REBATE MANAGEMENT STANDARD OBJECTS

Rebate Management data model provides objects and fields to create and manage rebate programs and manage payouts and transactions. Use the objects to optimize the incentives offered to build a mutually profitable relationship with your partners.

Rebate Management is available in Lightning Experience.

Available in: Enterprise, Unlimited, and Developer Editions.

[AccountAccountRelation](#)

Represents a relationship between accounts, such as a relationship between a distributor account and a ship-to account. This object is available in API version 58.0 and later.

[PartyRoleRelation](#)

Represents information about the type of relationship between the participants in a relationship. This object is available in API version 58.0 and later.

[ProgramRebateType](#)

Provide the rebate types that are part of this program. For example, volume rebate, revenue rebate, or rebate on every transaction. This object is available in API version 51.0 and later.

[ProgramRebateTypeBenefit](#)

Defines the benefit matrix for the rebate type. For example, 5% or \$200. This object is available in API version 51.0 and later.

[PgmRebateTypBnftMapping](#)

If benefit table is extended, defines mapping of benefit field to the aggregate object fields. This object is available in API version 51.0 and later.

[ProgramRebateTypeFilter](#)

The definition that filters the transaction journals eligible for a rebate type. This filter definition is used in the rebates data processing engines. This object is available in API version 51.0 and later.

[ProgramRebateTypePayout](#)

The payout given to a member for a particular rebate type. For example, volume rebate payout in Jan'19 for ABC enterprises is \$560, petrol engine payout for ABC in Jan'19 is \$440. This object is available in API version 51.0 and later.

[ProgramRebateTypPayoutSrc](#)

The rebate amount and the tier applied calculated for each row in the aggregate. There is a 1 to 1 relation between payout source and aggregate. This object is available in API version 51.0 and later.

[ProgramRebateTypeProduct](#)

Represents a junction between a program rebate type and a product. This object is available in API version 53.0 and later.

[ProgramRebateTypeReference](#)

Represents the association between the contract, opportunity, or any eligible standard or custom object, and rebate type. This object is available in API version 52.0 and later.

[RebateClaim](#)

Represents information about the claim submitted by the end customer or distributor for a ship and debit program. This object is available in API version 54.0 and later.

[RebateClaimAdjustment](#)

Represents information about the adjustments made to the rebate claim. This object is available in API version 58.0 and later.

Rebate Management Standard Objects

[RebateMemberAggregateItem](#)

Represents a junction between a rebate member product aggregate and a transaction journal. This object is available in API version 54.0 and later.

[RebateMemberClaimAggregate](#)

Represents information about the aggregated claim quantity and amount for a rebate member per product. This object is available in API version 58.0 and later.

[RebateMemberProductAggregate](#)

Stores the post calculation summary of journal transactions by member, period, and rebate type. For example, ABC enterprises for May 2021 against Vol Rebate on Radius category, did a total quantity of 150 units and transaction amount of \$80,000. This object is available in API version 65.0 and later.

[RebatePartnerSpecialPrcTrm](#)

Represents information about the special pricing term for a ship and debit program. This object is available in API version 58.0 and later.

[RebatePayment](#)

Tracks if the payment has been generated for this member for back end processing. This object is available in API version 51.0 and later.

[RebatePayoutAdjustment](#)

Rebate amount adjustment that needs to be given manually. An adjustment is an amount added or subtracted to the calculated rebate amount. This object is available in API version 51.0 and later.

[RebateProgram](#)

The rebate program your organization runs with a single account, all accounts, or specific list of accounts. This object is available in API version 51.0 and later.

[RebateProgramMember](#)

The member of a rebate program. By virtue of being a member, the partner or business account is eligible to get rebate payments. For example, ABC Enterprises and HVAC Corp are members of GoldStone Volume Rebate Program. This object is available in API version 51.0 and later.

[RebateProgramMemberPayout](#)

The payout calculated for a member for the period. For example, \$1000 Jan'21 payout for ABC enterprises. This object is available in API version 51.0 and later.

[RebateProgramPayoutPeriod](#)

The period of the payout calculation. For example, 1st to 31st Jan, or 1st Dec to 14th Dec. This object is available in API version 51.0 and later.

[RebatePtrSpclPrcTrmBnft](#)

Represents information about the benefit tier in a rebate partner special pricing term. This object is available in API version 58.0 and later.

[ReceivedDocument](#)

Allows partners to upload .CSV document. This object is available in API version 51.0 and later.

[TransactionJournal](#)

The transactions that need to be processed for a rebate program. For example, order line for 1000 units of \$1200 for member ABC enterprises. This object is available in API version 51.0 and later.

[UnitOfMeasureConversion](#)

Represents the information used to convert a measurement value from a unit of measure to another. This object is available in API version 52.0 and later.

AccountAccountRelation

Represents a relationship between accounts, such as a relationship between a distributor account and a ship-to account. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description ID of the account associated with this account account relationship. This field is a relationship field.</p> <p>Relationship Name Account</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
EndDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The date when the relationship ends.</p>
HierarchyType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Specifies the hierarchy between accounts that are related. Possible values are:</p> <ul style="list-style-type: none"> Child

Field	Details
	<ul style="list-style-type: none"> • Parent • Peer <p>The default value is <code>Peer</code>.</p>
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the account is actively involved with the related account (true) or not (false). The default value is <code>false</code>.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description Name of the account account relationship.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the owner of this object.</p>

Field	Details
	<p>This field is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
PartyRoleRelationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The relationship between two accounts. This field is a relationship field.</p> <p>Relationship Name PartyRoleRelation</p> <p>Relationship Type Lookup</p> <p>Refers To PartyRoleRelation</p>
RelatedAccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The related account in the relationship. This field is a relationship field.</p> <p>Relationship Name RelatedAccount</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
RelatedInverseRecordId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	Description The record that specifies the inverse relationship between the accounts. This field is a relationship field. Relationship Name RelatedInverseRecord Relationship Type Lookup Refers To AccountAccountRelation
StartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date when the relationship starts.

PartyRoleRelation

Represents information about the type of relationship between the participants in a relationship. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.

Field	Details
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the party role relationship.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the owner of this object. This field is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
RelatedInverseRecordId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The record that specifies the inverse relationship between the roles. This field is a relationship field.</p> <p>Relationship Name RelatedInverseRecord</p> <p>Relationship Type Lookup</p> <p>Refers To PartyRoleRelation</p>

Field	Details
RelatedRoleName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The role that's related to another role in the relationship.</p>
RelationshipObjectName	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The object that's associated with the relationship. Possible values are:</p> <ul style="list-style-type: none"> Account_Account_Relationship—Account Account Relationship Contact_Contact_Relationship—Contact Contact Relationship <p>The default value is Account_Account_Relationship.</p>
RoleName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The name of the role in the relationship.</p>
ShouldCreaInversRoleAuto	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether a role record should be created automatically for the relationship (true) or not (false). The default value is <code>false</code>.</p>

ProgramRebateType

Provide the rebate types that are part of this program. For example, volume rebate, revenue rebate, or rebate on every transaction. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccrualRate	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The rate you want to accrue at for the rebate program member. This rate is in the same units as the specified measure type, for example percent or amount. This field is available in API version 52.0 and later.</p>
AggregateObjectName	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Name of the custom aggregation entity. For example, RebateMemberProductAggregate.</p>
BenefitQualifierField	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Represents an attribute in the aggregate object whose value will be used, in conjunction with Aggregate Field and Rebate Type Benefit Field attributes from the PgmRebateTypBnftMapping entity, to determine the Benefit Value from the ProgramRebateTypeBenefit entity.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • <code>GrowthAmount</code>—Rebate Member Product Aggregate:Growth Amount. • <code>GrowthAmountPercent</code>—Rebate Member Product Aggregate:Growth Amount Percent. • <code>GrowthQuantity</code>—Rebate Member Product Aggregate:Growth Quantity. • <code>GrowthQuantityPercent</code>—Rebate Member Product Aggregate:Growth Quantity Percent. • <code>PriorTotalQuantity</code>—Rebate Member Product Aggregate:Prior Total Quantity. • <code>PriorTotalTransactionAmount</code>—Rebate Member Product Aggregate:Prior Total Transaction Amount.

Field	Details
	<ul style="list-style-type: none"> • TotalQuantity—Rebate Member Product Aggregate:Total Quantity. • TotalTransactionAmount—Rebate Member Product Aggregate:Total Transaction Amount.
CalcObjectId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Specifies the data processing engine definition used for the calculation. Only active data processing engine definitions can be used.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Aggregate By Member • Aggregate By Product • Account Hierarchy Member Aggregate • Process Per Transaction • Ship and Debit Member Aggregate • Year on Year Growth
CalculationBasis	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Specify the basis for rebate amount calculation. This field is available in API version 52.0 and later.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Accrual: Accrual rate, if provided, or the benefit setup is used to calculate the rebate amount. • Payout: Benefit setup is used to calculate the rebate amount. • PayoutAndAccrual—Payout and Accrual: Benefit setup is used for payout , and accrual rate for accrual amount. <p>The default value is 'Payout'.</p>
CalculationMethod	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Specifies the rule for calculating rebate benefits.</p>

Field	Details
	<p>Possible values are:</p> <ul style="list-style-type: none"> • Retrospective • Stepped
CalculationType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Type of calculation for the rebate type. Possible values are:</p> <ul style="list-style-type: none"> • AggregateBased • Custom • GrowthBased • PerTransaction
FilterCriteria	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description Stores the rebate type filter definition in JSON format, which will be consumed by the Calc object.</p>
FilterLogic	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Contains the filter criteria options that are offered - AND, OR, Custom.</p>
IsIntegratable	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description This field determines if the rebate type record is of type template or not, based on which the record can be associated with an opportunity,contract, quote, or any other eligible object. The default value is 'false'.</p>

Field	Details
MeasureField	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Stores the reference to the aggregate object that will be used for rebate amount calculations based on the measure type selected and the benefit value fetched. Possible values are:</p> <ul style="list-style-type: none"> • GrowthAmount—Rebate Member Product Aggregate:Growth Amount. • GrowthAmountPercent—Rebate Member Product Aggregate:Growth Amount Percent. • GrowthQuantity—Rebate Member Product Aggregate:Growth Quantity. • GrowthQuantityPercent—Rebate Member Product Aggregate:Growth Quantity Percent. • PriorTotalQuantity—Rebate Member Product Aggregate:Prior Total Quantity. • PriorTotalTransactionAmount—Rebate Member Product Aggregate:Prior Total Transaction Amount. • TotalQuantity—Rebate Member Product Aggregate:Total Quantity. • TotalTransactionAmount—Rebate Member Product Aggregate:Total Transaction Amount.
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the program rebate type.</p>
ProductFilterType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The criteria to be applied for the products present in the Included or Excluded Products list. Possible values are:</p> <ul style="list-style-type: none"> • ExcludeProducts—Exclude Products • IncludeProducts—Include Products
RebateMeasureType	<p>Type picklist</p>

Field	Details
	<p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Type of rebate. Possible values are:</p> <ul style="list-style-type: none"> AmountperUnit Custom FixedAmount PercentageOfRevenue
RebateProgramId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Reference to the rebate program.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Status of the rebate type. Possible values are:</p> <ul style="list-style-type: none"> Active Inactive
UnitOfMeasureId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The unit of measure associated with the program rebate type. This field is available in API version 52.0 and later. This is a relationship field.</p> <p>Relationship Name UnitOfMeasure</p> <p>Relationship Type Lookup</p>

Field	Details
	Refers To UnitOfMeasure

Usage

Each program can have multiple rebate types. For example, buy 100 units and get 2% revenue back, buy 10 units of petrol engines and get 1% rebate, and so on. If you want to give tiered benefits, select the Benefit Qualifier Field. For example, to give a tiered benefit of \$5 for 0–100 units and \$10 for 101–500 units, select Total Quantity in the Benefit Qualifier Field when the Measure Type is Total Quantity.

ProgramRebateTypeBenefit

Defines the benefit matrix for the rebate type. For example, 5% or \$200. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
BenefitValue	Type double Properties Create, Filter, Sort, Update Description Rebate benefit at a level. For example, 3%, \$3000.
EffectiveEndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date until when the program rebate type benefit is effective. If the date does not match a payout period end date, it isn't picked.
EffectiveStartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The date from when the program rebate type benefit is effective. If the date does not match a payout period start date, it isn't picked.
MaximumMeasureFieldValue	Type double Properties Create, Filter, Nillable, Sort, Update Description Cap the measure value at a certain figure. For example, pay 1% on \$100,000 even when the members do more than that.
MaximumQualifyingValue	Type double Properties Create, Filter, Nillable, Sort, Update Description Upper limit of quantity or revenue at a level.
MinimumQualifyingValue	Type double Properties Create, Filter, Sort, Update Description Minimum quantity or revenue required to qualify to a level.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the qualification. For example, Tier 1/2/3, Gold/Silver.
ProductId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Use this if the benefits vary by products. For example, Product A has a tier from 1- 100 units for \$20 and Product B has 1-100 units at \$19. To use product or any dimension to the benefits, add that field in benefit mapping

Field	Details
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Status of the program rebate type benefit. Possible values are:</p> <ul style="list-style-type: none"> • Active • Inactive

Usage

The benefit table can be extended with custom columns, for example, Region. The benefits can then be configured as: APAC 3%, USA 2%, and so on.

PgmRebateTypBnftMapping

If benefit table is extended, defines mapping of benefit field to the aggregate object fields. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AggregateField	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Used to describe the join conditions between the aggregate object and the Program Rebate Type Benefit entity. Possible values are:</p> <ul style="list-style-type: none"> • <code>RebateMemberProductAggregate.GrowthAmount</code>—Growth Amount • <code>RebateMemberProductAggregate.GrowthAmountPercent</code>—Growth Amount Percent

Field	Details
	<ul style="list-style-type: none"> • <code>RebateMemberProductAggregate.GrowthQuantity</code>—Growth Quantity • <code>RebateMemberProductAggregate.GrowthQuantityPercent</code>—Growth Quantity Percent • <code>RebateMemberProductAggregate.LastReferencedDate</code>—Last Referenced Date • <code>RebateMemberProductAggregate.LastViewedDate</code>—Last Viewed Date • <code>RebateMemberProductAggregate.PriorTotalQuantity</code>—Prior Total Quantity • <code>RebateMemberProductAggregate.PriorTotalTransactionAmount</code>—Prior Total Transaction Amount • <code>RebateMemberProductAggregate.ProductId</code>—Product ID • <code>RebateMemberProductAggregate.ProgramRebateTypeId</code>—Program Rebate ID • <code>RebateMemberProductAggregate.RebateProgramMemberId</code>—Rebate Program Member ID • <code>RebateMemberProductAggregate.RebateProgramPayoutPeriodId</code>—Rebate Program Payout Period ID • <code>RebateMemberProductAggregate.TotalQuantity</code>—Total Quantity • <code>RebateMemberProductAggregate.TotalTransactionAmount</code>—Total Transaction Amount • <code>RebateMemberProductAggregate.TransactionJournalId</code>—ID
ProgramRebateTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Parent identifier</p>
RebateTypeBenefitField	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Used to describe the join conditions between the aggregate object and the Program Rebate Type Benefit entity. Possible values are:</p> <ul style="list-style-type: none"> • <code>ProductId</code>—ID of the Product

ProgramRebateTypeFilter

The definition that filters the transaction journals eligible for a rebate type. This filter definition is used in the rebates data processing engines. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
FilterField	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The field name to use for the program rebate type filter. Possible values are:</p> <ul style="list-style-type: none"> • <code>ActivityDate</code>—Activity date. • <code>CloneSourceId</code>—Cloned source ID. • <code>CreatedById</code>—Created by. • <code>CreatedDate</code>—Created date. • <code>ExternalTransactionNumber</code>—External transaction ID. • <code>Id</code>—ID • <code>IsDeleted</code>—Deleted. • <code>JournalDate</code>—Journal date. • <code>LastModifiedById</code>—Last modified by. • <code>LastModifiedDate</code>—The most recent date on which a user modified this record. • <code>LastReferencedDate</code>—The most recent date on which a user referenced this record. • <code>LastViewedDate</code>—The most recent date on which a user viewed this record. • <code>MemberId</code>—Program Member • <code>Name</code> • <code>OrderId</code>—Order • <code>OrderItemId</code>—Order Product. • <code>ProductCategoryId</code>—Product Category • <code>ProductId</code>—Product • <code>Quantity</code>

Field	Details
	<ul style="list-style-type: none"> QuantityUnitOfMeasureId—Quantity Unit SystemModstamp—System Modstamp TransactionAmount—Transaction Amount. UsageType—Usage Type. UserRecordAccessId—Object Access Level.
Operator	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The filter operator. Possible values are:</p> <ul style="list-style-type: none"> Contains—in Equals—equals GreaterThan—greater than GreaterThanOrEquals—greater or equal LessThan—less than LessThanOrEquals—less or equal NotEquals—not equal to
ProgramRebateTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The parent program rebate type associated with the filter.</p>
Sequence	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique sequence number for each condition within the program rebate type filter.</p>
Value	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field	Details
	Description The value for filtering the program rebate type.

ProgramRebateTypePayout

The payout given to a member for a particular rebate type. For example, volume rebate payout in Jan'19 for ABC enterprises is \$560, petrol engine payout for ABC in Jan'19 is \$440. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccruedAmount	Type currency Properties Filter, Nillable, Sort Description The accrued amount for the program rebate type payout. This is a calculated field.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the program rebate type.
ProgramRebateTypeId	Type reference Properties Create, Filter, Group, Sort Description Unique identifier for the program rebate type.

Field	Details
RebateAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Rebate amount. This is a calculated field.</p>
RebateProgramMemberPayoutId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Unique identifier of the rebate program member payout.</p>
TotalBenefitQualifierValue	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Roll-up summary of the Benefit Qualifier Value from the Program Rebate Type Payout Source entity. This is a calculated field.</p>
TotalMeasureValue	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Roll-up summary for the Measure Value field from the Program Rebate Type Payout Source entity. This is a calculated field.</p>

ProgramRebateTypPayoutSrc

The rebate amount and the tier applied calculated for each row in the aggregate. There is a 1 to 1 relation between payout source and aggregate. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccrualRate	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The accrual rate for the program rebate type payout source. This field is available in API version 52.0 and later.</p>
AccruedAmount	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The accrued amount for the program rebate type payout source. This field is available in API version 52.0 and later.</p>
AggregateIdentifierId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Unique identifier for the aggregate row.</p>
BenefitQualifierValue	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Value of the attribute from the aggregate object that is set up as Benefit Qualifier.</p>
MeasureValue	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p>

Field	Details
	Description Value of the attribute from the aggregate object that is set up as Measure Field.
MemberId	Type reference Properties Create, Filter, Group, Sort Description Unique identifier for the member.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the rebate program member.
ProgramRebateTypeBenefitId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Program rebate type benefit identifier.
ProgramRebateTypePayoutId	Type reference Properties Create, Filter, Group, Sort Description Unique identifier of the program rebate type payout.
RebateAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description Rebate amount calculated by invocable actions.

ProgramRebateTypeProduct

Represents a junction between a program rebate type and a product. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ProductId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The product associated with the record. This is a relationship field.</p> <p>Relationship Name Product</p> <p>Relationship Type Lookup</p> <p>Refers To Product2</p>
ProgramRebateTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The program rebate type associated with the product. This is a relationship field.</p> <p>Relationship Name ProgramRebateType</p> <p>Relationship Type Lookup</p> <p>Refers To ProgramRebateType</p>

ProgramRebateTypeReference

Represents the association between the contract, opportunity, or any eligible standard or custom object, and rebate type. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
<code>ProgramRebateTypeId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The program rebate type associated with the record. This is a relationship field.</p> <p>Relationship Name ProgramRebateType</p> <p>Relationship Type Lookup</p> <p>Refers To ProgramRebateType</p>
<code>ProgramRebateTypeSrcId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The source program rebate type associated to the contract, opportunity, or quote, or any other eligible standard or custom object. This is a relationship field.</p> <p>Relationship Name ProgramRebateTypeSrc</p> <p>Relationship Type Lookup</p> <p>Refers To ProgramRebateType</p>

Field	Details
ReferenceObjectId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The contract, opportunity, quote, or any other eligible standard or custom object associated with the program rebate type. This is a polymorphic relationship field.</p> <p>Relationship Name ReferenceObject</p> <p>Relationship Type Lookup</p> <p>Refers To Contract, Opportunity, Order, SalesAgreement</p>

RebateClaim

Represents information about the claim submitted by the end customer or distributor for a ship and debit program. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ApprovedAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The approved rebate claim amount. Available in API version 58.0 and later.</p>
CalculatedAmount	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p>

Field	Details
	Description The calculated rebate claim amount. Available in API version 58.0 and later.
ClaimAmount	Type currency Properties Create, Filter, Sort, Update Description The amount for which rebate is claimed.
ClaimDate	Type dateTime Properties Create, Filter, Sort, Update Description The date when the claim is submitted by the claimant.
ClaimType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the type of the rebate claim. Available in API version 58.0 and later. Possible values are: <ul style="list-style-type: none"> • ShipAndDebit—Ship and Debit • StandardRebate—Standard Rebate The default value is StandardRebate.
ClaimedByAccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The account of the customer or distributor who is submitting the claim. This field is a relationship field. Relationship Name ClaimedByAccount Relationship Type Lookup

Field	Details
	Refers To Account
ClaimedByAccountNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The reference number of the account of the customer or distributor who is submitting the claim.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description If multiple currencies are enabled, this field contains the currency ISO code associated with the record. Possible values are: <ul style="list-style-type: none"> • EUR—Euro • USD—U.S. Dollar The default value is EUR.
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description The description of the rebate claim.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The most recent date on which a user referenced this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The most recent date on which a user viewed this record.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Autogenerated name of the rebate claim.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the rebate claim record owner. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
ParticipatingAccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The account of a participant in the claim. It can be the ship to/end customer or shipper/channel partner. This field is a relationship field. Relationship Name ParticipatingAccount Relationship Type Lookup Refers To Account
ParticipatingAccountNumber	Type string

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The reference number of the account of a participant in the claim. It can be the ship to/end customer or shipper/ channel partner.</p>
ProcessingStatus	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The processing status of the rebate claim. Possible values are:</p> <ul style="list-style-type: none"> • Approved • Complete • In Review • New • Rejected • Reviewed • System Failed • System Processed <p>The default value is New.</p>
ProcessingStatusMessage	<p>Type string</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The message with the details of the rebate claim's processing status when it isn't completed.</p>
ProductCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The reference number of the product for which the rebate claim is submitted.</p>
ProductId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The product for which the rebate claim is submitted. This field is a relationship field.</p> <p>Relationship Name Product</p> <p>Relationship Type Lookup</p> <p>Refers To Product2</p>
ProgramReferenceNumber	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The reference number of the rebate program.</p>
Quantity	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The quantity of the product for which the rebate claim is submitted.</p>
QuantityUnitOfMeasureId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The unit of measure of the quantity. Available in API version 58.0 and later.</p> <p>Relationship Name QuantityUnitOfMeasure</p> <p>Relationship Type Lookup</p> <p>Refers To UnitOfMeasure</p>
RebateMemberClaimAggregateId	<p>Type reference</p>

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The rebate member claim aggregate record related to the rebate claim. Available in API version 58.0 and later. Relationship Name RebateMemberClaimAggregate Relationship Type Lookup Refers To RebateMemberClaimAggregate
RebatePaymentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The rebate payment record related to the rebate claim. Available in API version 58.0 and later. Relationship Name RebatePayment Relationship Type Lookup Refers To RebatePayment
ReceivedDocumentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The received document that this claim is part of. Available in API version 58.0 and later. Relationship Name ReceivedDocument Relationship Type Lookup Refers To ReceivedDocument
ReferencePricePerUnit	Type currency

Field	Details
	Properties Create, Filter, Nillable, Sort, Update Description The price of a product unit that's agreed upon between the manufacturer and the claimant by the manufacturer and the distributor or the manufacturer and the customer for the rebate claim.
ResalePricePerUnit	Type currency Properties Create, Filter, Nillable, Sort, Update Description The price at which the claimant bought the product.
SalePricePerUnit	Type currency Properties Create, Filter, Nillable, Sort, Update Description The original price at which a product unit is sold to the customer by the manufacturer.
ShipDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date when the product was shipped to end customer. Available in API version 58.0 and later.
ShippedTransactionIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The identifier of the transaction between distributor and end customer or ship to account. Available in API version 58.0 and later.
TotalAdjustmentAmount	Type currency Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description The total amount adjusted on the rebate claim. Available in API version 58.0 and later.
TransactionIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The unique identifier of the transaction between the manufacturer and distributor. Available in API version 58.0 and later.
UsageType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Specifies the usage type of the rebate claim. Possible value is: <ul style="list-style-type: none"> • <code>Rebates</code> The default value is <code>Rebates</code> . Available in API version 58.0 and later.

RebateClaimAdjustment

Represents information about the adjustments made to the rebate claim. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AdjustmentAmount	Type currency Properties Create, Filter, Sort, Update Description The adjustment amount for the rebate claim.

Field	Details
ApprovedDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The date when the rebate claim adjustment was approved.</p>
Comments	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The details about the adjustment made to the rebate claim.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The currency ISO code associated with the record. This is available when multiple currencies are enabled. Possible values are:</p> <ul style="list-style-type: none"> • EUR—Euro • USD—U.S. Dollar <p>The default value is EUR.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The most recent date on which a user referenced this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The most recent date on which a user viewed this record.</p>

Field	Details
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the rebate claim adjustment.</p>
RebateClaimId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The rebate claim record to which the adjustment was made. This field is a relationship field.</p> <p>Relationship Name RebateClaim</p> <p>Relationship Type Lookup</p> <p>Refers To RebateClaim</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The status of the adjustment made to the rebate claim. Possible values are:</p> <ul style="list-style-type: none"> • Approved • InReview—Under Review • Rejected <p>The default value is InReview.</p>

RebateMemberAggregateItem

Represents a junction between a rebate member product aggregate and a transaction journal. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, and LastReferenceDate is not null, the user accessed this record or list view indirectly.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description Name of the rebate member aggregate item.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the owner of this object. This field is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p>

Field	Details
	Refers To Group, User
RebateAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The rebate amount for the associated transaction journal record.
RebateMemberProductAggregateId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The rebate member product aggregate record associated with the transaction journal record. This is a relationship field. Relationship Name RebateMemberProductAggregate Relationship Type Lookup Refers To RebateMemberProductAggregate
TransactionAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The transaction amount for the transaction journal record associated with the aggregate item record.
TransactionJournalId	Type reference Properties Create, Filter, Group, Sort, Update Description The transaction journal associated with the rebate aggregated transaction journal record. This is a relationship field. Relationship Name TransactionJournal

Field	Details
	Relationship Type Lookup Refers To TransactionJournal
TransactionQuantity	Type double Properties Create, Filter, Nillable, Sort, Update Description The transaction quantity of the associated transaction journal record.

RebateMemberClaimAggregate

Represents information about the aggregated claim quantity and amount for a rebate member per product. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The currency ISO code associated with the record. This is available when multiple currencies are enabled. Possible values are: <ul style="list-style-type: none"> • EUR—Euro • USD—U.S. Dollar The default value is EUR.
LastReferencedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The most recent date on which a user referenced this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The most recent date on which a user viewed this record.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The auto-generated name of the rebate member claim aggregate.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the rebate member claim aggregate record owner. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PriceType	Type Picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update. Description Specifies the basis on which the product was sold in a rebate claim. Used to distinguish between standard and contract pricing strategies when calculating rebate eligibility.

Field	Details
ProductId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The product for which the rebate claim was made. This field is a relationship field.</p> <p>Relationship Name Product</p> <p>Relationship Type Lookup</p> <p>Refers To Product2</p>
RebateProgramMemberId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The rebate program member for whom the claim was made. This field is a relationship field.</p> <p>Relationship Name RebateProgramMember</p> <p>Relationship Type Lookup</p> <p>Refers To RebateProgramMember</p>
TotalClaimedAmount	<p>Type currency</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The total amount that's already claimed.</p>
TotalClaimedQuantity	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The total product quantity that's already claimed.</p>

RebateMemberProductAggregate

Stores the post calculation summary of journal transactions by member, period, and rebate type. For example, ABC enterprises for May 2021 against Vol Rebate on Radius category, did a total quantity of 150 units and transaction amount of \$80,000. This object is available in API version 65.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AggregateReferenceNumber	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description A unique reference number of the aggregate record that's assigned by the Data Processing Engine when generating Rebate Program Member Aggregate records. This reference number can be used to relate Rebate Member Aggregate Item records to the aggregate record. Available in API version 54.0 and later.</p>
GrowthAmount	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The difference between the total amount and the prior amount in the rebate aggregate.</p>
GrowthAmountPercent	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The difference between the total amount and the prior amount in percentage in the rebate aggregate.</p>
GrowthQuantity	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p>

Field	Details
	Description The difference between the total quantity and the previous quantity in the transaction journal associated with the rebate aggregate.
GrowthQuantityPercent	Type double Properties Create, Filter, Nillable, Sort, Update Description The quantity growth in percentage.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, and LastReferenceDate is not null, the user accessed this record or list view indirectly.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the rebate member product aggregate.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner of this object. This field is a polymorphic relationship field.

Field	Details
	Relationship Name Owner
	Relationship Type Lookup
	Refers To Group, User
PriorTotalQuantity	Type double
	Properties Create, Filter, Nillable, Sort, Update
	Description The quantity in the corresponding payout period of the previous rebate cycle.
PriorTotalTransactionAmount	Type currency
	Properties Create, Filter, Nillable, Sort, Update
	Description The total transaction amount corresponding to the prior period.
ProductId	Type reference
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The product associated with the rebate aggregation.
ProgramRebateTypeId	Type reference
	Properties Create, Filter, Group, Sort, Update
	Description The program rebate type associated with the rebate aggregation.
RebatePayoutStatus	Type picklist
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update
	Description The status of the aggregate rebate payout to the member.

Field	Details
	<p>Possible values are:</p> <ul style="list-style-type: none"> • Error • InProgress • Success <p>The default value is InProgress.</p>
RebatePayoutStatusMessage	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The status message of the aggregate rebate payout to the member.</p>
RebateProgramMemberId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The rebate program member associated with the rebate aggregation.</p>
RebateProgramPayoutPeriodId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The rebate program payout period associated with the rebate aggregation.</p>
RollupProgramMemberId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The immediate parent account in the hierarchy of the account (rebate program member) associated with the product aggregate. This field is available in API version 52.0 and later. This is a relationship field.</p> <p>Relationship Name RollupProgramMember</p> <p>Relationship Type Lookup</p> <p>Refers To RebateProgramMember</p>

Field	Details
TotalQuantity	Type double Properties Create, Filter, Nillable, Sort, Update Description The sum of values in transaction journal quantity fields associated with the rebate aggregation.
TotalTransactionAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The sum of values in transaction journal transaction amount fields associated with the rebate aggregation.
TransactionJournalId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The transaction journal associated with the program rebate type.

RebatePartnerSpecialPrcTrm

Represents information about the special pricing term for a ship and debit program. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	<p>Description</p> <p>The currency ISO code associated with the record. This is available when multiple currencies are enabled.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • EUR—Euro • USD—U.S. Dollar <p>The default value is EUR.</p>
Discount	<p>Type</p> <p>double</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>The agreed discount for a product unit between the manufacturer and the distributor as part of the special pricing terms for a ship and debit program. Between <code>ReferencePricePerUnit</code> and <code>Discount</code>, only one field can be added or used.</p>
IsDiscountByPercent	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Indicates whether the discount is given by percentage (<code>true</code>) or amount (<code>false</code>).</p> <p>The default value is <code>false</code>.</p>
LastReferencedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The most recent date on which a user referenced this record.</p>
LastViewedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The most recent date on which a user viewed this record.</p>
Name	<p>Type</p> <p>string</p>

Field	Details
	<p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The user-defined name of the rebate partner special pricing term.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the rebate partner special pricing term. This field is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ProductId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The product associated with the rebate partner special pricing term. This field is a relationship field.</p> <p>Relationship Name Product</p> <p>Relationship Type Lookup</p> <p>Refers To Product2</p>
ProductQtyUnitOfMeasureId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The unit of measure associated with the product quantity. This field is a relationship field.</p>

Field	Details
	Relationship Name ProductQtyUnitOfMeasure Relationship Type Lookup Refers To UnitOfMeasure
ProductQuantity	Type double Properties Create, Filter, Sort, Update Description The threshold quantity for a product agreed between the manufacturer and the distributor as part of the special pricing terms for a ship and debit program.
RebateProgramMemberId	Type reference Properties Create, Filter, Group, Sort, Update Description The rebate program member associated with the rebate partner special pricing term. This field is a relationship field. Relationship Name RebateProgramMember Relationship Type Lookup Refers To RebateProgramMember
ReferencePricePerUnit	Type currency Properties Create, Filter, Nillable, Sort, Update Description The price of a product unit that's agreed upon between the manufacturer and the distributor as part of the special pricing term. Between ReferencePricePerUnit and Discount, only one field can be added or used.
SalePricePerUnit	Type currency

Field	Details
	Properties Create, Filter, Sort, Update Description The actual price of each unit of the product that's sold to the partner by the manufacturer.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The status of the rebate partner special pricing term. Possible values are: <ul style="list-style-type: none"> • Active • Draft • Inactive The default value is Draft.

RebatePayment

Tracks if the payment has been generated for this member for back end processing. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Amount	Type currency Properties Create, Filter, Sort, Update Description Amount to be paid out.
Name	Type string

Field	Details
	Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the rebate program.
PaymentDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Date when payment is issued.
Status	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Status of the payout. Possible values are: <ul style="list-style-type: none"> Generated Paid Rejected

RebatePayoutAdjustment

Rebate amount adjustment that needs to be given manually. An adjustment is an amount added or subtracted to the calculated rebate amount. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AdjustmentAmount	Type currency

Field	Details
	Properties Create, Filter, Sort, Update Description Value of the adjustment.
ApprovedDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Approved date of the adjustment.
Comments	Type string Properties Create, Filter, Group, Sort, Update Description Notes for adjustment.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the rebate program.
RebateProgramMemberPayoutId	Type reference Properties Create, Filter, Group, Sort Description Rebate program member payout identifier.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Status of adjustment. Possible values are: <ul style="list-style-type: none"> Approved

Field	Details
	<ul style="list-style-type: none"> InReview—Under Review Rejected

RebateProgram

The rebate program your organization runs with a single account, all accounts, or specific list of accounts. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The description of the rebate program.</p>
EndDate	<p>Type date</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The end date of the rebate program.</p>
Frequency	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The frequency of rebate program. Possible values are:</p> <ul style="list-style-type: none"> Annually Biannually

Field	Details
	<ul style="list-style-type: none"> • CustomPeriods • Monthly • OnDemand • ProgramStartAndEndDate • Quarterly
GracePeriodDayCount	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Number of days from end date of an instance of a payout period. Transactions submitted until this day are considered for rebate calculation. For example, a value of 5 implies that channel partners can submit transactions for a monthly period before the 5th of the next month. This isn't enforced in the system but can be used as information for channel partners.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the rebate program.</p>
PayoutCalculationDayCount	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Number of days from period end date. The payment will be calculated after this date. For example, a payout calculation day count of 14 means 14 days after period end date.</p>
ProgramReferenceNumber	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The reference number assigned to this rebate program. This field is unique within your organization. This field is available in API version 52.0 and later.</p>
RebateProgramUrl	<p>Type url</p>

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description URL of the rebate program.
StartDate	Type date Properties Create, Filter, Group, Sort, Update Description Start date of rebate program.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Possible states of rebate program. Possible values are: <ul style="list-style-type: none"> • Active • Draft • Inactive
Type	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of the rebate program. Available in API version 58.0 and later. Possible values are: <ul style="list-style-type: none"> • ShipAndDebit • Standard The default value is <code>Standard</code> .

RebateProgramMember

The member of a rebate program. By virtue of being a member, the partner or business account is eligible to get rebate payments. For example, ABC Enterprises and HVAC Corp are members of GoldStone Volume Rebate Program. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Unique identifier for the account who's a member of the program.</p>
CumulativePayoutAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total rebate amount for a member. Sum of Total Payout Amount values from RebateProgramMemberPayout object that are not rejected. This is a calculated field.</p>
IsPayoutCalcSkipped	<p>Type boolean</p> <p>Properties</p> <p>Description Specifies whether the rebate payout calculation should be skipped for the rebate program member. This field is available in API version 52.0 and later.</p>
LastActivationDate	<p>Type date</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The latest date on which the program member was activated.</p>
LastDeactivationDate	<p>Type date</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	Description The latest date on which the program member was deactivated.
MemberStatus	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Status of membership. Possible values are: <ul style="list-style-type: none"> Active Inactive
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the member.
RebateProgramId	Type reference Properties Create, Filter, Group, Sort, Update Description Reference to rebate program identifier.
ShipToAccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ship to account. Use this when the rebate is applicable only when the member ships to this account. This field is available in API version 52.0 and later. This is a relationship field. Relationship Name ShipToAccount Relationship Type Lookup Refers To Account

RebateProgramMemberPayout

The payout calculated for a member for the period. For example, \$1000 Jan'21 payout for ABC enterprises. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccruedAmount	Type currency Properties Filter, Nillable, Sort Description The payout amount accrued by the rebate program member. This is a calculated field.
CalculatedRebateAmount	Type currency Properties Filter, Nillable, Sort Description Total amount calculated. This is a calculated field.
CalculationDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Date on which the calculation happened.
MemberId	Type reference Properties Create, Filter, Group, Sort Description Program member ID.

Field	Details
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the rebate program.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Status of payout. Possible values are:</p> <ul style="list-style-type: none"> • Approved • Interim—Calculation In progress. • Pending—Under review. • Rejected • SystemCalculated—Calculated.
TotalApprovedAdjustmentAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Summarized payout adjustment amount. This is a calculated field.</p>
TotalRebateAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Summarized payout amount. This is a calculated field.</p>

RebateProgramPayoutPeriod

The period of the payout calculation. For example, 1st to 31st Jan, or 1st Dec to 14th Dec. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
EndDate	Type date Properties Create, Filter, Group, Sort, Update Description End date of the period. The system picks transactions between start date and end date of the period for rebate calculations.
LastCalculationDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Last date on which the rebate amount calculation for that period for all the relevant aggregate records was completed successfully.
MemberPayoutCount	Type int Properties Filter, Group, Nillable, Sort Description Used to track total number of payouts that happened in a period for a particular rebate program.
PayoutCalculationDate	Type date Properties Create, Filter, Group, Sort, Update Description Date on or after which the payout calculation for this period is set to Closed.

Field	Details
RebateProgramId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Rebate program identifier.</p>
StartDate	<p>Type date</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Start date of the period.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Used to track if a payout period is active or inactive. Possible values are:</p> <ul style="list-style-type: none"> • Active • Closed • Inactive
TotalApprovedAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total approved member payout amount.</p>
TotalRejectedAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total rejected amount.</p>
TransactionGracePeriodDate	<p>Type date</p>

Field	Details
	Properties Create, Filter, Group, Sort, Update
	Description Cut-off date before which the transactions are accepted for the period.

RebatePtnrSpclPrcTrmBnft

Represents information about the benefit tier in a rebate partner special pricing term. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CurrencyIsoCode	Type picklist
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update
	Description The currency ISO code associated with the record. This is available when multiple currencies are enabled. Possible values are: <ul style="list-style-type: none"> • EUR—Euro • USD—U.S. Dollar The default value is EUR.
Discount	Type double
	Properties Create, Filter, Nillable, Sort, Update
	Description The discount that's applicable for the rebate partner special pricing term benefit.
EffectiveEndDate	Type dateTime

Field	Details
	Properties Create, Filter, Nillable, Sort, Update Description The date until when the rebate partner special pricing term benefit is effective.
EffectiveStartDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date from when the rebate partner special pricing term benefit is effective.
IsDiscountByPercent	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the discount is given by percentage (<code>true</code>) or amount (<code>false</code>). The default value is <code>false</code> .
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The most recent date on which a user referenced this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The most recent date on which a user viewed this record.
MaximumQuantity	Type double Properties Create, Filter, Nillable, Sort, Update Description The maximum quantity of product sold that is eligible for the rebate partner special pricing term benefit.

Field	Details
MinimumQuantity	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The minimum quantity of product sold that is eligible for the rebate partner special pricing term benefit.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the rebate partner special pricing term benefit.</p>
RebatePartnerSpecialPrcTrmId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The rebate partner special pricing term that's associated with the rebate partner special pricing term benefit. This field is a relationship field.</p> <p>Relationship Name RebatePartnerSpecialPrcTrm</p> <p>Relationship Type Lookup</p> <p>Refers To RebatePartnerSpecialPrcTrm</p>
ReferencePricePerUnit	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The reference price per unit that's applicable for the rebate partner special pricing term benefit.</p>

ReceivedDocument

Allows partners to upload .CSV document. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
FailedRecordsFileId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description Lookup to the error file.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the received document.</p>
Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Current stage of processing. Possible values are:</p> <ul style="list-style-type: none"> • APPROVED—Approved • ARCHIVED—Archived • DRAFT—Draft • IN_REVIEW—In Review • OBSOLETE—Obsolete • SUBMITTED—Submitted • SUPERSEDED—Superseded

Field	Details
UnprocessedRecordsFileId	Type reference
	Properties Filter, Group, Nillable, Sort, Update
	Description Lookup to the skipped file.

TransactionJournal

The transactions that need to be processed for a rebate program. For example, order line for 1000 units of \$1200 for member ABC enterprises. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccountId	Type reference
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The account for which the transaction is made. This is a relationship field.
	Relationship Name Account
	Relationship Type Lookup
	Refers To Account
ActivityDate	Type dateTime
	Properties Create, Filter, Sort, Update

Field	Details
	Description Date the transaction happened.
ErrorDescription	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the error in the journal record.
JournalDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Date the transaction was received.
MemberId	Type reference Properties Create, Filter, Group, Sort, Update Description Polymorphic key to RebateProgramMember or LoyaltyMember.
ProductId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The product associated with the transaction.
Quantity	Type double Properties Create, Filter, Nillable, Sort, Update Description The order quantity.
QuantityUnitOfMeasureId	Type reference

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The unit of measure associated with the record. This is a relationship field.</p> <p>Relationship Name QuantityUnitOfMeasure</p> <p>Relationship Type Lookup</p> <p>Refers To UnitOfMeasure</p>
RebatePgmReferenceNumber	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The reference number of the rebate program. This field is available in API version 52.0 and later.</p>
ShipToAccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The account for which the additional benefit is being offered for ship and debit program. This field is available in API version 52.0 and later. This is a relationship field.</p> <p>Relationship Name ShipToAccount</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
TransactionAmount	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The total amount of the transaction.</p>

Field	Details
UsageType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Type of journal record. Possible values are:</p> <ul style="list-style-type: none"> • Loyalty • Rebates

UnitOfMeasureConversion

Represents the information used to convert a measurement value from a unit of measure to another. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ConversionFactor	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The conversion factor for the conversion.</p>
FromUnitOfMeasureId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unit of measure to be converted. This is a relationship field.</p> <p>Relationship Name FromUnitOfMeasure</p>

Field	Details
	Relationship Type Lookup Refers To UnitOfMeasure
ToUnitOfMeasureId	Type reference Properties Create, Filter, Group, Sort, Update Description The unit of measure to be converted to. This is a relationship field. Relationship Name ToUnitOfMeasure Relationship Type Lookup Refers To UnitOfMeasure

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

UnitOfMeasureConversionFeed

Feed tracking is available for the object.

UnitOfMeasureConversionHistory

History is available for tracked fields of the object.

UnitOfMeasureConversionOwnerSharingRule

Sharing rules are available for the object.

UnitOfMeasureConversionShare

Sharing is available for the object.

REBATE MANAGEMENT STANDARD INVOCABLE ACTIONS

Add members to a rebate program, calculate rebate amounts and upsert payouts, generate rebate payout periods, process rebate calculation batch jobs, and process a rebate CSV file for Rebate Management. For more information on standard invocable actions, see [REST API Developer Guide](#) and [Actions Developer Guide](#).

[Add Rebate Member List](#)

Add a list of members to a rebate program. The list of rebate members is based on the accounts in the specified account list view.

[Calculate Rebate Amount and Upsert Payout](#)

Calculate the rebate amount and upsert the rebate payout for the specified aggregate record.

[Calculate Projected Rebate Amount](#)

Calculate the projected rebate amount for rebate types associated with a specified transaction reference ID.

[Generate Rebate Payout Periods](#)

Generate payout periods for a rebate program based on the frequency specified in the program.

[Get Benefit and Calculate Rebate Amount](#)

Get the details benefits and optionally calculate the rebate amount for the specified aggregate record.

[Get Eligible Program Rebate Types](#)

Retrieve the eligible program rebate types for a mapped object.

[Process Program Rebate Type Products](#)

Insert or delete the records in the Program Rebate Type Product object. The inserted products participate as inclusion or exclusion as defined in the Product Filter Type option on Program Rebate Type.

[Process Rebate Batch Calculation Jobs](#)

Process a rebate batch calculation job from the Data Processing Engine.

[Process Rebate CSV Files](#)

Process an uploaded CSV file using Bulk API 2.0 and convert the file's data into records in the target object.

[Upsert Custom Rebate Payout](#)

Upsert the custom calculated rebate payout for a specified aggregate record.

Add Rebate Member List

Add a list of members to a rebate program. The list of rebate members is based on the accounts in the specified account list view.

This object is available in API version 51.0 and later for users with Rebate Management license.

Supported REST HTTP Methods

URI

`/services/data/vXX.X/actions/standard/addRebateMemberList`

Formats

JSON, XML

HTTP Methods

GET, HEAD, POST

AuthenticationAuthorization: Bearer *token*

Inputs

Input	Details
listViewId	Type string Description Required. The ID of the account list that's specified to add rebate members.
notificationPreference	Type string Description A text value that indicates whether notifications should be sent for successful and unsuccessful rebate member additions. Valid values include BlockSuccessEmails, BlockFailureEmails, BlockAllEmails, and AllowAllNotifications.
rebateProgramId	Type string Description Required. The ID of the rebate program to which specified account list view is added.
status	Type string Description Required. The status of the rebate members for the accounts in the specified list view.

Usage

Sample Request

```
{
  "inputs": [{
    "listViewId": "a07B0000007qbQOIAY",
    "rebateProgramId": "x18Z1236547qbQOBCV",
    "status": "Active"
  }, {
    "notificationPreference": "BlockAllEmails"
  }]
}
```

Sample Response

```
{
  "isSuccess":true
}
```

Calculate Rebate Amount and Upsert Payout

Calculate the rebate amount and upsert the rebate payout for the specified aggregate record.
This object is available in API version 51.0 and later for users with Rebate Management license.

Supported REST HTTP Methods

- URI**
/services/data/v**XX.X**/actions/standard/calculateRebateAmountAndUpsertPayout
- Formats**
JSON, XML
- HTTP Methods**
GET, HEAD, POST
- Authentication**
Authorization: Bearer *token*

Inputs

Input	Details
aggregateId	Type ID Description Required. The ID of the aggregate record for which you want to calculate the rebate amount and upsert the rebate payout.
payoutMemberFieldName	Type String Description The name of the field that contains the rebate program member ID for which to perform the payout calculations.

Outputs

Output	Details
<code>programRebateTypePayoutSourceId</code>	<p>Type</p> <p>ID</p> <p>Description</p> <p>The ID of the program rebate type payout source record, which is generated if the request is successful.</p>

Usage

Sample Request

```
{
  "inputs": [
    { "aggregateId": "a00xx000000cCtxAAE" },
    { "aggregateId": "a00xx000000cCvZAAU" },
    { "aggregateId": "a00xx000000cCxBAAU" }
  ]
}
```

Sample Response

```
{
  "errors": null,
  "isSuccess": true,
  "outputValues": {
    "programRebateTypePayoutSourceId": "0ntxx00004000002AAA"
  }
}
```

Calculate Projected Rebate Amount

Calculate the projected rebate amount for rebate types associated with a specified transaction reference ID.

This object is available in API version 54.0 and later.

Supported REST HTTP Methods

URI

`/services/data/vXX.X/actions/standard/calculateProjectedRebateAmount`

Formats

JSON

HTTP Methods

POST

Authentication

Authorization: Bearer *token*

Inputs

Input	Details
programRebateTypeIds	Type string Description Required. The list of program rebate type IDs to calculate the projected rebate amounts for.
referenceRecordId	Type string Description Required. The transaction reference record ID to calculate the projected rebate amounts for.

Outputs

Output	Details
calculateProjectedRebateAmount	Type string Description The calculated rebate amount details for the program rebate types associated with the transaction reference record. This is an Apex output type that contains nested arrays in JSON format. calculateProjectedRebateAmount contains an array of the CalculateProjectedRebateAmountOutputRepresentation Apex class. This output representation contains an array of the ProjectedRebateAmountCalc fields, while an array of DetailedProjectedRebateAmountCalc is contained in ProjectedRebateAmountCalc.

Note: The fields aggregateId, benefitQualifierValue, benefitTier, measureFieldValue, qualifiedTiers, rebateTypeBenefit, totalProjectedRebateAmount, payoutPeriod, projectedRebateAmount can appear in the output list. These fields must be ignored because they aren't supported in the flow for this invocable action. These fields will be deprecated in API version 55.0.

Usage

JSON Sample Request

```
{
  "inputs": [ {
    "programRebateTypeIds": ["0hvRM0000004CUt"],
    "referenceRecordId": "801RM000000083TeYAI"
  }
]
```

```
    } ]
  }
}
```

JSON Sample Response

```
{
  "projectedRebateAmountCalc": [
    {
      "programRebateTypeId": "0hvRM0000004CUT",
      "referenceRecordId": "801RM00000083TeYAI",
      "totalProjectedRebateAmount": 1088000,
      "detailedProjectedRebateAmountCalc": [
        {
          "benefitQualifierValue": 500,
          "benefitTier": "0huRM0000004CRC",
          "rebateTypeBenefit": "5",
          "measureFieldValue": 160000,
          "payoutPeriod": "0i7RM0000004CV7",
          "projectedRebateAmount": 800000,
          "qualifiedTiers": [
            "0huRM0000004CRC"
          ]
        },
        {
          "benefitQualifierValue": 240,
          "benefitTier": "0huRM0000004CRC",
          "rebateTypeBenefit": "5",
          "measureFieldValue": 57600,
          "payoutPeriod": "0i7RM0000004CV7",
          "projectedRebateAmount": 288000,
          "qualifiedTiers": [
            "0huRM0000004CRC"
          ]
        }
      ]
    }
  ]
}
```

Details of the Apex output type

- **projectedRebateAmountCalc**—An array of projected rebate amounts. Each item specifies the projected rebate amount for a passed rebate type and the reference object.
 - **programRebateTypeId**—Specifies the program rebate type ID whose projected rebate amounts are calculated in this item.
 - **referenceRecordId**—Specifies the transaction reference record ID based on which the projected rebate amounts are calculated.
 - **totalProjectedRebateAmount**—Specifies the total projected rebate amount for this program rebate type and reference record.
 - **detailedProjectedRebateAmountCalc**—An array with each item corresponding to each aggregate record that is found for a combination of rebate type and reference object. For example, if the rebate is computed differently for every product using a benefit mapping and the reference object (order) has two order lines, this collection has two aggregates, one for each product.

- **benefitQualifierValue**—Specifies the total benefit qualifier value calculated from both the aggregate record and the reference object.
- **benefitTier**—Specifies the benefit tier ID that is determined based on the benefit qualifier value.
- **rebateTypeBenefit**—Specifies the applied benefit that is granted based on the benefit tier identified.
- **measureFieldValue**—Specifies the total measure value calculated from both the aggregate record and the reference object.
- **payoutPeriod**—Specifies the rebate program payout period that is determined based on the mapped member ID and activity date. The mapping between reference object and transaction journal is used here. See [Map Fields Between Target Transaction Object and Transaction Journal](#).
- **projectedRebateAmount**—Specifies the calculated projected rebate amount based on the benefit tier and the measure field value.
- **qualifiedTiers**—List of the eligible benefit tiers that have already been met.

Usage

You must configure the output parameter for the Calculate Projected Rebate Amount Flow Action in Flow Builder. The following screen illustrates how to use the output parameter in the Flow Builder.

The screenshot shows the 'New Resource' dialog in Flow Builder. The 'Resource Type' is set to 'Variable'. The 'API Name' is 'OutputReprsVariable'. The 'Data Type' is 'Apex-Defined'. The 'Apex Class' is 'ConnectApi__CalculateProjectedRebateAmountOutputRepr'. The 'Availability Outside the Flow' section has 'Available for output' checked. Buttons for 'Cancel' and 'Done' are at the bottom right.

Generate Rebate Payout Periods

Generate payout periods for a rebate program based on the frequency specified in the program.

This object is available in API version 51.0 and later for users with Rebate Management license.

Supported REST HTTP Methods

URI

`/services/data/vxx.x/actions/standard/generateRebatePayoutPeriods`

Formats

JSON, XML

HTTP Methods

  "RebateProgramPayoutPeriodIds": ["0ntxx00004000002AAA", "0ntxx00004000002AAB"]
}
```

Get Benefit and Calculate Rebate Amount

Get the details benefits and optionally calculate the rebate amount for the specified aggregate record.

This object is available in API version 51.0 and later for users with Rebate Management license.

Supported REST HTTP Methods

URI

/services/data/v~~XX~~.X/actions/standard/getBenefitAndCalculateRebateAmount

Formats

JSON, XML

HTTP Methods

GET, HEAD, POST

Authentication

Authorization: Bearer *token*

Inputs

Input	Details
aggregateId	Type ID Description Required. The ID of the aggregate record for which you want to calculate the rebate amount.
payoutMemberFieldName	Type ID Description The name of the field that contains the rebate program member ID for which to perform the payout calculations.
skipRebateCalc	Type Boolean Description Indicates whether to skip calculation of the rebate amount.

Outputs

Output	Details
accrualRate	Type Double

Output	Details
	Description The accrual rate if the request is successful.
accruedAmount	Type Double Description The accrued amount calculated if the request is successful.
aggregateId	Type ID Description The ID of the aggregate record for which you want to calculate the rebate amount.
benefitId	Type ID Description The ID of the applied Program Rebate Type Benefit record if the request is successful.
payoutMemberFieldName	Type String Description The name of the field that contains the rebate program member ID for which to perform the payout calculations.
qualifyingBenefits	Type string Description The comma-separated list of IDs of the qualified Program Rebate Type Benefit records if the request is successful.
rebateAmount	Type double Description The rebate amount calculated if the request is successful.

Usage

Sample Request

```
{
  "inputs": [
    { "AggregateId": "a00xx000000cCtxAAE",
      "SkipRebateCalc": false },
  ]
}
```

```
{
  "AggregateId": "a00xx000000cCvZAAU",
  "SkipRebateCalc": false},
  {"AggregateId": "a00xx000000cCxBAAU",
  "SkipRebateCalc": false}
]
```

Sample Response

```
{
  "errors":null,
  "isSuccess":true,
  "outputValues":{
    "AggregateId":"0ntxx00004000002AAA",
    "BenefitId":"0ntxx00004000002AAA",
    "RebateAmount":"2000"
  }
}
```

Get Eligible Program Rebate Types

Retrieve the eligible program rebate types for a mapped object.

For more information about how to use the `getEligibleProgramRebateTypes` action in Flow Builder, see [Configure the Output Parameter for the Get Eligible Program Rebate Types Flow Action in Flow Builder](#) in Salesforce Help.

This object is available in API version 52.0 and later.

Supported REST HTTP Methods

URI

`/services/data/vXX.X/actions/standard/getEligibleProgramRebateTypes`

Formats

JSON

HTTP Methods

POST

Authentication

Authorization: Bearer *token*

Inputs

Input	Details
<code>appliedRebateTypesLimit</code>	Type integer
	Description The maximum number of search results to be returned for the applied rebate types. The input value is passed through to the output parameter.

Input	Details
	This field is available in API version 54.0 and later.
appliedRebateTypesOffset Input	<p>Type integer</p> <p>Description The input offset for the applied rebate types search results plus the number of applied rebates types processed. Used to process applied rebate types in a loop. When all applied rebate types have been processed, zero is returned.</p> <p>This field is available in API version 54.0 and later.</p>
limit	<p>Type integer</p> <p>Description The maximum number of search results to be returned for the eligible rebate types.</p>
measureTypeFilter	<p>Type array</p> <p>Description Filters the eligible rebate types by the specified measure type.</p>
offset	<p>Type integer</p> <p>Description The offset for the eligible rebate types search results. The offset parameter specifies the end of the last batch retrieved. For example, to retrieve 100 rebate types at a time:</p> <ul style="list-style-type: none"> Request the first 100 with an offset of 0. Request the second 100 with an offset of 100. Request the third 100 with an offset of 200.
queryOnlyIntegrableProgram RebateTypes	<p>Type boolean</p> <p>Description Indicates whether only integrable program rebate types must be queried.</p>
referenceObjectIds	<p>Type array</p> <p>Description Required. The list of IDs of the mapped object for which to get the eligible rebate types.</p>
searchByRebateTypeName	<p>Type string</p>

Input	Details
	Description Searches the eligible rebate types by the specified name.

Outputs

Output	Details
resultantRebateTypes	Type string Description The list of eligible and applied rebate type IDs for the mapped object. Use with API calls.
resultantRebateTypes ForFlow	Type string Description The list of eligible and applied rebate type IDs for the mapped object. Use with Flow Builder. This field is available in API version 54.0 and later.

Usage

JSON Sample Request

```
{
  "inputs": [{
    "referenceObjectIds": ["01cxx00004000002AAA", "01cxx00004000002AAB"],
    "queryOnlyIntegratableProgramRebateTypes": true,
    "limit": 10,
    "offset": 5
  }]
}
```

JSON Sample Response

```
{
  resultantRebateTypes: {
    "isSuccess": true,
    "programRebateTypeIDs": [
      {ReferenceObjectID: "01cxx00004000002AAA", eligibleRebateTypes:
[01cxx00004000003AAA, 01cxx00004000003AAB], appliedRebateTypes:
[01cxx00004000004AAA, 01cxx00004000004AAB]},
      {ReferenceObjectID: "01cxx00004000002AAB", eligibleRebateTypes:
[01cxx00004000003AAC, 01cxx00004000003AAD], appliedRebateTypes:
[01cxx00004000005AAA, 01cxx00004000005AAB]}
    ],
    "limit": 10,
    "offset": 13,
  }
}
```

```

        "appliedRebateTypesLimit": 5,
        "appliedRebateTypesOffset": 9,
        "errors":null
    },
    resultantRebateTypesV2:{
        "isSuccess":true,
        "programRebateTypeIDs":[
            {ReferenceObjectID: "01cxx00004000002AAA", eligibleRebateTypes:
[01cxx00004000003AAA,01cxx00004000003AAB], appliedRebateTypes:
[01cxx00004000004AAA,01cxx00004000004AAB]},
            {ReferenceObjectID: "01cxx00004000002AAB", eligibleRebateTypes:
[01cxx00004000003AAC,01cxx00004000003AAD], appliedRebateTypes:
[01cxx00004000005AAA,01cxx00004000005AAB]}
        ],
        "limit": 10,
        "offset": 13,
        "appliedRebateTypesLimit": 5,
        "appliedRebateTypesOffset": 9,
        "errors":null
    }
}

```

Process Program Rebate Type Products

Insert or delete the records in the Program Rebate Type Product object. The inserted products participate as inclusion or exclusion as defined in the Product Filter Type option on Program Rebate Type.

For more information about how the processProgramRebateTypeProducts action inserts or deletes records, see [Create Payout Calculation Flows with Flow Actions](#) in Salesforce Help.

This object is available in API version 53.0 and later.

Supported REST HTTP Methods

URI

/services/data/v**XX.X**/actions/standard/processProgramRebateTypeProducts

Formats

JSON

HTTP Methods

POST

Authentication

Authorization: Bearer *token*

Inputs

Input	Details
operationType	Type string

Input	Details
	<p>Description</p> <p>Required. The type of operation to be performed on the program rebate type product records.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • <code>Delete</code>—Deletes all program rebate type products for the specified program rebate type ID. • <code>Insert</code>—Inserts all products as program rebate type products, preserves the existing ones.
<code>productListViewId</code>	<p>Type</p> <p>string</p> <p>Description</p> <p>The ID of the product list view containing the products to be added to the inclusion or exclusion list of this program rebate type.</p> <p> Note: This field isn't used when the type of operation is <code>Delete</code>.</p>
<code>programRebateTypeId</code>	<p>Type</p> <p>string</p> <p>Description</p> <p>Required. The ID of the program rebate type for which the records are being processed.</p>

Usage

JSON Sample Request

```
{
  "inputs": [{
    "operationType": "insert",
    "productListViewId": "00BHR00000Q6zqNMAR",
    "programRebateTypeId": "0hvHr000000HDQQIA4"
  }]
}
```

Process Rebate Batch Calculation Jobs

Process a rebate batch calculation job from the Data Processing Engine.

This object is available in API version 51.0 and later for users with Rebate Management license.

Supported REST HTTP Methods

URI

`/services/data/vxx.x/actions/standard/processRebatesBatchCalculationJob`

Formats

JSON, XML

HTTP Methods

GET, HEAD, POST

AuthenticationAuthorization: Bearer *token*

Inputs

Input	Details
calcDefinitionId	Type ID Description Required. The ID of the data processing engine definition record that you want to process.
rebateProgramIds	Type array Description The list of IDs of the rebate program records that the custom batch calculation job processes.
programRebateTypeIds	Type array Description The list of IDs of the program rebate type records that the custom batch calculation job processes.
rebateProgramPayoutPeriodIds	Type array Description The list of IDs of the rebate program payout period records that the custom batch calculation job processes.
rebateProgramMemberIds	Type array Description The list of IDs of the rebate program member records that the custom batch calculation job processes.

Outputs

Output	Details
batchJobId	Type ID

Output	Details
	Description The ID of the generated batch job record after the request is successful.
accepted	Type boolean Description Indicates whether the rebate batch calculation job is accepted.

Usage

Sample Request

```
{
  "inputs": [{
    "calcDefinitionId": "01cxx00004000002AAA",
    "rebateProgramIds": ["0htxx00004000002AAA", "0htxx00004000002bAA"],
    "programRebateTypeIds": ["0htxx00004000002AAA", "0htxx00004000002bAA"],
    "rebateProgramPayoutPeriodIds": ["0htxx00004000002AAA", "0htxx00004000002bAA"],
    "rebateProgramMemberIds": ["0htxx00004000002AAA", "0htxx00004000002bAA"]
  }]
}
```

Sample Response

```
{
  "errors": null,
  "isSuccess": true,
  "outputValues": {
    "batchJobId": "0htxx00004000002AAA",
  }
}
```

Process Rebate CSV Files

Process an uploaded CSV file using Bulk API 2.0 and convert the file's data into records in the target object.

This object is available in API version 51.0 and later for users with Rebate Management license.

Supported REST HTTP Methods

URI

/services/data/v**xx.x**/actions/standard/rebatesProcessCSV

Formats

JSON, XML

HTTP Methods

GET, HEAD, POST

Authentication

Authorization: Bearer *token*

Inputs

Input	Details
recordId	<p>Type ID</p> <p>Description Required. The ID of the received document record that includes the CSV file to be converted.</p>
entityAPIName	<p>Type string</p> <p>Description Required. The API name of the target object that receives the processed CSV file records.</p>
lineEnding	<p>Type string</p> <p>Description Optional. The line ending request header that specifies whether the line endings can be read either as line feeds (LFs) or as line feeds (CRLFs) for fields of type Text Area and Text Area (Long). The default value is LF.</p>

Usage

Sample Request

```
{
  "inputs": [{
    "recordId": "0io4S000000TPsyQAG",
    "entityAPIName" : "TransactionJournal"
  }]
}
```

Sample Response

```
{
  "errors":null,
  "isSuccess":true,
}
```

Upsert Custom Rebate Payout

Upsert the custom calculated rebate payout for a specified aggregate record.

This object is available in API version 51.0 and later for users with Rebate Management license.

Supported REST HTTP Methods

URI

/services/data/v~~XX~~.X/actions/standard/upsertCustomRebatePayout

Formats

JSON, XML

HTTP Methods

GET, HEAD, POST

Authentication

Authorization: Bearer *token*

Inputs

Input	Details
accrualRate	Type Double Description The accrual rate used to calculate the accrued amount for the generated program rebate type payout source record.
accruedAmount	Type Double Description The accrued amount calculated for the generated program rebate type payout source record.
aggregateId	Type ID Description Required. The ID of the aggregate record for which you want to upsert the rebate payout.
benefitId	Type ID Description The ID of the qualified program rebate type benefit record for which you want to upsert the rebate payout.
payoutMemberFieldName	Type String Description The name of the field that contains the rebate program member ID for which to perform the payout calculations.

Input	Details
rebateAmount	Type double Description Required. The rebate amount for which you want to upsert the rebate payout.

Outputs

Output	Details
programRebateTypePayoutSourceId	Type ID Description The ID of the program rebate type payout source record, which is generated after the request is successful.

Usage

Sample Request

```
{
  "inputs": [{
    "AggregateId": "01cxx00004000002AAA",
    "BenefitId": "0htxx00004000002AAA",
    "RebateAmount": "2000"
  }]
}
```

Sample Response

```
{
  "errors": null,
  "isSuccess": true,
  "outputValues": {
    "programRebateTypePayoutSourceId": "0ntxx00004000002AAA",
  }
}
```

REBATE MANAGEMENT METADATA API TYPES

Metadata API enables you to access some types and feature settings that you can customize in the user interface. For more information about Metadata API and to find a complete reference of existing metadata types, see [Metadata API Developer Guide](#).

ObjectHierarchyRelationship

Represents an organization's custom field mappings between a reference object and eligible rebate types. Fields can be mapped from Opportunity, OpportunityLineItem, Quote, QuoteLineItem, and Contract to TransactionJournal.

ObjectHierarchyRelationship

Represents an organization's custom field mappings between a reference object and eligible rebate types. Fields can be mapped from Opportunity, OpportunityLineItem, Quote, QuoteLineItem, and Contract to TransactionJournal.

This type extends the Metadata metadata type and inherits its `fullName` field.

File Suffix and Directory Location

ObjectHierarchyRelationship components have the suffix `ObjectHierarchyRelationship.settings` and are stored in the `ObjectHierarchyRelationship` folder.

Version

ObjectHierarchyRelationship components are available in API version 51.0 and later.

Fields

Field Name	Description
<code>childObjectMapping</code>	Field Type ObjectMapping Description Set of <code>inputObject</code> , <code>mappingFields</code> , and <code>outputObject</code> entries.
<code>inputObjRecordsGrpFieldName</code>	Field Type string Description The field name in the input object used to group the records. This field is available in API version 55.0 and later.
<code>mappingType</code>	Field Type ObjHierarchyMappingType (enumeration of type string)

Field Name	Description
	<p>Description</p> <p>Specifies the type of relationship between two objects.</p> <p>Valid values are:</p> <ul style="list-style-type: none"> • ChildToChild • ParentToChild • ParentToParent • Support <p>This field is available in API version 55.0 and later.</p>
masterLabel	<p>Field Type</p> <p>string</p> <p>Description</p> <p>Master label name of the mapping definition.</p>
outputPntRelationshipFieldName	<p>Field Type</p> <p>string</p> <p>Description</p> <p>The field name that defines the relationship between a parent and child for the output object. This field is available in API version 55.0 and later.</p>
parentObjectMapping	<p>Field Type</p> <p>ObjectMapping</p> <p>Description</p> <p>Required.</p> <p>Set of inputObject, mappingFields, and outputObject entries.</p>
parentRecord	<p>Field Type</p> <p>string</p> <p>Description</p> <p>The parent record for this object hierarchy relationship. This field is available in API version 55.0 and later.</p>
parentRelationshipFieldName	<p>Field Type</p> <p>string</p> <p>Description</p> <p>Name of the field that defines the relationship between the parent and child.</p>
usageType	<p>Field Type</p> <p>MappingUsageType (enumeration of type string)</p> <p>Description</p> <p>Required.</p>

Field Name	Description
	Name of the usage type of an object hierarchy relationship. Valid value is: <ul style="list-style-type: none">• ConvertToSalesAgreement• CIMFieldMapping• EligibleProgramRebateType• MapJournalToMemberAggregate• TransformationMapping

ObjectMapping

Represents a set of `inputObject`, `mappingFields`, and `outputObject` entries.

Fields

Field Name	Description
<code>inputObject</code>	Field Type string Description Required. Name of the input object type containing the source fields for mapping. For example, Opportunity or OpportunityLineItem.  Note: You can also use a custom object as the input object type.
<code>mappingFields</code>	Field Type <code>ObjectMappingField</code> Description Mapping of source object input fields to target object.
<code>outputObject</code>	Field Type string Description Required. Name of the output object type receiving data conversion. For example, TransactionJournal.

ObjectMappingField

Represents a set of `inputField` and `outputField` entries.

Fields

Field Name	Field Type	Description
inputField	string	<p>Field Type string</p> <p>Description Required.</p> <p>Field in the object specified by the <code>inputObject</code> field in ObjectMapping on page 93. This field is mapped to the field in <code>outputField</code>, which is a field in the object specified by the <code>outputObject</code> field in ObjectMapping on page 93.</p> <p> Note: You can also use custom fields as the input field type.</p>
outputField	string	<p>Field Type string</p> <p>Description Required.</p> <p>Field in the object specified by the <code>outputObject</code> field in ObjectMapping on page 93. This field is mapped to the field name in <code>inputField</code>, which is a field in the object specified by the <code>inputObject</code> field in ObjectMapping on page 93.</p> <p> Note: You can also use custom fields as the output field type.</p>

Declarative Metadata Sample Definition

The following are examples of a `ObjectHierarchyRelationship` component.

Example of mapping between Opportunity and Transaction Journal.

```
<?xml version="1.0" encoding="UTF-8"?>
<ObjectHierarchyRelationship xmlns="http://soap.sforce.com/2006/04/metadata">
  <parentObjectMapping>
    <inputObject>Opportunity</inputObject>
    <outputObject>TransactionJournal</outputObject>
    <mappingFields>
      <inputField>AccountId</inputField>
      <outputField>MemberId</outputField>
    </mappingFields>
  </parentObjectMapping>
  <childObjectMapping>
    <inputObject>OpportunityLineItem</inputObject>
    <outputObject>TransactionJournal</outputObject>
    <mappingFields>
```

```

        <inputField>Product2Id</inputField>
        <outputField>ProductId</outputField>
    </mappingFields>
    <mappingFields>
        <inputField>Quantity</inputField>
        <outputField>Quantity</outputField>
    </mappingFields>
</childObjectMapping>
<usageType>EligibleProgramRebateType</usageType>
</ObjectHierarchyRelationship>

```

Example of mapping between Quote and Transaction Journal.

```

<?xml version="1.0" encoding="UTF-8"?>
<ObjectHierarchyRelationship xmlns="http://soap.sforce.com/2006/04/metadata">
    <parentObjectMapping>
        <inputObject>Quote</inputObject>
        <outputObject>TransactionJournal</outputObject>
        <mappingFields>
            <inputField>AccountId</inputField>
            <outputField>MemberId</outputField>
        </mappingFields>
    </parentObjectMapping>
    <childObjectMapping>
        <inputObject>QuoteLineItem</inputObject>
        <outputObject>TransactionJournal</outputObject>
        <mappingFields>
            <inputField>Product2Id</inputField>
            <outputField>ProductId</outputField>
        </mappingFields>
        <mappingFields>
            <inputField>Quantity</inputField>
            <outputField>Quantity</outputField>
        </mappingFields>
    </childObjectMapping>
    <usageType>EligibleProgramRebateType</usageType>
</ObjectHierarchyRelationship>

```

Example of mapping between Contract and Transaction Journal.

```

<?xml version="1.0" encoding="UTF-8"?>
<ObjectHierarchyRelationship xmlns="http://soap.sforce.com/2006/04/metadata">
    <parentObjectMapping>
        <inputObject>Contract</inputObject>
        <outputObject>TransactionJournal</outputObject>
        <mappingFields>
            <inputField>AccountId</inputField>
            <outputField>MemberId</outputField>
        </mappingFields>
    </parentObjectMapping>
    <usageType>EligibleProgramRebateType</usageType>
</ObjectHierarchyRelationship>

```

The following is an example `package.xml` that references the previous definition.

```
<?xml version="1.0" encoding="UTF-8"?>
<Package xmlns="http://soap.sforce.com/2006/04/metadata">
  <types>
    <members>*</members>
    <name>ObjectHierarchyRelationship</name>
  </types>
  <version>51.0</version>
</Package>
```

Usage

Use the `deploy()` call to deploy metadata with a .zip file. Every .zip file contains a project manifest, a file that's named `package.xml`, and a set of directories that contain the components. The manifest file defines the components that you're trying to retrieve or deploy in the .zip file. The manifest also defines the API version that's used for the deployment or retrieval. For more information on the .zip file, deploying, and retrieving the metadata, see [Deploying and Retrieving Metadata with the Zip File](#). You can also deploy and retrieve the metadata API using Postman.

Wildcard Support in the Manifest File

This metadata type supports the wildcard character `*` (asterisk) in the `package.xml` manifest file. For information about using the manifest file, see [Deploying and Retrieving Metadata with the Zip File](#).

DATA PROCESSING ENGINE, BATCH MANAGEMENT, AND MONITOR WORKFLOW SERVICES

Data Processing Engine and Batch Management help automate your business processes. Use objects, APIs, Platform Events, and invocable actions to define, run, and review Data Processing Engine definitions and Batch Management jobs.

Here's how both these features can automate your business processes:

- Data Processing Engine: Transform data that's available in your Salesforce org and write back the transformation results as new or updated records. You can transform the data for standard and custom objects.
- Batch Management: Automate the processing of records in scheduled flows. You can process a high volume of standard and custom object records.

Once a Data Processing Engine definition is run or a Batch Management job is run, you can view the progress of the run and the results of the run using Monitor Workflow Services.

Data Model

Data Processing Engine, Batch Management, and Monitor Workflow Services share a data model. Let's learn about the objects and relationships in this shared data model.

Common Tooling API Object

BatchJobDefinition is a common Tooling API object that is shared between Data Processing Engine and Batch Management.

Common Platform Event

Batch Management jobs and Data Processing Engine definitions are run using invocable actions in Flows. Use the BatchJobStatusChanged event to notify subscribers after a Batch Management job or a Data Processing Engine definition is processed in a flow.

Common Business APIs

Common Business APIs are RESTful APIs that are sometimes available as Apex classes and methods.

Data Processing Engine

Transform data that's available in your Salesforce org and write back the transformation results as new or updated records. You can transform the data for standard and custom objects. Data Processing Engine consists of a Tooling API object, a standard object, a Metadata API, and an invocable action. You can use these to view, create, edit, and run Data Processing Engine definitions.

Batch Management

Automate the processing of records in scheduled flows. You can process a high volume of standard and custom object records. Batch Management consists of three Tooling API objects, a standard object, a Metadata API, and an invocable action. You can use these resources to view, create, edit, and run Batch Management jobs.

Monitor Workflow Services

The Monitor Workflow Services standard objects can be used to track the run of Data Processing Engine definitions and Batch Management jobs. During a run, you can view details about each part that the run is broken down into. After the run is complete, you can view its status and the records which weren't processed during the run.

EDITIONS

Available in: Lightning Experience

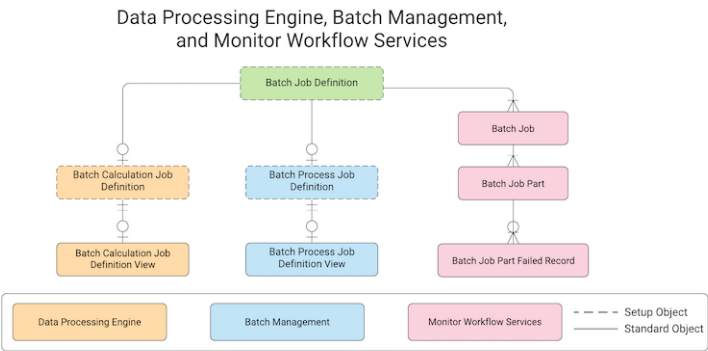

Available in: Data Processing Engine is available with Enterprise, Unlimited, and Performance Editions with the Financial Services Cloud, Loyalty Management, Manufacturing Cloud, Rebate Management, Accounting Subledger, or Provider Search in Health Cloud.

Available in: Batch Management is available with Enterprise, Unlimited, and Performance Editions with the Loyalty Management, Manufacturing Cloud, Rebate Management, or Accounting Subledger

Data Model

Data Processing Engine, Batch Management, and Monitor Workflow Services share a data model. Let's learn about the objects and relationships in this shared data model.

Here's the data model:

EDITIONS

Available in: Lightning Experience

Available in: Data Processing Engine is available with Enterprise, Unlimited, and Performance Editions with the Financial Services Cloud, Loyalty Management, Manufacturing Cloud, Rebate Management, Accounting Subledger, or Provider Search in Health Cloud.

Available in: Batch Management is available with Enterprise, Unlimited, and Performance Editions with the Loyalty Management, Manufacturing Cloud, Rebate Management, or Accounting Subledger

Common Tooling API Object

BatchJobDefinition is a common Tooling API object that is shared between Data Processing Engine and Batch Management.

Tooling API objects let you interact with metadata for declarative development. For example, you can create your own version of Setup.

BatchJobDefinition

Represents the definition of a batch job. This object is available in API version 51.0 and later.

BatchJobDefinition

Represents the definition of a batch job. This object is available in API version 51.0 and later.

Note: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported SOAP API Calls

`describeSObjects()`, `query()`, `retrieve()`

Supported REST API Methods

GET, HEAD, Query

Fields

Field	Details
Description	Type textarea Properties Filter, Group, Nillable, Sort Description The description of the batch job definition.
DeveloperName	Type string Properties Filter, Group, Sort Description The developer name of the batch job.
Language	Type picklist

Common Platform Event

Batch Management jobs and Data Processing Engine definitions are run using invocable actions in Flows. Use the BatchJobStatusChanged event to notify subscribers after a Batch Management job or a Data Processing Engine definition is processed in a flow.

BatchJobStatusChangedEvent

Notifies subscribers of when a batch job is completed in a flow. This object is available in API version 51.0 and later.

BatchJobStatusChangedEvent

Notifies subscribers of when a batch job is completed in a flow. This object is available in API version 51.0 and later.

Supported Calls

describeSObjects()

EDITIONS

Available in: Lightning Experience

Available in: Data Processing Engine is available with Enterprise, Unlimited, and Performance Editions with the Financial Services Cloud, Loyalty Management, Manufacturing Cloud, Rebate Management, Accounting Subledger, or Provider Search in Health Cloud.

Available in: Batch Management is available with Enterprise, Unlimited, and Performance Editions with the Loyalty Management, Manufacturing Cloud, Rebate Management, or Accounting Subledger

Field	Details
	Properties Nillable Description The timestamp for when the batch job execution is complete.
EventUuid	Type string Properties Nillable Description A universally unique identifier (UUID) that identifies a platform event message. This field is available in API version 52.0 and later.
ReplayId	Type string Properties Nillable Description Represents an ID value that is populated by the system and refers to the position of the event in the event stream. Replay ID values aren't guaranteed to be contiguous for consecutive events. A subscriber can store a replay ID value and use it on resubscription to retrieve missed events that are within the retention window.
StartDateTime	Type dateTime Properties Nillable Description The timestamp for when the batch job execution is started.
Status	Type picklist Properties Restricted picklist Description The status of the batch job. Possible values are: <ul style="list-style-type: none">• Canceled—Canceled• Failure• Success

Common Business APIs

Common Business APIs are RESTful APIs that are sometimes available as Apex classes and methods.

[REST Reference](#)

You can access Common Business APIs using REST endpoints. These REST APIs follow similar conventions as Connect REST APIs.

REST Reference

You can access Common Business APIs using REST endpoints. These REST APIs follow similar conventions as Connect REST APIs.

To understand the architecture, authentication, rate limits, and how the requests and responses work, see [Connect REST API Developer Guide](#).

[Resources](#)

Here's a list of Common Business API resources.

[Response Bodies](#)

Here's a list of Common Business API response bodies.

SEE ALSO:

[Connect REST API Developer Guide](#)

Resources

Here's a list of Common Business API resources.

[Batch Job Cancel](#)

Cancel a batch job of type data processing engine (calc job) and batch management. A batch job with only the status Submitted or In Progress can be canceled.

Batch Job Cancel

Cancel a batch job of type data processing engine (calc job) and batch management. A batch job with only the status Submitted or In Progress can be canceled.

Special Access Rules

To use this resource, the following permissions are required:

- Your org must have the Batch Management and Data Processing Engine licenses
- Users in your org require System Administration profile

Resource

```
/connect/batch-job/batchJobId/cancel-job
```

Resource example

```
/connect/batch-job/0mdxx00000000fxAAA/cancel-job
```

Available version

52.0

Requires Chatter

No

HTTP methods

POST

**Note:** POST doesn't take request parameters or a request body.**Response body for POST**

Returns HTTP 201 on success.

See [Batch Job Cancel Output](#) for HTTP code descriptions that are unique to this resource in case of failure of the batch job cancel request.

Response Bodies

Here's a list of Common Business API response bodies.

[Batch Job Cancel Output](#)

Output representation of the batch job cancel request.

Batch Job Cancel Output

Output representation of the batch job cancel request.

Property Name	Type	Description	Filter Group and Version	Available Version
message	String	Details about why the batch job cancel request failed.	Small, 52.0	52.0

This table lists HTTP response code descriptions that are unique to this resource.

HTTP Response Code	Error Code	Description
400	INVALID_STATUS	We can't cancel the batch job that doesn't have an active run. Specify the ID of a batch job with an active run and try again.
400	INVALID_STATUS	We can't cancel the batch job that is already canceled or completed. Specify the ID of a valid batch job with the status InProgress or Submitted and try again.
400	DELETE_FAILED	We can't cancel the batch job of which the results are already being written back.
400	DELETE_FAILED	We can't cancel the batch job because of an error in processing your org's data. Run the Data Processing Engine definition and try again.

HTTP Response Code	Error Code	Description
403	FORBIDDEN	You don't have the permission to cancel a batch job. Ask your Salesforce admin for help.
404	RESOURCE_NOT_FOUND	Specify the ID of a valid batch job and try again.
500	INTERNAL_SERVER_ERROR	Something went wrong when we tried to cancel the batch job. Try again or ask your Salesforce admin for help.

Data Processing Engine

Transform data that's available in your Salesforce org and write back the transformation results as new or updated records. You can transform the data for standard and custom objects. Data Processing Engine consists of a Tooling API object, a standard object, a Metadata API, and an invocable action. You can use these to view, create, edit, and run Data Processing Engine definitions.

[Data Processing Engine Tooling API Objects](#)

Data Processing Engine consists of one Tooling API object, BatchCalcJobDefinition. Use this object to create and edit a Data Processing Engine definition.

[Data Processing Engine Standard Object](#)

Data Processing Engine contains one standard object, BatchCalcJobDefinitionView. Use this object to view all the Data Processing Engine definitions available in your Salesforce org, including file-based definitions.

[Data Processing Engine Metadata API](#)

Use a Metadata API to create, update, and activate Data Processing Engine definitions.

[Data Processing Engine Invocable Actions](#)

Run an active Data Processing Engine definition. For more information on custom invocable actions, see [REST API Developer Guide](#) and [Actions Developer Guide](#).

EDITIONS

Available in: Lightning Experience

Available in: Data Processing Engine is available with Enterprise, Unlimited, and Performance Editions with the Financial Services Cloud, Loyalty Management, Manufacturing Cloud, Rebate Management, Accounting Subledger, or Provider Search in Health Cloud.

Data Processing Engine Tooling API Objects

Data Processing Engine consists of one Tooling API object, BatchCalcJobDefinition. Use this object to create and edit a Data Processing Engine definition.

Tooling API objects let you interact with metadata for declarative development. For example, you can create your own version of Setup.

BatchCalcJobDefinition

Represents a Data Processing Engine (DPE) definition. This object is available in API version 51.0 and later.

BatchCalcJobDefinition

Represents a Data Processing Engine (DPE) definition. This object is available in API version 51.0 and later.

 **Note:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported SOAP API Calls

describeSObjects(), query(), retrieve()

Supported REST API Methods

DELETE, GET, HEAD, PATCH, POST, Query

Data Processing Engine Metadata API

Use a Metadata API to create, update, and activate Data Processing Engine definitions.

[BatchCalcJobDefinition](#)

Represents a Data Processing Engine definition.

BatchCalcJobDefinition

Represents a Data Processing Engine definition.

Parent Type

This type extends the Metadata metadata type and inherits its `fullName` field.

File Suffix and Directory Location

`BatchCalcJobDefinition` components have the suffix `.batchCalcJobDefinition` and are stored in the `batchCalcJobDefinitions` folder.

Version

`BatchCalcJobDefinition` components are available in API version 51.0 and later.

Special Access Rules

To use this metadata type, one of these licenses is required:

EDITIONS

Fields

Field Name	Field Type	Description
aggregates	BatchCalcJobAggregate[]	Collection of aggregate nodes in a data processing engine.
appends	BatchCalcJobUnion[]	Collection of append nodes in a data processing engine.
atomicWritebacks	BatchCalcJobAtomicWriteBack[]	Collection of composite writeback nodes in a data processing engine definition. Available in API version 62.0 and later.
customNodes	BatchCalcJobCustomNode[]	Collection of custom nodes in a data processing engine. Available in API version 57.0 and later.
dataSpaceApiName	string	Stores the Data Space API Name from Data Cloud. Available in API version 60.0 and later.
datasources	BatchCalcJobDatasource[]	Collection of data source nodes in a data processing engine.
definitionRunMode	BatchCalcJobRunMode (enum of type string)	Specifies the execution mode in a data processing engine. Valid values are: <ul style="list-style-type: none"> • Batch • OnDemand
description	string	Description of a data processing engine definition.
executionPlatformType	BatchCalcJobExecutionPlatformType (enum of type string)	The platform that's used to run the Data Processing Engine definition. Valid values are: <ul style="list-style-type: none"> • CRMA • CDP • CORE Available in API version 59.0 and later.
filters	BatchCalcJobFilter[]	Collection of filter nodes in a data processing engine. definition.
forecasts	BatchCalcJobForecast[]	Collection of forecast nodes in a data processing engine. definition. Available in API version 58.0 and later.
hierarchyPaths	BatchCalcJobHierarchyPath[]	Collection of hierarchy path nodes in a data processing engine definition.
isTemplate	boolean	Indicates whether it's a template data processing engine definition.

Field Name	Field Type	Description
joins	BatchCalcJobSourceJoin[]	Collection of join nodes in a data processing engine.
label	string	The label of a data processing engine definition.
parameters	BatchCalcJobParameter[]	Collection of input variables in a data processing engine.
processType	BatchCalcProcessType (enumeration of type string)	<p>The process type of a data processing engine. These process types may be available to you depending on your industry solution and permission sets. status	BatchJobDefinition Status (enumeration of type string)	Status of a data processing engine definition. Valid values are: <ul style="list-style-type: none">• Active• Inactive
transforms	BatchCalcJobTransform[]	Collection of data transformation nodes in a data processing engine.
writebacks	BatchCalcJobWriteback Object[]	Collection of writeback objects in which the results of the data processing engine are written back.

BatchCalcJobAggregate

Represents a collection of fields relating to an aggregate node in a data processing engine.

Fields

Field Name	Field Type	Description
description	string	Description of an aggregate node.
fields	BatchCalcJob AggregateField[]	Required. Collection of aggregation fields.
groupBy	string[]	Required. Collections of fields used to group data in an aggregate node.
label	string	Required. Label of an aggregate node.
name	string	Required. Name of an aggregate node.
sourceName	string	Required. Name of the source node.

BatchCalcJobAggregateField

Represents a collection of fields relating to an aggregation field in an aggregate node of a data processing engine.

Fields

Field Name	Field Type	Description
aggregateFunction	BatchCalcJobAggregateFunction (enumeration of type string)	Required. Function used for aggregation. Valid values are: <ul style="list-style-type: none">• Unique—A count of unique values.• Sum—The sum of all values.• Max—The largest value.• Min—The smallest value.• Avg—The average value, calculated as the mean.• Std—The standard deviation.• StdP—A standard deviation with population variance.• Var—The variance.• VarP—The variance with population.• Count—The total count of values.
alias	string	Required. Name that subsequent nodes within the data processing engine use to refer to the aggregate field.
sourceFieldName	string	Required. Source node field on which the aggregate is calculated.

BatchCalcJobAtomicWriteback

Represents a node in a DPE definition that stores the details about the relationship between the writeback nodes and the composite writeback operations between the nodes.

Field Name	Field Type	Description
description	string	Description of the composite writeback object.
label	string	Required. Name of the composite writeback object.
name	string	Required. API name of the composite writeback object.
writebackObjectRelationships	BatchCalcJobAtomicWritebackRelationship	Specifies the relationship between the writeback objects that are involved in the writeback operation.
writebackSequence	int	Sequence in which the data processing engine executes the composite write back node.

BatchCalcJobAtomicWritebackRelationship

Represents the relationships between the writeback objects that are involved in a composite writeback operation. It captures the relationships between these objects and the sequence in which they should be processed.

Field Name	Field Type	Description
childWritebackObjectField	string	Field name that's associated with the child writeback object in a composite writeback relationship. Available in API version 63.0 and later.
childWritebackObjectName	string	Name of the child writeback object that's associated with the writeback relationship.
parentWritebackObjectField	string	Field name that's associated with the parent writeback object in a composite writeback relationship. Available in API version 63.0 and later.
parentWritebackObjectName	string	Required. Name of the parent writeback object that's associated with the writeback relationship.
relationshipName	string	Describes the relationship between the child and parent writeback objects in a composite writeback node. Available in API version 64.0 and later.
sequenceNumber	int	Sequence number of the writeback node that's associated with its parent node in the relationship.

BatchCalcJobCustomNode

Represents a collection of custom nodes in a data processing engine. Use a custom node to add a custom action.

Fields

Field Name	Field Type	Description
description	string	Description of a custom node.
extensionName	string	Required. Name of an extension node.
extensionNamespace	string	Required. Namespace of an extension node.
label	string	Required. Label of a custom node.
name	string	Required. Name of a custom node.
parameters	BatchCalcJobCustomNodeParameter []	The field mappings of an extension node.
sources	string[]	Sources of an extension node.

BatchCalcJobCustomNodeParameter

Represents the field mappings of an extension node.

Fields

Field Name	Field Type	Description
name	string	Required. Name of a parameter.
value	string	Required. Value of a parameter.

BatchCalcJobDatasource

Represents a collection of fields relating to a data source node in a data processing engine.

Fields

Field Name	Field Type	Description
CSVDelimiter	BatchCalcJobCSVDelimiter (enumeration of type string)	<p>Specifies the field separator to read fields from a CSV file record.</p> <p>Possible values are:</p> <ul style="list-style-type: none">• COMMA• BACKQUOTE• CARET• PIPE• SEMICOLON• TAB <p>The default value is <code>COMMA</code>.</p> <p>The same delimiter value used for the CSV file can't be used within any of the column values in the file. If you mistakenly use the same delimiter value in column values, it can cause data parsing issues.</p>
description	string	Description of a data source node.
fields	BatchCalcJobDatasourceField[]	Required. Collection of data source fields.
fileIdentifier	string	Specifies the source of the file or file storage system.
filePath	string	The file path for the specified file.
fileSource	BatchCalcJobFileSource (enumeration of type string)	<p>Specifies the source of the file or file storage system.</p> <p>Possible value is:</p> <ul style="list-style-type: none">• ContentManagement
label	string	Required. Label of a data source node.
name	string	Required. Name of a data source node.
sourceName	string	Required. Name of a standard or custom object from which the data source node extracts data.

Field Name	Field Type	Description
<code>type</code>	BatchCalcJobDataSourceType (enumeration of type string)	Required. Type of object for the source object field. Supported values are: <ul style="list-style-type: none">• <code>Analytics</code>• <code>CalculatedInsightsObject</code>• <code>CRMObject</code>• <code>CSV</code>• <code>DataModelObject</code>• <code>StandardObject</code>

BatchCalcJobDatasourceField

Represents a collection of fields relating to a source object field that are selected in the data source node of a data processing engine.

Fields

Field Name	Field Type	Description
<code>alias</code>	string	Name that subsequent nodes within the data processing engine use to refer to the data source field. Required when the field name is lookup.
<code>dataType</code>	BatchCalcJobDataType (enumeration of type string)	Specifies the data type of the input field when using a CSV file as a data source. Possible values are: <ul style="list-style-type: none">• <code>Text</code>• <code>Numeric</code>• <code>Date</code>• <code>DateTime</code>• <code>MultiValue</code>
<code>isPrimaryKey</code>	boolean	Indicates whether a column name is the primary key (<code>true</code>) or not (<code>false</code>) for the Data Cloud CSV file.
<code>name</code>	string	Required. Name of the field. Can be either of the following: <ul style="list-style-type: none">• Name of the source field selected in the associated data source object.• Name from a nested lookup object with three child levels.

BatchCalcJobFilter

Represents a collection of fields relating to a filter node in a data processing engine.

Fields

Field Name	Field Type	Description
criteria	BatchCalcJobFilterCriteria[]	Collection of filter criteria in a filter node. The field is required when <code>isDynamicFilter</code> is set to <code>False</code> .
description	string	Description of the batch calculation job filter.
filterCondition	string	Logic that is specified to apply the filter conditions. The field is required when <code>isDynamicFilter</code> is set to <code>False</code> .
filterParameterName	string	Name of the parameter of type filter.
isDynamicFilter	boolean	Indicates whether the filter criteria is dynamic. If value is set to <code>True</code> , filter criteria is passed in runtime with <code>filterParameterName</code> .
label	string	Required. Label of the filter node.
name	string	Required. Name of the filter node.
sourceName	string	Required. Name of the source node.

BatchCalcJobForecast

Represents a collection of fields relating to a forecast node in a data processing engine. Available in API version 58.0 and later.

Fields

Field Name	Field Type	Description
accuracy <code>BatchCalcJobFrcstAccuracy</code> (enumeration of type string)		The interval percentage to account for errors in forecasts. Possible values are: <ul style="list-style-type: none">• <code>Eighty</code>• <code>NinetyFive</code>• <code>None</code> The default value is <code>None</code> .
aggrFields <code>BatchCalcJobFrcstAggrFld[]</code>		The list of fields to forecast.
dateField string		Required. The date field from the source node used to forecast values for the specified forecast length.

Field Name	Field Type	Description
description	string	The description of the forecast node.
forecastModel	BatchCalcJobFrcstModel (enumeration of type string)	<p>The model used to forecast data.</p> <p>Possible values are:</p> <ul style="list-style-type: none">• Additive• Auto• Multiplicative <p>The default value is Auto.</p>
forecastPeriod	int	<p>The number of time periods to generate forecast data. For example, if you select Year-Month as the forecast period type, and 4 as the forecast period count, the forecast results are generated for the next 4 months.</p> <p>The minimum and the default count is 1, and the maximum is 100.</p>
forecastPeriodType	BatchCalcJobFrcstPeriodType (enumeration of type string)	<p>Required.</p> <p>The type of forecast period to group date field values in the forecast results.</p> <p>Possible values are:</p> <ul style="list-style-type: none">• FiscalYear• FiscalYearMonth• FiscalYearQuarter• FiscalYearWeek• Year• YearMonth• YearMonthDay• YearQuarter• YearWeek
groupFields	BatchCalcJobFrcstGrpFld[]	The source fields for grouping the data to be

Field Name	Field Type	Description
		processed by the forecast node.
label	string	Required. The name of the forecast node in the UI.
name	string	Required. A unique name for the forecast node.
startDate	string	Required. The start date of the forecast period.
seasonality	BatchCalcJobFrcstSeasonality (enumeration of type string)	Represents the periodic fluctuations that occur around the same time every year. Possible values are: <ul style="list-style-type: none">TwoThreeFourFiveSixSevenEightNineTenElevenTwelveThirteenFourteenFifteenSixteenSeventeenEighteenNineteenTwentyTwentyOne

Field Name	Field Type	Description
		<ul style="list-style-type: none">• TwentyTwo• TwentyThree• TwentyFour• Auto• None <p>The default value is None.</p>
ignoreLastPeriod	boolean	Indicates whether to ignore the last period in the source node when it has incomplete data (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code> .
sourceName	string	Required. The name of the source node. A source can be any node other than the datasink and register node.

BatchCalcJobForecastAggregateField

Represents a list of fields to forecast in a forecast node.

Field Name	Field Type	Description
aggregateFunction	BatchCalcJobAggregateFunction (enumeration of type string)	Required. The function of the aggregate field. Possible values are: <ul style="list-style-type: none">• Avg• Count• Max• Min• Std• StdP• Sum• Unique• Var

Field Name	Field Type	Description
		<ul style="list-style-type: none">• VarP
aggregationResultLabel	string	Required. The name of the aggregation result generated from the aggregation function that's applied to the source node field.
fieldName	string	Required. The name of the source field.

BatchCalcJobFrstGrpFld

Represents source fields for grouping the data to be processed by the forecast node.

Field Name	Field Type	Description
fieldName	string	Required. The name of the source field to group the data to be processed by the forecast node.
groupBy	string	A comma-separated list of values to group data by. Required when the source field type is Date or DateTime. Possible values are: <ul style="list-style-type: none">• Second• Second Epoch• Minute• Hour• Day• Day Epoch• Week• • Month• Quarter• Year

BatchCalcJobHierarchyPath

Represents a collection of hierarchy path nodes in a data processing engine definition.

Fields

Field Name	Field Type	Description
description	string	Description of the hierarchy path node.
hierarchyFieldName	string	Required. Field name that contains the hierarchy path.
isSelfFieldValueIncluded	boolean	Indicates whether the self value is included in the calculated hierarchy path (True) or not (False).
label	string	Required. Label of the hierarchy path node.
name	string	Required. Name of the hierarchy path node.
parentFieldName	string	Required. Parent field name to calculate hierarchy path.
selfFieldName	string	Required. Self field name to calculate hierarchy path.
sourceName	string	Required. Name of the source node.

BatchCalcJobFilterCriteria

Represents a collection of fields relating to a filter condition in a filter node in a data processing engine.

Fields

Field Name	Field Type	Description
inputVariable	string	Name of the input variable used as a filter.
operator	BatchCalcJobFilter Operator (enumeration of type string)	Required. Operator that is specified in the filter condition. Valid values are: <ul style="list-style-type: none">• Equals• NotEquals• GreaterThan• GreaterThanOrEqual• LessThan• LessThanOrEqual• StartsWith• EndsWith• Contains• DoesNotContain• IsNull• IsNotNull• In• NotIn

Field Name	Field Type	Description
sequence	integer	Required. Sequence number used to refer the criteria in a filter node.
sourceFieldName	string	Required. Name of the field from the source node to apply the filter.
value	string	Value used to filter data from the source node.

BatchCalcJobParameter

Represents a collection of fields relating to an input variable in a data processing engine.

Fields

Field Name	Field Type	Description
dataType	BatchCalcJobParameter DataType (enumeration of type string)	Required. Data type of the parameter. Valid values are: <ul style="list-style-type: none">• Date• DateTime• Expression• FileIdentifier• Filter• Numeric• Text
defaultValue	string	Default value of the parameter.
description	string	Description of the batch calculation job parameter.
isMultiValue	boolean	Indicates whether the parameter has different values (<code>True</code>) or not (<code>False</code>). This field is supported only for the <code>Text</code> data type.
label	string	Required. Label of the batch calculation job parameter.
name	string	Required. Name of the batch calculation job parameter.

BatchCalcJobSourceJoin

Represents a collection of fields relating to a join node in a data processing engine.

Fields

Field Name	Field Type	Description
description	string	Description of the join node.
fields	BatchCalcJobJoin ResultField[]	Collection of fields in a join node.

Field Name	Field Type	Description
joinKeys	BatchCalcJobJoinKey[]	Collection of mapping of fields from the primary source node and the second source node in a join node.
label	string	Required. Label of the join node.
name	string	Required. Name of the join node.
primarySourceName	string	Required. Name associated with the node as the primary source node.
secondarySourceName	string	Required. Name associated with the node as the secondary source node.
type	BatchCalcJobSourceJoinType (enumeration of type string)	Required. Type of join specified between the primary source node and secondary source node. Valid values are: <ul style="list-style-type: none">• LeftOuter• RightOuter• Inner• Outer• Lookup

BatchCalcJobJoinKey

Represents a collection of fields relating to a mapping of fields from the first source node and second source node in a join node of a data processing engine.

Fields

Field Name	Field Type	Description
primarySourceFieldName	string	Required. Mapped field name of the primary source node.
secondarySourceFieldName	string	Required. Mapped field name of the secondary source node.

BatchCalcJobJoinResultField

Represents a collection of fields relating to a set of resultant fields in a join node of a data processing engine.

Fields

Field Name	Field Type	Description
alias	string	Required. Name that subsequent nodes within the data processing engine definition use to refer to the resultant field.
sourceFieldName	string	Required. Name of field from the primary or secondary data source.
sourceName	string	Required. Source node of the primary or secondary data source.

BatchCalcJobTransform

Represents a collection of fields relating to a data transformation in a data processing engine.

Fields

Field Name	Field Type	Description
description	string	The description of the batch calculation job transform.
droppedFields	BatchCalcJobTransformDroppedField[]	The collection of dropped fields in a data transformation. Available when the transformation type is <code>Slice</code> .
expressionFields	BatchCalcJobTransformAddedField[]	The collection of formula fields in a data transformation. Available when the transformation type is <code>Expression</code> .
label	string	Required. The label of the batch calculation job transform.
name	string	Required. The name of the batch calculation job transform.
orderBy	BatchCalcJobOrderByField on page 137[]	A collection of fields that's used to sort the records within each partition group.
partitionBy	string[]	A group of fields that's used to partition the source data into partition groups.
sourceName	string	Required. Name of the source node.
transformType	BatchCalcJobTransformType (enumeration of type string)	Required. The type of transformation. Valid values are: <ul style="list-style-type: none">• <code>ComputeRelative</code>—This transformation calculates values based on values of the same partition group.• <code>Expression</code>—This transformation calculates values based on existing values of fields in the same record.• <code>Slice</code>—This transformation removes fields from the source node.

BatchCalcJobTransformDroppedField

Represents a collection of fields relating to a dropped field in a data transformation of a data processing engine.

Fields

Field Name	Field Type	Description
sourceFieldName	string	Required. Name of the field that is dropped.

BatchCalcJobTransformAddedField

Represents a collection of fields relating to a formula in a data transformation of a data processing engine.

Fields

Field Name	Field Type	Description
alias	string	Required. Name that subsequent nodes within the data processing engine use to the transform node.
dataType	BatchCalcJobDataType (enumeration of type string)	Required. Data type of the formula. Valid values are: <ul style="list-style-type: none">• Text• Numeric• Date• DateTime• MultiValue
decimalPlaces	integer	Number of digits to the right of a decimal point in the value. Required for the Numeric data type.
expression	string	Required. Formula defined by the user.
length	integer	Total length of the value including the decimal places. Required for data types: Text and Numeric.

BatchCalcJobOrderByField

Represents a collection of fields that are used to sort the partitioned data.

Fields

Field Name	Field Type	Description
name	string	Required. Name of the field that is used to sort data.
orderType	BatchCalcJobOrderType (enumeration of type string)	Order in which the data is sorted. Valid values are: <ul style="list-style-type: none">• Ascending• Descending

BatchCalcJobUnion

Represents a collection of fields relating to the union of data from two nodes in a data processing engine.

Fields

Field Name	Field Type	Description
description	string	Description of the batch calculation job union.

Field Name	Field Type	Description
isDisjointedSchema	boolean	Indicates whether the union is of two disjointed datasets (<code>true</code>) or not (<code>false</code>). Set to <code>True</code> to allow joining of two datasets having no common fields.
label	string	Required. Label of the batch calculation job union.
name	string	Required. Name of the batch calculation job union.
sources	string[]	Names of the source nodes.

BatchCalcJobWritebackObject

Represents a collection of fields relating to the object in which the results of the data processing engine are written back.

Fields

Field Name	Field Type	Description
canWritebackNonEditableFields	boolean	Indicates whether the non-editable fields are included in field mapping when the action type is upsert. The default value is <code>false</code> . Available in API version 64.0 and later.
description	string	Descriptions of the batch calculation job writeback object.
externalIdFieldName	string	Unique external field ID for the target object name. Available in API version 60.0 and later.
fields	BatchCalcJobWritebackMapping []	Collection of the writeback fields.
filterCondition	string	The condition that filters the records from a writeback dataset for a user. Examples of a filter condition include a user ID, stage name, and a security policy that returns only the records that a user owns. Available in API version 57.0 and later.
folderName	string	The folder where the writeback dataset is saved. Available in API version 57.0 and later.
isChangedRow	boolean	Indicates whether a row in the write back object is changed. Set to <code>True</code> to write back the changed rows.
isExistingDataset	boolean	Indicates whether a CRM Application (CRMA) dataset or a Data Cloud Data Lake object is present (<code>true</code>) or will be created (<code>false</code>). Available in API version 62.0 and later.
label	string	Required. Name of the write back object.
name	string	Required. Name of the batch calculation job write back object.

Field Name	Field Type	Description
operationType	BatchCalcJobWriteback Opn (enumeration of type string)	Type of operation specified. Valid values are: <ul style="list-style-type: none">• Delete—This value is available in API version 56.0 and later.• Insert• Overwrite—Available only when <code>storageType</code> is <code>DataLakeObject</code>. This value is available in API version 60.0 and later.• Update• Upsert
sharingInheritanceObjectName	string	The name of the source object from which the row-level sharing inheritance settings are applied. Available in API version 57.0 and later.
sourceName	string	Required. Name of the source node associated with the write back object.
storageType	BatchCalcJobWriteback Type (enumeration of type string)	Specifies where you want to use the data stored in the source node. Available in API version 57.0 and later. Valid values are: <ul style="list-style-type: none">• Analytics• DataLakeObject• sObject The default value is <code>sObject</code> .
targetObjectName	string	Required. Object that is inserted or upserted by the data processing engine.
writebackSequence	integer	Sequence in which the target object is updated by the data processing engine.
writebackUser	string	ID of the user whose permissions decide which objects and fields of the target object can be updated.

BatchCalcJobWritebackMapping

Represents a collection of fields relating to the mapping between results and the fields in the target object.

Fields

Field Name	Field Type	Description
fieldType	string	Target field type on the writeback object. Valid values are: <ul style="list-style-type: none">• Primary Key• Qualifier Key Available in API version 64.0 and later.

Field Name	Field Type	Description
isAutogenerated	boolean	Indicates whether the target field value on the writeback object is autogenerated (<code>true</code>) or not (<code>false</code>). Available in API version 64.0 and later.
parentName	string	Name of the lookup object. Required only when the <code>relationshipName</code> field is defined.
relationshipName	string	Name of the lookup relationship.
runtimeParameter	boolean	Indicates whether the source field from runtime parameter is <code>true</code> or <code>false</code> . The default value is <code>false</code> . Available in API version 59.0 and later.
sourceFieldName	string	Required. Name of the field in the source node that is written back.
targetFieldName	string	Name of the sObject field to which the results are written back.

Declarative Metadata Sample Definition

The following is an example of a `BatchCalcJobDefinition` component.

```

</BatchCalcJobDefinition>

```

The following is an example package.xml that references the previous definition.

```

<?xml version="1.0" encoding="UTF-8"?>
<!--
  ~ Copyright 2020 Salesforce, Inc.
  ~ All Rights Reserved
  ~ Company Confidential

```

```
-->
<Package xmlns="http://soap.sforce.com/2006/04/metadata">
  <types>
    <members>*</members>
    <name>BatchCalcJobDefinition</name>
  </types>
  <version>60.0</version>
</Package>
```

Wildcard Support in the Manifest File

This metadata type supports the wildcard character * (asterisk) in the `package.xml` manifest file. For information about using the manifest file, see [Deploying and Retrieving Metadata with the Zip File](#).

Data Processing Engine Invocable Actions

Run an active Data Processing Engine definition. For more information on custom invocable actions, see [REST API Developer Guide](#) and [Actions Developer Guide](#).

Data Processing Engine Actions

Run an active Data Processing Engine definition. This action executes a Data Processing Engine definition asynchronously.

Data Processing Engine Actions

Run an active Data Processing Engine definition. This action executes a Data Processing Engine definition asynchronously.

A Data Processing Engine definition transforms data from your Salesforce org and writes back the results to your org. For more information about running Data Processing Engine definitions, see [Run a Data Processing Engine Definition](#) in Salesforce Help.

This object is available in API version 51.0 and later.

Supported REST HTTP Methods

URI

`/services/data/vXX.X/actions/custom/dataProcessingEngineAction`

Formats

JSON

HTTP Methods

GET, POST

Authentication

Authorization: Bearer *token*

Inputs

Use the GET method to retrieve input variables of a Data Processing Engine definition. The input variables of each Data Processing Engine definition are unique. The Data Processing Engine action uses the input variables to execute the Data Processing Engine definition and generate a batch job ID.

Note: You can't use this action to start two simultaneous runs of a definition with the same input variables.

Outputs

Output	Details
batchJobId	<p>Type</p> <p>string</p> <p>Description</p> <p>ID of the batch job generated after the request is successful. This ID is used to track the progress of the batch job in Monitor Workflow Services.</p>

Usage

JSON Sample Request to execute PointsAccrual DPE Definition

```
{
  "PointsAccrual" : {
    "memberTier" : "Gold",
    "minimumPointBalanceRequired" : "50000",
    "pointType" : "non-qualifying"
  }
}
```

JSON Sample Response

```
{
  "actionName":"PointsAccrual",
  "errors":null,
  "isSuccess":true,
  "outputValues":{
    "batchJobId":"01Mxx0000A000001EAA"
  }
}
```

Example

GET

This example shows how to retrieve input variables of a Data Processing Engine action type.

```
curl --include --request GET \
--header "Authorization: Authorization: Bearer 00DR...xyz" \
--header "Content-Type: application/json" \
"https://instance.salesforce.com/services/data/v60.0/actions/custom/dataProcessingEngineAction/newinputvardefn"
```

POST

Here's a request to retrieve DPE definition

```
{
  "inputs": [
    {
      "start_date": "26-09-2023",
      "end_date": "12-12-2023",
      "randomkey": "069SM0000001SgbYAE"
    }
  ]
}
```

```
}  
]  
}
```

Here's a response for this action.

```
[  
  {  
    "actionName": "newinputvardefn",  
    "errors": null,  
    "invocationID": null,  
    "isSuccess": true,  
    "outputValues": {  
      "batchJobId": "0mdSM0000006EJdYAM",  
      "accepted": true  
    },  
    "version": 1  
  }  
]
```

Batch Management

Automate the processing of records in scheduled flows. You can process a high volume of standard and custom object records. Batch Management consists of three Tooling API objects, a standard object, a Metadata API, and an invocable action. You can use these resources to view, create, edit, and run Batch Management jobs.

[Batch Management Tooling API Objects](#)

You can use the Batch Management Tooling API object to view the settings of Batch Management jobs.

[Batch Management Standard Objects](#)

Batch Management contains a standard BatchProcessJobDefinitionView object, which you can use to view all the batch jobs available in your Salesforce org, including file-based jobs.

[Batch Management Metadata API](#)

Use a Metadata API to create, update, and activate Batch Management jobs.

[Batch Management Invocable Actions](#)

Run an active Batch Management job definition. For more information on custom invocable actions, see [REST API Developer Guide](#) and [Actions Developer Guide](#).

EDITIONS

Available in: Lightning Experience

Available in: Batch Management is available with Enterprise, Unlimited, and Performance Editions with the Loyalty Management, Manufacturing Cloud, Rebate Management, or Accounting Subledger

Batch Management Tooling API Objects

You can use the Batch Management Tooling API object to view the settings of Batch Management jobs.

Tooling API objects let you interact with metadata for declarative development. For example, you can create your own version of Setup.

[BatchProcessJobDefinition](#)

Represents the details of a Batch Management job. This object is available in API version 51.0 and later.

BatchProcessJobDefinition

Represents the details of a Batch Management job. This object is available in API version 51.0 and later.

 **Note:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Data and processes in your org are impacted if you update or delete a BatchProcessJobDefinition record. Update or delete a Batch Management job using the [Metadata API](#) on page 157.

Supported SOAP API Calls

`describeSObjects()`, `query()`, `retrieve()`

Supported REST API Methods

`DELETE`, `GET`, `HEAD`, `PATCH`, `POST`, `Query`

Fields

Field	Details

Batch Management Standard Objects

Batch Management contains a standard BatchProcessJobDefinitionView object, which you can use to view all the batch jobs available in your Salesforce org, including file-based jobs.

[BatchProcessJobDefView](#)

Represents the details of a Batch Job definition. The definition can also be file-based definitions that are available in your Salesforce org. This object is available in API version 51.0 and later.

BatchProcessJobDefView

Represents the details of a Batch Job definition. The definition can also be file-based definitions that are available in your Salesforce org. This object is available in API version 51.0 and later.

Supported Calls

`describeObjects()`, `query()`

EDITIONS

Available in: Lightning Experience

Available in: Batch Management is available with Enterprise, Unlimited, and Performance Editions with the Loyalty Management, Manufacturing Cloud, Rebate Management, or Accounting Subledger

Fields

Field	Details
DurableId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The unique identifier for the field. Always retrieve this value before using it, as the value isn't guaranteed to stay the same from one release to the next. Simplify queries by using this field instead of making multiple queries.</p>
IsActive	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the definition is active.</p>
Label	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The label of the Batch Job definition.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the Batch Job definition.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix associated with this object. Each Developer Edition organization that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the namespacePrefix__componentName notation. The namespace prefix can have one of the following values:</p>

Field	Details
	<ul style="list-style-type: none">• In Developer Edition organizations, the namespace prefix is set to the namespace prefix of the organization for all objects that support it. There is an exception if an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition organization of the package developer.• In organizations that are not Developer Edition organizations, NamespacePrefix is only set for objects that are part of an installed managed package. There is no namespace prefix for all other objects.
ProcessDefinition	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description The name of the process group for the batch process job definition.</p>
ProcessGroup	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The team or group for which the definition processes records.</p>
SourceObjectName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The API name of the object whose records are processed.</p>
Type	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The type of process for which the Batch Management job processes records. Possible values are:</p> <ul style="list-style-type: none">• Flow• LoyaltyProgramProcess <p>This field is available in API version 55.0 and later.</p>

Field	Details
TypeInstance	Type string Properties Filter, Group, Nillable, Sort Description The API name of the process that's processed by the Batch Job definition.

Batch Management Metadata API

Use a Metadata API to create, update, and activate Batch Management jobs.

[BatchProcessJobDefinition](#)

Represents the details of a Batch Management job definition. This type extends the Metadata metadata type and inherits its `fullName` field.

BatchProcessJobDefinition

Represents the details of a Batch Management job definition. This type extends the Metadata metadata type and inherits its `fullName` field.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

EDITIONS

Available in: Lightning Experience

Available in: Batch Management is available with Enterprise, Unlimited, and Performance Editions with the Loyalty Management, Manufacturing Cloud, Rebate Management, or Accounting Subledger

File Suffix and Directory Location

BatchProcessJobDefinition components have the suffix `.batchProcessJobDefinition` and are stored in the `batchProcessJobDefinitions` folder.

Version

BatchProcessJobDefinition components are available in API version 51.0 and later.

Special Access Rules

To use this metadata type, your Salesforce org must have the Loyalty Management or the Rebate Management license. The Loyalty Program Process type is only available in orgs that have Loyalty Management enabled.

Fields

Field Name	Field Type	Description
<code>batchSize</code>	integer	Required. Number of records that each Batch Management job can process. Flow type Batch Management jobs can process up to 2000

Field Name	Field Type	Description
		records and Loyalty Program Process type Batch Management jobs can process up to 250 records.
dataSource	BatchDataSource on page 159[]	Required. Source of information whose records must be processed by the Batch Management job.
description	string	Description of the Batch Management job, up to 255 characters.
executionProcessApiName	string	<p>API name of process that must be executed by the Batch Management job. This field is available in API version 55.0 and later.</p> <ul style="list-style-type: none"> • If the batch job's type is Flow, enter the API name of an active flow that the batch job must execute. • If the batch job's type is Loyalty Program Process, enter: <ul style="list-style-type: none"> – Transaction_Journals if you want the batch job to process Transaction Journal records by applying the applicable active loyalty program process of the type TransactionJournal. – API name of an active loyalty process of the type TierProcessing if you want the batch job to run the loyalty program process to assess the tier of eligible members. The API name consists of the name of the process, the process type, and the name of the loyalty program separated by two consecutive underscores. For example, the process API name is <code>Update Member Tier__TierProcessing__Inner Circle</code> if the process name is Update Member Tier, the process type is TierProcessing, and the loyalty program name is Inner Circle. <p>You can use database-based APEX classes that let you use flex queues in the Batch Management job, allowing to place more than 5 jobs in a queue. This functionality is applicable to all Industry Clouds that use managed packages. See Apex Flex Queue.</p>
flowApiName	string	<p>API name of an active flow process that must be executed by the Batch Management job.</p> <p> Note: You can either specify the flow API name in the <code>executionProcessApiName</code> field or in the <code>flowApiName</code> field.</p>
flowInputVariable	string	Input variable of associated flow that is used by the batch job to uniquely identify records.
masterLabel	string	Required. Name of the Batch Management job, up to 80 characters.
processGroup	string	Required. Name of the group for which the Batch Management job processes records.
retryCount	integer	Required. Number of times this Batch Management job must be rerun in case it fails. The maximum retry count is 3. Valid values are 1–3.

Field Name	Field Type	Description
retryInterval	integer	Required. Number of milliseconds after which the Batch Management job must be rerun in case it fails. Valid values are 1,000–10,000.
status	string	Indicates the status of the Batch Management job. Valid values are <code>Active</code> and <code>Inactive</code> .
type	string (enumeration of type string)	The type of process that the Batch Management job must execute. This field is available in API version 55.0 and later. Valid values are: <ul style="list-style-type: none">• <code>Flow</code>• <code>Loyalty Program Process</code>

BatchDataSource

Represents the source of information whose records must be processed by the Batch Management job.

Fields

Field Name	Field Type	Description
condition	string	Required. Criteria defined to filter the records.
criteria	string	Type of filter criteria that's used to filter records for processing.
dataSourceType	string	Type of data source that's used to create the batch job definition. Valid values are: <ul style="list-style-type: none">• <code>SingleSubject</code>• <code>MultiSubject</code> Available in API version 64.0 and later.
filters	BatchDataSrcFilterCriteria on page 160[]	Filter criterion that decides which records must be processed by the Batch Management job.
orderFields	BatchDataSourceOrderField on page 161	Fields that are used to order the records before the records are added to a batch in a job.
sourceObject	string	Required. API name of an object whose records must be processed by the batch job. If the batch job type is <code>Loyalty Program Process</code> , the source object must be: <ul style="list-style-type: none">• <code>TransactionJournal</code> if the batch job is used to process transaction journals by applying the applicable loyalty program process.• An object that stores the details of loyalty program members whose tier must be assessed by the loyalty program process specified in the <code>executionProcessApiName</code> field.

Field Name	Field Type	Description
sourceObjectField	string	API name of the source object field that uniquely identifies records for which the batch job is executed. This field is available in API version 57.0 and later. This field is only applicable when the batch job's type is Loyalty Program Process and a TierProcess type active loyalty program process is specified in the <code>executionProcessApiName</code> field. Specify the API name of a field that is a lookup to the LoyaltyProgramMember object and uniquely identifies the members whose tier must be assessed.

BatchDataSrcFilterCriteria

Represents the filter conditions that decide which records must be processed by the Batch Management job.

Fields

Field Name	Field Type	Description
domainObjectName	string	Name of the object the field is associated with. Available in API version 64.0 and later.
dynamicValueType	string	Data type of the input variable used as a filter.
fieldName	string	Required. Name of the field that must be used to filter records.
fieldPath	string	Stores the path to a field in the object. Available in API version 64.0 and later.
fieldValue	string	Required. Value of the field that must be filtered. Specify the field if <code>isDynamicValue</code> is set to <code>False</code> .
isDynamicValue	boolean	Required. Indicates whether the filter criteria is dynamic.
operator	string (enumeration of type string)	Required. Operator that is specified in the filter criteria. Valid values are: <ul style="list-style-type: none">• <code>equals</code>• <code>excludes</code>• <code>greaterThan</code>• <code>greaterThanOrEqualTo</code>• <code>in</code>• <code>includes</code>• <code>lessThan</code>• <code>LessThanOrEqualTo</code>• <code>GreaterOrEqual</code>• <code>like</code>• <code>notEquals</code>• <code>notIn</code>
sequenceNo	integer	Required. Sequence number used to refer the criteria in a filter.

BatchDataSourceOrderField

Represents the fields that are used to group data.

Fields

Field Name	Field Type	Description
domainObjectName	string	Required. Name of the object the field is associated with. Available in API version 64.0 and later.
fieldName	string	Required. Name of the field that must be used to filter records. Available in API version 64.0 and later.
fieldPath	string	Required. Stores the path to a field in the object. Available in API version 64.0 and later.

Declarative Metadata Sample Definition

The following is an example of a BatchProcessJobDefinition component.

```
<?xml version="1.0" encoding="UTF-8"?>
<BatchProcessJobDefinition xmlns="http://soap.sforce.com/2006/04/metadata">
  <batchSize>10</batchSize>
  <dataSource>
    <condition>1</condition>
    <criteria>all</criteria>
    <filters>
      <dynamicValue>false</dynamicValue>
      <dynamicValueType>string</dynamicValueType>
      <fieldName>Name</fieldName>
      <fieldValue>abcd</fieldValue>
      <operator>equals</operator>
      <sequenceNo>1</sequenceNo>
    </filters>
    <sourceObject>Account</sourceObject>
  </dataSource>
  <flowApiName>Flow1</flowApiName>
  <flowInputVariable>recordId</flowInputVariable>
  <masterLabel>BatchJob1</masterLabel>
  <processGroup>Loyalty</processGroup>
  <retryCount>2</retryCount>
  <retryInterval>1000</retryInterval>
  <status>Inactive</status>
  <description>test</description>
  <type>Flow</type>
  <executionProcessApiName>testFlow</executionProcessApiName>
</BatchProcessJobDefinition>
```

The following is an example of a Flow object used in Metadata API.

```
<?xml version="1.0" encoding="UTF-8"?>
```

```

    <members>Flow1</members>  
    <name>Flow</name>  
  </types>  
  <version>51.0</version>  
</Package>
```

Wildcard Support in the Manifest File

This metadata type supports the wildcard character * (asterisk) in the `package.xml` manifest file. For information about using the manifest file, see [Deploying and Retrieving Metadata with the Zip File](#).

Batch Management Invocable Actions

Run an active Batch Management job definition. For more information on custom invocable actions, see [REST API Developer Guide](#) and [Actions Developer Guide](#).

Batch Job Actions

Run an active Batch Management job definition. This action executes a defined Batch Management job asynchronously.

Submit Failed Records Batch Job

Run to resubmit an existing batch job with failed records for processing. This action executes the batch job asynchronously.

Batch Job Actions

Run an active Batch Management job definition. This action executes a defined Batch Management job asynchronously.

A Batch Management job processes a flow in manageable parts. For more information about running an active Batch Management jobs, see [Schedule a Batch Job](#) in Salesforce Help.

This object is available in API version 51.0 and later.

Supported REST HTTP Methods

URI

`/services/data/vxx.x/actions/custom/batchJobAction`

Formats

JSON

HTTP Methods

GET, POST

AuthenticationAuthorization: Bearer *token***Inputs**

The batch job action uses the batch job definition ID and input variables to execute the job and generate a batch job ID. The input values vary according to the input variables in that flow.

Outputs

Output	Details
batchJobId	Type string Description ID of the batch job generated after the request is successful. This batch job ID is used to track the progress of the batch job in Monitor Workflow Services.

Usage

A request body is always required. The input values vary according to the input variables in that flow. If your batch job doesn't require any input variables, you still must send an empty JSON body.

```
{
  "inputs": [{}]
}
```

JSON Sample Request

```
{
  "noOfEmployees" : 900,
  "accountIndustry" : "Technology"
}
```

JSON Sample Response

```
{
  "batchJobId": "01Mxx0000A000001EAA"
  "accepted": "true"
}
```

Submit Failed Records Batch Job

Run to resubmit an existing batch job with failed records for processing. This action executes the batch job asynchronously.

This object is available in API version 52.0 and later.

Supported REST HTTP Methods

URI

/services/data/v~~XX~~.~~X~~/actions/standard/submitFailedRecordsBatchJob

Formats

JSON

HTTP Methods

GET, POST

Authentication

Authorization: Bearer *token*

Inputs

Input	Details
failedRecordIds	Type array Description The IDs of failed records in a batch job.
parentBatchJobId	Type string Description Required. The ID of a batch job with failed records.

Outputs

Output	Details
batchJobId	Type string Description The ID of a batch job generated after the request is successful. This batch job ID is used to track the progress of the batch job in Monitor Workflow Services in the org.
status	Type string Description Indicates whether a batch job succeeded or failed.

Usage

JSON Sample Request

```
{
  "inputs": [{
    "parentBatchJobId": "0mdRM0000004DXrYAM",
    "failedRecordIds": [
      "001RM000005AG0bYAG", "001RM000005AERZYA4", "001RM000005AG0WYAW"
    ]
  }]
}
```

JSON Sample Response

```
[ {
  "actionName" : "submitFailedRecordsBatchJob",
  "errors" : null,
  "isSuccess" : true,
  "outputValues" : {
    "batchJobId" : "0mdRM0000004DZ9YAM"
  }
} ]
```

Monitor Workflow Services

The Monitor Workflow Services standard objects can be used to track the run of Data Processing Engine definitions and Batch Management jobs. During a run, you can view details about each part that the run is broken down into. After the run is complete, you can view its status and the records which weren't processed during the run.

The objects of Monitor Workflow Services aren't available in Object Manager of your Salesforce org.

[BatchJob](#)

Represents an instance of a batch job that is either running and has been run. This object is available in API version 51.0 and later.

[BatchJobPart](#)

Represents one part of a batch job. This object is available in API version 51.0 and later.

[BatchJobPartFailedRecord](#)

Represents records that a batch job part couldn't successfully process. This object is available in API version 51.0 and later.

EDITIONS

Available in: Lightning Experience

Available in: Monitor Workflow Services is available with Enterprise, Unlimited, and Performance Editions where Data Processing Engine or Batch Management is available

BatchJob

Represents an instance of a batch job that is either running and has been run. This object is available in API version 51.0 and later.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`

Fields

Field	Details
BatchJobDefinitionId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The unique identifier of the associated batch job definition. This is a relationship field.</p> <p>Relationship Name BatchJobDefinition</p> <p>Relationship Type Lookup</p> <p>Refers To BatchJobDefinition</p>
BatchJobDefinitionName	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The developer name of the associated batch job definition.</p>
EndTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the batch job run was completed.</p>
ErrorDescription	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The error message in case the batch job run failed.</p>
ExternalReference	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	Description The unique identifier of the process that's running or has run the batch job.
IsDebugOn	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The default value is <code>false</code> .
IsDebugRecipeDeleted	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The default value is <code>false</code> .
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed the batch job.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this item.
Name	Type string Properties Filter, Group, idLookup, Sort Description The name of the batch job.
OwnerId	Type reference

Field	Details
	Properties Filter, Group, Sort Description Unique identifier of the user who initiated the batch job run. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
ProcessGroup	Type string Properties Filter, Group, Sort Description The group or team for which the batch job is run.
RetryCount	Type int Properties Filter, Group, Nillable, Sort Description The number of times the batch job run is automatically rerun in case it fails.
RuntimeParameter	Type textarea Properties Nillable Description The values of the input variables that are used as filter criteria in a Batch Management job.
StartTime	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the batch job run was started.

Field	Details
Status	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The status of the batch job run. Possible values are:</p> <ul style="list-style-type: none">• Canceled• Completed• CompletedWithFailures• Failed• InProgress• Submitted
Type	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description The type of batch job that is run. Possible values are:</p> <ul style="list-style-type: none">• Calc—Data Processing Engine• DecisionTableRefresh• Flow

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

BatchJobFeed

Feed tracking is available for the object.

BatchJobHistory

History is available for tracked fields of the object.

BatchJobPart

Represents one part of a batch job. This object is available in API version 51.0 and later.

When a batch job is run, it is divided in to multiple parts. Each part is used to process a specific number of records.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
BatchJobId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The unique identifier of the associated batch job. This is a relationship field.</p> <p>Relationship Name BatchJob</p> <p>Relationship Type Lookup</p> <p>Refers To BatchJob</p>
EndTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the batch job part was processed.</p>
ErrorDescription	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The error message in case the batch job part failed.</p>
FailedRecordCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of records that the batch job part couldn't process.</p>

Field	Details
FailedRecFile	<p>Type FILE</p> <p>Properties Filter, Group, Sort</p> <p>Description The file containing failed records downloaded as CSV, JSON, or TXT formats during a Data Processing Engine definition's run by using CRM Analytics (CRMA) or Data Cloud runtime. Available in API version 63.0 and later.</p>
InputRecordCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of records that the batch job part must process.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The name of the batch job part.</p>
OutputRecordCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of records the batch job part has processed.</p>
ParentBatchJobPartId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The unique identifier of the part batch job part associated with the batch job part. This is a relationship field.</p> <p>Relationship Name ParentBatchJobPart</p> <p>Relationship Type Lookup</p>

Field	Details
	Refers To BatchJobPart
RetryCount	Type int Properties Filter, Group, Nillable, Sort Description The number of times the batch job part is automatically rerun in case it fails.
StartTime	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the batch job part's run was started.
Status	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The status of the batch job part. Possible values are: <ul style="list-style-type: none">• Canceled—Canceled• Completed• Failed• InProgress—In Progress
Type	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of node in case the associated batch job is of the type Calc (Data Processing Engine). Possible values are: <ul style="list-style-type: none">• Aggregate• Append• Compute• Custom
