContentSpaceChannels (String contentSpaceId,  
ConnectApi.ManagedContentSpaceChannelsInputRepresentation spaceChannels)
```

## Parameters

*contentSpaceId*

Type: [String](#)

ID of the managed content space.

*spaceChannels*

Type: [ConnectApi.ManagedContentSpaceChannelsInputRepresentation](#)

[ConnectApi.ManagedContentSpaceChannelsInputRepresentation](#) input class with the channels to add or remove from the managed content space.

## Return Value

Type: [ConnectApi.ManagedContentSpaceChannelsRepresentation](#)

# ManagedTopics Class

Get managed topics in an Experience Cloud site. Create, delete, and reorder managed topics.

## Namespace

[ConnectApi](#)

## ManagedTopics Methods

These methods are for `ManagedTopics`. All methods are static.

### IN THIS SECTION:

[createManagedTopic\(communityId, recordId, managedTopicType\)](#)

Create a managed topic of a specific type for an Experience Cloud site.

[createManagedTopic\(communityId, recordId, managedTopicType, parentId\)](#)

Create a child managed topic for an Experience Cloud site.

[createManagedTopicByName\(communityId, name, managedTopicType\)](#)

Create a managed topic of a specific type by name for an Experience Cloud site.

[createManagedTopicByName\(communityId, name, managedTopicType, parentId\)](#)

Create a child managed topic by name for an Experience Cloud site.

[deleteManagedTopic\(communityId, managedTopicId\)](#)

Delete a managed topic from an Experience Cloud site.

[getManagedTopic\(communityId, managedTopicId\)](#)

Get a managed topic in an Experience Cloud site.

[getManagedTopic\(communityId, managedTopicId, depth\)](#)

Get a managed topic, including its parent and children managed topics, in an Experience Cloud site.

[getManagedTopics\(communityId\)](#)

Get the featured and navigational managed topics for an Experience Cloud site.

[getManagedTopics\(communityId, managedTopicType\)](#)

Get managed topics of the specified type for an Experience Cloud site.

[getManagedTopics\(communityId, managedTopicType, depth\)](#)

Get managed topics of the specified type, including their parent and children managed topics, in an Experience Cloud site.

[getManagedTopics\(communityId, managedTopicType, recordIds, depth\)](#)

Get managed topics of the specified type, including their parent and children managed topics, that are associated with topics in an Experience Cloud site.

[getManagedTopics\(communityId, managedTopicType, pageParam, pageSize\)](#)

Get a page of managed topics.

[reorderManagedTopics\(communityId, managedTopicPositionCollection\)](#)

Reorder the relative positions of managed topics in an Experience Cloud site.

**createManagedTopic(*communityId*, *recordId*, *managedTopicType*)**

Create a managed topic of a specific type for an Experience Cloud site.

**API Version**

32.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.ManagedTopic createManagedTopic(String communityId, String recordId, ConnectApi.ManagedTopicType managedTopicType)
```

**Parameters**

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recordId*

Type: [String](#)

ID of the topic.

*managedTopicType*

Type: [ConnectApi.ManagedTopicType](#)

Specify the type of managed topic.

- `Content`—Topics that are associated with native content.
- `Featured`—Topics that are featured, for example, on the Experience Cloud site home page, but don't provide overall navigation.
- `Navigational`—Topics that display in a navigational menu in the Experience Cloud site.

A topic can be associated with all three managed topic types, so a topic can be a `Featured`, `Navigational`, and `Content` topic.

You can create up to 25 `Featured` and 5,000 `Content` topics. You can create up to eight levels of `Navigational` managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 `Navigational` topics.

**Return Value**

Type: [ConnectApi.ManagedTopic](#)

**Usage**

Only community managers (users with the Create and Set Up Experiences or Manage Experiences permission) can create managed topics.

**createManagedTopic(*communityId*, *recordId*, *managedTopicType*, *parentId*)**

Create a child managed topic for an Experience Cloud site.

**API Version**

35.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.ManagedTopic createManagedTopic(String communityId, String recordId, ConnectApi.ManagedTopicType managedTopicType, String parentId)
```

**Parameters**

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recordId*

Type: [String](#)

ID of the topic.

*managedTopicType*

Type: [ConnectApi.ManagedTopicType](#)

Specify `Navigational` for the type of managed topic to create a child managed topic.

You can create up to 25 `Featured` and 5,000 `Content` topics. You can create up to eight levels of `Navigational` managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 `Navigational` topics.

*parentId*

Type: [String](#)

ID of the parent managed topic.

You can create up to eight levels (parent, direct children, their children, etc.) of managed topics and up to 10 children managed topics per managed topic.

**Return Value**

Type: [ConnectApi.ManagedTopic](#)

**Usage**

Only community managers (users with the `Create and Set Up Experiences` or `Manage Experiences` permission) can create managed topics.

**createManagedTopicByName(*communityId*, *name*, *managedTopicType*)**

Create a managed topic of a specific type by name for an Experience Cloud site.

## API Version

32.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedTopic createManagedTopicByName(String communityId,  
String name, ConnectApi.ManagedTopicType managedTopicType)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*name*

Type: [String](#)

Name of the topic.

*managedTopicType*

Type: [ConnectApi.ManagedTopicType](#)

Specify the type of managed topic.

- `Content`—Topics that are associated with native content.
- `Featured`—Topics that are featured, for example, on the Experience Cloud site home page, but don't provide overall navigation.
- `Navigational`—Topics that display in a navigational menu in the Experience Cloud site.

A topic can be associated with all three managed topic types, so a topic can be a `Featured`, `Navigational`, and `Content` topic.

You can create up to 25 `Featured` and 5,000 `Content` topics. You can create up to eight levels of `Navigational` managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 `Navigational` topics.

## Return Value

Type: [ConnectApi.ManagedTopic](#)

## Usage

Only community managers (users with the `Create and Set Up Experiences` or `Manage Experiences` permission) can create managed topics.

**`createManagedTopicByName (communityId, name, managedTopicType, parentId)`**

Create a child managed topic by name for an Experience Cloud site.

## API Version

35.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedTopic createManagedTopicByName(String communityId,  
String name, ConnectApi.ManagedTopicType managedTopicType, String parentId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*name*

Type: [String](#)

Name of the topic.

*managedTopicType*

Type: [ConnectApi.ManagedTopicType](#)

Specify `Navigational` for the type of managed topic to create a child managed topic.

You can create up to 25 `Featured` and 5,000 `Content` topics. You can create up to eight levels of `Navigational` managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 `Navigational` topics.

*parentId*

Type: [String](#)

ID of the parent managed topic.

You can create up to eight levels (parent, direct children, their children, etc.) of managed topics and up to 10 children managed topics per managed topic.

## Return Value

Type: [ConnectApi.ManagedTopic](#)

## Usage

Only community managers (users with the Create and Set Up Experiences or Manage Experiences permission) can create managed topics.

## **deleteManagedTopic (communityId, managedTopicId)**

Delete a managed topic from an Experience Cloud site.

## API Version

32.0

## Requires Chatter

No

## Signature

```
public static deleteManagedTopic(String communityId, String managedTopicId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*managedTopicId*

Type: [String](#)

ID of managed topic.

## Return Value

Type: Void

## Usage

Only community managers (users with the Create and Set Up Experiences or Manage Experiences permission) can delete managed topics.

## **getManagedTopic (communityId, managedTopicId)**

Get a managed topic in an Experience Cloud site.

## API Version

32.0

## Available to Guest Users

32.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedTopic getManagedTopic(String communityId, String managedTopicId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*managedTopicId*

Type: [String](#)

ID of managed topic.

## Return Value

Type: [ConnectApi.ManagedTopic](#)

### **getManagedTopic (communityId, managedTopicId, depth)**

Get a managed topic, including its parent and children managed topics, in an Experience Cloud site.

## API Version

35.0

## Available to Guest Users

35.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedTopic getManagedTopic(String communityId, String managedTopicId, Integer depth)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*managedTopicId*

Type: [String](#)

ID of managed topic.

*depth*

Type: [Integer](#)

Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is `null`. If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If `depth` isn't specified, it defaults to 1.

## Return Value

Type: [ConnectApi.ManagedTopic](#)

**getManagedTopics (communityId)**

Get the featured and navigational managed topics for an Experience Cloud site.

To get the content topics for an Experience Cloud site, use [getManagedTopics \(communityId, managedTopicType\)](#).

**API Version**

32.0

**Available to Guest Users**

32.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId)
```

**Parameters**

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

**Return Value**

Type: [ConnectApi.ManagedTopicCollection](#)

**getManagedTopics (communityId, managedTopicType)**

Get managed topics of the specified type for an Experience Cloud site.

**API Version**

32.0

**Available to Guest Users**

32.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId,
ConnectApi.ManagedTopicType managedTopicType)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*managedTopicType*

Type: [ConnectApi.ManagedTopicType](#)

Type of managed topic.

- `Content`—Topics that are associated with native content.
- `Featured`—Topics that are featured, for example, on the Experience Cloud site home page, but don't provide overall navigation.
- `Navigational`—Topics that display in a navigational menu in the Experience Cloud site.

A topic can be associated with all three managed topic types, so a topic can be a `Featured`, `Navigational`, and `Content` topic.

If you specify `Content`, up to 50 topics are returned. If you want more than 50 `Content` topics, use [getManagedTopics\(\*communityId\*, \*managedTopicType\*, \*pageParam\*, \*pageSize\*\)](#).

## Return Value

Type: [ConnectApi.ManagedTopicCollection](#)

### **getManagedTopics(*communityId*, *managedTopicType*, *depth*)**

Get managed topics of the specified type, including their parent and children managed topics, in an Experience Cloud site.

## API Version

35.0

## Available to Guest Users

35.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId,
ConnectApi.ManagedTopicType managedTopicType, Integer depth)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*managedTopicType*

Type: [ConnectApi.ManagedTopicType](#)

Type of managed topic.

- `Content`—Topics that are associated with native content.
- `Featured`—Topics that are featured, for example, on the Experience Cloud site home page, but don't provide overall navigation.
- `Navigational`—Topics that display in a navigational menu in the Experience Cloud site.

A topic can be associated with all three managed topic types, so a topic can be a `Featured`, `Navigational`, and `Content` topic.

*depth*

Type: `Integer`

Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is `null`. If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If `depth` isn't specified, it defaults to 1.

## Return Value

Type: `ConnectApi.ManagedTopicCollection`

### **`getManagedTopics (communityId, managedTopicType, recordIds, depth)`**

Get managed topics of the specified type, including their parent and children managed topics, that are associated with topics in an Experience Cloud site.

## API Version

38.0

## Available to Guest Users

38.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedTopicCollection getManagedTopics (String communityId,
ConnectApi.ManagedTopicType managedTopicType, List<String> recordIds, Integer depth)
```

## Parameters

*communityId*

Type: `String`

ID for an Experience Cloud site, `internal`, or `null`.

*managedTopicType*

Type: `ConnectApi.ManagedTopicType`

Type of managed topic.

- **Content**—Topics that are associated with native content.
- **Featured**—Topics that are featured, for example, on the Experience Cloud site home page, but don't provide overall navigation.
- **Navigational**—Topics that display in a navigational menu in the Experience Cloud site.

A topic can be associated with all three managed topic types, so a topic can be a **Featured**, **Navigational**, and **Content** topic.

#### *recordIds*

Type: [List<String>](#)

A list of up to 100 topic IDs associated with the managed topics.

If you list more than 10 topic IDs, you can't specify 2–8 for *depth*.

#### *depth*

Type: [Integer](#)

Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is `null`. If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If *depth* isn't specified, it defaults to 1.

## Return Value

Type: [ConnectApi.ManagedTopicCollection](#)

### **getManagedTopics (communityId, managedTopicType, pageParam, pageSize)**

Get a page of managed topics.

## API Version

44.0

## Available to Guest Users

44.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedTopicCollection getManagedTopics (String communityId,
ConnectApi.ManagedTopicType managedTopicType, Integer pageParam, Integer pageSize)
```

## Parameters

### *communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*managedTopicType*Type: [ConnectApi.ManagedTopicType](#)

Type of managed topic.

- **Content**—Topics that are associated with native content.
- **Featured**—Topics that are featured, for example, on the Experience Cloud site home page, but don't provide overall navigation.
- **Navigational**—Topics that display in a navigational menu in the Experience Cloud site.

A topic can be associated with all three managed topic types, so a topic can be a **Featured**, **Navigational**, and **Content** topic.

*pageParam*Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 50.

**Return Value**Type: [ConnectApi.ManagedTopicCollection](#)**reorderManagedTopics (communityId, managedTopicPositionCollection)**

Reorder the relative positions of managed topics in an Experience Cloud site.

**API Version**

32.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.ManagedTopicCollection reorderManagedTopics (String communityId,
ConnectApi.ManagedTopicPositionCollectionInput managedTopicPositionCollection)
```

**Parameters***communityId*Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*managedTopicPositionCollection*Type: [ConnectApi.ManagedTopicPositionCollectionInput](#)

A collection of relative positions of managed topics. This collection can include only **Featured** and **Navigational** topics and doesn't have to include all managed topics.

## Return Value

Type: `ConnectApi.ManagedTopicCollection`

## Usage

Only community managers (users with the Create and Set Up Experiences or Manage Experiences permission) can reorder managed topics.

You can reorder parent managed topics or children managed topics with the same parent. If you don't include all managed topics in the `ConnectApi.ManagedTopicPositionCollectionInput`, the managed topics are reordered by respecting the positions indicated in the `ConnectApi.ManagedTopicPositionCollectionInput` and then by pushing down any managed topics that aren't included in the `ConnectApi.ManagedTopicPositionCollectionInput` to the next available position.

## Example

If you have these managed topics:

Managed Topic	Position
ManagedTopicA	0
ManagedTopicB	1
ManagedTopicC	2
ManagedTopicD	3
ManagedTopicE	4

And you reorder managed topics by including this information in `ConnectApi.ManagedTopicPositionCollectionInput`:

Managed Topic	Position
ManagedTopicD	0
ManagedTopicE	2

The result is:

Managed Topic	Position
ManagedTopicD	0
ManagedTopicA	1
ManagedTopicE	2
ManagedTopicB	3
ManagedTopicC	4

## Retired ManagedTopics Methods

These methods for `ManagedTopics` are retired.

### IN THIS SECTION:

[getManagedTopics\(\*communityId\*, \*managedTopicType\*, \*recordId\*, \*depth\*\)](#)

Get managed topics of the specified type, including their parent and children managed topics, that are associated with a given topic in an Experience Cloud site.

### **getManagedTopics(*communityId*, *managedTopicType*, *recordId*, *depth*)**

Get managed topics of the specified type, including their parent and children managed topics, that are associated with a given topic in an Experience Cloud site.

### API Version

35.0–37.0

 **Important:** In version 38.0 and later, use [getManagedTopics\(\*communityId\*, \*managedTopicType\*, \*recordIds\*, \*depth\*\)](#).

### Available to Guest Users

35.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId,
ConnectApi.ManagedTopicType managedTopicType, String recordId, Integer depth)
```

### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*managedTopicType*

Type: [ConnectApi.ManagedTopicType](#)

Type of managed topic.

- `Content`—Topics that are associated with native content.
- `Featured`—Topics that are featured, for example, on the Experience Cloud site home page, but don't provide overall navigation.
- `Navigational`—Topics that display in a navigational menu in the Experience Cloud site.

A topic can be associated with all three managed topic types, so a topic can be a `Featured`, `Navigational`, and `Content` topic.

*recordId*

Type: [String](#)

ID of the topic associated with the managed topics.

*depth*

Type: [Integer](#)

Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is `null`. If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If `depth` isn't specified, it defaults to 1.

## Return Value

Type: [ConnectApi.ManagedTopicCollection](#)

# MarketingIntegration Class

Get, save, and submit a microsites marketing integration form for an Experience Cloud site.

## Namespace

[ConnectApi](#)

## MarketingIntegration Methods

The following are methods for `MarketingIntegration`. All methods are static.

`MarketingIntegration` methods make calls to Marketing Cloud Engagement REST APIs to create, query, and insert data to the data extension object. If the API returns errors, ConnectInApex error messages include the [error code and message](#) from Marketing Cloud Engagement.

### IN THIS SECTION:

[getForm\(siteId, formId\)](#)

Get a marketing integration form for an Experience Cloud site.

[saveForm\(siteId, formInput\)](#)

Save a marketing integration form for an Experience Cloud site.

[submitForm\(siteId, formId, formSubmissionInput\)](#)

Submit a marketing integration form for an Experience Cloud site.

### **getForm(siteId, formId)**

Get a marketing integration form for an Experience Cloud site.

## API Version

53.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Form getForm(String siteId, String formId)
```

## Parameters

*siteId*

Type: [String](#)

ID for the Experience Cloud site.

*formId*

Type: [String](#)

ID of the form.

## Return Value

Type: [ConnectApi.Form](#)

## **saveForm(siteId, formInput)**

Save a marketing integration form for an Experience Cloud site.

## API Version

53.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Form saveForm(String siteId, ConnectApi.FormInput formInput)
```

## Parameters

*siteId*

Type: [String](#)

ID for the Experience Cloud site.

*formInput*

Type: [ConnectApi.FormInput](#)

A [ConnectApi.FormInput](#) object to save.

## Return Value

Type: [ConnectApi.Form](#)

## Usage

This method attempts to create a read-only data extension in Marketing Cloud Engagement. A Marketing Cloud Engagement admin can change the read-only setting. We recommend keeping the data extension as read-only to maintain schema consistency with the form.

### **submitForm(siteId, formId, formSubmissionInput)**

Submit a marketing integration form for an Experience Cloud site.

## API Version

53.0

## Available to Guest Users

53.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.FormSubmission submitForm(String siteId, String formId,
ConnectApi.FormSubmissionInput formSubmissionInput)
```

## Parameters

*siteId*

Type: [String](#)

ID for the Experience Cloud site.

*formId*

Type: [String](#)

ID of the form.

*formSubmissionInput*

Type: [ConnectApi.FormSubmissionInput](#)

A [ConnectApi.FormSubmissionInput](#) object to submit.

## Return Value

Type: [ConnectApi.FormSubmission](#)

## Mentions Class

Access information about mentions. A mention is an "@" character followed by a user or group name. When a user or group is mentioned, they receive a notification.

## Namespace

[ConnectApi](#)

## Mentions Methods

These methods are for `Mentions`. All methods are static.

All methods in this class require Chatter and are subject to the per user, per namespace, per hour rate limit.

### IN THIS SECTION:

[getMentionCompletions\(\*communityId\*, \*q\*, \*contextId\*\)](#)

Get the first page of possible users and groups to mention in a feed item body or comment body.

[getMentionCompletions\(\*communityId\*, \*q\*, \*contextId\*, \*type\*, \*pageParam\*, \*pageSize\*\)](#)

Get a page of possible mention proposals of the specified type.

[getMentionValidations\(\*communityId\*, \*parentId\*, \*recordIds\*, \*visibility\*\)](#)

Get information about whether the mentions are valid for the context user.

### **getMentionCompletions(*communityId*, *q*, *contextId*)**

Get the first page of possible users and groups to mention in a feed item body or comment body.

### API Version

29.0

### Requires Chatter

Yes

### Signature

```
public static ConnectApi.MentionCompletionPage getMentionCompletions (String communityId,  
String q, String contextId)
```

### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*q*

Type: [String](#)

A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn't require a minimum number of characters. This parameter does not support wildcards.

*contextId*

Type: [String](#)

A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

## Return Value

Type: [ConnectApi.MentionCompletionPage](#)

## Usage

Call this method to generate a page of proposed mentions that a user can choose from when they enter characters after @ in a feed item body or a comment body.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetMentionCompletions\(communityId, q, contextId, result\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **getMentionCompletions(communityId, q, contextId, type, pageParam, pageSize)**

Get a page of possible mention proposals of the specified type.

## API Version

29.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.Mentions getMentionCompletions (String communityId, String q,
String contextId, ConnectApi.MentionCompletionType type, Integer pageParam, Integer
pageSize)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*q*

Type: [String](#)

A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn't require a minimum number of characters. This parameter does not support wildcards.

*contextId*

Type: [String](#)

A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

*type*

Type: [ConnectApi.MentionCompletionType](#)

Type of mention completion.

- `All`—All mention completions, regardless of the type of record to which the mention refers.
- `Group`—Mention completions for groups.
- `User`—Mention completions for users.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

## Return Value

Type: [ConnectApi.MentionCompletionPage](#)

## Usage

Call this method to generate a page of proposed mentions that a user can choose from when they enter characters after @ in a feed item body or a comment body.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetMentionCompletions\(communityId, q, contextId, type, pageParam, pageSize, result\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **getMentionValidations(communityId, parentId, recordIds, visibility)**

Get information about whether the mentions are valid for the context user.

## API Version

29.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.Mentions getMentionValidations(String communityId, String
parentId, List<String> recordIds, ConnectApi.FeedItemVisibilityType visibility)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*parentId*

Type: [String](#)

The feed item parent ID.

*recordIds*

Type: [List<String>](#)

A comma-separated list of IDs to be mentioned. The maximum value is 25.

*visibility*

Type: [ConnectApi.FeedItemVisibilityType](#)

Type of users who can see a feed item.

- `AllUsers`—Visibility is not limited to internal users.
- `InternalUsers`—Visibility is limited to internal users.

## Return Value

Type: [ConnectApi.MentionValidations](#)

## Usage

Call this method to check whether the record IDs returned from a call to `ConnectApi.Mentions.getMentionCompletions` are valid for the context user. For example, the context users can't mention private groups they don't belong to. If such a group were included in the list of mention validations, the `ConnectApi.MentionValidations.hasErrors` property would be `true` and the group would have a `ConnectApi.MentionValidation.validationStatus` of `Disallowed`.

## Mentions Test Methods

These test methods are for `Mentions`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see [Testing ConnectApi Code](#).

### **setTestGetMentionCompletions**(communityId, q, contextId, result)

Register a `ConnectApi.MentionCompletionPage` object to be returned when `getMentionCompletions`(`String`, `String`, `String`) is called in a test context.

## API Version

29.0

## Signature

```
public static void setTestGetMentionCompletions (String communityId, String q, String contextId, ConnectApi.MentionCompletionPage result)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*q*

Type: [String](#)

A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn't require a minimum number of characters. This parameter does not support wildcards.

*contextId*

Type: [String](#)

A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

*result*

Type: [ConnectApi.MentionCompletionPage](#)

A `ConnectApi.MentionCompletionPage` object containing test data.

## Return Value

Type: Void

SEE ALSO:

[getMentionCompletions\(communityId, q, contextId\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **setTestGetMentionCompletions(communityId, q, contextId, type, pageParam, pageSize, result)**

Registers a `ConnectApi.MentionCompletionPage` object to be returned when `getMentionCompletions(String, String, String, ConnectApi.MentionCompletionType, Integer, Integer)` is called in a test context.

## API Version

29.0

## Signature

```
public static Void setTestGetMentionCompletions (String communityId, String q, String contextId, ConnectApi.MentionCompletionType type, Integer pageParam, Integer pageSize, ConnectApi.MentionCompletionPage result)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*q*

Type: [String](#)

A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn't require a minimum number of characters. This parameter does not support wildcards.

*contextId*

Type: [String](#)

A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

*type*

Type: [ConnectApi.MentionCompletionType](#)

Type of mention completion.

- `All`—All mention completions, regardless of the type of record to which the mention refers.
- `Group`—Mention completions for groups.
- `User`—Mention completions for users.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*result*

Type: [ConnectApi.MentionCompletionPage](#)

A `ConnectApi.MentionCompletionPage` object containing test data.

## Return Value

Type: Void

SEE ALSO:

[getMentionCompletions\(communityId, q, contextId, type, pageParam, pageSize\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## Missions Class

Export and purge mission activity for users. Get a user's mission progress. Update mission activity counts for users.

## Namespace

[ConnectApi](#)

## Missions Methods

These methods are for `Missions`. All methods are static.

All methods in this class require Chatter and are subject to the per user, per namespace, per hour rate limit.

#### IN THIS SECTION:

[exportUserMissionsActivities\(communityId, userId\)](#)

Export mission activity for a user.

[getUserMissionsProgress\(communityId, userId\)](#)

Get mission activity progress for a user.

[purgeUserMissionsActivities\(communityId, userId\)](#)

Start a job to purge mission activity for a user.

[purgeUserMissionsActivities\(communityId\)](#)

Start a job to purge mission activity for all users.

[updateUserMissionActivityCount\(activityType, activityCount, communityId, userId\)](#)

Update the mission activity count for a user.

### **exportUserMissionsActivities (communityId, userId)**

Export mission activity for a user.

#### API Version

45.0

#### Requires Chatter

Yes

#### Signature

```
public static ConnectApi.UserMissionActivitiesJob exportUserMissionsActivities(String communityId, String userId)
```

#### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID of the user.

#### Return Value

Type: [ConnectApi.UserMissionActivitiesJob](#)

#### Usage

You can export these activities with this method.

- `FeedItemAnswerAQuestion`—User answered a question.
- `FeedItemLikeSomething`—User liked a post or comment.
- `FeedItemMarkAnswerAsBest`—User marked an answer as the best answer.
- `FeedItemPostQuestion`—User posted a question.
- `FeedItemReceiveAComment`—User received a comment on a post.
- `FeedItemReceiveALike`—User received a like on a post or comment.
- `FeedItemReceiveAnAnswer`—User received an answer to a question.
- `FeedItemWriteAComment`—User commented on a post.
- `FeedItemWriteAPost`—User made a post.
- `FeedItemYourAnswerMarkedBest`—User's answer was marked as the best answer.

### **`getUserMissionsProgress (communityId, userId)`**

Get mission activity progress for a user.

#### API Version

46.0

#### Requires Chatter

Yes

#### Signature

```
public static ConnectApi.UserMissionActivityCollection getUserMissionsProgress(String communityId, String userId)
```

#### Parameters

*communityId*

Type: `String`

ID for an Experience Cloud site, internal, or `null`.

*userId*

Type: `String`

ID of the user.

#### Return Value

Type: `ConnectApi.UserMissionActivityCollection`

### **`purgeUserMissionsActivities (communityId, userId)`**

Start a job to purge mission activity for a user.

## API Version

45.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.UserMissionActivitiesJob purgeUserMissionsActivities(String communityId, String userId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID of the user.

## Return Value

Type: [ConnectApi.UserMissionActivitiesJob](#)

## Usage

This method purges these activities.

- `FeedItemAnswerAQuestion`—User answered a question.
- `FeedItemLikeSomething`—User liked a post or comment.
- `FeedItemMarkAnswerAsBest`—User marked an answer as the best answer.
- `FeedItemPostQuestion`—User posted a question.
- `FeedItemReceiveAComment`—User received a comment on a post.
- `FeedItemReceiveALike`—User received a like on a post or comment.
- `FeedItemReceiveAnAnswer`—User received an answer to a question.
- `FeedItemWriteAComment`—User commented on a post.
- `FeedItemWriteAPost`—User made a post.
- `FeedItemYourAnswerMarkedBest`—User's answer was marked as the best answer.

## **purgeUserMissionsActivities (communityId)**

Start a job to purge mission activity for all users.

## API Version

49.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.UserMissionActivitiesJob purgeUserMissionsActivities(String communityId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

## Return Value

Type: [ConnectApi.UserMissionActivitiesJob](#)

## Usage

This method purges these activities.

- `FeedItemAnswerAQuestion`—User answered a question.
- `FeedItemLikeSomething`—User liked a post or comment.
- `FeedItemMarkAnswerAsBest`—User marked an answer as the best answer.
- `FeedItemPostQuestion`—User posted a question.
- `FeedItemReceiveAComment`—User received a comment on a post.
- `FeedItemReceiveALike`—User received a like on a post or comment.
- `FeedItemReceiveAnAnswer`—User received an answer to a question.
- `FeedItemWriteAComment`—User commented on a post.
- `FeedItemWriteAPost`—User made a post.
- `FeedItemYourAnswerMarkedBest`—User's answer was marked as the best answer.

## **updateUserMissionActivityCount(activityType, activityCount, communityId, userId)**

Update the mission activity count for a user.

## API Version

45.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.UserMissionActivityStatus
updateUserMissionActivityCount (ConnectApi.UserMissionActivityType activityType, Integer
activityCount, String communityId, String userId)
```

## Parameters

*activityType*

Type: [ConnectApi.UserMissionActivityType](#)

Type of mission activity for a user. Values are:

- `FeedItemAnswerAQuestion`—User answered a question.
- `FeedItemLikeSomething`—User liked a post or comment.
- `FeedItemMarkAnswerAsBest`—User marked an answer as the best answer.
- `FeedItemPostQuestion`—User posted a question.
- `FeedItemReceiveAComment`—User received a comment on a post.
- `FeedItemReceiveALike`—User received a like on a post or comment.
- `FeedItemReceiveAnAnswer`—User received an answer to a question.
- `FeedItemWriteAComment`—User commented on a post.
- `FeedItemWriteAPost`—User made a post.
- `FeedItemYourAnswerMarkedBest`—User’s answer was marked as the best answer.

*activityCount*

Type: [Integer](#)

Number of mission activities of the specified type for the user.

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID of the user.

## Return Value

Type: [ConnectApi.UserMissionActivityStatus](#)

## NamedCredentials Class

Create, refresh, get, delete, replace, and update credentials. Create and get external credentials. Create and get named credentials. Create, get, delete, and update external auth identity providers. Get the URL for the OAuth token flow for an external credential.

-  **Note:** Managed packages can access only the named credentials and external credentials that are included in or created from the package’s Apex code. If a managed package tries to access non-packaged named credentials and external credentials that a Salesforce admin created in the org, an error occurs.

## Namespace

[ConnectApi](#)

## NamedCredentials Methods

These methods are for `NamedCredentials`. All methods are static.

### IN THIS SECTION:

[createCredential\(requestBody\)](#)

Create a credential.

[createCredential\(requestBody, action\)](#)

Refresh an OAuth or AWS Roles Anywhere credential.

[createExternalAuthIdentityProvider\(requestBody\)](#)

Create an external auth identity provider.

[createExternalAuthIdentityProviderCredentials\(fullName, requestBody\)](#)

Create external auth identity provider credentials.

[createExternalCredential\(requestBody\)](#)

Create an external credential.

[createNamedCredential\(requestBody\)](#)

Create a named credential.

[deleteCredential\(externalCredential, principalName, principalType\)](#)

Delete a credential.

[deleteCredential\(externalCredential, principalName, principalType, authenticationParameters\)](#)

Delete a credential with authentication parameters.

[deleteExternalAuthIdentityProvider\(fullName\)](#)

Delete an external auth identity provider.

[getCredential\(externalCredential, principalName, principalType\)](#)

Get a credential.

[getExternalAuthIdentityProvider\(fullName\)](#)

Get an external auth identity provider.

[getExternalAuthIdentityProviderCredentials\(fullName\)](#)

Get external auth identity provider credentials.

[getExternalAuthIdentityProviders\(\)](#)

Get a list of external auth identity providers in the org.

[getExternalCredential\(developerName\)](#)

Get an external credential, including the named credentials and principals associated with it and the type and status of each principal.

[getExternalCredentials\(\)](#)

Get external credentials that the user can authenticate to.

[getNamedCredential\(developerName\)](#)

Get a named credential.

[getNamedCredentials\(\)](#)

Get a list of named credentials for the org.

[getOAuthCredentialAuthUrl\(requestBody\)](#)

Get the URL for the OAuth token flow for an external credential.

[patchCredential\(requestBody\)](#)

Update custom credentials.

[updateCredential\(requestBody\)](#)

Replace a credential.

[updateExternalAuthIdentityProvider\(fullName, requestBody\)](#)

Update an external auth identity provider.

[updateExternalAuthIdentityProviderCredentials\(fullName, requestBody\)](#)

Replace external auth identity provider credentials.

**createCredential (requestBody)**

Create a credential.

**API Version**

56.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.Credential createCredential (ConnectApi.CredentialInput  
requestBody)
```

**Parameters**

*requestBody*

Type: [ConnectApi.CredentialInput](#)

A [ConnectApi.CredentialInput](#) class.

**Return Value**

Type: [ConnectApi.Credential](#)

**createCredential(requestBody, action)**

Refresh an OAuth or AWS Roles Anywhere credential.

**API Version**

58.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.Credential createCredential(ConnectApi.CredentialInput
requestBody, ConnectApi.CreateCredentialAction action)
```

**Parameters**

*requestBody*

Type: [ConnectApi.CredentialInput](#)

A [ConnectApi.CredentialInput](#) class.

*action*

Type: [ConnectApi.CreateCredentialAction](#)

Action to take when creating the credential. Value is:

- Refresh

**Return Value**

Type: [ConnectApi.Credential](#)

**createExternalAuthIdentityProvider(requestBody)**

Create an external auth identity provider.

**API Version**

62.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.ExternalAuthIdentityProvider
createExternalAuthIdentityProvider(ConnectApi.ExternalAuthIdentityProviderInput
requestBody)
```

## Parameters

*requestBody*

Type: [ConnectApi.ExternalAuthIdentityProviderInput](#) on page 1831

A [ConnectApi.ExternalAuthIdentityProviderInput](#) input class.

## Return Value

Type: [ConnectApi.ExternalAuthIdentityProvider](#) on page 2049

### **createExternalAuthIdentityProviderCredentials (fullName, requestBody)**

Create external auth identity provider credentials.

## API Version

62.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ExternalAuthIdentityProviderCredentials  
createExternalAuthIdentityProviderCredentials (String fullName,  
ConnectApi.ExternalAuthIdentityProviderCredentialsInput requestBody)
```

## Parameters

*fullName*

Type: [String](#)

Full name of the external auth identity provider to create credentials for.

*requestBody*

Type: [ConnectApi.ExternalAuthIdentityProviderCredentialsInput](#) on page 1831

A [ConnectApi.ExternalAuthIdentityProviderCredentialsInput](#) input class

## Return Value

Type: [ConnectApi.ExternalAuthIdentityProviderCredentials](#) on page 2051

### **createExternalCredential (requestBody)**

Create an external credential.

## API Version

58.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ExternalCredential  
createExternalCredential (ConnectApi.ExternalCredentialInput requestBody)
```

## Parameters

*requestBody*

Type: [ConnectApi.ExternalCredentialInput](#)

Input used to create or update an external credential.

## Return Value

Type: [ConnectApi.ExternalCredential](#)

## **createNamedCredential (requestBody)**

Create a named credential.

## API Version

58.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.NamedCredential  
createNamedCredential (ConnectApi.NamedCredentialInput requestBody)
```

## Parameters

*requestBody*

Type: [ConnectApi.NamedCredentialInput](#)

Input used to create or update a named credential.

## Return Value

Type: [ConnectApi.NamedCredential](#)

## **deleteCredential (externalCredential, principalName, principalType)**

Delete a credential.

This method deletes the user external credentials that store the encrypted access tokens used for named credential callouts, not the external credential itself. You can delete an external credential only in the UI or by using REST API.

### API Version

56.0

### Requires Chatter

No

### Signature

```
public static Void deleteCredential(String externalCredential, String principalName,
ConnectApi.CredentialPrincipalType principalType)
```

### Parameters

*externalCredential*

Type: [String](#)

Fully qualified developer name of the external credential.

*principalName*

Type: [String](#)

Name of the external credential named principal.

*principalType*

Type: [ConnectApi.CredentialPrincipalType](#)

Type of credential principal. Values are:

- [AwsStsPrincipal](#)
- [NamedPrincipal](#)
- [PerUserPrincipal](#)

### Return Value

Type: Void

### **deleteCredential(externalCredential, principalName, principalType, authenticationParameters)**

Delete a credential with authentication parameters.

This method deletes the user external credentials that store the encrypted access tokens used for named credential callouts, not the external credential itself. You can delete an external credential only in the UI or by using REST API.

### API Version

59.0

## Requires Chatter

No

## Signature

```
public static Void deleteCredential(String externalCredential, String principalName,
ConnectApi.CredentialPrincipalType principalType, List<String> authenticationParameters)
```

## Parameters

*externalCredential*

Type: [String](#)

Fully qualified developer name of the external credential.

*principalName*

Type: [String](#)

Name of the external credential named principal.

*principalType*

Type: [ConnectApi.CredentialPrincipalType](#)

Type of credential principal. Values are:

- [AwsStsPrincipal](#)
- [NamedPrincipal](#)
- [PerUserPrincipal](#)

*authenticationParameters*

Type: [List<String>](#)

List of authentication parameters only for custom protocols, for example `myApiKey, myApiSecret`. If unspecified, all credentials are deleted.

## Return Value

Type: Void

## **deleteExternalAuthIdentityProvider (fullName)**

Delete an external auth identity provider.

## API Version

62.0

## Requires Chatter

No

## Signature

```
public static Void deleteExternalAuthIdentityProvider(String fullName)
```

## Parameters

*fullName*

Type: [String](#)

Full name of the external auth identity provider to delete.

## Return Value

Type: Void

## **getCredential(externalCredential, principalName, principalType)**

Get a credential.

## API Version

56.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Credential getCredential(String externalCredential, String principalName, ConnectApi.CredentialPrincipalType principalType)
```

## Parameters

*externalCredential*

Type: [String](#)

Fully qualified developer name of the external credential.

*principalName*

Type: [String](#)

Name of the external credential named principal.

*principalType*

Type: [ConnectApi.CredentialPrincipalType](#)

Type of credential principal. Values are:

- [AwsStsPrincipal](#)
- [NamedPrincipal](#)
- [PerUserPrincipal](#)

## Return Value

Type: [ConnectApi.Credential](#)

**getExternalAuthIdentityProvider (fullName)**

Get an external auth identity provider.

**API Version**

62.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.ExternalAuthIdentityProvider  
getExternalAuthIdentityProvider(String fullName)
```

**Parameters**

*fullName*

Type: [String](#)

Full name of the external auth identity provider.

**Return Value**

Type: [ConnectApi.ExternalAuthIdentityProvider](#) on page 2049

**getExternalAuthIdentityProviderCredentials (fullName)**

Get external auth identity provider credentials.

**API Version**

62.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.ExternalAuthIdentityProviderCredentials  
getExternalAuthIdentityProviderCredentials(String fullName)
```

**Parameters**

*fullName*

Type: [String](#)

Full name of the external auth identity provider.

## Return Value

Type: [ConnectApi.ExternalAuthIdentityProviderCredentials](#) on page 2051

### **getExternalAuthIdentityProviders ()**

Get a list of external auth identity providers in the org.

## API Version

62.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ExternalAuthIdentityProviderList  
getExternalAuthIdentityProviders ()
```

## Return Value

Type: [ConnectApi.ExternalAuthIdentityProviderList](#) on page 2051

### **getExternalCredential (developerName)**

Get an external credential, including the named credentials and principals associated with it and the type and status of each principal.

## API Version

56.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ExternalCredential getExternalCredential (String developerName)
```

## Parameters

*developerName*

Type: [String](#)

Fully qualified developer name of the external credential.

## Return Value

Type: [ConnectApi.ExternalCredential](#)

**getExternalCredentials ()**

Get external credentials that the user can authenticate to.

**API Version**

56.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.ExternalCredentialList getExternalCredentials()
```

**Return Value**

Type: [ConnectApi.ExternalCredentialList](#)

**getNamedCredential (developerName)**

Get a named credential.

**API Version**

59.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.NamedCredential getNamedCredential (String developerName)
```

**Parameters**

*developerName*

Type: [String](#)

Fully qualified developer name of the named credential.

**Return Value**

Type: [ConnectApi.NamedCredential](#)

**getNamedCredentials ()**

Get a list of named credentials for the org.

### API Version

59.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.NamedCredentialList getNamedCredentials()
```

### Return Value

Type: [ConnectApi.NamedCredentialList](#)

### **getOAuthCredentialAuthUrl (requestBody)**

Get the URL for the OAuth token flow for an external credential.

### API Version

56.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.OAuthCredentialAuthUrl  
getOAuthCredentialAuthUrl (ConnectApi.OAuthCredentialAuthUrlInput requestBody)
```

### Parameters

*requestBody*

Type: [ConnectApi.OAuthCredentialAuthUrlInput](#)

A [ConnectApi.OAuthCredentialAuthUrlInput](#) class indicating the OAuth authentication flow.

### Return Value

Type: [ConnectApi.OAuthCredentialAuthUrl](#)

### Usage

Accepts input parameters representing a specific external credential and, optionally, a named principal. Returns the URL a user must visit to begin the authentication flow, ultimately returning authentication tokens to Salesforce. Use this method as part of building a customized or branded user interface to help users initiate authentication.

## Example

```

ConnectApi.OAuthCredentialAuthUrlInput input = new ConnectApi.OAuthCredentialAuthUrlInput();

input.externalCredential = 'MyExternalCredentialDeveloperName';
input.principalType = ConnectApi.CredentialPrincipalType.PerUserPrincipal;
input.principalName = 'MyPrincipal'; // Only required when principalType = NamedPrincipal

ConnectApi.OAuthCredentialAuthUrl output =
ConnectApi.NamedCredentials.getOAuthCredentialAuthUrl(input);

String authenticationUrl = output.authenticationUrl; // Redirect users to this URL to
authenticate in the browser

```

## patchCredential (requestBody)

Update custom credentials.

This method updates custom credentials. To replace a credential, use [updateCredential \(requestBody\)](#).

## API Version

59.0

## Requires Chatter

No

## Signature

```

public static ConnectApi.Credential patchCredential (ConnectApi.CredentialInput
requestBody)

```

## Parameters

*requestBody*

Type: [ConnectApi.CredentialInput](#)

A [ConnectApi.CredentialInput](#) class. Only the custom credentials in the input class are updated.

## Return Value

Type: [ConnectApi.Credential](#)

## updateCredential (requestBody)

Replace a credential.

This method uses the [ConnectApi.CredentialInput](#) and the [ConnectApi.CredentialValueInput](#) input classes to replace a credential's values. In the UI, these values appear as the credential's authentication parameters. To update a credential, use [patchCredential \(requestBody\)](#).

## API Version

56.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Credential updateCredential (ConnectApi.CredentialInput  
requestBody)
```

## Parameters

*requestBody*

Type: [ConnectApi.CredentialInput](#)

A [ConnectApi.CredentialInput](#) class.

## Return Value

Type: [ConnectApi.Credential](#)

## **updateExternalAuthIdentityProvider (fullName, requestBody)**

Update an external auth identity provider.

## API Version

62.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ExternalAuthIdentityProvider  
updateExternalAuthIdentityProvider (String fullName,  
ConnectApi.ExternalAuthIdentityProviderInput requestBody)
```

## Parameters

*fullName*

Type: [String](#)

Full name of the external auth identity provider to update.

*requestBody*

Type: [ConnectApi.ExternalAuthIdentityProviderInput](#) on page 1831

A [ConnectApi.ExternalAuthIdentityProviderInput](#) input class.

## Return Value

Type: [ConnectApi.ExternalAuthIdentityProvider](#) on page 2049

## **updateExternalAuthIdentityProviderCredentials(fullName, requestBody)**

Replace external auth identity provider credentials.

## API Version

62.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ExternalAuthIdentityProviderCredentials
updateExternalAuthIdentityProviderCredentials(String fullName,
ConnectApi.ExternalAuthIdentityProviderCredentialsInput requestBody)
```

## Parameters

*fullName*

Type: [String](#)

The external auth identity provider credentials to replace.

*requestBody*

Type: [ConnectApi.ExternalAuthIdentityProviderCredentialsInput](#) on page 1831

A [ConnectApi.ExternalAuthIdentityProviderCredentialsInput](#) input class.

## Return Value

Type: [ConnectApi.ExternalAuthIdentityProviderCredentials](#) on page 2051

# NavigationMenu Class

Get navigation menu items for an Experience Cloud site.

## Namespace

[ConnectApi](#)

## NavigationMenu Methods

These methods are for `NavigationMenu`. All methods are static.

## IN THIS SECTION:

`getCommunityNavigationMenu(communityId, navigationLinkId, navigationLinkSetDeveloperName, publishStatus, includeImageUrl, addHomeMenuItem, menuItemTypesToSkip)`

Get navigation menu items for an Experience Cloud site.

`getCommunityNavigationMenu(communityId, navigationLinkId, navigationLinkSetDeveloperName, publishStatus, includeImageUrl, addHomeMenuItem, menuItemTypesToSkip, effectiveAccountId)`

Get navigation menu items for an Experience Cloud based on an effective account.

**`getCommunityNavigationMenu(communityId, navigationLinkId, navigationLinkSetDeveloperName, publishStatus, includeImageUrl, addHomeMenuItem, menuItemTypesToSkip)`**

Get navigation menu items for an Experience Cloud site.

### API Version

52.0

### Available to Guest Users

52.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.NavigationMenuItemCollection getCommunityNavigationMenu(String communityId, String navigationLinkId, String navigationLinkSetDeveloperName, ConnectApi.PublishStatus publishStatus, Boolean includeImageUrl, Boolean addHomeMenuItem, List<ConnectApi.NavigationMenuItemType> menuItemTypesToSkip)
```

### Parameters

*communityId*

Type: [String](#)

ID of an Experience Cloud site.

*navigationLinkId*

Type: [String](#)

ID of the navigation link set.

*navigationLinkSetDeveloperName*

Type: [String](#)

Developer name of the navigation link set.

*publishStatus*

Type: [ConnectApi.PublishStatus](#)

Publish status of the navigation menu item. Values are:

- `Draft`
- `Live`

*includeImageUrl*

Type: `Boolean`

Specifies whether to include the image URL with the menu item (`true`) or not (`false`).

*addHomeMenuItem*

Type: `Boolean`

Specifies whether to add the Home menu item (`true`) or not (`false`).

*menuItemTypesToSkip*

Type: `List<ConnectApi.NavigationMenuItemType>`

List of menu item types to filter out of the results. Values are:

- `DataSourceDriven`—Menu items dynamically added from a data source.
- `Event`—Event, such as logging in, logging out, or switching accounts.
- `ExternalLink`—URL outside of your site.
- `GlobalAction`—Lets users create records that aren't related to other records.
- `InternalLink`—Relative URL inside your site.
- `MenuItemLabel`—Menu label.
- `Modal`—Modal, such as Account Switcher.
- `NavigationalTopic`—Dropdown list with links to the navigational topics in your site.
- `SalesforceObject`—Objects such as accounts, cases, contacts, and custom objects.
- `SystemLink`—System link, such as a link to Builder, Workspaces, or Setup.

## Return Value

Type: `ConnectApi.NavigationMenuItemCollection`

## Usage

Supported navigation menu item types are:

- `DataSourceDriven`—Menu items dynamically added from a data source.
- `Event`—Event, such as logging in, logging out, or switching accounts.
- `ExternalLink`—URL outside of your site.
- `GlobalAction`—Lets users create records that aren't related to other records.
- `InternalLink`—Relative URL inside your site.
- `MenuItemLabel`—Menu label.
- `Modal`—Modal, such as Account Switcher.
- `NavigationalTopic`—Dropdown list with links to the navigational topics in your site.
- `SalesforceObject`—Objects such as accounts, cases, contacts, and custom objects.
- `SystemLink`—System link, such as a link to Builder, Workspaces, or Setup.

```
getCommunityNavigationMenu(communityId, navigationLinkId,  
navigationLinkIdDeveloperName, publishStatus, includeImageUrl,  
addHomeMenuItem, menuItemTypesToSkip, effectiveAccountId)
```

Get navigation menu items for an Experience Cloud based on an effective account.

### API Version

54.0

### Available to Guest Users

54.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.NavigationMenuItemCollection getCommunityNavigationMenu(String  
communityId, String navigationLinkId, String navigationLinkIdDeveloperName,  
ConnectApi.PublishStatus publishStatus, Boolean includeImageUrl, Boolean addHomeMenuItem,  
List<ConnectApi.NavigationMenuItemType> menuItemTypesToSkip, String effectiveAccountId)
```

### Parameters

*communityId*

Type: [String](#)

ID of an Experience Cloud site.

*navigationLinkId*

Type: [String](#)

ID of the navigation link set.

*navigationLinkIdDeveloperName*

Type: [String](#)

Developer name of the navigation link set.

*publishStatus*

Type: [ConnectApi.PublishStatus](#)

Publish status of the navigation menu item. Values are:

- Draft
- Live

*includeImageUrl*

Type: [Boolean](#)

Specifies whether to include the image URL with the menu item (`true`) or not (`false`).

*addHomeMenuItem*

Type: [Boolean](#)

Specifies whether to add the Home menu item (`true`) or not (`false`).

#### *menuItemTypesToSkip*

Type: [List<ConnectApi.NavigationMenuItemType>](#)

List of menu item types to filter out of the results. Values are:

- `DataSourceDriven`—Menu items dynamically added from a data source.
- `Event`—Event, such as logging in, logging out, or switching accounts.
- `ExternalLink`—URL outside of your site.
- `GlobalAction`—Lets users create records that aren't related to other records.
- `InternalLink`—Relative URL inside your site.
- `MenuItemLabel`—Menu label.
- `Modal`—Modal, such as Account Switcher.
- `NavigationalTopic`—Dropdown list with links to the navigational topics in your site.
- `SalesforceObject`—Objects such as accounts, cases, contacts, and custom objects.
- `SystemLink`—System link, such as a link to Builder, Workspaces, or Setup.

#### *effectiveAccountId*

Type: [String](#)

ID of the account for which the request is made. If unspecified, defaults to the account ID for the context user.

## Return Value

Type: [ConnectApi.NavigationMenuItemCollection](#)

## Usage

Supported navigation menu item types are:

- `DataSourceDriven`—Menu items dynamically added from a data source.
- `Event`—Event, such as logging in, logging out, or switching accounts.
- `ExternalLink`—URL outside of your site.
- `GlobalAction`—Lets users create records that aren't related to other records.
- `InternalLink`—Relative URL inside your site.
- `MenuItemLabel`—Menu label.
- `Modal`—Modal, such as Account Switcher.
- `NavigationalTopic`—Dropdown list with links to the navigational topics in your site.
- `SalesforceObject`—Objects such as accounts, cases, contacts, and custom objects.
- `SystemLink`—System link, such as a link to Builder, Workspaces, or Setup.

## NextBestAction Class

Execute recommendation strategies, get recommendations, manage recommendation reactions.

## Namespace

[ConnectApi](#)

## Usage

Community users can't access this class. Portal and guest users can access strategies only through the Suggested Actions component.

## NextBestAction Methods

These methods are for `NextBestAction`. All methods are static.

### IN THIS SECTION:

[deleteRecommendationReaction\(reactionId\)](#)

Delete a recommendation reaction.

[executeStrategy\(strategyName, maxResults, contextRecordId\)](#)

Execute a strategy.

[executeStrategy\(strategyName, maxResults, contextRecordId, debugTrace\)](#)

Execute a strategy and request a trace.

[executeStrategy\(strategyName, strategyInput\)](#)

Execute a strategy using an input class.

[getRecommendation\(recommendationId\)](#)

Get a recommendation.

[getRecommendationReaction\(reactionId\)](#)

Get a recommendation reaction.

[getRecommendationReactions\(onBehalfOfId, createdById, targetId, contextRecordId, pageParam, pageSize\)](#)

Get recommendation reactions.

[setRecommendationReaction\(reaction\)](#)

Record user reactions to recommendations.

### **deleteRecommendationReaction (reactionId)**

Delete a recommendation reaction.

### API Version

45.0

### Requires Chatter

No

### Signature

```
public static void deleteRecommendationReaction(String reactionId)
```

### Parameters

*reactionId*

Type: [String](#)

ID of the recommendation reaction or other sObject that caused the user to react.

## Return Value

Type: Void

## Usage

Users with the Manage Next Best Action Recommendations or Modify All Data permission can delete recommendation reactions.

## **executeStrategy(strategyName, maxResults, contextRecordId)**

Execute a strategy.

## API Version

45.0

## Available to Guest Users

45.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.NBARecommendations executeStrategy(String strategyName, Integer maxResults, String contextRecordId)
```

## Parameters

*strategyName*

Type: [String](#)

Name of the strategy.

*maxResults*

Type: [Integer](#)

Maximum number of results. Valid values are from 1 to 25. The default is 3.

*contextRecordId*

Type: [String](#)

ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.

## Return Value

Type: [ConnectApi.NBARecommendations](#)

**executeStrategy(strategyName, maxResults, contextRecordId, debugTrace)**

Execute a strategy and request a trace.

**API Version**

45.0

**Available to Guest Users**

45.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.NBARRecommendations executeStrategy(String strategyName, Integer maxResults, String contextRecordId, Boolean debugTrace)
```

**Parameters**

*strategyName*

Type: [String](#)

Name of the strategy.

*maxResults*

Type: [Integer](#)

Maximum number of results. Valid values are from 1 to 25. The default is 3.

*contextRecordId*

Type: [String](#)

ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.

*debugTrace*

Type: [Boolean](#)

Specifies whether to return trace and debug information in the response ([true](#)) or not ([false](#)).

**Return Value**

Type: [ConnectApi.NBARRecommendations](#)

**executeStrategy(strategyName, strategyInput)**

Execute a strategy using an input class.

**API Version**

45.0

## Available to Guest Users

45.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.NBARecommendations executeStrategy(String strategyName,  
ConnectApi.NBAStrategyInput strategyInput)
```

## Parameters

*strategyName*

Type: [String](#)

Name of the strategy.

*strategyInput*

Type: [ConnectApi.NBAStrategyInput](#)

A [ConnectApi.NBAStrategyInput](#) body.

## Return Value

Type: [ConnectApi.NBARecommendations](#)

## **getRecommendation (recommendationId)**

Get a recommendation.

## API Version

45.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Recommendation getRecommendation(String recommendationId)
```

## Parameters

*recommendationId*

Type: [String](#)

ID of the recommendation.

## Return Value

Type: [ConnectApi.Recommendation](#)

### **getRecommendationReaction (reactionId)**

Get a recommendation reaction.

## API Version

45.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RecommendationReaction getRecommendationReaction(String reactionId)
```

## Parameters

*reactionId*

Type: [String](#)

ID of the recommendation reaction or other sObject that caused the user to react.

## Return Value

Type: [ConnectApi.RecommendationReaction](#)

## Usage

Users with the Manage Next Best Action Recommendations or Modify All Data permission can get recommendation reactions.

### **getRecommendationReactions (onBehalfOfId, createdById, targetId, contextRecordId, pageParam, pageSize)**

Get recommendation reactions.

## API Version

45.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RecommendationReactions getRecommendationReactions(String onBehalfOfId, String createdById, String targetId, String contextRecordId, Integer pageParam, Integer pageSize)
```

## Parameters

*onBehalfOfId*

Type: [String](#)

Use the ID of the user who is indirectly reacting to the recommendation to filter the results.

*createdById*

Type: [String](#)

Use the ID of the user or record that created the recommendation reaction to filter the results.

*targetId*

Type: [String](#)

Use the ID of the target to filter the results.

*contextRecordId*

Type: [String](#)

Use the ID of a context record to filter the results.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

## Return Value

Type: [ConnectApi.RecommendationReactions](#)

## Usage

Users with the Manage Next Best Action Recommendations or Modify All Data permission can get recommendation reactions.

### **setRecommendationReaction (reaction)**

Record user reactions to recommendations.

## API Version

45.0

## Available to Guest Users

48.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RecommendationReaction  
setRecommendationReaction(ConnectApi.RecommendationReactionInput reaction)
```

## Parameters

*reaction*

Type: [ConnectApi.RecommendationReactionInput](#)

A [ConnectApi.RecommendationReactionInput](#) object representing a reaction to a recommendation produced by a recommendation strategy.

## Return Value

Type: [ConnectApi.RecommendationReaction](#)

# OmnichannelInventoryService Class

Route orders to inventory locations in Order Management.

## Namespace

[ConnectApi](#)

## OmnichannelInventoryService Methods

These methods are for `OmnichannelInventoryService`. All methods are static.

### IN THIS SECTION:

[createReservation\(createReservationInputRepresentation\)](#)

Create an inventory reservation in Omnichannel Inventory.

[fulfillReservation\(fulfillReservationInputRepresentation\)](#)

Fulfill one or more inventory reservations.

[getInventoryAvailability\(inventoryAvailabilityInputRepresentation\)](#)

Retrieve inventory availability data for one or more products at one or more inventory locations or location groups.

[getInventoryAvailabilityUploadStatus\(uploadId\)](#)

Retrieve the status of an inventory availability upload job.

[getPublishLocationStructureStatus\(uploadId\)](#)

Retrieve the status of a publish location structure job.

[publishLocationStructure\(\)](#)

Asynchronously publish information about your inventory locations and location groups to Omnichannel Inventory. The publish includes records whose `IsEnabled` and `ShouldSyncWithOci` fields are both `true`. This method returns an ID that you can use to retrieve the status of the publish job.

[releaseReservation\(releaseReservationInputRepresentation\)](#)

Release one or more existing inventory reservations to free up that inventory.

[submitInventoryAvailabilityUpload\(fileUpload\)](#)

Upload an inventory availability data file to Omnichannel Inventory.

[transferReservation\(transferReservationInputRepresentation\)](#)

Transfer one or more inventory reservations between locations or location groups. This API doesn't change physical quantities, but reduces the reserved quantity at the source and increases it at the destination.

[updateReservation\(updateReservationInputRepresentation\)](#)

Updates an existing reservation in Omnichannel Inventory. Add, remove, and update quantities for existing SKUs in the reservation.

**createReservation (createReservationInputRepresentation)**

Create an inventory reservation in Omnichannel Inventory.

**API Version**

51.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.OCICreateReservationOutputRepresentation
createReservation (ConnectApi.OCICreateReservationInputRepresentation
createReservationInputRepresentation)
```

**Parameters**

*createReservationInputRepresentation*

Type: [ConnectApi.OCICreateReservationInputRepresentation](#)

Data to reserve inventory at one or more Omnichannel Inventory locations or location groups.

**Return Value**

Type: [ConnectApi.OCICreateReservationOutputRepresentation](#)

**fulfillReservation (fulfillReservationInputRepresentation)**

Fulfill one or more inventory reservations.

### API Version

51.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.OCIFulfillReservationOutputRepresentation  
fulfillReservation(ConnectApi.OCIFulfillReservationInputRepresentation  
fulfillReservationInputRepresentation)
```

### Parameters

*fulfillReservationInputRepresentation*

Type: [ConnectApi.OCIFulfillReservationInputRepresentation](#)

Wraps a list of inventory reservations to fulfill.

### Return Value

Type: [ConnectApi.OCIFulfillReservationOutputRepresentation](#)

### **getInventoryAvailability (inventoryAvailabilityInputRepresentation)**

Retrieve inventory availability data for one or more products at one or more inventory locations or location groups.

### API Version

51.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.OCIGetInventoryAvailabilityOutputRepresentation  
getInventoryAvailability(ConnectApi.OCIGetInventoryAvailabilityInputRepresentation  
inventoryAvailabilityInputRepresentation)
```

### Parameters

*inventoryAvailabilityInputRepresentation*

Type: [ConnectApi.OCIGetInventoryAvailabilityInputRepresentation](#)

Details of a request to retrieve inventory availability.

### Return Value

Type: [ConnectApi.OCIGetInventoryAvailabilityOutputRepresentation](#)

**getInventoryAvailabilityUploadStatus (uploadId)**

Retrieve the status of an inventory availability upload job.

**API Version**

51.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.OCIUploadInventoryAvailabilityStatusOutputRepresentation  
getInventoryAvailabilityUploadStatus (String uploadId)
```

**Parameters**

*uploadId*

Type: [String](#)

The upload ID of the upload job.

**Return Value**

Type: [ConnectApi.OCIUploadInventoryAvailabilityStatusOutputRepresentation](#)

**getPublishLocationStructureStatus (uploadId)**

Retrieve the status of a publish location structure job.

**API Version**

51.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.OCIPublishLocationStructureStatusOutputRepresentation  
getPublishLocationStructureStatus (String uploadId)
```

**Parameters**

*uploadId*

Type: [String](#)

The upload ID of the publish job.

## Return Value

Type: [ConnectApi.OCIPublishLocationStructureStatusOutputRepresentation](#)

## **publishLocationStructure ()**

Asynchronously publish information about your inventory locations and location groups to Omnichannel Inventory. The publish includes records whose `IsEnabled` and `ShouldSyncWithOci` fields are both `true`. This method returns an ID that you can use to retrieve the status of the publish job.

## API Version

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.OCIPublishLocationStructureOutputRepresentation  
publishLocationStructure ()
```

## Return Value

Type: [ConnectApi.OCIPublishLocationStructureOutputRepresentation](#)

## **releaseReservation (releaseReservationInputRepresentation)**

Release one or more existing inventory reservations to free up that inventory.

## API Version

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.OCIReleaseReservationOutputRepresentation  
releaseReservation (ConnectApi.OCIReleaseReservationInputRepresentation  
releaseReservationInputRepresentation)
```

## Parameters

*releaseReservationInputRepresentation*

Type: [ConnectApi.OCIReleaseReservationInputRepresentation](#)

Details of one or more inventory reservations to release.

## Return Value

Type: [ConnectApi.OCIReleaseReservationOutputRepresentation](#)

## **submitInventoryAvailabilityUpload (fileUpload)**

Upload an inventory availability data file to Omnichannel Inventory.

## API Version

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.OCIUploadInventoryAvailabilityOutputRepresentation
submitInventoryAvailabilityUpload (ConnectApi.BinaryInput fileUpload)
```

## Parameters

*fileUpload*

Type: [ConnectApi.BinaryInput](#)

JSON file containing inventory availability data.

## Return Value

Type: [ConnectApi.OCIUploadInventoryAvailabilityOutputRepresentation](#)

## Usage

To create an inventory data file, format the data as a series of JSON entries representing locations and individual inventory records.

Inventory Import Data Considerations:

- Separate the top-level entries with line feeds, not commas. Each entry must be on a single line.
- When the system reads a location entry, it assigns the subsequent inventory entries to that location until it reads another location entry.
- For each location entry, specify "mode" : "UPDATE".
- Each inventory record entry requires a unique recordId. Best practice is to use a UUID. The record Id protects against importing duplicate data.
- Each inventory record entry requires an effectiveDate.
- Each futures entry requires a nonzero quantity and a future expectedDate.
- The system only creates or updates entries that are included in the data. It doesn't delete entries that aren't included. However, if an included entry has an empty value, that value is deleted.

 **Note:** The file size limit is 10 MB, and it must be in NDJSON format. For larger data sets, you can use the headless Commerce API or split the data into multiple files. The headless Commerce API accepts GZIP or JSON files up to 100 MB in size.

This example illustrates the data format:

 **Note:** For readability, this example shows the first few entries on multiple lines. In the import file, each location and inventory record entry must be on a single line.

```
{
  "location": "Warehouse-A", // location identifier
  "mode": "UPDATE" // must be UPDATE (other operations might be available in future releases)
}
{
  "recordId": "0a87539d-f3dd-47bc-91c7-9c752e39dbe0", // unique identifier for the inventory
  record
  "onHand": 10,
  "sku": "12389156",
  "effectiveDate": "2020-12-08T14:05:22.790896-07:00",
  "futures": [ // list of future restocks
    {
      "quantity": 1,
      "expectedDate": "2021-04-18T14:05:22.781-07:00"
    },
    {
      "quantity": 5,
      "expectedDate": "2021-05-18T14:05:22.781-07:00"
    }
  ],
  "safetyStockCount": 0
}
{
  "recordId": "0a87539d-f3dd-47bc-91c7-9c752e312345",
  "onHand": 10,
  "sku": "9485728",
  "effectiveDate": "2020-12-08T14:05:22.790896-07:00",
  "futures": [
    {
      "quantity": 10,
      "expectedDate": "2021-04-18T14:05:22.781-07:00"
    }
  ],
  "safetyStockCount": 0
}
{"location": "Warehouse-B", "mode": "UPDATE"}
{"recordId": "0a87539d-f3dd-47bc-91c7-9c752e312345", "onHand": 10, "sku": "12389156", "effectiveDate": "2020-12-08T14:05:22.790896-07:00", "futures": [{"quantity": 1, "expectedDate": "2021-04-18T14:05:22.781-07:00"}], "safetyStockCount": 0}
{"recordId": "0a87539d-f3dd-47bc-91c7-9c752e312345", "onHand": 10, "sku": "9485728", "effectiveDate": "2020-12-08T14:05:22.790896-07:00", "futures": [{"quantity": 5, "expectedDate": "2021-04-18T14:05:22.781-07:00"}], "safetyStockCount": 0}
```

### **transferReservation (transferReservationInputRepresentation)**

Transfer one or more inventory reservations between locations or location groups. This API doesn't change physical quantities, but reduces the reserved quantity at the source and increases it at the destination.

#### API Version

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.OCITransferReservationOutputRepresentation  
transferReservation(ConnectApi.OCITransferReservationInputRepresentation  
transferReservationInputRepresentation)
```

## Parameters

*transferReservationInputRepresentation*

Type: [ConnectApi.OCITransferReservationInputRepresentation](#)

Wraps a list of inventory reservation transfers and specifies whether a single failure cancels the entire list.

## Return Value

Type: [ConnectApi.OCITransferReservationOutputRepresentation](#)

## **updateReservation (updateReservationInputRepresentation)**

Updates an existing reservation in Omnichannel Inventory. Add, remove, and update quantities for existing SKUs in the reservation.

## API Version

61.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.OCIUpdateReservationOutputRepresentation  
updateReservation(ConnectApi.OCIUpdateReservationInputRepresentation  
updateReservationInputRepresentation)
```

## Parameters

*updateReservationInputRepresentation*

Type: [ConnectApi.OCIUpdateReservationInputRepresentation](#) on page 1871

Data to update one or more Omnichannel Inventory item reservations.

## Return Value

Type: [ConnectApi.OCIUpdateReservationOutputRepresentation](#) on page 2160

## OMSAalytics Class

Get products with return rates, get text classified into different classifications using text analysis, and capture the return reasons from external sources based on the product ids.

### Namespace

[ConnectApi](#)

IN THIS SECTION:

[OMSAalytics Class](#)

These methods are for `OMSAalytics`. All methods are static.

## OMSAalytics Class

These methods are for `OMSAalytics`. All methods are static.

### Namespace

[ConnectApi](#)

IN THIS SECTION:

[getTextClassificationsBulkResults\(ids\)](#)

Gets text classification results for request IDs.

[productsExpand\(scope, products, expand\)](#)

Fetches expanded details of a product that aren't found in the sObject. The expanded variable fields, such as return reasons, are added as output. This method supports an extensibility framework that lets the context user override the existing implementation so they can fetch the data from third-party apps. The application doesn't require two separate APIs to get return reasons.

[productsReturnRate\(pageParam, pageSize\)](#)

Gets pages of data showing the return rates of products that are calculated by the Customer Data Platform. Return data is paginated in descending order.

[productsReturnRate\(pageParam, pageSize\)](#)

Get a page of products and their return rates.

[productsReturnRate\(pageParam, pageSize, products\)](#)

Get a page of products and their return rates for a list of product IDs.

[submitTextClassificationsRequest\(textClassificationsRequestInput, llmType\)](#)

Submits a text classification request to Einstein

### **getTextClassificationsBulkResults(ids)**

Gets text classification results for request IDs.

### API Version

59.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TextClassificationsBulkResultsOutputRepresentation  
getTextClassificationsBulkResults(List<String> ids)
```

## Parameters

*ids*

Type: List(String)

List of request IDs.

## Return Value

Type: [ConnectApi.TextClassificationsBulkResultsOutputRepresentation](#)

## Example

```
List <String> requestIds = new List <String> ();  
    requestIds.add(requestId);  
    ConnectApi.TextClassificationsBulkResultsOutputRepresentation output =  
    ConnectApi.OMSanalytics.getTextClassificationsBulkResults(requestIds);
```

## **productsExpand(scope, products, expand)**

Fetches expanded details of a product that aren't found in the sObject. The expanded variable fields, such as return reasons, are added as output. This method supports an extensibility framework that lets the context user override the existing implementation so they can fetch the data from third-party apps. The application doesn't require two separate APIs to get return reasons.

## API Version

59.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ProductsListOutputRepresentation productsExpand(String scope,  
List<String> products, List<ConnectApi.ProductExpandType> expand)
```

## Parameters

*scope*

Type: String

The scope for the extensibility framework. Requires a web store ID.

*products*

Type: List )String)

A list of IDs to fetch details for.

*expand*

Type: List )String)

Output representation for expand feature.

## Return Value

Type: `ConnectApi.ProductsListOutputRepresentation`

## Example

```
String scope = 'webstoreId eq ' + ws.Id;
    ConnectApi.ProductsListOutputRepresentation output =
ConnectApi.OMSanalytics.productsExpand(scope, productIds, new List
<ConnectApi.ProductExpandType> {
    ConnectApi.ProductExpandType.ReturnReasons
});
```

## **productsReturnRate (pageParam, pageSize)**

Gets pages of data showing the return rates of products that are calculated by the Customer Data Platform. Return data is paginated in descending order.

## API Version

59.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ProductReturnRateListOutputRepresentation
productsReturnRate(Integer pageParam, Integer pageSize)
```

## Parameters

*page*

Type: String

The page number for the list of products. Starts at 0.

*products*

Type: List )String)

A list of IDs to fetch details for.

*pageSize*

Type: List )Integer)

The number of products that are returned on each page.

## Return Value

Type: [ConnectApi.ProductReturnRateListOutputRepresentation](#)

## Example

```
ConnectApi.ProductReturnRateListOutputRepresentation output =  
ConnectApi.OMSanalytics.productsReturnRate(page, pageSize);
```

## **productsReturnRate (pageParam, pageSize)**

Get a page of products and their return rates.

## API Version

59.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ProductReturnRateListOutputRepresentation  
productsReturnRate(Integer pageParam, Integer pageSize)
```

## Parameters

*pageParam*

Type: [Integer](#)

Specifies the page token to use to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

## Return Value

Type: [ConnectApi.ProductReturnRateListOutputRepresentation](#)

## **productsReturnRate (pageParam, pageSize, products)**

Get a page of products and their return rates for a list of product IDs.

## API Version

60.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ProductReturnRateListOutputRepresentation
productsReturnRate(Integer pageParam, Integer pageSize, List<String> products)
```

## Parameters

*pageParam*

Type: [Integer](#)

Specifies the page token to use to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*products*

Type: [List<String>](#)

List of product IDs.

## Return Value

Type: `ConnectApi.ProductReturnRateListOutputRepresentation`

## **submitTextClassificationsRequest (textClassificationsRequestInput, llmType)**

Submits a text classification request to Einstein

## API Version

59.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TextClassificationsOutputRepresentation
submitTextClassificationsRequest (ConnectApi.TextClassificationsInputRepresentation
textClassificationsRequestInput, String llmType)
```

## Parameters

*textClassificationsRequestInput*

Type: [ConnectApi.TextClassificationsInputRepresentation](#)

Text classification containing a list of text strings and classifiers. Each text string is classified into classifiers based on analysis.

### *LlmType*

Type: List [String](#))

The large language model that's used for analysis. Supports Open AI only.

### Return Value

Type: [ConnectApi.TextClassificationsOutputRepresentation](#)

### Example

```
ConnectApi.TextClassificationsInputRepresentation textClassificationsInputRepresentation
= new ConnectApi.TextClassificationsInputRepresentation();
textClassificationsInputRepresentation.textList = textList;
textClassificationsInputRepresentation.classifiers = classifiers;
List < String > requestIds = new List < String > ();
```

## Orchestration Class

Get orchestration instances.

### Namespace

[ConnectApi](#)

### Orchestration Methods

These methods are for `Orchestration`. All methods are static.

IN THIS SECTION:

[getOrchestrationInstanceCollection\(relatedRecordId\)](#)

Get orchestration instances associated with a Salesforce record that's configured as a context record for orchestration interactive steps.

#### **getOrchestrationInstanceCollection(relatedRecordId)**

Get orchestration instances associated with a Salesforce record that's configured as a context record for orchestration interactive steps.

### API Version

54.0

### Requires Chatter

No

## Signature

```
public static ConnectApi.OrchestrationInstanceCollection  
getOrchestrationInstanceCollection(String relatedRecordId)
```

## Parameters

*relatedRecordId*

Type: [String](#)

The ID of a record configured as a context record for orchestration interactive steps.

## Return Value

Type: [ConnectApi.OrchestrationInstanceCollection](#)

# OrderPaymentSummary Class

Work with payments in Order Management.

## Namespace

[ConnectApi](#)

## OrderPaymentSummary Methods

These methods are for `OrderPaymentSummary`. All methods are static.

### IN THIS SECTION:

[createOrderPaymentSummary\(orderPaymentSummaryInput\)](#)

Create an `OrderPaymentSummary` for an `OrderSummary`. Specify a payment authorization or payments that share the same payment method. In an org with the multicurrency feature enabled, the `OrderPaymentSummary` inherits the `CurrencyIsoCode` value from the `OrderSummary`.

### **createOrderPaymentSummary (orderPaymentSummaryInput)**

Create an `OrderPaymentSummary` for an `OrderSummary`. Specify a payment authorization or payments that share the same payment method. In an org with the multicurrency feature enabled, the `OrderPaymentSummary` inherits the `CurrencyIsoCode` value from the `OrderSummary`.

## API Version

48.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.CreateOrderPaymentSummaryOutputRepresentation  
createOrderPaymentSummary (ConnectApi.CreateOrderPaymentSummaryInputRepresentation  
orderPaymentSummaryInput)
```

## Parameters

*orderPaymentSummaryInput*

Type: [ConnectApi.CreateOrderPaymentSummaryInputRepresentation](#)

The OrderSummary and payment authorization or payments.

## Return Value

Type: [ConnectApi.CreateOrderPaymentSummaryOutputRepresentation](#)

## Example

```
String orderSummaryId = '10sxx0000004CCG';  
String paymentId1 = '0a3xx0000000085AAA';  
String paymentId2 = '0a3xx0000000085BBB';  
  
ConnectApi.CreateOrderPaymentSummaryInputRepresentation orderPaymentSummaryInput = new  
ConnectApi.CreateOrderPaymentSummaryInputRepresentation();  
orderPaymentSummaryInput.orderSummaryId = orderSummaryId;  
List<String> paymentList = new List<String>();  
paymentList.add(paymentId1);  
paymentList.add(paymentId2);  
orderPaymentSummaryInput.paymentIds = paymentList;  
  
ConnectApi.CreateOrderPaymentSummaryOutputRepresentation result =  
ConnectAPI.OrderPaymentSummary.createOrderPaymentSummary(orderPaymentSummaryInput);
```

# OrderSummary Class

Work with orders in Order Management.

## Namespace

[ConnectApi](#)

## OrderSummary Methods

These methods are for `OrderSummary`. All methods are static.

## IN THIS SECTION:

[adjustPreview\(orderSummaryId, adjustInput\)](#)

Retrieve the expected results of adjusting the price of one or more OrderItemSummaries from an OrderSummary, without actually executing the adjustment. The response data contains the financial changes that would result from submitting the proposed adjustment.

[adjustSubmit\(orderSummaryId, adjustInput\)](#)

Adjust the price of one or more OrderItemSummaries from an OrderSummary, and create corresponding change orders.

[createCreditMemo\(orderSummaryId, creditMemoInput\)](#)

Create a credit memo to represent the refund for one or more change orders associated with an OrderSummary.

[createMultipleInvoices\(invoicesInput\)](#)

Create Invoices to represent the charges for one or more change orders. Create Invoices for change orders that increase order amounts, such as for return fees. When you ensure the refund for a return, include the invoices for any associated return fees in the request.

[ensureFundsAsync\(orderSummaryId, ensureFundsInput\)](#)

Ensure funds for an Invoice and apply them to it. If needed, capture authorized funds by sending a request to a payment provider. This method inserts a background operation into an asynchronous job queue and returns the ID of that operation so you can track its status. Payment gateway responses appear in the payment gateway log and do not affect the background operation status.

[ensureRefundsAsync\(orderSummaryId, ensureRefundsInput\)](#)

Ensure refunds for a CreditMemo or excess funds by sending a request to a payment provider. This method inserts a background operation into an asynchronous job queue and returns the ID of that operation so you can track its status. Payment gateway responses appear in the payment gateway log and don't affect the background operation status.

[multipleEnsureFundsAsync\(multipleEnsureFundsInput\)](#)

Ensure and apply funds for one or more Invoices. If needed, capture authorized funds by sending a request to a payment provider. This method inserts a background operation into an asynchronous job queue and returns the ID of that operation so you can track its status. Payment gateway responses appear in the payment gateway log and do not affect the background operation status.

[previewCancel\(orderSummaryId, changelInput\)](#)

Retrieve the expected change order values for canceling one or more OrderItemSummaries from an OrderSummary, without actually executing the cancel.

[previewReturn\(orderSummaryId, changelInput\)](#)

Retrieve the expected change order values for a simple return of one or more OrderItemSummaries from an OrderSummary, without actually executing the return.

[submitCancel\(orderSummaryId, changelInput\)](#)

Cancel one or more OrderItemSummaries from an OrderSummary, and create a corresponding change order.

[submitReturn\(orderSummaryId, changelInput\)](#)

Return one or more OrderItemSummaries from an OrderSummary, and create a corresponding change order. This return is a simple return that creates a change order but not a ReturnOrder.

**adjustPreview(orderSummaryId, adjustInput)**

Retrieve the expected results of adjusting the price of one or more OrderItemSummaries from an OrderSummary, without actually executing the adjustment. The response data contains the financial changes that would result from submitting the proposed adjustment.

## API Version

49.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.AdjustOrderSummaryOutputRepresentation adjustPreview(String orderSummaryId, ConnectApi.AdjustOrderItemSummaryInputRepresentation adjustInput)
```

## Parameters

*orderSummaryId*

Type: [String](#)

ID of the OrderSummary.

*adjustInput*

Type: [ConnectApi.AdjustOrderItemSummaryInputRepresentation](#)

Price adjustments to order item summaries that together make up a price adjustment to an order, with options for adjusting items in the process of being fulfilled.

## Return Value

Type: [ConnectApi.AdjustOrderSummaryOutputRepresentation](#)

## Usage

When a price adjustment is applied to an OrderItemSummary, its quantities are considered in three groups:

### Pre-fulfillment

QuantityAvailableToFulfill, which is equal to QuantityOrdered - QuantityCanceled - QuantityAllocated

### In-fulfillment

QuantityAllocated - QuantityFulfilled

### Post-fulfillment

QuantityAvailableToReturn, which is equal to QuantityFulfilled - QuantityReturnInitiated

You can apply adjustments to these groups in three different ways, controlled by the *allocatedItemsChangeOrderType* input property:

- Distribute the adjustment evenly between pre-fulfillment and post-fulfillment quantities. Ignore in-fulfillment quantities. Submitting the adjustment would create one change order for the adjustments to pre-fulfillment quantities and one change order for the adjustments to post-fulfillment quantities.
- Distribute the adjustment evenly between pre-fulfillment, in-fulfillment, and post-fulfillment quantities. Submitting the adjustment would create one change order for the adjustments to both pre-fulfillment and in-fulfillment quantities, and one change order for the adjustments to post-fulfillment quantities.

- Distribute the adjustment evenly between pre-fulfillment, in-fulfillment, and post-fulfillment quantities. Submitting the adjustment would create one change order for the adjustments to pre-fulfillment quantities, one change order for the adjustments to in-fulfillment quantities, and one change order for the adjustments to post-fulfillment quantities.

SEE ALSO:

[createCreditMemo\(orderSummaryId, creditMemoInput\)](#)

[ensureRefundsAsync\(orderSummaryId, ensureRefundsInput\)](#)

[adjustSubmit\(orderSummaryId, adjustInput\)](#)

### **adjustSubmit (orderSummaryId, adjustInput)**

Adjust the price of one or more OrderItemSummaries from an OrderSummary, and create corresponding change orders.

### API Version

49.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.AdjustOrderSummaryOutputRepresentation adjustSubmit (String  
orderSummaryId, ConnectApi.AdjustOrderItemSummaryInputRepresentation adjustInput)
```

### Parameters

*orderSummaryId*

Type: [String](#)

ID of the OrderSummary.

*adjustInput*

Type: [ConnectApi.AdjustOrderItemSummaryInputRepresentation](#)

Price adjustments to order item summaries that together make up a price adjustment to an order, with options for adjusting items in the process of being fulfilled.

### Return Value

Type: [ConnectApi.AdjustOrderSummaryOutputRepresentation](#)

### Usage

When a price adjustment is applied to an OrderItemSummary, its quantities are considered in three groups:

#### **Pre-fulfillment**

QuantityAvailableToFulfill, which is equal to QuantityOrdered - QuantityCanceled - QuantityAllocated

#### **In-fulfillment**

QuantityAllocated - QuantityFulfilled

**Post-fulfillment**

QuantityAvailableToReturn, which is equal to QuantityFulfilled - QuantityReturnInitiated

You can apply adjustments to these groups in three different ways, controlled by the *allocatedItemsChangeOrderType* input property:

- Distribute the adjustment evenly between pre-fulfillment and post-fulfillment quantities. Ignore in-fulfillment quantities. Create one change order for the adjustments to pre-fulfillment quantities and one change order for the adjustments to post-fulfillment quantities.
- Distribute the adjustment evenly between pre-fulfillment, in-fulfillment, and post-fulfillment quantities. Create one change order for the adjustments to both pre-fulfillment and in-fulfillment quantities, and one change order for the adjustments to post-fulfillment quantities.
- Distribute the adjustment evenly between pre-fulfillment, in-fulfillment, and post-fulfillment quantities. Create one change order for the adjustments to pre-fulfillment quantities, one change order for the adjustments to in-fulfillment quantities, and one change order for the adjustments to post-fulfillment quantities.

After submitting a price adjustment, process refunds as appropriate:

- If the discount only applied to OrderItemSummaries for which payment hasn't been captured, it doesn't require a refund. This situation normally applies to OrderItemSummaries in the US that haven't been fulfilled.
- If the discount applied to OrderItemSummaries that haven't been fulfilled and for which payment has been captured, process a refund. In this case, pass the *totalExcessFundsAmount* from the output representation to the [ensureRefundsAsync\(\)](#) method.
- If the discount applied to OrderItemSummaries that have been fulfilled, process a refund. Pass the *postFulfillmentChangeOrderId* from the output representation to the [createCreditMemo\(\)](#) method, then pass the CreditMemo to the [ensureRefundsAsync\(\)](#) method.
- If the discount applied to both fulfilled and unfulfilled OrderItemSummaries for which payment has been captured, process both refunds. Pass the *postFulfillmentChangeOrderId* from the output representation to the [createCreditMemo\(\)](#) method, then pass the credit memo and the *totalExcessFundsAmount* from the output representation to the [ensureRefundsAsync\(\)](#) method.

SEE ALSO:

[createCreditMemo\(orderSummaryId, creditMemoInput\)](#)  
[ensureRefundsAsync\(orderSummaryId, ensureRefundsInput\)](#)  
[adjustPreview\(orderSummaryId, adjustInput\)](#)

**createCreditMemo(orderSummaryId, creditMemoInput)**

Create a credit memo to represent the refund for one or more change orders associated with an OrderSummary.

**API Version**

48.0

**Requires Chatter**

No

## Signature

```
public static ConnectApi.CreateCreditMemoOutputRepresentation createCreditMemo(String orderSummaryId, ConnectApi.CreateCreditMemoInputRepresentation creditMemoInput)
```

## Parameters

*orderSummaryId*

Type: [String](#)

ID of the OrderSummary.

*creditMemoInput*

Type: [ConnectApi.CreateCreditMemoInputRepresentation](#)

The list of change order IDs.

## Return Value

Type: [ConnectApi.CreateCreditMemoOutputRepresentation](#)

## **createMultipleInvoices (invoicesInput)**

Create Invoices to represent the charges for one or more change orders. Create Invoices for change orders that increase order amounts, such as for return fees. When you ensure the refund for a return, include the invoices for any associated return fees in the request.

## API Version

56.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.CreateMultipleInvoicesFromChangeOrdersOutputRepresentation createMultipleInvoices(ConnectApi.CreateMultipleInvoicesFromChangeOrdersInputRepresentation invoicesInput)
```

## Parameters

*invoicesInput*

Type: [ConnectApi.CreateMultipleInvoicesFromChangeOrdersInputRepresentation](#)

Data about the change orders to create Invoices for.

## Return Value

Type: [ConnectApi.CreateMultipleInvoicesFromChangeOrdersOutputRepresentation](#)

### SEE ALSO:

[ensureRefundsAsync\(orderSummaryId, ensureRefundsInput\)](#)

[createReturnOrder\(returnOrderInput\)](#)

[returnItems\(returnOrderId, returnItemsInput\)](#)

## **ensureFundsAsync (orderSummaryId, ensureFundsInput)**

Ensure funds for an Invoice and apply them to it. If needed, capture authorized funds by sending a request to a payment provider. This method inserts a background operation into an asynchronous job queue and returns the ID of that operation so you can track its status. Payment gateway responses appear in the payment gateway log and do not affect the background operation status.

## API Version

48.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.EnsureFundsAsyncOutputRepresentation ensureFundsAsync(String orderSummaryId, ConnectApi.EnsureFundsAsyncInputRepresentation ensureFundsInput)
```

## Parameters

*isConsiderReservedBalanceAmount*

Type: [Boolean](#)

If true, the reserved balance amount is used for the Order Summary to fund the invoice. If not enough reserved balance amount, any available balance that isn't reserved by another Order Summary is used. If false, any available balance is used.

*orderSummaryId*

Type: [String](#)

ID of the OrderSummary.

*ensureFundsInput*

Type: [ConnectApi.EnsureFundsAsyncInputRepresentation](#)

The ID of the Invoice.

## Return Value

Type: [ConnectApi.EnsureFundsAsyncOutputRepresentation](#)

## Usage

This method checks the `OrderPaymentSummaries` associated with the specified `OrderSummary` for funds to apply to the Invoice balance following this logic:

 **Note:** If multiple `OrderPaymentSummaries` have equal `BalanceAmount` values, their order of selection is random.

1. Verify that the Invoice balance doesn't exceed the total `BalanceAmount` of all the `OrderPaymentSummaries` associated with the `OrderSummary`.
2. If an `OrderPaymentSummary` has a `BalanceAmount` equal to the Invoice balance, apply the funds from that `OrderPaymentSummary`.
3. If no exact match was found, apply funds from the `OrderPaymentSummary` with the largest `BalanceAmount`.
4. If the Invoice still has a balance to ensure, repeat steps 2 and 3 until the full balance is ensured or no captured funds remain.
5. If the Invoice still has a balance, look for an `OrderPaymentSummary` with an authorized amount equal to the remaining Invoice balance. If one exists, capture and apply the funds from that `OrderPaymentSummary`.
6. If no exact match was found, capture and apply funds from the `OrderPaymentSummary` with the largest authorized amount.
7. If the Invoice still has a balance to ensure, repeat steps 5 and 6 until the full balance is ensured.

 **Note:** If the method creates a payment, the payment record's `ClientContext` value isn't predictable. Don't use it in custom logic.

SEE ALSO:

[multipleEnsureFundsAsync\(multipleEnsureFundsInput\)](#)

### **ensureRefundsAsync (orderSummaryId, ensureRefundsInput)**

Ensure refunds for a `CreditMemo` or excess funds by sending a request to a payment provider. This method inserts a background operation into an asynchronous job queue and returns the ID of that operation so you can track its status. Payment gateway responses appear in the payment gateway log and don't affect the background operation status.

### API Version

48.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.EnsureRefundsAsyncOutputRepresentation ensureRefundsAsync (String
orderSummaryId, ConnectApi.EnsureRefundsAsyncInputRepresentation ensureRefundsInput)
```

### Parameters

*isConsiderReservedBalanceAmount*

Type: [Boolean](#)

If true, the refundable amount is used to open the payment balance for the reservedBalanceAmount in the Order Payment Summaries. The remaining refundable amount considers the sequence of order payment summaries, if provided. If false, any reserved balance amount for exchanges is refunded.

*orderSummaryId*

Type: [String](#)

ID of the OrderSummary.

*ensureRefundsInput*

Type: [ConnectApi.EnsureRefundsAsyncInputRepresentation](#)

ID of a credit memo to ensure refunds for, an amount of excess funds to refund, or both. At least one is required. Also includes any invoices for fees that reduce the refund amount, such as return fees. If multiple payment methods are available, you can specify how to distribute the refund.

## Return Value

Type: [ConnectApi.EnsureRefundsAsyncOutputRepresentation](#)

## Usage

This method applies the refund to the OrderPaymentSummaries associated with the specified OrderSummary following this logic.

 **Note:** If multiple OrderPaymentSummaries have equal `AvailableToRefund` amounts, their order of selection is random.

1. Verify that the CreditMemo balance and excess funds amount don't exceed the total `AvailableToRefund` amount of all the OrderPaymentSummaries associated with the OrderSummary.
2. If `sequences` is specified, follow these steps.
  - a. Traverse the `sequences` list in order and apply the specified refund amounts to the specified OrderPaymentSummaries.
  - b. If the specified CreditMemo and excess funds are fully refunded, or if `isAllowPartial` is true, then the action stops here.
3. If a CreditMemo is specified, follow these steps.
  - a. If an OrderPaymentSummary has an `AvailableToRefund` amount matching the CreditMemo's remaining balance, apply the refund to that payment.
  - b. If no exact match was found but one or more OrderPaymentSummary has a large enough `AvailableToRefund` amount to cover the balance, use the OrderPaymentSummary with the smallest `AvailableToRefund` amount.
  - c. If no single OrderPaymentSummary has a large enough `AvailableToRefund` amount, use multiple OrderPaymentSummaries in descending order of `AvailableToRefund` amount. This ensures the fewest OrderPaymentSummaries are used.
4. If only one OrderPaymentSummary is specified but has multiple payments, follow these steps.
  - a. If a payment has an amount matching the CreditMemo's remaining balance, apply the refund to that payment.
  - b. If no exact match was found but one or more payment has a large enough amount to cover the balance, use the payment with the smallest amount.
  - c. If no single payment has a large enough amount, use multiple payments in descending order of amount. This ensures the fewest payments are used.
5. If an excess funds amount is specified, follow these steps.
  - a. Examine those OrderPaymentSummaries. If one has an `AvailableToRefund` amount matching the excess funds amount, apply the refund to that OrderPaymentSummary.

- b. If no exact match was found but one or more OrderPaymentSummary has a large enough AvailableToRefund amount to cover the balance, use the OrderPaymentSummary with the smallest AvailableToRefund amount.
- c. If no single OrderPaymentSummary has a large enough AvailableToRefund amount, use multiple OrderPaymentSummaries in descending order of AvailableToRefund amount. This ensures the fewest OrderPaymentSummaries are used.

 **Note:** If the method creates a refund, the refund record's ClientContext value isn't predictable. Don't use it in custom logic.

### **multipleEnsureFundsAsync (multipleEnsureFundsInput)**

Ensure and apply funds for one or more Invoices. If needed, capture authorized funds by sending a request to a payment provider. This method inserts a background operation into an asynchronous job queue and returns the ID of that operation so you can track its status. Payment gateway responses appear in the payment gateway log and do not affect the background operation status.

#### API Version

56.0

#### Requires Chatter

No

#### Signature

```
public static ConnectApi.MultipleAsyncOutputRepresentation
multipleEnsureFundsAsync (ConnectApi.MultipleEnsureFundsAsyncInputRepresentation
multipleEnsureFundsInput)
```

#### Parameters

*multipleEnsureFundsInput*

Type: [ConnectApi.MultipleEnsureFundsAsyncInputRepresentation](#)

List of Invoices and the associated OrderSummaries.

#### Return Value

Type: [ConnectApi.MultipleAsyncOutputRepresentation](#)

#### Usage

For each Invoice in the request, this method checks the OrderPaymentSummaries associated with the specified OrderSummary for funds to apply to the Invoice balance following this logic.

 **Note:** If multiple OrderPaymentSummaries have equal BalanceAmount values, their order of selection is random.

1. Verify that the Invoice balance doesn't exceed the total `BalanceAmount` of all the `OrderPaymentSummaries` associated with the `OrderSummary`.
2. If an `OrderPaymentSummary` has a `BalanceAmount` equal to the invoice balance, apply the funds from that `OrderPaymentSummary`.
3. If no exact match was found, apply funds from the `OrderPaymentSummary` with the largest `BalanceAmount`.
4. If the Invoice still has a balance to ensure, repeat steps 2 and 3 until the full balance is ensured or no captured funds remain.
5. If the Invoice still has a balance, look for an `OrderPaymentSummary` with an authorized amount equal to the remaining Invoice balance. If one exists, capture and apply the funds from that `OrderPaymentSummary`.
6. If no exact match was found, capture and apply funds from the `OrderPaymentSummary` with the largest authorized amount.
7. If the Invoice still has a balance to ensure, repeat steps 5 and 6 until the full balance is ensured.

**Note:** If the method creates a payment, the payment record's `ClientContext` value isn't predictable. Don't use it in custom logic.

SEE ALSO:

[ensureFundsAsync\(orderSummaryId, ensureFundsInput\)](#)

### **previewCancel(orderSummaryId, changeInput)**

Retrieve the expected change order values for canceling one or more `OrderItemSummaries` from an `OrderSummary`, without actually executing the cancel.

### API Version

48.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.PreviewCancelOutputRepresentation previewCancel(String  
orderSummaryId, ConnectApi.ChangeInputRepresentation changeInput)
```

### Parameters

*orderSummaryId*

Type: [String](#)

ID of the `OrderSummary`.

*changeInput*

Type: [ConnectApi.ChangeInputRepresentation](#)

A list of changes to `OrderItemSummaries` that make up an order change, such as a cancel or return.

## Return Value

Type: [ConnectApi.PreviewCancelOutputRepresentation](#)

### SEE ALSO:

- [createCreditMemo\(orderSummaryId, creditMemoInput\)](#)
- [ensureRefundsAsync\(orderSummaryId, ensureRefundsInput\)](#)
- [submitCancel\(orderSummaryId, changeInput\)](#)

## **previewReturn(orderSummaryId, changeInput)**

Retrieve the expected change order values for a simple return of one or more OrderItemSummaries from an OrderSummary, without actually executing the return.

## API Version

48.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.PreviewReturnOutputRepresentation previewReturn(String orderSummaryId, ConnectApi.ChangeInputRepresentation changeInput)
```

## Parameters

*orderSummaryId*

Type: [String](#)

ID of the OrderSummary.

*changeInput*

Type: [ConnectApi.ChangeInputRepresentation](#)

A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.

## Return Value

Type: [ConnectApi.PreviewReturnOutputRepresentation](#)

### SEE ALSO:

- [createCreditMemo\(orderSummaryId, creditMemoInput\)](#)
- [ensureRefundsAsync\(orderSummaryId, ensureRefundsInput\)](#)
- [submitReturn\(orderSummaryId, changeInput\)](#)

## **submitCancel(orderSummaryId, changeInput)**

Cancel one or more OrderItemSummaries from an OrderSummary, and create a corresponding change order.

### API Version

48.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.SubmitCancelOutputRepresentation submitCancel(String  
orderSummaryId, ConnectApi.ChangeInputRepresentation changeInput)
```

### Parameters

*orderSummaryId*

Type: [String](#)

ID of the OrderSummary.

*changeInput*

Type: [ConnectApi.ChangeInputRepresentation](#)

A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.

### Return Value

Type: [ConnectApi.SubmitCancelOutputRepresentation](#)

### SEE ALSO:

[createCreditMemo\(orderSummaryId, creditMemoInput\)](#)

[ensureRefundsAsync\(orderSummaryId, ensureRefundsInput\)](#)

[previewCancel\(orderSummaryId, changeInput\)](#)

### **submitReturn (orderSummaryId, changeInput)**

Return one or more OrderItemSummaries from an OrderSummary, and create a corresponding change order. This return is a simple return that creates a change order but not a ReturnOrder.

### API Version

48.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.SubmitReturnOutputRepresentation submitReturn(String  
orderSummaryId, ConnectApi.ChangeInputRepresentation changeInput)
```

## Parameters

*orderSummaryId*

Type: [String](#)

ID of the OrderSummary.

*changeInput*

Type: [ConnectApi.ChangeInputRepresentation](#)

A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.

## Return Value

Type: [ConnectApi.SubmitReturnOutputRepresentation](#)

## Usage

After submitting a return, process a refund. Pass the *changeOrderId* from the output representation to the [createCreditMemo\(\)](#) method, then pass the credit memo to the [ensureRefundsAsync\(\)](#) method.

SEE ALSO:

[createCreditMemo\(orderSummaryId, creditMemoInput\)](#)

[previewReturn\(orderSummaryId, changeInput\)](#)

# OrderSummaryCreation Class

Create Order Summaries in Order Management.

## Namespace

[ConnectApi](#)

## OrderSummaryCreation Methods

These methods are for `OrderSummaryCreation`. All methods are static.

IN THIS SECTION:

[createOrderSummary\(orderSummaryInput\)](#)

Create an OrderSummary based on an order. That order is considered the original order for the OrderSummary. Subsequent change orders that apply to the OrderSummary are also represented as orders. You can specify whether the order is managed in Salesforce Order Management or by an external system. Most Salesforce Order Management APIs can run only on orders that it manages.

### **createOrderSummary (orderSummaryInput)**

Create an OrderSummary based on an order. That order is considered the original order for the OrderSummary. Subsequent change orders that apply to the OrderSummary are also represented as orders. You can specify whether the order is managed in Salesforce Order Management or by an external system. Most Salesforce Order Management APIs can run only on orders that it manages.

### API Version

48.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.OrderSummaryOutputRepresentation  
createOrderSummary (ConnectApi.OrderSummaryInputRepresentation orderSummaryInput)
```

### Parameters

*orderSummaryInput*

Type: [ConnectApi.OrderSummaryInputRepresentation](#)

Input object that wraps the ID of the source order.

### Return Value

Type: [ConnectApi.OrderSummaryOutputRepresentation](#)

## Organization Class

Access information about an org.

## Namespace

[ConnectApi](#)

## Organization Methods

These methods are for `Organization`. All methods are static.

### IN THIS SECTION:

[getSettings\(\)](#)

Get information about the context user and the org, including which features are enabled.

### **getSettings ()**

Get information about the context user and the org, including which features are enabled.

### API Version

28.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.OrganizationSettings getSettings()
```

### Return Value

Type: [ConnectApi.OrganizationSettings](#)

## PardotBusinessUnitContext Class

Get the Pardot business units the context user has access to.

### Namespace

[ConnectApi](#)

## PardotBusinessUnitContext Methods

These methods are for `PardotBusinessUnitContext`. All methods are static.

### IN THIS SECTION:

[getBusinessUnitContext\(\)](#)

Get the Pardot business units the context user has access to.

[getBusinessUnitContextByIsCurrentStatus\(isCurrent\)](#)

Get the Pardot business units the context user has access to by specifying the current status.

### **getBusinessUnitContext ()**

Get the Pardot business units the context user has access to.

### API Version

55.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.PardotBusinessUnitContextOutput getBusinessUnitContext()
```

### Return Value

Type: [ConnectApi.PardotBusinessUnitContextOutput](#)

### **getBusinessUnitContextByIsCurrentStatus (isCurrent)**

Get the Pardot business units the context user has access to by specifying the current status.

#### API Version

55.0

#### Requires Chatter

No

#### Signature

```
public static ConnectApi.PardotBusinessUnitContextOutput  
getBusinessUnitContextByIsCurrentStatus(Boolean isCurrent)
```

#### Parameters

*isCurrent*

Type: [Boolean](#)

Specifies whether to return only the business unit that's selected as the context user's current business unit context in the business unit switcher of the Pardot Lightning app (`true`) or to return only the business units that aren't selected as the context user's current business unit context (`false`).

#### Return Value

Type: [ConnectApi.PardotBusinessUnitContextOutput](#)

## Payments Class

Authorize a payment, capture an authorized payment, and refund an authorized payment.

### Namespace

[ConnectApi](#)

### Payments Methods

These methods are for `Payments`. All methods are static.

#### IN THIS SECTION:

[authorize\(authorizePayment\)](#)

Authorize a payment.

[postAuth\(postAuthorizePayment\)](#)

Confirms that the merchant is ready to capture payment of an existing pre-authorized transaction.

[reverseAuthorization\(AuthReversalInput, authorizationId\)](#)

Reverses a payment authorization.

[capture\(AuthCaptureInput, authorizationId\)](#)

Capture an authorized payment.

[refund\(ReferencedRefundInput, paymentId\)](#)

Refund an authorized payment.

[sale\(sale\)](#)

Captures a payment without any prior authorization and creates a payment entity. The payment sale transaction is a combination of an [Authorize](#) transaction and [Capture](#) transaction. This payment sale method allows merchants to request that the funds are transferred to the merchant account in a single command, with no further action (such as charging a credit card) from the merchant.

[tokenizePaymentMethod\(tokenizePaymentMethodInput\)](#)

Method to take the input parameters of the payment method you want to tokenize and then pass them to the payment gateway's tokenization service. The results of the tokenization request are returned as a response from the payment gateway.

### **authorize (authorizePayment)**

Authorize a payment.

#### API Version

51.0

#### Requires Chatter

No

#### Signature

```
global static ConnectApi.AuthorizationResponse authorize (ConnectApi.AuthorizationRequest authorizePayment)
```

#### Parameters

*authorizePayment*

Type: [ConnectApi.AuthorizationRequest](#)

Represents a payment authorization.

#### Return Value

Type: [ConnectApi.AuthorizationResponse](#)

### **postAuth (postAuthorizePayment)**

Confirms that the merchant is ready to capture payment of an existing pre-authorized transaction.

#### API Version

54.0

## Requires Chatter

No

## Signature

```
global static ConnectApi.PostAuthorizationResponse postAuth(ConnectApi.PostAuthRequest  
postAuthorizePayment)
```

## Parameters

*postAuthorizePayment*

Type: [ConnectApi.PostAuthRequest](#)

Information about the payment, payment method, and payment gateway from the original payment authorization.

## Return Value

Type: [ConnectApi.PostAuthorizationResponse](#)

## **reverseAuthorization (AuthReversalInput, authorizationId)**

Reverses a payment authorization.

## API Version

51.0

## Requires Chatter

No

## Signature

```
global static ConnectApi.AuthorizationReversalResponse  
reverseAuthorization(ConnectApi.AuthorizationReversalRequest AuthReversalInput, String  
authorizationId)
```

## Parameters

*AuthReversalInput*

Type: [ConnectApi.AuthorizationReversalRequest](#)

Input information for the payment authorization reversal.

*authorizationId*

Type: [String](#)

The ID of the payment authorization to be reversed.

## Return Value

Type: [ConnectApi.AuthorizationReversalResponse](#)

**capture (AuthCaptureInput, authorizationId)**

Capture an authorized payment.

To access Payments methods, you need these permissions.

- Salesforce Order Management License
- PaymentsAPIUser user permission. This permission is available with the Salesforce Order Management License. Your Salesforce admin assigns it to your profile.

**API Version**

50.0

**Requires Chatter**

No

**Signature**

```
global static ConnectApi.CaptureResponse capture (ConnectApi.CaptureRequest  
AuthCaptureInput, String authorizationId)
```

**Parameters**

*AuthCaptureInput*

Type: [ConnectApi.CaptureRequest](#)

A [ConnectApi.CaptureRequest](#) object with information about the payment capture.

*authorizationId*

Type: [String](#)

ID of the payment authorization. Required.

**Return Value**

Type: [ConnectApi.CaptureResponse](#)

**refund (ReferencedRefundInput, paymentId)**

Refund an authorized payment.

To access Payments methods, you need these permissions.

- Salesforce Order Management License
- PaymentsAPIUser user permission. This permission is available with the Salesforce Order Management License. Your Salesforce admin assigns it to your profile.

**API Version**

50.0

## Requires Chatter

No

## Signature

```
global static ConnectApi.ReferencedRefundResponse  
refund(ConnectApi.ReferencedRefundRequest ReferencedRefundInput, String paymentId)
```

## Parameters

*ReferencedRefundInput*

Type: [ConnectApi.ReferencedRefundRequest](#)

A [ConnectApi.ReferencedRefundRequest](#) object with information about the refund.

*paymentId*

Type: [String](#)

ID of the payment to be refunded. Required.

## Return Value

Type: [ConnectApi.ReferencedRefundResponse](#)

## **sale (sale)**

Captures a payment without any prior authorization and creates a payment entity. The payment sale transaction is a combination of an [Authorize](#) transaction and [Capture](#) transaction. This payment sale method allows merchants to request that the funds are transferred to the merchant account in a single command, with no further action (such as charging a credit card) from the merchant.

## API Version

54.0

## Requires Chatter

No

## Signature

```
global static ConnectApi.SaleResponse sale(ConnectApi.SaleRequest sale)
```

## Parameters

*sale*

Type: [ConnectApi.SaleRequest](#)

Payment sale input class.

## Return Value

Type: [ConnectApi.SaleResponse](#)

### **tokenizePaymentMethod(tokenizePaymentMethodInput)**

Method to take the input parameters of the payment method you want to tokenize and then pass them to the payment gateway's tokenization service. The results of the tokenization request are returned as a response from the payment gateway.

#### API Version

52.0

#### Requires Chatter

No

#### Signature

```
global static ConnectApi.PaymentMethodTokenizationResponse  
tokenizePaymentMethod(ConnectApi.PaymentMethodTokenizationRequest  
tokenizePaymentMethodInput)
```

#### Parameters

*tokenizePaymentMethodInput*  
Type: [ConnectApi.PaymentMethodTokenizationRequest](#)  
Information about the payment method to be tokenized.

#### Return Value

Type: [ConnectApi.PaymentMethodTokenizationResponse](#)

#### Usage

Accepts input parameters representing a payment method and passes them in a tokenization request to the payment gateway. The results of the tokenization request are returned as a response from the payment gateway. If the tokenization was successful, the response contains the tokenized value and details about the tokenization process. Otherwise, the response contains an error message and details about the error.

#### Example

```
ConnectApi.PaymentMethodTokenizationRequest request = new  
ConnectApi.PaymentMethodTokenizationRequest();  
request.paymentGatewayId = '0b0xx0000001Ja5AAE';  
ConnectApi.CardPaymentMethodRequest cpmRequest = new ConnectApi.CardPaymentMethodRequest();  
cpmRequest.cardHolderName = 'Jo Manager';  
cpmRequest.expiryMonth = 11;  
cpmRequest.expiryYear = 2222;  
cpmRequest.cardNumber = '4111111111111111';  
cpmRequest.cvv = '111';  
cpmRequest.cardCategory = ConnectApi.CardCategory.CreditCard;  
cpmRequest.cardType = ConnectApi.CardType.Visa.name();  
request.cardPaymentMethod = cpmRequest;
```

```
ConnectApi.PaymentMethodTokenizationResponse response =  
ConnectApi.Payments.tokenizePaymentMethod(request);
```

## Personalization Class

Get assigned personalization audiences that match the user context. Create, get, update, and delete an audience. Get personalization targets that match the user context, based on the assigned audiences that include the user. Create and update targets. Get and delete a target.

### Namespace

[ConnectApi](#)

**Note:** Personalization varies what the user can see in the browser but doesn't secure data in any way. To prevent users accessing sensitive data, use standard Salesforce security features, such as sharing rules and permission sets.

### Personalization Methods

These methods are for `Personalization`. All methods are static.

#### IN THIS SECTION:

[createAudience\(communityId, audience\)](#)

Create an audience.

[createTargets\(communityId, target\)](#)

Create targets.

[deleteAudience\(communityId, audienceId\)](#)

Delete an audience.

[deleteTarget\(communityId, targetId\)](#)

Delete a target.

[getAudience\(communityId, audienceId, includeAudienceCriteria\)](#)

Get an audience.

[getAudienceBatch\(communityId, audienceIds\)](#)

Get audience information for a comma-separated list of audience IDs.

[getAudiences\(communityId, ipAddress, domain, userId, publishStatus, includeAudienceCriteria, targetType, recordId\)](#)

Get a list of assigned audiences that match the user context and record information.

[getAudiences\(communityId, ipAddress, domain, userId, publishStatus, includeAudienceCriteria, targetType\)](#)

Get a list of assigned audiences that match the user context.

[getTarget\(communityId, targetId\)](#)

Get a target.

[getTargetBatch\(communityId, targetIds\)](#)

Get target information for a comma-separated list of target IDs.

[getTargets\(communityId, ipAddress, domain, userId, publishStatus, recordId, targetTypes, includeAudience, includeAllMatchingTargetsWithinGroup, groupNames\)](#)

Get a list of targets that match the user context, based on the assigned audiences that include the user.

[updateAudience\(communityId, audienceId, audience\)](#)

Update an audience.

[updateTargets\(communityId, target\)](#)

Update targets.

### **createAudience(communityId, audience)**

Create an audience.

### API Version

48.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.Audience createAudience(String communityId,
ConnectApi.AudienceInput audience)
```

### Parameters

*communityId*

Type: [String](#)

ID of the Experience Cloud site.

*audience*

Type: [ConnectApi.AudienceInput](#)

A [ConnectApi.AudienceInput](#) object that defines the audience.

### Return Value

Type: [ConnectApi.Audience](#)

### **createTargets(communityId, target)**

Create targets.

### API Version

48.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TargetCollection createTargets(String communityId,  
ConnectApi.TargetCollectionInput target)
```

## Parameters

*communityId*

Type: [String](#)

ID of the Experience Cloud site.

*target*

Type: [ConnectApi.TargetCollectionInput](#)

A [ConnectApi.TargetCollectionInput](#) object that defines the targets.

## Return Value

Type: [ConnectApi.TargetCollection](#)

## **deleteAudience (communityId, audienceId)**

Delete an audience.

## API Version

48.0

## Requires Chatter

No

## Signature

```
public static Void deleteAudience(String communityId, String audienceId)
```

## Parameters

*communityId*

Type: [String](#)

ID of the Experience Cloud site.

*audienceId*

Type: [String](#)

ID of the audience.

## Return Value

Type: Void

### **deleteTarget (communityId, targetId)**

Delete a target.

## API Version

48.0

## Requires Chatter

No

## Signature

```
public static Void deleteTarget(String communityId, String targetId)
```

## Parameters

*communityId*

Type: [String](#)

ID of the Experience Cloud site.

*targetId*

Type: [String](#)

ID of the target.

## Return Value

Type: Void

### **getAudience (communityId, audienceId, includeAudienceCriteria)**

Get an audience.

## API Version

48.0

## Available to Guest Users

48.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Audience getAudience(String communityId, String audienceId, Boolean includeAudienceCriteria)
```

## Parameters

*communityId*

Type: [String](#)

ID of the Experience Cloud site.

*audienceId*

Type: [String](#)

ID of the audience.

*includeAudienceCriteria*

Type: [Boolean](#)

Specifies whether to include audience criteria (`true`) or not (`false`). If unspecified, defaults to `false`.

## Return Value

Type: [ConnectApi.Audience](#)

## **getAudienceBatch(*communityId*, *audienceIds*)**

Get audience information for a comma-separated list of audience IDs.

## API Version

48.0

## Available to Guest Users

48.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.BatchResult[] getAudienceBatch(String communityId, List<String> audienceIds)
```

## Parameters

*communityId*

Type: [String](#)

ID of the Experience Cloud site.

*audienceIds*

Type: [List<String>](#)

Comma-separated list of audience IDs.

## Return Value

Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.Audience` object and errors for audiences that didn't load.

## **getAudiences(*communityId*, *ipAddress*, *domain*, *userId*, *publishStatus*, *includeAudienceCriteria*, *targetTypes*, *recordId*)**

Get a list of assigned audiences that match the user context and record information.

## API Version

51.0

## Available to Guest Users

51.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.AudienceCollection getAudiences(String communityId, String
ipAddress, String domain, String userId, ConnectApi.PublishStatus publishStatus, Boolean
includeAudienceCriteria, List<String> targetTypes, String recordId)
```

## Parameters

*communityId*

Type: `String`

ID for an Experience Cloud site, `internal`, or `null`.

*ipAddress*

Type: `String`

IP address of the user. If `null`, no audiences with location criteria are returned.

*domain*

Type: `String`

Name of the user's Salesforce custom domain. If `null`, no audiences with domain criteria are returned.

*userId*

Type: `String`

ID of the user. If `null`, defaults to the ID of the context user.

*publishStatus*

Type: `ConnectApi.PublishStatus`

Publish status of the audience. Values are:

- Draft
- Live

If `null`, defaults to `Live`.

*includeAudienceCriteria*

Type: [Boolean](#)

Specifies whether to include audience criteria (`true`) or not (`false`). If unspecified, defaults to `false`.

*targetTypes*

Type: [List<String>](#)

Comma-separated list of target types to filter the results. Supported values include:

- ExperienceVariation (version 48.0 and later)
- Custom object API names, such as **CustomObjectName\_\_c** (version 48.0 and later)
- NavigationLinkSet (version 49.0 and later)
- Topic (version 49.0 and later)
- CollaborationGroup (version 49.0 and later)
- KnowledgeArticle (version 49.0 and later)
- ContentDocument (version 49.0 and later)
- ManagedContent (version 49.0 and later)
- Report (version 49.0 and later)
- Dashboard (version 49.0 and later)

If `null`, all target types are returned.

*recordId*

Type: [String](#)

ID of the record for field based criteria. If `null`, all applicable audiences with field based criteria are returned.

## Return Value

Type: [ConnectApi.AudienceCollection](#)

**getAudiences (communityId, ipAddress, domain, userId, publishStatus, includeAudienceCriteria, targetTypes)**

Get a list of assigned audiences that match the user context.

## API Version

48.0

## Available to Guest Users

48.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.AudienceCollection getAudiences(String communityId, String ipAddress, String domain, String userId, ConnectApi.PublishStatus publishStatus, Boolean includeAudienceCriteria, List<String> targetTypes)
```

## Parameters

*communityId*

Type: [String](#)

ID of the Experience Cloud site.

*ipAddress*

Type: [String](#)

IP address of the user. If `null`, no audiences with location criteria are returned.

*domain*

Type: [String](#)

Name of the user's Salesforce custom domain. If `null`, no audiences with domain criteria are returned.

*userId*

Type: [String](#)

ID of the user. If `null`, defaults to the ID of the context user.

*publishStatus*

Type: [ConnectApi.PublishStatus](#)

Publish status of the audience. Values are:

- `Draft`
- `Live`

If `null`, defaults to `Live`.

*includeAudienceCriteria*

Type: [Boolean](#)

Specifies whether to include audience criteria (`true`) or not (`false`). If unspecified, defaults to `false`.

*targetTypes*

Type: [List<String>](#)

Comma-separated list of target types to filter the results. Supported values include:

- `ExperienceVariation` (version 48.0 and later)
- Custom object API names, such as `CustomObjectName__c` (version 48.0 and later)
- `NavigationLinkSet` (version 49.0 and later)
- `Topic` (version 49.0 and later)
- `CollaborationGroup` (version 49.0 and later)
- `KnowledgeArticle` (version 49.0 and later)
- `ContentDocument` (version 49.0 and later)

- `ManagedContent` (version 49.0 and later)
- `Report` (version 49.0 and later)
- `Dashboard` (version 49.0 and later)

If `null`, all target types are returned.

## Return Value

Type: `ConnectApi.AudienceCollection`

## **getTarget(*communityId*, *targetId*)**

Get a target.

## API Version

48.0

## Available to Guest Users

48.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Target getTarget(String communityId, String targetId)
```

## Parameters

*communityId*

Type: `String`

ID of the Experience Cloud site.

*targetId*

Type: `String`

ID of the target.

## Return Value

Type: `ConnectApi.Target`

## **getTargetBatch(*communityId*, *targetIds*)**

Get target information for a comma-separated list of target IDs.

## API Version

48.0

### Available to Guest Users

48.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.BatchResult[] getTargetBatch(String communityId, List<String> targetIds)
```

### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*targetIds*

Type: [List<String>](#)

Comma-separated list of target IDs.

### Return Value

Type: [ConnectApi.BatchResult](#)

The `ConnectApi.BatchResult.getResult()` method returns a [ConnectApi.Target](#) object and errors for targets that didn't load.

```
getTargets(communityId, ipAddress, domain, userId, publishStatus, recordId, targetTypes, includeAudience, includeAllMatchingTargetsWithinGroup, groupNames)
```

Get a list of targets that match the user context, based on the assigned audiences that include the user.

### API Version

48.0

### Available to Guest Users

48.0

### Requires Chatter

No

## Signature

```
public static ConnectApi.TargetCollection getTargets(String communityId, String
ipAddress, String domain, String userId, ConnectApi.PublishStatus publishStatus, String
recordId, List<String> targetTypeTypes, Boolean includeAudience, Boolean
includeAllMatchingTargetsWithinGroup, List<String> groupNames)
```

## Parameters

*communityId*

Type: [String](#)

ID of the Experience Cloud site.

*ipAddress*

Type: [String](#)

IP address of the user. If `null`, no audiences with location criteria are returned.

*domain*

Type: [String](#)

Name of the user's Salesforce custom domain. If `null`, no audiences with domain criteria are returned.

*userId*

Type: [String](#)

ID of the user. If `null`, the default is the ID of the context user.

*publishStatus*

Type: [ConnectApi.PublishStatus](#)

Publish status of the target. Values are:

- Draft
- Live

*recordId*

Type: [String](#)

ID of the record, if you want to specify field based criteria in audiences.

*targetTypes*

Type: [List<String>](#)

Comma-separated list of target types to filter the results. Supported values include:

- ExperienceVariation (version 48.0 and later)
- Custom object API names, such as **CustomObjectName\_\_c** (version 48.0 and later)
- NavigationLinkSet (version 49.0 and later)
- Topic (version 49.0 and later)
- CollaborationGroup (version 49.0 and later)
- KnowledgeArticle (version 49.0 and later)
- ContentDocument (version 49.0 and later)
- ManagedContent (version 49.0 and later)
- Report (version 49.0 and later)
- Dashboard (version 49.0 and later)

If `null`, all target types are returned.

*includeAudience*

Type: [Boolean](#)

Specifies whether to include the matching audience (`true`) or not (`false`). If `null`, the default is `false`.

*includeAllMatchingTargetsWithinGroup*

Type: [Boolean](#)

Specifies whether to include all the matching targets within a target group (`true`) or not (`false`). If `null`, the default is `false`. If `false`, the first matching target within each group, based on priority within the group, is returned.

*groupNames*

Type: [List<String>](#)

A comma-separated list of group names. Groups bundle related target and audience pairs.

## Return Value

Type: [ConnectApi.TargetCollection](#)

## **updateAudience(*communityId*, *audienceId*, *audience*)**

Update an audience.

## API Version

48.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Audience updateAudience(String communityId, String audienceId, ConnectApi.AudienceInput audience)
```

## Parameters

*communityId*

Type: [String](#)

ID of the Experience Cloud site.

*audienceId*

Type: [String](#)

ID of the audience.

*audience*

Type: [ConnectApi.AudienceInput](#)

A [ConnectApi.AudienceInput](#) object that defines the updates to the audience.

## Return Value

Type: [ConnectApi.Audience](#)

## **updateTargets (communityId, target)**

Update targets.

## API Version

48.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TargetCollection updateTargets(String communityId,
ConnectApi.TargetCollectionUpdateInput target)
```

## Parameters

*communityId*

Type: [String](#)

ID of the Experience Cloud site.

*target*

Type: [ConnectApi.TargetCollectionUpdateInput](#)

A [ConnectApi.TargetCollectionUpdateInput](#) object that defines the updates for the targets.

## Return Value

Type: [ConnectApi.TargetCollection](#)

## PickTicket Class

Create tickets to fulfill orders.

## Namespace

[ConnectApi](#)

## PickTicket Methods

These methods are for `PickTicket`. All methods are static.

## IN THIS SECTION:

[distributePickedQuantities\(distributePickedQuantitiesInput\)](#)

Distribute picked quantities among orders in a pick ticket.

**distributePickedQuantities (distributePickedQuantitiesInput)**

Distribute picked quantities among orders in a pick ticket.

**API Version**

58.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.DistributePickedQuantitiesOutputRepresentation  
distributePickedQuantities (ConnectApi.DistributePickedQuantitiesInputRepresentation  
distributePickedQuantitiesInput)
```

**Parameters**

*distributePickedQuantitiesInput*

Type: `ConnectApi.DistributePickedQuantitiesInputRepresentation`

Input to distribute picked quantities.

**Return Value**

Type: `ConnectApi.DistributePickedQuantitiesOutputRepresentation`

## QuestionAndAnswers Class

Access question and answers suggestions.

**Namespace**

[ConnectApi](#)

## IN THIS SECTION:

[QuestionAndAnswers Methods](#)

These methods are for `QuestionAndAnswers`. All methods are static.

**QuestionAndAnswers Methods**

These methods are for `QuestionAndAnswers`. All methods are static.

All methods in this class require Chatter and are subject to the per user, per namespace, per hour rate limit.

#### IN THIS SECTION:

[getSuggestions\(communityId, q, subjectId, includeArticles, maxResults\)](#)

Get question and answers suggestions.

[setTestGetSuggestions\(communityId, q, subjectId, includeArticles, maxResults, result\)](#)

Register a `ConnectApi.QuestionAndAnswersSuggestions` object to be returned when `getSuggestions` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

[updateQuestionAndAnswers\(communityId, feedElementId, questionAndAnswersCapability\)](#)

Choose or change the best answer for a question.

### **getSuggestions(communityId, q, subjectId, includeArticles, maxResults)**

Get question and answers suggestions.

#### API Version

32.0

#### Requires Chatter

Yes

#### Signature

```
public static ConnectApi.QuestionAndAnswersSuggestions getSuggestions(String communityId,
String q, String subjectId, Boolean includeArticles, Integer maxResults)
```

#### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*q*

Type: [String](#)

Required and can't be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*subjectId*

Type: [String](#)

Specify a subject ID to search only questions on that object. If the ID is a topic or a user, the ID is ignored.

*includeArticles*

Type: [Boolean](#)

Specify `true` to include knowledge articles in the search results. To return only questions, specify `false`.

*maxResults*

Type: [Integer](#)

The maximum number of results to return for each type of item. Possible values are 1–10. The default value is 5.

## Return Value

Type: [ConnectApi.QuestionAndAnswersSuggestions](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetSuggestions\(communityId, q, subjectId, includeArticles, maxResults, result\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **setTestGetSuggestions(communityId, q, subjectId, includeArticles, maxResults, result)**

Register a `ConnectApi.QuestionAndAnswersSuggestions` object to be returned when `getSuggestions` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

## API Version

32.0

## Signature

```
public static Void setTestGetSuggestions(String communityId, String q, String subjectId, Boolean includeArticles, Integer maxResults, ConnectApi.QuestionAndAnswersSuggestions result)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*q*

Type: [String](#)

Required and can't be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*subjectId*

Type: [String](#)

Specify a subject ID to search only questions on that object. If the ID is a topic or a user, the ID is ignored.

*includeArticles*

Type: [Boolean](#)

Specify `true` to include knowledge articles in the search results. To return only questions, specify `false`.

*maxResults*

Type: [Integer](#)

The maximum number of results to return for each type of item. Possible values are 1–10. The default value is 5.

*result*

Type: [ConnectApi.QuestionAndAnswersSuggestions](#)

Object containing test data.

## Return Value

Type: Void

SEE ALSO:

[getSuggestions\(communityId, q, subjectId, includeArticles, maxResults\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **updateQuestionAndAnswers (communityId, feedElementId, questionAndAnswersCapability)**

Choose or change the best answer for a question.

## API Version

32.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.QuestionAndAnswersCapability updateQuestionAndAnswers(String communityId, String feedElementId, ConnectApi.QuestionAndAnswersCapabilityInput questionAndAnswersCapability)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*feedElementId*

Type: [String](#)

ID of the feed element.

*questionAndAnswersCapability*

Type: [ConnectApi.QuestionAndAnswersCapabilityInput](#)

Specify the best answer (comment ID) for the question.

## Return Value

Type: [ConnectApi.QuestionAndAnswersCapability](#)

If the feed element doesn't support this capability, the return value is [ConnectApi.NotFoundException](#).

## Example

```
ConnectApi.QuestionAndAnswersCapabilityInput qaInput = new
ConnectApi.QuestionAndAnswersCapabilityInput ();
qaInput.bestAnswerId = '0D7D00000001MAKAY';

ConnectApi.QuestionAndAnswersCapability qa =
ConnectApi.QuestionAndAnswers.updateQuestionAndAnswers (null, '0D5D0000000XZjJ', qaInput);
```

# Recommendations Class

Get and reject Chatter, custom, and static recommendations. Create, get, update, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

For Next Best Action recommendations, see [NextBestAction Class](#).

## Namespace

[ConnectApi](#)

## Recommendations Methods

These methods are for `Recommendations`. All methods are static.

All methods in this class require Chatter and are subject to the per user, per namespace, per hour rate limit.

### IN THIS SECTION:

[createRecommendationAudience\(communityId, recommendationAudience\)](#)

Create an audience for a custom recommendation.

[createRecommendationAudience\(communityId, name\)](#)

Create an audience for a custom recommendation.

[createRecommendationDefinition\(communityId, recommendationDefinition\)](#)

Create a custom recommendation definition.

[createRecommendationDefinition\(communityId, name, title, actionUrl, actionUrlName, explanation\)](#)

Create a custom recommendation definition with the specified parameters.

[createScheduledRecommendation\(communityId, scheduledRecommendation\)](#)

Create a scheduled custom recommendation.

[createScheduledRecommendation\(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel\)](#)

Create a scheduled custom recommendation with the specified parameters.

[deleteRecommendationAudience\(communityId, recommendationAudienceId\)](#)

Delete a custom recommendation audience.

[deleteRecommendationDefinition\(communityId, recommendationDefinitionId\)](#)

Delete a custom recommendation definition.

[deleteRecommendationDefinitionPhoto\(communityId, recommendationDefinitionId\)](#)

Delete a custom recommendation definition photo.

[deleteScheduledRecommendation\(communityId, scheduledRecommendationId, deleteDefinitionIfLast\)](#)

Delete a scheduled custom recommendation.

[getRecommendationAudience\(communityId, recommendationAudienceId\)](#)

Get information about a custom recommendation audience.

[getRecommendationAudienceMembership\(communityId, recommendationAudienceId\)](#)

Get the members of a custom recommendation audience.

[getRecommendationAudienceMembership\(communityId, recommendationAudienceId, pageParam, pageSize\)](#)

Get a page of custom recommendation audience members.

[getRecommendationAudiences\(communityId\)](#)

Get custom recommendation audiences.

[getRecommendationAudiences\(communityId, pageParam, pageSize\)](#)

Get a page of custom recommendation audiences.

[getRecommendationDefinition\(communityId, recommendationDefinitionId\)](#)

Get a custom recommendation definition.

[getRecommendationDefinitionPhoto\(communityId, recommendationDefinitionId\)](#)

Get a custom recommendation definition photo.

[getRecommendationDefinitions\(communityId\)](#)

Get custom recommendation definitions.

[getRecommendationForUser\(communityId, userId, action, objectId\)](#)

Get the Chatter, custom, or static recommendation for the context user for the specified action and object ID.

[getRecommendationsForUser\(communityId, userId, contextAction, contextObjectId, channel, maxResults\)](#)

Get the Chatter recommendations, such as user, group, file, article, record, and topic recommendations for the context user. Get the custom and static recommendations for the context user.

[getRecommendationsForUser\(communityId, userId, action, contextAction, contextObjectId, channel, maxResults\)](#)

Get the Chatter, custom, and static recommendations for the context user for the specified action.

[getRecommendationsForUser\(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults\)](#)

Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

[getScheduledRecommendation\(communityId, scheduledRecommendationId\)](#)

Get a scheduled custom recommendation.

[getScheduledRecommendations\(communityId, channel\)](#)

Get scheduled custom recommendations.

[rejectRecommendationForUser\(communityId, userId, action, objectId\)](#)

Reject a Chatter, custom, or static recommendation for the context user for the specified action and object ID.

[rejectRecommendationForUser\(communityId, userId, action, objectEnum\)](#)

Reject a static recommendation for the context user.

[updateRecommendationAudience\(communityId, recommendationAudienceId, recommendationAudience\)](#)

Update a custom recommendation audience.

[updateRecommendationDefinition\(communityId, recommendationDefinitionId, name, title, actionUrl, actionUrlName, explanation\)](#)

Update a custom recommendation definition with the specified parameters.

[updateRecommendationDefinition\(communityId, recommendationDefinitionId, recommendationDefinition\)](#)

Update a custom recommendation definition.

[updateRecommendationDefinitionPhoto\(communityId, recommendationDefinitionId, fileUpload\)](#)

Update a custom recommendation definition photo with a file that hasn't been uploaded.

[updateRecommendationDefinitionPhoto\(communityId, recommendationDefinitionId, fileId, versionNumber\)](#)

Update a custom recommendation definition photo with an uploaded file.

[updateRecommendationDefinitionPhotoWithAttributes\(communityId, recommendationDefinitionId, photo\)](#)

Update a custom recommendation definition photo with an uploaded file that requires cropping.

[updateRecommendationDefinitionPhotoWithAttributes\(communityId, recommendationDefinitionId, photo, fileUpload\)](#)

Update a custom recommendation definition photo with a file that hasn't been uploaded and requires cropping.

[updateScheduledRecommendation\(communityId, scheduledRecommendationId, scheduledRecommendation\)](#)

Update a scheduled custom recommendation.

[updateScheduledRecommendation\(communityId, scheduledRecommendationId, rank, enabled, recommendationAudienceId\)](#)

Update a scheduled custom recommendation with the specified parameters.

### **createRecommendationAudience (communityId, recommendationAudience)**

Create an audience for a custom recommendation.

#### API Version

35.0

#### Requires Chatter

Yes

#### Signature

```
public static ConnectApi.RecommendationAudience createRecommendationAudience(String
communityId, ConnectApi.RecommendationAudienceInput recommendationAudience)
```

#### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recommendationAudience*

Type: [ConnectApi.RecommendationAudienceInput](#)

A [ConnectApi.RecommendationAudienceInput](#) object.

#### Return Value

Type: [ConnectApi.RecommendationAudience](#)

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

### **createRecommendationAudience (communityId, name)**

Create an audience for a custom recommendation.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.RecommendationAudience createRecommendationAudience(String communityId, String name)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*name*

Type: [String](#)

Name of the audience.

## Return Value

Type: [ConnectApi.RecommendationAudience](#)

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

### **createRecommendationDefinition (communityId, recommendationDefinition)**

Create a custom recommendation definition.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.RecommendationDefinition createRecommendationDefinition(String communityId, ConnectApi.RecommendationDefinitionInput recommendationDefinition)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recommendationDefinition*

Type: [ConnectApi.RecommendationDefinitionInput](#)

A [ConnectApi.RecommendationDefinitionInput](#) object.

## Return Value

Type: [ConnectApi.RecommendationDefinition](#)

## Usage

Recommendation definitions allow you to create custom recommendations that appear in Experience Cloud sites, encouraging users to watch videos, take training and more.

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

These recommendations appear by default on the Customer Service template. They appear on the home and question detail pages and in the feed in Salesforce mobile web. They also appear anywhere community managers add recommendations using Experience Builder in the Customer Service template.

So that users don't see the same recommendations all the time, Salesforce periodically removes and brings back custom recommendations that haven't been accepted or dismissed.

```
createRecommendationDefinition(communityId, name, title, actionUrl, actionUrlName, explanation)
```

Create a custom recommendation definition with the specified parameters.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.RecommendationDefinition createRecommendationDefinition(String communityId, String name, String title, String actionUrl, String actionUrlName, String explanation)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*name*

Type: [String](#)

Name of the custom recommendation definition. The name is displayed in Setup.

*title*

Type: [String](#)

Title of the custom recommendation definition.

*actionUrl*

Type: [String](#)

URL for acting on the custom recommendation, for example, the URL to join a group.

*actionUrlName*

Type: [String](#)

Text label for the action URL in the user interface, for example, "Launch."

*explanation*

Type: [String](#)

Explanation, or body, of the custom recommendation.

## Return Value

Type: [ConnectApi.RecommendationDefinition](#)

## Usage

Recommendation definitions allow you to create custom recommendations that appear in Experience Cloud sites, encouraging users to watch videos, take training and more.

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

These recommendations appear by default on the Customer Service template. They appear on the home and question detail pages and in the feed in Salesforce mobile web. They also appear anywhere community managers add recommendations using Experience Builder in the Customer Service template.

So that users don't see the same recommendations all the time, Salesforce periodically removes and brings back custom recommendations that haven't been accepted or dismissed.

### **createScheduledRecommendation(*communityId*, *scheduledRecommendation*)**

Create a scheduled custom recommendation.

#### API Version

35.0

#### Requires Chatter

Yes

#### Signature

```
public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, ConnectApi.ScheduledRecommendationInput scheduledRecommendation)
```

#### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*scheduledRecommendation*

Type: [ConnectApi.ScheduledRecommendationInput](#)

A [ConnectApi.ScheduledRecommendationInput](#) object.

#### Return Value

Type: [ConnectApi.ScheduledRecommendation](#)

#### Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

### **createScheduledRecommendation(*communityId*, *recommendationDefinitionId*, *rank*, *enabled*, *recommendationAudienceId*, *channel*)**

Create a scheduled custom recommendation with the specified parameters.

#### API Version

36.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String
communityId, String recommendationDefinitionId, Integer rank, Boolean enabled, String
recommendationAudienceId, ConnectApi.RecommendationChannel channel)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the custom recommendation definition.

*rank*

Type: [Integer](#)

Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1.

Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the `rank`. The `rank` of all the scheduled custom recommendations after it is pushed down. See [Ranking scheduled custom recommendations example](#).

If the specified `rank` is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The `rank` of the scheduled custom recommendation is the size of the list, instead of the one specified.

If a `rank` is not specified, the scheduled custom recommendation is put at the end of the list.

*enabled*

Type: [Boolean](#)

Indicates whether scheduling is enabled. If `true`, the custom recommendation is enabled and appears in Experience Cloud sites. If `false`, custom recommendations in feeds in Salesforce mobile web aren't removed, but no new custom recommendations appear. In Customer Service and Partner Central sites, disabled custom recommendations no longer appear.

*recommendationAudienceId*

Type: [String](#)

ID of the custom recommendation definition that this scheduled recommendation schedules.

*channel*

Type: [ConnectApi.RecommendationChannel](#)

A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- `CustomChannel1`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- `CustomChannel2`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

- `CustomChannel13`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel14`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel15`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `DefaultChannel`—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

Use these channel values; you can't rename or create other channels.

## Return Value

Type: [ConnectApi.ScheduledRecommendation](#)

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

### Ranking scheduled custom recommendations example

If you have these scheduled custom recommendations:

Scheduled Recommendations	Rank
ScheduledRecommendationA	1
ScheduledRecommendationB	2
ScheduledRecommendationC	3

And you include this information in the Scheduled Custom Recommendation Input:

Scheduled Recommendation	Rank
ScheduledRecommendationD	2

The result is:

Scheduled Recommendation	Rank
ScheduledRecommendationA	1
ScheduledRecommendationD	2
ScheduledRecommendationB	3
ScheduledRecommendationC	4

**deleteRecommendationAudience (communityId, recommendationAudienceId)**

Delete a custom recommendation audience.

**API Version**

35.0

**Requires Chatter**

Yes

**Signature**

```
public static Void deleteRecommendationAudience (String communityId, String recommendationAudienceId)
```

**Parameters**

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recommendationAudienceId*

Type: [String](#)

ID of the custom recommendation audience.

**Return Value**

Type: Void

**Usage**

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**deleteRecommendationDefinition (communityId, recommendationDefinitionId)**

Delete a custom recommendation definition.

**API Version**

35.0

**Requires Chatter**

Yes

## Signature

```
public static Void deleteRecommendationDefinition(String communityId, String recommendationDefinitionId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the custom recommendation definition.

## Return Value

Type: Void

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

## **deleteRecommendationDefinitionPhoto (communityId, recommendationDefinitionId)**

Delete a custom recommendation definition photo.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static Void deleteRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the custom recommendation definition.

## Return Value

Type: Void

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

## **deleteScheduledRecommendation(*communityId*, *scheduledRecommendationId*, *deleteDefinitionIfLast*)**

Delete a scheduled custom recommendation.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static Void deleteScheduledRecommendation(String communityId, String
scheduledRecommendationId, Boolean deleteDefinitionIfLast)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*scheduledRecommendationId*

Type: [String](#)

ID of the scheduled custom recommendation.

*deleteDefinitionIfLast*

Type: [Boolean](#)

If `true` and if this is the last scheduled custom recommendation of a custom recommendation definition, deletes the custom recommendation definition. Default is `false`.

## Return Value

Type: Void

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

Deleting a scheduled custom recommendation is comparable to a deletion in an ordered list. All scheduled custom recommendations after the deleted scheduled custom recommendation receive a new, higher rank automatically.

### **getRecommendationAudience (communityId, recommendationAudienceId)**

Get information about a custom recommendation audience.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.RecommendationAudience getRecommendationAudience (String communityId, String recommendationAudienceId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recommendationAudienceId*

Type: [String](#)

ID of the custom recommendation audience.

## Return Value

Type: [ConnectApi.RecommendationAudience](#)

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

### **getRecommendationAudienceMembership (communityId, recommendationAudienceId)**

Get the members of a custom recommendation audience.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.UserReferencePage getRecommendationAudienceMembership(String communityId, String recommendationAudienceId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recommendationAudienceId*

Type: [String](#)

ID of the custom recommendation audience.

## Return Value

Type: [ConnectApi.UserReferencePage](#)

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

```
getRecommendationAudienceMembership(communityId, recommendationAudienceId, pageParam, pageSize)
```

Get a page of custom recommendation audience members.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.UserReferencePage getRecommendationAudienceMembership(String communityId, String recommendationAudienceId, Integer pageParam, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recommendationAudienceId*

Type: [String](#)

ID of the custom recommendation audience.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of members per page.

## Return Value

Type: [ConnectApi.UserReferencePage](#)

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

## **getRecommendationAudiences (communityId)**

Get custom recommendation audiences.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.RecommendationAudiencePage getRecommendationAudiences(String communityId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

## Return Value

Type: [ConnectApi.RecommendationAudiencePage](#)

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

### **getRecommendationAudiences (communityId, pageParam, pageSize)**

Get a page of custom recommendation audiences.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.RecommendationAudiencePage getRecommendationAudiences (String communityId, Integer pageParam, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of audiences per page.

## Return Value

Type: [ConnectApi.RecommendationAudiencePage](#)

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission

can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

### **getRecommendationDefinition(*communityId*, *recommendationDefinitionId*)**

Get a custom recommendation definition.

#### API Version

35.0

#### Requires Chatter

Yes

#### Signature

```
public static ConnectApi.RecommendationDefinition getRecommendationDefinition(String communityId, String recommendationDefinitionId)
```

#### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the custom recommendation definition.

#### Return Value

Type: [ConnectApi.RecommendationDefinition](#)

#### Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

### **getRecommendationDefinitionPhoto(*communityId*, *recommendationDefinitionId*)**

Get a custom recommendation definition photo.

#### API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.Photo getRecommendationDefinitionPhoto(String communityId,  
String recommendationDefinitionId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the custom recommendation definition.

## Return Value

Type: [ConnectApi.Photo](#)

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

## **getRecommendationDefinitions (communityId)**

Get custom recommendation definitions.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.RecommendationDefinitionPage getRecommendationDefinitions(String  
communityId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

## Return Value

Type: `ConnectApi.RecommendationDefinitionPage`

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

### **`getRecommendationForUser (communityId, userId, action, objectId)`**

Get the Chatter, custom, or static recommendation for the context user for the specified action and object ID.

## API Version

33.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.RecommendationCollection getRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectId)
```

## Parameters

*communityId*

Type: `String`

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: `String`

ID for the context user or the keyword `me`.

*action*

Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation.

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

*objectId*

Type: `String`

Specifies the object to act on.

- If *action* is *follow*, *objectId* is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
- If *action* is *join*, *objectId* is a group ID.
- If *action* is *view*, *objectId* is a user ID, file ID, group ID, record ID, custom recommendation ID (version 34.0 and later), the enum *Today* for static recommendations (version 35.0 and later), or an article ID (version 37.0 and later).

## Return Value

Type: [ConnectApi.RecommendationCollection](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetRecommendationForUser\(communityId, userId, action, objectId, result\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)**

Get the Chatter recommendations, such as user, group, file, article, record, and topic recommendations for the context user. Get the custom and static recommendations for the context user.

## API Version

36.0

## Available to Guest Users

38.0

 **Note:** Only article and file recommendations are available to guest users.

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID for the context user or the keyword `me`.

*contextAction*

Type: [ConnectApi.RecommendationActionType](#)

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

*contextObjectId*

Type: [String](#)

ID of the object that the context user just performed an action on.

- If *contextAction* is `follow`, *contextObjectId* is a user ID, file ID, record ID, or topic ID.
- If *contextAction* is `view`, *contextObjectId* is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

*channel*

Type: [ConnectApi.RecommendationChannel](#)

A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- `CustomChannel1`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- `CustomChannel2`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel3`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel4`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel5`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `DefaultChannel`—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

*maxResults*

Type: [Integer](#)

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

## Return Value

Type: [ConnectApi.RecommendationCollection](#)

## Usage

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam's user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetRecommendationsForUser\(`communityId`, `userId`, `contextAction`, `contextObjectId`, `channel`, `maxResults`, `result`\)](#)  
[Apex Developer Guide: Testing ConnectApi Code](#)

**`getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)`**

Get the Chatter, custom, and static recommendations for the context user for the specified action.

## API Version

36.0

## Available to Guest Users

38.0

 **Note:** Only article and file recommendations are available to guest users.

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String
communityId, String userId, ConnectApi.RecommendationActionType action,
ConnectApi.RecommendationActionType contextAction, String contextObjectId,
ConnectApi.RecommendationChannel channel, Integer maxResults)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID for the context user or the keyword `me`.

*action*

Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation.

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

*contextAction*

Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

*contextObjectId*

Type: `String`

ID of the object that the context user just performed an action on.

- If *contextAction* is `follow`, *contextObjectId* is a user ID, file ID, record ID, or topic ID.
- If *contextAction* is `view`, *contextObjectId* is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

*channel*

Type: `ConnectApi.RecommendationChannel`

A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- `CustomChannel11`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- `CustomChannel12`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel13`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel14`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel15`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `DefaultChannel1`—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

*maxResults*

Type: `Integer`

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

## Return Value

Type: [ConnectApi.RecommendationCollection](#)

## Usage

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam's user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

### SEE ALSO:

[setTestGetRecommendationsForUser\(communityId, userId, action, contextAction, contextObjectId, channel, maxResults, result\)](#)  
[Apex Developer Guide: Testing ConnectApi Code](#)

## **getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)**

Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

## API Version

36.0

## Available to Guest Users

38.0

 **Note:** Only article and file recommendations are available to guest users.

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String
communityId, String userId, ConnectApi.RecommendationActionType action, String
objectCategory, ConnectApi.RecommendationActionType contextAction, String
contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*Type: [String](#)

ID for the context user or the keyword me.

*action*Type: [ConnectApi.RecommendationActionType](#)

Specifies the action to take on a recommendation.

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

*objectCategory*Type: [String](#)

- If *action* is `follow`, *objectCategory* is users, files, topics, or records.
- If *action* is `join`, *objectCategory* is groups.
- If *action* is `view`, *objectCategory* is users, files, groups, records, custom, apps, or articles (version 37.0 and later).

You can also specify a key prefix, the first three characters of the object ID, as the *objectCategory*. Valid values are:

- If *action* is `follow`, *objectCategory* is 005 (users), 069 (files), 0T0 (topics), or 001 (accounts), for example.
- If *action* is `join`, *objectCategory* is 0F9 (groups).
- If *action* is `view`, *objectCategory* is 005 (users), 069 (files), 0F9 (groups), 0RD (custom recommendations), T (static recommendations), 001 (accounts), or kA0 (articles), for example, (version 37.0 and later).

*contextAction*Type: [ConnectApi.RecommendationActionType](#)

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.*contextObjectId*Type: [String](#)

ID of the object that the context user just performed an action on.

- If *contextAction* is `follow`, *contextObjectId* is a user ID, file ID, record ID, or topic ID.
- If *contextAction* is `view`, *contextObjectId* is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.*channel*Type: [ConnectApi.RecommendationChannel](#)

A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- `CustomChannel11`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- `CustomChannel12`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel13`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel14`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel15`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `DefaultChannel1`—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

*maxResults*

Type: [Integer](#)

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

## Return Value

Type: [ConnectApi.RecommendationCollection](#)

## Usage

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam's user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

[Apex Developer Guide: Testing ConnectApi Code](#)

### **getScheduledRecommendation(`communityId`, `scheduledRecommendationId`)**

Get a scheduled custom recommendation.

#### API Version

35.0

#### Requires Chatter

Yes

#### Signature

```
public static ConnectApi.ScheduledRecommendation getScheduledRecommendation(String communityId, String scheduledRecommendationId)
```

#### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*scheduledRecommendationId*

Type: [String](#)

ID of the scheduled custom recommendation.

#### Return Value

Type: [ConnectApi.ScheduledRecommendation](#)

#### Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

### **getScheduledRecommendations(`communityId`, `channel`)**

Get scheduled custom recommendations.

## API Version

36.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ScheduledRecommendationPage getScheduledRecommendations(String communityId, ConnectApi.RecommendationChannel channel)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*channel*

Type: [ConnectApi.RecommendationChannel](#)

A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- `CustomChannel1`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- `CustomChannel2`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel3`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel4`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel5`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `DefaultChannel`—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

## Return Value

Type: [ConnectApi.ScheduledRecommendationPage](#)

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**rejectRecommendationForUser(*communityId*, *userId*, *action*, *objectId*)**

Reject a Chatter, custom, or static recommendation for the context user for the specified action and object ID.

**API Version**

33.0

**Requires Chatter**

Yes

**Signature**

```
public static rejectRecommendationForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, String objectId)
```

**Parameters**

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID for the context user or the keyword `me`.

*action*

Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation. Supported values are:

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

*objectId*

Type: [String](#)

Specifies the object to take action on.

- If *action* is `follow`, *objectId* is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
- If *action* is `join`, *objectId* is a group ID.
- If *action* is `view`, *objectId* is a custom recommendation ID, the enum `Today` for static recommendations, or an article ID (version 37.0 and later).

**Return Value**

Type: `Void`

**rejectRecommendationForUser(*communityId*, *userId*, *action*, *objectEnum*)**

Reject a static recommendation for the context user.

## API Version

34.0

## Requires Chatter

Yes

## Signature

```
public static rejectRecommendationForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, ConnectApi.RecommendedObjectType objectEnum)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID for the context user or the keyword `me`.

*action*

Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation. Supported values are:

- `view`—View a static recommendation.

*objectEnum*

Type: [ConnectApi.RecommendedObjectType](#)

Specifies the object type to take action on.

- `Today`—Static recommendations that don't have an ID, for example, the Today app recommendation.

## Return Value

Type: `Void`

```
updateRecommendationAudience(communityId, recommendationAudienceId,
recommendationAudience)
```

Update a custom recommendation audience.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.RecommendationAudience updateRecommendationAudience(String
communityId, String recommendationAudienceId, ConnectApi.RecommendationAudienceInput
recommendationAudience)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recommendationAudienceId*

Type: [String](#)

ID of the custom recommendation audience.

*recommendationAudience*

Type: [ConnectApi.RecommendationAudienceInput](#)

A [ConnectApi.RecommendationAudienceInput](#) object.

## Return Value

Type: [ConnectApi.RecommendationAudience](#)

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**updateRecommendationDefinition(*communityId*, *recommendationDefinitionId*, *name*, *title*, *actionUrl*, *actionUrlName*, *explanation*)**

Update a custom recommendation definition with the specified parameters.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.RecommendationDefinition updateRecommendationDefinition(String
communityId, String recommendationDefinitionId, String name, String title, String
actionUrl, String actionUrlName, String explanation recommendationDefinition)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the custom recommendation definition.

*name*

Type: [String](#)

Name of the custom recommendation definition. The name is displayed in Setup.

*title*

Type: [String](#)

Title of the custom recommendation definition.

*actionUrl*

Type: [String](#)

URL for acting on the custom recommendation, for example, the URL to join a group.

*actionUrlName*

Type: [String](#)

Text label for the action URL in the user interface, for example, "Launch."

*explanation*

Type: [String](#)

Explanation, or body, of the custom recommendation.

## Return Value

Type: [ConnectApi.RecommendationDefinition](#)

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**`updateRecommendationDefinition`**(**`communityId`**, **`recommendationDefinitionId`**, **`recommendationDefinition`**)

Update a custom recommendation definition.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.RecommendationDefinition updateRecommendationDefinition(String communityId, String recommendationDefinitionId, ConnectApi.RecommendationDefinitionInput recommendationDefinition)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the custom recommendation definition.

*recommendationDefinition*

Type: [ConnectApi.RecommendationDefinitionInput](#)

A `ConnectApi.RecommendationDefinitionInput` object containing the properties to update.

## Return Value

Type: [ConnectApi.RecommendationDefinition](#)

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

## **updateRecommendationDefinitionPhoto (communityId, recommendationDefinitionId, fileUpload)**

Update a custom recommendation definition photo with a file that hasn't been uploaded.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.Photo updateRecommendationDefinitionPhoto(String communityId,  
String recommendationDefinitionId, ConnectApi.BinaryInput fileUpload)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the custom recommendation definition.

*fileUpload*

Type: [ConnectApi.BinaryInput](#)

File to use as the photo. The content type must be usable as an image.

## Return Value

Type: [ConnectApi.Photo](#)

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**updateRecommendationDefinitionPhoto(*communityId*, *recommendationDefinitionId*, *fileId*, *versionNumber*)**

Update a custom recommendation definition photo with an uploaded file.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.Photo updateRecommendationDefinitionPhoto(String communityId,  
String recommendationDefinitionId, String fileId, Integer versionNumber)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the custom recommendation definition.

*fileId*

Type: [String](#)

ID of a file already uploaded. The file must be an image, and be smaller than 2 GB.

*versionNumber*

Type: [Integer](#)

Version number of the existing file. Specify either an existing version number, or `null` to get the latest version.

## Return Value

Type: [ConnectApi.Photo](#)

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

### **updateRecommendationDefinitionPhotoWithAttributes (communityId, recommendationDefinitionId, photo)**

Update a custom recommendation definition photo with an uploaded file that requires cropping.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.Photo updateRecommendationDefinitionPhotoWithAttributes (String communityId, String recommendationDefinitionId, ConnectApi.PhotoInput photo)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recommendationDefinitionId*

Type: `String`

ID of the custom recommendation definition.

*photo*

Type: `ConnectApi.PhotoInput`

A `ConnectApi.PhotoInput` object specifying the file ID, version number, and cropping parameters.

## Return Value

Type: `ConnectApi.Photo`

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

### **updateRecommendationDefinitionPhotoWithAttributes (communityId, recommendationDefinitionId, photo, fileUpload)**

Update a custom recommendation definition photo with a file that hasn't been uploaded and requires cropping.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.Photo updateRecommendationDefinitionPhotoWithAttributes (String
communityId, String recommendationDefinitionId, ConnectApi.PhotoInput photo,
ConnectApi.BinaryInput fileUpload)
```

## Parameters

*communityId*

Type: `String`

ID for an Experience Cloud site, `internal`, or `null`.

*recommendationDefinitionId*

Type: `String`

ID of the custom recommendation definition.

*photo*

Type: [ConnectApi.PhotoInput](#)

A [ConnectApi.PhotoInput](#) object specifying the cropping parameters.

*fileUpload*

Type: [ConnectApi.BinaryInput](#)

File to use as the photo. The content type must be usable as an image.

## Return Value

Type: [ConnectApi.Photo](#)

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

## **updateScheduledRecommendation(*communityId*, *scheduledRecommendationId*, *scheduledRecommendation*)**

Update a scheduled custom recommendation.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ScheduledRecommendation updateScheduledRecommendation(String communityId, String scheduledRecommendationId, ConnectApi.ScheduledRecommendationInput scheduledRecommendation)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*scheduledRecommendationId*

Type: [String](#)

ID of the scheduled custom recommendation.

*scheduledRecommendation*

Type: [ConnectApi.ScheduledRecommendationInput](#)

A `ConnectApi.ScheduledRecommendationInput` object containing the properties to update.

## Return Value

Type: `ConnectApi.ScheduledRecommendation`

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

### Ranking scheduled custom recommendations example

If you have these scheduled custom recommendations:

Scheduled Recommendations	Rank
ScheduledRecommendationA	1
ScheduledRecommendationB	2
ScheduledRecommendationC	3

And you include this information in the Scheduled Custom Recommendation Input:

Scheduled Recommendation	Rank
ScheduledRecommendationD	2

The result is:

Scheduled Recommendation	Rank
ScheduledRecommendationA	1
ScheduledRecommendationD	2
ScheduledRecommendationB	3
ScheduledRecommendationC	4

**`updateScheduledRecommendation`**(`communityId`, `scheduledRecommendationId`, `rank`, `enabled`, `recommendationAudienceId`)

Update a scheduled custom recommendation with the specified parameters.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ScheduledRecommendation updateScheduledRecommendation(String communityId, String scheduledRecommendationId, Integer rank, Boolean enabled, String recommendationAudienceId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*scheduledRecommendationId*

Type: [String](#)

ID of the scheduled custom recommendation.

*rank*

Type: [Integer](#)

Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1.

Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the `rank`. The `rank` of all the scheduled custom recommendations after it is pushed down. See [Ranking scheduled custom recommendations example](#).

If the specified `rank` is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The `rank` of the scheduled custom recommendation is the size of the list, instead of the one specified.

If a `rank` is not specified, the scheduled custom recommendation is put at the end of the list.

*enabled*

Type: [Boolean](#)

Indicates whether scheduling is enabled. If `true`, the custom recommendation is enabled and appears in Experience Cloud sites.

If `false`, custom recommendations in feeds in Salesforce mobile web aren't removed, but no new custom recommendations appear. In Customer Service and Partner Central sites, disabled custom recommendations no longer appear.

*recommendationAudienceId*

Type: [String](#)

ID of the custom recommendation definition that this scheduled recommendation schedules.

## Return Value

Type: [ConnectApi.ScheduledRecommendation](#)

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

### Ranking scheduled custom recommendations example

If you have these scheduled custom recommendations:

Scheduled Recommendations	Rank
ScheduledRecommendationA	1
ScheduledRecommendationB	2
ScheduledRecommendationC	3

And you include this information in the Scheduled Custom Recommendation Input:

Scheduled Recommendation	Rank
ScheduledRecommendationD	2

The result is:

Scheduled Recommendation	Rank
ScheduledRecommendationA	1
ScheduledRecommendationD	2
ScheduledRecommendationB	3
ScheduledRecommendationC	4

## Recommendations Test Methods

These test methods are for `Recommendations`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see [Testing ConnectApi Code](#).

### IN THIS SECTION:

[setTestGetRecommendationForUser\(communityId, userId, action, objectId, result\)](#)

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

[setTestGetRecommendationsForUser\(communityId, userId, contextAction, contextObjectId, channel, maxResults, result\)](#)

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

[setTestGetRecommendationsForUser\(communityId, userId, action, contextAction, contextObjectId, channel, maxResults, result\)](#)

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

```
setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel,
maxResults, result)
```

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

### **setTestGetRecommendationForUser(communityId, userId, action, objectId, result)**

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

## API Version

33.0

## Requires Chatter

Yes

## Signature

```
public static Void setTestGetRecommendationForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, String objectId,
ConnectApi.RecommendationCollection result)
```

## Parameters

*communityId*

Type: `String`

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: `String`

ID for the context user or the keyword `me`.

*action*

Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation.

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

*objectId*

Type: `String`

Specifies the object to take action on.

- If *action* is `follow`, *objectId* is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
- If *action* is `join`, *objectId* is a group ID.
- If *action* is `view`, *objectId* is a user ID, file ID, group ID, record ID, custom recommendation ID, the enum `Today` for static recommendations, or an article ID (version 37.0 and later).

*result*

Type: [ConnectApi.RecommendationCollection](#)

Object containing test data.

## Return Value

Type: Void

SEE ALSO:

[getRecommendationForUser\(communityId, userId, action, objectId\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults, result)**

Register a [ConnectApi.RecommendationCollection](#) object to be returned when [getRecommendationsForUser](#) is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

## API Version

36.0

## Requires Chatter

Yes

## Signature

```
public static Void setTestGetRecommendationsForUser(String communityId, String userId,
ConnectApi.RecommendationActionType contextAction, String contextObjectId,
ConnectApi.RecommendationChannel channel, Integer maxResults,
ConnectApi.RecommendationCollection result)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, internal, or `null`.

*userId*

Type: [String](#)

ID for the context user or the keyword `me`.

*contextAction*

Type: [ConnectApi.RecommendationActionType](#)

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

`contextObjectId`

Type: [String](#)

ID of the object that the context user just performed an action on.

- If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, record ID, or topic ID.
- If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

`channel`

Type: [ConnectApi.RecommendationChannel](#)

A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- `CustomChannel11`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- `CustomChannel12`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel13`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel14`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel15`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `DefaultChannel`—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

`maxResults`

Type: [Integer](#)

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

`result`

Type: [ConnectApi.RecommendationCollection](#)

Object containing test data.

## Return Value

Type: Void

SEE ALSO:

[getRecommendationsForUser\(communityId, userId, contextAction, contextObjectId, channel, maxResults\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

**setTestGetRecommendationsForUser(*communityId*, *userId*, *action*, *contextAction*, *contextObjectId*, *channel*, *maxResults*, *result*)**

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**

36.0

**Requires Chatter**

Yes

- `CustomChannel15`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `DefaultChannel1`—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

#### `maxResults`

Type: [Integer](#)

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

#### `result`

Type: [ConnectApi.RecommendationCollection](#)

Object containing test data.

## Return Value

Type: Void

### SEE ALSO:

[getRecommendationsForUser\(communityId, userId, action, contextAction, contextObjectId, channel, maxResults\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

**`setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults, result)`**

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

## API Version

36.0

## Requires Chatter

Yes

## Signature

```
public static void setTestGetRecommendationsForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, String objectCategory,
ConnectApi.RecommendationActionType contextAction, String contextObjectId,
ConnectApi.RecommendationChannel channel, Integer maxResults,
ConnectApi.RecommendationCollection result)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID for the context user or the keyword `me`.

*action*

Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation.

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

*objectCategory*

Type: [String](#)

- If *action* is `follow`, *objectCategory* is `users`, `files`, `records`, or `topics`.
- If *action* is `join`, *objectCategory* is `groups`.
- If *action* is `view`, *objectCategory* is `users`, `files`, `groups`, `records`, `custom`, `apps`, or `articles` (version 37.0 and later).

You can also specify a key prefix, the first three characters of the object ID, as the *objectCategory*. Valid values are:

- If *action* is `follow`, *objectCategory* is `005` (users), `069` (files), `0T0` (topics), or `001` (accounts), for example.
- If *action* is `join`, *objectCategory* is `0F9` (groups).
- If *action* is `view`, *objectCategory* is `005` (users), `069` (files), `0F9` (groups), `0RD` (custom recommendations), `T` (static recommendations), `001` (accounts), or `kA0` (articles), for example, (version 37.0 and later).

*contextAction*

Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

`contextObjectId`

Type: [String](#)

ID of the object that the context user just performed an action on.

- If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, record ID, or topic ID.
- If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

`channel`

Type: [ConnectApi.RecommendationChannel](#)

A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- `CustomChannel11`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- `CustomChannel12`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel13`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel14`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel15`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `DefaultChannel1`—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

`maxResults`

Type: [Integer](#)

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

`result`

Type: [ConnectApi.RecommendationCollection](#)

Object containing test data.

## Return Value

Type: Void

## SEE ALSO:

[getRecommendationsForUser\(communitiyId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## Retired Recommendations Methods

These methods for `Recommendations` are retired.

### IN THIS SECTION:

[createScheduledRecommendation\(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId\)](#)

Create a scheduled custom recommendation with the specified parameters.

[getRecommendationsForUser\(communityId, userId, contextAction, contextObjectId, maxResults\)](#)

Get the Chatter recommendations, such as user, group, file, and record recommendations for the context user. Get the custom and static recommendations for the context user.

[getRecommendationsForUser\(communityId, userId, action, contextAction, contextObjectId, maxResults\)](#)

Get the Chatter, custom, and static recommendations for the context user for the specified action.

[getRecommendationsForUser\(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults\)](#)

Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

[getScheduledRecommendations\(communityId\)](#)

Get scheduled custom recommendations.

[setTestGetRecommendationsForUser\(communityId, userId, contextAction, contextObjectId, maxResults, result\)](#)

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

[setTestGetRecommendationsForUser\(communityId, userId, action, contextAction, contextObjectId, maxResults, result\)](#)

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

[setTestGetRecommendationsForUser\(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result\)](#)

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**`createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId)`**

Create a scheduled custom recommendation with the specified parameters.

### API Version

35.0 only

 **Important:** In version 36.0 and later, use `createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel)`.

### Requires Chatter

Yes

## Signature

```
public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, String recommendationDefinitionId, Integer rank, Boolean enabled, String recommendationAudienceId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recommendationDefinitionId*

Type: [String](#)

ID of the custom recommendation definition.

*rank*

Type: [Integer](#)

Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1.

Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the `rank`. The `rank` of all the scheduled custom recommendations after it is pushed down. See [Ranking scheduled custom recommendations example](#).

If the specified `rank` is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The `rank` of the scheduled custom recommendation is the size of the list, instead of the one specified.

If a `rank` is not specified, the scheduled custom recommendation is put at the end of the list.

*enabled*

Type: [Boolean](#)

Indicates whether scheduling is enabled. If `true`, the custom recommendation is enabled and appears in Experience Cloud sites. If `false`, custom recommendations in feeds in Salesforce mobile web aren't removed, but no new custom recommendations appear. In Customer Service and Partner Central sites, disabled custom recommendations no longer appear.

*recommendationAudienceId*

Type: [String](#)

ID of the custom recommendation definition that this scheduled recommendation schedules.

## Return Value

Type: [ConnectApi.ScheduledRecommendation](#)

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

### Ranking scheduled custom recommendations example

If you have these scheduled custom recommendations:

Scheduled Recommendations	Rank
ScheduledRecommendationA	1
ScheduledRecommendationB	2
ScheduledRecommendationC	3

And you include this information in the Scheduled Custom Recommendation Input:

Scheduled Recommendation	Rank
ScheduledRecommendationD	2

The result is:

Scheduled Recommendation	Rank
ScheduledRecommendationA	1
ScheduledRecommendationD	2
ScheduledRecommendationB	3
ScheduledRecommendationC	4

### **getRecommendationsForUser(*communityId*, *userId*, *contextAction*, *contextObjectId*, *maxResults*)**

Get the Chatter recommendations, such as user, group, file, and record recommendations for the context user. Get the custom and static recommendations for the context user.

#### API Version

33.0–35.0

 **Important:** In version 36.0 and later, use `getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)`.

#### Requires Chatter

Yes

#### Signature

```
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String
communityId, String userId, ConnectApi.RecommendationActionType contextAction, String
contextObjectId, Integer maxResults)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID for the context user or the keyword `me`.

*contextAction*

Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed.

If you don't want recommendations based on a recent action, specify `null`.

*contextObjectId*

Type: [String](#)

ID of the object that the context user just performed an action on.

- If *contextAction* is `follow`, *contextObjectId* is a user ID, file ID, or record ID.
- If *contextAction* is `view`, *contextObjectId* is a user ID, file ID, group ID, or record ID.

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed.

If you don't want recommendations based on a recent action, specify `null`.

*maxResults*

Type: [Integer](#)

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

## Return Value

Type: [ConnectApi.RecommendationCollection](#)

## Usage

If you want to get recommendations based on a recent action performed, such as following a user, use *contextAction* and *contextObjectId* together. For example, if you just followed Pam, you specify `follow` for *contextAction* and Pam's user ID for *contextObjectId*.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## SEE ALSO:

[setTestGetRecommendationsForUser\(communityId, userId, contextAction, contextObjectId, maxResults, result\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

### **getRecommendationsForUser(*communityId*, *userId*, *action*, *contextAction*, *contextObjectId*, *maxResults*)**

Get the Chatter, custom, and static recommendations for the context user for the specified action.

#### API Version

33.0–35.0

 **Important:** In version 36.0 and later, use `getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)`.

#### Requires Chatter

Yes

#### Signature

```
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String
communityId, String userId, ConnectApi.RecommendationActionType action,
ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer
maxResults)
```

#### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID for the context user or the keyword `me`.

*action*

Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation.

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

*contextAction*

Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed.

If you don't want recommendations based on a recent action, specify `null`.

*contextObjectId*

Type: [String](#)

ID of the object that the context user just performed an action on.

- If *contextAction* is *follow*, *contextObjectId* is a user ID, file ID, or record ID.
- If *contextAction* is *view*, *contextObjectId* is a user ID, file ID, group ID, or record ID.

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

*maxResults*

Type: [Integer](#)

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

## Return Value

Type: [ConnectApi.RecommendationCollection](#)

## Usage

If you want to get recommendations based on a recent action performed, such as following a user, use *contextAction* and *contextObjectId* together. For example, if you just followed Pam, you specify *follow* for *contextAction* and Pam's user ID for *contextObjectId*.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

[Apex Developer Guide: Testing ConnectApi Code](#)

## **getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults)**

Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

## API Version

33.0–35.0

 **Important:** In version 36.0 and later, use [getRecommendationsForUser\(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults\)](#).

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String
communityId, String userId, ConnectApi.RecommendationActionType action, String
```

```
objectCategory, ConnectApi.RecommendationActionType contextAction, String
contextObjectId, Integer maxResults)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID for the context user or the keyword `me`.

*action*

Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation.

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

*objectCategory*

Type: [String](#)

- If *action* is `follow`, *objectCategory* is `users`, `files`, or `records`.
- If *action* is `join`, *objectCategory* is `groups`.
- If *action* is `view`, *objectCategory* is `users`, `files`, `groups`, `records`, `custom`, or `apps`.

You can also specify a key prefix, the first three characters of the object ID, as the *objectCategory*. Valid values are:

- If *action* is `follow`, *objectCategory* is `005` (users), `069` (files), or `001` (accounts), for example.
- If *action* is `join`, *objectCategory* is `0F9` (groups).
- If *action* is `view`, *objectCategory* is `005` (users), `069` (files), `0F9` (groups), `ORD` (custom recommendations), `T` (static recommendations), or `001` (accounts), for example.

*contextAction*

Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

*contextObjectId*

Type: [String](#)

ID of the object that the context user just performed an action on.

- If *contextAction* is `follow`, *contextObjectId* is a user ID, file ID, or record ID.
- If *contextAction* is `view`, *contextObjectId* is a user ID, file ID, group ID, or record ID.

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

*maxResults*

Type: [Integer](#)

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

## Return Value

Type: [ConnectApi.RecommendationCollection](#)

## Usage

If you want to get recommendations based on a recent action performed, such as following a user, use *contextAction* and *contextObjectId* together. For example, if you just followed Pam, you specify `follow` for *contextAction* and Pam's user ID for *contextObjectId*.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

[Apex Developer Guide: Testing ConnectApi Code](#)

## **getScheduledRecommendations (communityId)**

Get scheduled custom recommendations.

## API Version

35.0 only

 **Important:** In version 36.0 and later, use `getScheduledRecommendations (communityId, channel)`.

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ScheduledRecommendationPage getScheduledRecommendations (String
communityId)
```

## Parameters

*communityId*

Type: `String`

ID for an Experience Cloud site, `internal`, or `null`.

## Return Value

Type: `ConnectApi.ScheduledRecommendationPage`

## Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

## **setTestGetRecommendationsForUser (communityId, userId, contextAction, contextObjectId, maxResults, result)**

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

## API Version

33.0–35.0

## Requires Chatter

Yes

## Signature

```
public static Void setTestGetRecommendationsForUser (String communityId, String userId,
ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer
maxResults, ConnectApi.RecommendationCollection result)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID for the context user or the keyword `me`.

*contextAction*

Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed.

If you don't want recommendations based on a recent action, specify `null`.

*contextObjectId*

Type: [String](#)

ID of the object that the context user just performed an action on.

- If *contextAction* is `follow`, *contextObjectId* is a user ID, file ID, or record ID.
- If *contextAction* is `view`, *contextObjectId* is a user ID, file ID, group ID, or record ID.

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed.

If you don't want recommendations based on a recent action, specify `null`.

*maxResults*

Type: [Integer](#)

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

*result*

Type: `ConnectApi.RecommendationCollection`

Object containing test data.

## Return Value

Type: `Void`

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID for the context user or the keyword `me`.

*action*

Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation.

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

*contextAction*

Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

*contextObjectId*

Type: [String](#)

ID of the object that the context user just performed an action on.

- If *contextAction* is `follow`, *contextObjectId* is a user ID, file ID, or record ID.
- If *contextAction* is `view`, *contextObjectId* is a user ID, file ID, group ID, or record ID.

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

*maxResults*

Type: [Integer](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

**setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result)**

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

## API Version

33.0–35.0

## Requires Chatter

Yes

## Signature

```
public static Void setTestGetRecommendationsForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, String objectCategory,
ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer
maxResults, ConnectApi.RecommendationCollection result)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID for the context user or the keyword `me`.

*action*

Type: [ConnectApi.RecommendationActionType](#)

Specifies the action to take on a recommendation.

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

#### *objectCategory*

Type: [String](#)

- If *action* is `follow`, *objectCategory* is users, files, or records.
- If *action* is `join`, *objectCategory* is groups.
- If *action* is `view`, *objectCategory* is users, files, groups, records, custom, or apps.

You can also specify a key prefix, the first three characters of the object ID, as the *objectCategory*. Valid values are:

- If *action* is `follow`, *objectCategory* is 005 (users), 069 (files), or 001 (accounts), for example.
- If *action* is `join`, *objectCategory* is 0F9 (groups).
- If *action* is `view`, *objectCategory* is 005 (users), 069 (files), 0F9 (groups), 0RD (custom recommendations), T (static recommendations), or 001 (accounts), for example.

#### *contextAction*

Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

#### *contextObjectId*

Type: [String](#)

ID of the object that the context user just performed an action on.

- If *contextAction* is `follow`, *contextObjectId* is a user ID, file ID, or record ID.
- If *contextAction* is `view`, *contextObjectId* is a user ID, file ID, group ID, or record ID.

Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don't want recommendations based on a recent action, specify `null`.

#### *maxResults*

Type: [Integer](#)

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

#### *result*

Type: `ConnectApi.RecommendationCollection`

Object containing test data.

## Return Value

Type: Void

## Records Class

Access information about record motifs, which are small icons used to distinguish record types in the Salesforce UI.

## Namespace

[ConnectApi](#)

## Records Methods

These methods are for `Records`. All methods are static.

### IN THIS SECTION:

[getMotif\(communityId, idOrPrefix\)](#)

Get a motif that contains the URLs for a set of small, medium, and large motif icons for a record. It can also contain a base color for the record.

[getMotifBatch\(communityId, idOrPrefixList\)](#)

Get a motif for a list of objects.

### **getMotif(communityId, idOrPrefix)**

Get a motif that contains the URLs for a set of small, medium, and large motif icons for a record. It can also contain a base color for the record.

### API Version

28.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.Motif getMotif(String communityId, String idOrPrefix)
```

### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*idOrPrefix*

Type: [String](#)

An ID or key prefix.

## Return Value

Type: [ConnectApi.Motif](#)

## Usage

Each Salesforce record type has its own set of motif icons.

### **getMotifBatch(*communityId*, *idOrPrefixList*)**

Get a motif for a list of objects.

## API Version

31.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.BatchResult[] getMotifBatch(String communityId, List<String>
idOrPrefixList)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*idOrPrefixList*

Type: [List<String>](#)

A list of object IDs or prefixes.

## Return Value

Type: [ConnectApi.BatchResult\[\]](#)

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.Motif` object and errors for motifs that didn't load.

## Example

```
String communityId = null;
List<String> prefixIds = new List<String> { '001', '01Z', '069' };

// Get info about the motifs of all records in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.Records.getMotifBatch(communityId,
prefixIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the color of each motif.
        ConnectApi.Motif motif;
        if (batchResult.getResult() instanceof ConnectApi.Motif) {
            motif = (ConnectApi.Motif) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(motif.color);
    }
    else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

## RegisterGuestBuyer Class

Register a guest buyer for a webstore using an account ID, enabling a guest buyer to order on behalf of another buyer.

### Namespace

[ConnectApi](#)

### RegisterGuestBuyer Methods

These methods are for `RegisterGuestBuyer`. All methods are static.

#### IN THIS SECTION:

[registerGuestBuyer\(webstoreId, accountId\)](#)

Register a guest buyer for a webstore using an account ID. This method enables a guest buyer to order on behalf of another buyer.

#### **registerGuestBuyer(webstoreId, accountId)**

Register a guest buyer for a webstore using an account ID. This method enables a guest buyer to order on behalf of another buyer.

#### API Version

60.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.RegisterGuestBuyerOutputRepresentation registerGuestBuyer(String webstoreId, String accountId)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*accountId*

Type: [String](#)

ID of the account for which the request is made.

## Return Value

Type: [ConnectApi.RegisterGuestBuyerOutputRepresentation](#) on page 2228

# Repricing Class

Perform functions related to repricing orders in Order Management.

## Namespace

[ConnectApi](#)

## Repricing Methods

These methods are for `Repricing`. All methods are static.

### IN THIS SECTION:

[productDetails\(webstoreId, skuOrProductId, effectiveAccountId, currencyCode, locale\)](#)

Get details of a product in a web store.

[searchProducts\(webstoreId, searchTerm, pageParam, pageSize, effectiveAccountId, facets\)](#)

Search products in a webstore.

**productDetails(webstoreId, skuOrProductId, effectiveAccountId, currencyCode, locale)**

Get details of a product in a web store.

## API Version

55.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ProductDetailsOutputRepresentation productDetails(String webstoreId, String skuOrProductId, String effectiveAccountId, String currencyCode, String locale)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the WebStore.

*skuOrProductId*

Type: [String](#)

SKU or ID of the Product.

*effectiveAccountId*

Type: [String](#)

Effective Account ID. Required for B2B stores. For other stores, pass null.

*currencyCode*

Type: [String](#)

ISO currency code. If you pass null, the default store value is used.

*locale*

Type: [String](#)

Locale. If you pass null, the default store value is used.

*excludeAttributeSetInfo*

Type: [String](#)

Specifies whether the attribute set information for the product is returned.

*excludeMedia*

Type: [String](#)

Specifies whether the media groups and default images of the product are returned.

*excludeQuantityRule*

Type: [String](#)

Specifies whether the quantity rule information for the product is returned.

*excludeVariationInfo*

Type: [String](#)

Specifies whether the variation information for the product is returned.

*excludePrices*

Type: [String](#)

Specifies whether the prices for the product is returned.

## Return Value

Type: [ConnectApi.ProductDetailsOutputRepresentation](#)

**searchProducts(webstoreId, searchTerm, pageParam, pageSize, effectiveAccountId, facets)**

Search products in a webstore.

## API Version

59.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ProductSearchOutputRepresentation searchProducts(String webstoreId, String searchTerm, Integer pageParam, Integer pageSize, String effectiveAccountId, String facets)
```

## Parameters

*webstoreId*

Type: [String](#)

ID of the webstore.

*searchTerm*

Type: [String](#)

Term used for the search.

*pageParam*

Type: [Integer](#)

Maximum number of search results pages to return. If you don't specify a value, the default is 1.

*pageSize*

Type: [Integer](#)

Number of items per page. Valid values are from 1 through 100. If you don't specify a value, the default size is 20.

*effectiveAccountId*

Type: [String](#)

ID of the account for which the request is made. If unspecified, defaults to the account ID for the context user.

*facets*

Type: [String](#)

A list of facet names to filter the search. For example, ["size\_medium", "color\_red"] is encoded to WyJzaXplX211ZG11bSIsICJjb2xvc19yZWQiXQ==

## Return Value

Type: [ConnectApi.ProductSearchOutputRepresentation](#) on page 2208

# ReturnOrder Class

Process ReturnOrders in Order Management, limited to 2,000 requests per hour.

## Namespace

[ConnectApi](#)

## ReturnOrder Methods

These methods are for `ReturnOrder`. All methods are static.

### IN THIS SECTION:

[createReturnOrder\(returnOrderInput\)](#)

Create a ReturnOrder and ReturnOrderLineItems for items belonging to an OrderSummary.

[returnItems\(returnOrderId, returnItemsInput\)](#)

Process ReturnOrderLineItems belonging to a ReturnOrder. Processing a ReturnOrderLineItem generates a change Order and makes that ReturnOrderLineItem read-only. The change order for a returned item or delivery charge has a positive amount and should be used to create a credit memo. The change order for a return fee has a negative amount and should be used to create an invoice. If a processed ReturnOrderLineItem has any remaining expected quantity, then the API creates a separate ReturnOrderLineItem representing that quantity.

### **createReturnOrder (returnOrderInput)**

Create a ReturnOrder and ReturnOrderLineItems for items belonging to an OrderSummary.

### API Version

50.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.ReturnOrderOutputRepresentation  
createReturnOrder (ConnectApi.ReturnOrderInputRepresentation returnOrderInput)
```

## Parameters

*returnOrderInput*

Type: [ConnectApi.ReturnOrderInputRepresentation](#)

Data for creating a ReturnOrder and ReturnOrderLineItems.

## Return Value

Type: [ConnectApi.ReturnOrderOutputRepresentation](#)

SEE ALSO:

[returnItems\(returnOrderId, returnItemsInput\)](#)

## **returnItems (returnOrderId, returnItemsInput)**

Process ReturnOrderLineItems belonging to a ReturnOrder. Processing a ReturnOrderLineItem generates a change Order and makes that ReturnOrderLineItem read-only. The change order for a returned item or delivery charge has a positive amount and should be used to create a credit memo. The change order for a return fee has a negative amount and should be used to create an invoice. If a processed ReturnOrderLineItem has any remaining expected quantity, then the API creates a separate ReturnOrderLineItem representing that quantity.

## API Version

52.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ReturnItemsOutputRepresentation returnItems (String  
returnOrderId, ConnectApi.ReturnItemsInputRepresentation returnItemsInput)
```

## Parameters

*returnOrderId*

Type: [String](#)

ID of the ReturnOrder.

*returnItemsInput*

Type: [ConnectApi.ReturnItemsInputRepresentation](#)

Data about products and delivery charges to return, as well as associated return fees.

## Return Value

Type: [ConnectApi.ReturnItemsOutputRepresentation](#)

### SEE ALSO:

[createMultipleInvoices\(invoicesInput\)](#)

[ensureRefundsAsync\(orderSummaryId, ensureRefundsInput\)](#)

[createReturnOrder\(returnOrderInput\)](#)

## Routing Class

Route orders to inventory locations in Order Management.

## Namespace

[ConnectApi](#)

## Routing Methods

These methods are for `Routing`. All methods are static.

### IN THIS SECTION:

[confirmHeldFOCapacity\(confirmHeldFOCapacityInput\)](#)

Confirm held fulfillment order capacity at one or more locations. This call decreases a location's held capacity and increases its assigned fulfillment order count. Confirm held capacity when you assign a fulfillment order to a location.

[findRoutesWithFewestSplits\(findRoutesWithFewestSplitsInputRepresentation\)](#)

Returns combinations of inventory locations that can fulfill an order within a specified limit of shipment splits. By default, checks up to 1,000,000 potential routes, returning a maximum of 10,000 results.

[findRoutesWithFewestSplitsUsingOCI\(findRoutesWithFewestSplitsUsingOCIInput\)](#)

For one or more order summaries, find inventory availability using Omnichannel Inventory and identify the fulfillment routes with fewest splits. By default, checks up to 1,000,000 potential routes, returning a maximum of 10,000 results. This method combines the functionality of the `getInventoryAvailability()` and `findRoutesWithFewestSplits()` methods.

[getFOCapacityValues\(getFOCapacityValuesInput\)](#)

Get information about the current fulfillment order capacity of one or more locations.

[holdFOCapacity\(holdFOCapacityInput\)](#)

Hold fulfillment order capacity at a location. Holding capacity at a location reserves a space for a fulfillment order that you'll assign to it.

[rankAverageDistance\(rankAverageDistanceInputRepresentation\)](#)

Calculates the average distance from sets of inventory locations to an order recipient, and ranks them. Use this method to compare the average shipping distances for different sets of locations that can fulfill an order. While this method is executing, you can't invoke another Apex callout.

[releaseHeldFOCapacity\(releaseHeldFOCapacityInput\)](#)

Release held fulfillment order capacity at one or more locations. This call decreases a location's held capacity without changing its assigned fulfillment order count. Release held capacity when you cancel the assignment of a fulfillment order to a location.

**confirmHeldFOCapacity (confirmHeldFOCapacityInput)**

Confirm held fulfillment order capacity at one or more locations. This call decreases a location's held capacity and increases its assigned fulfillment order count. Confirm held capacity when you assign a fulfillment order to a location.

**API Version**

55.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.ConfirmHeldFOCapacityOutputRepresentation
confirmHeldFOCapacity (ConnectApi.ConfirmHeldFOCapacityInputRepresentation
confirmHeldFOCapacityInput)
```

**Parameters**

*confirmHeldFOCapacityInput*

Type: [ConnectApi.ConfirmHeldFOCapacityInputRepresentation](#)

The input includes, for each fulfillment order, the location where capacity is held for it.

**Return Value**

Type: [ConnectApi.ConfirmHeldFOCapacityOutputRepresentation](#)

**findRoutesWithFewestSplits (findRoutesWithFewestSplitsInputRepresentation)**

Returns combinations of inventory locations that can fulfill an order within a specified limit of shipment splits. By default, checks up to 1,000,000 potential routes, returning a maximum of 10,000 results.

**API Version**

51.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.FindRoutesWithFewestSplitsOutputRepresentation
findRoutesWithFewestSplits (ConnectApi.FindRoutesWithFewestSplitsInputRepresentation
findRoutesWithFewestSplitsInputRepresentation)
```

## Parameters

*findRoutesWithFewestSplitsInputRepresentation*

Type: [ConnectApi.FindRoutesWithFewestSplitsInputRepresentation](#)

The input includes the ordered item quantities, data about available inventory, and, optionally, a maximum allowable number of shipment splits.

## Return Value

Type: [ConnectApi.FindRoutesWithFewestSplitsOutputRepresentation](#)

### **findRoutesWithFewestSplitsUsingOCI (findRoutesWithFewestSplitsUsingOCIInput)**

For one or more order summaries, find inventory availability using Omnichannel Inventory and identify the fulfillment routes with fewest splits. By default, checks up to 1,000,000 potential routes, returning a maximum of 10,000 results. This method combines the functionality of the `getInventoryAvailability()` and `findRoutesWithFewestSplits()` methods.

## API Version

54.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.FindRoutesWithFewestSplitsUsingOCIOutputRepresentation
findRoutesWithFewestSplitsUsingOCI(ConnectApi.FindRoutesWithFewestSplitsUsingOCIInputRepresentation
findRoutesWithFewestSplitsUsingOCIInput)
```

## Parameters

*findRoutesWithFewestSplitsUsingOCIInput*

Type: [ConnectApi.FindRoutesWithFewestSplitsUsingOCIInputRepresentation](#)

The input includes, for each order, the ordered item quantities, the assigned location group or locations, and, optionally, a maximum allowable number of shipment splits and a list of locations to exclude from the calculation.

## Return Value

Type: [ConnectApi.FindRoutesWithFewestSplitsUsingOCIOutputRepresentation](#)

## SEE ALSO:

[getInventoryAvailability\(inventoryAvailabilityInputRepresentation\)](#)

[findRoutesWithFewestSplits\(findRoutesWithFewestSplitsInputRepresentation\)](#)

### **getFOCapacityValues (getFOCapacityValuesInput)**

Get information about the current fulfillment order capacity of one or more locations.

### API Version

55.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.GetFOCapacityValuesOutputRepresentation  
getFOCapacityValues (ConnectApi.GetFOCapacityValuesRequestInputRepresentation  
getFOCapacityValuesInput)
```

### Parameters

*getFOCapacityValuesInput*

Type: [ConnectApi.GetFOCapacityValuesRequestInputRepresentation](#)

Locations to get fulfillment order capacity information about.

### Return Value

Type: [ConnectApi.GetFOCapacityValuesOutputRepresentation](#)

### **holdFOCapacity (holdFOCapacityInput)**

Hold fulfillment order capacity at a location. Holding capacity at a location reserves a space for a fulfillment order that you'll assign to it.

### API Version

55.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.HoldFOCapacityOutputRepresentation  
holdFOCapacity (ConnectApi.HoldFOCapacityInputRepresentation holdFOCapacityInput)
```

### Parameters

*holdFOCapacityInput*

Type: [ConnectApi.HoldFOCapacityInputRepresentation](#)

The input includes, for each fulfillment order, the location to hold capacity for it.

### Return Value

Type: [ConnectApi.HoldFOCapacityOutputRepresentation](#)

**rankAverageDistance (rankAverageDistanceInputRepresentation)**

Calculates the average distance from sets of inventory locations to an order recipient, and ranks them. Use this method to compare the average shipping distances for different sets of locations that can fulfill an order. While this method is executing, you can't invoke another Apex callout.

**API Version**

51.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.RankAverageDistanceOutputRepresentation  
rankAverageDistance (ConnectApi.RankAverageDistanceInputRepresentation  
rankAverageDistanceInputRepresentation)
```

**Parameters**

*rankAverageDistanceInputRepresentation*

Type: [ConnectApi.RankAverageDistanceInputRepresentation](#)

An order recipient's geographic location and information about sets of inventory locations that can fulfill the order.

**Return Value**

Type: [ConnectApi.RankAverageDistanceOutputRepresentation](#)

**releaseHeldFOCapacity (releaseHeldFOCapacityInput)**

Release held fulfillment order capacity at one or more locations. This call decreases a location's held capacity without changing its assigned fulfillment order count. Release held capacity when you cancel the assignment of a fulfillment order to a location.

**API Version**

55.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.ReleaseHeldFOCapacityOutputRepresentation  
releaseHeldFOCapacity (ConnectApi.ReleaseHeldFOCapacityInputRepresentation  
releaseHeldFOCapacityInput)
```

## Parameters

*releaseHeldFOCapacityInput*

Type: [ConnectApi.ReleaseHeldFOCapacityInputRepresentation](#)

The input includes, for each fulfillment order, the location that holds the capacity to release.

## Return Value

Type: [ConnectApi.ReleaseHeldFOCapacityOutputRepresentation](#)

# SalesforceInbox Class

Access information about Automated Activity Capture, which is available in Einstein and Salesforce Inbox.

## Namespace

[ConnectApi](#)

## SalesforceInbox Methods

These methods are for `SalesforceInbox`. All methods are static.

### IN THIS SECTION:

[shareActivity\(activityId, sharingInfo\)](#)

Share emails or events with certain groups of users.

### **shareActivity(activityId, sharingInfo)**

Share emails or events with certain groups of users.

## API Version

39.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ActivitySharingResult shareActivity(String activityId,
ConnectApi.ActivitySharingInput sharingInfo)
```

## Parameters

*activityId*

Type: [String](#)

The ID of the activity.

*sharingInfo*

Type: [ConnectApi.ActivitySharingInput](#)

A [ConnectApi.ActivitySharingInput](#) object.

### Return Value

Type: [ConnectApi.ActivitySharingResult](#)

### Usage

This method is a feature of both Sales Cloud Einstein and Inbox. It lets users connect their email and calendar to Salesforce. Then, their emails and events are automatically added to related Salesforce records. Users can specify who their individual emails and events are shared with.

## Sites Class

Search an Experience Cloud site.

## Namespace

[ConnectApi](#)

## Sites Methods

These methods are for `sites`. All methods are static.

IN THIS SECTION:

[searchSite\(siteId, queryTerm, pageToken, pageSize, language\)](#)

Search an Experience Cloud site.

**`searchSite(siteId, queryTerm, pageToken, pageSize, language)`**

Search an Experience Cloud site.

### API Version

54.0

### Available to Guest Users

54.0

### Requires Chatter

No

## Signature

```
public static ConnectApi.SiteSearchResult searchSite(String siteId, String queryTerm, String pageToken, Integer pageSize, String language)
```

## Parameters

*siteId*

Type: [String](#)

ID for the Experience Cloud site.

*queryTerm*

Type: [String](#)

White-space separated words used to search for relevant content. Provide a maximum of 1024 characters, composed of up to 32 words and white spaces. Logical operators aren't supported.

*pageToken*

Type: [String](#)

Specifies the base64 encoded page token. Page tokens are returned as part of the response. If unspecified, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 240. If you pass in `null`, the default size is 25.

*language*

Type: [String](#)

Language locale for the context user. If unspecified or if the specified language locale isn't available, the default value is `en_US`.

## Return Value

Type: [ConnectApi.SiteSearchResult](#)

## SmartDataDiscovery Class

Get predictions on Salesforce objects.

Use the `ConnectApi.SmartDataDiscovery.predict` method to get predictions on Salesforce objects. For more information, see [Get Predictions in Apex](#).

## SocialEngagement Class

Manage information about social accounts or fan pages for social networks.

## Namespace

[ConnectApi](#)

## SocialEngagement Methods

These methods are for `SocialEngagement`. All methods are static.

## IN THIS SECTION:

[deleteSocialPost\(socialPostId, socialAccountId\)](#)

Delete a social post from its social network.

[followSocialPersona\(socialPersonId, socialAccountId\)](#)

Follow a social persona in its social network.

[followSocialPostPersona\(socialPostId, socialAccountId\)](#)

Follow a social persona on a social post in its social network.

[getIntents\(socialPostId\)](#)

Get available intents for a social post.

[getManagedSocialAccount\(id\)](#)

Get a managed social account that is in the org and assigned to the user.

[getManagedSocialAccounts\(\)](#)

Gets a list of managed social accounts that are in the org and assigned to the user.

[getManagedSocialAccounts\(socialNetwork\)](#)

Get a list of managed social accounts that are in the org and assigned to the user.

[getRelationship\(id, socialPersonId\)](#)

Get the follow relationship between a managed social account and a social persona.

[hideSocialPost\(socialPostId, socialAccountId\)](#)

Hide a social post in its social network.

[likeSocialPost\(socialPostId, socialAccountId\)](#)

Like a social post in its social network.

[massApprove\(massApproval\)](#)

Approve or reject the publishing of a large number of social posts.

[recallApproval\(socialPostId\)](#)

Recall an approval request to publish a social post.

[unfollowSocialPersona\(socialPersonId, socialAccountId\)](#)

Stop following a social persona in its social network.

[unfollowSocialPostPersona\(socialPostId, socialAccountId\)](#)

Stop following a social persona of a social post in its social network.

[unhideSocialPost\(socialPostId, socialAccountId\)](#)

Unhide a social post in its social network.

[unlikeSocialPost\(socialPostId, socialAccountId\)](#)

Unlike a social post in its social network.

**deleteSocialPost(socialPostId, socialAccountId)**

Delete a social post from its social network.

**Note:** Deleting a social post from its social network doesn't delete the record from Salesforce.

### API Version

46.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.DeleteSocialPostIntent deleteSocialPost(String socialPostId,  
String socialAccountId)
```

### Parameters

*socialPostId*

Type: [String](#)

ID of the social post to delete.

*socialAccountId*

Type: [String](#)

ID of the social account that deletes the post.

### Return Value

Type: [ConnectApi.DeleteSocialPostIntent](#)

### **followSocialPersona (socialPersonaId, socialAccountId)**

Follow a social persona in its social network.

### API Version

45.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.FollowSocialPersonaIntent followSocialPersona(String  
socialPersonaId, String socialAccountId)
```

### Parameters

*socialPersonaId*

Type: [String](#)

ID of the social persona to follow.

*socialAccountId*

Type: [String](#)

ID of the social account that follows the social persona.

## Return Value

Type: [ConnectApi.FollowSocialPersonaIntent](#)

### **followSocialPostPersona (socialPostId, socialAccountId)**

Follow a social persona on a social post in its social network.

## API Version

45.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.FollowSocialPersonaIntent followSocialPostPersona (String  
socialPostId, String socialAccountId)
```

## Parameters

*socialPostId*

Type: [String](#)

ID of the social post authored by the social persona to follow.

*socialAccountId*

Type: [String](#)

ID of the social account that follows the social persona.

## Return Value

Type: [ConnectApi.FollowSocialPersonaIntent](#)

### **getIntentents (socialPostId)**

Get available intents for a social post.

## API Version

45.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.SocialPostIntents getIntents(String socialPostId)
```

## Parameters

*socialPostId*

Type: [String](#)

ID of a social post.

## Return Value

Type: [ConnectApi.SocialPostIntents](#)

## **getManagedSocialAccount (id)**

Get a managed social account that is in the org and assigned to the user.

## API Version

44.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedSocialAccount getManagedSocialAccount(String id)
```

## Parameters

*id*

Type: [String](#)

Description: Internal SFDC ID for this managed social account.

## Return Value

Type: [ConnectApi.ManagedSocialAccount](#)

## **getManagedSocialAccounts ()**

Gets a list of managed social accounts that are in the org and assigned to the user.

## API Version

44.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedSocialAccounts getManagedSocialAccounts()
```

## Return Value

Type: [ConnectApi.ManagedSocialAccounts](#)

## **getManagedSocialAccounts (socialNetwork)**

Get a list of managed social accounts that are in the org and assigned to the user.

## API Version

44.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.ManagedSocialAccounts  
getManagedSocialAccounts (ConnectApi.SocialNetworkProvider socialNetwork)
```

## Parameters

*socialNetwork*

Type: [ConnectApi.SocialNetworkProvider](#)

Description: Filters results based on the social network. Values are:

- Facebook
- GooglePlus
- Instagram
- InstagramBusiness
- KakaoTalk
- Kik
- Line
- LinkedIn
- Messenger
- Other
- Pinterest
- QQ
- Rypple
- SinaWeibo
- SMS
- Snapchat

- Telegram
- Twitter
- VKontakte
- WeChat
- WhatsApp
- YouTube

## Return Value

Type: [ConnectApi.ManagedSocialAccounts](#)

### **getRelationship(id, socialPersonaId)**

Get the follow relationship between a managed social account and a social persona.

## API Version

46.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.SocialAccountRelationship getRelationship(String id, String socialPersonaId)
```

## Parameters

*id*

Type: [String](#)

ID of the managed social account.

*socialPersonaId*

Type: [String](#)

ID of the social persona.

## Return Value

Type: [ConnectApi.SocialAccountRelationship](#)

### **hideSocialPost(socialPostId, socialAccountId)**

Hide a social post in its social network.

## API Version

46.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.HideSocialPostIntent hideSocialPost(String socialPostId, String socialAccountId)
```

## Parameters

*socialPostId*

Type: [String](#)

ID of the social post to hide.

*socialAccountId*

Type: [String](#)

ID of the social account that hides the post.

## Return Value

Type: [ConnectApi.HideSocialPostIntent](#)

## **likeSocialPost(socialPostId, socialAccountId)**

Like a social post in its social network.

## API Version

46.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.LikeSocialPostIntent likeSocialPost(String socialPostId, String socialAccountId)
```

## Parameters

*socialPostId*

Type: [String](#)

ID of the social post to like.

*socialAccountId*

Type: [String](#)

ID of the social account that likes the post.

## Return Value

Type: [ConnectApi.LikeSocialPostIntent](#)

## **massApprove (massApproval)**

Approve or reject the publishing of a large number of social posts.

## API Version

46.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.SocialPostMassApprovalOutput  
massApprove (ConnectApi.SocialPostMassApprovalInput massApproval)
```

## Parameters

*massApproval*

Type: [ConnectApi.SocialPostMassApprovalInput](#)

A [ConnectApi.SocialPostMassApprovalInput](#) body that includes a list of social post IDs and the action to approve or reject publishing them.

## Return Value

Type: [ConnectApi.SocialPostMassApprovalOutput](#)

## **recallApproval (socialPostId)**

Recall an approval request to publish a social post.

## API Version

46.0

## Requires Chatter

No

## Signature

```
public static Void recallApproval (String socialPostId)
```

## Parameters

*socialPostId*

Type: [String](#)

ID of the social post.

## Return Value

Type: Void

### **unfollowSocialPersona (socialPersonaId, socialAccountId)**

Stop following a social persona in its social network.

## API Version

45.0

## Requires Chatter

No

## Signature

```
public static Void unfollowSocialPersona(String socialPersonaId, String socialAccountId)
```

## Parameters

*socialPersonaId*

Type: [String](#)

ID of the social persona to stop following.

*socialAccountId*

Type: [String](#)

ID of the social account that stops following the social persona.

## Return Value

Type: Void

### **unfollowSocialPostPersona (socialPostId, socialAccountId)**

Stop following a social persona of a social post in its social network.

## API Version

45.0

## Requires Chatter

No

## Signature

```
public static Void unfollowSocialPostPersona(String socialPostId, String socialAccountId)
```

## Parameters

*socialPostId*

Type: [String](#)

ID of the social post authored by the social persona to stop following.

*socialAccountId*

Type: [String](#)

ID of the social account that stops following the social persona.

## Return Value

Type: Void

## **unhideSocialPost(socialPostId, socialAccountId)**

Unhide a social post in its social network.

## API Version

46.0

## Requires Chatter

No

## Signature

```
public static Void unhideSocialPost(String socialPostId, String socialAccountId)
```

## Parameters

*socialPostId*

Type: [String](#)

ID of the social post to unhide.

*socialAccountId*

Type: [String](#)

ID of the social account that unhides the post.

## Return Value

Type: Void

## **unlikeSocialPost(socialPostId, socialAccountId)**

Unlike a social post in its social network.

### API Version

46.0

### Requires Chatter

No

### Signature

```
public static void unlikeSocialPost(String socialPostId, String socialAccountId)
```

### Parameters

*socialPostId*

Type: [String](#)

ID of the social post to unlike.

*socialAccountId*

Type: [String](#)

ID of the social account that unlikes the post.

### Return Value

Type: Void

## Surveys Class

Send survey invitations by email.

### Namespace

[ConnectApi](#)

## Surveys Methods

These methods are for `Surveys`. All methods are static.

### IN THIS SECTION:

[sendSurveyInvitationEmail\(surveyID, SurveyEmailInput\)](#)

Email survey invitations to up to 300 participants. You can email either leads, contacts, or users in your org. Either a link to launch the survey or a question can be embedded in the email invitations.

### **sendSurveyInvitationEmail(surveyID, SurveyEmailInput)**

Email survey invitations to up to 300 participants. You can email either leads, contacts, or users in your org. Either a link to launch the survey or a question can be embedded in the email invitations.

### API Version

50.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.SurveyInvitationEmailOutput sendSurveyInvitationEmail(String surveyID, ConnectApi.SurveyInvitationEmailInput SurveyEmailInput)
```

### Parameters

*surveyID*

Type: [String](#)

ID of the survey.

*SurveyEmailInput*

Type: [ConnectApi.SurveyInvitationEmailInput](#)

A [ConnectApi.SurveyInvitationEmailInput](#) object.

### Return Value

Type: [ConnectApi.SurveyInvitationEmailOutput](#)

## TaxPlatform Class

Apply or cancel tax.

### Namespace

[ConnectApi](#)

## TaxPlatform Methods

These methods are for `TaxPlatform`. All methods are static.

### IN THIS SECTION:

[calculateTax\(calculateTax\)](#)

Apply tax or cancel tax.

#### **calculateTax (calculateTax)**

Apply tax or cancel tax.

## API Version

55.0

## Requires Chatter

No

## Signature

```
global static ConnectApi.CalculateTaxResponse calculateTax(ConnectApi.CalculateTaxRequest calculateTax)
```

## Parameters

*calculateTax*

Type: [ConnectApi.CalculateTaxRequest](#)

Represents a request to calculate tax for one or more line items.

## Return Value

Type: [ConnectApi.CalculateTaxResponse](#)

# Topics Class

Access information about topics, such as their descriptions, the number of people talking about them, related topics, and information about groups contributing to the topic. Update a topic's name or description, merge topics, and add and remove topics from records and feed items.

## Namespace

[ConnectApi](#)

## Topics Methods

These methods are for `Topics`. All methods are static.

These methods in this class require Chatter and are subject to the per user, per namespace, per hour rate limit.

- [getGroupsRecentlyTalkingAboutTopic](#)(communityId, topicId)
- [getRecentlyTalkingAboutTopicsForGroup](#)(communityId, groupId)
- [getRecentlyTalkingAboutTopicsForUser](#)(communityId, userId)

All other methods in this class count toward the [Salesforce Platform total API request allocations](#), which are per org and span a 24-hour period.

### IN THIS SECTION:

[assignTopic](#)(communityId, recordId, topicId)

Assign a topic to a record or feed item.

[assignTopicByName\(communityId, recordId, topicName\)](#)

Assign a topic to a record or feed item.

[createTopic\(communityId, name, description\)](#)

Create a topic.

[createTopicDataCategoryRules\(communityId, dataCategoryGroup, dataCategory, topicNames\)](#)

Create topic and article assignment rules by data category.

[deleteTopic\(communityId, topicId\)](#)

Delete a topic.

[getGroupsRecentlyTalkingAboutTopic\(communityId, topicId\)](#)

Get information about the five groups that most recently contributed to a topic.

[getRecentlyTalkingAboutTopicsForGroup\(communityId, groupId\)](#)

Get up to five topics most recently used in a group.

[getRecentlyTalkingAboutTopicsForUser\(communityId, userId\)](#)

Get up to five topics most recently used by a user.

[getRelatedTopics\(communityId, topicId\)](#)

Get up to five topics most closely related to a topic.

[getTopic\(communityId, topicId\)](#)

Get a topic.

[getTopicDataCategoryRules\(communityId, dataCategoryGroup, dataCategory\)](#)

Get topic and article assignment rules by data category.

[getTopics\(communityId, recordId\)](#)

Get the first page of topics assigned to a record or feed item.

[getTopics\(communityId\)](#)

Get the first page of topics for the org or Experience Cloud site.

[getTopics\(communityId, sortParam\)](#)

Get the first page of sorted topics for the org or community.

[getTopics\(communityId, pageParam, pageSize\)](#)

Get a page of topics.

[getTopics\(communityId, pageParam, pageSize, sortParam\)](#)

Get a page of sorted topics.

[getTopics\(communityId, q, sortParam\)](#)

Get the sorted topics that match the search criteria.

[getTopics\(communityId, q, pageParam, pageSize\)](#)

Get a page of topics that match the search criteria.

[getTopics\(communityId, q, pageParam, pageSize, sortParam\)](#)

Get a page of sorted topics that match the search criteria.

[getTopics\(communityId, q, exactMatch\)](#)

Get the topic that matches the exact, case-insensitive name.

[getTopicsOrFallbackToRenamedTopics\(communityId, q, exactMatch, fallbackToRenamedTopics\)](#)

Get the most recent renamed topic match, if there isn't an exact match.

[getTopicSuggestions\(communityId, recordId, maxResults\)](#)

Get up to a specified number of suggested topics for a record or feed item.

[getTopicSuggestions\(communityId, recordId\)](#)

Get suggested topics for a record or feed item.

[getTopicSuggestionsForText\(communityId, text, maxResults\)](#)

Get up to a specified number of suggested topics for a string of text.

[getTopicSuggestionsForText\(communityId, text\)](#)

Get suggested topics for a string of text.

[getTrendingTopics\(communityId\)](#)

Get trending topics for the org or Experience Cloud site.

[getTrendingTopics\(communityId, maxResults\)](#)

Get up to a specified number of trending topics for the org or Experience Cloud site.

[mergeTopics\(communityId, topicId, idsToMerge\)](#)

Merge up to five secondary topics with a primary topic.

[reassignTopicDataCategoryRules\(communityId, dataCategoryGroup, dataCategory, topicNames\)](#)

Reassign topic and article assignment rules by data category by deleting the existing rules and creating new rules.

[reassignTopicsByName\(communityId, recordId, topicNames\)](#)

Reassign all the topics on a record or feed item, that is, remove all the assigned topics on a record or feed item and add topics. Optionally, provide a list of suggested topics to assign to a record or feed item to improve future topic suggestions.

[unassignTopic\(communityId, recordId, topicId\)](#)

Remove a topic from a record or feed item.

[updateTopic\(communityId, topicId, topic\)](#)

Update the description or name of a topic or merge up to five secondary topics with a primary topic.

[updateTopicsForArticlesInDataCategory\(communityId, dataCategoryGroup, dataCategory, articleTopicAssignmentJob\)](#)

Assign topics to articles and unassign topics from articles in a data category.

### **assignTopic(communityId, recordId, topicId)**

Assign a topic to a record or feed item.

#### **API Version**

29.0

#### **Requires Chatter**

No

#### **Signature**

```
public static ConnectApi.Topic assignTopic(String communityId, String recordId, String
topicId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recordId*

Type: [String](#)

ID for a record or feed item.

*topicId*

Type: [String](#)

ID for a topic.

## Return Value

Type: [ConnectApi.Topic](#)

## Usage

Only users with the Assign Topics permission can add existing topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

### **assignTopicByName(*communityId*, *recordId*, *topicName*)**

Assign a topic to a record or feed item.

## API Version

29.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Topic assignTopicByName(String communityId, String recordId, String topicName)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recordId*

Type: [String](#)

The ID of the record or feed item to which to assign the topic.

*topicName*

Type: [String](#)

The name of a new or existing topic.

## Return Value

Type: [ConnectApi.Topic](#)

## Usage

Only users with the Assign Topics permission can add existing topics to records or feed items. Only users with the Create Topics permission can add new topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

## **createTopic(*communityId*, *name*, *description*)**

Create a topic.

## API Version

36.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Topic createTopic(String communityId, String name, String description)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*name*

Type: [String](#)

The name of the topic.

*description*

Type: [String](#)

The description of the topic.

## Return Value

Type: [ConnectApi.Topic](#)

## Usage

Only users with the Create Topics permission can create a topic.

**createTopicDataCategoryRules (communityId, dataCategoryGroup, dataCategory, topicNames)**

Create topic and article assignment rules by data category.

**API Version**

40.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.TopicPage createTopicDataCategoryRules(String communityId,
String dataCategoryGroup, String dataCategory, ConnectApi.TopicNamesInput topicNames)
```

**Parameters**

*communityId*

Type: [String](#)

ID for an Experience Cloud site, internal, or `null`.

*dataCategoryGroup*

Type: [String](#)

The data category group used by articles.

*dataCategory*

Type: [String](#)

The data category used by articles.

*topicNames*

Type: [ConnectApi.TopicNamesInput](#)

A `ConnectApi.TopicNamesInput` object with the names of topics to assign to articles in a data category.

**Return Value**

Type: [ConnectApi.TopicPage](#)

**deleteTopic (communityId, topicId)**

Delete a topic.

**API Version**

29.0

**Requires Chatter**

No

## Signature

```
public static void deleteTopic(String communityId, String topicId)
```

## Parameters

*communityId*

Type: [String](#),

ID for an Experience Cloud site, `internal`, or `null`.

*topicId*

Type: [String](#)

ID for a topic.

## Return Value

Type: `Void`

## Usage

Only users with the Delete Topics or Modify All Data permission can delete topics.

Topic deletion is asynchronous. If a topic is requested before the deletion completes, the response is successful and the `isBeingDeleted` property of `ConnectApi.Topic` is `true` in version 33.0 and later. If a topic is requested after the deletion completes, the response is `ConnectApi.NotFoundException`.

## **getGroupsRecentlyTalkingAboutTopic(communityId, topicId)**

Get information about the five groups that most recently contributed to a topic.

## API Version

29.0

## Available to Guest Users

32.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ChatterGroupSummaryPage  
getGroupsRecentlyTalkingAboutTopic(String communityId, String topicId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*topicId*

Type: [String](#)

ID for a topic.

## Return Value

Type: [ConnectApi.ChatterGroupSummaryPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetGroupsRecentlyTalkingAboutTopic\(communityId, topicId, result\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **getRecentlyTalkingAboutTopicsForGroup(communityId, groupId)**

Get up to five topics most recently used in a group.

## API Version

29.0

## Available to Guest Users

32.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.TopicPage getRecentlyTalkingAboutTopicsForGroup(String communityId, String groupId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*groupId*

Type: [String](#)

ID for a group.

## Return Value

Type: [ConnectApi.TopicPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

### SEE ALSO:

[setTestGetRecentlyTalkingAboutTopicsForGroup\(communityId, groupId, result\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **getRecentlyTalkingAboutTopicsForUser (communityId, userId)**

Get up to five topics most recently used by a user.

## API Version

29.0

## Available to Guest Users

32.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.TopicPage getRecentlyTalkingAboutTopicsForUser (String communityId, String userId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, internal, or `null`.

*userId*

Type: [String](#)

ID for a user.

## Return Value

Type: [ConnectApi.TopicPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

### SEE ALSO:

[setTestGetRecentlyTalkingAboutTopicsForUser\(communityId, userId, result\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **getRelatedTopics (communityId, topicId)**

Get up to five topics most closely related to a topic.

Two topics that are assigned to the same feed item at least three times are related.

## API Version

29.0

## Available to Guest Users

32.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TopicPage getRelatedTopics(String communityId, String topicId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*topicId*

Type: [String](#)

ID for a topic.

## Return Value

Type: [ConnectApi.TopicPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

### SEE ALSO:

[setTestGetRelatedTopics\(`communityId`, `topicId`, `result`\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **getTopic(`communityId`, `topicId`)**

Get a topic.

## API Version

29.0

## Available to Guest Users

32.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Topic getTopic(String communityId, String topicId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*topicId*

Type: [String](#)

ID for a topic.

## Return Value

Type: [ConnectApi.Topic](#)

## **getTopicDataCategoryRules(`communityId`, `dataCategoryGroup`, `dataCategory`)**

Get topic and article assignment rules by data category.

## API Version

40.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TopicPage getTopicDataCategoryRules(String communityId, String dataCategoryGroup, String dataCategory)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*dataCategoryGroup*

Type: [String](#)

The data category group used by articles.

*dataCategory*

Type: [String](#)

The data category used by articles.

## Return Value

Type: [ConnectApi.TopicPage](#)

## **getTopics(*communityId*, *recordId*)**

Get the first page of topics assigned to a record or feed item.

## API Version

29.0

## Available to Guest Users

32.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TopicPage getTopics(String communityId, String recordId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recordId*

Type: [String](#)

ID for a record or feed item.

## Return Value

Type: [ConnectApi.TopicPage](#)

## Usage

Administrators must enable topics for objects before users can add topics to records of that object type.

### **getTopics (communityId)**

Get the first page of topics for the org or Experience Cloud site.

## API Version

29.0

## Available to Guest Users

32.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TopicPage getTopics(String communityId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

## Return Value

Type: [ConnectApi.TopicPage](#)

### **getTopics (communityId, sortParam)**

Get the first page of sorted topics for the org or community.

## API Version

29.0

### Available to Guest Users

32.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.TopicPage getTopics(String communityId, ConnectApi.TopicSort
sortParam)
```

### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*sortParam*

Type: [ConnectApi.TopicSort](#)

Values are:

- `popularDesc`—Sorts topics by popularity with the most popular first. This value is the default.
- `alphaAsc`—Sorts topics alphabetically.

### Return Value

Type: [ConnectApi.TopicPage](#)

### **getTopics(communityId, pageParam, pageSize)**

Get a page of topics.

### API Version

29.0

### Available to Guest Users

32.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.TopicPage getTopics(String communityId, Integer pageParam,
Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

## Return Value

Type: [ConnectApi.TopicPage](#)

### **getTopics(*communityId*, *pageParam*, *pageSize*, *sortParam*)**

Get a page of sorted topics.

## API Version

29.0

## Available to Guest Users

32.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TopicPage getTopics(String communityId, Integer pageParam, Integer pageSize, ConnectApi.TopicSort sortParam)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: `ConnectApi.TopicSort`

Values are:

- `popularDesc`—Sorts topics by popularity with the most popular first. This value is the default.
- `alphaAsc`—Sorts topics alphabetically.

## Return Value

Type: `ConnectApi.TopicPage`

### **getTopics(*communityId*, *q*, *sortParam*)**

Get the sorted topics that match the search criteria.

## API Version

29.0

## Available to Guest Users

32.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TopicPage getTopics(String communityId, String q,
ConnectApi.TopicSort sortParam)
```

## Parameters

*communityId*

Type: `String`

ID for an Experience Cloud site, `internal`, or `null`.

*q*

Type: `String`

Specifies the string to search. The string must contain at least two characters, not including wildcards.

*sortParam*

Type: `ConnectApi.TopicSort`

Values are:

- `popularDesc`—Sorts topics by popularity with the most popular first. This value is the default.
- `alphaAsc`—Sorts topics alphabetically.

## Return Value

Type: [ConnectApi.TopicPage](#)

### **getTopics(*communityId*, *q*, *pageParam*, *pageSize*)**

Get a page of topics that match the search criteria.

## API Version

29.0

## Available to Guest Users

32.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TopicPage getTopics(String communityId, String q, Integer pageParam, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*q*

Type: [String](#)

Specifies the string to search. The string must contain at least two characters, not including wildcards.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

## Return Value

Type: [ConnectApi.TopicPage](#)

### **getTopics(*communityId*, *q*, *pageParam*, *pageSize*, *sortParam*)**

Get a page of sorted topics that match the search criteria.

## API Version

29.0

## Available to Guest Users

32.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TopicPage getTopics(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.TopicSort sortParam)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*q*

Type: [String](#)

Specifies the string to search. The string must contain at least two characters, not including wildcards.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*sortParam*

Type: [ConnectApi.TopicSort](#)

Values are:

- `popularDesc`—Sorts topics by popularity with the most popular first. This value is the default.
- `alphaAsc`—Sorts topics alphabetically.

## Return Value

Type: [ConnectApi.TopicPage](#)

## **getTopics(communityId, q, exactMatch)**

Get the topic that matches the exact, case-insensitive name.

### API Version

33.0

### Available to Guest Users

33.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.TopicPage getTopics(String communityId, String q, Boolean exactMatch)
```

### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*q*

Type: [String](#)

Specifies the string to search. The string must contain at least two characters, not including wildcards.

*exactMatch*

Type: [Boolean](#)

Specify `true` to find a topic by its exact, case-insensitive name.

### Return Value

Type: [ConnectApi.TopicPage](#)

**getTopicsOrFallbackToRenamedTopics (communityId, q, exactMatch, fallbackToRenamedTopics)**

Get the most recent renamed topic match, if there isn't an exact match.

### API Version

35.0

### Available to Guest Users

35.0

### Requires Chatter

No

## Signature

```
public static ConnectApi.TopicPage getTopicsOrFallbackToRenamedTopics (String communityId,
String q, Boolean exactMatch, Boolean fallbackToRenamedTopics)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*q*

Type: [String](#)

Specifies the string to search. The string must contain at least two characters, not including wildcards.

*exactMatch*

Type: [Boolean](#)

Specify `true` to find a topic by its exact, case-insensitive name or to find the most recent renamed topic match if there isn't an exact match.

*fallbackToRenamedTopics*

Type: [Boolean](#)

Specify `true` and if there isn't an exact match, the most recent renamed topic match is returned. If there are multiple renamed topic matches, only the most recent is returned. If there are no renamed topic matches, an empty collection is returned.

## Return Value

Type: [ConnectApi.TopicPage](#)

## **getTopicSuggestions (communityId, recordId, maxResults)**

Get up to a specified number of suggested topics for a record or feed item.

## API Version

29.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TopicSuggestionPage getTopicSuggestions (String communityId,
String recordId, Integer maxResults)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recordId*

Type: [String](#)

ID for a record or feed item.

*maxResults*

Type: [Integer](#)

Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

## Return Value

Type: [ConnectApi.TopicSuggestionPage](#)

## Usage

Administrators must enable topics for objects before users can see suggested topics for records of that object type.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestGetTopicSuggestions\(communityId, recordId, maxResults, result\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **getTopicSuggestions(communityId, recordId)**

Get suggested topics for a record or feed item.

## API Version

29.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TopicSuggestionPage getTopicSuggestions(String communityId,  
String recordId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recordId*

Type: [String](#)

ID for a record or feed item.

## Return Value

Type: [ConnectApi.TopicSuggestionPage](#)

## Usage

Administrators must enable topics for objects before users can see suggested topics for records of that object type.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## **getTopicSuggestionsForText(communityId, text, maxResults)**

Get up to a specified number of suggested topics for a string of text.

## API Version

29.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TopicSuggestionPage getTopicSuggestionsForText(String communityId, String text, Integer maxResults)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*text*

Type: [String](#)

String of text.

*maxResults*

Type: [Integer](#)

Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

## Return Value

Type: [ConnectApi.TopicSuggestionPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

### SEE ALSO:

[setTestGetTopicSuggestionsForText\(`communityId`, `text`, `maxResults`, `result`\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **getTopicSuggestionsForText(`communityId`, `text`)**

Get suggested topics for a string of text.

## API Version

29.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TopicSuggestionPage getTopicSuggestionsForText(String communityId, String text)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*text*

Type: [String](#)

String of text.

## Return Value

Type: [ConnectApi.TopicSuggestionPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

### SEE ALSO:

[setTestGetTopicSuggestionsForText\(`communityId`, `text`, `result`\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

**getTrendingTopics (communityId)**

Get trending topics for the org or Experience Cloud site.

**API Version**

29.0

**Available to Guest Users**

32.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.TopicPage getTrendingTopics(String communityId)
```

**Parameters**

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

**Return Value**

Type: [ConnectApi.TopicPage](#)

**Usage**

The more frequently people add a specific topic to their posts and comments and comment on or like posts with the same topic over a short period, the more likely it is to become a trending topic. For example, if your coworkers are attending the upcoming Dreamforce conference and have started discussing it in Chatter, you might see a trending topic for Dreamforce. A trending topic is not solely based on popularity and usually relates to a one-time or infrequent event that has a spike in activity, such as a conference or a project deadline.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

[setTestGetTrendingTopics\(communityId, result\)](#)

## SEE ALSO:

[setTestGetTrendingTopics\(communityId, maxResults, result\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **mergeTopics(communityId, topicId, idsToMerge)**

Merge up to five secondary topics with a primary topic.

## API Version

33.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.Topic mergeTopics(String communityId, String topicId,
List<String> idsToMerge)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*topicId*

Type: [String](#)

The ID for the primary topic for the merge. If this topic is a managed topic, it retains its topic type, topic images, and children topics.

*idsToMerge*

Type: [List<String>](#)

A list of up to five comma-separated secondary topic IDs to merge with the primary topic. If any of the secondary topics are navigational or featured topics, they lose their topic type, topic images, and children topics. Their feed items are reassigned to the primary topic. If you merge a topic with a content topic, the content associations are preserved. If you merge a topic with an inactive endorsee, the endorsement isn't mapped to the primary topic.

## Return Value

Type: [ConnectApi.Topic](#)

## Usage

Only users with the Delete Topics or Modify All Data permission can merge topics.

## **reassignTopicDataCategoryRules (communityId, dataCategoryGroup, dataCategory, topicNames)**

Reassign topic and article assignment rules by data category by deleting the existing rules and creating new rules.

## API Version

40.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TopicPage reassignTopicDataCategoryRules(String communityId,
String dataCategoryGroup, String dataCategory, ConnectApi.TopicNamesInput topicNames)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*dataCategoryGroup*

Type: [String](#)

The data category group used by articles.

*dataCategory*

Type: [String](#)

The data category used by articles.

*topicNames*

Type: [ConnectApi.TopicNamesInput](#)

A `ConnectApi.TopicNamesInput` object with the names of topics to reassign to articles in a data category.

## Return Value

Type: [ConnectApi.TopicPage](#)

### **reassignTopicsByName(*communityId*, *recordId*, *topicNames*)**

Reassign all the topics on a record or feed item, that is, remove all the assigned topics on a record or feed item and add topics. Optionally, provide a list of suggested topics to assign to a record or feed item to improve future topic suggestions.

## API Version

35.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TopicPage reassignTopicsByName(String communityId, String recordId, ConnectApi.TopicNamesInput topicNames)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recordId*

Type: [String](#)

The ID of the record or feed item to which to assign the topic.

*topicNames*

Type: [ConnectApi.TopicNamesInput](#)

A list of topics to replace the currently assigned topics. Optionally, a list of suggested topics to assign to improve future topic suggestions.

## Return Value

Type: [ConnectApi.TopicPage](#)

## Usage

Only users with the Assign Topics permission can remove topics from records or feed items and add existing topics to records or feed items. Only users with the Create Topics permission can add new topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

### **unassignTopic(*communityId*, *recordId*, *topicId*)**

Remove a topic from a record or feed item.

## API Version

29.0

## Requires Chatter

No

## Signature

```
public static Void unassignTopic(String communityId, String recordId, String topicId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recordId*

Type: [String](#)

ID for a record or feed item.

*topicId*

Type: [String](#)

ID for a topic.

## Return Value

Type: Void

## Usage

Only users with the Assign Topics permission can remove topics from feed items or records. Administrators must enable topics for objects before users can add topics to records of that object type.

**updateTopic(*communityId*, *topicId*, *topic*)**

Update the description or name of a topic or merge up to five secondary topics with a primary topic.

**API Version**

29.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.Topic updateTopic(String communityId, String topicId,
ConnectApi.TopicInput topic)
```

**Parameters**

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*topicId*

Type: [String](#)

ID for a topic.

*topic*

Type: [ConnectApi.TopicInput](#)

A `ConnectApi.TopicInput` object containing the name and description of the topic or up to five comma-separated secondary topic IDs to merge with the primary topic.

**Return Value**

Type: [ConnectApi.Topic](#)

**Usage**

Only users with the Edit Topics or Modify All Data permission can update topic names and descriptions. Only users with the Delete Topics or Modify All Data permission can merge topics.

**updateTopicsForArticlesInDataCategory(*communityId*, *dataCategoryGroup*, *dataCategory*, *articleTopicAssignmentJob*)**

Assign topics to articles and unassign topics from articles in a data category.

**API Version**

40.0

## Requires Chatter

No

## Signature

```
public static ConnectApi.TopicPage updateTopicsForArticlesInDataCategory(String communityId, String dataCategoryGroup, String dataCategory, ConnectApi.ArticleTopicAssignmentJobInput articleTopicAssignmentJob)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, internal, or `null`.

*dataCategoryGroup*

Type: [String](#)

The data category group used by articles.

*dataCategory*

Type: [String](#)

The data category used by articles.

*articleTopicAssignmentJob*

Type: [ConnectApi.ArticleTopicAssignmentJobInput](#)

A [ConnectApi.ArticleTopicAssignmentJobInput](#) object that indicates the operation to take on which topics.

## Return Value

Type: [ConnectApi.TopicPage](#)

## Topics Test Methods

These test methods are for `Topics`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see [Testing ConnectApi Code](#).

### **setTestGetGroupsRecentlyTalkingAboutTopic(*communityId*, *topicId*, *result*)**

Register a `ConnectApi.ChatterGroupSummaryPage` object to be returned when the matching `ConnectApi.getGroupsRecentlyTalkingAboutTopic` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

29.0

## Signature

```
public static Void setTestGetGroupsRecentlyTalkingAboutTopic(String communityId, String topicId, ConnectApi.ChatterGroupSummaryPage result)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*topicId*

Type: [String](#)

ID for a topic.

*result*

Type: [ConnectApi.ChatterGroupSummaryPage](#)

Object containing test data.

## Return Value

Type: Void

### SEE ALSO:

[getGroupsRecentlyTalkingAboutTopic\(communityId, topicId\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **setTestGetRecentlyTalkingAboutTopicsForGroup(communityId, groupId, result)**

Register a `ConnectApi.TopicPage` object to be returned when the matching

`ConnectApi.getRecentlyTalkingAboutTopicsForGroup` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

29.0

## Signature

```
public static Void setTestGetRecentlyTalkingAboutTopicsForGroup(String communityId,  
String groupId, ConnectApi.TopicPage result)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*groupId*

Type: [String](#)

ID for a group.

*result*

Type: [ConnectApi.TopicPage](#)

Object containing test data.

## Return Value

Type: Void

### SEE ALSO:

[getRecentlyTalkingAboutTopicsForGroup\(communityId, groupId\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **setTestGetRecentlyTalkingAboutTopicsForUser(communityId, userId, result)**

Register a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getRecentlyTalkingAboutTopicsForUser` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

29.0

## Signature

```
public static Void setTestGetRecentlyTalkingAboutTopicsForUser(String communityId,
String userId, ConnectApi.TopicPage result)
```

## Parameters

*communityId*

Type: `String`

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: `String`

ID for a user.

*result*

Type: `ConnectApi.TopicPage`

Specify the test topics page.

## Return Value

Type: Void

### SEE ALSO:

[getRecentlyTalkingAboutTopicsForUser\(communityId, userId\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **setTestGetRelatedTopics(communityId, topicId, result)**

Register a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getRelatedTopics` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

29.0

## Signature

```
public static Void setTestGetRelatedTopics(String communityId, String topicId,
ConnectApi.TopicPage result)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*topicId*

Type: [String](#)

ID for a topic.

*result*

Type: [ConnectApi.TopicPage](#)

Object containing test data.

## Return Value

Type: Void

## SEE ALSO:

[getRelatedTopics\(communityId, topicId\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **setTestGetTopicSuggestions(communityId, recordId, maxResults, result)**

Register a `ConnectApi.TopicSuggestionPage` object to be returned when the matching `ConnectApi.getTopicSuggestions` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

29.0

## Signature

```
public static Void setTestGetTopicSuggestions(String communityId, String recordId,
Integer maxResults, ConnectApi.TopicSuggestionPage result)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recordId*

Type: [String](#)

ID for a record or feed item.

*maxResults*

Type: [Integer](#)

Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

*result*

Type: [ConnectApi.TopicSuggestionPage](#)

Specify the test topic suggestions page.

## Return Value

Type: Void

SEE ALSO:

[getTopicSuggestions\(communityId, recordId, maxResults\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **setTestGetTopicSuggestions(communityId, recordId, result)**

Register a `ConnectApi.TopicSuggestionPage` object to be returned when the matching `ConnectApi.getTopicSuggestions` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

29.0

## Signature

```
public static Void setTestGetTopicSuggestions(String communityId, String recordId,
ConnectApi.TopicSuggestionPage result)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*recordId*

Type: [String](#)

ID for a record or feed item.

*result*

Type: [ConnectApi.TopicSuggestionPage](#)

Object containing test data.

## Return Value

Type: Void

### SEE ALSO:

[getTopicSuggestions\(communityId, recordId\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **setTestGetTopicSuggestionsForText(communityId, text, maxResults, result)**

Register a `ConnectApi.TopicSuggestionPage` object to be returned when the matching `ConnectApi.getTopicSuggestionsForText` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

29.0

## Signature

```
public static Void setTestGetTopicSuggestionsForText(String communityId, String text, Integer maxResults, ConnectApi.TopicSuggestionPage result)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*text*

Type: [String](#)

String of text.

*maxResults*

Type: [Integer](#)

Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

*result*

Type: [ConnectApi.TopicSuggestionPage](#)

Object containing test data.

## Return Value

Type: Void

### SEE ALSO:

[getTopicSuggestionsForText\(communityId, text, maxResults\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **setTestGetTopicSuggestionsForText(communityId, text, result)**

Register a `ConnectApi.TopicSuggestionPage` object to be returned when the matching `ConnectApi.getTopicSuggestionsForText` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

29.0

## Signature

```
public static Void setTestGetTopicSuggestionsForText(String communityId, String text,
ConnectApi.TopicSuggestionPage result)
```

## Parameters

*communityId*

Type: `String`

ID for an Experience Cloud site, `internal`, or `null`.

*text*

Type: `String`

String of text.

*result*

Type: `ConnectApi.TopicSuggestionPage`

Object containing test data.

## Return Value

Type: Void

### SEE ALSO:

[getTopicSuggestionsForText\(communityId, text\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **setTestGetTrendingTopics(communityId, result)**

Register a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getTrendingTopics` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

29.0

## Signature

```
public static Void setTestGetTrendingTopics(String communityId, ConnectApi.TopicPage result)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*result*

Type: [ConnectApi.TopicPage](#)

Object containing test data.

## Return Value

Type: Void

SEE ALSO:

[getTrendingTopics\(communityId\)](#)

[Apex Developer Guide: Testing ConnectApi Code](#)

## **setTestGetTrendingTopics (communityId, maxResults, result)**

Register a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getTrendingTopics` method is called in a test context. Use the method with the same parameters or you receive an exception.

## API Version

29.0

## Signature

```
public static Void setTestGetTrendingTopics(String communityId, Integer maxResults, ConnectApi.TopicPage result)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*maxResults*

Type: [Integer](#)

Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

*result*

Type: [ConnectApi.TopicPage](#)

Object containing test data.

## Return Value

Type: Void

# UserProfiles Class

Access user profile data. The user profile data populates the profile page (also called the Chatter profile page). This data includes user information (such as address, manager, and phone number), some user capabilities (permissions), and a set of subtab apps, which are custom tabs on the profile page.

## Namespace

[ConnectApi](#)

## UserProfiles Methods

These methods are for `UserProfiles`. All methods are static.

All methods in this class require Chatter and are subject to the per user, per namespace, per hour rate limit.

IN THIS SECTION:

[deleteBannerPhoto\(communityId, userId\)](#)

Delete a user's banner photo.

[deletePhoto\(communityId, userId\)](#)

Delete a user's photo.

[getBannerPhoto\(communityId, userId\)](#)

Get a user's banner photo.

[getPhoto\(communityId, userId\)](#)

Get a user's photo.

[getUserProfile\(communityId, userId\)](#)

Get the user profile of the context user.

[setBannerPhoto\(communityId, userId, fileId, versionNumber\)](#)

Set an uploaded file as a user's banner photo.

[setBannerPhoto\(communityId, userId, fileUpload\)](#)

Set a file that hasn't been uploaded as a user's banner photo.

[setBannerPhotoWithAttributes\(communityId, userId, bannerPhoto\)](#)

Set and crop an uploaded file as a user's banner photo.

[setBannerPhotoWithAttributes\(communityId, userId, bannerPhoto, fileUpload\)](#)

Set and crop a file that hasn't been uploaded as a user's banner photo.

[setPhoto\(communityId, userId, fileId, versionNumber\)](#)

Set an uploaded file as a user's photo.

[setPhoto\(communityId, userId, fileUpload\)](#)

Set a file that hasn't been uploaded as a user's photo.

[setPhotoWithAttributes\(communityId, userId, photo\)](#)

Set and crop an uploaded file as a user's photo.

[setPhotoWithAttributes\(communityId, userId, photo, fileUpload\)](#)

Set and crop a file that hasn't been uploaded as a user's photo.

### **deleteBannerPhoto(communityId, userId)**

Delete a user's banner photo.

### API Version

36.0

### Requires Chatter

Yes

### Signature

```
public static void deleteBannerPhoto(String communityId, String userId)
```

### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID of the user.

### Return Value

Type: `Void`

**deletePhoto (communityId, userId)**

Delete a user's photo.

**API Version**

35.0

**Requires Chatter**

Yes

**Signature**

```
public static Void deletePhoto(String communityId, String userId)
```

**Parameters**

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID for the context user or the keyword `me`.

**Return Value**

Type: Void

**getBannerPhoto (communityId, userId)**

Get a user's banner photo.

**API Version**

36.0

**Requires Chatter**

Yes

**Signature**

```
public static ConnectApi.BannerPhoto getBannerPhoto(String communityId, String userId)
```

**Parameters**

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID of the user.

### Return Value

Type: [ConnectApi.BannerPhoto](#)

### **getPhoto (communityId, userId)**

Get a user's photo.

### API Version

35.0

### Available to Guest Users

35.0

### Requires Chatter

Yes

### Signature

```
public static ConnectApi.Photo getPhoto(String communityId, String userId)
```

### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, internal, or `null`.

*userId*

Type: [String](#)

ID for a user.

### Return Value

Type: [ConnectApi.Photo](#)

### **getUserProfile (communityId, userId)**

Get the user profile of the context user.

### API Version

29.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.UserProfile getUserProfile(String communityId, String userId)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID for a user.

## Return Value

Type: [ConnectApi.UserProfile](#)

## **setBannerPhoto(communityId, userId, fileId, versionNumber)**

Set an uploaded file as a user's banner photo.

## API Version

36.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String userId, String fileId, Integer versionNumber)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID of the user.

*fileId*

Type: [String](#)

ID of the uploaded file to use as the user banner. The key prefix must be 069, and the image must be smaller than 8 MB.

*versionNumber*

Type: [Integer](#)

Version number of the file. Specify an existing version number or, to get the latest version, specify `null`.

## Return Value

Type: [ConnectApi.BannerPhoto](#)

## Usage

Photos are processed asynchronously and might not be visible right away.

### **setBannerPhoto(*communityId*, *userId*, *fileUpload*)**

Set a file that hasn't been uploaded as a user's banner photo.

## API Version

36.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String userId,
ConnectApi.BinaryInput fileUpload)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID of the user.

*fileUpload*

Type: [ConnectApi.BinaryInput](#)

File to use as the photo. The content type must be usable as an image.

## Return Value

Type: [ConnectApi.BannerPhoto](#)

## Usage

Photos are processed asynchronously and might not be visible right away.

### **setBannerPhotoWithAttributes (communityId, userId, bannerPhoto)**

Set and crop an uploaded file as a user's banner photo.

## API Version

36.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId,  
String userId, ConnectApi.BannerPhotoInput bannerPhoto)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID of the user.

*bannerPhoto*

Type: [ConnectApi.BannerPhotoInput](#)

A `ConnectApi.BannerPhotoInput` object that specifies the ID and version of the file, and how to crop the file.

## Return Value

Type: [ConnectApi.BannerPhoto](#)

## Usage

Photos are processed asynchronously and might not be visible right away.

### **setBannerPhotoWithAttributes (communityId, userId, bannerPhoto, fileUpload)**

Set and crop a file that hasn't been uploaded as a user's banner photo.

## API Version

36.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId,
String userId, ConnectApi.BannerPhotoInput bannerPhoto, ConnectApi.BinaryInput
fileUpload)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, internal, or `null`.

*userId*

Type: [String](#)

ID of the user.

*bannerPhoto*

Type: [ConnectApi.BannerPhotoInput](#)

A [ConnectApi.BannerPhotoInput](#) object specifying the cropping parameters.

*fileUpload*

Type: [ConnectApi.BinaryInput](#)

File to use as the photo. The content type must be usable as an image.

## Return Value

Type: [ConnectApi.BannerPhoto](#)

## Usage

Photos are processed asynchronously and might not be visible right away.

## **setPhoto(communityId, userId, fileId, versionNumber)**

Set an uploaded file as a user's photo.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.Photo setPhoto(String communityId, String userId, String
fileId, Integer versionNumber)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID for the context user or the keyword `me`.

*fileId*

Type: [String](#)

ID of an uploaded file. The file must be an image, and be smaller than 2 GB.

*versionNumber*

Type: [Integer](#)

Version number of the existing file. Specify either an existing version number, or `null` to get the latest version.

## Return Value

Type: [ConnectApi.Photo](#)

## Usage

Photos are processed asynchronously and might not be visible right away.

### **setPhoto(*communityId*, *userId*, *fileUpload*)**

Set a file that hasn't been uploaded as a user's photo.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.Photo setPhoto(String communityId, String userId,
ConnectApi.BinaryInput fileUpload)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID for the context user or the keyword `me`.

*fileUpload*

Type: [ConnectApi.BinaryInput](#)

File to use as the photo. The content type must be usable as an image.

## Return Value

Type: [ConnectApi.Photo](#)

## Usage

Photos are processed asynchronously and might not be visible right away.

### **setPhotoWithAttributes(*communityId*, *userId*, *photo*)**

Set and crop an uploaded file as a user's photo.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId,
ConnectApi.PhotoInput photo)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID for the context user or the keyword `me`.

*photo*

Type: [ConnectApi.PhotoInput](#)

A [ConnectApi.PhotoInput](#) object specifying the file ID, version number, and cropping parameters.

## Return Value

Type: [ConnectApi.Photo](#)

## Usage

Photos are processed asynchronously and might not be visible right away.

### **setPhotoWithAttributes (communityId, userId, photo, fileUpload)**

Set and crop a file that hasn't been uploaded as a user's photo.

## API Version

35.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId,
ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*userId*

Type: [String](#)

ID for the context user or the keyword `me`.

*photo*

Type: [ConnectApi.PhotoInput](#)

A `ConnectApi.PhotoInput` object specifying the cropping parameters.

*fileUpload*

Type: [ConnectApi.BinaryInput](#)

File to use as the photo. The content type must be usable as an image.

## Return Value

Type: [ConnectApi.Photo](#)

## Usage

Photos are processed asynchronously and might not be visible right away.

# Zones Class

Access information about Chatter Answers zones in your organization. Zones organize questions into logical groups, with each zone having its own focus and unique questions.

 **Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring '18](#).

## Namespace

[ConnectApi](#)

## Zones Methods

These methods are for `Zones`. All methods are static.

All methods in this class require Chatter and are subject to the per user, per namespace, per hour rate limit.

### IN THIS SECTION:

[getZone\(communityId, zoneId\)](#)

Get a zone.

[getZones\(communityId\)](#)

Get a list of zones.

[getZones\(communityId, pageParam, pageSize\)](#)

Get a page of zones.

[searchInZone\(communityId, zoneId, q, filter\)](#)

Search articles or questions in a zone.

[searchInZone\(communityId, zoneId, q, filter, pageParam, pageSize\)](#)

Search a page of articles or questions in a zone.

[searchInZone\(communityId, zoneId, q, filter, language\)](#)

Search articles or questions in a zone, and specify the language of the results.

### **getZone(communityId, zoneId)**

Get a zone.

 **Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring '18](#).

### API Version

29.0

### Requires Chatter

Yes

### Signature

```
public static ConnectApi.Zone getZone(String communityId, String zoneId)
```

## Parameters

*communityId*

Type: String

ID for an Experience Cloud site, `internal`, or `null`.

*zoneId*

Type: String

The ID of a zone.

## Return Value

Type: [ConnectApi.Zone](#)

### **getZones (communityId)**

Get a list of zones.

 **Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring '18](#).

## API Version

29.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ZonePage getZones(String communityId)
```

## Parameters

*communityId*

Type: String

ID for an Experience Cloud site, `internal`, or `null`.

## Return Value

Type: [ConnectApi.ZonePage](#)

### **getZones (communityId, pageParam, pageSize)**

Get a page of zones.

 **Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring '18](#).

### API Version

29.0

### Requires Chatter

Yes

### Signature

```
public static ConnectApi.Zone getZones(String communityId, Integer pageParam, Integer pageSize)
```

### Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*pageParam*

Type: [Integer](#)

Number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

### Return Value

Type: [ConnectApi.ZonePage](#)

### **searchInZone (communityId, zoneId, q, filter)**

Search articles or questions in a zone.

 **Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring '18](#).

### API Version

29.0

### Available to Guest Users

37.0

### Requires Chatter

Yes

## Signature

```
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId,
String q, ConnectApi.ZoneSearchResultType filter)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*zoneId*

Type: [String](#)

ID of a zone.

*q*

Type: [String](#)

Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*filter*

Type: [ConnectApi.ZoneSearchResultType](#)

A `ZoneSearchResultType` enum value. One of the following:

- `Article`—Search results contain only articles.
- `Question`—Search results contain only questions.

## Return Value

Type: [ConnectApi.ZoneSearchPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestSearchInZone\(communityId, zoneId, q, filter, result\)](#)

## **searchInZone (communityId, zoneId, q, filter, pageParam, pageSize)**

Search a page of articles or questions in a zone.

 **Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring '18](#).

## API Version

29.0

## Available to Guest Users

37.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String pageParam, Integer pageSize)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*zoneId*

Type: [String](#)

ID of a zone.

*q*

Type: [String](#)

Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*filter*

Type: [ConnectApi.ZoneSearchResultType](#)

A `ZoneSearchResultType` enum value. One of the following:

- `Article`—Search results contain only articles.
- `Question`—Search results contain only questions.

*pageParam*

Type: [String](#)

Specifies the page token to use to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*

Type: [Integer](#)

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

## Return Value

Type: [ConnectApi.ZoneSearchPage](#)

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

## **searchInZone(`communityId`, `zoneId`, `q`, `filter`, `language`)**

Search articles or questions in a zone, and specify the language of the results.

 **Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring '18](#).

## API Version

36.0

## Available to Guest Users

37.0

## Requires Chatter

Yes

## Signature

```
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String language)
```

## Parameters

*communityId*

Type: [String](#)

ID for an Experience Cloud site, `internal`, or `null`.

*zoneId*

Type: [String](#)

ID of a zone.

*q*

Type: [String](#)

Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*filter*

Type: [ConnectApi.ZoneSearchResultType](#)

- `Article`—Search results contain only articles.

- `Question`—Search results contain only questions.

*language*

Type: `String`

The language of the articles or questions. The value must be a Salesforce supported locale code.

## Return Value

Type: `ConnectApi.ZoneSearchPage`

## Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

[setTestSearchInZone\(`communityId`, `zoneId`, `q`, `filter`, `language`, `result`\)](#)

## Zones Test Methods

These test methods are for `Zones`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see [Testing ConnectApi Code](#).

### **setTestSearchInZone(`communityId`, `zoneId`, `q`, `filter`, `result`)**

Register a `ConnectApi.ZoneSearchPage` object to be returned when `searchInZone(communityId, zoneId, q, filter)` is called in a test context. Use the method with the same parameters or you receive an exception.

**Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring '18](#).

## API Version

29.0

## Signature

```
public static void setTestSearchInZone(String communityId, String zoneId, String q,
ConnectApi.ZoneSearchResultType filter, ConnectApi.ZoneSearchPage result)
```

## Parameters

*communityId*

Type: `String`

Use either the ID for an Experience Cloud site, `internal`, or `null`.

*zoneId*

Type: `String`

The ID of a zone.

*q*

Type: String

Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*filter*

Type: `ConnectApi.ZoneSearchResultType`

A `ZoneSearchResultType` enum value. One of the following:

- `Article`—Search results contain only articles.
- `Question`—Search results contain only questions.

*result*

Type: `ConnectApi.ZoneSearchPage`

The object containing test data.

## Return Value

Type: Void

SEE ALSO:

## API Version

36.0

## Signature

```
public static void setTestSearchInZone(String communityId, String zoneId, String q,
ConnectApi.ZoneSearchResultType filter, String language, ConnectApi.ZoneSearchPage
result)
```

## Parameters

*communityId*

Type: String

Use either the ID for an Experience Cloud site, `internal`, or `null`.

*zoneId*

Type: String

The ID of a zone.

*q*

Type: String

Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

*filter*

Type: [ConnectApi.ZoneSearchResultType](#)

- `Article`—Search results contain only articles.
- `Question`—Search results contain only questions.

*language*

Type: String

The language of the articles or questions. The value must be a Salesforce supported locale code. In an `<apex:page>`, the default value is the language of the page. Otherwise, the default value is the user's locale.

*result*

Type: [ConnectApi.ZoneSearchPage](#)

The object containing test data.

## Return Value

Type: Void

## ConnectApi Input Classes

Some `ConnectApi` methods take arguments that are instances of `ConnectApi` input classes.

Input classes are concrete unless marked abstract in this documentation. Concrete input classes have public constructors that have no parameters.

Some methods have parameters that are typed with an abstract class. You must pass in an instance of a concrete child class for these parameters.

Most input class properties can be set. Read-only properties are noted in this documentation.

## ConnectApi.ActionLinkDefinitionInput

The definition of an action link. An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can drive productivity and accelerate innovation.

### Usage

You can use context variables in the `actionUrl`, `headers`, and `requestBody` properties. Use context variables to pass information about the user who executed the action link to your server-side code. Salesforce substitutes the value when the action link is executed.

The available context variables are:

Context Variable	Description
<code>{!actionLinkId}</code>	The ID of the action link the user executed.
<code>{!actionLinkGroupId}</code>	The ID of the action link group containing the action link the user executed.
<code>{!communityId}</code>	The ID of the site in which the user executed the action link. The value for your internal org is the empty key <code>"000000000000000000"</code> .
<code>{!communityUrl}</code>	The URL of the site in which the user executed the action link. The value for your internal org is empty string <code>""</code> .
<code>{!orgId}</code>	The ID of the org in which the user executed the action link.
<code>{!userId}</code>	The ID of the user that executed the action link.

Property	Type	Description	Required or Optional	Available Version
<code>actionType</code>	<code>ConnectApi.ActionLinkType</code>	Defines the type of action link. Values are: <ul style="list-style-type: none"> <li><code>Api</code>—The action link calls a synchronous API at the action URL. Salesforce sets the status to <code>SuccessfulStatus</code> or <code>FailedStatus</code> based on the HTTP status code returned by your server.</li> <li><code>ApiAsync</code>—The action link calls an asynchronous API at the action URL. The action remains in a <code>PendingStatus</code> state until a third party makes a request to <code>/connect/action-links/<i>actionLinkId</i></code> to set the status to</li> </ul>	Required  Can be defined in an action link template.	33.0

Property	Type	Description	Required or Optional	Available Version
		<p>SuccessfulStatus or FailedStatus when the asynchronous operation is complete.</p> <ul style="list-style-type: none"> <li>Download—The action link downloads a file from the action URL.</li> <li>Ui—The action link takes the user to a web page at the action URL.</li> </ul> <p>Use Ui if you need to load a page before the user performs an action, for example, to have the user provide input or view something before the action happens.</p> <p> <b>Note:</b> Invoking ApiAsync action links from an app requires a call to set the status. However, there isn't currently a way to set the status of an action link using Apex. To set the status, use Connect REST API. See the Action Link resource in the <a href="#">Connect REST API Developer Guide</a> for more information.</p>		
actionUrl	String	<p>The action link URL. For example, a Ui action link URL is a Web page. A Download action link URL is a link to the file to download. Ui and Download action link URLs are provided to clients. An Api or ApiAsync action link URL is a REST resource. Api and ApiAsync action link URLs aren't provided to clients. Links to Salesforce can be relative. All other links must be absolute and start with https://.</p> <p> <b>Tip:</b> To avoid issues due to upgrades or changing functionality in your API, we recommend using a versioned API for actionUrl, for example, https://www.example.com/api/v1/exampleResource. If your API isn't versioned, you can use the expirationDate property of the ConnectApi.ActionLinkGroup DefinitionInput class to</p>	<p>Required</p> <p>Can be defined in an action link template.</p>	33.0

Property	Type	Description	Required or Optional	Available Version
		avoid issues due to upgrades or changing functionality in your API.		
<code>excludedUserId</code>	<a href="#">String</a>	ID of a single user to exclude from performing the action. If you specify an <code>excludedUserId</code> , you can't specify a <code>userId</code> .	Optional Can be defined in an action link template using the <code>User Visibility</code> and <code>Custom User Alias</code> fields.	33.0
<code>groupDefault</code>	<a href="#">Boolean</a>	<code>true</code> if this action is the default action link in the action link group; <code>false</code> otherwise. There can be only one default action link per action link group. The default action link gets distinct styling in the Salesforce UI.	Optional Can be defined in an action link template.	33.0
<code>headers</code>	<a href="#">List&lt;ConnectApi.RequestHeaderInput&gt;</a>	The request headers for the <code>Api</code> and <code>ApiAsync</code> action link types. See <a href="#">Action Links Overview, Authentication, and Security</a> .	Optional Can be defined in an action link template.	33.0
<code>labelKey</code>	<a href="#">String</a>	Key for the set of labels to show in the user interface. A set includes labels for these states: <code>NewStatus</code> , <code>PendingStatus</code> , <code>SuccessStatus</code> , <code>FailedStatus</code> . For example, if you use the <code>APPROVE</code> key, you get these labels: <code>Approve</code> , <code>Pending</code> , <code>Approved</code> , <code>Failed</code> .  For a complete list of keys and labels, see <a href="#">Action Links Labels</a> .  If none of the predefined labels work for your action link, use a custom label. To use a custom label, create an action link template. See <a href="#">Create Action Link Templates</a> .	Required Can be defined in an action link template.	33.0
<code>method</code>	<a href="#">ConnectApi.HttpRequestMethod</a>	One of these HTTP methods: <ul style="list-style-type: none"> <li><code>HttpDelete</code>—Returns HTTP 204 on success. Response body or output class is empty.</li> <li><code>HttpGet</code>—Returns HTTP 200 on success.</li> <li><code>HttpHead</code>—Returns HTTP 200 on success. Response body or output class is empty.</li> </ul>	Required Can be defined in an action link template.	33.0

Property	Type	Description	Required or Optional	Available Version
		<ul style="list-style-type: none"> <li><code>HttpPatch</code>—Returns HTTP 200 on success or HTTP 204 if the response body or output class is empty.</li> <li><code>HttpPost</code>—Returns HTTP 201 on success or HTTP 204 if the response body or output class is empty. Exceptions are the batch posting resources and methods, which return HTTP 200 on success.</li> <li><code>HttpPut</code>—Return HTTP 200 on success or HTTP 204 if the response body or output class is empty.</li> </ul>		
<code>requestBody</code>	<a href="#">String</a>	<p>The request body for <code>Api</code> action links.</p> <p> <b>Note:</b> Escape quotation mark characters in the <code>requestBody</code> value.</p>	Optional Can be defined in an action link template.	33.0
<code>requiresConfirmation</code>	<a href="#">Boolean</a>	<code>true</code> to require the user to confirm the action; <code>false</code> otherwise.	Required Can be defined in an action link template.	33.0
<code>userId</code>	<a href="#">String</a>	The ID of the user who can execute the action. If not specified or <code>null</code> , any user can execute the action. If you specify a <code>userId</code> , you can't specify an <code>excludedUserId</code> .	Optional Can be defined in an action link template using the <code>User Visibility</code> and <code>Custom User Alias</code> fields.	33.0

## SEE ALSO:

[ConnectApi.ActionLinkGroupDefinitionInput](#)

## ConnectApi.ActionLinkGroupDefinitionInput

The definition of an action link group. All action links must belong to a group. Action links in a group are mutually exclusive and share some properties. Define standalone actions in their own action group.

Action link definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

Property	Type	Description	Required or Optional	Available Version
actionLinks	<a href="#">List&lt;ConnectApi.ActionLinkDefinitionInput&gt;</a>	<p>The action links that make up this group.</p> <p>Within an action link group, action links are displayed in the order listed in the <code>actionLinks</code> property of the <code>ConnectApi.ActionLinkGroupDefinitionInput</code> class. Within a feed item, action link groups are displayed in the order specified in the <code>actionLinkGroupIds</code> property of the <code>ConnectApi.AssociatedActionsCapabilityInput</code> class.</p> <p>You can create up to three action links in a <code>Primary</code> group and up to four in an <code>Overflow</code> group.</p>	<p>Required to instantiate this action link group without a template.</p> <p>To instantiate from a template, don't specify a value.</p>	33.0
category	<a href="#">ConnectApi.PlatformActionGroupCategory</a>	<p>Indicates the priority and relative locations of action links in an associated feed item. Values are:</p> <ul style="list-style-type: none"> <li><code>Primary</code>—The action link group is displayed in the body of the feed element.</li> <li><code>Overflow</code>—The action link group is displayed in the overflow menu of the feed element.</li> </ul>	<p>Required to instantiate this action link group without a template.</p> <p>To instantiate from a template, don't specify a value.</p>	33.0
executions Allowed	<a href="#">ConnectApi.ActionLinkExecutionsAllowed</a>	<p>Defines the number of times an action link can be executed. Values are:</p> <ul style="list-style-type: none"> <li><code>Once</code>—An action link can be executed only one time across all users.</li> <li><code>OncePerUser</code>—An action link can be executed only one time for each user.</li> <li><code>Unlimited</code>—An action link can be executed an unlimited number of times by each user. If the action link's <code>actionType</code> is <code>Api</code> or <code>ApiAsync</code>, you can't use this value.</li> </ul>	<p>Required to instantiate this action link group without a template.</p> <p>To instantiate from a template, don't specify a value.</p>	33.0
expirationDate	<a href="#">Datetime</a>	ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, that represents	Required to instantiate this action link group without a template.	33.0

Property	Type	Description	Required or Optional	Available Version
		<p>the date and time this action link group is removed from associated feed items and can no longer be executed. The <code>expirationDate</code> must be within one year of the creation date.</p> <p>If the action link group definition includes an OAuth token, it is a good idea to set the expiration date of the action link group to the same value as the expiration date of the OAuth token so that users can't execute the action link and get an OAuth error.</p> <p>To set a date when instantiating from a template, see <a href="#">Set the Action Link Group Expiration Time in Design Action Link Templates</a>.</p>	Optional to instantiate from a template.	
<code>templateBindings</code>	<a href="#">List of ActionLinkGroup</a>	A collection of key-value pairs to fill in binding variable values or a custom user alias from an action link template. To instantiate this action link group from an action link template that uses binding variables, you must provide values for all the variables. See <a href="#">Define Binding Variables in Design Action Link Templates</a> .	To instantiate without a template, don't specify a value.  Required to instantiate this action link group from a template that uses binding variables.	33.0
<code>templateId</code>	<code>String</code>	The ID of the action link group template from which to instantiate this action link group.	To instantiate without a template, don't specify a value.  Required to instantiate this action link group from a template.	33.0

`createActionLinkGroupDefinition(communitlyId, actionLinkGroup)`

## ConnectApi.ActionLinkTemplateBindingInput

A key-value pair to fill in a binding variable value from an action link template.

Property	Type	Description	Required or Optional	Available Version
key	<a href="#">String</a>	The name of the binding variable key specified in the action link template in Setup. For example, if the binding variable in the template is <code>{!Binding.firstName}</code> , the key is <code>firstName</code> .	Required	33.0
value	<a href="#">String</a>	The value of the binding variable key. For example, if the key is <code>firstName</code> , this value could be <code>Joan</code> .	Required	33.0

SEE ALSO:

[ConnectApi.ActionLinkGroupDefinitionInput](#)

## ConnectApi.ActivitySharingInput

Defines who a captured email or event is shared with.

Property	Type	Description	Required or Optional	Available Version
groupsToShareWith	<a href="#">List&lt;String&gt;</a>	List of IDs for the groups that you share the activity with. Valid only if <code>sharingType</code> is <code>MyGroups</code> .	Optional	39.0
sharingType	<a href="#">ConnectApi.ActivitySharingType</a>	Type of sharing operation. Values are: <ul style="list-style-type: none"> <li><code>Everyone</code>—The activity is shared with everyone.</li> <li><code>MyGroups</code>—The activity is shared only with a selection of the context user's groups.</li> <li><code>OnlyMe</code>—The activity is private.</li> </ul>	Required	39.0

## ConnectApi.AddressRequest

Address input representation for a payment method or card payment method.

Name	Type	Description	Required or Optional	Available Version
city	<a href="#">String</a>	Payment method city.	Optional	51.0
companyName	<a href="#">String</a>	Payment method company name.	Optional	51.0
country	<a href="#">String</a>	Payment method country.	Optional	51.0

Name	Type	Description	Required or Optional	Available Version
postalCode	String	Payment method postal code.	Optional	51.0
state	String	Payment method state.	Optional	51.0
street	String	Payment method street.	Optional	51.0

## ConnectApi.AdjustItemInputRepresentation

A price adjustment to an OrderItemSummary. It only supports discounts, not increases.

Property	Type	Description	Required or Optional	Available Version
adjustmentType	String	Describes how the amount is calculated. It can have one of these values: <ul style="list-style-type: none"> <li>AmountWithTax—Value of amount is the adjustment, including tax.</li> <li>AmountWithoutTax—Value of amount is the adjustment, not including tax. Tax is calculated on the value and added.</li> <li>Percentage—Value of amount is a percentage discount. It is divided by 100, and then multiplied by the TotalPrice and TotalTaxAmount of the OrderItemSummary to determine the adjustment amount.</li> </ul>	Required	49.0
amount	Double	Value used to calculate the adjustment amount, as described by the adjustmentType. It must be a negative value.	Required	49.0
description	String	Description of the adjustment.	Optional	49.0
orderItemSummaryId	String	ID of the OrderItemSummary.	Required	49.0
reason	String	Reason for the adjustment. The value must match one of the picklist values on the Reason field of the OrderItemSummaryChange object.	Required	49.0

## ConnectApi.AdjustOrderItemSummaryInputRepresentation

Price adjustments to order item summaries that together make up a price adjustment to an order, with options for adjusting items in the process of being fulfilled.

Property	Type	Description	Required or Optional	Available Version
adjustItems	List<ConnectApi.AdjustItemInputRepresentation>	List of price adjustments to order item summaries.	Required	49.0
allocatedItemsChangeOrderType	String	Process to use for order item summary quantities that are currently being fulfilled, defined as <code>QuantityAllocated - QuantityFulfilled</code> . Values are: <ul style="list-style-type: none"> <li><code>Disallowed</code>—When distributing the adjustment, ignore any quantities being fulfilled. If an order item summary's entire quantity is being fulfilled, return an error. This is the default value.</li> <li><code>InFulfillment</code>—When distributing the adjustment, include quantities being fulfilled. Create a separate change order for the adjustments made to those quantities.</li> <li><code>PreFulfillment</code>—When distributing the adjustment, include quantities being fulfilled. Include the adjustments made to those quantities in the change order for pre-fulfillment quantity adjustments.</li> </ul>	Optional	55.0
includeTaxAdjustments	Boolean	Specifies whether to create multiple lines for each tax adjustment or one line with all tax adjustments. The default value is false.	Optional	59.0

## ConnectApi.AlternativeInput

Alternative representation for an extension on a feed element.

Property	Type	Description	Required or Optional	Available Version
textRepresentation	String	Text representation of the extension.	Required	40.0
thumbnailUrl	String	Thumbnail URL to the extension.	Optional	40.0
title	String	Title of the extension.	Optional	40.0

## ConnectApi.AnnouncementInput

An announcement.

Property	Type	Description	Required or Optional	Available
body	<a href="#">ConnectApi.MessageBodyInput</a>	Text of the announcement.	Required for creating an announcement if <code>feedItemId</code> isn't specified  Don't specify for updating an announcement.	31.0
expirationDate	<a href="#">Datetime</a>	The Salesforce UI displays an announcement until 11:59 p.m. on this date unless another announcement is posted first. The Salesforce UI ignores the time value in the <code>expirationDate</code> . However, you can use the time value to create your own display logic in your own UI.	Required for creating an announcement  Optional for updating an announcement	31.0
feedItemId	<a href="#">String</a>	ID of an <code>AdvancedTextPost</code> feed item that is the body of the announcement.	Required for creating an announcement if <code>body</code> isn't specified  Don't specify for updating an announcement.	36.0
isArchived	<a href="#">Boolean</a>	Specifies whether the announcement is archived.	Optional	36.0
parentId	<a href="#">String</a>	ID of the parent entity for the announcement, that is, a group ID when the announcement appears in a group.	Required for creating an announcement if <code>feedItemId</code> isn't specified  Don't specify for updating an announcement.	36.0

Property	Type	Description	Required or Optional	Available
sendEmails	<a href="#">Boolean</a>	Specifies whether the announcement is sent as an email to all group members regardless of their email setting for the group. If Chatter emails aren't enabled for the organization, announcement emails aren't sent. Default value is <code>false</code> .	Optional for creating an announcement Don't specify for updating an announcement	36.0

## SEE ALSO:

[postAnnouncement\(communityId, groupId, announcement\)](#)

[postAnnouncement\(communityId, announcement\)](#)

## ConnectApi.ArticleTopicAssignmentJobInput

An article and topic assignment job.

Property	Type	Description	Required or Optional	Available Version
operation	<a href="#">ConnectApi.ArticleTopicJobType</a>	Type of operation to perform on articles and topics. Values are: <ul style="list-style-type: none"> <li><code>AssignTopicsToArticle</code>—Assign topics to articles in a data category.</li> <li><code>UnassignTopicsFromArticle</code>—Unassign topics from articles in a data category.</li> </ul>	Required	40.0
topicNames	<a href="#">ConnectApi.TopicNamesInput</a>	List of topic names to assign to or unassign from articles.	Required	40.0

## ConnectApi.AssociatedActionsCapabilityInput

A list of action link groups to associate with a feed element. To associate an action link group with a feed element, the call must be made from the Apex namespace that created the action link definition. In addition, the user making the call must have created the definition or have View All Data permission.

An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can drive productivity and accelerate innovation.

Property	Type	Description	Required or Optional	Available Version
actionLinkGroupIds	List<String>	The action link group IDs to associate with the feed element. Associate one <code>Primary</code> and up to 10 total action link groups to a feed item. Action link groups are returned in the order specified in this property.  An action link group ID is returned from a call to <code>ConnectApi.ActionLinks.createActionLinkGroupDefinition(<code>communityId</code>, <code>actionLinkGroup</code>)</code> .	Required	33.0

SEE ALSO:

## ConnectApi.AssociateRecordsWithRecipientInput

Records associated with the survey invitation.

Property	Type	Description	Required or Optional	Available Version
associateRecordIds	List<String>	ID of the associated records.	Required	50.0
recipientId	String	Participant ID with whose invitation the record should be associated.	Required	50.0

SEE ALSO:

[ConnectApi.SurveyInvitationEmailInput](#)

## ConnectApi.AudienceCriteriaInput

Custom recommendation audience criteria type.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass for:

- [ConnectApi.CustomListAudienceCriteriaInput](#)
- [ConnectApi.NewUserAudienceCriteriaInput](#)

Property	Type	Description	Required or Optional	Available Version
type	<a href="#">ConnectApi.RecommendationAudienceCriteriaType</a>	Specifies the custom recommendation audience criteria type. One of these values: <ul style="list-style-type: none"> <li>CustomList—A custom list of users makes up the audience.</li> <li>MaxDaysInCommunity—New members make up the audience.</li> </ul>	Optional If not specified, defaults to CustomList.	36.0

SEE ALSO:

[ConnectApi.RecommendationAudienceInput](#)

## ConnectApi.AudienceCriterionInput

Personalization audience criterion.

Property	Type	Description	Required or Optional	Available Version
criterion	<a href="#">List&lt;ConnectApi.AudienceCriterionValueInput&gt;</a>	List of mappings of audience criteria fields and values.	Required when creating an audience Optional when updating an audience	48.0
criterionNumber	<a href="#">Integer</a>	Number associated with the audience criterion in a formula. For example, (1 AND 2) OR 3. If unspecified, criteria are assigned numbers in the order that they're added.	Optional	48.0
criterionOperator	<a href="#">ConnectApi.AudienceCriteriaOperator</a>	Operator used in the personalization audience criterion. Values are: <ul style="list-style-type: none"> <li>Contains</li> <li>Equal</li> <li>GreaterThan</li> <li>GreaterThanOrEqual</li> <li>Includes</li> <li>LessThan</li> <li>LessThanOrEqual</li> <li>NotEqual</li> <li>NotIncludes</li> <li>StartsWith</li> </ul>	Required when creating an audience Optional when updating an audience	48.0

Property	Type	Description	Required or Optional	Available Version
criteriaType	<a href="#">ConnectApi.AudienceCriteriaType</a>	Type of personalization audience criterion. Values are: <ul style="list-style-type: none"> <li><code>Audience</code>—Criterion based on audience.</li> <li><code>Default</code>—Audience has no criteria.</li> <li><code>Domain</code>—Criterion based on domain.</li> <li><code>FieldBased</code>—Criterion based on object fields.</li> <li><code>GeoLocation</code>—Criterion based on location.</li> <li><code>Permission</code>—Criterion based on standard or custom permissions.</li> <li><code>Profile</code>—Criterion based on profile.</li> </ul>	Required when creating an audience  Optional when updating an audience	48.0

SEE ALSO:

[ConnectApi.AudienceInput](#)

## ConnectApi.AudienceCriterionValueInput

Audience criterion value.

Property	Type	Description	Required or Optional	Available Version
audienceId	<a href="#">String</a>	ID of an audience.	Required if creating or updating an audience with the <code>Audience</code> criterion type.	53.0
city	<a href="#">String</a>	City of a user.	Optional if creating or updating an audience with the <code>GeoLocation</code> criterion type	48.0
country	<a href="#">String</a>	Country of a user.	Required if creating or updating an audience with the <code>GeoLocation</code> criterion type	48.0
domainId	<a href="#">String</a>	Domain ID of a user.	Required if creating or updating an audience with the	48.0

Property	Type	Description	Required or Optional	Available Version
			Domain criterion type	
entityField	String	Field of an object.	Required if creating or updating an audience with the <code>FieldBased</code> criterion type	48.0
entityType	String	Type of object.	Required if creating or updating an audience with the <code>FieldBased</code> criterion type	48.0
fieldValue	String	Value of a field.	Required if creating or updating an audience with the <code>FieldBased</code> criterion type	48.0
isEnabled	Boolean	Specifies whether the permission is enabled ( <code>true</code> ) or not ( <code>false</code> ) for a user.	Required if creating or updating an audience with the <code>Permission</code> criterion type	48.0
permission	String	Valid API name of a standard user or custom permission.	Required if creating or updating an audience with the <code>Permission</code> criterion type	48.0
profileId	String	Profile ID of a user.	Required if creating or updating an audience with the <code>Profile</code> criterion type	48.0

Property	Type	Description	Required or Optional	Available Version
subdivision	<a href="#">String</a>	Subdivision of a user.	Required if creating or updating an audience with the <code>GeoLocation</code> criterion type and using the <code>city</code> property	48.0

SEE ALSO:

[ConnectApi.AudienceCriterionInput](#)

## ConnectApi.AudienceInput

A personalization audience.

Property	Type	Description	Required or Optional	Available Version
criteria	<a href="#">List&lt;ConnectApi.AudienceCriterionInput&gt;</a>	List of audience criteria to update or add. An audience can have up to 100 criteria.	Required when creating an audience  Optional when updating an audience	48.0
customFormula	<a href="#">String</a>	Custom formula for the audience criteria. For example, (1 AND 2) OR 3.	Required when creating an audience with the <code>formulaFilterType</code> set to <code>CustomLogicMatches</code>  Optional, otherwise	48.0
formulaFilterType	<a href="#">ConnectApi.FormulaFilterType</a>	Formula filter type for the personalization audience. Values are: <ul style="list-style-type: none"> <li><code>AllCriteriaMatch</code>—All audience criteria are true (AND operation).</li> <li><code>AnyCriterionMatches</code>—Any audience criterion is true (OR operation).</li> <li><code>CustomLogicMatches</code>—Audience criteria match the custom formula (for example, (1 AND 2) OR 3).</li> </ul>	Required when creating an audience  Optional when updating an audience	48.0

Property	Type	Description	Required or Optional	Available Version
name	<a href="#">String</a>	Name of the audience.	Required when creating an audience Optional when updating an audience	48.0

## ConnectApi.AuditParamsRequest

Audit Parameters input.

This class is abstract.

Superclass of [ConnectApi.BaseRequest](#).

Property	Type	Description	Required or Optional	Available Version
email	<a href="#">String</a>	Email of the client that made the request.	Optional	50.0
ipAddress	<a href="#">String</a>	IP address of the client that made the request.	Optional	50.0
macAddress	<a href="#">String</a>	Mac address of the client that made the request.	Optional	50.0
phone	<a href="#">String</a>	Phone number of the client that made the request.	Optional	50.0

## ConnectApi.AuthApiPaymentMethodRequest

Payment method input representation for payment authorizations.

Subclass of [ConnectApi.BaseApiPaymentMethodRequest](#).

Property	Type	Description	Required or Optional	Available Version
card PaymentMethod	<a href="#">ConnectApi.Card PaymentMethodRequest</a>	Card payment method information.	Required	51.0

## ConnectApi.AuthorizationReversalRequest

Authorization reversal input consumed by authorization reversal service.

Subclass of [ConnectApi.BaseRequest](#).

Property	Type	Description	Required or Optional	Available Version
accountId	String	Account for the payment authorization reversal. Must match the payment authorization's account.		51.0
amount	Double	Amount of adjustment applied to the payment authorization.		51.0
comments	String	Users can add comments to provide additional details about a record. Maximum of 1,000 characters.		51.0
effectiveDate	Datetime	Date that the adjustment takes effect on the authorization.		51.0

## ConnectApi.AuthorizationRequest

Payment Authorization input consumed by Payment Authorization service.

Subclass of [ConnectApi.BaseRequest](#).

Property	Type	Description	Required or Optional	Available Version
accountId	String	Salesforce account that contains the payment transaction being authorized.	Required	51.0
amount	Double	Authorization amount.	Required	51.0
comments	String	Optional comments for the payment authorization.	Optional	51.0
currencyIsoCode	String	Three-letter ISO 4217 currency code associated with the payment group record.	Required	51.0
effectiveDate	Datetime	Date that the authorization will be applied to the transaction.	Required	51.0
paymentGatewayId	String	Payment gateway that processes the authorization.	Required	51.0
paymentGroup	<a href="#">ConnectApi.PaymentGroupRequest</a>	Payment group for the authorization. The payload must reference either a <code>paymentGroup</code> or a <code>paymentGroupId</code> , but not both.	Optional	51.0
paymentMethod	<a href="#">ConnectApi.AuthApiPaymentMethodRequest</a>	Payment method used in the payment gateway for the authorization transaction.	Required	51.0

## ConnectApi.BannerPhotoInput

A banner photo.

Property	Type	Description	Required or Optional	Available Version
cropHeight	Integer	Height of the crop rectangle in pixels.	Optional	36.0
cropWidth	Integer	Width of the crop rectangle in pixels.	Optional	36.0
cropX	Integer	X position of the crop rectangle from the left edge of the image in pixels. Top left is position (0,0).	Optional	36.0
cropY	Integer	Y position of the crop rectangle from the top edge of the image in pixels. Top left is position (0,0).	Optional	36.0
fileId	String	18 character ID of an existing file. The key prefix must be 069 and the file must be an image and be smaller than 2 GB.   <b>Note:</b> Images uploaded on the Group page and on the User page don't have file IDs and therefore can't be used.	Required	36.0
versionNumber	Integer	Version number of an existing file. If not provided, the latest version is used.	Optional	36.0

## ConnectApi.BaseRequest

Base parameters for making a request to the payment gateway.

This class is abstract.

Subclass of [ConnectApi.AuditParamsRequest](#).

Superclass of:

- [ConnectApi.AuthorizationRequest](#)
- [ConnectApi.AuthorizationReversalRequest](#)
- [ConnectApi.CaptureRequest](#)
- [ConnectApi.PaymentMethodTokenizationRequest](#)
- [ConnectApi.PostAuthRequest](#)
- [ConnectApi.RefundRequest](#)
- [ConnectApi.SaleRequest](#)

Property	Type	Description	Required or Optional	Available Version
additionalData	<a href="#">Map&lt;String, String&gt;</a>	An optional map of additional parameters to be sent to the payment gateway.	Optional	50.0
idempotencyKey	<a href="#">String</a>	Idempotency key.	Optional	50.0

## ConnectApi.BaseApiPaymentMethodRequest

Payment method API input representation.

This class is abstract.

Superclass of:

- [ConnectApi.AuthApiPaymentMethodRequest](#)
- [ConnectApi.PostAuthApiPaymentMethodRequest](#)
- [ConnectApi.SaleApiPaymentMethodRequest](#)

Property	Type	Description	Required or Optional	Available Version
address	<a href="#">ConnectApi.AddressRequest</a>	Payment method address.	Required	51.0
id	<a href="#">String</a>	Payment method record ID. Used in payment transactions.	Required	51.0
saveForFuture	<a href="#">Boolean</a>	Shows whether Salesforce saves the payment method for future use.	Required	51.0

## ConnectApi.BasePaymentMethodRequest

Base payment method input representation.

This class is abstract.

Superclass of:

- [ConnectApi.AlternativePaymentMethod](#)
- [ConnectApi.CardPaymentMethodRequest](#)

No additional properties.

## ConnectApi.BatchInput

Construct a set of inputs to be passed into a method at the same time.

Use this constructor when there isn't a binary input:

```
ConnectApi.BatchInput (Object input)
```

Use this constructor to pass one binary input:

```
ConnectApi.BatchInput(Object input, ConnectApi.BinaryInput binary)
```

Use this constructor to pass multiple binary inputs:

```
ConnectApi.BatchInput(Object input, List<ConnectApi.BinaryInput> binaries)
```

The constructors takes these parameters:

Argument	Type	Description	Available Version
input	Object	An individual input object to be used in the batch operation. For example, for <code>postFeedElementBatch()</code> , this should be <code>ConnectApi.FeedElementInput</code> .	32.0
binary	<a href="#">ConnectApi.BinaryInput</a>	A binary file to associate with the input object.	32.0
binaries	<a href="#">List&lt;ConnectApi.BinaryInput&gt;</a>	A list of binary files to associate with the input object.	32.0

SEE ALSO:

[Post a Batch of Feed Elements](#)

[Post a Batch of Feed Elements with a New \(Binary\) File](#)

## ConnectApi.BinaryInput

Create a `ConnectApi.BinaryInput` object to attach files to feed items and comments, to add repository files, to create managed content, and to replace managed content variants.

The constructor is:

```
ConnectApi.BinaryInput(blob, contentType, filename)
```

The constructor takes these arguments:

Argument	Type	Description	Available Version
blob	<a href="#">Blob</a>	Contents of the file to be used for input	28.0
contentType	<a href="#">String</a>	MIME type description of the content, such as <code>image/jpeg</code>	28.0
filename	<a href="#">String</a>	File name with the file extension, such as <code>UserPhoto.jpg</code>	28.0

SEE ALSO:

[Post a Feed Element with a New File \(Binary\) Attachment](#)

[Post a Comment with a New File](#)

[ConnectApi.BatchInput](#)

## ConnectApi.BookmarksCapabilityInput

Create or update a bookmark on a feed element.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput](#).

Property	Type	Description	Required or Optional	Available Version
<code>isBookmarkedByCurrentUser</code>	<a href="#">Boolean</a>	Specifies if the feed element should be bookmarked for the user ( <code>true</code> ) or not ( <code>false</code> ).	No	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.BotVersionActivationInput

Activation status of the bot version.

Property	Type	Description	Required or Optional	Available Version
<code>status</code>	<a href="#">ConnectApi.BotVersionActivationStatus</a>	<p>Activation status of the bot version. Values are:</p> <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul> <p>Activation status must be specified in the <code>status</code> or <code>postBody</code> parameter.</p>	Optional	50.0

## ConnectApi.CanvasCapabilityInput

Create or update a canvas app associated with a feed element.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput](#).

Property	Type	Description	Required or Optional	Available Version
<code>description</code>	<a href="#">String</a>	A description of the canvas app. The maximum size is 255 characters.	Optional	32.0
<code>developerName</code>	<a href="#">String</a>	The API name (developer name) of the connected app.	Required	32.0
<code>height</code>	<a href="#">String</a>	The height of the canvas app in pixels.	Optional	32.0
<code>namespacePrefix</code>	<a href="#">String</a>	A unique namespace prefix for the canvas app.	Optional	32.0
<code>parameters</code>	<a href="#">String</a>	JSON parameters passed to the canvas app.	Optional	32.0

Property	Type	Description	Required or Optional	Available Version
thumbnailUrl	<a href="#">String</a>	A thumbnail URL to a preview image. The maximum thumbnail size is 120 pixels by 120 pixels.	Optional	32.0
title	<a href="#">String</a>	A title for the canvas link.	Required	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.CapacityRequestInputRepresentation

Request related to a location's fulfillment order capacity.

Property	Type	Description	Required or Optional	Available Version
actionRequestId	<a href="#">String</a>	Unique string that identifies the request. Can be a UUID. Use the action request IDs in response data to identify which requests succeeded or failed.	Required	55.0
locationId	<a href="#">String</a>	ID of the location associated with the request.	Required	55.0

## ConnectApi.CaptureRequest

Payment capture input consumed by the payment capture service.

Subclass of [ConnectApi.BaseRequest](#).

Property	Type	Description	Required or Optional	Available Version
accountId	<a href="#">String</a>	ID of the account linked to the capture request.	Optional	50.0
amount	<a href="#">Double</a>	Amount captured from the previous authorization.	Required	50.0
clientContext	<a href="#">String</a>	Context for payment APIs. Used for a payment caller to re-establish context.	Optional	50.0
comments	<a href="#">String</a>	Comments for the payment capture.	Optional	50.0
effectiveDate	<a href="#">Datetime</a>	Date when the payment becomes effective.	Optional	50.0
paymentGroup	<a href="#">ConnectApi.PaymentGroupRequest</a>	Details about the payment group record associated with the payment request.	Optional	50.0

## ConnectApi.AlternativePaymentMethod

A payment method that doesn't have a defined Salesforce entity such as `CardPaymentMethod` or `DigitalWallet`. Common examples of alternative payment methods include `CashOnDeliver`, `Klarna`, and `Direct Debit`. `AlternativePaymentMethod` functions the same as any other type of payment method for processing transactions in the payment gateway.

Subclass of [ConnectApi.BasePaymentMethodRequest](#)

Property	Type	Description	Required or Optional	Available Version
<code>accountId</code>	<a href="#">String</a>	Salesforce Payments account to which this payment method is linked.	Required	54.0
<code>comments</code>	<a href="#">String</a>	Details about a record added by a user. Maximum of 1,000 characters.	Optional	54.0
<code>email</code>	<a href="#">String</a>	Email address of the card holder.	Optional	54.0
<code>gatewayToken</code>	<a href="#">String</a>	A unique, alphanumeric ID, called a token, that a payment gateway generates when it first processes a payment. The token replaces the actual payment data so that the data is kept secure. This token is stored as encrypted text, and can be used for recurring payments.	Required	54.0
<code>gatewayToken Details</code>	<a href="#">String</a>	Detailed information about the gateway token.	Required	54.0
<code>name</code>	<a href="#">String</a>	Name that you assign to the payment method object.	Optional	54.0

## ConnectApi.CardPaymentMethodRequest

Card payment method input representation.

Subclass of [ConnectApi.BasePaymentMethodRequest](#).

Property	Type	Description	Required or Optional	Available Version
<code>accountId</code>	<a href="#">String</a>	Salesforce Payments account to which this payment method is linked.	Required	51.0
<code>autoPay</code>	<a href="#">Boolean</a>	Indicates whether a token for recurring payments is being requested ( <code>true</code> ) or not ( <code>false</code> ). The token lets the payment method be used for recurring payments.	Optional	55.0
<code>cardCategory</code>	<a href="#">ConnectApi. CardCategory</a>	Card processing type. Valid values are: <ul style="list-style-type: none"> <li><code>CreditCard</code></li> <li><code>DebitCard</code></li> </ul>	Required	51.0

Property	Type	Description	Required or Optional	Available Version
cardHolder FirstName	String	First name of the card holder.	Required	51.0
cardHolder LastName	String	Last name of the card holder.	Required	51.0
cardHolderName	String	Full name of the card holder.	Required	51.0
cardNumber	String	Card number.	Required	51.0
cardType	String	Card network type. Valid values are: <ul style="list-style-type: none"> <li>AmericanExpress</li> <li>DinersClub</li> <li>JCB</li> <li>MasterCard</li> <li>Maestro</li> <li>Visa</li> </ul>	Required	51.0
comments	String	Optional comments for the card payment method.	Optional	51.0
cvv	String	Card Verification Value.	Required	51.0
email	String	Email address of the card holder.	Required	51.0
expiryMonth	Integer	Card expiration month.	Required	51.0
expiryYear	Integer	Card expiration year.	Required	51.0
nickName	String	Optional nickname for the card.	Optional	51.0
startMonth	Integer	Month the card becomes active.	Optional	51.0
startYear	Integer	Year the card becomes active.	Optional	51.0

## ConnectApi.CartInput

A cart.

Property	Type	Description	Required or Optional	Available Version
currencyIsoCode	String	Currency ISO code of the cart.	Optional	57.0
customFields	List<SObject>	Array of sObjects and custom fields for the sObjects. Standard fields are ignored. The custom fields must already be defined for the sObject. Currently, only the WebCart sObject is supported. Field-level security rules from the <a href="#">shopper profile</a> are applied	Optional	61.0

Property	Type	Description	Required or Optional	Available Version
		to the custom fields. The rules are applied for registered shoppers and for the guest shopper profile. See <a href="#">Create a Cart and Cart Item with Custom Fields in a Commerce Store</a> .		
<code>effectiveAccountId</code>	<a href="#">String</a>	ID of the buyer account or guest buyer profile for which the request is made. If unspecified, the default value is determined from context.	Optional	49.0
<code>isSecondary</code>	<a href="#">Boolean</a>	Specifies whether the cart is secondary ( <code>true</code> ) or not ( <code>false</code> ). If unspecified, defaults to <code>false</code> .	Optional	53.0
<code>name</code>	<a href="#">String</a>	Name of the cart. The name can have up to 250 Unicode characters. If unspecified, defaults to the generated name.	Optional	49.0
<code>orderOwnerId</code>	<a href="#">String</a>	ID of the owner of the order.	Optional	58.0
<code>type</code>	<a href="#">ConnectApi.CartType</a>	Type of cart. Values are: <ul style="list-style-type: none"> <li><code>Cart</code>—Cart created by a customer.</li> <li><code>PayNowReadOnly</code>—Clone of a Template cart that the customer can check out with using the Pay Now feature.</li> <li><code>Template</code>—Cart created by an internal user.</li> </ul> If unspecified, defaults to <code>Cart</code> .	Optional	49.0
<code>typeAsString</code>	<a href="#">String</a>	Type of the cart provided as a string.	Optional	59.0

## ConnectApi.cartCouponInput

Cart coupon input.

Property	Type	Description	Required or Optional	Available Version
<code>couponCode</code>	<a href="#">String</a>	The coupon code.	Required	54.0

## ConnectApi.CartInventoryReservationInputRepresentation (Pilot)

Input representation to create or update a reservation.

 **Note:** This feature is not generally available and is being piloted with certain Customers subject to additional terms and conditions. It is not part of your purchased Services. This feature is subject to change, may be discontinued with no notice at any time in Salesforce's sole discretion, and Salesforce may never make this feature generally available. Make your purchase decisions only on the basis of generally available products and features. This feature is made available on an AS IS basis and use of this feature is at your sole risk.

Property	Type	Description	Required or Optional	Available Version
durationInSeconds	Integer	Reservation duration in seconds.	Required	58.0

## ConnectApi.CartItemInput

An item in a cart.

Property	Type	Description	Required or Optional	Available Version
cartDeliveryGroupId	String	ID of the cart delivery group.	Optional	59.0
customFields	List<SObject>	Array of sObjects and custom fields for the sObjects. Standard fields are ignored. The custom fields must already be defined for the sObject. Currently, only the CartItem sObject is supported. Field-level security rules from the <a href="#">shopper profile</a> are applied to the custom fields. The rules are applied for registered shoppers and for the guest shopper profile. The custom fields can be of type Checkbox, Currency, Date, Email, LongTextArea, Number, Percent, Phone, Text, TextArea, Url, Address, or Location. The customFields property isn't supported in stores built on an Aura template. See <a href="#">Create a Cart and Cart Item with Custom Fields in a Commerce Store</a> .	Optional	61.0
productId	String	ID of the product.	Required when adding an item to a cart Not supported when updating a cart item	49.0
productSellingModelId	String	Reserved for future use.	Optional	59.0
quantity	String	Quantity of the cart item. Use a value that can be converted to BigDecimal.	Required	49.0
subscriptionTerm	Integer on page 3490	Reserved for future use.	Optional	59.0

Property	Type	Description	Required or Optional	Available Version
type	<a href="#">ConnectApi.CartItemType</a>	Type of item in a cart. Value is <code>Product</code> . <ul style="list-style-type: none"> <li>• <code>DeliveryCharge</code></li> <li>• <code>Product</code></li> </ul>	Required when adding an item to a cart Not supported when updating a cart item	49.0

## ConnectApi.CartItemPromotionCollectionInputRepresentation

Promotions for a cart item.

Property	Type	Description	Required or Optional	Available Version
items	<a href="#">List&lt;ConnectApi.CartItemPromotionInputRepresentation&gt;</a>	List of cart items to get the associated promotions.	Required	52.0

## ConnectApi.CartItemPromotionInputRepresentation

ID of a cart item associated with a promotion.

Property	Type	Description	Required or Optional	Available Version
cartItemId	<a href="#">String</a>	ID of the item associated with the cart.	Optional	52.0

## ConnectApi.CartMessagesVisibilityInput

Set the visibility for cart messages.

Property	Type	Description	Required or Optional	Available Version
visibility	<a href="#">Boolean</a>	Specifies whether to set cart messages as visible ( <code>true</code> ) or not ( <code>false</code> ).	Required	50.0

## ConnectApi.CartToWishlistInput

Copy products from a cart to a wishlist.

Property	Type	Description	Required or Optional	Available Version
wishlistId	<a href="#">String</a>	ID of the wishlist to copy cart products to.	Required	50.0

## ConnectApi.CdpCalculatedInsightInput

Input representation for a calculated insight.

Property	Type	Description	Required or Optional	Available Version
apiName	String	API name of the calculated insight with suffix <code>__cio</code> .	Required for creating a calculated insight  Optional for updating a calculated insight	57.0
createdFrom Package	Boolean	Specifies whether the calculated insight was created from an installed package ( <code>true</code> ) or not ( <code>false</code> ).	Optional	57.0
dataSpaceName	String	Name of the data space.	Optional	57.0
definitionType	ConnectApi.CdpCalculatedInsightDefinitionTypeEnum	Definition type of the calculated insight. Values are: <ul style="list-style-type: none"> <li>CalculatedMetric</li> <li>ExternalMetric</li> <li>StreamingMetric</li> </ul>	Required for creating a calculated insight  Optional for updating a calculated insight	57.0
description	String	Calculated insight description.	Optional	57.0
displayName	String	Calculated insight display name.	Required for creating a calculated insight  Optional for updating a calculated insight	57.0
draft	Boolean	Specifies whether to save the calculated insight as draft ( <code>true</code> ) or not ( <code>false</code> ).	Optional	57.0
expression	String	Calculated insight ANSI SQL expression.	Required for creating a calculated insight  Optional for updating a calculated insight	57.0
packagedCalculatedInsightApiName	String	API name of the packaged calculated insight.	Optional	57.0

## ConnectApi.CdpIdentityResolutionConfigInput

Input representation for creating an identity resolution ruleset.

Property	Type	Description	Required or Optional	Available Version
configurationType	<a href="#">ConnectApi.CdIdentityResolutionConfigurationType</a>	Source object for an identity resolution ruleset. Values are: <ul style="list-style-type: none"> <li>Account</li> <li>Individual</li> </ul>	Required	57.0
description	String	Description of the identity resolution ruleset.	Optional	57.0
doesRunAutomatically	Boolean	Specifies whether automatic job run scheduling is enabled for the ruleset ( <code>true</code> ) or not ( <code>false</code> ). If unspecified, defaults to <code>false</code> .	Optional	57.0
label	String	User friendly name of the identity resolution ruleset.	Required	57.0
matchRules	List< <a href="#">ConnectApi.CdIdentityResolutionMatchRule</a> >	List of match rules for the identity resolution ruleset.	Optional	57.0
reconciliationRules	List< <a href="#">ConnectApi.CdIdentityResolutionReconciliationRule</a> >	List of reconciliation rules for the identity resolution ruleset.	Required	57.0
rulesetId	String	Extended ID of the ruleset used to differentiate between rulesets created for comparison. The ruleset ID must be unique and can't be longer than 4 characters.	Optional	57.0

## ConnectApi.CdIdentityResolutionConfigPatchInput

Input representation for updating an identity resolution ruleset.

Property	Type	Description	Required or Optional	Available Version
description	String	Description of the identity resolution ruleset.	Optional	57.0
doesRunAutomatically	Boolean	Specifies whether automatic job run scheduling is enabled for the ruleset ( <code>true</code> ) or not ( <code>false</code> ). If unspecified, defaults to <code>false</code> .	Optional	57.0
label	String	User friendly name of the identity resolution ruleset.	Required	57.0
matchRules	List< <a href="#">ConnectApi.CdIdentityResolutionMatchRule</a> >	List of match rules for the identity resolution ruleset.	Optional	57.0

Property	Type	Description	Required or Optional	Available Version
reconciliationRules	<a href="#">List&lt;ConnectApi.CdplIdentityResolutionReconciliationRule&gt;</a>	List of reconciliation rules for the identity resolution ruleset.	Required	57.0

## ConnectApi.CdplIdentityResolutionMatchCriterion

Input representation for an identity resolution ruleset's match rule criterion.

Property	Type	Description	Required or Optional	Available Version
caseSensitiveMatch	<a href="#">Boolean</a>	Specifies whether the criterion match is case sensitive ( <code>true</code> ) or not ( <code>false</code> ). Available only when matching is based on the <a href="#">party identifier</a> .	Optional	58.0
entityName	<a href="#">String</a>	API name of the Data Model Object the match rule applies to.	Required	57.0
fieldName	<a href="#">String</a>	Name of the field the criterion applies to.	Required	57.0
matchMethodType	<a href="#">ConnectApi.CdplIdentityResolutionMatchMethodType</a>	Match method for a match rule criterion. Values are: <ul style="list-style-type: none"> <li><code>Exact</code>—Exact match.</li> <li><code>ExactNormalized</code>—Exact normalized match.</li> <li><code>Fuzzy</code>—Fuzzy match with medium precision.</li> <li><code>FuzzyHigh</code>—Fuzzy match with high precision.</li> <li><code>FuzzyLow</code>—Fuzzy match with low precision.</li> </ul>	Required	57.0
partyIdentificationInfo	<a href="#">ConnectApi.CdplIdentityResolutionMatchCriterionPartyIdentificationInfo</a>	Party Identifier information.	Optional	57.0
shouldMatchOnBlank	<a href="#">Boolean</a>	Specifies whether blank fields can be used for matching ( <code>true</code> ) or not ( <code>false</code> ).	Required	57.0

SEE ALSO:

[ConnectApi.CdplIdentityResolutionMatchRule](#)

## ConnectApi.CdplIdentityResolutionMatchCriterionPartyIdentificationInfo

Input representation for information when party identification is used in an identity resolution ruleset's match rule criterion.

Property	Type	Description	Required or Optional	Available Version
partyName	<a href="#">String</a>	Party identification name.	Required if the match rule criterion uses party identification for matching	57.0
partyType	<a href="#">String</a>	Party identification type.	Optional	57.0

SEE ALSO:

[ConnectApi.CdplIdentityResolutionMatchCriterion](#)

## ConnectApi.CdplIdentityResolutionMatchRule

Input representation for an identity resolution ruleset's match rule.

Property	Type	Description	Required or Optional	Available Version
criteria	<a href="#">List&lt;ConnectApi.CdplIdentityResolutionMatchCriterion&gt;</a>	Object and field the match rule applies to and the match method applied.	Required	57.0
label	<a href="#">String</a>	User friendly name for the identity resolution match rule.	Required	57.0

SEE ALSO:

[ConnectApi.CdplIdentityResolutionConfigInput](#)

[ConnectApi.CdplIdentityResolutionConfigPatchInput](#)

## ConnectApi.CdplIdentityResolutionReconciliationFieldRule

Input representation for an identity resolution ruleset's reconciliation rule for a field.

Property	Type	Description	Required or Optional	Available Version
fieldName	<a href="#">String</a>	The field that this reconciliation rule applies to.	Required	57.0

Property	Type	Description	Required or Optional	Available Version
ruleType	<a href="#">ConnectApi.CdplIdentityResolutionReconciliationRuleType</a>	Default reconciliation rule applied to fields in the object the reconciliation rule applies to. Values are: <ul style="list-style-type: none"> <li>LastUpdated</li> <li>MostFrequent</li> <li>SourceSequence</li> </ul>	Required	57.0
shouldIgnoreEmptyValue	<a href="#">Boolean</a>	Specifies whether to ignore an empty value ( <a href="#">true</a> ) or not ( <a href="#">false</a> ).	Required	57.0
sources	<a href="#">List&lt;ConnectApi.CdplIdentityResolutionReconciliationSource&gt;</a>	If <a href="#">ruleType</a> is <a href="#">SourceSequence</a> , a prioritized list of data sources.	Required if <a href="#">ruleType</a> is <a href="#">SourceSequence</a>	57.0

SEE ALSO:

[ConnectApi.CdplIdentityResolutionReconciliationRule](#)

## ConnectApi.CdplIdentityResolutionReconciliationRule

Input representation for an identity resolution ruleset's default reconciliation rule for an object.

Property	Type	Description	Required or Optional	Available Version
entityName	<a href="#">String</a>	API name of the Data Model Object the reconciliation rule applies to.	Required	57.0
fields	<a href="#">List&lt;ConnectApi.CdplIdentityResolutionReconciliationFieldRule&gt;</a>	Field-specific reconciliation rules that override this default rule for the specified field.	Optional	57.0
ruleType	<a href="#">ConnectApi.CdplIdentityResolutionReconciliationRuleType</a>	Default reconciliation rule applied to fields in the object the reconciliation rule applies to. Values are: <ul style="list-style-type: none"> <li>LastUpdated</li> <li>MostFrequent</li> <li>SourceSequence</li> </ul>	Required	57.0
shouldIgnoreEmptyValue	<a href="#">Boolean</a>	Specifies whether to ignore an empty value ( <a href="#">true</a> ) or not ( <a href="#">false</a> ).	Required	57.0

Property	Type	Description	Required or Optional	Available Version
sources	<a href="#">List&lt;ConnectApi.CdpIdentityResolutionReconciliationSource&gt;</a>	If ruleType is SourceSequence, a list of data sources in priority order.	Required if ruleType is SourceSequence	57.0

SEE ALSO:

[ConnectApi.CdpIdentityResolutionConfigInput](#)

[ConnectApi.CdpIdentityResolutionConfigPatchInput](#)

## ConnectApi.CdpIdentityResolutionReconciliationSource

Input representation for an identity resolution default reconciliation rule or field-specific rule using the `SourceSequence` match method.

Property	Type	Description	Required or Optional	Available Version
name	<a href="#">String</a>	If the ruleType for a reconciliation rule is SourceSequence, API name of a source Data Lake Object.	Required if ruleType is SourceSequence	57.0

SEE ALSO:

[ConnectApi.CdpIdentityResolutionReconciliationRule](#)

[ConnectApi.CdpIdentityResolutionReconciliationFieldRule](#)

[ConnectApi.CdpIdentityResolutionReconciliationFieldRule](#)

## ConnectApi.CdpIdentityResolutionRunNowInput

Input representation for running an identity resolution ruleset job on demand.

Property	Type	Description	Required or Optional	Available Version
callingApp	<a href="#">String</a>	Calling application.	Optional	57.0
callingAppInfo	<a href="#">String</a>	Calling application information.	Optional	57.0

## ConnectApi.CdpQueryInput

Data query input.

Property	Type	Description	Required or Optional	Available Version
sql	<a href="#">String</a>	ANSI-standard SQL query.	Required	52.0

## ConnectApi.CdpSegmentDbtInput

Segment dbt input.

Property	Type	Description	Required or Optional	Available Version
models	<a href="#">List&lt;ConnectApi.CdpSegmentDbtModelInput&gt;</a>	List of models. The segment data build tool currently supports a single SQL model.	Required	55.0

SEE ALSO:

[ConnectApi.CdpSegmentInput](#)

## ConnectApi.CdpSegmentDbtModelInput

Segment dbt model input.

Property	Type	Description	Required or Optional	Available Version
name	<a href="#">String</a>	Dbt model name.	Required	55.0
sql	<a href="#">String</a>	Dbt SQL.  Dbt SQL date strings must be in ISO 8601 format , for example, 2011-02-25T18:24:31.000Z.  For details about supported validations, see <a href="#">Supported Validations for Segment Data Build Tool Model SQL</a> .	Required	55.0

SEE ALSO:

[ConnectApi.CdpSegmentDbtInput](#)

## ConnectApi.CdpSegmentInput

Segment input.

Property	Type	Description	Required or Optional	Available Version
additionalMetadata	<a href="#">Map&lt;String,String&gt;</a>	Map of additional metadata.	Optional for creating a segment  Not supported for updating a segment	55.0

Property	Type	Description	Required or Optional	Available Version
dataSpace	String	Segment dataspace. In API version 59.0 and later, this property is not available. Use the <code>dataspace</code> request parameter instead.	Optional	57.0–58.0
description	String	Segment description.	Optional	55.0
developerName	String	Segment developer name.	Required for creating a segment Not supported for updating a segment	55.0
displayName	String	Segment display name.	Optional	57.0
includeDbt	ConnectApi.CdpSegmentDbtInput	Segment data build tool.	Required	55.0
publishSchedule	ConnectApi.PublishSchedule	Publish refresh schedule. Values are: <ul style="list-style-type: none"> <li>One—Refreshes every hour. Used to rapidly publish UI and DBT-based segments.</li> <li>Four—Refreshes every four hours. Used to rapidly publish UI and DBT-based segments.</li> <li>Twelve—Refreshes every twelve hours.</li> <li>TwentyFour—Refreshes every twenty-four hours.</li> </ul>	Optional	55.0
publishSchedule EndDate	String	Date indicating the end of the publish schedule.	Optional if <code>publishSchedule</code> isn't specified	55.0
publishSchedule StartDateTime	String	Datetime indicating the start of the publish schedule.	Optional if <code>publishSchedule</code> isn't specified	55.0
segmentOnApiName	String	API name of the SegmentOn entity.	Optional	57.0
segmentType	ConnectApi.SegmentType	Type of segment. Value is: <ul style="list-style-type: none"> <li>Dbt—Data build tool</li> </ul> After a segment is created, the segment type can't be changed.	Required for creating a segment Not supported for updating a segment	55.0

## ConnectApi.ChangelInputRepresentation

A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.

Property	Type	Description	Required or Optional	Available Version
changeItems	<a href="#">List&lt;ConnectApi.ChangeItemInputRepresentation&gt;</a>	List of changes to OrderItemSummaries.	Required	48.0

## SEE ALSO:

[previewCancel\(orderSummaryId, changelInput\)](#)

[previewReturn\(orderSummaryId, changelInput\)](#)

[submitCancel\(orderSummaryId, changelInput\)](#)

[submitReturn\(orderSummaryId, changelInput\)](#)

## ConnectApi.ChangelItemInputRepresentation

Change to an order item summary, such as a return or cancel. You specify whether to prorate the associated shipping charge based on the price change. The order item summary can't be a shipping charge.

Property	Type	Description	Required or Optional	Available Version
changeItemFees	<a href="#">List&lt;ChangeItemFee&gt;</a>	List of input data for fees associated with the order item being returned or canceled.	Optional	57.0
orderItemSummaryId	<a href="#">String</a>	ID of the order item summary.	Required	48.0
quantity	<a href="#">Double</a>	Quantity to change. Use a positive value. For example, a value of 2 means "cancel or return 2 units."	Required	48.0
reason	<a href="#">String</a>	Reason for the change. The value must match one of the picklist values on the Reason field of the OrderItemSummaryChange object.	Required	48.0
reasonForChangeText	<a href="#">String</a>	Reason text used for the return insights. The value has a max of 255 characters.	Optional	59.0
shippingReductionFlag	<a href="#">Boolean</a>	Specifies whether to prorate the shipping charge.	Required	48.0

## SEE ALSO:

## ConnectApi.ChangeItemFeeInputRepresentation

Input representation for Change Item Fee Input

Property	Type	Description	Required or Optional	Available Version
amount	Double	Positive value used to calculate the fee amount, as described by the amountType.	Required	57.0
amountType	String	<p>Describes how the fee amount is calculated. Valid values are:</p> <ul style="list-style-type: none"> <li>AmountWithTax—Value of amount is the fee amount, including tax.</li> <li>AmountWithoutTax—Value of amount is the fee amount, not including tax. Tax is calculated on the value and added.</li> <li>Percentage—Value of amount is a percentage. To determine the fee amount, amount is divided by 100, and then multiplied by the TotalPrice and TotalTaxAmount of the associated OrderItemSummary, prorated for the quantity being returned.</li> <li>PercentageGross—Value of amount is a percentage. To determine the fee amount, amount is divided by 100, and then multiplied by the TotalLineAmountWithTax of the associated OrderItemSummary, prorated for the quantity being returned.</li> </ul>	Required	57.0
description	String	Description of the fee.	Required	57.0
priceBookEntryId	String	ID of the price book entry associated with the fee product.	Required unless price books are optional in the org	57.0
product2Id	String	ID of the product representing the fee.	Required	57.0

Property	Type	Description	Required or Optional	Available Version
reason	<a href="#">String</a>	Reason for the fee. The value must match an entry in the OrderProductSummaryChange object's Reason picklist.	Required	57.0

## ConnectApi.ChatterGroupInput

Chatter group input.

Property	Type	Description	Available
announcement	<a href="#">String</a>	The 18-character ID of an announcement.  An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement.	31.0
canHaveChatterGuests	<a href="#">Boolean</a>	<code>true</code> if this group allows Chatter customers, <code>false</code> otherwise. After this property is set to <code>true</code> , it cannot be set to <code>false</code> .	29.0
description	<a href="#">String</a>	The "Description" section of the group.	29.0
information	<a href="#">ConnectApi.GroupInformationInput</a>	The "Information" section of a group. If the group is private, this section is visible only to members.	28.0
isArchived	<a href="#">Boolean</a>	<code>true</code> if the group is archived, <code>false</code> otherwise. Defaults to <code>false</code> .	29.0
isAutoArchiveDisabled	<a href="#">Boolean</a>	<code>true</code> if automatic archiving is turned off for the group, <code>false</code> otherwise. Defaults to <code>false</code> .	29.0
name	<a href="#">String</a>	The name of the group.	29.0
owner	<a href="#">String</a>	The ID of the group owner. This property is available for PATCH requests only.	29.0

Property	Type	Description	Available
visibility	<a href="#">ConnectApi.GroupVisibilityType</a>	Group visibility type. <ul style="list-style-type: none"> <li>• <code>PrivateAccess</code>—Only members of the group can see posts to this group.</li> <li>• <code>PublicAccess</code>—All users within the Experience Cloud site can see posts to this group.</li> <li>• <code>Unlisted</code>—Reserved for future use.</li> </ul>	29.0

## SEE ALSO:

[createGroup\(communityId, groupInput\)](#)

[updateGroup\(communityId, groupId, groupInput\)](#)

## ConnectApi.ChatterStreamInput

A Chatter feed stream.

Property	Type	Description	Required or Optional	Available Version
description	<a href="#">String</a>	Description of the stream, up to 1,000 characters.	Optional	39.0
name	<a href="#">String</a>	Name of the stream, up to 120 characters.	Required when creating a stream Optional when updating a stream	39.0
subscriptionsToAdd	<a href="#">List&lt;ConnectApi.StreamSubscriptionInput&gt;</a>	List of up to 25 entities whose feeds are included in the stream. Adding an entity that is already added results in no operation. Including the same entity in <code>subscriptionsToAdd</code> and <code>subscriptionsToRemove</code> results in no operation.	Optional	39.0
subscriptionsToRemove	<a href="#">List&lt;ConnectApi.StreamSubscriptionInput&gt;</a>	List of entities whose feeds are removed from the stream. Removing an entity that is already removed results in no operation. Including the same entity in <code>subscriptionsToAdd</code> and <code>subscriptionsToRemove</code> results in no operation.	Optional when updating a stream Not supported when creating a stream	39.0

## ConnectApi.CommentCapabilitiesInput

A container for all capabilities that can be included with a comment.

Property	Type	Description	Required or Optional	Available Version
content	<a href="#">ConnectApi.ContentCapabilityInput</a>	Content to attach to the comment.	Optional	32.0
feedEntityShare	<a href="#">ConnectApi.FeedEntityShareCapabilityInput</a>	Feed entity to share to the comment.	Optional	42.0
record	<a href="#">ConnectApi.RecordCapabilityInput</a>	Existing knowledge article to attach to the comment.	Optional	42.0

SEE ALSO:

[ConnectApi.CommentInput](#)

## ConnectApi.CommentInput

Comment input used to add rich comments, for example, comments that include mentions or file attachments.

Property	Type	Description	Required or Optional	Available Version
attachment	<a href="#">ConnectApi.FeedItemAttachmentInput</a>	Specifies an attachment for the comment. Valid values are: <ul style="list-style-type: none"> <li>ContentAttachmentInput</li> <li>NewFileAttachmentInput</li> </ul> LinkAttachmentInput is not permitted for comments. <p><b>Important:</b> As of version 32.0, use the <code>capabilities</code> property.</p>	Optional	28.0–31.0
body	<a href="#">ConnectApi.MessageBodyInput</a>	Description of message body. The body can contain up to 10,000 characters and 25 mentions. Because the character limit can change, clients should make a <code>describeSObjects()</code> call on the <code>FeedItem</code> or <code>FeedComment</code> object and look at the length of the <code>Body</code> or <code>CommentBody</code> field to determine the maximum number of allowed characters. <p>To edit this property in a comment, use <code>updateComment (communityId, commentId, comment)</code>. Editing comments is supported in version 34.0 and later.</p>	Required	28.0

Property	Type	Description	Required or Optional	Available Version
		Rich text and inline images are supported in comment bodies in version 35.0 and later. Entity links are supported in version 43.0 and later.		
capabilities	<a href="#">ConnectApi.CommentCapabilityInput</a>	Specifies any capabilities for the comment, such as a file attachment.	Optional	32.0
threadParentId	<a href="#">String</a>	ID of the parent comment for a threaded comment.	Optional	44.0

## SEE ALSO:

[Post a Comment with a Mention](#)

[Post a Comment with a New File](#)

[Post a Comment with an Existing File](#)

## ConnectApi.CommerceAddressInput

Commerce address input.

Property	Type	Description	Required or Optional	Available Version
addressType	<a href="#">String</a>	Type of address, for example, <i>Shipping</i> or <i>Billing</i> .	Optional	54.0
city	<a href="#">String</a>	The address city.	Optional	54.0
commerceAddressFieldInputList	<a href="#">List&lt;ConnectApi.CommerceAddressFieldInput&gt;</a>	A list of custom address fields, if any.	Optional	54.0
companyName	<a href="#">String</a>	The address company name.	Optional	57.0
country	<a href="#">String</a>	The address country.	Optional	54.0
countryCode	<a href="#">String</a>	Two-character country code.	Optional	54.0–58.0
firstName	<a href="#">String</a>	The address first name.	Optional	57.0
isDefault	<a href="#">Boolean</a>	Indicates whether a contact's address is the preferred method of communication	Optional	54.0

Property	Type	Description	Required or Optional	Available Version
		( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> .		
<code>lastName</code>	<a href="#">String</a>	The address last name.	Optional	57.0
<code>middleName</code>	<a href="#">String</a>	The address middle name.	Optional	57.0
<code>name</code>	<a href="#">String</a>	Name of the contact.	Required	54.0
<code>phoneNumber</code>	<a href="#">String</a>	The address phone number.	Optional	57.0
<code>postalCode</code>	<a href="#">String</a>	Zip code or postal code for the address.	Optional	54.0
<code>region</code>	<a href="#">String</a>	The address state.	Optional	54.0
<code>regionCode</code>	<a href="#">String</a>	The address state code.	Optional	54.0–58.0
<code>street</code>	<a href="#">String</a>	The address street.	Optional	54.0

## ConnectApi.CommerceAddressFieldInput

Commerce address field input. This is used to reference custom fields for the address.

Property	Type	Description	Required or Optional	Available Version
<code>dataName</code>	<a href="#">String</a>	The name of the custom address field.	Required	54.0
<code>text</code>	<a href="#">String</a>	The value of the custom address field.	Optional	54.0

## ConnectApi.CompositeCommerceProductInputRepresentation

Composite product input.

Property	Type	Description	Required or Optional	Available Version
<code>attributeSetInfo</code>	<a href="#">ConnectApi.AttributeSetRepresentation</a>	Attribute set information for a variation parent product.	Optional	62.0
<code>categoryIds</code>	<a href="#">List&lt;String&gt;</a>	List of category IDs associated with the product.	Optional	61.0
<code>productFields</code>	<a href="#">Map&lt;String, String&gt;</a>	A map of product field names and their values.	Required	61.0
<code>productMedia</code>	<a href="#">ConnectApi.ProductMedia</a>	Media associated with the product.	Optional	61.0

## ConnectApi.ConfirmHeldFOCapacityInputRepresentation

Request to confirm held fulfillment order capacity at one or more locations. Can correspond to one action call.

Property	Type	Description	Required or Optional	Available Version
confirmHeldFOCapacityRequests	List<ConnectApi.ConfirmHeldFOCapacityRequestInputRepresentation>	List of requests to confirm held fulfillment order capacity at one or more locations.	Required	55.0

## ConnectApi.ConfirmHeldFOCapacityRequestInputRepresentation

Request to confirm held fulfillment order capacity at one or more locations.

Property	Type	Description	Required or Optional	Available Version
allOrNothing	Boolean	Controls whether a single failed request cancels all other requests in the list ( <i>true</i> ) or whether some requests can succeed if others fail ( <i>false</i> ). The default value is <i>false</i> .	Optional	55.0
capacityRequests	List<ConnectApi.CapacityRequestInputRepresentation>	List of requests to confirm held fulfillment order capacity. Each request is for one fulfillment order assigned to one location.	Required	55.0

## ConnectApi.ContentCapabilityInput

Attach or update a file on a comment. Use this class to attach a new file or update a file that has already been uploaded to Salesforce.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput](#).

To attach or remove files from a feed post (instead of a comment) in version 36.0 and later, use [ConnectApi.FilesCapabilityInput](#).

Property	Type	Description	Required or Optional	Available Version
contentDocumentId	String	ID of the existing content.	Required for existing content	32.0
description	String	Description of the file to be uploaded.	Optional	32.0
sharingOption	ConnectApi.FileSharingOption	Sharing option of the file. Values are: <ul style="list-style-type: none"> <li>Allowed—Resharing of the file is allowed.</li> <li>Restricted—Resharing of the file is restricted.</li> </ul>	Optional	35.0

Property	Type	Description	Required or Optional	Available Version
title	<a href="#">String</a>	Title of the file. This value is used as the file name for new content. For example, if the title is My Title, and the file is a .txt file, the file name is My Title.txt.	Required for new content	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.ContentHubFieldValueInput

Fields of the item type.

Property	Type	Description	Required or Optional	Available Version
name	<a href="#">String</a>	Name of the item field. When updating the metadata of a repository file, only the name field can be updated.	Required	39.0
value	<a href="#">String</a>	Value of the item field.	Required	39.0

SEE ALSO:

[ConnectApi.ContentHubItemInput](#)

## ConnectApi.ContentHubItemInput

Item type ID and fields of the item type.

Property	Type	Description	Required or Optional	Available Version
fields	<a href="#">List&lt;ConnectApi.ContentHubFieldValueInput&gt;</a>	List of fields for the item.	Required to create a SharePoint file in a repository because the file name is required; otherwise optional	39.0
itemTypeId	<a href="#">String</a>	ID of the item type.	Required to create a file in a repository	39.0

## ConnectApi.ContractInputRepresentation

Input to create and update contract.

Property	Type	Description	Required or Optional	Available Version
isAutoDocgenRequired	Boolean	Specifies whether automatic document generation is required or not.	Required	56.0
recordTypeName	String	Contract record type name.	Optional	56.0
sourceObjectId	String	Source record ID.	Required	56.0
templateName	String	Document template name for document generation.	Optional	56.0

## ConnectApi.CouponCodeRedemptionInput

Input representation for coupon code redemption.

Property	Type	Description	Required or Optional	Available Version
buyer	String	ID of the buyer account or email address for a guest user.	Required	60.0
couponCodes	List<String>	List of coupon codes.	Required	58.0
effectiveAccountId	String	ID of the account.	Required	58.0–59.0
transactionId	String	ID of the transaction, which must be a valid cart ID.	Required	58.0

## ConnectApi.CouponCodeRedemptionInput

Input representation for coupon code redemption.

Property	Type	Description	Required or Optional	Available Version
buyer	String	ID of the buyer account or email address for a guest user.	Required	60.0
couponCodes	List<String>	List of coupon codes.	Required	58.0
effectiveAccountId	String	ID of the account.	Required	58.0–59.0
transactionId	String	ID of the transaction, which must be a valid cart ID.	Required	58.0

## ConnectApi.CreateCreditMemoInputRepresentation

A list of change orders used to create a credit memo.

Property	Type	Description	Required or Optional	Available Version
changeOrderIds	<a href="#">List&lt;String&gt;</a>	List of IDs of the change orders.	Required	48.0

SEE ALSO:

[createCreditMemo\(orderSummaryId, creditMemoInput\)](#)

## ConnectApi.CreateInvoiceFromChangeOrdersInputRepresentation

OrderSummary and associated change orders to create Invoices for.

Property	Type	Description	Required or Optional	Available Version
changeOrderIds	<a href="#">List&lt;String&gt;</a>	List of IDs of change orders to create Invoices for.	Required	56.0
orderSummaryId	<a href="#">String</a>	ID of the associated Order Summary.	Required	56.0

SEE ALSO:

[createMultipleInvoices\(invoicesInput\)](#)

[ConnectApi.CreateMultipleInvoicesFromChangeOrdersInputRepresentation](#)

## ConnectApi.CreateMultipleInvoicesFromChangeOrdersInputRepresentation

Data about the change orders to create Invoices for.

Property	Type	Description	Required or Optional	Available Version
invoicesFromChangeOrders	<a href="#">List&lt;ConnectApi.CreateInvoiceFromChangeOrdersInputRepresentation&gt;</a>	List of OrderSummary IDs with the IDs of the associated change orders to create Invoices for. Each entry in the list generates one invoice, which combines the change orders in that entry.	Required	56.0

SEE ALSO:

[createMultipleInvoices\(invoicesInput\)](#)

## ConnectApi.CreateOrderPaymentSummaryInputRepresentation

An OrderSummary for which to create an OrderPaymentSummary, with the payment authorization or payments to include in it.

Property	Type	Description	Required or Optional	Available Version
orderSummaryId	<a href="#">String</a>	ID of the OrderSummary.	Required	48.0
paymentAuthorizationId	<a href="#">String</a>	ID of the payment authorization.	Either a payment authorization or at least one payment is required.	48.0
paymentIds	<a href="#">List&lt;String&gt;</a>	List of IDs of the payments.	Either a payment authorization or at least one payment is required.	48.0

SEE ALSO:

[createOrderPaymentSummary\(orderPaymentSummaryInput\)](#)

## ConnectApi.CreateServiceAppointmentInput

Contains information to create a service appointment.

Property	Type	Description	Required or Optional	Available Version
assignedResources	<a href="#">ConnectApi.AssignedResourceInput</a>	Represents the service resources to be assigned to a service appointment.   <b>Note:</b> When creating an appointment, use <code>extendedFields</code> to add values to any of the fields, including custom fields, in <code>assignedResources</code> as long as you have edit access to those fields.	Optional	53.0
lead	<a href="#">ConnectApi.LeadInput</a>	Represents a prospect or lead.   <b>Note:</b> Required to create a service appointment for unauthenticated guest users.	Required if <code>serviceAppointment</code> isn't provided.	53.0
schedulingPolicyId	<a href="#">String</a>	The ID of the <code>AppointmentSchedulingPolicy</code> object. If no scheduling policy is passed in the request body, the default configurations are used. The only scheduling policy configuration that is used in determining time slots is the enforcement of account visiting hours.	Optional	53.0

Property	Type	Description	Required or Optional	Available Version
serviceAppointment	<a href="#">ConnectApi.ServiceAppointment</a>	<p>Represents the service appointment details to book an appointment.</p> <p> <b>Note:</b> When creating an appointment, use <code>extendedFields</code> to add values to any of the fields, including custom fields, in <code>assignedResources</code> as long as you have edit access to those fields.</p>	Required if lead isn't provided.	53.0

## ConnectApi.CredentialInput

Credential input.

Property	Type	Description	Required or Optional	Available Version
authenticationProtocol	<a href="#">ConnectApi.CredentialAuthenticationProtocol</a>	<p>Authentication protocol of the external credential. Values are:</p> <ul style="list-style-type: none"> <li>• <code>AwsSv4</code></li> <li>• <code>Basic</code></li> <li>• <code>Custom</code></li> <li>• <code>Jwt</code></li> <li>• <code>OAuth</code></li> </ul>	Required	56.0
authenticationProtocolVariant	<a href="#">ConnectApi.CredentialAuthenticationProtocolVariant</a>	<p>Authentication protocol variant of the external credential. Values are:</p> <ul style="list-style-type: none"> <li>• <code>AwsSv4_STS</code>—AWS Signature Version 4 with Security Token Service.</li> <li>• <code>ClientCredentialsClientSecret—OAuth</code> 2.0 Client Credentials client secret. Client secrets are sent in the callout's request body.</li> <li>• <code>ClientCredentialsClientSecretBasic—OAuth</code> 2.0 Client Credentials client secret. Client secrets are sent in the callout's authorization header, as with Basic authentication.</li> <li>• <code>ClientCredentialsJwtAssertion—OAuth</code> 2.0 Client Credentials JSON Web Token assertion.</li> <li>• <code>JwtBearer</code>—OAuth 2.0 JSON Web Token bearer flow.</li> </ul>	Optional	57.0

Property	Type	Description	Required or Optional	Available Version
		<ul style="list-style-type: none"> <li>NoAuthentication—No authentication.</li> <li>RolesAnywhere—AWS Signature Version 4 with Identity and Access Management (IAM) Roles Anywhere.</li> </ul> <p>If specified, the authentication protocol variant must match the actual protocol variant of the external credential.</p>		
credentials	Map<String, ConnectApi.CredentialValueInput>	<p>Map of protocol-specific credentials.</p> <p>Authentication protocols have credential allowlists and encryption rules.</p> <ul style="list-style-type: none"> <li>AwsSv4—awsAccessKeyId (not encrypted), awsSecretAccessKey (encrypted), awsRoleArn (not encrypted)</li> <li>Custom—Any credential name is valid (user sets encryption rules)</li> </ul>	Required	56.0
externalCredential	String	Fully qualified developer name of the external credential.	Required	56.0
principalName	String	Name of the external credential named principal.	Required if principalType is NamedPrincipal	56.0
principalType	ConnectApi.CredentialPrincipalType	<p>Type of credential principal. Values are:</p> <ul style="list-style-type: none"> <li>AwsStsPrincipal</li> <li>NamedPrincipal</li> <li>PerUserPrincipal</li> </ul>	Required	56.0

## ConnectApi.CredentialCustomHeaderInput

Credential custom header input.

Property	Type	Description	Required or Optional	Available Version
headerName	String	Header name.	Required	58.0
headerValue	String	Header value.	Required	58.0
id	String	Header ID.	Optional	58.0

Property	Type	Description	Required or Optional	Available Version
sequenceNumber	<a href="#">Integer</a>	Sequence number.	Required	58.0

SEE ALSO:

[ConnectApi.ExternalCredentialInput](#)

[ConnectApi.NamedCredentialInput](#)

## ConnectApi.CredentialValueInput

Credential value input.

Authentication protocols have credential allowlists and encryption rules.

- `AwsSv4`—`awsAccessKeyId` (not encrypted), `awsSecretAccessKey` (encrypted), `awsRoleArn` (not encrypted)
- `Custom`—Any credential name is valid (user sets encryption rules)

Property	Type	Description	Required or Optional	Available Version
encrypted	<a href="#">Boolean</a>	Specifies whether the value of the credential is encrypted ( <code>true</code> ) or not ( <code>false</code> ).	Required	56.0
revision	<a href="#">Integer</a>	Revision number of a short-lived credential, such as <code>OAuthToken</code> . If the provided revision isn't the latest version, the authentication endpoint refreshes the credential.	Optional	58.0
value	<a href="#">String</a>	Value of the credential.	Required	56.0

SEE ALSO:

[ConnectApi.CredentialInput](#)

## ConnectApi.CustomListAudienceCriteriaInput

Criteria for the custom list type of custom recommendation audience.

Subclass of [ConnectApi.AudienceCriteriaInput](#).

Property	Type	Description	Required or Optional	Available Version
member OperationType	<a href="#">ConnectApi.RecommendationAudienceMemberOperationType</a>	The operation to carry out on the audience members. Values are: <ul style="list-style-type: none"> <li>• <code>Add</code>—Adds specified members to the audience.</li> <li>• <code>Remove</code>—Removes specified members from the audience.</li> </ul>	Required to update a recommendation audience  Don't use or specify <code>null</code> to create a recommendation audience	36.0

Property	Type	Description	Required or Optional	Available Version
members	<a href="#">List&lt;String&gt;</a>	A collection of user IDs. When updating an audience, you can include up to 100 members. An audience can have up to 100,000 members, and each Experience Cloud site can have up to 100 audiences.	Required to update a recommendation audience Don't use or specify <code>null</code> to create a recommendation audience	36.0

## ConnectApi.DirectMessageCapabilityInput

Create or update the members of a direct message.

Property	Type	Description	Required or Optional	Available Version
membersToAdd	<a href="#">List&lt;String&gt;</a>	List of user IDs for members to include in the direct message.	Required when creating a direct message (POST) Optional when updating a direct message (PATCH)	39.0
membersToRemove	<a href="#">List&lt;String&gt;</a>	List of user IDs for members to remove from the direct message.	Optional when updating a direct message (PATCH) Not supported when creating a direct message (POST)	40.0
subject	<a href="#">String</a>	Subject of the direct message.	Optional when creating a direct message (POST) Not supported when updating a direct message (PATCH)	39.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.DistinctValueRefinementInput

Attribute-based refinement with distinct values for product search.

This class is a subclass of [ConnectApi.RefinementInput](#).

Property	Type	Description	Required or Optional	Available Version
values	List<String>	Comma-separated list of attribute values. It considers attribute labels for localization.	Required	52.0

## ConnectApi.EinsteinLlmAdditionalConfigInput

Additional configuration information for the LLM provider.

Property	Type	Description	Required or Optional	Available Version
additional Parameters	Map<String, ConnectApi.WrappedValue>	Map of parameters and values for the LLM provider.	Optional	60.0
application Name	String	Name of the application.	Required	60.0
enable PiiMasking	Boolean	Specifies whether to mask personally identifiable information (PII) ( <code>true</code> ) or not ( <code>false</code> ).	Optional	60.0
frequency Penalty	Double	Use to reduce the repetitiveness of generated tokens. The higher the value, the stronger a penalty is applied to previously present tokens, proportional to how many times they already appeared in the prompt or in prior generations. Minimum value is 0.0. Maximum value is 1.0.	Optional	60.0
maxTokens	Integer	Maximum number of tokens to generate.	Optional	60.0
num Generations	Integer	Number of generation requests to send to the LLM provider.	Optional	60.0
presence Penalty	Double	Use to reduce the repetitiveness of generated tokens. This value is similar to frequency penalty, except that this penalty is applied equally to all tokens that already appeared, regardless of their exact frequencies. Minimum value is 0.0, and maximum value is 1.0.	Optional	60.0
stopSequences	List<String>	Generated text is cut at the end of the earliest occurrence of a stop sequence.	Optional	60.0
temperature	Double	Sampling temperature to use. Higher values mean the model takes more risks. Lower temperatures mean that generations are	Optional	60.0

Property	Type	Description	Required or Optional	Available Version
		less random. Minimum value is 0 . 0, and maximum value is 1 . 0		

## ConnectApi.EinsteinPromptTemplateGenerationsInput

Prompt template input parameters to use for generation.

Property	Type	Description	Required or Optional	Available Version
additional Config	<a href="#">ConnectApi.EinsteinIlmAdditionalConfigInput</a>	Configuration information for the LLM provider.	Required	60.0
citationMode	<a href="#">String</a>	Mode of citations for the specified prompt template. Valid values are: <ul style="list-style-type: none"> <li><code>post_generation</code>—Citations are generated after the generated response for the specified prompt template.</li> <li><code>off</code>—Citations aren't generated for the specified prompt template.</li> </ul>	Optional	62.0
inputParams	<a href="#">Map&lt;String, ConnectApi.WrappedValue&gt;</a>	Parameters and values to resolve the specified prompt template.	Required	60.0
isPreview	<a href="#">Boolean</a>	Specifies whether to only resolve the prompt template ( <code>true</code> ) or to resolve the prompt template and generate an LLM response ( <code>false</code> ).	Required	60.0
outputLanguage	<a href="#">String</a>	Language code for the language to generate the LLM response in. See <a href="#">Supported Languages in Prompt Template Responses</a> .	Optional	61.0

## ConnectApi.EnsureFundsAsyncInputRepresentation

ID of an Invoice to ensure funds for and apply them to.

Property	Type	Description	Required or Optional	Available Version
invoiceId	<a href="#">String</a>	ID of the Invoice.	Required	48.0

Property	Type	Description	Required or Optional	Available Version
<code>isConsiderBalance</code>	Boolean	If true, the reserved balance amount is used for the Order Summary to fund the invoice. If not enough reserved balance amount, any available balance that isn't reserved by another Order Summary is used. If false, any available balance is used.	Optional	59.0

SEE ALSO:

[ensureFundsAsync\(orderSummaryId, ensureFundsInput\)](#)

## ConnectApi.EnsureRefundsAsyncInputRepresentation

ID of a credit memo to ensure refunds for, an amount of excess funds to refund, or both. At least one is required. Also includes any invoices for fees that reduce the refund amount, such as return fees. If multiple payment methods are available, you can specify how to distribute the refund.

Property	Type	Description	Required or Optional	Available Version
<code>creditMemoId</code>	String	ID of the credit memo that represents a refund amount.	Either <code>creditMemoId</code> or <code>excessFundsAmount</code> is required	48.0
<code>excessFundsAmount</code>	Double	Amount of excess funds to refund.	Either <code>excessFundsAmount</code> or <code>creditMemoId</code> is required	49.0
<code>invoicesToPay</code>	List< <a href="#">ConnectApi.InvoiceToPayInputRepresentation</a> >	List of invoices for any fees that reduce the refund, such as return fees.	Optional	56.0
<code>isAllowPartial</code>	Boolean	This value controls the behavior when the amounts included in the <code>sequences</code> list don't cover the entire refund amount. If this value is false, then the default refund logic is applied to ensure the remaining refund amount. If this value is true, then the unrefunded balance remains on the credit memo. If you don't specify a <code>sequences</code> list, this value is ignored and the default refund logic is applied. The default value is false.	Optional	56.0

Property	Type	Description	Required or Optional	Available Version
<code>reservedBalanceAmountConsidered</code>	<a href="#">Boolean</a>	If true, the refundable amount is used to open the payment balance for the reservedBalanceAmount in the Order Payment Summaries. The remaining refundable amount considers the sequence of order payment summaries, if provided. If false, any reserved balance amount for exchanges is refunded.	Optional	59.0
<code>sequences</code>	<a href="#">List&lt;ConnectApi.SequenceOrderPaymentSummaryInputRepresentation&gt;</a>	Ordered list of refund amounts and OrderPaymentSummaries to apply them to. An OrderPaymentSummary must either belong to the order summary or be a reference to the order summary in the OrderPaymentSummaryReference entity. The process traverses this list in order and stops when it's refunded the full amount.	Optional	56.0

SEE ALSO:

[ensureRefundsAsync\(orderSummaryId, ensureRefundsInput\)](#)

## ConnectApi.EntityLinkSegmentInput

An entity link segment.

Subclass of [ConnectApi.MessageSegmentInput](#).

Property	Type	Description	Required or Optional	Available Version
<code>entityId</code>	<a href="#">String</a>	ID of the entity to link to. Only users with access to the entity see it. It's hidden for users without access.	Required	43.0

## ConnectApi.ExtendedFieldInput

Contains information about the extended field.

Property	Type	Description	Required or Optional	Available Version
<code>name</code>	<a href="#">String</a>	The name of the field, including custom field.	Optional	53.0
<code>value</code>	<a href="#">String</a>	The value of the field.	Optional	53.0

## ConnectApi.ExtensionInput

An extension.

Property	Type	Description	Required or Optional	Available Version
alternativeRepresentation	<a href="#">ConnectApi.AlternativeInput</a>	Alternative representation of the extension.	Required	40.0
extensionId	<a href="#">String</a>	ID of the extension.	Required	40.0
payload	<a href="#">String</a>	Payload associated with the extension.	Required	40.0
payloadVersion	<a href="#">String</a>	Payload version that identifies the structure of the payload associated with the extension.	Optional	40.0

SEE ALSO:

[ConnectApi.ExtensionsCapabilityInput](#)

## ConnectApi.ExtensionsCapabilityInput

Create or update extensions associated with a feed element.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput](#).

Property	Type	Description	Required or Optional	Available Version
itemsToAdd	<a href="#">List&lt;ConnectApi.ExtensionInput&gt;</a>	List of extensions to associate with the feed element.	Required for creating an extension Optional for updating an extension	40.0
itemsToRemove	<a href="#">List&lt;String&gt;</a>	List of attachment IDs to remove from the feed element.	Optional for updating an extension Don't specify for creating an extension	41.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.ExternalAuthIdentityProviderCredentialInput

External auth identity provider credential input.

Property	Type	Description	Required or Optional	Available Version
credentialName	<a href="#">String</a>	Name of the external auth identity provider credential.	Required	62.0
credentialValue	<a href="#">String</a>	Value of the external auth identity provider credential.	Required	62.0

SEE ALSO:

[ConnectApi.ExternalAuthIdentityProviderCredentialsInput](#)

## ConnectApi.ExternalAuthIdentityProviderCredentialsInput

External auth identity provider credentials input.

Property	Type	Description	Required or Optional	Available Version
credentials	<a href="#">ConnectApi.ExternalAuthIdentityProviderCredentialsInput</a> on page 1830>	List of external auth identity provider credentials to populate.	Required	62.0

SEE ALSO:

[createExternalAuthIdentityProviderCredentials\(fullName, requestBody\)](#)

[updateExternalAuthIdentityProviderCredentials\(fullName, requestBody\)](#)

## ConnectApi.ExternalAuthIdentityProviderInput

External auth identity provider input.

Property	Type	Description	Required or Optional	Available Version
authenticationFlow	<a href="#">ConnectApi.IdentityProviderAuthFlow</a> on page 2319	Authentication flow to get tokens to call protected APIs. Values are: <ul style="list-style-type: none"> <li>AuthorizationCode</li> </ul>	Required	62.0
authenticationProtocol	<a href="#">ConnectApi.IdentityProviderAuthProtocol</a> on page 2319	Authentication protocol required to access the external system. Values are: <ul style="list-style-type: none"> <li>OAuth</li> </ul>	Required	62.0
authorizeUrl	<a href="#">String</a>	Authorization endpoint URL for the external system.	Required when the <a href="#">authenticationProtocol</a> is OAuth and the <a href="#">authenticationFlow</a>	62.0

Property	Type	Description	Required or Optional	Available Version
			is AuthorizationCode Otherwise, Optional.	
description	String	Description of the external auth identity provider.	Optional	62.0
fullName	String	Full name of the external auth identity provider. The full name can include a namespace prefix.	Required	62.0
label	String	External auth identity provider label.	Required	62.0
tokenUrl	String	Token endpoint URL to retrieve tokens from the external system. Required for all OAuth 2.0 authentication flows.	Required	62.0
userInfoUrl	String	User info URL to retrieve user profile information from the external system.  Applicable only when the authenticationProtocol is OAuth.	Optional	62.0

## SEE ALSO:

[createExternalAuthIdentityProvider\(requestBody\)](#)

[updateExternalAuthIdentityProvider\(fullName, requestBody\)](#)

## ConnectApi.ExternalCredentialInput

Input used to create or update an external credential.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Property	Type	Description	Required or Optional	Available Version
authenticationProtocol	ConnectApi.CredentialAuthenticationProtocol	Authentication protocol of the external credential. Values are: <ul style="list-style-type: none"> <li>AwsSv4</li> <li>Basic</li> <li>Custom</li> <li>Jwt</li> <li>OAuth</li> </ul>	Required	58.0

Property	Type	Description	Required or Optional	Available Version
authenticationProtocolVariant	<a href="#">ConnectApi.CredentialAuthenticationProtocolVariant</a>	<p>Authentication protocol variant of the external credential. Values are:</p> <ul style="list-style-type: none"> <li><code>AwsSv4_STS</code>—AWS Signature Version 4 with Security Token Service.</li> <li><code>ClientCredentialsClientSecret—Oauth2.0</code> Client Credentials client secret. Client secrets are sent in the callout's request body.</li> <li><code>ClientCredentialsClientSecretBasic—Oauth2.0</code> Client Credentials client secret. Client secrets are sent in the callout's authorization header, as with Basic authentication.</li> <li><code>ClientCredentialsJwtAssertion—Oauth2.0</code> Client Credentials JSON Web Token assertion.</li> <li><code>JwtBearer</code>—OAuth 2.0 JSON Web Token bearer flow.</li> <li><code>NoAuthentication</code>—No authentication.</li> <li><code>RolesAnywhere</code>—AWS Signature Version 4 with Identity and Access Management (IAM) Roles Anywhere.</li> </ul> <p>If specified, the authentication protocol variant must match the actual protocol variant of the external credential.</p>	Optional	58.0
customHeaders	<a href="#">List&lt;ConnectApi.CredentialCustomHeaderInput&gt;</a>	List of credential custom headers.	Optional	58.0
developerName	<a href="#">String</a>	Fully qualified developer name of the external credential.	Required for creating an external credential Optional for updating an external credential	58.0
masterLabel	<a href="#">String</a>	External credential label.	Required	58.0
parameters	<a href="#">List&lt;ConnectApi.ExternalCredentialParameterInput&gt;</a>	List of external credential parameters.	Optional depending on <code>authenticationProtocol</code> and <code>authenticationVariant</code>	58.0

Property	Type	Description	Required or Optional	Available Version
principals	<a href="#">List&lt;ConnectApi.ExternalCredentialPrincipalInput&gt;</a>	List of principals the credential has.	Optional	58.0

## ConnectApi.ExternalCredentialParameterInput

External credential parameter input.

Property	Type	Description	Required or Optional	Available Version
id	<a href="#">String</a>	Parameter ID.	Optional	58.0
parameterDescription	<a href="#">String</a>	Parameter description.	Optional	58.0
parameterName	<a href="#">String</a>	Parameter name of the external credential.	Required	58.0
parameterType	<a href="#">ConnectApi.ExternalCredentialParameterType</a>	Parameter type of the external credential. Values are: <ul style="list-style-type: none"> <li><a href="#">AdditionalRefreshStatusCode</a></li> <li><a href="#">AuthParameter</a></li> <li><a href="#">AuthProvider</a></li> <li><a href="#">AuthProviderUrl</a></li> <li><a href="#">AuthProviderUrlQueryParameter</a></li> <li><a href="#">JwtBodyClaim</a></li> <li><a href="#">JwtHeaderClaim</a></li> <li><a href="#">SigningCertificate</a></li> </ul>	Required	58.0
parameterValue	<a href="#">String</a>	Parameter value of the external credential.	Required	58.0

SEE ALSO:

[ConnectApi.ExternalCredentialInput](#)

[ConnectApi.ExternalCredentialPrincipalInput](#)

## ConnectApi.ExternalCredentialPrincipalInput

External credential principal input.

Property	Type	Description	Required or Optional	Available Version
id	<a href="#">String</a>	ID of the principal external credential parameter.	Optional	58.0

Property	Type	Description	Required or Optional	Available Version
parameters	<a href="#">List&lt;ConnectApi.ExternalCredentialParameterInput&gt;</a>	List of external credential parameters.	Optional	58.0
principalName	<a href="#">String</a>	Principal name.	Required	58.0
principalType	<a href="#">ConnectApi.CredentialPrincipalType</a>	Type of credential principal. Values are: <ul style="list-style-type: none"> <li><code>AwsStsPrincipal</code></li> <li><code>NamedPrincipal</code></li> <li><code>PerUserPrincipal</code></li> </ul>	Required	58.0
sequenceNumber	<a href="#">Integer</a>	Sequence number.	Required	58.0

SEE ALSO:

[ConnectApi.ExternalCredentialInput](#)

## ConnectApi.FeedElementCapabilitiesInput

A container for all capabilities that can be included when creating a feed element.

Property	Type	Description	Required or Optional	Available Version
associated Actions	<a href="#">ConnectApi.AssociatedActionsCapabilityInput</a>	Describes actions added to the feed element.	Optional	33.0
bookmarks	<a href="#">ConnectApi.BookmarksCapabilityInput</a>	Describes bookmarks added to the feed element.	Optional	32.0
canvas	<a href="#">ConnectApi.CanvasCapabilityInput</a>	Describes a canvas app added to the feed element.	Optional	32.0
content	<a href="#">ConnectApi.ContentCapabilityInput</a>	Describes content added to the feed element. <p> <b>Important:</b> This class isn't available for feed posts in version 36.0 and later. In version 36.0 and later, use <a href="#">ConnectApi.FilesCapabilityInput</a>.</p>	Optional	32.0–35.0
directMessage	<a href="#">ConnectApi.DirectMessageCapabilityInput</a>	Describes the direct message.	Optional	39.0

Property	Type	Description	Required or Optional	Available Version
extensions	<a href="#">ConnectApi.ExtensionsCapabilityInput</a>	Describes the extensions associated with the feed element.	Optional	40.0
feedEntityShare	<a href="#">ConnectApi.FeedEntityShareCapabilityInput</a>	Describes the feed entity shared with the feed element.	Optional	39.0
files	<a href="#">ConnectApi.FilesCapabilityInput</a>	Describes files attached to the feed element.	Optional	36.0
link	<a href="#">ConnectApi.LinkCapabilityInput</a>	Describes a link added to the feed element.	Optional	32.0
poll	<a href="#">ConnectApi.PollCapabilityInput</a>	Describes a poll added to the feed element.	Optional	32.0
questionAndAnswers	<a href="#">ConnectApi.QuestionAndAnswersCapabilityInput</a>	Describes a question and answer capability added to the feed element.	Optional	32.0
status	<a href="#">ConnectApi.StatusCapabilityInput</a>	Describes the status of the feed element.	Optional	44.0
topics	<a href="#">ConnectApi.TopicsCapabilityInput</a>	Describes topics assigned to the feed element.	Optional	38.0

SEE ALSO:

[ConnectApi.FeedElementInput](#)

## ConnectApi.FeedElementCapabilityInput

A feed element capability.

In API version 30.0 and earlier, most feed items can have comments, likes, topics, and so on. In version 31.0 and later, every feed item (and feed element) can have a unique set of *capabilities*. If a capability property exists on a feed element, that capability is available, even if the capability property doesn't have a value. For example, if the `ChatterLikes` capability property exists on a feed element (with or without a value), the context user can like that feed element. If the capability property doesn't exist, it isn't possible to like that feed element. A capability can also contain associated data. For example, the `Moderation` capability contains data about moderation flags.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

This class is a superclass of:

- [ConnectApi.AssociatedActionsCapabilityInput](#)
- [ConnectApi.BookmarksCapabilityInput](#)
- [ConnectApi.CanvasCapabilityInput](#)
- [ConnectApi.ContentCapabilityInput](#)
- [ConnectApi.DirectMessageCapabilityInput](#)
- [ConnectApi.ExtensionsCapabilityInput](#)
- [ConnectApi.FeedEntityShareCapabilityInput](#)
- [ConnectApi.FilesCapabilityInput](#)
- [ConnectApi.LinkCapabilityInput](#)
- [ConnectApi.MuteCapabilityInput](#)
- [ConnectApi.PollCapabilityInput](#)
- [ConnectApi.QuestionAndAnswersCapabilityInput](#)
- [ConnectApi.ReadByCapabilityInput](#)
- [ConnectApi.RecordCapabilityInput](#)
- [ConnectApi.StatusCapabilityInput](#)
- [ConnectApi.TopicsCapabilityInput](#)

## ConnectApi.FeedElementInput

Feed elements are the top-level items that a feed contains. Feeds are feed element containers.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass of [ConnectApi.FeedItemInput](#).

Property	Type	Description	Required or Optional	Available Version
capabilities	<a href="#">ConnectApi.FeedElementCapabilitiesInput</a>	The capabilities that define auxiliary information on this feed element.	Optional	31.0
feedElementType	<a href="#">ConnectApi.FeedElementType</a>	The type of feed element this input represents.	Required when creating a feed element Optional when updating a feed element	31.0

Property	Type	Description	Required or Optional	Available Version
subjectId	<a href="#">String</a>	<p>The ID of the parent this feed element is being posted to. This value can be the ID of a user, group, or record, or the string <code>me</code> to indicate the context user.</p> <p>In version 45.0 and later, you can move a feed element from one public group to another by setting this property to the ID of the new public group. You can't include or change any other properties when moving a feed element.</p>	Required	31.0

## SEE ALSO:

- [Post a Feed Element with a Mention](#)
- [Post a Feed Element with Existing Content](#)
- [Post a Feed Element with a New File \(Binary\) Attachment](#)
- [Define an Action Link and Post with a Feed Element](#)

- [Post a Rich-Text Feed Element with Inline Image](#)

## ConnectApi.FeedEntityShareCapabilityInput

Share a feed entity with a feed post or comment.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput](#).

Property	Type	Description	Required or Optional	Available Version
feedEntityId	<a href="#">String</a>	ID of the feed entity to share with the feed post or comment.	Required	39.0

## SEE ALSO:

- [ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.FeedItemInput

Used to create rich feed items, for example, feed items that include @mentions or files.

Subclass of [ConnectApi.FeedElementInput](#) as of version 31.0.

Property	Type	Description	Required or Optional	Available Version
attachment	<a href="#">ConnectApi.FeedItemAttachmentInput</a>	Specifies the attachment for the feed item. The feed item type is inferred based on the provided attachment.   <b>Important:</b> As of API version 32.0, use the inherited <code>capabilities</code> property.	Optional	28.0–31.0
body	<a href="#">ConnectApi.MessageBodyInput</a>	Message body. The body can contain up to 10,000 characters and 25 mentions. Because the character limit can change, clients should make a <code>describeObjects()</code> call on the <code>FeedItem</code> or <code>FeedComment</code> object and look at the length of the <code>Body</code> or <code>CommentBody</code> field to determine the maximum number of allowed characters.  If you specify <code>originalFeedElementId</code> to share a feed item, use the <code>body</code> property to add the first comment to the feed item.  To edit this property in a feed item, use <code>updateFeedElement(<code>communityId</code>, <code>feedElementId</code>, <code>feedElement</code>)</code> . Editing feed posts is supported in version 34.0 and later.	Required unless the feed item has a link capability or a content capability.	28.0
isBookmarkedByCurrentUser	<a href="#">Boolean</a>	Specifies if the new feed item should be bookmarked for the user ( <code>true</code> ) or not ( <code>false</code> ).   <b>Important:</b> As of API version 32.0, use the <code>capabilities.bookmarks.isBookmarkedByCurrentUser</code> property.	Optional	28.0–31.0
originalFeedElementId	<a href="#">String</a>	To share a feed element, specify its 18-character ID.   <b>Important:</b> As of API version 39.0, use the <code>capabilities.feedEntityShare.feedEntityId</code> property.	Optional	31.0–38.0
originalFeedItemId	<a href="#">String</a>	To share a feed item, specify its 18-character ID.   <b>Important:</b> In API version 32.0–38.0, use the <code>originalFeedElementId</code> property. In API version 39.0 and later, use the <code>capabilities.feedEntityShare.feedEntityId</code> property.	Optional	28.0–31.0
visibility	<a href="#">ConnectApi.FeedItemVisibilityTypeEnum</a>	Type of users who can see a feed item. <ul style="list-style-type: none"><li>• <code>AllUsers</code>—Visibility is not limited to internal users.</li><li>• <code>InternalUsers</code>—Visibility is limited to internal users.</li></ul>	Optional	28.0

Property	Type	Description	Required or Optional	Available Version
		<p>Default values:</p> <ul style="list-style-type: none"> <li>For external users, the default value is <code>AllUsers</code>. External users must use this value to see their posts.</li> <li>For internal users, the default value is <code>InternalUsers</code>. Internal users can accept this value or use the value <code>AllUsers</code> to allow external users to see their posts.</li> </ul> <p>If the parent of the feed item is a user, group, or direct message, the <code>visibility</code> of the feed item must be <code>AllUsers</code>.</p>		

## ConnectApi.FileIdInput

Attach a file that has already been uploaded or remove a file from a feed element.

Property	Type	Description	Required or Optional	Available Version
<code>id</code>	<code>String</code>	ID of a file that has already been uploaded.	Required	36.0
<code>operationType</code>	<code>ConnectApi.OperationType</code>	<p>Operation to carry out on the file. Values are:</p> <ul style="list-style-type: none"> <li><code>Add</code>—Adds the file to the feed element.</li> <li><code>Remove</code>—Removes the file from the feed element.</li> </ul> <p><code>Remove</code> operations are processed before <code>Add</code> operations. Adding content that is already added and removing content that is already removed result in no operation.</p>	<p>Optional</p> <p>If not specified, defaults to <code>Add</code>.</p>	36.0

SEE ALSO:

[ConnectApi.FilesCapabilityInput](#)

## ConnectApi.FindRoutesWithFewestSplitsInputRepresentation

Data used to calculate order fulfillment routes involving the fewest number of shipment splits.

Property	Type	Description	Required or Optional	Available Version
<code>locationAvailableInventory</code>	<code>List&lt;ConnectApi.LocationAvailabilityInputRepresentation&gt;</code>	Each list element represents the available quantity of a product at an inventory location.	At least one element is required	51.0

Property	Type	Description	Required or Optional	Available Version
maximumNumberOfSplits	Integer	The maximum allowable number of shipment splits. Routing options that involve more than this number of splits are not returned.   <b>Note:</b> Each split represents an additional shipment. Specifying a maximum of 0 returns only locations that can fulfill the entire order in a single shipment. A maximum of 1 returns combinations of locations that can fulfill the order in one or two shipments, and so on.	Required	51.0
orderedQuantities	List<ConnectApi.QuantityWithSkuInputRepresentation>	Each list element represents a quantity of a product to be routed for fulfillment.	At least one element is required	51.0

SEE ALSO:

[findRoutesWithFewestSplits\(findRoutesWithFewestSplitsInputRepresentation\)](#)

## ConnectApi.FindRoutesWithFewestSplitsGroupUsingOCIInputRepresentation

Data used to calculate inventory availability and fulfillment routes for one order involving the fewest number of shipment splits.

Property	Type	Description	Required or Optional	Available Version
excludeLocations	List<String>	List of locations to exclude from the routing calculations.	Optional	55.0
maximumNumberOfSplits	Integer	Maximum allowable number of shipment splits. Routing options that involve more than this number of splits are not returned.   <b>Note:</b> Each split represents an additional shipment. Specifying a maximum of 0 returns only locations that can fulfill the entire order in a single shipment. A maximum of 1 returns combinations of locations that can fulfill the order in one or two shipments, and so on.	Required	54.0

Property	Type	Description	Required or Optional	Available Version
orderedItems	<a href="#">ConnectApi.RouteWithFewestSplitsUsingOCItemRepresentation</a>	Each list element represents a quantity of a product to be routed for fulfillment and the assigned location group or location.	At least one element is required	54.0

SEE ALSO:

[findRoutesWithFewestSplitsUsingOCI\(findRoutesWithFewestSplitsUsingOCIInput\)](#)

[ConnectApi.FindRoutesWithFewestSplitsUsingOCIInputRepresentation](#)

## ConnectApi.FindRoutesWithFewestSplitsUsingOCIInputRepresentation

Data used to calculate order fulfillment routes involving the fewest number of shipment splits, taking into account inventory availability.

Property	Type	Description	Required or Optional	Available Version
<a href="#">findRoutesWithFewestSplitsUsingOCIInputRepresentation</a>	<a href="#">ConnectApi.RouteWithFewestSplitsUsingOCIInputRepresentation</a>	Each list element represents a routing request for one order.	At least one element is required	54.0
ociExpandAttributes	Collection	The string value groupEligibilityExclusion excludes specific locations.	Optional	59.0

SEE ALSO:

[findRoutesWithFewestSplitsUsingOCI\(findRoutesWithFewestSplitsUsingOCIInput\)](#)

## ConnectApi.FindRoutesWithFewestSplitsUsingOCIItemInputRepresentation

A quantity of a product and a location group or location assigned to fulfill it.

Property	Type	Description	Required or Optional	Available Version
locationGroupIdentifier	<a href="#">String</a>	The External Reference of the location group or location assigned to the order item. If you specify a location group, inventory is considered for all locations belonging to that group.	Required	54.0
quantity	<a href="#">Double</a>	Quantity of the product.	Required	54.0

Property	Type	Description	Required or Optional	Available Version
stockKeepingUnit	<a href="#">String</a>	SKU of the product.	Required	54.0

SEE ALSO:

[findRoutesWithFewestSplitsUsingOCI\(findRoutesWithFewestSplitsUsingOCIInput\)](#)

[ConnectApi.FindRoutesWithFewestSplitsUsingOCIInputRepresentation](#)

[ConnectApi.FindRoutesWithFewestSplitsGroupUsingOCIInputRepresentation](#)

## ConnectApi.FilesCapabilityInput

Attach up to 10 files that have already been uploaded or remove one or more files from a feed element.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput](#).

Property	Type	Description	Required or Optional	Available Version
items	<a href="#">List&lt;ConnectApi.FileIdInput&gt;</a>	List of file IDs and operations to be carried out on those files.	Required	36.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.FormFieldInput

Marketing integration form field.

Property	Type	Description	Required or Optional	Available Version
name	<a href="#">String</a>	Name of the marketing integration form field.	Required	53.0
type	<a href="#">ConnectApi.FormFieldType</a>	Type of marketing integration form field. Values are: <ul style="list-style-type: none"> <li>• <a href="#">Boolean</a></li> <li>• <a href="#">Date</a></li> <li>• <a href="#">EmailAddress</a></li> <li>• <a href="#">Number</a></li> <li>• <a href="#">Text</a></li> </ul>	Required	53.0

SEE ALSO:

[ConnectApi.FormInput](#)

## ConnectApi.FormInput

Marketing integration form.

Property	Type	Description	Required or Optional	Available Version
formFieldsList	<a href="#">List&lt;ConnectApi.FormFieldInput&gt;</a>	Fields for the marketing integration form.	Required	53.0
formName	<a href="#">String</a>	Name of the marketing integration form.	Required	53.0
member Identification Code	<a href="#">String</a>	The member identification code (MID) of the Marketing Cloud Engagement account associated with the form.	Required	53.0

## ConnectApi.FormSubmissionFieldInput

Marketing integration form field submission.

Property	Type	Description	Required or Optional	Available Version
name	<a href="#">String</a>	Name of the marketing integration form field.	Required	53.0
value	<a href="#">String</a>	Value of the marketing integration form field.	Required	53.0

SEE ALSO:

[ConnectApi.FormSubmissionInput](#)

## ConnectApi.FormSubmissionInput

Marketing integration form submission.

Property	Type	Description	Required or Optional	Available Version
formFieldsList	<a href="#">List&lt;ConnectApi.FormFieldSubmissionInput&gt;</a>	Fields for the marketing integration form.	Required	53.0

## ConnectApi.FulfillmentGroupInputRepresentation

A list of OrderItemSummaries to be fulfilled together, and the fulfillment location to handle them. The fulfillment type is one of the values defined for the Type field on the FulfillmentOrder object, such as "Warehouse" or "Retail Store." The specified type is assigned to the FulfillmentOrder for this fulfillment group.

Property	Type	Description	Required or Optional	Available Version
fulfilledFromLocationId	String	ID of the fulfillment location.	Required	48.0
fulfillmentType	String	Fulfillment type. One of the Type field values defined for FulfillmentOrders.	Required	48.0
orderItemSummaries	List<ConnectApi.OrderItemSummaryInputRepresentation>	List of OrderItemSummaries.	Required	48.0
referenceId	String	Reference to this input for use in troubleshooting failures. This value is only used by the APIs for creating fulfillment orders for multiple order delivery group summaries.	Optional	50.0

SEE ALSO:

[ConnectApi.FulfillmentOrderInputRepresentation](#)  
[createFulfillmentOrders\(fulfillmentOrderInput\)](#)

## ConnectApi.FulfillmentOrderInputRepresentation

An OrderDeliveryGroupSummary that defines a delivery method and recipient, and a list of fulfillment groups to assign to FulfillmentOrders. Each fulfillment group is a set of OrderItemSummaries that match the OrderDeliveryGroupSummary and share the same fulfillment location. The method creates a FulfillmentOrder for each fulfillment group and a FulfillmentOrderLineItem for each OrderItemSummary.

Property	Type	Description	Required or Optional	Available Version
fulfillmentGroups	List<ConnectApi.FulfillmentGroupInputRepresentation>	List of fulfillment groups that specify the OrderItemSummaries and fulfillment locations.	Required	48.0
orderDeliveryGroupSummaryId	String	ID of the OrderDeliveryGroupSummary.	Required	48.0
orderSummaryId	String	ID of the OrderSummary.	Required	48.0

SEE ALSO:

[createFulfillmentOrders\(fulfillmentOrderInput\)](#)

## ConnectApi.FulfillmentOrderInvoiceInputRepresentation

Instantiate and include this object with no properties when creating an invoice.

This input class has no properties.

SEE ALSO:

[createInvoice\(fulfillmentOrderId, invoiceInput\)](#)

## ConnectApi.FulfillmentOrderLineItemInputRepresentation

A FulfillmentOrderLineItem and quantity to cancel. You can cancel less than the full quantity, in which case you reallocate the canceled quantity to a different FulfillmentOrder.

Property	Type	Description	Required or Optional	Available Version
fulfillmentOrderLineItemId	String	ID of the FulfillmentOrderLineItem.	Required	48.0
quantity	Double	Quantity to cancel.	Required	48.0

SEE ALSO:

[ConnectApi.FulfillmentOrderLineItemsToCancelInputRepresentation](#)

[cancelFulfillmentOrderLineItems\(fulfillmentOrderId, cancelFulfillmentOrderLineItemsInput\)](#)

## ConnectApi.FulfillmentOrderLineItemsToCancelInputRepresentation

A list of FulfillmentOrderLineItems and quantities to cancel.

Property	Type	Description	Required or Optional	Available Version
fulfillmentOrderLineItemsToCancel	List< <a href="#">ConnectApi.FulfillmentOrderLineItemInputRepresentation</a> >	List of FulfillmentOrderLineItems and quantities.	Required	48.0

SEE ALSO:

[cancelFulfillmentOrderLineItems\(fulfillmentOrderId, cancelFulfillmentOrderLineItemsInput\)](#)

## ConnectApi.BaseRequest

Base parameters for making a request to the payment gateway.

This class is abstract.

Subclass of [ConnectApi.AuditParamsRequest](#).

Superclass of:

- [ConnectApi.AuthorizationRequest](#)
- [ConnectApi.AuthorizationReversalRequest](#)

- [ConnectApi.CaptureRequest](#)
- [ConnectApi.PaymentMethodTokenizationRequest](#)
- [ConnectApi.PostAuthRequest](#)
- [ConnectApi.RefundRequest](#)
- [ConnectApi.SaleRequest](#)

Property	Type	Description	Required or Optional	Available Version
<code>additionalData</code>	<a href="#">Map&lt;String, String&gt;</a>	An optional map of additional parameters to be sent to the payment gateway.	Optional	50.0
<code>idempotencyKey</code>	<a href="#">String</a>	Idempotency key.	Optional	50.0

## ConnectApi.GetFOCapacityValuesRequestInputRepresentation

Locations to get fulfillment order capacity information for.

Property	Type	Description	Required or Optional	Available Version
<code>locationIds</code>	<a href="#">List&lt;String&gt;</a>	List of IDs of the locations to get fulfillment order capacity information for.	Required	55.0

## ConnectApi.GroupInformationInput

Chatter group information input.

Property	Type	Description	Available Version
<code>text</code>	<a href="#">String</a>	The text in the "Information" section of a group.	28.0
<code>title</code>	<a href="#">String</a>	The title of the "Information" section of a group.	28.0

SEE ALSO:

[ConnectApi.ChatterGroupInput](#)

## ConnectApi.HashtagSegmentInput

Include a hashtag in a feed item or comment.

Subclass of [ConnectApi.MessageSegmentInput](#).

Property	Type	Description	Available Version
tag	String	Text of the hash tag without the # (hash tag) prefix	28.0
		 <b>Note:</b> Closing square brackets (]) are not supported in hash tag text. If the text contains a closing square bracket (]), the hash tag ends at the bracket.	

SEE ALSO:

[ConnectApi.MessageBodyInput](#)

## ConnectApi.HoldFOCapacityInputRepresentation

Request to hold fulfillment order capacity at one or more locations. Can correspond to one action call.

Property	Type	Description	Required or Optional	Available Version
holdFOCapacityRequests	List< <a href="#">ConnectApi.HoldFOCapacityRequestInputRepresentation</a> >	List of requests to hold fulfillment order capacity at one or more locations.	Required	55.0

## ConnectApi.HoldFOCapacityRequestInputRepresentation

Request to hold fulfillment order capacity at one or more locations.

Property	Type	Description	Required or Optional	Available Version
allOrNothing	Boolean	Controls whether a single failed request cancels all other requests in the list ( <i>true</i> ) or whether some requests can succeed if others fail ( <i>false</i> ). The default value is <i>false</i> .	Optional	55.0
capacityRequests	List< <a href="#">ConnectApi.CapacityRequestInputRepresentation</a> >	List of requests to hold fulfillment order capacity. Each request is for one fulfillment order at one location.	Required	55.0

## ConnectApi.InlineImageSegmentInput

An inline image segment.

Subclass of [ConnectApi.MessageSegmentInput](#).

Property	Type	Description	Required or Optional	Available Version
altText	<a href="#">String</a>	Alt text for the inline image.	Optional If not specified, the title of the inline image file is used as the alt text.	35.0
fileId	<a href="#">String</a>	ID of the inline image file.	Required	35.0

SEE ALSO:

[Post a Rich-Text Feed Element with Inline Image](#)

[ConnectApi.MessageBodyInput](#)

## ConnectApi.InnerEnsureFundsAsyncInputRepresentation

ID of an Invoice and ID of the associated OrderSummary.

Property	Type	Description	Required or Optional	Available Version
invoiceId	<a href="#">String</a>	ID of the Invoice to ensure funds for.	Required	56.0
isOrderBalanceAmount	<a href="#">Boolean</a>	If true, the reserved balance amount is used for the Order Summary to fund the invoice. If not enough reserved balance amount, any available balance that isn't reserved by another Order Summary is used. If false, any available balance is used.	Optional	59.0
orderSummaryId	<a href="#">String</a>	ID of the OrderSummary associated with the Invoice.	Required	56.0

SEE ALSO:

[multipleEnsureFundsAsync\(multipleEnsureFundsInput\)](#)

[ConnectApi.MultipleEnsureFundsAsyncInputRepresentation](#)

## ConnectApi.InviteInput

An invitation.

Property	Type	Description	Required or Optional	Available Version
invitees	<a href="#">List&lt;String&gt;</a>	List of email addresses to send the invitation to.	Required	39.0

Property	Type	Description	Required or Optional	Available Version
message	<a href="#">String</a>	Message to include in the invitation.	Optional	39.0

## ConnectApi.InvoiceToPayInputRepresentation

Invoice for a fee.

Property	Type	Description	Required or Optional	Available Version
invoiceId	<a href="#">String</a>	ID of the invoice for a fee.	Required	56.0

SEE ALSO:

- [ensureRefundsAsync\(orderSummaryId, ensureRefundsInput\)](#)
- [ConnectApi.EnsureRefundsAsyncInputRepresentation](#)

## ConnectApi.LeadInput

Contains information about a lead or guest user.

Property	Type	Description	Required or Optional	Available Version
company	<a href="#">String</a>	The company of the lead.	Optional	53.0
email	<a href="#">String</a>	The email address of the lead.	Optional	53.0
extendedFields	<a href="#">ConnectApi.ExtendedFieldsInput</a>	Use to add values to any of the fields, including custom fields.	Optional	53.0
firstName	<a href="#">String</a>	The first name of the lead.	Optional	53.0
lastName	<a href="#">String</a>	The last name of the lead.	Optional	53.0
phone	<a href="#">String</a>	The phone number of the lead.	Optional	53.0

## ConnectApi.LinkCapabilityInput

Create or update a link on a feed element.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput](#).

Property	Type	Description	Required or Optional	Available Version
url	<a href="#">String</a>	Link URL. The URL can be to an external site.	Required	32.0

Property	Type	Description	Required or Optional	Available Version
urlName	<a href="#">String</a>	Description of the link.	Optional	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.LinkSegmentInput

Include a link segment in a feed item or comment.

Subclass of [ConnectApi.MessageSegmentInput](#).

Property	Type	Description	Available Version
url	<a href="#">String</a>	URL to be used for the link	28.0

SEE ALSO:

[ConnectApi.MessageBodyInput](#)

## ConnectApi.LocationInputRepresentation

Inventory location data used to calculate shipping distance.

Property	Type	Description	Required or Optional	Available Version
countryCode	<a href="#">String</a>	The country code of the location.	Required	51.0
locationIdentifier	<a href="#">String</a>	The identifier of the location.	Required	51.0
postalCode	<a href="#">String</a>	The postal code of the location.	Required	51.0

## ConnectApi.LocationAvailabilityInputRepresentation

The available quantity of a product at an inventory location.

Property	Type	Description	Required or Optional	Available Version
externalReferenceId	<a href="#">String</a>	The external reference ID of the inventory location.	Optional	51.0
quantity	<a href="#">Double</a>	The available quantity of the product.	Required	51.0
stockKeepingUnit	<a href="#">String</a>	The Stock Keeping Unit of the product.	Required	51.0

## ConnectApi.ManagedContentBodyInput

Input representation for the body of a piece of managed content.

Property	Type	Description	Required or Optional	Available Version
nodeMap	Object	Body of the managed content version. The format must be Map<String, Object> , where map values are either primitive values like String, Integer, Double, Boolean, or another Map<String, Object>.	Required	60.0

SEE ALSO:

[ConnectApi.ManagedContentDocumentInput](#)

[ConnectApi.ManagedContentVariantUpdateInput](#)

## ConnectApi.ManagedContentDocumentCloneInput

Managed content clone input.

Property	Type	Description	Required or Optional	Available Version
apiName	String	API name of the cloned content.	Optional	61.0
contentSpaceOr FolderId	String	ID of the target folder for the cloned content. If unspecified, defaults to the folder of the source content.	Optional	61.0
includeVariants	Boolean	Specifies whether to include variants ( <code>true</code> ) or not ( <code>false</code> ) when cloning the content. If unspecified, default is <code>false</code> .	Optional	61.0
title	String	Title of the cloned content. If unspecified, "clone of" is appended to the source content's title.	Optional	61.0

SEE ALSO:

[cloneManagedContentDocument\(contentKeyOrId, ManagedContentCloneInputParam\)](#)

## ConnectApi.ManagedContentDocumentInput

Input representation for a piece of managed content.

Property	Type	Description	Required or Optional	Available Version
apiName	String	API name of the managed content.	Optional	61.0

Property	Type	Description	Required or Optional	Available Version
contentBody	<a href="#">ConnectApi.ManagedContentBodyInput</a>	Body of the managed content.	Required	60.0
contentKey	<a href="#">String</a>	Content key to assign to the managed content. A content key is a universally unique identifier (UUID) such as MCA4CCV5QS2BAB5H7YRCRPTCWGZQ.	Optional	60.0
contentSpaceOrFolderId	<a href="#">String</a>	Content space or folder ID where the content is created.	Required	60.0
contentType	<a href="#">String</a>	Fully qualified name of the content type to create.  If you're uploading a binary file using a multipart/form-data message, <code>contentType</code> must be <code>sfdc_cms__image</code> or <code>sfdc_cms__doc</code> .  You can't create a Form using <code>sfdc_cms__form</code> . The <code>sfdc_cms__form</code> content type isn't supported.	Required	60.0
externalId	<a href="#">String</a>	External ID of the managed content.	Optional	60.0
title	<a href="#">String</a>	Title of the managed content.	Required	60.0
urlName	<a href="#">String</a>	URL name of the managed content within the org.	Optional	60.0

## ConnectApi.ManagedContentChannelCreateRepresentation

Input class to create a managed content channel.

Property	Type	Description	Required or Optional	Available Version
cacheControlMaxAge	<a href="#">Long</a>	Cache control max age value in seconds.	Optional	62.0
domain	<a href="#">String</a>	ID or name of the domain assigned to the public channel.	Optional	62.0
isDomainLocked	<a href="#">Boolean</a>	Specifies whether the domain is locked and can't be changed ( <code>true</code> ) or not ( <code>false</code> ).	Optional	62.0

Property	Type	Description	Required or Optional	Available Version
<code>isSearchable</code>	<a href="#">Boolean</a>	Specifies whether the text contents of the channel are searchable ( <code>true</code> ) or not ( <code>false</code> ).	Optional	62.0
<code>mediaCacheControlMaxAge</code>	<a href="#">Long</a>	Media cache control max age value in seconds.	Optional	62.0
<code>name</code>	<a href="#">String</a>	Name of the managed content channel.	Required	62.0
<code>targetId</code>	<a href="#">String</a>	ID of the target associated with the managed content channel.	Required for all channel types except <code>PublicUnauthenticated</code>	62.0
<code>type</code>	<a href="#">ConnectApi.ManagedContentChannelType</a>	Type of managed content channel. Values are: <ul style="list-style-type: none"> <li><code>CloudToCloud</code>—Cloud-to-Cloud integrated channel.</li> <li><code>Community</code>—Experience Cloud site channel.</li> <li><code>ConnectedApp</code>—Channel served by a connected app.</li> <li><code>PublicUnauthenticated</code>—Public channel. All published content is publicly available.</li> <li><code>UserPermission</code>—Channel backed by a system permission. All published content is available only to users with the permission.</li> </ul>	Required	62.0

SEE ALSO:

[postManagedContentChannel\(ManagedContentCreateInputParam\)](#)

## ConnectApi.ManagedContentChannelUpdateRepresentation

Input class to update a managed content channel.

Property	Type	Description	Required or Optional	Available Version
<code>cacheControlMaxAge</code>	<a href="#">Long</a>	Cache control max age value in seconds.	Optional	62.0
<code>domain</code>	<a href="#">String</a>	ID or name of the domain assigned to the public channel.	Optional	62.0

Property	Type	Description	Required or Optional	Available Version
isDomainLocked	Boolean	Specifies whether the domain is locked and can't be changed ( <code>true</code> ) or not ( <code>false</code> ).	Optional	62.0
isSearchable	Boolean	Specifies whether the text contents of the channel are searchable ( <code>true</code> ) or not ( <code>false</code> ).	Optional	62.0
mediaCacheControlMaxAge	Long	Media cache control max age value in seconds.	Optional	62.0
name	String	Name of the managed content channel.	Required	62.0
targetId	String	ID of the target associated with the managed content channel.	Required for all channel types except <code>Public Unauthenticated</code>	62.0

SEE ALSO:

[patchManagedContentChannel\(channelId, ManagedContentChannelInput\)](#)

## ConnectApi.ManagedContentVariantUpdateInput

Input representation for replacing a managed content variant.

Property	Type	Description	Required or Optional	Available Version
contentBody	<a href="#">ConnectApi.ManagedContentBodyInput</a>	Body of the managed content variant.	Optional	60.0
title	String	Title of the managed content variant.	Optional	60.0
urlName	String	URL name of the managed content variant within the org.	Optional	60.0

## ConnectApi.ManagedContentPublishInput

Input for publishing content.

Property	Type	Description	Required or Optional	Available Version
contentIds	List<String>	IDs of content to publish. All variants of the content are published.	Required if <code>variantIds</code> isn't specified	60.0

Property	Type	Description	Required or Optional	Available Version
contextContentSpaceId	<a href="#">String</a>	ID of the context workspace. If specified, content from other workspaces is published if it is shared to the specified workspace. If unspecified, the context workspace is derived from the content's origin workspace. All content in the request should belong to the same origin workspace.	Optional	61.0
description	<a href="#">String</a>	Description for publish action.	Optional	60.0
includeContentReferences	<a href="#">Boolean</a>	Specifies whether to include content references ( <code>true</code> ) or not ( <code>false</code> ).	Optional	60.0
variantIds	<a href="#">List&lt;String&gt;</a>	IDs of variants to publish. All variants must be from the same content space.	Required if <code>contentIds</code> isn't specified	60.0

## ConnectApi.ManagedContentSpaceChannelInputRepresentation

Channel to add or remove from a managed content space.

Property	Type	Description	Required or Optional	Available Version
channelId	<a href="#">String</a>	ID of the channel to add or remove from the managed content space.	Required	62.0
operation	<a href="#">ConnectApi.ManagedContentSpaceChannelOperation</a> on page 2320	Operation to perform on the channel and managed content space. <ul style="list-style-type: none"> <li><code>Add</code>—Add a channel to a managed content space.</li> <li><code>Remove</code>—Remove a channel from a managed content space.</li> </ul>	Required	62.0

SEE ALSO:

[ConnectApi.ManagedContentSpaceChannelsInputRepresentation](#)

## ConnectApi.ManagedContentSpaceChannelsInputRepresentation

Channels to add or remove from the managed content space.

Property	Type	Description	Required or Optional	Available Version
spaceChannels	<a href="#">List&lt;ConnectApi.ManagedContentSpaceChannelInputRepresentation&gt;</a>	List of channels to add or remove from the managed content space.	Required	62.0

SEE ALSO:

[patchManagedContentSpaceChannels\(contentSpaceId, spaceChannels\)](#)

## ConnectApi.ManagedContentUnpublishInput

Input for unpublishing content.

Property	Type	Description	Required or Optional	Available Version
contentIds	<a href="#">List&lt;String&gt;</a>	IDs of content to unpublish. All variants of the content are unpublished.	Required if <code>variantIds</code> isn't specified	60.0
contextContentSpaceId	<a href="#">String</a>	ID of the context workspace. If specified, content from other workspaces is unpublished if it is shared to the specified workspace. If unspecified, the context workspace is derived from the content's origin workspace. All content in the request should belong to the same origin workspace.	Optional	61.0
description	<a href="#">String</a>	Description for unpublish action.	Optional	60.0
variantIds	<a href="#">List&lt;String&gt;</a>	IDs of variants to unpublish. All variants must be from the same content space.	Required if <code>contentIds</code> isn't specified	60.0

## ConnectApi.ManagedTopicPositionCollectionInput

A collection of relative positions of managed topics.

Property	Type	Description	Required or Optional	Available Version
managedTopicPositions	<a href="#">List&lt;ConnectApi.ManagedTopicPositionInput&gt;</a>	List of relative positions of managed topics. This list can include <code>Featured</code> and <code>Navigational</code> managed topics and doesn't need to include all managed topics.	Required	32.0

Property	Type	Description	Required or Optional	Available Version
		For more information about reordering managed topics, see the example in <a href="#">reorderManagedTopics(communitId, managedTopicPositionCollection)</a> .		

## ConnectApi.ManagedTopicPositionInput

Relative position of a managed topic.

Property	Type	Description	Required or Optional	Available Version
managedTopicId	<a href="#">String</a>	ID of existing managed topic.	Required	32.0
position	<a href="#">Integer</a>	Relative position of the managed topic, indicated by zero-indexed, ascending whole numbers.	Required	32.0

SEE ALSO:

[ConnectApi.ManagedTopicPositionCollectionInput](#)

## ConnectApi.MarkupBeginSegmentInput

The beginning tag for rich text markup.

Subclass of [ConnectApi.MessageSegmentInput](#).

Property	Type	Description	Required or Optional	Available Version
altText	<a href="#">String</a>	Alternative text for the <a href="#">Hyperlink</a> segment.	Optional	45.0
markupType	<a href="#">ConnectApi.MarkupType</a>	Type of rich text markup. <ul style="list-style-type: none"> <li>• <a href="#">Bold</a>—Bold tag.</li> <li>• <a href="#">Code</a>—Code tag.</li> <li>• <a href="#">Hyperlink</a>—Hyperlink anchor tag.</li> <li>• <a href="#">Italic</a>—Italic tag.</li> <li>• <a href="#">ListItem</a>—List item tag.</li> <li>• <a href="#">OrderedList</a>—Ordered list tag.</li> <li>• <a href="#">Paragraph</a>—Paragraph tag.</li> <li>• <a href="#">Strikethrough</a>—Strikethrough tag.</li> <li>• <a href="#">Underline</a>—Underline tag.</li> </ul>	Required	35.0

Property	Type	Description	Required or Optional	Available Version
		<ul style="list-style-type: none"> <li>UnorderedList—Unordered list tag.</li> </ul> Markup segments with a <code>markupType</code> of <code>Code</code> can include only text segments.		
<code>url</code>	<code>String</code>	URL for the <code>Hyperlink</code> segment. Supported hyperlink URLs start with <code>http://</code> or <code>https://</code> .	Required for <code>Hyperlink</code>	45.0

SEE ALSO:

[Post a Rich-Text Feed Element with Inline Image](#)

[ConnectApi.MessageBodyInput](#)

## ConnectApi.MarkupEndSegmentInput

The end tag for rich text markup.

Subclass of [ConnectApi.MessageSegmentInput](#)

Property	Type	Description	Required or Optional	Available Version
<code>markupType</code>	<code>ConnectApi.MarkupType</code>	Type of rich text markup. <ul style="list-style-type: none"> <li><code>Bold</code>—Bold tag.</li> <li><code>Code</code>—Code tag.</li> <li><code>Hyperlink</code>—Hyperlink anchor tag.</li> <li><code>Italic</code>—Italic tag.</li> <li><code>ListItem</code>—List item tag.</li> <li><code>OrderedList</code>—Ordered list tag.</li> <li><code>Paragraph</code>—Paragraph tag.</li> <li><code>Strikethrough</code>—Strikethrough tag.</li> <li><code>Underline</code>—Underline tag.</li> <li><code>UnorderedList</code>—Unordered list tag.</li> </ul>	Required	35.0

SEE ALSO:

[Post a Rich-Text Feed Element with Inline Image](#)

[ConnectApi.MessageBodyInput](#)

## ConnectApi.MentionSegmentInput

Include an @mention of a user or group in a feed post or comment. When creating a feed post or comment, you can include up to 25 mentions.

Subclass of [ConnectApi.MessageSegmentInput](#).

Property	Type	Description	Available Version
<code>id</code>	<a href="#">String</a>	ID of the user or group to mention.  To mention a user, use either <code>id</code> or <code>username</code> . You can't include both.  To mention a group, you must use <code>id</code> .	28.0  Groups are available in 29.0.
<code>username</code>	<a href="#">String</a>	User name of the user to mention.  To mention a user, use either <code>id</code> or <code>username</code> . You can't include both.	38.0

SEE ALSO:

[ConnectApi.MessageBodyInput](#)

## ConnectApi.MessageBodyInput

Add rich messages to feed items and comments.

Property	Type	Description	Available Version
<code>messageSegments</code>	<a href="#">List&lt;ConnectApi.MessageSegmentInput&gt;</a>	List of message segments contained in the body	28.0

SEE ALSO:

[ConnectApi.FeedItemInput](#)

[ConnectApi.CommentInput](#)

[ConnectApi.AnnouncementInput](#)

## ConnectApi.MessageSegmentInput

Used to add rich message segments to feed items and comments.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass for:

- [ConnectApi.EntityLinkSegmentInput](#)
- [ConnectApi.HashtagSegmentInput](#)
- [ConnectApi.InlineImageSegmentInput](#)
- [ConnectApi.LinkSegmentInput](#)

- [ConnectApi.MarkupBeginSegmentInput](#)
- [ConnectApi.MarkupEndSegmentInput](#)
- [ConnectApi.MentionSegmentInput](#)
- [ConnectApi.TextSegmentInput](#)

Use the [ConnectApiHelper repository on GitHub](#) to simplify many of the tasks accomplished with `ConnectApi.MessageSegmentInput`, such as posting with inline images, rich text, and mentions.

Property	Type	Description	Required or Optional	Available Version
<code>type</code>	<a href="#">ConnectApi.MessageSegmentType</a>	The type of message segment. Values are: <ul style="list-style-type: none"> <li>• <code>EntityLink</code></li> <li>• <code>FieldChange</code></li> <li>• <code>FieldChangeName</code></li> <li>• <code>FieldChangeValue</code></li> <li>• <code>Hashtag</code></li> <li>• <code>InlineImage</code></li> <li>• <code>Link</code></li> <li>• <code>MarkupBegin</code></li> <li>• <code>MarkupEnd</code></li> <li>• <code>Mention</code></li> <li>• <code>MoreChanges</code></li> <li>• <code>ResourceLink</code></li> <li>• <code>Text</code></li> </ul>	Required	23.0

## ConnectApi.MultipleEnsureFundsAsyncInputRepresentation

List of Invoices and the associated OrderSummaries.

Property	Type	Description	Required or Optional	Available Version
asyncInputs	<a href="#">List&lt;ConnectApi.InnerEnsureFundsAsyncInputRepresentation&gt;</a>	List of Invoices to ensure funds for and the associated OrderSummaries.	Required	56.0

SEE ALSO:

[multipleEnsureFundsAsync\(multipleEnsureFundsInput\)](#)

## ConnectApi.MultipleFulfillmentOrderInputRepresentation

List of inputs for creating fulfillment orders.

Property	Type	Description	Required or Optional	Available Version
fulfillmentOrders	<a href="#">List&lt;ConnectApi.FulfillmentOrderInputRepresentation&gt;</a>	Each element contains the data to create one fulfillment order.	Required	50.0

## ConnectApi.MultipleFulfillmentOrderInvoicesInputRepresentation

The FulfillmentOrders to create Invoices for.

Property	Type	Description	Required or Optional	Available Version
fulfillmentOrderIds	<a href="#">List&lt;String&gt;</a>	List of IDs of FulfillmentOrders to create Invoices for.	At least one ID is required.	52.0

## ConnectApi.MuteCapabilityInput

Mute or unmute a feed element.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput](#).

Property	Type	Description	Required or Optional	Available Version
isMutedByMe	<a href="#">Boolean</a>	Indicates whether the feed element is muted for the context user. Default value is <code>false</code> .	Required	35.0

SEE ALSO:

[setIsMutedByMe\(communityId, feedElementId, isMutedByMe\)](#)

## ConnectApi.NamedCredentialInput

Input used to create or update a named credential.

Property	Type	Description	Required or Optional	Available Version
calloutOptions	<a href="#">ConnectApi.NamedCredentialCalloutOptionsInput</a>	Callout options.	Required	58.0
calloutUrl	<a href="#">String</a>	URL of the named credential in a callout.	Required	58.0
customHeaders	<a href="#">List&lt;ConnectApi.CredentialCustomHeaderInput&gt;</a>	Custom HTTP headers.	Optional	58.0
developerName	<a href="#">String</a>	Named credential developer name.	Required for creating a named credential Optional for updating a named credential	58.0
externalCredentials	<a href="#">List&lt;ConnectApi.ExternalCredentialInput&gt;</a>	External credentials used by the named credential. In version 58.0 and later only one external credential is supported.	Required	58.0
masterLabel	<a href="#">String</a>	Named credential label.	Required	58.0
networkConnection	<a href="#">ConnectApi.NetworkConnectionInput</a>	PrivateConnect outbound network connection.	Optional depending on type	58.0
parameters	<a href="#">List&lt;ConnectApi.NamedCredentialParameterInput&gt;</a>	Named credential parameters.	Optional	58.0
type	<a href="#">ConnectApi.NamedCredentialType</a>	Type of named credential. Values are: <ul style="list-style-type: none"> <li>• <a href="#">PrivateEndpoint</a></li> <li>• <a href="#">SecuredEndpoint</a></li> </ul>	Required	58.0

## ConnectApi.NamedCredentialCalloutOptionsInput

Named credential callout options input.

Property	Type	Description	Required or Optional	Available Version
allowMergeFieldsInBody	<a href="#">Boolean</a>	Specifies whether to allow merge fields in the HTTP body ( <code>true</code> ) or not ( <code>false</code> ).	Required	58.0

Property	Type	Description	Required or Optional	Available Version
allowMergeFieldsInHeader	Boolean	Specifies whether to allow merge fields in the HTTP header ( <code>true</code> ) or not ( <code>false</code> ).	Required	58.0
generateAuthorizationHeader	Boolean	Specifies whether to generate an authorization header ( <code>true</code> ) or not ( <code>false</code> ).	Required	58.0

SEE ALSO:

[ConnectApi.NamedCredentialInput](#)

## ConnectApi.NamedCredentialParameterInput

Named credential parameter input.

Property	Type	Description	Required or Optional	Available Version
id	String	ID of the parameter.	Optional	58.0
parameterDescription	String	Description of the parameter.	Optional	58.0
parameterName	String	Name of the parameter.	Required	58.0
parameterType	ConnectApi.NamedCredentialParameterType	Type of named credential parameter. Values are: <ul style="list-style-type: none"> <li>AllowedManagedPackageNamespaces</li> <li>ClientCertificate</li> </ul>	Required	58.0
parameterValue	String	Value of the parameter.	Required	58.0

SEE ALSO:

[ConnectApi.NamedCredentialInput](#)

## ConnectApi.NetworkConnectionInput

Network connection input.

Property	Type	Description	Required or Optional	Available Version
developerName	String	Developer name of the network connection.	Required	58.0

Property	Type	Description	Required or Optional	Available Version
namespace	<a href="#">String</a>	Namespace of the network connection.	Optional	58.0

SEE ALSO:

[ConnectApi.NamedCredentialInput](#)

## ConnectApi.NBAStrategyInput

A recommendation strategy.

Property	Type	Description	Required or Optional	Available Version
contextRecordId	<a href="#">String</a>	ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.	Optional	45.0
maxResults	<a href="#">Integer</a>	Maximum number of results. Valid values are from 1 to 25. The default is 3.	Optional	45.0
strategyContext	<a href="#">Map&lt;String, String&gt;</a>	Variable and value mappings for the strategy.	Optional	45.0
debugTrace	<a href="#">Boolean</a>	Specifies whether to return trace and debug information in the response ( <a href="#">true</a> ) or not ( <a href="#">false</a> ). If unspecified, the default is <a href="#">false</a> .	Optional	45.0

## ConnectApi.NewUserAudienceCriteriaInput

Criteria for the new members type of custom recommendation audience.

Subclass of [ConnectApi.AudienceCriteriaInput](#).

Property	Type	Description	Required or Optional	Available Version
value	<a href="#">Double</a>	The maximum number of days since a user became a site member. For example, if you specify <i>30</i> , anyone who became a site member in the last 30 days is included in the new members audience.	Required	36.0

## ConnectApi.OAuthCredentialAuthUrlInput

OAuth authentication flow.

Property	Type	Description	Required or Optional	Available Version
externalCredential	String	Fully qualified developer name of the external credential.	Required	56.0
principalName	String	Name of the external credential named principal.	Required if principalType is NamedPrincipal	56.0
principalType	ConnectApi.CredentialPrincipalType	Type of credential principal. Values are: <ul style="list-style-type: none"> <li>AwsStsPrincipal</li> <li>NamedPrincipal</li> <li>PerUserPrincipal</li> </ul>	Required	56.0
returnUrl	String	Return URL to apply to the authentication URL.	Optional	56.0

## ConnectApi.OciCreateReservationInputRepresentation

Data to reserve inventory at one or more Omnichannel Inventory locations or location groups.

Property	Type	Description	Required or Optional	Available Version
actionRequestId	String	A UUID that identifies the request. Use the action request IDs in response data to identify which requests succeeded or failed.	Required	51.0
allowPartialReservations	Boolean	When true, if the system can't create the entire reservation, then it attempts to create a partial reservation.	Optional	51.0
createRecords	List<ConnectApi.OciCreateReservationSingleInputRepresentation>	A list of product quantities and locations or location groups. The list can include up to 100 elements.	At least one element is required	51.0
expirationSeconds	Integer	A length of time in seconds. If the reservation isn't fulfilled within this amount of time after the reservationTime, then it expires. The maximum value is 14400.	Optional	51.0
externalRefId	String	External reference ID.	Optional	51.0
reservationTime	String	The time at which to record the reservation. Example: 2020-07-24T21:13:00Z	Optional	51.0

## ConnectApi.OCICreateReservationSingleInputRepresentation

A quantity of a product and an Omnichannel Inventory location or location group at which to reserve it.

Property	Type	Description	Required or Optional	Available Version
<del>locationGroupIdentifier</del>	String	Identifier of the location group at which to reserve inventory.	Either locationGroupIdentifier or locationIdentifier is required, but not both	51.0
locationIdentifier	String	Identifier of the location at which to reserve inventory.	Either locationGroupIdentifier or locationIdentifier is required, but not both	51.0
quantity	Double	The quantity of the product to reserve.	Required	51.0
stockKeepingUnit	String	The SKU of the product to reserve.	Required	51.0

## ConnectApi.OCIFulfillReservationInputRepresentation

A list of inventory reservations to fulfill.

Property	Type	Description	Required or Optional	Available Version
fulfillmentRecords	List< <a href="#">ConnectApi.OCIFulfillReservationSingleInputRepresentation</a> >	A list of inventory reservations. The list can include up to 100 elements.	At least one element is required.	51.0
reservationId	String	The ID of the inventory reservation.	Optional	58.0

## ConnectApi.OCIFulfillReservationSingleInputRepresentation

An inventory reservation to fulfill.

Property	Type	Description	Required or Optional	Available Version
actionRequestId	String	A UUID that identifies the request. Use the action request IDs in response data to identify which requests succeeded or failed.	Required	51.0
externalRefId	String	The external reference ID of the location that's fulfilling the reservation.	Optional	51.0

Property	Type	Description	Required or Optional	Available Version
locationIdentifier	String	The identifier of the location that's fulfilling the reservation.	Required	51.0
quantity	Double	The quantity being fulfilled.	Required	51.0
reservationId	String	The ID of the inventory reservation.	Optional	58.0
stockKeepingUnit	String	The SKU of the product being fulfilled.	Required	51.0

## ConnectApi.OCIGetInventoryAvailabilityInputRepresentation

Details of a request to retrieve inventory availability.

Property	Type	Description	Required or Optional	Available Version
locationGroup Identifier	String	The External Reference of a location group to retrieve inventory availability data for. Specifying this value retrieves inventory data for all locations belonging to this group.	Optional; can't combine with <code>locationIdentifiers</code> or <code>locationIdentifiers</code>	51.0
locationGroup Identifiers	List<String>	A list of up to 100 External References of location groups to retrieve inventory availability data for.	Optional; can't combine with <code>locationGroupIdentifier</code> or <code>locationIdentifiers</code>	51.0
locationIdentifiers	List<String>	A list of up to 100 External References of locations to retrieve inventory availability data for.	Optional; can't combine with <code>locationGroupIdentifier</code> or <code>locationGroupIdentifiers</code>	51.0
stockKeepingUnit	String	The SKU of a product to retrieve inventory availability data for. Specifying a SKU with no locations or location groups returns availability data for that SKU at all inventory locations that aren't assigned to location groups.	Optional; can't combine with <code>stockKeepingUnits</code>	51.0
stockKeepingUnits	List<String>	A list of up to 100 SKUs of products to retrieve inventory availability data for.	Optional; can't combine with <code>stockKeepingUnit</code>	51.0
useCache	Boolean	Whether to fetch the inventory data from the cache. The default value is True..	Optional	51.0

## ConnectApi.OCIReleaseReservationInputRepresentation

Details of one or more inventory reservations to release.

Property	Type	Description	Required or Optional	Available Version
releaseRecords	List<ConnectApi.OCIReleaseReservationSingleInputRepresentation>	List of inventory reservations to release. The list can include up to 100 elements.	At least one element is required.	51.0
reservationId	String	The ID of the inventory reservation.	Optional	58.0

## ConnectApi.OCIReleaseReservationSingleInputRepresentation

A single inventory reservation to release.

Property	Type	Description	Required or Optional	Available Version
actionRequestId	String	A UUID that identifies the request. Use the action request IDs in response data to identify which requests succeeded or failed.	Required	51.0
externalRefId	String	The external reference ID of the location or location group that has the reservation.	Optional	51.0
locationGroupIdentifier	String	The identifier of the location group that has the reservation.	The identifier for a location or location group, but not both, is required.	51.0
locationIdentifier	String	The identifier of the location that has the reservation.	The identifier for a location or location group, but not both, is required.	51.0
quantity	Double	The quantity of reserved inventory to release.	Required	51.0
reservationId	String	The ID of the inventory reservation.	Optional	58.0
stockKeepingUnit	String	The SKU of the product to release.	Required	51.0

## ConnectApi.OCITransferReservationInputRepresentation

A list of inventory reservation transfers and specifies whether a single failure cancels the entire list.

Property	Type	Description	Required or Optional	Available Version
allOrNothingTransferId	String	Controls whether a single failed transfer cancels all other transfers in the <code>transferRecords</code> list. <ul style="list-style-type: none"> <li>To allow some transfers in the <code>transferRecords</code> list to succeed when others fail, don't include this property.</li> <li>To cancel all the transfers in the <code>transferRecords</code> list when any of them fail, set this property to a UUID. The ID must be unique, but isn't otherwise used in this version.</li> </ul>	Optional	51.0
reservationId	String	The ID of the inventory reservation.	Optional	58.0
transferRecords	List<ConnectApi.OCTransferReservationSingleInputRepresentation>	A list of inventory reservation transfers. The list can include up to 100 elements.	At least one element is required.	51.0

## ConnectApi.OCTransferReservationSingleInputRepresentation

An inventory reservation transfer.

Property	Type	Description	Required or Optional	Available Version
actionRequestId	String	A UUID that identifies the request. Use the action request IDs in response data to identify which requests succeeded or failed.	Required	51.0
externalRefId	String	The external reference ID of the location receiving the transfer.	Optional	51.0
<del>fromLocationIdentifier</del>	String	The identifier of the location group sending the reservation.	The identifier for a sending location or location group, but not both, is required	51.0
<del>fromLocationIdentifier</del>	String	The identifier of the location sending the reservation.	The identifier for a sending location or location group, but not both, is required	51.0
ignoreAvailabilityCheck	Boolean	If true, force the transfer even if the receiving location doesn't have sufficient available inventory. The default value is false.	Optional	52.0

Property	Type	Description	Required or Optional	Available Version
quantity	Double	The quantity of inventory being transferred.	Required	51.0
reservationId	String	The ID of the inventory reservation.	Optional	58.0
stockKeepingUnit	String	The SKU of the product being transferred.	Required	51.0
<del>toLocationGroupIdentifier</del>	String	The identifier of the location group receiving the reservation.	The identifier for a receiving location or location group, but not both, is required	51.0
toLocationIdentifier	String	The identifier of the location receiving the reservation.	The identifier for a receiving location or location group, but not both, is required	51.0

## ConnectApi.OCIUpdateReservationInputRepresentation

Data to update one or more Omnichannel Inventory item reservations.

Property	Type	Description	Required or Optional	Available Version
actionRequestId	String	Unique and idempotent action request ID. Use in response data to identify which requests succeeded or failed.	Required	61.0
<del>allowPartialReservations</del>	Boolean	When true, if the system can't update the entire reservation, then it attempts to update a partial reservation.	Optional	61.0
externalRefId	String	External reference ID.	Optional	61.0
reservationId	String	The ID of the inventory reservation.	Optional	61.0
reservationTime	String	The time the reservation was updated. Example: 2020-07-24T21:13:00Z.	Optional	61.0
<del>updateAllOtherRecords</del>	List	Controls whether a single failed request updates all other requests in the list (true) or whether some requests can succeed if others fail (false). The default value is false.	Optional	61.0
updateRecords	List <a href="#">ConnectApi.UpdateReservationItem</a> on page 1871 []	A list of product quantities and locations or location groups. The list can have up to 100 elements.	At least one element is required	61.0

## ConnectApi.OCIUpdateReservationSingleInputRepresentation

Data to update one Omnichannel Inventory reservation item.

Property	Type	Description	Required or Optional	Available Version
<code>locationGroupIdentifier</code>	String	Identifier of the location group where the inventory is reserved.	Either <code>locationGroupIdentifier</code> or <code>locationIdentifier</code> are required, but not both	61.0
<code>locationIdentifier</code>	String	Identifier of the location where the inventory is reserved.	Either <code>locationGroupIdentifier</code> or <code>locationIdentifier</code> are required, but not both	61.0
<code>quantity</code>	Double	The quantity of the product to update.	Required	61.0
<code>stockKeepingUnit</code>	String	The SKU of the product to update.	Required	61.0

## ConnectApi.OrderItemSummaryInputRepresentation

An OrderItemSummary and quantity.

Property	Type	Description	Required or Optional	Available Version
<code>orderItemSummaryId</code>	String	ID of the OrderItemSummary.	Required	48.0
<code>quantity</code>	Double	Quantity to include.	Required	48.0

SEE ALSO:

- [ConnectApi.FulfillmentGroupInputRepresentation](#)
- [ConnectApi.FulfillmentOrderInputRepresentation](#)
- [createFulfillmentOrders\(fulfillmentOrderInput\)](#)

## ConnectApi.OrderItemSummaryAdjustmentInput

Order item summary.

Property	Type	Description	Required or Optional	Available Version
<code>orderItemSummaryId</code>	String	ID of the order item summary.	Required	53.0

SEE ALSO:

- [ConnectApi.OrderItemSummaryAdjustmentCollectionInput](#)

## ConnectApi.OrderItemSummaryAdjustmentCollectionInput

Collection of order item summaries.

Property	Type	Description	Required or Optional	Available Version
orderItem Summaries	List<ConnectApi.OrderItemSummaryAdjustmentInput>	List of order item summaries.	Required	53.0

## ConnectApi.OrderSummaryInputRepresentation

An order from which to create an OrderSummary. Optionally, you can specify OrderSummary-specific information such as its Status and whether it is managed in Salesforce Order Management.

Property	Type	Description	Required or Optional	Available Version
businessModel	String	The order's business model. It can have one of these values: <ul style="list-style-type: none"> <li>B2B</li> <li>B2C</li> </ul>	Optional	53.0
externalReference Identifier	String	Used internally to prevent duplicate records. This value is case-sensitive.	Optional	56.0
name	String	Specifies an OrderNumber to assign to the order summary.	Optional	50.0
orderId	String	ID of the original order.	Required	48.0
orderLifecycleType	String	Specifies whether the order is managed in Salesforce Order Management or by an external system. It can have one of these values: <ul style="list-style-type: none"> <li>MANAGED—Managed in Salesforce Order Management.</li> <li>UNMANAGED—Managed by an external system.</li> </ul> If no value is specified, the default is MANAGED.	Optional	49.0
sourceProcess	String	Describes the order process creating the OrderSummary. It can have one of these values: <ul style="list-style-type: none"> <li>OrderOnBehalf—An Order on Behalf Of process.</li> </ul>	Optional	57.0

Property	Type	Description	Required or Optional	Available Version
		<ul style="list-style-type: none"> <li>Standard—Any process other than Order on Behalf Of.</li> </ul> If no value is specified, the default is Standard.		
status	String	Specifies a status to assign to the order summary. The value must match one of the picklist values on the Status field of the OrderSummary object.	Optional	50.0

SEE ALSO:

[createOrderSummary\(orderSummaryInput\)](#)

## ConnectApi.OrderSummaryAdjustmentAggregatesAsyncInput

Order summary IDs for calculating adjustment aggregates.

Property	Type	Description	Required or Optional	Available Version
orderSummaryIds	List< String>	List of order summary IDs.	Required	55.0

## ConnectApi.OrderSummaryLookupInput

Order summary lookup input.

Property	Type	Description	Required or Optional	Available Version
orderSummaryIdOrRefNumber	String	Either the order summary ID or reference number value.	Required	58.0
verification	<a href="#">ConnectApi.OrderSummaryVerificationInput</a>	Verification attributes for guest shoppers.	Optional	58.0

## ConnectApi.OrderSummaryVerificationInput

Order summary verification input.

Property	Type	Description	Required or Optional	Available Version
email	String	Guest shopper or registered buyer's email address.	Optional	58.0
lastName	String	Guest shopper or registered buyer's last name.	Optional	58.0
phoneNumber	String	Guest shopper or registered buyer's phone number.	Optional	58.0

## ConnectApi.OrderToCartInput

Input for action adding an order to a cart.

Property	Type	Description	Required or Optional	Available Version
cartStateOrId	String	Cart state ( <code>active</code> or <code>current</code> ) or the ID of the cart to which the products from an order are to be copied.	Required	57.0

## ConnectApi.PaymentGroupRequest

Payment group input consumed by a payment group service.

Property	Type	Description	Required or Optional	Available Version
createPaymentGroup	Boolean	Specifies whether Salesforce needs to create a payment group ( <code>true</code> ) or not ( <code>false</code> ).	Optional	50.0
currencyIsoCode	String	Three-letter ISO 4217 currency code associated with the payment group record.	Optional	50.0
id	String	ID of the payment group record.	Optional	50.0
sourceObjectId	String	Source object ID of the payment group record. Supports only OrderId.	Optional	50.0

## ConnectApi.PaymentInfoInputRepresentation

Payment information about additional funds required for an order.

Property	Type	Description	Required or Optional	Available Version
lastPaymentGatewayLogId	String	Last payment gateway log ID for the new order payment summary.	Optional	60.0

Property	Type	Description	Required or Optional	Available Version
name	<a href="#">String</a>	Overrides the default name of the order payment summary created.	Optional	60.0
paymentAuthorizationId	<a href="#">String</a>	Payment authorization ID to be used if needed to fund the exchange order.	Optional	60.0
paymentIds	<a href="#">List&lt;String&gt;</a>	Payment IDs for the new order payment summary.	Optional	60.0
paymentMethodId	<a href="#">String</a>	Payment method ID for the new order payment summary.	Optional	60.0

## ConnectApi.PaymentMethodTokenizationRequest

Payment method tokenization input consumed by the payment tokenization service.

Subclass of [ConnectApi.BaseRequest](#).

Property	Type	Description	Required or Optional	Available Version
address	<a href="#">ConnectApi.AddressRequest</a>	Address of the payment method.	Required	52.0
cardPaymentMethod	<a href="#">ConnectApi.CardPaymentRequest</a>	Object representation of the card payment method.	Required	52.0
paymentGatewayId	<a href="#">String</a>	ID of the card payment method's payment gateway.	Required	52.0

## ConnectApi.PhotoInput

Specify how to crop a photo that has already been uploaded.

Property	Type	Description	Available version
cropSize	<a href="#">Integer</a>	The length, in pixels, of any edge of the crop square.	29.0
cropX	<a href="#">Integer</a>	The position X, in pixels, from the left edge of the image to the start of the crop square. Top left is position (0,0).	29.0
cropY	<a href="#">Integer</a>	The position Y, in pixels, from the top edge of the image to the start of the crop square. Top left is position (0,0).	29.0
fileId	<a href="#">String</a>	18 character ID of an existing file. The key prefix must be 069 and the file must be an image and be smaller than 2 GB.	25.0

 **Note:** Images uploaded on the Group page and on the User page don't have file IDs and therefore can't be used.

Property	Type	Description	Available version
<code>versionNumber</code>	<a href="#">Integer</a>	Version number of the existing content. If not provided, the latest version is used.	25.0

SEE ALSO:

## ConnectApi.PinCapabilityInput

Pin or unpin a feed element to a feed.

Property	Type	Description	Required or Optional	Available Version
<code>entityId</code>	<a href="#">String</a>	ID of the entity to pin or unpin. In version 41.0 and later, <code>entityId</code> must be a feed item ID. In version 41.0–42.0, only one feed item can be pinned per feed. In version 43.0 and later, three feed items can be pinned per feed.	Required	41.0
<code>isPinned</code>	<a href="#">Boolean</a>	Specifies whether to pin ( <a href="#">true</a> ) or unpin ( <a href="#">false</a> ) the entity.	Required	41.0

## ConnectApi.PollCapabilityInput

Create, update, or vote on a poll on a feed element.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput](#).

Property	Type	Description	Required or Optional	Available Version
<code>choices</code>	<a href="#">List&lt;String&gt;</a>	The choices used to create a new poll. You must specify 2–10 poll choices for each poll.	Required for creating a poll	32.0
<code>myChoiceId</code>	<a href="#">String</a>	ID of an existing choice on the feed poll. Used to vote on an existing poll.	Required for voting on a poll	32.0

SEE ALSO:

- [ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.PostAuthRequest

Payment post authorization input consumed by the payment post authorization service.

Subclass of [ConnectApi.BaseRequest](#).

Property	Type	Description	Required or Optional	Available Version
accountId	<a href="#">String</a>	ID of the account of the customer for the authorized payment.	Required	54.0
amount	<a href="#">Double</a>	Amount of the post authorization.	Required	54.0
comments	<a href="#">String</a>	Comments for payment post authorization. Maximum of 1000 characters.	Optional	54.0
currencyIsoCode	<a href="#">String</a>	Three-letter ISO 4217 currency code associated with the payment group record.	Optional	54.0
effectiveDate	<a href="#">Datetime</a>	Date that the payment post authorization occurs.	Required	54.0
paymentGatewayId	<a href="#">String</a>	Payment gateway that evaluates the post authorization.	Required	54.0
paymentGroup	<a href="#">ConnectApi.PaymentGroupRequest</a>	Payment group associated with or to be created for the request. Request must contain either a paymentGroupId or paymentGroup, but not both.	Optional	54.0
paymentMethod	<a href="#">ConnectApi.PostAuthApiPaymentMethodRequest</a>	Payment method sent for the post authorization.	Required.	54.0

## ConnectApi.PostAuthApiPaymentMethodRequest

Payment method input for post authorization.

Subclass of [ConnectApi.BaseApiPaymentMethodRequest](#).

Property	Type	Description	Required or Optional	Available Version
alternativePaymentMethod	<a href="#">ConnectApi.AlternativePaymentMethod</a>	Alternative payment method.	Required	54.0
cardPaymentMethod	<a href="#">ConnectApi.CardPaymentMethodRequest</a>	Card payment method.	Required	54.0

## ConnectApi.PreviewCartToExchangeOrderInputRepresentation

Information required to preview a cart to exchange order.

Property	Type	Description	Required or Optional	Available Version
exchangeCartId	<a href="#">String</a>	ID of the cart used for adding items to the exchange order.	Required	60.0
orderSummaryId	<a href="#">String</a>	Order summary ID.	Required	60.0
referenceId	<a href="#">String</a>	Return order ID.	Required	60.0
reservationType	<a href="#">String</a>	The type of the reservation.	Optional	61.0

## ConnectApi.PricingInput

Pricing for multiple products.

Property	Type	Description	Required or Optional	Available Version
pricingLineItems	<a href="#">List&lt;ConnectApi.PricingLineItemInput&gt;</a>	Up to 500 line items for pricing.	Required	49.0

## ConnectApi.PricingLineItemInput

Pricing line item.

Property	Type	Description	Required or Optional	Available Version
productId	<a href="#">String</a>	ID of the product to price.	Required	49.0

SEE ALSO:

[ConnectApi.PricingInput](#)

## ConnectApi.ProductSearchGroupingInput

Grouping information for product search results.

Property	Type	Description	Required or Optional	Available Version
groupingOption	<a href="#">ConnectApi.CommerceSearchGroupingOption</a>	Grouping option for search results. Values are: <ul style="list-style-type: none"> <li>NoGrouping—Search results aren't grouped.</li> </ul>	Required	52.0

Property	Type	Description	Required or Optional	Available Version
		<ul style="list-style-type: none"> <li><code>VariationParent</code>—Search results are grouped by the variation parent.</li> </ul>		
<code>topProductType</code>	<a href="#">ConnectApi.CommerceSearch.TopProductType</a>	<p>Type of the top product to return for each product group in search results. Value is:</p> <ul style="list-style-type: none"> <li><code>VariationParent</code></li> </ul> <p>If <code>NoGrouping</code> is specified for <code>groupingOption</code>, <code>topProductType</code> is ignored.</p>	Optional	52.0

## ConnectApi.ProductSearchInput

Product search.

Property	Type	Description	Required or Optional	Available Version
<code>categoryId</code>	<a href="#">String</a>	Category ID returns results for products in this category or its subcategories. If you omit <code>categoryId</code> from the request, all categories are searched. If you specify <code>categoryId</code> and <code>searchTerm</code> , only products in the specified category are searched.	Required if <code>searchTerm</code> isn't specified	52.0
<code>fields</code>	<a href="#">List&lt;String&gt;</a>	Product fields to return in search results. Search results include fields you have access to. If unspecified, returns the <code>Name</code> , <code>Description</code> , <code>StockKeepingUnit</code> , <code>ProductCode</code> , and <code>Family</code> fields.	Optional	52.0
<code>grouping</code>	<a href="#">ConnectApi.ProductSearch.GroupingInput</a>	Specifies whether to group products in search results and how to group them. If unspecified, the default is the value specified in <b>Search &gt; Results Display Settings &gt; Results Grouping</b> .	Optional	52.0
<code>includePrices</code>	<a href="#">Boolean</a>	Specifies whether to include prices for products in search results ( <code>true</code> ) or not ( <code>false</code> ). If unspecified, defaults to <code>false</code> .	Optional	52.0
<code>includeQuantity Rule</code>	<a href="#">Boolean</a>	Specifies whether to include purchase quantity rule information for products in search results ( <code>true</code> ) or not ( <code>false</code> ). If unspecified, defaults to <code>false</code> .	Optional	52.0

Property	Type	Description	Required or Optional	Available Version
page	<a href="#">Integer</a>	Number of the page you want returned. Starts at 0. If you pass in <code>null</code> or 0, the first page is returned.	Optional	52.0
pageSize	<a href="#">Integer</a>	Specifies the number of items per page. Valid values are from 1 through 200. If unspecified, the default is the value specified in Results per Page in <b>Search &gt; Results Display Settings</b> .	Optional	52.0
refinements	<a href="#">List&lt;ConnectApi.RefinementInput&gt;</a>	List up to nine refinements (facets) for search results. Buyers or shoppers can select up to 20 values for each refinement.	Optional	52.0
searchTerm	<a href="#">String</a>	List of up to 32 space-separated search terms.	Required if <code>categoryId</code> isn't specified	52.0
sortRuleId	<a href="#">String</a>	ID of the sort rule that specifies the order of products in the search results.	Optional	52.0

## ConnectApi.ProductVariationInputRepresentation

Variation product input.

Property	Type	Description	Required or Optional	Available Version
variationAttributes	<a href="#">Map&lt;String,String&gt;</a>	Mapping of variation attributes (API name and value) associated with the product.	Required	62.0

## ConnectApi.PromotionCartInput

Cart during promotion evaluation.

Property	Type	Description	Required or Optional	Available Version
cartItems	<a href="#">List&lt;ConnectApi.PromotionCartItemInput&gt;</a>	A collection of items in the cart.	Required	57.0
currencyIsoCode	<a href="#">String</a>	Three-letter ISO 4217 currency code associated with the cart.	Required for multi-currency orgs	57.0

Property	Type	Description	Required or Optional	Available Version
id	<a href="#">String</a>	ID of the cart.	Optional	57.0

SEE ALSO:

[ConnectApi.PromotionEvaluateInput](#)  
[evaluate\(salesTransaction\)](#)

## ConnectApi.PromotionCartDeliveryGroupInput

IDs of the cart delivery group and its delivery method.

Property	Type	Description	Required or Optional	Available Version
cartDelivery GroupId	<a href="#">String</a>	ID of the cart delivery group.	Required	57.0
deliveryMethodId	<a href="#">String</a>	ID of the order delivery method.	Required	57.0

SEE ALSO:

[ConnectApi.PromotionEvaluateInput](#)  
[evaluate\(salesTransaction\)](#)

## ConnectApi.PromotionCartItemInput

Item in a cart during promotion evaluation.

Property	Type	Description	Required or Optional	Available Version
cartDelivery GroupId	<a href="#">String</a>	ID of the cart delivery group.	Required when evaluating shipping promotions	57.0
cartId	<a href="#">String</a>	ID of the cart.	Optional	57.0
id	<a href="#">String</a>	ID of the cart item. Must be unique across all items in the cart.	Required	57.0
itemDescription	<a href="#">String</a>	Description of the cart item.	Optional	57.0
itemName	<a href="#">String</a>	Name of the cart item.	Optional	57.0
listPrice	<a href="#">String</a>	List price of the cart item.	Optional	57.0
product2Id	<a href="#">String</a>	Product ID of the cart item.	Required if sku isn't specified	57.0

Property	Type	Description	Required or Optional	Available Version
quantity	<a href="#">String</a>	Number of items in the cart.	Required	57.0
salesPrice	<a href="#">String</a>	Sales price of the cart item. This is the price per quantity and the value used to compute the discount. If <code>salesPrice</code> and <code>totalLineBaseAmount</code> are specified, <code>totalLineBaseAmount</code> is used.	Required if <code>totalLineBaseAmount</code> isn't specified	57.0
sku	<a href="#">String</a>	Stock keeping unit (SKU) of the cart item.	Required if <code>product2Id</code> isn't specified	57.0
totalLineBaseAmount	<a href="#">String</a>	Total amount for the cart item, equal to sales price multiplied by quantity. This value is used to compute the discount. If <code>salesPrice</code> and <code>totalLineBaseAmount</code> are specified, <code>totalLineBaseAmount</code> is used.	Required if <code>salesPrice</code> isn't specified	57.0
totalListBaseAmount	<a href="#">String</a>	Total amount for the cart item based on list price and quantity.	Optional	57.0
type	<a href="#">ConnectApi.CartItemType</a>	Type of item in a cart. Values are: <ul style="list-style-type: none"> <li>• <code>DeliveryCharge</code></li> <li>• <code>Product</code></li> </ul>	Required when evaluating shipping promotions	57.0

## SEE ALSO:

[ConnectApi.PromotionCartInput](#)

[ConnectApi.PromotionEvaluateInput](#)

`evaluate(salesTransaction)`

## ConnectApi.PromotionEvaluateInput

Find promotions that the customer is eligible for and compute their discounts.

Property	Type	Description	Required or Optional	Available Version
cart	<a href="#">ConnectApi.PromotionCartInput</a>	Cart and its items.	Required	57.0
cartDeliveryGroups	<a href="#">ConnectApi.PromotionDeliveryGroups</a>	List of cart delivery groups associated with the items in the cart. Available if shipping promotions are enabled.	Required when evaluating shipping promotions	57.0

Property	Type	Description	Required or Optional	Available Version
couponCodes	List<String>	List of coupon codes to enable promotions. A customer can apply a maximum of two coupons per cart.	Optional	57.0
effectiveAccountId	String	ID of the account for which the request is made.	Required if segments isn't specified	57.0
isItemizeHeaderAdjustments	Boolean	Specifies whether order-level adjustments are itemized ( <code>true</code> ) or not ( <code>false</code> ). If unspecified, the default value is <code>false</code> .	Optional	57.0
parentProducts	Map<String, String>	Map of the parent product ID to its variation product IDs.	Optional	57.0
productCategories	Map<String, String>	Map of product IDs to their associated category IDs.	Optional	57.0
segments	List<String>	All promotions associated with promotion segments specified in this list are active and can be evaluated against the cart. Additionally, any segments associated with a store or buyer group are also still evaluated against the cart. If this field is not present, only the promotions associated with a store or buyer group are evaluated.	Optional	57.0
webStoreId	String	ID of the store for which the request is made. If unspecified, defined segments must be used instead.	Optional	57.0

SEE ALSO:

[evaluate\(salesTransaction\)](#)

## ConnectApi.PromotionParentProductsInput

IDs of a parent product and variation product.

Property	Type	Description	Required or Optional	Available Version
childProductId	String	ID of the variation product.	Required	57.0

Property	Type	Description	Required or Optional	Available Version
parentProductId	<a href="#">String</a>	ID of the parent product.	Required	57.0

SEE ALSO:

[ConnectApi.PromotionEvaluateInput](#)  
[evaluate\(salesTransaction\)](#)

## ConnectApi.PromotionProductCategoriesInput

IDs of a product and associated category.

Property	Type	Description	Required or Optional	Available Version
categoryId	<a href="#">String</a>	ID of the category.	Required	57.0
productId	<a href="#">String</a>	ID of the product.	Required	57.0

SEE ALSO:

[ConnectApi.PromotionEvaluateInput](#)  
[evaluate\(salesTransaction\)](#)

## ConnectApi.QuantityWithSkulInputRepresentation

A quantity of a product.

Property	Type	Description	Required or Optional	Available Version
quantity	<a href="#">Double</a>	Quantity of the product.	Required	51.0
stockKeepingUnit	<a href="#">String</a>	SKU of the product.	Required	51.0

## ConnectApi.QuestionAndAnswersCapabilityInput

Create or edit a question feed element or set the best answer of the existing question feed element.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput](#).

Property	Type	Description	Required or Optional	Available Version
bestAnswerId	<a href="#">String</a>	A comment ID to use as a best answer for a question feed element. The best answer comment must already exist on the question feed element.	Required to update a feed element.  Not supported when posting a feed element.	32.0
questionTitle	<a href="#">String</a>	Title for a question feed element.  To edit the title of a question, use <a href="#">updateFeedElement (communityId, feedElementId, feedElement)</a> . Editing question titles is supported in version 34.0 and later.	Required to post a feed element.  Not supported when updating a feed element.	32.0

SEE ALSO:

[Edit a Question Title and Post](#)

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.RankAverageDistanceInputRepresentation

An order recipient's geographic location and information about sets of inventory locations that can fulfill the order.

Property	Type	Description	Required or Optional	Available Version
deliveryCountryCode	<a href="#">String</a>	The country code of the order recipient.	Required	51.0
deliveryPostalCode	<a href="#">String</a>	The postal code of the order recipient.	Required	51.0
distanceUnit	<a href="#">String</a>	Specify <i>mi</i> or <i>km</i> to return average distances in miles or kilometers, respectively.		51.0
sortResult	<a href="#">String</a>	Specify <i>ASC</i> or <i>DESC</i> to rank the results by average shipping distance in ascending or descending order, respectively.		51.0
targetLocations	<a href="#">List&lt;ConnectApi.TargetLocationInputRepresentation&gt;</a>	Each element is a set of inventory locations that can combine to fulfill the order.	At least one element is required	51.0

## ConnectApi.ReadByCapabilityInput

Mark feed elements as read by the context user.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput](#).

Property	Type	Description	Required or Optional	Available Version
<code>isReadByMe</code>	<a href="#">Boolean</a>	Specifies to mark the feed element as read ( <code>true</code> ) for the context user.	Required	40.0
<code>lastReadDateByMe</code>	<a href="#">Datetime</a>	Specifies the last date, in ISO 8601 format, when the feed element is marked as read for the context user. If you don't specify a date or you specify a future date, the current system date is used.	Optional	40.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.SequenceOrderPaymentSummaryInputRepresentation

Amount to apply to specified OrderPaymentSummary as part of a payment or refund.

Property	Type	Description	Required or Optional	Available Version
<code>amount</code>	<a href="#">Double</a>	Amount to apply to the OrderPaymentSummary.	Optional	56.0
<code>orderPaymentSummaryId</code>	<a href="#">String</a>	ID of the OrderPaymentSummary to apply the Amount to.	Required	56.0

SEE ALSO:

[ensureRefundsAsync\(orderSummaryId, ensureRefundsInput\)](#)

[ConnectApi.EnsureRefundsAsyncInputRepresentation](#)

## ConnectApi.sharedOrderPaymentSummarySequenceInputRepresentation

Shared order payment summary sequence.

Property	Type	Description	Required or Optional	Available Version
<code>orderPaymentSummaryId</code>	<a href="#">String</a>	Shared order payment summary ID.	Required	60.0
<code>reservedBalanceAmount</code>	<a href="#">Double</a>	Balance amount to be reserved.	Required	60.0

## ConnectApi.SubmitCartToExchangeOrderInputRepresentation

Information required for a submit cart to exchange order action.

Property	Type	Description	Required or Optional	Available Version
exchangeCartId	<a href="#">String</a>	ID of the cart used for adding items to the exchange order.	Required	60.0
orderNumber	<a href="#">String</a>	Order number.	Optional	60.0
orderSummaryId	<a href="#">String</a>	Order summary ID.	Required	60.0
paymentInfoList	<a href="#">List of Payment Information on page 1875</a>	List of payment information when additional funds are needed for the newly created exchange order.	Optional	60.0
referenceId	<a href="#">String</a>	Return order ID.	Optional	60.0
reservationType	<a href="#">String</a>	The reservation that's created by the submit API. The possible values are Full, which means there's a reservation against the exchange cart, or None if there's no reservation.	Optional	61.0
sequences	<a href="#">List of Sequences on page 1887</a>	Ordered list of order payment summaries and reserved balance amounts to apply them to.	Optional	60.0

## ConnectApi.RecipientEngagementContextInput

Context based on which the survey invitation is sent to a participant.

Property	Type	Description	Required or Optional	Available Version
recipientEngagementContext	<a href="#">Map&lt;String, String&gt;</a>	Map each recipient with the context based on which the survey invitation is emailed.	Required	50.0
recipientId	<a href="#">String</a>	Participant ID with whom the engagement context should be associated.	Required	50.0

SEE ALSO:

[ConnectApi.SurveyInvitationEmailInput](#)

## ConnectApi.RecommendationAudienceInput

A custom recommendation audience.

Property	Type	Description	Required or Optional	Available Version
criteria	<a href="#">ConnectApiAudienceCriteriaInput</a>	The criteria for the custom recommendation audience type.	Optional  If not specified when creating a recommendation audience, the audience criteria type defaults to custom list.	36.0
memberOperationType	<a href="#">ConnectApi.RecommendationAudienceMemberOperationType</a>	<p> <b>Important:</b> This property is available only in version 35.0. In version 36.0 and later, use <a href="#">ConnectApi.CustomListAudienceCriteriaInput</a>.</p> <p>The operation to carry out on the audience members.</p> <ul style="list-style-type: none"> <li>• <b>Add</b>—Adds specified members to the audience.</li> <li>• <b>Remove</b>—Removes specified members from the audience.</li> </ul>	Required to update a recommendation audience  Don't use or specify <code>null</code> to create a recommendation audience	35.0 only
members	<a href="#">List&lt;String&gt;</a>	<p> <b>Important:</b> This property is available only in version 35.0. In version 36.0 and later, use <a href="#">ConnectApi.CustomListAudienceCriteriaInput</a>.</p> <p>A collection of user IDs.</p> <p>When updating an audience, you can include up to 100 members. An audience can have up to 100,000 members, and each Experience Cloud site can have up to 100 audiences.</p>	Required to update a recommendation audience  Don't use or specify <code>null</code> to create a recommendation audience	35.0 only
name	<a href="#">String</a>	The unique name of the custom recommendation audience.	Optional to update a recommendation audience  Required to create a recommendation audience	35.0

## SEE ALSO:

[createRecommendationAudience\(communityId, recommendationAudience\)](#)

## ConnectApi.RecommendationDefinitionInput

A custom recommendation definition.

Property	Type	Description	Required or Optional	Available Version
<code>actionUrl</code>	<a href="#">String</a>	URL for acting on the custom recommendation, for example, the URL to join a group.	Required to create a recommendation definition  Optional to update a recommendation definition	35.0
<code>actionUrlName</code>	<a href="#">String</a>	Text label for the action URL in the user interface, for example, "Launch."	Required to create a recommendation definition  Optional to update a recommendation definition	35.0
<code>explanation</code>	<a href="#">String</a>	Explanation, or body, of the custom recommendation.	Required to create a recommendation definition  Optional to update a recommendation definition	35.0
<code>name</code>	<a href="#">String</a>	Name of the custom recommendation definition. The name is displayed in Setup.	Required to create a recommendation definition  Optional to update a recommendation definition	35.0
<code>title</code>	<a href="#">String</a>	Title of the custom recommendation definition.	Optional	35.0

SEE ALSO:

[createRecommendationDefinition\(communityId, recommendationDefinition\)](#)

## ConnectApi.RecommendationReactionInput

A reaction to a recommendation produced by a recommendation strategy.

Property	Type	Description	Required or Optional	Available Version
aiModel	String	Reserved for future use.	Optional	47.0
contextRecordId	String	ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.	Optional	45.0
executionId	String	ID of the original recommendation strategy execution.	Optional	45.0
externalId	String	External ID of the recommendation. This ID doesn't need to be a Salesforce 18-character ID. For example, it can be a product number from an external system.	Optional	46.0
onBehalfOfId	String	ID of the user or entity for which the reaction took place.	Optional	45.0
reactionType	ConnectApi.RecommendationReactionType	Type of reaction to a recommendation. Values are: <ul style="list-style-type: none"> <li>Accepted</li> <li>Rejected</li> </ul>	Required	45.0
recommendationMode	String	Reserved for future use.	Optional	46.0
recommendationScore	Double	Reserved for future use.	Optional	46.0
strategyName	String	Name of the recommendation strategy.	Required	45.0
targetActionId	String	ID of the target action.	Optional	45.0
targetActionName	String	Name of the target action.	Required	45.0
targetId	String	ID of the recommendation that is being reacted to.	Required	45.0

## ConnectApi.RecordCapabilityInput

Attach an existing knowledge article to a comment.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput](#).

Property	Type	Description	Required or Optional	Available Version
recordId	String	ID of the existing knowledge article to attach.	Required	42.0

## ConnectApi.RecordsetFilterCriteriaInput

A set of recordset filter criteria applied to records, such as service appointment records.

Property	Type	Description	Required or Optional	Available Version
criteriaIds	List<String>	Recordset filter criteria IDs.	Required	53.0
enforceSharing	Boolean	Determines whether record sharing checks are enforced ( <code>true</code> ) or not ( <code>false</code> ) during the execution of this call.	Optional	53.0
filteredObjectName	String	Object that the filter is applied to.	Required	53.0
recordIds	List<String>	List of record IDs of the filtered object.	Required	53.0

## ConnectApi.ReferencedRefundRequest

Referenced refund input.

Subclass of [ConnectApi.RefundRequest](#).

Property	Type	Description	Required or Optional	Available Version
accountId	String	ID of the account linked to the referenced refund request.	Optional	50.0
amount	Double	Amount refunded.	Required	50.0
clientContext	String	Context for payment APIs. Used for a payment caller to re-establish context.	Optional	50.0
comments	String	Optional comments for the refund.	Optional	50.0
effectiveDate	Datetime	Date when the refund becomes effective.	Optional	50.0
paymentGroup	<a href="#">ConnectApi.PaymentGroupRequest</a>	Payment group details associated with the refund request.	Optional	50.0

## ConnectApi.RefinementInput

Attribute-based refinement input for product search.

This class is abstract and is a superclass of [ConnectApi.DistinctValueRefinementInput](#).

Property	Type	Description	Required or Optional	Available Version
attributeType	<a href="#">ConnectApi.CommerceSearchAttributeType</a>	Search attribute type. <ul style="list-style-type: none"> <li>• Custom</li> <li>• ProductAttribute</li> </ul>	Required	52.0

Property	Type	Description	Required or Optional	Available Version
		<ul style="list-style-type: none"> <li>Standard</li> </ul>		
nameOrId	String	Developer name of the attribute. In version 52.0 and later, the ID of the attribute isn't supported.	Required	52.0
type	ConnectApi.CommerceSearchFacetType	Search facet type. Value is: <ul style="list-style-type: none"> <li>DistinctValue</li> </ul>	Required	52.0

## ConnectApi.RefundRequest

Refund input.

This class is abstract.

Subclass of [ConnectApi.BaseRequest](#).

No additional properties.

Superclass of [ConnectApi.ReferencedRefundRequest](#).

## ConnectApi.ReleaseHeldFOCapacityInputRepresentation

Request to release held fulfillment order capacity at one or more locations. Can correspond to one action call.

Property	Type	Description	Required or Optional	Available Version
releaseHeldFOCapacityRequests	List< <a href="#">ConnectApi.ReleaseHeldFOCapacityRequestInputRepresentation</a> >	List of requests to release held fulfillment order capacity at one or more locations.	Required	55.0

## ConnectApi.ReleaseHeldFOCapacityRequestInputRepresentation

Request to release held fulfillment order capacity at one or more locations.

Property	Type	Description	Required or Optional	Available Version
allOrNothing	Boolean	Controls whether a single failed request cancels all other requests in the list ( <i>true</i> ) or whether some requests can succeed if others fail ( <i>false</i> ). The default value is <i>false</i> .	Optional	55.0

Property	Type	Description	Required or Optional	Available Version
capacityRequests	List< <a href="#">ConnectApi.CapacityRequestInputRepresentation</a> >	List of requests to release held fulfillment order capacity. Each request is for capacity for one fulfillment order held at one location.	Required	55.0

## ConnectApi.RequestHeaderInput

An HTTP request header name and value pair.

Property	Type	Description	Required or Optional	Available Version
name	String	The name of the request header.	Required	33.0
value	String	The value of the request header.	Required	33.0

SEE ALSO:

[Define an Action Link and Post with a Feed Element](#)

## ConnectApi.ReturnItemsInputRepresentation

Data about products and delivery charges to return, as well as associated return fees.

Property	Type	Description	Required or Optional	Available Version
returnOrderItemDeliveryCharges	List< <a href="#">ConnectApi.ReturnOrderItemDeliveryChargeInputRepresentation</a> >	List of ReturnOrderLineItems to return that represent delivery charges.	Optional	52.0
returnOrderItemFees	List< <a href="#">ConnectApi.ReturnOrderItemFeeInputRepresentation</a> >	List of ReturnOrderLineItems to process that represent return fees.	Optional	56.0
returnOrderItems	List< <a href="#">ConnectApi.ReturnOrderItemInputRepresentation</a> >	List of ReturnOrderLineItems to process that represent products, along with data about how to process them.	Required	52.0

SEE ALSO:

[returnItems\(returnOrderId, returnItemsInput\)](#)

## ConnectApi.ReturnOrderInputRepresentation

Data for creating a ReturnOrder and ReturnOrderLineItems.

Property	Type	Description	Required or Optional	Available Version
orderSummaryId	<a href="#">String</a>	ID of the OrderSummary containing the items to be returned. The OrderSummary's OrderLifeCycleType must be Managed.	Required	50.0
returnOrderLifeCycleType	<a href="#">String</a>	The LifeCycleType of the ReturnOrder. Possible values are: <ul style="list-style-type: none"> <li>Managed—Process the ReturnOrder using the APIs and actions. It can generate change orders and affects financial fields and rollup calculations.</li> <li>Unmanaged—The ReturnOrder is for tracking purposes only. It isn't involved in any financial calculations and doesn't generate any change orders. The system doesn't prevent the creation of duplicate ReturnOrderLineItems in an unmanaged ReturnOrder for the same OrderItem.</li> </ul>	Required	51.0
returnOrderLineItems	<a href="#">List&lt;ConnectApi.ReturnOrderLineItemInputRepresentation&gt;</a>	List of data for creating ReturnOrderLineItems.	At least one element is required	50.0
status	<a href="#">String</a>	Status to assign the ReturnOrder. This value must match an entry in the ReturnOrder object's Status picklist.	Required	51.0

SEE ALSO:

[createReturnOrder\(returnOrderInput\)](#)

## ConnectApi.ReturnOrderItemInputRepresentation

ID of a ReturnOrderLineItem and instructions for updating it. After the update, the ReturnOrderLineItem is read-only. Any remaining quantity to be returned is added to a new ReturnOrderLineItem.

Property	Type	Description	Required or Optional	Available Version
quantityReceived	<a href="#">Double</a>	The quantity of the ReturnOrderLineItem that has been received. The value must be zero or greater. This value isn't used by any standard features, but is provided for use in customizations.	Required	52.0
quantityRejected	<a href="#">Double</a>	The quantity of the ReturnOrderLineItem that has been rejected for return. The value	Required	52.0

Property	Type	Description	Required or Optional	Available Version
		must be zero or greater. This value isn't used by any standard features, but is provided for use in customizations.		
quantityReturned	Double	The quantity of the ReturnOrderLineItem that has been returned. The value must be greater than zero. If this value plus quantityToCancel is less than the expected return quantity, then the remaining quantity to be returned is added to a new ReturnOrderLineItem.	Required	52.0
quantityToCancel	Double	The quantity of the ReturnOrderLineItem to remove because it's not being returned. The value must be zero or greater. If this value plus quantityReturned is less than the expected return quantity, then the remaining quantity to be returned is added to a new ReturnOrderLineItem.	Required	52.0
reasonForRejection	String	The reason why the rejected quantity, if any, was rejected. This value isn't used by any standard features, but is provided for use in customizations.	Optional	52.0
returnOrderLineItemId	String	The ID of the ReturnOrderLineItem.	Required	52.0

SEE ALSO:

[ConnectApi.ReturnItemsInputRepresentation](#)  
[returnItems\(returnOrderId, returnItemsInput\)](#)

## ConnectApi.ReturnOrderItemDeliveryChargeInputRepresentation

ID of a ReturnOrderLineItem representing a delivery charge.

Property	Type	Description	Required or Optional	Available Version
returnOrderLineItemId	String	ID of a ReturnOrderLineItem to return.	Required	52.0

SEE ALSO:

[ConnectApi.ReturnItemsInputRepresentation](#)  
[returnItems\(returnOrderId, returnItemsInput\)](#)

## ConnectApi.ReturnOrderItemFeeInputRepresentation

ID of a ReturnOrderLineItem representing a return fee, and instructions for updating it. After the update, the ReturnOrderLineItem is read-only. Any remaining quantity of the fee to be processed is added to a new ReturnOrderLineItem.

Property	Type	Description	Required or Optional	Available Version
quantityReturned	Double	Quantity of the ReturnOrderLineItem to process. When the fee is a fixed amount, the charge is determined by multiplying the total fee amount by this value divided by the expected quantity. For example, if the fee amount is \$10 and the expected quantity is 2, then if the quantityReturned is 1, \$5 is charged. This value normally equals the quantity returned of the ReturnOrderLineItem for the returned item that the fee applies to. The value must be greater than zero. If this value plus quantityToCancel is less than the expected quantity, then the remaining quantity to be returned is added to a new ReturnOrderLineItem.	Required	56.0
quantityToCancel	Double	Quantity of the ReturnOrderLineItem to remove. This value normally equals the quantity canceled of the ReturnOrderLineItem for the returned item that the fee applies to. This value can also be used to cancel a portion of the fee. The value must be zero or greater. If this value plus quantityReturned is less than the expected quantity, then the remaining quantity to be returned is added to a new ReturnOrderLineItem.	Required	56.0
returnOrderLineItemId	String	ID of the ReturnOrderLineItem representing the return fee.	Required	56.0

SEE ALSO:

[ConnectApi.ReturnItemsInputRepresentation](#)  
[returnItems\(returnOrderId, returnItemsInput\)](#)

## ConnectApi.ReturnOrderLineItemInputRepresentation

Data for creating a ReturnOrderLineItem for an order item being returned, including data to create ReturnOrderLineItems representing any return fees associated with it.

Property	Type	Description	Required or Optional	Available Version
<code>canReduceShipping</code>	<a href="#">Boolean</a>	Whether to refund any associated shipping charge.	Required	50.0
<code>orderItemSummaryId</code>	<a href="#">String</a>	ID of the associated <code>OrderItemSummary</code> . If the <code>OrderItemSummary</code> already has an associated <code>ReturnOrderLineItem</code> , then you must specify a different <code>reasonForReturn</code> . Duplicating the reason breaks the financial calculations.	Required	50.0
<code>quantityExpected</code>	<a href="#">Double</a>	Quantity expected to be returned. This value also applies to any fees specified in <code>returnOrderLineItemFees</code> .	Required	50.0
<code>quantityReceived</code>	<a href="#">Double</a>	Quantity already physically returned.	Optional	50.0
<code>reasonForReturn</code>	<a href="#">String</a>	Reason for the return. The value must match an entry in both the <code>OrderSummaryChangeReason</code> field and the <code>ReturnOrderLineItem</code> object's <code>ReasonForReturn</code> picklist.	Required if the <code>returnOrderLifeCycleType</code> is <code>MANAGED</code> .	50.0
<code>returnOrderLineItemFees</code>	<a href="#">List&lt;ConnectApi.ReturnOrderLineItemFeeInputRepresentation&gt;</a>	List of input data for return fees associated with the order item being returned. A <code>ReturnOrderLineItem</code> of Type <code>Fee</code> is created to represent each fee.	Optional	56.0

SEE ALSO:

## ConnectApi.ReturnOrderLineItemFeeInputRepresentation

Data for creating a `ReturnOrderLineItem` that represents a return fee.

Property	Type	Description	Required or Optional	Available Version
<code>amount</code>	<a href="#">Double</a>	Value used to calculate the fee amount, as described by the <code>amountType</code> . It must be a positive value.	Required	56.0
<code>amountType</code>	<a href="#">String</a>	Describes how the fee amount is calculated. It can have one of these values: <ul style="list-style-type: none"> <li><code>AmountWithTax</code>—Value of <code>amount</code> is the fee amount, including tax.</li> </ul>	Required	56.0

Property	Type	Description	Required or Optional	Available Version
		<ul style="list-style-type: none"> <li><code>AmountWithoutTax</code>—Value of <code>amount</code> is the fee amount, not including tax. Tax is calculated on the value and added.</li> <li><code>Percentage</code>—Value of <code>amount</code> is a percentage. To determine the fee amount, <code>amount</code> is divided by 100, and then multiplied by the <code>TotalPrice</code> and <code>TotalTaxAmount</code> of the associated <code>OrderItemSummary</code>, prorated for the quantity being returned.</li> <li><code>PercentageGross</code>—Value of <code>amount</code> is a percentage. To determine the fee amount, <code>amount</code> is divided by 100, and then multiplied by the <code>TotalLineAmountWithTax</code> of the associated <code>OrderItemSummary</code>, prorated for the quantity being returned.</li> </ul>		
<code>description</code>	<a href="#">String</a>	Description of the fee.	Required	56.0
<code>product2Id</code>	<a href="#">String</a>	ID of the product representing the fee.	Required	56.0
<code>reason</code>	<a href="#">String</a>	Reason for the fee. The value must match an entry in the <code>ReturnOrderLineItem</code> object's <code>ReasonForReturn</code> picklist.	Required	56.0

## ConnectApi.SaleRequest

Payment sale input consumed by the payment sale service.

Subclass of [ConnectApi.BaseRequest](#).

Property	Type	Description	Required or Optional	Available Version
<code>accountId</code>	<a href="#">String</a>	Reference to account.	Required	54.0
<code>amount</code>	<a href="#">Double</a>	The amount of the sale request.	Required	54.0
<code>comments</code>	<a href="#">String</a>	Optional comment for the sale request.	Optional	54.0

Property	Type	Description	Required or Optional	Available Version
currencyIsoCode	<a href="#">String</a>	Three-letter ISO 4217 currency code associated with the payment output.	Required	54.0
effectiveDate	<a href="#">Datetime</a>	Date that the sale request takes effect.	Required	54.0
paymentGatewayId	<a href="#">String</a>	The payment gateway that receives the sale request.	Required	54.0
paymentGroup	<a href="#">ConnectApi.PaymentGroupRequest</a>	Payment group information for the sale request.	Optional	54.0
paymentMethod	<a href="#">ConnectApi.PaymentMethodRequest</a>	Payment method used within the sale request.	Required	54.0

## ConnectApi.SaleApiPaymentMethodRequest

Payment method request for sale.

Subclass of [ConnectApi.BaseApiPaymentMethodRequest](#).

Property	Type	Description	Required or Optional	Available Version
cardPaymentMethod	<a href="#">ConnectApi.CardPaymentMethodRequest</a>	Payment method used in a sale request.	Required	54.0

## ConnectApi.ScheduledRecommendationInput

A scheduled custom recommendation.

Property	Type	Description	Required or Optional	Available Version
channel	<a href="#">ConnectApi.RecommendationChannel</a>	<p>A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:</p> <ul style="list-style-type: none"> <li><code>CustomChannel1</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.</li> <li><code>CustomChannel2</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> </ul>	<p>Optional for creating a scheduled recommendation</p> <p>If not specified, defaults to <code>DefaultChannel</code>.</p> <p>Don't use when updating a scheduled recommendation</p>	36.0

Property	Type	Description	Required or Optional	Available Version
		<ul style="list-style-type: none"> <li><code>CustomChannel13</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li><code>CustomChannel14</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li><code>CustomChannel15</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li><code>DefaultChannel</code>—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.</li> </ul> <p>Use these channel values; you can't rename or create other channels.</p>		
<code>enabled</code>	Boolean	Indicates whether scheduling is enabled. If <code>true</code> , the custom recommendation is enabled and appears in Experience Cloud sites. If <code>false</code> , custom recommendations in feeds in Salesforce mobile web aren't removed, but no new custom recommendations appear. In Customer Service and Partner Central sites, disabled custom recommendations no longer appear.	Optional	35.0
<code>rank</code>	Integer	Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1. Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the <code>rank</code> . The <code>rank</code> of all the scheduled custom recommendations after it is pushed down.	Optional	35.0

Property	Type	Description	Required or Optional	Available Version
		<p>See <a href="#">Ranking scheduled custom recommendations example</a>.</p> <p>If the specified <code>rank</code> is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The <code>rank</code> of the scheduled custom recommendation is the size of the list, instead of the one specified.</p> <p>If a <code>rank</code> is not specified, the scheduled custom recommendation is put at the end of the list.</p>		
<code>recommendationAudienceId</code>	String	ID of the audience for this scheduled custom recommendation. When updating a scheduled custom recommendation, specify <code>ALL</code> to remove the association between a custom recommendation audience and a scheduled custom recommendation.	Optional	35.0
<code>recommendationDefinitionId</code>	String	ID of the custom recommendation definition that this scheduled recommendation schedules.	Required to create a scheduled recommendation  You can't specify a <code>recommendationDefinitionId</code> when updating a scheduled recommendation.	35.0

### Ranking scheduled custom recommendations example

If you have these scheduled custom recommendations:

Scheduled Recommendations	Rank
ScheduledRecommendationA	1
ScheduledRecommendationB	2
ScheduledRecommendationC	3

And you include this information in the Scheduled Custom Recommendation Input:

Scheduled Recommendation	Rank
ScheduledRecommendationD	2

The result is:

Scheduled Recommendation	Rank
ScheduledRecommendationA	1
ScheduledRecommendationD	2
ScheduledRecommendationB	3
ScheduledRecommendationC	4

## ConnectApi.SellerDetailsRequest

Seller details for the tax calculation

Property	Type	Description	Required or Optional	Available Version
code	String	Code used to identify the seller of the taxed items.		55.0

## ConnectApi.ServiceAppointmentInput

Contains information about the service appointment.

Property	Type	Description	Required or Optional	Available Version
additionalInformation	String	Additional details about the service appointment.	Optional	53.0
appointmentMode	ConnectApi.AppointmentModeEnum	Mode of the service appointment. <ul style="list-style-type: none"> <li><b>Group</b>— Service appointment mode is Group.</li> <li><b>Regular</b>— Default mode of service appointment.</li> </ul>	Optional	60.0
appointmentType	String	Type of the appointment.	Optional	53.0
attendeeLimit	Integer	Maximum number of customers that's allowed to attend the service appointment.	Required if the appointment mode is Group.	60.0
city	String	Name of the city.	Optional	53.0
comments	String	Comments about the appointment.	Optional	53.0

Property	Type	Description	Required or Optional	Available Version
contactId	<a href="#">String</a>	ID of the contact associated with the parent record.	Optional	53.0
country	<a href="#">String</a>	Name of the country.	Optional	53.0
description	<a href="#">String</a>	Description of the appointment.	Optional	53.0
engagementChannelTypeId	<a href="#">String</a>	ID of the engagement channel type to associate with the appointment.  You can use engagement channel type only if: <ul style="list-style-type: none"> <li>• <b>Schedule Appointments Using Engagement Channels</b> is enabled in Salesforce Scheduler Settings in your Salesforce org.</li> <li>• Shifts are defined in the scheduling policy. For more information on setting up shifts in the scheduling policy, see <a href="#">Define Shift Rules in Scheduling Policy</a>.</li> </ul> <p> <b>Note:</b> Engagement channel types are not supported with operating hours rules in the scheduling policy.</p>	Optional	56.0
extendedFields	<a href="#">ConnectApiExtendedFields</a>	Values to add to any of the fields, including custom fields.	Optional	53.0
parentRecordId	<a href="#">String</a>	ID of the parent record associated with the account.	Required if lead isn't provided.	53.0
postalCode	<a href="#">String</a>	Postal code of the city.	Optional	53.0
schedEndTime	<a href="#">Datetime</a>	Time at which the appointment is scheduled to end.	Optional	53.0
schedStartTime	<a href="#">Datetime</a>	Time at which the appointment is scheduled to start.	Optional	53.0
serviceTerritoryId	<a href="#">String</a>	ID of the service territory associated with the service appointment.	Optional	53.0
state	<a href="#">String</a>	Name of the state.	Optional	53.0
street	<a href="#">String</a>	Name of the street.	Optional	53.0
subject	<a href="#">String</a>	Short phrase describing the appointment.	Optional	53.0
workTypeId	<a href="#">String</a>	ID of the work type associated with the service appointment. If specified, it is added to the service appointment record.	Optional	53.0

## ConnectApi.ShiftsFromPatternInput

Shifts from a pattern.

Property	Type	Description	Required or Optional	Available Version
schedulingEndDate	String	Scheduling end date in YYYY-MM-DD format. Provide <code>schedulingEndDate</code> or <code>schedulingOccurrences</code> . Don't provide both.	Required if <code>schedulingOccurrences</code> isn't provided	51.0
schedulingOccurrences	Integer	Number of scheduling occurrences. Provide <code>schedulingEndDate</code> or <code>schedulingOccurrences</code> . Don't provide both.	Required if <code>schedulingEndDate</code> isn't provided	51.0
schedulingStartDate	String	Scheduling start date in YYYY-MM-DD format.	Required	51.0
serviceResourceId	String	ID of the service resource to assign shifts to. In version 53.0 and later, use <code>serviceResourceIdList</code> .	Optional	51.0–52.0
serviceResourceIdList	List<String>	List of service resource IDs to assign shifts to.	Optional	53.0
serviceTerritoryId	String	ID of the service territory to assign shifts to.	Optional	51.0
shiftStatus	String	Status of the shifts. Default values are: <ul style="list-style-type: none"> <li>Confirmed</li> <li>Published</li> <li>Tentative</li> </ul> Additional status values can be created.	Optional	52.0

## ConnectApi.SocialPostMassApprovalInput

List of social post ids and the action to approve or reject publishing them.

Property	Type	Description	Required or Optional	Available Version
isApproved	Boolean	Specifies whether to approve ( <code>true</code> ) or reject ( <code>false</code> ) publishing the social posts. If unspecified, defaults to <code>false</code> .	Optional	46.0
socialPostIdList	List<String>	A list of up to 200 social post IDs.	Required	46.0

## ConnectApi.StatusCapabilityInput

Change the status of a feed post or comment.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput](#).

Property	Type	Description	Required or Optional	Available Version
feedEntityStatus	<a href="#">ConnectApi.FeedEntityStatus</a>	<p>Status of the feed post or comment. Values are:</p> <ul style="list-style-type: none"> <li><b>Draft</b>—The feed post isn't published but is visible to the author and users with <b>Modify All Data</b> or <b>View All Data</b> permission. Comments can't be drafts.</li> <li><b>Isolated</b>—The feed post or comment is isolated, and only admins can see it.</li> <li><b>PendingReview</b>—The feed post or comment isn't approved yet and therefore isn't published or visible.</li> <li><b>Published</b>—The feed post or comment is approved and visible.</li> </ul> <p>Posts that have a status of <b>PendingReview</b> or <b>Published</b> can't be changed to a status of <b>Draft</b> and vice versa. Only admins can change the status of a post or comment to or from <b>Isolated</b> status.</p>	Required	37.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.StreamSubscriptionInput

An entity to subscribe to for a Chatter feed stream.

Property	Type	Description	Required or Optional	Available Version
entityId	<a href="#">String</a>	The ID of any feed-enabled entity, such as a group, record, or user, that the context user can access. When subscribed, the entity's feed is included in the feed stream.	Required	39.0

SEE ALSO:

[ConnectApi.ChatterStreamInput](#)

## ConnectApi.SurveyInvitationEmailInput

Survey invitation email.

Property	Type	Description	Required or Optional	Available Version
allowGuestUserResponse	Boolean	Specifies whether participants who don't have a Salesforce account can respond ( <b>true</b> ) or not ( <b>false</b> ).	Required	50.0
allowParticipantsAccessTheirResponse	Boolean	Specifies whether participants can see their responses ( <b>true</b> ) or not ( <b>false</b> ).	Required	50.0
associateRecordsWithRecipients	List<ConnectApi.AssociateRecordsWithRecipientInput>	Maps each recipient with another record that must be associated with the recipient's survey invitation.	Optional	50.0
body	String	Content of the email. Specify the email body in case you don't specify an email template. The email body must contain one of the following merge fields: <ul style="list-style-type: none"> <li>To embed a link to launch the survey: <code>[[SURVEY_INVITATION_URL]]</code></li> <li>To embed a survey question: <code>{{SurveyQuestion.QuestionName}}</code> and <code>{{SurveyQuestion.QuestionHtmlContent}}</code></li> </ul>	Optional	50.0
collectAnonymousResponse	Boolean	Specifies whether participants can respond anonymously ( <b>true</b> ) or not ( <b>false</b> ).	Required	50.0
communityId	String	ID of the site that's used to open the survey for users outside your org.	Optional	50.0
emailTemplateId	String	ID of the Lightning email template that's used to send the survey invitation. The template must contain the required merge fields that embed either the survey link or a question in the email. Only Lightning email templates are used to send survey invitations.	Optional	50.0
fromEmailAddress	String	Email ID of the user or the org-wide email address associated with the user's profile.	Required	50.0
invitationExpirationDate	Datetime	Date on which the survey invitation expires.	Optional	50.0
invitationOwner	String	ID of the owner of the survey invitation records.	Optional	50.0
isPersonalInvitation	Boolean	Specifies whether an unique invitation is created for each participant ( <b>true</b> ) or not	Required	50.0

Property	Type	Description	Required or Optional	Available Version
		( <code>false</code> ). When a participant responds using a personal invitation, the response record is associated with the participant's Salesforce record.		
recipient Engagement Contexts	<a href="#">List&lt;ConnectApi.RecipientEngagementContextInput&gt;</a>	Maps each recipient with the context based on which the survey invitation is emailed.	Optional	50.0
recipients	<a href="#">List&lt;String&gt;</a>	List of up to 300 IDs of leads, contacts, or users to whom the survey invitation is emailed.	Required	50.0
shareInvitations With	<a href="#">List&lt;String&gt;</a>	IDs of the users with whom the survey invitation records must be shared. The invitation records are shared with Read access.	Optional	50.0
subject	<a href="#">String</a>	Subject of the email. Specify the subject in case you don't specify an email template.	Optional	50.0
surveyQuestion Ids	<a href="#">List&lt;String&gt;</a>	IDs of the questions that are embedded in the email. You can send an email invitation for questions of the following types: Net Promoter Score (NPS), rating, and score.	Optional	50.0

## ConnectApi.TargetCollectionInput

Collection of targets to create.

Property	Type	Description	Required or Optional	Available Version
targets	<a href="#">List&lt;ConnectApi.TargetInput&gt;</a>	List of targets to create.	Required	48.0

## ConnectApi.TargetCollectionUpdateInput

Collection of targets to update.

Property	Type	Description	Required or Optional	Available Version
targets	<a href="#">List&lt;ConnectApi.TargetUpdateInput&gt;</a>	List of targets to update.	Required	48.0

## ConnectApi.TargetLocationInputRepresentation

A set of inventory locations that together can fulfill an order.

Property	Type	Description	Required or Optional	Available Version
locations	<a href="#">List&lt;ConnectApi.TargetLocationInputRepresentation&gt;</a>	A list of locations with information about their country and postal codes.	Required	51.0

## ConnectApi.TargetInput

Target to create.

Property	Type	Description	Required or Optional	Available Version
audienceId	<a href="#">String</a>	ID of the audience to assign to the target.	Required	48.0
groupName	<a href="#">String</a>	Group name of the target. Groups bundle related target and audience pairs. You can have up to 2,000 groups and 500 targets per group. To determine the group name for targets of type <a href="#">ExperienceVariation</a> , see <a href="#">Personalization Target Developer and Group Names</a> in the <i>Experience Cloud Developer Guide</i> .	Required	48.0
priority	<a href="#">Integer</a>	Priority of the target. Within a group, priority determines which target is returned if the user matches more than one audience.	Optional	48.0
publishStatus	<a href="#">ConnectApi.PublishStatus</a>	The publish status of the target. Values are: <ul style="list-style-type: none"> <li>Draft</li> <li>Live</li> </ul> We recommend setting the publish status to <code>Draft</code> . If you specify <code>Live</code> , your changes revert after you publish the site.	Optional	48.0
targetType	<a href="#">String</a>	Type of target, indicating the nature of the data being targeted. Supported values include: <ul style="list-style-type: none"> <li><code>ExperienceVariation</code> (version 48.0 and later)</li> <li>Custom object API names, such as <code>CustomObjectName__c</code> (version 48.0 and later)</li> </ul>	Required	48.0

Property	Type	Description	Required or Optional	Available Version
		<ul style="list-style-type: none"> <li>• <code>NavigationLinkSet</code> (version 49.0 and later)</li> <li>• <code>Topic</code> (version 49.0 and later)</li> <li>• <code>CollaborationGroup</code> (version 49.0 and later)</li> <li>• <code>KnowledgeArticle</code> (version 49.0 and later)</li> <li>• <code>ContentDocument</code> (version 49.0 and later)</li> <li>• <code>ManagedContent</code> (version 49.0 and later)</li> <li>• <code>Report</code> (version 49.0 and later)</li> <li>• <code>Dashboard</code> (version 49.0 and later)</li> </ul> <p>You can have up to 2,500 <code>ExperienceVariation</code> targets and 25,000 record targets.</p>		
<code>targetValue</code>	<a href="#">String</a>	Value of the target. If <code>targetType</code> is <code>ExperienceVariation</code> , <code>targetValue</code> is the developer name of the experience variation. If <code>targetType</code> is <code>CustomObjectName__c</code> , <code>targetValue</code> is the ID of the custom object. To determine the developer name for targets of type <code>ExperienceVariation</code> , see <a href="#">Personalization Target Developer and Group Names</a> in the <i>Experience Cloud Developer Guide</i> .	Required	48.0

SEE ALSO:

[ConnectApi.TargetCollectionInput](#)

## ConnectApi.TargetUpdateInput

Target to update.

Property	Type	Description	Required or Optional	Available Version
<code>audienceId</code>	<a href="#">String</a>	ID of the audience to assign to the target.	Required if <code>priority</code> isn't	48.0

Property	Type	Description	Required or Optional	Available Version
			specified. Otherwise, Optional	
priority	<a href="#">Integer</a>	Priority of the target. Within a group, priority determines which target is returned if the user matches more than one audience.	Required if <code>audienceId</code> isn't specified. Otherwise, Optional	48.0
targetId	<a href="#">String</a>	ID of the target to update.	Required	48.0

SEE ALSO:

[ConnectApi.TargetCollectionUpdateInput](#)

## ConnectApi.CalculateTaxRequest

Request to sent through the tax adapter to the external tax engine. Inputs with a `TaxTransactionType` of Debit represent a tax calculation request. Inputs with a `TaxTransactionType` of Credit represent a tax cancellation request.

Subclass of [ConnectApi.TaxTransactionRequest](#).

Property	Type	Description	Required or Optional	Available Version
isCommit	<a href="#">Boolean</a>	Commits the transaction for tax calculation.	Required	55.0
taxEngineId	<a href="#">String</a>	ID of the Salesforce tax engine entity used to represent the external tax engine.	Required	55.0
taxTransactionType	<a href="#">ConnectApi.TaxTransactionType</a>	Type of tax transaction. Values are: <ul style="list-style-type: none"> <li><code>Credit</code>—Transaction is a credit transaction.</li> <li><code>Debit</code>—Transaction is a debit transaction.</li> </ul>	Required	55.0
taxType	<a href="#">ConnectApi.CalculateTaxType</a>	Type of tax calculation. Values are: <ul style="list-style-type: none"> <li><code>Actual</code>—Calculated tax represents the final taxed amount for the transaction.</li> <li><code>Estimated</code>—Calculated tax represents only an estimated value before the transaction is finalized.</li> </ul>	Required	55.0

## ConnectApi.TaxAddressRequest

Address input representation for tax calculation.

Name	Type	Description	Required or Optional	Available Version
city	<a href="#">String</a>	City.	Optional	55.0
country	<a href="#">String</a>	Country.	Optional	55.0
latitude	<a href="#">Double</a>	Latitude.	Optional	55.0
locationCode	<a href="#">String</a>	Location code.	Optional	55.0
longitude	<a href="#">Double</a>	Longitude.	Optional	55.0
postalCode	<a href="#">String</a>	Postal code.	Optional	55.0
state	<a href="#">String</a>	State.	Optional	55.0
street	<a href="#">String</a>	Street.	Optional	55.0

## ConnectApi.TaxAddressesRequest

Addresses, including the Bill To address, Ship From address, Ship to address, and Sold To address.

Name	Type	Description	Required or Optional	Available Version
billTo	<a href="#">ConnectApi.TaxAddressRequest</a>	Bill To address.	Optional	55.0
shipFrom	<a href="#">ConnectApi.TaxAddressRequest</a>	Ship From address.	Optional	55.0
shipTo	<a href="#">ConnectApi.TaxAddressRequest</a>	Ship To address.	Optional	55.0
soldTo	<a href="#">ConnectApi.TaxAddressRequest</a>	Sold To address.	Optional	55.0

## ConnectApi.TaxCustomerDetailsRequest

Customer details for the tax calculation.

Property	Type	Description	Required or Optional	Available Version
accountId	<a href="#">String</a>	ID of the customer's account.	Optional	55.0
code	<a href="#">String</a>	Customer code.	Optional	55.0
exemptionNo	<a href="#">String</a>	Tax exemption number.	Optional	55.0

Property	Type	Description	Required or Optional	Available Version
exemptionReason	<a href="#">String</a>	Tax exemption reason.	Optional	55.0

## ConnectApi.TaxLineItemRequest

A list of line items passed to the tax engine for tax calculation.

Property	Type	Description	Required or Optional	Available Version
addresses	<a href="#">ConnectApi.TaxAddressesRequest</a>	Addresses, including the Bill To address, Ship From address, Ship To address, and Sold To address.	Optional	55.0
amount	<a href="#">Double</a>	Amount of the line item.	Optional	55.0
description	<a href="#">String</a>	Description of the line item.	Optional	55.0
effectiveDate	<a href="#">Datetime</a>	Date to apply the tax calculation to the line item.	Optional	55.0
lineNumber	<a href="#">String</a>	Line number of the line item.	Optional	55.0
productCode	<a href="#">String</a>	Product code of the line item.	Optional	55.0
quantity	<a href="#">Double</a>	Quantity of the line item.	Optional	55.0
taxCode	<a href="#">String</a>	Tax code for the line item.	Optional	55.0

## ConnectApi.TaxTransactionRequest

Information about the tax transaction sent to the tax adapter as part of a tax calculation request.

This class is abstract.

Superclass of [ConnectApi.CalculateTaxRequest](#).

Property	Type	Description	Required or Optional	Available Version
addresses	<a href="#">ConnectApi.TaxAddressesRequest</a>	Addresses, including the Bill To address, Ship From address, Ship to address, and Sold To address.	Optional	55.0
currencyIsoCode	<a href="#">String</a>	Three-letter ISO 4217 currency code associated with the payment group record.	Optional	55.0
customerDetails	<a href="#">ConnectApi.TaxCustomerDetailsRequest</a>	Customer details for the tax calculation.	Optional	55.0

Property	Type	Description	Required or Optional	Available Version
description	<a href="#">String</a>	Information about whether the tax transaction failed or was successful.	Optional	55.0
documentCode	<a href="#">String</a>	Document code.	Optional	55.0
effectiveDate	<a href="#">Datetime</a>	The date that tax is applied to the taxed entity.	Required	55.0
lineItems	<a href="#">List&lt;ConnectApi.TaxLineItemRequest&gt;</a>	The line items on which tax was calculated.	Required	55.0
referenceDocumentCode	<a href="#">String</a>	The original document code. Used in case of subsequent transactions such as credit tax.	Optional	55.0
referenceEntityId	<a href="#">String</a>	ID of the reference entity used during tax calculation.	Optional	55.0
transactionDate	<a href="#">Datetime</a>	The date that the tax transaction occurred.	Optional	53.0

## ConnectApi.TextClassificationsInputRepresentation

Text classification information associating classifiers and text to be classified.

Property	Type	Description	Required or Optional	Available Version
classifiers	<a href="#">List&lt;String&gt;</a>	List of classifiers according to which text has to be classified.	Required	59.0
textList	<a href="#">List&lt;String&gt;</a>	List of text to be classified.	Required	59.0

## ConnectApi.TextSegmentInput

Include a text segment in a feed item or comment.

Subclass of [ConnectApi.MessageSegmentInput](#).

Property	Type	Description	Available Version
<code>text</code>	<a href="#">String</a>	Plain text for this segment. If hashtags or links are detected in <code>text</code> , they're included in the comment as hashtag and link segments. Mentions aren't detected in <code>text</code> and aren't separated out of the text. Mentions require <a href="#">ConnectApi.MentionSegmentInput</a> .	28.0

## SEE ALSO:

- [Edit a Comment](#)
- [Edit a Feed Element](#)
- [Edit a Question Title and Post](#)
- [Post a Rich-Text Feed Element with Inline Image](#)
- [ConnectApi.MessageBodyInput](#)

## ConnectApi.TopicInput

Update a topic's name or description or merge topics.

Property	Type	Description	Available Version
<code>description</code>	<a href="#">String</a>	Description of the topic	29.0
<code>idsToMerge</code>	<a href="#">List&lt;String&gt;</a>	List of up to five secondary topic IDs to merge with the primary topic  If any of the secondary topics are navigational or featured topics, they lose their topic type, topic images, and children topics. Their feed items are reassigned to the primary topic. If you merge a topic with a content topic, the content associations are preserved. If you merge a topic with an inactive endorsee, the endorsement isn't mapped to the primary topic.	33.0
<code>name</code>	<a href="#">String</a>	Name of the topic  Use this property to change only the capitalization and spacing of the topic name.	29.0

## SEE ALSO:

- [updateTopic\(communityId, topicId, topic\)](#)

## ConnectApi.TopicNamesInput

A list of topic names to replace currently assigned topics. Also a list of suggested topics to assign.

Property	Type	Description	Required or Optional	Available Version
<code>topicNames</code>	<a href="#">List&lt;String&gt;</a>	A list of up to 10 topic names for a feed item or 100 topic names for a record.	Required	35.0

Property	Type	Description	Required or Optional	Available Version
topicSuggestions	List<String>	A list of suggested topics to assign to a record or feed item to improve future topic suggestions.	Optional	37.0

SEE ALSO:

[reassignTopicsByName\(communityId, recordId, topicNames\)](#)

[ConnectApi.ArticleTopicAssignmentJobInput](#)

## ConnectApi.TopicsCapabilityInput

Assign topics to a feed element.

Property	Type	Description	Required or Optional	Available Version
contextTopicName	String	Name of the parent topic in the site to which the feed element belongs.	Optional	38.0
topics	List<String>	List of topics to assign to the feed element.	Required	38.0

SEE ALSO:

[ConnectApi.FeedElementCapabilitiesInput](#)

## ConnectApi.UpDownVoteCapabilityInput

Upvote or downvote a feed element or a comment.

Property	Type	Description	Required or Optional	Available Version
vote	<a href="#">ConnectApi.UpDownVoteValue</a>	Type of vote for a feed element or comment. Values are: <ul style="list-style-type: none"> <li>Down</li> <li>None</li> <li>Up</li> </ul>	Required	41.0

## ConnectApi.UpdateServiceAppointmentInput

Contains information to update a service appointment.

Property	Type	Description	Required or Optional	Available Version
<code>serviceAppointmentId</code>	String	The ID of the service appointment to be modified.	Required	53.0
<code>assignedResources</code>	<a href="#">ConnectApi.AssignedResourceInput</a>	<p>Represents the service resources who are assigned to a service appointment.</p> <p>When updating an appointment, pass the complete list of required resources. If you don't pass a resource who is already assigned to the appointment, the API deletes that assigned resource. For example, suppose that an existing service appointment has assigned resources: A and B and you pass B and C in assigned resources in the PATCH request. The API checks the resource availability of B and C for existing work type and service territory, and if both are available, the service appointment gets updated with:</p> <ul style="list-style-type: none"> <li>• Resource A—Deleted</li> <li>• Resource B—Updated</li> <li>• Resource C—Created</li> </ul> <p>However, if you don't pass any of the assigned resources, the API assumes there's no change.</p> <p> <b>Note:</b> When creating an appointment, use <code>extendedFields</code> to add values to any of the fields, including custom fields, in <code>assignedResources</code> as long as you have edit access to those fields.</p>	Optional	53.0
<code>lead</code>	<a href="#">ConnectApi.LeadInput</a>	<p>Represents a prospect or lead.</p> <p> <b>Note:</b> Required to create a service appointment for unauthenticated guest users.</p>	Required if <code>serviceAppointment</code> isn't provided.	53.0
<code>schedulingPolicyId</code>	String	The ID of the <code>AppointmentSchedulingPolicy</code> object. If no scheduling policy is passed in the request body, the default configurations are used. The only scheduling policy configuration that is used in determining	Optional	53.0

Property	Type	Description	Required or Optional	Available Version
		time slots is the enforcement of account visiting hours.		
<code>serviceAppointment</code>	<a href="#">ConnectApi.ServiceAppointment</a>	Represents the service appointment details to book an appointment. When updating an appointment, pass only the fields that must be updated.   <b>Note:</b> When creating an appointment, use <code>extendedFields</code> to add values to any of the fields, including custom fields, in <code>assignedResources</code> as long as you have edit access to those fields.	Required if <code>lead</code> isn't provided.	53.0

## ConnectApi.UserInput

Update a user's About Me information.

Property	Type	Description	Available Version
<code>aboutMe</code>	<a href="#">String</a>	The <code>aboutMe</code> property of a <code>ConnectApi.UserDetail</code> output object. This property populates the About Me section of the user profile, which is visible to all members of an Experience Cloud site or org.	29.0

SEE ALSO:

[updateUser\(communityId, userId, userInput\)](#)

## ConnectApi.WishlistInput

Create a wishlist.

Property	Type	Description	Required or Optional	Available Version
<code>name</code>	<a href="#">String</a>	Name of the wishlist.	Required	49.0
<code>products</code>	<a href="#">List&lt;ConnectApi.WishlistItemInput&gt;</a>	List of products to add to the wishlist.	Optional	49.0

## ConnectApi.WishlistItemInput

Item to update or add to a wishlist.

Property	Type	Description	Required or Optional	Available Version
productId	<a href="#">String</a>	ID of the product to update or add to the wishlist.	Required	49.0

SEE ALSO:

[ConnectApi.WishlistInput](#)

## ConnectApi.WishlistUpdateInput

Update a wishlist name.

Property	Type	Description	Required or Optional	Available Version
name	<a href="#">String</a>	Wishlist name to update.	Required	50.0

## ConnectApi.WrappedValue

Value wrapped for use as an object.

Property	Type	Description	Required or Optional	Available Version
value	<a href="#">Object</a>	Value to wrap.	Required	60.0

## Retired `connectApi` Input Classes

These `ConnectApi` input classes are retired.

IN THIS SECTION:

[ConnectApi.CanvasAttachmentInput](#)

Used to attach a canvas app to a feed item.

[ConnectApi.ContentAttachmentInput](#)

Used to attach existing content to a comment or feed item.

[ConnectApi.DatacloudOrderInput](#)

Input representation for a Datacloud order to purchase contacts or companies and retrieve purchase information.

[ConnectApi.FeedItemAttachmentInput](#)

Used to attach a file to a feed item.

[ConnectApi.LinkAttachmentInput](#)

Add links to a feed item.

[ConnectApi.NewFileAttachmentInput](#)

Attach a new file to a feed item.

[ConnectApi.PollAttachmentInput](#)

Attach a poll to a feed item.

## ConnectApi.CanvasAttachmentInput

Used to attach a canvas app to a feed item.

**!** **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, use [ConnectApi.CanvasCapabilityInput](#).

Subclass of [ConnectApi.FeedItemAttachmentInput](#).

Property	Type	Description	Available Version
<code>description</code>	<a href="#">String</a>	Optional. The description of the canvas app.	29.0–31.0
<code>developerName</code>	<a href="#">String</a>	The developer name (API name) of the canvas app	29.0–31.0
<code>height</code>	<a href="#">String</a>	Optional. The height of the canvas app in pixels. Default height is 200 pixels.	29.0–31.0
<code>namespacePrefix</code>	<a href="#">String</a>	Optional. The namespace prefix of the Developer Edition organization in which the canvas app was created.	29.0–31.0
<code>parameters</code>	<a href="#">String</a>	Optional. Parameters passed to the canvas app in JSON format. Example: <pre>{ 'isUpdated'='true' }</pre>	29.0–31.0
<code>thumbnailUrl</code>	<a href="#">String</a>	Optional. A URL to a thumbnail image for the canvas app. Maximum dimensions are 120x120 pixels.	29.0–31.0
<code>title</code>	<a href="#">String</a>	The title of the link used to call the canvas app.	29.0–31.0

## ConnectApi.ContentAttachmentInput

Used to attach existing content to a comment or feed item.

**!** **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, use [ConnectApi.ContentCapabilityInput](#).

Subclass of [ConnectApi.FeedItemAttachmentInput](#).

Property	Type	Description	Available Version
<code>contentDocumentId</code>	<a href="#">String</a>	ID of the existing content.	28.0–31.0

## ConnectApi.DatacloudOrderInput

Input representation for a Datacloud order to purchase contacts or companies and retrieve purchase information.

Property	Type	Description	Required or Optional	Available Version
companyIds	<a href="#">String</a>	A comma-separated list of identification numbers for the companies to be purchased.  You can't include any contact IDs or your purchase fails.	Required to purchase companies	32.0
contactIds	<a href="#">String</a>	A comma-separated list of identification numbers for the contacts to be purchased.  You can't include any company IDs or your purchase fails.	Required to purchase contacts	32.0
userType	<a href="#">ConnectDatacloudUserTypeEnum</a>	Indicates the Data.com user type to be used. There are two user types. <ul style="list-style-type: none"> <li>• <code>Monthly</code> (default)</li> <li>• <code>Listpool</code></li> </ul>	Optional	32.0

SEE ALSO:

[postOrder\(orderInput\)](#)

## ConnectApi.FeedItemAttachmentInput

Used to attach a file to a feed item.

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, use [ConnectApi.FeedElementCapabilityInput](#).

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass for:

- [ConnectApi.CanvasAttachmentInput](#)
- [ConnectApi.ContentAttachmentInput](#)
- [ConnectApi.LinkAttachmentInput](#)
- [ConnectApi.NewFileAttachmentInput](#)
- [ConnectApi.PollAttachmentInput](#)

## ConnectApi.LinkAttachmentInput

Add links to a feed item.

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, use [ConnectApi.LinkCapabilityInput](#).

Subclass of [ConnectApi.FeedItemAttachmentInput](#).

Property	Type	Description	Available Version
url	String	URL to be used for the link	28.0–31.0
urlName	String	Title of the link	28.0–31.0

## ConnectApi.NewFileAttachmentInput

Attach a new file to a feed item.

**!** **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, use [ConnectApi.ContentCapabilityInput](#).

The actual binary file, that is the attachment, is provided as part of the [BinaryInput](#) in the method that takes this attachment input, such as `postFeedItem` or `postComment`.

Subclass of [ConnectApi.FeedItemAttachmentInput](#).

Property	Type	Description	Available Version
description	String	Description of the file to be uploaded.	28.0–31.0
title	String	The title of the file. This value is required and is also used as the file name. For example, if the title is My Title, and the file is a .txt file, the file name is My Title.txt.	28.0–31.0

## ConnectApi.PollAttachmentInput

Attach a poll to a feed item.

**!** **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, use [ConnectApi.PollCapabilityInput](#).

Subclass of [ConnectApi.FeedItemAttachmentInput](#).

Property	Type	Description	Available Version
pollChoices	List<String>	The text labels for the poll items. Polls must contain between 2 to 10 poll choices.	28.0–31.0

## ConnectApi Output Classes

Most `ConnectApi` methods return instances of `ConnectApi` output classes.

All properties are read-only, except for instances of output classes created within test code.

All output classes are concrete unless marked abstract in this documentation.

All concrete output classes have no-argument constructors that you can invoke only from test code. See [Testing ConnectApi Code](#).

## ConnectApi.AbstractCartItem

A cart item.

This class is abstract.

Superclass of:

- [ConnectApi.CartItem](#)
- [ConnectApi.CartItemWithoutPrice](#)

Property Name	Type	Description	Available Version
billingFrequency	<a href="#">ConnectApi.BillingFrequency</a>	Reserved for future use.	59.0
cartDeliveryGroupId	String	ID of the cart delivery group.	60.0
cartId	String	ID of the cart.	49.0
cartItemId	String	ID of the item.	49.0
childProduct Count	<a href="#">Integer</a> on page 3490	Number of child products in the cart that are associated with the item. A cart item can have child products if the <code>productClass</code> of the item is <code>Bundle</code> . For nested bundles, which include a child product that's also a bundle, <code>childProductCount</code> includes all child products.	62.0
customFields	<a href="#">List&lt;SObject&gt;</a>	Array of sObjects and viewable custom fields for the sObjects. Standard fields are ignored. Currently, only the <code>CartItem</code> sObject is supported. Field-level security rules from the <a href="#">shopper profile</a> are applied to the custom fields. The rules are applied for registered shoppers and for the guest shopper profile.	61.0
messagesSummary	<a href="#">ConnectApi.CartMessagesSummary</a>	Messages summary for the item.	49.0
name	String	Name of the item.	49.0
parentCartItemId	String	ID of the item's parent cart item. The value is empty if the item is a top-level cart item.	62.0
productDetails	<a href="#">ConnectApi.CartItemProduct</a>	Summary of the product details.	49.0
productId	String	ID of the product.	49.0
productSelling ModelId	String	Reserved for future use.	59.0
quantity	String	Quantity of the item.	49.0
sellingModelType	<a href="#">ConnectApi.SellingModelType</a>	Reserved for future use.	60.0
subscriptionTerm	<a href="#">Integer</a> on page 3490	Reserved for future use.	59.0

Property Name	Type	Description	Available Version
type	<a href="#">ConnectApi.CartItemType</a>	Type of item in a cart. Values are: <ul style="list-style-type: none"> <li>• <a href="#">DeliveryCharge</a></li> <li>• <a href="#">Product</a></li> </ul>	49.0

SEE ALSO:

[ConnectApi.CartItemResult](#)

## ConnectApi.AbstractContentHubItemType

An item type associated with a repository folder.

This class is abstract.

Superclass of:

- [ConnectApi.ContentHubItemTypeDetail](#)
- [ConnectApi.ContentHubItemTypeSummary](#)

Property Name	Type	Description	Available Version
contentStreamSupport	<a href="#">ConnectApi.ContentHubStreamSupport</a>	Support for content streaming. Values are: <ul style="list-style-type: none"> <li>• <a href="#">ContentStreamAllowed</a></li> <li>• <a href="#">ContentStreamNotAllowed</a></li> <li>• <a href="#">ContentStreamRequired</a></li> </ul>	39.0
description	<a href="#">String</a>	Description of the item type.	39.0
displayName	<a href="#">String</a>	Display name of the item type.	39.0
id	<a href="#">String</a>	ID of the item type.	39.0
isVersionable	<a href="#">Boolean</a>	Indicates whether the item type can have versions.	39.0
url	<a href="#">String</a>	URL to the detailed information of the item type.	39.0

## ConnectApi.AbstractDirectoryEntrySummary

A directory entry with summary information.

This class is abstract.

Superclass of:

- [ConnectApi.RepositoryGroupSummary](#)
- [ConnectApi.RepositoryUserSummary](#)

Property Name	Type	Description	Available Version
domain	<a href="#">String</a>	Domain of the directory entry.	39.0

Property Name	Type	Description	Available Version
email	String	Email of the directory entry.	39.0
id	String	ID of the directory entry.	39.0
type	ConnectApi. ContentHub DirectoryEntry Type	Type of directory entry. Values are: <ul style="list-style-type: none"> <li>GroupEntry</li> <li>UserEntry</li> </ul>	39.0

## ConnectApi.AbstractExtensionInformation

Extension information.

This class is abstract.

Superclass of [ConnectApi.LightningExtensionInformation](#).

Property Name	Type	Description	Available Version
extension InformationType	ConnectApi. ExtensionInformation Type	Information type of the extension. Values are: <ul style="list-style-type: none"> <li>Lightning</li> </ul>	40.0

## ConnectApi.AbstractGatewayCommonResponse

Payment gateway response fields commonly used in payment services.

This class is abstract.

Superclass of [ConnectApi.AbstractGatewayResponse](#).

Property Name	Type	Description	Available Version
gatewayAvsCode	String	Used to verify the address mapped to a payment method when the payments platform requests tokenization from the payment gateway.	50.0
gatewayDate	Datetime	Date when the notification occurred. Some gateways don't send this value.	50.0
gatewayMessage	String	Error messages that the gateway returned for the notification request. Maximum length of 255 characters.	50.0
gatewayResultCode	String	Gateway-specific result code. You can map the result code to a Salesforce-specific result code. Maximum length of 64 characters.	50.0
gatewayResultCodeDescription	String	A description of the gateway-specific result code that a payment gateway returned. Maximum length of 1,000 characters.	50.0

Property Name	Type	Description	Available Version
salesforceResultCode	<a href="#">String</a>	The Salesforce result code for the gateway result code.	50.0

## ConnectApi.AbstractGatewayResponse

Payment gateway response fields used in sale, authorization, and capture services.

This class is abstract.

Subclass of [ConnectApi.AbstractGatewayCommonResponse](#).

Super class of:

- [ConnectApi.AuthReversalGatewayResponse](#)
- [ConnectApi.AuthorizationGatewayResponse](#)
- [ConnectApi.AuthorizationReversalResponse](#)
- [ConnectApi.CaptureGatewayResponse](#)
- [ConnectApi.PaymentMethodTokenizationGatewayResponse](#)
- [ConnectApi.PostAuthGatewayResponse](#)
- [ConnectApi.RefundGatewayResponse](#)
- [ConnectApi.SaleGatewayResponse](#)

Property Name	Type	Description	Available Version
gatewayReferenceDetails	<a href="#">String</a>	Provides information about the gateway communication.	50.0
gatewayReferenceNumber	<a href="#">String</a>	Unique transaction ID created by the payment gateway.	50.0

## ConnectApi.AbstractManagedContentChannelRepresentation

Managed content channel.

This class is abstract.

Super class of:

- [ConnectApi.ManagedContentChannel](#)
- [ConnectApi.ManagedContentChannelSummary](#)

No additional properties.

SEE ALSO:

[ConnectApi.ManagedContentChannelsRepresentation](#)

## ConnectApi.AbstractManagedContentDeliveryDocument

Managed content delivery document.

This class is abstract.

Superclass of:

- [ConnectApi.ManagedContentDeliveryDocument](#)
- [ConnectApi.ManagedContentDeliveryDocumentSummary](#)

Property Name	Type	Description	Available Version
contentKey	String	Globally unique identifier (GUID) for the managed content.	55.0
contentType	<a href="#">ConnectApi.ManagedContentTypeSummary</a>	Type of managed content.	55.0
language	String	Language locale of the managed content.	55.0
managedContentId	String	ID of the managed content.	55.0
publishedDate	Datetime	Most recent publish date of the managed content.	55.0
resourceUrl	String	URL to the single content delivery resource.	55.0
title	String	Title of the managed content.	55.0
unauthenticatedUrl	String	Public URL for the managed content.	55.0
urlName	String	URL name of the managed content.	55.0

SEE ALSO:

[ConnectApi.ManagedContentDeliveryDocumentCollection](#)

## ConnectApi.AbstractManagedContentReference

Managed content reference.

This class is abstract.

Superclass of:

- [ConnectApi.ManagedContentReference](#)
- [ConnectApi.ManagedContentReferenceSummary](#)

Property Name	Type	Description	Available Version
contentKey	String	Unique identifier for the managed content reference.	54.0
managedContentId	String	ID of the managed content reference.	54.0
resourceUrl	String	URL to the single content delivery resource.	55.0

SEE ALSO:

[ConnectApi.ManagedContentDeliveryDocumentCollection](#)

## ConnectApi.AbstractMessageBody

Abstract message body.

This class is abstract.

Superclass of:

- [ConnectApi.FeedBody](#)
- [ConnectApi.MessageBody](#)

Name	Type	Description	Available Version
isRichText	<a href="#">Boolean</a>	Indicates whether the body is rich text.	35.0
messageSegments	<a href="#">List&lt;ConnectApi.MessageSegment&gt;</a>	List of message segments	28.0
text	<a href="#">String</a>	Display-ready text. Use this text if you don't want to process the message segments.	28.0

## ConnectApi.AbstractNBAAction

A recommended action of recommendation strategy.

This class is abstract.

Superclass of [ConnectApi.NBAFlowAction](#).

Property Name	Type	Description	Available Version
parameters	<a href="#">ConnectApi.NBAActionParameter</a>	List of parameters to pass to the action.	45.0
type	<a href="#">ConnectApi.NBAActionType</a>	Type of action. Values are: <ul style="list-style-type: none"> <li>• <code>Flow</code>—Automated process tool with multiple subtypes.</li> </ul>	45.0

SEE ALSO:

[ConnectApi.NBARecommendation](#)

## ConnectApi.AbstractNBATarget

A recommendation target of a recommendation strategy.

This class is abstract.

Superclass of [ConnectApi.NBANativeRecommendation](#).

Property Name	Type	Description	Available Version
type	<a href="#">ConnectApi.NBATargetType</a>	Type of target. Values are: <ul style="list-style-type: none"> <li>• Recommendation</li> </ul>	45.0

SEE ALSO:

[ConnectApi.NBARecommendation](#)

## ConnectApi.AbstractRecommendation

A Chatter, custom, or static recommendation.

This class is abstract.

Superclass of:

- [ConnectApi.EntityRecommendation](#)
- [ConnectApi.NonEntityRecommendation](#)

[ConnectApi.NonEntityRecommendation](#) isn't used in version 34.0 and later. In version 34.0 and later, [ConnectApi.EntityRecommendation](#) is used for all recommendations.

Property Name	Type	Description	Available Version
explanation	<a href="#">ConnectApi.RecommendationExplanation</a>	The Chatter, custom, or static recommendation explanation.	32.0
platformActionGroup	<a href="#">ConnectApi.PlatformActionGroup</a>	A platform action group instance with state appropriate for the context user.	34.0
recommendationType	<a href="#">ConnectApi.RecommendationType</a>	Specifies the type of record being recommended.	32.0
url	<a href="#">String</a>	URL for the Chatter, custom, or static recommendation.	34.0

SEE ALSO:

[ConnectApi.RecommendationsCapability](#)

[ConnectApi.RecommendationCollection](#)

## ConnectApi.AbstractRecommendationExplanation

Explanation for a Chatter recommendation.

This class is abstract.

Superclass of [ConnectApi.RecommendationExplanation](#).

Property Name	Type	Description	Available Version
summary	String	Summary explanation for the Chatter recommendation.	32.0
type	ConnectApi.RecommendationExplanationType	<p>Indicates the reason for the Chatter recommendation.</p> <ul style="list-style-type: none"> <li>• <code>ArticleHasRelatedContent</code>—Articles with related content to a context article.</li> <li>• <code>ArticleViewedTogether</code>—Articles often viewed together with the article that the context user just viewed.</li> <li>• <code>ArticleViewedTogetherWithViewers</code>—Articles often viewed together with other records that the context user views.</li> <li>• <code>Custom</code>—Custom recommendations.</li> <li>• <code>FilePopular</code>—Files with many followers or views.</li> <li>• <code>FileViewedTogether</code>—Files often viewed at the same time as other files that the context user views.</li> <li>• <code>FollowedTogetherWithFollowees</code>—Users often followed together with other records that the context user follows.</li> <li>• <code>GroupMembersFollowed</code>—Groups with members that the context user follows.</li> <li>• <code>GroupNew</code>—Recently created groups.</li> <li>• <code>GroupPopular</code>—Groups with many active members.</li> <li>• <code>ItemViewedTogether</code>—Records often viewed at the same time as other records that the context user views.</li> <li>• <code>PopularApp</code>—Applications that are popular.</li> <li>• <code>RecordOwned</code>—Records that the context user owns.</li> <li>• <code>RecordParentOfFollowed</code>—Parent records of records that the context user follows.</li> <li>• <code>RecordViewed</code>—Records that the context user recently viewed.</li> <li>• <code>TopicFollowedTogether</code>—Topics often followed together with the record that the context user just followed.</li> <li>• <code>TopicFollowedTogetherWithFollowees</code>—Topics often followed together with other records that the context user follows.</li> </ul>	32.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>• <code>TopicPopularFollowed</code>—Topics with many followers.</li> <li>• <code>TopicPopularLiked</code>—Topics on posts that have many likes.</li> <li>• <code>UserDirectReport</code>—Users who report to the context user.</li> <li>• <code>UserFollowedTogether</code>—Users often followed together with the record that the context user followed .</li> <li>• <code>UserFollowsSameUsers</code>—Users who follow the same users as the context user.</li> <li>• <code>UserManager</code>—The context user’s manager.</li> <li>• <code>UserNew</code>—Recently created users.</li> <li>• <code>UserPeer</code>—Users who report to the same manager as the context user.</li> <li>• <code>UserPopular</code>—Users with many followers.</li> <li>• <code>UserViewingSameRecords</code>—Users who view the same records as the context user.</li> </ul>	

## ConnectApi.AbstractRecordField

A field on a record.

This class is abstract.

Superclass of:

- [ConnectApi.BlankRecordField](#)
- [ConnectApi.LabeledRecordField](#)

Message segments in a feed item are typed as `ConnectApi.MessageSegment`. Feed item capabilities are typed as `ConnectApi.FeedItemCapability`. Record fields are typed as `ConnectApi.AbstractRecordField`. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

 **Important:** The composition of a feed can change between releases. Write your code to handle instances of unknown subclasses.

Name	Type	Description	Available Version
type	<a href="#">String</a>	Type of the field. One of these values: <ul style="list-style-type: none"> <li>• Address</li> <li>• Blank</li> <li>• <a href="#">Boolean</a></li> <li>• Compound</li> <li>• CreatedBy</li> <li>• <a href="#">Date</a></li> <li>• DateTime</li> <li>• Email</li> <li>• LastModifiedBy</li> <li>• Location</li> <li>• Name</li> <li>• Number</li> <li>• Percent</li> <li>• Phone</li> <li>• Picklist</li> <li>• Reference</li> <li>• Text</li> <li>• <a href="#">Time</a></li> </ul>	29.0

SEE ALSO:

[ConnectApi.RecordViewSection](#)

## ConnectApi.AbstractRecordView

A view of any record in the org, including a custom object record. This object is used if a specialized object, such as User or ChatterGroup, isn't available for the record type.

This class is abstract.

Subclass of [ConnectApi.ActorWithId](#).

Superclass of:

- [ConnectApi.RecordSummary](#)
- [ConnectApi.RecordView](#)

Name	Type	Description	Available Version
name	<a href="#">String</a>	The localized name of the record.	29.0

## ConnectApi.AbstractRepositoryFile

A repository file.

This class is abstract.

Subclass of [ConnectApi.AbstractRepositoryItem](#).

Superclass of:

- [ConnectApi.RepositoryFileDetail](#)
- [ConnectApi.RepositoryFileSummary](#)

Property Name	Type	Description	Available Version
checkinComment	String	Checkin comment of the file.	39.0
contentBody	String	Text of the file's content if available, otherwise <code>null</code> .	43.0
contentSize	Integer	Length in bytes of the content of the file.	39.0
downloadUrl	String	URL to the repository file content.	39.0
external ContentUrl	String	URL of this file's content in the external system.	39.0
external DocumentUrl	String	URL of this file in the external system.	39.0
external FilePermission Information	<a href="#">ConnectApi.ExternalFilePermissionInformation</a>	External file permission information, such as available groups, available permission types, and current sharing status, or <code>null</code> if <code>includeExternalFilePermissionsInfo</code> is <code>false</code> .	39.0
contentType	String	Mime type of the file.	39.0
previewUrl Thumbnail	String	URL to the thumbnail preview (240 x 180 PNG).	39.0
previewUrl ThumbnailBig	String	URL to the big thumbnail preview (720 x 480 PNG).	39.0
previewUrl ThumbnailTiny	String	URL to the tiny thumbnail preview (120 x 90 PNG).	39.0
previewsUrl	String	URL to the previews.	39.0
title	String	Title of the file.	39.0
versionId	String	ID of the file version in the external system.	39.0

## ConnectApi.AbstractRepositoryFolder

A repository folder.

This class is abstract.

Subclass of [ConnectApi.AbstractRepositoryItem](#).

Superclass of:

- [ConnectApi.RepositoryFolderDetail](#)
- [ConnectApi.RepositoryFolderSummary](#)

Property Name	Type	Description	Available Version
externalFolderUrl	<a href="#">String</a>	URL of this folder in the external system.	39.0
folderItemsUrl	<a href="#">String</a>	URL that lists the files and folders in this folder.	39.0
path	<a href="#">String</a>	Absolute path of the folder in the external system.	39.0

## ConnectApi.AbstractRepositoryItem

A repository item.

This class is abstract.

Superclass of:

- [ConnectApi.AbstractRepositoryFile](#)
- [ConnectApi.AbstractRepositoryFolder](#)

Property Name	Type	Description	Available Version
createdBy	<a href="#">String</a>	Name of the user who created the item.	39.0
createdDate	<a href="#">Datetime</a>	Date the item was created.	39.0
description	<a href="#">String</a>	Description of the Item.	39.0
id	<a href="#">String</a>	ID of the item.	39.0
itemTypeUrl	<a href="#">String</a>	URL to the item type information.	39.0
modifiedBy	<a href="#">String</a>	Name of the user who last modified the item.	39.0
modifiedDate	<a href="#">Datetime</a>	Date the item was last modified.	39.0
motif	<a href="#">ConnectApi.Motif</a>	Motif of the item.	39.0
name	<a href="#">String</a>	Name of the item.	39.0
repository	<a href="#">ConnectApi.Reference</a>	Item external repository.	39.0
type	<a href="#">String</a>	Item type, file or folder.	39.0
url	<a href="#">String</a>	The URL to the item.	39.0

## ConnectApi.AbstractUserMissionActivity

User activity associated with missions.

This class is abstract.

Superclass of:

- [ConnectApi.UserMission](#)
- [ConnectApi.UserMissionActivity](#)

Property Name	Type	Description	Available Version
<code>activityCount</code>	<a href="#">Integer</a>	Number of mission activities of the specified type for the user.	45.0
<code>activityType</code>	<a href="#">String</a>	Type of mission activity for a user. Values are: <ul style="list-style-type: none"> <li>• <code>FeedItemAnswerAQuestion</code>—User answered a question.</li> <li>• <code>FeedItemLikeSomething</code>—User liked a post or comment.</li> <li>• <code>FeedItemMarkAnswerAsBest</code>—User marked an answer as the best answer.</li> <li>• <code>FeedItemPostQuestion</code>—User posted a question.</li> <li>• <code>FeedItemReceiveAComment</code>—User received a comment on a post.</li> <li>• <code>FeedItemReceiveALike</code>—User received a like on a post or comment.</li> <li>• <code>FeedItemReceiveAnAnswer</code>—User received an answer to a question.</li> <li>• <code>FeedItemWriteAComment</code>—User commented on a post.</li> <li>• <code>FeedItemWriteAPost</code>—User made a post.</li> <li>• <code>FeedItemYourAnswerMarkedBest</code>—User’s answer was marked as the best answer.</li> </ul>	45.0

## ConnectApi.ActionLinkDefinition

The definition of an action link. Action link definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

Property Name	Type	Description	Available Version
<code>actionUrl</code>	<a href="#">String</a>	The action link URL. For example, a <code>Ui</code> action link URL is a Web page. A <code>Download</code> action link URL is a link to the file to download. <code>Ui</code> and <code>Download</code> action link URLs are provided to clients. An <code>Api</code> or	33.0

Property Name	Type	Description	Available Version
		<code>ApiAsync</code> action link URL is a REST resource. <code>Api</code> and <code>ApiAsync</code> action link URLs aren't provided to clients. Links to Salesforce can be relative. All other links must be absolute and start with <code>https://</code> .	
<code>createdDate</code>	<a href="#">Datetime</a>	ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.	33.0
<code>excludedUserId</code>	<a href="#">String</a>	ID of a single user to exclude from performing the action. If you specify an <code>excludedUserId</code> , you can't specify a <code>userId</code> .	33.0
<code>groupDefault</code>	<a href="#">Boolean</a>	<code>true</code> if this action is the default action link in the action link group; <code>false</code> otherwise. There can be only one default action link per action link group. The default action link gets distinct styling in the Salesforce UI.	33.0
<code>headers</code>	<a href="#">List&lt;ConnectApi.RequestHeader&gt;</a>	The request headers for the <code>Api</code> and <code>ApiAsync</code> action link types.	33.0
<code>id</code>	<a href="#">String</a>	The 18-character ID for the action link definition.	33.0
<code>label</code>	<a href="#">String</a>	<p>A custom label to display on the action link button. A <code>label</code> value can be set only in an action link template.</p> <p>Action links have four statuses: <code>NewStatus</code>, <code>PendingStatus</code>, <code>SuccessStatus</code>, and <code>FailedStatus</code>. These strings are appended to the label for each status:</p> <ul style="list-style-type: none"> <li><code>label</code></li> <li><code>label Pending</code></li> <li><code>label Success</code></li> <li><code>label Failed</code></li> </ul> <p>For example, if the value of <code>label</code> is "See Example," the values of the four action link states are: See Example, See Example Pending, See Example Success, and See Example Failed.</p> <p>An action link can use either <code>label</code> or <code>labelKey</code> to generate label names, it can't use both. If <code>label</code> has a value, the value of <code>labelKey</code> is <code>None</code>. If <code>labelKey</code> has a value other than <code>None</code>, the value of <code>label</code> is <code>null</code>.</p>	34.0
<code>labelKey</code>	<a href="#">String</a>	Key for the set of labels to show in the user interface. A set includes labels for these states: <code>NewStatus</code> , <code>PendingStatus</code> , <code>SuccessStatus</code> , <code>FailedStatus</code> . For example, if you use the <code>Approve</code> key, you get these labels: Approve, Pending, Approved, Failed.	33.0

Property Name	Type	Description	Available Version
		For a complete list of label keys, see <a href="#">Action Links Labels</a> in the <i>Connect REST API Developer Guide</i> .	
method	<a href="#">ConnectApi.HttpRequestMethod</a>	The HTTP method. One of these values: <ul style="list-style-type: none"> <li><code>HttpDelete</code>—Returns HTTP 204 on success. Response body or output class is empty.</li> <li><code>HttpGet</code>—Returns HTTP 200 on success.</li> <li><code>HttpHead</code>—Returns HTTP 200 on success. Response body or output class is empty.</li> <li><code>HttpPatch</code>—Returns HTTP 200 on success or HTTP 204 if the response body or output class is empty.</li> <li><code>HttpPost</code>—Returns HTTP 201 on success or HTTP 204 if the response body or output class is empty. Exceptions are the batch posting resources and methods, which return HTTP 200 on success.</li> <li><code>HttpPut</code>—Return HTTP 200 on success or HTTP 204 if the response body or output class is empty.</li> </ul>	33.0
modifiedDate	<a href="#">Datetime</a>	ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.	33.0
requestBody	<a href="#">String</a>	The request body for <code>Api</code> and <code>ApiAsync</code> action link types. <p> <b>Note:</b> Escape quotation mark characters in the <code>requestBody</code> value.</p>	33.0
requiresConfirmation	<a href="#">Boolean</a>	<code>true</code> to require the user to confirm the action; <code>false</code> otherwise.	33.0
templateId	<a href="#">String</a>	The ID of the action link template from which to instantiate this action link. If the action link isn't associated with a template, the value is <code>null</code> .	33.0
type	<a href="#">ConnectApi.ActionLinkType</a>	Defines the type of action link. Values are: <ul style="list-style-type: none"> <li><code>Api</code>—The action link calls a synchronous API at the action URL. Salesforce sets the status to <code>SuccessfulStatus</code> or <code>FailedStatus</code> based on the HTTP status code returned by your server.</li> <li><code>ApiAsync</code>—The action link calls an asynchronous API at the action URL. The action remains in a <code>PendingStatus</code> state until a third party makes a request to</li> </ul>	33.0

Property Name	Type	Description	Available Version
		<p><code>/connect/action-links/<i>actionLinkId</i></code> to set the status to <code>SuccessfulStatus</code> or <code>FailedStatus</code> when the asynchronous operation is complete.</p> <ul style="list-style-type: none"> <li><code>Download</code>—The action link downloads a file from the action URL.</li> <li><code>Ui</code>—The action link takes the user to a web page at the action URL.</li> </ul> <p> <b>Note:</b> Invoking <code>ApiAsync</code> action links from an app requires a call to set the status. However, there isn't currently a way to set the status of an action link using Apex. To set the status, use Connect REST API. See the Action Link resource in the <a href="#">Connect REST API Developer Guide</a> for more information.</p>	
<code>userId</code>	<a href="#">String</a>	The ID of the user who can execute the action. If not specified or <code>null</code> , any user can execute the action. If you specify a <code>userId</code> , you can't specify an <code>excludedUserId</code> .	33.0

SEE ALSO:

[ConnectApi.ActionLinkGroupDefinition](#)

## ConnectApi.ActionLinkDiagnosticInfo

Any diagnostic information that may exist for an executed action link. Diagnostic info is provided only for users who can access the action link.

Property Name	Type	Description	Available Version
<code>diagnosticInfo</code>	<a href="#">String</a>	Any diagnostic information returned when an action link is executed. Diagnostic information is provided only for users who can access the action link.	33.0
<code>url</code>	<a href="#">String</a>	The URL for this action link diagnostic information.	33.0

## ConnectApi.ActionLinkGroupDefinition

The definition of an action link group. Information in the action link group definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link group definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

Property Name	Type	Description	Available Version
actionLinks	List<ConnectApi.ActionLinkDefinition>	A collection of action link definitions that make up the action link group. Within an action link group, action links are displayed in the order listed in the actionLinks property of the ConnectApi.ActionLinkGroupDefinitionInput class. Within a feed item, action link groups are displayed in the order specified in the actionLinkGroupIds property of the ConnectApi.AssociatedActionsCapabilityInput class.	33.0
category	ConnectApi.PlatformActionGroupCategory	Indicates the priority and location of the action links. Values are: <ul style="list-style-type: none"> <li>Primary—The action link group is displayed in the body of the feed element.</li> <li>Overflow—The action link group is displayed in the overflow menu of the feed element.</li> </ul>	33.0
createdDate	Datetime	ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.	33.0
executionsAllowed	ConnectApi.ActionLinkExecutionsAllowed	Defines the number of times an action link can be executed. Values are: <ul style="list-style-type: none"> <li>Once—An action link can be executed only one time across all users.</li> <li>OncePerUser—An action link can be executed only one time for each user.</li> <li>Unlimited—An action link can be executed an unlimited number of times by each user. If the action link's actionType is Api or ApiAsync, you can't use this value.</li> </ul>	33.0
expirationDate	Datetime	ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, that represents the date and time this action group expires and can no longer be executed. If the value is null, there isn't an expiration date.	33.0
id	String	18-character ID of the action link group definition.	33.0
modifiedDate	Datetime	ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.	33.0
templateId	String	The ID of the action link group template from which to instantiate this action link group, or null if this group isn't associated with a template.	33.0
url	String	The URL for this action link group definition.	33.0

## ConnectApi.ActivitySharingResult

The results of sharing a captured email or event.

Property Name	Type	Description	Available Version
success	Boolean	Whether the share operation succeeded or not.	39.0

## ConnectApi.Actor

Actor.

This class is abstract.

Superclass of:

- [ConnectApi.ActorWithId](#)
- [ConnectApi.RecommendedObject](#)
- [ConnectApi.UnauthenticatedUser](#)

Name	Type	Description	Available Version
name	String	Name of the actor, such as the group name.	28.0
type	String	One of the following: <ul style="list-style-type: none"> <li>• file</li> <li>• group</li> <li>• recommendedObject (version 34.0 and later)</li> <li>• unauthenticateduser</li> <li>• user</li> <li>• <i>record type name</i>—the name of the record type, such as myCustomObject__c or Account</li> </ul>	28.0

## ConnectApi.ActorWithId

Actor with ID.

This class is abstract.

Subclass of [ConnectApi.Actor](#).

Superclass of:

- [ConnectApi.AbstractRecordView](#)
- [ConnectApi.ArticleSummary](#)
- [ConnectApi.ChatterGroup](#)
- [ConnectApi.ContentHubRepository](#)
- [ConnectApi.File](#)
- [ConnectApi.RelatedFeedPost](#)
- [ConnectApi.User](#)

Name	Type	Description	Available Version
<code>id</code>	<a href="#">String</a>	Actor's 18-character ID	28.0
<code>motif</code>	<a href="#">ConnectApi.Motif</a>	An icon that identifies the actor as a user, group, file, or custom object. The icon isn't the user or group photo, and it isn't a preview of the file. The motif can also contain the object's base color.	28.0
<code>mySubscription</code>	<a href="#">ConnectApi.Reference</a>	If the context user is following the item, this contains information about the subscription, else returns <code>null</code> .	28.0
<code>url</code>	<a href="#">String</a>	Connect REST API URL for the resource	28.0

SEE ALSO:

- [ConnectApi.FeedElement](#)
- [ConnectApi.FeedEntitySummary](#)
- [ConnectApi.GroupRecord](#)
- [ConnectApi.MentionSegment](#)
- [ConnectApi.RecordSummaryList](#)

## ConnectApi.Address

Address.

Name	Type	Description	Available Version
<code>city</code>	<a href="#">String</a>	Name of the city	28.0
<code>country</code>	<a href="#">String</a>	Name of the country	28.0
<code>formattedAddress</code>	<a href="#">String</a>	Formatted address per the locale of the context user	28.0
<code>state</code>	<a href="#">String</a>	Name of the state, province, or so on	28.0
<code>street</code>	<a href="#">String</a>	Street number	28.0

Name	Type	Description	Available Version
zip	String	Zip or postal code	28.0

SEE ALSO:

[ConnectApi.DatacloudCompany](#)

[ConnectApi.DatacloudContact](#)

[ConnectApi.UserDetail](#)

## ConnectApi.AdjustOrderSummaryOutputRepresentation

Output representation of the financial changes for an adjust items action. For a preview action, these values are the expected output. For a submit action, these values are the actual output.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
changeBalances	<a href="#">ConnectApi.ChangeItemOutputRepresentation</a>	Expected (for preview) or actual (for submit) financial values for the price adjustment action. Most of the values match the change order values. If two change orders are returned, then these values combine them. The sign of a value in this output is the opposite of the corresponding value on a change order record. For example, a discount is a positive value in <code>changeBalances</code> and a negative value on a change order record.	49.0
inFulfillmentChangeOrderId	String	ID of the change Order that holds the financial changes applicable to OrderItemSummary quantities that are in the process of being fulfilled. This change Order is only created for a request that specified an <code>allocatedItemsChangeOrderType</code> of <code>InFulfillment</code> . For an <code>adjustPreview</code> call, this value is always null.	55.0
orderSummaryId	String	ID of the OrderSummary.	49.0
postFulfillmentChangeOrderId	String	ID of the change Order that holds the financial changes applicable to OrderItemSummary quantities that have been fulfilled. For an <code>adjustPreview</code> call, this value is always null.	49.0
preFulfillmentChangeOrderId	String	ID of the change Order that holds the financial changes applicable to OrderItemSummary quantities that have not been fulfilled. If the request specified an <code>allocatedItemsChangeOrderType</code> of <code>PreFulfillment</code> , this change Order also includes the changes applicable to OrderItemSummary quantities	49.0

Property Name	Type	Description	Available Version
		that are in the process of being fulfilled. For an <code>adjustPreview</code> call, this value is always null.	

## ConnectApi.Alternative

Alternative representation for an extension on a feed element.

Property Name	Type	Description	Available Version
<code>textRepresentation</code>	String	Text representation of the extension.	40.0
<code>thumbnailUrl</code>	String	Thumbnail URL to the extension.	40.0
<code>title</code>	String	Title of the extension.	40.0

## ConnectApi.AlternativePaymentMethodOutput

Alternative payment method details output.

Property Name	Type	Description	Available Version
<code>accountId</code>	String	Salesforce Payments account to which this payment method is linked.	56.0
<code>comments</code>	String	Details about a record added by a user. Maximum of 1,000 characters.	56.0
<code>email</code>	String	Email address of the card holder.	56.0
<code>gatewayToken</code>	String	A unique, alphanumeric ID, called a token, that a payment gateway generates when it first processes a payment. The token replaces the actual payment data so that the data is kept secure. This token is stored as encrypted text, and can be used for recurring payments.	56.0
<code>gatewayTokenDetails</code>	String	Detailed information about the gateway token.	56.0
<code>name</code>	String	Name that you assign to the payment method object.	56.0

## ConnectApi.Announcement

An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement.

Name	Type	Description	Available Version
expirationDate	<a href="#">Datetime</a>	The Salesforce UI displays an announcement until 11:59 p.m. on this date unless another announcement is posted first. The Salesforce UI ignores the time value in the <code>expirationDate</code> . However, you can use the time value to create your own display logic in your own UI.	31.0
feedElement	<a href="#">ConnectApi.FeedElement</a>	The feed element that contains the body of the announcement and its associated comments, likes, and so on.	31.0
id	<a href="#">String</a>	18-character ID of the announcement.	31.0
isArchived	<a href="#">Boolean</a>	Specifies whether the announcement is archived.	36.0
sendEmails	<a href="#">Boolean</a>	Specifies whether the announcement is sent as an email to all group members.	36.0
url	<a href="#">String</a>	The URL to the announcement.	33.0

SEE ALSO:

[ConnectApi.AnnouncementPage](#)

[ConnectApi.ChatterGroup](#)

## ConnectApi.AnnouncementPage

A collection of announcements.

Name	Type	Description	Available Version
announcements	<a href="#">List&lt;ConnectApi.Announcement&gt;</a>	A collection of <code>ConnectApi.Announcement</code> objects.	31.0
currentPageUrl	<a href="#">String</a>	Connect REST API URL identifying the current page.	31.0
nextPageUrl	<a href="#">String</a>	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	31.0
previousPageUrl	<a href="#">String</a>	Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	31.0

## ConnectApi.ApprovalCapability

If a feed element has this capability, it includes information about an approval.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
id	String	The work item ID. The work item ID is <code>null</code> if there isn't a pending work item associated with the approval record.	32.0
postTemplateFields	List<ConnectApi.ApprovalPostTemplateField>	The details of the approval post template field.	32.0
processInstanceStepId	String	The process instance step ID. The associated record represents one step in an approval process.	32.0
status	ConnectApi.WorkflowProcessStatus	The status of the approval.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.ApprovalIntent

Approval intent for a social post.

Property Name	Type	Description	Available Version
isRecallable	Boolean	Specifies whether the social post can be recalled ( <code>true</code> ) or not ( <code>false</code> ).	45.0

SEE ALSO:

[ConnectApi.SocialPostIntents](#)

## ConnectApi.ApprovalPostTemplateField

Approval post template field.

Name	Type	Description	Available Version
displayName	String	The field name.	28.0
displayValue	String	The field value or <code>null</code> if the field is set to <code>null</code> .	28.0
record	ConnectApi.Reference	A record ID. If no record exists or if the reference is <code>null</code> , this value is <code>null</code> .	28.0

SEE ALSO:

[ConnectApi.ApprovalCapability](#)

## ConnectApi.ArticleItem

Article item in question and answers suggestions.

Property Name	Type	Description	Available Version
id	String	Id of the article.	32.0
rating	Double	The rating of the article.	32.0
title	String	Title of the article.	32.0
urlLink	String	Link URL of the article.	32.0
viewCount	Integer	Number of votes given to the article.	32.0

SEE ALSO:

[ConnectApi.QuestionAndAnswersSuggestions](#)

## ConnectApi.ArticleSummary

A knowledge article summary.

Subclass of [ConnectApi.ActorWithId](#).

Property Name	Type	Description	Available Version
articleType	String	Type of the knowledge article.	37.0
knowledgeArticleVersionId	String	ID of the knowledge article version.	39.0
lastPublishedDate	Datetime	Last published date of the knowledge article.	37.0
rating	Double	The rating of the article.	37.0
summary	String	Summary of the knowledge article contents.	37.0
title	String	Title of the knowledge article.	37.0
urlName	String	URL name of the knowledge article.	37.0
viewCount	Integer	Number of times the knowledge article has been viewed.	38.0

## ConnectApi.AssociatedActionsCapability

If a feed element has this capability, it has platform actions associated with it.

Property Name	Type	Description	Available Version
platformAction Groups	List<ConnectApi.PlatformActionGroup>	The platform action groups associated with a feed element. Platform action groups are returned in the order specified in the ConnectApi.AssociatedActions CapabilityInput class.	33.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.AsyncOutputRepresentation

Output representation of the async operation.

Subclass of [ConnectApi.BaseAsyncOutputRepresentation](#).

No additional properties.

SEE ALSO:

[multipleEnsureFundsAsync\(multipleEnsureFundsInput\)](#)

[ConnectApi.MultipleAsyncOutputRepresentation](#)

## ConnectApi.Audience

A personalization audience.

Property Name	Type	Description	Available Version
criteria	List<ConnectApi.AudienceCriteriaDetail>	Criteria details for the audience.	48.0
customFormula	String	Custom formula for the audience criteria. For example, (1 AND 2) OR 3.	48.0
formulaFilterType	ConnectApi.FormulaFilterType	Formula filter type for the personalization audience. Values are: <ul style="list-style-type: none"> <li>AllCriteriaMatch—All audience criteria are true (AND operation).</li> <li>AnyCriterionMatches—Any audience criterion is true (OR operation).</li> <li>CustomLogicMatches—Audience criteria match the custom formula (for example, (1 AND 2) OR 3).</li> </ul>	48.0
id	String	ID of the audience.	48.0
name	String	Name of the audience.	48.0

Property Name	Type	Description	Available Version
targets	<a href="#">List&lt;ConnectApi.AudienceTargetAssignment&gt;</a>	Target assignments for the audience.	48.0
url	<a href="#">String</a>	URL to this audience.	48.0

SEE ALSO:

[ConnectApi.AudienceCollection](#)

## ConnectApi.AudienceCollection

Collection of personalization audiences.

Property Name	Type	Description	Available Version
audiences	<a href="#">List&lt;ConnectApi.Audience&gt;</a>	Collection of audiences.	48.0

## ConnectApi.AudienceCriteria

Custom recommendation audience criteria.

This class is abstract.

This class is a superclass of:

- [ConnectApi.CustomListAudienceCriteria](#)
- [ConnectApi.NewUserAudienceCriteria](#)

Property Name	Type	Description	Available Version
type	<a href="#">ConnectApi.RecommendationAudienceCriteriaType</a>	Specifies the custom recommendation audience criteria type. One of these values: <ul style="list-style-type: none"> <li>• <code>CustomList</code>—A custom list of users makes up the audience.</li> <li>• <code>MaxDaysInCommunity</code>—New members make up the audience.</li> </ul>	36.0

SEE ALSO:

[ConnectApi.RecommendationAudience](#)

## ConnectApi.AudienceCriteriaDetail

Personalization audience criteria.

Property Name	Type	Description	Available Version
criteria	<a href="#">List&lt;ConnectApi.AudienceCriteriaDetail&gt;</a>	List of mappings of audience criteria fields and values.	48.0
criteriaNumber	<a href="#">Integer</a>	Number associated with the audience criterion in a formula. For example, (1 AND 2) OR 3. If unspecified, criteria are assigned numbers in the order that they're added.	48.0
criteriaOperator	<a href="#">ConnectApi.AudienceCriteriaOperator</a>	Operator used in the personalization audience criterion. Values are: <ul style="list-style-type: none"> <li>• <code>Contains</code></li> <li>• <code>Equal</code></li> <li>• <code>GreaterThan</code></li> <li>• <code>GreaterThanOrEqual</code></li> <li>• <code>Includes</code></li> <li>• <code>LessThan</code></li> <li>• <code>LessThanOrEqual</code></li> <li>• <code>NotEqual</code></li> <li>• <code>NotIncludes</code></li> <li>• <code>StartsWith</code></li> </ul>	48.0
criteriaType	<a href="#">ConnectApi.AudienceCriteriaType</a>	Type of personalization audience criterion. Values are: <ul style="list-style-type: none"> <li>• <code>Audience</code>—Criterion based on audience.</li> <li>• <code>Default</code>—Audience has no criteria.</li> <li>• <code>Domain</code>—Criterion based on domain.</li> <li>• <code>FieldBased</code>—Criterion based on object fields.</li> <li>• <code>GeoLocation</code>—Criterion based on location.</li> <li>• <code>Permission</code>—Criterion based on standard or custom permissions.</li> <li>• <code>Profile</code>—Criterion based on profile.</li> </ul>	48.0

SEE ALSO:

[ConnectApi.Audience](#)

## ConnectApi.AudienceCriteriaDetail

Audience criterion information.

Property Name	Type	Description	Available Version
value	<a href="#">Map&lt;String, String&gt;</a>	Mapping of an audience criterion value and field.	48.0

SEE ALSO:

[ConnectApi.AudienceCriteriaDetail](#)

## ConnectApi.AudienceTarget

Personalization audience assigned to a target.

Property Name	Type	Description	Available Version
audienceName	<a href="#">String</a>	Name of the audience assigned to the target.	48.0
id	<a href="#">String</a>	ID of the audience assigned to the target.	48.0
url	<a href="#">String</a>	URL to the audience assigned to the target.	48.0

SEE ALSO:

[ConnectApi.Target](#)

## ConnectApi.AudienceTargetAssignment

Target assignments for a personalization audience.

Property Name	Type	Description	Available Version
formulaScope	<a href="#">ConnectApi. FormulaScope</a>	Formula scope of the target.	51.0
groupName	<a href="#">String</a>	Group name of the target. Groups bundle related target and audience pairs.	48.0
id	<a href="#">String</a>	ID of the target.	48.0
isMatch	<a href="#">Boolean</a>	Specifies whether the target matches the current context ( <code>true</code> ) or doesn't ( <code>false</code> ).	48.0
priority	<a href="#">Integer</a>	Priority of the target. Within a group, priority determines which target is returned if the user matches more than one audience.	48.0
publishStatus	<a href="#">ConnectApi. PublishStatus</a>	Publish status of the target. Values are: <ul style="list-style-type: none"> <li>• Draft</li> <li>• Live</li> </ul>	48.0
targetType	<a href="#">String</a>	Type of target, indicating the nature of the data being targeted.	48.0

Property Name	Type	Description	Available Version
targetValue	<a href="#">String</a>	Value of the target.	48.0
url	<a href="#">String</a>	URL to the target.	48.0

SEE ALSO:

[ConnectApi.Audience](#)

## ConnectApi.AvailableLocationOutputRepresentation

A set of inventory locations that can combine to fulfill an order.

Property Name	Type	Description	Available Version
locations	<a href="#">List&lt;String&gt;</a>	A list of inventory locations.	51.0

SEE ALSO:

[findRoutesWithFewestSplits\(findRoutesWithFewestSplitsInputRepresentation\)](#)

[ConnectApi.FindRoutesWithFewestSplitsUsingOCIOutputRepresentation](#)

## ConnectApi.AverageDistanceResultOutputRepresentation

Wraps inventory location shipping distance calculation results.

Property Name	Type	Description	Available Version
distanceCalculation	<a href="#">ConnectApi.DistanceCalculationOutputRepresentation</a>	Results of the shipping distance calculations.	51.0

## ConnectApi.PaymentAuthAdjustmentResponse

Authorization Adjustment output representation.

Property Name	Type	Description	Available Version
accountId	<a href="#">String</a>	ID of the account containing the payment authorization being adjusted.	51.0
amount	<a href="#">Double</a>	Amount of the payment authorization adjustment.	51.0
currencyIsoCode	<a href="#">String</a>	Three-letter ISO 4217 currency code associated with the payment authorization adjustment.	51.0

Property Name	Type	Description	Available Version
effectiveDate	Datetime	Date when the authorization adjustment becomes effective.	51.0
id	String	ID of the PaymentAuthAdjustment record.	51.0
paymentAuthAdjustmentNumber	String	System-defined reference number.	51.0
requestDate	Datetime	Date when the authorization adjustment transaction occurred.	51.0
status	String	<p>Status of the payment authorization adjustment. Possible values are:</p> <ul style="list-style-type: none"> <li>• <b>Canceled</b>: The payment authorization reversal has been canceled. The parent authorization has returned to its pre-reversal balance.</li> <li>• <b>Draft</b>: The payment authorization reversal can be edited before applying it against the parent authorization.</li> <li>• <b>Processed</b>: The payment authorization reversal has been finalized.</li> </ul> <p>Users can change the status as follows:</p> <ul style="list-style-type: none"> <li>• Draft to Processed</li> <li>• Processed to Canceled</li> <li>• Draft to Canceled</li> </ul>	51.0

## ConnectApi.AuthReversalGatewayResponse

Authorization Reversal Gateway Response Representation.

Subclass of [ConnectApi.AbstractGatewayResponse](#).

No additional properties.

## ConnectApi.AuthorizationReversalResponse

Authorization Reversal output representation.

Property Name	Type	Description	Available Version
error	<a href="#">ConnectApi.ErrorResponse</a>	Error response representation for the authorization reversal.	51.0
gatewayResponse	<a href="#">ConnectApi.AuthReversalGatewayResponse</a>	Gateway response representation for authorization reversal.	51.0

Property Name	Type	Description	Available Version
paymentAuthAdjustment	<a href="#">ConnectApi.PaymentAuthAdjustmentResponse</a>	Payment authorization adjustment response representation for the authorization reversal.	51.0
paymentGatewayLogs	<a href="#">List&lt;ConnectApi.GatewayLogResponse&gt;</a>	Gateway log collection representation for the authorization reversal.	51.0

## ConnectApi.AuthorizationGatewayResponse

Payment gateway authorization response representation.

Subclass of [ConnectApi.AbstractGatewayResponse](#).

Property Name	Type	Description	Available Version
gatewayAuthorizationCode	<a href="#">String</a>	Gateway authorization code.	51.0

## ConnectApi.AuthorizationResponse

Payment Authorization output representation.

Property Name	Type	Description	Available Version
error	<a href="#">ConnectApi.ErrorResponse</a>	Error representation for the payment authorization.	51.0
gatewayResponse	<a href="#">ConnectApi.AuthorizationGatewayResponse</a>	Gateway response representation for the payment authorization.	51.0
paymentAuthorization	<a href="#">ConnectApi.PaymentAuthorizationResponse</a>	Payment authorization representation.	51.0
paymentGatewayLogs	<a href="#">List&lt;ConnectApi.GatewayLogResponse&gt;</a>	Gateway log list representation for the payment authorization.	51.0
paymentGroup	<a href="#">ConnectApi.PaymentGroupResponse</a>	Payment group representation for the payment authorization.	51.0
paymentMethod	<a href="#">ConnectApi.PaymentMethodResponse</a>	Payment method representation for the payment authorization.	51.0

## ConnectApi.BalanceStatePreviewOutputRepresentation

The generated preview of all balances for an order or a cart, including totals, adjustments, and taxes.

Property Name	Type	Description	Available Version
grandTotalAmount	Double	The grand total of the exchanges, including adjustments, fees, delivery cost, and taxes.	61.0
totalAdjustmentAmount	Double	The total amount the order was adjusted by, not including tax.	61.0
totalAdjustmentAmountWithTax	Double	The total amount the order was adjusted by, including tax.	61.0
totalAmount	Double	The total amount being return, not including tax.	61.0
totalAmountWithTax	Double	The total amount being return, including tax.	61.0
totalDeliveryAmount	Double	The total cost for delivery, not including tax.	61.0
totalDeliveryAmountWithTax	Double	The total cost for delivery, including tax.	61.0
totalFeeAmount	Double	The combined total of all fees charged, not including tax.	61.0
totalFeeAmountWithTax	Double	The combined total of all fees charged, including tax.	61.0
totalTaxAmount	Double	The combined total of all taxes.	61.0

## ConnectApi.BannerCapability

If a feed element has this capability, it has a banner motif and style.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
motif	<a href="#">ConnectApi.Motif</a>	A banner motif.	31.0
style	<a href="#">ConnectApi.BannerStyle</a>	Decorates a feed item with a color and set of icons. Possible value: <ul style="list-style-type: none"> <li>• <b>Announcement</b>—An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement.</li> </ul>	31.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.BannerPhoto

A banner photo.

Property Name	Type	Description	Available Version
bannerPhotoUrl	String	URL to the banner photo in a large format. This URL is available only to authenticated users.	36.0
bannerPhotoVersionId	String	18-character version ID of the banner photo.	36.0
url	String	URL to the banner photo.	36.0

SEE ALSO:

[ConnectApi.ChatterGroup](#)

[ConnectApi.UserDetail](#)

## ConnectApi.BaseManagedSocialAccount

Base information describing a managed social account or fan page of a social network.

This class is abstract.

Superclass of [ConnectApi.ManagedSocialAccount](#).

Property Name	Type	Description	Available Version
defaultResponseAccountId	String	Default response account to use when replying to posts sent to this account.	44.0
displayName	String	Real name (or user name if real name not available) for this account on the social network.	44.0
externalPictureUrl	String	URL to the account's avatar image.	44.0
id	String	Internal SFDC ID for this managed social account.	44.0
label	String	Label for the social account.	44.0
profileUrl	String	URL to the account's profile.	44.0
socialNetwork	<a href="#">ConnectApi.SocialNetworkProvider</a>	Social network that this account belongs to. Values are: <ul style="list-style-type: none"> <li>• Facebook</li> <li>• GooglePlus</li> <li>• Instagram</li> <li>• InstagramBusiness</li> <li>• KakaoTalk</li> <li>• Kik</li> <li>• Line</li> <li>• LinkedIn</li> <li>• Messenger</li> <li>• Other</li> </ul>	44.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>• Pinterest</li> <li>• QQ</li> <li>• Rypple</li> <li>• SinaWeibo</li> <li>• SMS</li> <li>• Snapchat</li> <li>• Telegram</li> <li>• Twitter</li> <li>• VKontakte</li> <li>• WeChat</li> <li>• WhatsApp</li> <li>• YouTube</li> </ul>	
uniqueName	String	Unique name used for distinguishing same name fan pages; acts like a user name for a fan page.	44.0
username	String	Unique user name or handle for this account on the social network.	44.0

## ConnectApi.BaseAsyncOutputRepresentation

Base Order Management async output class.

This class is abstract.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Superclass of:

- [ConnectApi.AsyncOutputRepresentation](#)
- [ConnectApi.EnsureFundsAsyncOutputRepresentation](#)
- [ConnectApi.EnsureRefundsAsyncOutputRepresentation](#)

Property Name	Type	Description	Available Version
backgroundOperationId	String	ID of the background operation.	48.0

## ConnectApi.BaseInvoiceOutputRepresentation

Base Order Management Invoice output class.

This class is abstract.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Superclass of [ConnectApi.ChangeOrdersInvoiceOutputRepresentation](#).

Property Name	Type	Description	Available Version
invoiceId	String	ID of the created invoice.	56.0

## ConnectApi.BaseOutputRepresentation

Base Order Management output class.

This class is abstract.

Superclass of:

- [ConnectApi.AdjustOrderSummaryOutputRepresentation](#)
- [ConnectApi.BaseAsyncOutputRepresentation](#)
- [ConnectApi.BaseInvoiceOutputRepresentation](#)
- [ConnectApi.ConfirmHeldFOCapacityOutputRepresentation](#)
- [ConnectApi.CreateCreditMemoOutputRepresentation](#)
- [ConnectApi.CreateMultipleInvoicesFromChangeOrdersOutputRepresentation](#)
- [ConnectApi.CreateOrderPaymentSummaryOutputRepresentation](#)
- [ConnectApi.EnsureFundsAsyncOutputRepresentation](#)
- [ConnectApi.EnsureRefundsAsyncOutputRepresentation](#)
- [ConnectApi.FindRoutesWithFewestSplitsOutputRepresentation](#)
- [ConnectApi.FindRoutesWithFewestSplitsUsingOCIOutputRepresentation](#)
- [ConnectApi.FindRoutesWithFewestSplitsWithInventoryOutputRepresentation](#)
- [ConnectApi.FulfillmentGroupOutputRepresentation](#)
- [ConnectApi.FulfillmentOrderCancelLineItemsOutputRepresentation](#)
- [ConnectApi.FulfillmentOrderInvoiceOutputRepresentation](#)
- [ConnectApi.FulfillmentOrderOutputRepresentation](#)
- [ConnectApi.GetFOCapacityValuesOutputRepresentation](#)
- [ConnectApi.HoldFOCapacityOutputRepresentation](#)
- [ConnectApi.MultipleAsyncOutputRepresentation](#)
- [ConnectApi.MultipleFulfillmentOrderInvoicesOutputRepresentation](#)
- [ConnectApi.MultipleFulfillmentOrderOutputRepresentation](#)
- [ConnectApi.OrderSummaryOutputRepresentation](#)
- [ConnectApi.PreviewCancelOutputRepresentation](#)
- [ConnectApi.PreviewReturnOutputRepresentation](#)
- [ConnectApi.ProductDetailsOutputRepresentation](#)
- [ConnectApi.RankAverageDistanceOutputRepresentation](#)
- [ConnectApi.RegisterGuestBuyerOutputRepresentation](#)
- [ConnectApi.ReleaseHeldFOCapacityOutputRepresentation](#)
- [ConnectApi.ReturnItemsOutputRepresentation](#)
- [ConnectApi.ReturnOrderItemSplitLineOutputRepresentation](#)
- [ConnectApi.ReturnOrderOutputRepresentation](#)

- [ConnectApi.SubmitCancelOutputRepresentation](#)
- [ConnectApi.SubmitReturnOutputRepresentation](#)

Property Name	Type	Description	Available Version
errors	<a href="#">List&lt;ConnectApi.ErrorResponse&gt;</a>	Any errors that were returned.	48.0
success	<a href="#">Boolean</a>	Indicates whether the transaction was successful.	48.0

## ConnectApi.BatchResult

The result of an operation returned by a batch method.

### Usage

Calls to batch methods return a list of `BatchResult` objects. Each element in the `BatchResult` list corresponds to the strings in the list parameter passed to the batch method. The first element in the `BatchResult` list matches the first string passed in the list parameter, the second element corresponds with the second string, and so on. If only one string is passed, the `BatchResult` list contains a single element.

### Example

The following example shows how to obtain and iterate through the returned `ConnectApi.BatchResult` objects. The code adds two group IDs to a list. One of group IDs is incorrect, which causes a failure when the code calls the batch method. After it calls the batch method, it iterates through the results to determine whether the operation was successful or not for each group ID in the list. The code writes the ID of every group that was processed successfully to the debug log. The code writes an error message for every failed group.

This example generates one successful operation and one failure.

```
List<String> myList = new List<String>();
// Add one correct group ID.
myList.add('0F9D00000000oOT');
// Add one incorrect group ID.
myList.add('0F9D00000000izf');

ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getGroupBatch(null,
myList);

// Iterate through each returned result.
for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the group ID.
        ConnectApi.ChatterGroupSummary groupSummary;
        if (batchResult.getResult() instanceof ConnectApi.ChatterGroupSummary) {
            groupSummary = (ConnectApi.ChatterGroupSummary) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(groupSummary.id);
    }
}
```

```
    else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

#### IN THIS SECTION:

##### [BatchResult Methods](#)

These are instance methods for `BatchResult`.

## BatchResult Methods

These are instance methods for `BatchResult`.

#### IN THIS SECTION:

##### [getError\(\)](#)

If an error occurred, returns a `ConnectApi.ConnectApiException` object providing the error code and description.

##### [getErrorMessage\(\)](#)

Returns a `String` that contains an error message.

##### [getErrorTypeName\(\)](#)

Returns a `String` that contains the name of the error type.

##### [getResult\(\)](#)

Returns an object that contains the results of the batch operation. The object is typed according to the batch method. For example, if you call `getMembershipBatch()`, a successful call to `BatchResult.getResult()` returns a `ConnectApi.GroupMembership` object.

##### [isSuccess\(\)](#)

Returns a `Boolean` that is set to `true` if the batch operation was successful for this object, `false` otherwise.

## **getError()**

If an error occurred, returns a `ConnectApi.ConnectApiException` object providing the error code and description.

#### Signature

```
public ConnectApi.ConnectApiException getError()
```

#### Return Value

Type: [ConnectApi.ConnectApiException](#)

## **getErrorMessage()**

Returns a `String` that contains an error message.

Signature

```
public String getErrorMessage()
```

Return Value

Type: [String](#)

Usage

The error message doesn't make a round trip through a Visualforce view state, because exceptions can't be serialized.

### **getErrorTypeName()**

Returns a String that contains the name of the error type.

Signature

```
public String getErrorTypeName()
```

Return Value

Type: [String](#)

### **getResult()**

Returns an object that contains the results of the batch operation. The object is typed according to the batch method. For example, if you call `getMembershipBatch()`, a successful call to `BatchResult.getResult()` returns a `ConnectApi.GroupMembership` object.

Signature

```
public Object getResult()
```

Return Value

Type: Object

### **isSuccess()**

Returns a Boolean that is set to `true` if the batch operation was successful for this object, `false` otherwise.

Signature

```
public Boolean isSuccess()
```

Return Value

Type: [Boolean](#)

## ConnectApi.BlankRecordField

Record field displayed as a place holder in a grid of fields.

Subclass of [ConnectApi.AbstractRecordField](#).

## ConnectApi.BookmarksCapability

If a feed element has this capability, the context user can bookmark it.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
isBookmarked ByCurrentUser	Boolean	Indicates whether the feed element has been bookmarked by the context user ( <code>true</code> ) or not ( <code>false</code> ).	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.BookmarkSummary

Summary of a bookmark.

Subclass of [ConnectApi.UserFeedEntityActivitySummary](#).

No additional properties.

## ConnectApi.BotInfoRepresentation

Information about the bot associated with the conversation application.

Property Name	Type	Description	Available Version
botId	String	ID of the bot.	54.0
botName	String	Name of the bot.	54.0
lastModifiedDate	Datetime	Last modified date of the bot definition.	54.0

## ConnectApi.BotVersionActivationInfo

Success or failure information of the bot version activation.

Property Name	Type	Description	Available Version
isActivated	Boolean	Indicates whether the bot is active or not.	51.0
messages	List<String>	Failure messages.	50.0
success	Boolean	Indicates whether the activation was successful or not.	50.0

## ConnectApi.BundleCapability

If a feed element has this capability, it has a container of feed elements called a *bundle*.

This class is abstract.

Subclass of [ConnectApi.FeedElementCapability](#).

Superclass of:

- [ConnectApi.GenericBundleCapability](#)
- [ConnectApi.TrackedChangeBundleCapability](#)

Property Name	Type	Description	Available Version
bundleType	<a href="#">ConnectApi.BundleType</a>	Defines this feed element's bundle type. The bundle type determines what additional information appears in the bundle.	31.0
page	<a href="#">ConnectApi.FeedElementPage</a>	A collection of feed elements.	31.0
totalElements	<a href="#">Integer</a>	The total number of feed elements that this bundle aggregates.	31.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.CalculateCartResult

Result of a cart calculate request. Includes a cart summary with calculated cart values.

Subclass of [ConnectApi.CommerceResultRepresentationBase](#)

Property Name	Type	Description	Available Version
data	<a href="#">ConnectApi.CartSummary</a>	A cart summary with calculated cart values.	62.0

## ConnectApi.CallCollaborationCapability

If a feed element has this capability, it has a recording comment.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
commentEndTime	<a href="#">Integer</a>	End time of the comment on the media player, in seconds.	51.0

Property Name	Type	Description	Available Version
commentStartTime	Integer	Start time of the comment on the media player, in seconds.	51.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.CandidateAnswersStatus

The status of candidate answers on a feed element.

Property Name	Type	Description	Available Version
hasCandidateAnswers	Boolean	Indicates whether candidate answers are available for a question.	41.0
hasCandidateAnswersPublished	Boolean	Indicates whether any candidate answers are published.	41.0
hasCandidateAnswersRated	Boolean	Indicates whether any candidate answers are rated.	41.0

SEE ALSO:

[ConnectApi.QuestionAndAnswersCapability](#)

## ConnectApi.CanvasCapability

If a feed element has this capability, it renders a canvas app.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
description	String	A description of the canvas app. The maximum size is 255 characters.	32.0
developerName	String	The API name (developer name) of the connected app.	32.0
height	String	The height of the canvas app in pixels.	32.0
icon	<a href="#">ConnectApi.Icon</a>	The icon for the canvas app.	32.0
namespacePrefix	String	A unique namespace prefix for the canvas app.	32.0
parameters	String	JSON parameters passed to the canvas app.	32.0
thumbnailUrl	String	A thumbnail URL to a preview image. The maximum thumbnail size is 120 pixels by 120 pixels.	32.0

Property Name	Type	Description	Available Version
title	String	A title for the canvas link.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.CapacityResponseOutputRepresentation

Response to a request related to a location's fulfillment capacity.

Property Name	Type	Description	Available Version
actionRequestId	String	Unique string that identifies the original capacity request.	55.0
error	<a href="#">ConnectApi.ErrorResponse</a>	Error returned by the request, if any.	55.0
success	Boolean	Indicates whether the request was successful.	55.0

## ConnectApi.CaptureGatewayResponse

Gateway capture response.

Subclass of [ConnectApi.AbstractGatewayResponse](#).

No additional properties.

## ConnectApi.CaptureResponse

Capture output.

Property Name	Type	Description	Available Version
error	<a href="#">ConnectApi.ErrorResponse</a>	Error response representation for an authorization capture.	50.0
gatewayResponse	<a href="#">ConnectApi.CaptureGatewayResponse</a>	Gateway log response containing details about gateway logs created during the process of the capture request.	50.0
payment	<a href="#">ConnectApi.PaymentResponse</a>	Payment response object for the capture request. Contains the information related to a payment object created during request processing.	50.0
paymentGatewayLogs	<a href="#">List&lt;ConnectApi.GatewayLogResponse&gt;</a>	Gateway log collection for an authorization capture.	50.0
paymentGroup	<a href="#">ConnectApi.PaymentGroupResponse</a>	Payment group associated with the capture request.	50.0

## ConnectApi.CardPaymentMethodOutput

Card payment method details output.

Property Name	Type	Description	Available Version
accountId	String	Salesforce Payments account to which this payment method is linked.	56.0
autoPay	Boolean	Indicates whether a token for recurring payments is being requested ( <code>true</code> ) or not ( <code>false</code> ). The token lets the payment method be used for recurring payments.	56.0
cardBin	String	Bank Identification Number (BIN). The BIN is the first 4-6 numbers on a payment card that identifies the card issuer.	56.0
cardCategory	ConnectApi.CardCategory	<ul style="list-style-type: none"> <li>CreditCard</li> <li>DebitCard</li> </ul>	56.0
cardHolderFirstName	String	First name of the card holder	56.0
cardHolderLastName	String	Last name of the card holder	56.0
cardHolderName	String	Full name of card holder	56.0
cardLastFour	String	Last four digits on a card.	56.0
cardType	ConnectApi.CardType	Credit card issuer. <ul style="list-style-type: none"> <li>AmericanExpress</li> <li>DinersClub</li> <li>JCB</li> <li>Maestro</li> <li>MasterCard</li> <li>Visa</li> </ul>	56.0
comments	String	Details about a record added by a user. Maximum of 1,000 characters.	56.0
displayCardNumber	String	Card displayed number	56.0
email	String	Email address of the card holder.	56.0
expiryMonth	Integer	Card expiration month	56.0
expiryYear	Integer	Card expiration year	56.0
nickName	String	Optional card nickname	56.0
startMonth	Integer	Month when card becomes active	56.0
startYear	Integer	Year when card becomes active	56.0

## ConnectApi.CartCoupon

Cart Coupon representation.

Property Name	Type	Description	Available Version
cartCouponId	<a href="#">String</a>	ID of the cart coupon code.	54.0
couponCode	<a href="#">String</a>	The coupon code a buyer can use to manually apply a promotion to the cart.	54.0

## ConnectApi.CartCouponCollection

Collection of coupons related to a cart.

Property Name	Type	Description	Available Version
cartCoupons	<a href="#">ConnectApi.CartCouponList</a>	Collection of coupons.	54.0
cartId	<a href="#">String</a>	ID of the cart.	54.0
cartStatus	<a href="#">ConnectApi.CartStatus</a>	Status of the cart. Values are: <ul style="list-style-type: none"> <li><b>Active</b>—Cart is created and available for modifications, like adding or removing products or promotions.</li> <li><b>Checkout</b>—Cart is in checkout. If the customer modifies the cart, the current checkout session is canceled.</li> <li><b>Closed</b>—Checkout is complete and an order was created. The cart cannot be modified.</li> <li><b>PendingClosed</b>—Cart is marked to be closed, but the request isn't completed yet. The cart can't be modified. This value is available in API version 57.0 and later.</li> <li><b>PendingDelete</b>—Cart is marked for delete, but the request isn't completed yet. The cart can't be modified.</li> <li><b>Processing</b>—Cart is processing. For example, taxes are being calculated. The cart can't be modified.</li> </ul>	54.0
ownerId	<a href="#">String</a>	ID of the user who owns the cart.	54.0

## ConnectApi.CartCouponList

List of coupons for a cart.

Property Name	Type	Description	Available Version
coupons	<a href="#">List&lt;ConnectApi.CartCoupon&gt;</a>	List of coupons associated with a cart.	54.0

## ConnectApi.CartInventoryItemReservationOutputRepresentation (Pilot)

Inventory item reservation.

 **Note:** This feature is not generally available and is being piloted with certain Customers subject to additional terms and conditions. It is not part of your purchased Services. This feature is subject to change, may be discontinued with no notice at any time in Salesforce's sole discretion, and Salesforce may never make this feature generally available. Make your purchase decisions only on the basis of generally available products and features. This feature is made available on an AS IS basis and use of this feature is at your sole risk.

Property Name	Type	Description	Available Version
errorCode	<a href="#">String</a>	Error code for this reservation item.	58.0
errorMessage	<a href="#">String</a>	Error message for this reservation item.	58.0
id	<a href="#">String</a>	ID for this reservation item.	58.0
itemReservation SourceId	<a href="#">String</a>	Item reservation source ID for this reservation item.	58.0
productId	<a href="#">String</a>	Product ID for this reservation item.	58.0
quantity	<a href="#">Double</a>	Quantity for this reservation item.	58.0
reservedAt LocationId	<a href="#">String</a>	Reserved at location or group ID for this reservation item.	58.0

## ConnectApi.CartInventoryReservationOutputRepresentation (Pilot)

Inventory Reservation

 **Note:** This feature is not generally available and is being piloted with certain Customers subject to additional terms and conditions. It is not part of your purchased Services. This feature is subject to change, may be discontinued with no notice at any time in Salesforce's sole discretion, and Salesforce may never make this feature generally available. Make your purchase decisions only on the basis of generally available products and features. This feature is made available on an AS IS basis and use of this feature is at your sole risk.

Property Name	Type	Description	Available Version
errorCode	<a href="#">String</a>	Error code for this reservation.	58.0
errorMessage	<a href="#">String</a>	Error message for this reservation.	58.0
inventoryItem Reservations	<a href="#">List&lt;ConnectApi.CartInventoryItemReservationOutputRepresentation&gt;</a>	Collection of inventory item reservations.	58.0

Property Name	Type	Description	Available Version
reservationIdentifier	String	Reservation identifier.	58.0
success	Boolean	Indicates whether the transaction was successful.	58.0

## ConnectApi.CartItem

An item in a cart.

Subclass of [ConnectApi.AbstractCartItem](#).

Property Name	Type	Description	Available Version
currencyIsoCode	String	Currency ISO code of the cart.	57.0
firstPymtTotalAmount	String	For subscription items, the first payment amount after adjustments and taxes. For non-subscription products, the value is the same as <code>totalAmount</code> .	60.0
firstPymtTotalPrice	String	For subscription items, the first term price, including adjustments but excluding taxes. For non-subscription items, the total price, including adjustments but excluding taxes.	60.0
firstPymtTotalTax	String	For subscription items, the tax amount on the first payment. For non-subscription products, the value is the same as <code>totalTax</code> .	60.0
itemizedAdjustmentAmount	String	Total itemized adjustment amount for the item, including promotions and excluding taxes.	52.0
listPrice	String	List price for the item.	49.0
productClass	ConnectApi.ProductClass	Class of product. Values are: <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Set</li> <li>• Simple</li> <li>• Variation</li> <li>• VariationParent</li> </ul>	62.0
salesPrice	String	Sales price for the item.	49.0
totalAdjustmentAmount	String	Total adjustment amount for the item.	50.0
totalAmount	String	Total amount for the item.	49.0
totalListPrice	String	Total list price for the item.	49.0
totalPrice	String	Total price for the item including adjustments but excluding taxes.	49.0

Property Name	Type	Description	Available Version
totalTax	String	Total tax for the item.	49.0
unitAdjusted Price	String	Unit price, including tier level discounts, for the item. This value is informational only and isn't used in pricing calculations.	50.0
unitAdjusted PriceWithItemAdj	String	Unit price, including both tier and item level discounts, for the item. This value is informational only and isn't used in pricing calculations.	61.0
unitAdjustment Amount	String	Tier level adjustments made to the unit price for the item. This value is informational only and isn't used in pricing calculations.	50.0
unitItem AdjustmentAmount	String	Item level adjustments made to the unit price for the item. This value is informational only and isn't used in pricing calculations.	61.0

## ConnectApi.CartItemBasic

Represents limited details about a cart item.

Property Name	Type	Description	Available Version
cartItemId	String	ID of the cart item.	60.0
name	String	Name of the cart item.	60.0
productId	String	ID of the product associated with the cart item.	60.0
quantity	String	Quantity of the cart item.	60.0
type	ConnectApi.CartItemType	Type of item in a cart. Value is Product.	60.0

## ConnectApi.CartItemBasicResult

Represents the result of a cart request.

Property Name	Type	Description	Available Version
cartItem	ConnectApi.CartItemBasic on page 1969	Item in a cart.	60.0
message	String	Error message when the request is not successful.	60.0
status	String	Status of the request.	60.0

## ConnectApi.CartItemCollection

A collection of items in a cart.

Property Name	Type	Description	Available Version
cartCoupons	<a href="#">ConnectApi.CartCouponCollection</a>	Collection of coupons in the cart.	59.0
cartItems	<a href="#">List&lt;ConnectApi.CartItemResult&gt;</a>	Collection of cart item results.	49.0
cartPromotions	<a href="#">ConnectApi.CartPromotionCollection</a>	Collection of promotions in the cart.	59.0
cartSummary	<a href="#">ConnectApi.CartSummary</a>	Summary of the cart.	49.0
currentPage	<a href="#">Integer</a>	Current page of cart items. The value matches the requested page number, unless the requested page number exceeds the total number of pages. In this scenario, the current page is the highest available page number.	60.0
currentPageToken	<a href="#">String</a>	Token identifying the current page.	49.0
currentPageUrl	<a href="#">String</a>	Connect REST API URL identifying the current page.	49.0
hasErrors	<a href="#">Boolean</a>	Specifies whether at least one of the results contains an error.	49.0
nextPageToken	<a href="#">String</a>	Token identifying the next page, or <code>null</code> if there isn't a next page.	49.0
nextPageUrl	<a href="#">String</a>	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	49.0
previousPageToken	<a href="#">String</a>	Token identifying the previous page, or <code>null</code> if there isn't a previous page.	49.0
previousPageUrl	<a href="#">String</a>	Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	49.0
totalItemCount	<a href="#">Integer</a>	Total number of unique products in the cart.	60.0
totalNumberOfPages	<a href="#">Integer</a>	Total number of pages for the given page size.	60.0

## ConnectApi.CartItemProduct

Product summary for a cart item.

Property Name	Type	Description	Available Version
fields	<a href="#">Map&lt;String, String&gt;</a>	Map of product fields and values.	49.0

Property Name	Type	Description	Available Version
name	<a href="#">String</a>	Name of the product.	49.0
productId	<a href="#">String</a>	ID of the product.	49.0
productSubscriptionInformation		Reserved for future use.	59.0
purchaseQuantityRule	<a href="#">ConnectApi.PurchaseQuantityRule</a>	If one exists, purchase quantity rule for the product.	52.0
sku	<a href="#">String</a>	SKU of the product.	49.0
thumbnailImage	<a href="#">ConnectApi.ProductMedia</a>	Thumbnail image of the product.	49.0
variationAttributes	<a href="#">Map&lt;String, ConnectApi.CartProductAttribute&gt;</a>	Variation attributes associated with the product.	50.0

SEE ALSO:

[ConnectApi.AbstractCartItem](#)

[ConnectApi.WishlistItem](#)

## ConnectApi.CartItemPromotionCollectionOutputRepresentation

Promotions for the items in a cart.

Property Name	Type	Description	Available Version
currencyIsoCode	<a href="#">String</a>	Currency code associated with the cart.	53.0
items	<a href="#">Map&lt;String, ConnectApi.CartPromotionListRepresentation&gt;</a>	Collection of promotions.	52.0

## ConnectApi.CartItemResult

Result after requesting a cart item.

Property Name	Type	Description	Available Version
cartItem	<a href="#">ConnectApi.AbstractCartItem</a>	Cart item.	49.0
message	<a href="#">String</a>	Message when the request isn't successful.	49.0

Property Name	Type	Description	Available Version
status	String	Status for the request.	49.0

SEE ALSO:

[ConnectApi.CartItemCollection](#)

[ConnectApi.WishlistToCartResult](#)

## ConnectApi.CartItemWithoutPrice

An item without price information in a cart.

Subclass of [ConnectApi.AbstractCartItem](#).

No additional properties.

## ConnectApi.CartMessage

Cart message.

Property Name	Type	Description	Available Version
message	String	Cart message.	49.0
messageId	String	ID of the object supplying the message.	49.0
relatedEntityId	String	ID of the entity, for example, cart, cart item, or cart tax, associated with the message.	49.0
severity	<a href="#">ConnectApi.CartMessageSeverity</a>	Severity of cart message. Values are: <ul style="list-style-type: none"> <li>Error</li> <li>Info</li> <li>Warning</li> </ul>	49.0
type	String	Type of message. Standard values include Inventory, Taxes, Pricing, Shipping, Entitlement, SystemError, and Other.	49.0
visible	Boolean	Specifies whether the message is visible ( <code>true</code> ) or dismissed ( <code>false</code> ).	49.0

SEE ALSO:

[ConnectApi.CartMessagesSummary](#)

## ConnectApi.CartMessagesSummary

Cart messages summary.

Property Name	Type	Description	Available Version
<code>errorCode</code>	<a href="#">Integer</a>	In <code>ConnectApi.CartItemResult</code> , the count of messages with the <code>Error</code> severity level.	49.0
<code>hasErrors</code>	<a href="#">Boolean</a>	Specifies whether there are messages related to the entity ( <code>true</code> ) or not ( <code>false</code> ).	49.0
<code>limitedMessages</code>	<a href="#">List&lt;ConnectApi.CartMessage&gt;</a>	In <code>ConnectApi.CartItemResult</code> , a limited list of messages related to the cart item. In <code>ConnectApi.CartSummary</code> , each message can be related to the cart or to another cart-related entity.	49.0
<code>relatedEntityId</code>	<a href="#">String</a>	In <code>ConnectApi.CartItemResult</code> , the ID of the related cart item. In <code>ConnectApi.CartSummary</code> , each message can be related to the cart or to another cart-related entity.	49.0
<code>totalLineItemsWithErrors</code>	<a href="#">Integer</a>	In <code>ConnectApi.CartItemResult</code> , either <code>null</code> if the cart item has no errors or 1 if the cart item has errors. In <code>ConnectApi.CartSummary</code> , the total number of product line items that contain errors.	50.0

SEE ALSO:

[ConnectApi.AbstractCartItem](#)

## ConnectApi.CartMessagesVisibilityResult

Result of setting the visibility for cart messages.

Property Name	Type	Description	Available Version
<code>visibility</code>	<a href="#">Boolean</a>	Specifies whether cart messages are set to visible ( <code>true</code> ) or not ( <code>false</code> ).	50.0

## ConnectApi.CartProductAttribute

Product attribute for a cart item.

Property Name	Type	Description	Available Version
<code>label</code>	<a href="#">String</a>	Label or display name of the attribute.	50.0
<code>sequence</code>	<a href="#">Integer</a>	Sequence of the attribute within the attribute set.	50.0

Property Name	Type	Description	Available Version
value	<a href="#">String</a>	Display value of the attribute.	50.0

SEE ALSO:

[ConnectApi.CartItemProduct](#)

## ConnectApi.CartPromotionCollection

All the promotions associated with the cart.

Property Name	Type	Description	Available Version
cartId	<a href="#">String</a>	ID of the cart.	53.0
cartStatus	<a href="#">ConnectApi.CartStatus</a>	Status of the cart. Values are: <ul style="list-style-type: none"> <li>• <code>Active</code>—Cart is created and available for modifications, like adding or removing products or promotions.</li> <li>• <code>Checkout</code>—Cart is in checkout. If the customer modifies the cart, the current checkout session is canceled.</li> <li>• <code>Closed</code>—Checkout is complete and an order was created. The cart cannot be modified.</li> <li>• <code>PendingClosed</code>—Cart is marked to be closed, but the request isn't completed yet. The cart can't be modified. This value is available in API version 57.0 and later.</li> <li>• <code>PendingDelete</code>—Cart is marked for delete, but the request isn't completed yet. The cart can't be modified.</li> <li>• <code>Processing</code>—Cart is processing. For example, taxes are being calculated. The cart can't be modified.</li> </ul>	53.0
currencyIsoCode	<a href="#">String</a>	Currency ISO code of the cart.	53.0
promotions	<a href="#">List&lt;ConnectApi.CartPromotion&gt;</a>	Collection of promotions.	53.0

## ConnectApi.CartPromotionList

A list of promotions for a cart.

Property Name	Type	Description	Available Version
promotions	List<ConnectApi.CartPromotionOutputRepresentation>	Promotions associated with a cart.	54.0

## ConnectApi.CartPromotionOutputRepresentation

A promotion associated with a cart.

Property Name	Type	Description	Available Version
adjustmentAmount	String	Adjustment amount out of the promotion.	53.0
couponCode	String	Coupon code for a promotion. A coupon code is available only for manual promotions, not for automatic promotions.	54.0
currencyIsoCode	String	Currency ISO code associated with the cart.	57.0
displayName	String	Localized display name of the promotion.	52.0
promotionId	String	ID of the promotion.	53.0
targetType	ConnectApi.CartPromotionType	Promotion target type. Values are: <ul style="list-style-type: none"> <li>Cart—Promotion targets a cart.</li> <li>Item—Promotion targets an item in a cart.</li> </ul>	53.0
termsAndConditions	String	Localized terms and conditions for the promotion.	53.0

## ConnectApi.CartSummary

A cart summary.

Property Name	Type	Description	Available Version
accountId	String	ID of the account for the cart.	49.0
asyncOperationStatus	String	Asynchronous processing status of the cart, if asynchronous processing is enabled for the store. This property returns <code>Completed</code> in Apex, because Apex operations always run synchronously.	59.0
cartId	String	ID of the cart.	49.0
currencyIsoCode	String	Three-letter ISO 4217 currency code associated with the cart.	49.0
customFields	List<SObject>	Array of sObjects and viewable custom fields for the sObjects. Field-level security rules from the <a href="#">shopper profile</a> are applied to the custom fields. The rules are applied for registered shoppers and for the guest	61.0

Property Name	Type	Description	Available Version
		shopper profile. If no custom fields were specified, returns an empty collection.	
firstPymtGrandTotalAmount	String	First payment amount for subscription products, plus the total payment amount for non-subscription products. Includes taxes.	60.0
firstPymtTotalTaxAmount	String	Tax amount on the first payment for any subscription products, plus the total tax amount on non-subscription products.	60.0
grandTotalAmount	String	Grand total amount including shipping and tax for items in the cart, in the currency of the cart.	49.0
isSecondary	Boolean	Specifies whether the cart is secondary ( <code>true</code> ) or not ( <code>false</code> ).	53.0
name	String	Name of the cart.	49.0
ownerId	String	ID of the owner of the cart.	49.0
ownerOrderId	String	ID of the owner of the order.	58.0
purchaseOrderNumber	String	Purchase order for the cart.	50.0
status	ConnectApi.CartStatus	Status of the cart. Values are: <ul style="list-style-type: none"> <li>• <code>Active</code>—Cart is created and available for modifications, like adding or removing products or promotions.</li> <li>• <code>Checkout</code>—Cart is in checkout. If the customer modifies the cart, the current checkout session is canceled.</li> <li>• <code>Closed</code>—Checkout is complete and an order was created. The cart cannot be modified.</li> <li>• <code>PendingClosed</code>—Cart is marked to be closed, but the request isn't completed yet. The cart can't be modified. This value is available in API version 57.0 and later.</li> <li>• <code>PendingDelete</code>—Cart is marked for delete, but the request isn't completed yet. The cart can't be modified.</li> <li>• <code>Processing</code>—Cart is processing. For example, taxes are being calculated. The cart can't be modified.</li> </ul>	49.0
taxType	String	Tax type of the cart. <ul style="list-style-type: none"> <li>• <code>Automatic</code>—Automatic taxation policy.</li> <li>• <code>Gross</code>—Gross taxation policy.</li> </ul>	55.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>Net—Net taxation policy.</li> </ul>	
totalAmount WithItem Adjustment	String	Total amount, including both tier and item level discounts but excluding cart level discounts, for all items in the cart.	61.0
totalCartLevel AdjustmentAmount	String	Total cart level discount amount for the cart.	61.0
totalChargeAmount	String	Total amount for shipping and other charges in the currency of the cart. Includes adjustments from shipping promotions.	49.0
totalListPrice	String	Total list price for the cart.	49.0
totalProduct Amount	String	Total amount including discounts, but excluding shipping and tax, for product items in the cart.	49.0
totalProductAmount AfterAdjustments	String	Total product amount, including promotions.	52.0
totalProduct Count	String	Total count of items in the cart. This field may not be accurate when <a href="#">faster add-to-cart</a> is turned on and quantity rules are enabled for products in the cart.	49.0
totalProduct LineItemCount	Integer	Total count of line items, of the type Product, in the cart.	60.0
totalProduct ListAmount	String	Total list amount for products in the cart.	59.0
totalPromotional AdjustmentAmount	String	Total promotional adjustment amount for items in the cart.	52.0
totalSubProduct Count	String	Total quantity of all cart items with the selling model type Evergreen or Term-Defined.	60.0
totalTaxAmount	String	Total tax amount for the cart, including tax on shipping, if applicable.	49.0
type	ConnectApi. CartType	Type of cart. Values are: <ul style="list-style-type: none"> <li>Cart—Cart created by a customer.</li> <li>PayNowReadOnly—Clone of a Template cart that the customer can check out with using the Pay Now feature.</li> <li>Template—Cart created by an internal user.</li> </ul>	49.0
uniqueProduct Count	Integer	Total count of unique items, or SKUs, in the cart. This field is supported when <a href="#">faster add-to-cart</a> is turned off.	49.0

Property Name	Type	Description	Available Version
webstoreId	<a href="#">String</a>	ID of the webstore of the cart.	49.0

SEE ALSO:

[ConnectApi.CartItemCollection](#)

## ConnectApi.CartToWishlistResult

Result of copying products from a cart to a wishlist.

Property Name	Type	Description	Available Version
productsAddedCount	<a href="#">Integer</a>	Number of products copied from the cart to the wishlist.	50.0
wishlistId	<a href="#">String</a>	ID of the wishlist that cart products were copied to.	50.0

## ConnectApi.CaseCommentCapability

If a feed element has this capability, it has a case comment on the case feed.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
actorType	<a href="#">ConnectApi.CaseActorType</a>	Specifies the type of user who made the comment.	32.0
createdBy	<a href="#">ConnectApi.Actor</a>	Information about the user who created the comment.	32.0
createdDate	<a href="#">Datetime</a>	ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.	32.0
eventType	<a href="#">ConnectApi.CaseCommentEventType</a>	Specifies an event type for a comment in the case feed.	32.0
id	<a href="#">String</a>	18-character ID of case comment.	32.0
published	<a href="#">Boolean</a>	Specifies whether the comment has been published.	32.0
text	<a href="#">String</a>	Text of the case comment.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.CdpActionResponse

Customer Data Platform action response.

This class is abstract.

Superclass of:

- [ConnectApi.CdpCalculatedInsightStandardActionResponseRepresentation](#)
- [ConnectApi.CdpSegmentActionOutput](#) in API version 59.0 and later.

Property Name	Type	Description	Available Version
errors	List< <a href="#">ConnectApi.CdpErrorResponse</a> >	List of errors that resulted from the action.	57.0
success	Boolean	Indicates whether the call was successful ( <code>true</code> ) or not ( <code>false</code> ).	57.0

## ConnectApi.CdpCalculatedInsightPage

Collection of calculated insights.

Property Name	Type	Description	Available Version
collection	<a href="#">ConnectApi.CdpCalculatedInsightPageData</a>	Collection of calculated insights.	57.0

## ConnectApi.CdpCalculatedInsightPageData

Calculated insight collection data.

Property Name	Type	Description	Available Version
count	Integer	Number of results returned in the page.	57.0
currentPageToken	String	Token identifying the current page.	57.0
currentPageUrl	String	Connect REST API URL identifying the current page.	57.0
items	List< <a href="#">ConnectApi.CdpCalculatedInsightOutput</a> >	List of calculated insights.	57.0
nextPageToken	String	Token identifying the next page, or <code>null</code> if there isn't a next page.	57.0
nextPageUrl	String	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	57.0
previousPageToken	String	Token identifying the previous page, or <code>null</code> if there isn't a previous page.	57.0

Property Name	Type	Description	Available Version
previousPageUrl	String	Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	57.0
total	Integer	Total row count of calculated insights.	57.0

SEE ALSO:

[ConnectApi.CdpCalculatedInsightPage](#)

## ConnectApi.CdpCalculatedInsightDataSource

Calculated insight data source.

Property Name	Type	Description	Available Version
sourceApiName	String	Data source API name.	57.0
type	String	Data source type.	57.0

SEE ALSO:

[ConnectApi.CdpCalculatedInsightDimension](#)

[ConnectApi.CdpCalculatedInsightMeasure](#)

## ConnectApi.CdpCalculatedInsightDimension

Calculated insight dimension.

Property Name	Type	Description	Available Version
apiName	String	API name of the dimension.	57.0
creationType	String	Creation type of the dimension.	57.0
dataSource	<a href="#">ConnectApi.CdpCalculatedInsightDataSource</a>	Data source of the dimension.	57.0
dataType	String	Data type of the dimension.	57.0
dateGranularity	String	Date granularity of the dimension.	57.0
displayName	String	Display name of the dimension.	57.0
fieldRole	String	Field role of the dimension.	57.0
formula	String	Formula of the dimension.	57.0

SEE ALSO:

[ConnectApi.CdpCalculatedInsightOutput](#)

## ConnectApi.CdpCalculatedInsightMeasure

Calculated insight measure.

Property Name	Type	Description	Available Version
apiName	<a href="#">String</a>	API name of the measure.	57.0
creationType	<a href="#">String</a>	Creation type of the measure.	57.0
dataSource	<a href="#">ConnectApi.CdpCalculatedInsightDataSource</a>	Data source of the measure.	57.0
dataType	<a href="#">String</a>	Data type of the measure.	57.0
displayName	<a href="#">String</a>	Display name of the measure.	57.0
fieldAggregationType	<a href="#">String</a>	Field aggregation type of the measure.	57.0
fieldRole	<a href="#">String</a>	Field role of the measure.	57.0
formula	<a href="#">String</a>	Formula of the measure.	57.0

SEE ALSO:

[ConnectApi.CdpCalculatedInsightOutput](#)

## ConnectApi.CdpCalculatedInsightOutput

Calculated insight.

Property Name	Type	Description	Available Version
apiName	<a href="#">String</a>	API name of the calculated insight.	57.0
calculatedInsightStatus	<a href="#">String</a>	Status of the calculated insight.	57.0
creationType	<a href="#">String</a>	Creation type of the calculated insight.	57.0
dataSpace	<a href="#">String</a>	Data space of the calculated insight.	57.0
definitionStatus	<a href="#">String</a>	Definition status of the calculated insight.	57.0
definitionType	<a href="#">String</a>	Definition type of the calculated insight.	57.0
description	<a href="#">String</a>	Description of the calculated insight.	57.0
dimensions	<a href="#">List&lt;ConnectApi.CdpCalculatedInsightDimension&gt;</a>	Dimensions of the calculated insight.	57.0
displayName	<a href="#">String</a>	Display name of the calculated insight.	57.0
expression	<a href="#">String</a>	Expression of the calculated insight.	57.0

Property Name	Type	Description	Available Version
isEnabled	Boolean	Specifies whether the calculated insight is enabled ( <code>true</code> ) or not ( <code>false</code> ).	57.0
lastCalcInsight StatusDateTime	String	Last calculated insight status date and time.	57.0
lastCalcInsight StatusErrorCode	String	Last calculated insight status error code.	57.0
lastRunDateTime	String	Last run date and time of the calculated insight.	57.0
lastRunStatus	String	Last run status of the calculated insight.	57.0
lastRunStatus DateTime	String	Last run status date and time of the calculated insight.	57.0
lastRunStatus ErrorCode	String	Last run status error code of the calculated insight.	57.0
measures	List<ConnectApi. CdpCalculated InsightMeasure>	Measures of the calculated insight.	57.0

SEE ALSO:

[ConnectApi.CdpCalculatedInsightPageData](#)

## ConnectApi.CdpCalculatedInsightStandardActionResponseRepresentation

Response of the calculated insight run action.

Subclass of [ConnectApi.CdpActionResponse](#).

No additional properties.

## ConnectApi.CdpErrorResponse

Error response.

Property Name	Type	Description	Available Version
errorCode	String	Error code.	57.0
message	String	Message stating the reason for the error, if any.	57.0

SEE ALSO:

[ConnectApi.CdpActionResponse](#)

## ConnectApi.CdpIdentityResolutionMatchCriterionOutput

Identity resolution ruleset's match rule criterion.

Property Name	Type	Description	Available Version
caseSensitiveMatch	Boolean	Specifies whether the criterion match is case sensitive ( <code>true</code> ) or not ( <code>false</code> ). Available only when matching is based on the <a href="#">party identifier</a> .	58.0
entityName	String	API name of the Data Model Object the match rule applies to.	57.0
fieldName	String	Name of the field the criterion applies to.	57.0
matchMethodType	<a href="#">ConnectApi.CdpIdentityResolutionMatchMethodType</a>	Match method for a match rule criterion. Values are: <ul style="list-style-type: none"> <li>• <code>Exact</code>—Exact match.</li> <li>• <code>ExactNormalized</code>—Exact normalized match.</li> <li>• <code>Fuzzy</code>—Fuzzy match with medium precision.</li> <li>• <code>FuzzyHigh</code>—Fuzzy match with high precision.</li> <li>• <code>FuzzyLow</code>—Fuzzy match with low precision.</li> </ul>	57.0
partyIdentificationInfo	<a href="#">ConnectApi.CdpIdentityResolutionMatchCriterionPartyIdentificationInfoOutput</a>	Party Identifier information.	57.0
shouldMatchOnBlank	Boolean	Specifies whether blank fields can be used for matching ( <code>true</code> ) or not ( <code>false</code> ).	57.0

SEE ALSO:

[ConnectApi.CdpIdentityResolutionMatchRuleOutput](#)

## ConnectApi.CdpIdentityResolutionMatchCriterionPartyIdentificationInfoOutput

Information when party identification is used in an identity resolution ruleset's match rule criterion.

Property Name	Type	Description	Available Version
partyName	String	Party identification name.	57.0
partyType	String	Party identification type.	57.0

SEE ALSO:

[ConnectApi.CdpIdentityResolutionMatchCriterionOutput](#)

## ConnectApi.CdpIdentityResolutionMatchRuleOutput

Identity resolution ruleset's match rule.

Property Name	Type	Description	Available Version
criteria	<a href="#">List&lt;ConnectApi.CdpIdentityResolutionMatchCriterionOutput&gt;</a>	Object and field the match rule applies to and the match method applied.	57.0
label	<a href="#">String</a>	User friendly name for the identity resolution match rule.	57.0

SEE ALSO:

[ConnectApi.CdpIdentityResolutionOutput](#)

## ConnectApi.CdpIdentityResolutionOutput

Identity resolution ruleset.

Property Name	Type	Description	Available Version
anonymousUnifiedProfiles	<a href="#">Long</a>	Count of anonymous unified profiles created by running the identity resolution ruleset.	57.0
configurationType	<a href="#">ConnectApi.CdpIdentityResolutionConfigurationType</a>	Source object for an identity resolution ruleset. Values are: <ul style="list-style-type: none"> <li>Account</li> <li>Individual</li> </ul>	57.0
consolidationRate	<a href="#">Double</a>	Consolidation rate resulting from the run of an identity resolution ruleset.	57.0
dataSpaceName	<a href="#">String</a>	Data space used as source data for an identity resolution ruleset.	57.0
description	<a href="#">String</a>	Description of the identity resolution ruleset.	57.0
doesRunAutomatically	<a href="#">Boolean</a>	Specifies whether automatic job run scheduling is enabled for the ruleset ( <code>true</code> ) or not ( <code>false</code> ). If unspecified, defaults to <code>false</code> .	57.0
id	<a href="#">String</a>	Identity resolution ruleset's ID. This is not the identity resolution's extended ruleset ID ( <code>rulesetId</code> ).	57.0
knownUnifiedProfiles	<a href="#">Long</a>	Count of known unified profiles created by running the identity resolution ruleset.	57.0
label	<a href="#">String</a>	User friendly name of the identity resolution ruleset.	57.0
lastJobCompleted	<a href="#">Datetime</a>	Date and time the last job completed.	57.0
lastJobStatus	<a href="#">String</a>	Last job's status. Possible values are: <ul style="list-style-type: none"> <li>SUCCESS</li> <li>IN_PROGRESS</li> </ul>	57.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>FAIL</li> <li>SCHEDULED</li> <li>SKIPPED</li> </ul>	
matchRules	List<ConnectApi.CdpIdentityResolutionMatchRuleOutput>	List of match rules.	57.0
matchedSourceProfiles	Long	Count of matched source profiles identified by running the identity resolution ruleset.	57.0
objectApiName	String	Object name of the identity resolution ruleset.	57.0
reconciliationRules	List<ConnectApi.CdpIdentityResolutionReconciliationRuleOutput>	List of reconciliation rules.	57.0
rulesetId	String	Extension ID of a ruleset. The ruleset ID must be unique and no longer than 4 characters. This ID is not the identifying ID for the ruleset.	57.0
rulesetStatus	String	Status of a ruleset job. Possible values are: <ul style="list-style-type: none"> <li>NEW</li> <li>PUBLISHING</li> <li>PUBLISHED</li> <li>ERROR</li> <li>DELETING</li> <li>DELETE_FAILED</li> </ul>	57.0
sourceProfiles	Long	Count of source profiles that were processed by a ruleset job.	57.0
totalUnifiedProfiles	Long	Count of unified profiles created by running the identity resolution ruleset.	57.0

SEE ALSO:

[ConnectApi.CdpIdentityResolutionsOutput](#)

## ConnectApi.CdpIdentityResolutionReconciliationFieldRuleOutput

Identity resolution ruleset's reconciliation rule for a field.

Property Name	Type	Description	Available Version
fieldName	String	The field that this reconciliation rule applies to.	57.0

Property Name	Type	Description	Available Version
ruleType	<a href="#">ConnectApi.CdpIdentityResolutionReconciliationRuleType</a>	Default reconciliation rule applied to fields in the object the reconciliation rule applies to. Values are: <ul style="list-style-type: none"> <li>LastUpdated</li> <li>MostFrequent</li> <li>SourceSequence</li> </ul>	57.0
shouldIgnoreEmptyValue	<a href="#">Boolean</a>	Specifies whether to ignore an empty value ( <a href="#">true</a> ) or not ( <a href="#">false</a> ).	57.0
sources	<a href="#">List&lt;ConnectApi.CdpIdentityResolutionReconciliationSourceOutput&gt;</a>	If <code>ruleType</code> is <code>SourceSequence</code> , a prioritized list of data sources.	57.0

SEE ALSO:

[ConnectApi.CdpIdentityResolutionReconciliationRuleOutput](#)

## ConnectApi.CdpIdentityResolutionReconciliationRuleOutput

Identity resolution ruleset's reconciliation rule for an object.

Property Name	Type	Description	Available Version
entityName	<a href="#">String</a>	API name of the Data Model Object the reconciliation rule applies to.	57.0
fields	<a href="#">List&lt;ConnectApi.CdpIdentityResolutionReconciliationFieldRuleOutput&gt;</a>	Field-specific reconciliation rules that override this default rule for the specified field.	57.0
linkDmoName	<a href="#">String</a>	API name of the unified link object created by the identity resolution process.	57.0
ruleType	<a href="#">ConnectApi.CdpIdentityResolutionReconciliationRuleType</a>	Default reconciliation rule applied to fields in the object the reconciliation rule applies to. Values are: <ul style="list-style-type: none"> <li>LastUpdated</li> <li>MostFrequent</li> <li>SourceSequence</li> </ul>	57.0
shouldIgnoreEmptyValue	<a href="#">Boolean</a>	Specifies whether to ignore an empty value ( <a href="#">true</a> ) or not ( <a href="#">false</a> ).	57.0
sources	<a href="#">List&lt;ConnectApi.CdpIdentityResolutionReconciliationSourceOutput&gt;</a>	If <code>ruleType</code> is <code>SourceSequence</code> , a list of data sources in priority order.	57.0

Property Name	Type	Description	Available Version
<code>unifiedDmoName</code>	<a href="#">String</a>	API name of the unified data model object created by the identity resolution process.	57.0

SEE ALSO:

[ConnectApi.CdpIdentityResolutionOutput](#)

## ConnectApi.CdpIdentityResolutionReconciliationSourceOutput

Source for an identity resolution default reconciliation rule or field-specific rule using the `sourceSequence` match method.

Property Name	Type	Description	Available Version
<code>name</code>	<a href="#">String</a>	If the <code>ruleType</code> for a reconciliation rule is <code>SourceSequence</code> , API name of a source Data Lake Object.	57.0

SEE ALSO:

[ConnectApi.CdpIdentityResolutionReconciliationRuleOutput](#)

[ConnectApi.CdpIdentityResolutionReconciliationFieldRuleOutput](#)

## ConnectApi.CdpIdentityResolutionRunNowOutput

Identity resolution ruleset run now output.

Property Name	Type	Description	Available Version
<code>resultCode</code>	<a href="#">ConnectApi.CdpIdentityResolutionRunNowResultCode</a>	Result of an identity resolution ruleset job run. Values are: <ul style="list-style-type: none"> <li><code>ExceededMaximumNumberOfSuccessfulRunsAllowedIn24Hours</code></li> <li><code>IdentityResolutionJobIsAlreadyRunning</code></li> <li><code>NoPendingChangesJobRunSkipped</code></li> <li><code>SuccessfullySubmittedIdentityResolutionJobRunRequest</code></li> </ul>	57.0

## ConnectApi.CdpIdentityResolutionsOutput

Identity resolution rulesets.

Property Name	Type	Description	Available Version
identityResolutions	<a href="#">List&lt;ConnectApi.CdpIdentityResolutionOutput&gt;</a>	List of identity resolution rulesets.	57.0

## ConnectApi.CdpQueryDataOutput

Query data output.

Property Name	Type	Description	Available Version
data	<a href="#">List&lt;Object&gt;</a>	Result data set.	54.0

## ConnectApi.CdpQueryMetadataItem

Metadata item.

Property Name	Type	Description	Available Version
placeInOrder	<a href="#">Integer</a>	Attribute place order in the result.	55.0
type	<a href="#">String</a>	Metadata type for column.	55.0
typeCode	<a href="#">Integer</a>	Metadata type code.	55.0

SEE ALSO:

[ConnectApi.CdpQueryOutputV2](#)

## ConnectApi.CdpQueryMetadataOutput

Query metadata result.

Property Name	Type	Description	Available Version
metadata	<a href="#">List&lt;Object&gt;</a>	Metadata set.	52.0

## ConnectApi.CdpQueryOutput

Query result.

Property Name	Type	Description	Available Version
data	<a href="#">List&lt;Object&gt;</a>	Result data set.	52.0
done	<a href="#">Boolean</a>	Specifies whether the query is done ( <a href="#">true</a> ) or not ( <a href="#">false</a> ).	52.0
endTime	<a href="#">String</a>	Query end time.	52.0

Property Name	Type	Description	Available Version
metadata	Map<String, Object>	Result metadata set.	52.0
queryId	String	Query ID.	52.0
rowCount	Integer	Number of rows in the result data set.	52.0
startTime	String	Query start time.	52.0

## ConnectApi.CdpQueryOutputV2

Query output for the V2 API.

Property Name	Type	Description	Available Version
data	List<ConnectApi.CdpQueryV2Row> (in version 55.0 and later) List<Object> (version 54.0 only)	Result data set.	54.0
done	Boolean	Specifies whether the query is done ( <code>true</code> ) or not ( <code>false</code> ).	54.0
endTime	String	Query end time.	54.0
metadata	Map<String, ConnectApi.CdpQueryMetadataItem> (version 55.0 and later) Map<String, Object> (version 54.0 only)	Result metadata set.	54.0
nextBatchId	String	Next batch ID.  Use this property as the <code>nextBatchId</code> parameter in the <code>nextBatchAnsiSqlV2(nextBatchId)</code> method to get the next batch of data.	54.0
queryId	String	Query ID.	54.0
rowCount	Integer	Number of rows in the result data set.	54.0
startTime	String	Query start time.	54.0

## ConnectApi.CdpQueryV2Row

Row in the query output for the V2 API.

Property Name	Type	Description	Available Version
rowData	List<Object>	Row values.	55.0

SEE ALSO:

[ConnectApi.CdpQueryOutputV2](#)

## ConnectApi.CdpSegmentActionOutput

Segment action.

Subclass of [ConnectApi.CdpActionResponse](#) in API version 59.0 and later.

Property Name	Type	Description	Available Version
errorCode	String	Error code associated with the action, if any.	57.0
errorMessage	String	Error message associated with the action, if any.	57.0
jobId	String	Job ID for the publish job.	56.0
partitionId	String	ID of the partition.	56.0
publishStatus	String	Publish status of the segment.	57.0
segmentApiName	String	API name of the segment.	59.0
segmentId	String	ID of the segment.	56.0

## ConnectApi.CdpSegmentContainerOutput

Segment container.

Property Name	Type	Description	Available Version
batchSize	Integer	Number of items returned.	56.0
offset	Integer	Number of rows skipped before returning results.	56.0
orderByExpression	String	Expression indicating how results are ordered.	56.0
segments	List< <a href="#">ConnectApi.CdpSegmentOutput</a> >	List of segments.	55.0

## ConnectApi.CdpSegmentDbtModel

Segment dbt model.

Property Name	Type	Description	Available Version
name	String	Dbt model name.	55.0

Property Name	Type	Description	Available Version
sql	String	Dbt model SQL.	55.0

SEE ALSO:

[ConnectApi.CdpSegmentDbtPipeline](#)

## ConnectApi.CdpSegmentDbtPipeline

Segment dbt pipeline.

Property Name	Type	Description	Available Version
models	List<ConnectApi.CdpSegmentDbtModel>	Dbt models.	55.0

SEE ALSO:

[ConnectApi.CdpSegmentOutput](#)

## ConnectApi.CdpSegmentMemberOutput

Data Cloud segment member output.

Property Name	Type	Description	Available Version
data	List<ConnectApi.CdpSegmentMemberRowOutput>	Result data set.	58.0
endTime	Datetime	Query end time.	58.0
filter	String	Filter information for the query.	58.0
limit	Integer	Batch size information.	58.0
nextPageUrl	String	URL for the next page.	58.0
offset	Integer	Offset information.	58.0
orderBy	String	Order by information.	58.0
rowCount	Integer	Total row count.	58.0
startTime	Datetime	Query start time.	58.0
totalCount	Integer	Total count of records.	58.0

## ConnectApi.CdpSegmentMemberRowOutput

Data Cloud segment member row output.

Property Name	Type	Description	Available Version
deltaType	<a href="#">String</a>	Delta type, for example, <code>new</code> , <code>existing</code> , or <code>removed</code> .	58.0
id	<a href="#">String</a>	Segment member ID.	58.0
kqId	<a href="#">String</a>	Fully qualified key ID.	58.0
snapshotType	<a href="#">String</a>	Type of snapshot, for example, <code>full</code> or <code>incremental</code> .	58.0
timestamp	<a href="#">String</a>	Timestamp.	58.0
versionStamp	<a href="#">String</a>	Version timestamp.	58.0

SEE ALSO:

[ConnectApi.CdpSegmentMemberOutput](#)

## ConnectApi.CdpSegmentMembershipTableOutput

Data Cloud segment membership table.

Property Name	Type	Description	Available Version
historyTable	<a href="#">String</a>	Segment membership history table.	58.0
latestTable	<a href="#">String</a>	Segment membership latest table.	58.0
profileTable	<a href="#">String</a>	Segment membership profile table.	58.0

SEE ALSO:

[ConnectApi.CdpSegmentOutput](#)

## ConnectApi.CdpSegmentOutput

Segment.

Property Name	Type	Description	Available Version
apiName	<a href="#">String</a>	API name of the segment.	56.0
dataSpace	<a href="#">String</a>	Data space of the segment.	57.0
description	<a href="#">String</a>	Segment description.	55.0
developerName	<a href="#">String</a>	Segment developer name.	55.0

Property Name	Type	Description	Available Version
displayName	<a href="#">String</a>	Segment display name.	57.0
excludeCriteria	<a href="#">String</a>	Segment exclude criteria.	57.0
includeCriteria	<a href="#">String</a>	Segment include criteria.	57.0
includeDbt	<a href="#">ConnectApi.CdpSegmentDbtPipeline</a>	Segment dbt pipeline.	55.0
lookalikeCriteria		Reserved for future use.	56.0
marketSegmentDefinitionId	<a href="#">String</a>	ID of the market segment definition.	55.0
marketSegmentId	<a href="#">String</a>	ID of the market segment.	56.0
nextPublishDateTime	<a href="#">String</a>	Date and time of the next segment publish.	57.0
publishInterval	<a href="#">String</a>	Segment publish interval.	55.0
publishScheduleEndDate	<a href="#">String</a>	Publish schedule end date.	55.0
publishScheduleStartDateTime	<a href="#">String</a>	Publish schedule start date time.	55.0
publishStatus	<a href="#">String</a>	Segment publish status.	55.0
segmentMembershipDmo	<a href="#">ConnectApi.CdpSegmentMembershipTableOutput</a>	Segment membership tables.	58.0
segmentMembershipTable	<a href="#">String</a>	Name of the segment membership table.	56.0
segmentOnApiName	<a href="#">String</a>	API name of the SegmentOn entity.	56.0
segmentOnId	<a href="#">String</a>	ID of the DMO segment.	55.0
segmentStatus	<a href="#">String</a>	Segment status.	55.0
segmentType	<a href="#">String</a>	Type of segment.	56.0

## ConnectApi.ChangeltemOutputRepresentation

The financial changes resulting from a change to one or more OrderItemSummaries. Most of the values represent the deltas of the values on the associated OrderSummary. The sign of each value is the opposite of the corresponding value on a change order record. For example, a discount is a positive value here and a negative value on a change order record.

Property Name	Type	Description	Available Version
grandTotalAmount	Double	Change to the GrandTotalAmount field.	48.0
totalAdjDeliveryAmtWithTax	Double	Change to the TotalAdjDeliveryAmtWithTax field.	49.0
totalAdjDistAmountWithTax	Double	Change to the TotalAdjDistAmountWithTax field.	49.0
totalAdjProductAmtWithTax	Double	Change to the TotalAdjProductAmtWithTax field.	49.0
totalAdjustedDeliveryAmount	Double	Change to the TotalAdjustedDeliveryAmount field.	48.0
totalAdjustedDeliveryTaxAmount	Double	Change to the TotalAdjustedDeliveryTaxAmount field.	48.0
totalAdjustedProductAmount	Double	Change to the TotalAdjustedProductAmount field.	48.0
totalAdjustedProductTaxAmount	Double	Change to the TotalAdjustedProductTaxAmount field.	48.0
totalAdjustmentDistributedAmount	Double	Change to the TotalAdjustmentDistributedAmount field.	48.0
totalAdjustmentDistributedTaxAmount	Double	Change to the TotalAdjustmentDistributedTaxAmount field.	48.0
totalAmount	Double	Change to the TotalAmount field.	48.0
totalExcessFundsAmount	Double	Amount of excess funds available on the OrderPaymentSummaries related to the OrderSummary. It is equal to the captured amount that is owed as a refund but is not associated with an invoice or credit memo. Excess funds normally occur when order items are canceled before fulfillment but after payment has been captured. This situation is not common in the US, where funds are normally authorized but not captured until the fulfillment process begins. This value includes all current excess funds related to the OrderSummary, not only the funds related to the current change.	48.0
totalFeeAmount	Double	Total amount of the fees charged for the change.	57.0
totalFeeTaxAmount	Double	Total amount of tax on the fees charged for the change.	57.0
totalRefundableAmount	Double	Total amount available to be refunded. It is the sum of the excess funds and any outstanding change order grand total amounts that apply to post-fulfillment changes. This value includes all	48.0

Property Name	Type	Description	Available Version
		current refundable amounts related to the OrderSummary, not only the amount related to the current change.	
totalRequiredFundsAmount	Double	The required funds associated with added order items.	54.0
totalTaxAmount	Double	Change to the TotalTaxAmount field.	48.0

## ConnectApi.ChatterActivity

Chatter activity.

Name	Type	Description	Available Version
commentCount	Integer	Total number of comments in the org or site made by the user.	28.0
commentReceivedCount	Integer	Total number of comments in the org or site received by the user.	28.0
likeReceivedCount	Integer	Total number of likes and upvotes (in version 45.0 and later) on posts and comments in the org or site received by the user.	28.0
postCount	Integer	Total number of posts in the org or site made by the user.	28.0

SEE ALSO:

[ConnectApi.UserDetail](#)

## ConnectApi.ChatterActivitySummary

Summary of Chatter activity.

Subclass of [ConnectApi.UserFeedEntityActivitySummary](#).

Property Name	Type	Description	Available Version
commentCount	Integer	Total number of comments in the org or site made by the user.	42.0
commentReceivedCount	Integer	Total number of comments in the org or site received by the user.	42.0

Property Name	Type	Description	Available Version
likeReceivedCount	Integer	Total number of likes and upvotes (in version 45.0 and later) on posts and comments in the org or site received by the user.	42.0
postCount	Integer	Total number of posts in the org or site made by the user.	42.0

## ConnectApi.ChatterConversation

Chatter conversation.

Name	Type	Description	Available Version
conversationId	String	ID for the conversation.	29.0
conversationUrl	String	Connect REST API URL identifying the conversation.	29.0
members	List<ConnectApi.UserSummary>	List of users in the conversation.	29.0
messages	ConnectApi.ChatterMessagePage	Content of the conversation.	29.0
read	Boolean	Specifies if the conversation is read ( <code>true</code> ) or not read ( <code>false</code> ).	29.0

## ConnectApi.ChatterConversationPage

Chatter conversation page.

Name	Type	Description	Available Version
conversations	List<ConnectApi.ChatterConversationSummary>	List of conversations on the page.	29.0
currentPageToken	String	Token identifying the current page.	29.0
currentPageUrl	String	Connect REST API URL identifying the current page.	29.0
nextPageToken	String	Token identifying the next page, or <code>null</code> if there isn't a next page.	29.0
nextPageUrl	String	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	29.0

## ConnectApi.ChatterConversationSummary

Chatter conversation summary.

Name	Type	Description	Available Version
id	String	ID for the conversation summary.	29.0
latestMessage	<a href="#">ConnectApi.ChatterMessage</a>	Contents of the latest message.	29.0
members	<a href="#">List&lt;ConnectApi.UserSummary&gt;</a>	List of members in the conversation.	29.0
read	Boolean	Specifies if the conversation is read ( <a href="#">true</a> ) or not read ( <a href="#">false</a> ).	29.0
url	String	Connect REST API URL to the conversation summary.	29.0

SEE ALSO:

[ConnectApi.ChatterConversationPage](#)

## ConnectApi.ChatterGroup

Chatter group.

This class is abstract.

Subclass of [ConnectApi.ActorWithId](#).

Superclass of:

- [ConnectApi.ChatterGroupDetail](#)
- [ConnectApi.ChatterGroupSummary](#)

Name	Type	Description	Available Version
additional Label	String	An extra label for the group, for example, "Archived," "Private," or "Private With Customers." If there isn't an extra label, the value is <a href="#">null</a> .	30.0
announcement	<a href="#">ConnectApi.Announcement</a>	The current announcement for this group. An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement.	31.0
bannerPhoto	<a href="#">ConnectApi.BannerPhoto</a>	The banner photo for the group.	36.0
canHave ChatterGuests	Boolean	<a href="#">true</a> if this group allows Chatter guests.	28.0
community	<a href="#">ConnectApi.Reference</a>	Information about the Experience Cloud site the group is in.	28.0
description	String	Group's description.	28.0
emailTo ChatterAddress	String	Group's email address for posting to this group by email. Returns <a href="#">null</a> if Chatter emails and posting to Chatter by email aren't both enabled in your organization.	30.0
isArchived	Boolean	Specifies whether the group is archived ( <a href="#">true</a> ) or not ( <a href="#">false</a> ).	29.0

Name	Type	Description	Available Version
isAutoArchiveDisabled	Boolean	Specifies whether automatic archiving is disabled for the group ( <code>true</code> ) or not ( <code>false</code> ).	29.0
isBroadcast	Boolean	Specifies whether the group is a broadcast group ( <code>true</code> ) or not ( <code>false</code> ). In a broadcast group, only group owners and managers can post to the group.	36.0
lastFeedElementPostDate	Datetime	ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, of the most recent feed element posted to the group.	31.0
lastFeedItemPostDate	Datetime	ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, of the most recent feed item posted to the group. Use <code>lastFeedElementPosted</code> .	28.0–30.0
memberCount	Integer	Total number of group members.	28.0
myRole	ConnectApi.GroupMembershipType	Type of membership the user has with the group. <ul style="list-style-type: none"> <li>GroupOwner</li> <li>GroupManager</li> <li>NotAMember</li> <li>NotAMemberPrivateRequested</li> <li>StandardMember</li> </ul>	28.0
mySubscription	ConnectApi.Reference	If the context user is a member of this group, contains information about that subscription; otherwise, returns <code>null</code> .	28.0
name	String	Name of the group.	28.0
owner	ConnectApi.UserSummary	Information about the owner of the group.	28.0
photo	ConnectApi.Photo	Information about the group photo.	28.0
visibility	ConnectApi.GroupVisibilityType	Group visibility type. Valid values are: <ul style="list-style-type: none"> <li>PrivateAccess—Only members of the group can see posts to this group.</li> <li>PublicAccess—All users within the Experience Cloud site can see posts to this group.</li> <li>Unlisted—Reserved for future use.</li> </ul>	28.0

## ConnectApi.ChatterGroupDetail

Chatter group details.

Subclass of [ConnectApi.ChatterGroup](#).

Name	Type	Description	Available Version
fileCount	<a href="#">Integer</a>	The number of files posted to the group.	28.0
information	<a href="#">ConnectApi.GroupInformation</a>	Describes the Information section of the group. If the group is private, this section is visible only to members. If the context user is not a member of the group or does not have Modify All Data or View All Data permission, this value is <code>null</code> .	28.0
pendingRequests	<a href="#">Integer</a>	The number of requests to join a group that are in a pending state.	29.0

SEE ALSO:

[ConnectApi.ChatterGroupPage](#)

[ConnectApi.UserGroupDetailPage](#)

## ConnectApi.ChatterGroupPage

Page of groups.

Name	Type	Description	Available Version
currentPageUrl	<a href="#">String</a>	Connect REST API URL identifying the current page.	28.0
groups	<a href="#">List&lt;ConnectApi.ChatterGroupDetail&gt;</a>	List of group details.	28.0
nextPageUrl	<a href="#">String</a>	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	28.0
previousPageUrl	<a href="#">String</a>	Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	28.0

## ConnectApi.ChatterGroupSummary

Chatter group summary.

Subclass of [ConnectApi.ChatterGroup](#).

Name	Type	Description	Available Version
fileCount	<a href="#">Integer</a>	The number of files posted to the group.	28.0

SEE ALSO:

[ConnectApi.ChatterGroupSummaryPage](#)

[ConnectApi.UserGroupPage](#)

## ConnectApi.ChatterGroupSummaryPage

Page of group summaries.

Name	Type	Description	Available Version
currentPageUrl	<a href="#">String</a>	Connect REST API URL identifying the current page.	29.0
groups	<a href="#">List&lt;ConnectApi.ChatterGroupSummary&gt;</a>	List of group summary objects.	29.0
nextPageUrl	<a href="#">String</a>	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	29.0
previousPageUrl	<a href="#">String</a>	Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	29.0

## ConnectApi.ChatterLike

Chatter like information.

Name	Type	Description	Available Version
id	<a href="#">String</a>	Like's 18-character ID	28.0
likedItem	<a href="#">ConnectApi.Reference</a>	A reference to the liked comment or feed element.	28.0
url	<a href="#">String</a>	Like's Connect REST API URL	28.0
user	<a href="#">ConnectApi.UserSummary</a>	Like's creator	28.0

SEE ALSO:

[ConnectApi.ChatterLikePage](#)

## ConnectApi.ChatterLikePage

Page of Chatter likes.

Name	Type	Description	Available Version
currentPageToken	Integer	Token identifying the current page.	28.0
currentPageUrl	String	Connect REST API URL identifying the current page.	28.0
items	List<ConnectApi.ChatterLike>	List of likes.	32.0
likes	List<ConnectApi.ChatterLike>	List of likes.  <b>Important:</b> As of API version 32.0, use the <code>items</code> property.	28.0–31.0
nextPageToken	Integer	Token identifying the next page, or <code>null</code> if there isn't a next page.	28.0
nextPageUrl	String	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	28.0
previousPageToken	Integer	Token identifying the previous page, or <code>null</code> if there isn't a previous page.	28.0
previousPageUrl	String	Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	28.0
total	Integer	Total number of likes across all pages.	28.0

SEE ALSO:

[ConnectApi.ChatterLikesCapability](#)

[ConnectApi.Comment](#)

## ConnectApi.ChatterLikesCapability

If a feed element has this capability, the context user can like it. Exposes information about existing likes.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
isLikedBy CurrentUser	Boolean	Indicates whether the feed element is liked by the context user ( <code>true</code> ) or not ( <code>false</code> ).	32.0
page	ConnectApi.ChatterLikePage	Likes information for this feed element.	32.0
likesMessage	ConnectApi.MessageBody	A message body that describes who likes the feed element.	32.0

Property Name	Type	Description	Available Version
myLike	<a href="#">ConnectApi.Reference</a>	If the context user has liked the feed element, this property is a reference to the specific like, <code>null</code> otherwise.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.ChatterMessage

Chatter message.

Name	Type	Description	Available Version
body	<a href="#">ConnectApi.MessageBody</a>	Contents of the message.	29.0
conversationId	<a href="#">String</a>	ID for the conversation.	29.0
conversationUrl	<a href="#">String</a>	Connect REST API URL identifying the conversation.	29.0
id	<a href="#">String</a>	ID of the message.	29.0
recipients	<a href="#">List&lt;ConnectApi.UserSummary&gt;</a>	List of the recipients of the message.	29.0
sender	<a href="#">ConnectApi.UserSummary</a>	Sender of the message.	29.0
sendingCommunity	<a href="#">ConnectApi.Reference</a>	Information about the Experience Cloud site from which the message was sent.  Returns <code>null</code> for the default site or if digital experiences isn't enabled.	32.0
sentDate	<a href="#">Datetime</a>	The date and time the message was sent.	29.0
url	<a href="#">String</a>	Connect REST API URL identifying the current page of the conversation.	29.0

SEE ALSO:

[ConnectApi.ChatterConversationSummary](#)

[ConnectApi.ChatterMessagePage](#)

## ConnectApi.ChatterMessagePage

Chatter message page.

Name	Type	Description	Available Version
currentPageToken	<a href="#">String</a>	Token identifying the current page.	29.0

Name	Type	Description	Available Version
currentPageUrl	String	Connect REST API URL identifying the current page.	29.0
messages	List<ConnectApi.ChatterMessage>	Messages on the current page.	29.0
nextPageToken	String	Token identifying the next page, or <code>null</code> if there isn't a next page.	29.0
nextPageUrl	String	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	29.0

SEE ALSO:

[ConnectApi.ChatterConversation](#)

## ConnectApi.ChatterStream

A Chatter feed stream.

Property Name	Type	Description	Available Version
community	<a href="#">ConnectApi.CommunitySummary</a>	Experience Cloud site where the stream is.	41.0
createdDate	Datetime	Date the stream was created.	39.0
description	String	Description of the stream.	39.0
id	String	18-character ID of the stream.	39.0
name	String	Name of the stream.	39.0
subscriptions	<a href="#">ConnectApi.FeedableEntity</a>	List of entities whose feeds are included in the stream.	39.0
url	String	URL to the stream.	39.0

SEE ALSO:

[ConnectApi.ChatterStreamPage](#)

## ConnectApi.ChatterStreamPage

A collection of Chatter feed streams.

Property Name	Type	Description	Available Version
currentPageUrl	String	URL to the current page of streams.	39.0
items	List<ConnectApi.ChatterStream>	List of streams.	39.0

Property Name	Type	Description	Available Version
nextPageUrl	String	URL to the next page of streams. In version 39.0, all streams are included in <code>currentPageUrl</code> and <code>nextPageUrl</code> is <code>null</code> .	39.0
total	Integer	Total number of streams in the collection.	39.0

## ConnectApi.ClientInfo

Client information.

Name	Type	Description	Available Version
applicationName	String	Name of the connected app used for authentication.	28.0
applicationUrl	String	Value from the <code>Info URL</code> field of the connected app used for authentication.	28.0

SEE ALSO:

[ConnectApi.Comment](#)

[ConnectApi.FeedItem](#)

## ConnectApi.CloseCapability

If a feed element has this capability, users with permission can close it.

Users can't edit (specifically the feed item body or title), comment on, or delete a closed feed element. If the closed feed element is a poll, users can't vote on it. Users can't edit (specifically the comment body) or delete a comment on a closed feed element or select or remove it as best answer.

Admins and moderators can edit and delete closed feed elements and comments on closed feed elements. Admins and moderators can select or remove the best answer status on comments on closed feed elements.

Property Name	Type	Description	Available Version
canContextUserUpdateIsClosed	Boolean	Specifies whether the context user has permission to set the feed element to closed ( <code>true</code> ) or not ( <code>false</code> ).	43.0
isClosed	Boolean	Specifies whether the feed element is closed ( <code>true</code> ) or not ( <code>false</code> ).	43.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.Comment

A comment.

Name	Type	Description	Available Version
attachment	<a href="#">ConnectApi.FeedItemAttachment</a>	If the comment contains an attachment, property value is <code>ContentAttachment</code> . If the comment does not contain an attachment, it is <code>null</code> .   <b>Important:</b> As of version 32.0, use the <code>capabilities</code> property.	28.0–31.0
body	<a href="#">ConnectApi.FeedBody</a>	Body of the comment.	28.0
capabilities	<a href="#">ConnectApi.CommentCapabilities</a>	Capabilities associated with the comment, such as any file attachments.	32.0
clientInfo	<a href="#">ConnectApi.ClientInfo</a>	Information about the connected app used to authenticate the connection.	28.0
createdDate	<a href="#">Datetime</a>	ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.	28.0
feedElement	<a href="#">ConnectApi.Reference</a>	Feed element on which the comment is posted.	
feedItem	<a href="#">ConnectApi.Reference</a>	Feed item on which the comment is posted.   <b>Important:</b> As of version 32.0, use the <code>feedElement</code> property.	28.0–31.0
id	<a href="#">String</a>	Comment's 18-character ID.	28.0
isDelete Restricted	<a href="#">Boolean</a>	If this property is <code>true</code> , the context user can't delete the comment. If this property is <code>false</code> , the context user might be able to delete the comment.	28.0
likes	<a href="#">ConnectApi.ChatterLikePage</a>	The first page of likes for the comment.  This property has no information for comments on direct messages.	28.0
likesMessage	<a href="#">ConnectApi.MessageBody</a>	A message body that describes who likes the comment.  This property is <code>null</code> for comments on direct messages.	28.0
moderation Flags	<a href="#">ConnectApi.ModerationFlags</a>	Information about the moderation flags on a comment. If <code>ConnectApi.Features.communityModeration</code> is <code>false</code> , this property is <code>null</code> .	29.0
myLike	<a href="#">ConnectApi.Reference</a>	If the context user liked the comment, this property is a reference to the specific like, <code>null</code> otherwise.  This property is <code>null</code> for comments on direct messages.	28.0

Name	Type	Description	Available Version
parent	<a href="#">ConnectApi.Reference</a>	Information about the parent feed-item for this comment.	28.0
relativeCreatedDate	String	The created date formatted as a relative, localized string, for example, "17m ago" or "Yesterday."	28.0
threadLevel	Integer	Level of nesting for a comment. 0 indicates a standard comment with a parent post. 1 indicates a threaded comment with a parent comment and a parent post. 2 indicates a threaded comment with two parent comments and a parent post. The UI is limited to these three levels.	44.0
threadParentId	String	ID of the parent comment for a threaded comment.	44.0
type	<a href="#">ConnectApi.CommentType</a>	Type of comment. <ul style="list-style-type: none"> <li>ContentComment—Comment holds a content capability.</li> <li>TextComment—Comment contains only text.</li> </ul>	28.0
url	String	Connect REST API URL to this comment.	28.0
user	<a href="#">ConnectApi.UserSummary</a>	Information about the comment author.	28.0

## ConnectApi.CommentCapabilities

A set of capabilities on a comment.

Property Name	Type	Description	Available Version
comments	<a href="#">ConnectApi.CommentsCapability</a>	If a comment has this capability, it has threaded comments.	44.0
content	<a href="#">ConnectApi.ContentCapability</a>	If a comment has this capability, it has a file attachment.  Most <a href="#">ConnectApi.ContentCapability</a> properties are null if the content has been deleted from the feed element or if the access has changed to private.	32.0
edit	<a href="#">ConnectApi.EditCapability</a>	If a comment has this capability, users who have permission can edit it.	34.0

Property Name	Type	Description	Available Version
feedEntityShare	<a href="#">ConnectApi.FeedEntityShareCapability</a>	If a comment has this capability, a feed entity is shared with it.	42.0
record	<a href="#">ConnectApi.RecordCapability</a>	If a comment has this capability, it has a record attachment.	42.0
status	<a href="#">ConnectApi.StatusCapability</a>	If a comment has this capability, it has a status that determines its visibility.	38.0
upDownVote	<a href="#">ConnectApi.UpDownVoteCapability</a>	If a comment has this capability, users can upvote or downvote it.	41.0
verified	<a href="#">ConnectApi.VerifiedCapability</a>	If a comment has this capability, users with permission can mark it as verified or unverified.	41.0

SEE ALSO:

[ConnectApi.Comment](#)

## ConnectApi.CommentPage

A page of comments.

Name	Type	Description	Available Version
comments	<a href="#">List&lt;ConnectApi.Comment&gt;</a>	Collection of comments.  <b>Important:</b> As of version 32.0, use the <code>items</code> property.	28.0–31.0
currentPageToken	String	Token identifying the current page.	28.0
currentPageUrl	String	Connect REST API URL identifying the current page.	28.0
items	<a href="#">List&lt;ConnectApi.Comment&gt;</a>	Collection of comments for this feed element.	32.0
nextPageToken	String	Token identifying the next page, or <code>null</code> if there isn't a next page.  If you want to read more of the comments in search results, all the comments in the thread are refreshed, not just the ones that match the search term. Avoid using <code>nextPageToken</code> until the comments are refreshed.	28.0
nextPageUrl	String	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.  If you want to read more of the comments in search results, all the comments in the thread are refreshed, not just the ones that match the search term. Avoid using <code>nextPageUrl</code> until the comments are refreshed.	28.0

Name	Type	Description	Available Version
previousPageToken	<a href="#">String</a>	Token identifying the previous page, or <code>null</code> if there isn't a previous page.	44.0
previousPageUrl	<a href="#">String</a>	Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	44.0
total	<a href="#">Integer</a>	Total number of published comments for the parent feed element.	28.0

SEE ALSO:

[ConnectApi.CommentsCapability](#)

## ConnectApi.CommentSummary

Summary of the comment.

Subclass of [ConnectApi.UserActivitySummary](#).

Property Name	Type	Description	Available Version
commentId	<a href="#">String</a>	ID of the comment.	42.0

## ConnectApi.CommentsCapability

If a feed element or comment has this capability, the context user can add a comment to it.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
page	<a href="#">ConnectApi.CommentPage</a>	The comments information for this feed element or comment.  Threaded comments are supported in version 44.0 and later.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.CommerceActionResult

Result of executing a commerce action.

Property Name	Type	Description	Available Version
isSuccess	<a href="#">Boolean</a>	Specifies whether the action is a success ( <code>true</code> ) or not ( <code>false</code> ).	53.0

Property Name	Type	Description	Available Version
message	String	Action result message.	53.0

## ConnectApi.CommerceAddressCollection

A collection of Commerce addresses.

Property Name	Type	Description	Available Version
count	Integer	Count of addresses.	54.0
currentPageToken	String	Token to the current page of addresses.	54.0
currentPageUrl	String	URL to the current page of addresses.	54.0
items	<a href="#">ConnectApi.CommerceAddressOutput</a>	Address Details	54.0
nextPageToken	String	Token to the next page of addresses.	54.0
nextPageUrl	String	URL to the next page of addresses.	54.0
pageSize	Integer	Page size for addresses.	54.0
previousPageToken	String	Token to previous page of addresses.	54.0
previousPageUrl	String	URL to the previous page of addresses.	54.0
sortOrder	<a href="#">ConnectApi.CommerceAddressSort</a>	Sort order for Commerce addresses. <ul style="list-style-type: none"> <li>CreatedDateAsc—Sort in ascending order of created date.</li> <li>CreatedDateDesc—Sort in descending order of created date.</li> <li>NameAsc—Sort in ascending order of name.</li> <li>NameDesc—Sort in descending order of name.</li> </ul>	54.0

## ConnectApi.CommerceAddressOutput

Address for a Commerce account.

Property Name	Type	Description	Available Version
addressId	String	ID of the address.	54.0
addressType	String	Type of address (for example, "Shipping" or "Billing").	54.0
city	String	The address city.	54.0
companyName	String	The address company name.	57.0
country	String	The address country.	54.0
countryCode	String	Two-character country code.	54.0–58.0

Property Name	Type	Description	Available Version
fields	Map<String, Record Field>	A list of custom address fields, if any.	54.0
firstName	String	The address first name.	57.0
isDefault	Boolean	Indicates whether a contact's address is the preferred method of communication ( <code>true</code> ) or not ( <code>false</code> ). The default value is <code>false</code> .	54.0
lastName	String	The address last name.	57.0
middleName	String	The address middle name.	57.0
name	String	Name of the contact.	54.0
phoneNumber	String	The address phone number.	57.0
postalCode	String	Zip code or postal code for the address.	54.0
region	String	The address state.	54.0
regionCode	String	The address state code.	54.0–58.0
street	String	The address street.	54.0

## ConnectApi.CommerceProductSearchResults

Product search results information.

Property Name	Type	Description	Available Version
categories	ConnectApi.SearchCategory	Categories from the search results.	52.0
correlationId	String	Reserved for future use.	55.0
facets	List<ConnectApi.SearchFacet>	Facets from the search results.	52.0
locale	String	Locale of the search results.	52.0
productsPage	ConnectApi.ProductSummaryPage	Page of products from the search results.	52.0

## ConnectApi.CommerceProductSellingModel

Product selling model information.

Property Name	Type	Description	Available Version
isSubscriptionProduct	Boolean	Indicates whether the product selling model is a subscription product or not.	59.0

## ConnectApi.CommerceProductSummary

Summary of a product in product search results.

Property Name	Type	Description	Available Version
defaultImage	<a href="#">ConnectApi.ProductMedia</a>	Default image of the product.	55.0
fields	<a href="#">Map&lt;String, ConnectApi.FieldValue&gt;</a>	Map of fields belonging to the product.	55.0
id	<a href="#">String</a>	ID of the product.	55.0
name	<a href="#">String</a>	Name of the product.	55.0
prices	<a href="#">ConnectApi.PricingResult LineItem</a>	Prices of the product.	55.0
productClass	<a href="#">ConnectApi.ProductClass</a>	Class of product. Values are: <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Set</li> <li>• Simple</li> <li>• Variation</li> <li>• VariationParent</li> </ul>	55.0
productSellingModelInformation	<a href="#">ConnectApi.CommerceProductSellingModel</a>	Product selling model information.	59.0
purchaseQuantityRule	<a href="#">ConnectApi.PurchaseQuantityRule</a>	If one exists, purchase quantity rule for the product.	58.0
urlName	<a href="#">String</a>	SEO-friendly URL name for the product.	59.0
variationAttributeSet	<a href="#">ConnectApi.ProductAttributeSetSummary</a>	Variation attribute set that's associated with the product.	55.0

## ConnectApi.CommerceProductSummaryPage

Collection of product summary representations in product search results.

Property Name	Type	Description	Available Version
pageSize	<a href="#">Integer</a>	Number of products per page in search results.	55.0
products	<a href="#">ConnectApi.CommerceProductSummary</a>	Collection of product summaries.	55.0

Property Name	Type	Description	Available Version
total	Long	Number of products in search results across all pages.	55.0

## ConnectApi.CommerceResultRepresentationBase

Base cart calculate output class.

This class is abstract.

Superclass of:

- [ConnectApi.CalculateCartResult](#)

Property Name	Type	Description	Available Version
message	String	Message related to the request.	62.0
status	String	Asynchronous processing status of the cart, if asynchronous processing is enabled for the store. This property returns <code>Completed</code> in Apex, because Apex operations always run synchronously.	62.0

## ConnectApi.CommerceSearchIndex

Index information.

Property Name	Type	Description	Available Version
completionDate	Datetime	Completion date and time of the index.	52.0
createdDate	Datetime	Creation date of the index.	52.0
creationType	<a href="#">ConnectApi.CommerceSearchIndexCreationType</a>	Creation type of the index. Values are: <ul style="list-style-type: none"> <li>• Manual</li> <li>• Scheduled</li> </ul>	52.0
id	String	ID of the index.	52.0
indexBuildType	<a href="#">ConnectApi.CommerceSearchIndexBuildType</a>	Build type of the index. Values are: <ul style="list-style-type: none"> <li>• Full</li> <li>• Incremental</li> </ul>	57.0
indexStatus	<a href="#">ConnectApi.CommerceSearchIndexStatus</a>	Status of the index. Values are: <ul style="list-style-type: none"> <li>• Completed</li> <li>• Failed</li> <li>• InProgress</li> </ul>	52.0

Property Name	Type	Description	Available Version
indexUsage	<a href="#">ConnectApi.CommerceSearchIndexUsage</a>	Usage of the index. Values are: <ul style="list-style-type: none"> <li>• Live</li> <li>• OutOfUse</li> </ul>	52.0
isIncrementable	<a href="#">Boolean</a>	Specifies whether the index allows incremental indexing ( <code>true</code> ) or not ( <code>false</code> ).	57.0
lastCatalogSnapshotTime	<a href="#">Datetime</a>	Catalog snapshot time of the index.	57.0
message	<a href="#">String</a>	Detailed message for the index status.	52.0

SEE ALSO:

[ConnectApi.CommerceSearchIndexCollection](#)

## ConnectApi.CommerceSearchIndexCollection

Collection of indexes.

Property Name	Type	Description	Available Version
indexes	<a href="#">List&lt;ConnectApi.CommerceSearchIndex&gt;</a>	List of up to two indexes. Returns the completed, live index and either the in-progress, out-of-use index or the most-recently-failed, out-of-use index.	52.0

## ConnectApi.CommerceSearchIndexLog

Search index log information.

Property Name	Type	Description	Available Version
catalogSnapshotTime	<a href="#">Datetime</a>	Catalog snapshot time of the index build.	57.0
completionDate	<a href="#">Datetime</a>	Completion date of the index build.	57.0
createdById	<a href="#">String</a>	ID of the user who initiated the index build.	57.0
indexBuildStatus	<a href="#">ConnectApi.CommerceSearchIndexStatus</a>	Status of the index. Values are: <ul style="list-style-type: none"> <li>• Completed</li> <li>• Failed</li> <li>• InProgress</li> </ul>	57.0
indexBuildType	<a href="#">ConnectApi.CommerceSearchIndexBuildType</a>	Build type of the index. Values are: <ul style="list-style-type: none"> <li>• Full</li> <li>• Incremental</li> </ul>	57.0

Property Name	Type	Description	Available Version
indexId	String	ID of the index build.	57.0
message	String	Detailed message for the index build status.	57.0
numberOfProducts	Integer	Number of new or changed products in the index build.	57.0

## ConnectApi.CommerceSearchIndexLogCollection

Collection of search index logs for a webstore.

Property Name	Type	Description	Available Version
indexLogs	List<ConnectApi.CommerceSearchIndexLog>	List of up to 100 index logs sorted by most recent catalog snapshot time of the index.	57.0

## ConnectApi.Community

Experience Cloud site.

Name	Type	Description	Available Version
allowChatterAccessWithoutLogin	Boolean	Specifies if guest users can access public groups without logging in.	31.0
allowMembersToFlag	Boolean	Specifies if members can flag content.	30.0
builderBasedSnaEnabled	Boolean	Specifies whether the Service Not Available page is an auto-generated Experience Builder-based page ( <b>true</b> ) or a static resource page that's set in <b>Workspaces &gt; Administration &gt; Pages</b> ( <b>false</b> ).	52.0
builderUrl	String	Experience Builder URL for the site.	56.0
contentSpaceId	String	ID of the managed content space associated with the enhanced site.	62.0
description	String	Site description.	28.0
guestMemberVisibilityEnabled	Boolean	Specifies whether guest members can see other members ( <b>true</b> ) or not ( <b>false</b> ).	47.0
id	String	Site ID.	28.0
imageOptimizationCDNEnabled	Boolean	Specifies whether images are optimized for guest users on all devices for sites using Salesforce's CDN for Digital Experiences ( <b>true</b> ) or not ( <b>false</b> ).	56.0
invitationsEnabled	Boolean	Specifies whether users can invite other external users.	28.0

Name	Type	Description	Available Version
knowledgeableEnabled	Boolean	Specifies whether knowledgeable people and endorsements are available for topics ( <code>true</code> ), or not ( <code>false</code> ).	30.0
loginUrl	String	Login URL for the site.	36.0
memberVisibilityEnabled	Boolean	Specifies whether members can see other members ( <code>true</code> ) or not ( <code>false</code> ).	45.0
name	String	Site name.	28.0
nicknameDisplayEnabled	Boolean	Specifies whether nicknames are displayed.	32.0
privateMessagesEnabled	Boolean	Specifies whether members can send and receive private messages to and from other members ( <code>true</code> ) or not ( <code>false</code> ).	30.0
reputationEnabled	Boolean	Specifies whether reputation is calculated and displayed for members.	31.0
sendWelcomeEmail	Boolean	Specifies whether emails are sent to all new users when they join.	28.0
siteAsContainerEnabled	Boolean	Specifies whether the site is an Experience Builder site ( <code>true</code> ) or a Salesforce Tabs + Visualforce site ( <code>false</code> ).	41.0
siteUrl	String	URL for the site, which is your Experience Cloud sites domain plus a URL prefix. For example, <code>MyDomainName.my.site.com/customers</code> .	30.0
status	ConnectApi.CommunityStatus Enum	Status of the Experience Cloud site. <ul style="list-style-type: none"> <li>• Live</li> <li>• Inactive</li> <li>• UnderConstruction</li> </ul>	28.0
templateName	String	Name of the Experience Builder template.	46.0
url	String	Connect REST API URL to the site.	28.0
urlPathPrefix	String	Site-specific URL prefix. For example, in the site URL <code>MyDomainName.my.site.com/customers</code> , <code>customers</code> is the <code>UrlPathPrefix</code> .	28.0

SEE ALSO:

[ConnectApi.CommunityPage](#)

## ConnectApi.CommunityPage

Page of Experience Cloud sites.

Name	Type	Description	Available Version
communities	List<ConnectApi.Community>	List of Experience Cloud sites the context user has access to.	28.0

Name	Type	Description	Available Version
total	<a href="#">Integer</a>	Total number of Experience Cloud sites.	28.0

## ConnectApi.CommunitySummary

Summary of an Experience Cloud site.

Property Name	Type	Description	Available Version
id	<a href="#">String</a>	18-character ID of the site.	41.0
name	<a href="#">String</a>	Localized name of the site.	41.0

SEE ALSO:

[ConnectApi.UserActivitySummary](#)

## ConnectApi.CompanyVerifySummary

Company verify summary.

Subclass of [ConnectApi.UserFeedEntityActivitySummary](#).

No additional properties.

## ConnectApi.ComplexSegment

Complex segments of field changes.

This class is abstract.

Subclass of [ConnectApi.MessageSegment](#).

Superclass of [ConnectApi.FieldChangeSegment](#).

Name	Type	Description	Available Version
segments	<a href="#">List&lt;ConnectApi.MessageSegment&gt;</a>	List of message segments.	28.0

## ConnectApi.CompositeCommerceProductOutputRepresentation

Details of a composite product.

Property Name	Type	Description	Available Version
errors	<a href="#">List&lt;ConnectApi.ErrorResponse&gt;</a>	List of any errors that were returned, including the error code and error message.	61.0
productId	<a href="#">String</a>	ID of the product record created.	61.0

Property Name	Type	Description	Available Version
success	Boolean	Indicates whether the product was successfully created ( <code>true</code> ) or not ( <code>false</code> ).	61.0

## ConnectApi.CompositeCommerceVariationOutputRepresentation

Details of composite product variations.

Property Name	Type	Description	Available Version
errors	List<ConnectApi.ErrorResponse>	List of any errors that were returned, including the error code and error message.	62.0
productIds	List<String>	IDs of the created product variations.	62.0
success	Boolean	Indicates whether the product variations were successfully created ( <code>true</code> ) or not ( <code>false</code> ).	62.0

## ConnectApi.CompoundRecordField

Record field that is a composite of subfields.

Subclass of [ConnectApi.LabeledRecordField](#).

Name	Type	Description	Available Version
fields	List<ConnectApi.AbstractRecordField>	Collection of subfields that make up the compound field.	29.0

## ConnectApi.ConfirmHeldFOCapacityOutputRepresentation

Response to a request to confirm held fulfillment order capacity at one or more locations. Can correspond to one action call.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
confirmHeldFOCapacityResponses	List<ConnectApi.ConfirmHeldFOCapacityResponseOutputRepresentation>	List of responses to the requests to confirm held fulfillment order capacity at one or more locations.	55.0

## ConnectApi.ConfirmHeldFOCapacityResponseOutputRepresentation

Response to a request to confirm held fulfillment order capacity at one or more locations.

Property Name	Type	Description	Available Version
capacityResponses	List< <a href="#">ConnectApi.CapacityResponseOutputRepresentation</a> >	List of responses to the requests to confirm held fulfillment order capacity at individual locations.	55.0

## ConnectApi.Content

A file attached to a feed item.

Property Name	Type	Description	Available Version
checksum	String	MD5 checksum for the file.	36.0
contentUrl	String	URL of the content for links.	36.0
description	String	Description of the attachment.	36.0
downloadUrl	String	URL to the content.	36.0
fileExtension	String	Extension of the file.	36.0
fileSize	String	Size of the file in bytes. If size can't be determined, returns <code>unknown</code> .	36.0
fileType	String	Type of file, such as PDF.	36.0
hasPdfPreview	Boolean	<code>true</code> if the file has a PDF preview available; <code>false</code> otherwise.	36.0
id	String	18-character ID of the content.	36.0
imageDetails	<a href="#">ConnectApi.ContentImageDetails</a>	Image details, or <code>null</code> if the file isn't an image.	40.0
isInMyFileSync	Boolean	<code>true</code> if the file is synced with Salesforce Files Sync.	36.0
		 <b>Note:</b> Salesforce Files Sync was retired on May 25, 2018.	
mimeType	String	MIME type of the file.	36.0
renditionUrl	String	URL to the rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.	36.0
renditionUrl 240By180	String	URL to the 240 x 180 pixel rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.	36.0

Property Name	Type	Description	Available Version
renditionUrl 720By480	String	URL to the 720 x 480 pixel rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.	36.0
sharingOption	ConnectApi. FileSharingOption	Sharing option of the file. Values are: <ul style="list-style-type: none"> <li>Allowed—Resharing of the file is allowed.</li> <li>Restricted—Resharing of the file is restricted.</li> </ul>	36.0
textPreview	String	Text preview of the file if available; null otherwise.	36.0
thumb120By90 RenditionStatus	String	Specifies the rendering status of the 120 x 90 preview image of the file. One of these values: <ul style="list-style-type: none"> <li>Processing—Image is being rendered.</li> <li>Failed—Rendering process failed.</li> <li>Success—Rendering process was successful.</li> <li>Na—Rendering is not available for this image.</li> </ul>	36.0
thumb240By180 RenditionStatus	String	Specifies the rendering status of the 240 x 180 preview image of the file. One of these values: <ul style="list-style-type: none"> <li>Processing—Image is being rendered.</li> <li>Failed—Rendering process failed.</li> <li>Success—Rendering process was successful.</li> <li>Na—Rendering is not available for this image.</li> </ul>	36.0
thumb720By480 RenditionStatus	String	Specifies the rendering status of the 720 x 480 preview image of the file. One of these values: <ul style="list-style-type: none"> <li>Processing—Image is being rendered.</li> <li>Failed—Rendering process failed.</li> <li>Success—Rendering process was successful.</li> <li>Na—Rendering is not available for this image.</li> </ul>	36.0
title	String	Title of the file.	36.0
versionId	String	Version ID of the file.	36.0

## SEE ALSO:

[ConnectApi.FilesCapability](#)

## ConnectApi.ContentCapability

If a comment has this capability, it has a file attachment.

Subclass of [ConnectApi.FeedElementCapability](#).

For files attached to a feed post (instead of a comment) in version 36.0 and later, use [ConnectApi.FilesCapability](#).

If content is deleted from a feed element after it's posted or if the access to the content is changed to private, the `ConnectApi.ContentCapability` exists, however most of its properties are null.

Property Name	Type	Description	Available Version
<code>checksum</code>	<a href="#">String</a>	MD5 checksum for the file.	32.0
<code>contentUrl</code>	<a href="#">String</a>	URL of the content for links and Google docs.	32.0
<code>description</code>	<a href="#">String</a>	Description of the attachment.	32.0
<code>downloadUrl</code>	<a href="#">String</a>	URL to the content.	32.0
<code>fileExtension</code>	<a href="#">String</a>	Extension of the file.	32.0
<code>fileSize</code>	<a href="#">String</a>	Size of the file in bytes. If size cannot be determined, returns <code>Unknown</code> .	32.0
<code>fileType</code>	<a href="#">String</a>	Type of file.	32.0
<code>hasPdfPreview</code>	<a href="#">Boolean</a>	<code>true</code> if the file has a PDF preview available, <code>false</code> otherwise.	32.0
<code>id</code>	<a href="#">String</a>	18-character ID of the content.	32.0
<code>isInMyFileSync</code>	<a href="#">Boolean</a>	<code>true</code> if the file is synced with Salesforce Files Sync; <code>false</code> otherwise.	32.0
		 <b>Note:</b> Salesforce Files Sync was retired on May 25, 2018.	
<code>mimeType</code>	<a href="#">String</a>	MIME type of the file.	32.0
<code>renditionUrl</code>	<a href="#">String</a>	URL to the rendition resource for the file. Renditions are processed asynchronously and may not be available immediately after the file has been uploaded.	32.0
<code>renditionUrl240By180</code>	<a href="#">String</a>	URL to the 240x180 size rendition resource for the file. Renditions are processed asynchronously and may not be available immediately after the file has been uploaded.	32.0
<code>renditionUrl720By480</code>	<a href="#">String</a>	URL to the 720x480 size rendition resource for the file. Renditions are processed asynchronously and may not be available immediately after the file has been uploaded.	32.0

Property Name	Type	Description	Available Version
sharingOption	<a href="#">ConnectApi.FileSharingOption</a>	Sharing option of the file. Values are: <ul style="list-style-type: none"> <li>Allowed—Resharing of the file is allowed.</li> <li>Restricted—Resharing of the file is restricted.</li> </ul>	35.0
textPreview	<a href="#">String</a>	Text preview of the file if available, <code>null</code> otherwise. The maximum number of characters is 200.	32.0
thumb120By90RenditionStatus	<a href="#">String</a>	The status of the rendering of the 120x90 pixel sized preview image of the file. Should be either Processing, Failed, Success, or Na if unavailable.	32.0
thumb240By180RenditionStatus	<a href="#">String</a>	The status of the rendering of the 240x180 pixel sized preview image of the file. Should be either Processing, Failed, Success, or Na if unavailable.	32.0
thumb720By480RenditionStatus	<a href="#">String</a>	The status of the rendering of the 720x480 pixel sized preview image of the file. Should be either Processing, Failed, Success, or Na if unavailable.	32.0
title	<a href="#">String</a>	Title of the file.	32.0
versionId	<a href="#">String</a>	Version ID of the file.	32.0

## ConnectApi.ContentHubAllowedItemTypeCollection

The item types that the context user is allowed to create in a repository folder.

Property Name	Type	Description	Available Version
allowedItemTypes	<a href="#">List&lt;ConnectApi.ContentHubItemTypeSummary&gt;</a>	A collection of item types that the context user is allowed to create in a repository folder.	39.0

## ConnectApi.ContentHubFieldDefinition

A field definition.

Property Name	Type	Description	Available Version
displayName	<a href="#">String</a>	Label or caption of this field.	39.0
isMandatory	<a href="#">Boolean</a>	Specifies whether this field is mandatory for the item type.	39.0

Property Name	Type	Description	Available Version
maxLength	<a href="#">Integer</a>	Maximum length of the value of this field.	39.0
name	<a href="#">String</a>	Name of the field.	39.0
type	<a href="#">ConnectApi.ContentHubVariableType</a>	Data type of the value of the field. Values are: <ul style="list-style-type: none"> <li>• <a href="#">BooleanType</a></li> <li>• <a href="#">DateTimeType</a></li> <li>• <a href="#">DecimalType</a></li> <li>• <a href="#">HtmlType</a></li> <li>• <a href="#">IdType</a></li> <li>• <a href="#">IntegerType</a></li> <li>• <a href="#">StringType</a></li> <li>• <a href="#">UriType</a></li> <li>• <a href="#">XmlType</a></li> </ul>	39.0

SEE ALSO:

[ConnectApi.ContentHubItemTypeDetail](#)

## ConnectApi.ContentHubItemTypeDetail

The details of an item type associated with a repository folder.

Subclass of [ConnectApi.AbstractContentHubItemType](#).

Property Name	Type	Description	Available Version
fields	<a href="#">List&lt;ConnectApi.ContentHubFieldDefinition&gt;</a>	A list of fields that the context user is allowed to set in the metadata of this item type.	39.0

## ConnectApi.ContentHubItemTypeSummary

The summary of an item type associated with a repository folder.

Subclass of [ConnectApi.AbstractContentHubItemType](#).

No additional properties.

SEE ALSO:

[ConnectApi.ContentHubAllowedItemTypeCollection](#)

## ConnectApi.ContentHubPermissionType

A permission type.

Property Name	Type	Description	Available Version
id	<a href="#">String</a>	Internal ID of the permission type in the repository.	39.0
label	<a href="#">String</a>	Label as returned by the repository.	39.0

SEE ALSO:

[ConnectApi.ExternalFilePermissionInformation](#)

## ConnectApi.ContentHubProviderType

The type of repository.

Property Name	Type	Description	Available Version
label	<a href="#">String</a>	Localized label of the provider type.	39.0
type	<a href="#">String</a>	Provider type. One of these values: <ul style="list-style-type: none"> <li>• <a href="#">ContentHubBox</a></li> <li>• <a href="#">ContentHubGDrive</a></li> <li>• <a href="#">ContentHubSharepoint</a></li> <li>• <a href="#">ContentHubSharepointOffice365</a></li> <li>• <a href="#">ContentHubSharepointOneDrive</a></li> <li>• <a href="#">SimpleUrl</a></li> </ul>	39.0

SEE ALSO:

[ConnectApi.ContentHubRepository](#)

## ConnectApi.ContentHubRepository

A repository.

Subclass of [ConnectApi.ActorWithId](#).

Property Name	Type	Description	Available Version
authentication	<a href="#">ConnectApi.ContentHubRepositoryAuthentication</a>	Repository authentication information.	40.0
features	<a href="#">ConnectApi.ContentHubRepositoryFeatures</a>	Repository features.	39.0
label	<a href="#">String</a>	Repository label.	39.0
name	<a href="#">String</a>	Repository name.	39.0
providerType	<a href="#">ConnectApi.ContentHubProviderType</a>	Repository provider type.	39.0

Property Name	Type	Description	Available Version
rootFolderItemsUrl	String	URL to the list of items in the repository root folder.	39.0

SEE ALSO:

[ConnectApi.ContentHubRepositoryCollection](#)

## ConnectApi.ContentHubRepositoryAuthentication

Authentication information for a repository.

Property Name	Type	Description	Available Version
authFlowUrl	String	Depends on the authProtocol. <ul style="list-style-type: none"> <li>NoAuthentication—<code>null</code>.</li> <li>OAuth—URL to start the OAuth flow.</li> <li>Password—URL to the authentication settings for external systems.</li> </ul>	40.0
authProtocol	<a href="#">ConnectApi.ContentHubAuthenticationProtocol</a>	Authentication protocol used for the repository. Values are: <ul style="list-style-type: none"> <li>NoAuthentication—Repository doesn't require authentication.</li> <li>OAuth—Repository uses OAuth authentication protocol.</li> <li>Password—Repository uses user name and password authentication protocol.</li> </ul>	40.0
userHasAuthSettings	Boolean	Specifies whether the user has credentials or the administrator configured the external data source to use the same set of credentials for every user ( <code>true</code> ). Otherwise, <code>false</code> .	40.0

SEE ALSO:

[ConnectApi.ContentHubRepository](#)

## ConnectApi.ContentHubRepositoryCollection

A collection of repositories.

Property Name	Type	Description	Available Version
currentPageUrl	String	URL to the current page of repositories.	39.0
nextPageUrl	String	URL to the next page of repositories, or <code>null</code> if there isn't a next page.	39.0

Property Name	Type	Description	Available Version
previousPageUrl	String	URL to the previous page of repositories, or <code>null</code> if there isn't a previous page.	39.0
repositories	List<ConnectApi.ContentHubRepository>	Collection of repositories.	39.0

## ConnectApi.ContentHubRepositoryFeatures

The features of a repository.

Property Name	Type	Description	Available Version
canBrowse	Boolean	Specifies whether the repository's folder hierarchy can be browsed ( <code>true</code> ) or not ( <code>false</code> ).	39.0
canSearch	Boolean	Specifies whether the repository can be searched ( <code>true</code> ) or not ( <code>false</code> ).	39.0

SEE ALSO:

[ConnectApi.ContentHubRepository](#)

## ConnectApi.ContentImageFileDetails

Image file details.

Property Name	Type	Description	Available Version
height	Integer	Image's height in pixels.	40.0
imageFormat	String	Image's format.	40.0
orientation	String	Image's EXIF orientation value, if present.	40.0
width	Integer	Image's width in pixels.	40.0

SEE ALSO:

[ConnectApi.InlineImageSegment](#)

## ConnectApi.ContractOutputRepresentation

Contract list.

Property Name	Type	Description	Available Version
data	List<String>	Record IDs of the contacts.	56.0

## ConnectApi.ConversationApplicationDefinitionDetailRepresentation

Information about the conversation application definition.

Property Name	Type	Description	Available Version
botInfo	<a href="#">ConnectApi.BotInfoRepresentation</a>	Basic information of the bot associated with this conversation application.	54.0
errorMessage	<a href="#">String</a>	Error message for the failed get operation.	54.0
integrationApplication	<a href="#">ConnectApi.ConversationApplicationIntegrationType</a>	Conversation application integration types. Values are: <ul style="list-style-type: none"> <li>• Api</li> <li>• Slack</li> </ul>	54.0
integrationName	<a href="#">String</a>	Name of the conversation application.	54.0
isSuccess	<a href="#">Boolean</a>	Success indicator of the get operation.	54.0
runtimeUrl	<a href="#">String</a>	Base URL of the bot runtime API.	54.0

## ConnectApi.CouponCodeRedemptionResult

Coupon code redemption result.

Property Name	Type	Description	Available Version
availableRedemptions	<a href="#">Integer</a>	Number of coupon code redemptions available.	58.0
couponCode	<a href="#">String</a>	Coupon code.	58.0
errorMsg	<a href="#">String</a>	Error message when coupon code redemption isn't successful.	58.0
isSuccess	<a href="#">Boolean</a>	Specifies whether increasing or decreasing the coupon code redemption is successful ( <code>true</code> ) or not ( <code>false</code> ).	58.0
redemptionLimit	<a href="#">Integer</a>	Number of coupon code redemptions allowed.	58.0

## ConnectApi.CouponCodeRedemptionCollection

Collection of coupon code redemption results.

Property Name	Type	Description	Available Version
couponCodeRedemptionResults	<a href="#">List&lt;ConnectApi.CouponCodeRedemptionResult&gt;</a>	List of coupon code redemption results.	58.0

## ConnectApi.CreateCreditMemoOutputRepresentation

ID of a created Credit Memo.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
creditMemoId	String	ID of the created Credit Memo.	48.0

## ConnectApi.ChangeOrdersInvoiceOutputRepresentation

List of IDs of invoices created for change orders.

Subclass of [ConnectApi.BaseInvoiceOutputRepresentation](#).

No additional properties.

SEE ALSO:

[createMultipleInvoices\(invoicesInput\)](#)

[ConnectApi.CreateMultipleInvoicesFromChangeOrdersOutputRepresentation](#)

## ConnectApi.CreateMultipleInvoicesFromChangeOrdersOutputRepresentation

List of lists of invoices created from change orders for fees.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
invoices	List< <a href="#">ConnectApi.ChangeOrdersInvoiceOutputRepresentation</a> >	List of IDs of invoices created from change orders for fees. Include these invoice IDs when calling Ensure Refunds for the return that the fees applied to.	56.0

SEE ALSO:

[createMultipleInvoices\(invoicesInput\)](#)

## ConnectApi.CreateOrderPaymentSummaryOutputRepresentation

ID of the created Order Payment Summary.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
orderPaymentSummaryId	String	ID of the Order Payment Summary.	48.0

## ConnectApi.Credential

Credential.

Property Name	Type	Description	Available Version
authentication Protocol	<a href="#">ConnectApi.CredentialAuthenticationProtocol</a>	Authentication protocol of the external credential. Values are: <ul style="list-style-type: none"> <li>• <code>AwsSv4</code></li> <li>• <code>Basic</code></li> <li>• <code>Custom</code></li> <li>• <code>Jwt</code></li> <li>• <code>OAuth</code></li> </ul>	56.0
authentication ProtocolVariant	<a href="#">ConnectApi.CredentialAuthenticationProtocolVariant</a>	Authentication protocol variant of the external credential. Values are: <ul style="list-style-type: none"> <li>• <code>AwsSv4_STS</code>—AWS Signature Version 4 with Security Token Service.</li> <li>• <code>ClientCredentialsClientSecret</code>—OAuth 2.0 Client Credentials client secret. Client secrets are sent in the callout's request body.</li> <li>• <code>ClientCredentialsClientSecretBasic</code>—OAuth 2.0 Client Credentials client secret. Client secrets are sent in the callout's authorization header, as with Basic authentication.</li> <li>• <code>ClientCredentialsJwtAssertion</code>—OAuth 2.0 Client Credentials JSON Web Token assertion.</li> <li>• <code>JwtBearer</code>—OAuth 2.0 JSON Web Token bearer flow.</li> <li>• <code>NoAuthentication</code>—No authentication.</li> <li>• <code>RolesAnywhere</code>—AWS Signature Version 4 with Identity and Access Management (IAM) Roles Anywhere.</li> </ul>	57.0
authentication Status	<a href="#">ConnectApi.CredentialAuthenticationStatus</a>	Status of the credential authentication. Values are: <ul style="list-style-type: none"> <li>• <code>Configured</code>—Credential has all required credentials for at least one principal.</li> <li>• <code>NotConfigured</code>—Credential isn't configured.</li> <li>• <code>Unknown</code>—Credential status can't be determined because the authentication protocol is custom.</li> </ul>	56.0
credentials	<a href="#">Map&lt;String, ConnectApi.CredentialValue&gt;</a>	Map of protocol-specific credentials.	56.0

Property Name	Type	Description	Available Version
<code>externalCredential</code>	<a href="#">String</a>	Fully qualified developer name of the external credential.	56.0
<code>principalName</code>	<a href="#">String</a>	Name of the external credential named principal.	56.0
<code>principalType</code>	<a href="#">ConnectApi.CredentialPrincipalType</a>	Type of credential principal. Values are: <ul style="list-style-type: none"> <li>• <a href="#">AwsStsPrincipal</a></li> <li>• <a href="#">NamedPrincipal</a></li> <li>• <a href="#">PerUserPrincipal</a></li> </ul>	56.0

## ConnectApi.CredentialCustomHeader

Credential custom header.

Property Name	Type	Description	Available Version
<code>headerName</code>	<a href="#">String</a>	Header name.	57.0
<code>headerValue</code>	<a href="#">String</a>	Header value that can contain formulas.	57.0
<code>id</code>	<a href="#">String</a>	ID of the customer header parameter.	58.0
<code>sequenceNumber</code>	<a href="#">Integer</a>	Sequence number of the header. The sequence number determines the order of the header.	57.0

SEE ALSO:

[ConnectApi.ExternalCredential](#)

[ConnectApi.NamedCredential](#)

## ConnectApi.CredentialValue

Credential value.

Property Name	Type	Description	Available Version
<code>encrypted</code>	<a href="#">Boolean</a>	Specifies whether the credential value is encrypted ( <code>true</code> ) or not ( <code>false</code> ).	56.0
<code>revision</code>	<a href="#">Integer</a>	Revision number of a short-lived credential.	58.0
<code>value</code>	<a href="#">String</a>	Value of the credential.	56.0

SEE ALSO:

[ConnectApi.Credential](#)

## ConnectApi.CurrencyRecordField

Record field containing a currency value.

Subclass of [ConnectApi.LabeledRecordField](#).

## ConnectApi.CustomListAudienceCriteria

Criteria for the custom list type of custom recommendation audience.

Subclass of [ConnectApi.AudienceCriteria](#).

Property Name	Type	Description	Available Version
memberCount	Integer	Total number of members in the custom recommendation audience.	36.0
members	<a href="#">ConnectApi.UserReferencePage</a>	Members of the custom recommendation audience.	36.0

## ConnectApi.DashboardComponentSnapshot

Represents both dashboard component snapshots and alerts you receive when a dashboard component value crosses a threshold.

Property Name	Type	Description	Available Version
componentId	String	18-character ID of the dashboard component.	32.0
componentName	String	The dashboard component name.	32.0
dashboardBodyText	String	Display this text next to the actor in the feed element. Use this text in place of the default body text.	32.0
dashboardId	String	18-character ID of the dashboard.	32.0
dashboardName	String	The name of the dashboard.	32.0
fullSizeImageUrl	String	The source URL to retrieve the full-size image of a snapshot. Access this URL with OAuth credentials.	32.0
lastRefreshDate	Datetime	ISO 8601 date specifying when this dashboard component was last refreshed.	32.0
lastRefreshDateDisplayText	String	Display text for the last refresh date, for example, "Last Refreshed on October 31, 2013."	32.0
runningUser	<a href="#">ConnectApi.UserSummary</a>	The running user of the dashboard at the time the snapshot was posted. This value may be <code>null</code> . Each dashboard has a running user, whose security settings determine which data to display in a dashboard.	32.0

Property Name	Type	Description	Available Version
thumbnailUrl	String	The source URL to retrieve the thumbnail image of a snapshot. Access this URL with OAuth credentials.	32.0

SEE ALSO:

[ConnectApi.DashboardComponentSnapshotCapability](#)

[ConnectApi.DatacloudCompanies](#)

## ConnectApi.DashboardComponentSnapshotCapability

If a feed element has this capability, it has a dashboard component snapshot. A snapshot is a static image of a dashboard component at a specific point in time.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
dashboardComponentSnapshot	<a href="#">ConnectApi.DashboardComponentSnapshot</a>	The dashboard component snapshot.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.DateRecordField

Record field containing a date.

Subclass of [ConnectApi.LabeledRecordField](#).

Name	Type	Description	Available Version
dateValue	Datetime	Date that a machine can read. Ignore the trailing 00:00:00.000z characters.	29.0

## ConnectApi.DeleteIntent

Delete intent for a social post.

Property Name	Type	Description	Available Version
managedSocialAccount	<a href="#">ConnectApi.ManagedSocialAccount</a>	Managed social account that deletes the social post.	45.0

SEE ALSO:

[ConnectApi.DeleteIntents](#)

## ConnectApi.DeleteIntents

List of delete intents for a social post.

Property Name	Type	Description	Available Version
deletes	<a href="#">List&lt;ConnectApi.DeleteIntent&gt;</a>	List of delete intents for the social post.	45.0

SEE ALSO:

[ConnectApi.SocialPostIntents](#)

## ConnectApi.DeleteSocialPostIntent

Delete intent for the social post.

Property Name	Type	Description	Available Version
socialAccountId	<a href="#">String</a>	ID of the social account that deletes the social post.	46.0
socialPostId	<a href="#">String</a>	ID of the social post to delete.	46.0

## ConnectApi.DigestJob

Represents a successfully enqueued API digest job request.

Property Name	Type	Description	Available Version
period	<a href="#">ConnectApi.DigestPeriod</a>	Time period that's included in a Chatter email digest. Values are: <ul style="list-style-type: none"> <li><a href="#">DailyDigest</a>—The email includes up to the 50 latest posts from the previous day.</li> <li><a href="#">WeeklyDigest</a>—The email includes up to the 50 latest posts from the previous week.</li> </ul>	37.0

## ConnectApi.DirectMessageCapability

If a feed element has this capability, it's a direct message.

Property Name	Type	Description	Available Version
memberChanges	<a href="#">ConnectApi.DirectMessageMemberActivityPage</a>	Member activities of the direct message, with the most recent activity first.	40.0
members	<a href="#">ConnectApi.DirectMessageMemberPage</a>	Members included in the direct message.	39.0

Property Name	Type	Description	Available Version
originalMembers	<a href="#">ConnectApi.DirectMessageMemberPage</a>	Original members of the direct message.	40.0
subject	<a href="#">String</a>	Subject of the direct message.	39.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.DirectMessageMemberActivity

Direct message member activity.

Property Name	Type	Description	Available Version
activityDate	<a href="#">Datetime</a>	Direct message member activity date.	40.0
actor	<a href="#">ConnectApi.UserSummary</a>	User who changed the direct message membership.	40.0
membersAdded	<a href="#">ConnectApi.DirectMessageMemberPage</a>	Members added to the direct message as part of the activity.	40.0
membersRemoved	<a href="#">ConnectApi.DirectMessageMemberPage</a>	Members removed from the direct message as part of the activity.	40.0

SEE ALSO:

[ConnectApi.DirectMessageMemberActivityPage](#)

## ConnectApi.DirectMessageMemberActivityPage

A page of direct message member activities.

Property Name	Type	Description	Available Version
activities	<a href="#">List&lt;ConnectApi.DirectMessageMemberActivity&gt;</a>	Collection of direct message member activities.	40.0
currentPageToken	<a href="#">String</a>	Token identifying the current page.	40.0
currentPageUrl	<a href="#">String</a>	Connect REST API URL identifying the current page.	40.0
nextPageToken	<a href="#">String</a>	Token identifying the next page, or <code>null</code> if there isn't a next page.	40.0

Property Name	Type	Description	Available Version
nextPageUrl	String	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	40.0

SEE ALSO:

[ConnectApi.DirectMessageCapability](#)

## ConnectApi.DirectMessageMemberPage

A collection of direct message members.

Property Name	Type	Description	Available Version
currentPageToken	String	Page token to access the current page of direct message members.	39.0
currentPageUrl	String	URL to the current page of direct message members.	39.0
nextPageToken	String	Page token to access the next page of direct message members.	39.0
nextPageUrl	String	URL to the next page of direct message members.	39.0
users	List<ConnectApi.UserSummary>	Collection of direct message members.	39.0

SEE ALSO:

[ConnectApi.DirectMessageCapability](#)

[ConnectApi.DirectMessageCapability](#)

[ConnectApi.DirectMessageMemberActivity](#)

## ConnectApi.DistanceCalculationOutputRepresentation

Shipping distance data for a set of inventory locations.

Property Name	Type	Description	Available Version
averageDistance	Double	The average distance from the locations to the order recipient.	51.0
locations	List<ConnectApi.LocationOutputRepresentation>	The list of locations and their distances to the order recipient.	51.0
rank	Integer	This result's rank among all results by average distance to the order recipient.	51.0

## ConnectApi.DistinctFacetValue

Distinct facet value.

This class is a subclass of [ConnectApi.FacetValue](#).

Property Name	Type	Description	Available Version
displayName	String	Display name of the facet value.	52.0
nameOrId	String	Developer name of the attribute.	52.0
productCount	Long	Number of products in the search result that match the facet value.	52.0

SEE ALSO:

[ConnectApi.DistinctValueSearchFacet](#)

## ConnectApi.DistinctValueSearchFacet

Facet with distinct values in product search results.

This class is a subclass of [ConnectApi.SearchFacet](#).

Property Name	Type	Description	Available Version
values	List< <a href="#">ConnectApi.DistinctFacetValue</a> >	Values of the facet found in the search result. Sorted by display name in alphabetical order.	52.0

## ConnectApi.DownVoteSummary

Summary of a downvote.

Subclass of [ConnectApi.UserFeedEntityActivitySummary](#).

No additional properties.

## ConnectApi.EinsteinLlmGenAiSourceReference

Source from a data provider.

Property Name	Type	Description	Available Version
contents	List< <a href="#">ConnectApi.EinsteinLlmGenerationGenAiSourceContentInfo</a> >	List of values from the source that are used for grounding a generated response.	62.0
metadata	List< <a href="#">ConnectApi.EinsteinLlmGenerationGenAiSourceReferenceInfo</a> >	List of metadata for the source, such as URLs or record IDs.	62.0

## ConnectApi.EinsteinLlmGenerationCitationOutput

Source information associated with a generated response.

Property Name	Type	Description	Available Version
citedReferences	List<ConnectApi.EinsteinLlmGenerationGenAiCitedReference>	List of metadata for the sources that are cited in the generated response.	62.0
sourceReferences	List<ConnectApi.EinsteinLlmGenAiSourceReference>	List of sources from one or more data providers.	62.0

## ConnectApi.EinsteinLlmGenerationGenAiCitedReference

Metadata from an input source that is cited in a generated response.

Property Name	Type	Description	Available Version
link	String	URL for the source that is cited in a generated response.	62.0
sourceObject ApiName	String	API name of the source record that is cited in a generated response.	62.0
sourceObject RecordId	String	ID of the source record that is cited in a generated response.	62.0

## ConnectApi.EinsteinLlmGenerationGenAiSourceContentInfo

Values from a source that is cited in a generated response.

Property Name	Type	Description	Available Version
content	String	Text from the source that is cited in the generated response.	62.0
fieldName	String	API name of the field that is cited in the generated response, such as <code>Opportunity.Amount</code> .	62.0
objectName	String	API name of the object that is cited in the generated response, such as <code>Opportunity</code> .	62.0

## ConnectApi.EinsteinLlmGenerationGenAiSourceReferenceInfo

Metadata from a source from a data provider.

Property Name	Type	Description	Available Version
link	String	URL for the source from the data provider.	62.0

Property Name	Type	Description	Available Version
sourceObject ApiName	String	API name of the source record.	62.0
sourceObject RecordId	String	ID of the source record.	62.0

## ConnectApi.EinsteinLlmGenerationContentQualityOutput

Quality information about the generated response.

Property Name	Type	Description	Available Version
isToxicityDetected	Boolean	Specifies whether the generated response contains toxic language ( <code>true</code> ) or not ( <code>false</code> ).	61.0

## ConnectApi.EinsteinLLMGenerationItemOutput

Generated response from the LLM provider.

Property Name	Type	Description	Available Version
contentQuality Representation	ConnectApi. EinsteinLlm Generations ContentQuality	Specifies whether the generated response contains toxic language ( <code>true</code> ) or not ( <code>false</code> ).	61.0
parameters	String	Parameter values for the LLM provider.	60.0
responseId	String	ID of the generated response.	60.0
safetyScore Representation	ConnectApi. EinsteinLlm Generation SafetyScore Output	Safety score information related to the generated response.	60.0
text	String	Text of generated response.	60.0

## ConnectApi.EinsteinLlmGenerationSafetyScoreOutput

Safety score information related to the LLM response.

Property Name	Type	Description	Available Version
hateScore	Double	A higher value means the generated response is more likely to contain text that expresses, incites, or promotes hatred, violence, or severe harm towards	60.0

Property Name	Type	Description	Available Version
		the targeted group. Minimum value of 0 . 0. Maximum value of 1 . 0.	
physicalScore	Double	A higher value means the generated response is more likely to contain text with unsafe advice that may harm the user or others physically, or text that promotes, encourages, or depicts acts of self-harm. Minimum value of 0 . 0. Maximum value of 1 . 0.	60.0
profanityScore	Double	A higher value means the generated response is more likely to contain swear words, curse words, or obscene or profane language. Minimum value of 0 . 0. Maximum value of 1 . 0.	60.0
safetyScore	Double	Overall safety score based on the hateScore, physicalScore, profanityScore, sexualScore, toxicityScore, and violenceScore. A higher value means the generated response is more likely to be safe. Minimum value of 0 . 0. Maximum value of 1 . 0.	60.0
sexualScore	Double	A higher value means the generated response is more likely to contain text meant to arouse sexual excitement or promote sexual services. Minimum value of 0 . 0. Maximum value of 1 . 0.	60.0
toxicityScore	Double	A higher value means the generated response is more likely to contain text that is rude, disrespectful, or unreasonable. Minimum value of 0 . 0. Maximum value of 1 . 0.	60.0
violenceScore	Double	A higher value means the generated response is more likely to contain text that promotes or glorifies violence or celebrates the suffering or humiliation of others. Minimum value of 0 . 0. Maximum value of 1 . 0.	60.0

## ConnectApi.EinsteinPromptRecordCollectionOutputRepresentation

List of prompt template records.

Property Name	Type	Description	Available Version
hasMoreRecords	Boolean	Specifies whether the query returned more prompt template records ( <code>true</code> ) or not ( <code>false</code> ).	62.0
promptRecords	List<ConnectApi.EinsteinPromptRecordRepresentation>	List of prompt template records returned.	62.0

Property Name	Type	Description	Available Version
totalPromptRecords	Integer	Number of prompt template records returned.	62.0

## ConnectApi.EinsteinPromptRecordFieldRepresentation

Field values for a prompt template record field.

Property Name	Type	Description	Available Version
displayValue	String	Visible value of a prompt template record field.	62.0
value	Object	Raw data value of a prompt template record field.	62.0

## ConnectApi.EinsteinPromptRecordRepresentation

Prompt template record.

Property Name	Type	Description	Available Version
apiName	String	API name of the prompt template record.	62.0
childRelationships	Map<String, ConnectApi.EinsteinPromptRecordRepresentation>	Map of prompt template name and prompt template records that are versions of the prompt template.	62.0
fields	Map<String, ConnectApi.EinsteinPromptRecordFieldRepresentation>	Map of field name and prompt template record fields.	62.0
id	String	ID of the prompt template record.	62.0
isStandard	Boolean	Specifies whether the prompt template record is a standard prompt template ( <code>true</code> ) or user-created prompt template ( <code>false</code> ).	62.0

## ConnectApi.EinsteinPromptTemplateGenerationsError

Error response to a prompt template generation request.

Property Name	Type	Description	Available Version
errorMessage	String	Message stating the reason for the error, if any.	60.0
httpErrorCode	String	HTTP status code, if any.	60.0
localizedErrorMessage	String	Translated error message, if available.	60.0

Property Name	Type	Description	Available Version
messageCode	String	Message code associated with the error message, if any.	60.0

## ConnectApi.EinsteinPromptTemplateGenerationsRepresentation

Generated response from the LLM provider and resolved prompt template text.

Property Name	Type	Description	Available Version
citations	ConnectApi.EinsteinLlmGenerationCitationOutput	Source information associated with the generated responses.	62.0
generationErrors	List<ConnectApi.EinsteinPromptTemplateGenerationsError>	List of errors associated with the generated responses, if any.	60.0
generations	List< ConnectApi.EinsteinLlmGenerationItemOutput>	List of generated responses from the LLM provider.	60.0
isSummarized	Boolean	Specifies whether the generated response contains summarized text ( <code>true</code> ) or not ( <code>false</code> ).	61.0
parameters	ConnectApi.WrappedMapObject	Map of parameters and values for the LLM provider parameters.	60.0
prompt	String	Prompt template text with resolved inputs.	60.0
promptTemplateDevName	String	Developer name or ID of the prompt template record.	60.0
requestId	String	ID of the generation request sent to the LLM provider.	60.0
requestMessages	List<ConnectApi.EinsteinPromptTemplateMaskContent>	List of resolved prompt templates with masked data and masking information.	61.0
responseMessages	List<ConnectApi.EinsteinPromptTemplateMaskContent>	List of generated responses with masked data and masking information for the specified prompt template.	61.0
slotsMaskingInformation	List<ConnectApi.EinsteinPromptTemplateMaskData>	List of original and placeholder values of the masked data.	61.0

## ConnectApi.EinsteinPromptTemplateMaskContentRepresentation

Generated response with masked data and masking information for a prompt template.

Property Name	Type	Description	Available Version
content	String	Text of generated response or resolved prompt template with masked data.	61.0
moderationSettings	ConnectApi.EinsteinPromptTemplateMaskSettingsRepresentation	Data masking settings for the specified prompt template.	61.0
role	String	Role in the Salesforce role hierarchy of the user executing the prompt template.	61.0

## ConnectApi.EinsteinPromptTemplateMaskDataRepresentation

Information about masked data for a prompt template.

Property Name	Type	Description	Available Version
originalValue	String	Original value of the masked data.	61.0
placeholder	String	Placeholder value of the masked data.	61.0
recognizers	List<String>	Reserved for internal use.	61.0

## ConnectApi.EinsteinPromptTemplateMaskSettingsRepresentation

Data masking settings for a prompt template.

Property Name	Type	Description	Available Version
enableModeration	Boolean	Specifies whether data masking is enabled ( <code>true</code> ) or not ( <code>false</code> ).	61.0

## ConnectApi.EditCapability

If a feed element or comment has this capability, users who have permission can edit it.

Property Name	Type	Description	Available Version
isEditRestricted	Boolean	Specifies whether editing this feed element or comment is restricted. If <code>true</code> , the context user can't edit this feed element or comment. If <code>false</code> , the context user may or may not have permission to edit this feed element or comment. To determine if the context user can edit a feed element or comment, use the <a href="#">isFeedElementEditableByMe</a> ( <code>communityId</code> , <code>feedElementId</code> ) or	34.0

Property Name	Type	Description	Available Version
		<a href="#">isCommentEditableByMe (communityId, commentId)</a> method.	
isEditableByMeUrl	String	The URL to check if the context user is able to edit this feed element or comment.	34.0
lastEditedBy	<a href="#">ConnectApi.Actor</a>	Who last edited this feed element or comment.	34.0
lastEditedDate	Datetime	The most recent edit date of this feed element or comment.	34.0
latestRevision	Integer	The most recent revision of this feed element or comment.	34.0
relativeLastEditedDate	String	Relative last edited date, for example, "2h ago."	34.0

SEE ALSO:

[ConnectApi.CommentCapabilities](#)

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.EmailAddress

Email address.

Name	Type	Description	Available Version
displayName	String	The display name for the email address.	29.0
emailAddress	String	The email address.	29.0
relatedRecord	<a href="#">ConnectApi.RecordSummary</a>	The summary of a related record, for example, a contact or user summary.	36.0

SEE ALSO:

[ConnectApi.EmailMessageCapability](#)

## ConnectApi.EmailAttachment

An email attachment in an email message.

Property Name	Type	Description	Available Version
attachment	<a href="#">ConnectApi.RecordSummary</a>	Record summary of the attachment.	36.0
contentType	String	Type of attachment.	36.0

Property Name	Type	Description	Available Version
fileName	String	Name of the attachment.	36.0

SEE ALSO:

[ConnectApi.EmailMessageCapability](#)

## ConnectApi.EmailMergeFieldCollectionInfo

The merge fields for an object.

Property Name	Type	Description	Available Version
mergeFields	List<String>	List of merge fields for a single object.	39.0

SEE ALSO:

[ConnectApi.EmailMergeFieldInfo](#)

## ConnectApi.EmailMergeFieldInfo

The map for objects and their merge fields.

Property Name	Type	Description	Available Version
entityToMerge FieldsMap	Map<String, ConnectApi. EmailMergeField CollectionInfo>	Map for multiple objects and their merge field collections.	39.0

## ConnectApi.EmailMessageCapability

If a feed element has this capability, it has an email message from a case.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
attachments	<a href="#">ConnectApi.EmailAttachment</a>	Attachments in the email message.	36.0
bccAddresses	<a href="#">ConnectApi.EmailAddress</a>	BCC addresses for the email message.	36.0
body	String	Body of the email message.	36.0
ccAddresses	<a href="#">ConnectApi.EmailAddress</a>	CC addresses for the email message.	36.0
direction	ConnectApi. EmailMessageDirection	Direction of the email message. Values are: <ul style="list-style-type: none"> <li>Inbound—An inbound message (sent by a customer).</li> </ul>	32.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>Outbound—An outbound message (sent to a customer by a support agent).</li> </ul>	
emailMessageId	String	ID of the email message.	32.0
fromAddress	<a href="#">ConnectApi.EmailAddress</a>	From address for the email message.	36.0
htmlExpandEmailThread	Integer	Start location of previous email thread.	47.0
isRichText	Boolean	Indicates whether the body of the email message is in rich text format.	36.0
status	<a href="#">ConnectApi.EmailMessageStatus</a>	Status of an email message on a case. Values are: <ul style="list-style-type: none"> <li>DraftStatus</li> <li>ForwardedStatus</li> <li>NewStatus</li> <li>ReadStatus</li> <li>RepliedStatus</li> <li>SentStatus</li> </ul>	47.0
subject	String	Subject of the email message.	32.0
textBody	String	Body of the email message.   <b>Important:</b> In version 36.0 and later, use the body property.	32.0–35.0
toAddresses	<a href="#">List&lt;ConnectApi.EmailAddress&gt;</a>	To addresses of the email message.	32.0
totalAttachments	Integer	Total number of attachments in the email message.	38.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.Emoji

An emoji.

Property Name	Type	Description	Available Version
category	String	Emoji category.	39.0
shortcut	String	Emoji shortcut.	39.0

Property Name	Type	Description	Available Version
unicodeCharacter	<a href="#">String</a>	Emoji's unicode character.	39.0

SEE ALSO:

[ConnectApi.EmojiCollection](#)

## ConnectApi.EmojiCollection

A collection of emoji.

Property Name	Type	Description	Available Version
emojis	<a href="#">List&lt;ConnectApi.Emoji&gt;</a>	A collection of emoji.	39.0

SEE ALSO:

[ConnectApi.SupportedEmojis](#)

## ConnectApi.EnhancedLinkCapability

If a feed element has this capability, it has a link that may contain supplemental information like an icon, a title, and a description.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
description	<a href="#">String</a>	A description with a 500 character limit.	32.0
icon	<a href="#">ConnectApi.Icon</a>	A icon.	32.0
linkRecordId	<a href="#">String</a>	A ID associated with the link if the link URL refers to a Salesforce record.	32.0
linkUrl	<a href="#">String</a>	A link URL to a detail page if available content can't display inline.	32.0
title	<a href="#">String</a>	A title to a detail page.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.EnsureFundsAsyncOutputRepresentation

ID of the asynchronous background operation. This output only includes the operation ID, regardless of whether a call is made to an external payment gateway. It doesn't include any errors from the operation.

Subclass of [ConnectApi.BaseAsyncOutputRepresentation](#).

No additional properties.

SEE ALSO:

[ensureFundsAsync\(orderSummaryId, ensureFundsInput\)](#)

## ConnectApi.EnsureRefundsAsyncOutputRepresentation

ID of the asynchronous background operation. This output only includes the operation ID, regardless of whether a call is made to an external payment gateway. It doesn't include any errors from the operation.

Subclass of [ConnectApi.BaseAsyncOutputRepresentation](#).

No additional properties.

SEE ALSO:

[ensureRefundsAsync\(orderSummaryId, ensureRefundsInput\)](#)

## ConnectApi.EntityLabel

An entity's label.

Property Name	Type	Description	Available Version
label	<a href="#">String</a>	Localized singular label of the entity.	40.0
labelPlural	<a href="#">String</a>	Localized plural label of the entity.	40.0

SEE ALSO:

[ConnectApi.RecordSummary](#)

## ConnectApi.EntityLinkSegment

Entity link segment.

Subclass of [ConnectApi.MessageSegment](#).

Name	Type	Description	Available Version
motif	<a href="#">ConnectApi.Motif Class</a>	A set of small, medium, and large icons that indicate whether the entity is a file, group, record, or user. The motif can also contain the object's base color.	28.0
reference	<a href="#">ConnectApi.Reference</a>	A reference to the link object if applicable, otherwise, null.	28.0

## ConnectApi.EntityRecommendation

A Chatter, custom, or static recommendation.

Subclass of [ConnectApi.AbstractRecommendation](#).

Property Name	Type	Description	Available Version
<code>actOnUrl</code>	<a href="#">String</a>	For user, file, group, topic, and record <code>entity</code> types, use this Connect REST URL with a POST request to take action on the recommendation.  For <code>ConnectApi.RecommendedObject</code> <code>entity</code> types, such as custom recommendations, use the <code>actionUrl</code> property of the <a href="#">ConnectApi.PlatformAction</a> to take action on the recommendation.	32.0
<code>action</code>	<a href="#">ConnectApi.Recommendation.ActionType</a>	Specifies the action to take on a recommendation. <ul style="list-style-type: none"> <li><code>follow</code>—Follow a file, record, topic, or user.</li> <li><code>join</code>—Join a group.</li> <li><code>view</code>—View a file, group, article, record, user, custom, or static recommendation.</li> </ul>	32.0
<code>entity</code>	<a href="#">ConnectApi.Actor</a>	The entity with which the receiver is recommended to take action.	32.0

## ConnectApi.ErrorResponse

Base error response.

Property Name	Type	Description	Available Version
<code>errorCode</code>	<a href="#">String</a>	Error code.	48.0
<code>message</code>	<a href="#">String</a>	More error detail, if available.	48.0

SEE ALSO:

[ConnectApi.BaseOutputRepresentation](#)

## ConnectApi.Extension

An extension.

Property Name	Type	Description	Available Version
<code>alternativeRepresentation</code>	<a href="#">ConnectApi.AlternativeRepresentation</a>	Alternative representation of the extension.	40.0
<code>attachmentId</code>	<a href="#">String</a>	Attachment ID of the extension.	41.0
<code>extensionId</code>	<a href="#">String</a>	ID of the extension.	40.0
<code>payload</code>	<a href="#">String</a>	Payload associated with the extension.	40.0

Property Name	Type	Description	Available Version
payloadVersion	String	Payload version that identifies the structure of the payload associated with the extension.	40.0

SEE ALSO:

[ConnectApi.ExtensionsCapability](#)

## ConnectApi.ExtensionDefinition

An extension's definition.

Property Name	Type	Description	Available Version
canAccess	Boolean	Indicates whether users can access the extension when it's associated with a feed element.	40.0
canCreate	Boolean	Indicates whether users can create a feed element with the extension in the org.	40.0
createdDate	Datetime	Date when the extension was created.	40.0
description	String	Description of the extension.	40.0
iconUrl	String	URL to the icon for the extension.	40.0
id	String	ID of the extension.	40.0
informationCollection	List< <a href="#">ConnectApi.AbstractExtensionInformation</a> >	Collection of extension information.	40.0
isEnabledInCommunity	Boolean	Indicates whether the extension is enabled in the site.	40.0 only
isEnabledInLightningPublisher	Boolean	Indicates whether the extension is enabled in the Lightning publisher.	40.0 only
name	String	Name of the extension.	40.0
position	Integer	Position in which the extension is displayed in the publisher.	41.0

SEE ALSO:

[ConnectApi.ExtensionDefinitions](#)

## ConnectApi.ExtensionDefinitions

A collection of extension definitions.

Property Name	Type	Description	Available Version
currentPageToken	String	Token identifying the current page.	40.0
currentPageUrl	String	Connect REST API URL identifying the current page.	40.0
extensionDefinitions	List<ConnectApi.ExtensionDefinition>	Collection of extension definitions.	40.0
nextPageToken	String	Token identifying the next page, or <code>null</code> if there isn't a next page.	40.0
nextPageUrl	String	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	40.0
total	Integer	Total number of extensions returned.	40.0

## ConnectApi.ExtensionsCapability

If a feed element has this capability, it has one or more extension attachments.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
items	List<ConnectApi.Extension>	List of extensions associated with the feed element.	40.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.ExternalAuthIdentityProvider

External auth identity provider.

Property Name	Type	Description	Available Version
authenticationFlow	ConnectApi.IdentityProviderAuthFlow on page 2319	Authentication flow to get tokens to call protected APIs. Values are: <ul style="list-style-type: none"> <li>AuthorizationCode</li> </ul>	62.0
authenticationProtocol	ConnectApi.IdentityProviderAuthProtocol on page 2319	Authentication protocol required to access the external system. Values are: <ul style="list-style-type: none"> <li>OAuth</li> </ul>	62.0
authorizeUrl	String	Authorization endpoint URL for the external system.	62.0
callbackUrl	String	For the Authorization Code authentication flow, the callback URL that's used by the external system after authorization.	62.0

Property Name	Type	Description	Available Version
createdByNamespace	String	Namespace of the package that created the external auth identity provider.	62.0
credentials	<del>ConnectApi.ExternalAuthIdentityProviderCredential</del> List of external auth identity provider credentials on page 2050>	List of the external auth identity provider credentials.	62.0
description	String	Description of the external auth identity provider.	62.0
fullName	String	Full name of the external auth identity provider. The full name can include a namespace prefix.	62.0
id	String	External auth identity provider ID.	62.0
label	String	External auth identity provider label.	62.0
tokenUrl	String	Token endpoint URL to retrieve tokens from the external system. Required for all OAuth 2.0 authentication flows.	62.0
url	String	Connect REST API URL for the external auth identity provider.	62.0
userInfoUrl	String	User info URL to retrieve user profile information from the external system.	62.0

## SEE ALSO:

[ConnectApi.ExternalAuthIdentityProviderList](#)  
[createExternalAuthIdentityProvider\(requestBody\)](#)  
[getExternalAuthIdentityProvider\(fullName\)](#)  
[updateExternalAuthIdentityProvider\(fullName, requestBody\)](#)

## ConnectApi.ExternalAuthIdentityProviderCredential

External auth identity provider credential.

Property Name	Type	Description	Available Version
credentialName	String	Name of the external auth identity provider credential.	62.0
credentialValue	String	Value of the external auth identity provider credential.	62.0
encrypted	Boolean	Indicates whether the external auth identity provider credential is encrypted ( <code>true</code> ) or not ( <code>false</code> ).	62.0

## SEE ALSO:

[ConnectApi.ExternalAuthIdentityProviderCredentials](#)

## ConnectApi.ExternalAuthIdentityProviderCredentials

List of an external auth identity provider's credentials.

Property Name	Type	Description	Available Version
credentials	<a href="#">ConnectApi.ExternalAuthIdentityProviderCredentials</a> on page 2050>	List of external auth identity provider credentials.	62.0

SEE ALSO:

- [getExternalAuthIdentityProviderCredentials\(fullName\)](#)
- [createExternalAuthIdentityProviderCredentials\(fullName, requestBody\)](#)
- [updateExternalAuthIdentityProviderCredentials\(fullName, requestBody\)](#)

## ConnectApi.ExternalAuthIdentityProviderList

List of external auth identity providers in the org.

Property Name	Type	Description	Available Version
externalAuthIdentityProviders	<a href="#">ConnectApi.ExternalAuthIdentityProvider</a> on page 2049>	List of external auth identity providers.	62.0

SEE ALSO:

- [getExternalAuthIdentityProviders\(\)](#)

## ConnectApi.ExternalCredential

External credential, including the named credentials and principals associated with it and the type and status of each principal.

If you don't have the View Setup and Configuration permission, some properties are empty or show limited information.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Property Name	Type	Description	Available Version
authenticationProtocol	<a href="#">ConnectApi.CredentialAuthenticationProtocol</a>	Authentication protocol of the external credential. Values are: <ul style="list-style-type: none"> <li>• AwsSv4</li> <li>• Basic</li> <li>• Custom</li> <li>• Jwt</li> <li>• OAuth</li> </ul>	56.0

Property Name	Type	Description	Available Version
authenticationProtocolVariant	<a href="#">ConnectApi.CredentialAuthenticationProtocolVariant</a>	Authentication protocol variant of the external credential. Values are: <ul style="list-style-type: none"> <li><code>AwsSv4_STS</code>—AWS Signature Version 4 with Security Token Service.</li> <li><code>ClientCredentialsClientSecret</code>—OAuth 2.0 Client Credentials client secret. Client secrets are sent in the callout's request body.</li> <li><code>ClientCredentialsClientSecretBasic</code>—OAuth 2.0 Client Credentials client secret. Client secrets are sent in the callout's authorization header, as with Basic authentication.</li> <li><code>ClientCredentialsJwtAssertion</code>—OAuth 2.0 Client Credentials JSON Web Token assertion.</li> <li><code>JwtBearer</code>—OAuth 2.0 JSON Web Token bearer flow.</li> <li><code>NoAuthentication</code>—No authentication.</li> <li><code>RolesAnywhere</code>—AWS Signature Version 4 with Identity and Access Management (IAM) Roles Anywhere.</li> </ul>	57.0
authenticationStatus	<a href="#">ConnectApi.CredentialAuthenticationStatus</a>	Status of the credential authentication. Values are: <ul style="list-style-type: none"> <li><code>Configured</code>—Credential has all required credentials for at least one principal.</li> <li><code>NotConfigured</code>—Credential isn't configured.</li> <li><code>Unknown</code>—Credential status can't be determined because the authentication protocol is custom.</li> </ul>	56.0
createdByNamespace	<a href="#">String</a>	Namespace of the package that created the external credential.	59.0
customHeaders	<a href="#">List&lt;ConnectApi.CredentialCustomHeader&gt;</a>	List of custom headers.	57.0
developerName	<a href="#">String</a>	Fully qualified developer name of the external credential.	56.0
id	<a href="#">String</a>	External credential ID.	58.0
masterLabel	<a href="#">String</a>	External credential label.	56.0
parameters	<a href="#">List&lt;ConnectApi.ExternalCredentialParameter&gt;</a>	List of parameters of the external credential.	57.0

Property Name	Type	Description	Available Version
principals	<a href="#">List&lt;ConnectApi.ExternalCredentialPrincipal&gt;</a>	List of principals the credential has.	56.0
relatedNamedCredentials	<a href="#">List&lt;ConnectApi.NamedCredential&gt;</a>	List of named credentials associated to the external credential.	56.0
url	<a href="#">String</a>	Connect REST API URL for the external credential.	58.0

SEE ALSO:

[ConnectApi.ExternalCredentialList](#)

[ConnectApi.NamedCredential](#)

## ConnectApi.ExternalCredentialList

List of external credentials.

Property Name	Type	Description	Available Version
externalCredentials	<a href="#">List&lt;ConnectApi.ExternalCredential&gt;</a>	List of external credentials.	56.0

## ConnectApi.ExternalCredentialParameter

External credential parameter.

Property Name	Type	Description	Available Version
id	<a href="#">String</a>	Parameter ID.	58.0
parameterDescription	<a href="#">String</a>	Parameter description.	58.0
parameterName	<a href="#">String</a>	Parameter name. If the <code>parameterType</code> is <code>AuthParameter</code> , valid values are: <ul style="list-style-type: none"> <li><code>AwsAccountId</code>—Valid for <code>AwsSv4</code>.</li> <li><code>AwsProfileArn</code>—Valid for <code>AwsSv4</code> with <code>RolesAnywhere</code>.</li> <li><code>AwsRegion</code>—Valid for <code>AwsSv4</code>.</li> <li><code>AwsService</code>—Valid for <code>AwsSv4</code>.</li> <li><code>AwsStsDuration</code>—Valid for <code>AwsSv4</code> with <code>STS</code> or <code>RolesAnywhere</code>.</li> <li><code>AwsStsExternalId</code>—Valid for <code>AwsSv4</code> with <code>STS</code>.</li> <li><code>AwsTrustAnchorArn</code>—Valid for <code>AwsSv4</code> with <code>RolesAnywhere</code>.</li> </ul>	57.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>Scope—Valid for OAuth.</li> </ul> Other parameter types can be any value.	
parameterType	<a href="#">ConnectApi.ExternalCredentialParameterType</a>	Parameter type of the external credential. Values are: <ul style="list-style-type: none"> <li>AdditionalRefreshStatusCode</li> <li>AuthParameter</li> <li>AuthProvider</li> <li>AuthProviderUrl</li> <li>AuthProviderUrlQueryParameter</li> <li>JwtBodyClaim</li> <li>JwtHeaderClaim</li> <li>SigningCertificate</li> </ul>	57.0
parameterValue	<a href="#">String</a>	Parameter value. If the <code>parameterType</code> is <code>JwtBodyClaim</code> or <code>JwtHeaderClaim</code> , the parameter value can contain formulas. If the <code>parameterType</code> is <code>AuthProvider</code> or <code>SigningCertificate</code> , the parameter value is the fully qualified entity name of the corresponding entity.	57.0

[ConnectApi.ExternalCredential](#)

## ConnectApi.ExternalCredentialPrincipal

External credential principal.

If you don't have the View Setup and Configuration permission, some properties are empty or show limited information.

Property Name	Type	Description	Available Version
authenticationStatus	<a href="#">ConnectApi.CredentialAuthenticationStatus</a>	Status of the credential authentication. Values are: <ul style="list-style-type: none"> <li>Configured—Credential has all required credentials for at least one principal.</li> <li>NotConfigured—Credential isn't configured.</li> <li>Unknown—Credential status can't be determined because the authentication protocol is custom.</li> </ul>	56.0
id	<a href="#">String</a>	ID of the external credential principal.	58.0

Property Name	Type	Description	Available Version
parameters	<a href="#">List&lt;ConnectApi.ExternalCredentialParameter&gt;</a>	List of external credential parameters.	58.0
principalAccess	<a href="#">List&lt;ConnectApi.ExternalCredentialPrincipalAccess&gt;</a>	List of access entities associated with the external credential principal.	58.0
principalName	<a href="#">String</a>	Name of the external credential named principal.	56.0
principalType	<a href="#">ConnectApi.CredentialPrincipalType</a>	Type of credential principal. Values are: <ul style="list-style-type: none"> <li>• <a href="#">AwsStsPrincipal</a></li> <li>• <a href="#">NamedPrincipal</a></li> <li>• <a href="#">PerUserPrincipal</a></li> </ul>	56.0
sequenceNumber	<a href="#">Integer</a>	Sequence number of the external credential principal.	58.0

SEE ALSO:

[ConnectApi.ExternalCredential](#)

## ConnectApi.ExternalCredentialPrincipalAccess

External credential principal access.

Property Name	Type	Description	Available Version
developerName	<a href="#">String</a>	Developer name of the associated access entity.	58.0
id	<a href="#">String</a>	ID of the associated access entity.	58.0
type	<a href="#">ConnectApi.ExternalCredentialPrincipalAccessType</a>	Access type of the external credential principal. Values are: <ul style="list-style-type: none"> <li>• <a href="#">PermissionSet</a></li> <li>• <a href="#">PermissionSetGroup</a></li> <li>• <a href="#">Profile</a></li> </ul>	58.0

SEE ALSO:

[ConnectApi.ExternalCredentialPrincipal](#)

## ConnectApi.ExternalFilePermissionInformation

External file permission information.

Property Name	Type	Description	Available Version
external FilePermission Types	<a href="#">List&lt;ConnectApi. ContentHub PermissionType&gt;</a>	Available permission types for the parent folder of the external file, or null for non-external files or when <code>includeExternalFilePermissionsInfo</code> is false.	39.0
external FilePermissions Failure	<a href="#">Boolean</a>	true if the retrieval of external file information failed or if <code>includeExternalFilePermissionsInfo</code> is false; false otherwise.	39.0
external FilePermissions InfoFailureReason	<a href="#">String</a>	Explanation of the failure if a failure occurred and <code>includeExternalFilePermissionsInfo</code> is true; null otherwise.	39.0
external FileSharing Status	<a href="#">ConnectApi. ContentHub ExternalItem SharingType</a>	Sharing status for the external file. Values are: <ul style="list-style-type: none"> <li>• <code>DomainSharing</code>—File is shared with the domain.</li> <li>• <code>PrivateSharing</code>—File is private or shared only with individuals.</li> <li>• <code>PublicSharing</code>—File is publicly shared.</li> </ul> Value is null for non-external files or when <code>includeExternalFilePermissionsInfo</code> is false.	39.0
repository PublicGroups	<a href="#">List&lt;ConnectApi. RepositoryGroupSummary&gt;</a>	Available public groups in the external repository or null for non-external files or when <code>includeExternalFilePermissionsInfo</code> is false.	39.0

SEE ALSO:

[ConnectApi.AbstractRepositoryFile](#)

## ConnectApi.ExternalManagedAccountAddressOutput

Default shipping address for an externally managed account.

Property Name	Type	Description	Available Version
city	<a href="#">String</a>	City of the external managed account record.	53.0
country	<a href="#">String</a>	Country of the external managed account record.	53.0
geolocationAccuracy	<a href="#">String</a>	Geolocation accuracy of the external managed account record.	53.0
latitude	<a href="#">String</a>	Latitude of the external managed account record.	53.0

Property Name	Type	Description	Available Version
longitude	<a href="#">String</a>	Longitude of the external managed account record.	53.0
state	<a href="#">String</a>	State of the external managed account record.	53.0
street	<a href="#">String</a>	Street of the external managed account record.	53.0
zip	<a href="#">String</a>	Postal code of the external managed account record.	53.0

SEE ALSO:

[ConnectApi.ExternalManagedAccountOutput](#)

## ConnectApi.ExternalManagedAccountCollectionOutput

Collection of externally managed accounts.

Property Name	Type	Description	Available Version
externalManagedAccounts	<a href="#">List&lt;ConnectApi.ExternalManagedAccountOutput&gt;</a>	Collection of externally managed accounts.	49.0
totalExternalManagedAccounts	<a href="#">Integer</a>	Total number of externally managed accounts.	49.0

## ConnectApi.ExternalManagedAccountOutput

Externally managed account.

Property Name	Type	Description	Available Version
accountId	<a href="#">String</a>	ID of the account managed by another account.	49.0
accountName	<a href="#">String</a>	Name of the external managed account record.	53.0
address	<a href="#">ConnectApi.ExternalManagedAccountAddressOutput</a>	Default shipping address of the external managed account.	53.0
externalManagedAccountId	<a href="#">String</a>	ID of the external managed account record.	49.0
isMyAccount	<a href="#">Boolean</a>	Specifies whether the account is the context user's account ( <a href="#">true</a> ) or not ( <a href="#">false</a> ).	53.0

SEE ALSO:

[ConnectApi.ExternalManagedAccountCollectionOutput](#)

## ConnectApi.FacetValue

Facet value.

This class is abstract and is a superclass of [ConnectApi.DistinctFacetValue](#).

Property Name	Type	Description	Available Version
type	<a href="#">ConnectApi.CommerceSearchFacetType</a>	Search facet type. Value is: <ul style="list-style-type: none"> <li>• <a href="#">DistinctValue</a></li> </ul>	52.0

## ConnectApi.Features

Features available to the context user in the org.

Property	Type	Description	Available Version
activityReminderNotificationsEnabled	<a href="#">Boolean</a>	Reserved for future use.	37.0
chatter	<a href="#">Boolean</a>	Specifies whether Chatter is enabled.	28.0
chatterActivity	<a href="#">Boolean</a>	Specifies whether user details include information about Chatter activity.	28.0
chatterAnswers	<a href="#">Boolean</a>	Specifies whether Chatter Answers is enabled.  <b>Note:</b> With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see <a href="#">End of Support for Chatter Answers in Spring '18</a> .	29.0
chatterGlobalInfluence	<a href="#">Boolean</a>	Specifies whether user details include global Chatter activity.	28.0
chatterGroupRecords	<a href="#">Boolean</a>	Specifies whether Chatter groups can have records associated with them.	30.0
chatterGroupRecordSharing	<a href="#">Boolean</a>	Specifies whether Chatter records are implicitly shared among group members when records are added to groups.	30.0
chatterMessages	<a href="#">Boolean</a>	Specifies whether Chatter messages are enabled.	28.0
chatterTopics	<a href="#">Boolean</a>	Specifies whether topics are enabled.	28.0
communitiesEnabled	<a href="#">Boolean</a>	Specifies whether digital experiences is enabled.	31.0

Property	Type	Description	Available Version
community Moderation	Boolean	Specifies whether moderation is enabled.	29.0
community Reputation	Boolean	Specifies whether reputation is enabled.	32.0
dashboard Component Snapshots	Boolean	Specifies whether the user can post dashboard component snapshots.	28.0
default Currency IsoCode	String	ISO code of the default currency. Applicable only when multiCurrency is false.	28.0
einstein VoiceEnabled	Boolean	Reserved for future use.	46.0
einstein VoiceInPilot Enabled	Boolean	Reserved for future use.	46.0
einstein VoiceLogging Enabled	Boolean	Reserved for future use.	46.0
einstein VoiceProviderId	Integer	Reserved for future use.	46.0
favorites Enabled	Boolean	Specifies whether favorites in Lightning are enabled.	41.0
feedPolling	Boolean	Reserved for future use.	28.0
feedStream Enabled	Boolean	Specifies whether Chatter feed streams are enabled.	39.0
files	Boolean	Specifies whether files can act as resources for Connect REST API.	28.0
filesOnComments	Boolean	Specifies whether files can be attached to comments.	28.0
forecasting3 Aggregated Enabled	Boolean	Specifies whether aggregated forecasting is enabled for mobile clients.	38.0
forecasting Enabled	Boolean	Specifies whether forecasting is enabled.	38.0
forecasting PeriodRange	Integer	Range of the forecasting period.	38.0
forecasting PeriodStart	Integer	Start index for the forecasting period.	38.0

Property	Type	Description	Available Version
forecasting PeriodType	<a href="#">ConnectApi. PeriodType</a>	Time period used for forecasting. Values are: <ul style="list-style-type: none"> <li>• Month</li> <li>• Quarter</li> <li>• Week</li> <li>• Year</li> </ul>	38.0
groupsCanFollow	<a href="#">Boolean</a>	Reserved for future use.	28.0–29.0
ideas	<a href="#">Boolean</a>	Specifies whether Ideas is enabled.	29.0
liveAgent HostName	<a href="#">String</a>	Live Agent host name configured for the org.	41.0
managedTopics Enabled	<a href="#">Boolean</a>	Specifies whether managed topics are enabled.	32.0
maxEntity Subscriptions PerStream	<a href="#">Integer</a>	Specifies the maximum number of feed-enabled entities that can be subscribed to in a Chatter stream.	39.0
maxFiles PerFeedItem	<a href="#">Integer</a>	Specifies the maximum number of files that can be added to a feed item.	36.0
maxStreams PerPerson	<a href="#">Integer</a>	Specifies the maximum number of Chatter streams that a user can have.	39.0
mobile Notifications Enabled	<a href="#">Boolean</a>	Reserved for future use.	29.0
multiCurrency	<a href="#">Boolean</a>	Specifies whether the org uses multiple currencies ( <code>true</code> ) or not ( <code>false</code> ). When <code>false</code> , the <code>defaultCurrencyIsoCode</code> indicates the ISO code of the default currency.	28.0
offlineEdit Enabled	<a href="#">Boolean</a>	Specifies whether the offline object permissions are enabled for Salesforce for Android and Salesforce for iOS mobile clients.	37.0
publisherActions	<a href="#">Boolean</a>	Specifies whether actions in the publisher are enabled.	28.0
storeData OnDevices Enabled	<a href="#">Boolean</a>	Specifies whether the Salesforce for Android and Salesforce for iOS can use secure, persistent storage on mobile devices to cache data.	30.0
thanksAllowed	<a href="#">Boolean</a>	Reserved for future use.	28.0
trendingTopics	<a href="#">Boolean</a>	Specifies whether trending topics are enabled.	28.0
userNav ItemsEnabled	<a href="#">Boolean</a>	Specifies whether users can customize the navigation bar in Lightning.	41.0

Property	Type	Description	Available Version
viralInvites Allowed	Boolean	Specifies whether existing Chatter users can invite people in their company to use Chatter.	28.0
wave	Boolean	Specifies whether CRM Analytics is enabled.	36.0

## ConnectApi.Feed

Chatter feed.

Name	Type	Description	Available Version
feedElement PostUrl	String	Connect REST API URL to post feed elements to this subject.	31.0
feedElements	<del>ConnectApi.FeedElementPage</del> ConnectApi.FeedElementPage	Page of feed elements for the feed specified in <code>redirectedFeedType</code> . Otherwise, <code>null</code> .	40.0
feedElementsUrl	String	Connect REST API URL to feed elements.	31.0
feedItemsUrl	String	Connect REST API URL to feed items.	28.0–31.0
isModifiedUrl	String	Connect REST API URL with a <code>since</code> request parameter that contains an opaque token that describes when the feed was last modified. Returns <code>null</code> if the feed isn't a news feed. Use this URL to poll a news feed for updates.	28.0
		 <b>Important:</b> This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.	
pinnedFeed ElementsUrl	String	URL to pinned feed items.	41.0
redirected FeedFilter	ConnectApi.FeedFilter	Filter for the feed specified in <code>redirectedFeedType</code> . Otherwise, <code>null</code> .	42.0
redirected FeedSort	ConnectApi.FeedSort Order	Sort order for the feed specified in <code>redirectedFeedType</code> . Otherwise, <code>null</code> .	42.0
redirected FeedType	ConnectApi.FeedType	Specifies which feed is returned if <code>pageSize</code> is specified. Otherwise, <code>null</code> .	40.0

Name	Type	Description	Available Version
respectsMute	<a href="#">Boolean</a>	Indicates whether the feed respects the mute feature. If <code>true</code> , the feed shows the ability to mute or unmute each element, depending on the value of <code>isMutedByMe</code> ; <code>null</code> if the mute feature is disabled for the organization.	35.0

## ConnectApi.FeedBody

Feed body.

Subclass of [ConnectApi.AbstractMessageBody](#).

No additional properties.

SEE ALSO:

[ConnectApi.Comment](#)

[ConnectApi.FeedElement](#)

## ConnectApi.FeedDirectory

Directory of feeds and favorites.

Name	Type	Description	Available Version
favorites	<a href="#">List&lt;ConnectApi.FeedFavorite&gt;</a>	A list of feed favorites	30.0
feeds	<a href="#">List&lt;ConnectApi.FeedDirectoryItem&gt;</a>	A list of feeds	30.0

## ConnectApi.FeedDirectoryItem

Definition of a feed.

Name	Type	Description	Available Version
feedElementsUrl	<a href="#">String</a>	Connect REST API resource URL for the feed elements.	
feedItemsUrl	<a href="#">String</a>	Connect REST API resource URL for the feed items of a specific feed.	30.0–31.0
feedType	<a href="#">ConnectApi.FeedTypeEnum</a>	The feed type. One of these values: <ul style="list-style-type: none"> <li><code>Bookmarks</code>—Contains all feed items saved as bookmarks by the context user.</li> </ul>	30.0

Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>• <b>Company</b>—Contains all feed items except feed items of type <code>TrackedChange</code>. To see the feed item, the user must have sharing access to its parent.</li> <li>• <b>DirectMessageModeration</b>—Contains all direct messages that are flagged for moderation. The Direct Message Moderation feed is available only to users with Moderate Experiences Chatter Messages permissions.</li> <li>• <b>DirectMessages</b>—Contains all feed items of the context user's direct messages.</li> <li>• <b>Draft</b>—Contains all the feed items that the context user drafted.</li> <li>• <b>Files</b>—Contains all feed items that contain files posted by people or groups that the context user follows.</li> <li>• <b>Filter</b>—Contains the news feed filtered to contain feed items whose parent is a specified object type.</li> <li>• <b>Groups</b>—Contains all feed items from all groups the context user either owns or is a member of.</li> <li>• <b>Home</b>—Contains all feed items associated with any managed topic in an Experience Cloud site.</li> <li>• <b>Isolated</b>—Contains all the feed items and comments that are isolated.</li> <li>• <b>Landing</b>—Contains all feed items that best drive user engagement when the feed is requested. Allows clients to avoid an empty feed when there aren't many personalized feed items.</li> <li>• <b>Moderation</b>—Contains all feed items that are flagged for moderation, except direct messages. The moderation feed is available only to users with Moderate Experiences Feeds permissions.</li> <li>• <b>Mute</b>—Contains all feed items that the context user muted.</li> <li>• <b>News</b>—Contains all updates for people the context user follows, groups the user is a member of, and files and records the user is following. Contains all updates for records whose parent is the context user.</li> <li>• <b>PendingReview</b>—Contains all feed items and comments that are pending review.</li> <li>• <b>People</b>—Contains all feed items posted by all people the context user follows.</li> <li>• <b>Record</b>—Contains all feed items whose parent is a specified record, which could be a group, user, object, file, or any other standard or custom object. When the record is a group, the feed also contains feed items that mention the group. When the record is a user, the feed contains only feed items on that user. You can get another user's record feed.</li> </ul>	

Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li><code>Streams</code>—Contains all feed items for any combination of up to 25 feed-enabled entities that the context user subscribes to in a stream. Examples of feed-enabled entities include people, groups, and records,</li> <li><code>To</code>—Contains all feed items with mentions of the context user. Contains feed items the context user commented on and feed items created by the context user that are commented on.</li> <li><code>Topics</code>—Contains all feed items that include the specified topic.</li> <li><code>UserProfile</code>—Contains feed items created when a user changes records that can be tracked in a feed. Contains feed items whose parent is the user and feed items that @mention the user. This feed is different than the news feed, which returns more feed items, including group updates. You can get another user's user profile feed.</li> </ul>	
<code>feedUrl</code>	<a href="#">String</a>	Connect REST API resource URL for a specific feed	30.0
<code>keyPrefix</code>	<a href="#">String</a>	<p>A <i>key prefix</i> is the first three characters of a record ID, which specifies the object type.</p> <p>For filter feeds, this value is the key prefix associated with the object type used to filter this feed. All feed items in this feed have a parent whose object type matches this key prefix value. For non-filter feeds, this value is <code>null</code>.</p>	30.0
<code>label</code>	<a href="#">String</a>	Localized label of the feed	30.0

## ConnectApi.FeedElement

Feed elements are the top-level items that a feed contains. Feeds are feed element containers.

This class is abstract.

Superclass of:

- [ConnectApi.FeedItem](#)
- [ConnectApi.GenericFeedElement](#)

Property Name	Type	Description	Available Version
<code>body</code>	<a href="#">ConnectApi.FeedBody</a>	<p>Information about the feed element.</p> <p> <b>Important:</b> Use the <code>header.text</code> property as the default value for rendering</p>	22.0

Property Name	Type	Description	Available Version
		text because the <code>body.text</code> property can be <code>null</code> .	
<code>capabilities</code>	<a href="#">ConnectApi.FeedElementCapabilities</a>	A container for all capabilities that can be included with a feed element.	31.0
<code>createdDate</code>	<a href="#">Datetime</a>	ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.	31.0
<code>feedElementType</code>	<a href="#">ConnectApi.FeedElementType</a>	<p>Feed elements are the top-level objects that a feed contains. The feed element type describes the characteristics of that feed element. One of these values:</p> <ul style="list-style-type: none"> <li><code>Bundle</code>—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.</li> <li><code>FeedItem</code>—A feed item has a single parent and is scoped to one Experience Cloud site or across all Experience Cloud sites. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.</li> <li><code>Recommendation</code>—A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.</li> </ul>	31.0
<code>header</code>	<a href="#">ConnectApi.MessageBody</a>	The header is the title of the post. This property contains renderable plain text for all the segments of the message. If a client doesn't know how to render a feed element type, it should render this text.	31.0
<code>id</code>	<a href="#">String</a>	18-character ID of the feed element.	22.0
<code>modifiedDate</code>	<a href="#">Datetime</a>	ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.	31.0
<code>parent</code>	<a href="#">ConnectApi.ActorWithId</a>	Feed element's parent	28.0
<code>relativeCreatedDate</code>	<a href="#">String</a>	The created date formatted as a relative, localized string, for example, "17m ago" or "Yesterday."	31.0

Property Name	Type	Description	Available Version
url	String	Connect REST API URL to this feed element.	22.0

## ConnectApi.FeedElementCapabilities

A container for all capabilities that can be included with a feed element.

Property Name	Type	Description	Available Version
approval	<a href="#">ConnectApi.ApprovalCapability</a>	If a feed element has this capability, it includes information about an approval.	32.0
associatedActions	<a href="#">ConnectApi.AssociatedActionsCapability</a>	If a feed element has this capability, it has platform actions associated with it.	33.0
banner	<a href="#">ConnectApi.BannerCapability</a>	If a feed element has this capability, it has a banner motif and style.	31.0
bookmarks	<a href="#">ConnectApi.BookmarksCapability</a>	If a feed element has this capability, the context user can bookmark it.	31.0
bundle	<a href="#">ConnectApi.BundleCapability</a>	If a feed element has this capability, it has a container of feed elements called a <i>bundle</i> .	31.0
callCollaboration	<a href="#">ConnectApi.CallCollaborationCapability</a>	If a feed element has this capability, it has a recording comment.	51.0
canvas	<a href="#">ConnectApi.CanvasCapability</a>	If a feed element has this capability, it renders a canvas app.	32.0
caseComment	<a href="#">ConnectApi.CaseCommentCapability</a>	If a feed element has this capability, it has a case comment on the case feed.	32.0
chatterLikes	<a href="#">ConnectApi.ChatterLikesCapability</a>	If a feed element has this capability, the context user can like it. Exposes information about existing likes.	31.0
close	<a href="#">ConnectApi.CloseCapability</a>	If a feed element has this capability, users with permission can close it.	43.0
comments	<a href="#">ConnectApi.CommentsCapability</a>	If a feed element or comment has this capability, the context user can add a comment to it.	31.0

Property Name	Type	Description	Available Version
content	<a href="#">ConnectApi.ContentCapability</a>	<p>If a comment has this capability, it has a file attachment.</p> <p>Most <code>ConnectApi.ContentCapability</code> properties are null if the content has been deleted from the feed element or if the access has changed to private.</p> <p> <b>Important:</b> In version 36.0 and later, use the <code>files</code> property.</p>	32.0–35.0
dashboardComponentSnapshot	<a href="#">ConnectApi.DashboardComponentSnapshotCapability</a>	If a feed element has this capability, it has a dashboard component snapshot. A snapshot is a static image of a dashboard component at a specific point in time.	32.0
directMessage	<a href="#">ConnectApi.DirectMessageCapability</a>	If a feed element has this capability, it's a direct message.	39.0
edit	<a href="#">ConnectApi.EditCapability</a>	If a feed element has this capability, users who have permission can edit it.	34.0
emailMessage	<a href="#">ConnectApi.EmailMessageCapability</a>	If a feed element has this capability, it has an email message from a case.	32.0
enhancedLink	<a href="#">ConnectApi.EnhancedLinkCapability</a>	If a feed element has this capability, it has a link that may contain supplemental information like an icon, a title, and a description.	32.0
extensions	<a href="#">ConnectApi.ExtensionsCapability</a>	If a feed element has this capability, it has one or more extension attachments.	40.0
feedEntityShare	<a href="#">ConnectApi.FeedShareCapability</a>	If a feed element or comment has this capability, a feed entity is shared with it.	39.0
files	<a href="#">ConnectApi.FilesCapability</a>	If a feed element has this capability, it has one or more file attachments.	36.0
interactions	<a href="#">ConnectApi.InteractionsCapability</a>	If a feed element has this capability, it has information about user interactions.	37.0
link	<a href="#">ConnectApi.LinkCapability</a>	If a feed element has this capability, it has a link.	32.0
mediaReferences	<a href="#">ConnectApi.MediaReferencesCapability</a>	If a feed element has this capability, it has one or more media references.	41.0
moderation	<a href="#">ConnectApi.ModerationCapability</a>	If a feed element has this capability, users in an Experience Cloud site can flag it for moderation.	31.0

Property Name	Type	Description	Available Version
mute	<a href="#">ConnectApi.MuteCapability</a>	If a feed element has this capability, users can mute it.	35.0
origin	<a href="#">ConnectApi.OriginCapability</a>	If a feed element has this capability, it was created by a feed action.	33.0
pin	<a href="#">ConnectApi.PinCapability</a>	If a feed element has this capability, users who have permission can pin it to a feed.	41.0
poll	<a href="#">ConnectApi.PollCapability</a>	If a feed element has this capability, it includes a poll.	31.0
questionAndAnswers	<a href="#">ConnectApi.QuestionAndAnswersCapability</a>	If a feed element has this capability, it has a question and comments on the feed element are answers to the question.	31.0
readBy	<a href="#">ConnectApi.ReadByCapability</a>	If a feed element has this capability, the context user can mark it as read.	40.0
recommendations	<a href="#">ConnectApi.RecommendationsCapability</a>	If a feed element has this capability, it has a recommendation.	32.0
recordSnapshot	<a href="#">ConnectApi.RecordSnapshotCapability</a>	If a feed element has this capability, it contains all the snapshotted fields of a record for a single create record event.	32.0
socialPost	<a href="#">ConnectApi.SocialPostCapability</a>	If a feed element has this capability, it can interact with a social post on a social network.	36.0
status	<a href="#">ConnectApi.StatusCapability</a>	If a feed post or comment has this capability, it has a status that determines its visibility.	37.0
topics	<a href="#">ConnectApi.TopicsCapability</a>	If a feed element has this capability, the context user can add topics to it. Topics help users organize and discover conversations.	31.0
trackedChanges	<a href="#">ConnectApi.TrackedChangesCapability</a>	If a feed element has this capability, it contains all changes to a record for a single tracked change event.	32.0
upDownVote	<a href="#">ConnectApi.UpDownVoteCapability</a>	If a feed post or comment has this capability, users can upvote or downvote it.	41.0

[ConnectApi.FeedItemSummary](#)

## ConnectApi.FeedElementCapability

A feed element capability, which defines the characteristics of a feed element.

In API version 30.0 and earlier, most feed items can have comments, likes, topics, and so on. In version 31.0 and later, every feed item (and feed element) can have a unique set of *capabilities*. If a capability property exists on a feed element, that capability is available, even if the capability property doesn't have a value. For example, if the `ChatterLikes` capability property exists on a feed element (with or without a value), the context user can like that feed element. If the capability property doesn't exist, it isn't possible to like that feed element. A capability can also contain associated data. For example, the `Moderation` capability contains data about moderation flags.

This class is abstract.

This class is a superclass of:

- [ConnectApi.AssociatedActionsCapability](#)
- [ConnectApi.ApprovalCapability](#)
- [ConnectApi.BannerCapability](#)

This class doesn't have any properties.

## ConnectApi.FeedElementPage

A paged collection of `ConnectApi.FeedElement` objects.

Property Name	Type	Description	Available Version
<code>currentPageToken</code>	<code>String</code>	Token identifying the current page.	31.0
<code>currentPageUrl</code>	<code>String</code>	Connect REST API URL identifying the current page.	31.0
<code>elements</code>	<code>List&lt;ConnectApi.FeedElement&gt;</code>	Collection of feed elements.	31.0
<code>isModifiedToken</code>	<code>String</code>	Opaque polling token to use in the <code>since</code> parameter of the <code>ChatterFeeds.isModified</code> method. The token describes when the feed was last modified.   <b>Important:</b> This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.	31.0
<code>isModifiedUrl</code>	<code>String</code>	Connect REST API URL with a <code>since</code> request parameter that contains an opaque token that describes when the feed was last modified. Returns <code>null</code> if the feed isn't a news feed. Use this URL to poll a news feed for updates.   <b>Important:</b> This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.	31.0
<code>nextPageToken</code>	<code>String</code>	Token identifying the next page, or <code>null</code> if there isn't a next page.	31.0
<code>nextPageUrl</code>	<code>String</code>	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	31.0

Property Name	Type	Description	Available Version
updatesToken	String	A token to use in a request to the <code>ConnectApi.ChatterFeeds.getFeedElementsUpdatedSince</code> method.	31.0
updatesUrl	String	Connect REST API feed resource containing the feed elements that have been updated since the feed was refreshed. If the feed doesn't support this feature, the value is <code>null</code> .	31.0

SEE ALSO:

[ConnectApi.BundleCapability](#)

[ConnectApi.Feed](#)

## ConnectApi.FeedEnabledEntity

An entity that can have feeds associated with it.

Property Name	Type	Description	Available Version
id	String	The 18-character ID of the record.	39.0
motif	<code>ConnectApi.Motif</code>	Small, medium, and large icons indicating the record's type.	39.0
name	String	The localized name of the record.	39.0
type	String	The type of the record.	39.0
url	String	URL to the record.	39.0

SEE ALSO:

[ConnectApi.ChatterStream](#)

## ConnectApi.FeedEntityIsEditable

Indicates if the context user can edit a feed element or comment.

Property Name	Type	Description	Available Version
areAttachmentsEditableByMe	Boolean	<code>true</code> if the context user can add and remove attachments on the feed element or comment, <code>false</code> otherwise.	36.0
feedEntityUrl	String	URL of the feed element or comment.	34.0
isEditableByMe	Boolean	<code>true</code> if the context user can edit the feed element or comment, <code>false</code> otherwise.	34.0

## ConnectApi.FeedEntityNotAvailableSummary

A summary when the feed entity isn't available.

Subclass of [ConnectApi.FeedEntitySummary](#).

No additional properties.

## ConnectApi.FeedEntityReadSummary

Summary of the feed post or comment that was read.

Subclass of [ConnectApi.UserFeedEntityActivitySummary](#).

No additional properties.

## ConnectApi.FeedEntityShareCapability

If a feed element or comment has this capability, a feed entity is shared with it.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
feedEntity	<a href="#">ConnectApi.FeedEntitySummary</a>	The summary of the feed entity that is shared with the feed element or comment.	39.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.FeedEntitySummary

The summary of a feed entity that is shared with a feed element.

This class is abstract.

Superclass of:

- [ConnectApi.FeedItemSummary](#)
- [ConnectApi.FeedEntityNotAvailableSummary](#)

Property Name	Type	Description	Available Version
actor	<a href="#">ConnectApi.Actor</a>	Entity that created the feed entity.	39.0
body	<a href="#">ConnectApi.FeedBody</a>	Information about the feed entity.	39.0
createdDate	<a href="#">Datetime</a>	ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, when the entity was created.	39.0

Property Name	Type	Description	Available Version
feedElementType	<a href="#">ConnectApi.FeedElementType</a>	Type of feed entity. <ul style="list-style-type: none"> <li><b>Bundle</b>—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.</li> <li><b>FeedItem</b>—A feed item has a single parent and is scoped to one Experience Cloud site or across all Experience Cloud sites. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.</li> <li><b>Recommendation</b>—A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.</li> </ul>	39.0
id	<a href="#">String</a>	18-character ID of the feed entity.	39.0
isEntityAvailable	<a href="#">Boolean</a>	Specifies whether the entity is available. If <b>false</b> , either the user doesn't have access to the entity or the entity was deleted.	39.0
parent	<a href="#">ConnectApi.ActorWithId</a>	Parent of the feed entity.	39.0
relativeCreatedDate	<a href="#">String</a>	Relative created date, for example, "2h ago."	39.0
url	<a href="#">String</a>	URL to the feed entity.	39.0

SEE ALSO:

[ConnectApi.FeedEntityShareCapability](#)

## ConnectApi.FeedFavorite

Feed favorite.

Name	Type	Description	Available Version
community	<a href="#">ConnectApi.Reference</a>	Information about the Experience Cloud site that contains the favorite.	28.0
createdBy	<a href="#">ConnectApi.UserSummary</a>	Favorite's creator.	28.0
feedUrl	<a href="#">String</a>	Connect REST API URL identifying the feed item for this favorite.	28.0

Name	Type	Description	Available Version
id	<a href="#">String</a>	Favorite's 18-character ID.	28.0
lastViewDate	<a href="#">Datetime</a>	ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.	28.0
name	<a href="#">String</a>	Favorite's name.	28.0
searchText	<a href="#">String</a>	If the favorite is from a search, contains the search text, otherwise, an empty string.	28.0
target	<a href="#">ConnectApi.Reference</a>	A reference to the topic if applicable, <code>null</code> otherwise.	28.0
type	<a href="#">ConnectApi.FeedFavoriteTypeEnum</a>	An empty string or one of the following values: <ul style="list-style-type: none"> <li>• <code>ListView</code></li> <li>• <code>Search</code></li> <li>• <code>Topic</code></li> </ul>	28.0
url	<a href="#">String</a>	Connect REST API URL to this favorite.	28.0
user	<a href="#">ConnectApi.UserSummary</a>	Information about the user who saved this favorite.	28.0

SEE ALSO:

[ConnectApi.FeedDirectory](#)

[ConnectApi.FeedFavorites](#)

## ConnectApi.FeedFavorites

Feed favorites.

Name	Type	Description	Available Version
favorites	<a href="#">List&lt;ConnectApi.FeedFavorite&gt;</a>	Complete list of favorites.	28.0
total	<a href="#">Integer</a>	Total number of favorites.	28.0

## ConnectApi.FeedItem

Feed item.

Subclass of [ConnectApi.FeedElement Class](#) as of version 31.0.

Name	Type	Description	Available Version
actor	<a href="#">ConnectApi.Actor</a>	The entity that created the feed item.	28.0

Name	Type	Description	Available Version
attachment	<a href="#">ConnectApi.FeedItemAttachment</a>	Information about the attachment. If there is no attachment, returns <code>null</code> .   <b>Important:</b> As of version 32.0, use the inherited <code>capabilities</code> property.	28.0–31.0
canShare	<a href="#">Boolean</a>	Indicates whether the feed item can be shared.  If a feed item has multiple file attachments and at least one attachment has been deleted or is inaccessible, the feed item can't be shared. The <code>canShare</code> value is incorrectly set to <code>true</code> in these cases.   <b>Important:</b> As of version 39.0, use the <code>isSharable</code> property.	28.0–38.0
clientInfo	<a href="#">ConnectApi.ClientInfo</a>	Information about the connected app used to authenticate the connection.	28.0
comments	<a href="#">ConnectApi.CommentPage</a>	First page of comments for this feed item.   <b>Important:</b> As of version 32.0, use the inherited <code>capabilities.comments.page</code> property.	28.0–31.0
event	<a href="#">Boolean</a>	<code>true</code> if feed item is created due to an event change, <code>false</code> otherwise.	22.0
hasVerified Comment	<a href="#">Boolean</a>	<code>true</code> if the feed item has a verified comment, otherwise <code>false</code> .	41.0
isBookmarked ByCurrentUser	<a href="#">Boolean</a>	<code>true</code> if the context user has bookmarked this feed item, otherwise, <code>false</code> .   <b>Important:</b> As of version 32.0, use the inherited <code>capabilities.bookmarks.isBookmarkedByCurrentUser</code> property.	28.0–31.0
isDelete Restricted	<a href="#">Boolean</a>	If this property is <code>true</code> the comment cannot be deleted by the context user. If it is <code>false</code> , it might be possible for the context user to delete the comment, but it is not guaranteed.	28.0
isLikedBy CurrentUser	<a href="#">Boolean</a>	<code>true</code> if the context user has liked this feed item, otherwise, <code>false</code> .   <b>Important:</b> As of version 32.0, use the inherited	28.0–31.0

Name	Type	Description	Available Version
		<code>capabilities.chatterLikes.isLikedByCurrentUser</code> property.	
<code>isSharable</code>	<a href="#">Boolean</a>	Indicates whether the feed item can be shared.	39.0
<code>likes</code>	<a href="#">ConnectApi.ChatterLikePage</a>	First page of likes for this feed item. <b>!</b> <b>Important:</b> As of version 32.0, use the inherited <code>capabilities.chatterLikes.page</code> property.	28.0–31.0
<code>likesMessage</code>	<a href="#">ConnectApi.MessageBody</a>	A message body the describes who likes the feed item. <b>!</b> <b>Important:</b> As of version 32.0, use the inherited <code>capabilities.chatterLikes.likesMessage</code> property.	28.0–31.0
<code>moderationFlags</code>	<a href="#">ConnectApi.ModerationFlags</a>	Information about the moderation flags on a feed item. If <code>ConnectApi.Features.communityModeration</code> is <code>false</code> , this property is <code>null</code> . <b>!</b> <b>Important:</b> As of version 31.0, use the inherited <code>capabilities.moderation.moderationFlags</code> property.	29.0–30.0
<code>myLike</code>	<a href="#">ConnectApi.Reference</a>	If the context user has liked the feed item, this property is a reference to the specific like, otherwise, <code>null</code> . <b>!</b> <b>Important:</b> As of version 32.0, use the inherited <code>capabilities.chatterLikes.myLike</code> property.	28.0–31.0
<code>originalFeedItem</code>	<a href="#">ConnectApi.Reference</a>	A reference to the original feed item if this feed item is a shared feed item, otherwise, <code>null</code> .	28.0
<code>originalFeedItemActor</code>	<a href="#">ConnectApi.Actor</a>	If this feed item is a shared feed item, returns information about the original poster of the feed item, otherwise, returns <code>null</code> .	28.0
<code>photoUrl</code>	<a href="#">String</a>	URL of the photo associated with the feed item	28.0
<code>preamble</code>	<a href="#">ConnectApi.MessageBody</a>	A collection of message segments, including the unformatted text of the message that you can use as the title of a feed item. Message segments include	28.0–30.0

Name	Type	Description	Available Version
		<p>name, link, and motif icon information for the actor that created the feed item.</p> <p><b>!</b> <b>Important:</b> For API versions 29.0 and 30.0, use the <code>ConnectApi.FeedItem.preamble.text</code> property as the default case to render text. For API versions 31.0 and later, use the <code>ConnectApi.FeedElement.header.text</code> property as the default case to render text.</p>	
topics	<a href="#">ConnectApi.FeedItemTopicPage</a>	<p>Topics for this feed item.</p> <p><b>!</b> <b>Important:</b> As of version 31.0, use the inherited <code>capabilities.topics.items</code> property.</p>	28.0–31.0
type	<a href="#">ConnectApi.FeedItemType</a>	<p>Type of feed item.</p> <p><b>!</b> <b>Important:</b> As of API version 32.0, use the <code>capabilities</code> property to determine what can be done with a feed item. See <a href="#">Working with Feeds and Feed Elements</a>.</p> <p>One of these values:</p> <ul style="list-style-type: none"> <li>• <code>ActivityEvent</code>—Feed item generated in Case Feed when an event or task associated with a parent record with a feed enabled is created or updated.</li> <li>• <code>AdvancedTextPost</code>—A feed item with advanced text formatting, such as a group announcement post.</li> <li>• <code>ApprovalPost</code>—Feed item with an approval capability. Approvers can act on the feed item parent.</li> <li>• <code>AttachArticleEvent</code>—Feed item generated when an article is attached to a case in Case Feed.</li> <li>• <code>BasicTemplateFeedItem</code>—Feed item with an enhanced link capability.</li> <li>• <code>CallLogPost</code>—Feed item generated when a call log is saved to a case in Case Feed.</li> <li>• <code>CanvasPost</code>—Feed item generated by a canvas app in the publisher or from Connect REST API or Connect in Apex. The post itself is a link to a canvas app.</li> </ul>	28.0

Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>• <code>CaseCommentPost</code>—Feed item generated when a case comment is saved in Case Feed.</li> <li>• <code>ChangeStatusPost</code>—Feed item generated when the status of a case is changed in Case Feed.</li> <li>• <code>ChatTranscriptionPost</code>—Feed item generated in Case Feed when a Live Agent chat transcript is saved to a case.</li> <li>• <code>CollaborationGroupCreated</code>—Feed item generated when a new public group is created. Contains a link to the new group.</li> <li>• <code>CollaborationGroupUnarchived</code>—<del>Deprecated</del>. Feed item generated when an archived group is activated.</li> <li>• <code>ContentPost</code>—Feed item with a content capability.</li> <li>• <code>CreateRecordEvent</code>—Feed item that describes a record created in the publisher.</li> <li>• <code>DashboardComponentAlert</code>—Feed item with a dashboard alert.</li> <li>• <code>DashboardComponentSnapshot</code>—Feed item with a dashboard component snapshot capability.</li> <li>• <code>EmailMessageEvent</code>—Feed item generated when an email is sent from a case in Case Feed.</li> <li>• <code>FacebookPost</code>—<del>Deprecated</del>. Feed item generated when a Facebook post is created from a case in Case Feed.</li> <li>• <code>LinkPost</code>—Feed item with a link capability.</li> <li>• <code>MilestoneEvent</code>—Feed item generated when a case milestone is either completed or reaches a violation status. Contains a link to the case milestone.</li> <li>• <code>PollPost</code>—Feed item with a poll capability. Viewers of the feed item are allowed to vote on the options in the poll.</li> <li>• <code>ProfileSkillPost</code>—Feed item generated when a skill is added to a user's profile.</li> <li>• <code>QuestionPost</code>—Feed item generated when a question is asked.</li> </ul>	
		<p>As of API version 33.0, a feed item of this type can have a content capability and a link capability.</p>	

Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li><code>ReplyPost</code>—Feed item generated by a Chatter Answers reply.</li> <li><code>RypplePost</code>—Feed item generated when a user posts thanks.</li> <li><code>SocialPost</code>—Feed item generated when a social post is created from a case in Case Feed.</li> <li><code>TextPost</code>—Feed item containing text only.</li> <li><code>TrackedChange</code>—Feed item created when one or more fields on a record have been changed.</li> <li><code>UserStatus</code>—Deprecated. A user's post to their own profile.</li> </ul>	
<code>visibility</code>	<a href="#">ConnectApi.FeedItemVisibilityType</a>	Type of users who can see a feed item. <ul style="list-style-type: none"> <li><code>AllUsers</code>—Visibility is not limited to internal users.</li> <li><code>InternalUsers</code>—Visibility is limited to internal users.</li> </ul>	28.0

## ConnectApi.FeedItemSummary

A feed item summary.

Subclass of [ConnectApi.FeedEntitySummary](#).

Property Name	Type	Description	Available Version
<code>capabilities</code>	<a href="#">ConnectApi.FeedElementCapabilities</a>	Container for all capabilities that can be included with a feed item.	39.0
<code>header</code>	<a href="#">ConnectApi.MessageBody</a>	Title of the post. This property contains renderable plain text for all the message segments. If a client doesn't know how to render a feed element type, it should render this text.	39.0
<code>modifiedDate</code>	<a href="#">Datetime</a>	When the feed item was modified in the form of an ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.	39.0
<code>originalFeedItem</code>	<a href="#">ConnectApi.Reference</a>	Reference to the original feed item if this feed item is a shared feed item; otherwise, <code>null</code> .	39.0
<code>originalFeedItemActor</code>	<a href="#">ConnectApi.Actor</a>	If this feed item is a shared feed item, information about the original poster of the feed item; otherwise, <code>null</code> .	39.0

Property Name	Type	Description	Available Version
photoUrl	String	URL of the photo associated with the feed item.	39.0
visibility	ConnectApi.FeedItemVisibility	Specifies who can see a feed item. <ul style="list-style-type: none"> <li>AllUsers—Visibility is not limited to internal users.</li> <li>InternalUsers—Visibility is limited to internal users.</li> </ul>	39.0

## ConnectApi.FeedModifiedInfo

Feed modified information.

 **Important:** This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.

Name	Type	Description	Available Version
isModified	Boolean	<code>true</code> if the news feed has been modified since the last time it was polled; <code>false</code> otherwise. Returns <code>null</code> if the feed is not a news feed.	28.0
isModifiedToken	String	Opaque polling token to use in the <code>since</code> parameter of the <code>ChatterFeeds.isModified</code> method. The token describes when the feed was last modified.	28.0
nextPollUrl	String	Connect REST API URL with a <code>since</code> request parameter that contains an opaque token that describes when the feed was last modified. Returns <code>null</code> if the feed isn't a news feed. Use this URL to poll a news feed for updates.	28.0

## ConnectApi.FeedPollChoice

Feed poll choice.

Name	Type	Description	Available Version
id	String	Poll choice ID.	28.0
position	Integer	The location in the poll where this poll choice exists. The first poll choice starts at 1.	28.0
text	String	Label text associated with the poll choice.	28.0
voteCount	Integer	Total number of votes for this poll choice.	28.0

Name	Type	Description	Available Version
voteCountRatio	Double	The ratio of total number of votes for this poll choice to all votes cast in the poll. Multiply the ratio by 100 to get the percentage of votes cast for this poll choice.	28.0

SEE ALSO:

[ConnectApi.PollCapability](#)

## ConnectApi.FeedPostSummary

Summary of the post.

Subclass of [ConnectApi.UserActivitySummary](#).

Property Name	Type	Description	Available Version
feedItemId	String	ID of the post.	42.0

## ConnectApi.FeedReadSummary

Summary of the feed that was read.

Subclass of [ConnectApi.UserActivitySummary](#).

Property Name	Type	Description	Available Version
containerId	String	ID of the parent of the feed.	42.0
feedType	<a href="#">ConnectApi.FeedType</a>	Type of feed. <ul style="list-style-type: none"> <li>• <b>Bookmarks</b>—Contains all feed items saved as bookmarks by the context user.</li> <li>• <b>Company</b>—Contains all feed items except feed items of type <code>TrackedChange</code>. To see the feed item, the user must have sharing access to its parent.</li> <li>• <b>DirectMessageModeration</b>—Contains all direct messages that are flagged for moderation. The Direct Message Moderation feed is available only to users with Moderate Experiences Chatter Messages permissions.</li> <li>• <b>DirectMessages</b>—Contains all feed items of the context user's direct messages.</li> <li>• <b>Draft</b>—Contains all the feed items that the context user drafted.</li> <li>• <b>Files</b>—Contains all feed items that contain files posted by people or groups that the context user follows.</li> </ul>	42.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li><b>Filter</b>—Contains the news feed filtered to contain feed items whose parent is a specified object type.</li> <li><b>Groups</b>—Contains all feed items from all groups the context user either owns or is a member of.</li> <li><b>Home</b>—Contains all feed items associated with any managed topic in an Experience Cloud site.</li> <li><b>Isolated</b>—Contains all the feed items and comments that are isolated.</li> <li><b>Landing</b>—Contains all feed items that best drive user engagement when the feed is requested. Allows clients to avoid an empty feed when there aren't many personalized feed items.</li> <li><b>Moderation</b>—Contains all feed items that are flagged for moderation, except direct messages. The moderation feed is available only to users with Moderate Experiences Feeds permissions.</li> <li><b>Mute</b>—Contains all feed items that the context user muted.</li> <li><b>News</b>—Contains all updates for people the context user follows, groups the user is a member of, and files and records the user is following. Contains all updates for records whose parent is the context user.</li> <li><b>PendingReview</b>—Contains all feed items and comments that are pending review.</li> <li><b>People</b>—Contains all feed items posted by all people the context user follows.</li> <li><b>Record</b>—Contains all feed items whose parent is a specified record, which could be a group, user, object, file, or any other standard or custom object. When the record is a group, the feed also contains feed items that mention the group. When the record is a user, the feed contains only feed items on that user. You can get another user's record feed.</li> <li><b>Streams</b>—Contains all feed items for any combination of up to 25 feed-enabled entities that the context user subscribes to in a stream. Examples of feed-enabled entities include people, groups, and records,</li> </ul>	

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li><code>To</code>—Contains all feed items with mentions of the context user. Contains feed items the context user commented on and feed items created by the context user that are commented on.</li> <li><code>Topics</code>—Contains all feed items that include the specified topic.</li> <li><code>UserProfile</code>—Contains feed items created when a user changes records that can be tracked in a feed. Contains feed items whose parent is the user and feed items that @mention the user. This feed is different than the news feed, which returns more feed items, including group updates. You can get another user's user profile feed.</li> </ul>	

## ConnectApi.FieldChangeSegment

Field change segment.

Subclass of [ConnectApi.ComplexSegment](#).

No additional properties.

SEE ALSO:

[ConnectApi.MoreChangesSegment](#)

## ConnectApi.FieldChangeNameSegment

Field change name segment.

Subclass of [ConnectApi.MessageSegment](#).

No additional properties.

## ConnectApi.FieldChangeValueSegment

Field change value segment.

Subclass of [ConnectApi.MessageSegment](#).

Name	Type	Description	Available Version
<code>valueType</code>	<code>ConnectApi.FieldChangeValueType Enum</code>	Value type of a field change. <ul style="list-style-type: none"> <li><code>NewValue</code>—A new value</li> <li><code>OldValue</code>—An old value</li> </ul>	28.0
<code>url</code>	<code>String</code>	URL value if the field change is to a URL field (such as a web address)	28.0

## ConnectApi.FieldValue

Field's value in product search results.

Property Name	Type	Description	Available Version
value	String	Value of the field.	52.0

SEE ALSO:

[ConnectApi.ProductSummary](#)

## ConnectApi.File

File.

This class is abstract.

Subclass of [ConnectApi.ActorWithId](#).

Superclass of [ConnectApi.FileSummary](#).

Name	Type	Description	Available Version
checksum	String	MD5 checksum for the file.	28.0
content ModifiedDate	Datetime	ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z. File-specific modified date, which is updated only for direct file operations, such as rename. Modifications to the file from outside of Salesforce can update this date.	32.0
contentSize	Integer	Size of the file in bytes.	28.0
contentUrl	String	If the file is a link, returns the URL, otherwise, the string <code>null</code> .	28.0
createdDate	Datetime	ISO 8601 date string when the file was created.	41.0
description	String	Description of the file.	28.0
downloadUrl	String	URL to the file, that can be used for downloading the file.	28.0
fileExtension	String	Extension of the file.	28.0
fileType	String	Type of file, such as PDF, PowerPoint.	28.0
flashRendition Status	String	Specifies if a flash preview version of the file has been rendered.	28.0
 <b>Note:</b> Flash renditions were retired on July 16, 2021.			
isFileAsset	Boolean	Specifies whether the file is an asset.	46.0

Name	Type	Description	Available Version
<code>isInMyFileSync</code>	<a href="#">Boolean</a>	<code>true</code> if the file is synced with Salesforce Files Sync; <code>false</code> otherwise.   <b>Note:</b> Salesforce Files Sync was retired on May 25, 2018.	28.0
<code>isMajorVersion</code>	<a href="#">Boolean</a>	<code>true</code> if the file is a major version; <code>false</code> if the file is a minor version. Major versions can't be replaced.	31.0
<code>mimeType</code>	<a href="#">String</a>	File's MIME type.	28.0
<code>moderationFlags</code>	<a href="#">ConnectApi.ModerationFlags</a>	Information about the moderation flags on a file. If <code>ConnectApi.Features.communityModeration</code> is <code>false</code> , this property is <code>null</code> .	30.0
<code>modifiedDate</code>	<a href="#">Datetime</a>	ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z. Modifications to the file from within Salesforce update this date.	28.0
<code>name</code>	<a href="#">String</a>	Name of the file.	28.0
<code>origin</code>	<a href="#">String</a>	Specifies the file source. Valid values are: <ul style="list-style-type: none"> <li><code>Chatter</code>—file came from Chatter</li> <li><code>Content</code>—file came from content</li> </ul>	28.0
<code>owner</code>	<a href="#">ConnectApi.UserSummary</a>	File's owner.	28.0
<code>pdfRenditionStatus</code>	<a href="#">String</a>	Specifies if a PDF preview version of the file has been rendered.	28.0
<code>publishStatus</code>	<a href="#">ConnectApi.FilePublishStatus</a>	Specifies the publish status of the file. <ul style="list-style-type: none"> <li><code>PendingAccess</code>—File is pending publishing.</li> <li><code>PrivateAccess</code>—File is private.</li> <li><code>PublicAccess</code>—File is public.</li> </ul>	28.0
<code>renditionUrl</code>	<a href="#">String</a>	URL to the rendition for the file.	28.0
<code>renditionUrl240By180</code>	<a href="#">String</a>	URL to the 240 x 180 rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.	29.0
<code>renditionUrl720By480</code>	<a href="#">String</a>	URL to the 720 x 480 rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.	29.0

Name	Type	Description	Available Version
sharingOption	<a href="#">ConnectApi.FileSharingOption</a>	Sharing option of the file. Values are: <ul style="list-style-type: none"> <li>Allowed—Resharing of the file is allowed.</li> <li>Restricted—Resharing of the file is restricted.</li> </ul>	35.0
sharingPrivacy	<a href="#">ConnectApi.FileSharingPrivacy</a>	Sharing privacy of a file. Values are: <ul style="list-style-type: none"> <li>None—File is visible to anyone with record access.</li> <li>PrivateOnRecords—File is private on records.</li> </ul>	41.0
sharingRole	<a href="#">ConnectApi.FileSharingType</a>	Sharing role of the file. <ul style="list-style-type: none"> <li>Admin—Owner permission, but doesn't own the file.</li> <li>Collaborator—Viewer permission, and can edit, change permissions, and upload a new version of a file.</li> <li>Owner—Collaborator permission, and can make a file private, and delete a file.</li> <li>Viewer—Can view, download, and share a file.</li> <li>WorkspaceManaged—Permission controlled by the library.</li> </ul>	28.0
systemModstamp	<a href="#">Datetime</a>	ISO 8601 date string indicating when a user or any automated system process, such as a trigger, updated the file.	41.0
textPreview	<a href="#">String</a>	Text preview of the file if available; null otherwise.	30.0
thumb120By90RenditionStatus	<a href="#">String</a>	Specifies the rendering status of the 120 x 90 preview image of the file. One of these values: <ul style="list-style-type: none"> <li>Processing—Image is being rendered.</li> <li>Failed—Rendering process failed.</li> <li>Success—Rendering process was successful.</li> <li>Na—Rendering is not available for this image.</li> </ul>	28.0
thumb240By180RenditionStatus	<a href="#">String</a>	Specifies the rendering status of the 240 x 180 preview image of the file. One of these values: <ul style="list-style-type: none"> <li>Processing—Image is being rendered.</li> <li>Failed—Rendering process failed.</li> <li>Success—Rendering process was successful.</li> <li>Na—Rendering is not available for this image.</li> </ul>	28.0
thumb720By480RenditionStatus	<a href="#">String</a>	Specifies the rendering status of the 720 x 480 preview image of the file. One of these values: <ul style="list-style-type: none"> <li>Processing—Image is being rendered.</li> <li>Failed—Rendering process failed.</li> <li>Success—Rendering process was successful.</li> <li>Na—Rendering is not available for this image.</li> </ul>	28.0

Name	Type	Description	Available Version
<code>title</code>	<a href="#">String</a>	Title of the file.	28.0
<code>versionNumber</code>	<a href="#">String</a>	File's version number.	28.0

## ConnectApi.FileAsset

An asset file.

Property Name	Type	Description	Available Version
<code>baseAssetUrl</code>	<a href="#">String</a>	Base download URL of the asset.	45.0
<code>baseUnauthenticatedAssetUrl</code>	<a href="#">String</a>	Base download URL of the asset for unauthenticated users if <code>isVisibleByExternalUsers</code> is <code>true</code> , otherwise <code>null</code> .	45.0
<code>id</code>	<a href="#">String</a>	ID of the asset.	45.0
<code>isVisibleByExternalUsers</code>	<a href="#">Boolean</a>	Indicates whether unauthenticated users can see the asset file ( <code>true</code> ) or not ( <code>false</code> ).	45.0
<code>masterLabel</code>	<a href="#">String</a>	Label of the asset.	45.0
<code>name</code>	<a href="#">String</a>	Unique name of the asset.	45.0
<code>namespacePrefix</code>	<a href="#">String</a>	Namespace prefix of the package containing the asset.	45.0
<code>type</code>	<a href="#">String</a>	Type of asset.	45.0

SEE ALSO:

## ConnectApi.FilePreview

A file preview.

Property Name	Type	Description	Available Version
<code>format</code>	<a href="#">ConnectApi.FilePreviewFormat</a>	The format of the preview. Values are: <ul style="list-style-type: none"> <li><code>Jpg</code>—Preview format is JPG.</li> <li><code>Pdf</code>—Preview format is PDF.</li> <li><code>Svg</code>—Preview format is compressed SVG.</li> <li><code>Thumbnail</code>—Preview format is 240x180 PNG.</li> <li><code>ThumbnailBig</code>—Preview format is 720x480 PNG.</li> </ul>	39.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li><code>ThumbnailTiny</code>—Preview format is 120 x 90 PNG.</li> </ul>	
<code>previewUrlCount</code>	<code>Integer</code>	The total number of preview URLs for this preview format.	39.0
<code>previewUrls</code>	<code>List&lt;ConnectApi.FilePreviewUrl&gt;</code>	A list of file preview URLs.	39.0
<code>status</code>	<code>ConnectApi.FilePreviewStatus</code>	The availability status of the preview. Values are: <ul style="list-style-type: none"> <li><code>Available</code>—Preview is available.</li> <li><code>InProgress</code>—Preview is being processed.</li> <li><code>NotAvailable</code>—Preview is unavailable.</li> <li><code>NotScheduled</code>—Generation of the preview isn't scheduled yet.</li> </ul>	39.0
<code>url</code>	<code>String</code>	The URL for the file preview.	39.0

SEE ALSO:

[ConnectApi.FilePreviewCollection](#)

## ConnectApi.FilePreviewCollection

A collection of file previews.

Property Name	Type	Description	Available Version
<code>fileId</code>	<code>String</code>	ID of the file.	39.0
<code>previews</code>	<code>List&lt;ConnectApi.FilePreview&gt;</code>	Previews supported for the file.	39.0
<code>url</code>	<code>String</code>	URL to the current page of file previews.	39.0
<code>versionNumber</code>	<code>String</code>	Version number of the file.	40.0

SEE ALSO:

[ConnectApi.InlineImageSegment](#)

## ConnectApi.FilePreviewUrl

A URL to a file preview.

Property Name	Type	Description	Available Version
pageNumber	Integer	Preview page number starting from zero, or <code>null</code> for PDF files.	39.0
previewUrl	String	File preview URL.	39.0

SEE ALSO:

[ConnectApi.FilePreview](#)

## ConnectApi.FilesCapability

If a feed element has this capability, it has one or more file attachments.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
items	<a href="#">List&lt;ConnectApi.Content&gt;</a>	Collection of files.	36.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.FileSummary

A file summary.

Subclass of [ConnectApi.File](#).

No additional properties.

## ConnectApi.FindRoutesWithFewestSplitsOutputRepresentation

A list of inventory location combinations that can fulfill an order without exceeding the maximum number of shipments.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
targetLocations	<a href="#">List&lt;ConnectApi.AvailableLocationOutputRepresentation&gt;</a>	Each element of the list is a set of inventory locations that together can fulfill the order being routed.	51.0

SEE ALSO:

[findRoutesWithFewestSplits\(findRoutesWithFewestSplitsInputRepresentation\)](#)

## ConnectApi.FindRoutesWithFewestSplitsUsingOCIOutputRepresentation

A list of order fulfillment routes with inventory availability information.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
results	<a href="#">List&lt;ConnectApi.FindRoutesWithFewestSplitsWithInventoryOutputRepresentation&gt;</a>	Each element of the list is the response for one element of the input list.	54.0

SEE ALSO:

[findRoutesWithFewestSplitsUsingOCI\(findRoutesWithFewestSplitsUsingOCIInput\)](#)

## ConnectApi.FindRoutesWithFewestSplitsWithInventoryOutputRepresentation

Sets of inventory locations that can combine to fulfill an order, with availability data for those locations.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
inventory	<a href="#">ConnectApi.OCIInventoryAvailabilityOutputRepresentation</a>	Inventory availability data for the location groups and locations specified in the input.	54.0
targetLocations	<a href="#">List&lt;ConnectApi.AvailableLocationOutputRepresentation&gt;</a>	Each entry in the list is a set of inventory locations that can combine to fulfill an order.	54.0

SEE ALSO:

## ConnectApi.FollowerPage

Page of followers.

Name	Type	Description	Available Version
currentPageUrl	<a href="#">String</a>	Connect REST API URL identifying the current page.	28.0
followers	<a href="#">List&lt;ConnectApi.Subscription&gt;</a>	List of subscriptions.	28.0
nextPageUrl	<a href="#">String</a>	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	28.0
previousPageUrl	<a href="#">String</a>	Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	28.0
total	<a href="#">Integer</a>	Total number of followers across all pages.	28.0

## ConnectApi.FollowingCounts

Following counts.

Name	Type	Description	Available Version
people	<a href="#">Integer</a>	Number of people user is following.	28.0
records	<a href="#">Integer</a>	Number of records user is following. Topics are a type of record that can be followed as of version 29.0.	28.0
total	<a href="#">Integer</a>	Total number of items user is following.	28.0

SEE ALSO:

[ConnectApi.UserDetail](#)

## ConnectApi.FollowingPage

Page of following subscriptions.

Name	Type	Description	Available Version
currentPageUrl	<a href="#">String</a>	Connect REST API URL identifying the current page.	28.0
following	<a href="#">List&lt;ConnectApi.Subscription&gt;</a>	List of subscriptions.	28.0
nextPageUrl	<a href="#">String</a>	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	28.0
previousPageUrl	<a href="#">String</a>	Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	28.0
total	<a href="#">Integer</a>	Total number of records being followed across all pages.	28.0

## ConnectApi.FollowIntents

A list of follow intents for a social persona.

Property Name	Type	Description	Available Version
follows	<a href="#">List&lt;ConnectApi.FollowSocialPersonaIntent&gt;</a>	List of follow intents for the social persona.	45.0

SEE ALSO:

[ConnectApi.SocialPostIntents](#)

## ConnectApi.FollowSocialPersonalIntent

Follow intent on a social persona.

Property Name	Type	Description	Available Version
managedSocialAccount	<a href="#">ConnectApi.ManagedSocialAccount</a>	Managed social account that follows the social persona.	45.0
socialPersonaId	<a href="#">String</a>	ID of the social persona to follow.	45.0

SEE ALSO:

[ConnectApi.FollowIntents](#)

## ConnectApi.Form

Marketing integration form.

Property Name	Type	Description	Available Version
dataExtensionId	<a href="#">String</a>	ID of the data extension associated with the marketing integration form.	53.0
formFieldsList	<a href="#">ConnectApi.FormFields</a>	List of form fields associated with the marketing integration form.	53.0
formId	<a href="#">String</a>	ID of the marketing integration form.	53.0
formName	<a href="#">String</a>	Name of the marketing integration form.	53.0

## ConnectApi.FormField

Marketing integration form field.

Property Name	Type	Description	Available Version
name	<a href="#">String</a>	Name of the marketing integration form field.	53.0
type	<a href="#">ConnectApi.FormFieldType</a>	Type of marketing integration form field. Values are: <ul style="list-style-type: none"> <li>• <a href="#">Boolean</a></li> <li>• <a href="#">Date</a></li> <li>• <a href="#">EmailAddress</a></li> <li>• <a href="#">Number</a></li> <li>• <a href="#">Text</a></li> </ul>	53.0

SEE ALSO:

[ConnectApi.FormFields](#)

## ConnectApi.FormFields

List of marketing integration form fields.

Property Name	Type	Description	Available Version
formFields	List<ConnectApi.FormField>	List of form fields associated with the marketing integration form.	53.0

SEE ALSO:

[ConnectApi.Form](#)

## ConnectApi.FormSubmission

Marketing integration form submission.

Property Name	Type	Description	Available Version
formSubmissionId	String	ID of the form submission, representing the submission data that was saved.	53.0

## ConnectApi.FormulaScope

Formula scope for a target.

Property Name	Type	Description	Available Version
contextValues	Map<String, String>	Map of context values for the scope.  <b>Note:</b> In version 52.0 and later, use the contextValuesMap property.	50.0–51.0
contextValuesMap	Map<String, Object>	Map of context values for the scope.	52.0
fields	List<String>	List of fields of the scope.	50.0
formula	String	Formula of the scope.	50.0

SEE ALSO:

[ConnectApi.Target](#)

## ConnectApi.FulfillmentGroupOutputRepresentation

Information about one FulfillmentOrder from a request to create fulfillment orders from multiple OrderDeliveryGroupSummaries. If the FulfillmentOrder was created, then its ID is returned. If it failed, then data from the input is returned so you can resubmit it.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
fulfilledFromLocationId	String	(Creation failed) The input FulfilledFromLocationId.	50.0
fulfillmentOrderId	String	The FulfillmentOrderId from the successfully created FulfillmentOrder.	50.0
fulfillmentType	String	(Creation failed) The input FulfillmentType.	50.0
orderDeliveryGroupSummaryId	String	(Creation failed) The input OrderDeliveryGroupSummaryId.	50.0
orderItemSummaries	List<ConnectApi.OrderItemSummaryOutputRepresentation>	(Creation failed) The input list of OrderItemSummaries.	50.0
orderSummaryId	String	(Creation failed) The input OrderSummaryId.	50.0
referenceId	String	The referenceId from the FulfillmentGroup input representation. Use this value to troubleshoot a failure.	50.0

## ConnectApi.FulfillmentOrderCancelLineItemsOutputRepresentation

Wraps the base output.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

No additional properties.

## ConnectApi.FulfillmentOrderInvoiceOutputRepresentation

ID of the created invoice.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
invoiceId	String	ID of the created invoice.	48.0

## ConnectApi.FulfillmentOrderOutputRepresentation

A list of IDs of the created FulfillmentOrders.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
fulfillmentOrderIds	List<String>	A list of IDs of created Fulfillment Orders.	48.0

## ConnectApi.GatewayLogResponse

Gateway log output.

Property Name	Type	Description	Available Version
createdDate	<a href="#">Datetime</a>	Date when the gateway log was created.	50.0
gatewayResultCode	<a href="#">String</a>	Result codes that show the status of a transaction as it is passed to the financial institution and then returned to the client.	50.0
id	<a href="#">String</a>	ID of the gateway log record.	50.0
interactionStatus	<a href="#">String</a>	Gateway interaction status. It can be SUCCESS, FAILED, or TIMEOUT.	50.0

## ConnectApi.GenericBundleCapability

If a feed element has this capability, the feed element has a group of other feed elements condensed into one feed element. This group is called a *bundle*.

Subclass of [ConnectApi.BundleCapability](#).

## ConnectApi.GenericFeedElement

A concrete implementation of the abstract `ConnectApi.FeedElement` class.

Subclass of [ConnectApi.FeedElement](#).

## ConnectApi.GetFOCapacityValuesOutputRepresentation

Response to a request for fulfillment order capacity values for one or more locations.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
locations	<a href="#">List&lt;ConnectApi.LocationCapacityOutputRepresentation&gt;</a>	List of fulfillment order capacity values for one or more locations.	55.0

## ConnectApi.GlobalInfluence

Chatter influence.

Name	Type	Description	Available Version
percentile	<a href="#">String</a>	Percentile value for the user's influence rank within the org or Experience Cloud site.	28.0

Name	Type	Description	Available Version
rank	<a href="#">Integer</a>	Number indicating the user's influence rank, relative to all other users within the org or Experience Cloud site.	28.0

SEE ALSO:

[ConnectApi.UserDetail](#)

## ConnectApi.GroupChatterSettings

A user's Chatter settings for a specific group.

Name	Type	Description	Available Version
emailFrequency	<a href="#">ConnectApi.GroupEmailFrequency</a> on page 2318	The frequency with which a group member receives email from a group.	28.0

## ConnectApi.GroupInformation

Describes the Information section of the group. If the group is private, this section is visible only to members.

Name	Type	Description	Available Version
text	<a href="#">String</a>	The text of the "Information" section of the group.	28.0
title	<a href="#">String</a>	The title of the "Information" section of the group.	28.0

SEE ALSO:

[ConnectApi.ChatterGroupDetail](#)

## ConnectApi.GroupMember

Member of a group.

Name	Type	Description	Available Version
id	<a href="#">String</a>	User's 18-character ID.	28.0
lastFeed AccessDate	<a href="#">Datetime</a>	The date and time at which the group member last accessed the group feed.	31.0
role	<a href="#">ConnectApi.GroupMembershipType Enum</a>	Type of membership the user has with the group. <ul style="list-style-type: none"> <li>• <code>GroupOwner</code></li> <li>• <code>GroupManager</code></li> <li>• <code>NotAMember</code></li> <li>• <code>NotAMemberPrivateRequested</code></li> </ul>	28.0

Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>StandardMember</li> </ul>	
url	String	Connect REST API URL to this membership.	28.0
user	<a href="#">ConnectApi.UserSummary</a>	Information about the user who is subscribed to this group.	28.0

SEE ALSO:

[ConnectApi.GroupMemberPage](#)

## ConnectApi.GroupMemberPage

Page of group members.

Name	Type	Description	Available Version
currentPageUrl	String	Connect REST API URL identifying the current page.	28.0
members	List< <a href="#">ConnectApi.GroupMember</a> >	List of group members.	28.0
myMembership	<a href="#">ConnectApi.Reference</a>	If the context user is a member of this group, returns information about that membership, otherwise, <code>null</code> .	28.0
nextPageUrl	String	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	28.0
previousPageUrl	String	Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	28.0
totalMemberCount	Integer	Total number of group members across all pages.	28.0

## ConnectApi.GroupMembershipRequest

Request to become a group member.

Name	Type	Description	Available Version
createdDate	Datetime	ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.	28.0
id	String	ID for the group membership request object.	28.0
lastUpdateDate	Datetime	ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.	28.0
requestedGroup	<a href="#">ConnectApi.Reference</a>	Information about the group the context user is requesting to join.	28.0

Name	Type	Description	Available Version
responseMessage	<a href="#">String</a>	A message for the user if their membership request is declined. The value of this property is used only when the value of the <code>status</code> property is <code>Declined</code> .  The maximum length is 756 characters.	28.0
status	<a href="#">ConnectApi.GroupMembershipRequestStatusEnum</a>	Status of a request to join a private group. Values are: <ul style="list-style-type: none"> <li>Accepted</li> <li>Declined</li> <li>Pending</li> </ul>	28.0
url	<a href="#">String</a>	URL of the group membership request object.	28.0
user	<a href="#">ConnectApi.UserSummary</a>	Information about the user requesting membership in a group.	28.0

SEE ALSO:

[ConnectApi.GroupMembershipRequests](#)

## ConnectApi.GroupMembershipRequests

Requests to become group members.

Name	Type	Description	Available Version
requests	<a href="#">List&lt;ConnectApi.GroupMembershipRequest&gt;</a>	Information about group membership requests.	28.0
total	<a href="#">Integer</a>	The total number of requests.	28.0

## ConnectApi.GroupRecord

A record associated with a group.

Property	Type	Description	Available Version
id	<a href="#">String</a>	Record's 18-character ID.	33.0
record	<a href="#">ConnectApi.ActorWithId</a>	Information about the record associated with the group.	33.0
url	<a href="#">String</a>	Record URL.	33.0

SEE ALSO:

[ConnectApi.GroupRecordPage](#)

## ConnectApi.GroupRecordPage

A paginated list of `ConnectApi.GroupRecord` objects.

Property	Type	Description	Available Version
<code>currentPageUrl</code>	<code>String</code>	Connect REST API URL identifying the current page.	33.0
<code>nextPageUrl</code>	<code>String</code>	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	33.0
<code>previousPageUrl</code>	<code>String</code>	Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	33.0
<code>records</code>	<code>List&lt;ConnectApi.GroupRecord&gt;</code>	List of records on the current page.	33.0
<code>totalRecordCount</code>	<code>Integer</code>	Total number of records associated with the group.	33.0

## ConnectApi.HashtagSegment

Hashtag segment.

Subclass of `ConnectApi.MessageSegment`.

Name	Type	Description	Available Version
<code>tag</code>	<code>String</code>	Text of the topic without the hash symbol (#).	28.0
<code>topicUrl</code>	<code>String</code>	Connect REST API Topics resource that searches for the topic: <pre>/services/data/v62.0/chatter/topics?exactMatch=true&amp;q=<b>topic</b></pre>	28.0
<code>url</code>	<code>String</code>	Connect REST API Feed Items resource URL that searches for the topic in all feed items in an organization: <pre>/services/data/v62.0/chatter/feed-items?q=<b>topic</b></pre>	28.0

## ConnectApi.HideSocialPostIntent

Hide intent for a social post.

Property Name	Type	Description	Available Version
<code>isHidden</code>	<code>Boolean</code>	Specifies whether the managed social account hid the social post ( <code>true</code> ) or not ( <code>false</code> ).	45.0

Property Name	Type	Description	Available Version
managedSocialAccount	<a href="#">ConnectApi.ManagedSocialAccount</a>	Managed social account that hides the social post.	45.0

SEE ALSO:

[ConnectApi.SocialPostIntents](#)

## ConnectApi.HoldFOCapacityOutputRepresentation

Response to a request to hold fulfillment order capacity at one or more locations. Can correspond to one action call.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
holdFOCapacityResponses	<a href="#">List&lt;ConnectApi.HoldFOCapacityResponseOutputRepresentation&gt;</a>	List of responses to the requests to hold fulfillment order capacity at one or more locations.	55.0

## ConnectApi.HoldFOCapacityResponseOutputRepresentation

Response to a request to hold fulfillment order capacity at one or more locations.

Property Name	Type	Description	Available Version
capacityResponses	<a href="#">List&lt;ConnectApi.CapacityResponseOutputRepresentation&gt;</a>	List of responses to the requests to hold fulfillment order capacity at individual locations.	55.0

## ConnectApi.HttpHeaderOutputRepresentation

HTTP header with information about a text classification

Property Name	Type	Description	Available Version
name	<a href="#">String</a>	Name of the HTTP header.	59.0
value	<a href="#">String</a>	Value of the HTTP header.	59.0

## ConnectApi.Icon

Icon.

Property	Type	Description	Available Version
height	<a href="#">Integer</a>	The height of the icon in pixels.	28.0
width	<a href="#">Integer</a>	The width of the icon in pixels.	28.0
url	<a href="#">String</a>	The URL of the icon. This URL is available to unauthenticated users. This URL does not expire.	28.0

SEE ALSO:

[ConnectApi.CanvasCapability](#)

[ConnectApi.EnhancedLinkCapability](#)

[ConnectApi.SocialPostCapability](#)

## ConnectApi.InlineImageSegment

An inline image in the feed body.

Subclass of [ConnectApi.MessageSegment](#).

Property Name	Type	Description	Available Version
altText	<a href="#">String</a>	Alt text for the inline image.	35.0
contentSize	<a href="#">Integer</a>	Size of the file in bytes.	35.0
fileExtension	<a href="#">String</a>	Extension of the file, such as gif.	37.0
thumbnails	<a href="#">ConnectApi.FilePreviewCollection</a>	Information about the available thumbnails for the image.	35.0
url	<a href="#">String</a>	URL to the latest version of the inline image.	35.0

## ConnectApi.InteractionsCapability

If a feed element has this capability, it has information about user interactions.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
count	Long	The number of individual views, likes, and comments on a feed post.   <b>Note:</b> This count appears in the UI under the feed post as the number of views, for example, "5 views."	37.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

[ConnectApi.RelatedQuestion](#)

## ConnectApi.Invitation

An invitation.

Property Name	Type	Description	Available Version
email	String	Email address of the user.	39.0
status	<a href="#">ConnectApi.GroupViralInvitationsStatus</a>	Specifies the status of an invitation to join a group. Values are: <ul style="list-style-type: none"> <li>• <code>ActedUponUser</code>—The user was added to the group. An email was sent asking the user to visit the group.</li> <li>• <code>Invited</code>—An email was sent asking the user to sign up for the org.</li> <li>• <code>MaxedOutUsers</code>—The group has the maximum allowed members.</li> <li>• <code>MultipleError</code>—The user wasn't invited due to multiple errors.</li> <li>• <code>NoActionNeededUser</code>—The user is already a member of the group.</li> <li>• <code>NotVisibleToExternalInviter</code>—The user is not accessible to the user sending the invitation.</li> <li>• <code>Unhandled</code>—The user couldn't be added to the group for an unknown reason.</li> </ul>	39.0
userId	String	ID of the user.	39.0

SEE ALSO:

[ConnectApi.Invitations](#)

## ConnectApi.Invitations

A collection of invitations.

Property Name	Type	Description	Available Version
invitations	<a href="#">List&lt;ConnectApi.Invitation&gt;</a>	Collection of invitations.	39.0

## ConnectApi.KnowledgeArticleVersion

A knowledge article version.

Property Name	Type	Description	Available Version
articleType	<a href="#">String</a>	Type of the knowledge article.	36.0
id	<a href="#">String</a>	ID of the knowledge article version.	36.0
knowledgeArticleId	<a href="#">String</a>	ID of the corresponding knowledge article.	36.0
lastPublishedDate	<a href="#">Datetime</a>	Last published date of the knowledge article.	36.0
summary	<a href="#">String</a>	Summary of the knowledge article contents.	36.0
title	<a href="#">String</a>	Title of the knowledge article.	36.0
urlName	<a href="#">String</a>	URL name of the knowledge article.	36.0

SEE ALSO:

[ConnectApi.KnowledgeArticleVersionCollection](#)

## ConnectApi.KnowledgeArticleVersionCollection

A collection of knowledge article versions.

Property Name	Type	Description	Available Version
items	<a href="#">List&lt;ConnectApi.KnowledgeArticleVersion&gt;</a>	A collection of knowledge article versions.	36.0

## ConnectApi.LabeledRecordField

Record field containing a label and a text value.

This class is abstract.

Subclass of [ConnectApi.AbstractRecordField](#).

Superclass of:

- [ConnectApi.CompoundRecordField](#)
- [ConnectApi.CurrencyRecordField](#)
- [ConnectApi.DateRecordField](#)

- [ConnectApi.PercentRecordField](#)
- [ConnectApi.PicklistRecordField](#)
- [ConnectApi.RecordField](#)
- [ConnectApi.ReferenceField](#)
- [ConnectApi.ReferenceWithDateRecordField](#)

 **Important:** The composition of a feed can change between releases. Write your code to handle instances of unknown subclasses.

Name	Type	Description	Available Version
label	<a href="#">String</a>	Localized string describing the record field.	29.0
text	<a href="#">String</a>	Text value of the record field. All record fields have a text value. To ensure that all clients can consume new content, inspect the record field's <code>type</code> property. If it isn't recognized, render the text value as the default case.	29.0

## ConnectApi.LightningExtensionInformation

Lightning extension information.

Subclass of [ConnectApi.AbstractExtensionInformation](#).

Property Name	Type	Description	Available Version
compositionComponent	<a href="#">String</a>	Component to use in compose state.	40.0
headerTextLabel	<a href="#">String</a>	Label for the extension's header.	40.0
hoverTextLabel	<a href="#">String</a>	Label for hovering over the extension.	40.0
renderComponent	<a href="#">String</a>	Component to use in render or preview state.	40.0

SEE ALSO:

[ConnectApi.ExtensionDefinition](#)

## ConnectApi.LikeIntent

Like intent for a social post.

Property Name	Type	Description	Available Version
isLiked	<a href="#">Boolean</a>	Specifies whether the managed social account liked the social post ( <code>true</code> ) or not ( <code>false</code> ).	45.0

Property Name	Type	Description	Available Version
managedSocialAccount	<a href="#">ConnectApi.ManagedSocialAccount</a>	Managed social account that likes the social post.	45.0

SEE ALSO:

[ConnectApi.LikeIntents](#)

## ConnectApi.LikeIntents

List of like intents for a social post.

Property Name	Type	Description	Available Version
likes	<a href="#">List&lt;ConnectApi.LikeIntent&gt;</a>	List of like intents for the social post.	45.0

SEE ALSO:

[ConnectApi.SocialPostIntents](#)

## ConnectApi.LikeSocialPostIntent

Like intent on a social post.

Property Name	Type	Description	Available Version
socialAccountId	<a href="#">String</a>	ID of the social account that likes the social post.	46.0
socialPostId	<a href="#">String</a>	ID of the social post to like.	46.0

## ConnectApi.LikeSummary

Summary of a like.

Subclass of [ConnectApi.UserFeedEntityActivitySummary](#).

Property Name	Type	Description	Available Version
likeId	<a href="#">String</a>	ID of the like.	42.0

## ConnectApi.LinkCapability

If a feed element has this capability, it has a link.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
<code>url</code>	<a href="#">String</a>	Link URL. The URL can be to an external site.	32.0
<code>urlName</code>	<a href="#">String</a>	Description of the link.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.LinkMetadata

Metadata for a link.

Property Name	Type	Description	Available Version
<code>description</code>	<a href="#">String</a>	Description of the link.	42.0
<code>frameSource</code>	<a href="#">String</a>	HTML required to display the resource.	42.0
<code>height</code>	<a href="#">Integer</a>	Height required to display the HTML.	42.0
<code>originalUrl</code>	<a href="#">String</a>	Original URL that was used to request the metadata.	42.0
<code>providerUrl</code>	<a href="#">String</a>	URL of the provider that the information is retrieved from.	42.0
<code>source</code>	<a href="#">ConnectApi.LinkMetadataSource</a>	Source of the link metadata. Values are: <ul style="list-style-type: none"> <li><code>None</code>—Link metadata wasn't retrieved.</li> <li><code>Sfdc</code>—Salesforce is the source.</li> </ul>	42.0
<code>thumbnailUrl</code>	<a href="#">String</a>	Thumbnail of the resource.	42.0
<code>title</code>	<a href="#">String</a>	Title of the link.	42.0
<code>type</code>	<a href="#">ConnectApi.LinkMetadataType</a>	Type of link that the metadata represents. Values are: <ul style="list-style-type: none"> <li><code>Error</code>—Link metadata couldn't be retrieved.</li> <li><code>Link</code>—Represents a link.</li> <li><code>None</code>—Link metadata wasn't retrieved because the link isn't an allowed domain.</li> <li><code>Photo</code>—Represents a photo.</li> <li><code>Rich</code>—Represents rich content, typically HTML content.</li> <li><code>Unknown</code>—Link metadata was retrieved, but the type is unknown.</li> <li><code>Video</code>—Represents a video.</li> </ul>	42.0
<code>url</code>	<a href="#">String</a>	URL of the image to display, if one is available.	42.0

Property Name	Type	Description	Available Version
width	<a href="#">Integer</a>	Width required to display the HTML.	42.0

SEE ALSO:

[ConnectApi.LinkMetadataCollection](#)

## ConnectApi.LinkMetadataCollection

Collection of link metadata.

Property Name	Type	Description	Available Version
linkMetadataList	<a href="#">List&lt;ConnectApi.LinkMetadata&gt;</a>	List of metadata for links.	42.0

## ConnectApi.LinkSegment

Link segment.

Subclass of [ConnectApi.MessageSegment](#).

Name	Type	Description	Available Version
url	<a href="#">String</a>	The link URL.	28.0

## ConnectApi.LocationOutputRepresentation

An inventory location's distance to an order recipient.

Property Name	Type	Description	Available Version
distance	<a href="#">Double</a>	The distance from the location to the order recipient.	51.0
locationIdentifier	<a href="#">String</a>	The location identifier.	51.0

## ConnectApi.LocationCapacityOutputRepresentation

Fulfillment order capacity values for a location.

Property Name	Type	Description	Available Version
assigned	<a href="#">Integer</a>	Value of the location's Assigned Fulfillment Order Count.	55.0
capacity	<a href="#">Integer</a>	Value of the location's Fulfillment Order Capacity. This property represents the location's maximum capacity.	55.0

Property Name	Type	Description	Available Version
error	<a href="#">ConnectApi. ErrorResponse</a>	Error returned by the request, if any.	55.0
heldCapacity	<a href="#">Integer</a>	Number of fulfillment orders that the location is holding capacity for.	55.0
locationId	<a href="#">String</a>	ID of the location.	55.0

## ConnectApi.MaintenanceInfo

Information about the upcoming scheduled maintenance for the organization.

Property Name	Type	Description	Available Version
description	<a href="#">String</a>	Description of the maintenance.	34.0
maintenanceTitle	<a href="#">String</a>	Title of the maintenance.	34.0
maintenanceType	<a href="#">ConnectApi. MaintenanceType</a>	Type of maintenance. Values are: <ul style="list-style-type: none"> <li><a href="#">Downtime</a>—Downtime maintenance.</li> <li><a href="#">GenerallyAvailable</a>—Generally available mode.</li> <li><a href="#">MaintenanceAndAvailable</a>—Maintenance with available mode.</li> <li><a href="#">MaintenanceWithDowntime</a>—Scheduled maintenance with downtime.</li> <li><a href="#">ReadOnly</a>—Maintenance with read-only mode.</li> </ul>	34.0
message EffectiveTime	<a href="#">Datetime</a>	Effective time when users start seeing the maintenance message.	34.0
message ExpirationTime	<a href="#">Datetime</a>	Expiration time of the maintenance message.	34.0
scheduledEnd Downtime	<a href="#">Datetime</a>	Scheduled end of downtime. <code>null</code> for <a href="#">GenerallyAvailable</a> and <a href="#">ReadOnly</a> maintenance types.	34.0
scheduledEnd MaintenanceTime	<a href="#">Datetime</a>	Scheduled end of maintenance. <code>null</code> for <a href="#">Downtime</a> maintenance type.	34.0
scheduledStart Downtime	<a href="#">Datetime</a>	Scheduled start of downtime. <code>null</code> for <a href="#">GenerallyAvailable</a> and <a href="#">ReadOnly</a> maintenance types.	34.0

Property Name	Type	Description	Available Version
scheduledStart MaintenanceTime	Datetime	Scheduled start time of maintenance. <code>null</code> for Downtime maintenance type.	34.0

SEE ALSO:

[ConnectApi.OrganizationSettings](#)

## ConnectApi.ManagedContentAssociations

Content topics associated with managed content.

Property Name	Type	Description	Available Version
topics	List< <a href="#">ConnectApi.TopicSummary</a> >	A collection of topics associated with the managed content.	47.0

SEE ALSO:

[ConnectApi.ManagedContentVersion](#)

## ConnectApi.ManagedContentChannel

Managed content channel.

Subclass of [ConnectApi.AbstractManagedContentChannelRepresentation](#) in version 62.0 and later

Property Name	Type	Description	Available Version
cacheControlMaxAge	Long	HTTP cache control max age response header for content delivered from the channel.	55.0
channelId	String	ID of the managed content channel.	48.0–61.0
channelName	String	Name of the managed content channel.	48.0–61.0
channelType	<a href="#">ConnectApi.ManagedContentChannelType</a>	Type of managed content channel. Values are: <ul style="list-style-type: none"> <li>• <code>CloudToCloud</code>—Cloud-to-Cloud integrated channel.</li> <li>• <code>Community</code>—Experience Cloud site channel.</li> <li>• <code>ConnectedApp</code>—Channel served by a connected app.</li> <li>• <code>PublicUnauthenticated</code>—Public channel. All published content is publicly available.</li> <li>• <code>UserPermission</code>—Channel backed by a system permission. All published content is available only to users with the permission.</li> </ul>	48.0–61.0

Property Name	Type	Description	Available Version
domain	String	ID or name of the domain assigned to the channel.	52.0–61.0
domainId	String	ID of the domain assigned to the channel. In version 52.0 and later, this information is returned in the <code>domain</code> property.	50.0–51.0
domainName	String	Name of the domain assigned to the channel.	50.0–61.0
id	String	ID of the managed content channel.	62.0
isChannelSearchable	Boolean	Specifies whether the text contents of the channel are searchable ( <code>true</code> ) or not ( <code>false</code> ).	48.0–61.0
isDomainLocked	Boolean	Specifies whether the domain is locked and can't be changed ( <code>true</code> ) or not ( <code>false</code> ).	50.0–61.0
isSearchable	Boolean	Specifies whether the text contents of the channel are searchable ( <code>true</code> ) or not ( <code>false</code> ).	62.0
managedContentChannelDomain	ConnectApi.ManagedContentChannelDomainRepresentation	Domain associated with the channel.	62.0
mediaCacheControlMaxAge	Long	HTTP cache control max age response header for media delivered from the channel.	57.0
name	String	Name of the managed content channel.	62.0
targetId	String	ID of the target associated with the channel.	62.0

Property Name	Type	Description	Available Version
type	<a href="#">ConnectApi.ManagedContentChannelType</a>	Type of managed content channel. Values are: <ul style="list-style-type: none"> <li>• <code>CloudToCloud</code>—Cloud-to-Cloud integrated channel.</li> <li>• <code>Community</code>—Experience Cloud site channel.</li> <li>• <code>ConnectedApp</code>—Channel served by a connected app.</li> <li>• <code>PublicUnauthenticated</code>—Public channel. All published content is publicly available.</li> <li>• <code>UserPermission</code>—Channel backed by a system permission. All published content is available only to users with the permission.</li> </ul>	62.0

## ConnectApi.ManagedContentChannelCollection

Collection of managed content channels.

Property Name	Type	Description	Available Version
channels	<a href="#">List&lt;ConnectApi.ManagedContentChannel&gt;</a>	List of managed content channels.	48.0–61.0
currentPageUrl	<a href="#">String</a>	Connect REST API URL identifying the current page.	48.0–61.0
nextPageUrl	<a href="#">String</a>	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	48.0–61.0
previousPageUrl	<a href="#">String</a>	Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	48.0–61.0
totalChannels	<a href="#">Integer</a>	Total number of managed content channels.	48.0–61.0

## ConnectApi.ManagedContentChannelDomainRepresentation

Domain associated with a managed content channel.

Property Name	Type	Description	Available Version
<code>isLocked</code>	<a href="#">Boolean</a>	Specifies whether the domain is locked and can't be changed ( <code>true</code> ) or not ( <code>false</code> ).	62.0
<code>name</code>	<a href="#">String</a>	Name of the domain assigned to the channel.	62.0
<code>value</code>	<a href="#">String</a>	Value of the domain (name or ID) associated with the channel.	62.0

SEE ALSO:

[ConnectApi.ManagedContentChannel](#)

## ConnectApi.ManagedContentChannelDetail

Managed content channel detail.

Property Name	Type	Description	Available Version
<code>channelId</code>	<a href="#">String</a>	ID of the managed content channel.	54.0–61.0
<code>channelName</code>	<a href="#">String</a>	Name of the managed content channel.	54.0–61.0
<code>channelType</code>	<a href="#">ConnectApi.ManagedContentChannelType</a>	Type of managed content channel. Values are: <ul style="list-style-type: none"> <li><code>CloudToCloud</code>—Cloud-to-Cloud integrated channel.</li> <li><code>Community</code>—Experience Cloud site channel.</li> <li><code>ConnectedApp</code>—Channel served by a connected app.</li> <li><code>PublicUnauthenticated</code>—Public channel. All published content is publicly available.</li> <li><code>UserPermission</code>—Channel backed by a system permission. All published content is available only to users with the permission.</li> </ul>	54.0–61.0
<code>domain</code>	<a href="#">String</a>	Domain assigned to the managed content channel.	54.0–61.0
<code>domainName</code>	<a href="#">String</a>	Name of the domain assigned to the managed content channel.	54.0–61.0
<code>isChannelSearchable</code>	<a href="#">Boolean</a>	Specifies whether the text of the channel's contents is searchable ( <code>true</code> ) or not ( <code>false</code> ).	54.0–61.0
<code>isDomainLocked</code>	<a href="#">Boolean</a>	Specifies whether the channel's domain is locked and can't be changed ( <code>true</code> ) or not ( <code>false</code> ).	54.0–61.0

## ConnectApi.ManagedContentChannelsRepresentation

Collection of managed content channels.

Property Name	Type	Description	Available Version
channels	<a href="#">List&lt;ConnectApi.AbstractManagedContentChannelRepresentation&gt;</a>	List of managed content channels.	62.0
currentPageUrl	<a href="#">String</a>	Connect REST API URL identifying the current page.	62.0
nextPageUrl	<a href="#">String</a>	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	62.0
previousPageUrl	<a href="#">String</a>	Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	62.0
totalChannels	<a href="#">Integer</a>	Total number of managed content channels.	62.0

SEE ALSO:

## ConnectApi.ManagedContentChannelSummary

Managed content channel.

Subclass of [ConnectApi.AbstractManagedContentChannelRepresentation](#) in version 62.0 and later

Property Name	Type	Description	Available Version
domainUrl	<a href="#">String</a>	Domain URL of the channel.	55.0–61.0
id	<a href="#">String</a>	ID of the managed content channel.	62.0
name	<a href="#">String</a>	Name of the managed content channel.	54.0
resourceUrl	<a href="#">String</a>	Resource URL to complete information of the channel.	54.0–61.0
target	<a href="#">ConnectApi.ManagedContentChannelTargetSummary</a>	Target site associated with the channel.	54.0–61.0
type	<a href="#">ConnectApi.ManagedContentChannelType</a>	Type of managed content channel. Values are: <ul style="list-style-type: none"> <li>• <code>CloudToCloud</code>—Cloud-to-Cloud integrated channel.</li> <li>• <code>Community</code>—Experience Cloud site channel.</li> <li>• <code>ConnectedApp</code>—Channel served by a connected app.</li> </ul>	62.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li><code>PublicUnauthenticated</code>—Public channel. All published content is publicly available.</li> <li><code>UserPermission</code>—Channel backed by a system permission. All published content is available only to users with the permission.</li> </ul>	
<code>url</code>	<code>String</code>	URL to the channel resource.	62.0

SEE ALSO:

## ConnectApi.ManagedContentCloneStatus

Information about managed content's clone status.

Property Name	Type	Description	Available Version
<code>label</code>	<code>String</code>	Localized label for the status.	61.0
<code>status</code>	<code>ConnectApi.ManagedContentCloneStatus</code>	Status of the managed content clone. Values are: <ul style="list-style-type: none"> <li><code>PartialSuccess</code></li> <li><code>Success</code></li> </ul>	61.0

SEE ALSO:

[ConnectApi.ManagedContentDocumentClone](#)

## ConnectApi.ManagedContentClonedVariants

Information about clone variants.

Property Name	Type	Description	Available Version
language	<a href="#">String</a>	Language of the translated clone variant.	61.0
managedContentVariantId	<a href="#">String</a>	ID of the clone variant.	61.0
resourceURL	<a href="#">String</a>	Resource URL of the clone variant.	61.0

SEE ALSO:

[ConnectApi.ManagedContentDocumentClone](#)

## ConnectApi.ManagedContentCollectionItem

Managed content collection item.

Property Name	Type	Description	Available Version
body	<a href="#">Map&lt;String, Object&gt;</a>	Map of properties of the collection item with their values.	56.0
contentType	<a href="#">ConnectApi.ManagedContentCollectionItemTypeSummary</a>	Type of collection item.	56.0
id	<a href="#">String</a>	ID of the collection item.	56.0
name	<a href="#">String</a>	Name or title for collection item.	56.0

SEE ALSO:

[ConnectApi.ManagedContentCollectionItems](#)

## ConnectApi.ManagedContentCollectionItems

Managed content collection items.

Property Name	Type	Description	Available Version
channelInfo	<a href="#">ConnectApi.ManagedContentChannelSummary</a>	Information about the managed content channel.	56.0–61.0

Property Name	Type	Description	Available Version
channelSummary	<a href="#">ConnectApi.ManagedContentDeliveryChannelSummaryRepresentation</a>	Summary information about the managed content delivery channel.	62.0
collectionKey	<a href="#">String</a>	Unique identifier for the collection.	56.0
collectionType	<a href="#">ConnectApi.ManagedContentTypesSummary</a>	Type of collection.	56.0
id	<a href="#">String</a>	ID of the collection.	56.0
items	<a href="#">List&lt;ConnectApi.ManagedContentCollectionItem&gt;</a>	List of collection Items.	56.0
language	<a href="#">String</a>	Language locale of the collection.	56.0
publishedDate	<a href="#">Datetime</a>	Most recent publish date of the collection.	56.0
title	<a href="#">String</a>	Title of the collection.	56.0
total	<a href="#">Integer</a>	Total number of items in the current collection detail page.	56.0
urlName	<a href="#">String</a>	URL name of the collection.	56.0

SEE ALSO:

## ConnectApi.ManagedContentCollectionItemTypeSummary

Summary of a collection item type.

Property Name	Type	Description	Available Version
fullyQualifiedName	<a href="#">String</a>	Fully qualified name of the collection item type.	56.0
name	<a href="#">String</a>	Name of the collection item type.	56.0

SEE ALSO:

[ConnectApi.ManagedContentCollectionItem](#)

## ConnectApi.ManagedContentDateAndTimeNodeValue

Managed content node of date and time type.

Subclass of [ConnectApi.ManagedContentNodeValue](#).

Property Name	Type	Description	Available Version
dateTimeValue	<a href="#">Datetime</a>	UTC date and time value of the managed content node.	48.0
timeZone	<a href="#">String</a>	Time zone in which the date and time is authored.	48.0

## ConnectApi.ManagedContentDateNodeValue

Managed content node of date type.

Subclass of [ConnectApi.ManagedContentNodeValue](#).

Property Name	Type	Description	Available Version
value	<a href="#">Datetime</a>	Date value of the managed content node.	48.0

## ConnectApi.ManagedContentDeliveryChannelRepresentation

Managed content delivery channel.

Property Name	Type	Description	Available Version
domain	<a href="#">String</a>	Domain assigned to the managed content channel.	62.0
domainName	<a href="#">String</a>	Name of the domain assigned to the managed content channel.	62.0
id	<a href="#">String</a>	ID of the managed content channel.	62.0
isDomainLocked	<a href="#">Boolean</a>	Specifies whether the channel's domain is locked and can't be changed ( <a href="#">true</a> ) or not ( <a href="#">false</a> ).	62.0
isSearchable	<a href="#">Boolean</a>	Specifies whether the text of the channel's contents is searchable ( <a href="#">true</a> ) or not ( <a href="#">false</a> ).	62.0
name	<a href="#">String</a>	Name of the managed content channel.	62.0

Property Name	Type	Description	Available Version
type	<a href="#">ConnectApi.ManagedContentChannelType</a>	Type of managed content channel. Values are: <ul style="list-style-type: none"> <li>• <code>CloudToCloud</code>—Cloud-to-Cloud integrated channel.</li> <li>• <code>Community</code>—Experience Cloud site channel.</li> <li>• <code>ConnectedApp</code>—Channel served by a connected app.</li> <li>• <code>PublicUnauthenticated</code>—Public channel. All published content is publicly available.</li> <li>• <code>UserPermission</code>—Channel backed by a system permission. All published content is available only to users with the permission.</li> </ul>	62.0

SEE ALSO:

[getManagedContentDeliveryChannel\(channelId\)](#)

## ConnectApi.ManagedContentDeliveryChannelsRepresentation

Collection of managed content delivery channels.

Property Name	Type	Description	Available Version
channels	<a href="#">List&lt;ConnectApi.ManagedContentDeliveryChannelSummaryRepresentation&gt;</a>	List of managed content delivery channels.	62.0
currentPageUrl	<a href="#">String</a>	Connect REST API URL identifying the current page.	62.0
nextPageUrl	<a href="#">String</a>	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	62.0
previousPageUrl	<a href="#">String</a>	Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	62.0
totalChannels	<a href="#">Integer</a>	Total number of managed content delivery channels.	62.0

SEE ALSO:

## ConnectApi.ManagedContentDeliveryDocument

Managed content in delivery scope.

Subclass of [ConnectApi.AbstractManagedContentDeliveryDocument](#) in version 55.0 and later. Properties with an available version of 54.0 only are included in [ConnectApi.AbstractManagedContentDeliveryDocument](#) in version 55.0 and later.

Property Name	Type	Description	Available Version
channelInfo	ConnectApi.ManagedContentChannelSummary	Information about the managed content channel.	54.0–61.0

Property Name	Type	Description	Available Version
channelSummary	<a href="#">ConnectApi.ManagedContentDeliveryChannelSummaryRepresentation</a>	Summary information about the managed content delivery channel.	62.0
contentBody	<a href="#">Map&lt;String, Object&gt;</a>	Map of properties of the managed content with their values.	54.0
contentKey	<a href="#">String</a>	Globally unique identifier (GUID) for the managed content.	54.0 only
contentType	<a href="#">ConnectApi.ManagedContentTypeSummary</a>	Type of managed content.	54.0 only
language	<a href="#">String</a>	Language locale of the managed content.	54.0 only
managedContentId	<a href="#">String</a>	ID of the managed content.	54.0 only
publishedDate	<a href="#">Datetime</a>	Most recent publish date of the managed content.	54.0 only
references	<a href="#">Map&lt;String, ConnectApi.AbstractManagedContentReference&gt;</a>	Map of references with <code>contentKey</code> as the key.	54.0
referencesList	<a href="#">List&lt;ConnectApi.AbstractManagedContentReference&gt;</a>	List of references.	54.0
title	<a href="#">String</a>	Title of the managed content.	54.0 only
unauthenticatedUrl	<a href="#">String</a>	Public URL for the managed content.	54.0 only
urlName	<a href="#">String</a>	URL name of the managed content.	54.0 only

SEE ALSO:

[ConnectApi.ManagedContentDeliveryDocumentCollection](#)

## ConnectApi.ManagedContentDeliveryDocumentCollection

Managed content delivery document collection.

Property Name	Type	Description	Available Version
channelInfo	<a href="#">ConnectApi.ManagedContentChannelSummary</a>	Information about the managed content channel.	55.0–61.0

Property Name	Type	Description	Available Version
channelSummary	<a href="#">ConnectApi.ManagedContentDeliveryChannelSummaryRepresentation</a>	Summary information about the managed content delivery channel.	62.0
contents	<a href="#">List&lt;ConnectApi.AbstractManagedContentDeliveryDocument&gt;</a>	List of managed content delivery documents.	55.0
currentPageUrl	<a href="#">String</a>	URL to the current page of managed content records.	55.0
nextPageUrl	<a href="#">String</a>	URL to the next page of managed content records.	55.0
previousPageUrl	<a href="#">String</a>	URL to the previous page of managed content records.	55.0
references	<a href="#">Map&lt;String, ConnectApi.AbstractManagedContentReference&gt;</a>	Map of references with <code>contentKey</code> as the key.	55.0
referencesList	<a href="#">List&lt;ConnectApi.AbstractManagedContentReference&gt;</a>	List of references.	55.0

## ConnectApi.ManagedContentDeliveryDocumentSummary

Managed content delivery document summary.

Subclass of [ConnectApi.AbstractManagedContentDeliveryDocument](#).

No additional properties.

## ConnectApi.ManagedContentDocument

Information about a piece of managed content in an authoring space.

Property Name	Type	Description	Available Version
apiName	<a href="#">String</a>	API name of the managed content.	61.0
contentBody	<a href="#">Map&lt;String, Object&gt;</a>	Map of properties of the managed content with their values.	60.0
contentKey	<a href="#">String</a>	Globally unique identifier (GUID) for the managed content.	60.0
contentSpace	<a href="#">ConnectApi.ManagedContentSpaceSummary</a>	Content space of the managed content.	60.0

Property Name	Type	Description	Available Version
contentType	<a href="#">ConnectApi.ManagedContentTypeSummary</a>	Type of managed content.	60.0
createdBy	<a href="#">ConnectApi.ManagedContentUserSummary</a>	User who created the managed content.	60.0
createdDate	<a href="#">Datetime</a>	Date when the managed content was created.	60.0
externalId	<a href="#">String</a>	External ID of the managed content.	60.0
folder	<a href="#">ConnectApi.ManagedContentFolderSummary</a>	Folder of the managed content.	60.0
isPublished	<a href="#">Boolean</a>	Specifies whether the managed content variant is published to a channel ( <code>true</code> ) or not ( <code>false</code> ).	60.0
language	<a href="#">String</a>	Language locale of the managed content.	60.0
lastModifiedBy	<a href="#">ConnectApi.ManagedContentUserSummary</a>	User who last modified the managed content.	60.0
lastModifiedDate	<a href="#">Datetime</a>	Date when the managed content was last modified.	60.0
managedContentId	<a href="#">String</a>	ID of the managed content.	60.0
managedContentVariantId	<a href="#">String</a>	Managed content variant ID.	60.0
managedContentVersionId	<a href="#">String</a>	Managed content version ID.	60.0
status	<a href="#">ConnectApi.ManagedContentVariantStatusOutput</a>	Status of the managed content variant.	60.0
title	<a href="#">String</a>	Title of the managed content.	60.0
urlName	<a href="#">String</a>	URL name of the managed content.	60.0
versionNumber	<a href="#">String</a>	Version number of the managed content.	60.0

## ConnectApi.ManagedContentDocumentClone

Managed content document clone.

Property Name	Type	Description	Available Version
apiName	<a href="#">String</a>	API name of the cloned content.	61.0

Property Name	Type	Description	Available Version
cloneStatus	<a href="#">ConnectApi.ManagedContent.CloneStatus</a>	Status of the cloned content.	61.0
contentKey	<a href="#">String</a>	Globally unique identifier (GUID) for the cloned content.	61.0
errorMessage	<a href="#">String</a>	Error message if the primary variant failed to clone.	61.0
failedVariants	<a href="#">List&lt;ConnectApi.ManagedContent.FailedVariants&gt;</a>	Information about failed cloned variants if cloning was partially successful.	61.0
folder	<a href="#">ConnectApi.ManagedContent.FolderSummary</a>	Folder of the cloned content.	61.0
managedContentId	<a href="#">String</a>	ID of the cloned content in the authoring workspace.	61.0
resourceURL	<a href="#">String</a>	Resource URL of the cloned content.	61.0
sourceContentKeyOrId	<a href="#">String</a>	ID or content key of the source managed content in the authoring workspace.	61.0
title	<a href="#">String</a>	Title of cloned content.	61.0
variants	<a href="#">List&lt;ConnectApi.ManagedContent.ClonedVariants&gt;</a>	List of cloned variants.	61.0

SEE ALSO:

[cloneManagedContentDocument\(contentKeyOrId, ManagedContentCloneInputParam\)](#)

## ConnectApi.ManagedContentFailedVariants

Information about failed cloned managed content variants if cloning was partially successful.

Property Name	Type	Description	Available Version
errorMessage	<a href="#">String</a>	Error message for the failure.	61.0
language	<a href="#">String</a>	Language of the failed translated variant.	61.0
sourceManagedContentVariantId	<a href="#">String</a>	ID of the managed content variant that failed to clone.	61.0

SEE ALSO:

[ConnectApi.ManagedContentDocumentClone](#)

## ConnectApi.ManagedContentFolderSummary

Information about the managed content folder.

Property Name	Type	Description	Available Version
id	String	ID of the managed content folder in the authoring space.	60.0
resourceUrl	String	Resource URL of the managed content folder.	60.0

SEE ALSO:

[ConnectApi.ManagedContentDocument](#)

[ConnectApi.ManagedContentVariant](#)

## ConnectApi.ManagedContentMediaNodeValue

Managed content node of media type.

Subclass of [ConnectApi.ManagedContentNodeValue](#).

Property Name	Type	Description	Available Version
altText	String	Alternative text for the managed content node.	47.0
altUrl	String	Alternative URL to the managed content node. In version 49.0 and later, this information is returned in the <code>thumbnailUrl</code> property.	47.0–48.0
contentKey	String	Content key of the managed content.	51.0
fileName	String	File name of the managed content node.	48.0
mediaType	<a href="#">ConnectApi.ManagedContentMediaType</a>	Type of managed content media. Value is <code>Image</code> .	47.0
mimeType	String	MIME type of the managed content node.	47.0
resourceUrl	String	Resource URL to the image. In version 48.0, the resource URL is available if referencing asset files and is <code>null</code> if referencing media. In version 49.0 and later, the resource URL is available if referencing asset files or media.	48.0
thumbnailUrl	String	URL to the thumbnail of the media.	49.0
title	String	Title of the managed content node.	47.0
unauthenticatedUrl	String	Unauthenticated URL to the image or <code>null</code> if the image isn't visible to external users.	48.0

Property Name	Type	Description	Available Version
url	String	URL to the image.	47.0

## ConnectApi.ManagedContent/MediaSourceNodeValue

Source of managed content media.

Property Name	Type	Description	Available Version
fileName	String	File name of the media source.	49.0
isExternal	Boolean	Specifies whether the media source is referenced via an external URL ( <b>true</b> ) or uploaded ( <b>false</b> ).	49.0
mediaType	ConnectApi.ManagedContent.MediaType	Type of managed content media. Values are: <ul style="list-style-type: none"> <li>Document</li> <li>Image</li> </ul>	49.0
mimeType	String	MIME type of the media source.	49.0
referenceId	String	Reference ID of the uploaded media source.	49.0
resourceUrl	String	Resource URL of the media source.	49.0
unauthenticatedUrl	String	URL to the media source for unauthenticated users, or <b>null</b> if the media source isn't available to external users.	49.0
url	String	URL to the media source for authenticated users.	49.0

## ConnectApi.ManagedContentNodeType

Managed content node type.

Property Name	Type	Description	Available Version
label	String	Label of the managed content node type.	47.0
name	String	Developer name of the managed content node type.	47.0

Property Name	Type	Description	Available Version
nodeType	<a href="#">ConnectApi.ManagedContentTypeEnum</a>	Type of managed content node. Values are: <ul style="list-style-type: none"> <li>• <a href="#">Date</a></li> <li>• <a href="#">DateTime</a></li> <li>• <a href="#">Media</a></li> <li>• <a href="#">MediaSource</a></li> <li>• <a href="#">MultilineText</a></li> <li>• <a href="#">NameField</a></li> <li>• <a href="#">RichText</a></li> <li>• <a href="#">Text</a></li> <li>• <a href="#">Url</a></li> </ul>	47.0

SEE ALSO:

## ConnectApi.ManagedContentNodeValue

Managed content node.

This class is abstract.

Superclass of:

- [ConnectApi.ManagedContentDateAndTimeNodeValue](#)
- [ConnectApi.ManagedContentDateNodeValue](#)
- [ConnectApi.ManagedContentMediaNodeValue](#)
- [ConnectApi.ManagedContentMediaSourceNodeValue](#)
- [ConnectApi.ManagedContentTextNodeValue](#)

Property Name	Type	Description	Available Version
nodeType	<a href="#">ConnectApi.ManagedContentType</a>	Type of managed content node. Values are: <ul style="list-style-type: none"> <li>• <a href="#">Date</a></li> <li>• <a href="#">DateTime</a></li> <li>• <a href="#">Media</a></li> <li>• <a href="#">MediaSource</a></li> <li>• <a href="#">MultilineText</a></li> <li>• <a href="#">NameField</a></li> <li>• <a href="#">RichText</a></li> <li>• <a href="#">Text</a></li> <li>• <a href="#">Url</a></li> </ul>	47.0

SEE ALSO:

[ConnectApi.ManagedContentVersion](#)

## ConnectApi.ManagedContentPublishOutput

Information about a Publish action

Property Name	Type	Description	Available Version
deploymentId	<a href="#">String</a>	ID of the managed content deployment.	60.0
description	<a href="#">String</a>	Publish description.	60.0
publishDate	<a href="#">Datetime</a>	Publish date.	60.0

## ConnectApi.ManagedContentReference

Managed content reference.

Subclass of [ConnectApi.AbstractManagedContentReference](#).

Property Name	Type	Description	Available Version
contentBody	<a href="#">Map&lt;String, Object&gt;</a>	Map of properties of the managed content reference with their values.	54.0
title	<a href="#">String</a>	Title of the managed content reference.	54.0

SEE ALSO:

[ConnectApi.ManagedContentReferenceSummary](#)

## ConnectApi.ManagedContentReferenceSummary

Summary of the managed content reference.

Subclass of [ConnectApi.AbstractManagedContentReference](#).

Property Name	Type	Description	Available Version
title	String	Title of the managed content reference.	54.0

## ConnectApi.ManagedContentSpace

Managed content space.

Property Name	Type	Description	Available Version
apiName	String	API name of the managed content space.	61.0
createdBy	String	ID of the user who created the managed content space.	55.0
createdDate	Datetime	Date when the managed content space was created.	55.0
defaultLanguage	String	Default language of the managed content space.	55.0
description	String	Description of the managed content space.	55.0
id	String	ID of the managed content space.	55.0
isEnhancedSpace	Boolean	Specifies whether the space is enhanced ( <code>true</code> ) or not ( <code>false</code> ).	60.0
lastModifiedBy	String	ID of the user who last modified the managed content space.	55.0
lastModifiedDate	Datetime	Date when the managed content space was last modified.	55.0
name	String	Name of the managed content space.	55.0
rootFolderId	String	ID of the root folder of the managed content space.	55.0

## ConnectApi.ManagedContentSpaceChannelRepresentation

Managed content space channel.

Property Name	Type	Description	Available Version
channelSummary	<a href="#">ConnectApi.ManagedContentChannelSummary</a>	Information about the managed content space channel.	62.0

Property Name	Type	Description	Available Version
createdBy	<a href="#">ConnectApi.ManagedContentUserSummary</a>	Information about the user who created the managed content space channel.	62.0
createdDate	<a href="#">Datetime</a>	Date when the managed content space channel was created.	62.0
status	<a href="#">ConnectApi.ManagedContentSpaceChannelStatus</a> on page 2320	Status of the add or remove operation for a channel and managed content space. <ul style="list-style-type: none"> <li>• <code>Added</code>—Channel was added to the managed content space.</li> <li>• <code>Failed</code>—Add or remove operation failed.</li> <li>• <code>Pending</code>—Add or remove operation is pending.</li> <li>• <code>Removed</code>—Channel was removed from the managed content space.</li> </ul>	62.0

## ConnectApi.ManagedContentSpaceSummary

Information about the managed content space.

Property Name	Type	Description	Available Version
id	<a href="#">String</a>	ID of the managed content space.	60.0
resourceUrl	<a href="#">String</a>	Resource URL of the managed content space.	60.0

SEE ALSO:

[ConnectApi.ManagedContentDocument](#)

[ConnectApi.ManagedContentVariant](#)

## ConnectApi.ManagedContentTextNodeValue

Managed content node of text type.

Subclass of [ConnectApi.ManagedContentNodeValue](#).

Property Name	Type	Description	Available Version
value	<a href="#">String</a>	Text value of the managed content node.	47.0

## ConnectApi.ManagedContentType

Managed content type.

Property Name	Type	Description	Available Version
label	<a href="#">String</a>	Label of the managed content type.	47.0
name	<a href="#">String</a>	Developer name of the managed content type.	47.0
nodeTypes	<a href="#">Map&lt;String, ConnectApi.ManagedContentType&gt;</a>	Map of node types for the managed content type.	47.0

SEE ALSO:

[ConnectApi.ManagedContentVersionCollection](#)

## ConnectApi.ManagedContentTypeSummary

Managed content type.

Property Name	Type	Description	Available Version
fullyQualified Name	String	Fully qualified name of the managed content type.	54.0
name	String	Reserved for future use.	55.0

## SEE ALSO:

[ConnectApi.ManagedContentDeliveryDocument](#)

## ConnectApi.ManagedContentUnpublishOutput

Managed content unpublish action.

Property Name	Type	Description	Available Version
deploymentId	String	ID of the Managed content deployment.	60.0
description	String	Unpublish description.	60.0
unpublishDate	Datetime	Unpublish date.	60.0

## ConnectApi.ManagedContentUserSummary

Information about the user who created or modified the content.

Property Name	Type	Description	Available Version
id	String	ID of the user.	60.0
name	String	Reserved for future use.	60.0
resourceUrl	String	Resource URL of the user.	60.0

## SEE ALSO:

[ConnectApi.ManagedContentDocument](#)

[ConnectApi.ManagedContentVariant](#)

## ConnectApi.ManagedContentVariant

Managed content variant.

Property Name	Type	Description	Available Version
contentBody	Map<String, Object>	Map of properties of the managed content with their values.	60.0
contentKey	String	Globally unique identifier (GUID) for the managed content.	60.0
contentSpace	ConnectApi.ManagedContentSpaceSummary	Content space of the managed content.	60.0
contentType	ConnectApi.ManagedContentTypeSummary	Type of managed content.	60.0
createdBy	ConnectApi.ManagedContentUserSummary	User who created the managed content variant.	60.0
createdDate	Datetime	Date when the managed content variant was created.	60.0
externalId	String	External ID of the managed content.	60.0
folder	ConnectApi.ManagedContentFolderSummary	Folder of the managed content.	60.0
isPublished	Boolean	Specifies whether the managed content variant is published to a channel (true) or not (false).	60.0
language	String	Language locale of the managed content.	60.0
lastModifiedBy	ConnectApi.ManagedContentUserSummary	User who last modified the managed content variant.	60.0
lastModifiedDate	Datetime	Date when the managed content variant was last modified.	60.0
managedContentId	String	ID of the managed content.	60.0
managedContentVariantId	String	ID of the managed content variant.	60.0
managedContentVersionId	String	Managed content version ID.	60.0
status	ConnectApi.ManagedContentVariantStatusOutput	Information about a managed content variant's status in the authoring space.	60.0
title	String	Title of the managed content.	60.0
urlName	String	URL name of the managed content.	60.0

## ConnectApi.ManagedContentVariantStatusOutput

Information about a managed content variant's status in the authoring space.

Property Name	Type	Description	Available Version
label	<a href="#">String</a>	Localized label for the status.	60.0
status	<a href="#">ConnectApi.ManagedContentVariantStatus</a>	Status of the managed content variant. Values are: <ul style="list-style-type: none"> <li><code>Draft</code>—Content isn't published.</li> <li><code>Published</code>—Content is published and available for use in your live sites.</li> <li><code>Revised</code>—Content that's published and edited. Publish this content to make the changes available for use in your live sites.</li> </ul>	60.0

## ConnectApi.ManagedContentVersion

Managed content version.

Property Name	Type	Description	Available Version
associations	<a href="#">ConnectApi.ManagedContentAssociations</a>	Content topics associated with the managed content.	47.0
contentKey	<a href="#">String</a>	Content key of the managed content.	51.0
contentNodes	<a href="#">Map&lt;String, ConnectApi.ManagedContentNodeValue&gt;</a>	Map of content nodes.	47.0
contentUrlName	<a href="#">String</a>	Content URL name of the managed content version.	48.0
language	<a href="#">String</a>	Language of the managed content version.	48.0
managedContentId	<a href="#">String</a>	ID of the managed content.	47.0
publishedDate	<a href="#">Datetime</a>	Date when the managed content version was last published.	47.0
title	<a href="#">String</a>	Title of the managed content version.	47.0
type	<a href="#">String</a>	Type of managed content version.	47.0
titleLabel	<a href="#">String</a>	Type label of the managed content type.	47.0

Property Name	Type	Description	Available Version
unauthenticatedUrl	String	Unauthenticated delivery URL.	50.0

SEE ALSO:

[ConnectApi.ManagedContentVersionCollection](#)

## ConnectApi.ManagedContentVersionCollection

Collection of managed content versions.

Property Name	Type	Description	Available Version
currentPageUrl	String	Connect REST API URL identifying the current page.	47.0
items	List<ConnectApi.ManagedContentVersion>	List of managed content versions.	47.0
managedContentTypes	Map<String, ConnectApi.ManagedContentType>	Map of managed content types.	47.0
nextPageUrl	String	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	47.0
total	Integer	Total number of managed content versions.	47.0
totalTypes	Integer	Total number of managed content types.	47.0

## ConnectApi.ManagedSocialAccount

Information describing a managed social account or fan page of a social network.

Subclass of [ConnectApi.BaseManagedSocialAccount](#)

No additional properties.

## ConnectApi.ManagedSocialAccounts

A list of managed social accounts.

Property Name	Type	Description	Available Version
managedSocialAccounts	List<ConnectApi.ManagedSocialAccount>	List of managed social accounts.	44.0

## ConnectApi.ManagedTopic

Represents a managed topic in an Experience Cloud site.

Property Name	Type	Description	Available Version
children	<a href="#">List&lt;ConnectApi.ManagedTopic&gt;</a>	Children managed topics of the managed topic; <code>null</code> if the <code>depth</code> request parameter isn't specified or is <code>1</code> .	35.0
id	<a href="#">String</a>	ID of managed topic.	32.0
managedTopicType	<a href="#">ConnectApi.ManagedTopicType</a>	Type of managed topic. <ul style="list-style-type: none"> <li><code>Content</code>—Topics that are associated with native content.</li> <li><code>Featured</code>—Topics that are featured, for example, on the Experience Cloud site home page, but don't provide overall navigation.</li> <li><code>Navigational</code>—Topics that display in a navigational menu in the Experience Cloud site.</li> </ul>	32.0
parent	<a href="#">ConnectApi.Reference</a>	Parent managed topic of the managed topic.	35.0
topic	<a href="#">ConnectApi.Topic</a>	Information about the topic.	32.0
url	<a href="#">String</a>	Connect REST API URL to the managed topic.	32.0

SEE ALSO:

[ConnectApi.ManagedTopicCollection](#)

## ConnectApi.ManagedTopicCollection

A collection of managed topics.

Property Name	Type	Description	Available Version
currentPageUrl	<a href="#">String</a>	Connect REST API URL identifying the current page.	32.0
managedTopics	<a href="#">List&lt;ConnectApi.ManagedTopic&gt;</a>	List of managed topics.	32.0
nextPageUrl	<a href="#">String</a>	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	44.0

## ConnectApi.MarkupBeginSegment

The beginning of rich text markup.

Subclass of [ConnectApi.MessageSegment](#).

Property Name	Type	Description	Available Version
altText	<a href="#">String</a>	Alternative text for the segment, if available.	45.0
htmlTag	<a href="#">String</a>	The HTML tag for this markup.	35.0

Property Name	Type	Description	Available Version
markupType	<a href="#">ConnectApi.MarkupType</a>	Type of rich text markup. <ul style="list-style-type: none"> <li>• <code>Bold</code>—Bold tag.</li> <li>• <code>Code</code>—Code tag.</li> <li>• <code>Hyperlink</code>—Hyperlink anchor tag.</li> <li>• <code>Italic</code>—Italic tag.</li> <li>• <code>ListItem</code>—List item tag.</li> <li>• <code>OrderedList</code>—Ordered list tag.</li> <li>• <code>Paragraph</code>—Paragraph tag.</li> <li>• <code>Strikethrough</code>—Strikethrough tag.</li> <li>• <code>Underline</code>—Underline tag.</li> <li>• <code>UnorderedList</code>—Unordered list tag.</li> </ul>	35.0
url	<a href="#">String</a>	URL to the segment, if available.	45.0

## ConnectApi.MarkupEndSegment

The end of rich text markup.

Subclass of [ConnectApi.MessageSegment](#).

Property Name	Type	Description	Available Version
htmlTag	<a href="#">String</a>	The HTML tag for this markup.	35.0
markupType	<a href="#">ConnectApi.MarkupType</a>	Type of rich text markup. <ul style="list-style-type: none"> <li>• <code>Bold</code>—Bold tag.</li> <li>• <code>Code</code>—Code tag.</li> <li>• <code>Hyperlink</code>—Hyperlink anchor tag.</li> <li>• <code>Italic</code>—Italic tag.</li> <li>• <code>ListItem</code>—List item tag.</li> <li>• <code>OrderedList</code>—Ordered list tag.</li> <li>• <code>Paragraph</code>—Paragraph tag.</li> <li>• <code>Strikethrough</code>—Strikethrough tag.</li> <li>• <code>Underline</code>—Underline tag.</li> <li>• <code>UnorderedList</code>—Unordered list tag.</li> </ul>	35.0

## ConnectApi.MediaReference

A media reference.

Property Name	Type	Description	Available Version
mediaUrl	<a href="#">String</a>	URL to stream or download the media.	41.0
thumbnailUrl	<a href="#">String</a>	If one exists, URL of the media's thumbnail.	41.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

[ConnectApi.MediaReferenceCapability](#)

## ConnectApi.MediaReferenceCapability

If a feed element has this capability, it has one or more media references.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
media	<a href="#">List&lt;ConnectApi.MediaReference&gt;</a>	Collection of media references.	41.0

## ConnectApi.MentionCompletion

Information about a record that could be used to @mention a user or group.

Name	Type	Description	Available Version
additionalLabel	<a href="#">String</a>	If one exists, an additional label for the record represented by this completion, for example, "(Customer)" or "(Acme Corporation)".	29.0
description	<a href="#">String</a>	A description of the record represented by this completion.	29.0
name	<a href="#">String</a>	The name of the record represented by this completion. The name is localized, if possible.	29.0
outOfOffice	<a href="#">ConnectApi.OutOffice</a>	If the record represented by this completion is a user, an additional out-of-office message, if one exists, for the user.	40.0
photoUrl	<a href="#">String</a>	A URL to the photo or icon of the record represented by this completion.	29.0
recordId	<a href="#">String</a>	The ID of the record represented by this completion.	29.0

Name	Type	Description	Available Version
<code>userType</code>	<code>ConnectApi.UserTypeEnum</code>	If the record represented by this completion is a user, this value is the user type associated with that user; otherwise the value is <code>null</code> .  One of these values: <ul style="list-style-type: none"> <li><code>ChatterGuest</code>—User is an external user in a private group.</li> <li><code>ChatterOnly</code>—User is a Chatter Free customer.</li> <li><code>Guest</code>—User is unauthenticated.</li> <li><code>Internal</code>—User is a standard org member.</li> <li><code>Portal</code>—User is an external user in an Experience Cloud site.</li> <li><code>System</code>—User is Chatter Expert or a system user.</li> <li><code>Undefined</code>—User is a user type that is a custom object.</li> </ul>	30.0

SEE ALSO:

[ConnectApi.MentionCompletionPage](#)

## ConnectApi.MentionCompletionPage

Paginated list of Mention Completion response bodies.

Name	Type	Description	Available Version
<code>currentPageUrl</code>	<code>String</code>	Connect REST API URL identifying the current page.	29.0
<code>mentionCompletions</code>	<code>List&lt;ConnectApi.MentionCompletion&gt;</code>	A list of mention completion proposals. Use these proposals to build a feed post body.	29.0
<code>nextPageUrl</code>	<code>String</code>	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	29.0
<code>previousPageUrl</code>	<code>String</code>	Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	29.0

## ConnectApi.MentionSegment

Mention segment.

Subclass of [ConnectApi.MessageSegment](#).

Name	Type	Description	Available Version
<code>accessible</code>	<code>Boolean</code>	Specifies whether the mentioned user or group can see the post in which they are mentioned ( <code>true</code> ) or not ( <code>false</code> ).	28.0
<code>name</code>	<code>String</code>	Name of the mentioned user or group.	28.0

Name	Type	Description	Available Version
record	<a href="#">ConnectApi.ActorWithId</a>	Information about the mentioned user or group.	29.0
user	<a href="#">ConnectApi.UserSummary</a>	Information about the mentioned user.  <b>Important:</b> In versions 29.0 and later, use the <code>record</code> property.	28.0 only  In versions before 29.0, if the mention is not a user, the mention is in a <a href="#">ConnectApi.TextSegment</a> object.

## ConnectApi.MentionValidation

Information about whether a proposed mention is valid for the context user.

Name	Type	Description	Available Version
recordId	<a href="#">String</a>	The ID of the mentioned record.	29.0
validationStatus	<a href="#">ConnectApi.MentionValidationStatus Enum</a>	Type of validation error for a proposed mention, if any. <ul style="list-style-type: none"> <li><b>Disallowed</b>—The proposed mention is invalid and is rejected because the context user is trying to mention something that is not allowed. For example, a user who is not a member of a private group is trying to mention the private group.</li> <li><b>Inaccessible</b>—The proposed mention is allowed, but the user or record being mentioned isn't notified. They don't have access to the parent record that's being discussed.</li> <li><b>Ok</b>—There is no validation error for this proposed mention.</li> </ul>	29.0

SEE ALSO:

[ConnectApi.MentionValidations](#)

## ConnectApi.MentionValidations

Information about whether a set of mentions is valid for the context user.

Name	Type	Description	Available Version
hasErrors	<a href="#">Boolean</a>	Indicates whether at least one of the proposed mentions has an error ( <code>true</code> ), or not ( <code>false</code> ). For example, context users can't mention private groups	29.0

Name	Type	Description	Available Version
		they don't belong to. If such a group is included in the list of mention validations, <code>hasErrors</code> is <code>true</code> and the group has a <code>validationStatus</code> of <code>Disallowed</code> in its mention validation.	
<code>mentionValidations</code>	<code>List&lt;ConnectApi.MentionValidation&gt;</code>	List of mention validation information in the same order as the provided record IDs.	29.0

## ConnectApi.MessageBody

Message body.

Subclass of [ConnectApi.AbstractMessageBody](#).

No additional properties.

SEE ALSO:

- [ConnectApi.ChatterLikesCapability](#)
- [ConnectApi.ChatterMessage](#)
- [ConnectApi.Comment](#)
- [ConnectApi.FeedElement](#)
- [ConnectApi.FeedItemSummary](#)

## ConnectApi.MessageSegment

Message segment.

This class is abstract.

Superclass of:

- [ConnectApi.ComplexSegment](#)
- [ConnectApi.EntityLinkSegment](#)
- [ConnectApi.FieldChangeSegment](#)
- [ConnectApi.FieldChangeNameSegment](#)
- [ConnectApi.FieldChangeValueSegment](#)
- [ConnectApi.HashtagSegment](#)
- [ConnectApi.InlineImageSegment](#)
- [ConnectApi.LinkSegment](#)
- [ConnectApi.MarkupBeginSegment](#)
- [ConnectApi.MarkupEndSegment](#)
- [ConnectApi.MentionSegment](#)
- [ConnectApi.MoreChangesSegment](#)
- [ConnectApi.ResourceLinkSegment](#)
- [ConnectApi.TextSegment](#)

Message segments in a feed item are typed as `ConnectApi.MessageSegment`. Feed item capabilities are typed as `ConnectApi.FeedItemCapability`. Record fields are typed as `ConnectApi.AbstractRecordField`. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

**Important:** The composition of a feed can change between releases. Write your code to handle instances of unknown subclasses.

Name	Type	Description	Available Version
text	<a href="#">String</a>	Text-only rendition of this segment. If a client encounters an unknown message segment type, it can render this value.	28.0
type	<code>ConnectApi.MessageSegmentType Enum</code>	The message segment type. One of these values: <ul style="list-style-type: none"> <li>• <code>EntityLink</code></li> <li>• <code>FieldChange</code></li> <li>• <code>FieldChangeName</code></li> <li>• <code>FieldChangeValue</code></li> <li>• <code>Hashtag</code></li> <li>• <code>InlineImage</code></li> <li>• <code>Link</code></li> <li>• <code>MarkupBegin</code></li> <li>• <code>MarkupEnd</code></li> <li>• <code>Mention</code></li> <li>• <code>MoreChanges</code></li> <li>• <code>ResourceLink</code></li> <li>• <code>Text</code></li> </ul>	28.0

SEE ALSO:

[ConnectApi.AbstractMessageBody](#)

## ConnectApi.ModerationCapability

If a feed element has this capability, users in an Experience Cloud site can flag it for moderation.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
moderationFlags	<code>ConnectApi.ModerationFlags</code>	The moderation flags for this feed element. Moderators can view and take action on flagged items.	31.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.ModerationFlagItemDetail

Flag details on a feed item, comment, or file.

Property Name	Type	Description	Available Version
createdBy	String	ID of the user who flagged the item.	40.0
createdDate	Datetime	Date when the item was flagged.	40.0
id	String	ID of the moderation flag.	40.0
moderationType	ConnectApi. CommunityFlagType	Type of moderation flag. Values are: <ul style="list-style-type: none"> <li>FlagAsInappropriate—Flag for inappropriate content.</li> <li>FlagAsSpam—Flag for spam.</li> </ul>	40.0
note	String	Note from user who flagged the item.	40.0
visibility	ConnectApi. CommunityFlag Visibility	Visibility behavior of a flag for various user types. Values are: <ul style="list-style-type: none"> <li>ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.</li> <li>SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.</li> </ul>	40.0

SEE ALSO:

[ConnectApi.ModerationFlagsCollection](#)

## ConnectApi.ModerationFlags

Information about the moderation flags on a feed item, comment, or file.

Name	Type	Description	Available Version
flagCount	Integer	Number of moderation flags on this feed item, comment, or file. If the context user is not a moderator, the property is <code>null</code> .	29.0
flagCount ByReason	Map<ConnectApi. CommunityFlag ReasonType, Integer>	Number of moderation flags categorized by reason. Values for ConnectApi.CommunityFlagReasonType are: <ul style="list-style-type: none"> <li>FlaggedByRule—Moderation rule flagged the item.</li> <li>FlaggedBySystem—Einstein flagged the item.</li> <li>FlaggedByUserAsInappropriate—User flagged the item as inappropriate.</li> <li>FlaggedByUserAsSpam—User flagged the item as spam.</li> </ul>	40.0

Name	Type	Description	Available Version
flaggedByMe	Boolean	<code>true</code> if the context user flagged the feed item, comment, or file for moderation; <code>false</code> otherwise.	29.0
flags	<a href="#">ConnectApi.ModerationFlagsCollection</a>	Collection of flags.	40.0

SEE ALSO:

[ConnectApi.Comment](#)

[ConnectApi.File](#)

[ConnectApi.ModerationCapability](#)

## ConnectApi.ModerationFlagsCollection

A collection of flags on a feed item, comment, or file.

Property Name	Type	Description	Available Version
currentPageToken	String	Token identifying the current page.	40.0
currentPageUrl	String	Connect REST API URL identifying the current page.	40.0
flags	List< <a href="#">ConnectApi.ModerationFlagItemDetail</a> >	List of flag details.	40.0
nextPageToken	String	Token identifying the next page, or <code>null</code> if there isn't a next page.	40.0
nextPageUrl	String	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	40.0
pageSize	Integer	Number of items per page.	40.0

SEE ALSO:

[ConnectApi.ModerationFlags](#)

## ConnectApi.MoreChangesSegment

In feed items with a large number of tracked changes, the message is formatted as: "changed A, B, and made X more changes." The `MoreChangesSegment` contains the "X more changes."

Subclass of [ConnectApi.MessageSegment](#).

Name	Type	Description	Available Version
moreChanges	List< <a href="#">ConnectApi.FieldChangeSegment</a> >	Complete list of tracked changes.	29.0

Name	Type	Description	Available Version
moreChangesCount	Integer	Number of additional changes.	28.0

## ConnectApi.Motif

The motif properties contain URLs for small, medium, and large icons that indicate the Salesforce record type. Common record types are files, users, and groups, but all record types have a set of motif icons. Custom object records use their tab style icon. All icons are available to unauthenticated users so that, for example, you can display the motif icons in an email. The motif can also contain the record type's base color.

The motif images are icons, not user uploaded images or photos. For example, every user has the same set of motif icons.

Custom object records use their tab style icon, for example, the following custom object uses the "boat" tab style:

```
"motif": {
  "color": "8C004C",
  "largeIconUrl": "/img/icon/custom51_100/boat64.png",
  "mediumIconUrl": "/img/icon/custom51_100/boat32.png",
  "smallIconUrl": "/img/icon/custom51_100/boat16.png",
  "svgIconUrl": null
},
```

Users use the following icons:

```
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/icon/profile64.png",
  "mediumIconUrl": "/img/icon/profile32.png",
  "smallIconUrl": "/img/icon/profile16.png",
  "svgIconUrl": null
},
```

Groups use the following icons:

```
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/icon/groups64.png",
  "mediumIconUrl": "/img/icon/groups32.png",
  "smallIconUrl": "/img/icon/groups16.png",
  "svgIconUrl": null
},
```

Files use the following icons:

```
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/content/content64.png",
  "mediumIconUrl": "/img/content/content32.png",
  "smallIconUrl": "/img/icon/files16.png",
  "svgIconUrl": null
},
```

 **Note:** To view the icons in the previous examples, preface the URL with `https://instance_name`. For example, `https://instance_name/img/icon/profile64.png`.

Name	Type	Description	Available Version
color	String	A hex value representing the base color of the record type, or <code>null</code> .	29.0
largeImageUrl	String	A large icon indicating the record type.	28.0
mediumImageUrl	String	A medium icon indicating the record type.	28.0
smallImageUrl	String	A small icon indicating the record type.	28.0
svgImageUrl	String	An icon in SVG format indicating the record type, or <code>null</code> if the icon doesn't exist.	34.0

## ConnectApi.MultipleAsyncOutputRepresentation

IDs of the asynchronous background operations. This output only includes the operation IDs, regardless of whether calls are made to an external payment gateway. It doesn't include any errors from the operations.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
asyncOutputs	List< <a href="#">ConnectApi.AsyncOutputRepresentation</a> >	List of IDs of background operations.	56.0

SEE ALSO:

[multipleEnsureFundsAsync\(multipleEnsureFundsInput\)](#)

## ConnectApi.MultipleFulfillmentOrderInvoicesOutputRepresentation

IDs of the created Invoices.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
invoiceIds	List<String>	List of IDs of the created Invoices.	52.0

## ConnectApi.MultipleFulfillmentOrderOutputRepresentation

List of responses for the individual FulfillmentOrder creation attempts from a create multiple fulfillment orders request.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
fulfillmentOrders	List< <a href="#">ConnectApi.FulfillmentGroupOutputRepresentation</a> >	A list of response data for created and failed FulfillmentOrders.	50.0

## ConnectApi.MuteCapability

If a feed element has this capability, users can mute it. Muted feed elements are visible in the muted feed, and invisible in all other feeds that respect mute.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
isMutedByMe	<a href="#">Boolean</a>	Indicates whether the context user muted the feed element.	35.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.MuteSummary

Summary of a mute.

Subclass of [ConnectApi.UserFeedEntityActivitySummary](#).

No additional properties.

## ConnectApi.NamedCredential

Named credential associated with an external credential.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Property Name	Type	Description	Available Version
calloutOptions	<a href="#">ConnectApi.NamedCredentialCalloutOptions</a>	Callout options for the named credential.	58.0
calloutStatus	<a href="#">ConnectApi.CalloutStatus</a>	Indicates whether a named credential is enabled for callout. Values are: <ul style="list-style-type: none"> <li>• Disabled</li> <li>• Enabled</li> </ul>	59.0
calloutUrl	<a href="#">String</a>	URL of the named credential in a callout.	58.0
createdByNamespace	<a href="#">String</a>	Namespace of the package that created the named credential.	59.0
customHeaders	<a href="#">List&lt;ConnectApi.CredentialCustomHeader&gt;</a>	Custom HTTP headers for the named credential.	58.0
developerName	<a href="#">String</a>	Fully qualified developer name of the named credential.	56.0

Property Name	Type	Description	Available Version
externalCredentials	List<ConnectApi.ExternalCredential>	External credentials used by the named credential.	58.0
id	String	Named credential ID.	58.0
masterLabel	String	Named credential label.	56.0
networkConnection	ConnectApi.NetworkConnection	PrivateConnect outbound network connection for the named credential.	58.0
parameters	List<ConnectApi.NamedCredentialParameter>	Named credential parameters.	58.0
type	ConnectApi.NamedCredentialType	Type of named credential. Values are: <ul style="list-style-type: none"> <li>PrivateEndpoint</li> <li>SecuredEndpoint</li> </ul>	58.0
url	String	Connect REST API URL of the named credential.	58.0

SEE ALSO:

[ConnectApi.ExternalCredential](#)

[ConnectApi.NamedCredentialList](#)

## ConnectApi.NamedCredentialCalloutOptions

Named credential callout options.

Property Name	Type	Description	Available Version
allowMergeFieldsInBody	Boolean	Specifies whether to allow merge fields in the HTTP body ( <code>true</code> ) or not ( <code>false</code> ).	58.0
allowMergeFieldsInHeader	Boolean	Specifies whether to allow merge fields in the HTTP header ( <code>true</code> ) or not ( <code>false</code> ).	58.0
generateAuthorizationHeader	Boolean	Specifies whether to generate an authorization header ( <code>true</code> ) or not ( <code>false</code> ).	58.0

SEE ALSO:

[ConnectApi.NamedCredential](#)

## ConnectApi.NamedCredentialList

List of named credentials.

Property Name	Type	Description	Available Version
namedCredentials	List<ConnectApi.NamedCredential>	List of named credentials.	58.0

## ConnectApi.NamedCredentialParameter

Named credential parameter.

Property Name	Type	Description	Available Version
id	String	ID of the parameter.	58.0
parameterName	String	Name of the parameter.	58.0
parameterType	ConnectApi.NamedCredentialParameterType	Type of named credential parameter. Values are: <ul style="list-style-type: none"> <li>AllowedManagedPackageNamespaces</li> <li>ClientCertificate</li> </ul>	58.0
parameterValue	String	Value of the parameter.	58.0

SEE ALSO:

[ConnectApi.NamedCredential](#)

## ConnectApi.NavigationMenuItem

Navigation menu item.

Property Name	Type	Description	Available Version
actionType	ConnectApi.NavigationMenuItemActionType	Event, URL type, or modal navigation menu item. Values are: <ul style="list-style-type: none"> <li>Event—Event-based navigation. <ul style="list-style-type: none"> <li> <b>Note:</b> Event is internal only and can't be used in custom components.</li> </ul> </li> <li>ExternalLink—URL outside of your Experience Cloud site.</li> <li>InternalLink—Relative URL inside your Experience Cloud site.</li> <li>Modal—Modal, such as Account Switcher.</li> </ul>	52.0
actionValue	String	For Event action type, the event fully qualified name for the navigation menu item. For ExternalLink and InternalLink action types, the route URL for the navigation menu item.	52.0

Property Name	Type	Description	Available Version
		For Modal action type, the component fully qualified name for the navigation menu item.	
imageUrl	String	URL to the image of the navigation menu item.	52.0
label	String	Label for the navigation menu item.	52.0
pageReference	<a href="#">ConnectApi.NavigationMenuPageReference</a>	Page reference for the navigation menu item. Page reference is returned only for the Storefront Categories data source.	59.0
subMenu	<a href="#">List&lt;ConnectApi.NavigationMenuItem&gt;</a>	Submenu for the navigation menu item.	52.0
target	<a href="#">ConnectApi.NavigationMenuItemOpenTarget</a>	Target for the navigation menu item. Values are: <ul style="list-style-type: none"> <li>• <code>CurrentWindow</code>—Navigation menu item opens in the current window.</li> <li>• <code>NewWindow</code>—Navigation menu item opens in a new window.</li> </ul>	52.0

SEE ALSO:

[ConnectApi.NavigationMenuItemCollection](#)

## ConnectApi.NavigationMenuItemCollection

Collection of navigation menu items.

Property Name	Type	Description	Available Version
menuItems	<a href="#">List&lt;ConnectApi.NavigationMenuItem&gt;</a>	Collection of navigation menu items.	52.0

## ConnectApi.NavigationMenuPageReference

Navigation menu item page reference.

Property Name	Type	Description	Available Version
attributes	<a href="#">Map&lt;String, String&gt;</a>	Attributes for the navigation menu item page reference.	59.0
state	<a href="#">Map&lt;String, String&gt;</a>	State for the navigation menu item page reference.	59.0
type	String	Type for the navigation menu item page reference.	59.0

SEE ALSO:

[ConnectApi.NavigationMenuItem](#)

## ConnectApi.NBAActionParameter

A parameter for an action.

Property Name	Type	Description	Available Version
name	String	Name of the parameter.	45.0
type	String	Type of the parameter.	45.0
value	String	Value of the parameter.	45.0

## ConnectApi.NBAFlowAction

A recommended flow.

Subclass of [ConnectApi.AbstractNBAAction](#).

Property Name	Type	Description	Available Version
flowLabel	String	Label of the recommended flow.	47.0
flowType	ConnectApi.NBAFlowType	Type of recommended flow. Values are: <ul style="list-style-type: none"> <li>AutoLaunchedFlow—Autolaunched flow that runs in the background.</li> <li>Flow—Screen flow that accepts user inputs.</li> </ul>	47.0
id	String	ID of the flow.	45.0
name	String	Name of the flow.	45.0

## ConnectApi.NBANativeRecommendation

A record the user is recommended to take action on.

Subclass of [ConnectApi.AbstractNBATarget](#).

Property Name	Type	Description	Available Version
id	String	ID of the recommendation.	45.0
name	String	Name of the recommendation.	45.0
url	String	URL to the recommendation.	45.0

## ConnectApi.NBARecommendation

A recommendation returned by a recommendation strategy.

Property Name	Type	Description	Available Version
aiModel	String	Reserved for future use.	47.0

Property Name	Type	Description	Available Version
acceptanceLabel	String	Text indicating user acceptance of the recommendation.	45.0
description	String	Description of the recommendation.	45.0
externalId	String	External ID of the recommendation. This ID doesn't need to be a Salesforce 18-character ID. For example, it can be a product number from an external system.	46.0
imageUrl	String	URL to the asset file to display.	45.0
recommendation Mode	String	Reserved for future use.	46.0
recommendation Score	Double	Reserved for future use.	46.0
rejectionLabel	String	Text indicating user rejection of the recommendation.	45.0
target	ConnectApi. AbstractNBATarget	Target to act on.	45.0
targetAction	ConnectApi. AbstractNBAAction	Action to recommend.	45.0

SEE ALSO:

[ConnectApi.NBARRecommendations](#)

## ConnectApi.NBARRecommendations

Recommendations returned by a recommendation strategy.

Property Name	Type	Description	Available Version
debug	String	Runtime debug information recorded during recommendation strategy execution.	45.0
errors	String	Runtime errors that occurred during recommendation strategy execution.	45.0
executionId	String	ID of the recommendation strategy execution.	45.0
onBehalfOfId	String	ID of the user or entity for which the recommendation strategy was executed.	45.0
recommendations	List<ConnectApi. NBARRecommendation>	List of recommendations returned by a recommendation strategy.	45.0
trace	ConnectApi. StrategyTrace	Trace information for the recommendation strategy execution, if requested.	45.0

## ConnectApi.NetworkConnection

External network connection.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Property Name	Type	Description	Available Version
developerName	String	Name of the network connection.	58.0
id	String	ID of the network connection.	58.0
masterLabel	String	Label of the network connection.	58.0
namespacePrefix	String	Namespace prefix of the network connection.	58.0

SEE ALSO:

[ConnectApi.NamedCredential](#)

## ConnectApi.NewUserAudienceCriteria

Criteria for the new members type of custom recommendation audience.

Subclass of [ConnectApi.AudienceCriteria](#).

Property Name	Type	Description	Available Version
maxDaysInCommunity	Double	The maximum number of days since a user became a site member.	36.0

## ConnectApi.OAuthCredentialAuthUrl

OAuth authentication URL for a credential.

Property Name	Type	Description	Available Version
authenticationUrl	String	Authentication URL for the user external credential. Authentication URLs have encoded and escaped special characters. Before using the URL, undo the encoded and escaped characters.	56.0
external Credential	String	Fully qualified developer name of the external credential.	56.0
principalName	String	Name of the external credential named principal.	56.0
principalType	<a href="#">ConnectApi.CredentialPrincipalType</a>	Type of credential principal. Values are: <ul style="list-style-type: none"> <li>• <code>AwsStsPrincipal</code></li> <li>• <code>NamedPrincipal</code></li> <li>• <code>PerUserPrincipal</code></li> </ul>	56.0

## ConnectApi.OauthProviderInfo

OAuth provider information.

Name	Type	Description	Available Version
authorizationUrl	<a href="#">String</a>	The URL used for authorization.	37.0
name	<a href="#">String</a>	The name of the OAuth service provider.	37.0

SEE ALSO:

[ConnectApi.UserOauthInfo](#)

## ConnectApi.OCIBaseOutputRepresentation

Base Omnichannel Inventory output class.

This class is abstract.

Superclass of:

- [ConnectApi.OCIGetInventoryAvailabilityOutputRepresentation](#)
- [ConnectApi.OCIPublishLocationStructureOutputRepresentation](#)
- [ConnectApi.OCIPublishLocationStructureStatusOutputRepresentation](#)
- [ConnectApi.OCIUploadInventoryAvailabilityOutputRepresentation](#)
- [ConnectApi.OCIUploadInventoryAvailabilityStatusOutputRepresentation](#)

Property Name	Type	Description	Available Version
errors	<a href="#">List&lt;ConnectApi.ErrorResponse&gt;</a>	Any errors that were returned.	51.0
success	<a href="#">Boolean</a>	Indicates whether the request was successful.	51.0

## ConnectApi.OCICreateReservationErrorOutputRepresentation

Error returned from an attempt to create an Omnichannel Inventory reservation.

Property Name	Type	Description	Available Version
errorCode	<a href="#">String</a>	The error code.	51.0
message	<a href="#">String</a>	Details of the error, if available.	51.0

## ConnectApi.OCICreateReservationOutputRepresentation

Result of an Omnichannel Inventory reservation creation request.

Property Name	Type	Description	Available Version
details	List<ConnectApi. OCICreateReservation SingleOutputRepresentation>	Details for each product in the reservation.	51.0
errors	List<ConnectApi. OCICreateReservation ErrorOutputRepresentation>	Any errors returned by the reservation request.	51.0
expirationTime	String	The time at which the reservation would expire.	51.0
reservationTime	String	The time when the reservation was recorded.	51.0
success	Boolean	Indicates whether the reservation was successfully created.	51.0

## ConnectApi.OCICreateReservationSingleOutputRepresentation

Details of an inventory reservation for one product.

Property Name	Type	Description	Available Version
errorCode	String	The error code, if any.	51.0
locationGroupIdentifier	String	Identifier of the location group where the inventory is reserved.	51.0
locationIdentifier	String	Identifier of the location where the inventory is reserved.	51.0
quantity	Double	The reserved quantity of the product.	51.0
stockKeepingUnit	String	The SKU of the reserved product.	51.0

## ConnectApi.OCIFulfillReservationErrorOutputRepresentation

Response to a request to fulfill one inventory reservation.

Property Name	Type	Description	Available Version
details	ConnectApi. OCIFulfillReservation SingleOutputRepresentation	Details of the fulfilled reservation, if successful.	51.0
errorCode	String	Error code, if any.	51.0
message	String	Details of the error, if available.	51.0

## ConnectApi.OCIFulfillReservationOutputRepresentation

Response to a request to fulfill one or more inventory reservations.

Property Name	Type	Description	Available Version
errors	<a href="#">List&lt;ConnectApi.OCIFulfillReservationErrorOutputRepresentation&gt;</a>	Responses for the individual reservations in the fulfillment request.	51.0
success	<a href="#">Boolean</a>	Indicates whether the request was successful.	51.0

## ConnectApi.OCIFulfillReservationSingleOutputRepresentation

Details of a single fulfilled reservation.

Property Name	Type	Description	Available Version
actionRequestId	<a href="#">String</a>	The UUID that identifies the original fulfill reservation request.	51.0
externalRefId	<a href="#">String</a>	The external reference ID of the location that fulfilled the reservation.	51.0
locationIdentifier	<a href="#">String</a>	The identifier of the location that fulfilled the reservation.	51.0
quantity	<a href="#">Double</a>	The fulfilled quantity.	51.0
stockKeepingUnit	<a href="#">String</a>	The SKU of the fulfilled product.	51.0

## ConnectApi.OCIFutureInventoryOutputRepresentation

An expected future inventory restock.

Property Name	Type	Description	Available Version
expectedDate	<a href="#">Datetime</a>	Date when the future inventory is expected.	51.0
quantity	<a href="#">Double</a>	Quantity of the future inventory.	51.0

## ConnectApi.OCIGetInventoryAvailabilityOutputRepresentation

Response to a request for inventory availability data.

Subclass of [ConnectApi.OCIBaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
locationGroups	<a href="#">List&lt;ConnectApi.OCILocationGroupAvailabilityOutputRepresentation&gt;</a>	A list of inventory availability data for individual location groups.	51.0

Property Name	Type	Description	Available Version
locations	<a href="#">List&lt;ConnectApi.OCILocationAvailabilityOutputRepresentation&gt;</a>	A list of inventory availability data for individual locations.	51.0

SEE ALSO:

[getInventoryAvailability\(inventoryAvailabilityInputRepresentation\)](#)  
[findRoutesWithFewestSplitsUsingOCI\(findRoutesWithFewestSplitsUsingOCIInput\)](#)  
[ConnectApi.FindRoutesWithFewestSplitsUsingOCIOutputRepresentation](#)

## ConnectApi.OCIInventoryRecordOutputRepresentation

Inventory availability data for a product.

Property Name	Type	Description	Available Version
availableToFulfill	<a href="#">Double</a>	The Available To Fulfill quantity.	51.0
availableToOrder	<a href="#">Double</a>	The Available To Order quantity.	51.0
effectiveDate	<a href="#">Datetime</a>	The effective date of the inventory. Indicates if the SKU exists in the inventory.	51.0
exists	<a href="#">Boolean</a>	Indicates if the SKU exists in the inventory.	62.0
futures	<a href="#">List&lt;ConnectApi.OCIFutureInventoryOutputRepresentation&gt;</a>	A list of any expected future inventory restocks.	51.0
onHand	<a href="#">Double</a>	The On Hand quantity.	51.0
reserved	<a href="#">Double</a>	The Reserved quantity.	51.0
safetyStockCount	<a href="#">Double</a>	The Safety Stock Count.	51.0
stockKeepingUnit	<a href="#">String</a>	The SKU of the product.	51.0

## ConnectApi.OCILocationAvailabilityOutputRepresentation

A set of inventory availability data for one inventory location.

Property Name	Type	Description	Available Version
inventoryRecords	<a href="#">List&lt;ConnectApi.OCIInventoryRecordOutputRepresentation&gt;</a>	A list of availability data for individual products at this location.	51.0
locationIdentifier	<a href="#">String</a>	The identifier of the location.	51.0

## ConnectApi.OCILocationGroupAvailabilityOutputRepresentation

A set of inventory availability data for one inventory location group.

Property Name	Type	Description	Available Version
inventoryRecords	List< <a href="#">ConnectApi.OCIInventoryRecordOutputRepresentation</a> >	A list of availability data for individual products. The data combines the quantities for all locations belonging to this location group.	51.0
locationGroupIdentifier	String	The identifier of the location group.	51.0

## ConnectApi.OCIPublishLocationStructureOutputRepresentation

Response to a publish location structure request.

Subclass of [ConnectApi.OCIBaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
uploadId	String	Identifier of the publish job. Use this value to retrieve the status of the job.	51.0

## ConnectApi.OCIPublishLocationStructureStatusOutputRepresentation

Detailed status of a publish location structure job.

Subclass of [ConnectApi.OCIBaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
endTimeUTC	String	The UTC time when the job finished. (for example: "2020-07-06T22:54:08.012Z")	51.0
recordsProcessedCount	Integer	The number of records processed by the job.	51.0
recordsReadCount	Integer	The number of records read by the job.	51.0
recordsSkippedCount	Integer	The number of records skipped by the job.	51.0
startTimeUTC	String	The UTC time when the job started. (for example: "2020-07-06T22:53:06.788Z")	51.0
status	String	The status of the job. (e.g., "PENDING," "COMPLETED," etc.).	51.0
uploadId	String	Identifier of the job.	51.0
validationErrors	List<String>	List of any validation errors returned by the job.	51.0
validationStatus	String	The validation status of the job.	51.0

## ConnectApi.OCIReleaseReservationErrorOutputRepresentation

Response to a request to release one inventory reservation.

Property Name	Type	Description	Available Version
details	<a href="#">ConnectApi.OCIReleaseReservationSingleOutputRepresentation</a>	Details of the released reservation, if successful.	51.0
errorCode	<a href="#">String</a>	Error code, if any.	51.0
message	<a href="#">String</a>	Details of the error, if available.	51.0

## ConnectApi.OCIReleaseReservationOutputRepresentation

Response to a request to release one or more inventory reservations.

Property Name	Type	Description	Available Version
errors	<a href="#">List&lt;ConnectApi.OCIReleaseReservationErrorOutputRepresentation&gt;</a>	Responses for the individual reservations in the release request.	51.0
success	<a href="#">Boolean</a>	Indicates whether the request was successful.	51.0

## ConnectApi.OCIReleaseReservationSingleOutputRepresentation

Details of a single released reservation.

Property Name	Type	Description	Available Version
actionRequestId	<a href="#">String</a>	The UUID that identifies the original release reservation request.	51.0
externalRefId	<a href="#">String</a>	The external reference ID of the location that released the reservation.	51.0
locationGroupIdentifier	<a href="#">String</a>	The identifier of the location group that released the reservation.	51.0
locationIdentifier	<a href="#">String</a>	The identifier of the location that released the reservation.	51.0
quantity	<a href="#">Double</a>	The released quantity.	51.0
stockKeepingUnit	<a href="#">String</a>	The SKU of the released product.	51.0

## ConnectApi.OCITransferReservationErrorOutputRepresentation

Response to a request to fulfill one inventory reservation.

Property Name	Type	Description	Available Version
details	<a href="#">ConnectApi.OCITransferReservationSingleOutputRepresentation</a>	Details of the transferred reservation, if successful.	51.0
errorCode	<a href="#">String</a>	Error code, if any.	51.0
message	<a href="#">String</a>	Details of the error, if available.	51.0

## ConnectApi.OCITransferReservationOutputRepresentation

Response to a request to transfer one or more inventory reservations.

Property Name	Type	Description	Available Version
errors	<a href="#">List&lt;ConnectApi.OCITransferReservationErrorOutputRepresentation&gt;</a>	Responses for the individual reservations in the transfer request.	51.0
success	<a href="#">Boolean</a>	Indicates whether the request was successful.	51.0

## ConnectApi.OCITransferReservationSingleOutputRepresentation

Details of a single transferred reservation.

Property Name	Type	Description	Available Version
actionRequestId	<a href="#">String</a>	The UUID that identifies the original transfer reservation request.	51.0
externalRefId	<a href="#">String</a>	The external reference ID of the location that received the reservation.	51.0
<del>fromLocationGroupIdentifier</del>	<a href="#">String</a>	The identifier of the location group that sent the reservation.	51.0
fromLocationIdentifier	<a href="#">String</a>	The identifier of the location that sent the reservation.	51.0
ignoreAvailabilityCheck	<a href="#">Boolean</a>	Whether this call ignored availability data at the location that received the reservation.	52.0
quantity	<a href="#">Double</a>	The quantity of transferred inventory.	51.0
stockKeepingUnit	<a href="#">String</a>	The SKU of the transferred product.	51.0
<del>toLocationGroupIdentifier</del>	<a href="#">String</a>	The identifier of the location group that received the reservation.	51.0
toLocationIdentifier	<a href="#">String</a>	The identifier of the location that received the reservation.	51.0

## ConnectApi.OCIUpdateReservationErrorOutputRepresentation

Error output representation for the update inventory reservation.

Property Name	Type	Description	Available Version
errorCode	String	The error code.	61.0
message	String	Details of the error, if available.	61.0

## ConnectApi.OCIUpdateReservationOutputRepresentation

Result of an Omnichannel Inventory update request for reserved inventory.

Property Name	Type	Description	Available Version
details	List <a href="#">ConnectApi.OCIUpdateReservation</a> []	Details for each product in the reservation.	61.0
errors	List <a href="#">ConnectApi.OCIUpdateReservation</a> []	Any errors returned by the reservation update request.	61.0
reservationTime	String	The time when the reservation was updated.	61.0
success	Boolean	Indicates whether the reservation was successfully updated.	61.0

## ConnectApi.OCIUpdateReservationSingleOutputRepresentation

Details of an updated reservation for one product.

Property Name	Type	Description	Available Version
adjustment	Double	The total reservation adjustment.	61.0
errorCode	String	The error code, if any.	61.0
locationGroupIdentifier	String	Identifier of the location group where the inventory is reserved.	61.0
locationIdentifier	String	Identifier of the location where the inventory is reserved.	61.0
quantity	Double	The total reservation quantity of the product.	61.0
stockKeepingUnit	String	The SKU of the updated product.	61.0

## ConnectApi.OCIUploadInventoryAvailabilityOutputRepresentation

Response to an upload inventory availability job.

Subclass of [ConnectApi.OCIBaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
uploadId	<a href="#">String</a>	Identifier of the upload job. Use this value to retrieve the status of the job.	51.0

## ConnectApi.OCIUploadInventoryAvailabilityStatusOutputRepresentation

Detailed status of an upload inventory availability job.

Subclass of [ConnectApi.OCIBaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
endTimeUTC	<a href="#">String</a>	The UTC time when the job finished. (for example: "2020-07-06T22:54:08.012Z")	51.0
recordsProcessedCount	<a href="#">Integer</a>	The number of records processed by the job.	51.0
recordsReadCount	<a href="#">Integer</a>	The number of records read by the job.	51.0
recordsSkippedCount	<a href="#">Integer</a>	The number of records skipped by the job.	51.0
startTimeUTC	<a href="#">String</a>	The UTC time when the job started. (for example: "2020-07-06T22:53:06.788Z")	51.0
status	<a href="#">String</a>	The status of the job. (e.g., "PENDING," "COMPLETED," etc.).	51.0
uploadId	<a href="#">String</a>	Identifier of the job.	51.0
validationErrors	<a href="#">List&lt;String&gt;</a>	List of any validation errors returned by the job.	51.0
validationStatus	<a href="#">String</a>	The validation status of the job.	51.0

## ConnectApi.OrchestrationInstance

Orchestration instance.

Property Name	Type	Description	Available Version
flowDefinitionDeveloperName	<a href="#">String</a>	Developer name of the flow definition.	54.0
flowDefinitionId	<a href="#">String</a>	ID of the flow definition.	54.0
flowDefinitionName	<a href="#">String</a>	Name of the flow definition.	54.0
id	<a href="#">String</a>	ID of the orchestration instance.	54.0
interviewId	<a href="#">String</a>	ID of the interview to resume.	54.0

Property Name	Type	Description	Available Version
stageInstances	List<ConnectApi.OrchestrationStageInstance>	Orchestration stage instances.	54.0
status	ConnectApi.OrchestrationStatus	Status of the orchestration instance. Values are: <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Completed</li> <li>• Discontinued</li> <li>• Error</li> <li>• InProgress</li> <li>• NotStarted</li> <li>• Suspended</li> </ul>	54.0

SEE ALSO:

[ConnectApi.OrchestrationInstanceCollection](#)

## ConnectApi.OrchestrationInstanceCollection

Collection of orchestration instances.

Property Name	Type	Description	Available Version
instances	List<ConnectApi.OrchestrationInstance>	Collection of orchestration instances.	54.0

## ConnectApi.OrchestrationStageInstance

Orchestration stage instance.

Property Name	Type	Description	Available Version
id	String	ID of the orchestration stage instance.	54.0
label	String	Orchestration stage instance label.	54.0
name	String	Orchestration stage instance name.	54.0
status	ConnectApi.OrchestrationStatus	Status of the orchestration instance. Values are: <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Completed</li> <li>• Discontinued</li> <li>• Error</li> <li>• InProgress</li> <li>• NotStarted</li> </ul>	54.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>Suspended</li> </ul>	
stepInstances	List<ConnectApi.OrchestrationStepInstance>	Orchestration stage instance steps.	54.0

SEE ALSO:

[ConnectApi.OrchestrationInstance](#)

## ConnectApi.OrchestrationStepInstance

Orchestration step instance.

Property Name	Type	Description	Available Version
id	String	ID of the orchestration step instance.	54.0
label	String	Orchestration step instance label.	54.0
name	String	Orchestration step instance name.	54.0
status	ConnectApi.OrchestrationStatus	Status of the orchestration instance. Values are: <ul style="list-style-type: none"> <li>Canceled</li> <li>Completed</li> <li>Discontinued</li> <li>Error</li> <li>InProgress</li> <li>NotStarted</li> <li>Suspended</li> </ul>	54.0
stepType	ConnectApi.OrchestrationStepType	Type of orchestration step. Values are: <ul style="list-style-type: none"> <li>AsynchronousBackgroundStep</li> <li>BackgroundStep</li> <li>InteractiveStep</li> <li>ManagedContentRoleInteractiveStep</li> <li>ManagedContentVariantAutoPublishBackgroundStep</li> <li>ManagedContentVariantAutoUnpublishBackgroundStep</li> <li>ManagedContentVariantSetLockBackgroundStep</li> <li>ManagedContentVariantSetReadyBackgroundStep</li> <li>MuleSoftStep</li> </ul>	54.0

Property Name	Type	Description	Available Version
workItems	List<ConnectApi.OrchestrationWorkItem>	Orchestration step instance work items.	54.0

SEE ALSO:

[ConnectApi.OrchestrationStageInstance](#)

## ConnectApi.OrchestrationWorkItem

Orchestration work item.

Property Name	Type	Description	Available Version
assigneeId	String	ID of the assignee for the orchestration work item.	54.0
createdDate	Datetime	Date when the orchestration work item was created.	61.0
description	String	Description of the orchestration work item.	54.0
flowType	String	Flow type of the orchestration that created the orchestration work item.	62.0
id	String	ID of the orchestration work item.	54.0
label	String	Label key for the orchestration work item.	54.0
lastModifiedDate	Datetime	Date when the work item was last modified.	61.0
relatedRecordId	String	ID of the record the orchestration work item is related to.	54.0
screenFlowDeveloperName	String	Developer name of the screen flow to start when assignees work on the orchestration work item.	54.0
screenFlowId	String	ID of the screen flow to start when assignees work on the orchestration work item.	54.0
screenFlowInputs	String	Input parameters for the screen flow.	54.0
status	ConnectApi.OrchestrationWorkItemStatus	Status of the orchestration work item. Values are: <ul style="list-style-type: none"> <li>Assigned</li> <li>Completed</li> </ul>	54.0

SEE ALSO:

[ConnectApi.OrchestrationStepInstance](#)

## ConnectApi.OrderDeliveryGroupSummary

Order delivery group summary.

Property Name	Type	Description	Available Version
fields	<a href="#">Map&lt;String, ConnectApi.RecordField&gt;</a>	Map of fields from order delivery group summary and other related objects that were queried.	51.0

SEE ALSO:

[ConnectApi.OrderDeliveryGroupSummaryCollection](#)

## ConnectApi.OrderDeliveryGroupSummaryCollection

Collection of order delivery group summaries.

Property Name	Type	Description	Available Version
currentPageToken	<a href="#">String</a>	Token identifying the current page of order delivery group summaries.	51.0
currentPageUrl	<a href="#">String</a>	URL to the current page of order delivery group summaries.	51.0
nextPageToken	<a href="#">String</a>	Token identifying the next page of order delivery group summaries.	51.0
nextPageUrl	<a href="#">String</a>	URL to the next page of order delivery group summaries.	51.0
orderDeliveryGroups	<a href="#">List&lt;ConnectApi.OrderDeliveryGroupSummary&gt;</a>	Collection of order delivery group summaries.	51.0
previousPageToken	<a href="#">String</a>	Token identifying previous page of order delivery group summaries.	51.0
previousPageUrl	<a href="#">String</a>	URL to the previous page of order delivery group summaries.	51.0

## ConnectApi.OrderDeliveryGroupSummaryLookupOutput

Order delivery group summary lookup output.

Property Name	Type	Description	Available Version
currencyIsoCode	<a href="#">String</a>	Three-letter ISO 4217 currency code associated with the order delivery group summary record.	58.0
deliveryMethod	<a href="#">ConnectApi.DeliveryMethodOutput</a>	Delivery method associated with order the delivery group summary.	58.0
fields	<a href="#">Map&lt;String, ConnectApi.RecordField&gt;</a> <a href="#">on page 2226&gt;</a>	Map of requested order delivery group summary fields.	58.0

Property Name	Type	Description	Available Version
id	<a href="#">String</a>	ID of the order delivery group summary.	58.0
lineItems	<a href="#">ConnectApi.OrderDeliveryGroupSummaryLookupOutput</a>	Line items associated with the order delivery group summary.	58.0

## ConnectApi.OrderDeliveryMethodLookupOutput

Order delivery method lookup output.

Property Name	Type	Description	Available Version
fields	<a href="#">Map&lt;String, ConnectApi.RecordField&gt;</a>	Map of requested order delivery method fields.	58.0
id	<a href="#">String</a>	ID of the order delivery method.	58.0

## ConnectApi.OrderItemSummary

Order item summary.

Property Name	Type	Description	Available Version
adjustmentAggregates	<a href="#">ConnectApi.OrderItemSummaryAdjustmentAggregates</a>	Adjustment aggregates associated with an order item summary.	55.0
fields	<a href="#">Map&lt;String, ConnectApi.RecordField&gt;</a>	Map of fields from order item summary and other related objects that were queried.	51.0
orderItemSummaryId	<a href="#">String</a>	ID of the order item summary.	51.0
orderSummaryId	<a href="#">String</a>	ID of the order summary.	51.0
product	<a href="#">ConnectApi.OrderItemSummaryProduct</a>	Associated product item information.	51.0

SEE ALSO:

[ConnectApi.OrderItemSummaryCollection](#)

## ConnectApi.OrderItemSummaryAdjustmentAggregates

Adjustment aggregates associated with an order item summary.

Property Name	Type	Description	Available Version
available	Boolean	Indicates whether adjustment aggregates are available ( <code>true</code> ) or not ( <code>false</code> ).	55.0
status	<a href="#">ConnectApi. OrderSummaryAdjustment AggregatesStatus</a>	Order summary adjustment aggregate job status. <ul style="list-style-type: none"> <li>Failed—The adjustment aggregate data job for the order summary failed.</li> <li>InProgress—The adjustment aggregate data job for the order summary is in progress.</li> <li>NotInitiated—The adjustment aggregate data job for the order summary is not initiated.</li> <li>Submitted—The adjustment aggregate data job for the order summary is submitted.</li> </ul>	55.0
totalLine PromotionAmount	String	Total of all line item promotions applied to this specific product.	55.0
totalPromotion DistAmount	String	Total of all order level promotions applied to this specific product.	55.0

## ConnectApi.OrderItemSummaryAdjustmentCollection

Collection of adjustments for order item summaries.

Property Name	Type	Description	Available Version
orderItemSummaries	<a href="#">Map&lt;String, ConnectApi. OrderItemSummary AdjustmentList&gt;</a>	Order item summaries and their associated adjustments.	53.0

## ConnectApi.OrderItemSummaryAdjustmentList

Representation for list of adjustments for an Order Item Summary.

Property Name	Type	Description	Available Version
adjustments	<a href="#">List&lt;ConnectApi. OrderSummary Adjustment&gt;</a>	Adjustments associated with an order item summary.	53.0

SEE ALSO:

[ConnectApi.OrderItemSummaryAdjustmentCollection](#)

## ConnectApi.OrderItemSummaryCollection

Collection of order item summaries.

Property Name	Type	Description	Available Version
currentPageToken	String	Token identifying the current page of items.	51.0
currentPageUrl	String	URL to the current page of items.	51.0
items	List<ConnectApi.OrderItemSummary>	Collection of order item summaries.	51.0
nextPageToken	String	Token identifying the next page of items.	51.0
nextPageUrl	String	URL to the next page of items.	51.0
previousPageToken	String	Token identifying the previous page of items.	51.0
previousPageUrl	String	URL to the previous page of items.	51.0

## ConnectApi.OrderItemSummaryLookupOutput

Order item summary lookup output.

Property Name	Type	Description	Available Version
adjustmentAggregates	ConnectApi.OrderItemSummaryAdjustmentAggregates	Adjustment aggregates for the order item summary.	58.0
adjustments	ConnectApi.OrderItemSummaryAdjustment	Adjustments associated with the order item summary.	58.0
currencyIsoCode	String	Three-letter ISO 4217 currency code associated with the order item summary record.	58.0
fields	Map<String, ConnectApi.RecordField>	Map of requested order item summary fields.	58.0
id	String	ID of the order item summary.	58.0
product	ConnectApi.OrderItemSummaryProductOutput	Details of the product associated with order item summary.	58.0

## ConnectApi.OrderItemSummaryOutputRepresentation

Details of an OrderItemSummary from a failed FulfillmentOrder in a create multiple fulfillment orders request.

Property Name	Type	Description	Available Version
errors	List<ConnectApi.ErrorResponse>	List of errors specific to the OrderItemSummary, if any.	50.0
orderItemSummaryId	String	ID of the OrderItemSummary.	50.0
quantity	Double	Quantity of the OrderItemSummary.	50.0

## ConnectApi.OrderItemSummaryProduct

Product item mapped to the order item summary.

Property Name	Type	Description	Available Version
canViewProduct	Boolean	Specifies whether the context user can view the product ( <code>true</code> ) or not ( <code>false</code> ).	51.0
errorCode	String	Error code for the product with errors.	51.0
errorMessage	String	Error message for the product with errors.	51.0
fields	Map<String, ConnectApi.RecordField>	Map of the product fields queried.	51.0
media	ConnectApi.ProductMedia	Associated product media.	51.0
productAttributes	ConnectApi.ProductAttributeSetSummary	Summary of the product attributes.	51.0
productId	String	ID of the product.	51.0

SEE ALSO:

[ConnectApi.OrderItemSummary](#)

## ConnectApi.OrderShipment

Order shipment.

Property Name	Type	Description	Available Version
expectedDeliveryDate	Datetime	Expected delivery date for the shipment.	52.0
fields	Map<String, ConnectApi.RecordField>	Map of requested fields.	52.0
orderSummaryId	String	ID of the order summary.	52.0
shipmentId	String	ID of the shipment.	52.0
shipmentNumber	String	Number of the shipment.	52.0
status	String	Status of the shipment.	52.0

SEE ALSO:

[ConnectApi.OrderShipmentCollection](#)

## ConnectApi.OrderShipmentCollection

Collection of order shipments.

Property Name	Type	Description	Available Version
count	Integer	Total number of records returned in the collection.	52.0
currentPageToken	String	Token identifying the current page of order shipments.	52.0
currentPageUrl	String	URL to the current page of order shipments.	52.0
nextPageToken	String	Token identifying the next page of order shipments.	52.0
nextPageUrl	String	URL to the next page of order shipments.	52.0
previousPageToken	String	Token identifying the previous page of order shipments.	52.0
previousPageUrl	String	URL to the previous page of order shipments.	52.0
shipments	List<ConnectApi.OrderShipment>	Collection of order shipments.	52.0
sortOrder	ConnectApi.OrderShipmentSort	Sort order for order shipments. Values are: <ul style="list-style-type: none"> <li>ExpectedDeliveryDateAsc—Sorts by the oldest expected delivery date.</li> <li>ExpectedDeliveryDateDesc—Sorts by the most recent expected delivery date.</li> <li>ShipmentNumberAsc—Sorts by shipment number in ascending order (0–9).</li> <li>ShipmentNumberDesc—Sorts by shipment number in descending order (9–0).</li> </ul>	52.0

## ConnectApi.OrderShipmentItem

Shipment item.

Property Name	Type	Description	Available Version
fields	Map<String, ConnectApi.RecordField>	Map of requested fields.	52.0
orderItemSummaryId	String	ID of the order item summary.	52.0
product	ConnectApi.OrderItemSummaryProduct	Product mapped to an order item summary.	52.0
productId	String	ID of the product.	52.0

Property Name	Type	Description	Available Version
quantity	Double	Quantity of the product.	52.0
shipmentId	String	ID of the shipment.	52.0
shipmentItemId	String	ID of the shipment item.	52.0

## ConnectApi.OrderShipmentItemCollection

Collection of order shipment items.

Property Name	Type	Description	Available Version
count	Integer	Total number of records returned in a page.	52.0
currentPageToken	String	Token identifying the current page of order shipment items.	52.0
currentPageUrl	String	URL to the current page of order shipment items.	52.0
items	List<ConnectApi.OrderShipmentItem>	Collection of order shipment items.	52.0
nextPageToken	String	Token identifying the next page of order shipment items.	52.0
nextPageUrl	String	URL to the next page of order shipment items.	52.0
previousPageToken	String	Token identifying the previous page of order shipment items.	52.0
previousPageUrl	String	URL to the previous page of order shipment items.	52.0
sortOrder	ConnectApi.OrderShipmentItemSort	Sort order for order shipment items. Values are: <ul style="list-style-type: none"> <li>IdAsc—Sorts by ID in ascending alphanumeric order (A–Z, 0–9).</li> <li>IdDesc—Sorts by ID in descending alphanumeric order (Z–A, 9–0).</li> </ul>	52.0

## ConnectApi.OrderSummaryLookupOutput

Order summary lookup output.

Property Name	Type	Description	Available Version
adjustmentAggregates	ConnectApi.OrderSummaryAdjustmentAggregates	Adjustment aggregates associated with the order summary.	58.0
currencyIsoCode	String	Three-letter ISO 4217 currency code associated with the order summary.	58.0
deliveryGroups	ConnectApi.OrderSummaryLookupOutput	Delivery groups associated with the order summary.	58.0

Property Name	Type	Description	Available Version
fields	Map<String, <a href="#">ConnectApi.RecordField</a> >	Map of requested order summary fields.	58.0
id	String	ID of the order summary.	58.0
orderNumber	String	Reference number of the order summary.	58.0
status	String	Status associated with the order summary.	58.0

## ConnectApi.OrderSummaryOutputRepresentation

ID of the created Order Summary.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
orderSummaryId	String	ID of the Order Summary.	48.0

## ConnectApi.OrderSummaryProductLookupOutput

Order summary product lookup output.

Property Name	Type	Description	Available Version
canViewProduct	Boolean	Specifies whether the context user can view the product (true) or not (false).	58.0
errorCode	String	Error code captured during product load.	58.0
errorMessage	String	Error message captured during product load.	58.0
fields	Map<String, <a href="#">ConnectApi.RecordField</a> >	Map of requested product fields.	58.0
id	String	Id of the product	58.0
media	<a href="#">ConnectApi.ProductMedia</a>	Associated product media.	58.0
variationAttributes	Map<String, <a href="#">ConnectApi.OrderSummaryProductAttribute</a> >	Variation attributes (color, size, and so on) associated with the product.	58.0

## ConnectApi.OrderSummaryRepresentation

Order summary.

Property Name	Type	Description	Available Version
adjustmentAggregates	<a href="#">ConnectApi.OrderSummaryAdjustmentAggregates</a>	Adjustment aggregates associated with the order summary.	55.0

Property Name	Type	Description	Available Version
createdDate	Datetime	Created date of the order summary.	51.0
fields	Map< String, ConnectApi.RecordField >	Map of requested order summary fields.	51.0
orderNumber	String	Order number of the order summary.	51.0
orderSummaryId	String	ID of the order summary.	51.0
orderedDate	Datetime	Ordered date of the order summary.	51.0
ownerId	String	ID of the owner of the order summary.	51.0
status	String	Status of the order summary.	51.0
totalAmount	String	Total amount of the order summary.	51.0

SEE ALSO:

[ConnectApi.OrderSummaryCollectionRepresentation](#)

## ConnectApi.OrderSummaryAdjustment

Adjustment associated with an order summary.

Property Name	Type	Description	Available Version
amount	String	Amount associated with the adjustment.	53.0
basisReferenceDisplayname	String	Display name for secondary cause of the adjustment (for example, Null or the CouponCode that's associated with a Coupon)	54.0
currencyIsoCode	String	Three-letter ISO 4217 currency code associated with the adjustment.	53.0
displayName	String	Display name for the primary cause of the adjustment (for example, Display name of the Promotion)	53.0
targetType	ConnectApi.OrderSummaryAdjustmentTargetType	Type of price adjustment in promotions. Values are: <ul style="list-style-type: none"> <li>SplitLine—Price adjustment on an order item.</li> <li>Header—Price adjustment on the entire order.</li> </ul>	56.0
type	String	Type of adjustment (for example, Promotion, Other).	53.0

SEE ALSO:

[ConnectApi.OrderSummaryAdjustmentCollection](#)

[ConnectApi.OrderItemSummaryAdjustmentList](#)

## ConnectApi.OrderSummaryAdjustmentAggregates

Adjustment aggregates associated with an order summary.

Property Name	Type	Description	Available Version
available	Boolean	Indicates if adjustment aggregate values are available ( <code>true</code> ) or not ( <code>false</code> ).	55.0
status	ConnectApi. OrderSummaryAdjustment AggregatesStatus	Order summary adjustment aggregate job status. Values are: <ul style="list-style-type: none"> <li>Failed—The adjustment aggregate data job for the order summary failed.</li> <li>InProgress—The adjustment aggregate data job for the order summary is in progress.</li> <li>NotInitiated—The adjustment aggregate data job for the order summary is not initiated.</li> <li>Submitted—The adjustment aggregate data job for the order summary is submitted.</li> </ul>	55.0
totalDelivery PromotionDistAmount	String	Total distributed delivery promotion amounts associated with an order summary.	55.0
totalDelivery PromotionLineAmount	String	Total delivery promotion line amounts associated with an order summary.	55.0
totalDelivery Promotion TotalAmount	String	Total delivery promotion amount associated with an order summary.	55.0
totalProduct PromotionDistAmount	String	Total distributed product promotion amounts associated with an order summary.	55.0
totalProduct PromotionLineAmount	String	Total product promotion line amount associated with an order summary.	55.0
totalProduct Promotion TotalAmount	String	Total product promotion amount associated with an order summary.	55.0

## ConnectApi.OrderSummaryAdjustmentAggregatesAsyncOutput

Async adjustment aggregates output.

Property Name	Type	Description	Available Version
statusURL	String	Status URL.	55.0

## ConnectApi.OrderSummaryAdjustmentCollection

Collection of adjustments for an order summary.

Property Name	Type	Description	Available Version
adjustments	List<ConnectApi.OrderSummaryAdjustment>	Collection of adjustments for an order summary.	53.0

## ConnectApi.OrderSummaryCollectionRepresentation

Collection of order summaries.

Property Name	Type	Description	Available Version
count	Integer	Total count of order summaries returned on the current page.	51.0
currentPageToken	String	Token identifying the current page.	51.0
currentPageUrl	String	Connect REST API URL identifying the current page.	51.0
nextPageToken	String	Token identifying the next page, or <code>null</code> if there isn't a next page.	51.0
nextPageUrl	String	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	51.0
orderSummaries	List<ConnectApi.OrderSummaryRepresentation>	Collection of order summaries.	51.0
previousPageToken	String	Token identifying the previous page, or <code>null</code> if there isn't a previous page.	51.0
previousPageUrl	String	Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	51.0
sortOrder	ConnectApi.OrderSummarySortOrder	Sort order for order summaries. Values are: <ul style="list-style-type: none"> <li>• <code>CreatedDateAsc</code>—Sorts by the oldest created date.</li> <li>• <code>CreatedDateDesc</code>—Sorts by the most recent created date.</li> <li>• <code>OrderedDateAsc</code>—Sorts by the oldest ordered date.</li> <li>• <code>OrderedDateDesc</code>—Sorts by the most recent ordered date.</li> </ul>	51.0

## ConnectApi.OrderSummaryProductAttribute

Order summary product attribute representation.

Property Name	Type	Description	Available Version
label	String	Label or display name of the attribute.	58.0
sequence	Integer	Sequence of the attribute set with regard to the product.	58.0
value	String	Display value of the attribute.	58.0

## ConnectApi.OrderToCartFailedProduct

Product that could not be added to the cart from an order, with error information.

Property Name	Type	Description	Available Version
errorCode	String	Error code.	57.0
errorMessage	String	Error message about the cause of the failure.	57.0
productId	String	ID of the product.	57.0
productName	String	Name of the product.	57.0
productSKU	String	SKU of the product.	57.0

## ConnectApi.OrderToCartResult

Result of action adding an order to a cart.

Property Name	Type	Description	Available Version
cartId	String	ID of the cart.	57.0
totalFailedProductCount	Integer	Number of products that could not be successfully added to the cart from the order.	57.0
totalSuccessfulProductCount	Integer	Number of products successfully added to the cart from the order.	57.0
unaddedProducts	<a href="#">ConnectApi.OrderToCartFailedProduct</a>	List of products not successfully added to the cart.	57.0

## ConnectApi.OrganizationSettings

Org settings.

Name	Type	Description	Available Version
accessTimeout	<a href="#">Integer</a>	Amount of time after which the system prompts users who have been inactive to log out or continue working.	28.0
features	<a href="#">ConnectApi.Features</a>	Information about features available in the org.	28.0
maintenanceInfo	<a href="#">ConnectApi.MaintenanceInfo</a>	Information about a list of upcoming scheduled maintenances for the org.	34.0
name	<a href="#">String</a>	Org name.	28.0
orgId	<a href="#">String</a>	18-character ID for the org.	28.0
userSettings	<a href="#">ConnectApi.UserSettings</a>	Information about the org permissions for the user.	28.0

## ConnectApi.OriginCapability

If a feed element has this capability, it was created by a feed action.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
actor	<a href="#">ConnectApi.UserSummary</a>	The user who executed the feed action.	33.0
originRecord	<a href="#">ConnectApi.Reference</a>	A reference to the feed element containing the feed action.	33.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.OutOfOffice

User's out-of-office message.

Property Name	Type	Description	Available Version
message	<a href="#">String</a>	Out-of-office message for the user.	40.0

SEE ALSO:

[ConnectApi.User](#)

[ConnectApi.MentionCompletion](#)

## ConnectApi.PardotBusinessUnitContextItem

Pardot business unit context item.

**!** **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Property Name	Type	Description	Available Version
<code>id</code>	<a href="#">String</a>	ID of the <code>PardotTenant</code> record.	55.0
<code>isCurrent</code>	<a href="#">Boolean</a>	Specifies whether the business unit is selected as the context user's current business unit context in the business unit switcher of the Pardot Lightning app ( <code>true</code> ) or not ( <code>false</code> ).	55.0
<code>name</code>	<a href="#">String</a>	Name of the Pardot business unit as it is specified in the <code>MasterLabel</code> of the <code>PardotTenant</code> record.	55.0

SEE ALSO:

[ConnectApi.PardotBusinessUnitContextOutput](#)

## ConnectApi.PardotBusinessUnitContextOutput

Pardot business unit context.

Property Name	Type	Description	Available Version
<code>businessUnits</code>	<a href="#">List&lt;ConnectApi.PardotBusinessUnitContextItem&gt;</a>	List of the Pardot business unit context items that the context user has access to.	55.0
<code>isSuccess</code>	<a href="#">Boolean</a>	Indicates whether the requested resource was successfully provided.	55.0
<code>totalBusinessUnits</code>	<a href="#">Integer</a>	Indicates the total number of Pardot business units that the context user has access to.	55.0

## ConnectApi.PaymentAuthorizationResponse

Payment authorization output representation.

Property Name	Type	Description	Available Version
<code>accountId</code>	<a href="#">String</a>	Salesforce account for the payment authorization.	51.0
<code>amount</code>	<a href="#">Double</a>	Amount that the gateway authorized for the payment transaction.	51.0
<code>currencyIsoCode</code>	<a href="#">String</a>	Three-letter ISO 4217 currency code associated with the payment group record.	51.0
<code>effectiveDate</code>	<a href="#">Datetime</a>	Date that the authorization becomes effective.	51.0
<code>expirationDate</code>	<a href="#">Datetime</a>	Date that the authorization expires.	51.0

Property Name	Type	Description	Available Version
id	String	ID of the payment authorization record.	51.0
paymentAuthorizationNumber	String	System-defined number for the payment authorization record.	51.0
requestDate	Datetime	Date that the authorization occurred.	51.0
status	String	Status of the payment authorization as returned by the gateway.	51.0

## ConnectApi.PaymentGroupResponse

Payment group.

Property Name	Type	Description	Available Version
currencyIsoCode	String	Three-letter ISO 4217 currency code associated with the payment group record.	50.0
id	String	ID of the payment group record.	50.0
sourceObjectId	String	Source object ID of the payment group record. Supports only OrderId.	50.0

## ConnectApi.PaymentMethodDetails

Details about the payment method.

Property Name	Type	Description	Available Version
alternativePaymentMethod	ConnectApi.AlternativePaymentMethodOutput	Alternative Payment Method details.	56.0
cardPaymentMethod	ConnectApi.CardPaymentMethodOutput	Card Payment Method details.	56.0

## ConnectApi.PaymentMethodResponse

Payment method information response.

Property Name	Type	Description	Available Version
accountId	String	Salesforce Payments account to which this payment method is linked.	51.0
id	String	ID of the payment method.	51.0
paymentMethodDetails	ConnectApi.PaymentMethodDetails	Details about the payment method.	

Property Name	Type	Description	Available Version
status	String	Status of the payment method.	51.0

## ConnectApi.PaymentMethodTokenizationGatewayResponse

Payment method tokenization gateway response representation.

Subclass of [ConnectApi.AbstractGatewayResponse](#).

Property Name	Type	Description	Available Version
gatewayToken	String	The payment method token sent from the gateway.	52.0

## ConnectApi.PaymentMethodTokenizationResponse

Payment method tokenization output representation.

Property Name	Type	Description	Available Version
error	<a href="#">ConnectApi.ErrorResponse</a>	Error representation for the payment method tokenization process. Sent only if the tokenization process encounters an error in the gateway.	52.0
gatewayResponse	<a href="#">ConnectApi.PaymentMethodTokenizationGatewayResponse</a>	Response containing the tokenized payment method value from the payment gateway.	52.0
paymentGatewayLogs	<a href="#">List&lt;ConnectApi.GatewayLogResponse&gt;</a>	Logs showing more details about the tokenization process that occurred in the gateway.	52.0
paymentMethod	<a href="#">ConnectApi.PaymentMethodResponse</a>	Object representation of the payment method object that was tokenized.	52.0

## ConnectApi.PaymentResponse

Payment output.

Property Name	Type	Description	Available Version
accountId	String	ID of the account related the payment record.	50.0
amount	Double	Total amount of the payment transaction performed in the payment request.	50.0
currencyIsoCode	String	Three-letter ISO 4217 currency code associated with the payment output.	50.0
effectiveDate	Datetime	Date that the payment becomes effective.	50.0
id	String	ID of the payment record.	50.0

Property Name	Type	Description	Available Version
paymentNumber	String	Number of the payment record created as a result of the request processing.	50.0
requestDate	Datetime	Date when the payment transaction occurred.	50.0
status	String	Status of the new payment record. Can be DRAFT, PROCESSED or CANCELLED.	50.0

## ConnectApi.PercentRecordField

Record field containing a percentage value.

Subclass of [ConnectApi.LabeledRecordField](#).

Name	Type	Description	Available Version
value	Double	Value of the percentage.	29.0

## ConnectApi.PhoneNumber

Phone number.

Name	Type	Description	Available Version
label	String	A localized string indicating the phone type.	30.0
phoneNumber	String	Phone number.	28.0
phoneType	String	Phone type. Values are: <ul style="list-style-type: none"> <li>• Fax</li> <li>• Mobile</li> <li>• Work</li> </ul> These values are not localized.	30.0

Name	Type	Description	Available Version
type	String	 <b>Note:</b> This property is not available after version 29.0. Use the phoneType property instead. Values are: <ul style="list-style-type: none"> <li>Fax</li> <li>Mobile</li> <li>Work</li> </ul> These values are not localized.	28.0–29.0

## SEE ALSO:

## ConnectApi.Photo

Profile photo.

Name	Type	Description	Available Version
fullEmailPhotoUrl	String	A temporary URL to the large profile picture. The URL expires after 30 days and is available to unauthenticated users.	28.0
largePhotoUrl	String	URL to the large profile picture. The default width is 200 pixels, and the height is scaled so the original image proportions are maintained.  If a user hasn't uploaded a photo, this URL points to a default photo. If the user hasn't uploaded a photo and the request header included <i>X-Connect-Theme: Salesforce1</i> , this URL points to a default photo based on a theme that the admin selected for the org.	28.0
mediumPhotoUrl	String	URL to the medium profile picture. The default width is 160 pixels, and the height is scaled so the original image proportions are maintained.  If a user hasn't uploaded a photo, this URL points to a default photo. If the user hasn't uploaded a photo and the request header included <i>X-Connect-Theme: Salesforce1</i> , this URL points to a default photo based on a theme that the admin selected for the org.	37.0
photoVersionId	String	18-character ID to that version of the photo	28.0

Name	Type	Description	Available Version
smallPhotoUrl	String	URL to the small profile picture. The default size is 64x64 pixels. If a user hasn't uploaded a photo, this URL points to a default photo. If the user hasn't uploaded a photo and the request header included <i>X-Connect-Theme: Salesforce1</i> , this URL points to a default photo based on a theme that the admin selected for the org.	28.0
standardEmail PhotoUrl	String	A temporary URL to the small profile. The URL expires after 30 days and is available to unauthenticated users.	28.0
url	String	A resource that returns a Photo object: for example, <code>/services/data/v62.0/chatter/users/005D0000001LL80IAW/photo</code>	28.0

## ConnectApi.PicklistRecordField

Record field containing an enumerated value.

Subclass of [ConnectApi.LabeledRecordField](#).

## ConnectApi.PinCapability

If a feed element has this capability, users who have permission can pin it to a feed.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
isPinnableByMe	Boolean	Specifies whether the context user can pin or unpin the entity to the feed ( <b>true</b> ) or not ( <b>false</b> ).	41.0
isPinned	Boolean	Specifies whether the entity is pinned ( <b>true</b> ) or not pinned ( <b>false</b> ) to the feed.	41.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.PinnedFeedElements

List of pinned feed elements for a feed.

Property Name	Type	Description	Available Version
elements	List<ConnectApi.FeedElement>	List of pinned feed elements.   <b>Note:</b> In the UI, pinned feed elements don't show all auxiliary information, such as comments, likes, interaction counts, or read by information. As a result, the ConnectApi.PinnedFeedElements output class doesn't include all the information for these capabilities.	41.0

## ConnectApi.PlatformAction

A platform action instance with state information for the context user.

Property Name	Type	Description	Available Version
actionUrl	String	For action links of subtype <code>Ui</code> or <code>Download</code> , direct the user to download or visit the UI from this link. Salesforce issues a Javascript redirect for the link in this format: <code>/action-link-redirect/<b>communityId</b>/<b>actionLinkId</b>?_bearer=<b>bearerToken</b></code> For <code>Api</code> action links and for all platform actions, this value is <code>null</code> and Salesforce handles the call.	33.0
apiName	String	The API name. The value may be <code>null</code> .	33.0
confirmationMessage	String	If this action requires a confirmation and has a status of <code>NewStatus</code> , this is a default localized message that should be shown to an end user prior to invoking the action. Otherwise, this is <code>null</code> .	33.0
executingUser	ConnectApi.UserSummary	The user who initiated execution of this platform action.	33.0
groupDefault	Boolean	<code>true</code> if this platform action is the default or primary platform action in the platform action group; <code>false</code> otherwise. There can be only one default platform action per platform action group.	33.0
iconUrl	String	The URL of the icon for the platform action. This value may be <code>null</code> .	33.0
id	String	The ID for the platform action. If the <code>type</code> is <code>QuickAction</code> and the <code>subtype</code> is <code>Create</code> , this value is <code>null</code> .	33.0
label	String	The localized label for this platform action.	33.0

Property Name	Type	Description	Available Version
modifiedDate	Datetime	ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.	33.0
platformAction Group	ConnectApi.Reference	A reference to the platform action group containing this platform action.	33.0
status	ConnectApi.PlatformAction Status	<p>The execution status of the platform action. Values are:</p> <ul style="list-style-type: none"> <li>FailedStatus—The action link execution failed.</li> <li>NewStatus—The action link is ready to be executed. Available for Download and Ui action links only.</li> <li>PendingStatus—The action link is executing. Choosing this value triggers the API call for Api and ApiAsync action links.</li> <li>SuccessfulStatus—The action link executed successfully.</li> </ul>	33.0
subtype	String	<p>The subtype of a platform action or null.</p> <p>If the type property is ActionLink, possible values are:</p> <ul style="list-style-type: none"> <li>Api—The action link calls a synchronous API at the action URL. Salesforce sets the status to SuccessfulStatus or FailedStatus based on the HTTP status code returned by your server.</li> <li>ApiAsync—The action link calls an asynchronous API at the action URL. The action remains in a PendingStatus state until a third party makes a request to /connect/action-links/<b>actionLinkId</b> to set the status to SuccessfulStatus or FailedStatus when the asynchronous operation is complete.</li> <li>Download—The action link downloads a file from the action URL.</li> <li>Ui—The action link takes the user to a web page at the action URL.</li> </ul> <p> <b>Note:</b> Invoking ApiAsync action links from an app requires a call to set the status. However, there isn't currently a way to set the status of an action link using Apex. To set the status, use Connect REST API. See the Action</p>	33.0

Property Name	Type	Description	Available Version
		Link resource in the <a href="#">Connect REST API Developer Guide</a> for more information.	
type	<a href="#">ConnectApi.PlatformActionType</a>	The type of platform action. Values are: <ul style="list-style-type: none"> <li>• <code>ActionLink</code>—An indicator on a feed element that targets an API, a web page, or a file, represented by a button in the Salesforce UI.</li> <li>• <code>CustomButton</code>—When clicked, opens a URL or a Visualforce page in a window or executes JavaScript.</li> <li>• <code>ProductivityAction</code>—Productivity actions are predefined and attached to a limited set of objects. Productivity actions include Send Email, Call, Map, View Website, and Read News. Except for the Call action, you can't edit productivity actions.</li> <li>• <code>QuickAction</code>—A global or object-specific action.</li> <li>• <code>StandardButton</code>—A predefined Salesforce button such as New, Edit, or Delete.</li> </ul>	33.0
url	<a href="#">String</a>	The URL for this platform action.  If the type is <code>QuickAction</code> and the subtype is <code>Create</code> , this value is <code>null</code> .	33.0

[ConnectApi.PlatformActionGroup](#)

## ConnectApi.PlatformActionGroup

A platform action group instance with state appropriate for the context user.

Action link groups are one type of platform action group and are therefore represented as `ConnectApi.PlatformActionGroup` output classes.

Property Name	Type	Description	Available Version
category	<a href="#">ConnectApi.PlatformActionGroupCategory</a>	Indicates the priority and relative locations of platform actions. Values are: <ul style="list-style-type: none"> <li>• <code>Primary</code>—The action link group is displayed in the body of the feed element.</li> <li>• <code>Overflow</code>—The action link group is displayed in the overflow menu of the feed element.</li> </ul>	33.0

Property Name	Type	Description	Available Version
id	String	The 18-character ID or an opaque string ID of the platform action group.  If the <code>ConnectApi.PlatformAction</code> type is <code>QuickAction</code> and the subtype is <code>Create</code> , this value is <code>null</code> .	33.0
modifiedDate	Datetime	ISO 8601 date string, for example, 2014-02-25T18:24:31.000Z.	33.0
platformActions	List< <a href="#">ConnectApi.PlatformAction</a> >	The platform action instances for this group.  Within an action link group, action links are displayed in the order listed in the <code>actionLinks</code> property of the <code>ConnectApi.ActionLinkGroupDefinitionInput</code> class. Within a feed item, action link groups are displayed in the order specified in the <code>actionLinkGroupIds</code> property of the <code>ConnectApi.AssociatedActionsCapabilityInput</code> class.	33.0
url	String	The URL for this platform action group.  If the <code>ConnectApi.PlatformAction</code> type is <code>QuickAction</code> and the subtype is <code>Create</code> , this value is <code>null</code> .	33.0

## SEE ALSO:

[ConnectApi.AbstractRecommendation](#)  
[ConnectApi.AssociatedActionsCapability](#)

## ConnectApi.PollCapability

If a feed element has this capability, it includes a poll.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
choices	List< <a href="#">ConnectApi.FeedPollChoice</a> >	Collection of poll choices that make up the poll.	32.0
myChoiceId	String	18-character ID of the poll choice that the context user has voted for in this poll. Returns <code>null</code> if the context user has not voted.	32.0

Property Name	Type	Description	Available Version
totalVoteCount	<a href="#">Integer</a>	Total number of votes cast on the feed poll element.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.PostAuthorizationResponse

Gateway response following a post authorization request.

Property Name	Type	Description	Available Version
error	<a href="#">ConnectApi. ErrorResponse</a>	Information about errors that occurred in the payment gateway while evaluating the post authorization request.	54.0
gatewayResponse	<a href="#">ConnectApi. PostAuth GatewayResponse</a>	Payment gateway's response to the post authorization request.	54.0
paymentAuthorization	<a href="#">ConnectApi. PaymentAuthorization Response</a>	Payment gateway's response to the original payment authorization request.	54.0
paymentGatewayLogs	<a href="#">List&lt;ConnectApi. GatewayLog Response&gt;</a>	Stores information exchanged between the Salesforce payments platform and external payment gateways. Gateway logs can also record payloads from external payment entities.	54.0
paymentGroup	<a href="#">ConnectApi. PaymentGroup Response</a>	Payment group, consisting of one or more payments, sent to the gateway for the post authorization request.	54.0
paymentMethod	<a href="#">ConnectApi. PaymentMethod Response</a>	Payment method used in the post authorization request.	54.0

## ConnectApi.PostAuthGatewayResponse

Gateway response after confirmation that the merchant is ready to capture payment of an existing pre-authorized transaction.

Subclass of [ConnectApi.AbstractGatewayResponse](#).

Property Name	Type	Description	Available Version
gateway AuthorizationCode	<a href="#">String</a>	Code used to authorize the payment that the payment gateway is processing.	54.0
paymentMethod Details	<a href="#">ConnectApi. PaymentMethodDetails</a>	Details about the payment method.	54.0

## ConnectApi.PreserveCart

Represents a preserved cart.

Property Name	Type	Description	Available Version
cartId	String	ID of the authenticated cart.	60.0
currencyIsoCode	String	Currency ISO code for the authenticated cart.	60.0
failedCartItems	<a href="#">List&lt;ConnectApi.CartItem BasicResult&gt;</a>	List of products that weren't successfully transferred from the guest cart to the authenticated cart.	60.0
numberOfProducts	Integer	Total number of products in the guest cart.	60.0
numberOfProductsWithError	Integer	Total number of products that weren't successfully transferred from the guest cart to the authenticated cart.	60.0
numberOfProductsWithSuccess	Integer	Total number of products successfully transferred from the guest cart to the authenticated cart.	60.0
succeededCartItems	<a href="#">List&lt;ConnectApi.CartItem BasicResult&gt;</a>	List of products successfully transferred from the guest cart to the authenticated cart.	60.0

## ConnectApi.PreviewCancelOutputRepresentation

Expected financial values for a proposed cancel action.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
changeBalances	<a href="#">ConnectApi.ChangeItem OutputRepresentation</a>	Expected financial values for the proposed cancel action.	48.0
orderSummaryId	String	ID of the OrderSummary.	48.0

## ConnectApi.PreviewCartToExchangeOrderOutputRepresentation

Expected change order financial values for the preview cart to exchange order action.

Property Name	Type	Description	Available Version
balanceStateExchangeWebCart	<a href="#">ConnectApi.BalanceStatePreviewOutput</a> on page 1953	The balance state preview for the exchange web cart.	Big, 61.0
balanceStateOriginalOrderSummary	<a href="#">ConnectApi.BalanceStatePreviewOutput</a> on page 1953	The balance state preview for the original order summary.	Big, 61.0
balanceStateReturnOrder	<a href="#">ConnectApi.BalanceStatePreviewOutput</a> on page 1953	The balance state preview for the return order.	Big, 61.0

Property Name	Type	Description	Available Version
changeBalances	<a href="#">ConnectApi.OutputRepresentation</a> on page 1993	Change order financial values for a preview order action.	Big, 60.0
errors	<a href="#">List&lt;ConnectApi.ErrorResponse&gt;</a>	Any errors that were returned.	Big, 60.0
orderSummaryId	<a href="#">String</a>	ID of the order summary.	Big, 60.0
success	<a href="#">Boolean</a>	Indicates whether the transaction was successful.	Big, 60.0

## ConnectApi.PreviewReturnOutputRepresentation

Expected financial values for a proposed return action.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
changeBalances	<a href="#">ConnectApi.ChangeItemOutputRepresentation</a>	Expected financial values for the proposed return action.	48.0
orderSummaryId	<a href="#">String</a>	ID of the OrderSummary.	48.0

## ConnectApi.PriceAdjustmentSchedule

Price adjustment schedule.

Property Name	Type	Description	Available Version
adjustmentMethod		Reserved for future use.	59.0
id	<a href="#">String</a>	ID of the price adjustment schedule.	49.0
priceAdjustmentTiers	<a href="#">List&lt;ConnectApi.PriceAdjustmentTier&gt;</a>	List of price adjustment tiers.	49.0
scheduleType		Reserved for future use.	59.0

SEE ALSO:

[ConnectApi.ProductPrice](#)

## ConnectApi.PriceAdjustmentTier

Price adjustment tier.

Property Name	Type	Description	Available Version
adjustmentType	<a href="#">ConnectApi.PriceAdjustmentTierType</a>	Type of price adjustment for the tier. Values are: <ul style="list-style-type: none"> <li>AmountBasedAdjustment—Price is adjusted by a specified amount.</li> <li>PercentageBasedAdjustment—Price is adjusted by a specified percentage.</li> </ul>	49.0
adjustmentValue	<a href="#">String</a>	Adjustment value of the tier.	49.0
id	<a href="#">String</a>	ID of the price adjustment tier.	49.0
lowerBound	<a href="#">String</a>	Lower limit of the tier.	49.0
tierUnitPrice	<a href="#">String</a>	Unit price of the tier.	49.0
upperBound	<a href="#">String</a>	Upper limit of the tier.	49.0

SEE ALSO:

[ConnectApi.PriceAdjustmentSchedule](#)

## ConnectApi.PricingResult

Product pricing result.

Property Name	Type	Description	Available Version
currencyIsoCode	<a href="#">String</a>	Three-letter ISO 4217 currency code associated with the product.	49.0
error	<a href="#">ConnectApi.ErrorResponse</a>	Error code and message.	49.0
pricingLineItemResults	<a href="#">List&lt;ConnectApi.PricingResultLineItem&gt;</a>	Pricing result line items.	49.0
success	<a href="#">Boolean</a>	Specifies whether the execution was successful ( <code>true</code> ) or not ( <code>false</code> ).	49.0

## ConnectApi.PricingResultLineItem

Pricing result line item.

Property Name	Type	Description	Available Version
error	<a href="#">ConnectApi.ErrorResponse</a>	Error code and message.	49.0
listPrice	<a href="#">String</a>	List price for the product.	49.0
lowestUnitPrice	<a href="#">String</a>	Lowest unit price for the product.	49.0

Property Name	Type	Description	Available Version
pricebookEntryId	String	ID of the pricebook entry.	49.0
productId	String	ID of the product to price.	49.0
success	Boolean	Specifies whether the execution was successful ( <code>true</code> ) or not ( <code>false</code> ).	49.0
unitPrice	String	Unit price for the product.	49.0

SEE ALSO:

[ConnectApi.PricingResult](#)

[ConnectApi.ProductSummary](#)

## ConnectApi.ProductAttributeInfo

Product attribute metadata.

Property Name	Type	Description	Available Version
allowableValues	List<String>	Active attribute picklist values that can be used to create variations. These values are determined by the order of the picklist values in Object Manager.	50.0
apiName	String	API name of the attribute.	50.0
availableValues	List<String>	Attribute picklist values that are available for the product in the store. These values are sorted by the order of values in the <code>allowableValues</code> property.	50.0
fieldEnumOrId	String	Field ID for custom fields or enumeration value for standard fields.	50.0
label	String	Label of the attribute.	50.0
objectName	String	Name of the object that contains the field.	50.0
sequence	Integer	Sequence value determined by the order of the attributes under Commerce Setup for the attribute set.	50.0

SEE ALSO:

[ConnectApi.ProductDetail](#)

[ConnectApi.ProductAttributeSetInfo](#)

[ConnectApi.ProductVariationInfo](#)

## ConnectApi.ProductAttributeSelectionInfo

Product attribute.

Property Name	Type	Description	Available Version
apiName	String	API name of the attribute.	50.0
label	String	Label of the attribute.	50.0
sequence	Integer	Sequence value determined by the order of the attributes under Commerce Setup for the attribute set.	50.0
value	String	Display value of the attribute.	50.0

SEE ALSO:

[ConnectApi.ProductAttributesToProductEntry](#)

## ConnectApi.ProductAttributeSet

Product attribute set data.

Property Name	Type	Description	Available Version
attributes	Map<String, String>	Map of the attributes that are members of the attribute set.	50.0
developerName	String	Name of the attribute set.	50.0
id	String	ID of the product attribute record that represents the product attribute set.	50.0

## ConnectApi.ProductAttributeSetInfo

Attribute set metadata.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Property Name	Type	Description	Available Version
attributeInfo	Map<String, ConnectApi.ProductAttributeInfo>	Map of the API name of the attribute field to the attribute metadata.	50.0
description	String	Description of the attribute set.	50.0
developerName	String	Developer name of the attribute set.	50.0
id	String	ID of the attribute set.	50.0
masterLabel	String	Label of the attribute set.	50.0

Property Name	Type	Description	Available Version
sequence	<a href="#">Integer</a>	Sequence of the attribute set for the product.	50.0

SEE ALSO:

[ConnectApi.ProductDetail](#)

## ConnectApi.ProductAttributeSetSummary

Summary of a product attribute set.

Property Name	Type	Description	Available Version
apiName	<a href="#">String</a>	API name of the attribute set.	51.0
attributes	<a href="#">List&lt;ConnectApi.ProductAttributeSummary&gt;</a>	List of attributes in the attribute set.	51.0
label	<a href="#">String</a>	Display label of the attribute set.	51.0

SEE ALSO:

[ConnectApi.OrderItemSummaryProduct](#)

[ConnectApi.ProductSummary](#)

## ConnectApi.ProductAttributeSummary

Summary of a product attribute.

Property Name	Type	Description	Available Version
apiName	<a href="#">String</a>	API name of the attribute.	51.0
label	<a href="#">String</a>	Display label of the attribute.	51.0
sequence	<a href="#">Integer</a>	Sequence of the attribute in the attribute set.	51.0
value	<a href="#">String</a>	Display value of the attribute.	51.0

SEE ALSO:

[ConnectApi.ProductAttributeSetSummary](#)

## ConnectApi.ProductAttributesToProductEntry

Mapping of an attribute value combination to a variation product ID.

Property Name	Type	Description	Available Version
canonicalKey	String	Attribute API values concatenated with an underscore ( _ ) based on the sequence number of the attributes in the attribute set.	50.0
productId	String	Variation product ID for the selection of attributes.	50.0
selectedAttributes	List<ConnectApi.ProductAttributeSelectionInfo>	Ordered list of attribute values and metadata that can be used to form a key that maps to product ID.	50.0
urlName	String	Variant URL name for the selection of attributes.	59.0

SEE ALSO:

[ConnectApi.ProductVariationInfo](#)

## ConnectApi.ProductCartItem

Cart items of a specific product type.

Property Name	Type	Description	Available Version
cartItems	List<ConnectApi.CartItemResult on page 1971>	Items in a cart.	60.0
product	ConnectApi.CartItemProduct on page 1970	Product summary for a cart item.	60.0

## ConnectApi.ProductCartItemCollection

Items in the cart, grouped by product type.

Property Name	Type	Description	Available Version
count	Integer	Number of cart items returned on the current page	60.0
currentPage	Integer	Current page of cart items. The value matches the requested page number, unless the requested page number exceeds the total number of pages. In this scenario, the current page is the highest available page number.	60.0
hasErrors	Boolean	Indicates whether at least one of the results contains an error (True) or not (False).	60.0
products	List<ConnectApi.ProductCartItem on page 2195>	Products in the cart.	60.0

Property Name	Type	Description	Available Version
totalItemCount	<a href="#">Integer</a>	Total number of unique products in the cart.	60.0
totalNumberOfPages	<a href="#">Integer</a>	Total number of pages for the given page size.	60.0

## ConnectApi.ProductCategoryData

Product category.

Property Name	Type	Description	Available Version
description	<a href="#">String</a>	Description of the category.	49.0
id	<a href="#">String</a>	ID of the category.	49.0
name	<a href="#">String</a>	Name of the category.	49.0
urlSlug	<a href="#">String</a>	SEO-friendly URL slug of the category.	59.0

SEE ALSO:

[ConnectApi.ProductCategoryPath](#)

[ConnectApi.SearchCategory](#)

## ConnectApi.ProductCategoryDetail

Details of a product category.

Property Name	Type	Description	Available Version
bannerImage	<a href="#">ConnectApi.ProductCategoryMedia</a>	Banner image of the product category.	49.0
fields	<a href="#">Map&lt;String, String&gt;</a>	List of fields for the product category.	49.0
id	<a href="#">String</a>	ID of the product category.	49.0
mediaGroups	<a href="#">List&lt;ConnectApi.ProductCategoryMediaGroup&gt;</a>	List of media groups of the product category.	49.0
tileImage	<a href="#">ConnectApi.ProductCategoryMedia</a>	Tile image of the product category.	49.0
urlName	<a href="#">String</a>	SEO-friendly URL name of the product category.	59.0

SEE ALSO:

[ConnectApi.ProductCategoryDetailCollection](#)

## ConnectApi.ProductCategoryDetailCollection

Collection of product category details.

Property Name	Type	Description	Available Version
productCategories	<a href="#">List&lt;ConnectApi.ProductCategoryDetail&gt;</a>	List of product category details.	52.0

## ConnectApi.ProductCategoryMedia

Media associated with a product category.

Property Name	Type	Description	Available Version
alternateText	<a href="#">String</a>	Alternative text for the product category media.	49.0
contentVersionId	<a href="#">String</a>	ID of the latest published content version if the media is stored as a ContentDocument. If the image is a customer-provided external URL, the value is <code>null</code> . Not supported in enhanced CMS workspaces.	49.0
id	<a href="#">String</a>	ID of the product category image.	49.0
mediaType	<a href="#">ConnectApi.ProductMediaType</a>	Type of product media. Values are: <ul style="list-style-type: none"> <li>• Document</li> <li>• Image</li> <li>• Video</li> </ul>	49.0
sortOrder	<a href="#">Integer</a>	Sort order of a media item inside a media group.	49.0
thumbnailUrl	<a href="#">String</a>	URL of the thumbnail for product media. If a value exists, it should be used for the thumbnail whether the image is natively uploaded or hosted externally. Not supported in enhanced CMS workspaces.	49.0
title	<a href="#">String</a>	Title of the product category media.	49.0
url	<a href="#">String</a>	URL of the product category media.	49.0

SEE ALSO:

[ConnectApi.ProductCategoryMediaGroup](#)

[ConnectApi.ProductCategoryDetail](#)

## ConnectApi.ProductCategoryMediaGroup

Media group associated with a product category.

Property Name	Type	Description	Available Version
developerName	String	API name of the product category media group.	49.0
id	String	ID of the product category media group.	49.0
mediaItems	List<ConnectApi.ProductCategoryMedia>	List of media items within a product category media group.	49.0
name	String	Name of the product category media group.	49.0
usageType	ConnectApi.ProductMediaUsageType	Usage type of a product media item within a media group. Values are: <ul style="list-style-type: none"> <li>Attachment—Product media group with product documents as attachments.</li> <li>Banner—Product category media group with banner images of the product.</li> <li>Listing—Product media group with listing images of the product.</li> <li>Standard—Product media group with standard images and videos of the product.</li> <li>Tile—Product category media group with tile images of the product.</li> </ul>	49.0

## ConnectApi.ProductCategoryPath

List of product categories in a path.

Property Name	Type	Description	Available Version
path	List<ConnectApi.ProductCategoryData>	List of product categories in a path.	49.0

SEE ALSO:

[ConnectApi.ProductDetail](#)

## ConnectApi.ProductChild

Child product related to a parent product.

Property Name	Type	Description	Available Version
defaultQuantity	String	Default quantity of child products to be ordered.	57.0
isEntitled	Boolean	Specifies whether the child product can be viewed on the product detail page ( <code>true</code> ) or not ( <code>false</code> ).	62.0
productInfo	ConnectApi.ProductDetail	Product details of the child product.	57.0

## ConnectApi.ProductChildCollection

Collection of child products related to a parent product.

Property Name	Type	Description	Available Version
count	Integer	Number of child products returned on this page.	57.0
currentPageToken	String	Current page token, if any.	57.0
currentPageUrl	String	URL of the current page in the response.	57.0
items	List<ConnectApi.ProductChild>	List of child products related to the parent product. The child products are sorted by their configured sequence values, in ascending order, with null values sorted last. If there are no configured sequence values, the child products are sorted by <code>createdDate</code> , in ascending order.	57.0
nextPageToken	String	Token for the next page, if any. A value is included in the response only if a value is returned for <code>nextPageUrl</code> .	57.0
nextPageUrl	String	URL of the next page, if any.	57.0
previousPageToken	String	Token for the previous page, if any. A value is included in the response only if a value is returned for <code>previousPageUrl</code> .	57.0
previousPageUrl	String	URL of the previous page, if any.	57.0
productClass	ConnectApi.ProductClass	Class of product. Values are: <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Set</li> <li>• Simple</li> <li>• Variation</li> <li>• VariationParent</li> </ul>	62.0
total	Integer	Total number of child products in the collection.	57.0

## ConnectApi.ProductDetail

Details of a product.

Property Name	Type	Description	Available Version
attributeSetInfo	Map<String, ConnectApi.ProductAttributeSetInfo>	Map of the attribute set developer name to its metadata.	50.0

Property Name	Type	Description	Available Version
defaultImage	<a href="#">ConnectApi.ProductMedia</a>	Default image of the product.	49.0
entitlement	<a href="#">ConnectApi.ProductEntitlement</a>	Entitlement details for the product. To get pricing information for products in version 57 and later, use the <a href="#">CommerceStorePricing Class</a> .	49.0–56.0
fields	<a href="#">Map&lt;String, String&gt;</a>	List of fields for the product.	49.0
id	<a href="#">String</a>	ID of the product.	49.0
mediaGroups	<a href="#">List&lt;ConnectApi.ProductMediaGroup&gt;</a>	List of media groups of the product.	49.0
primaryProductCategoryPath	<a href="#">ConnectApi.ProductCategoryPath</a>	Primary category path of the product.	49.0
productClass	<a href="#">ConnectApi.ProductClass</a>	Class of product. Values are: <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Set</li> <li>• Simple</li> <li>• Variation</li> <li>• VariationParent</li> </ul>	50.0
productSellingModels	<a href="#">List&lt;ConnectApi.ProductSellingModel&gt;</a>	List of product selling models for the product.	56.0
purchaseQuantityRule	<a href="#">ConnectApi.PurchaseQuantityRule</a>	If one exists, purchase quantity rule for the product.	52.0
urlName	<a href="#">String</a>	SEO-friendly URL name for the product.	59.0
variationAttributeSet	<a href="#">ConnectApi.ProductAttributeSet</a>	Variation attribute set for the product.	50.0
variationInfo	<a href="#">ConnectApi.ProductVariationInfo</a>	Available and allowable values for variation attributes and a map to resolve variation product IDs from attribute value combinations.	50.0
variationParentId	<a href="#">String</a>	ID of the variation parent.	50.0

## ConnectApi.ProductDetailsOutputRepresentation

Details about a product.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
attributes	<a href="#">ConnectApi.ProductVariationAttributeOutputRepresentation</a>	List of variation attributes that define variations of the product.	55.0
currencyIsoCode	String	Currency ISO code.	55.0
description	String	Description of the product.	55.0
fields	Map<String, String>	List of the product's fields.	55.0
imageGroups	List< <a href="#">ConnectApi.ProductImageGroupOutputRepresentation</a> >	List of the product's image groups.	55.0
listPrice	Double	List price.	55.0
name	String	Name.	55.0
productQuantityRule	<a href="#">Purchase Quantity Rule</a>	If one exists, purchase quantity rule for the product.	55.0
productId	String	Product ID.	55.0
stockKeepingUnit	String	Stock keeping unit.	55.0
unitPrice	Double	Unit price.	55.0
variants	List< <a href="#">ConnectApi.ProductVariantOutputRepresentation</a> >	List of variations of the product.	55.0

## ConnectApi.ProductEntitlement

Entitlements for a product.

Property Name	Type	Description	Available Version
canViewPrice	Boolean	Specifies whether the product's price can be viewed ( <a href="#">true</a> ) or not ( <a href="#">false</a> ).	49.0

SEE ALSO:

[ConnectApi.ProductDetail](#)

## ConnectApi.ProductExpandOutputRepresentation

Product expand information with return reasons.

Property Name	Type	Description	Available Version
returnReasons	List<String>	Return reasons for products.	59.0

## ConnectApi.ProductImageOutputRepresentation

Details about a product image.

Property Name	Type	Description	Available Version
alternateText	String	Alternate text for accessibility.	55.0
mediaType	String	Media type.	55.0
thumbnailUrl	String	URL of the thumbnail version of the product image.	55.0
title	String	Title.	55.0
url	String	URL of the product image.	55.0

## ConnectApi.ProductImageGroupOutputRepresentation

Details about a product image group.

Property Name	Type	Description	Available Version
images	List<ConnectApi.ProductImageOutputRepresentation>	List of product images in the group.	55.0
viewType	String	The type of product images in the group.	55.0

## ConnectApi.ProductsListOutputRepresentation

Output representation of products with product data along with expand details.

Property Name	Type	Description	Available Version
product	List<ConnectApi.ProductOutputRepresentation>	The product's identifier.	59.0

## ConnectApi.ProductMedia

Media associated with a product.

Property Name	Type	Description	Available Version
alternateText	String	Alternative text for the product media.	49.0
contentVersionId	String	ID of the latest published content version if the media is stored as a ContentDocument. If the image is a	49.0

Property Name	Type	Description	Available Version
		customer-provided external URL, the value is <code>null</code> . Not supported in enhanced CMS workspaces.	
<code>id</code>	<a href="#">String</a>	ID of the product image.	49.0
<code>mediaType</code>	<a href="#">ConnectApi.ProductMediaType</a>	Type of product media. Values are: <ul style="list-style-type: none"> <li>• Document</li> <li>• Image</li> <li>• Video</li> </ul>	49.0
<code>sortOrder</code>	<a href="#">Integer</a>	Sort order of a media item within a media group.	49.0
<code>thumbnailUrl</code>	<a href="#">String</a>	URL of the thumbnail for product media. If a value exists, it should be used for the thumbnail whether the image is natively uploaded or hosted externally. Not supported in enhanced CMS workspaces.	49.0
<code>title</code>	<a href="#">String</a>	Title of the product media.	49.0
<code>url</code>	<a href="#">String</a>	URL of the product media.	49.0

## ConnectApi.ProductMediaGroup

Media group associated with a product.

Property Name	Type	Description	Available Version
<code>developerName</code>	<a href="#">String</a>	API name of the product media group.	49.0
<code>id</code>	<a href="#">String</a>	ID of the product media group.	49.0
<code>mediaItems</code>	<a href="#">List&lt;ConnectApi.ProductMedia&gt;</a>	List of media items within a product media group.	49.0
<code>name</code>	<a href="#">String</a>	Name of the product media group.	49.0

Property Name	Type	Description	Available Version
usageType	<a href="#">ConnectApi.ProductMediaUsageType</a>	Usage type of a product media item within a media group. Values are: <ul style="list-style-type: none"> <li><code>Attachment</code>—Product media group with product documents as attachments.</li> <li><code>Banner</code>—Product category media group with banner images of the product.</li> <li><code>Listing</code>—Product media group with listing images of the product.</li> <li><code>Standard</code>—Product media group with standard images and videos of the product.</li> <li><code>Tile</code>—Product category media group with tile images of the product.</li> </ul>	49.0

## ConnectApi.ProductOutputRepresentation

Output representation for product data.

Property Name	Type	Description	Available Version
expand	<a href="#">ConnectApi.ProductOutputRepresentation</a>	Output representation for expand feature.	<b>59.0</b>
products	<a href="#">String</a>	Product data.	<b>59.0</b>

## ConnectApi.ProductOverview

Overview of a product, with summary information about prices, selected fields, and the product's default image.

Property Name	Type	Description	Available Version
defaultImage	<a href="#">ConnectApi.ProductMedia</a>	Media representation of the product's default image.	54.0
error	<a href="#">ConnectApi.ErrorResponse</a>	Error code and error message.	54.0
fields	<a href="#">Map&lt;String, String&gt;</a>	Map of fields belonging to the product.	54.0
id	<a href="#">String</a>	ID of the product.	54.0
prices	<a href="#">ConnectApi.PricingResultLineItem</a>	Price of the product. To get pricing information for products in version 58 and later, use the <a href="#">CommerceStorePricing Class</a> .	54.0–57.0

Property Name	Type	Description	Available Version
sku	String	SKU of the product.	54.0
success	Boolean	Represents whether execution was successful and product overview information was retrieved without error.	54.0

## ConnectApi.ProductOverviewCollection

Collection of product overviews.

Property Name	Type	Description	Available Version
products	List<ConnectApi.ProductOverview>	Collection of product overview.	54.0
total	Integer	Total number of products returned.	54.0

## ConnectApi.ProductPrice

Pricing information for a product.

Property Name	Type	Description	Available Version
currencyIsoCode	String	Three-letter ISO 4217 currency code associated with the product.  Products are priced using the currency for the buyer account or guest buyer profile. If your store doesn't support the currency for the buyer account or guest buyer profile, products are priced using the default currency for your store.	49.0
listPrice	String	List price for the product.	49.0
lowestUnitPrice	String	Lowest unit price for the product.	49.0
priceAdjustment	ConnectApi.PriceAdjustmentSchedule	Price adjustment schedule for the product. If a product selling model ID is specified in a request parameter, this property is empty.	49.0
pricebookEntryId	String	ID of the price book entry. If a product selling model ID is specified in a request parameter, this property is empty.	49.0
productPriceEntries	List<ConnectApi.ProductPriceEntry>	List of line item prices for the product.	56.0
unitPrice	String	Unit price for the product. If a product selling model ID is specified in a request parameter, this property is empty.	49.0

## ConnectApi.ProductPriceEntry

Line item price for the product.

Property Name	Type	Description	Available Version
error	<a href="#">ConnectApi.ErrorResponse</a>	Error code and error message.	56.0
listPrice	<a href="#">String</a>	List price for the product entry.	56.0
priceAdjustment	<a href="#">ConnectApi.PriceAdjustmentSchedule</a>	Price adjustment schedule.	56.0
pricebookEntryId	<a href="#">String</a>	ID of the pricebook entry.	56.0
productSellingModelId	<a href="#">String</a>	ID of the product selling model. If no product selling model ID is specified in a request parameter, this property is empty.	56.0
success	<a href="#">Boolean</a>	Specifies whether execution was successful ( <code>true</code> ) or not ( <code>false</code> ).	56.0
unitPrice	<a href="#">String</a>	Unit price for the product entry.	56.0

## ConnectApi.ProductReturnRateListOutputRepresentation

Products with corresponding return rates.

Property Name	Type	Description	Available Version
productReturnRateList	<a href="#">ConnectApi.ProductReturnRateListOutputRepresentation</a>	List of product return rates.	59.0

## ConnectApi.ProductReturnRateOutputRepresentation

Return rate of a product's units returned divided by its units sold.

Property Name	Type	Description	Available Version
productId	<a href="#">String</a>	ID of the product.	59.0
returnRate	<a href="#">Double</a>	Return rate of specified product. Value range 0 to 1.	59.0

## ConnectApi.ProductReturnRateOutputRepresentation

Return rate of a product (units returned divided by units sold).

Property Name	Type	Description	Available Version
productId	<a href="#">String</a>	ID of the product.	59.0

Property Name	Type	Description	Available Version
returnRate	Double	Return rate of specified product. Values range from 0 to 1.	59.0

## ConnectApi.ProductVariationInfo

Product variation attributes, metadata, and mappings of attribute combinations to variation product IDs.

Property Name	Type	Description	Available Version
attributesToProductMappings	List<ConnectApi.ProductAttributeToProductEntry>	List ordered by ProductAttribute.Sequence values that map the attribute value combinations to the variation product ID.	50.0
variationAttributeInfo	Map<String, ConnectApi.ProductAttributeInfo>	Map of field API name to product attribute information.	51.0

SEE ALSO:

## ConnectApi.ProductSearchFacetOutputRepresentation

Product search facet value.

Property Name	Type	Description	Available Version
attributeType	String	Attribute type of the facet value.	59.0
displayName	String	Display name of the facet value.	59.0
displayRank	Integer	Display rank of the facet value.	59.0
displayType	String	Display type of the facet value.	59.0
facetType	String	Type of the facet.	59.0
nameOrId	String	Name or ID of the facet.	59.0
values	List<ConnectApi.ProductSearchFacetValueOutputRepresentation>	A list of facet values for the search.	59.0

## ConnectApi.ProductSearchFacetValueOutputRepresentation

Output representation of a product search facet value.

Property Name	Type	Description	Available Version
displayName	String	Display name of the search facet.	59.0

Property Name	Type	Description	Available Version
nameOrId	<a href="#">String</a>	Unique name or ID of the search facet.	59.0
productCount	<a href="#">Integer</a>	Number of products found with the search facet.	59.0
type	<a href="#">String</a>	Type of the search facet.	59.0

## ConnectApi.ProductSearchImageOutputRepresentation

Output representation of the product search image.

Property Name	Type	Description	Available Version
alternateText	<a href="#">String</a>	Alternate text for the product image.	59.0
mediaType	<a href="#">String</a>	Media type of the product image.	59.0
sortOrder	<a href="#">Integer</a>	Sort order of the product image.	59.0
title	<a href="#">String</a>	Title of the product image.	59.0
url	<a href="#">String</a>	URL of the product image.	59.0

## ConnectApi.ProductSearchOutputRepresentation

Output representation of the product search response

Property Name	Type	Description	Available Version
currencyIsoCode	<a href="#">String</a>	Three-letter ISO 4217 currency code associated with the product.	59.0
facets	<del><a href="#">ConnectApi.ProductSearchOutputRepresentation</a></del>	A list of facet names to filter the search. For example, ["size_medium", "color_red"].	59.0
locale	<a href="#">String</a>	Locale used for the product search.	59.0
pageNumber	<a href="#">Integer</a>	Maximum number of search results pages to return. If you don't specify a value, the default is 1.	59.0
pageSize	<a href="#">Integer</a>	Number of items per page. Valid values are from 1 through 100. If you don't specify a value, the default size is 20.	59.0
products	<del><a href="#">ConnectApi.ProductSearchOutputRepresentation</a></del>	List of products found by the search.	59.0
totalRecordsFound	<a href="#">Integer</a>	Total products found.	59.0

## ConnectApi.ProductSearchProductOutputRepresentation

Product found by a product search.

Property Name	Type	Description	Available Version
description	<a href="#">String</a>	Description of the product.	59.0
image	<a href="#">ConnectApi.TrailingImage</a>	Image of the product.	59.0
name	<a href="#">String</a>	Name of the product.	59.0
productClass	<a href="#">String</a>	Class of the product.	59.0
stockKeepingUnit	<a href="#">String</a>	Stock Keeping Unit (SKU) of the product.	59.0
variationAttributeSet	<a href="#">ConnectApi.VariationAttributeSet</a>	Variation attribute set of the product.	59.0

## ConnectApi.ProductSearchResults

Product search results.

Property Name	Type	Description	Available Version
categories	<a href="#">ConnectApi.SearchCategory</a>	Categories from the search results.	52.0
correlationId	<a href="#">String</a>	Reserved for future use.	55.0
facets	<a href="#">List&lt;ConnectApi.SearchFacet&gt;</a>	Facets from the search results.	52.0
locale	<a href="#">String</a>	Locale of the search results.	52.0
productsPage	<a href="#">ConnectApi.ProductSummaryPage</a>	Page of products from the search results.	52.0

## ConnectApi.ProductSearchSuggestionsResults

Product search suggestions results.

Property Name	Type	Description	Available Version
recentSearch Suggestions	<a href="#">List&lt;ConnectApi.SearchSuggestion&gt;</a>	Suggestions based on the user's recent searches.	52.0

## ConnectApi.ProductSellingModel

Product selling model for Commerce subscriptions.

Property Name	Type	Description	Available Version
description	<a href="#">String</a>	Description of the product selling model displayed on the UI.	60.0

Property Name	Type	Description	Available Version
displayName	String	Name of the product selling model displayed on the UI.	60.0
id	String	ID of the product selling model.	56.0
name	String	Name of the product selling model.	56.0
pricingTerm	Integer	Number of pricing term units in the pricing term. Used with <code>pricingTermUnit</code> to define the length of the pricing term. For example, if <code>pricingTermUnit</code> is <code>Months</code> and this property is 1, the subscription is priced monthly. However, if the <code>sellingModelType</code> property is set to <code>OneTime</code> , the <code>pricingTerm</code> property is empty, because the product isn't sold as a subscription. The only allowed value for this property is 1.	56.0
pricingTermUnit	ConnectApi.PricingTermUnit	Unit of time used to define a pricing term. Value is: <ul style="list-style-type: none"> <li><code>Months</code>—Product is priced on a monthly basis.</li> <li><code>Annual</code>—Product is priced on an annual basis.</li> </ul> This unit of time is combined with a number (specified by the <code>pricingTerm</code> property) to define the full term of the subscription. For example, if the unit of time is <code>Months</code> and the <code>pricingTerm</code> property is set to 1, the subscription is priced monthly. However, if the <code>sellingModelType</code> property is set to <code>OneTime</code> , the <code>pricingTermUnit</code> property is empty, because the product isn't sold as a subscription.	56.0
sellingModelType	ConnectApi.SellingModelType	Type of product selling model. Values are: <ul style="list-style-type: none"> <li><code>Evergreen</code>—A subscription without an end date. An evergreen subscription continues until the shopper affirmatively cancels it.</li> <li><code>OneTime</code>—A product that isn't sold as a subscription.</li> <li><code>TermDefined</code>—A subscription with a defined end date. The subscription continues for a specified time period. When the term ends, the subscription ends.</li> </ul>	56.0
subscriptionTermRule	ConnectApi.SubscriptionTermRule	Rules for the subscription term.	59.0

## ConnectApi.ProductSummary

Product summary.

Property Name	Type	Description	Available Version
defaultImage	<a href="#">ConnectApi.ProductMedia</a>	Default image of the product.	52.0
fields	<a href="#">Map&lt;String, ConnectApi.FieldValue&gt;</a>	Map of fields belonging to the product.	52.0
id	<a href="#">String</a>	ID of the product.	52.0
name	<a href="#">String</a>	Name of the product.	52.0
prices	<a href="#">ConnectApi.PricingResult LineItem</a>	Prices of the product.	52.0
productClass	<a href="#">ConnectApi.ProductClass</a>	Class of product. Values are: <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Set</li> <li>• Simple</li> <li>• Variation</li> <li>• VariationParent</li> </ul>	52.0
productSelling ModelInformation	<a href="#">ConnectApi.CommerceProduct SellingModel</a>	Product selling model information.	59.0
purchaseQuantityRule	<a href="#">ConnectApi.PurchaseQuantity Rule</a>	If one exists, purchase quantity rule for the product.	52.0
urlName	<a href="#">String</a>	SEO-friendly URL name for the product.	59.0
variationAttributeSet	<a href="#">ConnectApi.ProductAttribute SetSummary</a>	Variation attribute set that's associated with the product.	52.0

SEE ALSO:

[ConnectApi.ProductSummaryPage](#)

## ConnectApi.ProductSummaryPage

Page of product summaries.

Property Name	Type	Description	Available Version
currencyIsoCode	<a href="#">String</a>	Three-letter ISO 4217 currency code associated with the product.	52.0
pageSize	<a href="#">Integer</a>	Number of products per page in the search results.	52.0
products	<a href="#">List&lt;ConnectApi.ProductSummary&gt;</a>	Collection of product summaries.	52.0
total	<a href="#">Long</a>	Total number of products in the search results.	52.0

SEE ALSO:

[ConnectApi.ProductSearchResults](#)

## ConnectApi.ProductVariantOutputRepresentation

Details about a product variation.

Property Name	Type	Description	Available Version
listPrice	<a href="#">Double</a>	List price.	55.0
price	<a href="#">Double</a>	Price.	55.0
productId	<a href="#">String</a>	Product ID.	55.0
stockKeepingUnit	<a href="#">String</a>	Stock Keeping Unit.	55.0
unitPrice	<a href="#">Double</a>	Unit price.	55.0
variationValues	<a href="#">Map&lt;String, String&gt;</a>	The variation attribute values that define the variation.	55.0

## ConnectApi.ProductVariationAttributeOutputRepresentation

Details about a product variation attribute.

Property Name	Type	Description	Available Version
apiName	<a href="#">String</a>	API name of the attribute.	55.0
label	<a href="#">String</a>	Label of the attribute.	55.0
variationAttributeValues	<a href="#">List&lt;ConnectApi.ProductVariationAttributeValueOutputRepresentation&gt;</a>	List of valid values for the variation attribute.	55.0

## ConnectApi.ProductVariationAttributeValueOutputRepresentation

Valid value for a product variation attribute.

Property Name	Type	Description	Available Version
name	<a href="#">String</a>	API Name of the attribute this value belongs to.	55.0
orderable	<a href="#">Boolean</a>	Whether the value defines an orderable product variation.	55.0
value	<a href="#">String</a>	Value of the value.	55.0

## ConnectApi.ProductVariationInfo

Product variation attributes, metadata, and mappings of attribute combinations to variation product IDs.

Property Name	Type	Description	Available Version
attributesToProductMappings	<a href="#">List&lt;ConnectApi.ProductAttributesToProductEntry&gt;</a>	List ordered by <code>ProductAttribute.Sequence</code> values that map the attribute value combinations to the variation product ID.	50.0
variationAttributeInfo	<a href="#">Map&lt;String, ConnectApi.ProductAttributeInfo&gt;</a>	Map of field API name to product attribute information.	51.0

SEE ALSO:

[ConnectApi.ProductDetail](#)

## ConnectApi.PromotionCart

A cart, its items, and its adjustment groups.

Property Name	Type	Description	Available Version
cartAdjustmentGroups	<a href="#">ConnectApi.PromotionCartAdjustmentGroup</a>	Cart adjustment groups belonging to the cart.	57.0
cartItems	<a href="#">ConnectApi.PromotionCartItem</a>	Cart items belonging to the cart.	57.0
currencyIsoCode	<a href="#">String</a>	Currency code of the cart.	57.0
id	<a href="#">String</a>	ID of the cart.	57.0
totalAdjustmentBaseAmount	<a href="#">String</a>	Total adjustment base amount for the cart.	57.0
totalNetAmount	<a href="#">String</a>	Total price of the cart, including adjustments.	57.0

Property Name	Type	Description	Available Version
totalProductBaseAmount	String	Total price of all cart items in the cart.	57.0

SEE ALSO:

[ConnectApi.PromotionEvaluation.evaluate\(salesTransaction\)](#)

## ConnectApi.PromotionCartAdjustmentGroup

Adjustment group associated with a cart.

Property Name	Type	Description	Available Version
adjustmentBasisReference	String	ID of the associated coupon, if applicable.	57.0
adjustmentDescription	String	Description of the adjustment.	57.0
adjustmentType	ConnectApi.AdjustmentType	How the price adjustment amount is calculated. Values are: <ul style="list-style-type: none"> <li>AdjustmentAmount—The adjustment is a fixed amount.</li> <li>AdjustmentPercentage—The adjustment is a percentage.</li> </ul>	57.0
adjustmentValue	String	Price value of the adjustment.	57.0
baseAmount	String	Total amount of the adjustment.	57.0
cartId	String	ID of the cart.	57.0
id	String	ID of the cart adjustment group.	57.0
priceAdjustmentCauseId	String	ID of the related promotion.	57.0
priority	Integer	Where in the sequence of adjustments this adjustment was applied.	57.0

SEE ALSO:

[ConnectApi.PromotionCart](#)  
[ConnectApi.PromotionEvaluation.evaluate\(salesTransaction\)](#)

## ConnectApi.PromotionCartItem

A cart item and its adjustments.

Property Name	Type	Description	Available Version
cartDeliveryGroupId	String	ID of the associated cart delivery group.	57.0
cartId	String	ID of the associated cart.	57.0
cartItemPriceAdjustments	<a href="#">ConnectApi.PromotionCartItemPriceAdjustment</a>	List of price adjustments applied to the cart item.	57.0
id	String	ID of the cart item.	57.0
itemDescription	String	Description of the cart item.	57.0
itemName	String	Name of the cart item.	57.0
listPrice	String	Unit list price of the cart item.	57.0
product2Id	String	ID of the product.	57.0
quantity	String	Quantity of the cart item.	57.0
salesPrice	String	Unit sales price of the cart item.	57.0
sku	String	Stock keeping unit of the cart item.	57.0
totalAdjustmentBaseAmount	String	Total adjustment amount for the cart item.	57.0
totalLineBaseAmount	String	Total amount for the cart item, based on sales price and quantity, not including adjustments.	57.0
totalListBaseAmount	String	Total amount for the cart item, based on list price and quantity, not including adjustments.	57.0
totalNetAmount	String	Total amount for the cart item, based on list price and quantity, including adjustments.	57.0
type	<a href="#">ConnectApi.CartItemType</a>	Type of item in a cart. Values are: <ul style="list-style-type: none"> <li>• DeliveryCharge</li> <li>• Product</li> </ul>	57.0

SEE ALSO:

[ConnectApi.PromotionCart](#)

[evaluate\(salesTransaction\)](#)

## ConnectApi.PromotionCartItemPriceAdjustment

Price adjustments applied to a cart item.

Property Name	Type	Description	Available Version
adjustmentAmount Scope	<a href="#">ConnectApi. AdjustmentAmount Scope</a>	Scope of the price adjustment amount. Values are: <ul style="list-style-type: none"> <li><code>Total</code>—The adjustment scope is the total price.</li> <li><code>Unit</code>—The adjustment scope is the unit price.</li> <li><code>UnproratedTotal</code>—The adjustment scope is the unprorated total price.</li> </ul>	57.0
adjustmentBasis Reference	<a href="#">String</a>	ID of the associated coupon, if applicable.	57.0
adjustment Description	<a href="#">String</a>	Description of the adjustment.	57.0
adjustmentTarget Type	<a href="#">ConnectApi. CartPromotionType</a>	Level of the promotion target. Values are: <ul style="list-style-type: none"> <li><code>Cart</code>—The target is cart-level.</li> <li><code>Item</code>—The target is item-level.</li> </ul>	57.0
adjustmentType	<a href="#">ConnectApi. AdjustmentType</a>	How the price adjustment amount is calculated. Values are: <ul style="list-style-type: none"> <li><code>AdjustmentAmount</code>—The adjustment is a fixed amount.</li> <li><code>AdjustmentPercentage</code>—The adjustment is a percentage.</li> </ul>	57.0
adjustmentValue	<a href="#">String</a>	Value of the price adjustment.	57.0
baseAmount	<a href="#">String</a>	Total adjustment amount.	57.0
cartAdjustment GroupId	<a href="#">String</a>	ID of the associated cart adjustment group.	57.0
cartItemId	<a href="#">String</a>	ID of the associated cart item.	57.0
id	<a href="#">String</a>	ID of the cart item price adjustment.	57.0
priceAdjustment CauseId	<a href="#">String</a>	ID of the associated promotion.	57.0

Property Name	Type	Description	Available Version
priority	<a href="#">Integer</a>	Where in the sequence of adjustments this adjustment was applied.	57.0

SEE ALSO:

[ConnectApi.PromotionCartItem](#)  
[ConnectApi.PromotionCart](#)  
[ConnectApi.PromotionEvaluation](#)  
[evaluate\(salesTransaction\)](#)

## ConnectApi.PromotionCoupon

A coupon used in a promotion.

Property Name	Type	Description	Available Version
couponCode	<a href="#">String</a>	Coupon code.	57.0
couponErrorCode	<a href="#">String</a>	Error code returned if the coupon is invalid.	57.0
id	<a href="#">String</a>	ID of the coupon.	57.0
isValidCoupon	<a href="#">Boolean</a>	Indicates whether the coupon is valid ( <code>true</code> ) or invalid ( <code>false</code> ).	57.0

SEE ALSO:

[ConnectApi.PromotionEvaluation](#)  
[evaluate\(salesTransaction\)](#)

## ConnectApi.PromotionEvaluation

Results of a promotion evaluation.

Property Name	Type	Description	Available Version
cart	<a href="#">ConnectApi.PromotionCart</a>	Cart and its items.	57.0
coupons	<a href="#">ConnectApi.PromotionCoupon</a>	List of coupon codes to enable promotions. A customer can apply a maximum of two coupons.	57.0

SEE ALSO:

[evaluate\(salesTransaction\)](#)

## ConnectApi.PurchaseQuantityRule

Rule that restricts the quantity of a product that can be purchased.

Property Name	Type	Description	Available Version
increment	<a href="#">String</a>	Increment value of the quantity that can be purchased.	52.0
maximum	<a href="#">String</a>	Maximum quantity that can be purchased.	52.0
minimum	<a href="#">String</a>	Minimum quantity that can be purchased.	52.0

SEE ALSO:

## ConnectApi.QuestionAndAnswersCapability

If a feed element has this capability, it has a question and comments on the feed element are answers to the question.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
bestAnswer	<a href="#">ConnectApi.Comment</a>	Comment selected as the best answer for the question.	32.0
bestAnswerSelectedBy	<a href="#">ConnectApi.UserSummary</a>	User who selected the best answer for the question.	32.0
canCurrentUserSelectOrRemoveBestAnswer	<a href="#">Boolean</a>	Indicates whether the context user can select or remove a best answer ( <a href="#">true</a> ) or not ( <a href="#">false</a> ).	32.0
candidateAnswers	<a href="#">ConnectApi.CandidateAnswersStatus</a>	Status of candidate answers for the question.	41.0
escalatedCase	<a href="#">ConnectApi.Reference</a>	If a question post is escalated, this is the case to which it was escalated.	33.0
questionTitle	<a href="#">String</a>	Title for the question.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.QuestionAndAnswersSuggestions

Question and answers suggestions.

Property Name	Type	Description	Available Version
articles	<a href="#">List&lt;ConnectApi.ArticleItem&gt;</a>	List of articles.	32.0

Property Name	Type	Description	Available Version
questions	List<ConnectApi.FeedElement>	List of questions.	32.0

## ConnectApi.RankAverageDistanceOutputRepresentation

The results of calculating the average distances from sets of inventory locations to an order recipient.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
distanceUnit	String	The specified unit of distance (miles or kilometers).	51.0
results	List<ConnectApi.AverageDistanceResultOutputRepresentation>	The results of the shipping distance calculations.	51.0

## ConnectApi.ReadBy

Information about who read the feed element and when.

Property Name	Type	Description	Available Version
lastReadDateByUser	Datetime	When the user last read the feed element in ISO 8601 format.	40.0
user	ConnectApi.UserSummary	Information about the user who read the feed element.	40.0

SEE ALSO:

[ConnectApi.ReadByPage](#)

## ConnectApi.ReadByCapability

If a feed element has this capability, the context user can mark it as read.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
isReadByMe	Boolean	Specifies whether the feed element has been read ( <code>true</code> ) or not ( <code>false</code> ) by the context user.	40.0
lastReadDateByMe	Datetime	Last date when the feed element was marked read for the context user in ISO 8601 format. Otherwise, <code>null</code> .	40.0

Property Name	Type	Description	Available Version
page	<a href="#">ConnectApi.ReadByPage</a>	First page of information about who read the feed element and when.	40.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.ReadByPage

A collection of information about who read the feed element and when.

Property Name	Type	Description	Available Version
currentPageToken	<a href="#">String</a>	Token identifying the current page.	40.0
currentPageUrl	<a href="#">String</a>	Connect REST API URL identifying the current page. The default is 25 items per page.	40.0
items	<a href="#">List&lt;ConnectApi.ReadBy&gt;</a>	Collection of read-by information, including users and when they last read the feed element.	40.0
nextPageToken	<a href="#">String</a>	Token identifying the next page, or <code>null</code> if there isn't a next page.	40.0
nextPageUrl	<a href="#">String</a>	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	40.0
previousPageToken	<a href="#">String</a>	Reserved for future use.	40.0
previousPageUrl	<a href="#">String</a>	Reserved for future use.	40.0
total	<a href="#">Integer</a>	Total number of users who read the feed element.  <b>Note:</b> This count appears in the UI under feed posts in private and unlisted Chatter groups as the "seen by" number, for example, "Seen by 48."	40.0

## ConnectApi.Recommendation

A Next Best Action recommendation object.

Property Name	Type	Description	Available Version
acceptanceLabel	<a href="#">String</a>	Text indicating user acceptance of the recommendation.	45.0

Property Name	Type	Description	Available Version
actionReference	String	Reference to the action to perform, for example, launching a flow.	45.0
description	String	Description of the recommendation.	45.0
externalId	String	External ID of the recommendation. This ID doesn't need to be a Salesforce 18-character ID. For example, it can be a product number from an external system.	46.0
id	String	ID of the recommendation.	45.0
image	ConnectApi.FileAsset	Image to display.	45.0
name	String	Name of the recommendation.	45.0
rejectionLabel	String	Text indicating user rejection of the recommendation.	45.0
url	String	URL to the recommendation.	45.0

## ConnectApi.RecommendationAudience

A custom recommendation audience.

Property Name	Type	Description	Available Version
criteria	ConnectApi.AudienceCriteria	The criteria for the custom recommendation audience type.	36.0
id	String	18-character ID of the custom recommendation audience.	35.0
memberCount	Integer	 <b>Important:</b> This property is available only in version 35.0. In version 36.0 and later, this property is available in <a href="#">ConnectApi.CustomListAudienceCriteria</a> . Number of members in the custom recommendation audience.	35.0 only
members	ConnectApi.UserReferencePage	 <b>Important:</b> This property is available only in version 35.0. In version 36.0 and later, this property is available in <a href="#">ConnectApi.CustomListAudienceCriteria</a> . Members of the custom recommendation audience.	35.0 only
modifiedBy	ConnectApi.User	User who last modified the custom recommendation audience.	36.0
modifiedDate	Datetime	ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.	36.0

Property Name	Type	Description	Available Version
name	<a href="#">String</a>	Name of the custom recommendation audience.	35.0
url	<a href="#">String</a>	URL to the custom recommendation audience.	35.0

SEE ALSO:

[ConnectApi.RecommendationAudiencePage](#)

## ConnectApi.RecommendationAudiencePage

A list of custom recommendation audiences.

Property Name	Type	Description	Available Version
audienceCount	<a href="#">Integer</a>	The total number of custom recommendation audiences.	35.0
currentPageUrl	<a href="#">String</a>	URL to the current page.	35.0
nextPageUrl	<a href="#">String</a>	URL to the next page.	35.0
previousPageUrl	<a href="#">String</a>	URL to the previous page.	35.0
recommendationAudiences	<a href="#">List&lt;ConnectApi.RecommendationAudience&gt;</a>	A list of custom recommendation audiences.	35.0

## ConnectApi.RecommendationCollection

A list of Chatter, custom, and static recommendations.

Property Name	Type	Description	Available Version
recommendations	<a href="#">List&lt;ConnectApi.AbstractRecommendation&gt;</a>	Collection of Chatter, custom, and static recommendations.	33.0

## ConnectApi.RecommendationDefinition

Represents a custom recommendation definition.

Property Name	Type	Description	Available Version
actionUrl	<a href="#">String</a>	The URL for acting on this custom recommendation.	35.0
actionUrlName	<a href="#">String</a>	The text label for the action URL in the user interface.	35.0
explanation	<a href="#">String</a>	Explanation of the custom recommendation definition.	35.0

Property Name	Type	Description	Available Version
id	<a href="#">String</a>	18-character ID of the custom recommendation definition.	35.0
name	<a href="#">String</a>	Name of the custom recommendation definition. The name is displayed in Setup.	35.0
photo	<a href="#">ConnectApi.Photo</a>	Photo of the custom recommendation definition.	35.0
title	<a href="#">String</a>	Title of the custom recommendation definition.	35.0
url	<a href="#">String</a>	URL to the Connect REST API resource for the custom recommendation definition.	35.0

SEE ALSO:

[ConnectApi.RecommendationDefinitionPage](#)

[ConnectApi.ScheduledRecommendation](#)

## ConnectApi.RecommendationDefinitionPage

A list of custom recommendation definitions.

Property Name	Type	Description	Available Version
recommendationDefinitions	<a href="#">List&lt;ConnectApi.RecommendationDefinition&gt;</a>	A list of custom recommendation definitions.	35.0
url	<a href="#">String</a>	URL to the Connect REST API resource for the recommendation definition collection.	35.0

## ConnectApi.RecommendationExplanation

Explanation for a Chatter recommendation.

Subclass of [ConnectApi.AbstractRecommendationExplanation](#).

Property Name	Type	Description	Available Version
detailsUrl	<a href="#">String</a>	URL to explanation details or <code>null</code> if the Chatter recommendation doesn't have a detailed explanation.	32.0

SEE ALSO:

[ConnectApi.AbstractRecommendation](#)

## ConnectApi.RecommendationReaction

A reaction to a recommendation produced by a recommendation strategy

Property Name	Type	Description	Available Version
aiModel	String	Reserved for future use.	47.0
contextRecord	<a href="#">ConnectApi.Reference</a>	Reference to the context record.	45.0
createdBy	<a href="#">ConnectApi.Reference</a>	Reference to the reaction creator.	45.0
createdDate	Datetime	Reaction creation date.	45.0
externalId	String	External target ID of the recommendation reacted on. This ID doesn't need to be a Salesforce 18-character ID. For example, it can be a product number from an external system.	46.0
id	String	Reaction record ID.	45.0
onBehalfOf	<a href="#">ConnectApi.Reference</a>	Reference to the user or record that is indirectly reacting to the recommendation.	45.0
reactionType	<a href="#">ConnectApi.RecommendationReactionType</a>	Type of reaction to a recommendation. Values are: <ul style="list-style-type: none"> <li>Accepted</li> <li>Rejected</li> </ul>	45.0
recommendationMode	String	Reserved for future use.	46.0
recommendationScore	Double	Reserved for future use.	46.0
strategy	<a href="#">ConnectApi.RecordSnapshot</a>	Strategy that recommended the target record.	45.0
targetAction	<a href="#">ConnectApi.RecordSnapshot</a>	Target action that is recommended.	45.0
targetRecord	<a href="#">ConnectApi.Reference</a>	Reference to the target record.	45.0
url	String	URL to the recommendation reaction.	45.0

SEE ALSO:

[ConnectApi.RecommendationReactions](#)

## ConnectApi.RecommendationReactions

A list of recommendation reactions.

Property Name	Type	Description	Available Version
currentPageUrl	String	URL to the current page of reactions in the collection.	45.0

Property Name	Type	Description	Available Version
nextPageUrl	String	URL to the next page of reactions in the collection.	45.0
reactions	List<ConnectApi.RecommendationReaction>	Collection of recommendation reactions.	45.0

## ConnectApi.RecommendationsCapability

If a feed element has this capability, it has a recommendation.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
items	List<ConnectApi.AbstractRecommendation>	A list of recommendations.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.RecommendedObject

A recommended object, such as a custom or static recommendation.

Subclass of [ConnectApi.Actor](#)

Property Name	Type	Description	Available Version
idOrEnum	String	ID of a recommendation definition for a custom recommendation or the enum value <code>Today</code> for static recommendations that don't have an ID (version 35.0 and later).	34.0
motif	ConnectApi.Motif	Motif of the recommended object.	34.0

## ConnectApi.RecordCapability

If a comment has this capability, it has a record attachment.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
recordId	String	ID of the record.	42.0
url	String	URL to the record.	42.0

## ConnectApi.RecordField

Generic record field containing a label and text value.

Subclass of [ConnectApi.LabeledRecordField](#).

No additional properties.

SEE ALSO:

- [ConnectApi.CompoundRecordField](#)
- [ConnectApi.OrderItemSummary](#)
- [ConnectApi.OrderItemSummaryProduct](#)
- [ConnectApi.OrderDeliveryGroupSummary](#)
- [ConnectApi.OrderSummaryRepresentation](#)

## ConnectApi.RecordSnapshot

A record snapshot in a recommendation reaction.

Property Name	Type	Description	Available Version
id	<a href="#">String</a>	ID of the record.	45.0
nameAtSnapshot	<a href="#">String</a>	Name of the record when the ID was recorded.	45.0

SEE ALSO:

- [ConnectApi.RecommendationReaction](#)

## ConnectApi.RecordSnapshotCapability

If a feed element has this capability, it contains all the snapshotted fields of a record for a single create record event.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
recordView	<a href="#">ConnectApi.RecordView</a>	A record representation that includes metadata and data so you can display the record easily.	32.0

SEE ALSO:

- [ConnectApi.FeedElementCapabilities](#)

## ConnectApi.RecordSummary

Record summary.

Subclass of [ConnectApi.AbstractRecordView](#).

Property Name	Type	Description	Available Version
entityLabel	<a href="#">ConnectApi.EntityLabel</a>	Label of the record's entity.	40.0

SEE ALSO:

[ConnectApi.EmailAddress](#)

[ConnectApi.EmailAttachment](#)

[ConnectApi.ReferenceRecordField](#)

[ConnectApi.ReferenceWithDateRecordField](#)

## ConnectApi.RecordSummaryList

Summary information about a list of records in the organization including custom objects.

Name	Type	Description	Available Version
records	<a href="#">List&lt;ConnectApi.ActorWithId&gt;</a>	A list of records.	30.0
url	<a href="#">String</a>	The URL to this list of records.	30.0

## ConnectApi.RecordView

A view of any record in the org, including a custom object record. This object is used if a specialized object, such as User or ChatterGroup, isn't available for the record type.

Subclass of [ConnectApi.AbstractRecordView](#).

Name	Type	Description	Available Version
sections	<a href="#">List&lt;ConnectApi.RecordViewSection&gt;</a>	List of record view sections.	29.0

SEE ALSO:

[ConnectApi.RecordSnapshotCapability](#)

## ConnectApi.RecordViewSection

Section of record fields and values on a record detail.

Name	Type	Description	Available Version
columnCount	<a href="#">Integer</a>	Number of columns to use to lay out the fields in a record section.	29.0

Name	Type	Description	Available Version
columnOrder	ConnectApi. RecordColumnOrder Enum	Order of the fields to use in the <code>fields</code> property to lay out the fields in a record section. <ul style="list-style-type: none"> <li>• <code>LeftRight</code>—Fields are rendered from left to right.</li> <li>• <code>TopDown</code>—Fields are rendered from the top down.</li> </ul>	29.0
fields	ConnectApi. Abstract RecordField	Fields and values for the record contained in this section.	29.0
heading	String	Localized label to display when rendering this section of fields.	29.0
isCollapsible	Boolean	Indicates whether the section can be collapsed to hide all the fields ( <code>true</code> ) or not ( <code>false</code> ).	29.0

SEE ALSO:

[ConnectApi.RecordView](#)

## ConnectApi.RecordsetFilterCriteriaCollection

List of the recordset filters and records.

Property Name	Type	Description	Available Version
recordsetFilters	List<ConnectApi. RecordsetFilterCriteria>	Collection of recordset filter criteria IDs and filtered record IDs.	53.0

## ConnectApi.RecordsetFilterCriteria

Recordset filter criteria and the filtered records.

Property Name	Type	Description	Available Version
criteriaId	String	Recordset filter criteria ID.	53.0
recordIds	List<String>	List of filtered record IDs.	53.0

SEE ALSO:

[ConnectApi.RecordsetFilterCriteriaCollection](#)

## ConnectApi.RegisterGuestBuyerOutputRepresentation

Indicates success or failure of a register guest buyer action.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
errors	List<ConnectApi. ErrorResponse>	Any errors that were returned.	48.0
success	Boolean	Indicates whether the transaction was successful.	48.0

## ConnectApi.Reference

Reference to a record.

Name	Type	Description	Available Version
id	String	The ID of the record being referenced, which could be an 18-character ID or some other string identifier.	28.0
url	String	The URL to the resource endpoint.	28.0

## ConnectApi.ReferenceRecordField

Record field with a label and text value.

Subclass of [ConnectApi.LabeledRecordField](#).

Name	Type	Description	Available Version
reference	ConnectApi. RecordSummary	Object referenced by the record field.	29.0

## ConnectApi.ReferencedRefundResponse

Refund comprehensive output.

Property Name	Type	Description	Available Version
error	ConnectApi. ErrorResponse	Error response representation for the refund.	50.0
gatewayResponse	ConnectApi. RefundGatewayResponse	Gateway response received for the processed refund request.	50.0
paymentGatewayLogs	List<ConnectApi. GatewayLogResponse>	Gateway log collection representation for the refund.	50.0
paymentGroup	ConnectApi. PaymentGroupResponse	Payment group associated with the refund.	50.0
refund	ConnectApi. RefundResponse	Refund response representation.	50.0

## ConnectApi.ReferenceWithDateRecordField

Record field containing a referenced object that acted at a specific time, for example, "Created By..."

Subclass of [ConnectApi.LabeledRecordField](#).

Name	Type	Description	Available Version
dateValue	<a href="#">Datetime</a>	Time at which the referenced object acted.	29.0
reference	<a href="#">ConnectApi.RecordSummary</a>	Object referenced by the record field.	29.0

## ConnectApi.RefundGatewayResponse

Refund gateway response.

Subclass of [ConnectApi.AbstractGatewayResponse](#).

No additional properties.

## ConnectApi.RefundResponse

Refund output.

Property Name	Type	Description	Available Version
accountId	<a href="#">String</a>	ID of the account related to the refund record.	50.0
amount	<a href="#">Double</a>	Total amount of the refund transaction performed in the payment request.	50.0
currencyIsoCode	<a href="#">String</a>	Three-letter ISO 4217 currency code associated with the payment group record.	50.0
effectiveDate	<a href="#">Datetime</a>	Date that the refund becomes effective.	50.0
id	<a href="#">String</a>	ID of the refund record.	50.0
refundNumber	<a href="#">String</a>	Number of the refund record that was created as a result of the request processing.	50.0
requestDate	<a href="#">Datetime</a>	Date when the refund occurred.	50.0
status	<a href="#">String</a>	Indicates the results of processing the refund transaction in the gateway. Can be DRAFT, PROCESSED or CANCELLED.	50.0

## ConnectApi.RelatedFeedPost

This class is abstract.

Subclass of [ConnectApi.ActorWithId](#).

Superclass of: [ConnectApi.RelatedQuestion](#).

Property Name	Type	Description	Available Version
score	<a href="#">Double</a>	Score of the related feed post that indicates how closely related it is to the context feed post.	37.0
title	<a href="#">String</a>	Title of the related feed post.	37.0

SEE ALSO:

[ConnectApi.RelatedFeedPosts](#)

## ConnectApi.RelatedFeedPosts

A collection of related feed posts.

Property Name	Type	Description	Available Version
relatedFeedPosts	<a href="#">List&lt;ConnectApi.RelatedFeedPost&gt;</a>	Collection of related feed posts.	37.0

## ConnectApi.RelatedQuestion

A related question.

Subclass of [ConnectApi.RelatedFeedPost](#).

Property Name	Type	Description	Available Version
hasBestAnswer	<a href="#">Boolean</a>	Indicates whether the question has a best answer.	37.0
interactions	<a href="#">ConnectApi.InteractionsCapability</a>	The number of individual views, likes, and comments on a question.	38.0

## ConnectApi.ReleaseHeldFOCapacityOutputRepresentation

Response to a request to confirm held fulfillment order capacity at one or more locations. Can correspond to one action call.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
releaseHeldFOCapacityResponses	<a href="#">List&lt;ConnectApi.ReleaseHeldFOCapacityResponseOutputRepresentation&gt;</a>	List of responses to the requests to confirm held fulfillment order capacity at one or more locations.	55.0

## ConnectApi.ReleaseHeldFOCapacityResponseOutputRepresentation

Response to a request to release held fulfillment order capacity at one or more locations.

Property Name	Type	Description	Available Version
capacityResponses	<a href="#">List&lt;ConnectApi.CapacityResponseOutputRepresentation&gt;</a>	List of responses to the requests to release held fulfillment order capacity at individual locations.	55.0

## ConnectApi.ReplyIntent

Reply intent for a social post.

Property Name	Type	Description	Available Version
managedSocialAccount	<a href="#">ConnectApi.ManagedSocialAccount</a>	Managed social account that replies to the social post.	45.0

SEE ALSO:

[ConnectApi.ReplyIntents](#)

## ConnectApi.ReplyIntents

List of reply intents for a social post.

Property Name	Type	Description	Available Version
replies	<a href="#">List&lt;ConnectApi.ReplyIntent&gt;</a>	List of reply intents for the social post.	45.0

SEE ALSO:

[ConnectApi.SocialPostIntents](#)

## ConnectApi.RepositoryFileDetail

A detailed description of a repository file.

Subclass of [ConnectApi.AbstractRepositoryFile](#).

No additional properties.

## ConnectApi.RepositoryFileSummary

A summary of a repository file.

Subclass of [ConnectApi.AbstractRepositoryFile](#).

No additional properties.

SEE ALSO:

[ConnectApi.RepositoryFolderItem](#)

## ConnectApi.RepositoryFolderDetail

A detailed description of a repository folder.

Subclass of [ConnectApi.AbstractRepositoryFolder](#).

No additional properties.

## ConnectApi.RepositoryFolderItem

A folder item.

Property Name	Type	Description	Available Version
file	<a href="#">ConnectApi.RepositoryFileSummary</a>	If the folder item is a file, the file summary. If the folder item is a folder, <code>null</code> .	39.0
folder	<a href="#">ConnectApi.RepositoryFolderSummary</a>	If the folder item is a folder, the folder summary. If the folder item is a file, <code>null</code> .	39.0
type	<a href="#">ConnectApi.FolderItemType</a>	Type of item in a folder. Values are: <ul style="list-style-type: none"> <li>file</li> <li>folder</li> </ul>	39.0

SEE ALSO:

[ConnectApi.RepositoryFolderItemsCollection](#)

## ConnectApi.RepositoryFolderItemsCollection

A collection of repository folder items.

Property Name	Type	Description	Available Version
currentPageUrl	<a href="#">String</a>	URL to the current page of items.	39.0
items	<a href="#">List&lt;ConnectApi.RepositoryFolderItem&gt;</a>	Collection of items in a repository folder.	39.0
nextPageUrl	<a href="#">String</a>	URL to the next page of items, or <code>null</code> if there isn't a next page.	39.0
previousPageUrl	<a href="#">String</a>	URL to the previous page of items, or <code>null</code> if there isn't a previous page.	39.0

## ConnectApi.RepositoryFolderSummary

A summary of a repository folder.

Subclass of [ConnectApi.AbstractRepositoryFolder](#).

No additional properties.

SEE ALSO:

[ConnectApi.RepositoryFolderItem](#)

## ConnectApi.RepositoryGroupSummary

A group summary.

Subclass of [ConnectApi.AbstractDirectoryEntrySummary](#).

Property Name	Type	Description	Available Version
groupType	<a href="#">ConnectApi.ContentHubGroupType</a>	Type of group. Values are: <ul style="list-style-type: none"> <li>Everybody—Group is public to everybody.</li> <li>EverybodyInDomain—Group is public to everybody in the same domain.</li> <li>Unknown—Group type is unknown.</li> </ul>	39.0
name	<a href="#">String</a>	Name of the group.	39.0

SEE ALSO:

[ConnectApi.ExternalFilePermissionInformation](#)

## ConnectApi.RepositoryUserSummary

A user summary.

Subclass of [ConnectApi.AbstractDirectoryEntrySummary](#).

Property Name	Type	Description	Available Version
firstName	<a href="#">String</a>	First name of the user.	39.0
lastName	<a href="#">String</a>	Last name of the user.	39.0

## ConnectApi.Reputation

Reputation for a user.

Property Name	Type	Description	Available Version
reputationLevel	<a href="#">ConnectApi.ReputationLevel</a>	User's reputation level.	32.0
reputationPoints	<a href="#">Double</a>	User's reputation points, which can be earned by performing different activities.	32.0

Property Name	Type	Description	Available Version
url	String	Connect REST API URL to the reputation.	32.0

SEE ALSO:

[ConnectApi.User](#)

## ConnectApi.ReputationLevel

Reputation level for a user.

Property Name	Type	Description	Available Version
levelImageUrl	String	URL to the reputation level image.	32.0
levelName	String	Name of the reputation level.	32.0
levelNumber	Integer	Reputation level number, which is the numerical rank of the level, with the lowest level at 1. Administrators define the reputation level point ranges.	32.0

SEE ALSO:

[ConnectApi.Reputation](#)

## ConnectApi.RequestHeader

An HTTP request header name and value pair.

Property Name	Type	Description	Available Version
name	String	The name of the request header.	33.0
value	String	The value of the request header.	33.0

SEE ALSO:

[ConnectApi.ActionLinkDefinition](#)

## ConnectApi.ResourceLinkSegment

Resource link segment.

Name	Type	Description	Available Version
url	String	URL to a resource not otherwise identified by an ID field, for example, a link to a list of users.	28.0

## ConnectApi.ReturnItemsOutputRepresentation

Output of Return Items. Includes the ID of the generated change order for items and delivery charges being returned, as well as the ID of the generated change order for any charged return fees. Also includes information about any ReturnOrderLineItems that were created to represent remaining return quantities.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
changeOrderId	<a href="#">String</a>	ID of the change order created by processing the ReturnOrderLineItems representing returned items and delivery charges. Use this change order to create a credit memo.	52.0
feeChangeOrderId	<a href="#">String</a>	ID of the change order created by processing the ReturnOrderLineItems representing return fees. Use this change order to create an invoice.	56.0
returnLineItem Splits	<a href="#">List&lt;ConnectApi.ReturnOrderItemSplitLineOutputRepresentation&gt;</a>	List of properties representing any remaining quantities from partial returns processed by this call. It includes order items, delivery charges, and return fees. Each element of the list includes the ID of a split ReturnOrderLineItem and the ID of the partially processed ReturnOrderLineItem whose remaining quantity it holds.	52.0

SEE ALSO:

[returnItems\(returnOrderId, returnItemsInput\)](#)

## ConnectApi.ReturnOrderItemSplitLineOutputRepresentation

After a change order is created for a ReturnOrderLineItem, that ReturnOrderLineItem is read-only. If the Return Items API is used to return a partial quantity, it creates a new "split" ReturnOrderLineItem to hold the remaining quantity to be returned. In that case, it returns this output property, which contains the IDs of the original and split ReturnOrderLineItems.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
newReturnOrderItemId	<a href="#">String</a>	ID of the new ReturnOrderLineItem that holds the remaining return quantity.	52.0
original ReturnOrderItemId	<a href="#">String</a>	ID of the original ReturnOrderLineItem.	52.0

SEE ALSO:

[ConnectApi.ReturnItemsOutputRepresentation](#)  
[returnItems\(returnOrderId, returnItemsInput\)](#)

## ConnectApi.ReturnOrderOutputRepresentation

ID of the created ReturnOrder.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
returnOrderId	String	ID of the created ReturnOrder.	50.0

SEE ALSO:

[createReturnOrder\(returnOrderInput\)](#)

## ConnectApi.SaleResponse

Payment sale response.

Property Name	Type	Description	Available Version
error	<a href="#">ConnectApi.ErrorResponse</a>	Error representation for the payment sale.	54.0
gatewayResponse	<a href="#">ConnectApi.SaleGatewayResponse</a>	Information from the payment gateway following the sale request.	54.0
payment	<a href="#">ConnectApi.PaymentResponse</a>	Information about the payment used in the sale request.	54.0
paymentGatewayLogs	<a href="#">List&lt;ConnectApi.GatewayLogResponse&gt;</a>	Collection of responses from the gateway following the sale request.	54.0
paymentGroup	<a href="#">ConnectApi.PaymentGroupResponse</a>	Payment group used in the sale request.	54.0
paymentMethod	<a href="#">ConnectApi.PaymentMethodResponse</a>	Payment method used in the sale request.	54.0

## ConnectApi.SaleGatewayResponse

Sale gateway response.

Subclass of [ConnectApi.AbstractGatewayResponse](#).

No additional properties.

## ConnectApi.ScheduledRecommendation

Represents a scheduled custom recommendation.

Property Name	Type	Description	Available Version
channel	<a href="#">ConnectApi.RecommendationChannel</a>	<p>A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:</p> <ul style="list-style-type: none"> <li>• <code>CustomChannel1</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.</li> <li>• <code>CustomChannel2</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li>• <code>CustomChannel3</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li>• <code>CustomChannel4</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li>• <code>CustomChannel5</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li>• <code>DefaultChannel</code>—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.</li> </ul>	36.0
enabled	<a href="#">Boolean</a>	Indicates whether scheduling is enabled. If <code>true</code> , the custom recommendation is enabled and appears in Experience Cloud sites. If <code>false</code> , custom recommendations in feeds in Salesforce mobile web aren't removed, but no new custom recommendations appear. In Customer Service and Partner Central sites, disabled custom recommendations no longer appear.	35.0
id	<a href="#">String</a>	18-character ID of the scheduled custom recommendation.	35.0

Property Name	Type	Description	Available Version
rank	<a href="#">Integer</a>	The rank determining the order of this scheduled custom recommendation.	35.0
recommendation AudienceId	<a href="#">String</a>	ID of the audience for the scheduled custom recommendation.	35.0
recommendation Definition Representation	<a href="#">ConnectApi. Recommendation Definition</a>	Custom recommendation definition that this scheduled recommendation schedules.	35.0
url	<a href="#">String</a>	URL to the Connect REST API resource for the scheduled custom recommendation.	35.0

SEE ALSO:

[ConnectApi.ScheduledRecommendationPage](#)

## ConnectApi.ScheduledRecommendationPage

A list of scheduled custom recommendations.

Property Name	Type	Description	Available Version
scheduled Recommendations	<a href="#">List&lt;ConnectApi. Scheduled Recommendation&gt;</a>	A list of scheduled custom recommendations.	35.0
url	<a href="#">String</a>	URL to the Connect REST API resource for the scheduled custom recommendation collection.	35.0

## ConnectApi.Scope

Scope information for a target.

Property Name	Type	Description	Available Version
name	<a href="#">String</a>	Name of the scope for the target.	48.0–49.0
value	<a href="#">String</a>	Value of the scope for the target.	48.0–49.0

SEE ALSO:

[ConnectApi.Target](#)

## ConnectApi.SearchCategory

Search category.

Property Name	Type	Description	Available Version
category	<a href="#">ConnectApi.ProductCategoryData</a>	Information about the category.	52.0
children	<a href="#">List&lt;ConnectApi.SearchCategory&gt;</a>	First-level child categories of the category searched with non-empty search results.	52.0
productCount	Long	Number of products in the search results that belong to the category.	52.0

SEE ALSO:

[ConnectApi.ProductSearchResults](#)

## ConnectApi.SearchFacet

Search facet.

This class is abstract and is a superclass of [ConnectApi.DistinctValueSearchFacet](#).

Property Name	Type	Description	Available Version
attributeType	<a href="#">ConnectApi.CommerceSearchAttributeType</a>	Search attribute type. Values are: <ul style="list-style-type: none"> <li>• Custom</li> <li>• ProductAttribute</li> <li>• ProductCategory</li> <li>• Product2</li> <li>• Standard</li> </ul>	52.0
displayName	String	Display name of the facet.	52.0
displayRank	Integer	Display rank of the facet. Valid values are from 1 through 50.	52.0
displayType	<a href="#">ConnectApi.CommerceSearchFacetDisplayType</a>	Display type of the facet. Values are: <ul style="list-style-type: none"> <li>• CategoryTree</li> <li>• DatePicker</li> <li>• MultiSelect</li> <li>• SingleSelect</li> </ul>	52.0
facetType	<a href="#">ConnectApi.CommerceSearchFacetType</a>	Search facet type. Value is: <ul style="list-style-type: none"> <li>• DistinctValue</li> </ul>	52.0

Property Name	Type	Description	Available Version
nameOrId	<a href="#">String</a>	Developer name of the attribute. In version 52.0 and later, the ID of the attribute isn't supported.	52.0

SEE ALSO:

[ConnectApi.ProductSearchResults](#)

## ConnectApi.SearchSuggestion

Search suggestion.

Property Name	Type	Description	Available Version
value	<a href="#">String</a>	Search suggestion.	52.0

SEE ALSO:

[ConnectApi.ProductSearchSuggestionsResults](#)

## ConnectApi.ServiceAppointmentOutput

Output of the create service appointment request.

Property Name	Type	Description	Available Version
result	<a href="#">ConnectApi.ServiceAppointmentResult</a>	Result of the create or update service appointment request.	53.0

## ConnectApi.ServiceAppointmentResult

Contains result of the service appointment.

Property Name	Type	Description	Available Version
assignedResourceIds	<a href="#">List&lt;String&gt;</a>	The IDs of the assigned resources.	53.0
parentRecordId	<a href="#">String</a>	The ID of the parent record.	53.0
serviceAppointmentId	<a href="#">String</a>	The ID of the service appointment record.	53.0

## ConnectApi.ShiftsFromPattern

Shifts created from a pattern.

Property Name	Type	Description	Available Version
count	<a href="#">Integer</a>	Total count of created shifts.	51.0

Property Name	Type	Description	Available Version
error	<a href="#">ConnectApi.ShiftsFromPatternError</a>	Error details for shifts from a pattern.	53.0
isSuccess	Boolean	Indicates if the request is successful ( <code>true</code> ) or not ( <code>false</code> ).	53.0
recordIds	List<String>	Collection of created shift IDs.	51.0

## ConnectApi.ShiftsFromPatternError

Shifts from pattern error response.

Property Name	Type	Description	Available Version
code	String	Error code.	53.0
invalidServiceResourceId	String	ID of invalid service resource.	53.0
message	String	Error message.	53.0

## ConnectApi.SiteSearchItem

Site search result item.

Property Name	Type	Description	Available Version
contentReference	String	Content reference field, which is the route developer name for a site page or a content key for a content detail page.	54.0
contentTypeDeveloperName	String	Developer name of the content type of the site search result item.	54.0
highlightedSnippet	String	Text snippet that contains the query term.	54.0
id	String	ID of the site search result item.	54.0
pageType	<a href="#">ConnectApi.SitesPageType</a>	Type of site search result item. Values are: <ul style="list-style-type: none"> <li>• <code>ContentPage</code></li> <li>• <code>SitePage</code></li> </ul>	54.0
title	String	Title of the site search result item.	54.0

SEE ALSO:

[ConnectApi.SiteSearchResult](#)

## ConnectApi.SiteSearchResult

Site search result.

Property Name	Type	Description	Available Version
currentPageToken	String	Token for the current page of search results.	54.0
currentPageUrl	String	URL to the current page of search results.	54.0
items	List<ConnectApi.SiteSearchItem>	Collection of search result items.	54.0
language	String	Language of the search results.	54.0
nextPageToken	String	Token for the next page of search results.	54.0
nextPageUrl	String	URL to the next page of search results, or <code>null</code> if there isn't a next page.	54.0
pageSize	Integer	Number of items per page in search results.	54.0
previousPageToken	String	Token for the previous page of search results.	54.0
previousPageUrl	String	URL to the previous page of search results, or <code>null</code> if there isn't a previous page.	54.0
totalItems	Integer	Total number of items in the search results across all pages.	54.0

## ConnectApi.SocialAccount

A social account on a social network.

Property Name	Type	Description	Available Version
externalSocialAccountId	String	ID of the external social account, if available.	38.0
handle	String	Social handle, screen name, or alias that identifies this account.	36.0
name	String	Name of the account as defined by the account's owner.	36.0
profileUrl	String	URL to the account's profile.	36.0
socialPersonaId	String	ID of the social persona account, if the external social account ID isn't available.	39.0

SEE ALSO:

[ConnectApi.SocialPostCapability](#)

## ConnectApi.SocialAccountRelationship

Follow relationship between a managed social account and a social persona.

Property Name	Type	Description	Available Version
isFollowed	Boolean	Specifies whether the social account is followed by the social persona.	46.0
isFollowing	Boolean	Specifies whether the social account is following the social persona.	46.0
socialAccountId	String	ID of the social account.	46.0
socialPersonaId	String	ID of the social persona.	46.0

## ConnectApi.SocialPostCapability

If a feed element has this capability, it can interact with a social post on a social network.

Subclass of [ConnectApi.FeedElementCapabilities](#).

Property Name	Type	Description	Available Version
author	<a href="#">ConnectApi.SocialAccount</a>	Social account that authored the social post.	36.0
content	String	Content body of the social post.	36.0
deletedBy	<a href="#">ConnectApi.UserSummary</a>	User who deleted the social post.	38.0
hiddenBy	<a href="#">ConnectApi.UserSummary</a>	User who hid the social post.	41.0
icon	<a href="#">ConnectApi.Icon</a>	Icon of the social network.	36.0
id	String	ID associated with the social post Salesforce record.	36.0
isOutbound	Boolean	If <code>true</code> , the social post originated from the Salesforce application.	36.0
likedBy	String	External social account who liked the social post.	40.0
messageType	<a href="#">ConnectApi.SocialPostMessageType</a>	Message type of the social post. Values are: <ul style="list-style-type: none"> <li>• Comment</li> <li>• Direct</li> <li>• Post</li> <li>• PrivateMessage</li> <li>• Reply</li> <li>• Retweet</li> <li>• Tweet</li> </ul>	38.0
name	String	Title or heading of the social post.	36.0
postUrl	String	External URL to the social post on the social network.	36.0

Property Name	Type	Description	Available Version
provider	<a href="#">ConnectApi.SocialNetworkProvider</a>	Social network that this social post belongs to. Values are: <ul style="list-style-type: none"> <li>• Facebook</li> <li>• GooglePlus</li> <li>• Instagram</li> <li>• InstagramBusiness</li> <li>• KakaoTalk</li> <li>• Kik</li> <li>• Line</li> <li>• LinkedIn</li> <li>• Messenger</li> <li>• Other</li> <li>• Pinterest</li> <li>• QQ</li> <li>• Rypple</li> <li>• SinaWeibo</li> <li>• SMS</li> <li>• Snapchat</li> <li>• Telegram</li> <li>• Twitter</li> <li>• VKontakte</li> <li>• WeChat</li> <li>• WhatsApp</li> <li>• YouTube</li> </ul>	36.0
recipient	<a href="#">ConnectApi.SocialAccount</a>	Social account that is the recipient of the social post.	36.0
recipientId	<a href="#">String</a>	ID of the recipient of the social post.	38.0
reviewScale	<a href="#">Double</a>	Review scale of the social post.	40.0
reviewScore	<a href="#">Double</a>	Review score of the social post.	40.0
status	<a href="#">ConnectApi.SocialPostStatus</a>	Status of the social post.	36.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.SocialPostIntents

Intents available for a social post.

Property Name	Type	Description	Available Version
approvalIntent	<a href="#">ConnectApi.ApprovalIntent</a>	Approval intent for the social post.	45.0
deleteIntent	<a href="#">ConnectApi.DeleteIntents</a>	Delete intents for the social post.	45.0
followIntent	<a href="#">ConnectApi.FollowIntents</a>	Follow intents for the social persona.	45.0
hideIntent	<a href="#">ConnectApi.HideSocialPostIntent</a>	Hide intent for the social post.	45.0
likeIntent	<a href="#">ConnectApi.LikeIntents</a>	Like intents for the social post.	45.0
replyIntent	<a href="#">ConnectApi.ReplyIntents</a>	Reply intents for the social post.	45.0

## ConnectApi.SocialPostMassApprovalOutput

Approval or rejection of a large number of social posts.

Property Name	Type	Description	Available Version
isApproved	<a href="#">Boolean</a>	Specifies whether the social posts were approved ( <a href="#">true</a> ) or rejected ( <a href="#">false</a> ) for publishing.	46.0

## ConnectApi.SocialPostStatus

The status of a social post.

Property Name	Type	Description	Available Version
message	<a href="#">String</a>	Status message.	36.0

Property Name	Type	Description	Available Version
type	<a href="#">ConnectApi.SocialPostStatusType</a>	Status type. Values are: <ul style="list-style-type: none"> <li>• ApprovalPending</li> <li>• ApprovalRecalled</li> <li>• ApprovalRejected</li> <li>• Deleted</li> <li>• Failed</li> <li>• Hidden</li> <li>• Pending</li> <li>• Sent</li> <li>• Unknown</li> </ul>	36.0

SEE ALSO:

[ConnectApi.SocialPostCapability](#)

## ConnectApi.Stamp

A user stamp.

Property Name	Type	Description	Available Version
description	<a href="#">String</a>	Description of the stamp.	39.0–43.0
id	<a href="#">String</a>	ID of the stamp.	39.0–43.0
imageUrl	<a href="#">String</a>	Image URL of the stamp.	39.0–43.0
label	<a href="#">String</a>	Label of the stamp.	39.0–43.0

SEE ALSO:

[ConnectApi.User](#)

## ConnectApi.SortRule

Sort rule.

Property Name	Type	Description	Available Version
direction	<a href="#">ConnectApi.CommerceSearchSortRuleDirection</a>	Direction of the sort rule. Values are: <ul style="list-style-type: none"> <li>• Ascending—Sorts in ascending alphanumeric order (A–Z, 0–9).</li> <li>• Default—When no direction is defined, sorts by relevance.</li> </ul>	52.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>Descending—Sorts in descending alphanumeric order (Z–A, 9–0).</li> </ul>	
label	String	Label of the sort rule.	52.0
labelSuffix	ConnectApi.CommerceSearch.SortRuleLabelSuffix	Label suffix of the sort rule. Values are: <ul style="list-style-type: none"> <li>Ascen—Label suffix for 'Asc'</li> <li>Ascending—Label suffix for 'Ascending'</li> <li>Az—Label suffix for 'A-Z'</li> <li>Descen—Label suffix for 'Desc'</li> <li>Descending—Label suffix for 'Descending'</li> <li>FewMany—Label suffix for 'Few-Many'</li> <li>HeavyLight—Label suffix for 'Heavy-Light'</li> <li>HighLow—Label suffix for 'High-Low'</li> <li>HighestLowest—Label suffix for 'Highest-Lowest'</li> <li>LightHeavy—Label suffix for 'Light-Heavy'</li> <li>LowHigh—Label suffix for 'Low-High'</li> <li>LowestHighest—Label suffix for 'Lowest-Highest'</li> <li>ManyFew—Label suffix for 'Many-Few'</li> <li>NewOld—Label suffix for 'New-Old'</li> <li>Newest—Label suffix for 'Newest'</li> <li>NewestOldest—Label suffix for 'Newest-Oldest'</li> <li>NineZero—Label suffix for '9-0'</li> <li>OldNew—Label suffix for 'Old-New'</li> <li>Oldest—Label suffix for 'Oldest'</li> <li>OldestNewest—Label suffix for 'Oldest-Newest'</li> <li>PriceDecreasing—Label suffix for '\$-\$'</li> <li>PriceIncreasing—Label suffix for '\$-\$\$'</li> <li>ThickThin—Label suffix for 'Thick-Thin'</li> <li>ThinThick—Label suffix for 'Thin-Thick'</li> <li>Za—Label suffix for 'Z-A'</li> <li>ZeroNine—Label suffix for '0-9'</li> </ul>	54.0
nameOrId	String	Name of the sort rule field or, if the sort rule is based on a custom field, ID.	52.0

Property Name	Type	Description	Available Version
sortOrder	Integer	Sort order for the rule. A lower number has higher precedence. The first sort option is called when no other option is selected.	54.0
sortRuleId	String	ID of the sort rule.	52.0
type	ConnectApi.CommerceSearchSortRuleType	Type of sort rule. Values are: <ul style="list-style-type: none"> <li>ProductAttributeBased—Sorts by product attribute fields.</li> <li>ProductBased—Sorts by product field data.</li> <li>Relevancy—Sorts by product and catalog term frequency.</li> <li>SortByPricebook—Sorts by product prices defined in the specified pricebook (version 55.0 and later).</li> </ul>	52.0

SEE ALSO:

[ConnectApi.SortRulesCollection](#)

## ConnectApi.SortRulesCollection

Collection of sort rules.

Property Name	Type	Description	Available Version
sortRules	List<ConnectApi.SortRule>	Collection of sort rules.	52.0

## ConnectApi.StatusCapability

If a feed post or comment has this capability, it has a status that determines its visibility.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
feedEntityStatus	ConnectApi.FeedEntityStatus	Status of the feed post or comment. Values are: <ul style="list-style-type: none"> <li>Draft—The feed post isn't published but is visible to the author and users with Modify All Data or View All Data permission. Comments can't be drafts.</li> <li>Isolated—The feed post or comment is isolated, and only admins can see it.</li> </ul>	37.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li><code>PendingReview</code>—The feed post or comment isn't approved yet and therefore isn't published or visible.</li> <li><code>Published</code>—The feed post or comment is approved and visible.</li> </ul>	
<code>isApprovableByMe</code>	<code>Boolean</code>	Specifies whether the context user can change the status of the feed post or comment.	37.0

SEE ALSO:

[ConnectApi.CommentCapabilities](#)

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.StrategyTrace

Messages and trace nodes for a recommendation strategy execution.

Property Name	Type	Description	Available Version
<code>messages</code>	<code>List&lt;String&gt;</code>	Messages and errors from the strategy execution.	45.0
<code>nodes</code>	<code>List&lt;ConnectApi.StrategyTraceNode&gt;</code>	Nodes of the strategy execution used for debugging.	45.0

SEE ALSO:

[ConnectApi.NBARRecommendations](#)

## ConnectApi.StrategyTraceNode

A trace node for a recommendation strategy execution.

Property Name	Type	Description	Available Version
<code>inputCount</code>	<code>Integer</code>	Number of items put into the node.	45.0
<code>messages</code>	<code>List&lt;String&gt;</code>	Messages that occurred during node execution.	45.0
<code>nodeName</code>	<code>String</code>	Name of the node.	45.0
<code>nodeTime</code>	<code>Long</code>	Time spent processing inside the node.	45.0
<code>nodeType</code>	<code>String</code>	Type of node.	45.0
<code>outputCount</code>	<code>Integer</code>	Number of items returned from the node.	45.0
<code>outputs</code>	<code>List&lt;String&gt;</code>	Recommendations that are returned from the node.	45.0

Property Name	Type	Description	Available Version
totalTime	Long	Total time spent processing.	45.0

SEE ALSO:

[ConnectApi.StrategyTrace](#)

## ConnectApi.SubmitCancelOutputRepresentation

ID of the change order created for a cancel action, and a set of its financial values.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
changeBalances	<a href="#">ConnectApi.ChangeItemOutputRepresentation</a>	Financial values resulting from the cancel.	48.0
changeOrderId	String	ID of the change order created for the canceled order items and shipping charges. Use this change order to create a credit memo.	48.0
feeChangeOrderId	String	ID of the change order created by canceling order items with associated cancel fees. Use this change order to create an invoice.	57.0

## ConnectApi.SubmitCartToExchangeOrderOutputRepresentation

Exchange order summary resulting from a submit cart to exchange order action.

Property Name	Type	Description	Available Version
balanceStateExchangeWebCart	<a href="#">ConnectApi.BalanceStatePreviewOutputRepresentation</a> on page 1953	The balance state preview for the exchange web cart.	Big, 61.0
balanceStateOriginalOrderSummary	<a href="#">ConnectApi.BalanceStatePreviewOutputRepresentation</a> on page 1953	The balance state preview for the original order summary.	Big, 61.0
balanceStateReturnOrder	<a href="#">ConnectApi.BalanceStatePreviewOutputRepresentation</a> on page 1953	The balance state preview for the return order.	Big, 61.0
changeBalances	<a href="#">ConnectApi.ChangeItemOutputRepresentation</a> on page 1993	Change order financial values for a preview order action.	Big, 60.0
errors	List< <a href="#">ConnectApi.ErrorResponse</a> >	Any errors that were returned.	Big, 60.0
exchangeOrderSummaryId	String	Exchange order summary ID.	Big, 60.0
orderSummaryId	String	ID of the order summary.	Big, 60.0

Property Name	Type	Description	Available Version
success	Boolean	Indicates whether the transaction was successful.	Big, 60.0

## ConnectApi.SubmitReturnOutputRepresentation

ID of the change order created for a return action, and a set of its financial values.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

Property Name	Type	Description	Available Version
changeBalances	<a href="#">ConnectApi.ChangeItemOutputRepresentation</a>	Financial values resulting from the return.	48.0
changeOrderId	String	ID of the change order created for the returned order items and shipping charges. Use this change order to create a credit memo.	48.0
feeChangeOrderId	String	ID of the change order created by returning order items with associated return fees. Use this change order to create an invoice.	57.0

## ConnectApi.Subscription

Subscription.

Name	Type	Description	Available Version
community	<a href="#">ConnectApi.Reference</a>	Information about the Experience Cloud site in which the subscription exists.	28.0
id	String	Subscription's 18-character ID.	28.0
subject	<a href="#">ConnectApi.Actor</a>	Information about the parent, that is, the thing or person being followed.	28.0
subscriber	<a href="#">ConnectApi.Actor</a>	Information about the subscriber, that is, the person following this item.	28.0
url	String	Connect REST API URL to this specific subscription.	28.0

SEE ALSO:

[ConnectApi.FollowerPage](#)

[ConnectApi.FollowingPage](#)

## ConnectApi.SubscriptionTermRule

Subscription term rules.

Property Name	Type	Description	Available Version
increment	<a href="#">Integer</a>	Number of pricing term units that can be used to increase the subscription term.	59.0
maximum	<a href="#">Integer</a>	Maximum number of pricing term units per subscription term.	59.0
minimum	<a href="#">Integer</a>	Minimum number of pricing term units per subscription term.	59.0

## ConnectApi.SupportedEmojis

A collection of supported emoji.

Property Name	Type	Description	Available Version
supportedEmojis	<a href="#">ConnectApi.EmojiCollection</a>	A collection of supported emoji.	39.0

## ConnectApi.SurveyInvitationEmailOutput

Survey invitation email.

Property Name	Type	Description	Available Version
errorCode	<a href="#">Integer</a>	Error code for the failed call.	50.0
errorMessage	<a href="#">String</a>	Details explaining why the call failed.	50.0
status	<a href="#">ConnectApi.SurveyEmailStatusEnum</a>	Status of a survey invitation email. Values are: <ul style="list-style-type: none"> <li>Failed—The survey invitation email wasn't sent.</li> <li>Queued—The survey invitation email is queued for sending.</li> </ul>	50.0

## ConnectApi.Target

Personalization target information.

Property Name	Type	Description	Available Version
audience	<a href="#">ConnectApi.AudienceTarget</a>	Audience assigned to the target.	48.0
formulaScope	<a href="#">ConnectApi.FormulaScope</a>	Formula scope of the target.	50.0

Property Name	Type	Description	Available Version
groupName	String	Group name of the target. Groups bundle related target and audience pairs.	48.0
id	String	ID of the target.	48.0
priority	Integer	Priority of the target. Within a group, priority determines which target is returned if the user matches more than one audience.	48.0
publishStatus	ConnectApi.PublishStatus	Publish status of the target. Values are: <ul style="list-style-type: none"> <li>Draft</li> <li>Live</li> </ul>	48.0
scope	List<ConnectApi.Scope>	List of scopes for the target. In version 50.0 and later, the <code>formulaScope</code> property returns this information.	48.0–49.0
targetType	String	Type of target, indicating the nature of the data being targeted.	48.0
targetValue	String	Value of the target.	48.0
url	String	URL to the target.	48.0

SEE ALSO:

[ConnectApi.TargetCollection](#)

## ConnectApi.TargetCollection

List of personalization targets.

Property Name	Type	Description	Available Version
targets	List<ConnectApi.Target>	List of personalization targets.	48.0

## ConnectApi.CalculateTaxResponse

Shows the results of a tax calculation request.

Subclass of [ConnectApi.TaxTransactionResponse](#).

Property Name	Type	Description	Available Version
adapterError	ConnectApi.ErrorResponse	Adapter error.	55.0

Property Name	Type	Description	Available Version
status	<a href="#">ConnectApi.TaxTransactionStatus</a>	Status of a tax transaction. Values are: <ul style="list-style-type: none"> <li>Committed—Tax has been committed to the transaction.</li> <li>Uncommitted—Tax hasn't been committed to the transaction.</li> </ul>	55.0
taxEngineLogs	<a href="#">List&lt;ConnectApi.TaxEngineLogResponse&gt;</a>	Tax engine logs.	55.0
taxTransactionType	<a href="#">ConnectApi.TaxTransactionType</a>	Type of tax transaction. Values are: <ul style="list-style-type: none"> <li>Credit—Transaction is a credit transaction.</li> <li>Debit—Transaction is a debit transaction.</li> </ul>	55.0
taxType	<a href="#">ConnectApi.CalculateTaxType</a>	Type of tax calculation. Values are: <ul style="list-style-type: none"> <li>Actual—Calculated tax represents the final taxed amount for the transaction.</li> <li>Estimated—Calculated tax represents only an estimated value before the transaction is finalized.</li> </ul>	55.0

## ConnectApi.TaxAddressResponse

Location code of an address.

Property Name	Type	Description	Available Version
locationCode	<a href="#">String</a>	Location code of an address.	55.0

## ConnectApi.TaxAddressesResponse

The Ship From, Ship To, and Sold To addresses used during tax calculation.

Property Name	Type	Description	Available Version
shipFrom	<a href="#">ConnectApi.TaxAddressResponse</a>	The Ship From address used in tax calculation.	55.0
shipTo	<a href="#">ConnectApi.TaxAddressResponse</a>	The Ship To address used in tax calculation.	55.0
soldTo	<a href="#">ConnectApi.TaxAddressResponse</a>	The Sold To address used in tax calculation.	55.0

## ConnectApi.TaxAmountDetailsResponse

Information about tax amount values on the line item.

Property Name	Type	Description	Available Version
exemptAmount	Double	Amount of the line item exempt from tax application.	55.0
taxAmount	Double	Tax amount for the line item.	55.0
totalAmount	Double	Total amount of the line item.	55.0
totalAmountWithTax	Double	The line item's total amount with tax.	55.0

## ConnectApi.TaxDetailsResponse

Tax details for each line item in a tax line item output.

Property Name	Type	Description	Available Version
exemptAmount	Double	Amount of the line item that is exempt from taxation.	55.0
exemptReason	String	The reason that any tax exemption applied to the line item.	55.0
imposition	ConnectApi.TaxImpositionResponse	The business justification for applying tax to a line item.	55.0
jurisdiction	ConnectApi.TaxJurisdictionResponse	Business address used to calculate the tax rate for the line item.	55.0
rate	Double	Tax rate for the line item.	55.0
tax	Double	Total amount of tax on the line item.	55.0
taxId	String	ID for the type of tax applied to the line item.	55.0
taxableAmount	Double	Amount of line item that can be taxed.	55.0

## ConnectApi.TaxAddressResponse

Address output representation for tax calculation.

Property Name	Type	Description	Available Version
locationCode	String	Location code.	55.0

## ConnectApi.TaxEngineLogResponse

Shows the results of the tax calculation request to the tax engine.

Property Name	Type	Description	Available Version
createdDate	<a href="#">Datetime</a>	The date that the gateway log was created.	55.0
id	<a href="#">String</a>	ID of the tax engine log record.	55.0
resultCode	<a href="#">String</a>	Result code sent from the external tax engine. Review the tax engine provider's documentation for more information about the code.	55.0

## ConnectApi.TaxImpositionResponse

Tax imposition output representation.

Property Name	Type	Description	Available Version
name	<a href="#">String</a>	Name of the tax imposition.	55.0
type	<a href="#">String</a>	Type of the tax imposition.	55.0

## ConnectApi.TaxJurisdictionResponse

Represents the address or jurisdiction of the primary business used for calculating tax.

Property Name	Type	Description	Available Version
country	<a href="#">String</a>	Country of the tax jurisdiction address.	55.0
id	<a href="#">String</a>	ID of the tax jurisdiction address.	55.0
level	<a href="#">String</a>	Level of the tax jurisdiction address.	55.0
name	<a href="#">String</a>	Name of the tax jurisdiction address.	55.0
region	<a href="#">String</a>	Region of the tax jurisdiction address.	55.0
stateAssignedNo	<a href="#">String</a>	State-assigned number of the tax jurisdiction address.	55.0

## ConnectApi.LineItemResponse

Response class that stores information about a list of one or more line items on which the tax engine has calculated tax.

Property Name	Type	Description	Available Version
addresses	<a href="#">ConnectApi.TaxAddressesResponse</a>	The Ship From, Ship To, and Sold To addresses used during tax calculation.	55.0
amountDetails	<a href="#">ConnectApi.TaxAmountDetailsResponse</a>	Information about tax amount values on the line item.	55.0

Property Name	Type	Description	Available Version
effectiveDate	<a href="#">Datetime</a>	The date that the tax calculation takes effect.	55.0
lineNumber	<a href="#">String</a>	System-generated number used to identify the tax line.	55.0
productCode	<a href="#">String</a>	Product code for the product related to the taxed line item.	55.0
quantity	<a href="#">Double</a>	Quantity of the taxed line item.	55.0
taxCode	<a href="#">String</a>	Tax code for the taxed line item.	55.0
taxes	<a href="#">List&lt;ConnectApi.TaxDetailsResponse&gt;</a>	Tax details for each line item in a tax line item output.	55.0

## ConnectApi.TaxTransactionResponse

Tax transaction output representation

This class is abstract.

Superclass of [ConnectApi.CalculateTaxResponse](#).

Property Name	Type	Description	Available Version
addresses	<a href="#">ConnectApi.TaxAddressesResponse</a>	The Ship From, Ship To, and Sold To addresses used during tax calculation.	55.0
amountDetails	<a href="#">ConnectApi.TaxAmountDetailsResponse</a>	Information about tax amount values on the line item.	55.0
currencyIsoCode	<a href="#">String</a>	Three-letter ISO 4217 currency code associated with the payment group record.	55.0
description	<a href="#">String</a>	Information about whether the tax transaction failed or was successful.	55.0
documentCode	<a href="#">String</a>	Document code.	55.0
effectiveDate	<a href="#">Datetime</a>	The date that tax is applied to the taxed entity.	55.0
lineItems	<a href="#">List&lt;ConnectApi.LineItemResponse&gt;</a>	A list of line items on which tax was calculated.	55.0
referenceDocumentCode	<a href="#">String</a>	The original document code. Used in case of subsequent transactions such as credit tax.	55.0
referenceEntityId	<a href="#">String</a>	ID of the reference entity used during tax calculation.	55.0
taxTransactionId	<a href="#">String</a>	ID of the tax transaction.	55.0

Property Name	Type	Description	Available Version
transactionDate	<a href="#">Datetime</a>	The date that the tax transaction occurred.	55.0

## ConnectApi.TextClassificationsResultWithIdOutputRepresentation

Classified text with status and text classification request IDs.

Property Name	Type	Description	Available Version
id	<a href="#">String</a>	Request ID for text classifications.	<b>59.0</b>
result	<a href="#">ConnectApi.TextClassificationOutputRepresentation</a>	Result for text classifications.	<b>59.0</b>
status	<a href="#">String</a>	Request status for text classification.	<b>59.0</b>

## ConnectApi.TextClassificationsResultOutputRepresentation

Text classifications result.

Property Name	Type	Description	Available Version
classifications	<a href="#">ConnectApi.TextClassificationOutputRepresentation</a>	List of classifications that each text string was given after analysis.	<b>59.0</b>
classificationsId	<a href="#">String</a>	Response ID to receive feedback for classification.	<b>59.0</b>

## ConnectApi.TextClassificationsOutputRepresentation

HTTP headers containing URLs associating text strings and classifications.

Property Name	Type	Description	Available Version
httpHeaders	<a href="#">ConnectApi.HttpHeaderOutputRepresentation</a>	HTTP headers for text classifications output. Each header provides a URL you can use to get the result of the classification. The URL takes a list of text strings and classifiers that each text string can be classified in.	<b>59.0</b>

## ConnectApi.TextClassificationsBulkResultsOutputRepresentation

Text classification to get results for multiple text classification request IDs.

Property Name	Type	Description	Available Version
resultsList	<a href="#">ConnectApi.TextClassificationOutputRepresentation</a>	List of results for passed request IDs.	<b>59.0</b>

## ConnectApi.TextSegment

Text segment.

Subclass of [ConnectApi.MessageSegment](#).

No additional properties.

## ConnectApi.TimeZone

User's time zone as selected in the user's personal settings in Salesforce. This value doesn't reflect a device's current location.

Name	Type	Description	Available Version
gmtOffset	<a href="#">Double</a>	Signed offset, in hours, from GMT.	30.0
name	<a href="#">String</a>	Display name of this time zone.	30.0

SEE ALSO:

[ConnectApi.UserSettings](#)

## ConnectApi.Topic

Topic.

Name	Type	Description	Available Version
createdDate	<a href="#">Datetime</a>	ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.	29.0
description	<a href="#">String</a>	Description of the topic.	29.0
id	<a href="#">String</a>	18-character ID.	29.0
images	<a href="#">ConnectApi.TopicImages</a>	Images associated with the topic.	32.0
isBeingDeleted	<a href="#">Boolean</a>	<code>true</code> if the topic is currently being deleted; <code>false</code> otherwise. After the topic is deleted, when attempting to retrieve the topic, the output is NOT_FOUND.	33.0
name	<a href="#">String</a>	Name of the topic.	29.0
nonLocalized Name	<a href="#">String</a>	Non-localized name of the topic.	36.0
talkingAbout	<a href="#">Integer</a>	Number of people talking about this topic over the last two months, based on factors such as topic additions and comments on posts with the topic.	29.0

Name	Type	Description	Available Version
url	<a href="#">String</a>	URL to the topic detail page.	29.0

SEE ALSO:

- [ConnectApi.ManagedTopic](#)
- [ConnectApi.TopicPage](#)
- [ConnectApi.TopicEndorsement](#)
- [ConnectApi.TopicEndorsementCollection](#)
- [ConnectApi.TopicSuggestion](#)

## ConnectApi.TopicEndorsement

Represents one user endorsing another user for a single topic.

Name	Type	Description	Available Version
endorsee	<a href="#">ConnectApi.UserSummary</a>	User being endorsed.	30.0
endorsementId	<a href="#">String</a>	18-character ID of the endorsement record.	30.0
endorser	<a href="#">ConnectApi.UserSummary</a>	User performing the endorsement.	30.0
topic	<a href="#">ConnectApi.Topic</a>	Topic the user is being endorsed for.	30.0
url	<a href="#">String</a>	URL to the resource for the endorsement record.	30.0

## ConnectApi.TopicEndorsementCollection

Collection of topic endorsement response bodies.

Name	Type	Description	Available Version
currentPageUrl	<a href="#">String</a>	Connect REST API URL identifying the current page.	30.0
nextPageUrl	<a href="#">String</a>	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	30.0
previousPageUrl	<a href="#">String</a>	Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	30.0
topicEndorsements	<a href="#">List&lt;ConnectApi.Topic&gt;</a>	List of topic endorsements.	30.0

## ConnectApi.TopicEndorsementSummary

Topic endorsement summary.

Subclass of [ConnectApi.UserActivitySummary](#).

Property Name	Type	Description	Available Version
endorsementId	ID	ID of the topic endorsement.	42.0

## ConnectApi.TopicImages

Images associated with a topic.

Property Name	Type	Description	Available Version
coverImageUrl	String	URL to a topic's cover image, which appears on the topic page. Both topics and managed topics can have cover images.	32.0
featuredImageUrl	String	URL to a managed topic's featured image, which appears wherever you feature it, for example, on your Experience Cloud site home page.	32.0

SEE ALSO:

[ConnectApi.Topic](#)

## ConnectApi.TopicPage

Page of topics.

Name	Type	Description	Available Version
currentPageUrl	String	Connect REST API URL identifying the current page.	29.0
nextPageUrl	String	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	29.0
topics	List<ConnectApi.Topic>	List of topics.	29.0

## ConnectApi.TopicsCapability

If a feed element has this capability, the context user can add topics to it. Topics help users organize and discover conversations.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
canAssignTopics	Boolean	<code>true</code> if a topic can be assigned to the feed element, <code>false</code> otherwise.	32.0
items	<a href="#">List&lt;ConnectApi.Topic&gt;</a>	A collection of topics associated with this feed element.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.TopicSuggestion

Topic suggestion.

Name	Type	Description	Available Version
existingTopic	<a href="#">ConnectApi.Topic</a>	Topic that already exists or null for a new topic	29.0
name	<a href="#">String</a>	Topic name	29.0

SEE ALSO:

[ConnectApi.TopicSuggestionPage](#)

## ConnectApi.TopicSuggestionPage

Page of topic suggestions.

Name	Type	Description	Available Version
TopicSuggestions	<a href="#">List&lt;ConnectApi.TopicSuggestion&gt;</a>	List of topic suggestions.	29.0

## ConnectApi.TopicSummary

Summary of a topic.

Property Name	Type	Description	Available Version
id	<a href="#">String</a>	ID of the topic.	47.0
name	<a href="#">String</a>	Name of the topic.	47.0

SEE ALSO:

[ConnectApi.ManagedContentAssociations](#)

## ConnectApi.TrackedChangeBundleCapability

If a feed element has this capability, it has a group of other feed elements aggregated into one feed element called a *bundle*. This type of bundle aggregates feed tracked changes.

Subclass of [ConnectApi.BundleCapability](#).

Property Name	Type	Description	Available Version
changes	<a href="#">List&lt;ConnectApi.TrackedChangeItem&gt;</a>	Collection of feed tracked changes.	31.0

## ConnectApi.TrackedChangeItem

Tracked change item.

Name	Type	Description	Available Version
fieldName	<a href="#">String</a>	The name of the field that was updated.	28.0
newValue	<a href="#">String</a>	The new value of the field or <code>null</code> if the field length is long.	28.0
oldValue	<a href="#">String</a>	The old value of the field or <code>null</code> if the field length is long.	28.0

SEE ALSO:

[ConnectApi.TrackedChangesCapability](#)

[ConnectApi.TrackedChangeBundleCapability](#)

## ConnectApi.TrackedChangesCapability

If a feed element has this capability, it contains all changes to a record for a single tracked change event.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
changes	<a href="#">List&lt;ConnectApi.TrackedChangeItem&gt;</a>	Collection of feed tracked changes.	32.0

SEE ALSO:

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.UnauthenticatedUser

Unauthenticated user.

Subclass of [ConnectApi.Actor](#).

No additional properties.

Instances of this class are used as the actor for feed items and comments posted by Chatter customers.

## ConnectApi.UnreadConversationCount

Unread count for a conversation.

Name	Type	Description	Available Version
hasMore	<a href="#">Boolean</a>	Specifies if there are more than 50 unread messages ( <code>true</code> ) or not ( <code>false</code> ).	29.0
unreadCount	<a href="#">Integer</a>	The total number of unread messages.	29.0

## ConnectApi.UpDownVoteCapability

If a feed post or comment has this capability, users can upvote or downvote it.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
downVoteCount	<a href="#">Long</a>	Number of downvotes.	41.0
myVote	<a href="#">ConnectApi.UpDownVoteValue</a>	Specifies the context user's vote. Values are: <ul style="list-style-type: none"> <li>• Down</li> <li>• None</li> <li>• Up</li> </ul>	41.0
upVoteCount	<a href="#">Long</a>	Number of upvotes.	41.0

SEE ALSO:

[ConnectApi.CommentCapabilities](#)

[ConnectApi.FeedElementCapabilities](#)

## ConnectApi.UpVoteSummary

Summary of an upvote.

Subclass of [ConnectApi.UserFeedEntityActivitySummary](#).

No additional properties.

## ConnectApi.User

User.

This class is abstract.

Subclass of [ConnectApi.ActionWithId](#).

Superclass of:

- [ConnectApi.UserDetail](#)
- [ConnectApi.UserSummary](#)

Name	Type	Description	Available Version
additionalLabel	<a href="#">String</a>	If one exists, an extra label for the user, for example, "Customer," "Partner," or "Acme Corporation."	30.0
communityNickname	<a href="#">String</a>	User's nickname in the site.	32.0
companyName	<a href="#">String</a>	Name of the company. If your Experience Cloud site allows access without logging in, the value is <code>null</code> for guest users.	28.0
displayName	<a href="#">String</a>	User's name that is displayed in the site. If nicknames are enabled, the nickname is displayed. If nicknames aren't enabled, the full name is displayed.	32.0
firstName	<a href="#">String</a>	User's first name. In version 39.0 and later, if nicknames are enabled, <code>firstName</code> is <code>null</code> .	28.0
isChatterGuest	<a href="#">Boolean</a>	<code>true</code> if user is a Chatter customer; <code>false</code> otherwise.	28.0
isInThisCommunity	<a href="#">Boolean</a>	<code>true</code> if user is in the same site as the context user; <code>false</code> otherwise.	28.0
lastName	<a href="#">String</a>	User's last name. In version 39.0 and later, if nicknames are enabled, <code>lastName</code> is <code>null</code> .	28.0
outOfOffice	<a href="#">ConnectApi.OutOfOffice</a>	If one exists, extra out-of-office message for the user.	40.0
photo	<a href="#">ConnectApi.Photo</a>	Information about the user's photos.	28.0
reputation	<a href="#">ConnectApi.Reputation</a>	Reputation of the user.	32.0
stamps	<a href="#">List&lt;ConnectApi.Stamp&gt;</a>	Collection of the user's stamps. In version 44.0 and later, use SOQL to get a user's stamps.	39.0–43.0
title	<a href="#">String</a>	User's title. If your Experience Cloud site allows access without logging in, the value is <code>null</code> for guest users.	28.0

Name	Type	Description	Available Version
userType	ConnectApi.UserType Enum	Type of user. <ul style="list-style-type: none"> <li>ChatterGuest—User is an external user in a private group.</li> <li>ChatterOnly—User is a Chatter Free customer.</li> <li>Guest—User is unauthenticated.</li> <li>Internal—User is a standard org member.</li> <li>Portal—User is an external user in an Experience Cloud site.</li> <li>System—User is Chatter Expert or a system user.</li> <li>Undefined—User is a user type that is a custom object.</li> </ul>	28.0

SEE ALSO:

[ConnectApi.RecommendationAudience](#)

## ConnectApi.UserActivitiesJob

User activities job.

Property Name	Type	Description	Available Version
jobToken	String	Token that identifies the user activities job.	42.0
jobType	String	Type of user activities job. Value is <code>export</code> or <code>purge</code> .	42.0
message	String	Message describing the status and expected outcome of the job.  When the job completes, you receive an email with information about the Salesforce file that contains <a href="#">ConnectApi.UserActivityCollection</a> .	42.0

## ConnectApi.UserActivityCollection

User activity collection.

Property Name	Type	Description	Available Version
activityType	String	Type of user activity. Values are: <ul style="list-style-type: none"> <li>Bookmark—User bookmarked a post.</li> </ul>	42.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li><code>ChatterActivity</code>—Total counts of posts and comments made and likes and comments received for a user.</li> <li><code>ChatterLike</code>—User liked a post or comment.</li> <li><code>Comment</code>—User commented on a post.</li> <li><code>CompanyVerify</code>—User verified comment.</li> <li><code>DownVote</code>—User downvoted a post or comment.</li> <li><code>FeedEntityRead</code>—User read a post.</li> <li><code>FeedRead</code>—User read a feed.</li> <li><code>Mute</code>—User muted a post.</li> <li><code>Post</code>—User made a post.</li> <li><code>TopicEndorsement</code>—User endorsed another user on a topic or received endorsement on a topic.</li> <li><code>UpVote</code>—User upvoted a post or comment.</li> </ul>	
<code>userActivities</code>	<code>List&lt;ConnectApi.UserActivitySummary&gt;</code>	Collection of user activities.	42.0

## ConnectApi.UserActivitySummary

User activity summary.

This class is abstract.

Superclass of:

- [ConnectApi.CommentSummary](#)
- [ConnectApi.FeedPostSummary](#)
- [ConnectApi.FeedReadSummary](#)
- [ConnectApi.TopicEndorsementSummary](#)
- [ConnectApi.UserFeedEntityActivitySummary](#)

Property Name	Type	Description	Available Version
<code>activityDate</code>	<code>Datetime</code>	Date of the user activity.	42.0
<code>activityType</code>	<code>String</code>	Type of user activity. Values are: <ul style="list-style-type: none"> <li><code>Bookmark</code>—User bookmarked a post.</li> <li><code>ChatterActivity</code>—Total counts of posts and comments made and likes and comments received for a user.</li> <li><code>ChatterLike</code>—User liked a post or comment.</li> </ul>	42.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li><code>Comment</code>—User commented on a post.</li> <li><code>CompanyVerify</code>—User verified comment.</li> <li><code>DownVote</code>—User downvoted a post or comment.</li> <li><code>FeedEntityRead</code>—User read a post.</li> <li><code>FeedRead</code>—User read a feed.</li> <li><code>Mute</code>—User muted a post.</li> <li><code>Post</code>—User made a post.</li> <li><code>TopicEndorsement</code>—User endorsed another user on a topic or received endorsement on a topic.</li> <li><code>UpVote</code>—User upvoted a post or comment.</li> </ul>	
<code>activityUrl</code>	<code>String</code>	URL to the user activity.	42.0
<code>community</code>	<code>ConnectApi.CommunitySummary</code>	Experience Cloud site in which the user performed the activity.	42.0

SEE ALSO:

[ConnectApi.UserActivityCollection](#)

## ConnectApi.UserCapabilities

Capabilities associated with a user profile.

Name	Type	Description	Available Version
<code>canChat</code>	<code>Boolean</code>	Specifies if the context user can use Chatter Messenger with the subject user ( <code>true</code> ) or not ( <code>false</code> )	29.0
<code>canDirectMessage</code>	<code>Boolean</code>	Specifies if the context user can direct message the subject user ( <code>true</code> ) or not ( <code>false</code> )	29.0
<code>canEdit</code>	<code>Boolean</code>	Specifies if the context user can edit the subject user's account ( <code>true</code> ) or not ( <code>false</code> )	29.0
<code>canFollow</code>	<code>Boolean</code>	Specifies if the context user can follow the subject user's feed ( <code>true</code> ) or not ( <code>false</code> )	29.0
<code>canViewFeed</code>	<code>Boolean</code>	Specifies if the context user can view the feed of the subject user ( <code>true</code> ) or not ( <code>false</code> )	29.0
<code>canViewFullProfile</code>	<code>Boolean</code>	Specifies if the context user can view the full profile of the subject user ( <code>true</code> ) or only the limited profile ( <code>false</code> )	29.0

Name	Type	Description	Available Version
isModerator	Boolean	Specifies if the subject user is a Chatter moderator or admin ( <code>true</code> ) or not ( <code>false</code> )	29.0

SEE ALSO:

[ConnectApi.UserProfile](#)

## ConnectApi.UserChatterSettings

User's global Chatter settings.

Name	Type	Description	Available Version
defaultGroupEmailFrequency	ConnectApi.GroupEmailFrequency Enum	The default frequency with which a user receives email from a group when they join it.	28.0

## ConnectApi.UserDetail

Details about a user in an org.

Subclass of [ConnectApi.User](#).

If the context user doesn't have permission to see a property, its value is set to `null`.

Name	Type	Description	Available Version
aboutMe	String	Text from user's profile.	28.0
address	ConnectApi.Address	User's address.	28.0
bannerPhoto	ConnectApi.BannerPhoto	User's banner photo.	36.0
chatterActivity	ConnectApi.ChatterActivity	Chatter activity statistics.	28.0
chatterInfluence	ConnectApi.GlobalInfluence	User's influence rank.	28.0
email	String	User's email address.	28.0
followersCount	Integer	Number of users following this user.	28.0
followingCounts	ConnectApi.FollowingCounts	Information about items the user is following.	28.0
groupCount	Integer	Number of groups user is following.	28.0
hasChatter	Boolean	<code>true</code> if user has access to Chatter; <code>false</code> otherwise.	31.0
isActive	Boolean	<code>true</code> if user is active; <code>false</code> otherwise.	28.0

Name	Type	Description	Available Version
managerId	String	18-character ID of the user's manager.	28.0
managerName	String	Locale-based concatenation of manager's first and last names.	28.0
phoneNumbers	List<ConnectApi.Phone Number>	Collection of user's phone numbers.	28.0
thanksReceived	Integer	The number of times the user has been thanked.	29.0
username	String	Username of the user, such as <i>Admin@mycompany.com</i> .	28.0

SEE ALSO:

[ConnectApi.UserPage](#)

[ConnectApi.UserProfile](#)

## ConnectApi.UserFeedEntityActivitySummary

User feed entity activity summary.

This class is abstract.

Subclass of [ConnectApi.UserActivitySummary](#).

Superclass of:

- [ConnectApi.BookmarkSummary](#)
- [ConnectApi.ChatterActivitySummary](#)
- [ConnectApi.CompanyVerifySummary](#)
- [ConnectApi.DownVoteSummary](#)
- [ConnectApi.FeedEntityReadSummary](#)
- [ConnectApi.LikeSummary](#)
- [ConnectApi.MuteSummary](#)
- [ConnectApi.UpVoteSummary](#)

Property Name	Type	Description	Available Version
feedEntityId	String	ID of the feed entity.	42.0

## ConnectApi.UserGroupDetailPage

A page of groups that a user is a member of.

Property Name	Type	Description	Available Version
currentPageUrl	String	URL to the current page.	45.0

Property Name	Type	Description	Available Version
groups	<a href="#">List&lt;ConnectApi.ChatterGroupDetail&gt;</a>	Collection of groups that the user is a member of.	45.0
nextPageUrl	<a href="#">String</a>	URL to the next page, or <code>null</code> if there is no next page.	45.0
previousPageUrl	<a href="#">String</a>	URL to the previous page, or <code>null</code> if there is no previous page.	45.0
total	<a href="#">Integer</a>	Total number of groups that the user is a member of.	45.0

## ConnectApi.UserGroupPage

A paginated list of groups the context user is a member of.

Name	Type	Description	Available Version
currentPageUrl	<a href="#">String</a>	Connect REST API URL identifying the current page.	28.0
groups	<a href="#">List&lt;ConnectApi.ChatterGroupSummary&gt;</a>	List of groups.	28.0
nextPageUrl	<a href="#">String</a>	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	28.0
previousPageUrl	<a href="#">String</a>	Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	28.0
total	<a href="#">Integer</a>	Total number of groups across all pages.	28.0

## ConnectApi.UserMission

Mission details for a user.

Subclass of [ConnectApi.AbstractUserMissionActivity](#).

Property Name	Type	Description	Available Version
missionName	<a href="#">String</a>	Name of the mission.	46.0
missionThreshold	<a href="#">Integer</a>	Threshold of the mission. When a user reaches this activity count, the mission is achieved.	46.0

## ConnectApi.UserMissionActivitiesJob

User mission activities job.

Property Name	Type	Description	Available Version
jobToken	<a href="#">String</a>	Token that identifies the mission user activities job.	45.0
jobType	<a href="#">String</a>	Type of user activities job, either <code>export</code> or <code>purge</code> .	45.0
message	<a href="#">String</a>	Message describing the status and expected outcome of the job.  When the job completes, you receive an email with information about the Salesforce file that contains <a href="#">ConnectApi.UserMissionActivityCollection</a> .	45.0

## ConnectApi.UserMissionActivity

User activity associated with missions.

Subclass of [ConnectApi.AbstractUserMissionActivity](#).

No additional properties.

## ConnectApi.UserMissionActivityCollection

List of mission activities for a user.

Property Name	Type	Description	Available Version
community	<a href="#">ConnectApi.CommunitySummary</a>	Experience Cloud site in which the user performed activities.	45.0
userId	<a href="#">String</a>	ID of the user.	45.0
userMissionActivities	<a href="#">List&lt;ConnectApi.AbstractUserMissionActivity&gt;</a>	List of mission activities performed by the user.	45.0
userName	<a href="#">String</a>	Name of the user.	45.0

SEE ALSO:

[ConnectApi.UserMissionActivitiesJob](#)

## ConnectApi.UserMissionActivityStatus

Status of mission activity for a user.

Property Name	Type	Description	Available Version
message	<a href="#">String</a>	Success or error message.	45.0
status	<a href="#">String</a>	Status of mission activity for a user.	45.0

## ConnectApi.UserOauthInfo

User OAuth information.

Name	Type	Description	Available Version
availableExternalEmailService	<a href="#">Connect.OauthProviderInfo</a>	The available OAuth service provider.	37.0
isAuthenticated	Boolean	Specifies whether the user is authenticated ( <code>true</code> ) or not ( <code>false</code> ).	37.0

## ConnectApi.UserPage

Page of users.

Name	Type	Description	Available Version
currentPageToken	<a href="#">Integer</a>	Token identifying the current page.	28.0
currentPageUrl	<a href="#">String</a>	Connect REST API URL identifying the current page.	28.0
nextPageToken	<a href="#">Integer</a>	Token identifying the next page, or <code>null</code> if there isn't a next page.	28.0
nextPageUrl	<a href="#">String</a>	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	28.0
previousPageToken	<a href="#">Integer</a>	Token identifying the previous page, or <code>null</code> if there isn't a previous page.	28.0
previousPageUrl	<a href="#">String</a>	Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	28.0
users	<a href="#">List&lt;ConnectApi.UserDetail&gt;</a>	List of user detail information. If the context user doesn't have permission to see a property, the property is set to <code>null</code> .	28.0

## ConnectApi.UserProfile

Details necessary to render a view of a user profile.

Name	Type	Description	Available Version
capabilities	<a href="#">ConnectApi.UserCapabilities</a>	The context user's capabilities specific to the subject user's profile.	29.0
id	<a href="#">String</a>	The ID of the user attached to the profile.	29.0
tabs	<a href="#">List&lt;ConnectApi.UserProfileTab&gt;</a>	The tabs visible to the context user specific to the subject user's profile.	29.0
url	<a href="#">String</a>	The URL of the user's profile.	29.0

Name	Type	Description	Available Version
<code>userDetail</code>	<a href="#">ConnectApi.UserDetail</a>	The details about the user attached to the profile.	29.0

## ConnectApi.UserProfileTab

Information about a profile tab.

Name	Type	Description	Available Version
<code>id</code>	<a href="#">String</a>	The tab's unique identifier or 18-character ID	29.0
<code>isDefault</code>	<a href="#">Boolean</a>	Specifies if the tab appears first when clicking the user profile ( <code>true</code> ) or not ( <code>false</code> )	29.0
<code>tabType</code>	<a href="#">ConnectApi.UserProfileTabType Enum</a>	Specifies the type of tab <ul style="list-style-type: none"> <li><code>CustomVisualForce</code>—Tab that displays data from a Visualforce page.</li> <li><code>CustomWeb</code>—Tab that displays data from any external web-based application or web page.</li> <li><code>Element</code>—Tab that displays generic content inline.</li> <li><code>Feed</code>—Tab that displays the Chatter feed.</li> <li><code>Overview</code>—Tab that displays user details.</li> </ul>	29.0
<code>tabUrl</code>	<a href="#">String</a>	The current tab's content URL (for non built-in tab types)	29.0

SEE ALSO:

[ConnectApi.UserProfile](#)

## ConnectApi.UserReferencePage

A list of user references.

Property Name	Type	Description	Available Version
<code>currentPageUrl</code>	<a href="#">String</a>	URL to the current page.	35.0
<code>nextPageUrl</code>	<a href="#">String</a>	URL to the next page.	35.0
<code>previousPageUrl</code>	<a href="#">String</a>	URL to the previous page.	35.0
<code>userCount</code>	<a href="#">Integer</a>	Number of users in the collection.	35.0

Property Name	Type	Description	Available Version
users	<a href="#">List&lt;ConnectApi.Reference&gt;</a>	A collection of user references.	35.0

SEE ALSO:

[ConnectApi.CustomListAudienceCriteria](#)

## ConnectApi.UserSettings

Settings specific to a user.

Property	Type	Description	Available Version
approvalPosts	<a href="#">Boolean</a>	User can approve workflows from Chatter posts.	28.0
canAccessPersonalStreams	<a href="#">Boolean</a>	User can access personal stream feeds.	40.0
canFollow	<a href="#">Boolean</a>	User can follow users and records.	28.0
canModifyAllData	<a href="#">Boolean</a>	User has Modify all Data permission.	28.0
canOwnGroups	<a href="#">Boolean</a>	User can own groups.	28.0
canViewAllData	<a href="#">Boolean</a>	User has View all Data permission.	28.0
canViewAllGroups	<a href="#">Boolean</a>	User has View all Groups permission.	28.0
canViewAllUsers	<a href="#">Boolean</a>	User has View all Users permission.	28.0
canViewCommunitySwitcher	<a href="#">Boolean</a>	User can see the site switcher menu.	34.0
canViewFullUserProfile	<a href="#">Boolean</a>	User can see other user's Chatter profile.	28.0
canViewPublicFiles	<a href="#">Boolean</a>	User can see all files that are public.	28.0
currencySymbol	<a href="#">String</a>	Currency symbol to use for displaying currency values. Applicable only when the <code>ConnectApi.Features.multiCurrency</code> property is <code>false</code> .	28.0
externalUser	<a href="#">Boolean</a>	User is a Chatter customer.	28.0
fileSyncLimit	<a href="#">Integer</a>	Maximum number of files user can sync.	32.0
fileSyncStorageLimit	<a href="#">Integer</a>	Maximum storage for synced files, in megabytes (MB).	29.0
folderSyncLimit	<a href="#">Integer</a>	Maximum number of folders user can sync.	32.0

Property	Type	Description	Available Version
hasAccessToInternalOrg	Boolean	User is a member of the internal org.	28.0
hasChatter	Boolean	User has access to Chatter.	31.0
hasFileSync	Boolean	User has Sync Files permission.	28.0
hasFieldServiceLocationTracking	Boolean	User has Field Service GPS tracking enabled.	41.0
hasFieldServiceMobileAccess	Boolean	User has access to the Field Service mobile app.	41.0
hasFileSyncManagedClientAutoUpdate	Boolean	Administrator for the user's org allows file sync clients to update automatically.	34.0
hasRestDataApiAccess	Boolean	User has access to REST API.	29.0
timeZone	ConnectApi.TimeZone	The user's time zone as selected in the user's personal settings in Salesforce. This value does not reflect a device's current location.	30.0
userDefaultCurrencyIsoCode	String	The ISO code for the default currency. Applicable only when the <code>ConnectApi.Features.multiCurrency</code> property is <code>true</code> .	28.0
userId	String	18-character ID of the user.	28.0
userLocale	String	Locale of user.	28.0

## ConnectApi.VerifiedCapability

If a comment has this capability, users with permission can mark it as verified or unverified.

Subclass of [ConnectApi.FeedElementCapability](#).

Property Name	Type	Description	Available Version
<code>isVerifiableByMe</code>	<a href="#">Boolean</a>	Specifies whether the context user has permission to mark comments as verified or unverified ( <code>true</code> ) or not ( <code>false</code> ).	41.0
<code>isVerified</code>	<a href="#">Boolean</a>	Specifies whether the comment is marked as verified ( <code>true</code> ) or not ( <code>false</code> ).	41.0
<code>isVerifiedByAnonymized</code>	<a href="#">Boolean</a>	Specifies whether the comment is marked as verified by an anonymous user ( <code>true</code> ) or not ( <code>false</code> ). If the comment has never been marked as verified or	43.0

Property Name	Type	Description	Available Version
		unverified, <code>null</code> . Also <code>null</code> if the context user doesn't have permission to mark comments as verified or unverified.	
<code>lastVerifiedByUser</code>	<a href="#">ConnectApi.UserSummary</a>	User who last marked the comment as verified or unverified, otherwise <code>null</code> . Also <code>null</code> if the context user doesn't have permission to mark comments as verified or unverified.	41.0
<code>lastVerifiedDate</code>	<a href="#">Datetime</a>	Date when the comment was last marked as verified or unverified, otherwise <code>null</code> . Also <code>null</code> if the context user doesn't have permission to mark comments as verified or unverified.	41.0

[ConnectApi.CommentCapabilities](#)

## ConnectApi.Vote

An upvote or downvote on a feed element or comment.

Property Name	Type	Description	Available Version
<code>type</code>	<a href="#">ConnectApi.UpDownVoteValue</a>	Type of vote for a feed element or comment. <ul style="list-style-type: none"> <li>Down</li> <li>Up</li> </ul>	42.0
<code>user</code>	<a href="#">ConnectApi.UserSummary</a>	User who voted on the feed element or comment.	42.0
<code>votedItem</code>	<a href="#">ConnectApi.Reference</a>	Reference to the feed element or comment that was voted on.	42.0

SEE ALSO:

[ConnectApi.VotePage](#)

## ConnectApi.VotePage

A page of upvotes or downvotes on a feed element or comment.

Property Name	Type	Description	Available Version
<code>currentPageToken</code>	<a href="#">Integer</a>	Token identifying the current page.	42.0
<code>currentPageUrl</code>	<a href="#">String</a>	Connect REST API URL identifying the current page.	42.0

Property Name	Type	Description	Available Version
items	List<ConnectApi.Vote>	Collection of users and their upvotes or downvotes.  Upvotes include likes and upvotes. For example, if a post receives five likes and three upvotes, the number of upvotes is eight. For this reason, the collection of users and their upvotes also includes users who liked the post or comment. If a user both liked and upvoted a post, they appear only once in the collection.	42.0
nextPageToken	Integer	Token identifying the next page, or <code>null</code> if there isn't a next page.	42.0
nextPageUrl	String	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	42.0
previousPageToken	Integer	Token identifying the previous page, or <code>null</code> if there isn't a previous page.	42.0
previousPageUrl	String	Connect REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.	42.0
total	Long	Total number of upvotes or downvotes for the feed element or comment.  The number of upvotes includes the number of likes and upvotes. For example, if a post receives five likes and three upvotes, the total number of upvotes is eight. If a user both liked and upvoted a post, we count that as two upvotes.	42.0

## ConnectApi.Wishlist

Wishlist, including summary and items.

Property Name	Type	Description	Available Version
page	ConnectApi.WishlistItemCollection	Page of wishlist items.	49.0
summary	ConnectApi.WishlistSummary	Summary of the wishlist.	49.0

SEE ALSO:

[ConnectApi.WishlistsSummary](#)

## ConnectApi.WishlistItem

Item in a wishlist.

Property Name	Type	Description	Available Version
currencyIsoCode	<a href="#">String</a>	Three-letter ISO 4217 currency code associated with the product.	49.0
error	<a href="#">ConnectApi. ErrorResponse</a>	Error information.	49.0
listPrice	<a href="#">Double</a>	List price of the wishlist item.	49.0
productSummary	<a href="#">ConnectApi. CartItemProduct</a>	Product summary for the wishlist item.	49.0
salesPrice	<a href="#">Double</a>	Sales price of the wishlist item.	49.0
wishlistItemId	<a href="#">String</a>	ID of the wishlist item.	49.0

SEE ALSO:

[ConnectApi.WishlistItemCollection](#)

## ConnectApi.WishlistItemCollection

Collection of wishlist items.

Property Name	Type	Description	Available Version
currencyIsoCode	<a href="#">String</a>	Three-letter ISO 4217 currency code associated with the product.	49.0
currentPageToken	<a href="#">String</a>	Token identifying the current page.	49.0
currentPageUrl	<a href="#">String</a>	Connect REST API URL identifying the current page.	49.0
hasErrors	<a href="#">Boolean</a>	Specifies whether at least one of the results contains an error ( <a href="#">true</a> ) or not ( <a href="#">false</a> ).	49.0
items	<a href="#">List&lt;ConnectApi. WishlistItem&gt;</a>	Collection of wishlist items.	49.0
nextPageToken	<a href="#">String</a>	Token identifying the next page, or <a href="#">null</a> if there isn't a next page.	49.0
nextPageUrl	<a href="#">String</a>	Connect REST API URL identifying the next page, or <a href="#">null</a> if there isn't a next page.	49.0
previousPageToken	<a href="#">String</a>	Token identifying the previous page, or <a href="#">null</a> if there isn't a previous page.	49.0
previousPageUrl	<a href="#">String</a>	Connect REST API URL identifying the previous page, or <a href="#">null</a> if there isn't a previous page.	49.0

SEE ALSO:

[ConnectApi.Wishlist](#)

## ConnectApi.WishlistsSummary

List of wishlist summaries and the displayed list for the context user.

Property Name	Type	Description	Available Version
displayedList	<a href="#">ConnectApi.Wishlist</a>	Oldest wishlist displayed for the context user.	49.0
summaries	<a href="#">List&lt;ConnectApi.WishlistSummary&gt;</a>	Summary of wishlists belonging to the context user.	49.0
wishlistCount	<a href="#">Integer</a>	Total number of wishlists belonging to the context user.	49.0

## ConnectApi.WishlistSummary

Summary of a wishlist.

Property Name	Type	Description	Available Version
createdDate	<a href="#">Datetime</a>	Created date for the wishlist in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.	49.0
id	<a href="#">String</a>	ID of the wishlist.	49.0
modifiedDate	<a href="#">Datetime</a>	Last modified date of the wishlist in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.	49.0
name	<a href="#">String</a>	Name of the wishlist.	49.0
wishlistProductCount	<a href="#">Integer</a>	Unique product count in the wishlist.	49.0

SEE ALSO:

[ConnectApi.Wishlist](#)

[ConnectApi.WishlistsSummary](#)

## ConnectApi.WishlistToCartResult

Result of adding a wishlist to a cart.

Property Name	Type	Description	Available Version
cartId	<a href="#">String</a>	ID of the cart to which the products were added.	49.0
failedWishlistToCartItems	<a href="#">List&lt;ConnectApi.CartItemResult&gt;</a>	Wishlist items that weren't successfully added to the cart.	49.0
productsFailedCount	<a href="#">Integer</a>	Total number of products that weren't added to the cart.	49.0

Property Name	Type	Description	Available Version
productsRequestedCount	Integer	Total number of products requested to add to the cart.	49.0
productsSucceededCount	Integer	Total number of products that were successfully added to the cart.	49.0
succeededWishlistToCartItem	List<ConnectApi.CartItemResult>	Wishlist items that were successfully added to the cart.	49.0

## ConnectApi.WrappedMapObject

Map of a parameter name and value.

Property Name	Type	Description	Available Version
wrappedMap	Map<String, Object>	Map of parameter name and value.	60.0

## ConnectApi.Zone

Information about a Chatter Answers zone.

Name	Type	Description	Available Version
description	String	The description of the zone.	29.0
id	String	The zone ID.	29.0
isActive	Boolean	Indicates whether or not the zone is active.	29.0
isChatterAnswers	Boolean	Indicates whether or not the zone is available for Chatter Answers.	29.0
name	String	Name of the zone.	29.0
url	String	The URL of the zone.	30.0
visibility	ConnectApi.ZoneShowIn	Zone visibility type. <ul style="list-style-type: none"> <li>Community—Available in an Experience Cloud site.</li> <li>Internal—Available internally only.</li> <li>Portal—Available in a portal.</li> </ul>	29.0

Name	Type	Description	Available Version
visibilityId	<a href="#">String</a>	If the zone is available in a site, this property contains the ID of the site. If the zone is available to all sites, this property contains the value <code>All</code> .	29.0

SEE ALSO:

[ConnectApi.ZonePage](#)

## ConnectApi.ZonePage

Page of zones.

Name	Type	Description	Available Version
zones	<a href="#">List&lt;ConnectApi.Zone&gt;</a>	A list of one or more zones.	29.0
currentPageUrl	<a href="#">String</a>	Connect REST API URL identifying the current page.	29.0
nextPageUrl	<a href="#">String</a>	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	29.0

## ConnectApi.ZoneSearchPage

Page of zone search results.

Name	Type	Description	Available Version
currentPageToken	<a href="#">String</a>	Token identifying the current page.	29.0
currentPageUrl	<a href="#">String</a>	Connect REST API URL identifying the current page.	29.0
items	<a href="#">List&lt;ConnectApi.ZoneSearchResult&gt;</a>	List of search results.	29.0
nextPageToken	<a href="#">String</a>	Token identifying the next page, or <code>null</code> if there isn't a next page.	29.0
nextPageUrl	<a href="#">String</a>	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	29.0

## ConnectApi.ZoneSearchResult

Information about a specific zone search result.

Name	Type	Description	Available Version
<code>hasBestAnswer</code>	<a href="#">Boolean</a>	Indicates if the search result has a best answer.	29.0
<code>id</code>	<a href="#">String</a>	ID of the search result. The search result can be a question or an article.	29.0
<code>title</code>	<a href="#">String</a>	Title of the search result.	29.0
<code>type</code>	<code>ConnectApi.ZoneSearchResultType Enum</code>	Specifies the zone search result type. <ul style="list-style-type: none"> <li><code>Article</code>—Search results contain only articles.</li> <li><code>Question</code>—Search results contain only questions.</li> </ul>	29.0
<code>voteCount</code>	<a href="#">String</a>	Number of votes given to the search result.	29.0

## Retired `connectApi` Output Classes

These `ConnectApi` output classes are retired.

IN THIS SECTION:

[ConnectApi.ApprovalAttachment](#)

Attach an approval to a feed item.

[ConnectApi.BasicTemplateAttachment](#)

Attachments in feed items with type `BasicTemplate`.

[ConnectApi.CanvasTemplateAttachment](#)

Attachments in feed items with type `CanvasPost`.

[ConnectApi.CaseComment](#)

Attachments in feed items with type `CaseCommentPost`.

[ConnectApi.ContentAttachment](#)

Attachments in feed items with the type `ContentPost`.

[ConnectApi.DashboardComponentAttachment](#)

Attachments in feed items with type `DashboardSnapshot`.

[ConnectApi.DatacloudCompany](#)

Information about a Data.com company.

[ConnectApi.DatacloudCompanies](#)

Lists all companies that were purchased in a specific order, page URLs, and the number of companies in the order.

[ConnectApi.DatacloudContact](#)

Information about a Data.com contact.

[ConnectApi.DatacloudContacts](#)

Lists all contacts that were purchased in the specific order, page URLs, and the number of contacts in the order.

[ConnectApi.DatacloudOrder](#)

Represents a Datacloud order.

[ConnectApi.DatacloudPurchaseUsage](#)

Information about Data.com point usage for monthly and list pool users.

[ConnectApi.EmailMessage](#)

Email message from a case.

[ConnectApi.FeedItemAttachment](#)

Feed item attachment.

[ConnectApi.FeedItemPage](#)

A paged collection of `ConnectApi.FeedItem` objects.

[ConnectApi.FeedItemTopicPage](#)

Feed item topic page.

[ConnectApi.FeedPoll](#)

Attachment of `ConnectApi.FeedItem` objects where the `type` property is `PollPost`.

[ConnectApi.LinkAttachment](#)

Link attached to a feed item.

[ConnectApi.NonEntityRecommendation](#)

A recommendation for a non-Salesforce entity, such as an application.

[ConnectApi.RecordSnapshotAttachment](#)

Fields of a record at the point in time when the record was created.

[ConnectApi.TrackedChangeAttachment](#)

Tracked change attachment to a feed item.

## ConnectApi.ApprovalAttachment

Attach an approval to a feed item.

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.ApprovalCapability](#) is used.

Subclass of [ConnectApi.FeedItemAttachment](#).

Name	Type	Description	Available Version
<code>id</code>	<code>String</code>	A work item ID.	28.0–31.0
<code>postTemplateFields</code>	<code>List</code> < <a href="#">ConnectApi.ApprovalPostTemplateField</a> >	Collection of approval post template fields	28.0–31.0
<code>processInstanceStepId</code>	<code>String</code>	An approval step ID.	30.0–31.0

Name	Type	Description	Available Version
status	ConnectApi. WorkflowProcess Status Enum	Status of a workflow process. <ul style="list-style-type: none"> <li>• Approved</li> <li>• Fault</li> <li>• Held</li> <li>• NoResponse</li> <li>• Pending</li> <li>• Reassigned</li> <li>• Rejected</li> <li>• Removed</li> <li>• Started</li> </ul>	28.0–31.0

### ConnectApi.BasicTemplateAttachment

Attachments in feed items with type `BasicTemplate`.

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.EnhancedLinkCapability](#) is used.

Subclass of [ConnectApi.FeedItemAttachment](#).

Property	Type	Description	Available Version
description	<a href="#">String</a>	An optional description with a 500 character limit.	28.0–31.0
icon	<a href="#">ConnectApi.Icon</a>	An optional icon.	28.0–31.0
linkRecordId	<a href="#">String</a>	If <code>linkUrl</code> refers to a Salesforce record, <code>linkRecordId</code> contains the ID of the record.	28.0–31.0
linkUrl	<a href="#">String</a>	An optional URL to a detail page if there is more content that can't be displayed inline. Do not specify <code>linkUrl</code> unless you specify a <code>title</code> .	28.0–31.0
title	<a href="#">String</a>	An optional title to the detail page. If <code>linkUrl</code> is specified, the title links to <code>linkUrl</code> .	28.0–31.0

### ConnectApi.CanvasTemplateAttachment

Attachments in feed items with type `CanvasPost`.

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.CanvasCapability](#) is used.

Subclass of [ConnectApi.FeedItemAttachment](#).

Property	Type	Description	Available Version
description	String	Optional. Description of the canvas app. The maximum length of this field is 500 characters.	29.0–31.0
developerName	String	Specifies the developer name (API name) of the canvas app.	29.0–31.0
height	String	Optional. The height of the canvas app in pixels. Default height is 200 pixels.	29.0–31.0
icon	<a href="#">ConnectApi.Icon</a>	The canvas app icon.	29.0–31.0
namespacePrefix	String	Optional. The namespace prefix of the Developer Edition organization in which the canvas app was created.	29.0–31.0
parameters	String	Optional. Parameters passed to the canvas app in JSON format. Example: <pre>{ 'isUpdated'='true' }</pre>	29.0–31.0
thumbnailUrl	String	Optional. A URL to a thumbnail image for the canvas app. Maximum dimensions are 120x120 pixels.	29.0–31.0
title	String	Specifies the title of the link used to call the canvas app.	29.0–31.0

## ConnectApi.CaseComment

Attachments in feed items with type `CaseCommentPost`.

**!** **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.CaseCommentCapability](#) is used.

Subclass of [ConnectApi.FeedItemAttachment](#).

Name	Type	Description	Available Version
actorType	<a href="#">ConnectApi.CaseActorTypeEnum</a>	Type of user who made the comment. <ul style="list-style-type: none"> <li>Customer—if a Chatter customer made the comment</li> <li>CustomerService—if a service representative made the comment</li> </ul>	28.0–31.0
createdBy	<a href="#">ConnectApi.UserSummary</a>	Comment's creator	28.0–31.0
createdDate	Datetime	ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z	28.0–31.0
id	String	Comment's 18-character ID	28.0–31.0
published	Boolean	Specifies whether the comment has been published	28.0–31.0
text	String	Comment's text	28.0–31.0

## ConnectApi.ContentAttachment

Attachments in feed items with the type `ContentPost`.

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.ContentCapability](#) is used.

Subclass of [ConnectApi.FeedItemAttachment](#).

Name	Type	Description	Available Version
<code>checksum</code>	<a href="#">String</a>	MD5 checksum for the file.	28.0–31.0
<code>contentUrl</code>	<a href="#">String</a>	URL for link files and Google Docs; otherwise the value is <code>null</code> .	31.0–31.0
<code>description</code>	<a href="#">String</a>	Description of the attachment.	28.0–31.0
<code>downloadUrl</code>	<a href="#">String</a>	File's URL. This value is <code>null</code> if the content is a link or a Google Doc.	28.0–31.0
<code>fileExtension</code>	<a href="#">String</a>	File's extension.	28.0–31.0
<code>fileSize</code>	<a href="#">String</a>	Size of the file in bytes. If size cannot be determined, returns <code>unknown</code> .	28.0–31.0
<code>fileType</code>	<a href="#">String</a>	Type of file.	28.0–31.0
<code>hasImagePreview</code>	<a href="#">Boolean</a>	<code>true</code> if the file has a preview image available, otherwise, <code>false</code> .	28.0–29.0
<code>hasPdfPreview</code>	<a href="#">Boolean</a>	<code>true</code> if the file has a PDF preview available, otherwise, <code>false</code> .	28.0–31.0
<code>id</code>	<a href="#">String</a>	Content's 18-character ID.	28.0–31.0
<code>isInMyFileSync</code>	<a href="#">Boolean</a>	<code>true</code> if the file is synced with Salesforce Files Sync; <code>false</code> otherwise.	28.0–31.0
		 <b>Note:</b> Salesforce Files Sync was retired on May 25, 2018.	
<code>mimeType</code>	<a href="#">String</a>	File's MIME type.	28.0–31.0
<code>renditionUrl</code>	<a href="#">String</a>	URL to the file's rendition resource.	28.0–31.0
<code>renditionUrl 240By180</code>	<a href="#">String</a>	URL to the 240 x 180 rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.	30.0–31.0
<code>renditionUrl 720By480</code>	<a href="#">String</a>	URL to the 720 x 480 rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.	30.0–31.0
<code>textPreview</code>	<a href="#">String</a>	Text preview of the file if available; <code>null</code> otherwise.	30.0–31.0
<code>thumb120By90 RenditionStatus</code>	<a href="#">String</a>	Specifies the rendering status of the 120 x 90 preview image of the file. One of these values: <ul style="list-style-type: none"> <li><code>Processing</code>—Image is being rendered.</li> <li><code>Failed</code>—Rendering process failed.</li> <li><code>Success</code>—Rendering process was successful.</li> </ul>	30.0–31.0

Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>Na—Rendering is not available for this image.</li> </ul>	
thumb240By180RenditionStatus	String	Specifies the rendering status of the 240 x 180 preview image of the file. One of these values: <ul style="list-style-type: none"> <li>Processing—Image is being rendered.</li> <li>Failed—Rendering process failed.</li> <li>Success—Rendering process was successful.</li> <li>Na—Rendering is not available for this image.</li> </ul>	30.0–31.0
thumb720By480RenditionStatus	String	Specifies the rendering status of the 720 x 480 preview image of the file. One of these values: <ul style="list-style-type: none"> <li>Processing—Image is being rendered.</li> <li>Failed—Rendering process failed.</li> <li>Success—Rendering process was successful.</li> <li>Na—Rendering is not available for this image.</li> </ul>	30.0–31.0
title	String	Title of the file.	28.0–31.0
versionId	String	18-character ID for this version of the content.	28.0–31.0

## ConnectApi.DashboardComponentAttachment

Attachments in feed items with type `DashboardSnapshot`.

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, `ConnectApi.DashboardComponentSnapshotCapability` is used.

Subclass of `ConnectApi.FeedItemAttachment`.

Name	Type	Description	Available Version
componentId	String	Component's 18-character ID.	28.0–31.0
componentName	String	Name of the component. If no name is saved with the component, returns the localized string, "Untitled Component."	28.0–31.0
dashboardBodyText	String	Text displayed next to the actor in the body of a feed item. This is used instead of the default body text. If no text is specified, and there is no default body text, returns null.	28.0–31.0
dashboardId	String	Dashboard's 18-character ID.	28.0–31.0
dashboardName	String	Name of the dashboard.	28.0–31.0
fullSizeImageUrl	String	URL of the full-sized dashboard image.	28.0–31.0
lastRefreshDate	Datetime	ISO8601 date string, for example, 2011-02-25T18:24:31.000Z, specifying when this dashboard was last refreshed.	28.0–31.0

Name	Type	Description	Available Version
lastRefreshDate DisplayText	String	The text of the last refresh date to be displayed, such as, "Last refreshed on October 31, 2011."	28.0–31.0
runningUser	ConnectApi. User Summary	The user running the dashboard.	28.0–31.0
thumbnailUrl	String	URL of the thumbnail-sized dashboard image.	28.0–31.0

## ConnectApi.DatacloudCompany

Information about a Data.com company.

All company information is visible for companies that you purchased and own. If you haven't purchased a company, some of the fields are hidden. Hidden fields are fully or partially hidden by asterisks "\*\*\*\*."

Property Name	Type	Description	Available Version
activeContacts	Integer	The number of active Data.com contacts who work in the company.	32.0
address	ConnectApi.Address	The postal address for the company. This is typically a physical address that can include the city, state, street, and postal code.	32.0
annualRevenue	Double	The amount of money that the company makes in one year. Annual revenue is measured in US dollars.	32.0
companyId	String	A unique numerical identifier for the company. This is the Data.com identifier for a company.	32.0
description	String	A brief synopsis of the company that provides a general overview of the company and what it does.	32.0
dunsNumber	String	A randomly generated nine-digit number that's assigned by Dun & Bradstreet (D&B) to identify unique business establishments.	32.0
industry	String	A description of the type of industry such as "Telecommunications," "Agriculture," or "Electronics."	32.0
isInactive	Boolean	Indicates whether this company is active (true) or not (false). Inactive companies have out-of-date information in Data.com.	32.0
isOwned	Boolean	<ul style="list-style-type: none"> <li>True: You or your organization owns this company.</li> </ul>	32.0

Property Name	Type	Description	Available Version
		<ul style="list-style-type: none"> <li>False: Neither you nor your organization owns this company.</li> </ul>	
naicsCode	String	North American Industry Classification System (NAICS) codes were created to provide more details about a business's service orientation. The code descriptions are focused on what a business does.	32.0
naicsDescription	String	A description of the NAICS classification.	32.0
name	String	The name of the company.	32.0
numberOfEmployees	Integer	The number of employees who are working for the company.	32.0
ownership	String	The type of ownership of the company: <ul style="list-style-type: none"> <li>Public</li> <li>Private</li> <li>Government</li> <li>Other</li> </ul>	32.0
phoneNumbers	ConnectApi.PhoneNumber	The list of telephone numbers for the company, including the type. Here are some possible types of telephone numbers. <ul style="list-style-type: none"> <li>Mobile</li> <li>Work</li> <li>Fax</li> </ul>	32.0
sic	String	Standard Industrial Codes (SIC) is a numbering convention that indicates what type of service a business provides. It's a four-digit value.	32.0
sicDescription	String	A description of the SIC classification.	32.0
site	String	Company's site. For example, HQ, Single Location, or Branch. An organization status of the company. <ul style="list-style-type: none"> <li>Branch: a secondary location to a headquarter location.</li> <li>Headquarter: the parent company has branches or subsidiaries.</li> <li>Single Location: a single business with no subsidiaries or branches.</li> </ul>	32.0

Property Name	Type	Description	Available Version
tickerSymbol	String	The symbol that uniquely identifies companies that are traded on public stock exchanges.	32.0
tradeStyle	String	A legal name under which a company conducts business.	32.0
updatedAtDate	Datetime	The date of the most recent change to this company's information.	32.0
website	String	The standard URL for the company's home page.	32.0
yearStarted	String	The year when the company was founded.	32.0

## ConnectApi.DatacloudCompanies

Lists all companies that were purchased in a specific order, page URLs, and the number of companies in the order.

Property Name	Type	Description	Available Version
companies	ConnectApi.DatacloudCompany	A detailed list of companies that were part of a single order.	32.0
currentPageUrl	String	The URL for the current page of a list of companies.	32.0
nextPageUrl	String	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	32.0
previousPageUrl	String	The URL to the previous page of companies that were viewed before the current page. If this value is <code>null</code> , there's no previous page.	32.0
total	Integer	The number of companies in the order. You can calculate the number of pages to display by dividing this number by your page size. The default page size is 25.	32.0

## ConnectApi.DatacloudContact

Information about a Data.com contact.

All contact information is visible for contacts that you purchased. If you have not purchased a contact, some of the fields will be hidden. Hidden fields are fully or partially hidden by asterisks "\*\*\*\*."

Property Name	Type	Description	Available Version
address	ConnectApi.Address	The contact's business address.	32.0

Property Name	Type	Description	Available Version
companyId	String	A unique numerical identifier for the company where the contact works. This is the Data.com identifier for a company.	32.0
companyName	String	The company name where the contact works.	32.0
contactId	String	A unique numerical identifier for the contact. This is the Data.com identifier for a contact.	32.0
department	String	The department in the company where the contact works. Here are some possible departments. <ul style="list-style-type: none"> <li>• Engineering</li> <li>• IT</li> <li>• Marketing</li> <li>• Sales</li> </ul>	32.0
email	String	The most current business email address for the contact.	32.0
firstName	String	The first name of the contact.	32.0
isInactive	Boolean	Whether this contact is active (true) or not (false). Inactive contacts have out-of-date information in Data.com.	32.0
isOwned	Boolean	Whether this contact is owned (true) or not (false).	32.0
lastName	String	The last name of the contact.	32.0
level	String	A human resource label that designates a person's level in the company. Here are some possible levels. <ul style="list-style-type: none"> <li>• C-Level</li> <li>• Director</li> <li>• Manager</li> <li>• Staff</li> </ul>	32.0
phoneNumbers	ConnectApi.PhoneNumber	Telephone numbers for the contact, which can include direct-dial business telephone numbers, mobile telephone numbers, and business headquarters telephone numbers. The type of telephone number is also indicated.	32.0
title	String	The title of the contact, such as CEO or Vice President.	32.0
updatedAtDate	Datetime	The date of the most recent change to this contact's information.	32.0

## SEE ALSO:

[ConnectApi.DatacloudContacts](#)

## ConnectApi.DatacloudContacts

Lists all contacts that were purchased in the specific order, page URLs, and the number of contacts in the order.

Property Name	Type	Description	Available Version
contacts	<a href="#">ConnectApi.DatacloudContact</a>	A detailed list of purchased contacts.	32.0
currentPageUrl	String	URL to the current page of contacts.	32.0
nextPageUrl	String	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	32.0
previousPageUrl	String	URL to the previous page of contacts. This value is null if there is no previous page.	32.0
total	Integer	Number of contacts that are associated with this order. Can be greater than the number of contacts that are shown on a single page.	32.0

## ConnectApi.DatacloudOrder

Represents a Datacloud order.

Property Name	Type	Description	Available Version
entityUrl	String	URL to a list of contacts or companies that were purchased with this order.	32.0
id	String	Unique number that's used to track your order information.	32.0
purchaseCount	Integer	Number of contacts or companies that were purchased for this order.	32.0
purchaseDate	Datetime	Purchase date for this order.	32.0
url	String	GET request URL for this order.	32.0

## ConnectApi.DatacloudPurchaseUsage

Information about Data.com point usage for monthly and list pool users.

Property Name	Type	Description	Available Version
listpoolCreditsAvailable	Integer	The points or credits that are available in a pool of credits for your organization. This pool of credits can be used by any List Pool User in your organization.	32.0
listpoolCreditsUsed	Integer	The points or credits that have been used from a pool of credits that are used by List Pool Users to purchase records.	32.0

Property Name	Type	Description	Available Version
monthlyCreditsAvailable	Integer	The total credits that are assigned to a Monthly User. Unused credits expire at the end of each month.	32.0
monthlyCreditsUsed	Integer	The credits that are used by a Monthly User for the current month.	32.0

## ConnectApi.EmailMessage

Email message from a case.

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.EmailMessageCapability](#) is used.

Subclass of [ConnectApi.FeedItemAttachment](#).

Name	Type	Description	Available Version
direction	ConnectApi.EmailMessageDirectionEnum	The direction of the email message. <ul style="list-style-type: none"> <li>Inbound—An inbound message (sent by a customer).</li> <li>Outbound—An outbound message (sent to a customer by a support agent).</li> </ul>	29.0–31.0
emailMessageId	String	The ID of the email message.	29.0–31.0
subject	String	The subject of the email message.	29.0–31.0
textBody	String	The body of the email message.	29.0–31.0
toAddresses	List<ConnectApi.EmailAddress>	A list of email addresses to send the message to.	29.0–31.0

## ConnectApi.FeedItemAttachment

Feed item attachment.

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.FeedElementCapability](#) is used.

This class is abstract.

Subclasses:

- [ConnectApi.ApprovalAttachment](#)
- [ConnectApi.BasicTemplateAttachment](#)
- [ConnectApi.CanvasTemplateAttachment](#)
- [ConnectApi.EmailMessage](#)
- [ConnectApi.CaseComment](#)
- [ConnectApi.ContentAttachment](#)
- [ConnectApi.DashboardComponentAttachment](#)

- [ConnectApi.FeedPoll](#)
- [ConnectApi.LinkAttachment](#)
- [ConnectApi.RecordSnapshotAttachment](#)
- [ConnectApi.TrackedChangeAttachment](#)

Message segments in a feed item are typed as `ConnectApi.MessageSegment`. Feed item capabilities are typed as `ConnectApi.FeedItemCapability`. Record fields are typed as `ConnectApi.AbstractRecordField`. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

 **Important:** The composition of a feed can change between releases. Write your code to handle instances of unknown subclasses.

## ConnectApi.FeedItemPage

A paged collection of `ConnectApi.FeedItem` objects.

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.FeedElementPage](#) is used.

Name	Type	Description	Available Version
<code>currentPageToken</code>	<a href="#">String</a>	Token identifying the current page.	28.0–31.0
<code>currentPageUrl</code>	<a href="#">String</a>	Connect REST API URL identifying the current page.	28.0–31.0
<code>isModifiedToken</code>	<a href="#">String</a>	Opaque polling token to use in the <code>since</code> parameter of the <code>ChatterFeeds.isModified</code> method. The token describes when the feed was last modified.	28.0–31.0
		 <b>Important:</b> This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.	
<code>isModifiedUrl</code>	<a href="#">String</a>	Connect REST API URL with a <code>since</code> request parameter that contains an opaque token that describes when the feed was last modified. Returns <code>null</code> if the feed isn't a news feed. Use this URL to poll a news feed for updates.	28.0–31.0
		 <b>Important:</b> This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.	
<code>items</code>	<a href="#">List&lt;ConnectApi.FeedItem&gt;</a>	List of feed items	28.0–31.0
<code>nextPageToken</code>	<a href="#">String</a>	Token identifying the next page, or <code>null</code> if there isn't a next page.	28.0–31.0
<code>nextPageUrl</code>	<a href="#">String</a>	Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.	28.0–31.0
<code>updatesToken</code>	<a href="#">String</a>	Token to use in an <code>updatedSince</code> parameter, or <code>null</code> if not available.	30.0–31.0

Name	Type	Description	Available Version
<code>updatesUrl</code>	<a href="#">String</a>	A Connect REST API resource with a query string containing the value of the <code>updatesToken</code> property. The resource returns the feed items that have been updated since the last request. Use the URL as it is—do not modify it. Property is <code>null</code> if not available.	30.0–31.0

## ConnectApi.FeedItemTopicPage

Feed item topic page.

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.TopicsCapability](#) is used.

Name	Type	Description	Available Version
<code>canAssignTopics</code>	<a href="#">Boolean</a>	<code>true</code> if a topic can be assigned to the feed item, <code>false</code> otherwise.	28.0–31.0
<code>topics</code>	<a href="#">List&lt;ConnectApi.Topic&gt;</a>	List of topics.	28.0–31.0

## ConnectApi.FeedPoll

Attachment of `ConnectApi.FeedItem` objects where the `type` property is `PollPost`.

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.PollCapability](#) is used.

Subclass of [ConnectApi.FeedItemAttachment](#).

Name	Type	Description	Available Version
<code>choices</code>	<a href="#">List&lt;ConnectApi.FeedPoll.Choice&gt;</a>	List of choices for poll.	28.0–31.0
<code>myChoiceId</code>	<a href="#">String</a>	ID of the poll choice that the context user has voted for in this poll. Returns <code>null</code> if the context user hasn't voted.	28.0–31.0
<code>totalVoteCount</code>	<a href="#">Integer</a>	Total number of votes cast on the feed poll item.	28.0–31.0

## ConnectApi.LinkAttachment

Link attached to a feed item.

 **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.LinkCapability](#) is used.

Subclass of [ConnectApi.FeedItemAttachment](#).

Name	Type	Description	Available Version
title	String	Title given to the link if available, otherwise, <code>null</code> .	28.0–31.0
url	String	The link URL.	28.0–31.0

## ConnectApi.NonEntityRecommendation

A recommendation for a non-Salesforce entity, such as an application.

Subclass of [ConnectApi.AbstractRecommendation](#).

**!** **Important:** `ConnectApi.NonEntityRecommendation` isn't used in version 34.0 and later. In version 34.0 and later, [ConnectApi.EntityRecommendation](#) is used for all recommendations.

Property Name	Type	Description	Available Version
displayLabel	String	Localized label of the non-entity object.	32.0
motif	<a href="#">ConnectApi.Motif</a>	Motif for the non-entity object.	32.0

## ConnectApi.RecordSnapshotAttachment

Fields of a record at the point in time when the record was created.

**!** **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.RecordSnapshotCapability](#) is used.

Subclass of [ConnectApi.FeedItemAttachment](#).

Name	Type	Description	Available Version
recordView	<a href="#">ConnectApi.RecordView</a>	The representation of the record.	29.0–31.0

## ConnectApi.TrackedChangeAttachment

Tracked change attachment to a feed item.

**!** **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, [ConnectApi.TrackedChangesCapability](#) is used.

Name	Type	Description	Available Version
changes	<a href="#">List&lt;ConnectApi.TrackedChangeItem&gt;</a>	A list of tracked changes.	28.0–31.0

## ConnectApi Enums

Enums specific to the `ConnectApi` namespace.

`ConnectApi` enums inherit all properties and methods of Apex enums.

Enums are not versioned. Enum values are returned in all API versions. Clients should handle values they don't understand gracefully.

Enum	Description
<code>ConnectApi.ActionLinkExecutionsAllowed</code>	<p>Number of times an action link can be executed.</p> <ul style="list-style-type: none"> <li><code>Once</code>—An action link can be executed only one time across all users.</li> <li><code>OncePerUser</code>—An action link can be executed only one time for each user.</li> <li><code>Unlimited</code>—An action link can be executed an unlimited number of times by each user. If the action link's <code>actionType</code> is <code>Api</code> or <code>ApiAsync</code>, you can't use this value.</li> </ul>
<code>ConnectApi.ActionLinkType</code>	<p>Type of action link.</p> <ul style="list-style-type: none"> <li><code>Api</code>—The action link calls a synchronous API at the action URL. Salesforce sets the status to <code>SuccessfulStatus</code> or <code>FailedStatus</code> based on the HTTP status code returned by your server.</li> <li><code>ApiAsync</code>—The action link calls an asynchronous API at the action URL. The action remains in a <code>PendingStatus</code> state until a third party makes a request to <code>/connect/action-links/<b>actionLinkId</b></code> to set the status to <code>SuccessfulStatus</code> or <code>FailedStatus</code> when the asynchronous operation is complete.</li> <li><code>Download</code>—The action link downloads a file from the action URL.</li> <li><code>Ui</code>—The action link takes the user to a web page at the action URL.</li> </ul>
<code>ConnectApi.ActivitySharingTypeEnum</code>	<p>Type of sharing operation.</p> <ul style="list-style-type: none"> <li><code>Everyone</code>—The activity is shared with everyone.</li> <li><code>MyGroups</code>—The activity is shared only with a selection of the context user's groups.</li> <li><code>OnlyMe</code>—The activity is private.</li> </ul>
<code>ConnectApi.AdjustmentAmountScope</code>	<p>Scope of the price adjustment amount.</p> <ul style="list-style-type: none"> <li><code>Total</code>—The adjustment scope is the total price.</li> <li><code>Unit</code>—The adjustment scope is the unit price.</li> <li><code>UnproratedTotal</code>—The adjustment scope is the unprorated total price.</li> </ul>
<code>ConnectApi.AdjustmentType</code>	<p>How the price adjustment amount is calculated.</p> <ul style="list-style-type: none"> <li><code>AdjustmentAmount</code>—The adjustment is a fixed amount.</li> <li><code>AdjustmentPercentage</code>—The adjustment is a percentage.</li> </ul>
<code>ConnectApi.ArticleTopicJobType</code>	<p>Type of operation to perform on articles and topics.</p> <ul style="list-style-type: none"> <li><code>AssignTopicsToArticle</code>—Assign topics to articles in a data category.</li> <li><code>UnassignTopicsFromArticle</code>—Unassign topics from articles in a data category.</li> </ul>

Enum	Description
<code>ConnectApi.AsyncOperationStatus</code>	Asynchronous processing status of the cart, if asynchronous processing is enabled for the store. <ul style="list-style-type: none"> <li>Completed</li> <li>Errored</li> <li>Processing</li> </ul>
<code>ConnectApi.AudienceCriteriaOperator</code>	Operator used in the personalization audience criterion. <ul style="list-style-type: none"> <li>Contains</li> <li>Equal</li> <li>GreaterThan</li> <li>GreaterThanOrEqual</li> <li>Includes</li> <li>LessThan</li> <li>LessThanOrEqual</li> <li>NotEqual</li> <li>NotIncludes</li> <li>StartsWith</li> </ul>
<code>ConnectApi.AudienceCriteriaType</code>	Type of personalization audience criterion. <ul style="list-style-type: none"> <li>Audience—Criterion based on audience.</li> <li>Default—Audience has no criteria.</li> <li>Domain—Criterion based on domain.</li> <li>FieldBased—Criterion based on object fields.</li> <li>GeoLocation—Criterion based on location.</li> <li>Permission—Criterion based on standard or custom permissions.</li> <li>Profile—Criterion based on profile.</li> </ul>
<code>ConnectApi.BannerStyle</code>	Decorates a feed item with a color and set of icons. <ul style="list-style-type: none"> <li>Announcement—An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement.</li> </ul>
<code>ConnectApi.BillingFrequency</code>	Billing frequency for a subscription. <ul style="list-style-type: none"> <li>Annual</li> <li>Monthly</li> </ul>
<code>ConnectApi.BotVersionActivationStatus</code>	Activation status of the bot version. <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>

Enum	Description
<code>ConnectApi.BundleType</code>	Type of bundle. <ul style="list-style-type: none"> <li><code>GenericBundle</code>—A bundle that contains no additional information and is just a collection of feed elements.</li> <li><code>TrackedChanges</code>—A bundle that represents a collection of feed-tracked changes. The bundle includes summary information about the feed-tracked changes that make up the bundle.</li> </ul>
<code>ConnectApi.CalculatedInsightDefinitionTypeEnum</code>	Definition type of the calculated insight. <ul style="list-style-type: none"> <li><code>CalculatedMetric</code></li> <li><code>ExternalMetric</code></li> <li><code>StreamingMetric</code></li> </ul>
<code>ConnectApi.CalculateTaxType</code>	Type of tax calculation. <ul style="list-style-type: none"> <li><code>Actual</code>—Calculated tax represents the final taxed amount for the transaction.</li> <li><code>Estimated</code>—Calculated tax represents only an estimated value before the transaction is finalized.</li> </ul>
<code>ConnectApi.CalloutStatus</code>	Indicates whether a named credential is enabled for callout. <ul style="list-style-type: none"> <li><code>Disabled</code></li> <li><code>Enabled</code></li> </ul>
<code>ConnectApi.CardCategory</code>	Indicates a credit card or debit card. <ul style="list-style-type: none"> <li><code>CreditCard</code></li> <li><code>DebitCard</code></li> </ul>
<code>ConnectApi.CardType</code>	Credit card issuer. <ul style="list-style-type: none"> <li><code>AmericanExpress</code></li> <li><code>DinersClub</code></li> <li><code>JCB</code></li> <li><code>Maestro</code></li> <li><code>MasterCard</code></li> <li><code>Visa</code></li> </ul>
<code>ConnectApi.CartItemSortOrder</code>	Sort order for items in a cart. <ul style="list-style-type: none"> <li><code>CreatedDateAsc</code>—Sorts by oldest creation date.</li> <li><code>CreatedDateDesc</code>—Sorts by most recent creation date.</li> <li><code>NameAsc</code>—Sorts by name in ascending alphabetical order (A–Z).</li> <li><code>NameDesc</code>—Sorts by name in descending alphabetical order (Z–A).</li> <li><code>SalesPriceAsc</code>—Sorts from lowest to highest negotiated price.</li> <li><code>SalesPriceDesc</code>—Sorts from highest to lowest negotiated price.</li> </ul>

Enum	Description
<code>ConnectApi.CartItemType</code>	Type of item in a cart. <ul style="list-style-type: none"> <li>• <code>DeliveryCharge</code></li> <li>• <code>Product</code></li> </ul>
<code>ConnectApi.CartMessageSeverity</code>	Severity of cart message. <ul style="list-style-type: none"> <li>• <code>Error</code></li> <li>• <code>Info</code></li> <li>• <code>Warning</code></li> </ul>
<code>ConnectApi.CartPromotionType</code>	Level of the promotion target. <ul style="list-style-type: none"> <li>• <code>Cart</code>—The target is cart-level.</li> <li>• <code>Item</code>—The target is item-level.</li> </ul>
<code>ConnectApi.CartStatus</code>	Status of the cart. <ul style="list-style-type: none"> <li>• <code>Active</code>—Cart is created and available for modifications, like adding or removing products or promotions.</li> <li>• <code>Checkout</code>—Cart is in checkout. If the customer modifies the cart, the current checkout session is canceled.</li> <li>• <code>Closed</code>—Checkout is complete and an order was created. The cart cannot be modified.</li> <li>• <code>PendingClosed</code>—Cart is marked to be closed, but the request isn't completed yet. The cart can't be modified. This value is available in API version 57.0 and later.</li> <li>• <code>PendingDelete</code>—Cart is marked for delete, but the request isn't completed yet. The cart can't be modified.</li> <li>• <code>Processing</code>—Cart is processing. For example, taxes are being calculated. The cart can't be modified.</li> </ul>
<code>ConnectApi.CartTaxType</code>	Tax type of the cart. <ul style="list-style-type: none"> <li>• <code>Automatic</code>—Automatic taxation policy.</li> <li>• <code>Gross</code>—Gross taxation policy.</li> <li>• <code>Net</code>—Net taxation policy.</li> </ul>
<code>ConnectApi.CartType</code>	Type of cart. <ul style="list-style-type: none"> <li>• <code>Cart</code>—Cart created by a customer.</li> <li>• <code>PayNowReadOnly</code>—Clone of a <code>Template</code> cart that the customer can check out with using the Pay Now feature.</li> <li>• <code>Template</code>—Cart created by an internal user.</li> </ul>
<code>ConnectApi.CaseActorType</code>	Type of user who made the comment. <ul style="list-style-type: none"> <li>• <code>Customer</code>—if a Chatter customer made the comment</li> <li>• <code>CustomerService</code>—if a service representative made the comment</li> </ul>

Enum	Description
<code>ConnectApi.CaseCommentEventType</code>	<p>Event type of a comment in Case Feed.</p> <ul style="list-style-type: none"> <li><code>NewInternal</code>—A case comment that has newly been marked Internal Only.</li> <li><code>NewPublished</code>—A newly published case comment.</li> <li><code>NewPublishedByCustomer</code>—A case comment by a customer that was newly published.</li> <li><code>PublishExisting</code>—An existing case comment that was republished.</li> <li><code>PublishExistingByCustomer</code>—An existing case comment by a customer that was republished.</li> <li><code>UnpublishExistingByCustomer</code>—An existing case comment by a customer that was unpublished.</li> <li><code>UnpublishExisting</code>—An existing case comment that was unpublished.</li> </ul> <p> <b>Note:</b> Unfortunately, this typo is in the code, not the documentation. Use this spelling in your code.</p>
<code>ConnectApi.CdpIdentityResolutionConfigurationType</code>	<p>Source object for an identity resolution ruleset.</p> <ul style="list-style-type: none"> <li><code>Account</code></li> <li><code>Individual</code></li> </ul>
<code>ConnectApi.CdpIdentityResolutionMatchMethodType</code>	<p>Match method for a match rule criterion.</p> <ul style="list-style-type: none"> <li><code>Exact</code>—Exact match.</li> <li><code>ExactNormalized</code>—Exact normalized match.</li> <li><code>Fuzzy</code>—Fuzzy match with medium precision.</li> <li><code>FuzzyHigh</code>—Fuzzy match with high precision.</li> <li><code>FuzzyLow</code>—Fuzzy match with low precision.</li> </ul>
<code>ConnectApi.CdpIdentityResolutionReconciliationRuleType</code>	<p>Default reconciliation rule applied to fields in the object the reconciliation rule applies to.</p> <ul style="list-style-type: none"> <li><code>LastUpdated</code></li> <li><code>MostFrequent</code></li> <li><code>SourceSequence</code></li> </ul>
<code>ConnectApi.CdpIdentityResolutionRunNowResultCode</code>	<p>Result of an identity resolution ruleset job run.</p> <ul style="list-style-type: none"> <li><code>ExceededMaximumNumberOfSuccessfulRunsAllowedIn24Hours</code></li> <li><code>IdentityResolutionJobIsAlreadyRunning</code></li> <li><code>NoPendingChangesJobRunSkipped</code></li> <li><code>SuccessfullySubmittedIdentityResolutionJobRunRequest</code></li> </ul>
<code>ConnectApi.CommentType</code>	<p>Type of comment.</p> <ul style="list-style-type: none"> <li><code>ContentComment</code>—Comment holds a content capability.</li> <li><code>TextComment</code>—Comment contains only text.</li> </ul>

Enum	Description
ConnectApi. CommerceAddressSort	Sort order for Commerce addresses. <ul style="list-style-type: none"> <li>• CreatedDateAsc—Sort in ascending order of created date.</li> <li>• CreatedDateDesc—Sort in descending order of created date.</li> <li>• NameAsc—Sort in ascending order of name.</li> <li>• NameDesc—Sort in descending order of name.</li> </ul>
ConnectApi. CommerceSearch AttributeType	Search attribute type. <ul style="list-style-type: none"> <li>• Custom</li> <li>• ProductAttribute</li> <li>• ProductCategory</li> <li>• Product2</li> <li>• Standard</li> </ul>
ConnectApi. CommerceSearchFacet DisplayType	Display type of the facet. <ul style="list-style-type: none"> <li>• CategoryTree</li> <li>• DatePicker</li> <li>• MultiSelect</li> <li>• SingleSelect</li> </ul>
ConnectApi. CommerceSearchFacetType	Search facet type. <ul style="list-style-type: none"> <li>• DistinctValue</li> </ul>
ConnectApi. CommerceSearch GroupingOption	Grouping option for search results. <ul style="list-style-type: none"> <li>• NoGrouping—Search results aren't grouped.</li> <li>• VariationParent—Search results are grouped by the variation parent.</li> </ul>
ConnectApi. CommerceSearch IndexBuildType	Build type of the index. <ul style="list-style-type: none"> <li>• Full</li> <li>• Incremental</li> </ul>
ConnectApi. CommerceSearch IndexCreationType	Creation type of the index. <ul style="list-style-type: none"> <li>• Manual</li> <li>• Scheduled</li> </ul>
ConnectApi. CommerceSearch IndexStatus	Status of the index. <ul style="list-style-type: none"> <li>• Completed</li> <li>• Failed</li> <li>• InProgress</li> </ul>

Enum	Description
ConnectApi. CommerceSearch IndexUsage	Usage of the index. <ul style="list-style-type: none"> <li>• Live</li> <li>• OutOfUse</li> </ul>
ConnectApi. CommerceSearch SortRuleDirection	Direction of the sort rule. <ul style="list-style-type: none"> <li>• Ascending—Sorts in ascending alphanumeric order (A–Z, 0–9).</li> <li>• Default—When no direction is defined, sorts by relevance.</li> <li>• Descending—Sorts in descending alphanumeric order (Z–A, 9–0).</li> </ul>
ConnectApi. CommerceSearchSortRule LabelSuffix	Label suffix of the sort rule. <ul style="list-style-type: none"> <li>• Ascen—Label suffix for 'Asc'</li> <li>• Ascending—Label suffix for 'Ascending'</li> <li>• Az—Label suffix for 'A-Z'</li> <li>• Descen—Label suffix for 'Desc'</li> <li>• Descending—Label suffix for 'Descending'</li> <li>• FewMany—Label suffix for 'Few-Many'</li> <li>• HeavyLight—Label suffix for 'Heavy-Light'</li> <li>• HighLow—Label suffix for 'High-Low'</li> <li>• HighestLowest—Label suffix for 'Highest-Lowest'</li> <li>• LightHeavy—Label suffix for 'Light-Heavy'</li> <li>• LowHigh—Label suffix for 'Low-High'</li> <li>• LowestHighest—Label suffix for 'Lowest-Highest'</li> <li>• ManyFew—Label suffix for 'Many-Few'</li> <li>• NewOld—Label suffix for 'New-Old'</li> <li>• Newest—Label suffix for 'Newest'</li> <li>• NewestOldest—Label suffix for 'Newest-Oldest'</li> <li>• NineZero—Label suffix for '9-0'</li> <li>• OldNew—Label suffix for 'Old-New'</li> <li>• Oldest—Label suffix for 'Oldest'</li> <li>• OldestNewest—Label suffix for 'Oldest-Newest'</li> <li>• PriceDecreasing—Label suffix for '\$-\$'</li> <li>• PriceIncreasing—Label suffix for '\$-\$\$'</li> <li>• ThickThin—Label suffix for 'Thick-Thin'</li> <li>• ThinThick—Label suffix for 'Thin-Thick'</li> <li>• Za—Label suffix for 'Z-A'</li> <li>• ZeroNine—Label suffix for '0-9'</li> </ul>

Enum	Description
<code>ConnectApi.CommerceSearchSortRuleType</code>	Type of sort rule. <ul style="list-style-type: none"> <li>• <code>ProductAttributeBased</code>—Sorts by product attribute fields.</li> <li>• <code>ProductBased</code>—Sorts by product field data.</li> <li>• <code>Relevancy</code>—Sorts by product and catalog term frequency.</li> <li>• <code>SortByPricebook</code>—Sorts by product prices defined in the specified pricebook (version 55.0 and later).</li> </ul>
<code>ConnectApi.CommerceSearchTopProductType</code>	Type of the top product to return for each product group in search results. <ul style="list-style-type: none"> <li>• <code>VariationParent</code></li> </ul>
<code>ConnectApi.CommunityFlagReasonType</code>	Reason a post, comment, or file is flagged. <ul style="list-style-type: none"> <li>• <code>FlaggedByRule</code>—Moderation rule flagged the item.</li> <li>• <code>FlaggedBySystem</code>—Einstein flagged the item.</li> <li>• <code>FlaggedByUserAsInappropriate</code>—User flagged the item as inappropriate.</li> <li>• <code>FlaggedByUserAsSpam</code>—User flagged the item as spam.</li> </ul>
<code>ConnectApi.CommunityFlagType</code>	Type of moderation flag. <ul style="list-style-type: none"> <li>• <code>FlagAsInappropriate</code>—Flag for inappropriate content.</li> <li>• <code>FlagAsSpam</code>—Flag for spam.</li> </ul>
<code>ConnectApi.CommunityFlagVisibility</code>	Visibility behavior of a flag for various user types. <ul style="list-style-type: none"> <li>• <code>ModeratorsOnly</code>—The flag is visible only to users with moderation permissions on the flagged element or item.</li> <li>• <code>SelfAndModerators</code>—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.</li> </ul>
<code>ConnectApi.CommunityStatus</code>	Status of the Experience Cloud site. <ul style="list-style-type: none"> <li>• <code>Live</code></li> <li>• <code>Inactive</code></li> <li>• <code>UnderConstruction</code></li> </ul>
<code>ConnectApi.ActivityType</code>	Type of activity. <ul style="list-style-type: none"> <li>• <code>All</code></li> <li>• <code>Event</code></li> <li>• <code>Task</code></li> </ul>
<code>ConnectApi.ContentHubAuthenticationProtocol</code>	Authentication protocol used for the repository. <ul style="list-style-type: none"> <li>• <code>NoAuthentication</code>—Repository doesn't require authentication.</li> <li>• <code>Oauth</code>—Repository uses OAuth authentication protocol.</li> <li>• <code>Password</code>—Repository uses user name and password authentication protocol.</li> </ul>

Enum	Description
<code>ConnectApi.ContentHubDirectoryEntryType</code>	Type of directory entry. <ul style="list-style-type: none"> <li>• <code>GroupEntry</code></li> <li>• <code>UserEntry</code></li> </ul>
<code>ConnectApi.ContentHubExternalItemSharingType</code>	Sharing status for the external file. <ul style="list-style-type: none"> <li>• <code>DomainSharing</code>—File is shared with the domain.</li> <li>• <code>PrivateSharing</code>—File is private or shared only with individuals.</li> <li>• <code>PublicSharing</code>—File is publicly shared.</li> </ul>
<code>ConnectApi.ContentHubGroupType</code>	Type of group. <ul style="list-style-type: none"> <li>• <code>Everybody</code>—Group is public to everybody.</li> <li>• <code>EverybodyInDomain</code>—Group is public to everybody in the same domain.</li> <li>• <code>Unknown</code>—Group type is unknown.</li> </ul>
<code>ConnectApi.ContentHubItemType</code>	Item types. <ul style="list-style-type: none"> <li>• <code>Any</code>—Includes files and folders.</li> <li>• <code>FilesOnly</code>—Includes files only.</li> <li>• <code>FoldersOnly</code>—Includes folders only.</li> </ul>
<code>ConnectApi.ContentHubStreamSupport</code>	Support for content streaming. <ul style="list-style-type: none"> <li>• <code>ContentStreamAllowed</code></li> <li>• <code>ContentStreamNotAllowed</code></li> <li>• <code>ContentStreamRequired</code></li> </ul>
<code>ConnectApi.ContentHubVariableType</code>	Data type of the value of the field. <ul style="list-style-type: none"> <li>• <code>BooleanType</code></li> <li>• <code>DateTimeType</code></li> <li>• <code>DecimalType</code></li> <li>• <code>HtmlType</code></li> <li>• <code>IdType</code></li> <li>• <code>IntegerType</code></li> <li>• <code>StringType</code></li> <li>• <code>UriType</code></li> <li>• <code>XmlType</code></li> </ul>
<code>ConnectApi.ConversationApplicationIntegrationType</code>	Conversation application integration types. <ul style="list-style-type: none"> <li>• <code>Api</code></li> <li>• <code>Slack</code></li> </ul>
<code>ConnectApi.CreateCredentialAction</code>	Action to take when creating the credential. <ul style="list-style-type: none"> <li>• <code>Refresh</code></li> </ul>

Enum	Description
<code>ConnectApi.CredentialAuthenticationProtocol</code>	Authentication protocol of the external credential. <ul style="list-style-type: none"> <li>• <code>AwsSv4</code></li> <li>• <code>Basic</code></li> <li>• <code>Custom</code></li> <li>• <code>Jwt</code></li> <li>• <code>OAuth</code></li> </ul>
<code>ConnectApi.CredentialAuthenticationProtocolVariant</code>	Authentication protocol variant of the external credential. <ul style="list-style-type: none"> <li>• <code>AwsSv4_STS</code>—AWS Signature Version 4 with Security Token Service.</li> <li>• <code>ClientCredentialsClientSecret</code>—OAuth 2.0 Client Credentials client secret. Client secrets are sent in the callout's request body.</li> <li>• <code>ClientCredentialsClientSecretBasic</code>—OAuth 2.0 Client Credentials client secret. Client secrets are sent in the callout's authorization header, as with Basic authentication.</li> <li>• <code>ClientCredentialsJwtAssertion</code>—OAuth 2.0 Client Credentials JSON Web Token assertion.</li> <li>• <code>JwtBearer</code>—OAuth 2.0 JSON Web Token bearer flow.</li> <li>• <code>NoAuthentication</code>—No authentication.</li> <li>• <code>RolesAnywhere</code>—AWS Signature Version 4 with Identity and Access Management (IAM) Roles Anywhere.</li> </ul>
<code>ConnectApi.CredentialAuthenticationStatus</code>	Status of the credential authentication. <ul style="list-style-type: none"> <li>• <code>Configured</code>—Credential has all required credentials for at least one principal.</li> <li>• <code>NotConfigured</code>—Credential isn't configured.</li> <li>• <code>Unknown</code>—Credential status can't be determined because the authentication protocol is custom.</li> </ul>
<code>ConnectApi.CredentialPrincipalType</code>	Type of credential principal. <ul style="list-style-type: none"> <li>• <code>AwsStsPrincipal</code></li> <li>• <code>NamedPrincipal</code></li> <li>• <code>PerUserPrincipal</code></li> </ul>
<code>ConnectApi.DatacloudUserType</code>	Type of user. <ul style="list-style-type: none"> <li>• <code>Monthly</code>—A user type that's assigned monthly point limits for purchasing Data.com records. Only the assigned user can use monthly points. Points expire at the end of the month. Monthly is the default setting for <code>DatacloudUserType</code>.</li> <li>• <code>Listpool</code>—A user type that allows users to draw from a pool of points to purchase Data.com records.</li> </ul>
<code>ConnectApi.DatacloudImportStatusTypeEnum</code>	Status of the import. <ul style="list-style-type: none"> <li>• <code>Success</code>—Indicates that selected records were added to the org's CRM.</li> <li>• <code>Duplicate</code>—Marks a record that is already in the org's CRM. The API determines whether an org allows the addition of duplicate records in its CRM.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>Error</code>—Indicates that the selected records weren't added to the org's CRM.</li> </ul>
<code>ConnectApi.DigestPeriod</code>	<p>Time period that's included in a Chatter email digest.</p> <ul style="list-style-type: none"> <li>• <code>DailyDigest</code>—The email includes up to the 50 latest posts from the previous day.</li> <li>• <code>WeeklyDigest</code>—The email includes up to the 50 latest posts from the previous week.</li> </ul>
<code>ConnectApi.EmailMessageDirection</code>	<p>Direction of an email message on a case.</p> <ul style="list-style-type: none"> <li>• <code>Inbound</code>—An inbound message (sent by a customer).</li> <li>• <code>Outbound</code>—An outbound message (sent to a customer by a support agent).</li> </ul>
<code>ConnectApi.EmailMessageStatus</code>	<p>Status of an email message on a case.</p> <ul style="list-style-type: none"> <li>• <code>DraftStatus</code></li> <li>• <code>ForwardedStatus</code></li> <li>• <code>NewStatus</code></li> <li>• <code>ReadStatus</code></li> <li>• <code>RepliedStatus</code></li> <li>• <code>SentStatus</code></li> </ul>
<code>ConnectApi.ExtensionInformationType</code>	<p>Information type of the extension.</p> <ul style="list-style-type: none"> <li>• <code>Lightning</code></li> </ul>
<code>ConnectApi.ExternalCredentialParameterType</code>	<p>Parameter type of the external credential.</p> <ul style="list-style-type: none"> <li>• <code>AdditionalRefreshStatusCode</code></li> <li>• <code>AuthParameter</code></li> <li>• <code>AuthProvider</code></li> <li>• <code>AuthProviderUrl</code></li> <li>• <code>AuthProviderUrlQueryParameter</code></li> <li>• <code>JwtBodyClaim</code></li> <li>• <code>JwtHeaderClaim</code></li> <li>• <code>SigningCertificate</code></li> </ul>
<code>ConnectApi.ExternalCredentialPrincipalAccessType</code>	<p>Access type of the external credential principal.</p> <ul style="list-style-type: none"> <li>• <code>PermissionSet</code></li> <li>• <code>PermissionSetGroup</code></li> <li>• <code>Profile</code></li> </ul>
<code>ConnectApi.FeedCommentSortOrder</code>	<p>Order of comments.</p> <ul style="list-style-type: none"> <li>• <code>CreatedDateLatestAsc</code>—Sorts by most recently created comments in ascending order.</li> <li>• <code>CreatedDateOldestAsc</code>—Sorts by oldest comments in ascending order.</li> <li>• <code>Relevance</code>—Sorts by most relevant content.</li> </ul>

Enum	Description
<code>ConnectApi.FeedDensity</code>	<p>Density of the feed.</p> <ul style="list-style-type: none"> <li><code>AllUpdates</code>—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.</li> <li><code>FewerUpdates</code>—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.</li> </ul>
<code>ConnectApi.FeedElementCapabilityType</code>	<p>Capabilities of a feed element in API versions 31.0 and later. If a capability exists on a feed element, the capability is available, even if the value doesn't exist or is <code>null</code>. If the capability doesn't exist, it isn't available.</p> <ul style="list-style-type: none"> <li><code>AssociatedActions</code>—The feed element includes information about actions associated with it.</li> <li><code>Approval</code>—The feed element includes information about an approval.</li> <li><code>Banner</code>—The body of the feed element has an icon and border.</li> <li><code>Bookmarks</code>—The context user can bookmark the feed element. Bookmarked feed elements are visible in the bookmarks feed.</li> <li><code>Bundle</code>—The feed element has a group of other feed elements that display as a bundle in the feed. The <a href="#">bundle type</a> determines the additional data associated with the bundle.</li> <li><code>CallCollaboration</code>—The feed element has a recording comment.</li> <li><code>Canvas</code>—The feed element renders a canvas app.</li> <li><code>CaseComment</code>—The feed element has a case comment in the case feed.</li> <li><code>ChatterLikes</code>—The context user can like the feed element.</li> <li><code>Close</code>—The feed element can't be edited, commented on, or deleted. If the feed element is a poll, it can't be voted on.</li> <li><code>Comments</code>—The context user can add comments to the feed element.</li> <li><code>Content</code>—The feed element has a file.</li> <li><code>DashboardComponentSnapshot</code>—The feed element has a dashboard component snapshot.</li> <li><code>DirectMessage</code>—The feed element is a direct message.</li> <li><code>Edit</code>—Users who have permission can edit the feed element.</li> <li><code>EmailMessage</code>—The feed element has an email message from a case.</li> <li><code>EnhancedLink</code>—The feed element has a link that can contain supplemental information like an icon, a title, and a description.</li> <li><code>Extensions</code>—The feed element has one or more extension attachments.</li> <li><code>FeedEntityShare</code>—The feed element has a feed entity shared with it.</li> <li><code>Files</code>—The feed element has one or more file attachments.</li> <li><code>Interactions</code>—The feed element has information about user interactions.</li> <li><code>Link</code>—The feed element has a URL.</li> <li><code>MediaReferences</code>—The feed element has one or more media references.</li> <li><code>Moderation</code>—Users in an Experience Cloud site can flag the feed element for moderation.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>Mute</code>—The context user can mute the feed element.</li> <li>• <code>Origin</code>—A feed action created the feed element.</li> <li>• <code>Pin</code>—Users who have permission can pin the feed element.</li> <li>• <code>Poll</code>—The feed element has poll voting.</li> <li>• <code>QuestionAndAnswers</code>—The feed element has a question, and users can add answers to the feed element instead of comments. Users can also select the best answer.</li> <li>• <code>ReadBy</code>—The context user can mark the feed element as read.</li> <li>• <code>Recommendations</code>—The feed element has a recommendation.</li> <li>• <code>Record</code>—The comment has a record attachment.</li> <li>• <code>RecordSnapshot</code>—The feed element has all the snapshot fields of a record for a single create record event.</li> <li>• <code>SocialPost</code>—The feed element can interact with a social post on a social network.</li> <li>• <code>Status</code>—The feed element has a status that determines its visibility.</li> <li>• <code>Topics</code>—The context user can add topics to the feed element.</li> <li>• <code>TrackedChanges</code>—The feed element has all changes to a record for a single tracked change event.</li> <li>• <code>UpDownVote</code>—Users can upvote or downvote the feed element.</li> <li>• <code>Verified</code>—Users who have permission can mark a comment as verified or unverified.</li> </ul>
<code>ConnectApi.FeedElement</code> Type	<p>Feed elements are the top-level objects that a feed contains. The feed element type describes the characteristics of that feed element.</p> <ul style="list-style-type: none"> <li>• <code>Bundle</code>—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.</li> <li>• <code>FeedItem</code>—A feed item has a single parent and is scoped to one Experience Cloud site or across all Experience Cloud sites. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.</li> <li>• <code>Recommendation</code>—A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.</li> </ul>
<code>ConnectApi.FeedEntity</code> Status	<p>Status of the feed post or comment.</p> <ul style="list-style-type: none"> <li>• <code>Draft</code>—The feed post isn't published but is visible to the author and users with Modify All Data or View All Data permission. Comments can't be drafts.</li> <li>• <code>Isolated</code>—The feed post or comment is isolated, and only admins can see it.</li> <li>• <code>PendingReview</code>—The feed post or comment isn't approved yet and therefore isn't published or visible.</li> <li>• <code>Published</code>—The feed post or comment is approved and visible.</li> </ul>
<code>ConnectApi.FeedFavorite</code> Type	<p>Origin of the feed favorite.</p> <ul style="list-style-type: none"> <li>• <code>ListView</code></li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• Search</li> <li>• Topic</li> </ul>
ConnectApi.FeedFilter	<p>Filter value for a feed.</p> <ul style="list-style-type: none"> <li>• AllQuestions—Feed elements that are questions.</li> <li>• AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the <code>UserProfile</code> feed.</li> <li>• CommunityScoped—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a <code>User</code> or a <code>Group</code> parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the <code>UserProfile</code> feed.</li> <li>• QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the <code>Access Einstein-Generated Answers</code> permission.</li> <li>• QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the <code>Access Einstein-Generated Answers</code> permission.</li> <li>• Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the <code>Record</code> feed of a group.</li> <li>• SolvedQuestions—Feed elements that are questions and that have a best answer.</li> <li>• UnansweredQuestions—Feed elements that are questions and that don't have any answers.</li> <li>• UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the <code>Access Einstein-Generated Answers</code> permission.</li> <li>• Unread—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the <code>Record</code> feed of a group.</li> <li>• UnsolvedQuestions—Feed elements that are questions and that don't have a best answer.</li> </ul>
ConnectApi.FeedItemAttachmentType	<p>Attachment type for feed item output objects.</p> <ul style="list-style-type: none"> <li>• Approval—A feed item requiring approval.</li> <li>• BasicTemplate—A feed item with a generic rendering of an image, link, and title.</li> <li>• Canvas—A feed item that contains the metadata to render a link to a canvas app.</li> <li>• CaseComment—A feed item created from a comment to a case record.</li> <li>• CaseComment—A feed item created from a comment to a case record.</li> <li>• Content—A feed item with a file attached.</li> <li>• DashboardComponent—A feed item with a dashboard attached.</li> <li>• EmailMessage—An email attached to a case record in <code>Case Feed</code>.</li> <li>• Link—A feed item with a URL attached.</li> <li>• Poll—A feed item with a poll attached.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>Question</code>—A feed item with a question attached.</li> <li>• <code>RecordSnapshot</code>—The feed item attachment contains a view of a record at a single <code>ConnectApi.FeedItemType.CreateRecordEvent</code>.</li> <li>• <code>TrackedChange</code>—All changes to a record for a single <code>ConnectApi.FeedItemType.TrackedChange</code> event.</li> </ul>
<code>ConnectApi.FeedItemType</code>	<p>Type of feed item.</p> <ul style="list-style-type: none"> <li>• <code>ActivityEvent</code>—Feed item generated in Case Feed when an event or task associated with a parent record with a feed enabled is created or updated.</li> <li>• <code>AdvancedTextPost</code>—A feed item with advanced text formatting, such as a group announcement post.</li> <li>• <code>ApprovalPost</code>—Feed item with an approval capability. Approvers can act on the feed item parent.</li> <li>• <code>AttachArticleEvent</code>—Feed item generated when an article is attached to a case in Case Feed.</li> <li>• <code>BasicTemplateFeedItem</code>—Feed item with an enhanced link capability.</li> <li>• <code>CallLogPost</code>—Feed item generated when a call log is saved to a case in Case Feed.</li> <li>• <code>CanvasPost</code>—Feed item generated by a canvas app in the publisher or from Connect REST API or Connect in Apex. The post itself is a link to a canvas app.</li> <li>• <code>CaseCommentPost</code>—Feed item generated when a case comment is saved in Case Feed.</li> <li>• <code>ChangeStatusPost</code>—Feed item generated when the status of a case is changed in Case Feed.</li> <li>• <code>ChatTranscriptionPost</code>—Feed item generated in Case Feed when a Live Agent chat transcript is saved to a case.</li> <li>• <code>CollaborationGroupCreated</code>—Feed item generated when a new public group is created. Contains a link to the new group.</li> <li>• <code>CollaborationGroupUnarchived</code>—Deprecated. Feed item generated when an archived group is activated.</li> <li>• <code>ContentPost</code>—Feed item with a content capability.</li> <li>• <code>CreateRecordEvent</code>—Feed item that describes a record created in the publisher.</li> <li>• <code>DashboardComponentAlert</code>—Feed item with a dashboard alert.</li> <li>• <code>DashboardComponentSnapshot</code>—Feed item with a dashboard component snapshot capability.</li> <li>• <code>EmailMessageEvent</code>—Feed item generated when an email is sent from a case in Case Feed.</li> <li>• <code>FacebookPost</code>—Deprecated. Feed item generated when a Facebook post is created from a case in Case Feed.</li> <li>• <code>LinkPost</code>—Feed item with a link capability.</li> <li>• <code>MilestoneEvent</code>—Feed item generated when a case milestone is either completed or reaches a violation status. Contains a link to the case milestone.</li> <li>• <code>PollPost</code>—Feed item with a poll capability. Viewers of the feed item are allowed to vote on the options in the poll.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>ProfileSkillPost</code>—Feed item generated when a skill is added to a user's profile.</li> <li>• <code>QuestionPost</code>—Feed item generated when a question is asked. As of API version 33.0, a feed item of this type can have a content capability and a link capability.</li> <li>• <code>ReplyPost</code>—Feed item generated by a Chatter Answers reply.</li> <li>• <code>RypplePost</code>—Feed item generated when a user posts thanks.</li> <li>• <code>SocialPost</code>—Feed item generated when a social post is created from a case in Case Feed.</li> <li>• <code>TextPost</code>—Feed item containing text only.</li> <li>• <code>TrackedChange</code>—Feed item created when one or more fields on a record have been changed.</li> <li>• <code>UserStatus</code>—Deprecated. A user's post to their own profile.</li> </ul>
<code>ConnectApi.FeedItemVisibilityType</code>	Type of users who can see a feed item. <ul style="list-style-type: none"> <li>• <code>AllUsers</code>—Visibility is not limited to internal users.</li> <li>• <code>InternalUsers</code>—Visibility is limited to internal users.</li> </ul>
<code>ConnectApi.FeedSortOrder</code>	Order of feed items in the feed. <ul style="list-style-type: none"> <li>• <code>CreatedDateAsc</code>—Sorts by oldest creation date. This sort order is available only for <code>DirectMessageModeration</code>, <code>Draft</code>, <code>Isolated</code>, <code>Moderation</code>, and <code>PendingReview</code> feeds.</li> <li>• <code>CreatedDateDesc</code>—Sorts by most recent creation date.</li> <li>• <code>LastModifiedDateDesc</code>—Sorts by most recent activity.</li> <li>• <code>MostViewed</code>—Sorts by most viewed content. This sort order is available only for Home feeds when the <code>ConnectApi.FeedFilter</code> is <code>UnansweredQuestions</code>.</li> <li>• <code>Relevance</code>—Sorts by most relevant content. This sort order is available only for <code>Company</code>, <code>Home</code>, and <code>Topics</code> feeds.</li> </ul>
<code>ConnectApi.FeedType</code>	Type of feed. <ul style="list-style-type: none"> <li>• <code>Bookmarks</code>—Contains all feed items saved as bookmarks by the context user.</li> <li>• <code>Company</code>—Contains all feed items except feed items of type <code>TrackedChange</code>. To see the feed item, the user must have sharing access to its parent.</li> <li>• <code>DirectMessageModeration</code>—Contains all direct messages that are flagged for moderation. The Direct Message Moderation feed is available only to users with Moderate Experiences Chatter Messages permissions.</li> <li>• <code>DirectMessages</code>—Contains all feed items of the context user's direct messages.</li> <li>• <code>Draft</code>—Contains all the feed items that the context user drafted.</li> <li>• <code>Files</code>—Contains all feed items that contain files posted by people or groups that the context user follows.</li> <li>• <code>Filter</code>—Contains the news feed filtered to contain feed items whose parent is a specified object type.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>Groups</code>—Contains all feed items from all groups the context user either owns or is a member of.</li> <li>• <code>Home</code>—Contains all feed items associated with any managed topic in an Experience Cloud site.</li> <li>• <code>Isolated</code>—Contains all the feed items and comments that are isolated.</li> <li>• <code>Landing</code>—Contains all feed items that best drive user engagement when the feed is requested. Allows clients to avoid an empty feed when there aren't many personalized feed items.</li> <li>• <code>Moderation</code>—Contains all feed items that are flagged for moderation, except direct messages. The moderation feed is available only to users with Moderate Experiences Feeds permissions.</li> <li>• <code>Mute</code>—Contains all feed items that the context user muted.</li> <li>• <code>News</code>—Contains all updates for people the context user follows, groups the user is a member of, and files and records the user is following. Contains all updates for records whose parent is the context user.</li> <li>• <code>PendingReview</code>—Contains all feed items and comments that are pending review.</li> <li>• <code>People</code>—Contains all feed items posted by all people the context user follows.</li> <li>• <code>Record</code>—Contains all feed items whose parent is a specified record, which could be a group, user, object, file, or any other standard or custom object. When the record is a group, the feed also contains feed items that mention the group. When the record is a user, the feed contains only feed items on that user. You can get another user's record feed.</li> <li>• <code>Streams</code>—Contains all feed items for any combination of up to 25 feed-enabled entities that the context user subscribes to in a stream. Examples of feed-enabled entities include people, groups, and records,</li> <li>• <code>To</code>—Contains all feed items with mentions of the context user. Contains feed items the context user commented on and feed items created by the context user that are commented on.</li> <li>• <code>Topics</code>—Contains all feed items that include the specified topic.</li> <li>• <code>UserProfile</code>—Contains feed items created when a user changes records that can be tracked in a feed. Contains feed items whose parent is the user and feed items that @mention the user. This feed is different than the news feed, which returns more feed items, including group updates. You can get another user's user profile feed.</li> </ul>
<code>ConnectApi.FieldChange ValueType</code>	Value type of a field change. <ul style="list-style-type: none"> <li>• <code>NewValue</code>—A new value</li> <li>• <code>OldValue</code>—An old value</li> </ul>
<code>ConnectApi. FilePreviewFormat</code>	Format of the file preview. <ul style="list-style-type: none"> <li>• <code>Jpg</code>—Preview format is JPG.</li> <li>• <code>Pdf</code>—Preview format is PDF.</li> <li>• <code>Svg</code>—Preview format is compressed SVG.</li> <li>• <code>Thumbnail</code>—Preview format is 240 x 180 PNG.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>ThumbnailBig—Preview format is 720 x 480 PNG.</li> <li>ThumbnailTiny—Preview format is 120 x 90 PNG.</li> </ul>
ConnectApi. FilePreviewStatus	<p>Availability status of the file preview.</p> <ul style="list-style-type: none"> <li>Available—Preview is available.</li> <li>InProgress—Preview is being processed.</li> <li>NotAvailable—Preview is unavailable.</li> <li>NotScheduled—Generation of the preview isn't scheduled yet.</li> </ul>
ConnectApi. FilePublishStatus	<p>Publish status of the file.</p> <ul style="list-style-type: none"> <li>PendingAccess—File is pending publishing.</li> <li>PrivateAccess—File is private.</li> <li>PublicAccess—File is public.</li> </ul>
ConnectApi. FileSharingOption	<p>Sharing option of the file.</p> <ul style="list-style-type: none"> <li>Allowed—Resharing of the file is allowed.</li> <li>Restricted—Resharing of the file is restricted.</li> </ul>
ConnectApi. FileSharingPrivacy	<p>Sharing privacy of a file.</p> <ul style="list-style-type: none"> <li>None—File is visible to anyone with record access.</li> <li>PrivateOnRecords—File is private on records.</li> </ul>
ConnectApi. FileSharingType	<p>Sharing role of the file.</p> <ul style="list-style-type: none"> <li>Admin—Owner permission, but doesn't own the file.</li> <li>Collaborator—Viewer permission, and can edit, change permissions, and upload a new version of a file.</li> <li>Owner—Collaborator permission, and can make a file private, and delete a file.</li> <li>Viewer—Can view, download, and share a file.</li> <li>WorkspaceManaged—Permission controlled by the library.</li> </ul>
ConnectApi.FolderItem Type	<p>Type of item in a folder.</p> <ul style="list-style-type: none"> <li>file</li> <li>folder</li> </ul>
ConnectApi.FormFieldType	<p>Type of marketing integration form field.</p> <ul style="list-style-type: none"> <li>Boolean</li> <li>Date</li> <li>EmailAddress</li> <li>Number</li> <li>Text</li> </ul>

Enum	Description
<code>ConnectApi. FormulaFilterType</code>	<p>Formula filter type for the personalization audience.</p> <ul style="list-style-type: none"> <li>• <code>AllCriteriaMatch</code>—All audience criteria are true (AND operation).</li> <li>• <code>AnyCriterionMatches</code>—Any audience criterion is true (OR operation).</li> <li>• <code>CustomLogicMatches</code>—Audience criteria match the custom formula (for example, (1 AND 2) OR 3).</li> </ul>
<code>ConnectApi.GroupArchive Status</code>	<p>Archive status of groups.</p> <ul style="list-style-type: none"> <li>• <code>All</code>—All groups, including groups that are archived and groups that aren't archived.</li> <li>• <code>Archived</code>—Groups that are archived.</li> <li>• <code>NotArchived</code>—Groups that aren't archived.</li> </ul>
<code>ConnectApi.GroupEmail Frequency</code>	<p>Frequency with which a user receives email.</p> <ul style="list-style-type: none"> <li>• <code>EachPost</code></li> <li>• <code>DailyDigest</code></li> <li>• <code>WeeklyDigest</code></li> <li>• <code>Never</code></li> <li>• <code>UseDefault</code></li> </ul>
<code>ConnectApi. GroupMembershipType</code>	<p>Type of membership the user has with the group.</p> <ul style="list-style-type: none"> <li>• <code>GroupOwner</code></li> <li>• <code>GroupManager</code></li> <li>• <code>NotAMember</code></li> <li>• <code>NotAMemberPrivateRequested</code></li> <li>• <code>StandardMember</code></li> </ul>
<code>ConnectApi. GroupMembership RequestStatus</code>	<p>Status of a request to join a private group.</p> <ul style="list-style-type: none"> <li>• <code>Accepted</code></li> <li>• <code>Declined</code></li> <li>• <code>Pending</code></li> </ul>
<code>ConnectApi.GroupViral InvitationsStatus</code>	<p>Status of an invitation to join a group.</p> <ul style="list-style-type: none"> <li>• <code>ActedUponUser</code>—The user was added to the group. An email was sent asking the user to visit the group.</li> <li>• <code>Invited</code>—An email was sent asking the user to sign up for the org.</li> <li>• <code>MaxedOutUsers</code>—The group has the maximum allowed members.</li> <li>• <code>MultipleError</code>—The user wasn't invited due to multiple errors.</li> <li>• <code>NoActionNeededUser</code>—The user is already a member of the group.</li> <li>• <code>NotVisibleToExternalInviter</code>—The user is not accessible to the user sending the invitation.</li> <li>• <code>Unhandled</code>—The user couldn't be added to the group for an unknown reason.</li> </ul>

Enum	Description
ConnectApi. GroupVisibilityType	Group visibility type. <ul style="list-style-type: none"> <li>PrivateAccess—Only members of the group can see posts to this group.</li> <li>PublicAccess—All users within the Experience Cloud site can see posts to this group.</li> <li>Unlisted—Reserved for future use.</li> </ul>
ConnectApi.HttpRequest Method	HTTP method. <ul style="list-style-type: none"> <li>HttpDelete—Returns HTTP 204 on success. Response body or output class is empty.</li> <li>HttpGet—Returns HTTP 200 on success.</li> <li>HttpHead—Returns HTTP 200 on success. Response body or output class is empty.</li> <li>HttpPatch—Returns HTTP 200 on success or HTTP 204 if the response body or output class is empty.</li> <li>HttpPost—Returns HTTP 201 on success or HTTP 204 if the response body or output class is empty. Exceptions are the batch posting resources and methods, which return HTTP 200 on success.</li> <li>HttpPut—Return HTTP 200 on success or HTTP 204 if the response body or output class is empty.</li> </ul>
ConnectApi. IdentityProviderAuthFlow	Authentication flow to get tokens to call protected APIs. <ul style="list-style-type: none"> <li>AuthorizationCode</li> </ul>
ConnectApi. IdentityProviderAuthProtocol	Authentication protocol required to access the external system. <ul style="list-style-type: none"> <li>OAuth</li> </ul>
ConnectApi. LinkMetadataSource	Source of the link metadata. <ul style="list-style-type: none"> <li>None—Link metadata wasn't retrieved.</li> <li>Sfdc—Salesforce is the source.</li> </ul>
ConnectApi. LinkMetadataType	Type of link that the metadata represents. <ul style="list-style-type: none"> <li>Error—Link metadata couldn't be retrieved.</li> <li>Link—Represents a link.</li> <li>None—Link metadata wasn't retrieved because the link isn't an allowed domain.</li> <li>Photo—Represents a photo.</li> <li>Rich—Represents rich content, typically HTML content.</li> <li>Unknown—Link metadata was retrieved, but the type is unknown.</li> <li>Video—Represents a video.</li> </ul>
ConnectApi. MaintenanceType	Type of maintenance. <ul style="list-style-type: none"> <li>Downtime—Downtime maintenance.</li> <li>GenerallyAvailable—Generally available mode.</li> <li>MaintenanceAndAvailable—Maintenance with available mode.</li> <li>MaintenanceWithDowntime—Scheduled maintenance with downtime.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>ReadOnly</code>—Maintenance with read-only mode.</li> </ul>
<code>ConnectApi.ManagedContentChannelType</code>	<p>Type of managed content channel.</p> <ul style="list-style-type: none"> <li>• <code>CloudToCloud</code>—Cloud-to-Cloud integrated channel.</li> <li>• <code>Community</code>—Experience Cloud site channel.</li> <li>• <code>ConnectedApp</code>—Channel served by a connected app.</li> <li>• <code>PublicUnauthenticated</code>—Public channel. All published content is publicly available.</li> <li>• <code>UserPermission</code>—Channel backed by a system permission. All published content is available only to users with the permission.</li> </ul>
<code>ConnectApi.ManagedContentCloneStatus</code>	<p>Status of the managed content clone.</p> <ul style="list-style-type: none"> <li>• <code>PartialSuccess</code></li> <li>• <code>Success</code></li> </ul>
<code>ConnectApi.ManagedContentMediaType</code>	<p>Type of managed content media.</p> <ul style="list-style-type: none"> <li>• <code>Document</code></li> <li>• <code>Image</code></li> </ul>
<code>ConnectApi.ManagedContentNodeType</code>	<p>Type of managed content node.</p> <ul style="list-style-type: none"> <li>• <code>Date</code></li> <li>• <code>DateTime</code></li> <li>• <code>Media</code></li> <li>• <code>MediaSource</code></li> <li>• <code>MultilineText</code></li> <li>• <code>NameField</code></li> <li>• <code>RichText</code></li> <li>• <code>Text</code></li> <li>• <code>Url</code></li> </ul>
<code>ConnectApi.ManagedContentSpaceChannelOperation</code>	<p>Operation to perform on the channel and managed content space.</p> <ul style="list-style-type: none"> <li>• <code>Add</code>—Add a channel to a managed content space.</li> <li>• <code>Remove</code>—Remove a channel from a managed content space.</li> </ul>
<code>ConnectApi.ManagedContentSpaceChannelStatus</code>	<p>Status of the add or remove operation for a channel and managed content space.</p> <ul style="list-style-type: none"> <li>• <code>Added</code>—Channel was added to the managed content space.</li> <li>• <code>Failed</code>—Add or remove operation failed.</li> <li>• <code>Pending</code>—Add or remove operation is pending.</li> <li>• <code>Removed</code>—Channel was removed from the managed content space.</li> </ul>

Enum	Description
<code>ConnectApi.ManagedContentVariantStatus</code>	<p>Status of the managed content variant.</p> <ul style="list-style-type: none"> <li>• <code>Draft</code>—Content isn't published.</li> <li>• <code>Published</code>—Content is published and available for use in your live sites.</li> <li>• <code>Revised</code>—Content that's published and edited. Publish this content to make the changes available for use in your live sites.</li> </ul>
<code>ConnectApi.ManagedTopicType</code>	<p>Type of managed topic.</p> <ul style="list-style-type: none"> <li>• <code>Content</code>—Topics that are associated with native content.</li> <li>• <code>Featured</code>—Topics that are featured, for example, on the Experience Cloud site home page, but don't provide overall navigation.</li> <li>• <code>Navigational</code>—Topics that display in a navigational menu in the Experience Cloud site.</li> </ul>
<code>ConnectApi.MarkupType</code>	<p>Type of rich text markup.</p> <ul style="list-style-type: none"> <li>• <code>Bold</code>—Bold tag.</li> <li>• <code>Code</code>—Code tag.</li> <li>• <code>Hyperlink</code>—Hyperlink anchor tag.</li> <li>• <code>Italic</code>—Italic tag.</li> <li>• <code>ListItem</code>—List item tag.</li> <li>• <code>OrderedList</code>—Ordered list tag.</li> <li>• <code>Paragraph</code>—Paragraph tag.</li> <li>• <code>Strikethrough</code>—Strikethrough tag.</li> <li>• <code>Underline</code>—Underline tag.</li> <li>• <code>UnorderedList</code>—Unordered list tag.</li> </ul>
<code>ConnectApi.MentionCompletionType</code>	<p>Type of mention completion.</p> <ul style="list-style-type: none"> <li>• <code>All</code>—All mention completions, regardless of the type of record to which the mention refers.</li> <li>• <code>Group</code>—Mention completions for groups.</li> <li>• <code>User</code>—Mention completions for users.</li> </ul>
<code>ConnectApi.MentionValidationStatus</code>	<p>Type of validation error for a proposed mention, if any.</p> <ul style="list-style-type: none"> <li>• <code>Disallowed</code>—The proposed mention is invalid and is rejected because the context user is trying to mention something that is not allowed. For example, a user who is not a member of a private group is trying to mention the private group.</li> <li>• <code>Inaccessible</code>—The proposed mention is allowed, but the user or record being mentioned isn't notified. They don't have access to the parent record that's being discussed.</li> <li>• <code>Ok</code>—There is no validation error for this proposed mention.</li> </ul>
<code>ConnectApi.MessageSegmentType</code>	<p>Type of message segment, such as text, link, field change name, or field change value.</p> <ul style="list-style-type: none"> <li>• <code>EntityLink</code></li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>FieldChange</code></li> <li>• <code>FieldChangeName</code></li> <li>• <code>FieldChangeValue</code></li> <li>• <code>Hashtag</code></li> <li>• <code>InlineImage</code></li> <li>• <code>Link</code></li> <li>• <code>MarkupBegin</code></li> <li>• <code>MarkupEnd</code></li> <li>• <code>Mention</code></li> <li>• <code>MoreChanges</code></li> <li>• <code>ResourceLink</code></li> <li>• <code>Text</code></li> </ul>
<code>ConnectApi.NamedCredentialParameterType</code>	<p>Type of named credential parameter.</p> <ul style="list-style-type: none"> <li>• <code>AllowedManagedPackageNamespaces</code></li> <li>• <code>ClientCertificate</code></li> </ul>
<code>ConnectApi.NamedCredentialType</code>	<p>Type of named credential.</p> <ul style="list-style-type: none"> <li>• <code>PrivateEndpoint</code></li> <li>• <code>SecuredEndpoint</code></li> </ul>
<code>ConnectApi.NavigationMenuItemActionType</code>	<p>Event, URL type, or modal navigation menu item.</p> <ul style="list-style-type: none"> <li>• <code>Event</code>—Event-based navigation. <ul style="list-style-type: none"> <li> <b>Note:</b> <code>Event</code> is internal only and can't be used in custom components.</li> </ul> </li> <li>• <code>ExternalLink</code>—URL outside of your Experience Cloud site.</li> <li>• <code>InternalLink</code>—Relative URL inside your Experience Cloud site.</li> <li>• <code>Modal</code>—Modal, such as Account Switcher.</li> </ul>
<code>ConnectApi.NavigationMenuItemOpenTarget</code>	<p>Target for the navigation menu item.</p> <ul style="list-style-type: none"> <li>• <code>CurrentWindow</code>—Navigation menu item opens in the current window.</li> <li>• <code>NewWindow</code>—Navigation menu item opens in a new window.</li> </ul>
<code>ConnectApi.NavigationMenuItemType</code>	<p>Type of navigation menu item.</p> <ul style="list-style-type: none"> <li>• <code>DataSourceDriven</code>—Menu items dynamically added from a data source.</li> <li>• <code>Event</code>—Event, such as logging in, logging out, or switching accounts.</li> <li>• <code>ExternalLink</code>—URL outside of your site.</li> <li>• <code>GlobalAction</code>—Lets users create records that aren't related to other records.</li> <li>• <code>InternalLink</code>—Relative URL inside your site.</li> <li>• <code>MenuLabel</code>—Menu label.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>Modal</code>—Modal, such as Account Switcher.</li> <li>• <code>NavigationalTopic</code>—Dropdown list with links to the navigational topics in your site.</li> <li>• <code>SalesforceObject</code>—Objects such as accounts, cases, contacts, and custom objects.</li> <li>• <code>SystemLink</code>—System link, such as a link to Builder, Workspaces, or Setup.</li> </ul>
<code>ConnectApi.NBAActionType</code>	Type of action. <ul style="list-style-type: none"> <li>• <code>Flow</code>—Automated process tool with multiple subtypes.</li> </ul>
<code>ConnectApi.NBAFlowType</code>	Type of recommended flow. <ul style="list-style-type: none"> <li>• <code>AutoLaunchedFlow</code>—Autolaunched flow that runs in the background.</li> <li>• <code>Flow</code>—Screen flow that accepts user inputs.</li> </ul>
<code>ConnectApi.NBATargetType</code>	Type of target. <ul style="list-style-type: none"> <li>• <code>Recommendation</code></li> </ul>
<code>ConnectApi.OperationType</code>	Operation to carry out on the file. <ul style="list-style-type: none"> <li>• <code>Add</code>—Adds the file to the feed element.</li> <li>• <code>Remove</code>—Removes the file from the feed element.</li> </ul>
<code>ConnectApi.OrchestrationInstanceStatus</code>	Status of the orchestration instance. <ul style="list-style-type: none"> <li>• <code>Canceled</code></li> <li>• <code>Completed</code></li> <li>• <code>Discontinued</code></li> <li>• <code>Error</code></li> <li>• <code>InProgress</code></li> <li>• <code>NotStarted</code></li> <li>• <code>Suspended</code></li> </ul>
<code>ConnectApi.OrchestrationStepType</code>	Type of orchestration step. <ul style="list-style-type: none"> <li>• <code>AsynchronousBackgroundStep</code></li> <li>• <code>BackgroundStep</code></li> <li>• <code>InteractiveStep</code></li> <li>• <code>ManagedContentRoleInteractiveStep</code></li> <li>• <code>ManagedContentVariantAutoPublishBackgroundStep</code></li> <li>• <code>ManagedContentVariantAutoUnpublishBackgroundStep</code></li> <li>• <code>ManagedContentVariantSetLockBackgroundStep</code></li> <li>• <code>ManagedContentVariantSetReadyBackgroundStep</code></li> <li>• <code>MuleSoftStep</code></li> </ul>
<code>ConnectApi.OrchestrationWorkItemStatus</code>	Status of the orchestration work item. <ul style="list-style-type: none"> <li>• <code>Assigned</code></li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>Completed</li> </ul>
ConnectApi. OrderDeliveryGroup SummarySort	Sort order for order delivery group summaries. <ul style="list-style-type: none"> <li>IdAsc—Sorts by ID in ascending alphanumeric order (A–Z, 0–9).</li> <li>IdDesc—Sorts by ID in descending alphanumeric order (Z–A, 9–0).</li> </ul>
ConnectApi. OrderItemSummarySort	Sort order for order item summaries. <ul style="list-style-type: none"> <li>IdAsc—Sorts by ID in ascending alphanumeric order (A–Z, 0–9).</li> <li>IdDesc—Sorts by ID in descending alphanumeric order (Z–A, 9–0).</li> </ul>
ConnectApi. OrderShipmentItemSort	Sort order for order shipment items. <ul style="list-style-type: none"> <li>IdAsc—Sorts by ID in ascending alphanumeric order (A–Z, 0–9).</li> <li>IdDesc—Sorts by ID in descending alphanumeric order (Z–A, 9–0).</li> </ul>
ConnectApi. OrderShipmentSort	Sort order for order shipments. <ul style="list-style-type: none"> <li>ExpectedDeliveryDateAsc—Sorts by the oldest expected delivery date.</li> <li>ExpectedDeliveryDateDesc—Sorts by the most recent expected delivery date.</li> <li>ShipmentNumberAsc—Sorts by shipment number in ascending order (0–9).</li> <li>ShipmentNumberDesc—Sorts by shipment number in descending order (9–0).</li> </ul>
ConnectApi.OrderSummary AdjustmentAggregates Status	Order summary adjustment aggregate job status. <ul style="list-style-type: none"> <li>Failed—The adjustment aggregate data job for the order summary failed.</li> <li>InProgress—The adjustment aggregate data job for the order summary is in progress.</li> <li>NotInitiated—The adjustment aggregate data job for the order summary is not initiated.</li> <li>Submitted—The adjustment aggregate data job for the order summary is submitted.</li> </ul>
ConnectApi.OrderSummary AdjustmentTargetType	Type of price adjustment in promotions. <ul style="list-style-type: none"> <li>SplitLine—Price adjustment on an order item.</li> <li>Header—Price adjustment on the entire order.</li> </ul>
ConnectApi.OrderSummary SortOrder	Sort order for order summaries. <ul style="list-style-type: none"> <li>CreatedDateAsc—Sorts by the oldest created date.</li> <li>CreatedDateDesc—Sorts by the most recent created date.</li> <li>OrderedDateAsc—Sorts by the oldest ordered date.</li> <li>OrderedDateDesc—Sorts by the most recent ordered date.</li> </ul>
ConnectApi.PeriodType	Time period used for forecasting. <ul style="list-style-type: none"> <li>Month</li> <li>Quarter</li> <li>Week</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>Year</code></li> </ul>
<code>ConnectApi.PlatformActionGroupCategory</code>	<p>Location of an action link group on an associated feed element.</p> <ul style="list-style-type: none"> <li>• <code>Primary</code>—The action link group is displayed in the body of the feed element.</li> <li>• <code>Overflow</code>—The action link group is displayed in the overflow menu of the feed element.</li> </ul>
<code>ConnectApi.PlatformActionStatus</code>	<p>Status of the action.</p> <ul style="list-style-type: none"> <li>• <code>FailedStatus</code>—The action link execution failed.</li> <li>• <code>NewStatus</code>—The action link is ready to be executed. Available for <code>Download</code> and <code>Ui</code> action links only.</li> <li>• <code>PendingStatus</code>—The action link is executing. Choosing this value triggers the API call for <code>Api</code> and <code>ApiAsync</code> action links.</li> <li>• <code>SuccessfulStatus</code>—The action link executed successfully.</li> </ul>
<code>ConnectApi.PlatformActionType</code>	<p>Type of platform action.</p> <ul style="list-style-type: none"> <li>• <code>ActionLink</code>—An indicator on a feed element that targets an API, a web page, or a file, represented by a button in the Salesforce UI.</li> <li>• <code>CustomButton</code>—When clicked, opens a URL or a Visualforce page in a window or executes JavaScript.</li> <li>• <code>ProductivityAction</code>—Productivity actions are predefined and attached to a limited set of objects. Productivity actions include Send Email, Call, Map, View Website, and Read News. Except for the Call action, you can't edit productivity actions.</li> <li>• <code>QuickAction</code>—A global or object-specific action.</li> <li>• <code>StandardButton</code>—A predefined Salesforce button such as New, Edit, or Delete.</li> </ul>
<code>ConnectApi.PriceAdjustmentTierType</code>	<p>Type of price adjustment for the tier.</p> <ul style="list-style-type: none"> <li>• <code>AmountBasedAdjustment</code>—Price is adjusted by a specified amount.</li> <li>• <code>PercentageBasedAdjustment</code>—Price is adjusted by a specified percentage.</li> </ul>
<code>ConnectApi.PricingTermUnit</code>	<p>Unit of time used to define a pricing term.</p> <ul style="list-style-type: none"> <li>• <code>Months</code>—Product is priced on a monthly basis.</li> <li>• <code>Annual</code>—Product is priced on an annual basis.</li> </ul>
<code>ConnectApi.ProductClass</code>	<p>Class of product.</p> <ul style="list-style-type: none"> <li>• <code>Bundle</code></li> <li>• <code>Set</code></li> <li>• <code>Simple</code></li> <li>• <code>Variation</code></li> <li>• <code>VariationParent</code></li> </ul>
<code>ConnectApi.ProductMediaType</code>	<p>Type of product media.</p> <ul style="list-style-type: none"> <li>• <code>Document</code></li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>Image</li> <li>Video</li> </ul>
ConnectApi. ProductMediaUsageType	Usage type of a product media item within a media group. <ul style="list-style-type: none"> <li>Attachment—Product media group with product documents as attachments.</li> <li>Banner—Product category media group with banner images of the product.</li> <li>Listing—Product media group with listing images of the product.</li> <li>Standard—Product media group with standard images and videos of the product.</li> <li>Tile—Product category media group with tile images of the product.</li> </ul>
ConnectApi. PublishSchedule	Publish refresh schedule. <ul style="list-style-type: none"> <li>One—Refreshes every hour. Used to rapidly publish UI and DBT-based segments.</li> <li>Four—Refreshes every four hours. Used to rapidly publish UI and DBT-based segments.</li> <li>Twelve—Refreshes every twelve hours.</li> <li>TwentyFour—Refreshes every twenty-four hours.</li> </ul>
ConnectApi. PublishStatus	Publish status of a personalization audience, target, or navigation menu item. <ul style="list-style-type: none"> <li>Draft</li> <li>Live</li> </ul>
ConnectApi. RecommendationActionType	Action to take on a recommendation. <ul style="list-style-type: none"> <li>follow—Follow a file, record, topic, or user.</li> <li>join—Join a group.</li> <li>view—View a file, group, article, record, user, custom, or static recommendation.</li> </ul>
ConnectApi. RecommendationAudienceCriteriaType	Custom recommendation audience criteria type. <ul style="list-style-type: none"> <li>CustomList—A custom list of users makes up the audience.</li> <li>MaxDaysInCommunity—New members make up the audience.</li> </ul>
ConnectApi. RecommendationAudienceMemberOperationType	Operation to carry out on the custom recommendation audience members. <ul style="list-style-type: none"> <li>Add—Adds specified members to the audience.</li> <li>Remove—Removes specified members from the audience.</li> </ul>
ConnectApi. RecommendationChannel	A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. <ul style="list-style-type: none"> <li>CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.</li> <li>CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li>CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>CustomChannel14</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li>• <code>CustomChannel15</code>—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</li> <li>• <code>DefaultChannel1</code>—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.</li> </ul>
<p><code>ConnectApi.RecommendationExplanationType</code></p>	<p>Reason for a Chatter recommendation.</p> <ul style="list-style-type: none"> <li>• <code>ArticleHasRelatedContent</code>—Articles with related content to a context article.</li> <li>• <code>ArticleViewedTogether</code>—Articles often viewed together with the article that the context user just viewed.</li> <li>• <code>ArticleViewedTogetherWithViewers</code>—Articles often viewed together with other records that the context user views.</li> <li>• <code>Custom</code>—Custom recommendations.</li> <li>• <code>FilePopular</code>—Files with many followers or views.</li> <li>• <code>FileViewedTogether</code>—Files often viewed at the same time as other files that the context user views.</li> <li>• <code>FollowedTogetherWithFollowees</code>—Users often followed together with other records that the context user follows.</li> <li>• <code>GroupMembersFollowed</code>—Groups with members that the context user follows.</li> <li>• <code>GroupNew</code>—Recently created groups.</li> <li>• <code>GroupPopular</code>—Groups with many active members.</li> <li>• <code>ItemViewedTogether</code>—Records often viewed at the same time as other records that the context user views.</li> <li>• <code>PopularApp</code>—Applications that are popular.</li> <li>• <code>RecordOwned</code>—Records that the context user owns.</li> <li>• <code>RecordParentOfFollowed</code>—Parent records of records that the context user follows.</li> <li>• <code>RecordViewed</code>—Records that the context user recently viewed.</li> <li>• <code>TopicFollowedTogether</code>—Topics often followed together with the record that the context user just followed.</li> <li>• <code>TopicFollowedTogetherWithFollowees</code>—Topics often followed together with other records that the context user follows.</li> <li>• <code>TopicPopularFollowed</code>—Topics with many followers.</li> <li>• <code>TopicPopularLiked</code>—Topics on posts that have many likes.</li> <li>• <code>UserDirectReport</code>—Users who report to the context user.</li> <li>• <code>UserFollowedTogether</code>—Users often followed together with the record that the context user followed.</li> <li>• <code>UserFollowsSameUsers</code>—Users who follow the same users as the context user.</li> <li>• <code>UserManager</code>—The context user's manager.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>UserNew</code>—Recently created users.</li> <li>• <code>UserPeer</code>—Users who report to the same manager as the context user.</li> <li>• <code>UserPopular</code>—Users with many followers.</li> <li>• <code>UserViewingSameRecords</code>—Users who view the same records as the context user.</li> </ul>
<code>ConnectApi.RecommendationReactionType</code>	Type of reaction to a recommendation. <ul style="list-style-type: none"> <li>• <code>Accepted</code></li> <li>• <code>Rejected</code></li> </ul>
<code>ConnectApi.RecommendationType</code>	Type of record being recommended. <ul style="list-style-type: none"> <li>• <code>apps</code></li> <li>• <code>articles</code></li> <li>• <code>files</code></li> <li>• <code>groups</code></li> <li>• <code>records</code></li> <li>• <code>topics</code></li> <li>• <code>users</code></li> </ul>
<code>ConnectApi.RecommendedObjectType</code>	Type of object being recommended. <ul style="list-style-type: none"> <li>• <code>Today</code>—Static recommendations that don't have an ID, for example, the Today app recommendation.</li> </ul>
<code>ConnectApi.RecordColumnOrder</code>	Order in which fields are rendered in a grid. <ul style="list-style-type: none"> <li>• <code>LeftRight</code>—Fields are rendered from left to right.</li> <li>• <code>TopDown</code>—Fields are rendered from the top down.</li> </ul>
<code>ConnectApi.RecordFieldType</code>	Data type of a record field. <ul style="list-style-type: none"> <li>• <code>Address</code></li> <li>• <code>Blank</code></li> <li>• <code>Boolean</code></li> <li>• <code>Compound</code></li> <li>• <code>CreatedBy</code></li> <li>• <code>Date</code></li> <li>• <code>DateTime</code></li> <li>• <code>Email</code></li> <li>• <code>LastModifiedBy</code></li> <li>• <code>Location</code></li> <li>• <code>Name</code></li> <li>• <code>Number</code></li> <li>• <code>Percent</code></li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• Phone</li> <li>• Picklist</li> <li>• Reference</li> <li>• Text</li> <li>• Time</li> </ul>
ConnectApi.RelatedFeedPostType	Type of related feed post. <ul style="list-style-type: none"> <li>• Answered—Related questions that have at least one answer.</li> <li>• BestAnswer—Related questions that have a best answer.</li> <li>• Generic—All types of related questions, including answered, with a best answer, and unanswered.</li> <li>• Unanswered—Related questions that don't have answers.</li> </ul>
ConnectApi.SearchBoostBuryRuleAction	Action of the boost and bury rule. <ul style="list-style-type: none"> <li>• Boost—Boost rule. Increases search result rankings for targeted products.</li> <li>• Bury—Bury rule. Decreases search result rankings for targeted products.</li> </ul>
ConnectApi.SearchBoostBuryRuleOperation	Operation for the conditions of the target expression in the boost and bury rule. <ul style="list-style-type: none"> <li>• AllOf—All-of operation.</li> <li>• AnyOf—Any-of operation.</li> </ul>
ConnectApi.SegmentType	Type of segment. <ul style="list-style-type: none"> <li>• Dbt—Data build tool</li> </ul>
ConnectApi.SellingModelType	Type of product selling model. <ul style="list-style-type: none"> <li>• Evergreen—A subscription without an end date. An evergreen subscription continues until the shopper affirmatively cancels it.</li> <li>• OneTime—A product that isn't sold as a subscription.</li> <li>• TermDefined—A subscription with a defined end date. The subscription continues for a specified time period. When the term ends, the subscription ends.</li> </ul>
ConnectApi.SitesPageType	Type of site search result item. <ul style="list-style-type: none"> <li>• ContentPage</li> <li>• SitePage</li> </ul>
ConnectApi.SocialNetworkProvider	Social network provider. <ul style="list-style-type: none"> <li>• Facebook</li> <li>• GooglePlus</li> <li>• Instagram</li> <li>• InstagramBusiness</li> <li>• KakaoTalk</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• Kik</li> <li>• Line</li> <li>• LinkedIn</li> <li>• Messenger</li> <li>• Other</li> <li>• Pinterest</li> <li>• QQ</li> <li>• Rypple</li> <li>• SinaWeibo</li> <li>• SMS</li> <li>• Snapchat</li> <li>• Telegram</li> <li>• Twitter</li> <li>• VKontakte</li> <li>• WeChat</li> <li>• WhatsApp</li> <li>• YouTube</li> </ul>
ConnectApi.SocialPost MessageType	Message type of the social post. <ul style="list-style-type: none"> <li>• Comment</li> <li>• Direct</li> <li>• Post</li> <li>• PrivateMessage</li> <li>• Reply</li> <li>• Retweet</li> <li>• Tweet</li> </ul>
ConnectApi. SocialPostStatusType	State of the social post. <ul style="list-style-type: none"> <li>• ApprovalPending</li> <li>• ApprovalRecalled</li> <li>• ApprovalRejected</li> <li>• Deleted</li> <li>• Failed</li> <li>• Hidden</li> <li>• Pending</li> <li>• Sent</li> <li>• Unknown</li> </ul>

Enum	Description
<code>ConnectApi.SortOrder</code>	Order for sorting. <ul style="list-style-type: none"> <li>• <code>Ascending</code>—Items are in ascending alphabetical order (A-Z).</li> <li>• <code>Descending</code>—Items are in descending alphabetical order (Z-A).</li> <li>• <code>MostRecentlyViewed</code>—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.</li> </ul>
<code>ConnectApi.SurveyEmailStatusEnum</code>	Status of a survey invitation email. <ul style="list-style-type: none"> <li>• <code>Failed</code>—The survey invitation email wasn't sent.</li> <li>• <code>Queued</code>—The survey invitation email is queued for sending.</li> </ul>
<code>ConnectApi.SvcApptModeEnum</code>	Mode of the service appointment. <ul style="list-style-type: none"> <li>• <code>Group</code>— Service appointment mode is Group.</li> <li>• <code>Regular</code>— Default mode of service appointment.</li> </ul>
<code>ConnectApi.TaxTransactionStatus</code>	Status of a tax transaction. <ul style="list-style-type: none"> <li>• <code>Committed</code>—Tax has been committed to the transaction.</li> <li>• <code>Uncommitted</code>—Tax hasn't been committed to the transaction.</li> </ul>
<code>ConnectApi.TaxTransactionType</code>	Type of tax transaction. <ul style="list-style-type: none"> <li>• <code>Credit</code>—Transaction is a credit transaction.</li> <li>• <code>Debit</code>—Transaction is a debit transaction.</li> </ul>
<code>ConnectApi.TopicSort</code>	Order returned by the sort. <ul style="list-style-type: none"> <li>• <code>popularDesc</code>—Sorts topics by popularity with the most popular first. This value is the default.</li> <li>• <code>alphaAsc</code>—Sorts topics alphabetically.</li> </ul>
<code>ConnectApi.UpDownVoteValue</code>	Type of vote for a feed element or comment. <ul style="list-style-type: none"> <li>• <code>Down</code></li> <li>• <code>None</code></li> <li>• <code>Up</code></li> </ul>
<code>ConnectApi.UserActivityType</code>	Type of user activity. <ul style="list-style-type: none"> <li>• <code>Bookmark</code>—User bookmarked a post.</li> <li>• <code>ChatterActivity</code>—Total counts of posts and comments made and likes and comments received for a user.</li> <li>• <code>ChatterLike</code>—User liked a post or comment.</li> <li>• <code>Comment</code>—User commented on a post.</li> <li>• <code>CompanyVerify</code>—User verified comment.</li> <li>• <code>DownVote</code>—User downvoted a post or comment.</li> <li>• <code>FeedEntityRead</code>—User read a post.</li> </ul>

Enum	Description
	<ul style="list-style-type: none"> <li>• <code>FeedRead</code>—User read a feed.</li> <li>• <code>Mute</code>—User muted a post.</li> <li>• <code>Post</code>—User made a post.</li> <li>• <code>TopicEndorsement</code>—User endorsed another user on a topic or received endorsement on a topic.</li> <li>• <code>UpVote</code>—User upvoted a post or comment.</li> </ul>
<code>ConnectApi.UserMissionActivityType</code>	<p>Type of mission activity for a user.</p> <ul style="list-style-type: none"> <li>• <code>FeedItemAnswerAQuestion</code>—User answered a question.</li> <li>• <code>FeedItemLikeSomething</code>—User liked a post or comment.</li> <li>• <code>FeedItemMarkAnswerAsBest</code>—User marked an answer as the best answer.</li> <li>• <code>FeedItemPostQuestion</code>—User posted a question.</li> <li>• <code>FeedItemReceiveAComment</code>—User received a comment on a post.</li> <li>• <code>FeedItemReceiveALike</code>—User received a like on a post or comment.</li> <li>• <code>FeedItemReceiveAnAnswer</code>—User received an answer to a question.</li> <li>• <code>FeedItemWriteAComment</code>—User commented on a post.</li> <li>• <code>FeedItemWriteAPost</code>—User made a post.</li> <li>• <code>FeedItemYourAnswerMarkedBest</code>—User’s answer was marked as the best answer.</li> </ul>
<code>ConnectApi.UserProfileTabType</code>	<p>Type of user profile tab.</p> <ul style="list-style-type: none"> <li>• <code>CustomVisualForce</code>—Tab that displays data from a Visualforce page.</li> <li>• <code>CustomWeb</code>—Tab that displays data from any external web-based application or web page.</li> <li>• <code>Element</code>—Tab that displays generic content inline.</li> <li>• <code>Feed</code>—Tab that displays the Chatter feed.</li> <li>• <code>Overview</code>—Tab that displays user details.</li> </ul>
<code>ConnectApi.UserType</code>	<p>Type of user.</p> <ul style="list-style-type: none"> <li>• <code>ChatterGuest</code>—User is an external user in a private group.</li> <li>• <code>ChatterOnly</code>—User is a Chatter Free customer.</li> <li>• <code>Guest</code>—User is unauthenticated.</li> <li>• <code>Internal</code>—User is a standard org member.</li> <li>• <code>Portal</code>—User is an external user in an Experience Cloud site.</li> <li>• <code>System</code>—User is Chatter Expert or a system user.</li> <li>• <code>Undefined</code>—User is a user type that is a custom object.</li> </ul>
<code>ConnectApi.WishlistItemSortOrder</code>	<p>Sort order for wishlist items.</p> <ul style="list-style-type: none"> <li>• <code>CreatedDateAsc</code>—Sorts by oldest creation date.</li> <li>• <code>CreatedDateDesc</code>—Sorts by most recent creation date.</li> </ul>

Enum	Description
<code>ConnectApi.WorkflowProcessStatus</code>	Status of a workflow process. <ul style="list-style-type: none"> <li>• <code>Approved</code></li> <li>• <code>Fault</code></li> <li>• <code>Held</code></li> <li>• <code>NoResponse</code></li> <li>• <code>Pending</code></li> <li>• <code>Reassigned</code></li> <li>• <code>Rejected</code></li> <li>• <code>Removed</code></li> <li>• <code>Started</code></li> </ul>
<code>ConnectApi.ZoneSearchResultType</code>	Zone search result type. <ul style="list-style-type: none"> <li>• <code>Article</code>—Search results contain only articles.</li> <li>• <code>Question</code>—Search results contain only questions.</li> </ul>
<code>ConnectApi.ZoneShowIn</code>	Zone search result location. <ul style="list-style-type: none"> <li>• <code>Community</code>—Available in an Experience Cloud site.</li> <li>• <code>Internal</code>—Available internally only.</li> <li>• <code>Portal</code>—Available in a portal.</li> </ul>

## ConnectApi Exceptions

The `ConnectApi` namespace contains exception classes.

All exceptions classes support built-in methods for returning the error message and exception type. See [Exception Class and Built-In Exceptions](#) on page 3439.

The `ConnectApi` namespace contains these exceptions:

Exception	Description
<code>ConnectApi.ConnectApiException</code>	Any logic error in the way your application is utilizing <code>ConnectApi</code> code. This is equivalent to receiving a 400 error from Connect REST API.
<code>ConnectApi.NotFoundException</code>	Any issues with the specified resource being found. This is equivalent to receiving a 404 error from Connect REST API.
<code>ConnectApi.RateLimitException</code>	When you exceed the rate limit. This is equivalent to receiving a 503 Service Unavailable error from Connect REST API.

## ConnectApi Utilities

The `ConnectApi` namespace contains a utility class.

Utility	Description
<code>ConnectApi.ConnectUtilities.unwrapApexWrapper()</code>	Unwraps obfuscated, Apex-wrapped objects into known types such as <code>Map&lt;String, Object&gt;</code> . Example from Apex Debug log: <code>core.connect.apex.ApexMapWrapper@7270879d</code>

## Example

This example calls `getManagedContentForSite(siteId, contentKeyOrId, showAbsoluteUrl)` to get a custom content type with an image reference and uses the `ConnectApi.ConnectUtilities.unwrapApexWrapper()` utility.

```
ConnectApi.ManagedContentDeliveryDocument res =
    ConnectApi.ManagedContentDelivery.getManagedContentForSite
('0DMXXXXXXXXXXXXXXXXX', 'MCLXXXXXXXXXXXXXXXXXXXXXXXXXXXX', true);

//before contentBody field ApexWrapper is unwrapped
system.debug(res.contentBody);

//unwrap contentBody field in res
Map<String, Object> contentBody =
(Map<String, Object>) ConnectApi.ConnectUtilities.unwrapApexWrapper(res.contentBody);

//after contentBody field ApexWrapper is unwrapped, but image field still wrapped
system.debug(contentBody);

//before image field ApexWrapper is unwrapped
system.debug(contentBody.get('Image'));

//unwrap Image field in contentBody
Map<String, Object> Image =
(Map<String, Object>) ConnectApi.ConnectUtilities.unwrapApexWrapper(contentBody.get('Image'));

//after image field ApexWrapper is unwrapped
system.debug(Image);

//replace wrapped primary_image in contentBody with unwrapped version
contentBody.put('Image', Image);

//after contentBody field ApexWrapper is unwrapped, with image field also unwrapped
system.debug(contentBody);
```

## ConnectApi Release Notes

Use the Salesforce Release Notes to learn about the most recent updates and changes to the ConnectApi namespace in Apex.

For updates and changes that impact Apex, including ConnectApi, see the [Apex Release Notes](#).

For new and changed ConnectApi classes and enums, see [ConnectApi \(Connect in Apex\): New and Changed Classes and Enums](#) in the Salesforce Release Notes.

## Context Namespace

---

The `Context` namespace provides classes and methods to manage the sharing and consumption of business application data by using Context Service.

The `Context` namespace includes the [IndustriesContext](#) class.

## Database Namespace

---

The `Database` namespace provides classes used with DML operations.

The following are the classes in the `Database` namespace.

### IN THIS SECTION:

#### [Batchable Interface](#)

The class that implements this interface can be executed as a batch Apex job.

#### [BatchableContext Interface](#)

Represents the parameter type of a batch job method and contains the batch job ID. This interface is implemented internally by Apex.

#### [Cursor Class \(Beta\)](#)

Contains methods to fetch records and to get the number of cursor rows returned from a SOQL query.

#### [DeletedRecord Class](#)

Contains information about a deleted record.

#### [DeleteFilter Enum](#)

Determines if deleted rows are included in Apex cursor rows.

#### [DeleteResult Class](#)

Represents the result of a delete DML operation returned by the `Database.delete` method.

#### [DMLOptions Class](#)

Enables you to set options related to DML operations.

#### [DmlOptions.AssignmentRuleHeader Class](#)

Enables setting assignment rule options.

#### [DMLOptions.DuplicateRuleHeader Class](#)

Determines options for using duplicate rules to detect duplicate records. Duplicate rules are part of the Duplicate Management feature.

#### [DmlOptions.EmailHeader Class](#)

Enables setting email options.

#### [DuplicateError Class](#)

Contains information about an error that occurred when an attempt was made to save a duplicate record. Use if your organization has set up duplicate rules, which are part of the Duplicate Management feature.

#### [EmptyRecycleBinResult Class](#)

The result of the `emptyRecycleBin` DML operation returned by the `Database.emptyRecycleBin` method.

#### [Error Class](#)

Represents information about an error that occurred during a DML operation when using a Database method.

[GetDeletedResult Class](#)

Contains the deleted records retrieved for a specific sObject type and time window.

[GetUpdatedResult Class](#)

Contains the result for the `Database.getUpdated` method call.

[LeadConvert Class](#)

Contains information used for lead conversion.

[LeadConvertResult Class](#)

The result of a lead conversion.

[MergeResult Class](#)

Contains the result of a merge Database method operation.

[QueryLocator Class](#)

Represents the record set returned by `Database.getQueryLocator` and used with Batch Apex.

[QueryLocatorIterator Class](#)

Represents an iterator over a query locator record set.

[SaveResult Class](#)

The result of an insert or update DML operation returned by a Database method.

[UndeleteResult Class](#)

The result of an undelete DML operation returned by the `Database.undelete` method.

[UpsertResult Class](#)

The result of an upsert DML operation returned by the `Database.upsert` method.

## Batchable Interface

The class that implements this interface can be executed as a batch Apex job.

## Namespace

[Database](#)

SEE ALSO:

[Apex Developer Guide: Using Batch](#)

## Batchable Methods

The following are methods for `Batchable`.

IN THIS SECTION:

[execute\(jobId, recordList\)](#)

Gets invoked when the batch job executes and operates on one batch of records. Contains or calls the main execution logic for the batch job.

[finish\(jobId\)](#)

Gets invoked when the batch job finishes. Place any clean up code in this method.

**start(jobId)**

Gets invoked when the batch job starts. Returns the record set as an iterable that will be batched for execution.

**start(jobId)**

Gets invoked when the batch job starts. Returns the record set as a QueryLocator object that will be batched for execution.

**execute(jobId, recordList)**

Gets invoked when the batch job executes and operates on one batch of records. Contains or calls the main execution logic for the batch job.

**Signature**

```
public Void execute(Database.BatchableContext jobId, List<sObject> recordList)
```

**Parameters**

*jobId*

Type: [Database.BatchableContext](#)

Contains the job ID.

*recordList*

Type: [List<sObject>](#)

Contains the batch of records to process.

**Return Value**

Type: Void

**finish(jobId)**

Gets invoked when the batch job finishes. Place any clean up code in this method.

**Signature**

```
public Void finish(Database.BatchableContext jobId)
```

**Parameters**

*jobId*

Type: [Database.BatchableContext](#)

Contains the job ID.

**Return Value**

Type: Void

**start(jobId)**

Gets invoked when the batch job starts. Returns the record set as an iterable that will be batched for execution.

### Signature

```
public System.Iterable start(Database.BatchableContext jobId)
```

### Parameters

*jobId*

Type: [Database.BatchableContext](#)

Contains the job ID.

### Return Value

Type: [System.Iterable](#)

### **start (jobId)**

Gets invoked when the batch job starts. Returns the record set as a [QueryLocator](#) object that will be batched for execution.

### Signature

```
public Database.QueryLocator start(Database.BatchableContext jobId)
```

### Parameters

*jobId*

Type: [Database.BatchableContext](#)

Contains the job ID.

### Return Value

Type: [Database.QueryLocator](#)

## BatchableContext Interface

Represents the parameter type of a batch job method and contains the batch job ID. This interface is implemented internally by Apex.

### Namespace

[Database](#)

SEE ALSO:

[Batchable Interface](#)

### BatchableContext Methods

The following are methods for `BatchableContext`.

## IN THIS SECTION:

[getChildJobId\(\)](#)

Returns the ID of the current batch job chunk that is being processed.

[getJobId\(\)](#)

Returns the batch job ID.

**getChildJobId()**

Returns the ID of the current batch job chunk that is being processed.

**Signature**

```
public Id getChildJobId()
```

**Return Value**

Type: [ID](#)

**getJobId()**

Returns the batch job ID.

**Signature**

```
public Id getJobId()
```

**Return Value**

Type: [ID](#)

## Cursor Class (Beta)

Contains methods to fetch records and to get the number of cursor rows returned from a SOQL query.

### Namespace

[Database](#)

### Usage

 **Note:** This feature is a Beta Service. Customer may opt to try such Beta Service in its sole discretion. Any use of the Beta Service is subject to the applicable Beta Services Terms provided at [Agreements and Terms](#). You can provide feedback and suggestions for the feature in the [Trailblazer Community](#).

A cursor is created when a SOQL query is executed on a `Database.getCursor()` or a `Database.getCursorWithBinds()` call. When the SOQL query is invoked, the corresponding rows are returned from the cursor. The maximum number of rows per cursor is 50 million, regardless of the operation being synchronous or asynchronous.

## Example

```
public class QueryChunkingQueueable implements Queueable {
    private Database.Cursor locator;
    private integer position;

    public QueryChunkingQueueable() {
        locator = Database.getCursor
            ('SELECT Id FROM Contact WHERE LastActivityDate = LAST_N_DAYS:400');
        position = 0;
    }

    public void execute(QueueableContext ctx) {
        List<Contact> scope = locator.fetch(position, 200);
        position += scope.size();
        // do something, like archive or delete the scope list records
        if(position < locator.getNumRecords() ) {
            // process the next chunk
            System.enqueueJob(this);
        }
    }
}
```

### IN THIS SECTION:

[Cursor Methods](#)

## Cursor Methods

The following are methods for `Cursor`.

### IN THIS SECTION:

[fetch\(position, count\)](#)

Fetches cursor rows that correspond to the offset position and the specified record count. The maximum number of rows per cursor is 50 million, regardless of the operation being synchronous or asynchronous.

[getNumRecords\(\)](#)

Gets the number of rows returned in an Apex cursor from a `Cursor.fetch(position, count)` operation.

### **fetch(position, count)**

Fetches cursor rows that correspond to the offset position and the specified record count. The maximum number of rows per cursor is 50 million, regardless of the operation being synchronous or asynchronous.

### Signature

```
public static List<SObject> fetch(Integer position, Integer count)
```

## Parameters

*position*

Type: [Integer](#)

The offset position from which records are fetched.

*count*

Type: [Integer](#)

The number of sObjects to fetch from the cursor, up to a maximum of 2,000.

## Return Value

Type: [List](#) on page 3543<sObject>

The list of sObjects from the SOQL query, starting from the specified position.

## **getNumRecords ()**

Gets the number of rows returned in an Apex cursor from a `Cursor.fetch(position, count)` operation.

## Signature

```
public static Integer getNumRecords ()
```

## Return Value

Type: [Integer](#)

# DeletedRecord Class

Contains information about a deleted record.

## Namespace

[Database](#)

## Usage

The `getDeletedRecords` method of the `Database.GetDeletedResult` class returns a list of `Database.DeletedRecord` objects. Use the methods in the `Database.DeletedRecord` class to retrieve details about each deleted record.

## DeletedRecord Methods

The following are methods for `DeletedRecord`. All are instance methods.

### IN THIS SECTION:

[getDeletedDate\(\)](#)

Returns the deleted date of this record.

**getId()**

Returns the ID of a record deleted within the time window specified in the `Database.getDeleted` method.

**getDeletedDate()**

Returns the deleted date of this record.

**Signature**

```
public Date getDeletedDate()
```

**Return Value**

Type: [Date](#)

**getId()**

Returns the ID of a record deleted within the time window specified in the `Database.getDeleted` method.

**Signature**

```
public Id getId()
```

**Return Value**

Type: [ID](#)

**DeleteFilter Enum**

Determines if deleted rows are included in Apex cursor rows.

**Enum Values**

The following are the values of the `Database.DeleteFilter` enum.

Value	Description
DELETED_ROWS_ONLY	Includes only deleted rows.
NO_DELETED_ROWS	Excludes deleted rows.
NO_DELETED_SHARING_ROWS	Excludes deleted rows as per sharing rules.
NO_FILTER	Includes all rows, including deleted rows.

**DeleteResult Class**

Represents the result of a delete DML operation returned by the `Database.delete` method.

## Namespace

[Database](#)

## Usage

An array of `Database.DeleteResult` objects is returned with the `delete` database method. Each element in the `DeleteResult` array corresponds to the `sObject` array passed as the `sObject[]` parameter in the `delete` Database method; that is, the first element in the `DeleteResult` array matches the first element passed in the `sObject` array, the second element corresponds with the second element, and so on. If only one `sObject` is passed in, the `DeleteResult` array contains a single element.

## Example

The following example shows how to obtain and iterate through the returned `Database.DeleteResult` objects. It deletes some queried accounts using `Database.delete` with a false second parameter to allow partial processing of records on failure. Next, it iterates through the results to determine whether the operation was successful or not for each record. It writes the ID of every record that was processed successfully to the debug log, or error messages and fields of the failed records.

```
// Query the accounts to delete
Account[] accts = [SELECT Id from Account WHERE Name LIKE 'Acme%'];
// Delete the accounts
Database.DeleteResult[] drList = Database.delete(accts, false);

// Iterate through each returned result
for(Database.DeleteResult dr : drList) {
    if (dr.isSuccess()) {
        // Operation was successful, so get the ID of the record that was processed
        System.debug('Successfully deleted account with ID: ' + dr.getId());
    }
    else {
        // Operation failed, so get all errors
        for(Database.Error err : dr.getErrors()) {
            System.debug('The following error has occurred.');
```

## DeleteResult Methods

The following are methods for `DeleteResult`. All are instance methods.

### IN THIS SECTION:

#### [getErrors\(\)](#)

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

#### [getId\(\)](#)

Returns the ID of the `sObject` you were trying to delete.

**isSuccess()**

A Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise.

**getErrors ()**

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

**Signature**

```
public Database.Error[] getErrors()
```

**Return Value**

Type: [Database.Error\[\]](#)

**getId()**

Returns the ID of the sObject you were trying to delete.

**Signature**

```
public ID getId()
```

**Return Value**

Type: [ID](#)

**isSuccess ()**

A Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise.

**Signature**

```
public Boolean isSuccess()
```

**Return Value**

Type: [Boolean](#)

## DMLOptions Class

Enables you to set options related to DML operations.

**Namespace**

[Database](#)

## Usage

`Database.DMLOptions` is only available for Apex saved against API versions 15.0 and higher. `DMLOptions` settings take effect only for record operations performed using Apex DML and not through the Salesforce user interface. The `DMLOptions` class has three child options.

### DML Child Options

`DmLOptions.AssignmentRuleHeader`—Enables setting assignment rule options.

`DmLOptions.DuplicateRuleHeader`—Determines options for using duplicate rules to detect duplicate records. Duplicate rules are part of the Duplicate Management feature.

`DmLOptions.EmailHeader`—Enables setting email options.

## DmLOptions Properties

The following are properties for `DmLOptions`.

### IN THIS SECTION:

#### `allowFieldTruncation`

Specifies the truncation behavior of large strings.

#### `assignmentRuleHeader`

Specifies the assignment rule to be used when creating a case or lead.

#### `emailHeader`

Specifies additional information regarding the automatic email that gets sent when an events occurs.

#### `localeOptions`

Specifies the language of any labels that are returned by Apex.

#### `optAllOrNone`

Specifies whether the operation allows for partial success.

### **`allowFieldTruncation`**

Specifies the truncation behavior of large strings.

### Signature

```
public Boolean allowFieldTruncation {get; set;}
```

### Property Value

Type: `Boolean`

### Usage

In Apex saved against API versions previous to 15.0, if you specify a value for a string and that value is too large, the value is truncated. For API version 15.0 and later, if a value is specified that is too large, the operation fails and an error message is returned. The `allowFieldTruncation` property allows you to specify that the previous behavior, truncation, be used instead of the new behavior in Apex saved against API versions 15.0 and later.

### **assignmentRuleHeader**

Specifies the assignment rule to be used when creating a case or lead.

#### Signature

```
public Database.DmlOptions.AssignmentRuleHeader assignmentRuleHeader {get; set;}
```

#### Property Value

Type: [Database.DMLOptions.AssignmentRuleHeader](#)

#### Usage

`DMLOption.AssignmentRuleHeader.useDefaultRule` affects only the default assignment rule and does not disable other existing assignment rules on the object.

 **Note:** The `Database.DMLOptions` object supports assignment rules for cases and leads, but not for accounts.

### **emailHeader**

Specifies additional information regarding the automatic email that gets sent when an events occurs.

#### Signature

```
public Database.DmlOptions.EmailHeader emailHeader {get; set;}
```

#### Property Value

Type: [Database.DMLOptions.EmailHeader](#)

#### Usage

The Salesforce user interface allows you to specify whether or not to send an email when the following events occur.

- Creation of a new case or task
- Conversion of a case email to a contact
- New user email notification
- Lead queue email notification
- Password reset

In Apex saved against API version 15.0 or later, the `Database.DMLOptions.emailHeader` property enables you to specify additional information regarding the email that gets sent when one of the events occurs because of the code's execution.

### **localeOptions**

Specifies the language of any labels that are returned by Apex.

#### Signature

```
public Database.DmlOptions.LocaleOptions localeOptions {get; set;}
```

## Property Value

Type: [Database.DMLOptions.LocaleOptions](#)

## Usage

The value must be a valid user locale (language and country), such as de\_DE or en\_GB. The value is a String, 2-5 characters long. The first two characters are always an ISO language code, for example 'fr' or 'en.' If the value is further qualified by a country, then the string also has an underscore (\_) and another ISO country code, for example 'US' or 'UK'. For example, the string for the United States is 'en\_US', and the string for French Canadian is 'fr\_CA'.

## optAllOrNone

Specifies whether the operation allows for partial success.

## Signature

```
public Boolean optAllOrNone {get; set;}
```

## Property Value

Type: [Boolean](#)

## Usage

If `optAllOrNone` is set to `true`, all changes are rolled back if any record causes errors. The default for this property is `false` and successfully processed records are committed while records with errors aren't. If `optAllOrNone` is set to `false` and a record fails, the remainder of the DML operation can still succeed. You must iterate through the returned results to identify which records succeeded or failed.

This property is available in Apex saved against Salesforce API version 20.0 and later.

# DmlOptions.AssignmentRuleHeader Class

Enables setting assignment rule options.

## Namespace

[Database](#)

## Example

The following example uses the `useDefaultRule` option:

```
Database.DMLOptions dmo = new Database.DMLOptions();
dmo.assignmentRuleHeader.useDefaultRule= true;

Lead l = new Lead(company='ABC', lastname='Smith');
l.setOptions(dmo);
insert l;
```

The following example uses the `assignmentRuleID` option:

```
Database.DMLOptions dmo = new Database.DMLOptions();
dmo.assignmentRuleHeader.assignmentRuleId= '01QD0000000EqAn';

Lead l = new Lead(company='ABC', lastname='Smith');
l.setOptions(dmo);
insert l;
```

## DmlOptions.AssignmentRuleHeader Properties

The following are properties for `DmlOptions.AssignmentRuleHeader`.

### IN THIS SECTION:

#### [assignmentRuleID](#)

Specifies the ID of a specific assignment rule to run for the case or lead. The assignment rule can be active or inactive.

#### [useDefaultRule](#)

If specified as `true` for a case or lead, the system uses the default (active) assignment rule for the case or lead. If specified, do not specify an `assignmentRuleId`.

### **assignmentRuleID**

Specifies the ID of a specific assignment rule to run for the case or lead. The assignment rule can be active or inactive.

### Signature

```
public Id assignmentRuleID {get; set;}
```

### Property Value

Type: [ID](#)

### Usage

The ID can be retrieved by querying the `AssignmentRule` sObject. If specified, do not specify `useDefaultRule`.

If the value is not in the correct ID format (15-character or 18-character Salesforce ID), the call fails and an exception is returned.

### **useDefaultRule**

If specified as `true` for a case or lead, the system uses the default (active) assignment rule for the case or lead. If specified, do not specify an `assignmentRuleId`.

### Signature

```
public Boolean useDefaultRule {get; set;}
```

### Property Value

Type: [Boolean](#)

## Usage

If there are no assignment rules in the organization, in API version 29.0 and earlier, creating a case or lead with `useDefaultRule` set to `true` results in the case or lead being assigned to the predefined default owner. In API version 30.0 and later, the case or lead is unassigned and doesn't get assigned to the default owner.

## DMLOptions.DuplicateRuleHeader Class

Determines options for using duplicate rules to detect duplicate records. Duplicate rules are part of the Duplicate Management feature.

## Namespace

[Database](#)

## Example

The following example shows how to save an account record that's been identified as a duplicate. To learn how to iterate through duplicate errors, see [DuplicateError Class](#)

```
Database.DMLOptions dml = new Database.DMLOptions();
dml.DuplicateRuleHeader.allowSave = true;
dml.DuplicateRuleHeader.runAsCurrentUser = true;
Account duplicateAccount = new Account(Name='dupe');
Database.SaveResult sr = Database.insert(duplicateAccount, dml);
if (sr.isSuccess()) {
    System.debug('Duplicate account has been inserted in Salesforce!');
}
```

### IN THIS SECTION:

[DMLOptions.DuplicateRuleHeader Properties](#)

## DMLOptions.DuplicateRuleHeader Properties

The following are properties for `DMLOptions.DuplicateRuleHeader`.

### IN THIS SECTION:

#### [allowSave](#)

For a duplicate rule, when the Alert option is enabled, bypass alerts and save duplicate records by setting this property to `true`. Prevent duplicate records from being saved by setting this property to `false`.

#### [runAsCurrentUser](#)

Make sure that sharing rules for the current user are enforced when duplicate rules run by setting this property to `true`. Use the sharing rules specified in the class for the request by setting this property to `false`. If no sharing rules are specified, Apex code runs in system context and sharing rules for the current user are not enforced.

### **allowSave**

For a duplicate rule, when the Alert option is enabled, bypass alerts and save duplicate records by setting this property to `true`. Prevent duplicate records from being saved by setting this property to `false`.

## Signature

```
public Boolean allowSave {get; set;}
```

## Property Value

Type: [Boolean](#)

## Example

This example shows how to save an account record that's been identified as a duplicate.

`dml.DuplicateRuleHeader.allowSave = true` means the user should be allowed to save the duplicate. To learn how to iterate through duplicate errors, see [DuplicateError Class](#).

```
Database.DMLOptions dml = new Database.DMLOptions();
dml.DuplicateRuleHeader.allowSave = true;
dml.DuplicateRuleHeader.runAsCurrentUser = true;
Account duplicateAccount = new Account(Name='dupe');
Database.SaveResult sr = Database.insert(duplicateAccount, dml);
if (sr.isSuccess()) {
    System.debug('Duplicate account has been inserted in Salesforce!');
}
```

## runAsCurrentUser

Make sure that sharing rules for the current user are enforced when duplicate rules run by setting this property to `true`. Use the sharing rules specified in the class for the request by setting this property to `false`. If no sharing rules are specified, Apex code runs in system context and sharing rules for the current user are not enforced.

## Signature

```
public Boolean runAsCurrentUser {get; set;}
```

## Property Value

Type: [Boolean](#)

## Usage

If specified as `true`, duplicate rules run for the current user, which ensures users can't view duplicate records that aren't available to them.

Use `runAsCurrentUser = true` to detect duplicates when converting leads to contacts. Typically, lead conversion Apex code runs in a system context and does not enforce sharing rules for the current user.

## Example

This example shows how to set options so that duplicate rules run for the current user when saving a new account.

```
Database.DMLOptions dml = new Database.DMLOptions();
dml.DuplicateRuleHeader.allowSave = true;
dml.DuplicateRuleHeader.runAsCurrentUser = true;
Account duplicateAccount = new Account(Name='dupe');
```

```
Database.SaveResult sr = Database.insert(duplicateAccount, dml);
if (sr.isSuccess()) {
    System.debug('Duplicate account has been inserted in Salesforce!');
}
```

## DmlOptions.EmailHeader Class

Enables setting email options.

### Namespace

[Database](#)

### Usage

Even though auto-sent emails can be triggered by actions in the Salesforce user interface, the `DMLOptions` settings for `emailHeader` take effect only for DML operations carried out in Apex code.

### Example

In the following example, the `triggerAutoResponseEmail` option is specified:

```
Account a = new Account(name='Acme Plumbing');

    insert a;

    Contact c = new Contact(email='jplumber@salesforce.com',
    firstname='Joe',lastname='Plumber', accountid=a.id);

    insert c;

    Database.DMLOptions dlo = new Database.DMLOptions();

    dlo.EmailHeader.triggerAutoResponseEmail = true;

    Case ca = new Case(subject='Plumbing Problems', contactid=c.id);

    database.insert(ca, dlo);
```

Suppose that you use an after-insert or after-update trigger to change ownership of leads, contacts, or opportunities. If you use the API to change record ownership, or if a Lightning Experience user changes a record's owner, no email notification is sent. To send email notifications to a record's new owner, set the `triggerUserEmail` property to `true`.

### DmlOptions.EmailHeader Properties

The following are properties for `DmlOptions.EmailHeader`.

## IN THIS SECTION:

[triggerAutoResponseEmail](#)

Indicates whether to trigger auto-response rules (**true**) or not (**false**), for leads and cases.

[triggerOtherEmail](#)

Indicates whether to trigger email outside the organization (**true**) or not (**false**).

[triggerUserEmail](#)

Indicates whether to trigger email that is sent to users in the organization (**true**) or not (**false**).

**triggerAutoResponseEmail**

Indicates whether to trigger auto-response rules (**true**) or not (**false**), for leads and cases.

**Signature**

```
public Boolean triggerAutoResponseEmail {get; set;}
```

**Property Value**

Type: [Boolean](#)

**Usage**

This email can be automatically triggered by a number of events, for example creating a case or resetting a user password. If this value is set to **true**, when a case is created, if there is an email address for the contact specified in `ContactID`, the email is sent to that address. If not, the email is sent to the address specified in `SuppliedEmail`.

**triggerOtherEmail**

Indicates whether to trigger email outside the organization (**true**) or not (**false**).

**Signature**

```
public Boolean triggerOtherEmail {get; set;}
```

**Property Value**

Type: [Boolean](#)

**Usage**

This email can be automatically triggered by creating, editing, or deleting a contact for a case.

**Note:** Email sent through Apex because of a group event includes additional behaviors. A *group event* is an event for which `IsGroupEvent` is true. The `EventAttendee` object tracks the users, leads, or contacts that are invited to a group event. Note the following behaviors for group event email sent through Apex:

- Sending a group event invitation to a lead or contact respects the `triggerOtherEmail` option
- Email sent when updating or deleting a group event also respects the `triggerUserEmail` and `triggerOtherEmail` options, as appropriate

## triggerUserEmail

Indicates whether to trigger email that is sent to users in the organization (`true`) or not (`false`).

## Signature

```
public Boolean triggerUserEmail {get; set;}
```

## Property Value

Type: [Boolean](#)

## Usage

This email can be automatically triggered by a number of events; resetting a password, creating a new user, or creating or modifying a task.

 **Note:** Adding comments to a case in Apex doesn't trigger email to users in the organization even if `triggerUserEmail` is set to `true`.

 **Note:** Email sent through Apex because of a group event includes additional behaviors. A *group event* is an event for which `IsGroupEvent` is true. The `EventAttendee` object tracks the users, leads, or contacts that are invited to a group event. Note the following behaviors for group event email sent through Apex:

- Sending a group event invitation to a user respects the `triggerUserEmail` option
- Email sent when updating or deleting a group event also respects the `triggerUserEmail` and `triggerOtherEmail` options, as appropriate

# DuplicateError Class

Contains information about an error that occurred when an attempt was made to save a duplicate record. Use if your organization has set up duplicate rules, which are part of the Duplicate Management feature.

## Namespace

[Database](#)

## Example

When you try to save a record that's identified as a duplicate record by a duplicate rule, you'll receive a duplicate error. If the duplicate rule contains the Allow action, an attempt will be made to bypass the error.

```
// Try to save a duplicate account
Account duplicateAccount = new Account(Name='Acme', BillingCity='San Francisco');
Database.SaveResult sr = Database.insert(duplicateAccount, false);
if (!sr.isSuccess()) {

    // Insertion failed due to duplicate detected
    for(Database.Error duplicateError : sr.getErrors()){
        Datacloud.DuplicateResult duplicateResult =
            ((Database.DuplicateError) duplicateError).getDuplicateResult();
        System.debug('Duplicate records have been detected by ' +
```

```
        duplicateResult.getDuplicateRule();
    System.debug(duplicateResult.getErrorMessage());
}

// If the duplicate rule is an alert rule, we can try to bypass it
Database.DMLOptions dml = new Database.DMLOptions();
dml.DuplicateRuleHeader.AllowSave = true;
Database.SaveResult sr2 = Database.insert(duplicateAccount, dml);
if (sr2.isSuccess()) {
    System.debug('Duplicate account has been inserted in Salesforce!');
}
}
```

#### IN THIS SECTION:

[DuplicateError Methods](#)

#### SEE ALSO:

[SaveResult Class](#)

[DuplicateResult Class](#)

[Error Class](#)

## DuplicateError Methods

The following are methods for `DuplicateError`.

#### IN THIS SECTION:

[getDuplicateResult\(\)](#)

Returns the details of a duplicate rule and duplicate records found by the duplicate rule.

[getFields\(\)](#)

Returns an array of one or more field names. Identifies which fields in the object, if any, affected the error condition.

[getMessage\(\)](#)

Returns the error message text.

[getStatusCode\(\)](#)

Returns a code that characterizes the error.

### **getDuplicateResult()**

Returns the details of a duplicate rule and duplicate records found by the duplicate rule.

#### Signature

```
public Datacloud.DuplicateResult getDuplicateResult()
```

#### Return Value

Type: [Datacloud.DuplicateResult](#)

## Example

This example shows the code used to get the possible duplicates and related match information after saving a new contact. This code is part of a custom application that implements duplicate management when users add a contact. See [DuplicateResult Class](#) on page 2386 to check out the entire sample applicaton.

```
Datacloud.DuplicateResult duplicateResult =
    duplicateError.getDuplicateResult();
```

## getFields ()

Returns an array of one or more field names. Identifies which fields in the object, if any, affected the error condition.

## Signature

```
public List<String> getFields ()
```

## Return Value

Type: [List<String>](#)

## getMessage ()

Returns the error message text.

## Signature

```
public String getMessage ()
```

## Return Value

Type: [String](#)

## getStatusCode ()

Returns a code that characterizes the error.

## Signature

```
public StatusCode getStatusCode ()
```

## Return Value

Type: [StatusCode](#)

# EmptyRecycleBinResult Class

The result of the emptyRecycleBin DML operation returned by the `Database.emptyRecycleBin` method.

## Namespace

[Database](#)

## Usage

A list of `Database.EmptyRecycleBinResult` objects is returned by the `Database.emptyRecycleBin` method. Each object in the list corresponds to either a record ID or an `sObject` passed as the parameter in the `Database.emptyRecycleBin` method. The first index in the `EmptyRecycleBinResult` list matches the first record or `sObject` specified in the list, the second with the second, and so on.

## EmptyRecycleBinResult Methods

The following are methods for `EmptyRecycleBinResult`. All are instance methods.

### IN THIS SECTION:

#### [getErrors\(\)](#)

If an error occurred during the delete for this record or `sObject`, returns a list of one or more `Database.Error` objects. If no errors occurred, the returned list is empty.

#### [getId\(\)](#)

Returns the ID of the record or `sObject` you attempted to delete.

#### [isSuccess\(\)](#)

Returns `true` if the record or `sObject` was successfully removed from the Recycle Bin; otherwise `false`.

### **getErrors ()**

If an error occurred during the delete for this record or `sObject`, returns a list of one or more `Database.Error` objects. If no errors occurred, the returned list is empty.

### Signature

```
public Database.Errors[] getErrors ()
```

### Return Value

Type: `Database.Errors []`

### **getId ()**

Returns the ID of the record or `sObject` you attempted to delete.

### Signature

```
public ID getId ()
```

### Return Value

Type: `ID`

**isSuccess ()**

Returns `true` if the record or sObject was successfully removed from the Recycle Bin; otherwise `false`.

**Signature**

```
public Boolean isSuccess ()
```

**Return Value**

Type: [Boolean](#)

## Error Class

Represents information about an error that occurred during a DML operation when using a Database method.

## Namespace

[Database](#)

## Usage

`Error` class is part of `SaveResult`, which is generated when a user attempts to save a Salesforce record.

SEE ALSO:

[SaveResult Class](#)

[DuplicateError Class](#)

## Error Methods

The following are methods for `Error`. All are instance methods.

IN THIS SECTION:

[getFields\(\)](#)

Returns an array of one or more field names. Identifies which fields in the object, if any, affected the error condition.

[getMessage\(\)](#)

Returns the error message text.

[getStatusCode\(\)](#)

Returns a code that characterizes the error.

**getFields ()**

Returns an array of one or more field names. Identifies which fields in the object, if any, affected the error condition.

**Signature**

```
public String[] getFields ()
```

### Return Value

Type: [String](#)[]

#### **getMessage ()**

Returns the error message text.

### Signature

```
public String getMessage ()
```

### Return Value

Type: [String](#)

#### **getStatusCode ()**

Returns a code that characterizes the error.

### Signature

```
public StatusCode getStatusCode ()
```

### Return Value

Type: [StatusCode](#)

### Usage

The full list of status codes is available in the WSDL file for your organization (see *Downloading Salesforce WSDLs and Client Authentication Certificates* in the Salesforce online help.)

## GetDeletedResult Class

Contains the deleted records retrieved for a specific sObject type and time window.

### Namespace

[Database](#)

### Usage

The `Database.getDeleted` method returns the deleted record information as a `Database.GetDeletedResult` object.

### GetDeletedResult Methods

The following are methods for `GetDeletedResult`. All are instance methods.

## IN THIS SECTION:

[getDeletedRecords\(\)](#)

Returns a list of deleted records for the time window specified in the `Database.getDeleted` method call.

[getEarliestDateAvailable\(\)](#)

Returns the date in Coordinated Universal Time (UTC) of the earliest physically deleted object for the sObject type specified in `Database.getDeleted`.

[getLatestDateCovered\(\)](#)

Returns the date in Coordinated Universal Time (UTC) of the last date covered in the `Database.getDeleted` call.

**getDeletedRecords ()**

Returns a list of deleted records for the time window specified in the `Database.getDeleted` method call.

**Signature**

```
public List<Database.DeletedRecord> getDeletedRecords ()
```

**Return Value**

Type: [List<Database.DeletedRecord>](#)

**getEarliestDateAvailable ()**

Returns the date in Coordinated Universal Time (UTC) of the earliest physically deleted object for the sObject type specified in `Database.getDeleted`.

**Signature**

```
public Date getEarliestDateAvailable ()
```

**Return Value**

Type: [Date](#)

**getLatestDateCovered ()**

Returns the date in Coordinated Universal Time (UTC) of the last date covered in the `Database.getDeleted` call.

**Signature**

```
public Date getLatestDateCovered ()
```

**Return Value**

Type: [Date](#)

## Usage

If there is a value, it is less than or equal to the *endDate* argument of `Database.getDeleted`. A value here indicates that, for safety, you should use this value for the *startDate* of your next call to capture the changes that started after this date but didn't complete before *endDate* and were, therefore, not returned in the previous call.

## GetUpdatedResult Class

Contains the result for the `Database.getUpdated` method call.

## Namespace

[Database](#)

## Usage

Use the methods in this class to obtain detailed information about the updated records returned by `Database.getUpdated` for a specific time window.

## GetUpdatedResult Methods

The following are methods for `GetUpdatedResult`. All are instance methods.

IN THIS SECTION:

[getIds\(\)](#)

Returns the IDs of records updated within the time window specified in the `Database.getUpdated` method.

[getLatestDateCovered\(\)](#)

Returns the date in Coordinated Universal Time (UTC) of the last date covered in the `Database.getUpdated` call.

### **getIds()**

Returns the IDs of records updated within the time window specified in the `Database.getUpdated` method.

### Signature

```
public List<Id> getIds()
```

### Return Value

Type: [List<ID>](#)

### **getLatestDateCovered()**

Returns the date in Coordinated Universal Time (UTC) of the last date covered in the `Database.getUpdated` call.

### Signature

```
public Date getLatestDateCovered()
```

## Return Value

Type: [Date](#)

# LeadConvert Class

Contains information used for lead conversion.

## Namespace

[Database](#)

## Usage

The `convertLead` Database method converts a lead into an account and contact or an account and person account, as well as (optionally) an opportunity. The `convertLead` takes an instance of the `Database.LeadConvert` class as a parameter. Create an instance of this class and set the information required for conversion, such as setting the lead, and destination account and contact.

 **Note:** The `Database.convertLead()` method can take one `LeadConvert` object or a list of `LeadConvert` objects.

## Example

This example shows how to use the `Database.convertLead` method to convert a lead. It inserts a new lead, creates a `LeadConvert` object, sets its status to `converted`, then passes it to the `Database.convertLead` method. Finally, it verifies that the conversion was successful.

```
Lead myLead = new Lead(LastName = 'Fry', Company='Fry And Sons');
insert myLead;

Database.LeadConvert lc = new Database.LeadConvert();
lc.setLeadId(myLead.id);

LeadStatus convertStatus = [SELECT Id, ApiName FROM LeadStatus WHERE IsConverted=true LIMIT
  1];
lc.setConvertedStatus(convertStatus.ApiName);

Database.LeadConvertResult lcr = Database.convertLead(lc);
System.assert(lcr.isSuccess());
```

### IN THIS SECTION:

[LeadConvert Constructors](#)

[LeadConvert Methods](#)

## LeadConvert Constructors

The following are constructors for `LeadConvert`.

## IN THIS SECTION:

[LeadConvert\(\)](#)

Creates a new instance of the `Database.LeadConvert` class.

**LeadConvert ()**

Creates a new instance of the `Database.LeadConvert` class.

**Signature**

```
public LeadConvert ()
```

**LeadConvert Methods**

The following are methods for `LeadConvert`. All are instance methods.

## IN THIS SECTION:

[getAccountId\(\)](#)

Gets the ID of the account into which the lead will be merged.

[getAccountRecord\(\)](#)

This method is for internal use only.

[getBypassAccountDedupeCheck\(\)](#)

This method is for internal use only.

[getBypassContactDedupeCheck\(\)](#)

This method is for internal use only.

[getContactId\(\)](#)

Gets the ID of the contact into which the lead will be merged.

[getContactRecord\(\)](#)

This method is for internal use only.

[getConvertedStatus\(\)](#)

Gets the lead status value for a converted lead.

[getLeadID\(\)](#)

Gets the ID of the lead to convert.

[getOpportunityId\(\)](#)

Gets the ID of the existing opportunity that will be related to the resulting contact.

[getOpportunityName\(\)](#)

Gets the name of the opportunity to create.

[getOpportunityRecord\(\)](#)

This method is for internal use only.

[getOwnerId\(\)](#)

Gets the ID of the person to own any newly created account, contact, and opportunity.

[getRelatedPersonAccountId\(\)](#)

Gets the ID of the existing person account into which the lead will be converted.

[getRelatedPersonAccountRecord\(\)](#)

Gets the entity record of the new person account into which the lead will be converted.

[isDoNotCreateOpportunity\(\)](#)

Indicates whether an Opportunity is created during lead conversion (`false`, the default) or not (`true`).

[isOverWriteLeadSource\(\)](#)

Indicates whether the `LeadSource` field on the target Contact object is overwritten with the contents of the `LeadSource` field in the source Lead object (`true`), or not (`false`, the default).

[isSendNotificationEmail\(\)](#)

Indicates whether a notification email is sent to the owner specified by `setOwnerId` (`true`) or not (`false`, the default).

[setAccountId\(accountId\)](#)

Sets the ID of the account into which the lead is merged. This value is required only when updating an existing account, including person accounts.

[setAccountRecord\(accountRecord\)](#)

This method is for internal use only.

[setBypassAccountDedupeCheck\(bypassAccountDedupeCheck\)](#)

This method is for internal use only.

[setBypassContactDedupeCheck\(bypassContactDedupeCheck\)](#)

This method is for internal use only.

[setContactId\(contactId\)](#)

Sets the ID of the contact into which the lead will be merged (this contact must be associated with the account specified with `setAccountId`, and `setAccountId` must be specified). This value is required only when updating an existing contact.

[setContactRecord\(contactRecord\)](#)

This method is for internal use only.

[setConvertedStatus\(status\)](#)

Sets the lead status value for a converted lead. This field is required.

[setDoNotCreateOpportunity\(createOpportunity\)](#)

Specifies whether to create an opportunity during lead conversion. The default value is `false`: opportunities are created by default. Set this flag to `true` only if you do not want to create an opportunity from the lead.

[setLeadId\(leadId\)](#)

Sets the ID of the lead to convert. This field is required.

[setOpportunityId\(opportunityId\)](#)

Sets the ID of the opportunity into which the lead is merged. This value is required only when updating an existing opportunity.

[setOpportunityName\(opportunityName\)](#)

Sets the name of the opportunity to create. If no name is specified, this value defaults to the company name of the lead.

[setOpportunityRecord\(opportunityRecord\)](#)

This method is for internal use only.

[setOverwriteLeadSource\(overwriteLeadSource\)](#)

Specifies whether to overwrite the `LeadSource` field on the target contact object with the contents of the `LeadSource` field in the source lead object. The default value is `false`, to not overwrite the field. If you specify this as `true`, you must also specify `setContactId` for the target contact.

[setOwnerId\(ownerId\)](#)

Specifies the ID of the person to own any newly created account, contact, and opportunity. If the application does not specify this value, the owner of the new object will be the owner of the lead.

[setRelatedPersonAccountId\(relatedPersonAccountId\)](#)

Sets the ID of the existing person account into which to convert the lead. This value is required only when updating an existing person account.

[setSendNotificationEmail\(sendEmail\)](#)

Specifies whether to send a notification email to the owner specified by `setOwnerId`. The default value is `false`, that is, to not send email.

**getAccountId()**

Gets the ID of the account into which the lead will be merged.

**Signature**

```
public ID getAccountId()
```

**Return Value**

Type: ID

**getAccountRecord()**

This method is for internal use only.

**getBypassAccountDedupeCheck()**

This method is for internal use only.

**getBypassContactDedupeCheck()**

This method is for internal use only.

**getContactId()**

Gets the ID of the contact into which the lead will be merged.

**Signature**

```
public ID getContactId()
```

**Return Value**

Type: ID

**getContactRecord()**

This method is for internal use only.

**getConvertedStatus()**

Gets the lead status value for a converted lead.

**Signature**

```
public String getConvertedStatus()
```

**Return Value**

Type: [String](#)

**getLeadID()**

Gets the ID of the lead to convert.

**Signature**

```
public ID getLeadID()
```

**Return Value**

Type: [ID](#)

**getOpportunityId()**

Gets the ID of the existing opportunity that will be related to the resulting contact.

**Signature**

```
public ID getOpportunityId()
```

**Return Value**

Type: [ID](#)

**getOpportunityName()**

Gets the name of the opportunity to create.

**Signature**

```
public String getOpportunityName()
```

**Return Value**

Type: [String](#)

**getOpportunityRecord()**

This method is for internal use only.

**getOwnerID()**

Gets the ID of the person to own any newly created account, contact, and opportunity.

**Signature**

```
public ID getOwnerID()
```

**Return Value**

Type: [ID](#)

**getRelatedPersonAccountId()**

Gets the ID of the existing person account into which the lead will be converted.

**Signature**

```
public ID getRelatedPersonAccountId()
```

**Return Value**

Type: [ID](#)

**getRelatedPersonAccountRecord()**

Gets the entity record of the new person account into which the lead will be converted.

**Signature**

```
public ID getRelatedPersonAccountRecord()
```

**Return Value**

Type: [ID](#)

**isDoNotCreateOpportunity()**

Indicates whether an Opportunity is created during lead conversion (`false`, the default) or not (`true`).

**Signature**

```
public Boolean isDoNotCreateOpportunity()
```

**Return Value**

Type: [Boolean](#)

**isOverWriteLeadSource ()**

Indicates whether the `LeadSource` field on the target Contact object is overwritten with the contents of the `LeadSource` field in the source Lead object (`true`), or not (`false`, the default).

**Signature**

```
public Boolean isOverWriteLeadSource ()
```

**Return Value**

Type: [Boolean](#)

**isSendNotificationEmail ()**

Indicates whether a notification email is sent to the owner specified by `setOwnerId` (`true`) or not (`false`, the default).

**Signature**

```
public Boolean isSendNotificationEmail ()
```

**Return Value**

Type: [Boolean](#)

**setAccountId (accountId)**

Sets the ID of the account into which the lead is merged. This value is required only when updating an existing account, including person accounts.

**Signature**

```
public Void setAccountId (ID accountId)
```

**Parameters**

*accountId*  
Type: [ID](#)

**Return Value**

Type: `Void`

**setAccountRecord (accountRecord)**

This method is for internal use only.

**setBypassAccountDedupeCheck (bypassAccountDedupeCheck)**

This method is for internal use only.

**setBypassContactDedupeCheck (bypassContactDedupeCheck)**

This method is for internal use only.

**setContactId (contactId)**

Sets the ID of the contact into which the lead will be merged (this contact must be associated with the account specified with `setAccountId`, and `setAccountId` must be specified). This value is required only when updating an existing contact.

**Signature**

```
public Void setContactId(ID contactId)
```

**Parameters**

*contactId*  
Type: ID

**Return Value**

Type: Void

**Usage**

If `setContactId` is specified, then the application creates a new contact that is implicitly associated with the account. The contact name and other existing data are not overwritten (unless `setOverwriteLeadSource` is set to true, in which case only the `LeadSource` field is overwritten).

 **Important:** If you are converting a lead into a person account, do not specify `setContactId` or an error will result. Specify only `setAccountId` of the person account.

**setContactRecord (contactRecord)**

This method is for internal use only.

**setConvertedStatus (status)**

Sets the lead status value for a converted lead. This field is required.

**Signature**

```
public Void setConvertedStatus(String status)
```

**Parameters**

*status*  
Type: String

**Return Value**

Type: Void

**setDoNotCreateOpportunity (createOpportunity)**

Specifies whether to create an opportunity during lead conversion. The default value is `false`: opportunities are created by default. Set this flag to `true` only if you do not want to create an opportunity from the lead.

**Signature**

```
public Void setDoNotCreateOpportunity(Boolean createOpportunity)
```

**Parameters**

*createOpportunity*

Type: Boolean

**Return Value**

Type: Void

**setLeadId (leadId)**

Sets the ID of the lead to convert. This field is required.

**Signature**

```
public Void setLeadId(ID leadId)
```

**Parameters**

*leadId*

Type: ID

**Return Value**

Type: Void

**setOpportunityId (opportunityId)**

Sets the ID of the opportunity into which the lead is merged. This value is required only when updating an existing opportunity.

**Signature**

```
public Void setOpportunityId(ID opportunityId)
```

**Parameters**

*opportunityId*

Type: ID

**Return Value**

Type: Void

**setOpportunityName (opportunityName)**

Sets the name of the opportunity to create. If no name is specified, this value defaults to the company name of the lead.

**Signature**

```
public Void setOpportunityName(String opportunityName)
```

**Parameters**

*opportunityName*  
Type: [String](#)

**Return Value**

Type: Void

**Usage**

The maximum length of this field is 80 characters.

If `setDoNotCreateOpportunity` is true, no Opportunity is created and this field must be left blank; otherwise, an error is returned.

**setOpportunityRecord (opportunityRecord)**

This method is for internal use only.

**setOverwriteLeadSource (overwriteLeadSource)**

Specifies whether to overwrite the `LeadSource` field on the target contact object with the contents of the `LeadSource` field in the source lead object. The default value is `false`, to not overwrite the field. If you specify this as `true`, you must also specify `setContactId` for the target contact.

**Signature**

```
public Void setOverwriteLeadSource(Boolean overwriteLeadSource)
```

**Parameters**

*overwriteLeadSource*  
Type: [Boolean](#)

**Return Value**

Type: Void

**setOwnerId (ownerId)**

Specifies the ID of the person to own any newly created account, contact, and opportunity. If the application does not specify this value, the owner of the new object will be the owner of the lead.

### Signature

```
public Void setOwnerId(ID ownerId)
```

### Parameters

*ownerId*  
Type: ID

### Return Value

Type: Void

### Usage

This method is not applicable when merging with existing objects—if `setOwnerId` is specified, the `ownerId` field is not overwritten in an existing account or contact.

### **setRelatedPersonAccountId (relatedPersonAccountId)**

Sets the ID of the existing person account into which to convert the lead. This value is required only when updating an existing person account.

### Signature

```
public Void setRelatedPersonAccountId(ID relatedPersonAccountId)
```

### Parameters

*relatedPersonAccountId*  
Type: ID

### Return Value

Type: Void

### **setSendNotificationEmail (sendEmail)**

Specifies whether to send a notification email to the owner specified by `setOwnerId`. The default value is `false`, that is, to not send email.

### Signature

```
public Void setSendNotificationEmail(Boolean sendEmail)
```

### Parameters

*sendEmail*  
Type: Boolean

## Return Value

Type: Void

# LeadConvertResult Class

The result of a lead conversion.

## Namespace

[Database](#)

## Usage

An array of LeadConvertResult objects is returned with the `convertLead` Database method. Each element in the LeadConvertResult array corresponds to the `sObject` array passed as the `sObject []` parameter in the `convertLead` Database method, that is, the first element in the LeadConvertResult array matches the first element passed in the `sObject` array, the second element corresponds to the second element, and so on. If only one `sObject` is passed in, the LeadConvertResult array contains a single element.

## LeadConvertResult Methods

The following are methods for `LeadConvertResult`. All are instance methods.

### IN THIS SECTION:

#### [getAccountId\(\)](#)

The ID of the new account (if a new account was specified) or the ID of the account specified when `convertLead` was invoked.

#### [getContactId\(\)](#)

The ID of the new contact (if a new contact was specified) or the ID of the contact specified when `convertLead` was invoked.

#### [getErrors\(\)](#)

If an error occurred, an array of one or more database error objects providing the error code and description.

#### [getLeadId\(\)](#)

The ID of the converted lead.

#### [getOpportunityId\(\)](#)

The ID of the new opportunity, if one was created when `convertLead` was invoked.

#### [getRelatedPersonAccountId\(\)](#)

The ID of the new or existing person account specified when `convertLead` was invoked.

#### [isSuccess\(\)](#)

A Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise

### **getAccountId()**

The ID of the new account (if a new account was specified) or the ID of the account specified when `convertLead` was invoked.

## Signature

```
public ID getAccountId()
```

## Return Value

Type: [ID](#)

### **getContactId()**

The ID of the new contact (if a new contact was specified) or the ID of the contact specified when `convertLead` was invoked.

## Signature

```
public ID getContactId()
```

## Return Value

Type: [ID](#)

### **getErrors()**

If an error occurred, an array of one or more database error objects providing the error code and description.

## Signature

```
public Database.Error[] getErrors()
```

## Return Value

Type: [Database.Error\[\]](#)

### **getLeadId()**

The ID of the converted lead.

## Signature

```
public ID getLeadId()
```

## Return Value

Type: [ID](#)

### **getOpportunityId()**

The ID of the new opportunity, if one was created when `convertLead` was invoked.

## Signature

```
public ID getOpportunityId()
```

## Return Value

Type: [ID](#)

**getRelatedPersonAccountId()**

The ID of the new or existing person account specified when `convertLead` was invoked.

**Signature**

```
public ID getRelatedPersonAccountId()
```

**Return Value**

Type: [ID](#)

**isSuccess()**

A Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise

**Signature**

```
public Boolean isSuccess()
```

**Return Value**

Type: [Boolean](#)

## MergeResult Class

Contains the result of a merge Database method operation.

### Namespace

[Database](#)

### Usage

The `Database.merge` method returns a `Database.MergeResult` object for each merged record.

### MergeResult Methods

The following are methods for `MergeResult`. All are instance methods.

**IN THIS SECTION:**[getErrors\(\)](#)

Returns a list of `Database.Error` objects representing the errors encountered, if any, during a merge operation using the `Database.merge` method. If no error occurred, returns null.

[getId\(\)](#)

Returns the ID of the master record into which other records were merged.

[getMergedRecordIds\(\)](#)

Returns the IDs of the records merged into the master record.

[getUpdatedRelatedIds\(\)](#)

Returns the IDs of all related records that were reparented as a result of the merge that are viewable by the user sending the merge call.

[isSuccess\(\)](#)

Indicates whether the merge was successful (`true`) or not (`false`).

**getErrors ()**

Returns a list of `Database.Error` objects representing the errors encountered, if any, during a merge operation using the `Database.merge` method. If no error occurred, returns null.

**Signature**

```
public List<Database.Error> getErrors ()
```

**Return Value**

Type: [List<Database.Error>](#)

**getId ()**

Returns the ID of the master record into which other records were merged.

**Signature**

```
public Id getId ()
```

**Return Value**

Type: [ID](#)

**getMergedRecordIds ()**

Returns the IDs of the records merged into the master record.

**Signature**

```
public List<String> getMergedRecordIds ()
```

**Return Value**

Type: [List<String>](#)

**getUpdatedRelatedIds ()**

Returns the IDs of all related records that were reparented as a result of the merge that are viewable by the user sending the merge call.

**Signature**

```
public List<String> getUpdatedRelatedIds ()
```

## Return Value

Type: [List<String>](#)

## **isSuccess ()**

Indicates whether the merge was successful ([true](#)) or not ([false](#)).

## Signature

```
public Boolean isSuccess ()
```

## Return Value

Type: [Boolean](#)

# QueryLocator Class

Represents the record set returned by `Database.getQueryLocator` and used with Batch Apex.

## Namespace

[Database](#)

## QueryLocator Methods

The following are methods for `QueryLocator`. All are instance methods.

### IN THIS SECTION:

[getQuery\(\)](#)

Returns the query used to instantiate the `Database.QueryLocator` object. This is useful when testing the `start` method.

[iterator\(\)](#)

Returns a new instance of a query locator iterator.

## **getQuery ()**

Returns the query used to instantiate the `Database.QueryLocator` object. This is useful when testing the `start` method.

## Signature

```
public String getQuery ()
```

## Return Value

Type: [String](#)

## Usage

You can't use the [FOR UPDATE keywords](#) with a `getQueryLocator` query to lock a set of records. The set of records in the batch is determined when the `start` method is run.

## Example

```
System.assertEquals(QLReturnedFromStart.  
getQuery(),  
Database.getQueryLocator([SELECT Id  
FROM Account]).getQuery());
```

## `iterator()`

Returns a new instance of a query locator iterator.

## Signature

```
public Database.QueryLocatorIterator iterator()
```

## Return Value

Type: [Database.QueryLocatorIterator](#)

## Usage

 **Warning:** To iterate over a query locator, save the iterator instance that this method returns in a variable and then use this variable to iterate over the collection. Calling `iterator` every time you want to perform an iteration can result in incorrect behavior because each call returns a new iterator instance.

For an example, see [QueryLocatorIterator Class](#).

# QueryLocatorIterator Class

Represents an iterator over a query locator record set.

## Namespace

[Database](#)

## Example

This sample shows how to obtain an iterator for a query locator, which contains five accounts. This sample calls `hasNext` and `next` to get each record in the collection.

```
// Get a query locator  
Database.QueryLocator q = Database.getQueryLocator(  
    [SELECT Name FROM Account LIMIT 5]);  
// Get an iterator  
Database.QueryLocatorIterator it = q.iterator();
```

```
// Iterate over the records
while (it.hasNext())
{
    Account a = (Account)it.next();
    System.debug(a);
}
```

## QueryLocatorIterator Methods

The following are methods for `QueryLocatorIterator`. All are instance methods.

### IN THIS SECTION:

#### `hasNext()`

Returns `true` if there are one or more records remaining in the collection; otherwise, returns `false`.

#### `next()`

Advances the iterator to the next `sObject` record and returns the `sObject`.

### **hasNext ()**

Returns `true` if there are one or more records remaining in the collection; otherwise, returns `false`.

### Signature

```
public Boolean hasNext ()
```

### Return Value

Type: `Boolean`

### **next ()**

Advances the iterator to the next `sObject` record and returns the `sObject`.

### Signature

```
public sObject next ()
```

### Return Value

Type: `sObject`

### Usage

Because the return value is the generic `sObject` type, you must cast it if using a more specific type. For example:

```
Account a = (Account)myIterator.next ();
```

## Example

```
Account a = (Account)myIterator.next();
```

# SaveResult Class

The result of an insert or update DML operation returned by a Database method.

## Namespace

[Database](#)

## Usage

An array of SaveResult objects is returned with the `insert` and `update` database methods. Each element in the SaveResult array corresponds to the sObject array passed as the `sObject []` parameter in the Database method, that is, the first element in the SaveResult array matches the first element passed in the sObject array, the second element corresponds with the second element, and so on. If only one sObject is passed in, the SaveResult array contains a single element.

A SaveResult object is generated when a new or existing Salesforce record is saved.

## Example

The following example shows how to obtain and iterate through the returned `Database.SaveResult` objects. It inserts two accounts using `Database.insert` with a false second parameter to allow partial processing of records on failure. One of the accounts is missing the Name required field, which causes a failure. Next, it iterates through the results to determine whether the operation was successful or not for each record. It writes the ID of every record that was processed successfully to the debug log, or error messages and fields of the failed records. This example generates one successful operation and one failure.

```
// Create two accounts, one of which is missing a required field
Account[] accts = new List<Account>{
    new Account (Name='Account1'),
    new Account ();
};
Database.SaveResult[] srList = Database.insert(accts, false);

// Iterate through each returned result
for (Database.SaveResult sr : srList) {
    if (sr.isSuccess()) {
        // Operation was successful, so get the ID of the record that was processed
        System.debug('Successfully inserted account. Account ID: ' + sr.getId());
    }
    else {
        // Operation failed, so get all errors
        for(Database.Error err : sr.getErrors()) {
            System.debug('The following error has occurred.');
```

```
}  
}
```

SEE ALSO:

[Error Class](#)

[DuplicateError Class](#)

## SaveResult Methods

The following are methods for `SaveResult`. All are instance methods.

IN THIS SECTION:

[getErrors\(\)](#)

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

[getId\(\)](#)

Returns the ID of the sObject you were trying to insert or update.

[isSuccess\(\)](#)

Returns a Boolean that is set to `true` if the DML operation was successful for this object, `false` otherwise.

### **getErrors()**

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

#### Signature

```
public Database.Error[] getErrors()
```

#### Return Value

Type: [Database.Error\[\]](#)

### **getId()**

Returns the ID of the sObject you were trying to insert or update.

#### Signature

```
public ID getId()
```

#### Return Value

Type: [ID](#)

## Versioned Behavior Changes

In API version 53.0 and later, the method returns the sObject ID. However, if record locking fails during the update operation, the method returns a null value.

In API version 52.0 and earlier, the method returned a null value if the record wasn't updated successfully.

### **isSuccess ()**

Returns a Boolean that is set to `true` if the DML operation was successful for this object, `false` otherwise.

## Signature

```
public Boolean isSuccess ()
```

## Return Value

Type: [Boolean](#)

## Example

This example shows the code used to process duplicate records, which are detected when there is an unsuccessful save due to an error. This code is part of a custom application that implements duplicate management when users add a contact. See [DuplicateResult Class](#) on page 2386 to check out the entire sample applicaton.

```
if (!saveResult.isSuccess ()) { ... }
```

# UndeleteResult Class

The result of an undelete DML operation returned by the `Database.undelete` method.

## Namespace

[Database](#)

## Usage

An array of `Database.UndeleteResult` objects is returned with the `undelete` database method. Each element in the `UndeleteResult` array corresponds to the `sObject` array passed as the `sObject []` parameter in the `undelete` Database method; that is, the first element in the `UndeleteResult` array matches the first element passed in the `sObject` array, the second element corresponds with the second element, and so on. If only one `sObject` is passed in, the `UndeleteResults` array contains a single element.

## UndeleteResult Methods

The following are methods for `UndeleteResult`. All are instance methods.

### IN THIS SECTION:

#### [getErrors\(\)](#)

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns null.

**getId()**

Returns the ID of the sObject you were trying to undelete.

**isSuccess()**

Returns a Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise.

**getErrors()**

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns null.

**Signature**

```
public Database.Error[] getErrors()
```

**Return Value**

Type: [Database.Error\[\]](#)

**getId()**

Returns the ID of the sObject you were trying to undelete.

**Signature**

```
public ID getId()
```

**Return Value**

Type: [ID](#)

**Usage**

If this field contains a value, the object was successfully undeleted. If this field is empty, the operation was not successful for that object.

**isSuccess()**

Returns a Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise.

**Signature**

```
public Boolean isSuccess()
```

**Return Value**

Type: [Boolean](#)

## UpsertResult Class

The result of an upsert DML operation returned by the `Database.upsert` method.

## Namespace

[Database](#)

## Usage

An array of Database.UpsertResult objects is returned with the `upsert` database method. Each element in the UpsertResult array corresponds to the sObject array passed as the `sObject []` parameter in the `upsert` Database method; that is, the first element in the UpsertResult array matches the first element passed in the sObject array, the second element corresponds with the second element, and so on. If only one sObject is passed in, the UpsertResults array contains a single element.

## UpsertResult Methods

The following are methods for `UpsertResult`. All are instance methods.

### IN THIS SECTION:

#### [getErrors\(\)](#)

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

#### [getId\(\)](#)

Returns the ID of the sObject you were trying to update or insert.

#### [isCreated\(\)](#)

A Boolean value that is set to `true` if the record was created, `false` if the record was updated.

#### [isSuccess\(\)](#)

Returns a Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise.

### **getErrors ()**

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

### Signature

```
public Database.Error[] getErrors()
```

### Return Value

Type: [Database.Error \[\]](#)

### **getId ()**

Returns the ID of the sObject you were trying to update or insert.

### Signature

```
public ID getId()
```

## Return Value

Type: [ID](#)

## Versioned Behavior Changes

In API version 53.0 and later, the method returns the sObject ID. However, if record locking fails during the update operation, the method returns a null value.

In API version 52.0 and earlier, the method returned a null value if the record wasn't updated successfully.

## **isCreated()**

A Boolean value that is set to `true` if the record was created, `false` if the record was updated.

## Signature

```
public Boolean isCreated()
```

## Return Value

Type: [Boolean](#)

## **isSuccess()**

Returns a Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise.

## Signature

```
public Boolean isSuccess()
```

## Return Value

Type: [Boolean](#)

# Datacloud Namespace

---

The `Datacloud` namespace provides classes and methods for retrieving information about duplicate rules. Duplicate rules let you control whether and when users can save duplicate records within Salesforce.

The `Datacloud` namespace is related to the Duplicate Management feature. For more information, see [Manage Duplicate Records](#) in *Salesforce Help* and [Duplicate Management](#) in Trailhead. The `Datacloud` namespace isn't related to the Salesforce Data Cloud product. See [Data Cloud](#).

The following are the classes in the `Datacloud` namespace.

## IN THIS SECTION:

### [AdditionalInformationMap Class](#)

Represents other information, if any, about matched records.

[DuplicateResult Class](#)

Represents the details of a duplicate rule that detected duplicate records and information about those duplicate records.

[FieldDiff Class](#)

Represents the name of a matching rule field and how the values of the field compare for the duplicate and its matching record.

[FindDuplicates Class](#)

Performs rule-based searches for duplicate records. The input is an array of sObjects. Each sObject represents a record you want to find duplicates of. The output identifies the detected duplicates for each input sObject based on active duplicate rules for the given object.

[FindDuplicatesByIds Class](#)

Performs rule-based searches for duplicate records. The input is an array of IDs. Each ID specifies records to search for duplicates among. The duplicates are detected based on the active duplicate rules applicable to the object type corresponding to the input IDs.

[FindDuplicatesResult Class](#)

Output for rule-based searches for duplicate records. `FindDuplicatesResult` contains results of detecting duplicates using instances of `FindDuplicates` or `FindDuplicatesByIds` classes.

[MatchRecord Class](#)

Represents a duplicate record detected by a matching rule.

[MatchResult Class](#)

Represents the duplicate results for a matching rule.

## AdditionalInformationMap Class

Represents other information, if any, about matched records.

### Namespace

[Datacloud](#)

IN THIS SECTION:

[AdditionalInformationMap Methods](#)

### AdditionalInformationMap Methods

The following are methods for `AdditionalInformationMap`.

IN THIS SECTION:

[getName\(\)](#)

Returns the element name.

[getValue\(\)](#)

Returns the value of the element.

#### **getName ()**

Returns the element name.

### Signature

```
public String getName ()
```

### Return Value

Type: [String](#)

### getValue ()

Returns the value of the element.

### Signature

```
public String getValue ()
```

### Return Value

Type: [String](#)

## DuplicateResult Class

Represents the details of a duplicate rule that detected duplicate records and information about those duplicate records.

## Namespace

[Datacloud](#)

## Usage

The `DuplicateResult` class and its methods are available to organizations that use duplicate rules.

`DuplicateResult` is contained within `DuplicateError`, which is part of `SaveResult`. `SaveResult` is generated when a user attempts to save a record in Salesforce.

## Example

This example shows a custom application that lets users add a contact. When a contact is saved, an alert displays if there are duplicate records.

The sample application consists of a Visualforce page and an Apex controller. The Visualforce page is listed first so that you can see how the page makes use of the Apex controller. Save the Apex class first before saving the Visualforce page.

```
<apex:page controller="ContactDedupeController">
  <apex:form >
    <apex:pageBlock title="Duplicate Records" rendered="{!hasDuplicateResult}">
      <apex:pageMessages />
      <apex:pageBlockTable value="{!duplicateRecords}" var="item">
        <apex:column >
          <apex:facet name="header">Name</apex:facet>
          <apex:outputLink value="/{!item['Id']}">{!item['Name']}</apex:outputLink>
        </apex:column >
      </apex:pageBlockTable >
    </apex:pageBlock >
  </apex:form >
</apex:page >
```

```

        </apex:column>
        <apex:column >
            <apex:facet name="header">Owner</apex:facet>
            <apex:outputField value="{!item['OwnerId']}" />
        </apex:column>
        <apex:column >
            <apex:facet name="header">Last Modified Date</apex:facet>
            <apex:outputField value="{!item['LastModifiedDate']}" />
        </apex:column>
    </apex:pageBlockTable>
</apex:pageBlock>

<apex:pageBlock title="Contact" mode="edit">
    <apex:pageBlockButtons >
        <apex:commandButton value="Save" action="{!save}" />
    </apex:pageBlockButtons>

    <apex:pageBlockSection >
        <apex:inputField value="{!Contact.FirstName}" />
        <apex:inputField value="{!Contact.LastName}" />
        <apex:inputField value="{!Contact.Email}" />
        <apex:inputField value="{!Contact.Phone}" />
        <apex:inputField value="{!Contact.AccountId}" />
    </apex:pageBlockSection>
</apex:pageBlock>
</apex:form>
</apex:page>

```

This sample is the Apex controller for the page. This controller contains the action method for the Save button. The `save` method inserts the new contact. If errors are returned, this method iterates through each error, checks if it's a duplicate error, adds the error message to the page, and returns information about the duplicate records to be displayed on the page.

```

public class ContactDedupeController {

    // Initialize a variable to hold the contact record you're processing
    private final Contact contact;

    // Initialize a list to hold any duplicate records
    private List<sObject> duplicateRecords;

    // Define variable that's true if there are duplicate records
    public boolean hasDuplicateResult{get;set;}

    // Define the constructor
    public ContactDedupeController() {

        // Define the values for the contact you're processing based on its ID
        Id id = ApexPages.currentPage().getParameters().get('id');
        this.contact = (id == null) ? new Contact() :
            [SELECT Id, FirstName, LastName, Email, Phone, AccountId
            FROM Contact WHERE Id = :id];

        // Initialize empty list of potential duplicate records
        this.duplicateRecords = new List<sObject>();
        this.hasDuplicateResult = false;
    }
}

```

```
}

// Return contact and its values to the Visualforce page for display
public Contact getContact() {
    return this.contact;
}

// Return duplicate records to the Visualforce page for display
public List<sObject> getDuplicateRecords() {
    return this.duplicateRecords;
}

// Process the saved record and handle any duplicates
public PageReference save() {

    // Optionally, set DML options here, use "DML" instead of "false"
    // in the insert()
    // Database.DMLOptions dml = new Database.DMLOptions();
    // dml.DuplicateRuleHeader.allowSave = true;
    // dml.DuplicateRuleHeader.runAsCurrentUser = true;
    Database.SaveResult saveResult = Database.insert(contact, false);

    if (!saveResult.isSuccess()) {
        for (Database.Error error : saveResult.getErrors()) {
            // If there are duplicates, an error occurs
            // Process only duplicates and not other errors
            // (e.g., validation errors)
            if (error instanceof Database.DuplicateError) {
                // Handle the duplicate error by first casting it as a
                // DuplicateError class
                // This lets you use methods of that class
                // (e.g., getDuplicateResult())
                Database.DuplicateError duplicateError =
                    (Database.DuplicateError)error;
                Datacloud.DuplicateResult duplicateResult =
                    duplicateError.getDuplicateResult();

                // Display duplicate error message as defined in the duplicate rule
                ApexPages.Message errorMessage = new ApexPages.Message(
                    ApexPages.Severity.ERROR, 'Duplicate Error: ' +
                    duplicateResult.getErrorMessage());
                ApexPages.addMessage(errorMessage);

                // Get duplicate records
                this.duplicateRecords = new List<sObject>();

                // Return only match results of matching rules that
                // find duplicate records
                Datacloud.MatchResult[] matchResults =
                    duplicateResult.getMatchResults();

                // Just grab first match result (which contains the
                // duplicate record found and other match info)
                Datacloud.MatchResult matchResult = matchResults[0];
```

```
        Datacloud.MatchRecord[] matchRecords = matchResult.getMatchRecords();

        // Add matched record to the duplicate records variable
        for (Datacloud.MatchRecord matchRecord : matchRecords) {
            System.debug('MatchRecord: ' + matchRecord.getRecord());
            this.duplicateRecords.add(matchRecord.getRecord());
        }
        this.hasDuplicateResult = !this.duplicateRecords.isEmpty();
    }
}

//If there's a duplicate record, stay on the page
return null;
}

// After save, navigate to the view page:
return (new ApexPages.StandardController(contact)).view();
}
}
```

[DuplicateResult Methods](#)

#### SEE ALSO:

[SaveResult Class](#)

[DuplicateError Class](#)

## DuplicateResult Methods

The following are methods for `DuplicateResult`.

#### IN THIS SECTION:

[getDuplicateRule\(\)](#)

Returns the developer name of the executed duplicate rule that returned duplicate records.

[getErrorMessage\(\)](#)

Returns the error message configured by the administrator to warn users they may be creating duplicate records. This message is associated with a duplicate rule.

[getMatchResults\(\)](#)

Returns the duplicate records and match information.

[isAllowSave\(\)](#)

Indicates whether the duplicate rule will allow a record that's identified as a duplicate to be saved. Set to `true` if duplicate rule should allow save; otherwise, `false`.

**getDuplicateRule()**

Returns the developer name of the executed duplicate rule that returned duplicate records.

**Signature**

```
public String getDuplicateRule()
```

**Return Value**

Type: [String](#)

**getErrorMessage()**

Returns the error message configured by the administrator to warn users they may be creating duplicate records. This message is associated with a duplicate rule.

**Signature**

```
public String getErrorMessage()
```

**Return Value**

Type: [String](#)

**Example**

This example shows the code used to display the error message when duplicates are found while saving a new contact. This code is part of a custom application that lets users add a contact. When a contact is saved, an alert displays if there are duplicate records. Review [DuplicateResult Class](#) on page 2386 to check out the entire sample applicaton.

```
ApexPages.Message errorMessage = new ApexPages.Message(  
    ApexPages.Severity.ERROR, 'Duplicate Error: ' +  
    duplicateResult.getErrorMessage());  
ApexPages.addMessage(errorMessage);
```

**getMatchResults()**

Returns the duplicate records and match information.

**Signature**

```
public List<Datacloud.MatchResult> getMatchResults()
```

**Return Value**

Type: [List<Datacloud.MatchResult>](#)

## Example

This example shows the code used to return duplicate record and match information and assign it to the `matchResults` variable. This code is part of a custom application that implements duplicate management when users add a contact. See [DuplicateResult Class](#) on page 2386 to check out the entire sample applicaton.

```
Datacloud.MatchResult[] matchResults =
    duplicateResult.getMatchResults();
```

## isAllowSave ()

Indicates whether the duplicate rule will allow a record that's identified as a duplicate to be saved. Set to `true` if duplicate rule should allow save; otherwise, `false`.

## Signature

```
public Boolean isAllowSave ()
```

## Return Value

Type: [Boolean](#)

# FieldDiff Class

Represents the name of a matching rule field and how the values of the field compare for the duplicate and its matching record.

## Namespace

[Datacloud](#)

IN THIS SECTION:

[FieldDiff Methods](#)

## FieldDiff Methods

The following are methods for `FieldDiff`.

IN THIS SECTION:

[getDifference\(\)](#)

Returns how the field values compare for the duplicate and its matching record.

[getName\(\)](#)

Returns the name of a field on a matching rule that detected duplicates.

## getDifference ()

Returns how the field values compare for the duplicate and its matching record.

### Signature

```
public String getDifference ()
```

### Return Value

Type: [String](#)

Possible values include:

- **SAME**: Indicates the field values match exactly.
- **DIFFERENT**: Indicates that the field values do not match.
- **NULL**: Indicates that the field values are a match because both values are blank.

### **getName ()**

Returns the name of a field on a matching rule that detected duplicates.

### Signature

```
public String getName ()
```

### Return Value

Type: [String](#)

## FindDuplicates Class

Performs rule-based searches for duplicate records. The input is an array of sObjects. Each sObject represents a record you want to find duplicates of. The output identifies the detected duplicates for each input sObject based on active duplicate rules for the given object.

## Namespace

[Datacloud](#)

IN THIS SECTION:

[FindDuplicates Methods](#)

## FindDuplicates Methods

The following are methods for `FindDuplicates`.

IN THIS SECTION:

[findDuplicates\(sObjects\)](#)

Identifies duplicates for sObjects provided and returns a list of `FindDuplicatesResult` objects.

### **findDuplicates (sObjects)**

Identifies duplicates for sObjects provided and returns a list of `FindDuplicatesResult` objects.

## Usage

Use `FindDuplicates` to apply active duplicate rules associated with an object to records represented by input `sObjects`.

`FindDuplicates` uses the duplicate rules for the object that has the same type as the input `sObjects`.

## Input

- All `sObjects` in the input array must be of the same object type, and that type must correspond to an object type that supports duplicate rules.
- The input array is limited to 50 elements. If you exceed this limit, an exception is thrown with the following message:  
Configuration error: The number of records to check is greater than the permitted batch size.

## Output

- The output of `FindDuplicates` is an array of objects with the same number of elements as the input array, and in the same order. The output objects encapsulate record IDs for duplicate records. The output objects also contain values from the duplicate records.
- Each element contains an array of `DuplicateResult` objects. If `FindDuplicates` doesn't find any duplicates, the `duplicateRule` field in `DuplicateResult` contains the name of the duplicate rule that `FindDuplicates` applied, but the `matchResults` array is empty.

## Example

```
Account acct = new Account();
acct.Name = 'Acme';
acct.BillingStreet = '123 Fake St';
acct.BillingCity = 'Springfield';
acct.BillingState = 'VT';
acct.BillingCountry = 'US';

List<Account> acctList = new List<Account>();
acctList.add(acct);

if (Datacloud.FindDuplicates.findDuplicates(acctList).size() == 0) {
// If the new account doesn't have duplicates, insert it.
    insert(acct);
}
```

## Signature

```
public static List<Datacloud.FindDuplicatesResult> findDuplicates(List<SObject> sObjects)
```

## Parameters

*sObjects*

Type: `List<SObject>`

An array of `sObjects` for which you want to find duplicates.

## Return Value

Type: `List<FindDuplicatesResult>`

## FindDuplicatesByIds Class

Performs rule-based searches for duplicate records. The input is an array of IDs. Each ID specifies records to search for duplicates among. The duplicates are detected based on the active duplicate rules applicable to the object type corresponding to the input IDs.

### Namespace

[Datacloud](#)

IN THIS SECTION:

[FindDuplicatesByIds Methods](#)

### FindDuplicatesByIds Methods

The following are methods for `FindDuplicatesByIds`.

IN THIS SECTION:

[findDuplicatesByIds\(ids\)](#)

Identifies duplicates of sObjects provided and returns a list of `FindDuplicatesResult` objects.

#### **findDuplicatesByIds (ids)**

Identifies duplicates of sObjects provided and returns a list of `FindDuplicatesResult` objects.

### Usage

Use `FindDuplicatesByIds` to apply active duplicate rules associated with an object to records represented by the record IDs.

`FindDuplicatesByIds` uses the duplicate rules for the object that has the same type as the input record IDs. For example, if the record ID represents an Account, `FindDuplicatesByIds` uses the duplicate rules associated with the Account object.

#### Input

- All record IDs in the input array must be of the same object type, and that type must correspond to an object type that supports duplicate rules.
- The input array is limited to 50 elements. If you exceed this limit, an exception is thrown with the following message:  
`Configuration error: The number of records to check is greater than the permitted batch size.`

#### Output

- The output of `FindDuplicatesByIds` is an array of objects with the same number of elements as the input array, and in the same order. The output objects encapsulate record IDs for duplicate records. The output objects also contain values from the duplicate records.
- Each element contains an array of `DuplicateResult` objects. If `FindDuplicatesByIds` doesn't find any duplicates, the `duplicateRule` field in `DuplicateResult` contains the name of the duplicate rule that `FindDuplicatesByIds` applied, but the `matchResults` array is empty.

## Example

```
Account acct = new Account(name='Salesforce');
insert acct;

List<Id> idList = new List<Id>();
idList.add(acct.id);

if (Datacloud.FindDuplicatesByIds.findDuplicatesByIds(idList).size() > 0) {
    System.debug('Found duplicates');
}
```

## Signature

```
public static List<Datacloud.FindDuplicatesResult> findDuplicatesByIds(List<Id> ids)
```

## Parameters

*ids*

Type: [List<Id>](#)

A list of IDs for which you want to find duplicates.

## Return Value

Type: [List<FindDuplicatesResult>](#)

# FindDuplicatesResult Class

Output for rule-based searches for duplicate records. `FindDuplicatesResult` contains results of detecting duplicates using instances of `FindDuplicates` or `FindDuplicatesByIds` classes.

## Namespace

[Datacloud](#)

### IN THIS SECTION:

[FindDuplicatesResult Properties](#)

[FindDuplicatesResult Methods](#)

## FindDuplicatesResult Properties

The following are properties for `FindDuplicatesResult`.

### IN THIS SECTION:

[duplicateresults](#)

A list of `DuplicateResult` objects representing the results of calling `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)`. Elements in the list correspond to `sObjects` or IDs in the input list.

**errors**

A list of `Database.Error` objects holding errors resulting from calling `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)`.

**success**

Boolean signifying whether the call to `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)` was successful.

**duplicateresults**

A list of `DuplicateResult` objects representing the results of calling `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)`. Elements in the list correspond to `sObjects` or IDs in the input list.

**Signature**

```
public List<Datacloud.DuplicateResult> duplicateresults
```

**Property Value**

Type: [List<DuplicateResult>](#)

**errors**

A list of `Database.Error` objects holding errors resulting from calling `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)`.

**Signature**

```
public List<Database.Error> errors {get; set;}
```

**Property Value**

Type: [List<Database.Error>](#)

**success**

Boolean signifying whether the call to `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)` was successful.

**Signature**

```
public Boolean success {get; set;}
```

**Property Value**

Type: [Boolean](#)

**FindDuplicatesResult Methods**

The following are methods for `FindDuplicatesResult`.

## IN THIS SECTION:

[getDuplicateResults\(\)](#)

Returns a list of `DuplicateResult` objects representing the results of calling `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)`. Elements in the list correspond to `sObjects` or IDs in the input list.

[getErrors\(\)](#)

Returns a list of `DatabaseError` objects containing errors resulting from calling `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)`, if errors were encountered.

[isSuccess\(\)](#)

Returns a Boolean signifying whether the call to `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)` was successful.

**getDuplicateResults()**

Returns a list of `DuplicateResult` objects representing the results of calling `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)`. Elements in the list correspond to `sObjects` or IDs in the input list.

**Example**

```
Account acct = new Account(name='Salesforce');
List<Account> acctList = new List<Account>();
acctList.add(acct);

Datacloud.FindDuplicatesResult[] results = Datacloud.FindDuplicates.findDuplicates(acctList);
for (Datacloud.FindDuplicatesResult findDupeResult : results) {
    for (Datacloud.DuplicateResult dupeResult : findDupeResult.getDuplicateResults()) {
        for (Datacloud.MatchResult matchResult : dupeResult.getMatchResults()) {
            for (Datacloud.MatchRecord matchRecord : matchResult.getMatchRecords()) {
                System.debug('Duplicate Record: ' + matchRecord.getRecord());
            }
        }
    }
}
```

**Signature**

```
public List<Datacloud.DuplicateResult> getDuplicateResults()
```

**Return Value**

Type: [List<DuplicateResult>](#)

**getErrors()**

Returns a list of `DatabaseError` objects containing errors resulting from calling `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)`, if errors were encountered.

### Signature

```
public List<Database.Error> getErrors()
```

### Return Value

Type: [List<Database.Error>](#)

### **isSuccess ()**

Returns a Boolean signifying whether the call to `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)` was successful.

### Signature

```
public Boolean isSuccess()
```

### Return Value

Type: [Boolean](#)

## MatchRecord Class

Represents a duplicate record detected by a matching rule.

## Namespace

[Datacloud](#)

### IN THIS SECTION:

[MatchRecord Methods](#)

## MatchRecord Methods

The following are methods for `MatchRecord`.

### IN THIS SECTION:

[getAdditionalInformation\(\)](#)

Returns other information about a matched record. For example, a `matchGrade` represents the quality of the data for the D&B fields in the matched record.

[getFieldDiffs\(\)](#)

Returns all matching rule fields and how each field value compares for the duplicate and its matching record.

[getMatchConfidence\(\)](#)

Returns the ranking of how similar a matched record's data is to the data in your request. Must be equal to or greater than the value of the `minMatchConfidence` specified in your request. Returns -1 if unused.

[getRecord\(\)](#)

Returns the fields and field values for the duplicate.

**getAdditionalInformation()**

Returns other information about a matched record. For example, a `matchGrade` represents the quality of the data for the D&B fields in the matched record.

**Signature**

```
public List<Datacloud.AdditionalInformationMap> getAdditionalInformation()
```

**Return Value**

Type: [List<Datacloud.AdditionalInformationMap>](#)

**getFieldDiffs()**

Returns all matching rule fields and how each field value compares for the duplicate and its matching record.

**Signature**

```
public List<Datacloud.FieldDiff> getFieldDiffs()
```

**Return Value**

Type: [List<Datacloud.FieldDiff>](#)

**getMatchConfidence()**

Returns the ranking of how similar a matched record's data is to the data in your request. Must be equal to or greater than the value of the `minMatchConfidence` specified in your request. Returns -1 if unused.

**Signature**

```
public Double getMatchConfidence()
```

**Return Value**

Type: [Double](#)

**getRecord()**

Returns the fields and field values for the duplicate.

**Signature**

```
public SObject getRecord()
```

**Return Value**

Type: [SObject](#)

# MatchResult Class

Represents the duplicate results for a matching rule.

## Namespace

[Datacloud](#)

IN THIS SECTION:

[MatchResult Methods](#)

## MatchResult Methods

The following are methods for `MatchResult`.

IN THIS SECTION:

[getEntityType\(\)](#)

Returns the entity type of the matching rule.

[getErrors\(\)](#)

Returns errors that occurred during matching for the matching rule.

[getMatchEngine\(\)](#)

Returns the match engine for the matching rule.

[getMatchRecords\(\)](#)

Returns information about the duplicates for the matching rule.

[getRule\(\)](#)

Returns the developer name of the matching rule.

[getSize\(\)](#)

Returns the number of duplicates detected by the matching rule.

[isSuccess\(\)](#)

Returns `false` if there's an error with the matching rule, and `true` if the matching rule successfully ran.

### **getEntityType()**

Returns the entity type of the matching rule.

### Signature

```
public String getEntityType()
```

### Return Value

Type: [String](#)

**getErrors ()**

Returns errors that occurred during matching for the matching rule.

**Signature**

```
public List<Database.Error> getErrors ()
```

**Return Value**

Type: List<Database.Error>

**getMatchEngine ()**

Returns the match engine for the matching rule.

**Signature**

```
public String getMatchEngine ()
```

**Return Value**

Type: String

**getMatchRecords ()**

Returns information about the duplicates for the matching rule.

**Signature**

```
public List<Datacloud.MatchRecord> getMatchRecords ()
```

**Return Value**

Type: List<Datacloud.MatchRecord>

**getRule ()**

Returns the developer name of the matching rule.

**Signature**

```
public String getRule ()
```

**Return Value**

Type: String

**getSize ()**

Returns the number of duplicates detected by the matching rule.

### Signature

```
public Integer getSize ()
```

### Return Value

Type: [Integer](#)

### isSuccess ()

Returns `false` if there's an error with the matching rule, and `true` if the matching rule successfully ran.

### Signature

```
public Boolean isSuccess ()
```

### Return Value

Type: [Boolean](#)

## DataRetrieval Namespace

---

The `DataRetrieval` namespace provides classes and methods to record details of customer-agent engagements, as well as transcripts of their conversations.

The following are the classes in the `DataRetrieval` namespace.

[Engagement Class](#)

[Engagements Class](#)

[EngagementRecordDetails Class](#)

[EngagementRecordDetailsList Class](#)

[FieldDetailsRepresentation Class](#)

[ObjectDetailsRepresentation Class](#)

[RecordDetailsRepresentation Class](#)

[RecordTranscripts Class](#)

[RecordTranscriptsList Class](#)

[Transcript Class](#)

## DataSource Namespace

---

The `DataSource` namespace provides the classes for the Apex Connector Framework. Use the Apex Connector Framework to develop a custom adapter for Salesforce Connect. Then connect your Salesforce organization to any data anywhere via the Salesforce Connect custom adapter.

The following are the classes in the `DataSource` namespace.

## IN THIS SECTION:

[AsyncDeleteCallback Class](#)

A callback class that the `Database.deleteAsync` method references. Salesforce calls this class after the remote `deleteAsync` operation is completed. This class provides the compensating transaction in the completion context of the delete operation. Extend this class to define the actions to execute after the remote delete operation finishes execution.

[AsyncSaveCallback Class](#)

A callback class that the `Database.insertAsync` or `Database.updateAsync` method references. Salesforce calls this class after the remote operation is completed. This class provides the compensating transaction in the completion context of the insert or update operation. Extend this class to define the actions to execute after the remote insert or update operation finishes execution.

[AuthenticationCapability Enum](#)

Specifies the types of authentication that can be used to access the external system.

[AuthenticationProtocol Enum](#)

Determines what type of credentials are used to authenticate to the external system.

[Capability Enum](#)

Declares which functional operations the external system supports. Also specifies required endpoint settings for the external data source definition.

[Column Class](#)

Describes a column on a `DataSource.Table`. This class extends the `DataSourceUtil` class and inherits its methods.

[ColumnSelection Class](#)

Identifies the list of columns to return during a query or search.

[Connection Class](#)

Extend this class to enable your Salesforce org to sync the external system's schema and to handle queries, searches, and write operations (upsert and delete) of the external data. This class extends the `DataSourceUtil` class and inherits its methods.

[ConnectionParams Class](#)

Contains the credentials for authenticating to the external system.

[DataSourceUtil Class](#)

Parent class for the `DataSource.Provider`, `DataSource.Connection`, `DataSource.Table`, and `DataSource.Column` classes.

[DataType Enum](#)

Specifies the data types that are supported by the Apex Connector Framework.

[DeleteContext Class](#)

An instance of `DeleteContext` is passed to the `deleteRows()` method on your `Database.Connection` class. The class provides context information about the delete request to the implementor of `deleteRows()`.

[DeleteResult Class](#)

Represents the result of a delete operation on an sObject record. The result is returned by the `DataSource.deleteRows` method of the `DataSource.Connection` class.

[Filter Class](#)

Represents a `WHERE` clause in a SOSL or SOQL query.

[FilterType Enum](#)

Referenced by the `type` property on a `DataSource.Filter`.

### [IdentityType Enum](#)

Determines which set of credentials is used to authenticate to the external system.

### [Order Class](#)

Contains details about how to sort the rows in the result set. Equivalent to an `ORDER BY` statement in a SOQL query.

### [OrderDirection Enum](#)

Specifies the direction for sorting rows based on column values.

### [Provider Class](#)

Extend this base class to create a custom adapter for Salesforce Connect. The class informs Salesforce of the functional and authentication capabilities that are supported by or required to connect to the external system. This class extends the `DataSourceUtil` class and inherits its methods.

### [QueryAggregation Enum](#)

Specifies how to aggregate a column in a query.

### [QueryContext Class](#)

An instance of `QueryContext` is provided to the `query` method on your `DataSource.Connection` class. The instance corresponds to a SOQL request.

### [QueryUtils Class](#)

Contains helper methods to locally filter, sort, and apply limit and offset clauses to data rows. This helper class is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

### [ReadContext Class](#)

Abstract base class for the `QueryContext` and `SearchContext` classes.

### [SearchContext Class](#)

An instance of `SearchContext` is provided to the `search` method on your `DataSource.Connection` class. The instance corresponds to a search or SOSL request.

### [SearchUtils Class](#)

Helper class for implementing search on a custom adapter for Salesforce Connect.

### [Table Class](#)

Describes a table on an external system that the Salesforce Connect custom adapter connects to. This class extends the `DataSourceUtil` class and inherits its methods.

### [TableResult Class](#)

Contains the results of a search or query.

### [TableSelection Class](#)

Contains a breakdown of the SOQL or SOSL query. Its properties represent the FROM, ORDER BY, SELECT, and WHERE clauses in the query.

### [UpsertContext Class](#)

An instance of `UpsertContext` is passed to the `upsertRows()` method on your `DataSource.Connection` class. This class provides context information about the upsert request to the implementor of `upsertRows()`.

### [UpsertResult Class](#)

Represents the result of an upsert operation on an external object record. The result is returned by the `upsertRows` method of the `DataSource.Connection` class.

### [DataSource Exceptions](#)

The `DataSource` namespace contains exception classes.

## AsyncDeleteCallback Class

A callback class that the `Database.deleteAsync` method references. Salesforce calls this class after the remote `deleteAsync` operation is completed. This class provides the compensating transaction in the completion context of the delete operation. Extend this class to define the actions to execute after the remote delete operation finishes execution.

### Namespace

[DataSource](#)

IN THIS SECTION:

[AsyncDeleteCallback Methods](#)

### AsyncDeleteCallback Methods

The following are methods for `AsyncDeleteCallback`.

IN THIS SECTION:

[processDelete\(deleteResult\)](#)

Override this method to define actions that Salesforce executes after a remote `Database.deleteAsync` operation is completed. For example, based on the results of the remote operation, you can update custom object data or other data that's stored in the Salesforce org..

#### **processDelete(deleteResult)**

Override this method to define actions that Salesforce executes after a remote `Database.deleteAsync` operation is completed. For example, based on the results of the remote operation, you can update custom object data or other data that's stored in the Salesforce org..

### Signature

```
public void processDelete(Database.DeleteResult deleteResult)
```

### Parameters

*deleteResult*

Type: [Database.DeleteResult](#)

The result of the asynchronous delete operation.

### Return Value

Type: void

## AsyncSaveCallback Class

A callback class that the `Database.insertAsync` or `Database.updateAsync` method references. Salesforce calls this class after the remote operation is completed. This class provides the compensating transaction in the completion context of the insert or update operation. Extend this class to define the actions to execute after the remote insert or update operation finishes execution.

### Namespace

[DataSource](#)

IN THIS SECTION:

[AsyncSaveCallback Methods](#)

### AsyncSaveCallback Methods

The following are methods for `AsyncSaveCallback`.

IN THIS SECTION:

[processSave\(saveResult\)](#)

Override this method to define actions that Salesforce executes after the remote `Database.insertAsync` or `Database.updateAsync` operation is completed. For example, based on the results of the remote operation, you can update custom object data or other data that's stored in the Salesforce org.

#### **processSave (saveResult)**

Override this method to define actions that Salesforce executes after the remote `Database.insertAsync` or `Database.updateAsync` operation is completed. For example, based on the results of the remote operation, you can update custom object data or other data that's stored in the Salesforce org.

### Signature

```
public void processSave(Database.SaveResult saveResult)
```

### Parameters

*saveResult*

Type: [Database.SaveResult](#)

The result of the asynchronous insert or update operation.

### Return Value

Type: void

## AuthenticationCapability Enum

Specifies the types of authentication that can be used to access the external system.

## Usage

The `DataSource.Provider` class returns `DataSource.AuthenticationCapability` enum values. The returned values determine which authentication settings are available on the external data source definition in Salesforce.

If you set up callouts in your `DataSource.Connection` class, you can specify the callout endpoints as named credentials instead of URLs. If you do so for all callouts, return `ANONYMOUS` as the sole entry in the list of data source authentication capabilities. That way, the external data source definition doesn't require authentication settings. Salesforce manages all authentication for Apex callouts that specify a named credential as the callout endpoint so that your code doesn't have to.

## Enum Values

The following are the values of the `DataSource.AuthenticationCapability` enum.

Value	Description
<code>ANONYMOUS</code>	No credentials are required to authenticate to the external system.
<code>BASIC</code>	A username and password can be used to authenticate to the external system.
<code>CERTIFICATE</code>	A security certificate can be supplied when establishing each connection to the external system.
<code>OAUTH</code>	OAuth can be used to authenticate to the external system.

## AuthenticationProtocol Enum

Determines what type of credentials are used to authenticate to the external system.

## Enum Values

The following are the values of the `DataSource.AuthenticationProtocol` enum.

Value	Description
<code>NONE</code>	No credentials are used to authenticate to the external system.
<code>OAUTH</code>	OAuth 2.0 is used to authenticate to the external system.
<code>PASSWORD</code>	A username and password are used to authenticate to the external system.

## Capability Enum

Declares which functional operations the external system supports. Also specifies required endpoint settings for the external data source definition.

## Usage

The `DataSource.Provider` class returns `DataSource.Capability` enum values, which:

- Specify the functional capabilities of the external system.

- Determine which endpoint settings are available on the external data source definition in Salesforce.

## Enum Values

The following are the values of the `DataSource.Capability` enum.

Value	Description
<code>MULTI_PICKLIST</code>	The external system supports multi-picklist fields.
<code>PICKLIST</code>	The external system supports picklist fields.
<code>QUERY_PAGINATION_SERVER_DRIVEN</code>	<p>With server-driven paging, the external system determines the page sizes and batch boundaries. The external system's paging settings can optimize the external system's performance and improve the load times for external objects in your org. Also, the external data set can change while your users or the Lightning Platform are paging through the result set. Typically, server-driven paging adjusts batch boundaries to accommodate changing data sets more effectively than client-driven paging.</p> <p>If you enable server-driven paging on an external data source, Salesforce ignores the requested page sizes, including the default <code>queryMore()</code> batch size of 500 rows. The pages returned by the external system determine the batches, but each page can't exceed 2,000 rows. Also, the Apex code must generate a query token and use it to determine and fetch the next batch of results.</p>
<code>QUERY_TOTAL_SIZE</code>	The external system can provide the total number of rows that meet the query criteria, even when requested to return a smaller batch size. This capability enables you to simplify how you paginate results by using <code>queryMore()</code> .
<code>REQUIRE_ENDPOINT</code>	Requires the administrator to specify the endpoint in the URL field in the external data source definition.
<code>REQUIRE_HTTPS</code>	Requires the endpoint URL to use secure HTTP. If <code>REQUIRE_ENDPOINT</code> isn't declared, <code>REQUIRE_HTTPS</code> is ignored.
<code>ROW_CREATE</code>	Allows creating of external data.
<code>ROW_DELETE</code>	Allows deleting external data.
<code>ROW_QUERY</code>	Allows API and SOQL queries of the external data. Also allows reports on the external objects.
<code>ROW_UPDATE</code>	Allows updating external data.
<code>SEARCH</code>	<p>Allows SOSL and Salesforce searches of the external data.</p> <p>When the custom adapter declares the <code>SEARCH</code> capability, you can control which external objects are searchable by selecting or deselecting <b>Allow Search</b> on each external object. However, syncing always overwrites the external object's search status to match the search status of the external data source.</p>

Value	Description
	Only text, text area, and long text area fields on external objects can be searched. If an external object has no searchable fields, searches on that object return no records.

## Column Class

Describes a column on a `DataSource.Table`. This class extends the `DataSourceUtil` class and inherits its methods.

### Namespace

[DataSource](#)

### Usage

A list of column metadata is provided by the `DataSource.Connection` class when the `sync()` method is invoked. Each column can become a field on an external object.

The metadata is stored in Salesforce. Updating the Apex code to return new or updated values for the column metadata doesn't automatically update the stored metadata in Salesforce.

IN THIS SECTION:

[Column Properties](#)

[Column Methods](#)

### Column Properties

The following are properties for `Column`.

IN THIS SECTION:

[decimalPlaces](#)

If the data type is numeric, the number of decimal places to the right of the decimal point.

[description](#)

Description of what the column represents.

[filterable](#)

Whether a result set can be filtered based on the values of the column.

[isPicklistAlphabeticallySorted](#)

Returns `true` if the picklist is sorted alphabetically, `false` otherwise.

[isPicklistRestricted](#)

Returns `true` if the picklist is restricted, `false` otherwise.

**label**

User-friendly name for the column that appears in the Salesforce user interface.

**length**

If the column is a string data type, the number of characters in the column. If the column is a numeric data type, the total number of digits on both sides of the decimal point, but excluding the decimal point.

**name**

Name of the column in the external system.

**picklistValues**

If the data type is a picklist, the picklist values.

**referenceTargetField**

API name of the custom field on the parent object whose values are compared against this column's values. Matching values identify related records in an indirect lookup relationship. Applies only when the column's data type is `INDIRECT_LOOKUP_TYPE`. For other data types, this value is ignored.

**referenceTo**

API name of the parent object in the relationship that's represented by this column. Applies only when the column's data type is `LOOKUP_TYPE`, `EXTERNAL_LOOKUP_TYPE`, or `INDIRECT_LOOKUP_TYPE`. For other data types, this value is ignored.

**sortable**

Whether a result set can be sorted based on the values of the column via an `ORDER BY` clause.

**type**

Data type of the column.

**decimalPlaces**

If the data type is numeric, the number of decimal places to the right of the decimal point.

**Signature**

```
public Integer decimalPlaces {get; set;}
```

**Property Value**

Type: [Integer](#)

**description**

Description of what the column represents.

**Signature**

```
public String description {get; set;}
```

**Property Value**

Type: [String](#)

**filterable**

Whether a result set can be filtered based on the values of the column.

**Signature**

```
public Boolean filterable {get; set;}
```

**Property Value**

Type: [Boolean](#)

**isPicklistAlphabeticallySorted**

Returns `true` if the picklist is sorted alphabetically, `false` otherwise.

**Signature**

```
public Boolean isPicklistAlphabeticallySorted {get; set;}
```

**Property Value**

Type: [Boolean](#)

**isPicklistRestricted**

Returns `true` if the picklist is restricted, `false` otherwise.

**Signature**

```
public Boolean isPicklistRestricted {get; set;}
```

**Property Value**

Type: [Boolean](#)

**label**

User-friendly name for the column that appears in the Salesforce user interface.

**Signature**

```
public String label {get; set;}
```

**Property Value**

Type: [String](#)

**length**

If the column is a string data type, the number of characters in the column. If the column is a numeric data type, the total number of digits on both sides of the decimal point, but excluding the decimal point.

**Signature**

```
public Integer length {get; set;}
```

**Property Value**

Type: [Integer](#)

**name**

Name of the column in the external system.

**Signature**

```
public String name {get; set;}
```

**Property Value**

Type: [String](#)

**picklistValues**

If the data type is a picklist, the picklist values.

**Signature**

```
public List<Map<String,String>> picklistValues {get; set;}
```

**Property Value**

Type: [List<Map<String,String>>](#)

**referenceTargetField**

API name of the custom field on the parent object whose values are compared against this column's values. Matching values identify related records in an indirect lookup relationship. Applies only when the column's data type is `INDIRECT_LOOKUP_TYPE`. For other data types, this value is ignored.

**Signature**

```
public String referenceTargetField {get; set;}
```

**Property Value**

Type: [String](#)

**referenceTo**

API name of the parent object in the relationship that's represented by this column. Applies only when the column's data type is `LOOKUP_TYPE`, `EXTERNAL_LOOKUP_TYPE`, or `INDIRECT_LOOKUP_TYPE`. For other data types, this value is ignored.

**Signature**

```
public String referenceTo {get; set;}
```

**Property Value**

Type: [String](#)

**sortable**

Whether a result set can be sorted based on the values of the column via an `ORDER BY` clause.

**Signature**

```
public Boolean sortable {get; set;}
```

**Property Value**

Type: [Boolean](#)

**type**

Data type of the column.

**Signature**

```
public DataSource.DataType type {get; set;}
```

**Property Value**

Type: [DataSource.DataType](#)

**Column Methods**

The following are methods for `Column`.

**IN THIS SECTION:**[boolean\(name\)](#)

Returns a new column of data type `BOOLEAN_TYPE`.

[currency\(name, length, decimalPlaces\)](#)

Returns a new column of data type `CURRENCY_TYPE`.

[date\(name\)](#)

Returns a new column of data type `DATE_TYPE`.

[datetime\(name\)](#)

Returns a new column of data type `DATETIME_TYPE`.

[email\(name\)](#)

Returns a new column of data type `EMAIL_TYPE`.

[externalLookup\(name, domain\)](#)

Returns a new column of data type `EXTERNAL_LOOKUP_TYPE`.

[get\(name, label, description, isSortable, isFilterable, type, length, decimalPlaces, referenceTo, referenceTargetField, picklistValuesObj, isPicklistAlphabeticallySorted, isPicklistRestricted\)](#)

Returns a new column with the 13 specified `Column` property values.

[get\(name, label, description, isSortable, isFilterable, type, length, decimalPlaces, referenceTo, referenceTargetField\)](#)

Returns a new column with the ten specified `Column` property values.

[get\(name, label, description, isSortable, isFilterable, type, length, decimalPlaces\)](#)

Returns a new column with the eight specified `Column` property values.

[get\(name, label, description, isSortable, isFilterable, type, length\)](#)

Returns a new column with the seven specified `Column` property values.

[indirectLookup\(name, domain, targetField\)](#)

Returns a new column of data type `INDIRECT_LOOKUP_TYPE`.

[integer\(name, length\)](#)

Returns a new numeric column with no decimal places using the specified name and length.

[lookup\(name, domain\)](#)

Returns a new column of data type `LOOKUP_TYPE`.

[multipicklist\(name, picklistValues, isPicklistAlphabeticallySorted, isPicklistRestricted\)](#)

Returns a new column of data type `PICKLIST_MULTISELECT_TYPE` with the specified name and picklist values. You can also specify whether the picklist is sorted alphabetically or if the picklist is restricted.

[multipicklist\(name, picklistValues\)](#)

Returns a new column of data type `PICKLIST_MULTISELECT_TYPE` with the specified name and picklist values.

[number\(name, length, decimalPlaces\)](#)

Returns a new column of data type `NUMBER_TYPE`.

[percent\(name, length, decimalPlaces\)](#)

Returns a new column of data type `PERCENT_TYPE`.

[phone\(name\)](#)

Returns a new column of data type `PHONE_TYPE`.

[picklist\(name, picklistValues, isPicklistAlphabeticallySorted, isPicklistRestricted\)](#)

Returns a new column of data type `PICKLIST_TYPE` with the specified name and picklist values. You can also specify whether the picklist is sorted alphabetically or if the picklist is restricted.

[picklist\(name, picklistValues\)](#)

Returns a new column of data type `PICKLIST_TYPE` with the specified name and picklist values.

[text\(name, label, length\)](#)

Returns a new column of data type `STRING_SHORT_TYPE` or `STRING_LONG_TYPE`, with the specified name, label, and length.

[text\(name, length\)](#)

Returns a new column of data type `STRING_SHORT_TYPE` or `STRING_LONG_TYPE`, with the specified name and length.

[text\(name\)](#)

Returns a new column of data type `STRING_SHORT_TYPE` with the specified name and the length of 255 characters.

[textarea\(name\)](#)

Returns a new column of data type `STRING_LONG_TYPE` with the specified name and the length of 32,000 characters.

[time\(name\)](#)

Returns a new column of data type `Time` with the specified name.

[url\(name, length\)](#)

Returns a new column of data type `URL_TYPE` with the specified name and length.

[url\(name\)](#)

Returns a new column of data type `URL_TYPE` with the specified name and the length of 1,000 characters.

**boolean (name)**

Returns a new column of data type `BOOLEAN_TYPE`.

**Signature**

```
public static DataSource.Column boolean(String name)
```

**Parameters**

*name*

Type: [String](#)

Name of the column.

**Return Value**

Type: [DataSource.Column](#)

**currency (name, length, decimalPlaces)**

Returns a new column of data type `CURRENCY_TYPE`.

**Signature**

```
public static DataSource.Column currency(String name, Integer length, Integer decimalPlaces)
```

**Parameters**

*name*

Type: [String](#)

Name of the column.

*length*

Type: [Integer](#)

Number of characters allowed in the column.

*decimalPlaces*

Type: [Integer](#)

Number of decimal places to the right of the decimal point.

## Return Value

Type: [DataSource.Column](#)

## **date (name)**

Returns a new column of data type `DATE_TYPE`.

## Signature

```
public static DataSource.Column date(String name)
```

## Parameters

*name*

Type: [String](#)

Name of the column.

## Return Value

Type: [DataSource.Column](#)

## **datetime (name)**

Returns a new column of data type `DATETIME_TYPE`.

## Signature

```
public static DataSource.Column datetime(String name)
```

## Parameters

*name*

Type: [String](#)

Name of the column.

## Return Value

Type: [DataSource.Column](#)

## **email (name)**

Returns a new column of data type `EMAIL_TYPE`.

## Signature

```
public static DataSource.Column email(String name)
```

## Parameters

*name*

Type: [String](#)

Name of the column.

## Return Value

Type: [DataSource.Column](#)

## **externalLookup(name, domain)**

Returns a new column of data type `EXTERNAL_LOOKUP_TYPE`.

## Signature

```
public static DataSource.Column externalLookup(String name, String domain)
```

## Parameters

*name*

Type: [String](#)

Name of the column.

*domain*

Type: [String](#)

API name of the parent object in the external lookup relationship.

## Return Value

Type: [DataSource.Column](#)

The returned column has these property values.

Property	Value
name	<i>name</i>
label	<i>name</i>
description	<i>name</i>
isSortable	true
isFilterable	true
type	DataSource.DataType.EXTERNAL_LOOKUP_TYPE
length	255

Property	Value
<code>decimalPlaces</code>	0
<code>referenceTo</code>	<i>domain</i>
<code>referenceTargetField</code>	null

**`get(name, label, description, isSortable, isFilterable, type, length, decimalPlaces, referenceTo, referenceTargetField, picklistValuesObj, isPicklistAlphabeticallySorted, isPicklistRestricted)`**

Returns a new column with the 13 specified `Column` property values.

### Signature

```
public static DataSource.Column get(String name, String label, String description,
Boolean isSortable, Boolean isFilterable, DataSource.DataType type, Integer length,
Integer decimalPlaces, String referenceTo, String referenceTargetField, Object
picklistValuesObj, Boolean isPicklistAlphabeticallySorted, Boolean isPicklistRestricted)
```

### Parameters

See [Column Properties](#) on page 2409 for information about each parameter.

*name*

Type: [String](#)

*label*

Type: [String](#)

*description*

Type: [String](#)

*isSortable*

Type: [Boolean](#)

*isFilterable*

Type: [Boolean](#)

*type*

Type: [DataSource.DataType](#)

*length*

Type: [Integer](#)

*decimalPlaces*

Type: [Integer](#)

*referenceTo*

Type: [String](#)

*referenceTargetField*

Type: [String](#)

*picklistValuesObj*

Type: [Object](#)

*isPicklistAlphabeticallySorted*

Type: [Boolean](#)

*isPicklistRestricted*

Type: [Boolean](#)

## Return Value

Type: [DataSource.Column](#)

**get(name, label, description, isSortable, isFilterable, type, length, decimalPlaces, referenceTo, referenceTargetField)**

Returns a new column with the ten specified `Column` property values.

## Signature

```
public static DataSource.Column get(String name, String label, String description,
Boolean isSortable, Boolean isFilterable, DataSource.DataType type, Integer length,
Integer decimalPlaces, String referenceTo, String referenceTargetField)
```

## Parameters

See [Column Properties](#) on page 2409 for information about each parameter.

*name*

Type: [String](#)

*label*

Type: [String](#)

*description*

Type: [String](#)

*isSortable*

Type: [Boolean](#)

*isFilterable*

Type: [Boolean](#)

*type*

Type: [DataSource.DataType](#)

*length*

Type: [Integer](#)

*decimalPlaces*

Type: [Integer](#)

*referenceTo*

Type: [String](#)

*referenceTargetField*

Type: [String](#)

## Return Value

Type: [DataSource.Column](#)

**get(name, label, description, isSortable, isFilterable, type, length, decimalPlaces)**

Returns a new column with the eight specified `Column` property values.

## Signature

```
public static DataSource.Column get(String name, String label, String description,
Boolean isSortable, Boolean isFilterable, DataSource.DataType type, Integer length,
Integer decimalPlaces)
```

## Parameters

See [Column Properties](#) on page 2409 for information about each parameter.

*name*

Type: [String](#)

*label*

Type: [String](#)

*description*

Type: [String](#)

*isSortable*

Type: [Boolean](#)

*isFilterable*

Type: [Boolean](#)

*type*

Type: [DataSource.DataType](#)

*length*

Type: [Integer](#)

*decimalPlaces*

Type: [Integer](#)

## Return Value

Type: [DataSource.Column](#)

**get(name, label, description, isSortable, isFilterable, type, length)**

Returns a new column with the seven specified `Column` property values.

## Signature

```
public static DataSource.Column get(String name, String label, String description,
Boolean isSortable, Boolean isFilterable, DataSource.DataType type, Integer length)
```

## Parameters

See [Column Properties](#) on page 2409 for information about each parameter.

*name*

Type: [String](#)

*label*

Type: [String](#)

*description*

Type: [String](#)

*isSortable*

Type: [Boolean](#)

*isFilterable*

Type: [Boolean](#)

*type*

Type: [DataSource.DataType](#)

*length*

Type: [Integer](#)

## Return Value

Type: [DataSource.Column](#)

### **indirectLookup(name, domain, targetField)**

Returns a new column of data type `INDIRECT_LOOKUP_TYPE`.

## Signature

```
public static DataSource.Column indirectLookup(String name, String domain, String targetField)
```

## Parameters

*name*

Type: [String](#)

Name of the column.

*domain*

Type: [String](#)

API name of the parent object in the indirect lookup relationship.

*targetField*

Type: [String](#)

API name of the custom field on the parent object whose values are compared against this column's values. Matching values identify related records in an indirect lookup relationship.

## Return Value

Type: [DataSource.Column](#)

The returned column has these property values.

Property	Value
name	<i>name</i>
label	<i>name</i>
description	<i>name</i>
isSortable	true
isFilterable	true
type	DataSource.DataType.INDIRECT_LOOKUP_TYPE
length	255
decimalPlaces	0
referenceTo	<i>domain</i>
referenceTargetField	<i>targetField</i>

## **integer (name, length)**

Returns a new numeric column with no decimal places using the specified name and length.

## Signature

```
public static DataSource.Column integer(String name, Integer length)
```

## Parameters

*name*

Type: [String](#)

The column name.

*length*

Type: [Integer](#)

The column length.

## Return Value

Type: [DataSource.Column](#)

## **lookup (name, domain)**

Returns a new column of data type LOOKUP\_TYPE.

## Signature

```
public static DataSource.Column lookup(String name, String domain)
```

## Parameters

*name*

Type: [String](#)

Name of the column.

*domain*

Type: [String](#)

API name of the parent object in the lookup relationship.

## Return Value

Type: [DataSource.Column](#)

The returned column has these property values.

Property	Value
name	<i>name</i>
label	<i>name</i>
description	<i>name</i>
isSortable	true
isFilterable	true
type	DataSource.DataType.LOOKUP_TYPE
length	255
decimalPlaces	0
referenceTo	<i>domain</i>
referenceTargetField	null

## **multipicklist(name, picklistValues, isPicklistAlphabeticallySorted, isPicklistRestricted)**

Returns a new column of data type `PICKLIST_MULTISELECT_TYPE` with the specified name and picklist values. You can also specify whether the picklist is sorted alphabetically or if the picklist is restricted.

## Signature

```
public static DataSource.Column multipicklist(String name, List<Map<String,String>>
picklistValues, Boolean isPicklistAlphabeticallySorted, Boolean isPicklistRestricted)
```

## Parameters

*name*

Type: [String](#)

Name of the column.

*picklistValues*

Type: [List<Map<String,String>>](#)

*isPicklistAlphabeticallySorted*

Indicates whether the picklist is sorted alphabetically.

*isPicklistRestricted*

Type: [Boolean](#)

Indicates whether the picklist is restricted.

## Return Value

Type: [DataSource.Column](#)

### **multipicklist(name, picklistValues)**

Returns a new column of data type `PICKLIST_MULTISELECT_TYPE` with the specified name and picklist values.

## Signature

```
public static DataSource.Column multipicklist(String name, List<Map<String,String>> picklistValues)
```

## Parameters

*name*

Type: [String](#)

Name of the column.

*picklistValues*

Type: [List<Map<String,String>>](#)

List of picklist values.

## Return Value

Type: [DataSource.Column](#)

### **number(name, length, decimalPlaces)**

Returns a new column of data type `NUMBER_TYPE`.

## Signature

```
public static DataSource.Column number(String name, Integer length, Integer decimalPlaces)
```

## Parameters

See [Column Properties](#) on page 2409 for information about each parameter.

*name*

Type: [String](#)

*length*

Type: [Integer](#)

*decimalPlaces*

Type: [Integer](#)

## Return Value

Type: [DataSource.Column](#)

The returned column has these property values.

Property	Value
name	<i>name</i>
label	<i>name</i>
description	<i>name</i>
isSortable	true
isFilterable	true
type	DataSource.DataType.NUMBER_TYPE
length	<i>length</i>
decimalPlaces	<i>decimalPlaces</i>

## **percent(name, length, decimalPlaces)**

Returns a new column of data type `PERCENT_TYPE`.

## Signature

```
public static DataSource.Column percent(String name, Integer length, Integer decimalPlaces)
```

## Parameters

*name*

Type: [String](#)

Name of the column.

*length*

Type: [Integer](#)

Number of characters allowed in the column.

*decimalPlaces*

Type: [Integer](#)

Number of decimal places to the right of the decimal point.

## Return Value

Type: [DataSource.Column](#)

## **phone (name)**

Returns a new column of data type `PHONE_TYPE`.

## Signature

```
public static DataSource.Column phone(String name)
```

## Parameters

*name*

Type: [String](#)

Name of the column.

## Return Value

Type: [DataSource.Column](#)

## **picklist(name, picklistValues, isPicklistAlphabeticallySorted, isPicklistRestricted)**

Returns a new column of data type `PICKLIST_TYPE` with the specified name and picklist values. You can also specify whether the picklist is sorted alphabetically or if the picklist is restricted.

## Signature

```
public static DataSource.Column picklist(String name, List<Map<String,String>>
picklistValues, Boolean isPicklistAlphabeticallySorted, Boolean isPicklistRestricted)
```

## Parameters

*name*

Type: [String](#)

Name of the column.

*picklistValues*

Type: [List<Map<String,String>>](#)

List of picklist values.

*isPicklistAlphabeticallySorted*

Indicates whether the picklist is sorted alphabetically.

*isPicklistRestricted*

Type: [Boolean](#)

Indicates whether the picklist is restricted.

## Return Value

Type: [DataSource.Column](#)

### **picklist(name, picklistValues)**

Returns a new column of data type `PICKLIST_TYPE` with the specified name and picklist values.

## Signature

```
public static DataSource.Column picklist(String name, List<Map<String,String>>
picklistValues)
```

## Parameters

*name*

Type: [String](#)

Name of the column.

*picklistValues*

Type: [List<Map<String,String>>](#)

List of picklist values.

## Return Value

Type: [DataSource.Column](#)

### **text(name, label, length)**

Returns a new column of data type `STRING_SHORT_TYPE` or `STRING_LONG_TYPE`, with the specified name, label, and length.

## Signature

```
public static DataSource.Column text(String name, String label, Integer length)
```

## Parameters

*name*

Type: [String](#)

Name of the column.

*label*

Type: [String](#)

User-friendly name for the column that appears in the Salesforce user interface.

*length*

Type: [Integer](#)

Number of characters allowed in the column.

## Return Value

Type: [DataSource.Column](#)

The returned column has these property values.

Property	Value
name	<i>name</i>
label	<i>label</i>
description	<i>label</i>
isSortable	true
isFilterable	true
type	DataSource.DataType.STRING_SHORT_TYPE if <i>length</i> is 255 or less DataSource.DataType.STRING_LONG_TYPE if <i>length</i> is greater than 255
length	<i>length</i>
decimalPlaces	0

## **text(name, length)**

Returns a new column of data type `STRING_SHORT_TYPE` or `STRING_LONG_TYPE`, with the specified name and length.

## Signature

```
public static DataSource.Column text(String name, Integer length)
```

## Parameters

*name*

Type: [String](#)

Name of the column.

*length*

Type: [Integer](#)

Number of characters allowed in the column.

## Return Value

Type: [DataSource.Column](#)

The returned column has these property values.

Property	Value
name	<i>name</i>
label	<i>name</i>
description	<i>name</i>
isSortable	true
isFilterable	true
type	DataSource.DataType.STRING_SHORT_TYPE if <i>length</i> is 255 or less DataSource.DataType.STRING_LONG_TYPE if <i>length</i> is greater than 255
length	<i>length</i>
decimalPlaces	0

**text (name)**

Returns a new column of data type `STRING_SHORT_TYPE` with the specified name and the length of 255 characters.

**Signature**

```
public static DataSource.Column text(String name)
```

**Parameters**

*name*

Type: [String](#)

Name of the column.

**Return Value**

Type: [DataSource.Column](#)

The returned column has these property values.

Property	Value
name	<i>name</i>
label	<i>name</i>
description	<i>name</i>
isSortable	true
isFilterable	true
type	DataSource.DataType.STRING_SHORT_TYPE

Property	Value
length	255
decimalPlaces	0

**textarea (name)**

Returns a new column of data type `STRING_LONG_TYPE` with the specified name and the length of 32,000 characters.

**Signature**

```
public static DataSource.Column textarea(String name)
```

**Parameters**

*name*

Type: `String`

Name of the column.

**Return Value**

Type: `DataSource.Column`

The returned column has these property values.

Property	Value
name	<i>name</i>
label	<i>name</i>
description	<i>name</i>
isSortable	true
isFilterable	true
type	<code>DataSource.DataType.STRING_LONG_TYPE</code>
length	32000
decimalPlaces	0

**time (name)**

Returns a new column of data type `Time` with the specified name.

**Signature**

```
public static DataSource.Column time(String name)
```

## Parameters

*name*

Type: [String](#)

Name of the column.

## Return Value

Type: [DataSource.Column](#)

### **url (name, length)**

Returns a new column of data type `URL_TYPE` with the specified name and length.

## Signature

```
public static DataSource.Column url (String name, Integer length)
```

## Parameters

*name*

Type: [String](#)

Name of the column.

*length*

Type: [Integer](#)

Number of characters allowed in the column.

## Return Value

Type: [DataSource.Column](#)

The returned column has these property values.

Property	Value
name	<i>name</i>
label	<i>name</i>
description	<i>name</i>
isSortable	true
isFilterable	true
type	<code>DataSource.DataType.URL_TYPE</code>
length	<i>length</i>
decimalPlaces	0

**url (name)**

Returns a new column of data type `URL_TYPE` with the specified name and the length of 1,000 characters.

**Signature**

```
public static DataSource.Column url(String name)
```

**Parameters**

*name*

Type: [String](#)

Name of the column.

**Return Value**

Type: [DataSource.Column](#)

The returned column has these property values.

Property	Value
name	<i>name</i>
label	<i>name</i>
description	<i>name</i>
isSortable	true
isFilterable	true
type	DataSource.DataType.URL_TYPE
length	1000
decimalPlaces	0

## ColumnSelection Class

Identifies the list of columns to return during a query or search.

### Namespace

[DataSource Namespace](#)

### Usage

This class is associated with the `SELECT` clause for a SOQL query, or the `RETURNING` clause for a SOSL query.

IN THIS SECTION:

[ColumnSelection Properties](#)

## ColumnSelection Properties

The following are properties for `ColumnSelection`.

### IN THIS SECTION:

#### [aggregation](#)

How to aggregate the column's data.

#### [columnName](#)

Name of the selected column.

#### [tableName](#)

Name of the column's table.

### **aggregation**

How to aggregate the column's data.

### Signature

```
public DataSource.QueryAggregation aggregation {get; set;}
```

### Property Value

Type: [DataSource.QueryAggregation](#)

### **columnName**

Name of the selected column.

### Signature

```
public String columnName {get; set;}
```

### Property Value

Type: [String](#)

### **tableName**

Name of the column's table.

### Signature

```
public String tableName {get; set;}
```

### Property Value

Type: [String](#)

## Connection Class

Extend this class to enable your Salesforce org to sync the external system's schema and to handle queries, searches, and write operations (upsert and delete) of the external data. This class extends the `DataSourceUtil` class and inherits its methods.

## Namespace

[DataSource](#)

## Usage

Your `DataSource.Connection` and `DataSource.Provider` classes compose a custom adapter for Salesforce Connect. Changing the `sync` method on the `DataSource.Connection` class doesn't automatically resync any external objects.

## Example

```
global class SampleDataSourceConnection extends DataSource.Connection {
    global SampleDataSourceConnection(DataSource.ConnectionParams connectionParams) {
    }

    override global List<DataSource.Table> sync() {
        List<DataSource.Table> tables = new List<DataSource.Table>();
        List<DataSource.Column> columns;
        columns = new List<DataSource.Column>();
        columns.add(DataSource.Column.text('Name', 255));
        columns.add(DataSource.Column.text('ExternalId', 255));
        columns.add(DataSource.Column.url('DisplayUrl'));
        tables.add(DataSource.Table.get('Sample', 'Title', columns));
        return tables;
    }

    override global DataSource.TableResult query(DataSource.QueryContext c) {
        return DataSource.TableResult.get(c, DataSource.QueryUtils.process(c, getRows()));
    }

    override global List<DataSource.TableResult> search(DataSource.SearchContext c) {

        List<DataSource.TableResult> results = new List<DataSource.TableResult>();
        for (DataSource.TableSelection tableSelection : c.tableSelections) {
            results.add(DataSource.TableResult.get(tableSelection, getRows()));
        }
        return results;
    }

    // Helper method to get record values from the external system for the Sample table.
    private List<Map<String, Object>> getRows () {
        // Get row field values for the Sample table from the external system via a callout.

        HttpResponse response = makeGetCallout();
        // Parse the JSON response and populate the rows.
        Map<String, Object> m = (Map<String, Object>)JSON.deserializeUntyped(
```

```

        response.getBody());
    Map<String, Object> error = (Map<String, Object>)m.get('error');
    if (error != null) {
        throwException(string.valueOf(error.get('message')));
    }
    List<Map<String, Object>> rows = new List<Map<String, Object>>();
    List<Object> jsonRows = (List<Object>)m.get('value');
    if (jsonRows == null) {
        rows.add(foundRow(m));
    } else {
        for (Object jsonRow : jsonRows) {
            Map<String, Object> row = (Map<String, Object>)jsonRow;
            rows.add(foundRow(row));
        }
    }
    return rows;
}

global override List<DataSource.UpsertResult> upsertRows(DataSource.UpsertContext
    context) {
    if (context.tableSelected == 'Sample') {
        List<DataSource.UpsertResult> results = new List<DataSource.UpsertResult>();
        List<Map<String, Object>> rows = context.rows;

        for (Map<String, Object> row : rows){
            // Make a callout to insert or update records in the external system.
            HttpResponse response;
            // Determine whether to insert or update a record.
            if (row.get('ExternalId') == null){
                // Send a POST HTTP request to insert new external record.
                // Make an Apex callout and get HttpResponse.
                response = makePostCallout(
                    '{"name":"' + row.get('Name') + '", "ExternalId":"' +
                    row.get('ExternalId') + '"}');
            }
            else {
                // Send a PUT HTTP request to update an existing external record.
                // Make an Apex callout and get HttpResponse.
                response = makePutCallout(
                    '{"name":"' + row.get('Name') + '", "ExternalId":"' +
                    row.get('ExternalId') + '"',
                    String.valueOf(row.get('ExternalId')));
            }

            // Check the returned response.
            // First, deserialize it.
            Map<String, Object> m = (Map<String, Object>)JSON.deserializeUntyped(
                response.getBody());
            if (response.getStatusCode() == 200){
                results.add(DataSource.UpsertResult.success(
                    String.valueOf(m.get('id'))));
            }
            else {
                results.add(DataSource.UpsertResult.failure(

```

```

        String.valueOf(m.get('id')),
        'The callout resulted in an error: ' +
        response.getStatusCode());
    }
}
return results;
}
return null;
}

global override List<DataSource.DeleteResult> deleteRows(DataSource.DeleteContext
context) {
    if (context.tableSelected == 'Sample'){
        List<DataSource.DeleteResult> results = new List<DataSource.DeleteResult>();
        for (String externalId : context.externalIds){
            HttpResponse response = makeDeleteCallout(externalId);
            if (response.getStatusCode() == 200){
                results.add(DataSource.DeleteResult.success(externalId));
            }
            else {
                results.add(DataSource.DeleteResult.failure(externalId,
                    'Callout delete error:'
                    + response.getBody()));
            }
        }
        return results;

    }
}
```

#### IN THIS SECTION:

[Connection Methods](#)

## Connection Methods

The following are methods for `Connection`.

#### IN THIS SECTION:

[deleteRows\(deleteContext\)](#)

Invoked when external object records are deleted via the Salesforce user interface, APIs, or Apex.

[query\(queryContext\)](#)

Invoked by a SOQL query of an external object. A SOQL query is generated and executed when a user visits an external object's list view or record detail page in Salesforce. Returns the results of the query.

[search\(searchContext\)](#)

Invoked by a SOSL query of an external object or when a user performs a Salesforce global search that also searches external objects. Returns the results of the query.

[sync\(\)](#)

Invoked when an administrator clicks **Validate and Sync** on the external data source detail page. Returns a list of tables that describe the external system's schema.

[upsertRows\(upsertContext\)](#)

Invoked when external object records are created or updated via the Salesforce user interface, APIs, or Apex.

### **deleteRows (deleteContext)**

Invoked when external object records are deleted via the Salesforce user interface, APIs, or Apex.

## Signature

```
public List<DataSource.DeleteResult> deleteRows (DataSource.DeleteContext deleteContext)
```

## Parameters

*deleteContext*

Type: [DataSource.DeleteContext](#)

Contains context information about the delete request.

## Return Value

Type: [List<DataSource.DeleteResult>](#)

The results of the delete operation.

## **query (queryContext)**

Invoked by a SOQL query of an external object. A SOQL query is generated and executed when a user visits an external object's list view or record detail page in Salesforce. Returns the results of the query.

## Signature

```
public DataSource.TableResult query (DataSource.QueryContext queryContext)
```

## Parameters

*queryContext*

Type: [DataSource.QueryContext](#)

Represents the query to run against a data table.

## Return Value

Type: [DataSource.TableResult](#)

## **search (searchContext)**

Invoked by a SOSL query of an external object or when a user performs a Salesforce global search that also searches external objects. Returns the results of the query.

## Signature

```
public List<DataSource.TableResult> search (DataSource.SearchContext searchContext)
```

## Parameters

*searchContext*

Type: [DataSource.SearchContext](#)

Represents the query to run against an external data table.

## Return Value

Type: List<[DataSource.TableResult](#)>

### **sync ()**

Invoked when an administrator clicks **Validate and Sync** on the external data source detail page. Returns a list of tables that describe the external system's schema.

## Signature

```
public List<DataSource.Table> sync()
```

## Return Value

Type: List<[DataSource.Table](#)>

Each returned table can be used to create an external object in Salesforce. On the Validate External Data Source page, the administrator views the list of returned tables and selects which tables to sync. When the administrator clicks **Sync**, an external object is created for each selected table. Each column within the selected tables also becomes a field in the external object.

### **upsertRows (upsertContext)**

Invoked when external object records are created or updated via the Salesforce user interface, APIs, or Apex.

## Signature

```
public List<DataSource.UpsertResult> upsertRows (DataSource.UpsertContext upsertContext)
```

## Parameters

*upsertContext*

Type: [DataSource.UpsertContext](#)

Contains context information about the upsert request.

## Return Value

Type: List<[DataSource.UpsertResult](#)>

The results of the upsert operation.

## ConnectionParams Class

Contains the credentials for authenticating to the external system.

## Namespace

[DataSource](#)

## Usage

If your extension of the `DataSource.Provider` class returns `DataSource.AuthenticationCapability` values that indicate support for authentication, the `DataSource.Connection` class is instantiated with a `DataSource.ConnectionParams` instance in the constructor.

The authentication credentials in the `DataSource.ConnectionParams` instance depend on the `Identity Type` field of the external data source definition in Salesforce.

- If `Identity Type` is set to `Named Principal`, the credentials come from the external data source definition.
- If `Identity Type` is set to `Per User`:
  - For queries and searches, the credentials are specific to the current user who invokes the query or search. The credentials come from the user's authentication settings for the external system.
  - For administrative connections, such as syncing the external system's schema, the credentials come from the external data source definition.

The values in this class can appear in debug logs and can be accessed by users who have the "Author Apex" permission. If you require better security, we recommend that you specify named credentials instead of URLs as your Apex callout endpoints. Salesforce manages all authentication for Apex callouts that specify a named credential as the callout endpoint so that your code doesn't have to.

### IN THIS SECTION:

[ConnectionParams Properties](#)

## ConnectionParams Properties

The following are properties for `ConnectionParams`.

### IN THIS SECTION:

[certificateName](#)

The name of the certificate for establishing each connection to the external system.

[endpoint](#)

The URL of the external system.

[oauthToken](#)

The OAuth token that's issued by the external system.

[password](#)

The password for authenticating to the external system.

[principalType](#)

An instance of `DataSource.IdentityType`, which determines which set of credentials to use to access the external system.

[protocol](#)

The type of protocol that's used to authenticate to the external system.

[repository](#)

Reserved for future use.

[username](#)

The username for authenticating to the external system.

**certificateName**

The name of the certificate for establishing each connection to the external system.

**Signature**

```
public String certificateName {get; set;}
```

**Property Value**

Type: [String](#)

The value comes from the external data source definition in Salesforce.

**endpoint**

The URL of the external system.

**Signature**

```
public String endpoint {get; set;}
```

**Property Value**

Type: [String](#)

The value comes from the external data source definition in Salesforce.

**oauthToken**

The OAuth token that's issued by the external system.

**Signature**

```
public String oauthToken {get; set;}
```

**Property Value**

Type: [String](#)

**password**

The password for authenticating to the external system.

**Signature**

```
public String password {get; set;}
```

**Property Value**

Type: [String](#)

The value depends on the `Identity Type` field of the external data source definition in Salesforce.

- If `Identity Type` is set to `Named Principal`, the credentials come from the external data source definition.
- If `Identity Type` is set to `Per User`:
  - For queries and searches, the credentials are specific to the current user who invokes the query or search. The credentials come from the user's authentication settings for the external system.
  - For administrative connections, such as syncing the external system's schema, the credentials come from the external data source definition.

### **principalType**

An instance of [DataSource.IdentityType](#), which determines which set of credentials to use to access the external system.

### Signature

```
public DataSource.IdentityType principalType {get; set;}
```

### Property Value

Type: [DataSource.IdentityType](#)

### **protocol**

The type of protocol that's used to authenticate to the external system.

### Signature

```
public DataSource.AuthenticationProtocol protocol {get; set;}
```

### Property Value

Type: [DataSource.AuthenticationProtocol](#)

### **repository**

Reserved for future use.

### Signature

```
public String repository {get; set;}
```

### Property Value

Type: [String](#)

Reserved for future use.

### **username**

The username for authenticating to the external system.

## Signature

```
public String username {get; set;}
```

## Property Value

Type: [String](#)

The value depends on the `Identity Type` field of the external data source definition in Salesforce.

- If `Identity Type` is set to `Named Principal`, the credentials come from the external data source definition.
- If `Identity Type` is set to `Per User`:
  - For queries and searches, the credentials are specific to the current user who invokes the query or search. The credentials come from the user's authentication settings for the external system.
  - For administrative connections, such as syncing the external system's schema, the credentials come from the external data source definition.

## DataSourceUtil Class

Parent class for the `DataSource.Provider`, `DataSource.Connection`, `DataSource.Table`, and `DataSource.Column` classes.

## Namespace

[DataSource](#)

IN THIS SECTION:

[DataSourceUtil Methods](#)

## DataSourceUtil Methods

The following are methods for `DataSourceUtil`.

IN THIS SECTION:

[logWarning\(message\)](#)

Logs the error message in the debug log.

[throwException\(message\)](#)

Throws a `DataSourceException` and displays the provided message to the user.

### **logWarning (message)**

Logs the error message in the debug log.

## Signature

```
public void logWarning(String message)
```

## Parameters

*message*

Type: [String](#)

The error message.

## Return Value

Type: void

### **throwException (message)**

Throws a `DataSourceException` and displays the provided message to the user.

## Signature

```
public void throwException(String message)
```

## Parameters

*message*

Type: [String](#)

Error message to display to the user.

## Return Value

Type: void

# DataType Enum

Specifies the data types that are supported by the Apex Connector Framework.

## Usage

The `DataSource.DataType` enum is referenced by the `type` property on the `DataSource.Column` class.

## Enum Values

The following are the values of the `DataSource.DataType` enum.

Value	Description
<code>BOOLEAN_TYPE</code>	Boolean
<code>CURRENCY_TYPE</code>	Currency
<code>DATE_TYPE</code>	Date
<code>DATETIME_TYPE</code>	Date/Time
<code>EMAIL_TYPE</code>	Email

Value	Description
EXTERNAL_LOOKUP_TYPE	External lookup relationship
INDIRECT_LOOKUP_TYPE	Indirect lookup relationship
LOOKUP_TYPE	Lookup relationship
NUMBER_TYPE	Number
PERCENT_TYPE	Percent
PHONE_TYPE	Phone
PICKLIST_MULTISELECT_TYPE	Multi-select picklist
PICKLIST_TYPE	Picklist
STRING_LONG_TYPE	Long text area
STRING_SHORT_TYPE	Text area
TIME_TYPE	Time
URL_TYPE	URL

## DeleteContext Class

An instance of `DeleteContext` is passed to the `deleteRows()` method on your `Database.Connection` class. The class provides context information about the delete request to the implementor of `deleteRows()`.

### Namespace

[DataSource](#)

### Usage

The Apex Connector Framework creates context for operations. Context is comprised of parameters about the operations, which other methods can use. An instance of the `DeleteContext` class packages these parameters into an object that can be used when a `deleteRows()` operation is initiated.

IN THIS SECTION:

[DeleteContext Properties](#)

### DeleteContext Properties

The following are properties for `DeleteContext`.

IN THIS SECTION:

[externalIds](#)

The external IDs of the rows representing external object records to delete.

[tableSelected](#)

The name of the table to delete rows from.

### **externalIds**

The external IDs of the rows representing external object records to delete.

### Signature

```
public List<String> externalIds {get; set;}
```

### Property Value

Type: List<String>

### **tableSelected**

The name of the table to delete rows from.

### Signature

```
public String tableSelected {get; set;}
```

### Property Value

Type: [String](#)

## DeleteResult Class

Represents the result of a delete operation on an sObject record. The result is returned by the `DataSource.deleteRows` method of the `DataSource.Connection` class.

## Namespace

[DataSource](#)

## Usage

A delete operation on external object records generates an array of objects of type `DataSource.DeleteResult`. Its methods create result records that indicate whether the delete operation succeeded or failed.

IN THIS SECTION:

[DeleteResult Properties](#)

[DeleteResult Methods](#)

## DeleteResult Properties

The following are properties for `DeleteResult`.

**IN THIS SECTION:****[errorMessage](#)**

The error message that's generated by a failed delete operation. Recorded with a result of type `DataSource.DeleteResult`.

**[externalId](#)**

The unique identifier of a row that represents an external object record to delete.

**[success](#)**

Indicates whether a delete operation succeeded or failed.

**errorMessage**

The error message that's generated by a failed delete operation. Recorded with a result of type `DataSource.DeleteResult`.

**Signature**

```
public String errorMessage {get; set;}
```

**Property Value**

Type: [String](#)

**externalId**

The unique identifier of a row that represents an external object record to delete.

**Signature**

```
public String externalId {get; set;}
```

**Property Value**

Type: [String](#)

**success**

Indicates whether a delete operation succeeded or failed.

**Signature**

```
public Boolean success {get; set;}
```

**Property Value**

Type: [Boolean](#)

**DeleteResult Methods**

The following are methods for `DeleteResult`.

## IN THIS SECTION:

[equals\(obj\)](#)

Maintains the integrity of lists of type `DeleteResult` by determining the equality of external objects in a list. This method is dynamic and is based on the `equals` method in Java.

[failure\(externalId, errorMessage\)](#)

Creates a delete result indicating the failure of a delete request for a given external ID.

[hashCode\(\)](#)

Maintains the integrity of lists of type `DeleteResult` by determining the uniqueness of the external object records in a list.

[success\(externalId\)](#)

Creates a delete result indicating the successful completion of a delete request for a given external ID.

**equals (obj)**

Maintains the integrity of lists of type `DeleteResult` by determining the equality of external objects in a list. This method is dynamic and is based on the `equals` method in Java.

**Signature**

```
public Boolean equals(Object obj)
```

**Parameters**

*obj*

Type: `Object`

External object whose key is to be validated.

For information about the `equals` method, see [Using Custom Types in Map Keys and Sets](#).

**Return Value**

Type: `Boolean`

**failure(externalId, errorMessage)**

Creates a delete result indicating the failure of a delete request for a given external ID.

**Signature**

```
public static DataSource.DeleteResult failure(String externalId, String errorMessage)
```

**Parameters**

*externalId*

Type: `String`

The unique identifier of the `sObject` record to delete.

*errorMessage*

Type: `String`

The reason the delete operation failed.

## Return Value

Type: [DataSource.DeleteResult](#)

Status result of the delete operation.

## hashCode ()

Maintains the integrity of lists of type `DeleteResult` by determining the uniqueness of the external object records in a list.

## Signature

```
public Integer hashCode ()
```

## Return Value

Type: [Integer](#)

## success (externalId)

Creates a delete result indicating the successful completion of a delete request for a given external ID.

## Signature

```
public static DataSource.DeleteResult success (String externalId)
```

## Parameters

*externalId*

Type: [String](#)

The unique identifier of the sObject record to delete.

## Return Value

Type: [DataSource.DeleteResult](#)

Status result of the delete operation for the sObject with the given external ID.

## Filter Class

Represents a `WHERE` clause in a SOSL or SOQL query.

## Namespace

[DataSource](#)

## Usage

Compound types require child filters. Specifically, the `subfilters` property can't be null if the `type` property is `NOT_`, `AND_`, or `OR_`.

IN THIS SECTION:

[Filter Properties](#)

## Filter Properties

The following are properties for `Filter`.

IN THIS SECTION:

[columnName](#)

Name of the column that's being evaluated in a simple comparative type of filter.

[columnValue](#)

Value that the filter compares records against in a simple comparative type of filter.

[subfilters](#)

List of subfilters for compound filter types, such as `NOT_`, `AND_`, and `OR_`.

[tableName](#)

Name of the table whose column is being evaluated in a simple comparative type of filter.

[type](#)

Type of filter operation that limits the returned data.

### **columnName**

Name of the column that's being evaluated in a simple comparative type of filter.

### Signature

```
public String columnName {get; set;}
```

### Property Value

Type: [String](#)

### **columnValue**

Value that the filter compares records against in a simple comparative type of filter.

### Signature

```
public Object columnValue {get; set;}
```

### Property Value

Type: `Object`

### **subfilters**

List of subfilters for compound filter types, such as `NOT_`, `AND_`, and `OR_`.

### Signature

```
public List<DataSource.Filter> subfilters {get; set;}
```

### Property Value

Type: [List<DataSource.Filter>](#)

### tableName

Name of the table whose column is being evaluated in a simple comparative type of filter.

### Signature

```
public String tableName {get; set;}
```

### Property Value

Type: [String](#)

### type

Type of filter operation that limits the returned data.

### Signature

```
public DataSource.FilterType type {get; set;}
```

### Property Value

Type: [DataSource.FilterType](#)

## FilterType Enum

Referenced by the `type` property on a `DataSource.Filter`.

## Usage

Determines how to limit the returned data.

## Enum Values

The following are the values of the `DataSource.FilterType` enum.

Value	Description
AND_	This compound filter type returns all rows that match all the subfilters.
CONTAINS	Simple comparative filter type.
ENDS_WITH	Simple comparative filter type.

Value	Description
EQUALS	Simple comparative filter type.
GREATER_THAN	Simple comparative filter type.
GREATER_THAN_OR_EQUAL_TO	Simple comparative filter type.
LESS_THAN	Simple comparative filter type.
LESS_THAN_OR_EQUAL_TO	Simple comparative filter type.
LIKE_	Simple comparative filter type.
NOT_	This compound filter type returns the rows that don't match the subfilter.
NOT_EQUALS	Simple comparative filter type.
OR_	This compound filter type returns all rows that match any of the subfilters.
STARTS_WITH	Simple comparative filter type.

## IdentityType Enum

Determines which set of credentials is used to authenticate to the external system.

### Usage

The relevant credentials are passed to your `DataSource.Connection` class.

### Enum Values

The following are the values of the `DataSource.IdentityType` enum.

Value	Description
ANONYMOUS	No credentials are used to authenticate to the external system.
NAMED_USER	The credentials in the external data source definition are used to authenticate to the external system, regardless of which user is accessing the external data from your organization.
PER_USER	For queries and searches, the credentials are specific to the current user who invokes the query or search. The credentials come from the user's authentication settings for the external system.  For administrative connections, such as syncing the external system's schema, the credentials come from the external data source definition.

## Order Class

Contains details about how to sort the rows in the result set. Equivalent to an `ORDER BY` statement in a SQL query.

## Namespace

[DataSource](#)

## Usage

Used in the [order](#) property on the [DataSource.TableSelection](#) class.

IN THIS SECTION:

[Order Properties](#)

[Order Methods](#)

## Order Properties

The following are properties for `Order`.

IN THIS SECTION:

[columnName](#)

Name of the column whose values are used to sort the rows in the result set.

[direction](#)

Direction for sorting rows based on column values.

[tableName](#)

Name of the table whose column values are used to sort the rows in the result set.

### **columnName**

Name of the column whose values are used to sort the rows in the result set.

### Signature

```
public String columnName {get; set;}
```

### Property Value

Type: [String](#)

### **direction**

Direction for sorting rows based on column values.

### Signature

```
public DataSource.OrderDirection direction {get; set;}
```

### Property Value

Type: [DataSource.OrderDirection](#)

**tableName**

Name of the table whose column values are used to sort the rows in the result set.

**Signature**

```
public String tableName {get; set;}
```

**Property Value**

Type: [String](#)

**Order Methods**

The following are methods for `Order`.

**IN THIS SECTION:**

[get\(tableName, columnName, direction\)](#)

Creates an instance of the [DataSource.Order](#) class.

**get(tableName, columnName, direction)**

Creates an instance of the [DataSource.Order](#) class.

**Signature**

```
public static DataSource.Order get(String tableName, String columnName,  
DataSource.OrderDirection direction)
```

**Parameters**

*tableName*

Type: [String](#)

Name of the table whose column values are used to sort the rows in the result set.

*columnName*

Type: [String](#)

Name of the column whose values are used to sort the rows in the result set.

*direction*

Type: [DataSource.OrderDirection](#)

Direction for sorting rows based on column values.

**Return Value**

Type: [DataSource.Order](#)

## OrderDirection Enum

Specifies the direction for sorting rows based on column values.

### Usage

Used by the [direction](#) property on the [DataSource.Order](#) class.

### Enum Values

The following are the values of the `DataSource.OrderDirection` enum.

Value	Description
ASCENDING	Sort rows in ascending order (A–Z).
DESCENDING	Sort rows in descending order (Z–A).

### Provider Class

Extend this base class to create a custom adapter for Salesforce Connect. The class informs Salesforce of the functional and authentication capabilities that are supported by or required to connect to the external system. This class extends the `DataSourceUtil` class and inherits its methods.

### Namespace

[DataSource](#)

### Usage

Create an Apex class that extends `DataSource.Provider` to specify the following.

- The types of authentication that can be used to access the external system
- The features that are supported for the connection to the external system
- The Apex class that extends `DataSource.Connection` to sync the external system's schema and to handle the queries and searches of the external data

The values that are returned by the `DataSource.Provider` class determine which settings are available in the external data source definition in Salesforce. To access the external data source definition from Setup, enter *External Data Sources* in the `Quick Find` box, then select **External Data Sources**.

IN THIS SECTION:

[Provider Methods](#)

### Provider Methods

The following are methods for `Provider`.

## IN THIS SECTION:

[getAuthenticationCapabilities\(\)](#)

Returns the types of authentication that can be used to access the external system.

[getCapabilities\(\)](#)

Returns the functional operations that the external system supports and the required endpoint settings for the external data source definition in Salesforce.

[getConnection\(connectionParams\)](#)

Returns a connection that points to an instance of the external data source.

**getAuthenticationCapabilities ()**

Returns the types of authentication that can be used to access the external system.

**Signature**

```
public List<DataSource.AuthenticationCapability> getAuthenticationCapabilities ()
```

**Return Value**

Type: [List<DataSource.AuthenticationCapability>](#)

**getCapabilities ()**

Returns the functional operations that the external system supports and the required endpoint settings for the external data source definition in Salesforce.

**Signature**

```
public List<DataSource.Capability> getCapabilities ()
```

**Return Value**

Type: [List<DataSource.Capability>](#)

**getConnection (connectionParams)**

Returns a connection that points to an instance of the external data source.

**Signature**

```
public DataSource.Connection getConnection (DataSource.ConnectionParams connectionParams)
```

**Parameters**

*connectionParams*

Type: [DataSource.ConnectionParams](#)

Credentials for authenticating to the external system.

## Return Value

Type: [DataSource.Connection](#)

# QueryAggregation Enum

Specifies how to aggregate a column in a query.

## Usage

Used by the [aggregation](#) property on the [DataSource.ColumnSelection](#) class.

## Enum Values

The following are the values of the `DataSource.QueryAggregation` enum.

Value	Description
AVG	Reserved for future use.
COUNT	Returns the number of rows that meet the query criteria.
MAX	Reserved for future use.
MIN	Reserved for future use.
NONE	No aggregation.
SUM	Reserved for future use.

## QueryContext Class

An instance of `QueryContext` is provided to the [query](#) method on your [DataSource.Connection](#) class. The instance corresponds to a SOQL request.

## Namespace

[DataSource](#)

IN THIS SECTION:

[QueryContext Properties](#)

[QueryContext Methods](#)

## QueryContext Properties

The following are properties for `QueryContext`.

## IN THIS SECTION:

[queryMoreToken](#)

Query token that's used for server-driven paging to determine and fetch the subsequent batch of results.

[tableSelection](#)

Query details that represent the `FROM`, `ORDER BY`, `SELECT`, and `WHERE` clauses in a SOQL or SOSL query.

**queryMoreToken**

Query token that's used for server-driven paging to determine and fetch the subsequent batch of results.

## Signature

```
public String queryMoreToken {get; set;}
```

## Property Value

Type: [String](#)

**tableSelection**

Query details that represent the `FROM`, `ORDER BY`, `SELECT`, and `WHERE` clauses in a SOQL or SOSL query.

## Signature

```
public DataSource.TableSelection tableSelection {get; set;}
```

## Property Value

Type: [DataSource.TableSelection](#)

## QueryContext Methods

The following are methods for `QueryContext`.

## IN THIS SECTION:

[get\(metadata, offset, maxResults, tableSelection\)](#)

Creates an instance of the [QueryContext](#) class.

**get(metadata, offset, maxResults, tableSelection)**

Creates an instance of the [QueryContext](#) class.

## Signature

```
public static DataSource.QueryContext get(List<DataSource.Table> metadata, Integer offset, Integer maxResults, DataSource.TableSelection tableSelection)
```

## Parameters

*metadata*

Type: List<[DataSource.Table](#)>

List of table metadata that describes the external system's tables to query.

*offset*

Type: [Integer](#)

Used for client-driven paging. Specifies the starting row offset into the query's result set.

*maxResults*

Type: [Integer](#)

Used for client-driven paging. Specifies the maximum number of rows to return in each batch.

*tableSelection*

Type: [DataSource.TableSelection](#)

Query details that represent the FROM, ORDER BY, SELECT, and WHERE clauses in a SOQL or SOSL query.

## Return Value

Type: [DataSource.QueryContext](#)

# QueryUtils Class

Contains helper methods to locally filter, sort, and apply limit and offset clauses to data rows. This helper class is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

## Namespace

[DataSource](#)

## Usage

The `DataSource.QueryUtils` class and its helper methods can process query results locally within your Salesforce org. This class is provided for your convenience to simplify the development of your Salesforce Connect custom adapter for initial tests. However, the `DataSource.QueryUtils` class and its methods aren't supported for use in production environments that use callouts to retrieve data from external systems. Complete the filtering and sorting on the external system before sending the query results to Salesforce. When possible, use server-driven paging or another technique to have the external system determine the appropriate data subsets according to the limit and offset clauses in the query.

IN THIS SECTION:

[QueryUtils Methods](#)

## QueryUtils Methods

The following are methods for `QueryUtils`.

## IN THIS SECTION:

[applyLimitAndOffset\(queryContext, rows\)](#)

Returns a subset of data rows after locally applying limit and offset clauses from the query. This helper method is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

[filter\(queryContext, rows\)](#)

Returns a subset of data rows after locally ordering and applying filters from the query. This helper method is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

[process\(queryContext, rows\)](#)

Returns data rows after locally filtering, sorting, ordering, and applying limit and offset clauses from the query. This helper method is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

[sort\(queryContext, rows\)](#)

Returns data rows after locally sorting and applying the order from the query. This helper method is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

**applyLimitAndOffset(queryContext, rows)**

Returns a subset of data rows after locally applying limit and offset clauses from the query. This helper method is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

**Signature**

```
public static List<Map<String, Object>> applyLimitAndOffset (DataSource.QueryContext queryContext, List<Map<String, Object>> rows)
```

**Parameters**

*queryContext*

Type: [DataSource.QueryContext](#)

Represents the query to run against a data table.

*rows*

Type: [List<Map<String, Object>>](#)

Rows of data.

**Return Value**

Type: [List<Map<String, Object>>](#)

**filter(queryContext, rows)**

Returns a subset of data rows after locally ordering and applying filters from the query. This helper method is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

**Signature**

```
public static List<Map<String, object>> filter (DataSource.QueryContext queryContext, List<Map<String, Object>> rows)
```

## Parameters

*queryContext*

Type: [DataSource.QueryContext](#)

*queryContext*

*rows*

Type: [List<Map<String, Object>>](#)

Rows of data.

## Return Value

Type: [List<Map<String, Object>>](#)

### **process(queryContext, rows)**

Returns data rows after locally filtering, sorting, ordering, and applying limit and offset clauses from the query. This helper method is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

## Signature

```
public static List<Map<String, object>> process(DataSource.QueryContext queryContext,  
List<Map<String, Object>> rows)
```

## Parameters

*queryContext*

Type: [DataSource.QueryContext](#)

Represents the query to run against a data table.

*rows*

Type: [List<Map<String, Object>>](#)

Rows of data.

## Return Value

Type: [List<Map<String, Object>>](#)

### **sort(queryContext, rows)**

Returns data rows after locally sorting and applying the order from the query. This helper method is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

## Signature

```
public static List<Map<String, object>> sort(DataSource.QueryContext queryContext,  
List<Map<String, object>> rows)
```

## Parameters

*queryContext*

Type: [DataSource.QueryContext](#)

Represents the query to run against a data table.

*rows*

Type: [List<Map<String, Object>>](#)

Rows of data.

## Return Value

Type: [List<Map<String, Object>>](#)

# ReadContext Class

Abstract base class for the [QueryContext](#) and [SearchContext](#) classes.

## Namespace

[DataSource](#)

IN THIS SECTION:

[ReadContext Properties](#)

## ReadContext Properties

The following are properties for [ReadContext](#).

IN THIS SECTION:

[maxResults](#)

Maximum number of rows that the query can return.

[metadata](#)

Describes the external system's tables to query.

[offset](#)

The starting row offset into the query's result set. Used for client-driven paging.

### **maxResults**

Maximum number of rows that the query can return.

## Signature

```
public Integer maxResults {get; set;}
```

### Property Value

Type: [Integer](#)

#### **metadata**

Describes the external system's tables to query.

### Signature

```
public List<DataSource.Table> metadata {get; set;}
```

### Property Value

Type: List<[DataSource.Table](#)>

#### **offset**

The starting row offset into the query's result set. Used for client-driven paging.

### Signature

```
public Integer offset {get; set;}
```

### Property Value

Type: [Integer](#)

## SearchContext Class

An instance of `SearchContext` is provided to the [search](#) method on your `DataSource.Connection` class. The instance corresponds to a search or SOSL request.

## Namespace

[DataSource](#)

### IN THIS SECTION:

[SearchContext Constructors](#)

[SearchContext Properties](#)

## SearchContext Constructors

The following are constructors for `SearchContext`.

### IN THIS SECTION:

[SearchContext\(metadata, offset, maxResults, tableSelections, searchPhrase\)](#)

Creates an instance of the `SearchContext` class with the specified parameter values.

### `SearchContext()`

Creates an instance of the `SearchContext` class.

### **`SearchContext(metadata, offset, maxResults, tableSelections, searchPhrase)`**

Creates an instance of the `SearchContext` class with the specified parameter values.

### Signature

```
public SearchContext(List<DataSource.Table> metadata, Integer offset, Integer maxResults,
List<DataSource.TableSelection> tableSelections, String searchPhrase)
```

### Parameters

#### *metadata*

Type: `List<DataSource.Table>`

List of table metadata that describes the external system's tables to query.

#### *offset*

Type: `Integer`

Specifies the starting row offset into the query's result set.

#### *maxResults*

Type: `Integer`

Specifies the maximum number of rows to return in each batch.

#### *tableSelections*

Type: `List<DataSource.TableSelection>`

List of queries and their details. The details represent the FROM, ORDER BY, SELECT, and WHERE clauses in each SOQL or SOSL query.

#### *searchPhrase*

Type: `String`

The user-entered search string as a case-sensitive single phrase, with all non-alphanumeric characters removed.

### **`SearchContext ()`**

Creates an instance of the `SearchContext` class.

### Signature

```
public SearchContext ()
```

## SearchContext Properties

The following are properties for `SearchContext`.

## IN THIS SECTION:

[searchPhrase](#)

The user-entered search string as a case-sensitive single phrase, with all non-alphanumeric characters removed.

[tableSelections](#)

List of queries and their details. The details represent the FROM, ORDER BY, SELECT, and WHERE clauses in each SOQL or SOSL query.

**searchPhrase**

The user-entered search string as a case-sensitive single phrase, with all non-alphanumeric characters removed.

**Signature**

```
public String searchPhrase {get; set;}
```

**Property Value**

Type: [String](#)

**tableSelections**

List of queries and their details. The details represent the FROM, ORDER BY, SELECT, and WHERE clauses in each SOQL or SOSL query.

**Signature**

```
public List<DataSource.TableSelection> tableSelections {get; set;}
```

**Property Value**

Type: [List<DataSource.TableSelection>](#)

## SearchUtils Class

Helper class for implementing search on a custom adapter for Salesforce Connect.

## Namespace

[DataSource](#)

## Usage

We recommend that you develop your own search implementation that can search columns in addition to the designated name field.

## IN THIS SECTION:

[SearchUtils Methods](#)

## SearchUtils Methods

The following are methods for `SearchUtils`.

## IN THIS SECTION:

[searchByName\(searchDetails, connection\)](#)

Queries all the tables and returns each row whose designated name field contains the search phrase.

**searchByName(searchDetails, connection)**

Queries all the tables and returns each row whose designated name field contains the search phrase.

**Signature**

```
public static List<DataSource.TableResult> searchByName (DataSource.SearchContext
searchDetails, DataSource.Connection connection)
```

**Parameters**

*searchDetails*

Type: [DataSource.SearchContext](#)

The `SearchContext` class that specifies which data to search and what to search for.

*connection*

Type: [DataSource.Connection](#)

The `DataSource.Connection` class that connects to the external system.

**Return Value**

Type: [List<DataSource.TableResult>](#)

## Table Class

Describes a table on an external system that the Salesforce Connect custom adapter connects to. This class extends the `DataSourceUtil` class and inherits its methods.

## Namespace

[DataSource](#)

## Usage

A list of table metadata is provided by the `DataSource.Connection` class when the `sync()` method is invoked. Each table can become an external object in Salesforce.

The metadata is stored in Salesforce. Updating the Apex code to return new or updated values for the table metadata doesn't automatically update the stored metadata in Salesforce.

## IN THIS SECTION:

[Table Properties](#)

[Table Methods](#)

## Table Properties

The following are properties for `Table`.

### IN THIS SECTION:

#### [columns](#)

List of table columns.

#### [description](#)

Description of what the table represents.

#### [labelPlural](#)

Plural form of the user-friendly name for the table. The `labelPlural` becomes the object's plural label in the Salesforce user interface.

#### [labelSingular](#)

Singular form of the user-friendly name for the table. The `labelSingular` becomes the object label in the Salesforce user interface. We recommend that you make object labels unique across all standard, custom, and external objects in the org.

#### [name](#)

Name of the table on the external system.

#### [nameColumn](#)

Name of the table column that becomes the name field of the external object when the administrator syncs the table.

### **columns**

List of table columns.

### Signature

```
public List<DataSource.Column> columns {get; set;}
```

### Property Value

Type: [List<DataSource.Column>](#)

### **description**

Description of what the table represents.

### Signature

```
public String description {get; set;}
```

### Property Value

Type: [String](#)

### **labelPlural**

Plural form of the user-friendly name for the table. The `labelPlural` becomes the object's plural label in the Salesforce user interface.

### Signature

```
public String labelPlural {get; set;}
```

```
DataSource.Table, labelPlural
```

### Property Value

Type: [String](#)

### **labelSingular**

Singular form of the user-friendly name for the table. The `labelSingular` becomes the object label in the Salesforce user interface. We recommend that you make object labels unique across all standard, custom, and external objects in the org.

### Signature

```
public String labelSingular {get; set;}
```

### Property Value

Type: [String](#)

### **name**

Name of the table on the external system.

### Signature

```
public String name {get; set;}
```

### Property Value

Type: [String](#)

### **nameColumn**

Name of the table column that becomes the name field of the external object when the administrator syncs the table.

### Signature

```
public String nameColumn {get; set;}
```

### Property Value

Type: [String](#)

## Table Methods

The following are methods for `Table`.

## IN THIS SECTION:

`get(name, labelSingular, labelPlural, description, nameColumn, columns)`

Returns the table metadata with the specified parameter values.

`get(name, nameColumn, columns)`

Returns the table metadata with the specified parameter values, using the name for the labels and description.

**`get(name, labelSingular, labelPlural, description, nameColumn, columns)`**

Returns the table metadata with the specified parameter values.

## Signature

```
public static DataSource.Table get(String name, String labelSingular, String labelPlural,
String description, String nameColumn, List<DataSource.Column> columns)
```

## Parameters

*name*

Type: `String`

Name of the external table.

*labelSingular*

Type: `String`

Singular form of the user-friendly name for the table. The `labelSingular` becomes the object label in the Salesforce user interface.

*labelPlural*

Type: `String`

Plural form of the user-friendly name for the table. The `labelPlural` becomes the object's plural label in the Salesforce user interface.

*description*

Type: `String`

Description of the external table.

*nameColumn*

Type: `String`

Name of the table column that becomes the name field of the external object when the administrator syncs the table.

*columns*

Type: `List<DataSource.Column>`

List of table columns.

## Return Value

Type: `DataSource.Table`

**`get(name, nameColumn, columns)`**

Returns the table metadata with the specified parameter values, using the name for the labels and description.

## Signature

```
public static DataSource.Table get(String name, String nameColumn,
List<DataSource.Column> columns)
```

```
DataSource.Table, get, [String, String, List<DataSource.Column>], DataSource.Table
```

## Parameters

*name*

Type: [String](#)

Name of the external table.

*nameColumn*

Type: [String](#)

Name of the table column that becomes the name field of the external object when the administrator syncs the table.

*columns*

Type: List<[DataSource.Column](#)>

List of table columns.

## Return Value

Type: [DataSource.Table](#)

The returned table metadata has these property values.

Property	Value
name	<i>name</i>
labelSingular	<i>name</i>
labelPlural	<i>name</i>
description	<i>name</i>
nameColumn	<i>nameColumn</i>
columns	<i>columns</i>

## TableResult Class

Contains the results of a search or query.

## Namespace

[DataSource](#)

IN THIS SECTION:

[TableResult Properties](#)

[TableResult Methods](#)

## TableResult Properties

The following are properties for `TableResult`.

### IN THIS SECTION:

[errorMessage](#)

errorMessage

[queryMoreToken](#)

Query token that's used for server-driven paging to determine and fetch the subsequent batch of results. This token is passed back to the Apex data source on subsequent queries in the `queryMoreToken` property on the `QueryContext`.

[rows](#)

Rows of data.

[success](#)

Whether the search or query was successful.

[tableName](#)

Name of the table that was queried.

[totalSize](#)

The total number of rows that meet the query criteria, even when the external system is requested to return a smaller batch size.

### **errorMessage**

errorMessage

### Signature

```
public String errorMessage {get; set;}
```

### Property Value

Type: [String](#)

### **queryMoreToken**

Query token that's used for server-driven paging to determine and fetch the subsequent batch of results. This token is passed back to the Apex data source on subsequent queries in the `queryMoreToken` property on the `QueryContext`.

### Signature

```
public String queryMoreToken {get; set;}
```

### Property Value

Type: [String](#)

### **rows**

Rows of data.

### Signature

```
public List<Map<String, Object>> rows {get; set;}
```

### Property Value

Type: [List<Map<String, Object>>](#)

### **success**

Whether the search or query was successful.

### Signature

```
public Boolean success {get; set;}
```

### Property Value

Type: [Boolean](#)

### **tableName**

Name of the table that was queried.

### Signature

```
public String tableName {get; set;}
```

### Property Value

Type: [String](#)

### **totalSize**

The total number of rows that meet the query criteria, even when the external system is requested to return a smaller batch size.

### Signature

```
public Integer totalSize {get; set;}
```

### Property Value

Type: [Integer](#)

## TableResult Methods

The following are methods for `TableResult`.

## IN THIS SECTION:

[error\(errorMessage\)](#)

Returns failed search or query results with the provided error message.

[get\(success, errorMessage, tableName, rows, totalSize\)](#)Returns a subset of data rows in a `TableResult` with the provided property values and the number of rows in the table.[get\(success, errorMessage, tableName, rows\)](#)Returns a subset of data rows in a `TableResult` with the provided property values.[get\(queryContext, rows\)](#)Returns the subset of data rows that meet the query criteria, and the number of rows in the table, in a `TableResult`.[get\(tableSelection, rows\)](#)Returns the subset of data rows that meet the query criteria, and the number of rows in the table, in a `TableResult`.**error(errorMessage)**

Returns failed search or query results with the provided error message.

## Signature

```
public static DataSource.TableResult error(String errorMessage)
```

## Parameters

*errorMessage*Type: [String](#)*errorMessage*

## Return Value

Type: [DataSource.TableResult](#)The returned `TableResult` has these property values.

Property	Value
success	false
errorMessage	<i>errorMessage</i>
tableName	null
rows	null
rows.size()	0

**get(success, errorMessage, tableName, rows, totalSize)**Returns a subset of data rows in a `TableResult` with the provided property values and the number of rows in the table.

## Signature

```
public static DataSource.TableResult get(Boolean success, String errorMessage, String
tableName, List<Map<String, Object>> rows, Integer totalSize)
```

## Parameters

*success*

Type: [Boolean](#)

Whether the search or query was successful.

*errorMessage*

Type: [String](#)

errorMessage

*tableName*

Type: [String](#)

Name of the table that was queried.

*rows*

Type: [List<Map<String, Object>>](#)

Rows of data.

*totalSize*

Type: [Integer](#)

The total number of rows that meet the query criteria, even when the external system is requested to return a smaller batch size.

## Return Value

Type: [DataSource.TableResult](#)

### **get(success, errorMessage, tableName, rows)**

Returns a subset of data rows in a `TableResult` with the provided property values.

## Signature

```
public static DataSource.TableResult get(Boolean success, String errorMessage, String
tableName, List<Map<String, Object>> rows)
```

## Parameters

*success*

Type: [Boolean](#)

Whether the search or query was successful.

*errorMessage*

Type: [String](#)

errorMessage

*tableName*

Type: [String](#)

Name of the table that was queried.

*rows*

Type: [List<Map<String, Object>>](#)

Rows of data.

## Return Value

Type: [DataSource.TableResult](#)

### **get(queryContext, rows)**

Returns the subset of data rows that meet the query criteria, and the number of rows in the table, in a `TableResult`.

## Signature

```
public static DataSource.TableResult get(DataSource.QueryContext queryContext,  
List<Map<String, Object>> rows)
```

## Parameters

*queryContext*

Type: [DataSource.QueryContext](#)

Represents the query to run against a data table.

*rows*

Type: [List<Map<String, Object>>](#)

Rows of data.

## Return Value

Type: [DataSource.TableResult](#)

### **get(tableSelection, rows)**

Returns the subset of data rows that meet the query criteria, and the number of rows in the table, in a `TableResult`.

## Signature

```
public static DataSource.TableResult get(DataSource.TableSelection tableSelection,  
List<Map<String, Object>> rows)
```

## Parameters

*tableSelection*

Type: [DataSource.TableSelection](#)

Query details that represent the `FROM`, `ORDER BY`, `SELECT`, and `WHERE` clauses in a SOQL or SOSL query.

*rows*

Type: [List<Map<String, Object>>](#)

Rows of data.

## Return Value

Type: [DataSource.TableResult](#)

# TableSelection Class

Contains a breakdown of the SOQL or SOSL query. Its properties represent the FROM, ORDER BY, SELECT, and WHERE clauses in the query.

## Namespace

[DataSource](#)

IN THIS SECTION:

[TableSelection Properties](#)

## TableSelection Properties

The following are properties for `TableSelection`.

IN THIS SECTION:

[columnsSelected](#)

List of columns to query. Corresponds to the `SELECT` clause in a SOQL or SOSL query.

[filter](#)

Identifies the query filter, which can be a compound filter that has a list of subfilters. The filter corresponds to the `WHERE` clause in a SOQL or SOSL query.

[order](#)

Identifies the order for sorting the query results. Corresponds to the `ORDER BY` clause in a SOQL or SOSL query.

[tableSelected](#)

Name of the table to query. Corresponds to the `FROM` clause in a SOQL or SOSL query.

### **columnsSelected**

List of columns to query. Corresponds to the `SELECT` clause in a SOQL or SOSL query.

## Signature

```
public List<DataSource.ColumnSelection> columnsSelected {get; set;}
```

## Property Value

Type: List<[DataSource.ColumnSelection](#)>

### **filter**

Identifies the query filter, which can be a compound filter that has a list of subfilters. The filter corresponds to the `WHERE` clause in a SOQL or SOSL query.

### Signature

```
public DataSource.Filter filter {get; set;}
```

### Property Value

Type: [DataSource.Filter](#)

### **order**

Identifies the order for sorting the query results. Corresponds to the `ORDER BY` clause in a SOQL or SOSL query.

### Signature

```
public List<DataSource.Order> order {get; set;}
```

### Property Value

Type: [List<DataSource.Order>](#)

### **tableSelected**

Name of the table to query. Corresponds to the `FROM` clause in a SOQL or SOSL query.

### Signature

```
public String tableSelected {get; set;}
```

### Property Value

Type: [String](#)

## UpsertContext Class

An instance of `UpsertContext` is passed to the `upsertRows()` method on your `DataSource.Connection` class. This class provides context information about the upsert request to the implementor of `upsertRows()`.

## Namespace

[DataSource](#)

## Usage

The Apex Connector Framework creates the context for operations. Context is comprised of parameters about the operations, which other methods can use. An instance of the `UpsertContext` class packages these parameters into an object that can be used when an `upsertRows()` operation is initiated.

### IN THIS SECTION:

[UpsertContext Properties](#)

## UpsertContext Properties

The following are properties for `UpsertContext`.

### IN THIS SECTION:

#### [rows](#)

List of rows corresponding to the external object records to upsert.

#### [tableSelected](#)

The name of the table to upsert rows in.

#### **rows**

List of rows corresponding to the external object records to upsert.

### Signature

```
public List<Map<String,ANY>> rows {get; set;}
```

### Property Value

Type: `List<Map<String,Object>>`

#### **tableSelected**

The name of the table to upsert rows in.

### Signature

```
public String tableSelected {get; set;}
```

### Property Value

Type: `String`

## UpsertResult Class

Represents the result of an upsert operation on an external object record. The result is returned by the `upsertRows` method of the `DataSource.Connection` class.

## Namespace

[DataSource](#)

## Usage

An upsert operation on external object records generates an array of objects of type `DataSource.UpsertResult`. Its methods create result records that indicate whether the upsert operation succeeded or failed.

## IN THIS SECTION:

[UpsertResult Properties](#)[UpsertResult Methods](#)

## UpsertResult Properties

The following are properties for `UpsertResult`.

## IN THIS SECTION:

[errorMessage](#)

The error message that's generated by a failed upsert operation.

[externalId](#)

The unique identifier of a row that represents an external object record to upsert.

[success](#)

Indicates whether a delete operation succeeded or failed.

### **errorMessage**

The error message that's generated by a failed upsert operation.

### Signature

```
public String errorMessage {get; set;}
```

### Property Value

Type: [String](#)

### **externalId**

The unique identifier of a row that represents an external object record to upsert.

### Signature

```
public String externalId {get; set;}
```

### Property Value

Type: [String](#)

### **success**

Indicates whether a delete operation succeeded or failed.

### Signature

```
public Boolean success {get; set;}
```

## Property Value

Type: [Boolean](#)

## UpsertResult Methods

The following are methods for `UpsertResult`.

### IN THIS SECTION:

#### [equals\(obj\)](#)

Maintains the integrity of lists of type `UpsertResult` by determining the equality of external object records in a list. This method is dynamic and is based on the `equals` method in Java.

#### [failure\(externalId, errorMessage\)](#)

Creates an upsert result that indicates the failure of a delete request for a given external ID.

#### [hashCode\(\)](#)

Maintains the integrity of lists of type `UpsertResult` by determining the uniqueness of the external object records in a list.

#### [success\(externalId\)](#)

Creates a delete result that indicates the successful completion of an upsert request for a given external ID.

### **equals (obj)**

Maintains the integrity of lists of type `UpsertResult` by determining the equality of external object records in a list. This method is dynamic and is based on the `equals` method in Java.

### Signature

```
public Boolean equals(Object obj)
```

### Parameters

*obj*

Type: Object

External object whose key is to be validated.

### Return Value

Type: [Boolean](#)

### **failure(externalId, errorMessage)**

Creates an upsert result that indicates the failure of a delete request for a given external ID.

### Signature

```
public static DataSource.UpsertResult failure(String externalId, String errorMessage)
```

### Parameters

*externalId*

Type: [String](#)

The unique identifier of the external object record to upsert.

*errorMessage*

Type: [String](#)

The reason the upsert operation failed.

### Return Value

Type: [DataSource.UpsertResult](#)

Status result for the upsert operation.

### hashCode ()

Maintains the integrity of lists of type `UpsertResult` by determining the uniqueness of the external object records in a list.

### Signature

```
public Integer hashCode ()
```

### Return Value

Type: [Integer](#)

### success (externalId)

Creates a delete result that indicates the successful completion of an upsert request for a given external ID.

### Signature

```
public static DataSource.UpsertResult success (String externalId)
```

### Parameters

*externalId*

Type: [String](#)

The unique identifier of the external object record to upsert.

### Return Value

Type: [DataSource.UpsertResult](#)

Status result of the upsert operation for the external object record with the given external ID.

## DataSource Exceptions

The `DataSource` namespace contains exception classes.

All exception classes support built-in methods for returning the error message and exception type. See [Exception Class and Built-In Exceptions](#).

The `DataSource` namespace contains these exceptions.

Exception	Description	Methods
<code>DataSource.DataSourceException</code>	Throw this exception to indicate that an error occurred while communicating with an external data source.	To get the error message and write it to debug log, use the <code>String getMessage()</code> .
<code>DataSource.OAuthTokenExpiredException</code>	Throw this exception to indicate that an OAuth token has expired. The system then attempts to refresh the token automatically and restart the query, search, or sync operation.	To get the error message and write it to debug log, use the <code>String getMessage()</code> .

## DataWeave Namespace

The `DataWeave` namespace provides classes and methods to support the invocation of `DataWeave` scripts from Apex.

`DataWeave` is the MuleSoft expression language for accessing, parsing, and transforming data that travels through a Mule application. For detailed information, see [DataWeave Language](#).

These are the classes in the `DataWeave` namespace.

### IN THIS SECTION:

#### [Result Class](#)

Contains methods to retrieve data that was transformed using `Script` class methods.

#### [Script Class](#)

Contains the `createScript()` method to load `DataWeave` scripts and the `execute()` method to obtain script output in a `DataWeave.Result` object.

### SEE ALSO:

[DataWeave in Apex](#)

## Result Class

Contains methods to retrieve data that was transformed using `Script` class methods.

## Namespace

[DataWeave](#)

## Example

See [Script Class](#) for an example to run a `DataWeave` script from Apex and retrieve the resulting script output.

IN THIS SECTION:

[Result Methods](#)

## Result Methods

The following are methods for `Result`.

IN THIS SECTION:

[getValue\(\)](#)

Returns the result of a DataWeave script execution as an object.

[getValueAsString\(\)](#)

Returns the result of a DataWeave script execution as a string value.

### **getValue ()**

Returns the result of a DataWeave script execution as an object.

#### Signature

```
public Object getValue ()
```

#### Return Value

Type: `Object`

### **getValueAsString ()**

Returns the result of a DataWeave script execution as a string value.

#### Signature

```
public String getValueAsString ()
```

#### Return Value

Type: `String`

## Script Class

Contains the `createScript ()` method to load DataWeave scripts and the `execute ()` method to obtain script output in a `DataWeave.Result` object.

## Namespace

[DataWeave](#)

This example runs a DataWeave script from Apex and retrieves the resulting script output. First deploy the script to the org as `ContactsToJson.dwl`.

```
%dw 2.0
input records application/java
output application/json
---
{
  users: records map(record) -> {
    firstName: record.FirstName,
    lastName: record.LastName
  }
}
```

Then, execute the script from Apex.

```
List<Contact> data = [SELECT FirstName, LastName FROM Contact WHERE LastName LIMIT 5];
Map<String, Object> args = new Map<String, Object>{ 'records' => data };
DataWeave.Script script = DataWeave.Script.createScript('ContactsToJson');

DataWeave.Result result = script.execute(args);
string jsonOutput = result.getValueAsString();
```

IN THIS SECTION:

[Script Methods](#)

## Script Methods

The following are methods for `Script`.

IN THIS SECTION:

[createScript\(scriptName\)](#)

Loads a DataWeave 2.0 script from the `.dwl` metadata file that is deployed in an org. The script can then be run using the `Script.execute` method.

[createScript\(namespace, scriptName\)](#)

Loads a DataWeave 2.0 script from a specified namespace. The script can then be run using the `Script.execute` method.

[execute\(parameters\)](#)

Executes the DataWeave script that is loaded using the `createScript()` method and returns the script output.

[toString\(\)](#)

Returns the name of the script.

### **createScript(scriptName)**

Loads a DataWeave 2.0 script from the `.dwl` metadata file that is deployed in an org. The script can then be run using the `Script.execute` method.

### Signature

```
public static createScript(String scriptName)
```

## Parameters

*scriptName*

Type: [String](#)

The name of the deployed metadata .dw1 script (not including the file extension).

## Return Value

Type: [DataWeave.Script](#)

DataWeave script that is used as a parameter in the `Script.execute()` method.

## **createScript(namespace, scriptName)**

Loads a DataWeave 2.0 script from a specified namespace. The script can then be run using the `Script.execute` method.

## Signature

```
public static dataweave.Script createScript(String namespace, String scriptName)
```

## Parameters

*namespace*

Type: [String](#)

The namespace name for the deployed script. If the namespace name is null, the caller namespace is used. If the namespace name is empty, the org namespace is used.

*scriptName*

Type: [String](#)

The name of the deployed metadata .dw1 script (not including the file extension).

## Return Value

Type: [DataWeave.Script](#)

DataWeave script that is used as a parameter in the `Script.execute()` method.

## **execute(parameters)**

Executes the DataWeave script that is loaded using the `createScript()` method and returns the script output.

## Signature

```
public execute(Map<String, Object> parameters)
```

## Parameters

*parameters*

Type: `Map<String, Object>`

Input to the DataWeave script. The keys correspond to the input directive names defined in the DataWeave header.

See [Input Directive](#) and [DataWeave Header](#).

## Return Value

Type: [DataWeave.Result](#)

The `DataWeave.Result` object contains the script output.

## `toString()`

Returns the name of the script.

## Signature

```
public String toString()
```

## Return Value

Type: [String](#)

# Dom Namespace

---

The `Dom` namespace provides classes and methods for parsing and creating XML content.

The following are the classes in the `Dom` namespace.

### IN THIS SECTION:

#### [Document Class](#)

Use the `Document` class to process XML content. You can parse nested XML content that's up to 50 nodes deep.

#### [XmlNode Class](#)

Use the `XmlNode` class to work with a node in an XML document.

#### [XmlNodeType Enum](#)

Specifies the node type in an XML document.

## Document Class

Use the `Document` class to process XML content. You can parse nested XML content that's up to 50 nodes deep.

## Namespace

[Dom](#)

## Usage

One common application is to use it to create the body of a request for [HttpRequest](#) or to parse a response accessed by [HttpResponse](#).

### IN THIS SECTION:

#### [Document Constructors](#)

[Document Methods](#)

SEE ALSO:

[Reading and Writing XML Using the DOM](#)

## Document Constructors

The following are constructors for `Document`.

IN THIS SECTION:

[Document\(\)](#)

Creates a new instance of the `Dom.Document` class.

### **Document ()**

Creates a new instance of the `Dom.Document` class.

### Signature

```
public Document ()
```

## Document Methods

The following are methods for `Document`. All are instance methods.

IN THIS SECTION:

[createRootElement\(name, namespace, prefix\)](#)

Creates the top-level root element for a document.

[getRootElement\(\)](#)

Returns the top-level root element node in the document. If this method returns `null`, the root element has not been created yet.

[load\(xml\)](#)

Parse the XML representation of the document specified in the `xml` argument and load it into a document.

[toXmlString\(\)](#)

Returns the XML representation of the document as a `String`.

### **createRootElement(name, namespace, prefix)**

Creates the top-level root element for a document.

### Signature

```
public Dom.XmlNode createRootElement(String name, String namespace, String prefix)
```

## Parameters

*name*

Type: [String](#)

*namespace*

Type: [String](#)

*prefix*

Type: [String](#)

## Return Value

Type: [Dom.XmlNode](#)

## Usage

For more information about namespaces, see [Reading and Writing XML Using the DOM](#).

Calling this method more than once on a document generates an error as a document can have only one root element.

### **getRootElement()**

Returns the top-level root element node in the document. If this method returns `null`, the root element has not been created yet.

## Signature

```
public Dom.XmlNode getRootElement()
```

## Return Value

Type: [Dom.XmlNode](#)

### **load(xml)**

Parse the XML representation of the document specified in the `xml` argument and load it into a document.

## Signature

```
public Void load(String xml)
```

## Parameters

*xml*

Type: [String](#)

## Return Value

Type: `Void`

## Example

```
Dom.Document doc = new Dom.Document();  
doc.load(xml);
```

## toXmlString()

Returns the XML representation of the document as a String.

## Signature

```
public String toXmlString()
```

## Return Value

Type: [String](#)

# XmlNode Class

Use the `XmlNode` class to work with a node in an XML document.

## Namespace

[Dom](#)

## XmlNode Methods

The following are methods for `XmlNode`. All are instance methods.

### IN THIS SECTION:

[addChildElement\(name, namespace, prefix\)](#)

Creates a child element node for this node.

[addCommentNode\(text\)](#)

Creates a child comment node for this node.

[addTextNode\(text\)](#)

Creates a child text node for this node.

[getAttribute\(key, keyNamespace\)](#)

Returns *namespacePrefix:attributeValue* for the given key and key namespace.

[getAttributeCount\(\)](#)

Returns the number of attributes for this node.

[getAttributeKeyAt\(index\)](#)

Returns the attribute key for the given index. Index values start at 0.

[getAttributeKeyNsAt\(index\)](#)

Returns the attribute key namespace for the given index.

[getAttributeValue\(key, keyNamespace\)](#)

Returns the attribute value for the given key and key namespace.

[getAttributeValueNs\(key, keyNamespace\)](#)

Returns the attribute value namespace for the given key and key namespace.

[getChildElement\(name, namespace\)](#)

Returns the child element node for the node with the given name and namespace.

[getChildElements\(\)](#)

Returns the child element nodes for this node. This doesn't include child text or comment nodes.

[getChildren\(\)](#)

Returns the child nodes for this node. This includes all node types.

[getName\(\)](#)

Returns the element name.

[getNamespace\(\)](#)

Returns the namespace of the element.

[getNamespaceFor\(prefix\)](#)

Returns the namespace of the element for the given prefix.

[getNodeType\(\)](#)

Returns the node type.

[getParent\(\)](#)

Returns the parent of this element.

[getPrefixFor\(namespace\)](#)

Returns the prefix of the given namespace.

[getText\(\)](#)

Returns the text for this node.

[insertBefore\(newChild, refChild\)](#)

Inserts a new child node before the specified node.

[removeAttribute\(key, keyNamespace\)](#)

Removes the attribute with the given key and key namespace. Returns `true` if successful, `false` otherwise.

[removeChild\(childNode\)](#)

Removes the given child node.

[setAttribute\(key, value\)](#)

Sets the key attribute value.

[setAttributeNs\(key, value, keyNamespace, valueNamespace\)](#)

Sets the key attribute value.

[setNamespace\(prefix, namespace\)](#)

Sets the namespace for the given prefix.

**addChildElement(name, namespace, prefix)**

Creates a child element node for this node.

## Signature

```
public Dom.XmlNode addChildElement(String name, String namespace, String prefix)
```

## Parameters

*name*

Type: [String](#)

The *name* argument can't have a `null` value.

*namespace*

Type: [String](#)

*prefix*

Type: [String](#)

## Return Value

Type: [Dom.XmlNode](#)

## Usage

- If the *namespace* argument has a non-`null` value and the *prefix* argument is `null`, the namespace is set as the default namespace.
- If the *prefix* argument is `null`, Salesforce automatically assigns a prefix for the element. The format of the automatic prefix is `nsi`, where *i* is a number. If the *prefix* argument is `'`, the namespace is set as the default namespace.

### **addCommentNode (text)**

Creates a child comment node for this node.

## Signature

```
public Dom.XmlNode addCommentNode(String text)
```

## Parameters

*text*

Type: [String](#)

The *text* argument can't have a `null` value.

## Return Value

Type: [Dom.XmlNode](#)

### **addTextNode (text)**

Creates a child text node for this node.

## Signature

```
public Dom.XmlNode addTextNode(String text)
```

## Parameters

*text*

Type: [String](#)

The *text* argument can't have a `null` value.

## Return Value

Type: [Dom.XmlNode](#)

## **getAttribute(key, keyNamespace)**

Returns *namespacePrefix:attributeValue* for the given key and key namespace.

## Signature

```
public String getAttribute(String key, String keyNamespace)
```

## Parameters

*key*

Type: [String](#)

*keyNamespace*

Type: [String](#)

## Return Value

Type: [String](#)

## Example

For example, for the `<xyz a:b="c:d" />` element:

- `getAttribute` returns `c:d`
- `getAttributeValue` returns `d`

## **getAttributeCount()**

Returns the number of attributes for this node.

## Signature

```
public Integer getAttributeCount()
```

## Return Value

Type: [Integer](#)

**getAttributeKeyAt (index)**

Returns the attribute key for the given index. Index values start at 0.

**Signature**

```
public String getAttributeKeyAt(Integer index)
```

**Parameters**

*index*  
Type: [Integer](#)

**Return Value**

Type: [String](#)

**getAttributeKeyNsAt (index)**

Returns the attribute key namespace for the given index.

**Signature**

```
public String getAttributeKeyNsAt(Integer index)
```

**Parameters**

*index*  
Type: [Integer](#)

**Return Value**

Type: [String](#)

**getAttributeValue (key, keyNamespace)**

Returns the attribute value for the given key and key namespace.

**Signature**

```
public String getAttributeValue(String key, String keyNamespace)
```

**Parameters**

*key*  
Type: [String](#)

*keyNamespace*  
Type: [String](#)

## Return Value

Type: [String](#)

## Example

For example, for the `<xyz a:b="c:d" />` element:

- `getAttribute` returns `c:d`
- `getAttributeValue` returns `d`

## **getAttributeValueNs(key, keyNamespace)**

Returns the attribute value namespace for the given key and key namespace.

## Signature

```
public String getAttributeValueNs(String key, String keyNamespace)
```

## Parameters

*key*

Type: [String](#)

*keyNamespace*

Type: [String](#)

## Return Value

Type: [String](#)

## **getChildElement(name, namespace)**

Returns the child element node for the node with the given name and namespace.

## Signature

```
public Dom.XmlNode getChildElement(String name, String namespace)
```

## Parameters

*name*

Type: [String](#)

*namespace*

Type: [String](#)

## Return Value

Type: [Dom.XmlNode](#)

**getChildElements ()**

Returns the child element nodes for this node. This doesn't include child text or comment nodes.

**Signature**

```
public Dom.XmlNode[] getChildElements ()
```

**Return Value**

Type: [Dom.XmlNode\[\]](#)

**getChildren ()**

Returns the child nodes for this node. This includes all node types.

**Signature**

```
public Dom.XmlNode[] getChildren ()
```

**Return Value**

Type: [Dom.XmlNode\[\]](#)

**getName ()**

Returns the element name.

**Signature**

```
public String getName ()
```

**Return Value**

Type: [String](#)

**getNamespace ()**

Returns the namespace of the element.

**Signature**

```
public String getNamespace ()
```

**Return Value**

Type: [String](#)

**getNamespaceFor (prefix)**

Returns the namespace of the element for the given prefix.

### Signature

```
public String getNamespaceFor(String prefix)
```

### Parameters

*prefix*

Type: [String](#)

### Return Value

Type: [String](#)

### **getNodeType ()**

Returns the node type.

### Signature

```
public Dom.XmlNodeType getNodeType ()
```

### Return Value

Type: [Dom.XmlNodeType](#)

Uses `XmlNodeType` enum to return `COMMENT`, `ELEMENT`, or `TEXT` as the node type.

### **getParent ()**

Returns the parent of this element.

### Signature

```
public Dom.XmlNode getParent ()
```

### Return Value

Type: [Dom.XmlNode](#)

### **getPrefixFor (namespace)**

Returns the prefix of the given namespace.

### Signature

```
public String getPrefixFor(String namespace)
```

### Parameters

*namespace*

Type: [String](#)

The *namespace* argument can't have a `null` value.

## Return Value

Type: [String](#)

### **getText()**

Returns the text for this node.

## Signature

```
public String getText()
```

## Return Value

Type: [String](#)

### **insertBefore(newChild, refChild)**

Inserts a new child node before the specified node.

## Signature

```
public Dom.XmlNode insertBefore(Dom.XmlNode newChild, Dom.XmlNode refChild)
```

## Parameters

*newChild*

Type: [Dom.XmlNode](#)

The node to insert.

*refChild*

Type: [Dom.XmlNode](#)

The node before the new node.

## Return Value

Type: [Dom.XmlNode](#)

## Usage

- If *refChild* is `null`, *newChild* is inserted at the end of the list.
- If *refChild* doesn't exist, an exception is thrown.

### **removeAttribute(key, keyNamespace)**

Removes the attribute with the given key and key namespace. Returns `true` if successful, `false` otherwise.

## Signature

```
public Boolean removeAttribute(String key, String keyNamespace)
```

## Parameters

*key*

Type: [String](#)

*keyNamespace*

Type: [String](#)

## Return Value

Type: [Boolean](#)

### **removeChild(childNode)**

Removes the given child node.

## Signature

```
public Boolean removeChild(Dom.XmlNode childNode)
```

## Parameters

*childNode*

Type: [Dom.XmlNode](#)

## Return Value

Type: [Boolean](#)

### **setAttribute(key, value)**

Sets the key attribute value.

## Signature

```
public Void setAttribute(String key, String value)
```

## Parameters

*key*

Type: [String](#)

*value*

Type: [String](#)

## Return Value

Type: [Void](#)

### **setAttributeNs(key, value, keyNamespace, valueNamespace)**

Sets the key attribute value.

## Signature

```
public Void setAttributeNs(String key, String value, String keyNamespace, String valueNamespace)
```

## Parameters

*key*

Type: [String](#)

*value*

Type: [String](#)

*keyNamespace*

Type: [String](#)

*valueNamespace*

Type: [String](#)

## Return Value

Type: Void

## **setNamespace (prefix, namespace)**

Sets the namespace for the given prefix.

## Signature

```
public Void setNamespace(String prefix, String namespace)
```

## Parameters

*prefix*

Type: [String](#)

*namespace*

Type: [String](#)

## Return Value

Type: Void

# XmlNodeType Enum

Specifies the node type in an XML document.

## Usage

Use `XmlNodeType` enum with the `getNodeType()` method in the `XmlNode` class.

## Enum Values

The following are the values of the `Dom.XMLNodeType` enum.

Value	Description
COMMENT	Dom node of type comment.
ELEMENT	Dom node of type element.
TEXT	Dom node of type text.

## EventBus Namespace

---

The `EventBus` namespace provides classes and methods for platform events and Change Data Capture events.

The following are the classes in the `EventBus` namespace.

### IN THIS SECTION:

#### [ChangeEventHeader Class](#)

Contains header fields of Change Data Capture events.

#### [EventPublishFailureCallback Interface](#)

Implement this interface to track platform event messages that failed to publish. The `onFailure()` method in this interface is called when the final result of the asynchronous publish operation becomes available.

#### [EventPublishSuccessCallback Interface](#)

Implement this interface to track platform event messages that were published successfully. The `onSuccess()` method in this interface is called when the final result of the asynchronous publish operation becomes available.

#### [FailureResult Interface](#)

Contains the result of an Apex publish callback when the event publishing failed. This interface is used as a parameter in the `onFailure` method of the `EventPublishFailureCallback` interface.

#### [SuccessResult Interface](#)

Contains the result of an Apex publish callback when the event publishing succeeded. This interface is used as a parameter in the `onSuccess` method of the `EventPublishSuccessCallback` interface.

#### [TestBroker Class](#)

Contains methods that simulate the successful delivery or failed publishing of platform event or change event messages in an Apex test.

#### [TriggerContext Class](#)

Provides information about the platform event or change event trigger that's currently executing, such as how many times the trigger was retried due to the `EventBus.RetryableException`. Also, provides a method to resume trigger executions.

### SEE ALSO:

[Platform Events Developer Guide](#)

# ChangeEventHeader Class

Contains header fields of Change Data Capture events.

## Namespace

[EventBus](#)

### IN THIS SECTION:

[ChangeEventHeader Properties](#)

### SEE ALSO:

[Change Data Capture Developer Guide](#)

## ChangeEventHeader Properties

The following are properties for `ChangeEventHeader`.

### IN THIS SECTION:

#### [changedfields](#)

A list of the fields that were changed in an update operation, including the `LastModifiedDate` system field. This field is empty for other operations, including record creation. This property is available in Apex saved using API version 47.0 or later.

#### [changeorigin](#)

Only populated for changes done by API apps or from Lightning Experience; empty otherwise. The Salesforce API and the API client ID that initiated the change, if set by the client. Use this field to detect whether your app initiated the change to not process the change again and potentially avoid a deep cycle of changes.

#### [changetype](#)

The operation that caused the change.

#### [commitnumber](#)

The system change number (SCN) of a committed transaction, which increases sequentially. This field is provided for diagnostic purposes. The field value is not guaranteed to be unique in Salesforce—it is unique only in a single database instance. If your Salesforce org migrates to another database instance, the commit number might not be unique or sequential.

#### [committimestamp](#)

The date and time when the change occurred, represented as the number of milliseconds since January 1, 1970 00:00:00 GMT.

#### [commituser](#)

The ID of the user that ran the change operation.

#### [difffields](#)

Contains the names of fields whose values are sent as a unified diff because they contain large text values.

#### [entityname](#)

The API name of the standard or custom object that the change pertains to. For example, `Account` or `MyObject__c`.

#### [nulledfields](#)

Contains the names of fields whose values were changed to null in an update operation. Use this field in Apex change event messages to determine if a field was changed to null in an update and isn't an unchanged field.

[recordids](#)

One or more record IDs for the changed records. Typically, this field contains one record ID. If in one transaction the same change occurred in multiple records of the same object type during one second, Salesforce merges the change notifications. In this case, Salesforce sends one change event for all affected records and the `recordids` field contains the IDs for all records that have the same change.

[sequencenumber](#)

The sequence of the change within a transaction. The sequence number starts from 1.

[transactionkey](#)

A string that uniquely identifies each Salesforce transaction. You can use this key to identify and group all changes that were made in the same transaction.

**changedfields**

A list of the fields that were changed in an update operation, including the `LastModifiedDate` system field. This field is empty for other operations, including record creation. This property is available in Apex saved using API version 47.0 or later.

**Signature**

```
public List<String> changedfields {get; set;}
```

**Property Value**

Type: [List<String>](#)

**changeorigin**

Only populated for changes done by API apps or from Lightning Experience; empty otherwise. The Salesforce API and the API client ID that initiated the change, if set by the client. Use this field to detect whether your app initiated the change to not process the change again and potentially avoid a deep cycle of changes.

**Signature**

```
public String changeorigin {get; set;}
```

**Property Value**

Type: [String](#)

The format of the `changeOrigin` field value is:

```
com/salesforce/api/<API_Name>/<API_Version>;client=<Client_ID>
```

- `<API_Name>` is the name of the Salesforce API used to make the data change. It can take one of these values: `soap`, `rest`, `bulkapi`, `xmlrpc`, `oldsoap`, `toolingsoap`, `toolingrest`, `apex`, `apexdebuggerrest`.
- `<API_Version>` is the version of the API call that made the change and is in the format `XX.X`.
- `<Client_ID>` is a string that contains the client ID of the app that initiated the change. If the client ID is not set in the API call, `client=<Client_ID>` is not appended to the `changeOrigin` field.

**Example:**

```
com/salesforce/api/soap/49.0;client=Astro
```

The client ID is set in the Call Options header of an API call. For an example on how to set the Call Options header, see:

- REST API: [Sforce-Call-Options Header](#). (Bulk API also uses the Sforce-Call-Options header.)
- SOAP API: [CallOptions Header](#). (Apex API also uses the CallOptions element.)

### **changetype**

The operation that caused the change.

### Signature

```
public String changetype {get; set;}
```

### Property Value

Type: [String](#)

Can be one of the following values:

- CREATE
- UPDATE
- DELETE
- UNDELETE
- SNAPSHOT (reserved for future use)

For gap events, the change type starts with the GAP\_ prefix.

- GAP\_CREATE
- GAP\_UPDATE
- GAP\_DELETE
- GAP\_UNDELETE

For overflow events, the change type is GAP\_OVERFLOW.

### **commitnumber**

The system change number (SCN) of a committed transaction, which increases sequentially. This field is provided for diagnostic purposes. The field value is not guaranteed to be unique in Salesforce—it is unique only in a single database instance. If your Salesforce org migrates to another database instance, the commit number might not be unique or sequential.

### Signature

```
public Long commitnumber {get; set;}
```

### Property Value

Type: [Long](#)

### **committimestamp**

The date and time when the change occurred, represented as the number of milliseconds since January 1, 1970 00:00:00 GMT.

### Signature

```
public Long committimestamp {get; set;}
```

### Property Value

Type: [Long](#)

### **commituser**

The ID of the user that ran the change operation.

### Signature

```
public String commituser {get; set;}
```

### Property Value

Type: [String](#)

### **difffields**

Contains the names of fields whose values are sent as a unified diff because they contain large text values.

### Signature

```
public List<String> difffields {get; set;}
```

### Property Value

Type: [List<String>](#)

SEE ALSO:

[Change Data Capture Developer Guide: Sending Data Differences for Fields of Updated Records](#)

### **entityname**

The API name of the standard or custom object that the change pertains to. For example, Account or MyObject\_\_c.

### Signature

```
public String entityname {get; set;}
```

### Property Value

Type: [String](#)

### **nulledfields**

Contains the names of fields whose values were changed to null in an update operation. Use this field in Apex change event messages to determine if a field was changed to null in an update and isn't an unchanged field.

## Signature

```
public List<String> nulledfields {get; set;}
```

## Property Value

Type: List<String>

## **recordids**

One or more record IDs for the changed records. Typically, this field contains one record ID. If in one transaction the same change occurred in multiple records of the same object type during one second, Salesforce merges the change notifications. In this case, Salesforce sends one change event for all affected records and the `recordids` field contains the IDs for all records that have the same change.

## Signature

```
public List<String> recordids {get; set;}
```

## Property Value

Type: List<String>

Examples of operations with same changes are:

- Update of fieldA to valueA in Account records.
- Deletion of Account records.
- Renaming or replacing a picklist value that results in updating the field value in all affected records.

The `recordids` field can contain a wildcard value when a change event message is generated for custom field type conversions that cause data loss. In this case, the `recordids` value is the three-character prefix of the object, followed by the wildcard character `*`. For example, for accounts, the value is `001*`.

## **sequencenumber**

The sequence of the change within a transaction. The sequence number starts from 1.

## Signature

```
public Integer sequencenumber {get; set;}
```

## Property Value

Type: [Integer](#)

A lead conversion is an example of a transaction that can have multiple changes. A lead conversion results in the following sequence of changes, all within the same transaction.

1. Create an account
2. Create a contact
3. Create an opportunity
4. Update a lead

**transactionkey**

A string that uniquely identifies each Salesforce transaction. You can use this key to identify and group all changes that were made in the same transaction.

**Signature**

```
public String transactionkey {get; set;}
```

**Property Value**

Type: [String](#)

## EventPublishFailureCallback Interface

Implement this interface to track platform event messages that failed to publish. The `onFailure()` method in this interface is called when the final result of the asynchronous publish operation becomes available.

## Namespace

[EventBus](#)

## Usage

For more information, see [Get the Result of Asynchronous Platform Event Publishing with Apex Publish Callbacks](#) in the *Platform Events Developer Guide*.

**IN THIS SECTION:**

[EventPublishFailureCallback Methods](#)

[EventPublishFailureCallback Example Implementation](#)

## EventPublishFailureCallback Methods

The following are methods for `EventPublishFailureCallback`.

**IN THIS SECTION:**

[onFailure\(result\)](#)

The system invokes this method when the final result of `EventBus.publish` is available and the publishing of the platform event message failed.

**onFailure(result)**

The system invokes this method when the final result of `EventBus.publish` is available and the publishing of the platform event message failed.

## Signature

```
public void onFailure(eventbus.FailureResult result)
```

## Parameters

*result*

Type: [EventBus.FailureResult](#)

The final result of `EventBus.publish`.

## Return Value

Type: void

## EventPublishFailureCallback Example Implementation

For an example implementation and a test class, see [Get the Result of Asynchronous Platform Event Publishing with Apex Publish Callbacks](#) in the *Platform Events Developer Guide*.

## EventPublishSuccessCallback Interface

Implement this interface to track platform event messages that were published successfully. The `onSuccess()` method in this interface is called when the final result of the asynchronous publish operation becomes available.

## Namespace

[EventBus](#)

## Usage

For more information, see [Get the Result of Asynchronous Platform Event Publishing with Apex Publish Callbacks](#) in the *Platform Events Developer Guide*.

### IN THIS SECTION:

[EventPublishSuccessCallback Methods](#)

[EventPublishSuccessCallback Example Implementation](#)

## EventPublishSuccessCallback Methods

The following are methods for `EventPublishSuccessCallback`.

### IN THIS SECTION:

[onSuccess\(result\)](#)

The system invokes this method when the final result of `EventBus.publish` is available and the publishing of the platform event message succeeded.

### **onSuccess (result)**

The system invokes this method when the final result of `EventBus.publish` is available and the publishing of the platform event message succeeded.

### Signature

```
public void onSuccess(eventbus.SuccessResult result)
```

### Parameters

*result*

Type: [EventBus.SuccessResult](#)

The final result of `EventBus.publish`.

### Return Value

Type: void

## EventPublishSuccessCallback Example Implementation

For an example implementation and a test class, see [Get the Result of Asynchronous Platform Event Publishing with Apex Publish Callbacks](#) in the *Platform Events Developer Guide*.

## FailureResult Interface

Contains the result of an Apex publish callback when the event publishing failed. This interface is used as a parameter in the `onFailure` method of the `EventPublishFailureCallback` interface.

## Namespace

[EventBus](#)

IN THIS SECTION:

[FailureResult Methods](#)

## FailureResult Methods

The following are methods for `FailureResult`.

IN THIS SECTION:

[getEventUids\(\)](#)

Returns a list of `EventUuid` field values of each platform event that is included in `EventBus.EventPublishFailureCallback`.

**getEventUids ()**

Returns a list of `EventUuid` field values of each platform event that is included in `EventBus.EventPublishFailureCallback`.

**Signature**

```
public List<String> getEventUids()
```

**Return Value**

Type: [List<String>](#)

## SuccessResult Interface

Contains the result of an Apex publish callback when the event publishing succeeded. This interface is used as a parameter in the `onSuccess` method of the `EventPublishSuccessCallback` interface.

## Namespace

[EventBus](#)

IN THIS SECTION:

[SuccessResult Methods](#)

## SuccessResult Methods

The following are methods for `SuccessResult`.

IN THIS SECTION:

[getEventUids\(\)](#)

Returns a list of `EventUuid` field values of each platform event that is included in the `EventBus.EventPublishSuccessCallback`.

**getEventUids ()**

Returns a list of `EventUuid` field values of each platform event that is included in the `EventBus.EventPublishSuccessCallback`.

**Signature**

```
public List<String> getEventUids()
```

**Return Value**

Type: [List<String>](#)

# TestBroker Class

Contains methods that simulate the successful delivery or failed publishing of platform event or change event messages in an Apex test.

## Namespace

[EventBus](#)

IN THIS SECTION:

[TestBroker Methods](#)

## TestBroker Methods

The following are methods for `TestBroker`.

IN THIS SECTION:

[deliver\(\)](#)

Delivers platform event messages to the test event bus. Use this method to deliver test event messages multiple times and verify that event subscribers have processed the test events each step of the way.

[fail\(\)](#)

Causes the publishing of platform event messages to fail in the test event bus. Use this method to test Apex publish callbacks.

### **deliver()**

Delivers platform event messages to the test event bus. Use this method to deliver test event messages multiple times and verify that event subscribers have processed the test events each step of the way.

### Signature

```
public void deliver()
```

### Return Value

Type: void

### Usage

Enclose `Test.getEventBus().deliver()` within the `Test.startTest()` and `Test.stopTest()` statement block.

```
Test.startTest();  
// Create test events  
// ...  
// Publish test events with EventBus.publish()  
// ...  
// Deliver test events  
Test.getEventBus().deliver();  
// Perform validation
```

```
// ...
Test.stopTest();
```

SEE ALSO:

[Platform Events Developer Guide](#)

### **fail()**

Causes the publishing of platform event messages to fail in the test event bus. Use this method to test Apex publish callbacks.

### Signature

```
public void fail()
```

### Return Value

Type: void

### Usage

```
// Create test events
// ...
// Publish test events with EventBus.publish()
// ...
// Fail publishing of test events
Test.getEventBus().fail();
// Perform validation
// ...
```

For more information, see [Get the Result of Asynchronous Platform Event Publishing with Apex Publish Callbacks](#) in the *Platform Events Developer Guide*.

## TriggerContext Class

Provides information about the platform event or change event trigger that's currently executing, such as how many times the trigger was retried due to the `EventBus.RetryableException`. Also, provides a method to resume trigger executions.

### Namespace

[EventBus](#)

IN THIS SECTION:

[TriggerContext Properties](#)

[TriggerContext Methods](#)

## TriggerContext Properties

The following are properties for `TriggerContext`.

### IN THIS SECTION:

#### [lastError](#)

Read-only. The error message that the last thrown `EventBus.RetryableException` contains.

#### [retries](#)

Read-only. The number of times the trigger was retried due to throwing the `EventBus.RetryableException`.

### **lastError**

Read-only. The error message that the last thrown `EventBus.RetryableException` contains.

### Signature

```
public String lastError {get;}
```

### Property Value

Type: [String](#)

### Usage

The error message that this property returns is the message that was passed in when creating the `EventBus.RetryableException` exception, as follows.

```
throw new EventBus.RetryableException(  
    'Condition is not met, so retrying the trigger again.');
```

### **retries**

Read-only. The number of times the trigger was retried due to throwing the `EventBus.RetryableException`.

### Signature

```
public Integer retries {get;}
```

### Property Value

Type: [Integer](#)

## TriggerContext Methods

The following are methods for `TriggerContext`.

## IN THIS SECTION:

[currentContext\(\)](#)

Returns an instance of the `EventBus.TriggerContext` class containing information about the currently executing trigger.

[getResumeCheckpoint\(\)](#)

Returns the replay ID that was set by `setResumeCheckpoint()`. The returned value is the replay ID of the event message after which trigger processing resumes in a new trigger invocation.

[setResumeCheckpoint\(resumeReplayId\)](#)

Sets a checkpoint in the event stream where the platform event trigger resumes execution in a new invocation. Use this method to recover from limit and uncaught exceptions, or to control the number of events processed in one trigger execution. When calling this method, pass in the replay ID of the last successfully processed event message. When the trigger stops execution before all events in `Trigger.New` are processed, either because of an uncaught exception or intentionally, the trigger is invoked again. The new execution starts with the event message in the stream after the one with the checkpointed Replay ID.

**currentContext()**

Returns an instance of the `EventBus.TriggerContext` class containing information about the currently executing trigger.

**Signature**

```
public static EventBus.TriggerContext currentContext()
```

**Return Value**

Type: [EventBus.TriggerContext](#)

Information about the currently executing trigger.

**getResumeCheckpoint()**

Returns the replay ID that was set by `setResumeCheckpoint()`. The returned value is the replay ID of the event message after which trigger processing resumes in a new trigger invocation.

**Signature**

```
public String getResumeCheckpoint()
```

**Return Value**

Type: [String](#)

**setResumeCheckpoint(resumeReplayId)**

Sets a checkpoint in the event stream where the platform event trigger resumes execution in a new invocation. Use this method to recover from limit and uncaught exceptions, or to control the number of events processed in one trigger execution. When calling this method, pass in the replay ID of the last successfully processed event message. When the trigger stops execution before all events in `Trigger.New` are processed, either because of an uncaught exception or intentionally, the trigger is invoked again. The new execution starts with the event message in the stream after the one with the checkpointed Replay ID.

## Signature

```
public void setResumeCheckpoint(String resumeReplayId)
```

## Parameters

*resumeReplayId*

Type: [String](#)

The replay ID of the last successfully processed platform event message, after which to resume processing in a new trigger execution context.

## Return Value

Type: void

## Usage

The method throws an `EventBus.InvalidReplayIdException` if the supplied Replay ID is not valid—the replay ID is not in the current trigger batch of events, in the `Trigger.new` list.

## Example

This snippet shows how to call the method and pass in the `replayId` property of an event instance.

```
EventBus.TriggerContext.currentContext().setResumeCheckpoint(event.replayId);
```

# ExternalService Namespace

---

The `ExternalService` namespace provides dynamically generated Apex service interfaces and Apex classes for complex object data types.

The `ExternalService` namespace doesn't define a fixed set of classes. The namespace reflects OpenAPI-compatible external service registrations with active operations for type-safe outbound calls. The object schema, in the API specification that is associated with the registered external service, maps to Apex types.

SEE ALSO:

[Salesforce Help: Invoke External Service Callouts Using Apex](#)

# Flow Namespace

---

The `Flow` namespace provides a class for advanced access to flows from Apex such as from Visualforce controllers and asynchronous Apex.

The following is the class in the `Flow` namespace.

IN THIS SECTION:

[Interview Class](#)

The `Flow.Interview` class provides advanced controller access to flows and the ability to start a flow.

## Interview Class

The `Flow.Interview` class provides advanced controller access to flows and the ability to start a flow.

### Namespace

[Flow](#)

### Usage

SOQL and DML limits apply during flow execution. See [Per-Transaction Flow Limits](#) in Salesforce Help.

To create an Interview object, you have two options.

- ✔ **Note:** We recommend only using `createInterview()` if you must reuse your method or class. Using `createInterview()` has these drawbacks.
  - If you package a class that uses `createInterview()`, you have to add the associated flow manually.
  - If you delete a flow, Salesforce doesn't check if it's referenced with `createInterview()`.
- Create the object directly in your class by using:
  - No namespace: `Flow.Interview.flowName`
  - Namespace: `Flow.Interview.namespace.flowName`
- Create the object dynamically by using `createInterview()`

To enforce sharing rules, run the flow or Apex on API version 62.0 or later. The Apex class must be declared using the `with sharing` keyword. The flow runs more securely in the default context when an Apex class that's declared using the `with sharing` keyword launches an autolaunched flow. The flow enforces the sharing rules of the user that executes the Apex class. Data access is restricted to the sharing rules of the user that executed the Apex class. For example, a query can return fewer rows than it did in system context without sharing. An operation can fail because the user doesn't have the correct permissions.

### Examples: Starting Flow Interviews

These examples are all sample controllers that start an interview for the flow from the [Build a Discount Calculator](#) project on Trailhead. Each shows a different permutation, based on:

- Whether the interview is created statically, with `Flow.Interview.myFlow`, or dynamically, with `createInterview()`.
- Whether the flow is managed or local.

Interview Created Statically for a Local Flow

```
{
  Map<String, Object> inputs = new Map<String, Object>();
  inputs.put('AccountID', myAccount);
  inputs.put('OpportunityID', myOppty);

  Flow.Interview.Calculate_discounts myFlow =
    new Flow.Interview.Calculate_discounts(inputs);
  myFlow.start();
}
```

## Interview Created Dynamically for a Local Flow

```
public void callFlow(String flowName, Map <String, Object> inputs) {
    Flow.Interview myFlow = Flow.Interview.createInterview(flowName, inputs);
    myFlow.start();
}
```

## Interview Created Statically for a Managed Flow

```
{
    Map<String, Object> inputs = new Map<String, Object>();
    inputs.put('AccountID', myAccount);
    inputs.put('OpportunityID', myOppty);

    Flow.Interview.myNamespace.Calculate_discounts myFlow =
        new Flow.Interview.myNamespace.Calculate_discounts(inputs);
    myFlow.start();
}
```

## Interview Created Dynamically for a Managed Flow

```
public void callFlow(String namespace, String flowName, Map <String, Object> inputs) {
    Flow.Interview myFlow = Flow.Interview.createInterview(namespace, flowName, inputs);
    myFlow.start();
}
```

## Example: Getting Variable Values

This sample uses the `getVariableValue` method to obtain breadcrumb (navigation) information from a flow. If that flow contains subflow elements, and each of the referenced flows also contains a `vaBreadcrumb` variable, you can provide users with breadcrumbs regardless of which flow the interview is running.

```
public class SampleController {

    //Instance of the flow
    public Flow.Interview.Flow_Template_Gallery myFlow {get; set;}

    public String getBreadcrumb() {
        String aBreadcrumb;
        if (myFlow==null) { return 'Home';}
        else aBreadcrumb = (String) myFlow.getVariableValue('vaBreadcrumb');

        return(aBreadcrumb==null ? 'Home': aBreadcrumb);
    }
}
```

## SEE ALSO:

[Tooling API Objects: FlowTestCoverage](#)

[Apex Developer Guide: Add a Test Class](#)

## Interview Methods

The following are instance methods for `Interview`.

### **`createInterview(namespace, flowName, inputVariables)`**

Creates an interview for a namespaced flow.

### Signature

```
public static Flow.Interview createInterview(String namespace, String flowName,
Map<String, ANY> inputVariables)
```

### Parameters

*namespace*

Type: `String`

The flow's namespace.

*flowName*

Type: `String`

The flow's API name.

*inputVariables*

Type: `Map<String, Object>`

Initial values for the flow's input variables.

### Return Value

Type: `Flow.Interview`

### Usage

Use this method to dynamically create a `Flow.Interview` object for the `start()` method.

How you get output variable values from an interview depends on the type of the Apex variable where you're storing the interview.

- If the variable is cast to a specific flow, you can use `myFlow.myVar` to access a variable, where `myVar` is the name of the variable.

```
system.debug('My Output Variable: ' + myFlow.varName);
```

- If the variable is of type `Flow.Interview` but not cast to a specific flow, you must use `getVariableValue()` to access the flow's variables.

```
system.debug('My Output Variable: ' + myFlow.getVariableValue('varName'));
```

If the flow doesn't exist in the current org, a `TypeException` is thrown.

### **`createInterview(flowName, inputVariables)`**

Creates an interview for a flow.

## Signature

```
public static Flow.Interview createInterview(String flowName, Map<String, Object>
inputVariables)
```

## Parameters

*flowName*

Type: `String`

The flow's API name.

*inputVariables*

Type: `Map<String, Object>`

Initial values for the flow's input variables.

## Return Value

Type: `Flow.Interview`

## Usage

Use this method to dynamically create a `Flow.Interview` object for the `start()` method.

How you get output variable values from an interview depends on the type of the Apex variable where you're storing the interview.

- If the variable is cast to a specific flow, you can use `myFlow.myVar` to access a variable, where `myVar` is the name of the variable.

```
system.debug('My Output Variable: ' + myFlow.varName);
```

- If the variable is of type `Flow.Interview` but not cast to a specific flow, you must use `getVariableValue()` to access the flow's variables.

```
system.debug('My Output Variable: ' + myFlow.getVariableValue('varName'));
```

If the flow doesn't exist in the current org, a `TypeException` is thrown.

## **getVariableValue(variableName)**

Returns the value of the specified flow variable. The flow variable can be in the flow embedded in the Visualforce page, or in a separate flow that is called by a subflow element.

## Signature

```
public Object getVariableValue(String variableName)
```

## Parameters

*variableName*

Type: `String`

Specifies the unique name of the flow variable.

## Return Value

Type: `Object`

## Usage

The returned variable value comes from whichever flow the interview is running. If the specified variable can't be found in that flow, the method returns `null`.

This method checks for the existence of the variable at run time only, not at compile time.

## start ()

Starts an instance (interview) for an autolaunched or user provisioning flow.

## Signature

```
public Void start ()
```

## Return Value

Type: Void

## Usage

This method can be used only with flows that have one of these types.

- Autolaunched Flow
- User Provisioning Flow

For details, see “[Flow Types](#)” in Salesforce Help.

When a flow user invokes an autolaunched flow, the active flow version runs. If there's no active version, the latest version runs. When a flow admin invokes a flow, the latest version always runs.

# FormulaEval Namespace (Beta)

---

The FormulaEval namespace provides classes and methods to evaluate user-defined dynamic formulas for Apex objects and SObject types. Use the methods to avoid unnecessary DML statements to recalculate formula field values or evaluate dynamic formula expressions.

 **Note:** This feature is a Beta Service. Customer may opt to try such Beta Service in its sole discretion. Any use of the Beta Service is subject to the applicable Beta Services Terms provided at [Agreements and Terms](#). You can provide feedback and suggestions for the feature in the [Trailblazer Community](#).

When using a formula against an Apex object, the class methods or properties referenced by the formula must be global. Formula evaluation in Apex is bound by the [formula field character limit](#), but not the compile size limit. Formula fields can reference Apex types such as a location or an address. The values contained in individual components of such Apex types are accessed and evaluated by the formula.

Formula in Apex supports the following System types

- [Address](#)
- [Location](#)
- [URL](#)
- [UUID](#)

The following are the classes and enums in the `FormulaEval` namespace.

## IN THIS SECTION:

[FormulaBuilder Class](#)

Contains methods to build and validate user-defined formulas.

[FormulaGlobal Enum](#)

Specifies a global variable that references data in your organization in the `withGlobalVariables(formulaGlobals)` method.

[FormulaInstance Class](#)

Contains a method to evaluate the formula instance.

[FormulaReturnType Enum](#)

Specifies the return type for the `withReturnType(returnType)` method.

## FormulaBuilder Class

Contains methods to build and validate user-defined formulas.

## Namespace

[FormulaEval](#)

## Usage

Formula functions that are available to use in Apex are ones that can be used in validation rules. For details, see [Formula Operators and Functions by Context](#).

The context type that corresponds to the Apex class used in the builder `withType()` method must be a global, user-defined Apex class. Any fields or properties that the formula references must also be global.

## IN THIS SECTION:

[FormulaBuilder Methods](#)

## FormulaBuilder Methods

The following are methods for `FormulaBuilder`.

## IN THIS SECTION:

[build\(\)](#)

Validates and returns the formula instance created using the `FormulaBuilder` methods.

[treatNumericNullAsZero\(isNumericNullZero\)](#)

Optional. Indicates whether a null for a numeric data type is treated as zero while evaluating the formula with the `build()` method.

[withFormula\(formulaText\)](#)

Required. Sets the formula expression that the `build()` method uses to create the formula instance.

[withGlobalVariables\(formulaGlobals\)](#)

Optional. Sets the list of global variables that can be referenced in the formula expression created with the `build()` method.

[withReturnType\(returnType\)](#)

Required. Sets the formula output data type for the formula instance created with the `build()` method.

[withType\(contextType\)](#)

Sets the Apex type that corresponds to the Apex class used with the `build()` method.

[withType\(contextType\)](#)

Sets the Apex type that corresponds to the Apex class used with the `build()` method to SObject type.

**build()**

Validates and returns the formula instance created using the `FormulaBuilder` methods.

**Signature**

```
public FormulaEval.FormulaInstance build()
```

**Return Value**

Type: [FormulaEval.FormulaInstance](#)

Returns an instance of the `FormulaInstance` object. If the formula validation such as field references, functions, or syntax, fails, the method throws a `FormulaValidationException` exception.

**treatNumericNullAsZero(isNumericNullZero)**

Optional. Indicates whether a null for a numeric data type is treated as zero while evaluating the formula with the `build()` method.

**Signature**

```
public FormulaEval.FormulaBuilder treatNumericNullAsZero(Boolean isNumericNullZero)
```

**Parameters**

*isNumericNullZero*

Type: [Boolean](#)

If `true`, null for numeric is treated as zero. The default value is `false`.

**Return Value**

Type: [FormulaEval.FormulaBuilder](#)

**withFormula(formulaText)**

Required. Sets the formula expression that the `build()` method uses to create the formula instance.

**Signature**

```
public FormulaEval.FormulaBuilder withFormula(String formulaText)
```

## Parameters

*formulaText*

Type: [String](#)

## Return Value

Type: [FormulaEval.FormulaBuilder](#)

### **withGlobalVariables (formulaGlobals)**

Optional. Sets the list of global variables that can be referenced in the formula expression created with the `build()` method.

## Signature

```
public FormulaEval.FormulaBuilder withGlobalVariables(List<formulaeval.FormulaGlobal> formulaGlobals)
```

## Parameters

*formulaGlobals*

Type: List<[FormulaEval.FormulaGlobal](#)>

Uses values from the `FormulaGlobal` enum.

## Return Value

Type: [FormulaEval.FormulaBuilder](#)

### **withReturnType (returnType)**

Required. Sets the formula output data type for the formula instance created with the `build()` method.

## Signature

```
public FormulaEval.FormulaBuilder withReturnType(formulaeval.FormulaReturnType returnType)
```

## Parameters

*returnType*

Type: [FormulaEval.FormulaReturnType](#)

Uses values from the `FormulaReturnType` enum.

## Return Value

Type: [FormulaEval.FormulaBuilder](#)

### **withType (contextType)**

Sets the Apex type that corresponds to the Apex class used with the `build()` method.

## Signature

```
public formulaeval.FormulaBuilder withType(System.Type contextType)
```

## Parameters

*contextType*

Type: [System.Type](#)

An instance of the Apex class type.

## Return Value

Type: [FormulaEval.FormulaBuilder](#)

### **withType (contextType)**

Sets the Apex type that corresponds to the Apex class used with the `build()` method to SObject type.

## Signature

```
public formulaeval.FormulaBuilder withType(Schema.SObjectType contextSObjectType)
```

## Parameters

*contextSObjectType*

Type: [Schema.SObjectType](#)

An instance of the SObject type.

## Return Value

Type: [FormulaEval.FormulaBuilder](#)

## Example

This example uses an SObject type as an input in the `withType()` method to build and evaluate a formula.

```
FormulaEval.FormulaInstance ff = Formula.builder()
    .withReturnType(FormulaEval.FormulaReturnType.Boolean)
    .withType(Account.SObjectType)
    .withFormula('ISBLANK(Site)')
    .build();

Boolean siteIsBlank = (Boolean)ff.evaluate(new Account(Site='Test'));
Assert.IsFalse(siteIsBlank);
```

## FormulaGlobal Enum

Specifies a global variable that references data in your organization in the `withGlobalVariables(formulaGlobals)` method.

## Enum Values

The following are the values of the `FormulaEval.FormulaGlobal` enum.

Value	Description
<code>CUSTOMMETADATA</code>	A custom metadata record.
<code>LABEL</code>	A global variable to use when referencing a custom label.
<code>ORGANIZATION</code>	A global variable to use when referencing information about your company profile, such as organization's city, fax, ID, or other details.
<code>PERMISSION</code>	A global variable to use when referencing information about the current user's custom permission access.
<code>PROFILE</code>	A global variable to use when referencing information about the current user's profile, such as license type or name.
<code>SETUP</code>	A global variable to use when referencing a custom setting of type <code>hierarchy</code> .
<code>SYSTEM</code>	A global variable that exposes <code>OriginDateTime</code> and represents the literal value of 1900-01-01 00:00:00. Use this global variable when performing date/time offset calculations, or to assign a literal value to a date/time field.
<code>USER</code>	A global variable to use when referencing information about the current user, such as alias, title, and ID.
<code>USERROLE</code>	A global variable to use when referencing information about the current user's role, such as role name, description, and ID.

## FormulaInstance Class

Contains a method to evaluate the formula instance.

## Namespace

[FormulaEval](#)

## Example

```
global class MotorYacht {
    global Integer lengthInYards;
    global Integer numOfGuestCabins;
    global String name;
    global Account owner;
}
```

```
MotorYacht aBoat = new MotorYacht();
aBoat.lengthInYards = 52;
aBoat.numOfGuestCabins = 4;
aBoat.name = 'RV Foo';
```

```

FormulaEval.FormulaInstance isItSuper = Formula.builder()
    .withReturnType(FormulaEval.FormulaReturnType.STRING)
    .withType(MotorYacht.class)
    .withFormula('IF(lengthInYards < 100, "Not Super", "Super"')
    .build();
isItSuper.evaluate(aBoat); //=> "Not Super"

aBoat.owner = new Account(Name='Acme Watercraft', Site='New York');
FormulaEval.FormulaInstance ownerDetails = Formula.builder()
    .withReturnType(FormulaEval.FormulaReturnType.STRING)
    .withType(MotorYacht.class)
    .withFormula('owner.Name & " (" & owner.Site & ") "')
    .build();
ownerDetails.evaluate(aBoat); //=> "Acme Watercraft (New York)"

```

## Usage

The context type in the `withType` method must be a global, user-defined Apex class. Any fields or properties that the formula references must also be global.

IN THIS SECTION:

[FormulaInstance Methods](#)

## FormulaInstance Methods

The following are methods for `FormulaInstance`.

IN THIS SECTION:

[evaluate\(contextObject\)](#)

Calculates the formula expression and returns the formula output.

[getReferencedFields\(\)](#)

Returns a set of strings that denote the field names referenced in a formula.

### **evaluate (contextObject)**

Calculates the formula expression and returns the formula output.

### Signature

```
public Object evaluate(Object contextObject)
```

### Parameters

*contextObject*

Type: Object

An instance of the Apex class as generated with the `FormulaBuilder.builder()` method.

## Return Value

Type: Object

Apex type that corresponds to the Apex class as configured by the `withType()` method in the `FormulaBuilder` class.

## `getReferencedFields()`

Returns a set of strings that denote the field names referenced in a formula.

## Signature

```
public Set<String> getReferencedFields()
```

## Return Value

Type: [Set<String>](#)

## Usage

A formula is built and evaluated in the context of the current namespace of the subscriber org. If you package a formula that references fields, the fields must be fully qualified with the namespace name.

## Example

```
Account myAcc = new Account(Name='123');
FormulaEval.FormulaInstance ff = Formula.builder()
.withType(Schema.Account.class)
.withReturnType(FormulaEval.FormulaReturnType.STRING)
.withFormula('name & website')
.build();

//Returns the name, and website
Set<String> fieldNames = ff.getReferencedFields();

//Use the list of field names returned by the getReferenced method to generate dynamic
sql
String fieldNameList = '';
for (String fieldName : fieldNames) {
if(fieldNameList.length() > 0) fieldNameList = fieldNameList + ',';
fieldNameList = fieldNameList + fieldName;
}
String queryStr = 'select ' + fieldNameList + ' from Account'; //select name, website from
Account
sObject[] s = Database.query(queryStr);
```

## FormulaReturnType Enum

Specifies the return type for the `withReturnType(returnType)` method.

## Enum Values

The following are the values of the `FormulaEval.FormulaReturnType` enum.

Value	Description
BOOLEAN	A value that can only be assigned <code>true</code> , <code>false</code> , or <code>null</code> .
DATE	A value that indicates a particular day.
DATETIME	A value that indicates a particular day and time, such as a timestamp.
DECIMAL	A number that includes a decimal point. Decimal is an arbitrary precision number.
DOUBLE	A 64-bit number that includes a decimal point.
ID	Any valid 18-character Lightning Platform record identifier.
INTEGER	A 32-bit number that doesn't include a decimal point.
LONG	A 64-bit number that doesn't include a decimal point.
STRING	Any set of characters surrounded by single quotes.
TIME	A value that indicates a particular time.

## fscashflow Namespace

---

The `fscashflow` namespace provides classes used in the FSCashFlow Flexcards and its child Flexcards.

The `fscashflow` namespace has these classes.

### IN THIS SECTION:

#### [FSCashFlowUtil Class](#)

Use the callable `FSCashFlowUtil` class to manage and validate data for party income and expense entities by passing in the action and the corresponding arguments. This class provides utility methods used in `FSCashFlow` Flexcard and its child Flexcards.

## FSCashFlowUtil Class

Use the callable `FSCashFlowUtil` class to manage and validate data for party income and expense entities by passing in the action and the corresponding arguments. This class provides utility methods used in `FSCashFlow` Flexcard and its child Flexcards.

## Namespace

[fscashflow Namespace](#)

## Usage

The Financial Goals FlexCards use Integration Procedures that call the `FSCHouseholdService` class. These FlexCards display information about Financial Goals.

## IN THIS SECTION:

[FSCCashFlowUtil Methods](#)

## FSCCashFlowUtil Methods

The `FSCCashFlowUtil` has these methods.

## IN THIS SECTION:

[GetPartyIncomeFrequencyLabel](#)

Returns the picklist values for the party income frequency field on the party income entity.

[GetPartyIncomeTypeLabel](#)

Returns the picklist values for the party income type field on the party income entity.

[GetPartyIncomeStatusLabel](#)

Returns the picklist values for the party income status field on the party income entity.

[CalculateIncomeExpenseSummary](#)

Calculates the monthly income, total income, average monthly income, monthly expense, total expense, average monthly expense from a list of income and expenses provided.

[GetPartyExpenseFrequencyLabel](#)

Returns the picklist values for the party expense frequency field on the party expense entity.

[GetPartyExpenseTypeLabel](#)

Returns the picklist values for the party expense type field on the party expense entity.

[GetPartyExpenseStatusLabel](#)

Returns the picklist values for the party expense status field on the party expense entity.

[PerformIncomeValidation](#)

Performs validations on Party Income records. Ensure that the start date is not earlier than the end date.

[PerformExpenseValidation](#)

Performs validations on Party Income records.

[GetDurationDateRange](#)

Returns the start and end date given a duration. For example, if you input the number 3 on the date 10/29/2024, it will return a start date of 7/1/2024 and an end date of 10/1/2024.

[HandleUpsertError](#)

Helper method that constructs the error response for upsert of a partyIncome or partyExpense record.

[CheckReadAccess](#)

Checks for read access on the partyIncome and partyExpense entities.

[CheckCrudOnIncome](#)

Checks create, update and delete access on partyIncome entity.

[CheckCrudOnExpense](#)

Checks create, update and delete access on partyExpense entity.

### **GetPartyIncomeFrequencyLabel**

Returns the picklist values for the party income frequency field on the party income entity.

### Signature

```
call(String action, Map<String, Object> args)
```

### Return Value

Returns a list of picklist labels for Party Income frequency.

### **GetPartyIncomeTypeLabel**

Returns the picklist values for the party income type field on the party income entity.

### Signature

```
call(String action, Map<String, Object> args)
```

### Return Value

Returns a list of picklist labels for Party Income type.

### **GetPartyIncomeStatusLabel**

Returns the picklist values for the party income status field on the party income entity.

### Signature

```
call(String action, Map<String, Object> args)
```

### Return Value

Returns a list of picklist labels for Party Income status.

### **CalculateIncomeExpenseSummary**

Calculates the monthly income, total income, average monthly income, monthly expense, total expense, average monthly expense from a list of income and expenses provided.

### Signature

```
call(String action, Map<String, Object> args)
```

### Return Value

Returns income and expense details.

### Examples

Input and output JSON example of the actions are as follows.

Input format:

```
[
  {
    "Duration": "12",
    "PartyExpenseList": [
      {
        "Name": "PE-0000000004",
        "UsageType": "CashFlow",
        "RecurrenceInterval": "Monthly",
        "Type": "Child Care",
        "Id": "2n3SG000007dkzpYAA",
        "TotalAmount": 999.99,
        "PartyId": "001SG000004TCczYAG",
        "Status": "Active",

]

```

### **GetPartyExpenseFrequencyLabel**

Returns the picklist values for the party expense frequency field on the party expense entity.

#### **Signature**

`call(String action, Map<String, Object> args)`

#### **Return Value**

Returns a list of picklist labels for Party Expense frequency.

### **GetPartyExpenseTypeLabel**

Returns the picklist values for the party expense type field on the party expense entity.

#### **Signature**

`call(String action, Map<String, Object> args)`

#### **Return Value**

Returns a list of picklist labels for Party Expense type.

### **GetPartyExpenseStatusLabel**

Returns the picklist values for the party expense status field on the party expense entity.

#### **Signature**

`call(String action, Map<String, Object> args)`

## Return Value

Returns a list of picklist labels for Party Expense status.

## PerformIncomeValidation

Performs validations on Party Income records. Ensure that the start date is not earlier than the end date.

## Signature

```
call(String action, Map<String, Object> args)
```

## Return Value

Returns a list of picklist labels for Party Income type.

## Examples

Input and output JSON example of the actions are as follows.

Input format:

```
[
  {
    "IncomeFrequency": "Weekly",
    "IncomeFrequencyLabelObject": {
      "value": "Weekly",
      "label": "Weekly"
    },
    "MemberOptionsList": [
      {
        "value": "001OG00000xx6gAYAQ",
        "label": "Okee PA"
      },
      {
        "value": "id2",
        "label": "Name2"
      }
    ],
    "IsHousehold": true,
    "IncomeAmount": 100,
    "IncomeStatusOptions": [
      {
        "value": "Active",
        "label": "Active"
      },
      {
        "value": "Inactive",
        "label": "Inactive"
      }
    ],
    "PartyId": "001OG00000xx6gAYAQ",
    "IncomeStatus": "Active",
    "Party": {

        "label": "Monthly"
      },
      {
        "value": "Yearly",
        "label": "Yearly"
      }
    ],
    "UsageType": "CashFlow",
    "IncomeId": "2m30G000000009IYAQ",
    "IsPersonAccount": false,
    "IncomeTypeLabelObject": {
      "value": "Salary",
      "label": "Salary"
    }
  }
]

```

### PerformExpenseValidation

Performs validations on Party Income records.

### Signature

`call(String action, Map<String, Object> args)`

### Return Value

Returns a list of picklist labels for Party Income frequency.

### Examples

Output JSON example of the actions are as follows.

Output format:

```

{
  "Required fields": "Expense Type, Member, Amount, Start Date, Frequency"
}

```

### GetDurationDateRange

Returns the start and end date given a duration. For example, if you input the number 3 on the date 10/29/2024, it will return a start date of 7/1/2024 and an end date of 10/1/2024.

### Signature

`call(String action, Map<String, Object> args)`

## Return Value

Returns the start and end date for a specified duration.

## Examples

Output JSON example of the actions are as follows.

Output format:

```
{
    "DurationStartDate": "2024-02-02T00:00:00.000Z",
    "DurationEndDate": "2024-05-02T00:00:00.000Z"
}
```

## HandleUpsertError

Helper method that constructs the error response for upsert of a partyIncome or partyExpense record.

## Signature

```
call(String action, Map<String, Object> args
```

## Return Value

Returns a list of errors encountered while upserting the record in the database.

## Examples

Input and output JSON example of the action are as follows.

Input format:

```
[
  {
    "Name": "PI-0000000003",
    "UsageType": "CashFlow",
    "IncomeFrequency": "Monthly",
    "IncomeType": "Salary",
    "Id": "2m3SG000007dkxxYAA",
    "IncomeAmount": 999.99,
    "PartyId": "001SG000004TCxxYAG",
    "IncomeStatus": "Active",
    "StartDate": "2024-01-29T08:00:00.000Z"
  }
]
```

Output format:

```
[ { "UpsertError": "Invalid Id" } ]
```

## CheckReadAccess

Checks for read access on the partyIncome and partyExpense entities.

### Signature

```
call(String action, Map<String, Object> args
```

### Return Value

Returns True or False based on whether read access is granted or not.

### Examples

Output JSON example of the action are as follows.

Output format:

```
{ "isAccessible" : "true" }
```

### CheckCrudOnIncome

Checks create, update and delete access on partyIncome entity.

### Signature

```
call(String action, Map<String, Object> args
```

### Return Value

Returns True or False based on whether create, update and delete access on the partyIncome entity is given.

### Examples

Output JSON example of the action are as follows.

Output format:

```
{ "isCreatable" : "true", "isUpdateable" : "true", "isDeletable": "true" }
```

### CheckCrudOnExpense

Checks create, update and delete access on partyExpense entity.

### Signature

```
call(String action, Map<String, Object> args
```

### Return Value

Returns True or False based on whether create, update and delete access on the partyExpense entity is given.

### Examples

Output JSON example of the action are as follows.

Output format:

```
{ "isCreatable" : "true", "isUpdateable" : "true", "isDeletable": "true" }
```

## Functions Namespace

---

The Functions namespace provides classes and methods used to invoke and manage Salesforce Functions.

Salesforce Functions is your code, run on demand, in the Salesforce Functions trusted elastic compute cloud. Upload your complex business logic code, written using your preferred languages and frameworks, and Salesforce Functions takes care of everything else necessary to invoke your code in a secure, multi-tenant aware, and self-scaling environment. For more details on Salesforce Functions, see [Salesforce Functions](#).

The following are the classes in the `functions` namespace.

### IN THIS SECTION:

#### [Function Class](#)

Use the Function class to access deployed Salesforce Functions, and invoke them synchronously or asynchronously.

#### [FunctionCallback Interface](#)

Represents the callback Salesforce calls when an asynchronous, queued Function invocation has completed.

#### [FunctionErrorType Enum](#)

Represents the error type of `FunctionInvocationError`.

#### [FunctionInvocation Interface](#)

Use `FunctionInvocation` to get the status and results of a synchronous or asynchronous Function invocation.

#### [FunctionInvocationError Interface](#)

Use `FunctionInvocationError` to get detailed error information about a failed Function invocation.

#### [FunctionInvocationStatus Enum](#)

Represents the status of a Function invocation.

#### [FunctionInvokeMock Interface](#)

Use the `FunctionInvokeMock` interface to mock Salesforce Functions responses during testing.

#### [MockFunctionInvocationFactory Class](#)

Use the `MockFunctionInvocationFactory` methods to generate appropriate mock responses for testing Salesforce Functions.

## Function Class

Use the Function class to access deployed Salesforce Functions, and invoke them synchronously or asynchronously.

## Namespace

[functions](#)

## Usage

The Function class represents an instance of a deployed Function you can invoke from your org. You can invoke Functions synchronously, or asynchronously using asynchronous Apex.

If your Function takes longer than 2 minutes to return, the request times out. To avoid timing out, consider using asynchronous invocation. Invoking a Function asynchronously doesn't count against asynchronous Apex limits, such as Apex Queueable limits.

Before synchronously invoking a Function, commit any pending data operations in Apex, otherwise you get a CalloutException. For asynchronous invocations, the queued invocation doesn't happen if the Apex transaction isn't committed. Any data operations that happen in the Function itself aren't considered part of the Apex transaction.

Functions can't be invoked in an Apex test. A "Function invocations from Apex tests are not supported" CalloutException is thrown if Apex determines that a Function is being invoked during a test. If you must run tests against code that invokes Functions, mock your Function invocations during the tests. See [FunctionInvocation Example Implementation](#) for an example of a mocked FunctionInvocation that you can use in testing.

## Example

The following example synchronously invokes a deployed "accountfunction" Function:

```
functions.Function accountFunction = functions.Function.get('MyProject.accountfunction');
functions.FunctionInvocation invocation = accountFunction.invoke('{ "accountName" : "Acct",
    "contactName" : "MyContact", "opportunityName" : "Oppty" }');
String jsonResponse = invocation.getResponse();
```

The following example asynchronously invokes a deployed "AccountFunction" Function, using the provided callback:

```
functions.Function accountFunction = functions.Function.get('MyProject.accountfunction');
accountFunction.invoke('{ "accountName" : "Acct", "contactName" : "MyContact",
    "opportunityName" : "Oppty" }', new MyCallback());

public class MyCallback
    implements functions.FunctionCallback {
    public void handleResponse(functions.FunctionInvocation result) {
        // Handle result of function invocation
        // ...
    }
}
```

IN THIS SECTION:

[Function Methods](#)

## Function Methods

The following are methods for `Function`.

IN THIS SECTION:

[get\(functionName\)](#)

Returns the Function instance for the named Function and Project. The Function must be properly deployed and have appropriate permissions to work with the org running your Apex code.

`get(namespace, functionName)`

Returns the Function instance for the named Function, Project, and Namespace. The Function must be properly deployed and have appropriate permissions to work with the org running your Apex code.

`invoke(payload, callback)`

Invokes the Function asynchronously.

`invoke(payload)`

Invokes the Function synchronously.

**get (functionName)**

Returns the Function instance for the named Function and Project. The Function must be properly deployed and have appropriate permissions to work with the org running your Apex code.

**Signature**

```
public static functions.Function get(String functionName)
```

**Parameters**

*functionName*

Type: [String](#)

The name of the Salesforce Function and the Functions Project that the Function is part of. The format of the parameter string is "*project name.function name*". For example, to retrieve the `generatepdf` Function in the `Onboarding` Function Project, use `Onboarding.generatepdf`. The Function and Project must be deployed to a compute environment connected to the org.

**Return Value**

Type: [functions.Function](#)

Returns a Function instance that you can invoke.

**Usage**

The `Function.get()` method can throw the following exceptions:

- `InvalidParameterValueException` — The *functionName* parameter doesn't have the correct *project name.function name* format.
- `NoDataFoundException` — The project or Function name provided in the *functionName* parameter couldn't be found. Make sure the project and Function name are spelled correctly and that the project and Function have been properly deployed.

**get(namespace, functionName)**

Returns the Function instance for the named Function, Project, and Namespace. The Function must be properly deployed and have appropriate permissions to work with the org running your Apex code.

**Signature**

```
public static functions.Function get(String namespace, String functionName)
```

## Parameters

*namespace*

Type: [String](#)

The name of the Namespace that both the Salesforce Function and the Functions Project are part of. The org the Function is in must be `global` to access across namespaces. Default value is the same org where the method is being called.

*functionName*

Type: [String](#)

The name of the Salesforce Function and the Functions Project that the Function is part of. The format of the parameter string is "*project name.function name*". For example, to retrieve the `generatepdf` Function in the `Onboarding` Function Project, use `Onboarding.generatepdf`. The Function and Project must be deployed to a compute environment connected to the org.

## Return Value

Type: [functions.Function](#)

Returns a Function instance that you can invoke.

## Usage

The `Function.get()` method can throw the following exceptions:

- `InvalidParameterValueException` — The *functionName* parameter doesn't have the correct *project name.function name* format.
- `NoDataFoundException` — The project or Function name provided in the *functionName* parameter couldn't be found. Make sure the project and Function name are spelled correctly and that the project and Function have been properly deployed.
- `RuntimeException` — The function is `public` yet references a function across namespaces. Make sure to retrieve references across namespaces only in a `global` org.

## **invoke(payload, callback)**

Invokes the Function asynchronously.

## Signature

```
public functions.FunctionInvocation invoke(String payload, functions.FunctionCallback callback)
```

## Parameters

*payload*

Type: [String](#)

The payload data that gets passed to the Function. Specify your payload data in a JSON-format string.

*callback*

Type: [functions.FunctionCallback](#)

A `FunctionCallback` implementation that gets called when your Function is invoked asynchronously.

## Return Value

Type: [functions.FunctionInvocation](#)

Returns a `FunctionInvocation` that contains information about the results of the invocation, such as the Function response, or error results.

## Usage

The `Function.invoke(payload, callback)` method can throw the following exceptions:

- `CalloutException` — One of the following conditions causes this exception to be thrown:
  - Salesforce Functions isn't enabled on the current org. For more details on enabling Functions, see [Configure Orgs for Functions](#) in the Functions Developer Guide.
  - The Function is being invoked in an Apex test. Functions can't be invoked in tests.
  - The "Functions" permission set is missing or has incorrect permissions for `FunctionInvocationRequest`. For more details on the correct permissions for `FunctionInvocationRequest` see [Function Permissions](#) in the Functions Developer Guide.
  - The provided payload isn't valid JSON.
  - The Function hasn't completed deployment to a compute environment or invocation request returns a 404 HTTP error.
- `InvalidParameterValueException` — The `callback` parameter is null or references a class that doesn't implement `functions.FunctionCallback`.
- `NoDataFoundException` — A reference for the Function couldn't be found in the current org. Make sure the project and Function have been properly deployed.

## **invoke (payload)**

Invokes the Function synchronously.

## Signature

```
public functions.FunctionInvocation invoke(String payload)
```

## Parameters

*payload*

Type: [String](#)

The payload data that gets passed to the Function. Specify your payload data in a JSON-format string.

## Return Value

Type: [functions.FunctionInvocation](#)

Returns a `FunctionInvocation` that contains information about the results of the invocation, such as the Function response, or error results.

## Usage

The `Function.invoke(payload)` method can throw the following exceptions:

- `CalloutException` — One of the following conditions causes this exception to be thrown:

- Salesforce Functions isn't enabled on the current org. For more details on enabling Functions, see [Configure Orgs for Functions](#) in the Functions Developer Guide.
  - The Function is being invoked in an Apex test. Functions can't be invoked in tests.
  - The provided payload isn't valid JSON.
  - There are pending DML operations.
  - The Function is being synchronously invoked from an Apex trigger.
  - The Function hasn't completed deployment to a compute environment or invocation request returns a 404 HTTP error.
  - The Function request returns a 5xx HTTP error.
  - The Function invocation has exceeded the time limit for synchronous invocations. For details on the time limit and work-arounds, see [Limits](#) in the Functions Developer Guide.
- `NoDataFoundException` — A reference for the Function couldn't be found in the current org. Make sure the project and Function have been properly deployed.

## FunctionCallback Interface

Represents the callback Salesforce calls when an asynchronous, queued Function invocation has completed.

### Namespace

[functions](#)

### Usage

When invoking Functions asynchronously via `Function.invoke(payload, callback)`, you provide your own class that implements `FunctionCallback`.

IN THIS SECTION:

[FunctionCallback Methods](#)

[FunctionCallback Example Implementation](#)

### FunctionCallback Methods

The following are methods for `FunctionCallback`.

IN THIS SECTION:

[handleResponse\(var1\)](#)

Called when an asynchronous Function invocation has completed.

#### **handleResponse (var1)**

Called when an asynchronous Function invocation has completed.

## Signature

```
public void handleResponse (functions.FunctionInvocation var1)
```

## Parameters

*var1*

Type: [functions.FunctionInvocation](#)

The result parameter contains JSON response information and error information.

## Return Value

Type: void

## FunctionCallback Example Implementation

This is an example implementation of the `functions.FunctionCallback` interface.

```
public class MyCallback
    implements functions.FunctionCallback {
    public void handleResponse (functions.FunctionInvocation result) {
        // Handle result of function invocation
        String jsonResponse = result.getResponse();
        System.debug('Got response ' + jsonResponse);
        JSONParser parser = JSON.createParser(jsonResponse);
        // Process JSON using your own data class...
    }
}
```

The following example uses this implementation when invoking a Function asynchronously:

```
myFunction.invoke('{ "accountName" : "Acct", "contactName" : "MyContact", "opportunityName" : "Oppty" }', new MyCallback());
```

## FunctionErrorType Enum

Represents the error type of `FunctionInvocationError`.

## Enum Values

These are the values of the `functions.FunctionErrorType` enum.

Value	Description
<code>FUNCTION_EXCEPTION</code>	A known exception resulting from the Function logic itself. Examples include an exception thrown from the Function code, or an exception thrown from a library or framework the Function uses.
<code>RUNTIME_EXCEPTION</code>	A known exception resulting from the Salesforce Functions runtime. For example, a malformed payload passed to the Function when invoked results in this error type.

Value	Description
<code>UNEXPECTED_FUNCTION_EXCEPTION</code>	An unknown exception. For example, a network or system-level issue within the Salesforce Functions infrastructure results in this error type.

## FunctionInvocation Interface

Use `FunctionInvocation` to get the status and results of a synchronous or asynchronous Function invocation.

### Namespace

[functions](#)

### Usage

The results of a Function invocation are passed back via `FunctionInvocation`. Use this instance to determine if the invocation was successful, and any results from the Function invocation.

You can also implement your own `FunctionInvocation` interface if you run Apex tests with your Function invocation code. Your test code can create and use your own `FunctionInvocation` instance in place of using the results from a call to `Function.invoke()`.

#### IN THIS SECTION:

- [FunctionInvocation Methods](#)
- [FunctionInvocation Example Implementation](#)

## FunctionInvocation Methods

The following are methods for `FunctionInvocation`.

#### IN THIS SECTION:

- [getError\(\)](#)  
Returns error information for a Function invocation.
- [getInvocationId\(\)](#)  
Returns the invocation ID of the Function invocation.
- [getResponse\(\)](#)  
Returns the response string of the Function invocation.
- [getStatus\(\)](#)  
Returns the status of the Function invocation.

#### **getError()**

Returns error information for a Function invocation.

### Signature

```
public functions.FunctionInvocationError getError()
```

### Return Value

Type: [functions.FunctionInvocationError](#)

Contains a `FunctionInvocationError` instance that you can use to get information about any invocation errors. If the Function was invoked successfully, the returned instance is null.

### **getInvocationId()**

Returns the invocation ID of the Function invocation.

### Signature

```
public String getInvocationId()
```

### Return Value

Type: [String](#)

This ID is available after a call to either the synchronous or asynchronous `Function.invoke()` methods. For asynchronous invocations, this ID can be used to check the status of the queued invocation.

### **getResponse()**

Returns the response string of the Function invocation.

### Signature

```
public String getResponse()
```

### Return Value

Type: [String](#)

The response string is the raw request JSON response, which can be parsed using the [JSONParser Class](#).

### **getStatus()**

Returns the status of the Function invocation.

### Signature

```
public functions.FunctionInvocationStatus getStatus()
```

### Return Value

Type: [functions.FunctionInvocationStatus](#)

The result of the invocation, such as `FunctionInvocationStatus.SUCCESS` or `FunctionInvocationStatus.ERROR`.

## FunctionInvocation Example Implementation

This is an example implementation of the `functions.FunctionInvocation` interface.

```
public class MyFunctionInvocationError
    implements functions.FunctionInvocationError {
    public String getMessage() {
        return 'Mock error message for testing';
    }
    public functions.FunctionErrorType getType() {
        return functions.FunctionErrorType.FUNCTION_EXCEPTION;
    }
}

public class MyFunctionInvocation
    implements functions.FunctionInvocation {
    public functions.FunctionInvocationStatus getStatus() {
        return functions.FunctionInvocationStatus.ERROR;
    }
    public String getResponse() {
        return 'Mock response for testing';
    }
    public String getInvocationId() {
        return 'MOCKTESTID';
    }
    public functions.FunctionInvocationError getError() {
        functions.FunctionInvocationError testError = new MyFunctionInvocationError();
        return testError;
    }
}
```

The following example tests the implementation:

```
functions.FunctionInvocation testInvocation = new MyFunctionInvocation();
if (testInvocation.getStatus() == functions.FunctionInvocationStatus.ERROR) {
    System.debug('Error: ' + (testInvocation.getError() != null ?
testInvocation.getError().getMessage() : 'UNKNOWN'));
    return;
}
```

## FunctionInvocationError Interface

Use `FunctionInvocationError` to get detailed error information about a failed Function invocation.

### Namespace

[functions](#)

### Usage

`FunctionInvocationError` contains various error information such as the error message at the time of the error.

IN THIS SECTION:

[FunctionInvocationError Methods](#)

[FunctionInvocationError Example Implementation](#)

## FunctionInvocationError Methods

The following are methods for `FunctionInvocationError`.

IN THIS SECTION:

[getMessage\(\)](#)

Returns the error message from a Function invocation error.

[getType\(\)](#)

Returns the error type for `FunctionInvocationError`.

### **getMessage ()**

Returns the error message from a Function invocation error.

#### Signature

```
public String getMessage ()
```

#### Return Value

Type: [String](#)

### **getType ()**

Returns the error type for `FunctionInvocationError`.

#### Signature

```
public functions.FunctionErrorType getType ()
```

#### Return Value

Type: [functions.FunctionErrorType](#)

## FunctionInvocationError Example Implementation

This is an example implementation of the `functions.FunctionInvocationError` interface.

```
public class MyFunctionInvocationError
    implements functions.FunctionInvocationError {
    public String getMessage () {
        return 'Mock error message for testing';
    }
    public functions.FunctionErrorType getType () {
```

```

        return functions.FunctionErrorType.FUNCTION_EXCEPTION;
    }
}

```

This example tests the implementation.

```

functions.FunctionInvocationError testError = new MyFunctionInvocationError();
System.debug('Error: ' + testError.getMessage() + ' Type: ' + testError.getType());

```

## FunctionInvocationStatus Enum

Represents the status of a Function invocation.

### Enum Values

The following are the values of the `functions.FunctionInvocationStatus` enum.

Value	Description
ERROR	The invocation failed. Check the <code>FunctionInvocation</code> and <code>FunctionInvocationError</code> returned by the <code>invoke</code> call to debug the issue.
PENDING	The invocation is pending. If the Function is being invoked asynchronously, the invocation is still in the async queue.
SUCCESS	The invocation succeeded. Use <code>FunctionInvocation.getResponse()</code> with the <code>FunctionInvocation</code> instance returned by the <code>invoke</code> call to get any response returned by the Function.

## FunctionInvokeMock Interface

Use the `FunctionInvokeMock` interface to mock Salesforce Functions responses during testing.

### Namespace

[functions](#)

### Usage

To mock Salesforce Functions testing, implement an appropriate mock response in the `respond(functionName, payload)` method of the `FunctionInvokeMock` interface. During mock testing of a Salesforce Functions, Apex runtime sends the response specified in the `respond()` method, rather than invoking the function itself. Appropriate success and error messages can be configured with the `createSuccessResponse(invocationId, message)` and `createErrorResponse(invocationId, functionsErrorType, errorMsg)` methods in `Functions.MockFunctionInvocationFactory`.

IN THIS SECTION:

[FunctionInvokeMock Methods](#)

[FunctionInvokeMock Example Implementation](#)

## FunctionInvokeMock Methods

The following are methods for `FunctionInvokeMock`.

### IN THIS SECTION:

[respond\(functionName, payload\)](#)

The mock response implemented in the `Functions.FunctionInvokeMock` interface. The response is sent by Apex runtime when the `Test.setMock()` method is called.

### **respond(functionName, payload)**

The mock response implemented in the `Functions.FunctionInvokeMock` interface. The response is sent by Apex runtime when the `Test.setMock()` method is called.

### Signature

```
public functions.FunctionInvocation respond(String functionName, String payload)
```

### Parameters

*functionName*

Type: [String](#)

The name of the Salesforce Function and the Functions Project that the Function is part of. The format of the parameter string is "*project name.function name*".

*payload*

Type: [String](#)

The JSON-format payload data that is passed to the Function.

### Return Value

Type: [FunctionInvocation Interface](#)

The result of the mock call to Salesforce Functions. Appropriate responses can be generated by using the `createSuccessResponse()` and `createErrorResponse()` methods in the `Functions.MockFunctionInvocationFactory` class.

## FunctionInvokeMock Example Implementation

This is sample implementation of the `functions.FunctionInvokeMock` interface.

```
@isTest
public class FunctionsInvokeMockImpl implements functions.FunctionInvokeMock {
    public functions.FunctionInvocation respond(String functionName, String payload) {
        // return mock success response
        String invocationId = '0000000000000000';
        String response = 'mockResponse';
        return functions.MockFunctionInvocationFactory.createSuccessResponse(invocationId,
response);
    }
}
```

This example shows the minimal setup required for testing synchronous and asynchronous functions and is simplified to include both function invocations and the `FunctionCallback` class.

```

@isTest
public class FunctionTest {
    @isTest
    static void testSyncFunctionCall() {
        // Set mock class to respond to function invocations
        Test.setMock( functions.FunctionInvokeMock.class, new FunctionsInvokeMockInner());

        functions.Function mockedFunction = functions.Function.get('example.function');

        Test.startTest();
        // Synchronous function call
        functions.FunctionInvocation invokeResult = mockedFunction.invoke('{}');
        Test.stopTest();

        // Verify that the received response contains expected mock values
        System.assertEquals(functions.FunctionInvocationStatus.SUCCESS,
invokeResult.getStatus());
        System.assertEquals('mockResponse', invokeResult.getResponse());
        System.assertEquals('0000000000000000', invokeResult.getInvocationId());
    }

    @isTest
    static void testAsyncFunctionCall() {
        // Set mock class to respond to function invocations
        Test.setMock( functions.FunctionInvokeMock.class, new
FunctionsInvokeMockInner());

        functions.Function mockedFunction = functions.Function.get('example.function2');

        Test.startTest();
        //Asynchronous function invocation with callback
        mockedFunction.invoke('{}', new DemoCallback());
        Test.stopTest();
        // Include assertions here about the expected callback processing
    }

    public class DemoCallback implements functions.FunctionCallback {
        public void handleResponse(functions.FunctionInvocation invokeResult) {
            // Handle result of function invocation
            // The callback is included in the example here for convenience
            // It would normally be defined in the classes being tested

            // Verify that the received response contains expected mock values
            System.assertEquals(invokeResult.getStatus(),
functions.FunctionInvocationStatus.ERROR);
            functions.FunctionInvocationError resultError = invokeResult.getError();
            System.assertEquals('bang', invokeResult.getError().getMessage());
        }
    }
}

```

```
        System.assertEquals('0000000000000000', invokeResult.getInvocationId());
    }
}

public class FunctionsInvokeMockInner implements functions.FunctionInvokeMock {
    public functions.FunctionInvocation respond(String functionName, String payload)
    {
        // return mock success response
        String invocationId = '0000000000000000';

        if(functionName == 'example.function2') {
            return functions.MockFunctionInvocationFactory.createErrorResponse(
                invocationId,
                functions.FunctionErrorType.FUNCTION_EXCEPTION,
                'bang');
        }

        String response = 'mockResponse';
        return
functions.MockFunctionInvocationFactory.createSuccessResponse(invocationId, response);
    }
}
}
```

## MockFunctionInvocationFactory Class

Use the `MockFunctionInvocationFactory` methods to generate appropriate mock responses for testing Salesforce Functions.

### Namespace

[functions](#)

### Usage

To mock Salesforce Functions testing, implement an appropriate mock response in the `respond(functionName, payload)` method of the `FunctionInvokeMock` interface. During mock testing of a Salesforce Functions, the Apex runtime sends the response specified in the `respond()` method, rather than invoking the function itself. Appropriate success and error messages can be configured with the `createSuccessResponse(invocationId, message)` and `createErrorResponse(invocationId, functionsErrorType, errorMsg)` methods.

See [FunctionInvokeMock Example Implementation](#).

#### IN THIS SECTION:

[MockFunctionInvocationFactory Methods](#)

## MockFunctionInvocationFactory Methods

The following are methods for `MockFunctionInvocationFactory`.

### IN THIS SECTION:

[createErrorResponse\(invocationId, functionsErrorType, errMsg\)](#)

Generate a response for an error condition during mock testing of Salesforce Functions.

[createSuccessResponse\(invocationId, response\)](#)

Generate a response for a successful mock test of Salesforce Functions.

### **createErrorResponse(invocationId, functionsErrorType, errMsg)**

Generate a response for an error condition during mock testing of Salesforce Functions.

### Signature

```
public static functions.FunctionInvocation createErrorResponse(String invocationId,  
functions.FunctionErrorType functionsErrorType, String errMsg)
```

### Parameters

*invocationId*

Type: [String](#)

The ID associated with a call to either the synchronous or asynchronous `Function.invoke()` method.

*functionsErrorType*

Type: [FunctionErrorType Enum](#)

The error type of `FunctionInvocationError`.

*errMsg*

Type: [String](#)

The error message.

### Return Value

Type: [FunctionInvocation Interface](#)

### **createSuccessResponse(invocationId, response)**

Generate a response for a successful mock test of Salesforce Functions.

### Signature

```
public static functions.FunctionInvocation createSuccessResponse(String invocationId,  
String response)
```

## Parameters

*invocationId*

Type: [String](#)

The ID associated with a call to either the synchronous or asynchronous `Function.invoke()` method.

*response*

Type: [String](#)

The message indicating success.

## Return Value

Type: [FunctionInvocation Interface](#)

# industriesNlpSvc

---

Stores the objects used in Industries Einstein Natural Language Processing (NLP) services.

The `industriesNlpSvc` namespace contains these classes that are the outputs for the `transformNlpActionResult` Invocable action.

- *NlpResponse* — Stores the NLP Summarization result performed for an NLP Operation involving summarization use cases such as `SurveyLongSummarization` and `SurveyShortSummarization`.
- *NlpSummarizationResult* — Provides the summary obtained as result of NLP Operation.

### IN THIS SECTION:

[NlpResponse Class](#)

Stores the result for an NLP Operation. NLP operation can be `SurveyLongSummarization` and `SurveyShortSummarization`.

[NlpSummarizationResult Class](#)

Provides the summary obtained as result of NLP Operation.

## NlpResponse Class

Stores the result for an NLP Operation. NLP operation can be `SurveyLongSummarization` and `SurveyShortSummarization`.

## Namespace

[industriesNlpSvc](#)

### IN THIS SECTION:

[NlpResponse Properties](#)

## NlpResponse Properties

The following are properties for `NlpResponse`.

## IN THIS SECTION:

[summarizationResult](#)

Represents the property that stores the NLP Summarization result performed for an NLP Operation. NLP operation can be SurveyLongSummarization and SurveyShortSummarization.

[errors](#)

Represents the property to store errors that occurred as a result of the NLP Operation.

**summarizationResult**

Represents the property that stores the NLP Summarization result performed for an NLP Operation. NLP operation can be SurveyLongSummarization and SurveyShortSummarization.

**Signature**

```
public industriesNlpSvc.NlpSummarizationResult summarizationResult {get; set;}
```

**Property Value**

Type: List<[industriesNlpSvc.NlpSummarizationResult](#) on page 2555>

**errors**

Represents the property to store errors that occurred as a result of the NLP Operation.

**Signature**

```
public List<String> errors {get; set;}
```

**Property Value**

Type: List<String>

## NlpSummarizationResult Class

Provides the summary obtained as result of NLP Operation.

**Namespace**

[industriesNlpSvc](#)

## IN THIS SECTION:

[NlpSummarizationResult Properties](#)

## NlpSummarizationResult Properties

The following are properties for `NlpSummarizationResult`:

## IN THIS SECTION:

[summary](#)

Represents the field that captures the summary obtained as result of NLP Operation.

**summary**

Represents the field that captures the summary obtained as result of NLP Operation.

## Signature

```
public String summary {get; set;}
```

## Property Value

Type: List<String>

## IndustriesDigitalLending Namespace

---

The `industriesDigitalLending` namespace provides classes used in the Digital Lending OmniScripts and Integration Procedures.

The `industriesDigitalLending` namespace contains these classes:

- *DigitalLendingIntakeRecordsWrapper* — Use the callable `DigitalLendingIntakeRecordsWrapper` class to call utility methods from OmniScripts used in Digital Lending application intake process.
- *DigitalLendingPostIntakeRecordsWrapper* — Use the callable `DigitalLendingPostIntakeRecordsWrapper` class to call utility methods from integration procedures used in Digital Lending post intake in FlexCards.
- *DigitalLendingProductsApi* — Use the callable `DigitalLendingProductsApi` class to call utility methods from integration procedures used in Digital Lending FlexCards.
- *DigitalLendingUtils* — Use the callable `DigitalLendingUtils` class to call utility methods from integration procedures used in Digital Lending PostIntake FlexCards.
- *PricingExecutionWrapper* — Use the callable `PricingExecutionWrapper` class to call utility methods from integration procedures used in Digital Lending FlexCards.

See [industriesDigitalLending namespace](#) for more information about the available classes and methods.

## Invocable Namespace

---

The `Invocable` namespace provides classes for calling invocable actions from Apex.

These classes are in the `Invocable` namespace.

## IN THIS SECTION:

[Action Class](#)

Contains methods to create, update, and retrieve information about invocable actions.

[Action.Error Class](#)

Contains methods to retrieve errors returned by invocable actions.

[Action.Result Class](#)

Contains methods to retrieve results from invocable actions called from Apex code.

## Action Class

Contains methods to create, update, and retrieve information about invocable actions.

## Namespace

[Invocable](#)

### IN THIS SECTION:

[Action Methods](#)

### SEE ALSO:

[Apex Developer Guide: InvocableMethod Annotation](#)

## Action Methods

These methods are for `Action`.

### IN THIS SECTION:

[addInvocation\(\)](#)

Creates an empty invocation in preparation for calling an invocable action. After you create the invocation, you can add parameters to the invocation.

[clearInvocations\(\)](#)

Clears the existing invocations from the action.

[clone\(\)](#)

Creates a copy of the `Invocable.Action`.

[createCustomAction\(type, namespace, name\)](#)

Creates a wrapper for a custom invocable action in a specified package namespace.

[createCustomAction\(type, name\)](#)

Creates a wrapper for a custom invocable action.

[createStandardAction\(type\)](#)

Creates a wrapper for a standard invocable action.

[getName\(\)](#)

Gets the name of an invocable action.

[getNamespace\(\)](#)

Gets the namespace of a custom invocable action.

[getType\(\)](#)

Gets the type of an invocable action.

[invoke\(\)](#)

Invokes an invocable action from Apex code.

[isStandard\(\)](#)

Determines whether an invocable action is a standard invocable action.

[setInvocationParameter\(parameterName, parameterValue\)](#)

Sets a value for an invocable action parameter.

[setInvocations\(invocations\)](#)

Initializes the invocations for an action from a pre-existing list of invocations.

**addInvocation()**

Creates an empty invocation in preparation for calling an invocable action. After you create the invocation, you can add parameters to the invocation.

**Signature**

```
public Invocable.Action addInvocation()
```

**Return Value**

Type: [Invocable.Action](#) on page 2557

**clearInvocations()**

Clears the existing invocations from the action.

**Signature**

```
public Invocable.Action clearInvocations()
```

**Return Value**

Type: [Invocable.Action](#) on page 2557

**clone()**

Creates a copy of the `Invocable.Action`.

**Signature**

```
public Object clone()
```

**Return Value**

Type: `Object`

**createCustomAction(type, namespace, name)**

Creates a wrapper for a custom invocable action in a specified package namespace.

## Signature

```
public static Invokable.Action createCustomAction(String type, String namespace, String name)
```

## Parameters

*type*

Type: [String](#)

Type of invocable action.

*namespace*

Type: [String](#)

Namespace where the invocable action is located.

*name*

Type: [String](#)

Name for the custom invocable action.

## Return Value

Type: [Invokable.Action](#)

### **createCustomAction(type, name)**

Creates a wrapper for a custom invocable action.

## Signature

```
public static Invokable.Action createCustomAction(String type, String name)
```

## Parameters

*type*

Type: [String](#)

Type of invocable action.

*name*

Type: [String](#)

Name for the custom invocable action.

## Return Value

Type: [Invokable.Action](#)

### **createStandardAction(type)**

Creates a wrapper for a standard invocable action.

## Signature

```
public static Invocable.Action createStandardAction(String type)
```

## Parameters

*type*

Type: [String](#)

Type of invocable action.

## Return Value

Type: [Invocable.Action](#)

## **getName ()**

Gets the name of an invocable action.

## Signature

```
public String getName ()
```

## Return Value

Type: [String](#)

Name of the invocable action.

## **getNamespace ()**

Gets the namespace of a custom invocable action.

## Signature

```
public String getNamespace ()
```

## Return Value

Type: [String](#)

Namespace of the custom invocable action.

## **getType ()**

Gets the type of an invocable action.

## Signature

```
public String getType ()
```

## Return Value

Type: [String](#)

Type of invocable action.

## **invoke ()**

Invokes an invocable action from Apex code.

## Signature

```
public List<Invocable.Action.Result> invoke ()
```

## Return Value

Type: [List<Invocable.Action.Result>](#)

## **isStandard ()**

Determines whether an invocable action is a standard invocable action.

## Signature

```
public Boolean isStandard ()
```

## Return Value

Type: [Boolean](#)

This method returns `true` if the invocable action is a standard invocable action.

## **setInvocationParameter (parameterName, parameterValue)**

Sets a value for an invocable action parameter.

## Signature

```
public Invocable.Action setInvocationParameter (String parameterName, Object parameterValue)
```

## Parameters

*parameterName*

Type: [String](#)

Name of the invocable action parameter to set.

*parameterValue*

Type: [Object](#)

Value to set the invocable action parameter to.

## Return Value

Type: [Invocable.Action](#) on page 2557

## **setInvocations(invocations)**

Initializes the invocations for an action from a pre-existing list of invocations.

## Signature

```
public Invocable.Action setInvocations(List<Map<String,ANY>> invocations)
```

## Parameters

*invocations*

Type: [List](#) on page 3543<[Map](#) on page 3564<[String](#) on page 3773,ANY>>

List of invocations for the invocable action.

## Return Value

Type: [Invocable.Action](#) on page 2557

# Action.Error Class

Contains methods to retrieve errors returned by invocable actions.

## Namespace

[Invocable](#)

IN THIS SECTION:

[Action.Error Methods](#)

## Action.Error Methods

These methods are for `Action.Error`.

IN THIS SECTION:

[clone\(\)](#)

Creates a copy of the `Invocable.Action.Error`.

[getCode\(\)](#)

Gets the error code returned by an invocable action.

[getMessage\(\)](#)

Gets the error message returned by an invocable action.

**clone ()**

Creates a copy of the `Invocable.Action.Error`.

**Signature**

```
public Object clone ()
```

**Return Value**

Type: `Object`

**getCode ()**

Gets the error code returned by an invocable action.

**Signature**

```
public String getCode ()
```

**Return Value**

Type: `String`

**getMessage ()**

Gets the error message returned by an invocable action.

**Signature**

```
public String getMessage ()
```

**Return Value**

Type: `String`

## Action.Result Class

Contains methods to retrieve results from invocable actions called from Apex code.

## Namespace

[Invocable](#)

IN THIS SECTION:

[Action.Result Methods](#)

## Action.Result Methods

The methods are for `Action.Result`.

### IN THIS SECTION:

#### `clone()`

Creates a copy of the `Invocable.Action.Result`.

#### `getAction()`

Gets the invocable action that was invoked and caused a result to be returned.

#### `getErrors()`

Gets a list of errors that were returned by an invocable action.

#### `getInvocationParameters()`

Gets a list of the parameter values set for an invocable action. This method returns a list that contains the input parameter values for each invocation of an action. Each map in the list contains a key for the name of each input parameter.

#### `getOutputParameters()`

Gets a list of the parameter values returned by an invocable action. This method returns a list that contains the result for each invocation of an action. Each map in the list contains a key for the name of each output parameter.

#### `isSuccess()`

Determines if an invocable action ran without errors.

### **clone ()**

Creates a copy of the `Invocable.Action.Result`.

### Signature

```
public Object clone ()
```

### Return Value

Type: Object

### **getAction ()**

Gets the invocable action that was invoked and caused a result to be returned.

### Signature

```
public Invocable.Action getAction ()
```

### Return Value

Type: [Invocable.Action](#) on page 2557

### **getErrors ()**

Gets a list of errors that were returned by an invocable action.

### Signature

```
public List on page 3773<Invocable.Action.Error on page 2562> getErrors()
```

### Return Value

Type: [List](#) on page 3773<[Invocable.Action.Error](#) on page 2562>

### **getInvocationParameters ()**

Gets a list of the parameter values set for an invocable action. This method returns a list that contains the input parameter values for each invocation of an action. Each map in the list contains a key for the name of each input parameter.

### Signature

```
public Map<String, Object> getInvocationParameters ()
```

### Return Value

Type: [Map](#) on page 3564<[String](#) on page 3773, [Object](#)>

### **getOutputParameters ()**

Gets a list of the parameter values returned by an invocable action. This method returns a list that contains the result for each invocation of an action. Each map in the list contains a key for the name of each output parameter.

### Signature

```
public Map<String, Object> getOutputParameters ()
```

### Return Value

Type: [Map](#) on page 3564<[String](#) on page 3773, [Object](#)>

### **isSuccess ()**

Determines if an invocable action ran without errors.

### Signature

```
public Boolean isSuccess ()
```

### Return Value

Type: [Boolean](#)

This method returns `true` if the invocable action ran successfully.

## IsvPartners Namespace

---

The `IsvPartners` namespace provides a class associated with Salesforce ISV partner use cases, such as optimizing code, providing great customer trial experiences, and driving feature adoption.

These are the classes in the `IsvPartners` namespace.

### IN THIS SECTION:

#### [AppAnalytics Class](#)

Contains methods to help with AppExchange App Analytics use cases, such as minimizing subscriber attrition and obtaining product insights.

## AppAnalytics Class

Contains methods to help with AppExchange App Analytics use cases, such as minimizing subscriber attrition and obtaining product insights.

## Namespace

[IsvPartners](#)

## Usage

Use `AppAnalytics` and its methods to log App Analytics custom interactions.

## Example

```
public void submitClicked() {
    Id jobId = System.enqueueJob(new MyQueueable(colorValue));
    IsvPartners.AppAnalytics.logCustomInteraction(
        MyPageInteractions.SUBMIT_CLICKED, jobId);
}
```

### IN THIS SECTION:

#### [AppAnalytics Methods](#)

## AppAnalytics Methods

These are methods for `AppAnalytics`.

### IN THIS SECTION:

#### [logCustomInteraction\(interactionLabel, interactionId\)](#)

Logs the custom interaction using a label that you provide as an enum value and an interaction ID.

#### [logCustomInteraction\(interactionLabel, interactionUuid\)](#)

Logs the custom interaction using a label that you provide as an enum value and an interaction ID that you provide as an Apex UUID.

### `logCustomInteraction(interactionLabel)`

Logs the custom interaction using a label that you provide as an enum value.

### **`logCustomInteraction(interactionLabel, interactionId)`**

Logs the custom interaction using a label that you provide as an enum value and an interaction ID.

#### Signature

```
public static void logCustomInteraction(Object interactionLabel, Id interactionId)
```

#### Parameters

*interactionLabel*

Type: Object

A value used to label the custom interaction. The value of *interactionLabel* must be an enum with the same namespace as the code that calls the `logCustomInteraction` method.

*interactionId*

Type: Id

An Apex ID that is associated with the custom interaction. The *interactionId* that you provide is hashed and tokenized before it's included in AppExchange App Analytics package usage logs.

#### Return Value

Type: Void

### **`logCustomInteraction(interactionLabel, interactionUuid)`**

Logs the custom interaction using a label that you provide as an enum value and an interaction ID that you provide as an Apex UUID.

#### Signature

```
public static void logCustomInteraction(Object interactionLabel, System.UUID  
interactionUuid)
```

#### Parameters

*interactionLabel*

Type: Object

A value used to label the custom interaction. The value of *interactionLabel* must be an enum with the same namespace as the code that calls the `logCustomInteraction` method.

*interactionUuid*

Type: System.UUID

An Apex UUID that is associated with the custom interaction. The *interactionId* that you provide is hashed and tokenized before being included in AppExchange App Analytics package usage logs.

## Return Value

Type: Void

## **logCustomInteraction (interactionLabel)**

Logs the custom interaction using a label that you provide as an enum value.

## Signature

```
public static void logCustomInteraction(Object interactionLabel)
```

## Parameters

*interactionLabel*

Type: Object

A value used to label the custom interaction. The value of *interactionLabel* must be an enum with the same namespace as the code that calls the `logCustomInteraction` method.

## Return Value

Type: Void

# KbManagement Namespace

---

The `KbManagement` namespace provides a class for managing knowledge articles.

The following is the class in the `KbManagement` namespace.

## IN THIS SECTION:

[PublishingService Class](#)

Use the methods in the `KbManagement.PublishingService` class to manage the lifecycle of an article and its translations.

## PublishingService Class

Use the methods in the `KbManagement.PublishingService` class to manage the lifecycle of an article and its translations.

## Namespace

[KbManagement](#)

## Usage

Use the methods in the `KbManagement.PublishingService` class to manage the following parts of the lifecycle of an article and its translations:

- Publishing
- Updating

- Retrieving
- Deleting
- Submitting for translation
- Setting a translation to complete or incomplete status
- Archiving
- Assigning review tasks for draft articles or translations

 **Note:** Date values are based on GMT.

To use the methods in this class, you must enable Salesforce Knowledge. See [Salesforce Knowledge Implementation Guide](#) for more information on setting up Salesforce Knowledge.

## PublishingService Methods

The following are methods for `PublishingService`. All methods are static.

### IN THIS SECTION:

#### [archiveOnlineArticle\(articleId, scheduledDate\)](#)

Archives an online version of an article. If the specified `scheduledDate` is null, the article is archived immediately. Otherwise, it archives the article on the scheduled date.

#### [assignDraftArticleTask\(articleId, assigneeId, instructions, dueDate, sendEmailNotification\)](#)

Assigns a review task related to a draft article.

#### [assignDraftTranslationTask\(articleVersionId, assigneeId, instructions, dueDate, sendEmailNotification\)](#)

Assigns a review task related to a draft translation.

#### [cancelScheduledArchivingOfArticle\(articleId\)](#)

Cancels the scheduled archiving of an online article.

#### [cancelScheduledPublicationOfArticle\(articleId\)](#)

Cancels the scheduled publication of a draft article.

#### [completeTranslation\(articleVersionId\)](#)

Puts a translation in a completed state that is ready to publish.

#### [deleteArchivedArticle\(articleId\)](#)

Deletes an archived article.

#### [deleteArchivedArticleVersion\(articleId, versionNumber\)](#)

Deletes a specific archived version of a published article.

#### [deleteDraftArticle\(articleId\)](#)

Deletes a draft article.

#### [deleteDraftTranslation\(articleVersionId\)](#)

Deletes a draft translation.

#### [editArchivedArticle\(articleId\)](#)

Creates a draft article from the archived primary version and returns the new draft primary version ID of the article.

#### [editOnlineArticle\(articleId, unpublish\)](#)

Creates a draft article from the online version and returns the new draft primary version ID of the article. Also, unpublishes the online article, if `unpublish` is set to `true`.

[editPublishedTranslation\(articleId, language, unpublish\)](#)

Creates a draft version of the online translation for a specific language and returns the new draft primary version ID of the article. Also, unpublishes the article, if set to `true`.

[publishArticle\(articleId, flagAsNew\)](#)

Publishes an article. If `flagAsNew` is set to `true`, the article is published as a major version.

[restoreOldVersion\(articleId, versionNumber\)](#)

Creates a draft article from an existing online article based on the specified archived version of the article and returns the article version ID.

[scheduleForPublication\(articleId, scheduledDate\)](#)

Schedules the article for publication as a major version. If the specified date is null, the article is published immediately.

[setTranslationToIncomplete\(articleVersionId\)](#)

Sets a draft translation that is ready for publication back to “in progress” status.

[submitForTranslation\(articleId, language, assigneeId, dueDate\)](#)

Submits an article for translation to the specified language. Also assigns the specified user and due date to the submittal and returns new ID of the draft translation.

**archiveOnlineArticle(articleId, scheduledDate)**

Archives an online version of an article. If the specified `scheduledDate` is null, the article is archived immediately. Otherwise, it archives the article on the scheduled date.

**Signature**

```
public static Void archiveOnlineArticle(String articleId, Datetime scheduledDate)
```

**Parameters**

*articleId*

Type: [String](#)

*scheduledDate*

Type: [Datetime](#)

**Return Value**

Type: Void

**Example**

```
String articleId = 'Insert article ID';
Datetime scheduledDate = Datetime.newInstanceGmt(2012, 12, 1, 13, 30, 0);
KbManagement.PublishingService.archiveOnlineArticle(articleId, scheduledDate);
```

**assignDraftArticleTask(articleId, assigneeId, instructions, dueDate, sendEmailNotification)**

Assigns a review task related to a draft article.

## Signature

```
public static Void assignDraftArticleTask(String articleId, String assigneeId, String instructions, Datetime dueDate, Boolean sendEmailNotification)
```

## Parameters

*articleId*

Type: [String](#)

*assigneeId*

Type: [String](#)

*instructions*

Type: [String](#)

*dueDate*

Type: [Datetime](#)

*sendEmailNotification*

Type: [Boolean](#)

## Return Value

Type: [Void](#)

## Example

```
String articleId = 'Insert article ID';
String assigneeId = '';
String instructions = 'Please review this draft.';
Datetime dueDate = Datetime.newInstanceGmt(2012, 12, 1);
KbManagement.PublishingService.assignDraftArticleTask(articleId, assigneeId, instructions,
dueDate, true);
```

## **assignDraftTranslationTask(articleVersionId, assigneeId, instructions, dueDate, sendEmailNotification)**

Assigns a review task related to a draft translation.

## Signature

```
public static Void assignDraftTranslationTask(String articleVersionId, String assigneeId, String instructions, Datetime dueDate, Boolean sendEmailNotification)
```

## Parameters

*articleVersionId*

Type: [String](#)

*assigneeId*

Type: [String](#)

*instructions*

Type: [String](#)

*dueDate*

Type: [Datetime](#)

*sendEmailNotification*

Type: [Boolean](#)

## Return Value

Type: Void

## Example

```
String articleId = 'Insert article ID';
String assigneeId = 'Insert assignee ID';
String instructions = 'Please review this draft.';
Datetime dueDate = Datetime.newInstanceGmt(2012, 12, 1);
KbManagement.PublishingService.assignDraftTranslationTask(articleId, assigneeId,
instructions, dueDate, true);
```

## **cancelScheduledArchivingOfArticle (articleId)**

Cancels the scheduled archiving of an online article.

## Signature

```
public static Void cancelScheduledArchivingOfArticle(String articleId)
```

## Parameters

*articleId*

Type: [String](#)

## Return Value

Type: Void

## Example

```
String articleId = 'Insert article ID';
KbManagement.PublishingService.cancelScheduledArchivingOfArticle (articleId);
```

## **cancelScheduledPublicationOfArticle (articleId)**

Cancels the scheduled publication of a draft article.

## Signature

```
public static Void cancelScheduledPublicationOfArticle(String articleId)
```

## Parameters

*articleId*  
Type: [String](#)

## Return Value

Type: Void

## Example

```
String articleId = 'Insert article ID';  
KbManagement.PublishingService.cancelScheduledPublicationOfArticle (articleId);
```

## **completeTranslation(articleVersionId)**

Puts a translation in a completed state that is ready to publish.

## Signature

```
public static Void completeTranslation(String articleVersionId)
```

## Parameters

*articleVersionId*  
Type: [String](#)

## Return Value

Type: Void

## Example

```
String articleVersionId = 'Insert article ID';  
KbManagement.PublishingService.completeTranslation(articleVersionId);
```

## **deleteArchivedArticle(articleId)**

Deletes an archived article.

## Signature

```
public static Void deleteArchivedArticle(String articleId)
```

## Parameters

*articleId*  
Type: [String](#)

## Return Value

Type: Void

## Example

```
String articleId = 'Insert article ID';
KbManagement.PublishingService.deleteArchivedArticle(articleId);
```

## **deleteArchivedArticleVersion(articleId, versionNumber)**

Deletes a specific archived version of a published article.

## Signature

```
public static Void deleteArchivedArticleVersion(String articleId, Integer versionNumber)
```

## Parameters

*articleId*

Type: [String](#)

*versionNumber*

Type: [Integer](#)

## Return Value

Type: Void

## Example

```
String articleId = 'Insert article ID';
Integer versionNumber = 1;
KbManagement.PublishingService.deleteArchivedArticleVersion(articleId, versionNumber);
```

## **deleteDraftArticle(articleId)**

Deletes a draft article.

## Signature

```
public static Void deleteDraftArticle(String articleId)
```

## Parameters

*articleId*

Type: [String](#)

## Return Value

Type: Void

## Example

```
String articleId = 'Insert article ID';  
KbManagement.PublishingService.deleteDraftArticle(articleId);
```

## **deleteDraftTranslation(articleVersionId)**

Deletes a draft translation.

## Signature

```
public static Void deleteDraftTranslation(String articleVersionId)
```

## Parameters

*articleVersionId*

Type: [String](#)

## Return Value

Type: Void

## Example

```
String articleVersionId = 'Insert article ID';  
KbManagement.PublishingService.deleteDraftTranslation (articleVersionId);
```

## **editArchivedArticle(articleId)**

Creates a draft article from the archived primary version and returns the new draft primary version ID of the article.

## Signature

```
public static String editArchivedArticle(String articleId)
```

## Parameters

*articleId*

Type: [String](#)

## Return Value

Type: [String](#)

## Example

```
String articleId = 'Insert article ID';  
String id = KbManagement.PublishingService.editArchivedArticle(articleId);
```

**editOnlineArticle(articleId, unpublish)**

Creates a draft article from the online version and returns the new draft primary version ID of the article. Also, unpublishes the online article, if *unpublish* is set to `true`.

**Signature**

```
public static String editOnlineArticle(String articleId, Boolean unpublish)
```

**Parameters**

*articleId*

Type: `String`

*unpublish*

Type: `Boolean`

**Return Value**

Type: `String`

**Example**

```
String articleId = 'Insert article ID';  
String id = KbManagement.PublishingService.editOnlineArticle (articleId, true);
```

**editPublishedTranslation(articleId, language, unpublish)**

Creates a draft version of the online translation for a specific language and returns the new draft primary version ID of the article. Also, unpublishes the article, if set to `true`.

**Signature**

```
public static String editPublishedTranslation(String articleId, String language, Boolean unpublish)
```

**Parameters**

*articleId*

Type: `String`

*language*

Type: `String`

*unpublish*

Type: `Boolean`

**Return Value**

Type: `String`

## Example

```
String articleId = 'Insert article ID';
String language = 'fr';
String id = KbManagement.PublishingService.editPublishedTranslation(articleId, language,
true);
```

## **publishArticle(articleId, flagAsNew)**

Publishes an article. If *flagAsNew* is set to `true`, the article is published as a major version.

## Signature

```
public static Void publishArticle(String articleId, Boolean flagAsNew)
```

## Parameters

*articleId*

Type: `String`

*flagAsNew*

Type: `Boolean`

## Return Value

Type: `Void`

## Example

```
String articleId = 'Insert article ID';
KbManagement.PublishingService.publishArticle(articleId, true);
```

## **restoreOldVersion(articleId, versionNumber)**

Creates a draft article from an existing online article based on the specified archived version of the article and returns the article version ID.

## Signature

```
public static String restoreOldVersion(String articleId, Integer versionNumber)
```

## Parameters

*articleId*

Type: `String`

*versionNumber*

Type: `Integer`

## Return Value

Type: `String`

## Example

```
String articleId = 'Insert article ID';  
String id = KbManagement.PublishingService.restoreOldVersion (articleId, 1);
```

### **scheduleForPublication(articleId, scheduledDate)**

Schedules the article for publication as a major version. If the specified date is null, the article is published immediately.

## Signature

```
public static Void scheduleForPublication(String articleId, Datetime scheduledDate)
```

## Parameters

*articleId*

Type: [String](#)

*scheduledDate*

Type: [Datetime](#)

## Return Value

Type: Void

## Example

```
String articleId = 'Insert article ID';  
Datetime scheduledDate = Datetime.newInstanceGmt(2012, 12, 1, 13, 30, 0);  
KbManagement.PublishingService.scheduleForPublication(articleId, scheduledDate);
```

### **setTranslationToIncomplete(articleVersionId)**

Sets a draft translation that is ready for publication back to “in progress” status.

## Signature

```
public static Void setTranslationToIncomplete(String articleVersionId)
```

## Parameters

*articleVersionId*

Type: [String](#)

## Return Value

Type: Void

## Example

```
String articleVersionId = 'Insert article ID';
KbManagement.PublishingService.setTranslationToIncomplete(articleVersionId);
```

### **submitForTranslation(articleId, language, assigneeId, dueDate)**

Submits an article for translation to the specified language. Also assigns the specified user and due date to the submittal and returns new ID of the draft translation.

## Signature

```
public static String submitForTranslation(String articleId, String language, String
assigneeId, Datetime dueDate)
```

## Parameters

*articleId*

Type: [String](#)

*language*

Type: [String](#)

*assigneeId*

Type: [String](#)

*dueDate*

Type: [Datetime](#)

## Return Value

Type: [String](#)

## Example

```
String articleId = 'Insert article ID';
String language = 'fr';
String assigneeId = 'Insert assignee ID';
Datetime dueDate = Datetime.newInstanceGmt(2012, 12,1);
String id = KbManagement.PublishingService.submitForTranslation(articleId, language,
assigneeId, dueDate);
```

# LxScheduler Namespace

---

The `LxScheduler` namespace provides an interface and classes for integrating Salesforce Scheduler with external calendars.

The following are the classes and the interface in the `LxScheduler` namespace.

## IN THIS SECTION:

### [GetAppointmentCandidatesInput Class](#)

Contains information about the available service resources (appointment candidates) based on work type group and service territories.

[GetAppointmentCandidatesInputBuilder Class](#)

Contains methods to build an instance of the `lxscheduler.GetAppointmentCandidatesInput` class.

[GetAppointmentSlotsInput Class](#)

Contains information about the available appointment time slots for a resource based on given work type group and territories.

[GetAppointmentSlotsInputBuilder Class](#)

Contains methods to build an instance of the `lxscheduler.GetAppointmentSlotsInput` class.

[SchedulerResources Class](#)

Contains methods that holds the business logic to get resources availability.

[SkillRequirement Class](#)

Contains information about the set of skills that are required to complete a particular task for a work type.

[SkillRequirementBuilder Class](#)

Contains methods to build an instance of the `lxscheduler.SkillRequirement` class.

[WorkType Class](#)

Contains information about the type of work to be performed.

[WorkTypeBuilder Class](#)

Contains methods to build an instance of the `lxscheduler.WorkType` class.

[ServiceResourceScheduleHandler Interface](#)

Allows an implementing class to check external calendar events to find already booked time slots for the requested service resources. This interface is part of Salesforce Scheduler.

[ServiceAppointmentRequestInfo Class](#)

Represents the list of parameters that are passed to the `ServiceResourceScheduleHandler` interface. This class is implemented internally by Apex.

[ServiceResourceInfo Class](#)

Contains information about a service resource.

[ServiceResourceSchedule Class](#)

Use this class to pass results from your implemented Apex class to the `ServiceResourceScheduleHandler` interface methods.

[UnavailableTimeslot Class](#)

Use this class to pass the unavailable time slots to the `lxscheduler.ServiceResourceSchedule` class. Timezones that differ across operating hours are handled and results are always returned in UTC.

**SEE ALSO:**

[Apex Interface Implementation Limitations and Error Codes](#)

## GetAppointmentCandidatesInput Class

Contains information about the available service resources (appointment candidates) based on work type group and service territories.

Set up Salesforce Scheduler before making requests. This setup includes creating or configuring Service Resources, Service Territory Members, Work Type Groups, Work Types, Work Type Group Members, and Service Territory Work Types. See [Set Up Salesforce Scheduler](#) for more information.

The appointment time slots are determined based on multiple factors, such as field values, scheduled appointments, absences, Scheduler Settings, and Scheduling Policies to determine available time slots. See [How Salesforce Scheduler Determines Available Time Slots](#) for more information.

The following factors are considered for returning start time and end time of resources.

### Resource Availability

Determined using service territory member, service territory, work type, and account operating hours fields.

### Resource Unavailability

Determined by resource absences, existing appointments that the resource is assigned to. The resource must be marked as a required resource for the appointment with a status that isn't in closed, canceled, or completed.

### Appointment Start Time Interval in the Scheduling Policy

Appointment start time interval field in the Scheduling Policy is used to determine when the appointment can start. This interval can be 5, 10, 15, 20, 30, or 60. By default, it's set to 15.

### Work Type Duration

The end time is calculated as start time + duration of the work type.

 **Note:** If asset scheduling is enabled, the response also includes asset-based candidates.

## Namespace

[LxScheduler](#)

## Usage

The constructor for this class can't be called directly. Create an instance of this class using the [GetAppointmentCandidatesInputBuilder.build\(\)](#) method.

This example shows how to get a list of available appointment candidates based on `workTypeGroupId`:

```
//Build input for GetAppointmentCandidates API
    lxscheduler.GetAppointmentCandidatesInput input = new
lxscheduler.GetAppointmentCandidatesInputBuilder()
    .setWorkTypeGroupId('0VSRM0000000ABc4AM')
    .setTerritoryIds(new List<String>{'0HhRM0000000FXd0AM'})
    .setStartTime(System.now().format('yyyy-MM-dd\'T\'HH:mm:ssZ','America/New_York'))

    .setEndTime(System.now().addDays(5).format('yyyy-MM-dd\'T\'HH:mm:ssZ','America/New_York'))

    .setAccountId('001RM0000053iQgYAI')
    .setSchedulingPolicyId('0VrRM00000000Bx')
    .setApiVersion(Double.valueOf('50.0'))
    .build();

String response = lxscheduler.SchedulerResources.getAppointmentCandidates(input);
```

This example shows how to get a list of available appointment candidates based on `workType`:

```
//Build WorkType
    lxscheduler.WorkType workType = new lxscheduler.WorkTypeBuilder()
    .setId('08qRM0000000G9RYAU')
    .build();

    lxscheduler.GetAppointmentCandidatesInput input = new
lxscheduler.GetAppointmentCandidatesInputBuilder()
    .setWorkType(workType)
    .setTerritoryIds(new List<String>{'0HhRM0000000FXd0AM'})
```

```

        .setStartTime(System.now().format('yyyy-MM-dd\'T\'HH:mm:ssZ','America/New_York'))
    .setEndTime(System.now().addDays(5).format('yyyy-MM-dd\'T\'HH:mm:ssZ','America/New_York'))

    .setAccountId('001RM0000053iQgYAI')
    .setSchedulingPolicyId('0VrRM00000000Bx')
    .setApiVersion(Double.valueOf('50.0'))
    .build();

    String response = lxscheduler.SchedulerResources.getAppointmentCandidates(input);

```

This example shows how to get a list of available candidate appointments based on `durationInMinutes` and without the `workTypeGroupId` or `workType` fields:

**⚠ Important:** If you're using shifts, you must specify the `workTypeGroupId` or `workType` field.

```

//Build SkillRequirement
lxscheduler.SkillRequirement skillReq = new lxscheduler.SkillRequirementBuilder()
    .setSkillId('0C5RM0000004EZO2')
    .setSkillLevel(90)
    .build();

//Build WorkType
lxscheduler.WorkType workType = new lxscheduler.WorkTypeBuilder()
    .setDurationInMinutes(15)
    .setBlockTimeBeforeAppointmentInMinutes(5)
    .setBlockTimeAfterAppointmentInMinutes(5)
    .setTimeFrameStartInMinutes(10080)
    .setTimeFrameEndInMinutes(40320)
    .setOperatingHoursId('0OHRM0000000FmG4AU')
    .setSkillRequirements(new List<lxscheduler.SkillRequirement>{skillReq})
    .build();

lxscheduler.GetAppointmentCandidatesInput input = new
lxscheduler.GetAppointmentCandidatesInputBuilder()
    .setWorkType(workType)
    .setTerritoryIds(new List<String>{'0HhRM0000000FXd0AM'})
    .setSchedulingPolicyId('0VrRM00000000Bx')
    .setApiVersion(Double.valueOf('50.0'))
    .build();

    String response = lxscheduler.SchedulerResources.getAppointmentCandidates(input);

```

This example shows a sample response of a list of available candidates:

```

[
  {
    "startTime": "2021-02-16T16:15:00.000+0000",
    "endTime": "2021-02-16T16:16:00.000+0000",
    "resources": [
      "0Hnxx0000004C9BCAU"
    ],
    "territoryId": "0Hhxx0000004C92CAE"
  },

```

```
{
  "startTime": "2021-02-16T16:30:00.000+0000",
  "endTime": "2021-02-16T16:31:00.000+0000",
  "resources": [
    "0Hnxx0000004C9BCAU"
  ],
  "territoryId": "0Hhxx0000004C92CAE"
},
]
```

## GetAppointmentCandidatesInputBuilder Class

Contains methods to build an instance of the `lxscheduler.GetAppointmentCandidatesInput` class.

A Builder object is obtained by invoking one of the `GetAppointmentCandidatesInputBuilder` methods defined by the `GetAppointmentCandidatesInput` class.

### Namespace

[LxScheduler](#)

[GetAppointmentCandidatesInputBuilder Methods](#)

### GetAppointmentCandidatesInputBuilder Methods

The following are methods for `GetAppointmentCandidatesInputBuilder`.

IN THIS SECTION:

[build\(\)](#)

Returns an instance of the `lxscheduler.GetAppointmentCandidatesInput` object.

[setAccountId\(accountId\)](#)

Sets the ID of the associated account for which you want to create the appointments.

[setAllowConcurrent\(allowConcurrent\)](#)

Allows the scheduling of concurrent appointments.

[setApiVersion\(apiVersion\)](#)

Sets the API version of the business logic for the `getAppointmentCandidates` method.

[setCorrelationId\(correlationId\)](#)

Sets the correlation ID.

[setEndTime\(endTime\)](#)

Sets the scheduling end time.

[setEngagementChannelTypeIds\(engagementChannelTypeIds\)](#)

Sets an engagement channel type.

[setFilterByResources\(filterByResources\)](#)

Enables filtering resources using a comma-separated list of service resource IDs.

[setResourceLimitApptDistribution\(resourceLimitApptDistribution\)](#)

Sets the number of service resources to show during appointment scheduling.

[setSchedulingPolicyId\(schedulingPolicyId\)](#)

Sets the ID of the AppointmentSchedulingPolicy object.

[setStartTime\(startTime\)](#)

Sets the scheduling start time to the specified time.

[setTerritoryIds\(territoryIds\)](#)

Sets the service territory IDs.

[setWorkType\(workType\)](#)

Sets the type of work to be performed.

[setWorkTypeGroupId\(workTypeGroupId\)](#)

Sets the ID of the work type group.

**build()**

Returns an instance of the `lxscheduler.GetAppointmentCandidatesInput` object.

**Signature**

```
public lxscheduler.GetAppointmentCandidatesInput build()
```

**Return Value**

Type: [lxscheduler.GetAppointmentCandidatesInput](#)

**setAccountId(accountId)**

Sets the ID of the associated account for which you want to create the appointments.

**Signature**

```
public lxscheduler.GetAppointmentCandidatesInputBuilder setAccountId(String accountId)
```

**Parameters**

*accountId*

Type: [String](#)

**Return Value**

Type: [LxScheduler.GetAppointmentCandidatesInputBuilder](#)

**setAllowConcurrent(allowConcurrent)**

Allows the scheduling of concurrent appointments.

## Signature

```
public lxscheduler.GetAppointmentCandidatesInputBuilder setAllowConcurrent(Boolean allowConcurrent)
```

## Parameters

*allowConcurrent*

Type: [Boolean](#)

If true, allows scheduling of concurrent appointments in a time slot. The default is false.

Available in API version 47.0 and later.

## Return Value

Type: [LxScheduler.GetAppointmentCandidatesInputBuilder](#)

## **setApiVersion(apiVersion)**

Sets the API version of the business logic for the `getAppointmentCandidates` method.

## Signature

```
public lxscheduler.GetAppointmentCandidatesInputBuilder setApiVersion(Double apiVersion)
```

## Parameters

*apiVersion*

Type: [Double](#)

## Usage

The specified parameter must use the correct API version. For example, if API version is set to 45.0 and *filterByResources* is set (which is available in API version 51.0 and later), then this field is ignored. If no API version or incorrect API version is passed in the request body, by default the latest version is used.

 **Note:** The API is available since version 45.0.

## Return Value

Type: [LxScheduler.GetAppointmentCandidatesInputBuilder](#)

## **setCorrelationId(correlationId)**

Sets the correlation ID.

## Signature

```
public lxscheduler.GetAppointmentCandidatesInputBuilder setCorrelationId(String correlationId)
```

## Parameters

*correlationId*

Type: [String](#)

ID to pass custom information to the `ServiceResourceScheduleHandler` Apex interface. For example, you can use the correlation ID to identify the app, website, or any other external system that calls this Apex interface implementation. If you don't pass a custom value, a randomly generated identifier is passed. Available in API version 53.0 and later.

## Return Value

Type: [LxScheduler.GetAppointmentCandidatesInputBuilder](#)

### **setEndTime (endTime)**

Sets the scheduling end time.

## Signature

```
public lxscheduler.GetAppointmentCandidatesInputBuilder setEndTime(String endTime)
```

## Parameters

*endTime*

Type: [String](#)

The latest time that a time slot can end (inclusive).

**Note:** If end time is not specified, it defaults to 31 days.

## Usage

The specified string should use the standard date format "[yyyy-MM-dd\T\HH:mm:ssZ]" in the local time zone. Defaults to the user's time zone.

## Return Value

Type: [LxScheduler.GetAppointmentCandidatesInputBuilder](#)

### **setEngagementChannelTypeIds (engagementChannelTypeIds)**

Sets an engagement channel type.

## Signature

```
public lxscheduler.GetAppointmentCandidatesInputBuilder
setEngagementChannelTypeIds(List<String> engagementChannelTypeIds)
```

## Parameters

*engagementChannelTypeIds*

Type: [List<String>](#)

The ID of the engagement channel type record. The availability of service resources is filtered based on the engagement channel type selected. This field is available in API version 56.0 and later.

 **Note:** This field supports only one engagement channel type ID.

## Return Value

Type: [LxScheduler.GetAppointmentCandidatesInputBuilder](#)

## Usage

You can use engagement channel types only in these cases:

- The **Schedule Appointments Using Engagement Channels** setting is enabled in Salesforce Scheduler Settings in your Salesforce org.
- Shifts are defined in the scheduling policy. For more information on setting up shifts in scheduling policy, see [Define Shift Rules in Scheduling Policy](#).

 **Note:** Engagement channel types are not supported with operating-hours rules in the scheduling policy.

## **setFilterByResources (filterByResources)**

Enables filtering resources using a comma-separated list of service resource IDs.

## Signature

```
public lxscheduler.GetAppointmentCandidatesInputBuilder setFilterByResources (List<String>
filterByResources)
```

## Parameters

*filterByResources*

Type: List<String>

Gets only eligible resources that are both in the list and in the selected service territory sorted by the order in which the resource IDs are passed. This field is available in API version 51.0 and later.

## Return Value

Type: [LxScheduler.GetAppointmentCandidatesInputBuilder](#)

## **setResourceLimitApptDistribution (resourceLimitApptDistribution)**

Sets the number of service resources to show during appointment scheduling.

## Signature

```
public lxscheduler.GetAppointmentCandidatesInputBuilder
setResourceLimitApptDistribution (Integer resourceLimitApptDistribution)
```

## Parameters

*resourceLimitApptDistribution*

Type: [Integer](#)

Specify the maximum number of service resources that you want to show during appointment scheduling when appointment distribution is enabled. Available in API version 53.0 and later.

## Return Value

Type: [LxScheduler.GetAppointmentCandidatesInputBuilder](#)

### **setSchedulingPolicyId(schedulingPolicyId)**

Sets the ID of the AppointmentSchedulingPolicy object.

## Signature

```
public lxscheduler.GetAppointmentCandidatesInputBuilder setSchedulingPolicyId(String schedulingPolicyId)
```

## Parameters

*schedulingPolicyId*

Type: [String](#)

The ID of the AppointmentSchedulingPolicy object. If no scheduling policy is passed in the request body, the default configurations are used.

## Return Value

Type: [LxScheduler.GetAppointmentCandidatesInputBuilder](#)

### **setStartTime(startTime)**

Sets the scheduling start time to the specified time.

## Signature

```
public lxscheduler.GetAppointmentCandidatesInputBuilder setStartTime(String startTime)
```

## Parameters

*startTime*

Type: [String](#)

The earliest time that a time slot can begin (inclusive). You can also use a time from the past.

## Usage

The specified string should use the standard date format "[yyyy-MM-dd\T\HH:mm:ssZ]" in the local time zone. Defaults to the user's time zone.

## Return Value

Type: [LxScheduler.GetAppointmentCandidatesInputBuilder](#)

### **setTerritoryIds (territoryIds)**

Sets the service territory IDs.

## Signature

```
public lxscheduler.GetAppointmentCandidatesInputBuilder setTerritoryIds (List<String>
territoryIds)
```

## Parameters

*territoryIds*

Type: List<String>

List of service territory IDs, where the work that is being requested is performed. This is a required field.

## Return Value

Type: [LxScheduler.GetAppointmentCandidatesInputBuilder](#)

### **setWorkType (workType)**

Sets the type of work to be performed.

## Signature

```
public lxscheduler.GetAppointmentCandidatesInputBuilder setWorkType (lxscheduler.WorkType
workType)
```

## Parameters

*workType*

Type: [lxscheduler.WorkType](#)

This method takes input as an instance of the `lxscheduler.WorkType` class. Build the instance of the input class using the `lxscheduler.WorkTypeBuilder` class.

Required if *workTypeGroupId* is not given. If id of the *workType* is given, the rest of *workType* fields are optional.

## Usage

## Return Value

Type: [LxScheduler.GetAppointmentCandidatesInputBuilder](#)

### **setWorkTypeGroupId (workTypeGroupId)**

Sets the ID of the work type group.

## Signature

```
public LxScheduler.GetAppointmentCandidatesInputBuilder setWorkTypeGroupId(String
workTypeId)
```

## Parameters

*workTypeId*

Type: [String](#)

The ID of the work type group containing the work types that are being performed. Required if *workType* is not given. If *workType* is given, then you must provide either *id* or *durationInMinutes*, but not both.

## Return Value

Type: [LxScheduler.GetAppointmentCandidatesInputBuilder](#)

# GetAppointmentSlotsInput Class

Contains information about the available appointment time slots for a resource based on given work type group and territories.

The appointment time slots are determined based on your Salesforce Scheduler data model configurations. Here are some prerequisites that you can consider while setting up data.

- Set up Salesforce Scheduler before making your requests. The setup includes creating or configuring Service Resources, Service Territory Members, Work Type Groups, Work Types, Work Type Group Members, and Service Territory Work Types. See [Manage Business Information in Salesforce Scheduler](#) for more information.
- Configure a work type mapped for each territory in the request body via Service Territory Work Type. Map the same work type to the work type group, via work type group member.

The following factors affect how time slots are calculated and returned.

- Timezones that differ across operating hours are handled and results are always returned in UTC.
- The resource must be marked as a required resource on the assigned resource object.
- The resource is considered unavailable if the status categories of the resource assigned to service appointments are other than `Canceled`, `Cannot Complete`, and `Completed`.
- Resource Absences of all types are considered unavailable from start to end.
- The following fields of Work Type records, if configured, are used to fine-tune time slot requirements. For more information, see [Create Work Types in Salesforce Scheduler](#).

Parameter	Description
<code>Timeframe Start</code>	Time slots sooner than <code>current time + <b>Timeframe Start</b></code> aren't returned.
<code>Timeframe End</code>	Time slots later than <code>current time + <b>Timeframe End</b></code> aren't returned.
<code>Block Time Before Appointment</code>	The time period before the appointment is considered as unavailable.
<code>Block Time After Appointment</code>	The time period after the appointment is considered as unavailable.
<code>Operating Hours</code>	The overlap of all operating hours from the account, work type, service territory, and service territory member are considered while determining time slots. For more information, see <a href="#">Set Up Operating Hours in Salesforce Scheduler</a> .

- Only the time slots within the period of 31 days from the start date are returned.
- Salesforce Scheduler uses multiple factors, such as field values, scheduled appointments, absences, Scheduler Settings, and Scheduling Policies to determine available time slots, including the earliest and latest appointment slots. See [How Does Salesforce Scheduler Determine Available Time Slots](#).

 **Note:** If asset scheduling is enabled, you can provide an asset-based service resource in `requiredResourceIds` to retrieve available timeslots for the asset resource.

## Namespace

[LxScheduler](#)

## Usage

The constructor for this class can't be called directly. Create an instance of this class using the [GetAppointmentSlotsInputBuilder.build\(\)](#) method.

This example shows how to get a list of available time slots based on `workTypeId`:

```
//Build input for GetAppointmentSlots API
    lxscheduler.GetAppointmentSlotsInput input = new
lxscheduler.GetAppointmentSlotsInputBuilder()
    .setWorkTypeId('0VSxx0000004C92GAE')
    .setTerritoryIds(new List<String>{'0Hhxx0000004C92CAE'})
    .setStartTime(System.now().format('yyyy-MM-dd\T\HH:mm:ssZ'))
    .setEndTime(System.now().addDays(1).format('yyyy-MM-dd\T\HH:mm:ssZ'))
    .setAccountId('001xx000003GYK0AAO')
    .setRequiredResourceIds(new List<String>{'0Hnxx0000004C92CAE'})
    .setSchedulingPolicyId('0Vrxx0000004CAe')
    .setApiVersion(Double.valueOf('48.0'))
    .build();

String response = lxscheduler.SchedulerResources.getAppointmentSlots(input);
```

This example shows how to get a list of available time slots based on `workType`:

```
//Build WorkType
    lxscheduler.WorkType workType = new lxscheduler.WorkTypeBuilder()
    .setId('08qxx0000004C92AAE')
    .build();

    lxscheduler.GetAppointmentSlotsInput input = new
lxscheduler.GetAppointmentSlotsInputBuilder()
    .setWorkType(workType)
    .setTerritoryIds(new List<String>{'0Hhxx0000004C92CAE'})
    .setStartTime(System.now().format('yyyy-MM-dd\T\HH:mm:ssZ'))
    .setEndTime(System.now().addDays(1).format('yyyy-MM-dd\T\HH:mm:ssZ'))
    .setAccountId('001xx000003GYK0AAO')
    .setRequiredResourceIds(new List<String>{'0Hnxx0000004C92CAE'})
    .setSchedulingPolicyId('0Vrxx0000004CAe')
    .setApiVersion(Double.valueOf('48.0'))
    .build();

String response = lxscheduler.SchedulerResources.getAppointmentSlots(input);
```

This example shows how to get a list of available time slots based on `durationInMinutes` and without `workTypeId` or `workType` fields:

```
//Build WorkType
lxscheduler.WorkType workType = new lxscheduler.WorkTypeBuilder()
    .setDurationInMinutes(60)
    .build();

lxscheduler.GetAppointmentSlotsInput input = new
lxscheduler.GetAppointmentSlotsInputBuilder()
    .setWorkType(workType)
    .setTerritoryIds(new List<String>{'0Hhxx0000004C92CAE'})
    .setRequiredResourceIds(new List<String>{'0Hnxx0000004C92CAE'})
    .setApiVersion(Double.valueOf('48.0'))
    .build();

String response = lxscheduler.SchedulerResources.getAppointmentSlots(input);
```

This example shows a sample response of a list of available time slots:

```
[
  {
    "territoryId": "0Hhxx0000004C92CAE",
    "startTime": "2021-02-10T16:00:00.000+0000",
    "endTime": "2021-02-10T16:15:00.000+0000",
    "remainingAppointments": 1
  },
  {
    "territoryId": "0Hhxx0000004C92CAE",
    "startTime": "2021-02-10T16:15:00.000+0000",
    "endTime": "2021-02-10T16:30:00.000+0000",
    "remainingAppointments": 1
  },
]
```

## GetAppointmentSlotsInputBuilder Class

Contains methods to build an instance of the `lxscheduler.GetAppointmentSlotsInput` class.

A Builder object is obtained by invoking one of the `GetAppointmentSlotsInputBuilder` methods defined by the `GetAppointmentSlotsInput` class.

## Namespace

[LxScheduler](#)

IN THIS SECTION:

[GetAppointmentSlotsInputBuilder Methods](#)

## GetAppointmentSlotsInputBuilder Methods

The following are methods for `GetAppointmentSlotsInputBuilder`.

## IN THIS SECTION:

[build\(\)](#)

Returns an instance of the `lxscheduler.GetAppointmentSlotsInput` object.

[setAccountId\(accountId\)](#)

Sets the ID of the associated account for which you want to create appointments.

[setAllowConcurrentScheduling\(allowConcurrentScheduling\)](#)

Allows the scheduling of concurrent appointments.

[setApiVersion\(apiVersion\)](#)

Sets the API version of the business logic for the `getAppointmentSlots` method.

[setCorrelationId\(correlationId\)](#)

Sets the correlation ID.

[setEndTime\(endTime\)](#)

Sets the scheduling end time.

[setEngagementChannelTypeIds\(engagementChannelTypeIds\)](#)

Sets an engagement channel type.

[setPrimaryResourceId\(primaryResourceId\)](#)

Sets the ID of the primary resource.

[setRequiredResourceIds\(requiredResourceIds\)](#)

Sets the resource IDs.

[setSchedulingPolicyId\(schedulingPolicyId\)](#)

Sets the ID of the `AppointmentSchedulingPolicy` object.

[setStartTime\(startTime\)](#)

Sets the scheduling start time.

[setTerritoryIds\(territoryIds\)](#)

Sets the IDs of service territories.

[setWorkType\(workType\)](#)

Sets the type of work to be performed.

[setWorkTypeGroupId\(workTypeGroupId\)](#)

Sets the ID of the work type group.

**build()**

Returns an instance of the `lxscheduler.GetAppointmentSlotsInput` object.

**Signature**

```
public lxscheduler.GetAppointmentSlotsInput build()
```

**Return Value**

Type: [lxscheduler.GetAppointmentSlotsInput](#)

**setAccountId (accountId)**

Sets the ID of the associated account for which you want to create appointments.

**Signature**

```
public lxscheduler.GetAppointmentSlotsInputBuilder setAccountId(String accountId)
```

**Parameters**

*accountId*

Type: [String](#)

The ID of the associated account.

**Return Value**

Type: [lxscheduler.GetAppointmentSlotsInputBuilder](#)

**setAllowConcurrentScheduling (allowConcurrentScheduling)**

Allows the scheduling of concurrent appointments.

**Signature**

```
public lxscheduler.GetAppointmentSlotsInputBuilder setAllowConcurrentScheduling(Boolean allowConcurrentScheduling)
```

**Parameters**

*allowConcurrentScheduling*

Type: [Boolean](#)

If true, allows scheduling of concurrent appointments in a time slot. If false, concurrent appointments are not allowed. The default is false. Available in API version 47.0 and later.

**Return Value**

Type: [lxscheduler.GetAppointmentSlotsInputBuilder](#)

**setApiVersion (apiVersion)**

Sets the API version of the business logic for the `getAppointmentSlots` method.

**Signature**

```
public lxscheduler.GetAppointmentSlotsInputBuilder setApiVersion(Double apiVersion)
```

**Parameters**

*apiVersion*

Type: [Double](#)

## Usage

The specified parameter must use the correct API version. For example, if API version is set to 45.0 and *primaryResourceId* is set (which is available in API version 48.0 and later), then this field is ignored. If no API version or incorrect API version is passed in the request body, by default the latest version is used.

 **Note:** The API is available since version 45.0.

## Return Value

Type: [Ixscheduler.GetAppointmentSlotsInputBuilder](#)

### **setCorrelationId(correlationId)**

Sets the correlation ID.

## Signature

```
public Ixscheduler.GetAppointmentSlotsInputBuilder setCorrelationId(String correlationId)
```

## Parameters

*correlationId*

Type: [String](#)

ID to pass custom information to the [ServiceResourceScheduleHandler](#) Apex interface. For example, you can use the correlation ID to identify the app, website, or any other external system that calls this Apex interface implementation. If you don't pass a custom value, a randomly generated identifier is passed. Available in API version 53.0 and later.

## Return Value

Type: [Ixscheduler.GetAppointmentSlotsInputBuilder](#)

### **setEndTime(endTime)**

Sets the scheduling end time.

## Signature

```
public Ixscheduler.GetAppointmentSlotsInputBuilder setEndTime(String endTime)
```

## Parameters

*endTime*

Type: [String](#)

The latest time that a time slot can end (inclusive). If end time is not specified, it defaults to 31 days.

## Usage

The specified string should use the standard date format "[yyyy-MM-dd\T\HH:mm:ssZ]" in the local time zone. Defaults to the user's time zone.

## Return Value

Type: [lxscheduler.GetAppointmentSlotsInputBuilder](#)

### **setEngagementChannelTypeIds (engagementChannelTypeIds)**

Sets an engagement channel type.

## Signature

```
public lxscheduler.GetAppointmentSlotsInputBuilder  
setEngagementChannelTypeIds (List<String> engagementChannelTypeIds)
```

## Parameters

*engagementChannelTypeIds*

Type: List<String>

The ID of the engagement channel type record. The availability of time slots is filtered based on the engagement channel type selected. This field is available in API version 56.0 and later.

**Note:** This field supports only one engagement channel type ID.

## Return Value

Type: [lxscheduler.GetAppointmentSlotsInputBuilder](#)

## Usage

You can use engagement channel types only in these cases:

- The **Schedule Appointments Using Engagement Channels** setting is enabled in Salesforce Scheduler Settings in your Salesforce org.
- Shifts are defined in the scheduling policy. For more information on setting up shifts in scheduling policy, see [Define Shift Rules in Scheduling Policy](#).

**Note:** Engagement channel types are not supported with operating-hours rules in the scheduling policy.

### **setPrimaryResourceId (primaryResourceId)**

Sets the ID of the primary resource.

## Signature

```
public lxscheduler.GetAppointmentSlotsInputBuilder setPrimaryResourceId (String  
primaryResourceId)
```

## Parameters

*primaryResourceId*

Type: String

The ID of the primary resource in multi-resource scheduling. Required only when multi-resource scheduling is enabled. Available in API version 48.0 and later.

## Return Value

Type: [lxscheduler.GetAppointmentSlotsInputBuilder](#)

### **setRequiredResourceIds (requiredResourceIds)**

Sets the resource IDs.

## Signature

```
public lxscheduler.GetAppointmentSlotsInputBuilder setRequiredResourceIds (List<String>
requiredResourceIds)
```

## Parameters

*requiredResourceIds*

Type: [List<String>](#)

List of resource IDs that must be available during the time slot. This is a required field.

## Return Value

Type: [lxscheduler.GetAppointmentSlotsInputBuilder](#)

### **setSchedulingPolicyId (schedulingPolicyId)**

Sets the ID of the [AppointmentSchedulingPolicy](#) object.

## Signature

```
public lxscheduler.GetAppointmentSlotsInputBuilder setSchedulingPolicyId (String
schedulingPolicyId)
```

## Parameters

*schedulingPolicyId*

Type: [String](#)

If no scheduling policy is passed in the request body, the default configurations are used.

## Return Value

Type: [lxscheduler.GetAppointmentSlotsInputBuilder](#)

### **setStartTime (startTime)**

Sets the scheduling start time.

## Signature

```
public lxscheduler.GetAppointmentSlotsInputBuilder setStartTime(String startTime)
```

## Parameters

*startTime*

Type: [String](#)

The earliest time that a time slot can begin (inclusive). Defaults to the current time of the request, if empty.

## Usage

The specified string should use the standard date format "[yyyy-MM-dd\T\HH:mm:ssZ]" in the local time zone. Defaults to the user's time zone.

## Return Value

Type: [lxscheduler.GetAppointmentSlotsInputBuilder](#)

## **setTerritoryIds (territoryIds)**

Sets the IDs of service territories.

## Signature

```
public lxscheduler.GetAppointmentSlotsInputBuilder setTerritoryIds(List<String>
territoryIds)
```

## Parameters

*territoryIds*

Type: List<[String](#)>

List of IDs of service territories, where the work that is being requested is performed. This is a required field.

## Return Value

Type: [lxscheduler.GetAppointmentSlotsInputBuilder](#)

## **setWorkType (workType)**

Sets the type of work to be performed.

## Signature

```
public lxscheduler.GetAppointmentSlotsInputBuilder setWorkType(lxscheduler.WorkType
workType)
```

## Parameters

*workType*

Type: [lxscheduler.WorkType](#)

This method takes input as an instance of the `lxscheduler.WorkType` class. Build the instance of the input class using the `lxscheduler.WorkTypeBuilder` class.

Required if `workTypeGroupId` is not given.

### Return Value

Type: [lxscheduler.GetAppointmentSlotsInputBuilder](#)

### **setWorkTypeGroupId (workTypeGroupId)**

Sets the ID of the work type group.

### Signature

```
public lxscheduler.GetAppointmentSlotsInputBuilder setWorkTypeGroupId(String workTypeGroupId)
```

### Parameters

*workTypeGroupId*

Type: [String](#)

The ID of the work type group containing the work types that are being performed.

### Return Value

Type: [lxscheduler.GetAppointmentSlotsInputBuilder](#)

## SchedulerResources Class

Contains methods that holds the business logic to get resources availability.

## Namespace

[LxScheduler](#)

## Implementation Considerations

Apex implementation of the methods in the `SchedulerResources` class should adhere to Apex Governor Limits. It includes synchronous heap size limit, synchronous CPU time limit, and synchronous concurrent transactions for long running transactions. To avoid governor limits, you must tune the input by reducing the time frame, limiting number of service resources, or limiting number of territories at a time. This will reduce the overall transaction time and response size of the implementation. For more information on standard Apex Governor Limits, see [Salesforce Developer Limits and Allocations Quick Reference](#).

## Example

To get list of available service resources (appointment candidates):

```
String response = lxscheduler.SchedulerResources.getAppointments(input);
```

To get a list of available appointment time slots for a resource:

```
String response = lxscheduler.SchedulerResources.getAppointmentsSlots(input);
```

IN THIS SECTION:

[SchedulerResources Methods](#)

## SchedulerResources Methods

The following are methods for `SchedulerResources`.

IN THIS SECTION:

[getAppointmentCandidates\(getAppointmentCandidatesInput\)](#)

Returns a list of service resources based on work type group or work type and service territories.

[getAppointmentSlots\(getAppointmentSlotsInput\)](#)

Returns a list of available appointment time slots for a resource based on given work type group or work type and service territories.

[setAppointmentCandidatesMock\(expectedResponse\)](#)

Sets a mock object when running tests for the `getAppointmentCandidates` method.

[setAppointmentSlotsMock\(expectedResponse\)](#)

Sets a mock object when running tests for the `getAppointmentSlots` method.

### **getAppointmentCandidates (getAppointmentCandidatesInput)**

Returns a list of service resources based on work type group or work type and service territories.

Set up Salesforce Scheduler before making requests. This setup includes creating or configuring Service Resources, Service Territory Members, Work Type Groups, Work Types, Work Type Group Members, and Service Territory Work Types. See [Set Up Salesforce Scheduler](#) for more information.

The appointment time slots are determined based on multiple factors, such as field values, scheduled appointments, absences, Scheduler Settings, and Scheduling Policies to determine available time slots. See [How Salesforce Scheduler Determines Available Time Slots](#) for more information.

The following factors are considered for returning start time and end time of resources.

#### **Resource Availability**

Determined using service territory member, service territory, work type, and account operating hours fields.

#### **Resource Unavailability**

Determined by resource absences, existing appointments that the resource is assigned to. The resource must be marked as a required resource for the appointment with a status that isn't in closed, canceled, or completed.

#### **Appointment Start Time Interval in the Scheduling Policy**

Appointment start time interval field in the Scheduling Policy is used to determine when the appointment can start. This interval can be 5, 10, 15, 20, 30, or 60. By default, it's set to 15.

#### **Work Type Duration**

The end time is calculated as start time + duration of the work type.

 **Note:** If asset scheduling is enabled, the response also includes asset-based candidates.

## Signature

```
public static String getAppointmentCandidates (lxscheduler.GetAppointmentCandidatesInput
getAppointmentCandidatesInput)
```

## Parameters

*getAppointmentCandidatesInput*

Type: [lxscheduler.GetAppointmentCandidatesInput](#)

This method takes input as an instance of the `lxscheduler.GetAppointmentCandidatesInput` class. Build the instance of the input class using the `lxscheduler.GetAppointmentCandidatesInputBuilder` class.

## Return Value

Type: [String](#)

### **getAppointmentSlots (getAppointmentSlotsInput)**

Returns a list of available appointment time slots for a resource based on given work type group or work type and service territories.

The appointment time slots are determined based on your Salesforce Scheduler data model configurations. Here are some prerequisites that you can consider while setting up data.

- Set up Salesforce Scheduler before making your requests. The setup includes creating or configuring Service Resources, Service Territory Members, Work Type Groups, Work Types, Work Type Group Members, and Service Territory Work Types. See [Manage Business Information in Salesforce Scheduler](#) for more information.
- Configure a work type mapped for each territory in the request body via Service Territory Work Type. Map the same work type to the work type group, via work type group member.

The following factors affect how time slots are calculated and returned.

- Timezones that differ across operating hours are handled and results are always returned in UTC.
- The resource must be marked as a required resource on the assigned resource object.
- The resource is considered unavailable if the status categories of the resource assigned to service appointments are other than `Canceled`, `Cannot Complete`, and `Completed`.
- Resource Absences of all types are considered unavailable from start to end.
- The following fields of Work Type records, if configured, are used to fine-tune time slot requirements. For more information, see [Create Work Types in Salesforce Scheduler](#).

Parameter	Description
Timeframe Start	Time slots sooner than current time + <b>Timeframe Start</b> aren't returned.
Timeframe End	Time slots later than current time + <b>Timeframe End</b> aren't returned.
Block Time Before Appointment	The time period before the appointment is considered as unavailable.
Block Time After Appointment	The time period after the appointment is considered as unavailable.
Operating Hours	The overlap of all operating hours from the account, work type, service territory, and service territory member are considered while determining time slots. For more information, see <a href="#">Set Up Operating Hours in Salesforce Scheduler</a> .

- Only the time slots within the period of 31 days from the start date are returned.
  - Salesforce Scheduler uses multiple factors, such as field values, scheduled appointments, absences, Scheduler Settings, and Scheduling Policies to determine available time slots, including the earliest and latest appointment slots. See [How Does Salesforce Scheduler Determine Available Time Slots](#).
-  **Note:** If asset scheduling is enabled, you can provide an asset-based service resource in `requiredResourceIds` to retrieve available timeslots for the asset resource.

## Signature

```
public static String getAppointmentSlots (lxscheduler.GetAppointmentSlotsInput
getAppointmentSlotsInput)
```

## Parameters

*getAppointmentSlotsInput*

Type: [lxscheduler.GetAppointmentSlotsInput](#)

This method takes input as an instance of the `lxscheduler.GetAppointmentSlotsInput` class. Build the instance of the input class using the `lxscheduler.GetAppointmentSlotsInputBuilder` class.

## Return Value

Type: [String](#)

## **setAppointmentCandidatesMock (expectedResponse)**

Sets a mock object when running tests for the `getAppointmentCandidates` method.

This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

## Signature

```
public static void setAppointmentCandidatesMock (String expectedResponse)
```

## Parameters

*expectedResponse*

Type: [String](#)

## Return Value

Type: void

This example shows a sample implementation of the `GetAppointmentCandidates` class:

```
public class AppointmentCandidateService {
    //Instance members for parsing
    public String startTime;
    public String endTime;
    public List<String> resources;
    public String territoryId;
```

```
List<AppointmentCandidateService> candidateList =
AppointmentCandidateService.getAppointments();
    System.assertEquals(2, candidateList.size(), 'Should return only 2 records!');
    Test.stopTest();
}
}
```

### **setAppointmentSlotsMock (expectedResponse)**

Sets a mock object when running tests for the `getAppointmentSlots` method.

This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

#### Signature

```
public static void setAppointmentSlotsMock(String expectedResponse)
```

#### Parameters

*expectedResponse*  
Type: [String](#)

#### Return Value

Type: void

## SkillRequirement Class

Contains information about the set of skills that are required to complete a particular task for a work type.

### Namespace

[LxScheduler](#)

### Usage

The constructor for this class can't be called directly. Create an instance of this class using the [SkillRequirementBuilder.build\(\)](#) method.

## SkillRequirementBuilder Class

Contains methods to build an instance of the `lxscheduler.SkillRequirement` class.

A Builder object is obtained by invoking one of the `SkillRequirementBuilder` methods defined by the `SkillRequirement` class.

### Namespace

[LxScheduler](#)

IN THIS SECTION:

[SkillRequirementBuilder Methods](#)

## SkillRequirementBuilder Methods

The following are methods for `SkillRequirementBuilder`.

IN THIS SECTION:

[build\(\)](#)

Returns an instance of the `lxscheduler.SkillRequirement` object.

[setSkillId\(skillId\)](#)

Sets the skill that is required to complete a particular task for a work type. This is a required field.

[setSkillLevel\(skillLevel\)](#)

Sets the level of the skill that is required to complete a particular task for a work type

### **build()**

Returns an instance of the `lxscheduler.SkillRequirement` object.

### Signature

```
public lxscheduler.SkillRequirement build()
```

### Return Value

Type: [lxscheduler.SkillRequirement](#)

### **setSkillId(skillId)**

Sets the skill that is required to complete a particular task for a work type. This is a required field.

### Signature

```
public lxscheduler.SkillRequirementBuilder setSkillId(String skillId)
```

### Parameters

*skillId*

Type: [String](#)

### Return Value

Type: [lxscheduler.SkillRequirementBuilder](#)

### **setSkillLevel(skillLevel)**

Sets the level of the skill that is required to complete a particular task for a work type

## Signature

```
public lxscheduler.SkillRequirementBuilder setSkillLevel(Double skillLevel)
```

## Parameters

*skillLevel*

Type: [Double](#)

The skill levels can range from zero to 99.99. Depending on your business needs, you might want the skill level to reflect years of experience, certification levels, or license classes.

## Return Value

Type: [lxscheduler.SkillRequirementBuilder](#)

# WorkType Class

Contains information about the type of work to be performed.

## Namespace

[LxScheduler](#)

## Usage

The constructor for this class can't be called directly. Create an instance of this class using the [WorkTypeBuilder.build\(\)](#) method.

# WorkTypeBuilder Class

Contains methods to build an instance of the `lxscheduler.WorkType` class.

A Builder object is obtained by invoking one of the `workTypeBuilder` methods defined by the `WorkType` class.

## Namespace

[LxScheduler](#)

IN THIS SECTION:

[WorkTypeBuilder Methods](#)

## WorkTypeBuilder Methods

The following are methods for `WorkTypeBuilder`.

IN THIS SECTION:

[build\(\)](#)

Returns an instance of the `lxscheduler.WorkType` object.

[setBlockTimeAfterAppointmentInMinutes\(blockTimeAfterAppointmentInMinutes\)](#)

Sets the time period, in minutes.

[setBlockTimeBeforeAppointmentInMinutes\(blockTimeBeforeAppointmentInMinutes\)](#)

Sets the time period, in minutes.

[setDurationInMinutes\(durationInMinutes\)](#)

Sets the event length.

[setId\(id\)](#)

Sets the ID of the work type to the specified ID.

[setOperatingHoursId\(operatingHoursId\)](#)

Sets the overlap of operating hours.

[setSkillRequirements\(skillRequirements\)](#)

Sets the skills that are required to complete a particular task for a work type.

[setTimeFrameEndInMinutes\(timeFrameEndInMinutes\)](#)

Sets the end of the timeframe.

[setTimeFrameStartInMinutes\(timeFrameStartInMinutes\)](#)

Sets the beginning of the timeframe.

## **build()**

Returns an instance of the `lxscheduler.WorkType` object.

## Signature

```
public lxscheduler.WorkType build()
```

## Return Value

Type: [lxscheduler.WorkType](#)

## **setBlockTimeAfterAppointmentInMinutes (blockTimeAfterAppointmentInMinutes)**

Sets the time period, in minutes.

## Signature

```
public lxscheduler.WorkTypeBuilder setBlockTimeAfterAppointmentInMinutes (Integer  
blockTimeAfterAppointmentInMinutes)
```

## Parameters

*blockTimeAfterAppointmentInMinutes*

Type: [Integer](#)

The time period after the appointment is considered unavailable.

## Return Value

Type: [lxscheduler.WorkTypeBuilder](#)

### **setBlockTimeBeforeAppointmentInMinutes (blockTimeBeforeAppointmentInMinutes)**

Sets the time period, in minutes.

## Signature

```
public lxscheduler.WorkTypeBuilder setBlockTimeBeforeAppointmentInMinutes(Integer  
blockTimeBeforeAppointmentInMinutes)
```

## Parameters

*blockTimeBeforeAppointmentInMinutes*

Type: [Integer](#)

The time period before the appointment is considered as unavailable.

## Return Value

Type: [lxscheduler.WorkTypeBuilder](#)

### **setDurationInMinutes (durationInMinutes)**

Sets the event length.

## Signature

```
public lxscheduler.WorkTypeBuilder setDurationInMinutes(Integer durationInMinutes)
```

## Parameters

*durationInMinutes*

Type: [Integer](#)

Contains the event length, in minutes. Required if *id* is not given.

## Return Value

Type: [lxscheduler.WorkTypeBuilder](#)

### **setId (id)**

Sets the ID of the work type to the specified ID.

## Signature

```
public lxscheduler.WorkTypeBuilder setId(String id)
```

## Parameters

*id*

Type: [String](#)

The ID of the work type. Required if you're using shifts or if *durationInMinutes* is not given.

## Return Value

Type: [lxscheduler.WorkTypeBuilder](#)

### **setOperatingHoursId (operatingHoursId)**

Sets the overlap of operating hours.

## Signature

```
public lxscheduler.WorkTypeBuilder setOperatingHoursId(String operatingHoursId)
```

## Parameters

*operatingHoursId*

Type: [String](#)

The overlap of all operating hours from the account, work type, service territory, and service territory member are considered while determining time slots.

## Return Value

Type: [lxscheduler.WorkTypeBuilder](#)

### **setSkillRequirements (skillRequirements)**

Sets the skills that are required to complete a particular task for a work type.

## Signature

```
public lxscheduler.WorkTypeBuilder  
setSkillRequirements(List<lxscheduler.SkillRequirement> skillRequirements)
```

## Parameters

*skillRequirements*

Type: [List<lxscheduler.SkillRequirement>](#)

This method takes input as an instance of the `lxscheduler.SkillRequirement` class. Build the instance of the input class using the `lxscheduler.SkillRequirementBuilder` class.

## Return Value

Type: [lxscheduler.WorkTypeBuilder](#)

**setTimeFrameEndInMinutes (timeFrameEndInMinutes)**

Sets the end of the timeframe.

**Signature**

```
public lxscheduler.WorkTypeBuilder setTimeFrameEndInMinutes(Integer  
timeFrameEndInMinutes)
```

**Parameters**

*timeFrameEndInMinutes*

Type: [Integer](#)

**Return Value**

Type: [lxscheduler.WorkTypeBuilder](#)

**setTimeFrameStartInMinutes (timeFrameStartInMinutes)**

Sets the beginning of the timeframe.

**Signature**

```
public lxscheduler.WorkTypeBuilder setTimeFrameStartInMinutes(Integer  
timeFrameStartInMinutes)
```

**Parameters**

*timeFrameStartInMinutes*

Type: [Integer](#)

**Return Value**

Type: [lxscheduler.WorkTypeBuilder](#)

## ServiceResourceScheduleHandler Interface

Allows an implementing class to check external calendar events to find already booked time slots for the requested service resources. This interface is part of Salesforce Scheduler.

### Namespace

[LxScheduler](#)

### Usage

The `lxscheduler.ServiceResourceScheduleHandler` interface is called by Salesforce Scheduler APIs.

To implement this interface, you must first declare a class with the `implements` keyword as follows:

```
public class ServiceResourceScheduleHandlerImpl implements
LxScheduler.ServiceResourceScheduleHandler{ }
```

Next, your class must provide an implementation for the following method:

```
public static List<LxScheduler.ServiceResourceSchedule>
getUnavailableTimeslots(LxScheduler.ServiceAppointmentRequestInfo requestInfo){
    //Your code here
}
```

The implemented method must be declared as `global` or `public`.

IN THIS SECTION:

[ServiceResourceScheduleHandler Methods](#)

[ServiceResourceScheduleHandler Example Implementation](#)

## ServiceResourceScheduleHandler Methods

The following are methods for `ServiceResourceScheduleHandler`.

IN THIS SECTION:

[getUnavailableTimeslots\(var1\)](#)

Passes the required information to get unavailable time slots from an external system. The implementation of this method returns the `lxscheduler.ServiceResourceSchedule` class.

### **getUnavailableTimeslots (var1)**

Passes the required information to get unavailable time slots from an external system. The implementation of this method returns the `lxscheduler.ServiceResourceSchedule` class.

### Signature

```
public List<lxscheduler.ServiceResourceSchedule>
getUnavailableTimeslots(lxscheduler.ServiceAppointmentRequestInfo var1)
```

### Parameters
