CollaborationGroup

CollaborationGroupMember

# CollaborationGroupRecord

Represents the records associated with Chatter groups.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `CollaborationGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the Chatter group.<br>This is a relationship field.<br>**Relationship Name**<br>CollaborationGroup<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>CollaborationGroup |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Optional. The ID of the Experience Cloud site that the group belongs to. Available from API version 34.0. |
| `RecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. The ID of the record associated with the Chatter group.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Record<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Campaign, Case, Contact, Contract, Lead, Opportunity |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CollaborationGroupRecordChangeEvent (API version 62.0)**
Change events are available for the object.

# CollaborationInvitation

Represents an invitation to join Chatter, either directly or through a group. This object is available in API version 21.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Invitations are available if "Allow Invitations" is enabled for your organization.

Invitations are limited to your allowed domain(s) unless the invite is sent from a private group that allows customers. Allowed domains are set by the administrator.

Invitations to customers are available if "Allow Customer Invitations" is enabled for your organization. Users must have the "Invite Customers to Chatter" permission to send invitations to people outside their Chatter domain.

## Fields

| Field | Details |
|---|---|
| `InvitedUserEmail` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The email address for the user invited to join Chatter. Label is `Invited Email`. |
| `InvitedUserEmailNormalized` | **Type**<br>email<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>A normalized version of the `InvitedUserEmail` entered. Label is `Invited Email (Normalized)`. |
| `InviterId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The person that initiated the invitation. |
| `OptionalMessage` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>An optional message from the person sending the invitation to the person receiving it. |
| `ParentId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Used when the email address on the invitation is different than the one entered when the invitee accepts the invitation. |
| `SharedEntityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the user or group associated with this invitation.<br>• If the invitation is to join Chatter, the `SharedEntityId` is the ID of the User that created the invitation. The invitee will auto-follow the inviter.<br>• If the invitation is to join a group within Chatter, the `SharedEntityId` is the ID of the Chatter CollaborationGroup.<br>• To invite a customer, set `SharedEntityId` to the ID of the private CollaborationGroup with Allow Customers turned on. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The status of the invitation. Possible values are:<br>• `Sent`<br>• `Accepted`<br>• `Canceled` |

# Usage

Use this object to create or delete (cancel) invitations to join Chatter. You can either invite a user to join Chatter directly or as part of a CollaborationGroup.

Note: To invite someone to join a CollaborationGroup, you must be either the owner or a manager of the group or a Salesforce system administrator.

The Salesforce system administrator doesn't need to be a member of the group in order to send invitations using the API.

When the person accepts your CollaborationGroup invitation, they join the CollaborationGroup and Chatter as well.

Note: You can't send invitations to users of the organization the invite was sent from.

Invited users can view profiles, post on their feed, and join groups, but they can't see your Salesforce data or records.

If your organization allows groups with customers, owners and managers of private groups with the "Allow Customers" setting, as well as system administrators, can use this object to invite customers.

## Java Samples

The following example shows how to send an invitation to join Chatter:

```
public void invitePeople(String inviterUserId, String invitedEmail) throws Exception {
    CollaborationInvitation invitation = new CollaborationInvitation();
    invitation.setSharedEntityId(inviterUserId);//pass the userId of the inviter
    invitation.setInvitedUserEmail(invitedEmail);//email of the invited user
    insert(invitation);
}
```

The following example shows how to send an invitation to a customer user from a group that allows customers:

```
public void inviteToGroup(String GroupName, String invitedEmail) throws Exception {
    QueryResult qr = query("select id from collaborationgroup where name = '" +
        GroupName); //pass the group name
    String groupId = qr.getRecords()[0].getId();
    CollaborationInvitation invitation = new CollaborationInvitation();
    invitation.setSharedEntityId(groupId);//pass the groupId
    invitation.setInvitedUserEmail(invitedEmail);//email of the invited user
    insert(invitation);
}
```

## Apex Samples

```
String emailAddress = 'bob@external.com';
CollaborationGroup chatterGroup = [SELECT Id
      FROM CollaborationGroup
      WHERE Name='All acme.com'
      LIMIT 1];
CollaborationInvitation inv = New CollaborationInvitation();
inv.SharedEntityId = chatterGroup.id;
inv.InvitedUserEmail = emailAddress;

try {
   Insert inv;
} catch(DMLException e){
   System.debug('There was an error with the invite: '+e);
}
```

# CollaborationRoom

Represents a collaboration room, which links Salesforce to a Slack channel used by applications with specific use cases, such as swarming or reporting. This object is available in API version 55.0 and later.

## Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

To access this object, enable the Slack Terms of Service and one of:

- Sales Cloud for Slack App
- Service Cloud for Slack App
- CRM Analytics for Slack App
- Industries Cloud for Slack App
- Health Cloud for Slack App

## Fields

| Field | Details |
| --- | --- |
| `IsArchived` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the collaboration room is archived (`true`) or not (`false`).<br>The default value is `false`. |
| `IsAutoJoin` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether new users automatically join the collaboration room. Used for Sales Cloud for Slack App.<br>The default value is `false`. |
| `IsExternal` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether external users are members of the Slack channel (`true`) or not (`false`).<br>The default value is `false`. |

| Field | Details |
| --- | --- |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of collaboration room. |
| `PlatformKey` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Slack channel. |
| `TeamKey` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Slack workspace. |

# CollabDocumentMetric

Represents the engagement metrics for a Quip thread (document or spreadsheet) that's linked to a Salesforce record. This object is available in API version 50.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `Document` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>The Quip thread ID. |
| `Site` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the Quip site in which the thread is located. |
| `SourceTemplate` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>The ID of the template (if any) on which a Quip thread is based. |
| `DocumentTitle` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>The title of the thread. |
| `MetricDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date that the metric was gathered in your local time zone. |
| `MetricDateOnly` | **Type**<br>date<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date that the metric was gathered in UTC. Available in API version 55.0 and later. |
| `LastUpdatedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date that the thread was created, last edited, or last shared in your local time zone. |
| `LastUpdatedDateOnly` | **Type**<br>date<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date that the thread was created, last edited, or last shared in UTC. Available in API version 55.0 and later. |
| `ViewerCount` | **Type**<br>int<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The number of thread views by user for the specified MetricDate. |
| `UpdateCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of edits made on the thread on a given day. |

| Field | Details |
| --- | --- |
| `EditorCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>For the specified MetricDate, the number of users who edited the Quip thread. |
| `CommenterCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>For the specified MetricDate, the number of users who commented on the Quip thread. |

# CollabDocumentMetricRecord

Represents an association between a CollabDocumentMetric and a Salesforce record.It tracks which Salesforce record, such as an Account or Contact, is linked to a Quip thread for which metrics were gathered using CollabDocumentMetric. CollabDocumentMetricRecord is available in API version 50.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `ParentRecord` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the Salesforce record. |
| `QuipDocumentMetric` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
|---|---|
| | **Description**<br>The ID of the CollabDocumentMetric record. |
| `MetricDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date that the metric was gathered in your local time zone. |
| `MetricDateOnly` | **Type**<br>date<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date that the metric was gathered in UTC. Available in API version 55.0 and later. |
| `EntityType` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>The object type of the Salesforce record, such as Account or Contact. |

# CollabTemplateMetric

Represents the engagement metrics for a Quip template.This object is available in API version 50.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `Template` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the template. |
| `TemplateTitle` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The title of the template. |
| `Site` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the Quip site on which the template is available. |
| `MetricDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date that the metric was gathered in your local time zone. |
| `MetricDateOnly` | **Type**<br>date<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date that the metric was gathered in UTC. Available in API version 55.0 and later. |
| `LastUpdatedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date that the thread was created, last edited, or last shared in your local time zone. |
| `LastUpdatedDateOnly` | **Type**<br>date<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The date that the thread was created, last edited, or last shared in UTC. Available in API version 55.0 and later. |
| `TotalDocumentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of documents created based on the template. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CollabTemplateMetricChangeEvent (API version 62.0)**
Change events are available for the object.

# CollabTemplateMetricRecord

Represents an association between a CollabTemplateMetric and a Salesforce record.It tracks which Salesforce record, such as an Account or Contact, is linked to a Quip template for which metrics were gathered using CollabTemplateMetric. CollabTemplateMetricRecord is available in API version 50.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `ParentRecord` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the Salesforce record. |
| `QuipDocumentMetric` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the CollabTemplateMetric record. |
| `MetricDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date that the metric was gathered in your local time zone. |
| `MetricDateOnly` | **Type**<br>date<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date that the metric was gathered in UTC. Available in API version 55.0 and later. |
| `EntityType` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>The object type of the Salesforce record, such as Account or Contact. |

# CollabUserEngagementMetric

Represents the user engagement metrics for a Quip thread in a Quip template or document. This object is available in API version 50.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

# Fields

| Field | Details |
| --- | --- |
| `CommentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of comments by the user for the specified `MetricDate`. |
| `EditCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of edits by the user for the specified `MetricDate`. |
| `MetricDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date that the metric was gathered in your local time zone. |
| `MetricDateOnly` | **Type**<br>date<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date that the metric was gathered in UTC. Available in API version 55.0 and later. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The unique name of the CollabUserEngagementMetric object. |
| `QuipThread` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The Quip thread ID. |
| `QuipThreadTitle` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>The title of the Quip document, sheet, slide, and so forth. |
| `QuipThreadType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of Quip thread. The possible values are:<br>• `CHAT`<br>• `DOCUMENT`<br>• `SHEET`<br>• `SLIDE`<br>• `TEMPLATE` |
| `QuipUser` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>The ID of the Quip user. |
| `SalesforceUserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the Salesforce user. |
| `Site` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the Quip site. |
| `SourceTemplate` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>The ID of the source template. |
| `ViewCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of views by the user for the specified `MetricDate`. |

# CollabUserEngmtRecordLink

Represents an association between a CollabUserEngagementMetric and a Salesforce record. It tracks which Salesforce record, such as an Account or Contact, is associated with the user engagement metric. This object is available in API version 50.0 and later.

Note: The CollabUserEngmtRecordLink object is now deprecated. You can still access user engagement metrics for metric dates before August 12, 2021. To obtain user engagement metric for dates starting from August 12, 2021, follow the instructions in the Quip Engagement Metrics documentation.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `MetricDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date of the gathered metric. |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The unique name of the CollabUserEngmtRecordLink object. |
| `ObjectType` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>The object type of the Salesforce record, such as Account or Contact. |
| `ParentRecordId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the Salesforce record. |
| `UserEngagementMetricId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the CollabUserEngagementMetric record. |

# ColorDefinition

Represents the color-related metadata for a custom tab. This object is available in API version 43.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

# Fields

| Field Name | Details |
| --- | --- |
| `Color` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The color described in web color RGB format—for example, “00FF00”. |
| `Context` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The color context, which determines whether the color is the main color (or primary) for the tab. |
| `DurableId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A unique virtual Salesforce ID for the color. |
| `TabDefinitionId` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The `TabDefinition` ID.<br>This is a relationship field.<br>**Relationship Name**<br>TabDefinition<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>TabDefinition |
| `Theme` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The icon's theme. |

# ContCalloutSummaryEventLog

Continuation Callout Summary events contain information about all of the asynchronous callouts performed during a transaction, their response status codes, execution times, and URL endpoint destinations. This object is available in API version 65.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `ContinuationIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A unique ID identifying a sequence of events within a request. |
| `Duration` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total duration of continuation, in milliseconds. |
| `IsSuccess` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the continuation was successful or not. |
| `OriginRequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the request that initiated a callout. |
| `RequestFormSize` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Continuation request form size, in bytes. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. |
| `ResponseSize` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The size of the callout response, in bytes. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values. |
| `StatusCode` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The HTTP status or internal code returned by the remote endpoint. A status code of 200 indicates that the request was successful. Other status code values indicate the type of |

| Field | Details |
| --- | --- |
| | problem that was encountered. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `20130715233322.670`. |
| `Url` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The callout endpoint URL. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |
| `VisualforceControllerSize` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Continuation Visualforce controller size, in bytes. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values. |

# CombinedAttachment

This read-only object contains all notes, attachments, Google Docs, documents uploaded to libraries in Salesforce CRM Content, and files added to Chatter that are associated with a record.

## Supported Calls

`describeSObjects()`

## Fields

| Field Name | Details |
|---|---|
| `ContentSize` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Size of the document in bytes. |
| `ContentUrl` | **Type**<br>url<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL for links and Google Docs. This field is set only for links and Google Docs, and is one of the fields that determine the `FileType`.<br>This field is available in API version 31.0 and later. |
| `ExternalDataSourceName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of the external data source in which the document is stored. This field is set only for external documents that are connected to Salesforce.<br>This field is available in API version 32.0 and later. |
| `ExternalDataSourceType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Type of external data source in which the document is stored. This field is set only for external documents that are connected to Salesforce.<br>This field is available in API version 35.0 and later. |

| Field Name | Details |
| --- | --- |
| FileExtension | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>File extension of the document.<br>This field is available in API version 31.0 and later. |
| FileType | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Type of document, determined by the file extension. |

Only administrators and file owners with Collaborator access to the file can modify this field. Default is `Allowed`, which means that new shares are allowed. When set to `Restricted`, new shares are prevented without affecting existing shares.<br>This field is available in API versions 35.0 and later. |

| Field Name | Details |
| --- | --- |
| `Title` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Title of the attached file. |

## Usage

Use this object to list all notes, attachments, documents uploaded to libraries in Salesforce CRM Content, and files added to Chatter for a record, such as a related list on a detail page.

To determine if an object supports the CombinedAttachment object, call `describeSObject()` on the object. For example, `describeSObject('Account')` returns all the child relationships of the Account object, including `CombinedAttachment`. You can then query the CombinedAttachment child relationship.

```
SELECT Name, (SELECT Title FROM CombinedAttachments)
FROM Account
```

You can't directly query CombinedAttachment.

# CommerceEntitlementBuyerGroup

Represents the entitlement policy for a buyer group. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

## Special Access Rules

The CommerceEntitlementBuyerGroup object is available when you meet these requirements. The B2B Commerce license is enabled. The Commerce Buyer and Entitlements Integrator permission is granted.

## Fields

| Field | Details |
| --- | --- |
| `BuyerGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The unique ID for the buyer group. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The standard code for the currency.<br>Possible values are:<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the entitlement buyer group. |
| `PolicyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The unique ID for the entitlement policy. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CommerceEntitlementBuyerGroupChangeEvent on page 68**
Change events are available for the object.

# CommerceEntitlementPolicy

Represents an entitlement policy, which determines what products and prices a user can see. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The CommerceEntitlementPolicy object is available only if the B2B Commerce license is enabled.

## Fields

| Field | Details |
|---|---|
| `CanViewPrice` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether a user can view the price of a product (`true`) or not (`false`). Default value is `false`. |
| `CanViewProduct` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether a user can view the product (`true`) or not (`false`). Default value is `false`. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The standard code for the currency.<br>Possible values are:<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The entitlement policy description. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines if the entitlement policy is active (`true`) or inactive (`false`). Default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it can mean that the record was only referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the entitlement policy. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The unique ID for the entitlement policy owner. |

## Associated Objects

This object has the following associated objects. Except where noted, these objects are available in the same API version as CommerceEntitlementPolicy.

**CommerceEntitlementPolicyChangeEvent on page 68**
Change events are available for the object.

**CommerceEntitlementPolicyOwnerFeed on page 55**
Feed tracking is available for the object.

**CommerceEntitlementPolicyHistory on page 63**
History is available for tracked fields of the object.

**CommerceEntitlementPolicyOwnerSharingRule**
Sharing rules are available for this object.

# CommerceEntitlementPolicyShare

Represents the entitlement rule for sharing products and prices with users other than the owner. This object is available in API version 49.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

The CommerceEntitlementPolicyShare object is available only if the B2B Commerce license is enabled.

## Fields

| Field | Details |
|---|---|
| `AccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Possible values are:<br>• `All`—Owner |

| Field | Details |
| --- | --- |
| | • `Edit`—Read/Write<br>• `Read`—Read Only |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The unique ID of the parent entitlement policy. |
| `RowCause` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited.<br>Possible values are:<br>• `CompliantCollaboration`—Compliant Data Sharing<br>• `GuestParentImplicit`—Associated guest user sharing<br>• `GuestPersonImplicit`—Associated Guest User Sharing<br>• `GuestRule`—Guest User Sharing Rule<br>• `ImplicitChild`—Account Sharing<br>• `ImplicitParent`—Associated record owner or sharing<br>• `ImplicitPerson`—Person Contact<br>• `Manual`—Manual Sharing<br>• `Owner`<br>• `Rule`—Sharing Rule<br>• `SurveyShare`—Survey Sharing Rule<br>• `Team`—Sales Team<br>• `Territory`—Territory Assignment Rule<br>• `Territory2AssociationManual`—Territory Manual<br>• `Territory2Forecast`—Territory assignment for forecasting and reporting<br>• `TerritoryManual`—Territory Manual<br>• `TerritoryRule`—Territory Sharing Rule |
| `UserOrGroupId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The unique ID of the associated user or buyer group. |

# CommerceEntitlementProduct

Represents the entitlement policy for a product. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

## Special Access Rules

The CommerceEntitlementProduct object is available when you meet these requirements. The B2B Commerce license is enabled. The Commerce Buyer and Entitlements Integrator permission is granted.

## Fields

| Field | Details |
| --- | --- |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The standard code for the currency.<br>Possible values are:<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The product entitlement policy name. |

| Field | Details |
| --- | --- |
| `PolicyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The unique ID for the product entitlement policy. |
| `ProductId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The unique ID for the product referenced in the entitlement policy. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CommerceEntitlementProductChangeEvent on page 68**
Change events are available for the object.

# CommissionSchedule

Represents a commission calculation and rate definition. Calculates commission values for a commissionable event.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `ApplicableObject` | **Type**<br>multipicklist<br>**Properties**<br>Create, Filter, Nillable, Restricted picklist, Update<br>**Description**<br>The object for which this Commission Schedule calculates commissions. |

| Field | Details |
| --- | --- |
| | Possible values are:<br>• `Contract`<br>• `InsurancePolicy`<br>• `Producer`<br>• `Quote` |
| `CalcProcessInputMapping` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The input mappings from the object fields to the variables used in the commission calculation. |
| `CalcProcessOutput` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The formula applied to this Commission Schedule's process output that calculates the final commission amount. |
| `CalcProcessOutputConvNotation` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>An optimized version of the CalcProcessOutput formula that calculates the commission. Not user-editable. |
| `CalculationProcessName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the Integration Procedure, Calculation Matrix, or Calculation Procedure this Commission Schedule uses for calculations. |
| `CalculationType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The type of calculation or process used when this Commission Schedule is used.<br>Possible values are:<br>• `Amount`<br>• `CalculationMatrix`<br>• `CalculationProcedure`<br>• `IntegrationProcedure`<br>• `Rate` |
| `CommissionAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The commission amount for the Commission Schedule when the process type is Amount. |
| `CommissionRate` | **Type**<br>percent<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The commission percentage for the Commission Schedule when the process type is Rate. |
| `CommissionStructureType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates whether the commission calculation is Flat or Tiered when the process type is Matrix.<br>Possible values are:<br>• `Flat`<br>• `Tiered`<br>The default value is `Flat`. |
| `EffectiveEndDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The effective end date of the Commission Schedule. |
| `EffectiveStartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The effective start date of the Commission Schedule. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the Commission Schedule is active.<br>The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the Commission Schedule. |
| `OwnerId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the record owner.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `TierDefinition` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Internal-only. Applies when the CalculationType is CalculationMatrix. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CommissionScheduleChangeEvent on page 68**
Change events are available for the object in API version 62.0 and later.

**CommissionScheduleFeed**
Feed tracking is available for the object.

**CommissionScheduleHistory**
History is available for tracked fields of the object.

**CommissionScheduleOwnerSharingRule**
Sharing rules are available for the object.

**CommissionScheduleShare**
Sharing is available for the object.

# CommissionScheduleAssignment

Represents the commission calculation applicable to a specific product or producer for one or multiple commissionable events.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `CommissionableEventType` | **Type**<br>multipicklist<br>**Properties**<br>Create, Filter, Nillable, Restricted picklist, Update<br>**Description**<br>The event that results in the commission calculation.<br>Possible values are:<br>• `Contracting`<br>• `Endorsement`<br>• `Issue Policy`<br>• `Policy Issuance` |
| `CommissionScheduleId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the associated Commission Schedule, which is the commission calculation tied to the product or producer.<br>This is a relationship field.<br>**Relationship Name**<br>CommissionSchedule<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CommissionSchedule |
| `EffectiveEndDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The last date when the Commission Schedule is in effect for the product or producer. |

| Field | Details |
| --- | --- |
| `EffectiveStartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The first date when the Commission Schedule is in effect for the product or producer. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed. |
| `MaxCommissionAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The maximum commission calculated for the product or producer for a commissionable event. Constrains the output from the Commission Schedule. |
| `MaxCommissionRate` | **Type**<br>percent<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The maximum commission rate that a producer receives for a commissionable event. |
| `MinCommissionAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The minimum commission calculated for the product or producer for a commissionable event. Constrains the output from the Commission Schedule. |
| `MinCommissionRate` | **Type**<br>percent<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The minimum commission rate that a producer receives for a commissionable event. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Name of the Commission Schedule Assignment. |
| `ProducerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The producer, broker, brokerage, or other user who receives the commission.<br>This is a relationship field.<br>**Relationship Name**<br>Producer<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Producer |
| `Product2Id` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The product for which commissions are calculated.<br>This is a relationship field.<br>**Relationship Name**<br>Product2 |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Product2 |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CommissionScheduleAssignmentChangeEvent on page 68**
Change events are available for the object in API version 62.0 and later.

**CommissionScheduleAssignmentFeed**
Feed tracking is available for the object.

**CommissionScheduleAssignmentHistory**
History is available for tracked fields of the object.

**CommissionScheduleAssignmentOwnerSharingRule on page 65**
Sharing rules are available for the object.

**CommissionScheduleAssignmentShare on page 67**
Sharing is available for the object.

# CommSubscription

Represents the subscription options for a specific communication. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `DataUsePurposeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the data use purpose record associated with the communication subscription. |

| Field | Details |
| --- | --- |
| `IsDefault` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if this communication subscription is the default (`true`) or not (`false`). This field has a default value of `false`. Only one communication subscription record can be the default. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. Name of the communication subscription record. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the account owner associated with this customer.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**CommSubscriptionChangeEvent (API version 61.0)**
Change events are available for the object.

**CommSubscriptionFeed**
Feed tracking is available for the object.

**CommSubscriptionHistory**
History is available for tracked fields of the object.

**CommSubscriptionOwnerSharingRule**
Sharing rules are available for the object.

**CommSubscriptionShare**
Sharing is available for the object.

# CommSubscriptionChannelType

Represents the engagement channel through which you can reach a customer for a communication subscription. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `CommunicationSubscriptionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the associated communication subscription record.<br>This is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>CommunicationSubscription<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CommSubscription |
| `EngagementChannelTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the associated engagement channel type record.<br>This is a relationship field.<br>**Relationship Name**<br>EngagementChannelType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EngagementChannelType |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `MessagingChannelUsageId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the associated Messaging channel usage record, which is in turn associated with a messaging channel.<br>This is a relationship field.<br>**Relationship Name**<br>MessagingChannelUsage<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MessagingChannelUsage |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. Name of the communication subscription channel type record. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID account owner associated with this customer.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

# Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**CommSubscriptionChannelTypeChangeEvent (API version 61.0)**
Change events are available for the object.

**CommSubscriptionChannelTypeFeed**
Feed tracking is available for the object.

**CommSubscriptionChannelTypeHistory**
History is available for tracked fields of the object.

**CommSubscriptionChannelTypeOwnerSharingRule**
Sharing rules are available for the object.

**CommSubscriptionChannelTypeShare**
Sharing is available for the object.

# CommSubscriptionConsent

Represents a customer's consent to a communication subscription. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

With certain page layout and field-level security settings, some fields aren't visible or editable.

| Field | Details |
|---|---|
| `BusinessBrandId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the Business Brand that the individual has given consent to for a communication subscription. This is a relationship field. This field is available in API version 53.0 and later.<br>**Relationship Name**<br>BusinessBrand<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BusinessBrand |
| `CommSubscriptionChannelTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the associated communication subscription channel type record.<br>This is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>CommSubscriptionChannelType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CommSubscriptionChannelType |
| `ConsentCapturedDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Required. Date when the customer's consent was captured. |
| `ConsentCapturedSource` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required. Source through which consent was captured. For example, user@example.com or www.example.com. |
| `ConsentGiverId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the person who gave consent to the communication subscription on behalf of the contact point.<br>Note: If the contact point gave consent, don't use `ConsentGiverId`.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>ConsentGiver<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Contact, Individual, User |
| `ContactPointId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the contact point, such as an Individual or person account, associated with the communication subscription consent.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>ContactPoint<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContactPointAddress, ContactPointEmail, ContactPointPhone |
| `DataUsePurposeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Represents the record for data use purpose that you want to associate this consent with. This field is available in API version 57.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>DataUsePurpose<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>DataUsePurpose |
| `EffectiveFromDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. Date when consent starts. |
| `EffectiveToDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Date when consent ends. This field is restricted by field-level security. |

| Field | Details |
| --- | --- |
| `EngagementChannelTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Represents the contact method you want to apply consent to. This field is available in API version 57.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>EngagementChannelType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EngagementChannelType |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. Name of the communication subscription consent record. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the account owner associated with this customer.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PartyId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Represents the record based on the Individual object that you want to associate consent with. This field is available in API version 57.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>Party<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Individual |
| `PartyRoleId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the Party Role for the individual you want to associate consent with. This is a polymorphic relationship field. This field is available in API version 53.0 and later.<br>**Relationship Name**<br>PartyRole<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Customer, Seller |
| `PrivacyConsentStatus` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Identifies whether the individual or person account associated with this record agrees to this form of contact.<br>Possible values are:<br>• `NotSeen`<br>• `OptIn`<br>• `OptInPending`—Available in API version 58.0 and later.<br>• `OptOut`<br>• `OptOutPending`—Available in API version 58.0 and later.<br>• `Seen`<br>The default value is `NotSeen`. This field is available in API version 57.0 and later. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CommSubscriptionConsentChangeEvent (API version 49.0)**
Change events are available for the object.

**CommSubscriptionConsentFeed**
Feed tracking is available for the object.

**CommSubscriptionConsentHistory**
History is available for tracked fields of the object.

**CommSubscriptionConsentOwnerSharingRule**
Sharing rules are available for the object.

**CommSubscriptionConsentShare**
Sharing is available for the object.

# CommSubscriptionTiming

Represents a customer's timing preferences for receiving a communication subscription. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

# Fields

| Field | Details |
| --- | --- |
| `CommSubscriptionConsentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the associated communication subscription consent record.<br>This is a relationship field.<br>**Relationship Name**<br>CommSubscriptionConsent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CommSubscriptionConsent |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Required. Name of the communication subscription timing record. |
| `Offset` | **Type**<br>double |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The amount of time before or after an event or the specific day of the week to communicate with the contact point. Set the unit of time in the `Unit` field.<br>For example, if you set `Unit` as *`Week`* and `Offset` as *`-4`*, communicate with the contact point four weeks before the event. If you set `Offset` as *`4`*, communicate with the contact point four weeks after the event. |
| `PreferredTimeEnd` | **Type**<br>time<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>End of the preferred time span in which to reach the customer. |
| `PreferredTimeStart` | **Type**<br>time<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Start of the preferred time span in which to reach the customer. |
| `PreferredTimeZone` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Time zone of the preferred time span. |
| `Unit` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The unit of time that works with the `Offset` field to determine the communication timing.<br>Possible values are:<br>• `Day`<br>• `DayOfWeek`<br>• `Hour`<br>• `Month` |

| Field | Details |
| --- | --- |
| | • `Week` |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**CommSubscriptionTimingChangeEvent (API version 62.0)**
Change events are available for the object.

**CommSubscriptionTimingFeed**
Feed tracking is available for the object.

**CommSubscriptionTimingHistory**
History is available for tracked fields of the object.

# Community (Zone)

Represents a zone that contains Idea or Question objects.

Note: Starting with the Summer '13 release, Chatter Answers and Ideas communities were renamed to zones. In API version 28, the API object label has changed to `Zone`, but the API type is still `Community`.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `CanCreateCase` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether users can ask private questions in the zone using Chatter Answers. |
| `DataCategoryName` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Group, Sort<br>**Description**<br>The data category associated with the zone. |

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Text description of the zone. |
| `HasChatterService` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether Chatter Answers is available in the zone. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the zone is active or inactive. An idea or question can only be posted to an active zone. |
| `IsPublished` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the zone is available in portals. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The name of the zone. |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the Experience Cloud site that this zone is associated with. This field is available only if digital experiences is enabled in your org. This field is available in API version 65.0 and later. |

## Usage

Use this object to create a zone in Ideas, Chatter Answers, or Answers. Zones help organize ideas and questions into logical groups and are shared by the Ideas, Answers, and Chatter Answers.

# ConcurApexLimitEventLog

Concurrent Apex Limit event logs contain information about long-running concurrent Apex requests in your org that Salesforce terminated after reaching your org's concurrency limit. Requests with an established Apex context that execute for 5 seconds are counted towards your org's limit of concurrent long-running requests. (Asynchronous requests don't count towards the limit.) When the long-running requests exceed the org default limit, additional long-running requests are denied. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `RequestCount` | **Type**<br>int<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Count of requests with an established Apex context executing for longer than 5 seconds in your org. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestIdentifier`. For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `RequestLimit` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Maximum count of requests with an established Apex context that can execute for longer than 5 seconds. When `RequestCount` reaches this limit, then additional long-running Apex requests are terminated. (Asynchronous requests don't count towards the limit.) See *Apex Developer Guide*: Lightning Platform Apex Limits. For example: `10`. |
| `RequestUri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URI of the long-running Apex request that Salesforce terminated. For example: `/apex/ApexClassName`. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |

# ConnectedApplication

Represents a connected app and its details; all fields are read-only.

Connected apps link client applications, third-party services, other Salesforce organizations, apps, and resources to your organization. The connected app configuration specifies authorization and security settings for these resources. This object exposes the settings for a specified connected app.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
|---|---|
| `MobileSessionTimeout` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Length of time after which the system logs out inactive mobile users. |
| `MobileStartUrl` | **Type**<br>url<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Users are directed to this URL after they've authenticated when the app is accessed from a mobile device. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The unique name for this object. |
| `NamedUserUvidTimeout` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The timeout value for a JSON Web Token (JWT)-based access token that's issued to a named user. This field defines the timeout only if the app is configured to have an app-specific timeout. If the app uses the user's session timeout, the timeout value is defined based on the user's profile or the org session settings. For more information about defining JWT-based access token timeout, see Configure a Connected App to Issue JWT-Based Access Tokens.<br>These values are available in API version 59.0 and later.<br>• `1`—1 Minute<br>• `5`—5 Minutes<br>• `10`—10 Minutes<br>• `15`—15 Minutes<br>• `30`—30 Minutes<br>These values are available in API version 65.0 and later.<br>• `60`—1 Hour<br>• `90`—90 Minutes<br>• `120`—2 Hours<br>• `240`—4 Hours<br>• `480`—8 Hours<br>• `720`—12 Hours<br>This field is available in API version 59.0 and later. |
| `OptionsAllowAdminApprovedUsersOnly` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether access is limited to users granted approval to use the connected app by an administrator. Manage profiles for the app by editing each profile's Access list. |
| `OptionsAppIssueJwtTokenEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>If set to `true`, the connected app is enabled to issue JWT-based access tokens.<br>Available in API version 59.0 and later. |
| `OptionsCodeCredentialGuestEnabled` | Reserved for future use. |

| Field Name | Details |
| --- | --- |
| `OptionsFullContentPushNotifications` | For internal use only. |
| `OptionsHasSessionLevelPolicy` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Specifies whether the connected app requires a High Assurance level session. |
| `OptionsIsInternal` | For internal use only. |
| `OptionsRefreshTokenValidityMetric` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Specifies whether the refresh token validity is based on duration or inactivity. If `true`, the token validity is measured based on the last use of the token; otherwise, it's based on the token duration. |
| `OptionsTokenExchangeManageBitEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>If `true`, the OAuth 2.0 token exchange flow is enabled. |
| `PinLength` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>For mobile apps, this field is the PIN length requirement for users of the connected app. Valid values are `4`, `5`, `6`, `7`, or `8`. |
| `RefreshTokenValidityPeriod` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The duration of an authorization token until it expires in hours, months, or days as set in the connected app management page. |

| Field Name | Details |
| --- | --- |
| `StartUrl` | **Type**<br>url<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>If the app isn't accessed from a mobile device, users are directed to this URL after they've authenticated. |
| `UvidTimeout` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The timeout value for a JWT-based access token that's issued to an unknown user as a result of the guest user variation of the Authorization Code and Credentials Flow. JWT-based access tokens issued during this flow variation always contain a UVID.<br>This field defines the timeout only if the app is configured to have an app-specific timeout. If the app uses the user's session timeout, the timeout value is defined based on the user's profile or the org session settings. For more information about defining JWT-based access token timeout, see Configure a Connected App to Issue JWT-Based Access Tokens.<br>These values are available in API version 59.0 and later.<br>• `1`—1 Minute<br>• `5`—5 Minutes<br>• `10`—10 Minutes<br>• `15`—15 Minutes<br>• `30`—30 Minutes<br>These values are available in API version 65.0 and later.<br>• `60`—1 Hour<br>• `90`—90 Minutes<br>• `120`—2 Hours<br>• `240`—4 Hours<br>• `480`—8 Hours<br>• `720`—12 Hours<br>This field is available in API version 59.0 and later. |

# ConferenceNumber

Holds the telephone number for an external event shown in the Salesforce Today feature in the Salesforce mobile app. This object is available in API version 35.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The Salesforce Today app is available in Salesforce for Android and Salesforce for iOS. It's not available in the Salesforce desktop site. Access to Today is available only if you grant Calendar permission to the Salesforce mobile app.

## Fields

| Field | Details |
|---|---|
| `AccessCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Specifies the access code to enter in order to validate identity and join the call. |
| `ExternalEventId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the external event associated with the conference number.<br>This field is a relationship field.<br>**Relationship Name**<br>ExternalEvent<br>**Refers To**<br>ExternalEvent |
| `IsLocked` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Returns `true` if the conference number is locked, or `false` if it's not.<br>The default value is `false`. |
| `Label` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The description of the conference number. |
| `MayEdit` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>Indicates whether the conference number can be edited (`true`) or not (`false`).<br>The default value is `false`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the conference call's organizer. |
| `Number` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The phone number used to connect to the conference call. |
| `Vendor` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The vendor or company associated with the conference number. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ConferenceNumberChangeEvent**

# Consumption Rate

Consumption rates describe the billing rate for a range of usage within a consumption schedule. All consumption schedules require at least one consumption rate in order to rate usage on a usage product. This object is available in API version 45.0 and later.

The consumption rate sets a quantity-based boundary for usage and defines how much your product costs when its usage falls within that boundary. Consumption rates price usage at a per-unit fee or a flat fee across the entire range of usage.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `ConsumptionScheduleId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The consumption schedule that contains the consumption rate.<br>This is a relationship field.<br>**Relationship Name**<br>ConsumptionSchedule<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ConsumptionSchedule |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for orgs with the multicurrency feature enabled.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • AUD—Australian Dollar<br>• CAD—Canadian Dollar<br>• GBP—British Pound<br>• JPY—Japanese Yen<br>• USD—U.S. Dollar |
| Description | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Description of the consumption rate. |
| LowerBound | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The lowest quantity of usage for the consumption rate. |
| Name | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Required. Default name of this record. Label is **Product Name**. |
| Price | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The price for usage that falls within the consumption rate's bounds. |
| PricingMethod | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>How Salesforce applies the consumption rate's price to the total quantity of usage within a usage summary. |

| Field | Details |
| --- | --- |
| | Possible values are:<br>• `FlatFee`—Salesforce applies the rate's price to the entire quantity of usage.<br>• `PerUnit`—Salesforce applies the rate's price to each individual quantity of usage within the usage summary. |
| `ProcessingOrder` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The order for processing the usage rate across multiple rates. Consumption rates are evaluated beginning with the lowest processing order. |
| `UpperBound` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The highest quantity of usage for the consumption rate. |

# Consumption Schedule

A consumption schedule organizes a set of consumption rates by which usage-based products are quoted and billed. This object is available in API version 45.0 and later.

Salesforce uses consumption schedules to group consumption rates. Your consumption schedule defines the unit of measurement and rating method for the schedule's rates. It also defines the billing frequency that Salesforce Billing uses to invoice a usage product.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `BillingTerm` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The number used with the billing term unit to determine billing frequency. |
| `BillingTermUnit` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The unit used with the billing term to determine billing frequency<br>Possible values are:<br>• `Month`—<br>• `Quarter`—<br>• `Year`— |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for orgs with the multicurrency feature enabled.<br>Possible values are:<br>• `AUD`—Australian Dollar<br>• `CAD`—Canadian Dollar<br>• `GBP`—British Pound<br>• `JPY`—Japanese Yen<br>• `USD`—U.S. Dollar |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Description of the consumption schedule. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this record is active (`true`) or not (`false`). Label is **Active**. |

| Field | Details |
| --- | --- |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `MatchingAttribute` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Salesforce Billing matches usage with a consumption schedule if the records share Matching Attribute value. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. Default name of this record. Label is **Product Name**. |
| `NumberOfRates` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of consumption rates in this consumption schedule. |
| `OwnerId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The user who owns a consumption schedule record.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `RatingMethod` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A specific use case to rate usage against the schedule. This field is the controlling picklist for the Type field.<br>Possible values are:<br>• `Tier` |
| `SBQQ__Category__c` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>This field is available only with Salesforce CPQ.<br>You can define custom categories to organize consumption schedules in separate tabs on sales rep UI. If you do this, make sure to create a field set for each category.<br>Possible values are:<br>• `Rates` |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Defines how rate tiers are calculated.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `Range`—The schedule prices only using the tier that applies to the usage quantity.<br>• `Slab`—Usage within a given bound receives pricing equal to its tier's value. |
| `UnitOfMeasure` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A unit of measure defines how you quantify instances of usage for your usage products. For example, if your usage product is a cloud storage subscription, you could provide a value of GB for your unit of measure. |
| `blng__BillingRule__c` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>This field is available only with Salesforce Billing.<br>Salesforce Billing invoices usage summaries based off their related consumption schedule's billing rule. |
| `blng__RevenueRecognitionRule__c` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>This field is available only with Salesforce Billing.<br>Salesforce Billing recognizes usage summary revenue based off the summary's related revenue recognition rule. |
| `blng__TaxRule__c` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>This field is available only with Salesforce Billing.<br>Salesforce Billing taxes usage summary invoice lines based off the summary's related tax rule. |

# Contact

Represents a contact, which is a person associated with an account.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `merge()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Customer Portal users can access only portal-enabled contacts.

## Fields

| Field | Details |
|---|---|
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the account that's the parent of this contact.<br>We recommend that you update up to 50 contacts simultaneously when changing the accounts on contacts enabled for a Customer Portal or partner portal. We also recommend that you make this update after business hours.<br>This is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `ActionCadenceAssigneeId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the sales rep designated to work the lead through their assigned cadence. This field is available in API version 48.0 and later when the Sales Engagement license is enabled. |

| Field | Details |
| --- | --- |
| | To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set. |
| `ActionCadenceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the lead's assigned cadence. This field is available in API version 48.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set. |
| `ActionCadenceState` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The state of the current action cadence tracker. This field is available in API version 50.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set.<br>Possible values are:<br>• `Complete`<br>• `Error`<br>• `Initializing`<br>• `Paused`<br>• `Processing`<br>• `Running` |
| `ActiveTrackerCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of cadences that are actively running on this contact. This field is available in API version 57.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set. |
| `ActivityMetricId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>When Einstein Activity Capture with Activity Metrics is enabled, the ID of the related activity metric.<br>This field is a relationship field.<br>This field is available in API version 41.0 and later.<br>**Relationship Name**<br>ActivityMetric<br>**Refers To**<br>ActivityMetric |
| `ActivityMetricRollupId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>When Einstein Activity Capture with Activity Metrics is enabled, the ID of the related activity metric rollup.<br>This field is a relationship field.<br>This field is available in API version 41.0 and later.<br>**Relationship Name**<br>ActivityMetricRollup<br>**Refers To**<br>ActivityMetricRollup |
| `AssistantName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The assistant's name. |
| `AssistantPhone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The assistant's phone number. Label is **Asst. Phone**. |

| Field | Details |
| --- | --- |
| `Birthdate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The contact's birthdate.<br>Filter criteria for report filters, list view filters, and SOQL queries ignore the year portion of the `Birthdate` field. For example, this SOQL query returns contacts with birthdays later in the year than today:<br>`SELECT Name, Birthdate`<br>`FROM Contact`<br>`WHERE Birthdate > TODAY` |
| `BuyerAttributes` | **Type**<br>multipicklist<br>**Properties**<br>Create, Filter, Nillable, Restricted picklist, Update<br>**Description**<br>If Automatic Contact Enhancements or Buyer Relationship Map is enabled, this field contains the role of the contact in the opportunity or account. Possible values are:<br>• `BusinessUser`—For example, an end user. Key value.<br>• `Buyer`—Key value<br>• `Champion`—Key value<br>• `DecisionMaker`—Shown in green on a contact in the buyer relationship map UI. Key value.<br>• `Detractor`—Shown in red on a contact in the buyer relationship map UI. Key value.<br>• `Evaluator`<br>• `ExecutiveSponsor`—Key value<br>• `TechnicalExpert`<br>Key values represent key contacts on an opportunity or account. If a buyer relationship map doesn't have contacts with key values, then Salesforce prompts you to add them. Having all key values represented on the map provides a full view of the deal or account, increasing sales success.<br>Warning: To ensure that the buyer relationship map feature works as expected, don't modify field values. For example, if you change `Detractor` to `Detract`, the value isn't shown in red in a buyer relationship map.<br>This field is available with all profiles except custom and minimum-access. To provide access, use field-level security in Object Manager. |
| `CanAllowPortalSelfReg` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this contact can self-register for your Customer Portal (`true`) or not (`false`). |
| `CleanStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the record's clean status as compared with Data.com. Values include: `Matched`, `Different`, `Acknowledged`, `NotFound`, `Inactive`, `Pending`, `SelectMatch`, or `Skipped`.<br>Several values for `CleanStatus` appear with different labels on the contact record.<br>• `Matched` appears as `In Sync`<br>• `Acknowledged` appears as `Reviewed`<br>• `Pending` appears as `Not Compared` |
| `ConnectionReceivedId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce. |
| `ConnectionSentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections. |
| `ContactSource` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>If Automatic Contact Creation is enabled, this field indicates whether the contact was created automatically. A possible value is:<br>• `Auto Create` |
| `Department` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The contact's department. |
| `DepartmentGroup` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>If Automatic Contact Enhancements or Buyer Relationship Map is enabled, this field contains the business unit, function, or department that the contact belongs to in the organization. Possible values are:<br>• `chiefExecutive`—Key value<br>• `customerSuccess`—For example, wealth management, consumer banking, subject matter experts, or healthcare research experts.<br>• `finance`—Includes pricing and procurement. Key value.<br>• `humanResources`<br>• `legal`—Key value<br>• `marketing`<br>• `other`<br>• `sales`<br>• `support`—For example, tech support or customer support.<br>• `tech`—For example, IT or engineering. Key value.<br>Key values represent key contacts on an opportunity or account. If a buyer relationship map doesn't have contacts with key values, then Salesforce prompts you to add them. Having all key values represented on the map provides a full view of the deal or account, increasing sales success. This field is available with all profiles except custom and minimum-access. To provide access, use field-level security in Object Manager. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>A description of the contact. Label is **Contact Description** up to 32 KB. |
| `DoNotCall` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates that the contact doesn't want to receive calls. |
| `Email` | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort, Update<br>**Description**<br>The contact's email address. |
| `EmailBouncedDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>If bounce management is activated and an email sent to the contact results in a hard bounce, the date and time of the bounce.<br>Note: Email bounce functionality isn't triggered by record updates, including updates to this field. |
| `EmailBouncedReason` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If bounce management is activated and an email sent to the contact results in a hard bounce, the reason for the bounce.<br>Note: Email bounce functionality isn't triggered by record updates, including updates to this field. |
| `Fax` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The contact's fax number. Label is **Business Fax**. |
| `FirstCallDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time of the first call placed to the contact. This field is available in API version 48.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set. |
| `FirstEmailDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time of the first email sent to the contact. This field is available in API version 48.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set. |
| `FirstName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The contact's first name up to 40 characters. |
| `GenderIdentity` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The contact's internal experience of their gender, which may or may not correspond to their designated sex at birth. |
| `HasOptedOutOfEmail` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the contact doesn't want to receive email from Salesforce (`true`) or does (`false`). Label is **Email Opt Out**. |
| `HasOptedOutOfFax` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the contact prohibits receiving faxes. |
| `HomePhone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The contact's home phone number. Label is **Home Phone**. |
| `IndividualId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the data privacy record associated with this contact. This field is available if Data Protection and Privacy is enabled.<br>This is a relationship field.<br>**Relationship Name**<br>Individual<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Individual |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |

| Field | Details |
| --- | --- |
| `IsEmailBounced` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If bounce management is activated and an email is sent to a contact, indicates whether the email results in a soft or hard bounce (`true`) or not (`false`). |
| `IsPersonAccount` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Read only. Indicates whether this account has a record type of Person Account (`true`) or not (`false`). Label is **Is Person Account**. |
| `IsPriorityRecord` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Group<br>**Description**<br>Shows whether the user has marked the contact as important (*`True`*) or not (*`False`*). The default value is `false`. Available in API version 59.0 and later. |
| `Jigsaw` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>References the company's ID in Data.com. If an account has a value in this field, it means that the account was imported from Data.com. If the field value is `null`, the account wasn't imported from Data.com. Maximum size is 20 characters. Available in API version 22.0 and later. Label is **Data.com Key**.<br>Important: The `Jigsaw` field is exposed in the API to support troubleshooting for import errors and reimporting of corrected data. Do not modify this value. |
| `JigsawContactId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the contact in reference to `Jigsaw`. |

| Field | Details |
| --- | --- |
| | **Important:** The `Jigsaw` field is exposed in the API to support troubleshooting for import errors and reimporting of corrected data. Don't modify the value in the `Jigsaw` field. |
| `LastActivityDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Value is the most recent of either:<br>• Due date of the most recent event logged against the record.<br>• Due date of the most recently closed task associated with the record. |
| `LastName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. Last name of the contact up to 80 characters. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `LeadSource` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The source of the lead that was converted to this contact. |
| `MailingAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The compound form of the mailing address. Read-only. For details on compound address fields, see Address Compound Fields. |
| `MailingCity` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Mailing address details. |
| `MailingCountry` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Mailing address details. |
| `MailingCountryCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ISO codes for the mailing address's state and country. |
| `MailingGeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update, Query, Restricted picklist, Nillable<br>**Description**<br>Accuracy level of the geocode for the mailing address. For details on geolocation compound field, see Compound Field Considerations and Limitations. |
| `MailingLatitude` | **Type**<br>double |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `MailingLongitude` to specify the precise geolocation of a mailing address. Acceptable values are numbers between –90 and 90 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `MailingLongitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `MailingLatitude` to specify the precise geolocation of a mailing address. Acceptable values are numbers between –180 and 180 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `MailingPostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Mailing address details. |
| `MailingState` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Mailing address details. |
| `MailingStateCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ISO codes for the mailing address's state and country. |
| `MailingStreet` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Street address for mailing address. |
| `MasterRecordId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If this record was deleted as the result of a merge, this field contains the ID of the record that remains. If this record was deleted for any other reason, or hasn't been deleted, the value is `null`.<br>This is a relationship field.<br>**Relationship Name**<br>MasterRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `MiddleName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The contact's middle name. Maximum size is 40 characters. |
| `MobilePhone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Contact's mobile phone number. Label is **Mobile Phone**. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Concatenation of `FirstName`, `MiddleName`, `LastName`, and `Suffix` up to 203 characters, including whitespaces. |

| Field | Details |
| --- | --- |
| `OtherAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The compound form of the other address. Read-only. For details on compound address fields, see Address Compound Fields. |
| `OtherCity` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Alternate address details. |
| `OtherCountry` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Alternate address details. |
| `OtherCountryCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ISO codes for the alternate address's state and country. |
| `OtherGeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Accuracy level of the geocode for the other address. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `OtherLatitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Used with `OtherLongitude` to specify the precise geolocation of an alternate address. Acceptable values are numbers between –90 and 90 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `OtherLongitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `OtherLatitude` to specify the precise geolocation of an alternate address. Acceptable values are numbers between –180 and 180 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `OtherPhone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Phone for alternate address. |
| `OtherPostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Alternate address details. |
| `OtherState` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Alternate address details. |
| `OtherStateCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ISO codes for the alternate address's state and country. |

| Field | Details |
| --- | --- |
| `OtherStreet` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Street for alternate address. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner of the account associated with this contact.<br>This is a relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Phone number for the contact. Label is **Business Phone**. |
| `PhotoUrl` | **Type**<br>url<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Path to be combined with the URL of a Salesforce instance (*Example:* https://*`yourInstance`*.salesforce.com/) to generate a URL to request the social network profile image associated with the contact. Generated URL returns an HTTP redirect (code 302) to the social network profile image for the contact.<br>Empty if Social Accounts and Contacts isn't enabled or if Social Accounts and Contacts is disabled for the requesting user. |

| Field | Details |
| --- | --- |
| `Pronouns` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The contact's personal pronouns, reflecting their gender identity. Others can use these pronouns to refer to the contact in the third person. The entry is selected from a picklist of available values, which the administrator sets. Maximum 40 characters.<br>Possible values are:<br>• `He/Him`<br>• `He/They`<br>• `Not Listed`<br>• `She/Her`<br>• `She/They`<br>• `They/Them` |
| `RecordTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>ID of the record type assigned to this object. |
| `ReportsToId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the contact that this contact reports to.<br>This is a relationship field.<br>**Relationship Name**<br>ReportsTo<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `Salutation` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Honorific abbreviation, word, or phrase to be used in front of name in greetings, such as Dr. or Mrs. |
| `ScheduledResumeDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the action cadence tracker is going to resume after it's paused or on a wait step. This field is available in API version 54.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set. |
| `Suffix` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Name suffix of the contact. Maximum size is 40 characters. |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Title of the contact, such as CEO or Vice President. |
| `TitleType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>If Automatic Contact Enhancements or Buyer Relationship Map is enabled, this field contains the hierarchical position that the contact holds in the organization. In the UI, this field is shown as Seniority Level. Possible values are:<br>• `ceo`—Key value<br>• `directorOrManager`—Key value<br>• `executive`—Key value<br>• `individualContributor` |

| Field | Details |
| --- | --- |
| | • `vp`—VP or Head of Department. Key value.<br>Key values represent key contacts on an opportunity or account. If a buyer relationship map doesn't show contacts with key values, then Salesforce prompts you to add them. Having all key values represented on the map provides a complete picture of the deal or account, increasing sales success. This field is available with all profiles except custom and minimum-access. To provide access, use field-level security in Object Manager. |

Note: When importing contact data, users need the Set Audit Fields upon Record Creation permission to assign values to audit fields such as `CreatedDate`. Audit fields are automatically updated during API operations unless you set these fields yourself.

## Usage

Use this object to manage individual people who are associated with an account. You can create, query, delete, or update any attachment associated with a contact.

Create or update contacts by converting a lead with the `convertLead()` call.

## Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AccountChangeEvent (API version 44.0)**
Change events are available for the object.

**ContactFeed (API version 18.0)**
Feed tracking is available for the object.

**ContactHistory (API version 11.0)**
History is available for tracked fields of the object.

**ContactOwnerSharingRule**
Sharing rules are available for the object.

**ContactShare**
Sharing is available for the object.

Overview of Salesforce Objects and Fields

# ContactCenterChannel

Represents a junction object that relates a Bring Your Own Channel for Contact Center as a Service (CCaaS) messaging channel to a CallCenter object for Bring Your Own Channel for CCaaS. This object also represents the routing details for a voicemail configuration. This object is available in API version 56.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, Service Cloud Voice with Amazon Connect, Service Cloud Voice with Partner Telephony, Service Cloud Voice with Partner Telephony from Amazon Connect, or Bring Your Own Channel for Contact Center as a Service (CCaaS) must be enabled.To access this object, you must be a SysAdmin user or have ViewSetup user permissions.

## Fields

| Field | Details |
|---|---|
| `ChannelId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>For Bring Your Own Channel for CCaaS, this field represents the unique ID of the Bring Your Own Channel messaging channel (MessagingChannel) that's associated with the contact center (CallCenterId). Available in API version 60.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>Channel<br>**Refers To**<br>MessagingChannel |
| `ContactCenterId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>This field is a relationship field. For Bring Your Own Channel for CCaaS, this field represents the unique ID of the contact center (CallCenterId) that's associated with the Bring Your Own Channel messaging channel (MessagingChannel). Available in API version 60.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>ContactCenter<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>CallCenter (the master object) |

| Field | Details |
| --- | --- |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Available in API version 63.0 only. For internal use. |
| `VoicemailFallbackQueueId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If voicemail routing is configured for the contact center, this field represents the unique ID of the fallback queue to use if voicemail routing fails. Don't change the value in this field. Instead, configure voicemail routing in Lightning Experience.<br>This field is a relationship field.<br>**Relationship Name**<br>VoicemailFallbackQueue<br>**Refers To**<br>Group |
| `VoicemailHandler` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>If voicemail routing is configured for the contact center, this field represents the unique ID of the flow used to route voicemails. Don't change the value in this field. Instead, configure voicemail routing in Lightning Experience. |

# ContactCleanInfo

Stores the metadata Data.com Clean uses to determine a contact record's clean status. Helps you automate the cleaning or related processing of contact records. ContactCleanInfo includes a number of bit vector fields.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see Data.com Prospector and Clean Retirement.

Contact Clean Info provides a snapshot of the data in your Salesforce contact record and its matched Data.com record at the time the Salesforce record was cleaned.

Contact Clean Info includes a number of bit vector fields, whose component fields each correspond to individual object fields and provide related data or status information about those fields. For example, the bit vector field `IsDifferent` has an `IsDifferentEmail` field. If the `IsDifferentEmail` field's value is `False`, that means the `Email` field value is *the same* on the Salesforce contact record and its matched Data.com record.

ContactCleanInfo bit vector fields include:

- `CleanedBy` indicates who (a user) or what (a Clean job) cleaned the contact record.
- `IsDifferent` indicates whether or not a field on the contact record has a value that differs from the corresponding field on the matched Data.com record.
- `IsFlaggedWrong` indicates whether or not a field on the contact record has a value that is flagged as wrong to Data.com.
- `IsReviewed` indicates whether or not a field on the contact record is in a `Reviewed` state, which means that the value was reviewed but not accepted.

## Fields

| Field Name | Details |
|---|---|
| `Address` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The compound form of the address. Read-only. See Address Compound Fields for details on compound address fields. |
| `City` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the billing address of the contact. |
| `CleanedByJob` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the contact record was cleaned by a Data.com Clean job (`true`) or not (`false`). |
| `CleanedByUser` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter<br>**Description**<br>Indicates whether the contact record was cleaned by a Salesforce user (`true`) or not (`false`). |
| `ContactId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique, system-generated ID assigned when the contact record was created. |
| `ContactStatusDataDotCom` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The status of the contact per Data.com. Values are: `Contact is Active per Data.com`, `Phone is Wrong per Data.com` , `Email is Wrong per Data.com`, `Phone and Email are Wrong per Data.com`, `Contact Not at Company per Data.com`, `Contact is Inactive per Data.com`, `Company this contact belongs to is out of business per Data.com`, `Company this contact belongs to never existed per Data.com` or `Email address is invalid per Data.com`. |
| `Country` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the billing address of the contact. |
| `DataDotComID` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID Data.com maintains for the contact. |

| Field Name | Details |
| --- | --- |
| `Email` | **Type**<br>email<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The email address for the contact. |
| `FirstName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The contact's first name. |
| `IsDifferentCity` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the contact's `City` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentCountry` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the contact's `Country` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentCountryCode` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the contact's `Country Code` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentEmail` | **Type**<br>boolean<br>**Properties**<br>Filter |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the contact's `Email` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentFirstName` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the contact's `First Name` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentLastName` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the contact's `Last Name` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentPhone` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the contact's `Phone` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentPostalCode` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the contact's `Postal Code` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentState` | **Type**<br>boolean<br>**Properties**<br>Filter |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the contact's `State` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentStateCode` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the contact's `State Code` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentStreet` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the contact's `Street` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentTitle` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the contact's `Title` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsFlaggedWrongAddress` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the contact's `Address` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongEmail` | **Type**<br>boolean<br>**Properties**<br>Filter, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the contact's `Email` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongName` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the contact's `Name` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongPhone` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the contact's `Phone` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongTitle` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the contact's `Title` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsInactive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the contact has been reported to Data.com as *`Inactive`* (`true`) or not (`false`). |
| `IsReviewedAddress` | **Type**<br>boolean<br>**Properties**<br>Filter, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the contact's `Address` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedEmail` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the contact's `Email` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedName` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the contact's `Name` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedPhone` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the contact's `Phone` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedTitle` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the contact's `Title` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `LastMatchedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort<br>**Description**<br>The date the contact record was last matched and linked to a Data.com record. |

| Field Name | Details |
| --- | --- |
| `LastName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The contact's last name. |
| `LastStatusChangedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of who or what last changed the record's `Clean Status` field value: a Salesforce user or a Clean job. |
| `LastStatusChangedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date on which the record's `Clean Status` field value was last changed. |
| `Latitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Used with `Longitude` to specify the precise geolocation of a billing address. Data not currently provided. |
| `Longitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Used with `Latitude` to specify the precise geolocation of a billing address. Data not currently provided. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Field label is **Contact Clean Info Name**. The name of the contact. Maximum size is 255 characters. |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The phone number for the contact. |
| `PostalCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the billing address of the contact. |
| `State` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the billing address of the contact. |
| `Street` | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the billing address of the contact. |
| `Title` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The contact's title. |

## Usage

Developers can create triggers that read the Contact Clean Info fields to help automate the cleaning or related processing of contact records.

Create a customized set of `Title` field values. Use triggers to map values from fields on imported or cleaned records onto a standard set of values.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ContactCleanInfoChangeEvent (API version 62.0)**
Change events are available for the object.

# ContactDailyMetric

Represents the daily engagement metrics for a contact. This object is available in API version 52.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Inbox must be enabled.

## Fields

| Field | Details |
|---|---|
| `AllCallsCallBackLater` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the day for this contact with the call result Call Back Later. |
| `AllCallsLeftVoicemail` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the day for this contact with the call result Left Voicemail. |

| Field | Details |
| --- | --- |
| `AllCallsMeaningfulConnect` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the day for this contact with the call result Meaningful Connect. |
| `AllCallsNotInterested` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the day for this contact with the call result Not Interested. |
| `AllCallsUncategorized` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the day for this contact with no call result specified. |
| `AllCallsUnqualified` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the day for this contact with the call result Unqualified. |
| `AllEmailsBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total of hard and soft bounced emails for this contact in the day.<br>This is a calculated field. |
| `AllEmailsDeliveredCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of successfully delivered emails for this contact in the day.<br>This is a calculated field. |
| `AllEmailsDeliveredRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of tracked emails sent that were successfully delivered to this contact. This field is a calculated field.<br>Available in API version 54.0 and later. |
| `AllEmailsHardBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of hard bounced emails for this contact in the day. |
| `AllEmailsOutOfOfficeCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails that triggered an out of office reply for this contact in the day. |
| `AllEmailsSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this contact in the day.<br>This is a calculated field. |
| `AllEmailsSoftBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails soft bounced for this contact in the day. |

| Field | Details |
| --- | --- |
| `AllEmailsTrackedSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this contact with engagement tracking enabled in the day. |
| `AllEmailsUntrackedSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this contact without engagement tracking enabled in the day. |
| `AllTotalCallsCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of calls to this contact with all call results in the day.<br>This is a calculated field. |
| `ContactId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the related contact.<br>This is a relationship field.<br>**Relationship Name**<br>Contact<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `DailyCutOffTimeStamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The time of day when each 24-hour metrics period starts and ends. |
| `Date` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The date on which the engagement occurred. |
| `DateInt` | **Type**<br>int<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The date on which the engagement occurred, in yyyymmdd format. |
| `HardBounceTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this contact with hard bounce tracking.<br>Available in API version 54.0 and later. |
| `InboundEngagementsCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of inbound engagements for this contact in the day. This field is a calculated field. The value is the sum of `UniqueEmailsOpenedCount`, `UniqueEmailsRepliedCount`, and `UniqueEmailsLinkClickedCount`.<br>Available in API version 58.0 and later. |
| `LinkClickTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this contact with link click tracking. |

| Field | Details |
| --- | --- |
| | Available in API version 54.0 and later. |
| `OpenTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this contact with open tracking.<br>Available in API version 54.0 and later. |
| `OutOfOfficeTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this contact with out-of-office tracking.<br>Available in API version 54.0 and later. |
| `OutboundEngagementsCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of outbound engagements for this contact in the day. This field is a calculated field. The value is the sum of `AllTotalCallsCount` and `AllEmailsDeliveredCount`.<br>Available in API version 58.0 and later. |
| `ReplyTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this contact with reply tracking.<br>Available in API version 54.0 and later. |
| `SoftBounceTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of emails sent to this contact with soft bounce tracking.<br>Available in API version 54.0 and later. |
| `TrackableSendHardBounceRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this contact with hard bounce tracking that hard bounced. This field is a calculated field.<br>Available in API version 54.0 and later. |
| `TrackableSendLinkClickRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this contact with link tracking that had link clicks. This field is a calculated field.<br>Available in API version 54.0 and later. |
| `TrackableSendOpenRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this contact with open tracking that were opened by the recipient. This field is a calculated field.<br>Available in API version 54.0 and later. |
| `TrackableSendOutOfOfficeRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this contact with out-of-office tracking that received out-of-office replies. This field is a calculated field.<br>Available in API version 54.0 and later. |

| Field | Details |
| --- | --- |
| `TrackableSendReplyRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this contact with reply tracking that received replies. This field is a calculated field.<br>Available in API version 54.0 and later. |
| `TrackableSendSoftBounceRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this contact with soft bounce tracking that soft bounced. This field is a calculated field.<br>Available in API version 54.0 and later. |
| `UniqueEmailsLinkClickedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of individual emails in which the contact clicked a link in the day. |
| `UniqueEmailsOpenedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of individual emails opened by the contact in the day. |
| `UniqueEmailsRepliedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of individual emails replied to by the contact in the day. |

# ContactMonthlyMetric

Represents the monthly engagement metrics for a contact. This object is available in API version 52.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Inbox must be enabled.

## Fields

| Field | Details |
|---|---|
| `AllCallsCallBackLater` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the month for this contact with the call result Call Back Later. |
| `AllCallsLeftVoicemail` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the month for this contact with the call result Left Voicemail. |
| `AllCallsMeaningfulConnect` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the month for this contact with the call result Meaningful Connect. |
| `AllCallsNotInterested` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the month for this contact with the call result Not Interested. |

| Field | Details |
| --- | --- |
| `AllCallsUncategorized` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the month for this contact with no call result specified. |
| `AllCallsUnqualified` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the month for this contact with the call result Unqualified. |
| `AllEmailsBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total of hard and soft bounced emails for this contact in the month.<br>This is a calculated field. |
| `AllEmailsDeliveredCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of successfully delivered emails for this contact in the month.<br>This is a calculated field. |
| `AllEmailsDeliveredRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of tracked emails sent that were successfully delivered to this contact. Available in API version 54.0 and later.<br>This field is a calculated field. |
| `AllEmailsHardBouncedCount` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of hard bounced emails for this contact in the month. |
| `AllEmailsOutOfOfficeCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails that triggered an out of office reply for this contact in the month. |
| `AllEmailsSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this contact in the month.<br>This is a calculated field. |
| `AllEmailsSoftBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails soft bounced for this contact in the month. |
| `AllEmailsTrackedSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this contact with engagement tracking enabled in the month. |
| `AllEmailsUntrackedSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this contact without engagement tracking enabled in the month. |

| Field | Details |
| --- | --- |
| `AllTotalCallsCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of calls to this contact with all call results in the month.<br>This is a calculated field. |
| `ContactId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the related contact.<br>This is a relationship field.<br>**Relationship Name**<br>Contact<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `HardBounceTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this contact with hard bounce tracking. Available in API version 54.0 and later. |
| `LinkClickTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this contact with link click tracking. Available in API version 54.0 and later. |
| `Month` | **Type**<br>date |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Sort<br>**Description**<br>The month in which the engagement occurred. |
| `MonthInt` | **Type**<br>int<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The month in which the engagement occurred, in yyyymm format. |
| `OpenTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this contact with open tracking. Available in API version 54.0 and later. |
| `OutOfOfficeTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this contact with out-of-office tracking. Available in API version 54.0 and later. |
| `ReplyTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this contact with reply tracking. Available in API version 54.0 and later. |
| `SoftBounceTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of emails sent to this contact with soft bounce tracking. Available in API version 54.0 and later. |
| `TrackableSendHardBounceRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this contact with hard bounce tracking that hard bounced. Available in API version 54.0 and later.<br>This field is a calculated field. |
| `TrackableSendLinkClickRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this contact with link tracking that had link clicks. Available in API version 54.0 and later.<br>This field is a calculated field. |
| `TrackableSendOpenRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this contact with open tracking that were opened by the recipient. Available in API version 54.0 and later.<br>This field is a calculated field. |
| `TrackableSendOutOfOfficeRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this contact with out-of-office tracking that received out-of-office replies. Available in API version 54.0 and later.<br>This field is a calculated field. |

| Field | Details |
| --- | --- |
| `TrackableSendReplyRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this contact with reply tracking that received replies. Available in API version 54.0 and later.<br>This field is a calculated field. |
| `TrackableSendSoftBounceRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this contact with soft bounce tracking that soft bounced. Available in API version 54.0 and later.<br>This field is a calculated field. |
| `UniqueEmailsLinkClickedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of individual emails in which the contact clicked a link in the month. |
| `UniqueEmailsOpenedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of individual emails opened by the contact in the month. |
| `UniqueEmailsRepliedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of individual emails replied to by the contact in the month. |

# ContactPointAddress

Represents a contact's billing or shipping address, which is associated with an individual or person account. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `ActiveFromDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date when the contact's address became active. |
| `ActiveToDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date when the contact's address is no longer active. |
| `Address` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The full address. |
| `AddressFirstName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>First name associated with the address.<br>The field is available only if the B2B Commerce license is enabled.<br>This field is available in API version 57.0 and later. |

| Field | Details |
| --- | --- |
| `AddressLastName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Last name associated with the address.<br>The field is available only if the B2B Commerce license is enabled.<br>This field is available in API version 57.0 and later. |
| `AddressMiddleName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Middle name associated with the address.<br>The field is available only if the B2B Commerce license is enabled.<br>This field is available in API version 57.0 and later. |
| `AddressType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates the type of address.<br>Possible values are:<br>• `Billing`<br>• `Shipping` |
| `BestTimeToContactEndTime` | **Type**<br>time<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The latest time to contact the individual. |
| `BestTimeToContactStartTime` | **Type**<br>time<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The earliest time to contact the individual. |
| `BestTimeToContactTimezone` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The timezone applied to the best time to contact the individual. |
| `City` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The address city. |
| `CompanyName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Company name associated with the address.<br>The field is available only if the B2B Commerce license is enabled.<br>This field is available in API version 57.0 and later. |
| `ContactPointPhoneId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Represents the primary phone number associated with this address.<br>This is a relationship field.<br>**Relationship Name**<br>ContactPointPhone<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContactPointPhone |

| Field | Details |
| --- | --- |
| `Country` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The address country. |
| `GeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The level of accuracy of a location's geographical coordinates compared with its physical address. A geocoding service typically provides this value based on the address's latitude and longitude coordinates.<br>Possible values are:<br>• `Address`<br>• `Block`<br>• `City`<br>• `County`<br>• `ExtendedZip`<br>• `NearAddress`<br>• `Neighborhood`<br>• `State`<br>• `Street`<br>• `Unknown`<br>• `Zip` |
| `IsDefault` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether a contact's address is the preferred method of communication (`true`) or not (`false`). The default value is `false`. |
| `IsPrimary` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether a contact's address is their primary address (`true`) or not (`false`). The default value is `false`. |
| `IsThirdPartyAddress` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the address is associated with a third party (`true`) or not (`false`). The default value is `false`.<br>This field is available in API version 57.0 and later. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last referenced a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Latitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `Longitude` to specify the precise geolocation of the address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. |
| `Longitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Used with `Latitude` to specify the precise geolocation of the address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. The name of the contact point address record. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the account's owner associated with this contact.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the contact's parent record. Only an individual or account can be a contact's parent.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Individual |
| `PhoneNumber` | **Type**<br>phone |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Phone number associated with the address.<br>The field is available only if the B2B Commerce license is enabled.<br>This field is available in API version 57.0 and later. |
| `PostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The address postal code. |
| `PreferenceRank` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Preference rank when there are multiple contact point addresses. |
| `State` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The address state. |
| `Street` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The address street. |
| `UsageType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Specify the usage type of this address. For instance, whether it's a work address or a home address.<br>Possible values are:<br>• `Home`<br>• `Inactive`<br>• `Temporary`<br>• `Work` |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ContactPointAddressChangeEvent**
Change events are available for the object.

**ContactPointAddressHistory**
History is available for tracked fields of the object.

**ContactPointAddressShare**
Sharing is available for the object.

# ContactPointConsent

Represents a customer's consent to be contacted via a specific contact point, such as an email address or phone number. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

With certain page layout and field-level security settings, some fields aren't visible or editable.

| Field | Details |
| --- | --- |
| `BusinessBrandId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the Business Brand that the individual has given consent to for a contact point. This is a relationship field. This field is available in API version 53.0 and later.<br>**Relationship Name**<br>BusinessBrand<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BusinessBrand |
| `CaptureContactPointType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Required. Indicates how you captured consent.<br>Possible values are:<br>• `Email`<br>• `MailingAddress`<br>• `Phone`<br>• `Social`<br>• `Web` |
| `CaptureDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Required. Date when consent was captured. |
| `CaptureSource` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required. Indicates how you captured consent. For example, a website or online form. |
| `ContactPointId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the contact point record through which the customer is consenting to be contacted.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>ContactPoint<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContactPointAddress, ContactPointEmail, ContactPointPhone |
| `DataUsePurposeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the data use purpose record that you want to associate this consent with.<br>This is a relationship field.<br>**Relationship Name**<br>DataUsePurpose<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>DataUsePurpose |
| `DoubleConsentCaptureDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Date when double opt-in was captured. |
| `EffectiveFrom` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Date when consents starts. |
| `EffectiveTo` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Date when consent ends. |
| `EngagementChannelTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the engagement channel record through which the customer is consenting to be contacted. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the contact point type consent record. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the account owner associated with this customer. |

| Field | Details |
| --- | --- |
| | This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PartyRoleId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the Party Role for the individual you want to associate consent with. This is a polymorphic relationship field. This field is available in API version 53.0 and later.<br>**Relationship Name**<br>PartyRole<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Customer, Seller |
| `PrivacyConsentStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Required. Identifies whether the individual or person account associated with this record agrees to this form of contact.<br>Possible values are:<br>• `NotSeen`<br>• `OptIn`<br>• `OptInPending`—Available in API version 58.0 and later.<br>• `OptOut`<br>• `Seen` |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ContactPointConsentChangeEvent**
Change events are available for the object.

**ContactPointConsentHistory**
History is available for tracked fields of the object.

**ContactPointConsentOwnerSharingRule**
Sharing rules are available for the object.

**ContactPointConsentShare**
Sharing is available for the object.

# ContactPointEmail

Represents a contact's email, which is associated with an individual or person account. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `ActiveFromDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date when the contact's email became active. |
| `ActiveToDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date when the contact's email is no longer active. |
| `BestTimeToContactEndTime` | **Type**<br>time<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The latest time to contact the individual. |

| Field | Details |
| --- | --- |
| BestTimeToContactStartTime | **Type**<br>time<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The earliest time to contact the individual. |
| BestTimeToContactTimezone | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The timezone applied to the best time to contact the individual. |
| EmailAddress | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The email address of the contact. |
| EmailDomain | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The domain of the contact's email, which is everything after the @ sign. |
| EmailLatestBounceDateTime | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time when an email failed to reach its recipient. |
| EmailLatestBounceReasonText | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The reason why the email didn't reach its recipient. |

| Field | Details |
| --- | --- |
| `EmailMailBox` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A subset of the contact's email, which is everything before the @ sign. |
| `IsPrimary` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether a contact's email is their primary email (`true`) or not (`false`). |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>Required. The name of the contact point email record. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the account's owner associated with this contact.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ContactPointConsentChangeEvent**
Change events are available for the object.

**ContactPointEmailHistory**
History is available for tracked fields of the object.

**ContactPointEmailOwnerSharingRule**
Sharing rules are available for the object.

**ContactPointEmailShare**
Sharing is available for the object.

# ContactPointPhone

Represents a contact's phone number, which is associated with an individual or person account. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `ActiveFromDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date when the contact's phone number became active. |
| `ActiveToDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date when the contact's phone number is no longer active. |
| `AreaCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The area code of the phone number's location for the contact. |

| Field | Details |
| --- | --- |
| BestTimeToContactEndTime | **Type**<br>time<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The latest time to contact the individual. |
| BestTimeToContactStartTime | **Type**<br>time<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The earliest time to contact the individual. |
| BestTimeToContactTimezone | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The timezone applied to the best time to contact the individual. |
| ExtensionNumber | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The phone number extension for the contact. |
| FormattedInternationalPhoneNumber | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The internationally recognized format for the contact's phone number. |
| FormattedNationalPhoneNumber | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The nationally recognized format for the contact's phone number. |

| Field | Details |
| --- | --- |
| `IsBusinessPhone` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether a contact's phone number is a business number (`true`) or not (`false`). |
| `IsFaxCapable` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether a contact's phone number is a fax number (`true`) or not (`false`). |
| `IsPersonalPhone` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether a contact's phone number is a personal number (`true`) or not (`false`). |
| `IsPrimary` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether a contact's phone number is their primary number (`true`) or not (`false`). |
| `IsSmsCapable` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether a contact's phone number can receive text messages (`true`) or not (`false`). |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>Required. The name of the contact point phone record. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the account's owner associated with this contact.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the contact's parent. Only an individual or account can be a contact's parent.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Parent |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Individual |
| `PhoneType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of phone number for the contact.<br>Possible values are:<br>• `Home`<br>• `Mobile` |
| `PreferenceRank` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Specify how this phone numbers ranks in terms of preference among the contact's other phone numbers. |
| `TelephoneNumber` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The phone number for the contact. |
| `UsageType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Specify the usage type of this number. For instance, whether it's a work phone or a home phone.<br>Possible values are:<br>• `Home`<br>• `Temp`<br>• `Work` |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ContactPointConsentChangeEvent**
Change events are available for the object.

**ContactPointPhoneHistory**
History is available for tracked fields of the object.

**ContactPointPhoneOwnerSharingRule**
Sharing rules are available for the object.

**ContactPointPhoneShare**
Sharing is available for the object.

# ContactPointTypeConsent

Represents consent for a contact point type, such as email or phone. This object is available in API version 45.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available if Data Protection and Privacy is enabled.

## Fields

With certain page layout and field-level security settings, some fields aren't visible or editable.

| Field Name | Details |
|---|---|
| `BusinessBrandId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the Business Brand that the individual has given consent to for a contact point type. this is a relationship field. This field is available in API version 53.0 and later.<br>**Relationship Name**<br>BusinessBrand<br>**Relationship Type**<br>Lookup |

| Field Name | Details |
| --- | --- |
| | **Refers To**<br>BusinessBrand |
| `CaptureContactPointType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Required. Indicates how you captured consent. Possible values are:<br>• `Email`<br>• `MailingAddress`<br>• `Phone`<br>• `Social`<br>• `Web` |
| `CaptureDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Required. Date when consent was captured. |
| `CaptureSource` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required. Indicates how you captured consent. For example, a website or online form. |
| `ContactPointType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Required. Represents the contact method you want to apply consent to. Possible values are:<br>• `Email`<br>• `MailingAddress`<br>• `Phone`<br>• `Social` |

| Field Name | Details |
| --- | --- |
| | • `Web` |
| `DataUsePurposeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Represents the record for data use purpose that you want to associate this consent with.<br>This is a relationship field.<br>**Relationship Name**<br>DataUsePurpose<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>DataUsePurpose |
| `DoubleConsentCaptureDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Date when double opt-in was captured. |
| `EffectiveFrom` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Date when consents starts. |
| `EffectiveTo` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Date when consent ends. |
| `EngagementChannelType` | **Type**<br>picklist |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Required if a `ContactPointType` isn't selected. Represents the contact method you want to apply consent to. Possible values are:<br>• `Billboard`<br>• `Email`<br>• `MailingAddress`<br>• `Phone`<br>• `SMS`<br>• `Social`<br>• `Web`<br>This is a relationship field.<br>**Relationship Name**<br>EngagementChannelType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EngagementChannelType |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Name of the contact point type consent record. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner of the account associated with this customer.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PartyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. Represents the record based on the Individual object you want to associate consent with.<br>This is a relationship field.<br>**Relationship Name**<br>Party<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Individual |
| `PartyRoleId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the Party Role for the individual you want to associate consent with. This is a polymorphic relationship field. This field is available in API version 53.0 and later. |

| Field Name | Details |
| --- | --- |
| | **Relationship Name**<br>PartyRole<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Customer, Seller |
| `PrivacyConsentStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Required. Identify whether the individual associated with this record agrees to this form of contact. Possible values are:<br>• `NotSeen`<br>• `Seen`<br>• `OptIn`<br>• `OptInPending`—Available in API version 58.0 and later.<br>• `OptOut`<br>• `OptOutPending`—Available in API version 58.0 and later. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ContactPointConsentChangeEvent (API version 47.0)**
Change events are available for the object.

**ContactPointTypeConsentHistory**
History is available for tracked fields of the object.

**ContactPointTypeConsentOwnerSharingRule**
Sharing rules are available for the object.

**ContactPointTypeConsentShare**
Sharing is available for the object.

# ContactOwnerSharingRule

Represents the rules for sharing a contact with a User other than the owner.

Note: To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The SharingRules Metadata API type is enabled for all orgs.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `ContactAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A value that represents the type of access granted to the target Group, UserRole, or User for Contacts. The possible values are:<br>• `Read`<br>• `Edit` |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Rule Name** in the user interface.<br>This field is available in API version 24.0 and later.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. |

| Field | Details |
| --- | --- |
| `GroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID representing the source group. A Contact owned by a User in the source Group triggers the rule to give access. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to **Label** on the user interface. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID representing the User or Group being granted access. |

## Usage

Use this object to manage the sharing rules for contacts.

SEE ALSO:

- Contact

- *Metadata API Developer Guide*: SharingRules

# ContactRequest

Represents a customer's request for support to get back to them about an issue. This object is available in API version 45.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

# Fields

| Field Name | Details |
| --- | --- |
| `IsCallback` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines how a voice call callback is handled after an agent accepts the callback work item.<br>If set to `true`, when an agent accepts the work item, the Omni-Channel utility doesn't immediately dial the callback phone number. Instead, the agent can determine how to handle the call. For example, after the agent accepts the work item, they can view the callback details, transfer the call, or contact the end user at another phone number. If the agent makes a call by using click-to-dial, the call appears as a Callback call in the Omni-Channel utility.<br>If set to `false`, when the agent accepts the work item in the Omni-Channel utility, the contact request is opened. The agent can review callback details. If they call with click-to-dial, the call appears as an Outbound call in the Omni-Channel utility.<br>The default value is `false`. Available in API version 60.0 and later. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The contact request number. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the Salesforce record that owns the request.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PreferredChannel` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The channel the customer selected as their preferred method of communication in the contact request flow. For example:<br>• Phone |
| `PreferredPhone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The phone number the customer provided when requesting help in the contact request flow. |
| `RequestDescription` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The description of the customer's issue that they provided when requesting help in the contact request flow. |

| Field Name | Details |
| --- | --- |
| `RequestReason` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The reason the customer provided when requesting help in the contact request flow. These values are customizable in Object Manager. The default values are:<br>• Account<br>• Billing<br>• Case<br>• General<br>• Order<br>• Other<br>• Product |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The status of the contact request. For example:<br>• Abandoned<br>• Attempted<br>• Contacted<br>• New |
| `WhatId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the Salesforce record the contact request is related to, such as an account, case, opportunity, or work order.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>What<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Case, Opportunity, WorkOrder |

| Field Name | Details |
| --- | --- |
| `WhoId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the Salesforce contact record the contact request is related to, such as a contact, lead, or user.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Who<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact, Lead, User |

## Usage

Contact request records are created when a customer fills out an online form. This form is created using a flow that uses the type `ContactRequestFlow`. There's a guided setup experience to create this flow on the Customer Contact Requests page in Setup. You then add the flow to an Experience Cloud site using either the Flows component or the Contact Request Button & Flow component.

Contact Request works in Experience Cloud sites, whether they require authentication or not. Make sure that your users have the Run Flows permission, including your Guest User profile. Without this permission, members won't see the button or the form to submit contact requests.

By default, all Standard User and System Administrator profiles have access to the object. Make sure that your users profiles, like service agents, have at least read access on the contact request object.

You can create queues for contact requests and route them with Omni-Channel.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**ContactRequestOwnerSharingRule**
Sharing rules are available for the object.

**ContactRequestShare**
Sharing is available for the object.

SEE ALSO:

*Salesforce Help*: Set Up and Manage Contact Requests

# ContactRequestShare

Represents a list of access levels to a ContactRequest with an explanation of the access level. This object is available in API version 45.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
|---|---|
| `AccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Level of access that the User or Group has to contact requests. The possible values are:<br>• `Read`<br>• `Edit`<br>• `All` (This value is not valid for `create()` or `update()` calls.)<br>This value must be set to an access level that is higher than the organization's default access level for contact requests. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the parent object, if any.<br>This is a relationship field.<br>**Relationship Name**<br>Parent |

| Field Name | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>ContactRequest |
| `RowCause` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited.<br>Possible values are:<br>• `Manual`—The User or Group has access because a user with "All" access manually shared the ContactRequest with them.<br>• `Owner`—The User is the owner of the ContactRequest.<br>• `Rule`—The User or Group has access via a ContactRequest sharing rule.<br>• `GuestRule`—The User or Group has access via a ContactRequest guest user sharing rule. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the User or Group that has been given access to the ContactRequest.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>UserOrGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

## Usage

This object lets you determine which users and groups can view and edit ContactRequest records owned by other users.

If you attempt to create a new record that matches an existing record, the `create()` call updates any modified fields and returns the existing record.

SEE ALSO:

*Salesforce Help*: Set Up and Manage Contact Requests

# ContactShare

Represents a list of access levels to a Contact along with an explanation of the access level. For example, if you have access to a record because you own it, the `ContactAccessLevel` is `All` and `RowCause` is Owner.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Summer '20 and later, only users with access to the Contact object can access this object.

## Fields

| Field | Details |
|---|---|
| `ContactId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the Contact associated with this sharing entry. This field can't be updated.<br>This is a relationship field.<br>**Relationship Name**<br>Contact<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |

| Field | Details |
| --- | --- |
| `ContactAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Level of access that the User or Group has to cases associated with the account Contact. The possible values are:<br>• `Read`<br>• `Edit`<br>• `All` This value is not valid for create or update.<br>This field must be set to an access level that is higher than the organization's default access level for contacts. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `RowCause` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited. Valid values include:<br>• `Rule`—The User or Group has access via a Contact sharing rule.<br>• `GuestRule`—The User or Group has access via a Contact guest user sharing rule.<br>• `ImplicitChild`—The User or Group has access to the Contact via sharing access on the associated Account. After faster account sharing recalculation is enabled for your org, sharing entries with this value aren't returned in queries. Instead of storing implicit child shares, record access is determined dynamically.<br>• `ImplicitPerson`—The User or Group has access to the business contact of a person account via access to the person account itself.<br>• `GuestPersonImplicit`—The guest user has access to the business contact of a person account via a Contact sharing rule.<br>• `PortalImplicit`—The Contact is associated with the portal user. |

| Field | Details |
| --- | --- |
| | • `LpuImplicit`—The User has access to records owned by high-volume Experience Cloud site users via a share group.<br>• `ARImplicit`—The User, who belongs to a partner or customer account, has access to the Contact via an account relationship data sharing rule.<br>• `Manual`—The User or Group has access because a User with "All" access manually shared the Contact with them.<br>• `Owner`—The User is the owner of the Contact. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the User or Group that has been given access to the Contact. This field can't be updated.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>UserOrGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

## Usage

This object allows you to determine which users and groups can view or edit Contact records owned by other users.

Note: After faster account sharing recalculation is enabled for your org, we no longer store implicit share records between accounts and their child contact records. Sharing entries that have a value of `ImplicitChild` in the `RowCause` field aren't returned when you query this object. Instead, the system dynamically determines whether users can access child contact records when they try to access them. This change speeds up ownership and sharing recalculation for accounts.

For more information, see the Faster Account Sharing Recalculation knowledge article.

AccountShare

# ContactSuggestionInsight

Represents a suggestion for a new contact record. Available in API versions 45.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

To add or decline contact suggestions, users need a Sales Cloud Einstein license and edit access on accounts. As of the Spring '20 release, Pardot and Sales Engagement users no longer have access to this object.

## Fields

| Field Name | Details |
|---|---|
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the related account. |
| `Address` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The address of the suggested contact. |
| `City` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The city of the suggested contact. |
| `ContactTitle` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The title of the suggested contact. |
| `Country` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The country of the suggested contact. |
| `CreatedRecordId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the created contact record. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. |
| `Division` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The division of the suggested contact. |
| `Email` | **Type**<br>email<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The email address of the suggested contact. |
| `FirstName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The first name of the suggested contact. |

| Field Name | Details |
| --- | --- |
| `GeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Accuracy level of the geocode for the address. See Compound Field Considerations and Limitations for details on geolocation compound fields.<br>Note: This field is available in the API only. |
| `LastName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The last name of the suggested contact. |
| `LastOperationUserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who last performed a related operation. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |

| Field Name | Details |
| --- | --- |
| `Latitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Used in conjunction with `Longitude` to specify the precise geolocation of an address. |
| `Longitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Used in conjunction with `Latitude` to specify the precise geolocation of an address. |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The phone number of the suggested contact. |
| `PostalCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The postal code of the suggested contact. |
| `RationaleLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The reason why this entry is a suggested contact. |
| `State` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The state of the suggested contact. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The status of the suggested contact. Possible values include:<br>• New<br>• Pending<br>• Added<br>• Declined |
| `Street` | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The street of the suggested contact. |

## Usage

This object is read-only and isn't supported in workflows, triggers, process builder, or Visualforce pages.

# ContactTag

Associates a word or short phrase with a Contact.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
| --- | --- |
| `ItemId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter<br>**Description**<br>ID of the tagged item. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter<br>**Description**<br>Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically. |
| `TagDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter<br>**Description**<br>ID of the parent TagDefinition object that owns the tag. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Restricted picklist<br>**Description**<br>Defines the visibility of a tag.<br>Valid values:<br>• `Public`—The tag can be viewed and manipulated by all users in an organization.<br>• `Personal`—The tag can be viewed or manipulated only by a user with a matching `OwnerId`. |

# Usage

ContactTag stores the relationship between its parent TagDefinition and the Contact being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

# ContentAsset

Represents a Salesforce file that has been converted to an asset file in a custom app in Lightning Experience. Use asset files for org setup and configuration. Asset files can be packaged and referenced by other components. This object is available in API version 38.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

- Only admin users can edit or delete ContentAssets.
- Users with file access can create and query ContentAssets.
- It isn't necessary to create asset files for regular, collaborative use of Salesforce Files. "Assetize" files only when they're used in setup and configuration situations.
- Neither the file (ContentDocument) nor the asset settings record (ContentAssets) can be deleted if the asset file is referenced by another component.
- ContentAsset doesn't support search or most recently used (MRU) lists.
- ContentAsset doesn't support Apex triggers.

## Fields

| Field | Details |
|---|---|
| `ContentDocumentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the document.<br>This is a relationship field.<br>**Relationship Name**<br>ContentDocument<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentDocument |
| `DeveloperName` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the asset file in the API. ContentAsset.DeveloperName:<br>• must be 40 characters or fewer<br>• must begin with a letter<br>• can contain only underscores and alphanumeric characters<br>• can't include spaces<br>• can't end with an underscore<br>• can't contain 2 consecutive underscores<br>In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. |
| `IsVisibleByExternalUsers` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether unauthenticated users can see the asset file. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language for this document. This field defaults to the user's language unless the org is multi-language enabled. Specifies the language of the labels returned. The value must be a valid user locale (language and country), such as `de_DE` or `en_GB`. For more information on locales, see the `Language` field on the CategoryNodeLocalization object. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The label for the asset file. This internal label doesn't get translated. |
| `NamespacePrefix` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix associated with this object. Each Developer Edition organization that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation. |

# ContentBody

Represents the body of a file in Salesforce CRM Content or Salesforce Files. This object is available in API version 40.0 and later.

## Supported Calls

`describeSObjects()`

## Special Access Rules

Cannot be queried, inserted, updated, or deleted directly.

## Fields

| Field | Details |
| --- | --- |
| `Id` | **Type**<br>ID<br>**Properties**<br>, Filter, Group, idLookup, Sort<br>**Description**<br>ID of the file body. |

## Usage

ContentBody is intended for internal Salesforce use. If you need to access the file content body, please use ContentVersion on page 1506.

# ContentDistribution

Represents information about sharing a document externally. This object is available in API version 32.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

- Content deliveries must be enabled to query content deliveries.
- Users (including users with the "View All Data" permission) can query only the files that they have access to. If the file is managed by a Content Library, the user must have "Deliver Content" enabled in the library permission definition and be a member of the library. If the file isn't managed by a Content Library, the user must have the "Enable Creation of Content Deliveries for Salesforce Files" permission.
- Users can query the `DistributionPublicUrl` and `Password` fields only if they are the file owner, if the file is shared with them, or if the `RelatedRecordId` specifies a record that the users can access.
- If the shared document is deleted, the delete cascades to any associated ContentDistribution. The ContentDistribution is still queryable by using the `QueryAll` verb.
- If the shared document is archived, the only fields that users can edit are `ExpiryDate` and `PreferencesExpires`.
- Customer Portal users can't access this object.
- Chatter Free users can't access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `ContentDocumentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the shared document. |
| `ContentDownloadUrl` | **Type**<br>string<br>**Properties**<br>Sort, Nillable<br>**Description**<br>The link for downloading the file. This field is available in API version 40.0 and later. |
| `ContentVersionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the shared document version. |

| Field Name | Details |
| --- | --- |
| | This is a relationship field.<br>**Relationship Name**<br>ContentVersion<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentVersion |
| `DistributionPublicUrl` | **Type**<br>string<br>**Properties**<br>Nillable, Sort<br>**Description**<br>URL of the link to the shared document. |
| `ExpiryDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Date when the shared document becomes inaccessible. |
| `FirstViewDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date when the shared document is first viewed. |
| `LastViewDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date when the shared document was last viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Name of the content delivery. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the user who owns the shared document.<br>This is a relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `PdfDownloadUrl` | **Type**<br>string<br>**Properties**<br>Sort, Nillable<br>**Description**<br>The link for downloading the file as a PDF. This field is available in API version 40.0 and later. |
| `Password` | **Type**<br>string<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>A password that allows access to a shared document. |
| `PreferencesAllowOriginalDownload` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>When `true`, the shared document can be downloaded as the file type that it was uploaded as. |

| Field Name | Details |
| --- | --- |
| | When `false`, download availability depends on whether a preview of the file exists. If a preview exists, the file can't be downloaded. If a preview doesn't exist, the file can still be downloaded.<br>If the shared document is a link, it can't be downloaded. |
| `PreferencesAllowPDFDownload` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>When `true`, the shared document can be downloaded as a PDF if the original file type is PDF or if a PDF preview has been generated. |
| `PreferencesAllowViewInBrowser` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>When `true`, a preview of the shared document can be viewed in a Web browser. |
| `PreferencesExpires` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>When `true`, access to the shared document expires on the date that's specified by `ExpiryDate`. |
| `PreferencesLinkLatestVersion` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>When `true`, users see the most recent version of a shared document. When `false`, users see the version of the document that's shared, even if it isn't the most recent version. |
| `PreferencesNotifyOnVisit` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>When `true`, the owner of the shared document is emailed the first time that someone views or downloads the shared document. |
| `PreferencesNotifyRndtnComplete` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>When `true`, the owner of the shared document is emailed when renditions of the shared document that can be previewed in a Web browser are generated. |
| `PreferencesPasswordRequired` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>When `true`, a password, specified by `Password`, is required to access the shared document. |
| `RelatedRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the record, such as an Account, Campaign, or Case, that the shared document is related to.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>RelatedRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Campaign, Case, Contact, EmailMessage, Lead, ListEmail, Opportunity |
| `ViewCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of times that the shared document has been viewed. |

# Usage

Use this object to create, update, delete, or query information about a document shared externally via a link or via Salesforce CRM Content delivery.

The ContentDistribution object supports triggers before and after these operations: insert, update, delete. It supports triggers after undelete.

**Example:** The VP of Marketing wants file authors to specify whether their files can be shared with external people using content delivery. He also wants some files to have a password. You can add a custom field `DeliveryPolicy` on the ContentVersion object. Make the custom field a picklist with the values, `Allowed`, `Blocked`, and `Password required`. Add the field to the ContentVersion layout so that the user can set the delivery policy per file. Then, add an insert trigger for the ContentDistribution object to enforce the rules based on the delivery policy set in the file.

**Note:** The `ContentVersionId` for `ContentDistribution` must be unique.

This trigger for the ContentDistribution object enforces the delivery policy rules for each file:

```
trigger deliveryPolicy on ContentDistribution (before insert) {
    for (ContentDistribution cd : trigger.new) {
        String versionId = DeliveryPolicyHelper.getContentVersionId(cd);
        ContentVersion version = [select DeliveryPolicy__c from ContentVersion where
Id = :versionId];
        String policy = version.DeliveryPolicy__c;
        if (policy.equals('Blocked')) {
            cd.addError('This file is not allowed to be delivered.');
        } else if (policy.equals('Password required')){
            if (!DeliveryPolicyHelper.requirePassword(cd)) {
                cd.addError('To deliver this file, set a password.');
            }
        }
    }
}
```

The trigger calls this helper class:

```
public class DeliveryPolicyHelper {
    public static String getContentVersionId(ContentDistribution cd) {
        if (cd.ContentVersionId != null) {
            return cd.ContentVersionId;
        } else {
            String versionId = [select LatestPublishedVersionId from ContentDocument
where Id = :cd.ContentDocumentId].get(0).LatestPublishedVersionId;
            return versionId;
        }
    }

    public static boolean requirePassword(ContentDistribution cd) {
        return cd.PreferencesPasswordRequired;
    }
}
```

**Important:** Apex has a per organization limit of 10 concurrent requests that last longer than 5 seconds. A trigger that uploads files can easily hit this limit.

# ContentDistributionEventLog

Content Distribution events contain information about content distributions and deliveries to users. This object is available in API version 65.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
|---|---|
| `Action` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The action that's used when a delivery is viewed. |
| `DeliveryIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the content delivery. |
| `DeliveryLocation` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The location of the delivery. |
| `RelatedObjectIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The 15-character ID of the record that's associated with the delivery distribution. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `20130715233322.670`. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |
| `VersionIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the content version. |

# ContentDistributionView

Represents information about views of a shared document. This read-only object is available in API version 32.0 and later.

## Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

## Special Access Rules

- Content deliveries must be enabled to query content deliveries.
- Users (including users with the "View All Data" permission) can query only the files that they have access to. If the file is managed by a Content Library, the user must have "Deliver Content" enabled in the library permission definition and be a member of the library. If the file isn't managed by a Content Library, the user must have the "Enable Creation of Content Deliveries for Salesforce Files" permission.
- ContentDistributionView can be deleted by an admin.
- If the shared document is deleted, the delete cascades to any associated ContentDistributionView. The ContentDistributionView is still queryable by using the `QueryAll` verb.
- Customer Portal users can't access this object.
- Chatter Free users can't access this object.

## Fields

| Field Name | Details |
|---|---|
| `DistributionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the content delivery that the document is part of.<br>This is a relationship field.<br>**Relationship Name**<br>Distribution<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentDistribution |
| `IsDownload` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>`true` if the shared document is downloaded; `false` if the shared document is viewed. |
| `IsInternal` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>`true` if the shared document is viewed by a user in the same organization; `false` if viewed by an external user. |
| `ParentViewId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of this instance of accessing the shared document. |

## Usage

Use this read-only object to query information about users who are accessing shared documents.

# ContentDocument

Represents a document that has been uploaded to a library in Salesforce CRM Content or Salesforce Files. This object is available in versions 17.0 and later for Salesforce CRM Content. This object is available in API version 21.0 and later for Salesforce Files.

The maximum number of documents that can be published is 30,000,000. Archived files count toward this limit and toward storage usage limits.

- Contact Manager, Group, Professional, Enterprise, Unlimited, and Performance Edition customers can publish a maximum of 200,000 new versions per 24-hour period.
- Developer Edition and trial users can publish a maximum of 2,500 new versions per 24-hour period.

## Supported Calls

`delete()`, `describeLayout()` `describeSObjects()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`

## Special Access Rules

- By default, users (including users with the View All Data permission) can only query files they have access to, including:
  - Salesforce Files in their personal library and in libraries they're a member of, regardless of library permissions (API version 17.0 and later).
  - Salesforce Files they own, shared directly with them, posted on their profile, or posted on groups they can see (API version 21.0 and later).

  Enable the Query All Files permission to let your View All Data users bypass the restrictions on querying files.
  - Query All Files returns all files, including files in non-member libraries and files in unlisted groups.
  - Users can't edit, upload new versions, or delete files they don't have access to.
  - View All Data permission is required to enable Query All Files.

- For API version 62.0 and later, enable the Query Non Vetoed Files permission in Data Cloud orgs to let your users view and SOQL query all public and non vetoed files in the org.
- Customer and Partner Portal users must have the View Content in Portal permission to query content in libraries where they have access.
- A Salesforce CRM Content document can be deleted if any of the following are true:
  - The document is published into a personal library or is in the user's upload queue.
  - The document is published into a public library, the user trying to delete the document is the file owner, and is a member of that library.
  - The document is published into a public library and the user trying to delete the document is not the owner but has the Manage Library or Delete Content library permission enabled.

For API version 25.0 and later, you can change ownership of Salesforce Files and Salesforce CRM Content documents.

- A user can change ownership of a Salesforce CRM Content document or Salesforce file if any of the following are true:
  - The user is the current owner.
  - The user has the Modify All Data permission enabled.
  - For a file in a Content Library, the user either has the Manage Salesforce CRM Content permission enabled, or has the Manage Library permission enabled for the library containing the document.

  Note: When the owner of a ContentDocument is changed, ContentDocumentLink may be triggered. This action deletes the ContentDocumentLink to the old owner and inserts one to the new owner.

  Note:
  - The user who is becoming the owner of the document must be a visible user who is active, but the original owner can be inactive.
  - A document's owner can be changed to a user who doesn't have access to the library that contains the document. Library administrators must give the new owner membership to the library.

# Fields

| Field | Details |
|---|---|
| `ArchivedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who archived the document.<br>This field is available in API version 24.0 and later. |
| `ArchivedDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The date when the document was archived.<br>This field is available in API version 24.0 and later. |
| `ContentAssetId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>If the ContentDocument is an asset file, this field points to the asset. For most entities, the value of this field is `null`.<br>This field is available in API version 38.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>ContentAsset<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentAsset |
| `ContentModifiedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date the document was modified.<br>`ContentModifiedDate` updates when, for example, the document is renamed or a new document version is uploaded. When you're uploading the first version of a document, `ContentModifiedDate` can be set to the current time or anytime in the past.<br>This field is available in API version 32.0 and later. |
| `ContentSize` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The size of the document in bytes for files smaller than 2 GB. If the file is 2 GB or larger, use the `ContentSizeLong` field<br>This field is available in API version 31.0 and later. |

| Field | Details |
| --- | --- |
| `ContentSizeLong` | **Type**<br>long<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The size of the document in bytes.<br>This field is available in API version 65.0 and later. We recommend that you use this field instead of `ContentSize` even for files smaller than 2 GB. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>A description of the document.<br>This field is available in API version 31.0 and later. |
| `Division` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as “North America,” “Healthcare,” or “Consulting.” Available only if the organization has the Division permission enabled. |
| `FileExtension` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>File extension of the document.<br>This field is available in API version 31.0 and later. |
| `FileType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Type of document, determined by the file extension.<br>This field is available in API version 31.0 and later. |
| `IsArchived` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the document has been archived (`true`) or not (`false`). |
| `IsInternalOnly` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates that a file is for internal use only. When `true`, prevents users with the Query Non Vetoed Files permission from viewing and performing SOQL query on public and non vetoed files in a Data Cloud org. Default value is `false`.<br>This field is available in API version 62.0 and later. |
| `LastReferencedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed. |
| `LatestPublishedVersionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the latest document version (ContentVersion).<br>This is a relationship field.<br>**Relationship Name**<br>LatestPublishedVersion<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentVersion |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>ID of the owner of this document.<br>This is a relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the library that owns the document. Created automatically when inserting a ContentVersion via the API for the first time.<br>This field is available in API version 24.0 and later when Salesforce CRM Content is enabled. |
| `PublishStatus` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Indicates if and how the document is published. Valid values are: |

| Field | Details |
| --- | --- |
| | • P—The document is published to a public library and is visible to other users. Label is **Public**.<br>• R—The document is published to a personal library and is not visible to other users. Label is **Personal Library**.<br>• U—The document is not published because publishing was interrupted. Label is **Upload Interrupted**. |
| SharingOption | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Controls whether sharing is frozen for a file. Only administrators and file owners with Collaborator access to the file can modify this field. Default is Allowed, which means that new shares are allowed. When set to Restricted, new shares are prevented without affecting existing shares.<br>This field is available in API versions 35.0 and later. |
| SharingPrivacy | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Controls sharing privacy for a file. Only administrators and file owners with Collaborator access to the file can modify this field.<br>Valid values are:<br>• N—Default. Label is **Visible to Anyone With Record Access**<br>• P—The file is private on records but can be shared selectively with others. Label is **Private on Records**.<br>This field is available in API versions 41.0 and later. |
| Title | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort, Update<br>**Description**<br>The title of a document. |

# Usage

- Use this object to retrieve, query, update, and delete the latest version of a document in a library or a Salesforce file. Use the ContentVersion object to create, query, retrieve, search, edit, and update a specific version of a Salesforce CRM Content document or Salesforce file.
- A document record is a container for multiple version records. You create a version to add a document to the system. The new version contains the actual file data which allows the document to have multiple versions. The version stores the body of the uploaded document.
- To create a document, create version via the ContentVersion object without setting the `ContentDocumentId`. This process automatically creates a parent document record. When adding a new version of the document, you must specify an existing `ContentDocumentId` which initiates the revision process for the document. When the latest version is published, the title, owner, and publish status fields are updated in the document.
- You can't add new versions of archived documents.
- When you delete a document, all versions of that document are deleted, including ratings, comments, and tags.
- A ContentDocument insert trigger executes when a file (ContentDocument) is added to the file library.
- A ContentDocument delete trigger executes when a file is deleted, but the cascaded ContentDocumentLink delete does not trigger ContentDocumentLink triggers.
- The `query()` call doesn't return archived documents. The `queryAll()` call returns archived documents.
- To query a file that is accessible only through a record share, you must specify the content ID of the file. When SOQL querying the ContentDocument object, the `ContentDocumentId` must be compounded by an AND operator.

  For example,

```
SELECT Id, Title FROM ContentDocument
WHERE (Id = '<ContentDocumentId>' and Title LIKE '%<title>%'
```

```
SELECT Id, Title, MyCustomField_c FROM ContentDocument
WHERE (Id IN ('<Id1>', '<Id2>')) AND (Title LIKE '%<title1>%' OR (Title LIKE '%<title2>%')
```

- If you query versions in the API, versions with a `PublishStatus` of `Upload Interrupted` are not returned.
- Assign topics to ContentDocument using `TopicAssignment` in API version 37.0 or later.

# Associated Objects

This object has the following associated objects. Unless noted, associated objects are available in the same API version as this object.

**ContentDocumentChangeEvent on page 68 (API version 55.0)**
Change events are available for the object.

**ContentDocumentFeed (API version 20.0)**
Feed tracking is available for the object.

**ContentDocumentHistory**
History is available for tracked fields of the object.

SEE ALSO:

ContentDocumentHistory

ContentVersion

# ContentDocumentHistory

Represents the history of a document. This object is available in versions 17.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

## Special Access Rules

- Customer and Partner Portal users must have the "View Content in Portal" permission to query content in libraries where they have access.
- A user can query all versions of a document from their personal library and any version that is part of or shared with a library where they are a member, regardless of library permissions.

## Fields

| Field | Details |
|---|---|
| `ContentDocumentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the document.<br>This is a relationship field.<br>**Relationship Name**<br>ContentDocument<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentDocument |
| `DataType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Data type of the field that was changed. |
| `Division` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled. |
| `Field` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Sort, Restricted picklist<br>**Description**<br>The name of the field that was changed. Possible values include:<br>• `contentDocPublished`—The document is published into a library.<br>• `contentDocUnpublished`—The document is archived or removed from a library, either directly or when the owning library is changed.<br>• `contentDocRepublished`—The document is removed from the archive.<br>• `contentDocFeatured`—The document is featured.<br>• `contentDocSubscribed`—The document is subscribed to.<br>• `contentDocUnsubscribed`—The document is no longer subscribed to. |
| `NewValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The new value of the field that was changed. |
| `OldValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The latest value of the field before it was changed. |

## Usage

Use this read-only object to query the history of a document.

SEE ALSO:

ContentDocument

# ContentDocumentLink

Represents the link between a Salesforce CRM Content document, Salesforce file, or ContentNote and where it's shared. A file can be shared with other users, groups, records, and Salesforce CRM Content libraries. This object is available in versions 21.0 and later for Salesforce CRM Content documents and Salesforce Files.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

- In API versions 59.0 and later, enable the Query All Files permission to query without a filter on `id`, `LinkedEntityId`, and `documentID` fields. The View All Data permission is required to enable Query All Files.
- In API versions 33.0 and later, you can create and delete ContentDocumentLink objects with a `LinkedEntityId` of any record type that can be tracked in the feed, even if feed tracking is disabled for that record type.
- In API versions 25.0 and later, you can create ContentDocumentLink objects with a `LinkEntityId` of type User, CollaborationGroup, or Organization.
- In API versions 21.0 and later, users with explicit Viewer access (the file has been directly shared with the user) to a file can delete ContentDocumentLink objects between the file and other users who have Viewer access. In the same API versions, any user with Viewer access to a file can delete ContentDocumentLink objects between the file and organizations or groups of which they are a member.
- For orgs with Digital Experiences enabled, a document can only be shared with users and groups that are a part of the Experience Cloud site the file was created in.

## Fields

| Field | Details |
| --- | --- |
| `ContentDocumentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the document.<br>This is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>ContentDocument<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentDocument |
| `LinkedEntityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the linked object. Can include Chatter users, groups, records (any that support Chatter feed tracking including custom objects), and Salesforce CRM Content libraries.<br>Using the API only, you can relate notes to custom settings.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>LinkedEntity<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Accreditation, ActivationTarget, ActivationTrgtIntOrgAccess, ApiAnomalyEventStore, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskIndDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CodeSet, CollaborationGroup, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, ConsumptionSchedule, Contact, ContactEncounter, ContactEncounterParticipant, ContentWorkspace, Contract, ConversationEntry, CoverageBenefit, CoverageBenefitItem, CredentialStuffingEventStore, CreditMemo, CreditMemoLine, Dashboard, DashboardComponent, DataStream, DelegatedAccount, DocumentChecklistItem, EmailMessage, EmailTemplate, EngagementChannelType, EnhancedLetterhead, EnrollmentEligibilityCriteria, Event, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, |

| Field | Details |
| --- | --- |
| | HealthcareProviderSpecialty, HealthcareProviderTaxonomy, Identifier, Image, IndividualApplication, Invoice, InvoiceLine, Lead, ListEmail, Location, MarketSegment, MarketSegmentActivation, MemberPlan, MessagingSession, MktCalculatedInsight, OperatingHours, Opportunity, Order, OrderItem, Organization, OtherComponentTask, OutgoingEmail, PartyConsent, PersonEducation, PersonLanguage, PersonLifeEvent, PersonName, PlanBenefit, PlanBenefitItem, Product2, ProductFulfillmentLocation, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, ProviderSearchSyncLog, PurchaserPlan, PurchaserPlanAssn, ReceivedDocument, Report, ReportAnomalyEventStore, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SessionHijackingEventStore, Shift, Shipment, ShipmentItem, Site, SkillRequirement, SocialPost, Solution, Task, ThreatDetectionFeedback, Topic, User, Visit, VisitedParty, Visitor, VoiceCall, VolunteerProject, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup, WorkTypeGroupMember |
| `ShareType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Required. The permission granted to the user of the shared file in a library. This is determined by the permission the user already has in the library. This field is available in API version 25.0 and later.<br>**`V`**<br>Viewer permission. The user can explicitly view but not edit the shared file.<br>**`C`**<br>Collaborator permission. The user can explicitly view and edit the shared file. You can retrieve the ShareType for ContentDocumentLink, but you can't create a ContentDocumentLink with a `ShareType` of `C` from an Apex trigger.<br>**`I`**<br>Inferred permission. The user's permission is determined by the related record. For shares with a library, this is defined by the permissions the user has in that library. Inferred permission on shares with libraries and file owners is available in API versions 21.0 and later. Inferred permission on shares with standard objects is available in API versions 36.0 and later. |
| `Visibility` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Specifies whether this file is available to all users, internal users, or shared users. This field is available in API version 26.0 and later.<br>`Visibility` can have the following values.<br>• `AllUsers`—The file is available to all users who have permission to see the file.<br>• `InternalUsers`—The file is available only to internal users who have permission to see the file.<br>• `SharedUsers`—The file is available to all users who can see the feed to which the file is posted. SharedUsers is used only for files shared with users, and is available only when an org has private org-wide sharing on by default. The `SharedUsers` value is available in API version 32.0 and later.<br>Note the following exceptions for `Visibility`.<br>• `AllUsers` & `InternalUsers` values apply to files posted on standard and custom object records, but not to users, groups, or content libraries.<br>• For posts to a record feed, `Visibility` is set to `InternalUsers` for all internal users by default.<br>• External users can set `Visibility` only to `AllUsers`.<br>• On user and group posts, only internal users can set `Visibility` to `InternalUsers`.<br>• For posts to a user feed, if the organization-wide default for user sharing is set to private, `Visibility` is set to `SharedUsers`.<br>• Only internal users can update Visibility.<br>• Visibility can be updated on links to files posted on standard and custom object records, but not to users, groups, or content libraries.<br>• Visibility is updatable in API version 43.0 and later.<br>The visibility setting on ContentDocumentLink determines a file's visibility on a record post. When a file has multiple references posted in a feed, the file's visibility is determined by the most visible setting. |

# Usage

Use this object to query the locations where a file is shared or query which files are linked to a particular location. For example, the following query returns a particular document shared with a Chatter group:

```
SELECT ContentDocument.title FROM ContentDocumentLink WHERE ContentDocumentId =
'069D00000000so2' AND LinkedEntityId = '0D5000000089123'
```

- You can't run a query without filters against ContentDocumentLink.
- You can't filter on ContentDocument fields if you're filtering by `ContentDocumentId`. You can only filter on ContentDocument fields if you're filtering by `LinkedEntityId`.
- You can't filter on the related object fields. For example, you can't filter on the properties of the account to which a file is linked. You can filter on the properties of the file, such as the title field.

A SOQL query must filter on one of `Id`, `ContentDocumentId`, or `LinkedEntityId`.

The ContentDocumentLink object supports triggers before and after these operations: insert, update, delete. A ContentDocumentLink trigger executes whenever there is an addition or deletion of the ContentDocumentLink. When a file is deleted, a ContentDocument delete trigger executes, but the cascaded ContentDocumentLink delete does not trigger ContentDocumentLink triggers.

**Example:** This trigger for the ContentDocumentLink object prevents public XLSX files from being shared.

```
trigger NoShareXLSX on ContentDocumentLink (after insert) {
    for (ContentDocumentLink cdl : trigger.new) {
        if (!CDLHelper.isSharingAllowed(cdl)) {
            cdl.addError('Sorry, you cannot share this file.');
        }
    }
}
```

The trigger calls this helper class.

```
public class CDLHelper {

    /**
     * Gets FileExtension of the inserted content.
     */
    public static String getFileExtension(ContentDocumentLink cdl) {
        String fileExtension;
        String docId = cdl.ContentDocumentId;
       FileExtension = [select FileExtension from ContentVersion where ContentDocumentId
 = :docId].get(0).FileExtension;
        return FileExtension;
    }

    /**
     * Checks the file's PublishStatus and FileExtension to decide whether user can
share the file with others.
     * PublishStatus 'P' means the document is in a public library.
     */
    public static boolean isSharingAllowed(ContentDocumentLink cdl) {
        String docId = cdl.ContentDocumentId;
       ContentVersion version = [select PublishStatus,FileExtension from ContentVersion
 where ContentDocumentId = :docId].get(0);
        if (version.PublishStatus.equals('P') && (version.FileExtension != null &&
version.FileExtension.equals('xlsx'))) {
            return false;
        }
        return true;
    }

    /**
     * Gets the parent account name if the file is linked to an account.
     */
    public static String getAccountName(ContentDocumentLink cdl) {
        String name;
        String id = cdl.LinkedEntityId;
        if (id.substring(0,3) == '001') {
            name = [select Name from Account where Id = :id].get(0).Name;
        }
```

```
        return name;
    }
}
```

**Important:** Apex has a per organization limit of 10 concurrent requests that last longer than 5 seconds. A trigger that uploads files, like bulk `ContentVersion` creation, can easily hit the SOQL queries limit.

## Associated Objects

This object has the following associated objects. Unless noted, associated objects are available in the same API version as this object.

**ContentDocumentLinkChangeEvent on page 68 (API version 55.0)**
Change events are available for the object.

SEE ALSO:

ContentDocument

# ContentDocumentListViewMapping

Represents an association between a ListView and a Quip ContentDocument. Applies to Quip file types only. Maintains the mapping between a list view and Quip document when the list view is exported to a newly created Quip document. This object is available in API version 44.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To use this object, the Files Connect and Quip permissions must be enabled in the org.

To insert and update this object through the API, the QuipMassAction gater permission must also be enabled.

## Fields

| Field | Details |
|---|---|
| `ContentDocumentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the document. |

| Field | Details |
| --- | --- |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this document. |
| `ListViewId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the list view associated with the document. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the document. |

## Usage

ContentDocumentListViewMapping is used primarily by the Quip list view integration feature. Only Quip file types (Quip sheets and docs) are supported. The ContentDocumentId field must point to a Quip file.

# ContentDocumentSubscription

Represents a subscription for a user following or commenting on a file in a library. This object is available in API version 42.0 and later.

## Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Only users with Modify All Data permission have access to this object.

## Fields

| Field | Details |
|---|---|
| `ContentDocumentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the file.<br>This is a relationship field.<br>**Relationship Name**<br>ContentDocument<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentDocument |
| `IsCommentSub` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Specifies whether the user made comments on the file. |
| `IsDocumentSub` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Specifies whether the user follows the file. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the user following or commenting on the file.<br>This is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>User<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

# ContentDocLinkEventLog

Content Document Link events contain sharing information for content documents. This object is available in API version 65.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `DocumentIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the document that's being shared. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. |
| `SharedWithObjectIdentifier` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Who the document was shared with. |
| `SharingOperation` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of sharing operation on the document.<br>**Possible Values**<br>• `INSERT`<br>• `UPDATE`<br>• `DELETE` |
| `SharingPermission` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>What permissions the document was shared with.<br>**Possible Values**<br>• `V`: Viewer<br>• `C`: Collaborator<br>• `I`: Inferred—that is, the sharing permissions were inferred from a relationship between the viewer and document. For example, a document's owner has a sharing permission to the document itself. Or, a document can be a part of a content collection, and the viewer has sharing permissions to the collection rather than explicit permissions to the document directly. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `UserIdentifier` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |

# ContentFolder

Represents a folder in a content library for adding files. This object is available in API version 34.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

- Salesforce CRM Content or Chatter must be enabled to access ContentFolder.
- All users with a content feature license can modify folders in their personal library.
- To modify a folder, the user must be a member of the library and have permission to modify folders.

## Fields

| Field Name | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the folder. |
| `ParentContentFolderId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the ParentFolder.<br>This is a relationship field. |

| Field Name | Details |
| --- | --- |
| | **Relationship Name**<br>ParentContentFolder<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentFolder |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ContentFolderChangeEvent (API version 62.0)**
Change events are available for the object.

# ContentFolderItem

Represents a file (ContentDocument) or folder (ContentFolder) that resides in a ContentFolder in a ContentWorkspace. This object is available in API version 35.0 and later.

## Supported Calls

`describeSObjects()`, `describeLayout()`, `query()`, `retrieve()`

## Special Access Rules

## Fields

| Field Name | Details |
| --- | --- |
| `ContentSize` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The file or folder size of the ContentFolderItem. |
| `FileExtension` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Specifies the file extension if the ContentFolderItem is a file. |
| `FileType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Specifies the type of file if ContentFolderItem is a file. |
| `IsFolder` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates that the ContentFolderItem is a folder, and not a file. |
| `ParentContentFolderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the ContentFolder that the ContentFolderItem resides in.<br>This is a relationship field.<br>**Relationship Name**<br>ParentContentFolder<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentFolder |
| `Title` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The name of the file or folder. |

# ContentFolderLink

Defines the association between a library and its root folder. This object is available in API version 34.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

- Salesforce CRM Content must be enabled to access ContentFolderLink.
- ContentFolderLink is read-only in the context of a library.

## Fields

| Field Name | Details |
|---|---|
| `ContentFolderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the folder.<br>This is a relationship field.<br>**Relationship Name**<br>ContentFolder<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentFolder |
| `EnableFolderStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates the status of enabling folders for the library. Valid values are:<br>• `C` — Completed folder enablement<br>• `S` — Started folder enablement<br>• `F` — Failed folder enablement<br>This field is available in API version 39.0 and later. |

| Field Name | Details |
| --- | --- |
| `ParentEntityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Name of the entity the folder hierarchy is linked to. |

# ContentFolderMember

Defines the association between a file and a folder. This object is available in API version 34.0 and later.

## Supported Calls

`describeSObjects()`, `delete()`, `query()`, `retrieve()`, `update()`

## Special Access Rules

- Salesforce CRM Content or Chatter must be enabled to access ContentFolderMember.
- All users with a content feature license can modify folders in their personal library.
- To modify ContentFolderMember, the user must be a member of the library and have permission to modify folders.

## Fields

| Field Name | Details |
| --- | --- |
| `ChildRecordId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the file.<br>This is a relationship field.<br>**Relationship Name**<br>ChildRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentDocument |

| Field Name | Details |
| --- | --- |
| `ParentContentFolderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>ID of the folder the file is in.<br>This is a relationship field.<br>**Relationship Name**<br>ParentContentFolder<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentFolder |

# ContentHubItem

Represents a file or folder in a Files Connect external data source, such as Microsoft SharePoint or OneDrive for Business. This object is available in API version 33.0 and later.

## Special Access Rules

Chatter and Files Connect must be enabled for the organization.

## Supported Calls

`describeSObjects()`, `query()`, `search()`

## Fields

| Field Name | Details |
| --- | --- |
| `ContentHubRepositoryId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable<br>**Description**<br>The ID for the related external data source described by the ContentHubRepository object. |

| Field Name | Details |
| --- | --- |
| `ContentItemSize` | **Type**<br>long<br>**Properties**<br>Group, Nillable<br>**Description**<br>The size of the file or folder. Available in API version 65.0 and later. |
| `ContentModifiedDate` | **Type**<br>dateTime<br>**Properties**<br>Nillable<br>**Description**<br>Date the file or folder content last changed. |
| `ContentSize` | **Type**<br>int<br>**Properties**<br>Group, Nillable<br>**Description**<br>The size of the file or folder that's less than 2 GB. |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable<br>**Description**<br>Explanation of item in external data source. |
| `ExternalContentUrl` | **Type**<br>url<br>**Properties**<br>Group, Nillable<br>**Description**<br>The URL of the document content in the external data source. |
| `ExternalDocumentUrl` | **Type**<br>url<br>**Properties**<br>Group, Nillable<br>**Description**<br>The URL of the detail page in the external data source. |

| Field Name | Details |
| --- | --- |
| `ExternalId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID for the file or folder in the external data source. |
| `FileExtension` | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>File format extension, such as .doc or .pdf |
| `FileType` | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>Complete file type, such as “Microsoft Word Document.” |
| `IsFolder` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether item is a folder or file. |
| `MimeType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable<br>**Description**<br>MIME type of the content. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Name of the file or folder in the external data source. |

| Field Name | Details |
| --- | --- |
| `Owner` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable<br>**Description**<br>Username of the content owner in the external data source. |
| `ParentId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable<br>**Description**<br>The ID of the parent folder for the record.<br>This field isn't returned in queries or searches of the ContentHubItem object. It supports only WHERE clauses, such as the following:<br>`WHERE ContentHubRepositoryId = <ID of external source> and ParentId = <ID of parent folder or record>`.<br>Or specify `WHERE ParentId = <name of root folder>` to return the children of the root folder.<br>Tip: The ParentId field supports both Salesforce IDs (in the format "0CHxxx") and external IDs. |
| `Title` | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>The title that appears in the content, which often differs from the `Name` of the containing file or folder. |
| `UpdatedBy` | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>Username for the person who last updated the file. |

## Usage

The following SOQL query examples show how to retrieve files and folders from a Files Connect external data source. These examples use placeholders for ID values for the repository ID and folder IDs. Before running these queries, replace the placeholders with valid ID values for your external data source and folders.

**Important:** You must filter queries and searches on ContentHubItem with the `ContentHubRepositoryId` field; for example, `SELECT Id FROM ContentHubItem WHERE ContentHubRepositoryId = <ID of external data source>`.

**Example 1:** Get the ID and name of the root folder in an external file source.

```
SELECT Id, Name
FROM ContentHubItem
WHERE ContentHubRepositoryId = '<repository ID>' AND ParentId = NULL
```

**Example 2:** List all folders and files under the specified root folder.

```
SELECT Id, Name
FROM ContentHubItem
WHERE ContentHubRepositoryId = '<repository ID>' AND ParentId = '<root folder ID>'
```

**Example 3:** List all external file data sources by querying ContentHubRepository.

```
SELECT DeveloperName
FROM ContentHubRepository
```

**Example 4:** List all files and folders in a given folder and external file source.

```
SELECT Id, Name
FROM ContentHubItem
WHERE ContentHubRepositoryId = '<repository ID>' AND ParentId = '<parent folder ID>'
```

**Example 5:** To return only folders in the result set, add `IsFolder = true` in the `WHERE` clause to a query that returns files and folders. For example, the following query lists all folders under the root folder.

```
SELECT Id, Name
FROM ContentHubItem
WHERE ContentHubRepositoryId = '<repository ID>' AND ParentId = '<root folder ID>'
      AND IsFolder = true
```

**Example 6:** Retrieve a link that is used to open the specified document in an external source.

```
SELECT ExternalDocumentUrl
FROM ContentHubItem
WHERE ContentHubRepositoryId = '<repository ID>' AND Id = '<document ID>'
```

**SOSL Example:** Retrieve the ID and name of all documents that contain the search string. The result set is limited to the first 10 documents.

```
FIND {<search string>}
RETURNING ContentHubItem(Id, Name
                         WHERE ContentHubRepositoryId = '<repository ID>')
LIMIT 10
```

# ContentHubRepository

Represents a Files Connect external data source such as Microsoft SharePoint or OneDrive for Business. This object is available in API version 33.0 and later.

## Special Access Rules

Chatter and Files Connect must be enabled for the organization.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
|---|---|
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique name of the record in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. This field is automatically generated but you can supply your own value if you create the record using the API.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Master label for the external data source. This display value is the internal label and does not get translated. |
| `Type` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The data source type. Possible values are:<br>• `contenthubGoogleDrive`<br>• `contenthubOffice365`<br>• `contenthubOneDrive`<br>• `contenthubSharepoint`<br>• `contenthubBox`<br>• `contenthubQuip` |

# ContentNote

Represents a note created with the enhanced note taking tool, released in Winter '16. This object is available in API version 32.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`

## Special Access Rules

- Notes must be enabled.

## Fields

| Field | Details |
| --- | --- |
| `Content` | **Type**<br>base64<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The content or body of the note, which can include properly formatted HTML or plain text. When a document is uploaded or downloaded via the API, it must be base64 encoded (for upload) or decoded (for download). Any special characters within plain text in the `Content` field must be escaped. You can escape special characters by calling `content.escapeHtml4()`. If the input contains unsafe HTML characters or new lines, we automatically strip them out before saving the content. |
| `ContentModifiedDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date the document was modified. ContentModifiedDate updates when, for example, the document is renamed or a new document version is uploaded.<br>This field is available in API version 48.0 and later. |
| `ContentSize` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Size of the note in bytes. |
| `FileExtension` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>File extension of the note. |
| `FileType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Type of file for the note. All notes have a file type of `SNOTE`. |
| `IsReadOnly` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Group, Sort<br>**Description**<br>Indicates whether the note is read only. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date the note was last viewed. This field is available in API version 35.0 and later. |

| Field | Details |
| --- | --- |
| `LatestContentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Lookup to the note's ContentBody. This field is available in API version 52.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>LatestContent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentBody |
| `LatestPublishedVersionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the ContentVersion for the latest published version of the note. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create (for users assigned the Set Audit Fields Upon Creation permission), Defaulted on create, Filter, Group, Sort, Update (for users assigned the Set Audit Fields Upon Creation permission)<br>**Description**<br>ID of the owner of the note. |
| `SharingPrivacy` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Controls sharing privacy for a file. Only administrators and file owners with Collaborator access to the file can modify this field. Default is `Visible to Anyone With Record Access`. When set to `Private on Records`, the file is private on records but can be shared selectively with others.<br>This field is available in API versions 41.0 and later. |

| Field | Details |
| --- | --- |
| `TextPreview` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A preview of the note's content. This field is available in API version 35.0 and later. |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Namefield, Sort, Update<br>**Description**<br>Title of the note. |

## Usage

- Use ContentNote to create, query, retrieve, search, edit, and update notes.
- ContentNote is built on ContentVersion, and so it has many of the same usages.
- Not all fields can be set for notes. Only the `Content` and `Title` fields can be updated.
- The maximum file size you can upload via SOAP API is 50 MB. When a document is uploaded or downloaded via the API, it's converted to base64. This conversion increases the document size by approximately 37%. Account for the base64 conversion increase so that the file you plan to upload is less than 50 MB after conversion.
- You can convert old Note records to Lightning Experience, so users can view and edit notes from the Notes & Attachments related list in Lightning Experience. Users can edit their converted notes, which are accessible from the Notes related list and Notes tab. Copy old Note records to newly created ContentNote records. Users assigned the Set Audit Fields Upon Creation permission can set the owner, created date, and last modified date on ContentNote records.
- SOQL and SOSL queries on the ContentNote return only the most recent version of the note.
- To relate a note to a record, use `ContentDocumentLink`. Review the `LinkedEntityID` field in `ContentDocumentLink` for a list of objects that notes can relate to.

For example, the following Apex code creates a note and escapes any special characters so they're converted to their HTML equivalents.

**Note:** Apex code doesn't need to be encoded to base64 before it's uploaded and downloaded.

```
ContentNote cn = new ContentNote();
cn.Title = 'test1';
String body = 'Hello World. Before insert/update, escape special characters such as ", ',
 &, and other standard escape characters.';
cn.Content = Blob.valueOf(body.escapeHTML4());
insert(cn);
```

In this example, the following code creates a note using text that is already formatted as HTML, so it doesn't need to be escaped.

```
ContentNote cn = new ContentNote();
cn.Title = 'test2';
```

```
String body = '<b>Hello World. Because this text is already formatted as HTML, it does not
 need to be escaped.
Special characters such as &quot;, etc. must already use their HTML equivalents.</b>';
cn.Content = body;
insert(cn);
```

# ContentNotification

Represents a notification for a file. This object is available in API version 42.0 and later.

## Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Only users with Modify All Data permission have access to this object.

## Fields

| Field | Details |
|---|---|
| `EntityIdentifierId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the object with the notification. |
| `EntityType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Type of object with the notification. One of the following.<br>• `ContentDocument`<br>• `ContentTagName`<br>• `ContentVersion`<br>• `ContentWorkspace`<br>• `ContentWorkspacePermission`<br>• `User` |

| Field | Details |
| --- | --- |
| `Nature` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Type of notification. |
| `Subject` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Subject of the notification. |
| `Text` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Text of the notification. |
| `UsersId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the user who received the notification.<br>This is a relationship field.<br>**Relationship Name**<br>Users<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

# ContentTagSubscription

Represents a subscription for a user following a tag on a file. This object is available in API version 42.0 and later.

## Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Only users with Modify All Data permission have access to this object.

## Fields

| Field | Details |
|---|---|
| `UserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the user following the tag on the file.<br>This is a relationship field.<br>**Relationship Name**<br>User<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

# ContentTaxonomy

Represents a content taxonomy, which is used to classify and organize Salesforce CMS content. To create a hierarchy of terms in a content taxonomy, use this object in addition to the ContentTaxonomyTerm, ContentTaxonomyRelatedTerm, and ContentTaxonomyTermRelatedTerm objects. This object is available in API version 63.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To view this object, users need the permission View Content Taxonomy enabled. To edit this object, users need View Content Taxonomy and Manage Content Taxonomy enabled.

## Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the content taxonomy. This description appears in the API and in the Content Taxonomy tab in the Digital Experiences App. The maximum length is 255 characters. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The combined language and locale ISO code. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the content taxonomy. |

SEE ALSO:

- ContentTaxonomyRelatedTerm
- ContentTaxonomyTerm
- ContentTaxonomyTermRelatedTerm
- ContentTaxonomyTermRelationshipType

# ContentTaxonomyRelatedTerm

Represents the relationship between a term and the content taxonomy to which the term belongs. This object is available in API version 63.0 and later.

## Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

## Special Access Rules

To view this object, users need the permission View Content Taxonomy enabled. To edit this object, users need View Content Taxonomy and Manage Content Taxonomy enabled.

## Fields

| Field | Details |
| --- | --- |
| `ContentTaxonomyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the content taxonomy to which the term belongs.<br>This field is a relationship field.<br>**Relationship Name**<br>ContentTaxonomy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentTaxonomy object |
| `ContentTaxonomyTermId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the term that belongs to the content taxonomy.<br>This field is a relationship field.<br>**Relationship Name**<br>ContentTaxonomyTerm<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentTaxonomyTerm object |

## Usage

To include a term in a taxonomy, you must use this object in addition to the ContentTaxonomyTerm and ContentTaxonomy objects.

SEE ALSO:

- ContentTaxonomy
- ContentTaxonomyTerm

# ContentTaxonomyTerm

Represents a term in a content taxonomy. Terms describe what content is or how it's used, and they're organized in parent-child relationships in the taxonomy hierarchy. This object is available in API version 63.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To view this object, users need the permission View Content Taxonomy enabled. To edit this object, users need View Content Taxonomy and Manage Content Taxonomy enabled.

## Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the content taxonomy term. This description appears in the API and in the Content Taxonomy tab in the Digital Experiences App. The maximum length is 255 characters. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The unique name of the content taxonomy term in the API. This field is unique within your organization. The name:<br>• must be 80 characters or fewer<br>• must begin with a letter |

| Field | Details |
| --- | --- |
| | • can contain only underscores and alphanumeric characters<br>• can't include spaces<br>• can't end with an underscore<br>• can't contain 2 consecutive underscores |
| `ExternalId` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The external ID of the content taxonomy term. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the content taxonomy term. The name must be between 2 and 255 characters long. |

## Usage

To include a term in a taxonomy, you must also use the objects ContentTaxonomyRelatedTerm and ContentTaxonomy. If you create only a ContentTaxonomyTerm, then the term isn't considered part of the taxonomy, and isn't visible. To relate this term to another term in your taxonomy, use the object ContentTaxonomyTermRelatedTerm.

SEE ALSO:

- ContentTaxonomy
- ContentTaxonomyRelatedTerm
- ContentTaxonomyTermRelatedTerm

# ContentTaxonomyTermRelatedTerm

Represents the relationship between two terms in a content taxonomy. This object is available in API version 63.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

## Special Access Rules

To view this object, users need the permission View Content Taxonomy enabled. To edit this object, users need View Content Taxonomy and Manage Content Taxonomy enabled.

## Fields

| Field | Details |
|---|---|
| `ContentTaxonomyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the content taxonomy to which the term belongs.<br>This field is a relationship field.<br>**Relationship Name**<br>ContentTaxonomy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentTaxonomy object |
| `ContentTaxonomyTermId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the primary term that has a relationship with another term.<br>This field is a relationship field.<br>**Relationship Name**<br>ContentTaxonomyTerm<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentTaxonomyTerm object |
| `ContentTaxonomyTrmRelaTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the type of relationship between the two taxonomy terms. |

| Field | Details |
| --- | --- |
| | This field is a relationship field.<br>**Relationship Name**<br>ContentTaxonomyTrmRelaType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentTaxonomyTermRelationshipType object |
| `RelatedContentTaxonomyTermId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the term that is related to the primary term.<br>This field is a relationship field.<br>**Relationship Name**<br>RelatedContentTaxonomyTerm<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentTaxonomyTerm object |

## Usage

To relate a term to another term in a content taxonomy, use this object in addition to the ContentTaxonomyTerm object. This object can't be updated. You can only create and delete it.

SEE ALSO:

ContentTaxonomyTerm

# ContentTaxonomyTermRelationshipType

Represents the type of relationship between two terms in a content taxonomy. This object is available in API version 63.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

To view this object, users need the permission View Content Taxonomy enabled.

## Fields

| Field | Details |
|---|---|
| `ContentTaxonomyTrmRelaCatg` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Category of the relationship type.<br>Possible values are:<br>• `HasBroader` |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Description of the relationship type. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Name of the relationship type. |

## Usage

ContentTaxonomyRelationshipType can't be created, updated, or deleted. In API version 63.0, the default category for the relationship type is HasBroader.

# ContentTransferEventLog

ContentTransferEventLog stores information about content transfer events, such as downloads, uploads, and previews. This information includes events performed on files and attachments to records. This object is available in API version 62.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `DocumentIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the document that's being shared. |
| `FilePreviewType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The content type of the file preview. |
| `FileSize` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The size of rendition being added (bytes). |
| `FileType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The content type of the file version. |
| `OperationType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The operation that's being performed. |

| Field | Details |
| --- | --- |
| | **Possible Values**<br>• `meta_deploy`<br>• `meta_list`<br>• `meta_retrieve`<br>• `meta_synchronous_create`<br>• `meta_synchronous_read`<br>• `meta_synchronous_upsert` |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 18-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943YAS` |
| `VersionIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the content version. |

# ContentUserSubscription

Represents a subscription for a user following another user. This object is available in API version 42.0 and later.

## Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Only users with Modify All Data permission have access to this object.

## Fields

| Field | Details |
|---|---|
| `SubscribedToUserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the user who is followed by another user.<br>This is a relationship field.<br>**Relationship Name**<br>SubscribedToUser<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `SubscriberUserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the user who follows another user.<br>This is a relationship field.<br>**Relationship Name**<br>SubscriberUser<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>User |

# ContentVersion

Represents a specific version of a document in Salesforce CRM Content or Salesforce Files. This object is available in versions 17.0 and later for Salesforce CRM Content documents. This object is available in versions 20.0 and later for Salesforce Files.

The maximum number of versions that can be published in a 24-hour period is 200,000.

Note: Depending on how files are shared, queries on ContentDocument and ContentVersion without specifying an ID don't return all files a user has access to. For example, if a user only has access to a file because they have access to a record that the file is shared with, the file won't be returned in a query such as "SELECT Id FROM ContentDocument."

## Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

- All users with a content feature license can create versions in their personal library. Customer and Partner Portal users must also supply the `NetworkId` of the Experience Cloud site in the request.
- By default, users (including users with the "View All Data" permission) can only query files they have access to, including:
  - Salesforce Files in their personal library and in libraries they're a member of, regardless of library permissions (API version 17.0 and later).
  - Salesforce Files they own, shared directly with them, posted on their profile, or posted on groups they can see (API version 21.0 and later).

  Enable the Query All Files permission to let your View All Data users bypass the restrictions on querying files.
  - Query All Files returns all files, including files in non-member libraries and files in unlisted groups.
  - Users can't edit, upload new versions, or delete files they don't have access to.
  - View All Data permission is required to enable Query All Files.
- All users can update versions in their personal library.
- The owner of a version or document can update the document if they're a member of the library, regardless of library permissions.
- To update a Salesforce CRM Content document, the user must be a member of the library with one of these library privileges enabled:
  - Add Content
  - Add Content On Behalf of Others
  - Manage Library
- Customer and Partner Portal users must have the View Content in Portal permission to query content in libraries where they have access.
- Customer and Partner Portal users can only publish, version, or edit documents if they have a Salesforce CRM Content feature license.
- `FileType` is defined by either `ContentUrl` for links or `PathOnClient` for documents, but not both.

- In API version 34.0 and later, any file can be shared with libraries, whether the file originated in Chatter or in Salesforce CRM Content.
- In API version 39.0 and later, custom Apex download handlers can be created that can control access to documents. See the Apex Developer Guide for more information.

## Fields

| Field | Details |
|---|---|
| `Checksum` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>MD5 checksum for the file. |
| `ContentBodyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Allows inserting a file version independently of the file blob being uploaded. This field is available for query and insert only. It can only point to a ContentBody record. This field is available in API version 40.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>ContentBody<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentBody |
| `ContentDocumentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the document.<br>This is a relationship field.<br>**Relationship Name**<br>ContentDocument<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>ContentDocument |
| `ContentLocation` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Origin of the document. Valid values are:<br>• **S**—Document is located within Salesforce. Label is **Salesforce**.<br>• **E**—Document is located outside of Salesforce. Label is **External**.<br>• **L**—Document is located on a social network and accessed via Social Customer Service. Label is **Social Customer Service**. |
| `ContentModifiedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the user who modified the document.<br>This is a relationship field.<br>**Relationship Name**<br>ContentModifiedBy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `ContentModifiedDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>Date the document was modified.<br>`ContentModifiedDate` updates when, for example, the document is renamed or a new document version is uploaded. When uploading the first version of a document, `ContentModifiedDate` can be set to the current time or any time in the past. |
| `ContentSize` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Size of the document in bytes. Always zero for links. |
| `ContentUrl` | **Type**<br>url<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>URL for links. This is only set for links. One of the fields that determines the `FileType`. The character limit in API versions 33.0 and later is 1,300. The character limit in API versions 32.0 and earlier was 255. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Description of the content version. |
| `Division` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as “North America,” “Healthcare,” or “Consulting.” Available only if the org has the Division permission enabled. |
| `ExternalDataSourceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the external document referenced in the `ExternalDataSource` object.<br>This is a relationship field.<br>**Relationship Name**<br>ExternalDataSource<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>ExternalDataSource |
| `ExternalDocumentInfo1` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Stores the URL of the file in the external content repository. The integration from the external source determines the content for this string. After the reference or copy is created, the URL of the external file is updated when you:<br>• Republish a file reference in Lightning Experience<br>• Open the document<br>• Create a file reference in the Connect REST API with `reuseReference` set to true.<br>When the file is updated, the shared link is updated to the most current version. |
| `ExternalDocumentInfo2` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Contains the external file ID. Salesforce determines the content for this string, which is private. The content can change without notice, depending on the external system. After the file reference is created, this field isn't updated, even if the file path changes. |
| `FeaturedContentBoost` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Read only. Designates a document as featured. |
| `FeaturedContentDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Date the document was featured. |
| `FileExtension` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>File extension of the document.<br>This field is available in API version 31.0 and later. |
| `FileType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Type of content determined by `ContentUrl` for links or `PathOnClient` for documents. |
| `FirstPublishLocationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the location where the version was first published. If the version is first published into a user's personal library or My Files, the field will contain the ID of the user who owns the personal library or My Files. In Lightning Experience, if the first version is published into a public library, the field will contain the ID of that library.<br>Accepts all record IDs supported by ContentDocumentLink (anything a file can be attached to, like records and groups).<br>Setting `FirstPublishLocationId` allows you to create a file and share it with an initial record/group in a single transaction, and have the option to create more links to share the file with other records or groups later. When a file is created, it's automatically linked to the record, and PublishStatus will change to Public from Pending/Personal.<br>This field is only set the first time a version is published via the API. `FirstPublishLocationId` can't be set to another ID when a new content version is inserted.<br>Note: Salesforce updates the `FirstPublishLocationId` updates automatically when a new `OwnerId` is added to the `ContentVersion`. For example, when you publish a new version with a different `OwnerId` than the current `OwnerId`, the `FirstPublishLocationId` of all previous versions updates to the previous `OwnerId`. The new published version sets the `FirstPublishLocationId` to the new `OwnerId`.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>FirstPublishLocation |

| Field | Details |

| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Accreditation, ActivationTarget, ActivationTrgtIntOrgAccess, ApiAnomalyEventStore, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskIndDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CodeSet, CollaborationGroup, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, ConsumptionSchedule, Contact, ContactEncounter, ContactEncounterParticipant, ContentWorkspace, Contract, ConversationEntry, CoverageBenefit, CoverageBenefitItem, CredentialStuffingEventStore, CreditMemo, CreditMemoLine, Dashboard, DashboardComponent, DataStream, DelegatedAccount, DocumentChecklistItem, EmailMessage, EmailTemplate, EngagementChannelType, EnhancedLetterhead, EnrollmentEligibilityCriteria, Event, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, Identifier, Image, IndividualApplication, Invoice, InvoiceLine, Lead, ListEmail, Location, MarketSegment, MarketSegmentActivation, MemberPlan, MessagingSession, MktCalculatedInsight, OperatingHours, Opportunity, Order, OrderItem, Organization, OtherComponentTask, OutgoingEmail, PartyConsent, PersonEducation, PersonLanguage, PersonLifeEvent, PersonName, PlanBenefit, PlanBenefitItem, Product2, ProductFulfillmentLocation, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, ProviderSearchSyncLog, PurchaserPlan, PurchaserPlanAssn, ReceivedDocument, Report, ReportAnomalyEventStore, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SessionHijackingEventStore, Shift, Shipment, ShipmentItem, Site, SkillRequirement, SocialPost, Solution, Task, ThreatDetectionFeedback, Topic, User, Visit, VisitedParty, Visitor, VoiceCall, VolunteerProject, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup, WorkTypeGroupMember |
| `IsAssetEnabled` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Group, Defaulted on create<br>**Description**<br>Can be specified on insert of ContentVersion to automatically convert a ContentDocument file into a ContentAsset. This field can be SOQL queried, but it can't be edited. This field is available in API version 38.0 and later. |
| `IsLatest` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this is the latest version of the document (`true`) or not (`false`). |
| `IsMajorVersion` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>`true` if the document is a major version; `false` if the document is a minor version. Major versions can't be replaced. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language for this document. This field defaults to the org's default language unless the multi language setting is enabled.<br>Specifies the language of the labels returned. The value must be a valid user locale (language and country), such as `de_DE` or `en_GB`. For more information on locales, see the `Language` field on the CategoryNodeLocalization object. |
| `NegativeRatingCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Read only. The number of times different users have given the document a thumbs down.<br>Rating counts for the latest version are not version-specific. If Version 1 receives 10 thumbs-down votes, and Version 2 receives 2 thumbs-down votes, the |

| Field | Details |
| --- | --- |
| | `NegativeRatingCount` on Version 2 is 12. However, rating counts are not retroactive for prior versions. The `NegativeRatingCount` on Version 1 is 10. |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Experience Cloud site that this file originated from. This field is available in API version 26.0 and later, if digital experiences is enabled for your org.<br>You can add a `NetworkId` only when creating a file. You can't change or add a `NetworkId` for an existing file. |
| `Origin` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The source of the content version. Valid values are:<br>• **C**—Content document from the user's personal library. Label is **Content**. The `FirstPublishLocationId` must be the user's ID. If `FirstPublishLocationId` is left blank, it defaults to the user's ID.<br>• **H**—Salesforce file from the user's My Files. Label is **Chatter**. The `FirstPublishLocationId` must be the user's ID. If `FirstPublishLocationId` is left blank, it defaults to the user's ID. Origin can only be set to **H** if Chatter is enabled for your organization.<br>This field defaults to C. Label is **Content Origin**. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the owner of this document.<br>This is a relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

| Field | Details |
| --- | --- |
| `PathOnClient` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The complete path of the document. One of the fields that determines the `FileType`.<br>Note: Specify a complete path including the file extension in order for the document to be visible in the Preview tab. |
| `PositiveRatingCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Read only. The number of times different users have given the document a thumbs up.<br>Rating counts for the latest version are not version-specific. If Version 1 receives 10 thumbs-up votes, and Version 2 receives 2 thumbs-up votes, the `PositiveRatingCount` on Version 2 is 12. However, rating counts are not retroactive for prior versions. The `PositiveRatingCount` on Version 1 is 10. |
| `PublishStatus` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Indicates if and how the document is published. Valid values are:<br>• `P`—The document is published to a public library and is visible to other users. Label is **Public**.<br>• `R`—The document is published to a personal library and is not visible to other users. Label is **Personal Library**.<br>• `U`—The document is not published because publishing was interrupted. Label is **Upload Interrupted**. |
| `RatingCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Read only. Total number of positive and negative ratings. |

| Field | Details |
| --- | --- |
| `ReasonForChange` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The reason why the document was changed. This field can only be set when inserting a new version (revising) a document. |
| `RecordTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>ID of the record type of the version.<br>Custom fields are restricted in `RecordTypeId`. When an administrator creates a custom field via the API it must be added to at least one page layout:<br>• If the custom field is added to the page layout associated with the General record type, the `RecordTypeId` that corresponds to that record type does not have to be set on the version record.<br>• If the custom field is added to the page layout associated with a custom record type, the `RecordTypeId` that corresponds to that record type must be set on the version record. |
| `SharingOption` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Controls whether sharing is frozen for a file. Only administrators and file owners with Collaborator access to the file can modify this field. Default is `Allowed`, which means that new shares are allowed. When set to `Restricted`, new shares are prevented without affecting existing shares.<br>This field is available in API versions 35.0 and later. |
| `SharingPrivacy` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Controls sharing privacy for a file. Only administrators and file owners with Collaborator access to the file can modify this field. Default is `Visible to Anyone With Record` |

| Field | Details |
| --- | --- |
| | `Access`. When set to `Private on Records`, the file is private on records but can be shared selectively with others.<br>This field is available in API versions 41.0 and later. |
| `TagCsv` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Sort, Update<br>**Description**<br>Text used to apply tags to a content version via the API. |
| `TextPreview` | **Type**<br>string<br>**Properties**<br>Nillable, Filter,Group, Sort<br>**Description**<br>A preview of a document. Available in API version 35.0 and later. |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The title of a document. |
| `VersionData` | **Type**<br>base64<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The content or body of the note, which can include properly formatted HTML or plain text. When a document is uploaded or downloaded via the API, it should be base64 encoded (for upload) or decoded (for download). Any special characters within plain text in the `Content` field must be escaped. You can escape special characters by calling `content.escapeHtml4()`.<br>This field can't be set for links.<br>The maximum file size you can upload via the SOAP API is 50 MB. When a document is uploaded or downloaded via the API, it is converted to base64 and stored in `VersionData`. This conversion increases the document size by approximately 37%. Account for the base64 conversion increase so that the file you plan to upload is less than 50 MB after conversion. |

| Field | Details |
| --- | --- |
| | If a custom Apex download handler is active, this field is accessed from the API, and the download is not allowed, Salesforce will return a `CONTENT_CUSTOMIZED_DOWNLOAD_EXCEPTION` error. |
| `VersionDataURL` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URL used to fetch a file from the binary data endpoint. This field is only populated on direct queries to ContentVersion, and not when queried through a related entity's foreign key to ContentVersion.<br>If available, access preview images of a file by appending a `thumb` query parameter to this URL. For example:<br>`myContentVersion.VersionDataUrl + '?thumb=THUMB240BY180'`<br>Available `thumb` parameter values are:<br>• `THUMB720BY480` — corresponds to the `big-thumbnail` preview format<br>• `THUMB240BY180` — corresponds to the `thumbnail` preview format<br>• `THUMB120BY90` — corresponds to the `tiny-thumbnail` preview format<br>See File Preview in the *Connect REST API Developer Guide* for additional details about file previews.<br>This field can't be set for links.<br>This field is available in API versions 55.0 and later. |
| `VersionNumber` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The version number. The number increments with each version of the document, for example, 1, 2, 3. |

# Usage

- Use this object to create, query, retrieve, search, edit, and update a specific version of a Salesforce CRM Content document or Salesforce file. Use the ContentDocument object to retrieve, query, update, and delete the latest version of a document, but not a content pack, in a library or a Salesforce file.
- Use this object to create, query, retrieve, search, edit, and update a specific version of a Salesforce file. Use the ContentDocument object to retrieve, query, update, and delete the latest version of a Salesforce file.
- To query a file that is shared only with a record, you must specify the content ID of the file.

- Not all fields can be set for Salesforce Files.
- You can only update a version if it is the latest version and if it is published.
- You can't archive versions.
- Using API version 32.0 and later, you can update record types on versions.
- You can't delete a version via the API.
- The maximum file size you can upload via the SOAP API is 50 MB. When a document is uploaded or downloaded via the API, it is converted to base64 and stored in `VersionData`. This conversion increases the document size by approximately 37%. Account for the base64 conversion increase so that the file you plan to upload is less than 50 MB after conversion.
- To download a document via the API, you must export the `VersionData` of the document. This does not increase the download count.
- When you upload a document from your local drive using the Data Loader, you must specify the actual path in both `VersionData` and `PathOnClient`. `VersionData` identifies the location and extracts the format and `PathOnClient` identifies the type of document being uploaded.
- SOQL queries on the ContentVersion object return all versions of the document. SOSL searches on the ContentVersion object return only the most recent version of the document.
- To query a file that is accessible only through a record share, you must specify the content ID of the file. When SOQL querying the ContentVersion object, either the `ContentVersionId` or the `ContentDocumentId` must be compounded by an AND operator.

  For example,

```
SELECT FileExtension, Title FROM ContentVersion
WHERE (ContentDocumentId = '<ContentDocumentId>' or Id='<ContentVersionId>') and
IsLatest=true
```

```
SELECT Id, VersionData, FileExtension, Title FROM ContentVersion
WHERE ContentDocumentId='<ContentDocumentId>' AND FirstPublishLocationId =
'<FirstPublishLocationId>'
```

- If you query versions in the API, versions with a `PublishStatus` of `Upload Interrupted` are not returned.
- Documents published into a personal library assume the default record type that is set for the user profile of the person publishing the document (General, if no default is set for the user profile).

  Note: An administrator can rename the default (*Content Version Layout*) page layout.

- Contact Manager, Group, Professional, Enterprise, Unlimited, and Performance Edition customers can publish a maximum of 200,000 new versions per 24–hour period. Developer Edition and trial users can publish a maximum of 2,500 new versions per 24–hour period.
- Custom validation rules can prevent an update of documents published into a personal library via the API.

## Applying Tags to ContentVersion Records

Tags can be applied to ContentVersion records using either Enterprise or Partner API.

To apply tags to a ContentVersion record, set a value in the `TagCsv` field. For example, setting this field to `one,two,three` creates and associates three tags to that version.

- The maximum length of the `TagCsv` field is 2,000 characters.
- The maximum length of an individual tag is 100 characters.
- When tags are applied to a version, the content is indexed automatically and the tags are searchable.

- You can't apply tags to a `TagCsv` that is published into a personal library. You can apply tags to a `TagCsv` that's in a shared library or folder.
- You can't apply tags using the ContentDocument object.
- You can't change or delete tag names. You can remove tags from a document, but that doesn't delete the tag.
- Tags are case insensitive. You can't have two tags with the same name even if they use different uppercase and lowercase letters. The case of the original tag is always used.

To delete tags from a ContentVersion record, perform a standard API update, and remove any values from the `TagCsv` field that you want to delete. For example, if the original `TagCsv` is `one,two,three`, perform an API update specifying `one,three` in the `TagCsv` field to delete `two`. To delete all tags from a ContentVersion you perform a standard API update by setting the field to `null`.

If you create a ContentVersion record and want to revise it via the API, you insert another ContentVersion record but associate it to the same ContentDocument record as the original. This has an impact on tagging:

- If you insert the revision and do not set any value in the `TagCsv` field, any tags applied to the previous version are automatically applied to the new version.
- If you insert the revision and specify a new `TagCsv` field, no tags transfer over and the tags you specify are applied instead.

When you perform a SOQL query for a ContentVersion record and select the `TagCsv` field, all the tags associated with that record are returned. The tags in the string are always ordered alphabetically even if they were inserted in a different order. You can't use the `TagCsv` field as part of a filter in a SOQL query. You can't query all tags in your organization.

Library tagging rules:

- API tagging respects the tagging restrictions that exist on any library that the document is published into. For example, if the library is in restricted tagging mode and only allows tags `one,three`, you can't save a version with a `TagCsv` of `one,two,three`.
- If the library is in guided tagging mode, you can apply tags to the ContentVersion. You can't query the value of guided tags on a library, but you can query the tagging model of a library.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**ContentVersionChangeEvent on page 68 (API version 55.0)**
Change events are available for the object.

**ContentVersionHistory**
History is available for tracked fields of the object.

SEE ALSO:

ContentDocument

ContentVersionHistory

# ContentVersionComment

Represents a comment on a version of a file. This object is available in API version 42.0 and later.

## Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Only users with Modify All Data permission have access to this object.

## Fields

| Field | Details |
|---|---|
| `ContentDocumentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the file.<br>This is a relationship field.<br>**Relationship Name**<br>ContentDocument<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentDocument |
| `ContentVersionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the version of the file.<br>This is a relationship field.<br>**Relationship Name**<br>ContentVersion<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentVersion |
| `UserComment` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>ID of the user who commented on the file. |

# ContentVersionHistory

Represents the history of a specific version of a document. This object is available in version 17.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

## Special Access Rules

- Customer and Partner Portal users must have the "View Content in Portal" permission to query content in libraries where they have access.
- A user can query all versions of a document from their personal library and any version that is part of or shared with a library where they are a member, regardless of library permissions.

Note: To record an event in `contentVersionViewed`, make sure:

- All files are published to a Content Library.
- The details page is viewed in Salesforce Classic.

## Fields

| Field | Details |
|---|---|
| `ContentVersionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the version.<br>This is a relationship field.<br>**Relationship Name**<br>ContentVersion<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentVersion |
| `DataType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Data type of the field that was changed. |
| `Division` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled. |
| `Field` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The name of the field that was changed. Possible values include:<br>• `contentVersionCreated`—A new version is created.<br>• `contentVersionUpdated`—The title, description, or any custom field on the version is changed.<br>• `contentVersionDownloaded`—A version is downloaded.<br>• `contentVersionViewed`—The version details are viewed.<br>• `contentVersionRated`—The version is rated.<br>• `contentVersionCommented`—The version receives a comment.<br>• `contentVersionDataReplaced`—The new version replaces the previous version, which can happen only when the new version is uploaded immediately after the previous version. |
| `NewValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The new value of the field that was changed. |
| `OldValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The latest value of the field before it was changed. |

## Usage

Use this read-only object to query the history of a document version.

SEE ALSO:

ContentVersion

# ContentVersionRating

Represents a rating on a version of a file. This object is available in API version 42.0 and later.

## Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Only users with Modify All Data permission have access to this object.

## Fields

| Field | Details |
| --- | --- |
| `ContentVersionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the version of the file.<br>This is a relationship field.<br>**Relationship Name**<br>ContentVersion<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentVersion |

| Field | Details |

| `Rating` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Rating of the file. |
| `UserComment` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Comment made by the user who rated the file. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the user who rated the file.<br>This is a relationship field.<br>**Relationship Name**<br>User<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

# ContentWorkspace

Represents a content library. This object is available in versions 17.0 and later.

Note: This object doesn't apply to personal libraries.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Note: create( ), update( ) and delete( ) on ContentWorkspace are supported in API version 40.0 and later only.

## Special Access Rules

- The Access Libraries user permission allows orgs to make libraries available to users without requiring that they have the legacy Salesforce CRM Content license. This permission is available for profiles and permission sets on most standard user licenses, and isn't available for High Volume Customer Portal, Customer Community, or Chatter Free licenses. Available in API versions 40.0 and later.
- Users with the Create Libraries user perm or the Manage Salesforce CRM Content administrator permission can create libraries (ContentWorkspaces) from the Libraries tab in Salesforce Classic and from the API.
- Customer and Partner Portal users can only edit the library document object if they have a Salesforce CRM Content feature license.
- Customer and Partner Portal users can query this object if they have the "View Content in Portal" permission. A user can query all public libraries where they're members, regardless of library permissions.
- Automated process users can't publish documents to libraries (ContentWorkspaces).

## Fields

| Field | Details |
|---|---|
| `DefaultRecordTypeId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the default content type for the library. Content types are the containers for custom fields in Salesforce CRM Content. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Text description of the content library. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The unique name of the library in the API. Allows a link to the library to be packaged when an asset file is added to a package. Although libraries aren't a packageable entity, references to libraries with a developer name will be included in the package when asset files are packaged. These links can then be restored in the target org.<br>This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not |

| Field | Details |
| --- | --- |
| | end with an underscore, and not contain two consecutive underscores. Label is Unique Name.<br>This field is available in API version 39.0 and later. |
| `IsRestrictContentTypes` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Read only. Indicates whether content types have been restricted (`true`) or not (`false`). |
| `IsRestrictLinkedContentTypes` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Read only. Indicates whether linked content types have been restricted (`true`) or not (`false`). |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the library. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique name of the library in the API. Allows a link to the library to be packaged when an asset file is added to a package. Limit: 15 characters. This field is available in API version 39.0 and later. |
| `RootContentFolderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of root folder of the library. This field is available in API version 39.0 and later. |

| Field | Details |
| --- | --- |
| `ShouldAddCreatorMembership` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Group<br>**Description**<br>Automatically create a library membership for the user creating the library. Note this field isn't meant for query and always returns false in query. This field is available in API version 40.0 and later. |
| `TagModel` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of tagging assigned to a library. Valid values are:<br>• `U` — Unrestricted. No restrictions on tagging. Users can enter any tag when publishing or editing content.<br>• `G` — Guided. Users can enter any tag when publishing or editing content, but they're also offered a list of suggested tags.<br>• `R` — Restricted. Users must choose from a list of suggested tags. |
| `WorkspaceImageId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of a library image. Image files can be assigned to libraries for branding and easy identification. Library image is visible to all users, even if they aren't library members. This field is available in API version 43.0 and later.<br>**Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of a library image. Image files can be assigned to libraries for branding and easy identification. Library image is visible to all users, even if they are not library members. This field is available in API version 43.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>WorkspaceImage |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>ContentAsset |
| `WorkspaceType` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Differentiates between different types of libraries. Valid values are:<br>• `R` — Regular library<br>• `B` — Org asset library<br>This field is available in API version 39.0 and later. |

## Usage

Use this object to query libraries to find out where documents can be published.

If the content type isn't specified when publishing a new version into a library, it is determined by the `DefaultRecordTypeId` of the primary library.

As of 40.0, you can create, update, or delete a library via the API.

SEE ALSO:

ContentWorkspaceDoc

# ContentWorkspaceDoc

Represents a link between a document and a public library in Salesforce CRM Content. This object is available in versions 17.0 and later.

Note: This object does not apply to documents and versions in a personal library.

## Supported Calls

`create()`, `delete()`, `describeSObjects()` `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

- Customer and Partner Portal users must have the "View Content in Portal" permission in order to query and obtain content in libraries where they have access.
- Customer and Partner Portal users can only edit documents if they have a Salesforce CRM Content feature license.

- To create a ContentWorkspaceDoc, you must be a member of the library with one of these library privileges enabled:
  - "Add Content"
  - "Add Content On Behalf of Others"
  - "Manage Library"
- To query all library documents in a library, a user must be a member of that library, regardless of library permissions.

## Fields

| Field | Details |
|---|---|
| `ContentDocumentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Read only. ID of the library document.<br>This is a relationship field.<br>**Relationship Name**<br>ContentDocument<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentDocument |
| `ContentWorkspaceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Read only. ID of the library.<br>This is a relationship field.<br>**Relationship Name**<br>ContentWorkspace<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentWorkspace |
| `IsOwner` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Read only. Indicates whether the library owns the document and determines permissions for that document (`true`) or not (`false`). Documents can belong to more than one library, but only one library owns the document and determines its permissions. |

## Usage

- Use this object to link a document to one or more libraries.
- To share a document with additional libraries, create additional ContentWorkspaceDoc records which join the document to the additional libraries.
- Inserting a ContentWorkspaceDoc triggers the publish process for public libraries.
- A document can be published into many public libraries, but it will always be owned by one library which controls the security of the document.
- A document can only be published into the document owner's personal library. You can't publish into another user's personal library. Personal libraries are not visible via the API.
- To publish a document into a personal library, you must specify your user ID as the first publish location ID. If you leave the first publish location ID blank, it defaults to the current user's ID.
- A document can be published from a personal library into a public library, but once it has been published into the public library, it can't be published into the personal library again.
- You can't publish a document from a personal library into a public library that has restricted content types.
- You can't update or delete a library document via the API.

SEE ALSO:

ContentWorkspace

# ContentWorkspaceMember

Represents a member of a content library. This object is available in API version 40.0 and later.

Manage library membership from the API.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

A user can create/update/delete memberships if they have the Manage Salesforce CRM Content admin perm or the Manage Library permission for the library concerned.

# Fields

| Field | Details |
| --- | --- |
| `ContentWorkspaceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the library.<br>This is a relationship field.<br>**Relationship Name**<br>ContentWorkspace<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentWorkspace |
| `ContentWorkspacePermissionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The id of the library permission or role.<br>This is a relationship field.<br>**Relationship Name**<br>ContentWorkspacePermission<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentWorkspacePermission |
| `MemberId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group,Namepointing, Sort<br>**Description**<br>ID of the library member (the member is either a user or a group).<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Member |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `MemberType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable,Restricted picklist, Sort<br>**Description**<br>The type of library member. Valid values are:<br>• G - Group<br>• U - User |

## Usage

Use this object to create, update, or delete members from a library.

# ContentWorkspacePermission

Represents a library permission. This object is available in API version 40.0 and later.

A library permission is a group of privileges assigned to each content library member. It determines which tasks a member can perform in a particular library. The same user can have a different library permission in each of his or her libraries.

Note: Library permissions do not apply to personal libraries. All library users can save files in their personal libraries.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`,`update()`, `upsert()`

## Special Access Rules

The ability to create permissions requires either the Manage Salesforce CRM Content admin perm or the Manage Content Permissions user perm.

## Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description** |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Namefield, Sort, Update<br>**Description**<br>Name of the library. |
| `PermissionsAddComment` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Permission for user to post comments to any content in the library and view all comments in the library. Users can edit or delete their own comments. |
| `PermissionsAddContent` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Permission for user to publish new content to the library, upload new content versions, or restore archived (deleted) content. Content authors can also change any tags associated with their content and archive or delete their own content. |
| `PermissionsAddContentOBO` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Permission for user to choose an author when publishing content in the library. |
| `PermissionsArchiveContent` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Permission for user to archive and restore any content in the library. |

| Field | Details |
| --- | --- |
| PermissionsChatterSharing | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Permission for user to make content from this library accessible outside of the library, sharing with a record or in Chatter. From a record or from Chatter, select a file from the library and attach it to a record or a post. |
| PermissionsDeleteContent | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Permission for user to delete any content in the library. Authors can undelete their own content from the Recycle Bin. |
| PermissionsDeliverContent | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Permission for user to share content outside the org via a content delivery or public link. |
| PermissionsFeatureContent | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Permission for user to identify any content in the library as “featured.” |
| PermissionsManageWorkspace | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Permission for user to perform any action in the library. This privilege is required to edit a library’s name and description, add or remove library members, or delete a library. Manage Library is a super permission which provides all other permission options listed except Deliver Content. Creating a library requires the Manage Salesforce CRM Content app permission or Create Libraries system permission. |

| Field | Details |
| --- | --- |
| PermissionsModifyComments | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Permission for user to edit or delete comments made to any content in the library. |
| PermissionsOrganizeFileAndFolder | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Permission for user to create, rename, and delete folders in libraries. |
| PermissionsTagContent | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Permission for user to add tags when publishing content or editing content details in the library. |
| PermissionsViewComments | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Permission for user to view comments. |
| Type | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Provides the type of access a user has to a library. Valid values are:<br>• Library Administrator<br>• Author<br>• Viewer<br>• Custom |

# ContentWorkspaceSubscription

Represents a subscription for a user following a library. This object is available in API version 42.0 and later.

## Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Only users with Modify All Data permission have access to this object.

## Fields

| Field | Details |
|---|---|
| `ContentWorkspaceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the library.<br>This is a relationship field.<br>**Relationship Name**<br>ContentWorkspace<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentWorkspace |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the user following the library.<br>This is a relationship field.<br>**Relationship Name**<br>User<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>User |

# ContextParamMap

Represents optional context data for a Conversation or a ConversationParticipant. This object is available in API version 57.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `ContextEntityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the Conversation or ConversationParticipant record.<br>This field is a polymorphic relationship field.<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Conversation, ConversationParticipant |
| `MapKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The key for the context data. |
| `MapValue` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The value for the context data. |

# Contract

Represents a contract (a business agreement) associated with an Account.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort,Update<br>**Description**<br>Required. ID of the Account associated with this contract.<br>This field is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `ActivatedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort,Update<br>**Description**<br>ID of the User who activated this contract.<br>This field is a relationship field.<br>**Relationship Name**<br>ActivatedBy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `ActivatedDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>Date and time when this contract was activated. |
| `ActivityMetricId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>When Einstein Activity Capture with Activity Metrics is enabled, the ID of the related activity metric.<br>This field is a relationship field.<br>**Relationship Name**<br>ActivityMetric<br>**Refers To**<br>ActivityMetric |
| `ActivityMetricRollupId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>When Einstein Activity Capture with Activity Metrics is enabled, the ID of the related activity metric rollup.<br>This field is a relationship field.<br>**Relationship Name**<br>ActivityMetricRollup<br>**Refers To**<br>ActivityMetricRollup |
| `AggregationStrategy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The aggregation strategy when creating a pricing contract.<br>Valid value is `Cumulative`. This field is available with Revenue Cloud in API version 64.0 and later. |

| Field | Details |
| --- | --- |
| `BillingAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The compound form of the billing address. Read-only. See Address Compound Fields for details on compound address fields. |
| `BillingCity` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details for the billing address. The maximum size is 40 characters. |
| `BillingCountry` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details for the billing address of this account. The maximum size is 80 characters. |
| `BillingCountryCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ISO country code for the contract's billing address. |
| `BillingGeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The accuracy of the geocode for the billing address.<br>Possible values are:<br>• `Address`<br>• `Block`<br>• `City`<br>• `County`<br>• `ExtendedZip` |

| Field | Details |
| --- | --- |
| | • `NearAddress`<br>• `Neighborhood`<br>• `State`<br>• `Street`<br>• `Unknown`<br>• `Zip` |
| `BillingLatitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `BillingLongitude` to specify the precise geolocation of a billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. |
| `BillingLongitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `BillingLatitude` to specify the precise geolocation of a billing address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. |
| `BillingPostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details for the billing address of this account. The maximum size is 20 characters. |
| `BillingState` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details for the billing address. The maximum size is 80 characters. |
| `BillingStateCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The ISO state code for the contract's billing address. |
| `BillingStreet` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Street address for the billing address. |
| `CompanySignedDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date your organization signed the contract. |
| `CompanySignedId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the user who signed the contract.<br>This field is a relationship field.<br>**Relationship Name**<br>CompanySigned<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `ContractNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Number of the contract. |
| `ContractTerm` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Number of months that the contract is valid. |
| `CustomerSignedDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date when the customer signed the contract. |
| `CustomerSignedId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the Contact who signed this contract.<br>This field is a relationship field.<br>**Relationship Name**<br>CustomerSigned<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `CustomerSignedTitle` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Title of the customer who signed the contract. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Description of the contract. |

| Field | Details |
| --- | --- |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort,<br>**Description**<br>Read-only. Calculated end date of the contract. This value is calculated by adding the `ContractTerm` to the `StartDate`. If the **Auto-calculate Contract End Date** setting is disabled, the contract end date is editable. |
| `HasContractCotermination` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the contract can be coterminated (`true`) or not (`false`).<br>The default value is `false`. This field is available with Revenue Cloud in API version 65.0 and later. |
| `IsPricingContract` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the contract has related contract item prices (`true`) or if there are no contract item prices for the contract (`false`). This field is available with Revenue Cloud in API version 63.0 and later. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create or filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). The label is **Deleted**. |
| `LastActivityDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Value is the most recent:<br>• The due date of the most recent event is logged against the record. |

| Field | Details |
| --- | --- |
| | • The due date of the most recently closed task associated with the record. |
| `LastApprovedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Last date the contract was approved. |
| `LastReferencedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`) but didn't view it. |
| `OwnerExpirationNotice` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Number of days ahead of the contract end date (15, 30, 45, 60, 90, and 120). Used to notify the owner in advance that the contract is ending. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the user who owns the contract.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `Pricebook2Id` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the pricebook, if any, associated with this contract. |
| `PricingSource` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Source of the pricing for the contract.<br>Valid values are:<br>• `LastTransaction`<br>• `PriceBookListPrice`—Price Book or List Price<br>Available in API version 60.0 and later. |
| `RecordTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>ID of the record type assigned to this object. |
| `RenewalTerm2` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The default subscription term for renewals. For example, if the Renewal Term Unit is months and you want a 6-month term, set the Renewal Term to 6. Available in API version 60.0 and later. |

| Field | Details |
| --- | --- |
| `RenewalTermUnit` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The unit of time for a subscription term.<br>Valid values are:<br>• `Annual`—UI label is **Years**<br>• `Months`<br>• `Quarterly`—Available in API version 61.0 and later.<br>• `Semi-Annual`—Available in API version 61.0 and later.<br>Available in API version 60.0 and later. |
| `ShippingAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The compound form of the shipping address. Read-only. See Address Compound Fields for details on compound address fields. |
| `ShippingCity` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details of the shipping address. City maximum size is 40 characters. |
| `ShippingCountry` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details of the shipping address. Country maximum size is 80 characters. |
| `ShippingCountryCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ISO country code for the contract's shipping address. |

| Field | Details |
| --- | --- |
| `ShippingGeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The accuracy of the geocode for the shipping address.<br>Valid values are:<br>• `Address`<br>• `Block`<br>• `City`<br>• `County`<br>• `ExtendedZip`<br>• `NearAddress`<br>• `Neighborhood`<br>• `State`<br>• `Street`<br>• `Unknown`<br>• `Zip`<br>Available in API version 60.0 and later. |
| `ShippingLatitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `ShippingLongitude` to specify the precise geolocation of a shipping address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. |
| `ShippingLongitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `ShippingLatitude` to specify the precise geolocation of an address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. |
| `ShippingPostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Details of the shipping address. The postal code maximum size is 20 characters. |
| `ShippingState` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details of the shipping address. The maximum size for the state is 80 characters. |
| `ShippingStateCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ISO state code for the contract's shipping address. |
| `ShippingStreet` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The street address of the shipping address. The maximum size is 255 characters. |
| `SourceQuoteId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort,Update<br>**Description**<br>ID of the source quote associated with this contract. This field is available with Revenue Cloud in API version 64.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>Contract<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Quote |
| `SpecialTerms` | **Type**<br>textarea |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Special terms that apply to the contract. |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort,Update<br>**Description**<br>Start date for this contract. The label is **Contract Start Date**. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The picklist of values that indicate order status. Each value is within one of two status categories defined in `StatusCode`. For example, the status picklist may contain: Ready to Ship, Shipped, Received as values within the Activated `StatusCode`.<br>Valid values are:<br>• `Activated`<br>• `Draft`<br>• `In Approval Process`<br>Available in API version 60.0 and later. |
| `StatusCode` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The status category for the contract. A contract can be Draft, InApproval, or Activated. Label is **Status Category**.<br>Valid values are:<br>• `Activated`<br>• `Draft`<br>• `InApproval`<br>Available in API version 60.0 and later. |

| Field | Details |
| --- | --- |
| `UnitPriceUplift` | **Type**<br>percent<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Indicates the percentage increase of a line item's unit price. This field is available with Revenue Cloud in API version 64.0 and later. |

## Usage

The Contract object represents a business agreement.

The `Status` field specifies the current state of a contract. Status strings (defined in the ContractStatus object) represent its current state (`Draft`, `InApproval`, or `Activated`).

Client applications must initially create a Contract in a non-Activated state. Client applications can subsequently activate a Contract by updating it and setting the value in its `Status` field to `Activated`; however, the `Status` field is the only field you can update when activating the Contract.

After a Contract has been activated, your client application can't change its status; however, before activation, your client application can change the status value from `Draft` to `InApproval` via the API. Also, your client application can delete contracts whose status is `Draft` or `InApproval` but not when a contract status is `Activated`.

Client applications can use the API to create, update, delete, and query any Attachment associated with a contract.

## Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AccountChangeEvent (API version 46.0)**
Change events are available for the object.

**ContractFeed (API version 18.0)**
Feed tracking is available for the object.

**ContractHistory**
History is available for tracked fields of the object.

ContractContactRole

ContractStatus

# ContractContactRole

Represents the role that a Contact plays on a Contract.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `ContactId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the Contact associated with this Contract.<br>This is a relationship field.<br>**Relationship Name**<br>Contact<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `ContractId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the Contract.<br>This is a relationship field.<br>**Relationship Name**<br>Contract<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contract |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `IsPrimary` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort,Update<br>**Description**<br>Specifies whether this Contact plays the primary role on this Contract (`true`) or not (`false`). Each contract has one primary contact role. Default is `false`. Labels is **Primary**. |
| `Role` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Nillable, Group, Sort, Update<br>**Description**<br>Name of the role played by the Contact on this Contract, such as Decision Maker, Approver, Buyer, and so on. Must be unique—there can't be multiple records in which the `ContractId`, `ContactId`, and `Role` values are identical. Different contacts can play the same role on the same contract. A contact can play different roles on the same contract. |

SEE ALSO:

ContractStatus

# ContractLineItem

Represents a product covered by a service contract (customer support agreement). This object is available in API version 18.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `AssetId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>Required. ID of the Asset associated with the contract line item. Must be a valid asset ID. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Description of the contract line item. |
| `Discount` | **Type**<br>percent<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The discount for the product as a percentage.<br>When updating, if you specify `Discount` without specifying `TotalPrice`, the `TotalPrice` will be adjusted to accommodate the new `Discount` value, and the `UnitPrice` will be held constant.<br>If you specify both `Discount` and `Quantity`, you must also specify either `TotalPrice` or `UnitPrice` so the system can determine which one to automatically adjust. |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The last day the contract line item is in effect. |
| `LastReferencedDate` | **Type**<br>date<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>date |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `LineItemNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Update<br>**Description**<br>Automatically-generated number that identifies the contract line item. |
| `ListPrice` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable<br>**Description**<br>Corresponds to the `UnitPrice` on the PricebookEntry that is associated with this line item, which can be in the standard pricebook or a custom pricebook. A client application can use this information to show whether the unit price (or sales price) of the line item differs from the pricebook entry list price. |
| `LocationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The location associated with the contract line item.<br>If you have access to the location entity, it doesn't necessarily mean you can access the location id field. To access the location, you must have `userHasLocation` user access. |
| `ParentContractLineItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The line item's parent line item, if it has one. |
| `PricebookEntryId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Update<br>**Description**<br>Required. ID of the associated PricebookEntry.<br>Only exists if Product2 is enabled. |
| `Product2Id` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The product related to the contract line item. |
| `Quantity` | **Type**<br>double<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Number of units of the contract line item (product) included in the associated service contract. |
| `RootContractLineItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>(Read only) The top-level line item in a contract line item hierarchy. Depending on where a line item lies in the hierarchy, its root could be the same as its parent. |
| `ServiceContractId` | **Type**<br>reference<br>**Properties**<br>Create, Filter<br>**Description**<br>Required. ID of the ServiceContract associated with the contract line item. Must be a valid service contract ID. |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Nillable, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The first day the contract line item is in effect. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Nillable<br>**Description**<br>Status of the contract line item. |
| `Subtotal` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable<br>**Description**<br>Contract line item's sales price multiplied by the `Quantity`. |
| `TotalPrice` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable<br>**Description**<br>This field is available only for backward compatibility. It represents the total price of the ContractLineItem<br>If you specify `Discount` and `Quantity`, this field or `UnitPrice` is required.<br>This field is nillable, but you can't set both `TotalPrice` and `UnitPrice` to null in the same update request. To insert the `TotalPrice` for a contract line item via the API (given only a unit price and the quantity), calculate this field as the unit price multiplied by the quantity. |
| `UnitPrice` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>The unit price for the contract line item. In the user interface, this field's value is calculated by dividing the total price of the contract line item by the quantity listed for that line item. Label is **Sales Price**.<br>This field or `TotalPrice` is required. You can't specify both.<br>If you specify `Discount` and `Quantity`, this field or `TotalPrice` is required. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ContractLineItemChangeEvent (API version 44.0)**
Change events are available for the object.

**ContractLineItemFeed**
Feed tracking is available for the object.

**ContractLineItemHistory**
History is available for tracked fields of the object.

# ContractLineOutcome

Represents information on a contract line outcome's captured data and other related parameters that are used when capturing data. This object is available in API version 58.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

- Field Service must be enabled.
- Entitlements must be enabled.

## Fields

| Field | Details |
|---|---|
| `CalculationMethod` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The method used for calculating the contract line outcome's captured data to determine the outcome value. Select `Average` or `As Captured` to calculate the contract line outcome. `Average` calculates the outcome value based on the average of all data captured to date. `As Captured` calculates the outcome value based on the asset's current data at the time of the compliance check.<br>Possible values are:<br>• `AsCaptured`<br>• `Average` |

| Field | Details |
| --- | --- |
| `CaptureFrequency` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The frequency at which data capturing and contract compliance check for the contract line outcome occurs.<br>Possible values are:<br>• `Daily`<br>• `Monthly`<br>• `Weekly` |
| `ComplianceStatus` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates if the criteria were met. Compliant–The outcome is compliant with the contract. Not Compliant–The outcome isn't compliant with the contract. Not Available–The outcome's compliance information isn't available yet. Invalid–The outcome isn't valid because the option selected for the Criteria Field of the recordset filter criteria was deleted. To restart the calculation, create a new contract line outcome.<br>Possible values are:<br>• `Compliant`<br>• `Invalid`<br>• `NotAvailable`<br>• `NotCompliant`<br>The default value is `NotAvailable`. |
| `ContractLineItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The contract line item associated with the contract line outcome.<br>This field is a relationship field.<br>**Relationship Name**<br>ContractLineItem<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>ContractLineItem |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A description of the contract line outcome. |
| `EndDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The contract line outcome's data capture end date. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the contract line outcome was last modified. Its UI label is Last Modified Date. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the contract line outcome was last viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the contract line outcome. |
| `NextDataCaptureDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date of the next data capture and compliance check based on the capture frequency. The date is auto-populated and updated after each capture |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The contract line outcome's owner. By default, the owner is the user who created the contract line outcome record. Its UI label is Contract Line Outcome Owner.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `RecordsetFilterCriteriaId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the recordset filter criteria in which the contract line outcome's conditions are defined.<br>This field is a relationship field.<br>**Relationship Name**<br>RecordsetFilterCriteria<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>RecordsetFilterCriteria |
| `ServiceContractId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The service contract associated with the contract line item and the contract line outcome.<br>This field is a relationship field.<br>**Relationship Name**<br>ServiceContract<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ServiceContract |
| `StartDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The contract line outcome's data capture start date. |

## Usage

Use this object to define the data capture frequency and other related parameters that are used when capturing data in order to evaluate a service contract's compliance.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ContractLineOutcomeChangeEvent on page 68**
Change events are available for the object.

**ContractLineOutcomeFeed on page 55**
Feed tracking is available for the object.

**ContractLineOutcomeHistory on page 63**
History is available for tracked fields of the object.

**ContractLineOutcomeOwnerSharingRule on page 65**
Sharing rules are available for the object.

**ContractLineOutcomeShare on page 67**
Sharing is available for the object.

SEE ALSO:

ContractLineOutcomeData

# ContractLineOutcomeData

Represents the contract line outcome's captured data. It stores the data that was captured between the contract line outcome's start date and end date. This object is available in API version 58.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

- Field Service must be enabled.
- Entitlements must be enabled.

## Fields

| Field | Details |
|---|---|
| `CalculatedValue` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The value calculated based on the contract line outcome's calculation method and the captured data. |
| `CaptureDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The date and time when the data was captured. |
| `ContractLineOutcomeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The contract line outcome associated with the contract line outcome data record.<br>This field is a relationship field.<br>**Relationship Name**<br>ContractLineOutcome |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>ContractLineOutcome |
| `KeyPerformanceIndicator` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The key performance indicators (fields or asset attributes) that define the contract line outcome's compliance status. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the contract line outcome data record was last modified. Its UI label is Last Modified Date. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the contract line outcome data record was last viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the contract line outcome data record. |
| `Value` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The actual value of the key performance indicator. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ContractLineOutcomeDataChangeEvent on page 68**
Change events are available for the object.

**ContractLineOutcomeDataFeed on page 55**
Feed tracking is available for the object.

**ContractLineOutcomeDataHistory on page 63**
History is available for tracked fields of the object.

**ContractLineOutcomeDataOwnerSharingRule on page 65**
Sharing rules are available for the object.

**ContractLineOutcomeDataShare on page 67**
Sharing is available for the object.

# ContractStatus

Represents the status of a Contract, such as Draft, InApproval, Activated, Terminated, or Expired.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `ApiName` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Uniquely identifies a picklist value so it can be retrieved without using an id or primary label. |
| `IsDefault` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this is the default contract status value (`true`) or not (`false`) in the picklist. |

| Field | Details |
| --- | --- |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Label for this contract status value. This display value is the internal label that does not get translated. |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number used to sort this value in the contract status picklist. These numbers are not guaranteed to be sequential, as some previous contract status values might have been deleted. |
| `StatusCode` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Code indicating the status of a contract. One of the following values:<br>• `Draft`<br>• `InApproval`<br>• `Activated`<br>Two other values (`Terminated` and `Expired`) are defined but are not available for use via the API. |

# Usage

This object represents a value in the contract status picklist. The contract status picklist provides additional information about the status of a Contract, such as its current state (`Draft`, `InApproval`, or `Activated`). You can query these records to retrieve the set of values in the contract status picklist, and then use that information while processing Contract objects to determine more information about a given contract. For example, the application could test whether a given contract is activated based on its `Status` value and the value of the `StatusCode` property in the associated ContractStatus object.

SEE ALSO:

ContractContactRole

# ContractTag

Associates a word or short phrase with a Contract.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
|---|---|
| `ItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter<br>**Description**<br>ID of the tagged item. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter<br>**Description**<br>Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically. |
| `TagDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter<br>**Description**<br>ID of the parent TagDefinition object that owns the tag. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Restricted picklist<br>**Description**<br>Defines the visibility of a tag.<br>Valid values:<br>• `Public`—The tag can be viewed and manipulated by all users in an organization. |

| Field Name | Details |
| --- | --- |
| | • `Personal`—The tag can be viewed or manipulated only by a user with a matching `OwnerId`. |

## Usage

ContractTag stores the relationship between its parent TagDefinition and the Contract being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

# ConvAnalysisSummary

Represents the information stored for each run or refresh of Sales Signals. This object is available in API version 63.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Users need the Sales Signals permission set and the Sales Signals feature must be enabled.

## Fields

| Field | Details |
| --- | --- |
| `AnalysisDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date when the actual data analysis was done, accounting for the delay between the refresh start time and the data analysis. |
| `DataModelVersion` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The data model version generated by Hawking. |

| Field | Details |
| --- | --- |
| `Error` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The error message sent by Hawking when a refresh fails. |
| `FlowIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. The UUID used to track the Hawking flow ID. |
| `RefreshDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort<br>**Description**<br>Required. The date when the admin started the refresh of their ECI data for processing. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Required. The status of the refresh or run.<br>Possible values are:<br>• `FAILED`<br>• `PARTIALLY_FAILED`<br>• `PROCESSING`<br>• `SUCCESS` |
| `TotalCalls` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The total number of calls that were analyzed for Sales Signals. |

| Field | Details |
| --- | --- |
| `TotalMentions` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The total number of mentions or keywords that were analyzed. |

# ConvAnalysisTopic

Represents a topic generated from the Sales Signals refresh or run. For example, a product experiencing issues due to high pricing could be a topic identified through the analysis of multiple calls. This object is available in API version 63.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Users need the Sales Signals permission set and the Sales Signals feature must be enabled.

## Fields

| Field | Details |
| --- | --- |
| `CallPercentage` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort<br>**Description**<br>Required. The percentage of calls that apply to a topic, out of the total number of calls that were analyzed. |
| `Category` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. A classification or grouping used to filter topics. This field is used in conjunction with `Keyword`. |

| Field | Details |
| --- | --- |
| `ConvAnalysisSummaryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. The conversation analysis summary associated with the topic.<br>This field is a relationship field.<br>**Relationship Name**<br>ConvAnalysisSummary<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>ConvAnalysisSummary (the parent object) |
| `GenerationsIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. The ID used to track the LLM-generated response for feedback purposes. |
| `Keyword` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. A specific word used in conjunction with `Category` to filter topics. For example, `Product:Salesforce`, where the keyword is Salesforce. |
| `MentionCount` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. The number of call insights associated with the topic. |
| `Order` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Required. A numerical value used to sort topics in a sequence. |
| `Summary` | **Type**<br>textarea<br>**Properties**<br>Create, Update<br>**Description**<br>Required. A detailed explanation of the topic. |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The title of the topic that describes it. |
| `TopicSentiment` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The sentiment of the topic, whether it's negative, neutral, or positive. |
| `TotalCalls` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of calls analyzed for the topic. |
| `TotalCallsForCategoryKeyword` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of calls analyzed for `category:keyword`. Multiple topics can be under a single `category:keyword`. |
| `TotalMentionsForCategoryKeyword` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of mentions analyzed for `category:keyword`. |
| `TurnIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>UUID that is generated and used to track a group of LLM-generated content. |

# ConvAnalysisTopicEntry

Represents a single entry under the ConvAnalysisTopic object. An entry represents a segment of a video or voice call that is associated with a conversation analysis topic. This object is available in API version 63.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Users need the Sales Signals permission set and the Sales Signals feature must be enabled.

## Fields

| Field | Details |
| --- | --- |
| `BulletGenerationsIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The generation ID used to track the LLM-generated response for feedback purposes. |
| `CallId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The unique identifier of the voice or video call that corresponds to the entry.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Call<br>**Refers To**<br>VideoCall, VoiceCall |
| `ConvAnalysisTopicId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. The conversation analysis topic associated with the entry.<br>This field is a relationship field.<br>**Relationship Name**<br>ConvAnalysisTopic<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>ConvAnalysisTopic (the parent object) |
| `SnippetStartTime` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The timestamp when the call is associated with the current topic entry. |
| `Summary` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The LLM-generated call summary that corresponds to the parent topic. |

# Conversation

Represents a conversation between an end user and an agent. Available in API version 49.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `ConversationChannelId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The record ID of the channel used to initialize the conversation. This can either be a messaging channel for the Messaging product or a call center for the Service Cloud Voice product. Available in API version 50.0 and later. |
| `ConversationIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>A unique identifier generated for the conversation. |
| `EndTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time that a conversation ends. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The autogenerated name of the conversation. |
| `StartTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time that a conversation starts. |

# ConversationApiLog

Logs of an API operation on a specific conversation object done using the Conversation Service API. This object is available in API version 63.0 and later.

This object stores the logs of operations done on the Conversation Service API. The Conversation Service API enables you to interact with conversational data on the Conversation Platform, offering tools to manage, access, and maintain your data effectively.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `Action` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The specific action performed using the Conversation Service API.<br>Possible values are:<br>• `Delete` |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Autogenerated name of the logs. |
| `Operation` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Name of the operation that triggered the Conversation Srevice API log. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Owner ID that triggered the Conversation API log.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |
| `RequestedById` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The User ID that triggered the Conversation API log.<br>This field is a relationship field.<br>**Relationship Name**<br>RequestedBy<br>**Refers To**<br>User |
| `RequestedDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort<br>**Description**<br>The date of the operation that triggered the Conversation API log. |
| `RequestedEntityIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The entity ID being created, updated, or deleted. |
| `RequestedEntityType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of entity being created, updated, or deleted.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `MessagingEndUser`—Messaging End User |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The status of the Conversation API operation.<br>Possible values are:<br>• `Completed`<br>• `Enqueued`<br>• `Failed`<br>• `InProgress`—In Progress<br>• `Requested` |

# ConversationContextEntry

Represents the context of a message or an event in the chat history between an agent and a messaging user. This object is available in API version 47.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

## Fields

| Field | Details |
| --- | --- |
| `ConversationContextEntryName` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The autogenerated number of the entry. |

| Field | Details |
| --- | --- |
| `CustomDetailContextKey` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable<br>**Description**<br>The key or name of the pre-chat field specified by the admin in the pre-chat implementation, for example, `customer_email`. |
| `CustomDetailContextValue` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable<br>**Description**<br>The value entered in the pre-chat field by a user before starting the chat. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The Conversation ID this entry is associated with. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ConversationContextChangeEvent (API version 62.0)**
Change events are available for the object.

# ConversationChannelDefinition

Represents a configurable definition of a conversation channel that's implemented for Interaction Service for Bring Your Own Channel for Messaging and Bring Your Own Channel for CCaaS messaging channels. This object is available in API version 60.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, interaction service must be configured. Access to standard objects requires Salesforce admin privileges or the Customize Application permission.

## Fields

| Field | Details |
|---|---|
| CapabilitiesSupportsCustomChannelParameters | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Indicates whether admins can configure custom parameters and parameter mappings for messaging channels. Custom parameters and parameter mappings are used to pass additional information at runtime to Omni-Channel flows. The default value is `false`. Available in API version 61.0. |
| CapabilitiesSupportsDoubleOptInConsent | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the channel supports (`true`) the Double Opt-In consent level. The default value is `false`. If set to true, then `capabilitiesSupportsExplicitConsent` must also be set to true. This field is optional and isn't supported for Bring Your Own Channel for Messaging. It's only supported for Bring Your Own Channel for CCaaS. |
| CapabilitiesSupportsExplicitConsent | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the channel supports (`true`) the Explicit Opt-In consent level. This field is optional. |
| CapabilitiesSupportsImplicitConsent | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the channel supports (`true`) the Implicit Opt-In consent level. This value is required and must always be set to true. The default value is false. |

| Field | Details |
| --- | --- |
| CapabilitiesSupportsIsoCountryCode | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the channel supports (*true*) ISO country codes. The default value is false. |
| CapabilitiesSupportsKeywords | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the channel supports (*true*) keywords. The default value is false. |
| ConnectedAppOauthLink | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>DO NOT SET OR CHANGE THIS VALUE. This value is automatically generated. This field represents the OAuth link for the connected app if the ConnectedAppType is `Partner`. This is a string identifier to the connected app containing the partner Org ID and the consumer ID minus the key prefixes. |
| ConnectedAppType | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The owner of the connected app used to manage authentication between Salesforce Interaction Service and the Messaging or CCaaS partner's system.<br>Possible values are:<br>• `Partner`<br>• `Customer`<br>The default value is `Partner`.<br>If set to *Partner*, the partner creates the connected app and includes it in their managed package. If set to *Customer*, the admin creates the connected app.<br>Available in API version 62.0. |
| ConsentOwner | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The system the customer uses to manage consent levels.<br>Possible values are:<br>• `Partner`<br>• `Salesforce`<br>The default value is `Salesforce`.<br>For example, if set to *`Salesforce`*, consent levels are managed by the Salesforce system. If set to *`Partner`*, consent levels are managed by the partner's telephony system.<br>For Bring Your Own Channel for Messaging, this value must be set to *`Salesforce`*. |
| `ConversationVendorInfoId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The *`ConversationChannelDefinition.ConversationVendorInfoId`* value used to link this record to the ConversationVendorInfo record. For example, 0m8000000000000123.<br>This field is a relationship field.<br>**Relationship Name**<br>ConversationVendorInfo<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ConversationVendorInfo |
| `customEventChnlAddrIdField` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The mapping field that points to the custom field used to point to the `ChannelAddressIdentifier` field.<br>This field is deprecated in API version 60.0 and will be removed in API version 61.0. Use a combination of `customEventTypeField` and `customEventPayloadField` instead. |
| `CustomEventPayloadField` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The mapping field that points to the custom field used to point to the `Payload` field in the format *`<orgNamespace>__<CustomFieldName>__`*c. This is the API name of the custom Payload field in the custom platform event. For example, devorg__Payload__c. |
| `customEventRecipientField` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The mapping field that points to the custom field used to point to the Recipient field.<br>This field is deprecated in API version 60.0 and will be removed in API version 61.0. Use a combination of `customEventTypeField` and `customEventPayloadField` instead. |
| `CustomEventTypeField` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The mapping field that points to the custom field used to point to the Platform event type (EventType) field, in the format *`<orgNamespace>__<CustomFieldName>__`*c. This is the API name of the custom EventType field in the custom platform event. For example, devorg__EventType__c. |
| `CustomIconId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>For Bring Your Own Channel for Messaging and Bring Your Own Channel for CCaaS, this field represents the name of the status resource image used to identify the channel integration, such as a channel logo. For the best results, set the image size to 50px x 50px and save the image in SVG file format. This field is optional. Available in API version 61.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>CustomIcon<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>StaticResource |
| `CustomPlatformEvent` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The API name of the custom platform event created for the Interaction Service API in the format *<orgNamespace>__<CustomPlatformEventName>__*e. For example, devorg__TestEvent__e. |
| `CustomerConnectedAppOauthLink` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>DO NOT SET OR CHANGE THIS VALUE. This value is automatically generated. This field represents the OAuth link for the connected app created by an admin if the ConnectedAppType is `Customer.` Available in API version 62.0. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique name of the custom metadata type object in the API in the format *<Prefix>_<ConversationChannelDefinition>*, where *Prefix* matches the prefix you gave to the name of the interaction service connected app. For example, Partner1_ChannelDefinition1, where Partner1 is the prefix and ChannelDefinition1 is the given name. |
| `EventCapabilitiesIsInboundAckOptionExposed` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Indicates whether the partner supports read receipts and delivery receipts for inbound messages (`true`) or whether the partner doesn't support these inbound acknowledgments and the functionality is hidden from the Salesforce admin in the Messaging settings (`false`). The default value is `false`.<br>This field is available in API version 65.0 and later. Use this field instead of IsInboundReceiptsEnabled. |

| Field | Details |
| --- | --- |
| EventCapabilitiesIsProgressIndicatorOptExposed | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Indicates whether the partner supports progress indicators for AI agents (`true`) or whether the partner doesn't support them and the functionality is hidden from the Salesforce admin in the Messaging settings (`false`). The default value is `false`.<br>This field is available in API version 65.0 and later. |
| EventCapabilitiesIsRoutingWorkResultSupported | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Indicates whether the Routing Work Result event is sent as a Custom Platform event (`true`) or not (`false`). The default value is `false`.<br>This field is available in API version 65.0 and later. Use this field instead of IsRoutingWorkResultEnabled. |
| EventCapabilitiesIsTypingIndicatorOptionHidden | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Indicates whether the partner doesn't support typing indicators for outbound messages and the functionality is hidden from the Salesforce admin in the Messaging settings (`true`) or whether outbound typing indicators are supported by the partner (`false`). The default value is `false`, meaning the outbound typing indicator feature is supported by default. To disable the outbound typing indicator feature, set this value to `true`.<br>This field is available in API version 65.0 and later. Use this field instead of IsTypingIndicatorDisabled. |
| `IsConferenceSupported` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the partner supports conferencing for Bring Your Own Channel (`true`), or not (`false`). With conferencing, more than two participants are allowed in a Messaging session. The default is `false`.<br>This field is available in API version 64.0 and later. |

| Field | Details |
| --- | --- |
| `IsInboundReceiptsEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the partner supports read receipts and delivery receipts for inbound messages (`true`) or whether the partner doesn't support these inbound acknowledgements and the functionality is hidden from the Salesforce admin in the Messaging settings (`false`). The default value is `false`.<br>This field is available in API version 63.0 and 64.0. The field is deprecated in API version 65.0 and will be removed in API version 66.0. Use EventCapabilitiesIsInboundAcknwOptionExposed instead. |
| `IsRoutingWorkResultEnabled` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the Routing Work Result event is sent as a Custom Platform event or not.<br>The default value is `false`.<br>Available in API version 64.0. This field is deprecated in API version 65.0 and will be removed in API version 66.0. Use EventCapabilitiesIsRoutingWorkResultSupported instead. |
| `IsTypingIndicatorDisabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the partner doesn't support typing indicators for outbound messages and the functionality is hidden from the Salesforce admin in the Messaging settings (`true`) or whether outbound typing indicators are supported by the partner (`false`). The default value is `false`, meaning the outbound typing indicator feature is supported by default. To disable the outbound typing indicator feature, set this value to `true`.<br>This field is available in API version 63.0 and 64.0. The field is deprecated in API version 65.0 and will be removed in API version 66.0. Use EventCapabilitiesIsTypingIndicatorOptionHidden instead. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The UI label name for the custom metadata type object in the API. This name appears in several places in the UI, so include the partner channel name for easy identification. For example, Channel Definition 1. |
| `MaxParticipantsForCnfrOverride` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Specifies the limit for how many participants can be in a messaging conference. If set, this field overrides the platform limit for the number of participants in a conference. If not set or if set to a value higher than the messaging platform limit, the limit defaults to the messaging platform limit of how many participants can be in a messaging conference at one time.<br>This field is available in API version 64.0 and later. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the *`namespacePrefix__componentName`* notation. The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.<br>`NamespacePrefix` is null if the publisher is Salesforce. |
| `RoutingOwner` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The system the customer uses to manage routing for Bring Your Own Channel for Messaging or Bring Your Own Channel for CCaaS. |

| Field | Details |
| --- | --- |
| | Possible values are:<br>• `Partner`<br>• `Salesforce`<br>The default value is `Salesforce`.<br>For example, if set to *`Salesforce`*, routing is managed by the Salesforce system. If set to *`Partner`*, routing is managed by the partner's system.<br>For Bring Your Own Channel for Messaging, this value must be set to *`Salesforce`*. |

# ConversationEntry

Represents a message or event in a voice call or a standard or enhanced messaging session. This object is available in API version 43.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To use the ConversationEntry object, enable the Access Conversation Entries user permission, which is available in API version 50.0 and later. Earlier versions do not require permissions.

## Fields

| Field | Details |
| --- | --- |
| `ActorId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the author. The possible values can be `null` or any ID in the following domain set:<br>• `BotDefinition`<br>• `LiveChatVisitor`<br>• `MessagingEndUser`<br>• `User`<br>This is a polymorphic relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Actor<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MessagingEndUser, User |
| `ActorName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The name of the author sending the message or event. |
| `ActorType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The author of this entry in the chat history. The valid values include:<br>• `Agent`<br>• `Bot`<br>• `EndUser`<br>• `Supervisor`<br>• `System` |
| `ClientDuration` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The length in milliseconds for the entry. This field is used with voice messages and other applicable use cases. This value may be 0 if not set by the client. This field is available in API version 51.0 and later. |
| `ClientTimestamp` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The timestamp sent by the client when it generated the entry. This field is available in API version 51.0 and later. |
| `ConversationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The MessagingSession ID this entry belongs to.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Conversation<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MessagingSession, VoiceCall |
| `EntryEndTime` | **Type**<br>datetime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The timestamp that this entry ended in the chat history. This field is available in API version 48.0 and later. |
| `EntryTime` | **Type**<br>datetime<br>**Properties**<br>Create, Filter, Sort<br>**Description**<br>The timestamp of this entry in the chat history. |
| `EntryTimeMilliSecs` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The milliseconds value for the time when an entry was received by the server. Note that the related `EntryTime` field does not provide millisecond accuracy. This field is available in API version 51.0 and later. |

| Field | Details |
| --- | --- |
| `EntryType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of entry in the chat history. Can be a message (`text`) or an event. The possible values include:<br>• `Text`<br>• `AdminOptedIn`<br>• `AdminOptedOut`<br>• `BotEscalated`<br>• `ChatbotClosedIdleSession`<br>• `ChatbotEndedChatByAction`—Conversation ended by automated action<br>• `ChatbotEndedTransferNotConfigured`—Conversation ended because transfer fail is not configured<br>• `ChatbotEstablished`<br>• `ChatbotNotEstablished`<br>• `EndUserOptedIn`<br>• `EndUserOptedOut` |
| `HasAttachments` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a message has attachments associated with it (`true`) or not (`false`). |
| `Message` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable<br>**Description**<br>The message or event sent by the author. In ConversationEntry records for enhanced Messaging channels or Messaging for In-App and Web, the Message field is blank due to data storage differences from standard channels. |
| `MessageDeliverTime` | **Type**<br>datetime<br>**Properties**<br>Create, Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Unused field reserved for future use. |
| `MessageIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID for the message. Maximum size is 36 characters. |
| `MessageReadTime` | **Type**<br>datetime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>Unused field reserved for future use. |
| `MessageSendTime` | **Type**<br>datetime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>Unused field reserved for future use. |
| `MessageStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The status of the message sent by the author. The valid values include:<br>• `Delivered`<br>• `Error`<br>• `Pending`<br>• `Read`<br>• `Sent` |
| `MessageStatusCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The code associated with a message status. `MessageStatusCode` is only populated when a message is undeliverable |
| `Seq` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The sequence position of this entry in the chat history. |
| `ServerReceivedTimestamp` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The timestamp recorded when the server received the entry. This is a unique value and is used for ordering. This value can also be referred to as the "transcripted timestamp." This field is available in API version 51.0 and later. |

## Usage

In standard SMS, WhatsApp, and Facebook Messenger channels, a ConversationEntry record is created for each message sent by a messaging end user or an agent, bot, or automation. Each ConversationEntry record is associated with a MessagingSession record, which represents the interaction between the messaging end user and the business. Access and work with ConversationEntry records like any standard object. You can report on messaging activity and track the conversation workflow end to end. You can also download or delete transcripts, redact sensitive text, and customize your workflows with solutions built on the ConversationEntry object.

In enhanced Messaging channels, Messaging for In-App and Web, and Service Cloud Voice ("enhanced channels"), inbound and outbound messages are processed in one of two ways depending on your location.

- A ConversationEntry record is created but the `Message` field is blank, or
- No ConversationEntry record is created.

To get the fullest picture of conversations in enhanced channels, use Data Cloud, the Connect REST API, or the Conversation Transcript Export tool to access transcripts. See Accessing Messaging and Voice Conversation Data.

Note: ConversationEntry records aren't created until the messaging session ends and the agent closes the session tab. One exception is for the first message in any standard messaging session, whose ConversationEntry record is created immediately.

# ConversationParticipant

Represents an active participant in a conversation. A new ConversationParticipant record is created each time a participant joins a conversation. This object is available in API version 49.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `AppType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of app used by the participant, such as messaging, chatbot, live_message, agent. The nillable property is available in API version 51.0 and later. |
| `ConversationId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The record ID of the conversation that this participant is part of. |
| `JoinedTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort<br>**Description**<br>The date and time that a participant joined a conversation. |
| `LastActiveTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort<br>**Description**<br>The date and time that a participant was last active during a conversation. |
| `LeftTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time that a participant left a conversation. |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The autogenerated name of the conversation participants. |
| `ParticipantContext` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>An identifier, such as a Facebook page, to add context about this participant. |
| `ParticipantEntityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the record connected to this participant record, such as a Contact, Messaging End User, or User record. |
| `ParticipantKey` | **Type**<br>string<br>**Properties**<br>Filter, idLookup, Group, Nillable, Sort<br>**Description**<br>A value that uniquely identifies this participant. |
| `ParticipantRole` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The role of this participant in the conversation, such as Agent, End User, or Supervisor. |

# ConvIntelligenceSignalRule

Represents a conversation intelligence signal rule. The rule triggers actions based on real-time intelligence signals from your telephony system or keywords mentioned by support reps or customers. The rule contains a set of conditions (subrules) and the filter logic used to evaluate those conditions to determine whether to trigger actions. This object is available in API version 62.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

This type requires an add-on license for Service Cloud Voice for Amazon Connect, Service Cloud Voice for Partner Telephony with Amazon Connect, Service Cloud Voice for Partner Telephony, or Digital Engagement.

## Fields

| Field | Details |
|---|---|
| `ActionType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Required. Action to take based on the conversation intelligence signal detected during a conversation. Possible values are:<br>Possible values are:<br>• `AlertSupervisor`–Sends an alert to the supervisor.<br>• `AlertSupervisorAndAgent`–Sends an alert to the rep and supervisor.<br>• `LaunchFlow`–Triggers an auto-launched flow. If set, also set `ActionValue`.<br>• `LaunchNBA`–Recommends the next best action to the rep. |
| `ActionValue` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Action to perform based on the `ActionType` specified.<br>If `ActionType` is set to `LaunchFlow`, this value is the `DeveloperName` of the flow to be launched. For example, EmailAlert.<br>For all other `ActionType` values, don't set this parameter. |
| `ConversationChannelId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Required. ID (`ChannelAddressIdentifier`) of the Messaging channel or name (`InternalName`) of the Voice channel.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ConversationChannel<br>**Refers To**<br>CallCenter, MessagingChannel |
| `Criteria` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required. Filter logic applied to the rule conditions (subrules). For example, ((1 AND 2) OR 3). The numbers in the formula are derived from the `ConvIntelligenceSignalSubrule.Order` value plus 1. For example, filter logic (1 AND 2) is calculated by adding the first condition (`Order`=0) with the second condition (`Order`=1). |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Required. Create, Filter, Group, Sort, Update<br>**Description**<br>API name of the conversation intelligence signal rule. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Required. Indicates whether the conversation intelligence signal rule is active (`true`) or inactive (`false`). The default value is `false`. |
| `Label` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Name of the conversation intelligence signal rule. |

| Field | Details |
| --- | --- |
| `ParticipantRole` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>If `Service` is set to KeywordMatch, this value determines whether the rule applies to utterances made by reps, customers, or both roles. Possible values are:<br>Possible values are:<br>• `Agent`<br>• `AgentOrCustomer`<br>• `Customer`<br>If `Service` is not set to KeywordMatch, don't set this parameter. |
| `Service` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Required. Salesforce- or partner-provided intelligence source.<br>For Salesforce-provided intelligence sources, set this parameter to `KeywordMatch`.<br>For partner-provided intelligence sources, possible values are:<br>• `AmazonConnectContactLens`<br>If none of the options apply to you, contact your Salesforce representative for the service name. |

# ConvIntelligenceSignalSubRule

Represents a condition (subrule) within a conversation intelligence signal rule. This object is available in API version 62.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

This type requires an add-on license for Service Cloud Voice for Amazon Connect, Service Cloud Voice for Partner Telephony with Amazon Connect, Service Cloud Voice for Partner Telephony, or Digital Engagement.

# Fields

| Field | Details |
|---|---|
| `ConvIntelligenceSignalRuleId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Unique ID of the conversation intelligence signal rule. This field is a relationship field.<br>**Relationship Name**<br>ConvIntelligenceSignalRule<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>ConvIntelligenceSignalRule (the master object) |
| `OperandValue` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Value of the signal type used to determine if the rule condition is met. For example, escalate_level_1. |
| `Operator` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Filter logic operator used to determine if the rule condition is met. Possible values are:<br>• `Equals`<br>• `GreaterThan`<br>• `LessThan`<br>• `NotEquals` |
| `Order` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Order the condition appears in relation to the other conditions in the list, with zero (0) being the first condition listed. If `Type` is set to Keyword, the maximum value is 24. For all other |

| Field | Details |
| --- | --- |
| | `Type` values, the maximum value is 4. This value is used when applying filter logic to the rule. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Type of conversation intelligence signal used by the rule to determine whether to trigger an action. This value depends on the ConvIntelligenceSignalRule.ConversationChannelId and ConvIntelligenceSignalRule.Service values.<br>If `Service` is set to KeywordMatch, possible values are:<br>• `Keyword`–A word or group of words spoken or typed.<br>If `Service` is set to AmazonConnectContactLens, possible values are:<br>• `Category`–Category name defined in your telephony system.<br>If `Service` is set to another value, contact your Salesforce representative for the conversation intelligence signal types available for your intelligence source. |

# ConvMessageSendRequest

Represents a request to send a template-based messaging component to a series of messaging users in an enhanced messaging channel or Messaging for In-App. This object is available in API version 60.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Messaging and its associated objects are available only in Enterprise, Unlimited, and Developer Editions for Service Cloud or Sales Cloud with the Digital Engagement add-on license.

## Fields

| Field | Details |
| --- | --- |
| `AllowExistingSessionStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the message can be sent only at certain times.<br>Possible values are:<br>• `Any`—Send the message regardless of whether the messaging user is engaged in an active messaging session with the business.<br>• `Closed`—Send the message unless the messaging user is engaged in a messaging session with a status other than Error or Ended, in which case it is never sent.<br>• `NonActive`—Send the message unless the messaging user is engaged in a messaging session with a status of Active, in which case it is never sent. |
| `CommSubscriptionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The related communication subscription, if applicable. This field is a relationship field that refers to CommSubscription. |
| `CompletedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date and time when the request is completed and all messages associated with the request are processed, meaning they were sent or failed to be sent. |
| `FailedMessageCount` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The number of messages that failed to be delivered to a messaging user. For example, if a flow sends the message to a series of 50 messaging users and 4 don't receive the message, this value is 4. |
| `FailedMessageErrorReasons` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The error reason for each of the failed messages. For example, if 4 messages fail to send, this field shows the error reason for each failed message. |

| Field | Details |
| --- | --- |
| `FailedMessageIdentifiers` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The IDs of the messages that failed to send. For example, if 4 messages fail to send, this field shows 4 message IDs. |
| `InProgressMessageCount` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>The number of messages in the process of being sent. |
| `InProgressMessageIdentifiers` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A list of IDs of the messages being sent. |
| `MessageDefinition` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The name of the messaging component being sent. Only active messaging components can be sent. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>An auto-generated ID for the request that uses the format MSJ-{00000000}. |
| `PendingMessageCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of messages that haven't yet been sent. |
| `PendingMessageIdentifiers` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>A list of IDs of the pending messages. |
| `RequestConsentType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates whether the flow applies the consent settings of the messaging end user or the communication subscription.<br>Possible values are:<br>• `CommunicationSubscription`<br>• `MessagingEndUser` |
| `RequestStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The status of the request.<br>Possible values are:<br>• `Completed`<br>• `Pending`<br>• `In Progress`—The system is actively trying to send the message. If a message can't be sent, the RequestStatus returns to Pending and sending is retried later. |
| `RequestType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of request.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `SendNotificationMessages` |
| `SessionLongevityPreference` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates whether to end the session after the message is sent.<br>Possible values are:<br>• `KeepSessionOpen`—After the flow sends the message, keep the messaging session in a New state. If the end user doesn't respond within 48 hours, the session ends. This is a good option if you expect customers to respond to automated messages and want service reps to see their response in context.<br>• `EndSession`—After the flow sends the message, end the messaging session. If the customer responds, a new messaging session is created and routed to your support team. |
| `ShouldEnforceChannelConsent` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the existing Messaging channel consent preferences are applied when determining who receives the message. Setting this value to `true` is the most common approach. The default value, `false`, allows you to add custom consent logic—for example, to customize a flow to send the message to both implicitly opted-in users and explicitly opted-in users. |
| `SuccessMessageCount` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The number of messages that were successfully sent to messaging users. Delivery may occur much later than sending, depending on factors such as the connectivity status of the recipient. Delivery is reflected in the messaging session transcript. |
| `SuccessMessageIdentifiers` | **Type**<br>textarea<br>**Properties**<br>Nillable |

| Field | Details |
| --- | --- |
| | **Description**<br>A list of IDs of the messages that were sent. |
| `TotalMessageCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of messages that the related flow attempted to send.<br>This field is a calculated field. |

## Usage

A ConvMessageSendRequest can be generated by a flow, Apex code, or REST API call that invokes the sendConversationMessages invocable action. Use the ConvMessageSendRequest object to query messages sent by the sendConversationMessages invocable action.

# ConversationVendorInfo

This setup object connects the partner vendor system to the Service Cloud feature. For example, for Service Cloud Voice, this object contains information about the partner telephony or Contact Center as a Service (CCaaS) partner system. For Bring Your Own Channel for Messaging this object contains information about the partner messaging system, and for Bring Your Own Channel for CCaaS, this object contains information about the CCaaS partner system. This object is available in API version 52.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

This object requires an add-on license for Service Cloud Voice for Partner Telephony or Digital Engagement.

## Fields

The fields in the ConversationVendorInfo object apply to all Service Cloud features unless otherwise stated in the field description. For example, if a field applies to just one Service Cloud Voice telephony model setup or is applied differently by different partner systems, this is stated in the field description.

| Field | Details |
| --- | --- |
| `AwsAccountKey` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The 12-digit AWS subaccount ID that's automatically provisioned for you when Service Cloud Voice was turned on. Available in API version 55.0 and later.<br>Applies to the following implementation:<br>• Service Cloud Voice with Amazon Connect |
| `AwsRootEmail` | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The email address used by Salesforce to create the root user for the provisioned AWS subaccount when Service Cloud Voice was turned on. Available in API version 55.0 and later.<br>Applies to the following implementation:<br>• Service Cloud Voice with Amazon Connect |
| `AwsTenantVersion` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The version number of the SVCTenantStack AWS CloudFormation stack that's deployed. The stack is deployed in AWS region "us-east-1". Available in API version 55.0 and later.<br>Applies to the following implementation:<br>• Service Cloud Voice with Amazon Connect |
| `agentSSOSupported` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Group, Update<br>**Description**<br>If set to `true`, agents can single sign-on (SSO) into their contact center using Salesforce as the identity provider (IdP). Behind the scenes, Salesforce is used as the SAML IdP in the Single Sign-On connected app for the contact center. If set to `false`, an IdP other than Salesforce is used or an IdP isn't used at all. The default value is `false`.<br>If this value is set to `false` and you want to use Salesforce as the IdP for your contact center, set this value and the `namedCredentialSupported` value to `true` and configure the `service_cloud_voice.PartnerSSO` interface in your Apex integration class.<br>Available in API version 53.0 and later. |

| Field | Details |
| --- | --- |
| | Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect<br>• Bring Your Own Channel for CCaaS |
| `BridgeComponent` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The Lightning component used to communicate between the telephony or messaging system and other Lightning components.<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect<br>• Bring Your Own Channel for CCaaS |
| `CapabilitiesSupportsIntelligence` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>If set to `true`, Salesforce ingests real-time signals sent from a partner telephony system. If set to `false`, Salesforce doesn't ingest real-time intelligence signals from a partner telephony system. The default value is `false`. Available in API version 59.0 and later.<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony |
| `CapabilitiesSupportsKeyProvisioning` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>If set to `true`, Salesforce has permission to automatically provision public keys to contact centers. The default value is `false`.<br>Available in API version 54.0 and later.<br>Applies to the following implementation:<br>• Service Cloud Voice with Partner Telephony |

| Field | Details |
| --- | --- |
| CapabilitiesSupportsMultiVendorConfig | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Indicates whether multiple Connector URLs are supported (`true`) or not supported (`false`) for contact centers. The default value is `false`.<br>Available in API version 65.0 and later.<br>Applies to this telephony model:<br>• Service Cloud Voice with Partner Telephony |
| CapabilitiesSupportsPartnerPhoneNumbers | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>If set to `true`, Salesforce has permission to access relevant agents' phone numbers while configuring contact center channels. The default value is `false`.<br>Available in API version 54.0 and later.<br>Applies to the following implementation:<br>• Service Cloud Voice with Partner Telephony |
| CapabilitiesSupportsQueueManagement | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>If set to `true`, support queue management. The default value is `false`. Available in API version 56.0 and later.<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect<br>• Bring Your Own Channel for CCaaS |
| CapabilitiesSupportsUnifiedRouting (Beta) | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether unified routing is supported (`true`) or not supported (`false`) for inbound voice calls in voice channels. The default value is `false`. Once this value is set to `true`, it can't be changed to `false`.<br>Available in API version 63.0 and later.<br>Applies to the following implementation:<br>• Service Cloud Voice with Partner Telephony |
| `ClientAuthMode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The client authentication mode.<br>Possible values are:<br>• `Custom`<br>• `Mixed`<br>• `SSO`<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect |
| `ConnectorUrl` | **Type**<br>url<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The URL that hosts your Service Cloud Voice or Bring Your Own Channel for CCaaS connector. This value could be a Visualforce page or a public URL.<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect<br>• Bring Your Own Channel for CCaaS |
| `customConfig` | **Type**<br>CustomEntityDefinition<br>**Properties**<br>Create, Filter, Group, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The foreign key to the CustomEntityDefinition, which contains partner-specific custom settings. Available in API version 53.0 and later.<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect<br>• Bring Your Own Channel for CCaaS |
| `CustomIconId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the static resource used to identify the contact center integration, such as a Contact Center as a Service (CCaaS) provider logo. The static resource must be in SVG format. This field is optional. Available in API version 62.0 and later.<br>This field is a relationship field.<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Bring Your Own Channel for CCaaS<br>This field is a relationship field.<br>**Relationship Name**<br>CustomIcon<br>**Refers To**<br>StaticResource |
| `CustomLoginUrl` | **Type**<br>url<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The URL that hosts your telephony system or CCaaS system login page.<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect<br>• Bring Your Own Channel for CCaaS |
| `DeveloperName` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API.<br>Note: Only users with View DeveloperName or View Setup and Configuration permissions can view, group, sort, and filter this field. |
| `IsTaxCompliant` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the Amazon tax settings for the AWS subaccount provisioned for Service Cloud Voice have been confirmed (`true`). The default value is `false`. Available in API version 55.0 and later.<br>Applies to the following implementation:<br>• Service Cloud Voice with Amazon Connect |
| `einsteinConversationInsights Supported` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Group, Update<br>**Description**<br>If set to `true`, Einstein Conversation Insights is turned on. The default value is `false`. Available in API version 53.0 and later.<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect |
| `integrationClass` | **Type**<br>ApexClass<br>**Properties**<br>Create, Filter, Group, Update<br>**Description**<br>The foreign key to the partner Apex class implementing supported interfaces. Available in API version 53.0 and later.<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect<br>• Bring Your Own Channel for CCaaS |

| Field | Details |
| --- | --- |
| `IntegrationClassName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Deprecated in API version 53.0. Don't set this field. Instead, use `integrationClass`.<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect |
| `keyProvisioningSupported` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Group, Update<br>**Description**<br>If set to `true`, key provisioning and renewal are automated. The default value is `false`. Available in API version 54.0 and later.<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the master label (`MasterLabel`) in the user interface.<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect<br>• Bring Your Own Channel for CCaaS |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The partner vendor's display name as it appears in the UI. This name appears in several places in the UI, so include the partner vendor name for easy identification. For Service Cloud Voice, this label also represents the telephony provider name in the contact center record. |

| Field | Details |
| --- | --- |
| | For Service Cloud Voice with Amazon Connect, this field is always set to `Service Cloud Voice`. |
| `namedCredential` | **Type**<br>Named Credential<br>**Properties**<br>Create, Filter, Group, Update<br>**Description**<br>A sample-named credential that can be used for Apex callouts to the partner system. Available in API version 53.0 and later.<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect<br>• Bring Your Own Channel for CCaaS |
| `namedCredentialSupported` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Group, Update<br>**Description**<br>If set to `true` and if supported by the partner telephony, then prescriptive setup through a named credential is enabled allowing server-to-server communication with a named credential. Available in API version 53.0 and later.<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect<br>• Bring Your Own Channel for CCaaS |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that's associated with this object.<br>Applies to the following implementations:<br>• Service Cloud Voice with Amazon Connect<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect<br>• Bring Your Own Channel for CCaaS |

| Field | Details |
| --- | --- |
| `partnerContactCenterListSupported` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Group, Update<br>**Description**<br>If set to `true`, enables the customer to select one contact center from a list of multiple contact centers to connect with Salesforce. The default value is `false`. Available in API version 53.0 and later.<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect<br>• Bring Your Own Channel for CCaaS |
| `partnerPhoneNumbersSupported` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Group, Update<br>**Description**<br>If set to `true`, displays a list of phone numbers used to create contact center channels. The default value is `false`. Available in API version 54.0 and later.<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect |
| `partnerTransferDestinationsSupported` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Group, Update<br>**Description**<br>If set to `true`, allows Salesforce to fetch contact center queues so that Salesforce and contact center queues can be mapped. The default value is `false`. Available in API version 53.0 and later.<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect<br>• Bring Your Own Channel for CCaaS |
| `ServerAuthMode` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Deprecated in API 53.0. Server authentication mode. Set this value to `None`.<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect |
| `TelephonySettingsComponent` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the Lightning Web Component (LWC) that is used to display additional agent settings in the Omni-Channel widget. This value is in the format `mynamespace:componentName`, where `mynamespace` is the namespace associated with the Service Cloud Voice package that was created, and `componentName` is the FQDN of the Lightning component.<br>Available in API version 54.0 and later.<br>Applies to the following implementation:<br>• Service Cloud Voice with Partner Telephony |
| `universalCallRecording AccessSupported` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Group, Update<br>**Description**<br>If set to `true`, Universal Call Recording Access is turned on. The default value is `false`.<br>If this value is set to `false` and you want to turn on Universal Call Recording, set this value to `true` and configure the service_cloud_voice.RecordingMediaProvider interface in your Apex integration class.<br>Available in API version 54.0 and later.<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect |
| `userSyncingSupported` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Group, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>If set to `true`, supports automated user syncing whenever a user is added to or removed from a contact center. The default value is `false`. Available in API version 53.0 and later.<br>Applies to the following implementations:<br>• Service Cloud Voice with Partner Telephony<br>• Service Cloud Voice with Partner Telephony from Amazon Connect<br>• Bring Your Own Channel for CCaaS |
| `vendorType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Update<br>**Description**<br>The Service Cloud feature the partner vendor supports.<br>Possible values are:<br>• `Amazon_Connect` — For Service Cloud Voice with Amazon Connect.<br>• `BringYourOwnChannelPartner` — For Bring Your Own Channel for Messaging. Available in API version 60.0 and later.<br>• `BringYourOwnContactCenter` — For Bring Your Own Channel for Contact Center as a Service (CCaaS). Available in API version 60.0 and later.<br>• `ServiceCloudVoicePartner` — For Service Cloud Voice with Partner Telephony or Service Cloud Voice with Partner Telephony from Amazon Connect.<br>If you're inserting or updating the record, this field must be set.<br>Available in API version 53.0 and later. |

# CorsWhitelistEntry

Represents an entry in the cross-origin resource sharing (CORS) allowlist. Origins included in the allowlist can request REST resources from that Salesforce org.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

## Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`, `update()`, `upsert()`

# Fields

| Field Name | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the record in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. This field is automatically generated but you can supply your own value if you create the record using the API.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>This picklist contains the following fully-supported languages:<br>• Chinese (Simplified): `zh_CN`<br>• Chinese (Traditional): `zh_TW`<br>• Danish: `da`<br>• Dutch: `nl_NL`<br>• English: `en_US`<br>• Finnish: `fi`<br>• French: `fr`<br>• German: `de`<br>• Italian: `it`<br>• Japanese: `ja`<br>• Korean: `ko`<br>• Norwegian: `no`<br>• Portuguese (Brazil): `pt_BR`<br>• Russian: `ru`<br>• Spanish: `es` |

| Field Name | Details |
| --- | --- |
| | • Spanish (Mexico): `es_MX` Spanish (Mexico) defaults to Spanish for customer-defined translations.<br>• Swedish: `sv`<br>• Thai: `th` The Salesforce user interface is fully translated to Thai, but Help is in English. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Primary label for the CORS allowlist entry. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>For managed packages, this field is the namespace prefix assigned to the package. For unmanaged packages, this field is blank. |
| `UrlPattern` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The origin URL pattern must include the HTTPS protocol (unless you're using your localhost) and a domain name, and can include a port. The wildcard character (*) is supported and must be in front of a second-level domain name. For example, `https://*.example.com` adds all subdomains of `example.com` to the allowlist.<br>The origin URL pattern can be an IP address. But an IP address and a domain that resolve to the same address aren't the same origin, and you must add them to the CORS allowlist as separate entries.<br>Google Chrome™ and Mozilla® Firefox® browser extensions are also allowed as resources in API version 53 and later. Chrome extensions must use the prefix `chrome-extension://` and 32 characters without digits or capital letters, for example `chrome-extension://abdkkegmcbiomijcbdaodaflgehfffed`. Firefox extensions must use the prefix `moz-extension://` and an 8-4-4-4-12 format of small alphanumeric characters, for example `moz-extension://1234ab56-78c9-1df2-3efg-4567891hi1j2`. |

## Usage

Cross-Origin Resource Sharing (CORS) allows web browsers to request resources from other origins. For example, using CORS, the JavaScript for a web application at `https://www.example.com` can request a resource from `https://www.salesforce.com`. To allow access to supported Salesforce APIs, Apex REST resources, and Lightning Out from JavaScript code in a web browser, add the requesting origin to your Salesforce CORS allowlist.

If a browser that supports CORS makes a request to an origin in the Salesforce CORS allowlist, Salesforce returns the origin in the `Access-Control-Allow-Origin` HTTP header, along with any additional CORS HTTP headers. If the origin isn't included in the allowlist, Salesforce returns HTTP status code 403.

**Important:** CORS doesn't support requests for unauthenticated resources, including OAuth endpoints. You must pass an OAuth token with requests that require it.

CORS is a W3C recommendation to enable browsers to request resources from origins other than their own.

# Coupon

A coupon associated with a promotion. This object is available in API version 54.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The Coupon object is available only if the B2B Commerce license is enabled.

## Fields

| Field | Details |
|---|---|
| `CouponCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Coupon code for the coupon. A buyer can use the coupon code to qualify for a promotion. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. |

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Description of the coupon. |
| `EndDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The end date and time when the coupon is no longer active. |
| `LastReferencedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Name of the coupon. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the owner of this coupon.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PromotionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the promotion associated with the coupon.<br>This is a relationship field.<br>**Relationship Name**<br>Promotion<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Promotion |
| `RedemptionLimitAllBuyers` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Number of times this coupon can be used in total. This field is available in API version 61.0 and later. |
| `RedemptionLimitPerBuyer` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Number of times this coupon can be used per customer. This field is available in API version 61.0 and later. |

| Field | Details |
| --- | --- |
| `StartDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The start date and time when the coupon is active. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Status of the coupon.<br>Possible values are:<br>• `Active`<br>• `Inactive`<br>The default value is `Inactive` |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CouponChangeEvent on page 68 (API version 62.0)**
Change events are available for the object.

# CouponCodeRedemption

Tracks each coupon code redemption. This object is available in API version 58.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available through the B2B Commerce license. To access this object, the Promotions Coupon Redemption Limit user permission must be assigned.

# Fields

| Field | Details |
| --- | --- |
| `Buyer` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Information about the buyer. Can be any buyer-specific information. |
| `CouponId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the redeemed coupon.<br>This field is a relationship field.<br>**Relationship Name**<br>Coupon<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Coupon |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Salesforce generated coupon code, such as CCR-000000002. Can't be edited. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who created the coupon code redemption.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Group, User |
| `Transaction` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort<br>**Description**<br>ID of the transaction where the coupon code was redeemed. Must be a valid cart ID. |

# CreditMemo

Represents a document that is used to reduce the amount that a buyer owes a seller under the terms of an earlier invoice. This object is available in API version 48.0 and later.

A credit memo always decreases the balance of an invoice. Users can apply positive credit memos to positive invoices, for example, a $10 credit memo reduces the balance of a $100 invoice line to $90.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

## Special Access Rules

This object is available with Order Management, Subscription Management, and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
| --- | --- |
| `AppType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Read-only field that indicates which Salesforce application generated the credit memo.<br>Possible values are:<br>• `Commerce Cloud` |

| Field | Details |
| --- | --- |
| | • `Revenue Cloud`<br>This field is available in API versions 54.0 to 55.0 |
| `Balance` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Amount of the credit memo that's available for allocation. |
| `BillToContactId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Inherited from the account's Bill to Account field.<br>This field is a relationship field.<br>**Relationship Name**<br>BillToContact<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `BillingAccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>The customer account associated with this credit memo.<br>This field is a relationship field.<br>**Relationship Name**<br>BillingAccount<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `CreationMode` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates whether the credit memo originated in Salesforce or an external system.<br>Possible values are:<br>• `External`<br>• `Salesforce`<br>This field is available in API version 55.0 and later. |
| `CreditDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The date when the credit memo was posted. |
| `CreditMemoNumber` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>A credit memo numbering alternative to DocumentNumber, containing a number in a format of your choice. Credit memo numbering is optional. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Three-letter ISO 4217 currency code associated with the credit memo.<br>The default value is USD.<br>This field is available in API version 55.0 and later. |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the credit memo. |

| Field | Details |
| --- | --- |
| DocumentNumber | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>System-generated number for organizing financial documents, for example DOC-0000123. |
| EffectiveDate | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Represents the effective date of the credit memo. If this field is empty, the credit date is used. For reporting purposes only; this field drives no other logic.<br>This field is available in API version 55.0 and later. |
| ExternalReference | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Contains an external system's ID for the credit memo.<br>This field is available in API version 55.0 and later. |
| ExternalReferenceDataSource | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Contains the name of the external system that also contains the credit memo.<br>This field is available in API version 55.0 and later. |
| LastReferencedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| LastViewedDate | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was only referenced (`LastReferencedDate`) and not viewed. |
| `NetCreditsApplied` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Represents the total difference between the credit applied to and credit unapplied from the invoice.<br>This field is a calculated field. This field is available in API version 55.0 and later. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>The user who owns a credit memo record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `ReferenceEntityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the record that this credit memo was generated from. For example, the order, order summary, or invoice.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ReferenceEntity<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Invoice, Order<br>This field is available in API version 53.0 and later. |
| `SourceAction` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates which Salesforce API created the credit memo.<br>Possible values are:<br>• `Invoice`—Indicates that Credit Invoice API created the credit memo and applied it to the invoice.<br>• `NegativeInvoiceLineConversion`—Indicates that Subscription Management created the credit memo when a negative invoice line was converted.<br>• `Standalone`—Indicates that the Credit Memo API created the credit memo.<br>• `VoidPostedInvoice`—Indicates that the Void a Posted Invoice API created the credit memo to offset the amount that was voided on the invoice.<br>This field is available in API version 55.0 and later. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Status of the credit memo.<br>Possible values are:<br>• `Canceled`—Indicates that the credit memo isn't being used and doesn't have a financial impact.<br>• `Error`—Indicates that the credit memo has an error and doesn't have a financial impact.<br>• `Pending`—Indicates that the credit memo is being processed but hasn't yet been posted as a financial transaction.<br>• `Posted`—The credit memo has been recorded as a financial transaction. Most fields can't be edited. |
| `TotalAdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Sum of `TotalAmount` values for the credit memo's adjustment lines.<br>This field is a calculated field. |
| `TotalAdjustmentAmountWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of the credit memo's adjustment line amounts, including tax.<br>This field is available in API version 49.0 and later. |
| `TotalAdjustmentTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of the credit memo's adjustment line tax. Adjustment line balances are excluded.<br>This field is available in API version 49.0 and later. |
| `TotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Sum of the credit memo's `TotalLineAmount` and `TotalAdjustmentAmount`.<br>This field is a calculated field. |
| `TotalAmountWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total credit memo amount, with tax included.<br>This field is a calculated field. |
| `TotalChargeAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Sum of `TotalAmount` values for the credit memo's charge lines.<br>This field is a calculated field. |
| `TotalChargeAmountWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of the credit memo's charge line amounts, including tax.<br>This field is available in API version 49.0 and later. |
| `TotalChargeTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>This field is available in API version 49.0 and later. |
| `TotalCreditAmountApplied` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Credit memo amount that's been applied to invoices.<br>This field is available in API version 53.0 and later. |
| `TotalCreditAmountUnapplied` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Credit memo amount that's been unapplied from invoices.<br>This field is available in API version 55.0 and later. |
| `TotalTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Sum of `TotalAmount` values for the credit memo's tax lines. |

| Field | Details |
| --- | --- |
| | This field is a calculated field. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, the associated objects are available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CreditMemoFeed on page 55**
Feed tracking is available for the object.

**CreditMemoHistory on page 63**
History is available for tracked fields of the object.

**CreditMemoOwnerSharingRule on page 65**
Sharing rules are available for the object.

**CreditMemoShare on page 67**
Sharing is available for the object.

# CreditMemoAddressGroup

Stores the buyer's address information, which is used to determine the amount of tax to credit to a buyer when a credit memo is issued. This object is available in API version 55.0 and later.

## Supported Calls

`delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(), search(), undelete(), update()`

## Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
| --- | --- |
| `Address` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>Buyer's address. |

| Field | Details |
| --- | --- |
| City | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Buyer's city. |
| Country | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Buyer's country. |
| CreditMemoAddressGroupNumber | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>An auto-generated number, such as 0000123, that represents the address group. |
| CreditMemoId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the credit memo associated with the address group.<br>This field is a relationship field.<br>**Relationship Name**<br>CreditMemo<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CreditMemo |
| CurrencyIsoCode | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Three-letter ISO 4217 currency code associated with the credit memo. |

| Field | Details |
| --- | --- |
| | The default value is USD. |
| `GeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The accuracy rating for the geocode of the address group. An accuracy rating contains information about the location of a latitude and longitude.<br>Possible values are:<br>• `Address`<br>• `Block`<br>• `City`<br>• `County`<br>• `ExtendedZip`<br>• `NearAddress`<br>• `Neighborhood`<br>• `State`<br>• `Street`<br>• `Unknown`<br>• `Zip` |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this address group. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this address group. |
| `Latitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Latitude of the buyer's address. |
| `Longitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Longitude of the buyer's address. |
| `PostalCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The buyer's postal code or ZIP code. |
| `State` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The buyer's state. |
| `Street` | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The buyer's street number and name. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CreditMemoAddressGroupHistory on page 63**
History is available for tracked fields of the object.

# CreditMemoInvApplication

Represents an amount applied from a credit memo to an invoice. This object is available in API version 48.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

## Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
|---|---|
| `Amount` | **Type**<br>currency<br>**Properties**<br>Filter, Sort<br>**Description**<br>The amount of the credit memo that was applied to or unapplied from the invoice. |
| `AppliedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the credit memo was applied. If the credit memo invoice application's type is `Unapplied`, this value is inherited from the Applied date of the credit memo referenced in the AssociatedLineId. |
| `AssociatedLineId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>For a credit memo invoice application that represents an unapplied credit memo, this field shows the original credit memo invoice application.<br>This field is a relationship field.<br>**Relationship Name**<br>AssociatedLine<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>CreditMemoInvApplication |
| `CreditMemoBalance` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The balance of a credit memo after a credit memo is applied or unapplied. This field is a snapshot of the credit memo's balance after the action. It isn't updated after further changes to the credit memo balance. |
| `CreditMemoId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The credit memo that was applied or unapplied.<br>This field is a relationship field.<br>**Relationship Name**<br>CreditMemo<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CreditMemo |
| `CreditMemoInvoiceNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Number of the invoice to which a credit memo is applied. |
| `Date` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date when the credit memo amount was applied to the invoice. |

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the credit applied to an invoice. |
| `EffectiveDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The effective date of the application or unapplication of credit. Users can provide this value when applying or unapplying the credit memo. This field is optional and provided only for reporting purposes. It doesn't affect the credit memo invoice application's other fields. |
| `HasBeenUnapplied` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Shows whether this credit memo application has been unapplied from the target invoice.<br>Possible values are:<br>• `NA`<br>• `No`<br>• `Yes` |
| `ImpactAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The net adjustment to the invoice's balance after a credit memo is applied or unapplied. If a credit memo was applied, this value is the negative version of the credit memo invoice application's `Amount`. If a credit memo was unapplied, this value is the positive version of the credit memo invoice application's `Amount`.<br>This field is a calculated field. |
| `InvoiceBalance` | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The balance of the credit memo after a credit memo is applied or unapplied. This field is a snapshot of the credit memo's balance after the action. It isn't updated after further changes to the credit memo balance. |
| `InvoiceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the invoice to which credit is applied.<br>This field is a relationship field.<br>**Relationship Name**<br>Invoice<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Invoice |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Indicates whether the credit memo line application was generated because of an apply action (application) or an unapply action (unapplication).<br>Possible values are:<br>• `Applied`<br>• `Unapplied` |
| `UnappliedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when this application was unapplied from the target invoice. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CreditMemoInvApplicationFeed on page 55**
Feed tracking is available for the object.

**CreditMemoInvApplicationHistory on page 63**
History is available for tracked fields of the object.

# CreditMemoLine

Represents product, service, adjustment, or tax line items that were included in a credit memo. This object is available in API version 48.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

## Special Access Rules

This object is available with Order Management, Subscription Management, and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
|---|---|
| `AdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>Amount of this credit memo line item if its type is Adjustment. |
| `AdjustmentAmountWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Sum of the adjustment amount and the adjustment tax amount.<br>This field is available in API version 49.0 and later. This field is available when Subscription Management is enabled. |

| Field | Details |
| --- | --- |
| AdjustmentTaxAmount | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Amount of the tax related to the adjustment amount.<br>This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled. |
| BillingAddressId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the billing address related to this credit memo line.<br>This field is a relationship field. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled.<br>**Relationship Name**<br>BillingAddress<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CreditMemoAddressGroup |
| ChargeAmount | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>Amount of this credit memo line item if its type is Charge. |
| ChargeAmountWithTax | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Sum of the adjustment amount and the adjustment tax amount.<br>This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled. |

| Field | Details |
| --- | --- |
| `ChargeTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Amount of the tax related to the charge amount.<br>This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled. |
| `CreditMemoId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the parent credit memo.<br>This field is a relationship field.<br>**Relationship Name**<br>CreditMemo<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CreditMemo |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Three-letter ISO 4217 currency code associated with the credit memo line.<br>The default value is USD. |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the credit memo line. |
| `EndDate` | **Type**<br>date |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>For credit memos made from a time-based service, the end date of the line item being credited. |
| `LineAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Amount of the credit memo line.<br>This field is a calculated field. This field is available in API version 49.0 and later. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the credit memo line. |
| `Product2Id` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The product or service being credited in the credit memo line.<br>This field is a relationship field.<br>**Relationship Name**<br>Product2<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Product2 |
| `ReferenceEntityItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The order product or invoice line corresponding to this credit memo line. |

| Field | Details |
| --- | --- |
| | This field is a polymorphic relationship field. This field is available in API version 53.0 and later.<br>**Relationship Name**<br>ReferenceEntityItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderItemSummary, OrderProduct, InvoiceLine |
| `ReferenceEntityItemType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of transaction that generated the credit memo line.<br>Possible values are:<br>• `DeliveryCharge`<br>• `OrderProduct` |
| `ReferenceEntityItemTypeCode` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of object that generated the credit memo line.<br>Possible values are:<br>• `Charge`<br>• `Product` |
| `RelatedLineId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The credit memo line related to this line item.<br>This field is a relationship field.<br>**Relationship Name**<br>RelatedLine<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>CreditMemoLine |
| `ShippingAddressId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the shipping address.<br>This field is a relationship field. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled.<br>**Relationship Name**<br>ShippingAddress<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CreditMemoAddressGroup |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>For credit memo lines generated from a time-based service, the first date of the billing for the service. |
| `Status` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>State of the credit memo line. Inherited from the credit memo. |
| `TaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>Total tax for the credit memo. |

| Field | Details |
| --- | --- |
| `TaxCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The code used to calculate the tax rate for the invoice line. |
| `TaxDocumentNumber` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The document number that tracks taxes calculated for this credit memo line.<br>This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled. |
| `TaxEffectiveDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date used to calculate the credit memo line's `TaxAmount`. |
| `TaxName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>User-defined name for applied tax. |
| `TaxRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>Percentage value used for calculating tax. |
| `TotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The total amount of the credit memo line before any applicable tax. |
| `TotalAmountWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount of tax for this credit memo line, with tax included. Sum of TotalAmount and TaxAmount. |
| `TaxStatus` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Tracks whether the taxes were calculated for this credit memo line.<br>Possible values are:<br>• `Complete`<br>• `Error`<br>• `None`<br>The default value is None. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled. |
| `TaxTransactionNumber` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Tracks the transaction number of the tax calculated for this credit memo line. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled. |
| `TaxTreatmentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the tax treatment for the credit memo line.<br>This field is a relationship field. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>TaxTreatment<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>TaxTreatment |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of transaction for the invoice line.<br>Possible values are:<br>• `Adjustment`<br>• `Charge`<br>• `Tax` |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CreditMemoLineFeed on page 55**
Feed tracking is available for the object.

**CreditMemoLineHistory on page 63**
History is available for tracked fields of the object.

# Crisis

Represents a major crisis event that affects an Employee in an InternalOrganizationUnit. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts.

Work.com uses this object to track and describe crisis situations.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access this object, you must be assigned a Workplace Command Center permission set license and the Provides access to Workplace Command Center features system permission.

## Fields

| Field | Details |
| --- | --- |
| `CrisisType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The type or category of crisis.<br>Possible values are:<br>• `Economic Crisis`<br>• `Natural Disaster`<br>• `Pandemic`<br>• `War` |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The crisis description. |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date the crisis ended. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |

| Field | Details |
| --- | --- |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. The crisis record name. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who currently owns this record. Default value is the user logged in to the API to perform the create operation. |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The date the crisis started. |

# Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**CrisisHistory (API version 49.0)**
History is available for tracked fields of the object.

**CrisisOwnerSharingRule**
Sharing rules are available for the object.

**CrisisShare (API version 49.0)**
Sharing is available for the object.

*Workplace Command Center for Work.com Developer Guide*: Extend Work.com with Custom Solutions

# CronJobDetail

Contains details about the associated scheduled job, such as the job's name and type. This object is available in API version 29.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `JobType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of the associated scheduled job. The following are the available job types. Use the job type value when querying for a specific job type.<br>• `1`—Data Export<br>• `3`—Dashboard Refresh<br>• `4`—Reporting Snapshot<br>• `6`—Scheduled Flow<br>• `7`—Scheduled Apex<br>• `8`—Report Run<br>• `9`—Batch Job<br>• `A`—Reporting Notification |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The name of the associated scheduled job. |

## Usage

Use this object to query additional information about a scheduled job, such as the job's name and type.

# CronTrigger

Contains schedule information for a scheduled job. CronTrigger is similar to a cron job on UNIX systems. This object is available in API version 17.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `CronExpression` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The cron expression used to initiate the schedule.<br>Syntax:<br>`Seconds Minutes Hours Day_of_month Month Day_of_week Optional_year`<br>See `schedule(jobName, cronExpression, schedulableClass)` in the *Apex Reference Guide*. |
| `CronJobDetailId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the CronJobDetail record containing more details about this scheduled job.<br>This is a relationship field.<br>**Relationship Name**<br>CronJobDetail<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CronJobDetail |

| Field | Details |
| --- | --- |
| `EndTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the job either finished or will finish. |
| `NextFireTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The next date and time the job is scheduled to run. `null` if the job is not scheduled to run again. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Owner of the job. |
| `PreviousFireTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The most recent date and time the job ran. `null` if the job has not run before current local time. |
| `StartTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the most recent iteration of the scheduled job started. |
| `State` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The current state of the job. The job state is managed by the system. Possible values are:<br>• `WAITING`—The job is waiting for execution.<br>• `ACQUIRED`—The job has been picked up by the system and is about to execute.<br>• `EXECUTING`—The job is executing.<br>• `COMPLETE`—The trigger has fired and is not scheduled to fire again.<br>• `ERROR`—The trigger definition has an error.<br>• `DELETED`—The job has been deleted.<br>• `PAUSED`—A job can have this state during patch and major releases. After the release has finished, the job state is automatically set to `WAITING` or another state.<br>• `BLOCKED`—Execution of a second instance of the job is attempted while one instance is running. This state lasts until the first job instance is completed.<br>• `PAUSED_BLOCKED`—A job has this state due to a release occurring. When the release has finished and no other instance of the job is running, the job's status is set to another state. |
| `TimesTriggered` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of times this job has been triggered. |
| `TimeZoneSidKey` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Returns the timezone ID. For example, `America/Los_Angeles`. |

## Usage

Use this object to query scheduled jobs in your organization.

# CryptoProdCatgWalletGroup

Specifies if CryptoWalletGroup is in the allowlist or airdrop for the ProductCategory. A custom object between ProductCategory and CryptoWalletGroup adding the CryptoWalletGroup to allowlist or airdrop. This object is available in API version 58.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object has read, create, update, delete, modify all, and view all access.

## Fields

| Field | Details |
| --- | --- |
| `CryptoWalletGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The CryptoWalletGroup ID.<br>This field is a relationship field.<br>**Relationship Name**<br>CryptoWalletGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CryptoWalletGroup |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, and `LastReferenceDate` is not null, the user accessed this record or list view indirectly. |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the record. |
| `ProductCategoryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the category.<br>This field is a relationship field.<br>**Relationship Name**<br>ProductCategory<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ProductCategory |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies if CryptoProdCatgWalletGroup is active and functional, or inactive and disabled.<br>Possible values are:<br>• `Active`<br>• `Inactive` |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Determines whether the list of wallets is for minting allowlist or for executing an airdrop.<br>Possible values are:<br>• `Airdrop`<br>• `Allowlist` |

# CspTrustedSite

Represents a trusted URL. For each CspTrustedSite, you can specify Content Security Policy (CSP) directives and permissions policy directives. Each CSP directive allows Lightning components, third-party APIs, and WebSocket connections to access a resource type from the trusted URL. If the Permissions-Policy HTTP header is enabled, each permissions policy directive grants the trusted URL access to a browser feature. In API version 58.0 and earlier, CspTrustedSite included only CSP directives and was referred to as CSP Trusted Sites in Salesforce Setup. Available in API version 39.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `CanAccessCamera` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this CspTrustedSite can access the user's camera. The default value is `false`.<br>This field takes effect only when the `enablePermissionsPolicy` field equals `true` and the `grantCameraAccess` field equals `TrustedUrls` in the SecuritySettings metadata API type.<br>This field is available in API version 59.0 and later. |
| `CanAccessMicrophone` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this CspTrustedSite can access the user's microphone. The default value is `false`.<br>This field takes effect only when the `enablePermissionsPolicy` field equals `true` and the `grantMicrophoneAccess` field is `TrustedUrls` in the SecuritySettings metadata API type.<br>This field is available in API version 59.0 and later. |
| `Context` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Declares the scope of the CSP directives for this trusted URL.<br>Possible values are:<br>• `All`—Apply the CSP directives to all supported context types.<br>• `Communities`—Apply the CSP directives to Experience Builder sites only.<br>• `FieldServiceMobileExtension`—Apply the CSP directives to the Field Service Mobile Extensions only.<br>• `LEX`—Apply the CSP directives to Lightning Experience only.<br>• `LightningOut`—Reserved for future use. Available in API version 64.0 and later<br>• `VisualForce`—Apply the CSP directives to custom Visualforce pages only. This value is available in API version 55.0 and later.<br>For custom Visualforce pages, content is restricted to trusted URLs only if the page's `cspHeader` attribute is set to `true`.<br>This field is available in API version 44.0 and later. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The description of the trusted URL. Limit: 255 characters. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The developer name of the trusted URL.<br>Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `EndpointUrl` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The URL for this CspTrustedSite.<br>This field must include a domain name and can include a port. For example, `https://example.com` or `https://example.com:8080`. |

| Field | Details |
| --- | --- |
| | To reduce repetition, you can use the wildcard character `*` (asterisk). For example, `*.example.com`. For a third-party API, the URL must begin with https://. For example, `https://example.com`. For a WebSocket connection, the URL must begin with wss://. For example, `wss://example.com`.<br>Otherwise, the URL cannot be malformed. Examples of malformed URLs that fail a syntax check are `malformed^url.example.com`, and `https://{subdomain}.example.com`.<br>To add a URL based on parameters, build the URL before you update the `EndpointUrl` field. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this CspTrustedSite is active. |
| `IsApplicableToConnectSrc` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether Lightning components, third-party APIs, and WebSocket connections can load URLs using script interfaces from this trusted URL. |
| `IsApplicableToFontSrc` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether Lightning components, third-party APIs, and WebSocket connections can load fonts from this trusted URL. |
| `IsApplicableToFrameSrc` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether Lightning components, third-party APIs, and WebSocket connections can load resources contained in `<iframe>` elements from this trusted URL. |

| Field | Details |
| --- | --- |
| `IsApplicableToImgSrc` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether Lightning components, third-party APIs, and WebSocket connections can load images from this trusted URL. |
| `IsApplicableToMediaSrc` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether Lightning components, third-party APIs, and WebSocket connections can load audio and video from this trusted URL. |
| `IsApplicableToStyleSrc` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether Lightning components can load style sheets from this trusted URL. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language for the trusted URL. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Master label for this trusted URL. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Namespace prefix for this trusted URL. |

## Usage

For each CSPTrustedSite, at least one field starting with `grantAccess` or `isApplicableTo` must be set to `true`.

In API versions 50.0 to 58.0, if all `isApplicable` fields are `false`, the `isApplicableToImgSrc` field is set to `true`. In API version 49.0 and earlier, if all `isApplicable` fields are `false`, those fields all default to `true`.

To ensure smooth integration across Salesforce products, Salesforce includes URLs in each of the CSP directives that correspond to the `isApplicable` fields, even though those URLs aren't defined as CspTrustedSite components. Salesforce regularly updates those URLs based on the latest requirements.

# CspViolationEventLog

CSP violation events capture details about blocked resource requests from Lightning Experience pages based on your content security policy (CSP). This object is available in API version 63.0 and later.

This event is free for all customers with a 24-hour data retention period. The CSP violation event is available in the API but not in the Event Monitoring Analytics app.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `BlockedUri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The full string of the blocked resource. If the call to the blocked resource used a URL, `BLOCKED_URI` is the full URL. Or,for violations with a `DIRECTIVE` of `script-src` directives, `inline` or `eval`.<br>**Examples**<br>• https://www.example.com/images/picture.png |

| Field | Details |
| --- | --- |
| | • file://host1:0002/media/video.mp4<br>• inline |
| `BlockedUriDomain` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If `BLOCKED_URI` is a URL, the domain for that URL. To allow resources to be loaded from the `BLOCKED_URI`, `BLOCKED_URI_DOMAIN` is the `endpointUrl` value to add or update in the CspTrustedSite Metadata API. |
| `ColumnNumber` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The column number in the document or worker script at which the violation occurred. This value is relevant only when `DIRECTIVE` is `script-src`.<br>For those violations, use this value with `LINE_NUMBER` to identify the location of the violation.<br>**Example**<br>27 |
| `Context` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The content security policy (CSP) context for the request. The CSP context controls which pages can load content from a CspTrustedSite.<br>CSP violation events capture details about blocked resource requests from only Lightning Experience pages, this value is always `Lightning`. |
| `Directive` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The CSP directive that blocked the resource request. |

| Field | Details |
| --- | --- |
| | **Possible Values**<br>• `font-src`<br>• `frame-src`<br>• `img-src`<br>• `media-src`<br>• `style-src`<br>• `script-src`<br>For information on these directives and a full list of all CSP directives, see MDN Web Docs: Content-Security-Policy. |
| `Disposition` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The CSP violation handling instruction for the user agent at the time of the violation.<br>**Possible Values**<br>• `enforce`—Enforce the policy violation. For violations with this `DISPOSITION`, the resource request was blocked.<br>• `report`—Report the policy violation. For violations with this `DISPOSITION`, the resource request wasn't blocked, but the violation was reported. |
| `LineNumber` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The line number in the document or worker script at which the violation occurred. This value is relevant only when `DIRECTIVE` is `script-src`. For those violations, use this value with `COLUMN_NUMBER` to identify the location of the violation.<br>**Example**<br>12 |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. |

| Field | Details |
| --- | --- |
| `ResourceSample` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A sample of the resource that caused the violation, usually the first 40 characters, or the empty string. |
| `Source` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The page where this CSP violation originated. For example, if your CSP policy prevented an image from loading on a Visualforce page, `SOURCE` contains the URL of that page. |
| `SourceFile` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URL of the script in which the violation occurred. If the violation didn't occur in a script, `SOURCE_FILE` is null. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. |
| `UniqueIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A string identifier for the CSP violation. |

## Usage

Only one CSP violation event log file is available at a time. When the daily incremental event log file is generated during the daily background process, the new file replaces the existing file.

If the event log file doesn't exist, either the log generation process hasn't run yet or there's no violation data to report for that 24-hour window. The event log file is generated only when at least one violation occurred for the day.

To collect CSP violation logs for multiple days, schedule a daily query of the CSP Violation event type via REST API. For example, you can configure a cron job in Unix or a scheduled task in Windows to run the query.

# CurrencyType

Represents the currencies used by an organization for which the multicurrency feature is enabled.

## Supported Calls

`create()`, `describeSObjects()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

## Special Access Rules

- This object is not available in single-currency organizations.
- You need the "Customize Application" permission to edit this object.
- Your client application can't delete this object.

## Fields

| Field | Details |
|---|---|
| `ConversionRate` | **Type**<br>double<br>**Properties**<br>Filter<br>**Description**<br>Required. Conversion rate of this currency type against the corporate currency. |
| `DecimalPlaces` | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Required. For this currency, specifies the number of digits to the right of the decimal point, such as zero (`0`) for JPY or `2` for USD. |
| `IsActive` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether this currency type is active (`true`) or not (`false`). Inactive currency types do not appear in picklists in the user interface. Label is **Active**. This field defaults to `false` if no value is provided when updating or inserting a record. |
| `IsCorporate` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether this currency type is the corporate currency (`true`) or not (`false`). Label is **Corporate Currency**. All other currency conversion rates are applied against this corporate currency. If a currency is already defined as the corporate currency in the user interface, it can't be unset. When a non-corporate currency is set to a corporate currency, the system reconfigures all conversion rates based on the new corporate currency. |
| `IsoCode` | **Type**<br>picklist<br>**Properties**<br>Filter, Restricted picklist<br>**Description**<br>Required. ISO code of the currency. Must be one of the valid alphabetic, three-letter currency ISO codes defined by the ISO 4217 standard, such as `USD`, `GBP`, or `JPY`. Must be unique within your organization. Label is **Currency ISO Code**. |

## Usage

This object is for multicurrency organizations only. Use this object to define the currencies your organization uses.

When updating an existing record, make sure to provide values for all fields to avoid undesired changes to the CurrencyType. For example, if a value for `IsActive` is not provided, the default (`false`) is used, which could result in a currently active CurrencyType becoming inactive.

# CustExpIntlTransfSetup

Stores information for different data sources that are processed for customer insights. This object is available in API version 65.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `DataSourceChannelName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The name of the associated communication channel, such as Web, Email, Chat, or Voice. |
| `DataSourceChannelType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Specifies the channel type as standard or custom.<br>Possible values are:<br>• `Custom`<br>• `Standard`<br>The default value is `Standard`. |
| `IsDataProcessingPaused` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether data processing for the channel is temporarily paused (`true`). Use this field to control channel operations without deactivating the channel.<br>The default value is `false`. |
| `IsEnabled` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the channel is active for processing data (`true`).<br>The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date and time when the current user last viewed or modified this record, a record related to this record, or a list view. If this value is null, the current user has never viewed or modified a record related to this object. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date and time when the current user last viewed or modified this record. If this value is null, the current user has never viewed or modified this record. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the Customer Experience Intelligence Transformer Setup record. |
| `ProcessingStartDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The date to start processing data in the specified communication channel. |

# CustomBrand

Represents a custom branding and color scheme. This object is available in API version 28.0 and later.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

This object is available only when your org has digital experiences enabled.

## Fields

| Field Name | Details |
| --- | --- |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the parent entity that this branding applies to. The parent entity can be an Experience Cloud site, organization, topic, or reputation level.<br>The branding applies to the entity that the `ParentId` references. For example, if the `ParentId` references a network ID, the branding applies to that Experience Cloud site only, and if the `ParentId` references an organization ID, the branding applies to the organization that it is accessed through, and so on. Label is `Branded Entity ID`. |

## Usage

Use this object along with CustomBrandAsset to apply a custom branding scheme to your Experience Cloud site. The branding scheme for the site shows in both the user interface and in the Salesforce mobile app. You must have Create and Manage Experiences to customize site branding.

You can also use this object to apply a custom branding scheme to your org when it is accessed through the Salesforce mobile app.

SEE ALSO:

Network

# CustomBrandAsset

Represents a branding element in a custom branding scheme. For example, a color, logo image, header image, or footer text. A CustomBrandAsset can apply to an Experience Cloud site or to an org using the Salesforce mobile app. This object is available in API version 28.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

This object is available only when your org has digital experiences enabled.

## Fields

| Field Name | Details |
| --- | --- |
| `AssetCategory` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Values include:<br>• `MotifZeronaryColor`—The background color for the header. Label is `Zeronary motif color`.<br>If this CustomBrandAsset is for a network, this is the header color for the network. If it is for an org, this is the header color when users access the Salesforce mobile app.<br>• `MotifPrimaryColor`—The color used for the active tab. Label is `Primary motif color`.<br>Not used for the Salesforce mobile app branding.<br>• `MotifSecondaryColor`—The color used for the top borders of lists and tables. Label is `Secondary motif color`.<br>Not used for the Salesforce mobile app branding.<br>• `MotifTertiaryColor`—The background color for section headers on edit and detail pages. Label is `Tertiary motif color`.<br>Not used for the Salesforce mobile app branding.<br>• `MotifQuaternaryColor`—If this CustomBrandAsset is for a network, this is the background color for network pages. If it is for an org, this is the background color on a splash page. Label is `Quaternary motif color`.<br>• `MotifZeronaryComplementColor`—Font color used with `zeronaryColor`. Label is `Zeronary motif colors complement color`.<br>• `MotifPrimaryComplementColor`—Font color used with `primaryColor`. Label is `Primary motif colors complement color`. |

| Field Name | Details |
| --- | --- |
| | Not used for the Salesforce mobile app branding.<br>• `MotifTertiaryComplementColor`—Font color used with `tertiaryColor`. Label is `Tertiary motif colors complement color`.<br>Not used for the Salesforce mobile app branding.<br>• `MotifQuaternaryComplementColor`—Font color used with `quaternaryColor`. Label is `Quaternary motif colors complement color`.<br>Not used for the Salesforce mobile app branding.<br>• `PageHeader`—An image that appears on the header of the pages. Can be an .html, .gif, .jpg, or .png file. Label is `Page Header`.<br>Not used for the Salesforce mobile app branding.<br>• `PageFooter`—An image that appears on the footer of the pages. Must be an .html file. Label is `Page Footer`.<br>Not used for the Salesforce mobile app branding.<br>• `LoginFooterText`—The text that appears in the footer of the login page. Label is `Footer text displayed on the login page`.<br>Not used for the Salesforce mobile app branding.<br>• `LoginLogoImageId`—The logo that appears on the login page for external users. In the Salesforce mobile app, this logo also appears on the Experience Cloud site splash page. Label is `Logo image displayed on the login page`.<br>• `LargeLogoImageId`—Only used for the Salesforce mobile app. The logo that appears on the splash page when you start the Salesforce mobile app. Label is `Large logo image`.<br>• `SmallLogoImageId`—Only used for the Salesforce mobile app. The logo that appears on the publisher in the Salesforce mobile app. Label is `Small logo image`.<br>• `StaticLogoImageURL`—The logo that appears on the login page for external users. Label is `Static logo image url`.<br>• `LoginQuaternaryColor`—The background color that appears on the Experience Cloud site login page for external users. Label is `Login background color`.<br>• `LoginRightFrameUrl`—The URL to the contents that appears on right side of the Experience Cloud site login page for external users. Label is `Login right frame url`.<br>• `LogoAssetId`—Navigation tile menu item images. Label is `Logo asset image`.<br>• `LoginPrimaryColor`—The background color of the login button. Label is `Login primary color`. |

| Field Name | Details |
| --- | --- |
| | • `LoginBackgroundImageUrl`—The path to the image URL that appears as the background on the Experience Cloud site's login page. Label is `Background image url`.<br>• `LargeLogoAssetId`—Navigational topic images. Label is `Large logo asset image`.<br>• `MediumLogoAssetId`—Featured topic images. Label is `Medium logo asset image`. |
| `AssetSourceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the document uploaded to the Documents folder if the value of `AssetCategory` is:<br>• `PageHeader`<br>• `PageFooter`<br>• `LoginLogoImageId`<br>• `LargeLogoImageId`<br>• `SmallLogoImageId`<br>ID of the content asset if the value of the `AssetCategory` is:<br>• `LogoAssetId`<br>• `LargeLogoAssetId`<br>• `MediumLogoAssetId` |
| `CustomBrandId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the associated CustomBrand .<br>This is a relationship field.<br>**Relationship Name**<br>CustomBrand<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CustomBrand |

| Field Name | Details |
| --- | --- |
| `ForeignKeyAssetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>This field was removed in API version 41.0, and is available in earlier versions for backward compatibility only. Use `AssetSourceId` instead.<br>ID of the document used if the value of `AssetCategory` is `PageHeader`, `PageFooter`, or `LoginLogoImageId`. |
| `TextAsset` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Text used if the `AssetCategory` is `LoginFooterText`. |

## Usage

Use this object to add basic branding elements—color scheme, header or footer images, login page logo, or footer text—to the branding scheme ( CustomBrand ) for your Experience Cloud site. You must have Create and Manage Experiences to customize site branding.

If you're using digital experiences in the Salesforce mobile app, the loading page shows the logo.

Network

# CustomFieldDisplayValue

Stores variation details for the product attribute item view. This object is available in API version 63.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

CustomFieldDisplayValue is available only if the B2B or D2C Commerce license is enabled.

# Fields

| Field | Details |
|---|---|
| `Color` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The color variation in hexadecimal value format, for example `#FF0000`. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The currency ISO code allowed by the organization. Possible value is:<br>• `USD`—U.S. Dollar<br>The default value is `USD`. |
| `CustomFieldDisplayId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the custom field display that this variation is associated with.<br>This field is a relationship field.<br>**Relationship Name**<br>CustomFieldDisplay<br>**Refers To**<br>CustomFieldDisplay |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Name of the custom field display value. |
| `PickListApiValue` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The API name of the color variation picklist value, for example, `red_c`. |

## Usage

This object only gets populated when display type in the CustomFieldDisplay object is ColorSwatch.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as CustomFieldDisplayValue.

**CustomFieldDisplayValueChangeEvent on page 68**
Change events are available for the object.

**CustomFieldDisplayValueFeed on page 55**
Feed tracking is available for the object.

**CustomFieldDisplayValueHistory on page 63**
History is available for tracked fields of the object.

# CustomHelpMenuItem

Represents the items within a section of the Lightning Experience help menu that the admin added to display custom, org-specific help resources. This object is available in API version 44.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Packaging Considerations

Although you can package custom Help Menu section information, the section won't appear in the Help Menu Setup page or the Help Menu user interface of orgs where the package is installed. Instead, customers must view the data in the CustomHelpMenuItem and CustomHelpMenuSection objects and then manually add resources on the Help Menu Setup page.

## Fields

| Field | Details |
| --- | --- |
| `LinkUrl` | **Type**<br>url<br>**Properties**<br>Create, Filter, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Required. The URL for the resource. Specify up to 1,000 characters. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The name of the resource. Specify up to 100 characters. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the custom help section the item belongs to.<br>This is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CustomHelpMenuSection |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The order of the item within the custom section. Valid values are 1 through 15. |

# CustomHelpMenuSection

Represents a section of the Lightning Experience help menu that the admin added to display custom, org-specific help resources. This object is available in API version 44.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Packaging Considerations

Although you can package custom Help Menu section information, the section won't appear in the Help Menu Setup page or the Help Menu user interface of orgs where the package is installed. Instead, customers must view the data in the CustomHelpMenuItem and CustomHelpMenuSection objects and then manually add resources on the Help Menu Setup page.

## Fields

| Field | Details |
|---|---|
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the custom help section in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The label corresponds to section title in the user interface. Limit: 80 characters.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Required. Language of the label. Possible values are:<br>• da (Danish)<br>• de (German)<br>• en_US (English)<br>• es (Spanish)<br>• es_MX (Spanish (Mexico))<br>• fi (Finnish)<br>• fr (French)<br>• it (Italian)<br>• ja (Japanese)<br>• ko (Korean)<br>• nl_NL (Dutch) |

| Field | Details |
| --- | --- |
| | • no (Norwegian)<br>• pt_BR (Portuguese (Brazil))<br>• ru (Russian)<br>• sv (Swedish)<br>• th (Thai)<br>• zh_CN (Chinese (Simplified))<br>• zh_TW (Chinese (Traditional)) |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The name of the resource. Specify up to 100 characters. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |

# CustomHttpHeader

Represents a custom HTTP header that provides context information from Salesforce such as region, org details, or the role of the person viewing the external object. This object is available in API version 43.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Spring '20 and later, only authenticated internal and external users can access this object.

## Fields

| Field Name | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>A text description of the header field's purpose. |
| `HeaderFieldName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Name of the header field. The name must contain at least one alphanumeric character or underscore. It can also include: ! # $ % & ' * + - . ^ _ ` \| ~ |
| `HeaderFieldValue` | **Type**<br>string<br>**Properties**<br>Filter, Sort<br>**Description**<br>A formula that resolves to the value for the header. The values in the formula must evaluate to a string. If the formula resolves to null and an empty string, the header isn't sent. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the custom HTTP header is available to use. |
| `ParentId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the entity that the custom HTTP header is related to.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ExternalDataSource, NamedCredential |

## Usage

For each OData external data source, define up 10 HTTP headers to request data.

Note: HTTP headers aren't supported on named credentials.

# CustomMsgChannel

Represents a custom conversation channel and stores event-driven Messaging settings. Custom conversation channels are implemented for Bring Your Own Channel for Messaging and Bring Your Own Channel for CCaaS Messaging channels. This object is available in API version 63.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Access to standard objects requires Salesforce admin privileges or the Customize Application permission.

## Fields

| Field | Details |
| --- | --- |
| `ChannelDefinitionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Specifies the ConversationChannelDefinition for the custom channel.<br>This field is a relationship field.<br>**Relationship Name**<br>ChannelDefinition<br>**Refers To**<br>ConversationChannelDefinition |
| EventCapabilitiesIsInboundAcknowledgmentEnabled | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Indicates whether the Salesforce admin has enabled read receipts and delivery receipts for inbound messages in the Messaging settings (`true`) or whether the admin hasn't enabled these inbound acknowledgments (`false`). The default value is `false`, meaning inbound acknowledgments are disabled by default even if supported by the partner.<br>This field is available in API version 65.0 and later. Use this field instead of HasInboundReceipts. |
| EventCapabilitiesIsProgressIndicatorEnabled | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Indicates whether the Salesforce admin has enabled AI agent progress indicators in the Messaging settings (`true`) or whether the admin hasn't enabled progress indicators (`false`). The default value is `false`, meaning progress indicators for AI agents are disabled by default even if supported by the partner.<br>This field is available in API version 65.0 and later. |
| EventCapabilitiesIsTypingIndicatorDisabled | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Indicates whether the Salesforce admin has enabled typing indicators for outbound messages in the Messaging settings (`false`) or whether the admin hasn't enabled outbound typing indicators (`true`). The default value is `false`, meaning the outbound typing indicators are enabled by default.<br>This field is available in API version 65.0 and later. Use this field instead of HasTypingIndicator. |

| Field | Details |
| --- | --- |
| `HasInboundReceipts` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the Salesforce admin has enabled read receipts and delivery receipts for inbound messages in the Messaging settings (`true`) or whether the admin hasn't enabled these inbound acknowledgments (`false`). The default value is `false`, meaning inbound acknowledgments are disabled by default even if supported by the partner.<br>This field is deprecated in API version 65.0 and will be removed in API version 66.0. Use EventCapabilitiesIsInboundAcknowledgementEnabled instead. |
| `HasTypingIndicator` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the Salesforce admin has enabled typing indicators for outbound messages in the Messaging settings (`true`) or whether the admin hasn't enabled outbound typing indicators (`false`). The default value is `true`, meaning the outbound typing indicator feature is enabled by default if supported by the partner. To disable the outbound typing indicator feature, set this value to `false`.<br>This field is deprecated in API version 65.0 and will be removed in API version 66.0. Use EventCapabilitiesIsTypingIndicatorDisabled instead. |
| `MessagingChannelId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Specifies the Messaging Channel ID for the custom channel. This field is unique within your organization.<br>This field is a relationship field.<br>**Relationship Name**<br>MessagingChannel<br>**Refers To**<br>MessagingChannel |

# CustomNotificationType

Stores information about custom notification types. This object is available in API version 47.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `CustomNotifTypeName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Unique, Update<br>**Description**<br>Specifies a notification type name. The notification type name is unique within your organization. The notification type name isn't namespaced, so it can't be duplicated across installed packages. Maximum number of characters: 80. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Specifies a general description of the notification type, which is displayed with the notification type name. Maximum number of characters: 255. |
| `Desktop` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the desktop delivery channel is enabled (`true`) or not (`false`). The default value is `false`. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Specifies the API name of the notification type. |

| Field | Details |
| --- | --- |
| `IsSlack` | **Type**<br>boolean<br>**Properties**<br>Reserved for future use.<br>**Description**<br>Reserved for future use. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies the language of the custom notification type. The value for this field is the language value of the org. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Specifies the notification type label. |
| `Mobile` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the mobile delivery channel is enabled (`true`) or not (`false`). The default value is `false`. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Specifies the namespace of the notification type, if installed with a managed package. |

# CustomPermission

Represents a permission created to control access to a custom process or app, such as sending email. This object is available in API version 31.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Manage Session Permission Set Activations
- Assign Permission Sets

## Fields

| Field Name | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A description of the custom permission. Limit: 255 characters. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique name of the custom permission in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The label corresponds to **Name** in the user interface. Limit: 80 characters.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `IsLicensed` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>When enabled (true) indicates that the appropriate Salesforce license is required before accessing the permission. This field is available in API version 50.0 and later. |
| `IsProtected` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the custom permission is protected (`true`) or not (`false`). Protected components that have been installed in other organizations can't be linked to or referenced by components created in the subscriber organization. A developer can delete a protected component contained in a managed package in a future release of the package without worrying about failing installations. However, after a component is marked as unprotected and is released globally, the developer can't delete it. The default value is `false`. This field is available in API version 50.0 and later. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language of the custom permission. Valid values are:<br>• Chinese (Simplified): `zh_CN`<br>• Chinese (Traditional): `zh_TW`<br>• Danish: `da`<br>• Dutch: `nl_NL`<br>• English: `en_US`<br>• Finnish: `fi`<br>• French: `fr`<br>• German: `de`<br>• Italian: `it`<br>• Japanese: `ja`<br>• Korean: `ko`<br>• Norwegian: `no`<br>• Portuguese (Brazil): `pt_BR`<br>• Russian: `ru`<br>• Spanish: `es` |

| Field Name | Details |
| --- | --- |
| | • Spanish (Mexico): `es_MX` Spanish (Mexico) defaults to Spanish for customer-defined translations.<br>• Swedish: `sv`<br>• Thai: `th` The Salesforce user interface is fully translated to Thai, but Help is in English. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The custom permission label, which corresponds to **Label** in the user interface. Limit: 80 characters. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |

# Usage

Use the CustomPermission object to determine users' access to custom permissions.

For example, to query all permission sets where the Button1 permission is enabled:

```
SELECT Id, DeveloperName,
(select Id, Parent.Name, Parent.Profile.Name from SetupEntityAccessItems)
FROM CustomPermission
WHERE DeveloperName = 'Button1'
```

To query all permission sets and profiles with custom permissions:

```
SELECT Assignee.Name, PermissionSet.Id,
PermissionSet.Profile.Name,
PermissionSet.isOwnedByProfile,
PermissionSet.Label
FROM PermissionSetAssignment
WHERE PermissionSetId
IN (SELECT ParentId
   FROM SetupEntityAccess
   WHERE SetupEntityType =
'CustomPermission')
```

To query for all SetupEntityAccess rows with custom permissions:

```
SELECT Id,ParentId,Parent.Name, SetupEntityId
FROM SetupEntityAccess
WHERE SetupEntityType='CustomPermission'
AND ParentId
IN (SELECT Id
   FROM PermissionSet
   WHERE isOwnedByProfile = false)
```

# CustomPermissionDependency

Represents the dependency between two custom permissions when one custom permission requires that you enable another custom permission. This object is available in API version 32.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Spring '20 and later, only users with View Setup and Configuration permission can access this object.

## Fields

| Field Name | Details |
|---|---|
| `CustomPermissionId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the custom permission that requires the permission that's specified in `RequiredCustomPermissionId`.<br>This is a relationship field.<br>**Relationship Name**<br>CustomPermission<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CustomPermission |
| `RequiredCustomPermissionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the custom permission that must be enabled when `CustomPermissionId` is enabled.<br>This is a relationship field.<br>**Relationship Name**<br>RequiredCustomPermission<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CustomPermission |

## Usage

The following Apex class contains a method that returns the IDs of all custom permissions that are required for the given custom permission ID. To use this class, save it in your organization.

```
public class CustomPermissionUtil {
   public String[] getAllRequiredCustomPermissions(String customPermId) {
      return getAllRequiredHelper(new String[]{customPermId});
   }

   private String[] getAllRequiredHelper(String[] customPermIds) {
      CustomPermissionDependency[] requiredPerms = [SELECT RequiredCustomPermissionId
                                                    FROM CustomPermissionDependency
                                                    WHERE CustomPermissionId
                                                    IN :customPermIds];
```

```
        String[] requiredPermIds = new String[]{};
        for (CustomPermissionDependency cpd : requiredPerms) {
            requiredPermIds.add(cpd.RequiredCustomPermissionId);
        }
        if (requiredPermIds.size() > 0) {
            customPermIds.addall(getAllRequiredHelper(requiredPermIds));
            return customPermIds;
        } else {
            return customPermIds;
        }
    }
}
```

For more information about using Apex classes, see the Apex Developer Guide.

CustomPermission

# Customer

Represents the customer role of an individual with respect to a particular company or organization. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `CustomerStatusType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The status of the customer account.<br>Possible values are:<br>• `Active`<br>• `Inactive` |
| `LastReferencedDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. Name of this customer. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who owns the record.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PartyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required. Represents the individual object related to this customer record.<br>This is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Party<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Individual |
| `TotalLifeTimeValue` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The total revenue amount gained from this customer. |

# DandBCompany

Represents a Dun & Bradstreet® company record, which is associated with an account added from Data.com. This object is available in API version 25.0 and later.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see Data.com Prospector and Clean Retirement.

Warning: You can update fields in the DandBCompany object; however, field changes may be overwritten by Data.com Clean jobs or by using the Data.com Clean button.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Only organizations with Data.com Premium Prospector or Data.com Premium Clean can access this object.

# Fields

| Field Name | Details |
| --- | --- |
| `Address` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The compound form of the address. Read-only. See Address Compound Fields for details on compound address fields. |
| `City` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The city where a company is physically located. Maximum size is 40 characters. |
| `CompanyCurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The code used to represent a company's local currency. This data is provided by the International Organization for Standardization (ISO) and is based on their three-letter currency codes. For example, USD is the ISO code for United States Dollar. Maximum size is 3 characters. |
| `Country` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The country where a company is physically located. Maximum size is 40 characters. |
| `CountryAccessCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The required code for international calls. Maximum size is 4 characters. |

| Field Name | Details |
| --- | --- |
| `CurrencyCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The currency in which the company's sales volume is expressed. The full list of values can be found at the Optimizer Resources page maintained by Dun & Bradstreet. Maximum size is 4 characters. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A brief description of the company, which may include information about its history, its products and services, and its influence on a particular industry. Maximum size is 32000 characters. |
| `DomesticUltimateBusinessName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The primary name of the Domestic Ultimate, which is the highest ranking subsidiary, specified by country, within an organization's corporate structure. Maximum size is 255 characters. |
| `DomesticUltimateDunsNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The D-U-N-S Number for the Domestic Ultimate, which is the highest ranking subsidiary, specified by country, within an organization's corporate structure. Maximum size is 9 characters. |
| `DunsNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The Data Universal Numbering System (D-U-N-S) number is a unique, nine-digit number assigned to every business location in the Dun & Bradstreet database that has a unique, separate, and distinct operation. D-U-N-S numbers are used by industries and organizations around the world as a global standard for business identification and tracking. Maximum size is 9 characters. |
| `EmployeeQuantityGrowthRate` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The yearly growth rate of the number of employees in a company expressed as a decimal percentage. The data includes the total employee growth rate for the past two years. |
| `EmployeesHere` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The number of employees at a specified location, such as a branch location. Maximum size is 15 characters. |
| `EmployeesHereReliability` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The reliability of the `EmployeesHere` figure. Available values include:<br>• 0—Actual number<br>• 1—Low<br>• 2—Estimated (for all records)<br>• 3—Modeled (for non-US records) |
| `EmployeesTotal` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The total number of employees in the company, including all subsidiary and branch locations. This data is only available on records that have a value of |

| Field Name | Details |
| --- | --- |
| | *Headquarters/Parent* in the LocationStatus field. Maximum size is 15 characters. |
| EmployeesTotalReliability | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The reliability of the EmployeesTotal figure. Available values include:<br>• 0—Actual number<br>• 1—Low<br>• 2—Estimated (for all records)<br>• 3—Modeled (for non-US records)<br>A blank value indicates this data is unavailable. |
| FamilyMembers | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The total number of family members, worldwide, within an organization, including the Global Ultimate, its subsidiaries (if any), and its branches (if any). Maximum size is 5 characters. |
| Fax | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The company's facsimile number. |
| FifthNaics | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An additional NAICS code used to further classify an organization by industry. Maximum size is 6 characters. |
| FifthNaicsDesc | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding NAICS code. Maximum size is 120 characters. |
| `FifthSic` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters. |
| `FifthSic8` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters. |
| `FifthSic8Desc` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters. |
| `FifthSicDesc` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters. |
| `FipsMsaCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The Federal Information Processing Standards (FIPS) and the Metropolitan Statistical Area (MSA) codes identify the organization's location. The MSA codes are defined by the US Office of Management and Budget. Maximum size is 5 characters. |
| `FipsMsaDesc` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of an organization's FIPS MSA code. Maximum size is 255 characters. |
| `FortuneRank` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The numeric value of the company's Fortune 1000 ranking. A null or blank value means that the company isn't ranked as a Fortune 1000 company. |
| `FourthNaics` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An additional NAICS code used to further classify an organization by industry. Maximum size is 6 characters. |
| `FourthNaicsDesc` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding NAICS code. Maximum size is 120 characters. |
| `FourthSic` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters. |
| `FourthSic8` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters. |
| `FourthSic8Desc` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters. |
| `FourthSicDesc` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters. |
| `GeoCodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The level of accuracy of a location's geographical coordinates compared with its physical address. Available values include:<br>• A – *`Non-US rooftop accuracy`*<br>• B – *`Block level`*<br>• C – *`Places the address in the correct city`*<br>• D – *`Rooftop level`*<br>• I – *`Street intersection`*<br>• M – *`Mailing address level`* |

| Field Name | Details |
| --- | --- |
| | • N – *Not matched*<br>• P – *PO BOX location*<br>• S – *Street level*<br>• T – *Census tract level*<br>• Z – *ZIP code level*<br>• 0 (zero)– *Geocode could not be assigned* |
| GlobalUltimateBusinessName | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The primary name of the Global Ultimate, which is the highest entity within an organization's corporate structure and may oversee branches and subsidiaries. Maximum size is 255 characters. |
| GlobalUltimateDunsNumber | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The D-U-N-S Number of the Global Ultimate, which is the highest entity within an organization's corporate structure and may oversee branches and subsidiaries. Maximum size is 9 characters. |
| GlobalUltimateTotalEmployees | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The total number of employees at the Global Ultimate, which is the highest entity within an organization's corporate structure and may oversee branches and subsidiaries. Maximum size is 15 characters. |
| ImportExportAgent | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Identifies whether a business imports goods or services, exports goods or services, and/or is an agent for goods. Available values include:<br>• A—Importer/exporter/agent |

| Field Name | Details |
| --- | --- |
| | • B—Importer/exporter<br>• C—Importer<br>• D—Importer/agent<br>• E—Exporter/agent<br>• F—Agent (keeps no inventory and does not take title goods)<br>• G—None or data not available<br>• H—Exporter |
| `IncludedInSnP500` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A true or false value. If `true`, the company is listed in the S&P 500 Index. If `false`, the company isn't listed in the S&P 500 Index. |
| `Latitude` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Used with longitude to specify a precise location, which is then used to assess the Geocode Accuracy. Maximum size is 11 characters. |
| `LegalStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Identifies the legal structure of an organization. |
| `LocationStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Identifies the organizational status of a company. Available values are *`Single location`*, *`Headquarters/Parent`*, and *`Branch`*. Available values include:<br>• 0—Single location (no other entities report to the business)<br>• 1—Headquarters/parent (branches and/or subsidiaries report to the business) |

| Field Name | Details |
| --- | --- |
| | • 2—Branch (secondary location to a headquarters location) |
| `Longitude` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Used with latitude to specify a precise location, which is then used to assess the Geocode Accuracy. Maximum size is 11 characters. |
| `MailingAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The compound form of the mailing address. Read-only. See Address Compound Fields for details on compound address fields. |
| `MailingCity` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The city where a company has its mail delivered. Maximum size is 40 characters. |
| `MailingCountry` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The country where a company has its mail delivered. Maximum size is 40 characters. |
| `MailingPostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The postal code that a company uses on its mailing address. Maximum size is 20 characters. |

| Field Name | Details |
| --- | --- |
| `MailingState` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The state where a company has its mail delivered. Maximum size is 20 characters. |
| `MailingStreet` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The street address where a company has its mail delivered. Maximum size is 255 characters. |
| `MarketingPreScreen` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The probability that a company will pay with a significant delay compared to the agreed terms. The risk level is based on the standard Commercial Credit Score, and ranges from low risk to high risk. Available values include:<br>• L—*`Low risk of delinquency`*<br>• M—*`Moderate risk of delinquency`*<br>• H—*`High risk of delinquency`*<br>**Important:** Use this information for marketing pre-screening purposes only. |
| `MarketingSegmentationCluster` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Twenty-two distinct, mutually exclusive profiles, created as a result of cluster analysis of Dun & Bradstreet data for US organizations. |
| `MinorityOwned` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether an organization is owned or controlled by a member of a minority group. Available values include:<br>• Y—Minority owned<br>• N—Not minority owned |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The primary or registered name of a company. Maximum size is 255 characters. |
| `NationalId` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The identification number used in some countries for business registration and tax collection. Maximum size is 255 characters. |
| `NationalIdType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>A code value that identifies the type of national identification number used. The full list of resources can be found at the Optimizer Resources page maintained by Dun & Bradstreet. Maximum size is 5 characters. |
| `OutOfBusiness` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates whether the company at the specified address has discontinued operations. Available values include:<br>• Y—Out of business<br>• N—Not out of business |
| `OwnOrRent` | **Type**<br>picklist |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates whether a company owns or rents the building it occupies. Available values include:<br>• 0—Unknown or not applicable<br>• 1—Owns<br>• 2—Rents |
| `ParentOrHqBusinessName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The primary name of the parent or headquarters company. Maximum size is 255 characters. |
| `ParentOrHqDunsNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The D-U-N-S Number for the parent or headquarters. Maximum size is 9 characters. |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A company's primary telephone number. |
| `PostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The postal code that corresponds to a company's physical location. Maximum size is 20 characters. |
| `PremisesMeasure` | **Type**<br>int |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A numeric value for the measurement of the premises. |
| `PremisesMeasureReliability` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A descriptive accuracy of the measurement such as actual, estimated, or modeled. |
| `PremisesMeasureUnit` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A descriptive measurement unit such as acres, square meters, or square feet. |
| `PrimaryNaics` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The six-digit North American Industry Classification System (NAICS) code is the standard used by business and government to classify business establishments according to their economic activity for the purpose of collecting, analyzing, and publishing statistical data related to the US business economy. The full list of values can be found at the Optimizer Resources page maintained by Dun & Bradstreet. Maximum size is 6 characters. |
| `PrimaryNaicsDesc` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of an organization's line of business, based on its NAICS code. Maximum size is 120 characters. |
| `PrimarySic` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The four-digit Standard Industrial Classification (SIC) code is used to categorize business establishments by industry. The full list of values can be found at the Optimizer Resources page maintained by Dun & Bradstreet. Maximum size is 4 characters. |
| `PrimarySic8` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The eight-digit Standard Industrial Classification (SIC) code is used to categorize business establishments by industry. The full list of values can be found at the Optimizer Resources page maintained by Dun & Bradstreet. Maximum size is 8 characters. |
| `PrimarySic8Desc` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of an organization's line of business, based on its SIC code. The full list of values can be found at the Optimizer Resources page maintained by Dun & Bradstreet. Maximum size is 80 characters. |
| `PrimarySicDesc` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of an organization's line of business, based on its SIC code. Maximum size is 80 characters. |
| `PriorYearEmployees` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The total number of employees for the prior year. |

| Field Name | Details |
| --- | --- |
| `PriorYearRevenue` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The annual revenue for the prior year. |
| `PublicIndicator` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates whether ownership of the company is public or private. Available values include:<br>• Y—Public<br>• N—Private |
| `SalesTurnoverGrowthRate` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The increase in annual revenue from the previous value for an equivalent period expressed as a decimal percentage. |
| `SalesVolume` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The total annual sales revenue in the headquarters' local currency. Dun & Bradstreet tracks revenue data for publicly traded companies, Global Ultimates, Domestic Ultimates, and some headquarters. |
| `SalesVolumeReliability` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The reliability of the `SalesVolume` figure. Available values include:<br>• 0—Actual number |

| Field Name | Details |
| --- | --- |
| | • 1—Low<br>• 2—Estimated (for all records)<br>• 3—Modeled (for non-US records) |
| `SecondNaics` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An additional NAICS code used to further classify an organization by industry. Maximum size is 6 characters. |
| `SecondNaicsDesc` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding NAICS code. Maximum size is 120 characters. |
| `SecondSic` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters. |
| `SecondSic8` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters. |
| `SecondSic8Desc` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters. |
| `SecondSicDesc` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters. |
| `SixthNaics` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An additional NAICS code used to further classify an organization by industry. Maximum size is 6 characters. |
| `SixthNaicsDesc` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding NAICS code. Maximum size is 120 characters. |
| `SixthSic` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters. |
| `SixthSic8` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters. |
| `SixthSic8Desc` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters. |
| `SixthSicDesc` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters. |
| `SmallBusiness` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates whether the company is designated a small business as defined by the Small Business Administration of the US government. Available values include:<br>• Y—Small business site<br>• N—Not small business site |
| `State` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The state where a company is physically located. Maximum size is 20 characters. |
| `StockExchange` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The corresponding exchange for a company's stock symbol. For example: NASDAQ or NYSE. Maximum size is 16 characters. |
| `StockSymbol` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The abbreviation used to identify publicly traded shares of a particular stock. Maximum size is 6 characters. |
| `Street` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The street address where a company is physically located. Maximum size is 255 characters. |
| `Subsidiary` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates whether a company is more than 50 percent owned by another organization. Available values include:<br>• 0—Not subsidiary of another organization<br>• 3—Subsidiary of another organization |
| `ThirdNaics` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An additional NAICS code used to further classify an organization by industry. Maximum size is 6 characters. |
| `ThirdNaicsDesc` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>A brief description of an organization's line of business, based on the corresponding NAICS code. Maximum size is 120 characters. |
| `ThirdSic` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters. |
| `ThirdSic8` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters. |
| `ThirdSic8Desc` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters. |
| `ThirdSicDesc` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters. |
| `TradeStyle1` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>A name, different from its legal name, that an organization may use for conducting business. Similar to "Doing business as" or "DBA". Maximum size is 255 characters. |
| `TradeStyle2` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An additional tradestyle used by the organization. Maximum size is 255 characters. |
| `TradeStyle3` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An additional tradestyle used by the organization. Maximum size is 255 characters. |
| `TradeStyle4` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An additional tradestyle used by the organization. Maximum size is 255 characters. |
| `TradeStyle5` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An additional tradestyle used by the organization. Maximum size is 255 characters. |
| `URL` | **Type**<br>url<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An organization's primary website address. Maximum size is 104 characters. |
| `UsTaxId` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The identification number for the company used by the Internal Revenue Service (IRS) in the administration of tax laws. Also referred to as Federal Taxpayer Identification Number. Maximum size is 9 characters. |
| `WomenOwned` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates whether a company is more than 50 percent owned or controlled by a woman. Available values include:<br>• Y—Owned by a woman<br>• N—Not owned by a woman, or unknown |
| `YearStarted` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The year the company was established or the year when current ownership or management assumed control of the company. Maximum size is 4 characters. |

## Usage

Use this object to manage D&B Company records in your organization.

# Dashboard

Represents a dashboard, which shows data from custom reports as visual components. Access is read-only. This object is available in API version 20.0 and later.

## Supported Calls

`describeSObjects()`, `describeLayout()`, `query()`, `retrieve()`, `search()`

# Fields

| Field | Details |
| --- | --- |
| `BackgroundDirection` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Returns the direction of the background fade. Available values are:<br>• `Top to Bottom`<br>• `Left to Right`<br>• `Diagonal` (default value)<br>Label is `Background Fade Direction`. |
| `BackgroundEnd` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Returns the ending fade color in hexadecimal. Label is `Ending Color`. |
| `BackgroundStart` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Returns the starting fade color in hexadecimal. Label is `Starting Color`. |
| `ChartTheme` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Returns the background theme used for charts.<br>Possible values are:<br>• `dark`—Dark Background<br>• `light`—Light Background |
| `ColorPalette` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Returns the color palette used for the dashboard.<br>Possible values are:<br>• `Default`—Default Palette<br>• `accessible`—Mineral(Accessible) Palette<br>• `bluegrass`—Bluegrass Palette<br>• `colorSafe`—Color Safe Palette<br>• `dusk`—Dusk Palette<br>• `earth`—Lake Palette<br>• `fire`—Fire Palette<br>• `gray`—Gray Palette<br>• `heat`—Heat Palette<br>• `justice`—Wildflowers Palette<br>• `nightfall`—Nightfall Palette<br>• `pond`—Pond Palette<br>• `sunrise`—Sunrise Palette<br>• `tropic`—Ocean Palette<br>• `unity`—Aurora Palette<br>• `water`—Water Palette<br>• `watermelon`—Watermelon Palette |
| `DashboardResultRefreshedDate` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>Returns the date on which the dashboard results were last refreshed. |
| `DashboardResultRunningUser` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The user whose security settings were used to generate the dashboard results. |
| `Description` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Returns the description of the dashboard. Limit: 255 characters. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is `Dashboard Unique Name`.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. |
| `FolderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Required. Returns the ID of the Folder that contains the dashboard. See Folder.<br>This is a relationship field.<br>**Relationship Name**<br>Folder<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Folder, User |
| `FolderName` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Name of the folder that contains the dashboard. Available in API version 35.0 and later. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is `Deleted`. |
| `LastReferencedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort,<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `LeftSize` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Returns the size of the left column of the dashboard.<br>Available values are:<br>• `Narrow`<br>• `Medium`<br>• `Wide` |

| Field | Details |
| --- | --- |
| `MiddleSize` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Returns the size of the middle column of the dashboard.<br>Available values are:<br>• `Narrow`<br>• `Medium`<br>• `Wide` |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `RightSize` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Returns the size of the right column in the dashboard.<br>Available values are:<br>• `Narrow`<br>• `Medium`<br>• `Wide` |

| Field | Details |
| --- | --- |
| `RunningUserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Returns the ID of the running user specified for the dashboard.<br>If the dashboard was created in Lightning Experience and is configured to run as the viewing user, it returns the user ID of the dashboard creator.<br>If the dashboard was created in Salesforce Classic and is configured to run as the logged-in user, returns the user ID of the last specified running user.<br>This is a relationship field.<br>**Relationship Name**<br>RunningUser<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `TextColor` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Returns the body text color in hexadecimal. Label is `Text Color`. |
| `Title` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Returns the title of the dashboard. Limit: 80 characters. |
| `TitleColor` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Returns the title text color in hexadecimal. Label is `Title Color`. |
| `TitleSize` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Sort<br>**Description**<br>Returns the title font size in points. Label is `Title Size`. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Returns the dashboard type. Available values are:<br>• `SpecifiedUser`—The dashboard displays data according to the access level of one specific running user.<br>• `LoggedInUser`—The dashboard displays data according to the access level of the logged-in user.<br>• `MyTeamUser`—The dashboard displays data according to the access level of the logged-in user, and managers can view dashboards from the point of view of users beneath them in the role hierarchy. |

## Supported Query Scopes

Use these scopes to help specify the data that your SOQL query returns.

**allPrivate**
Records saved in all users' private folders.

Requires the user permission "Manage All Private Reports and Dashboards" and Enhanced Analytics Folder Sharing. If your organization was created after the Summer '13 release, you already have Enhanced Analytics Folder Sharing. Available in API version 36.0 and later.

**created**
Records created by the user running the query.

**everything**
All records except records saved in other users' private folders.

**mine**
Records saved in the private folder of the user running the query.

## Usage

Provides read-only access to the current values in the dashboard fields.

## Example: Dashboards in an Inactive User's Private Folder

This SOQL query returns dashboards saved in a specific user's private folder.

```
SELECT Id FROM Dashboard USING SCOPE allPrivate WHERE CreatedByID = '005A0000000Bc2deFG'
```

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**DashboardFeed**
Feed tracking is available for the object.

SEE ALSO:

DashboardTag

Report

# DashboardComponent

Represents a dashboard component, which can be a chart, metric, table, or gauge on a dashboard. Access is read-only. This object is available in API version 21.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `CustomReportId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Requires the user permission "Manage All Private Reports and Dashboards." The ID of the report that provides data for the dashboard component. See Report. |
| `DashboardId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the dashboard that contains the dashboard component. See Dashboard.<br>This is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Dashboard<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Dashboard |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the dashboard component. |

## Usage

Provides read only access to the current values in dashboard component fields.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**DashboardComponentFeed**
Feed tracking is available for the object.

# DashboardTag

Associates a word or short phrase with a Dashboard. This object is available in API version 20.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
| --- | --- |
| `ItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter |

| Field Name | Details |
| --- | --- |
| | **Description**<br>ID of the tagged item. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter<br>**Description**<br>Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically. |
| `TagDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter<br>**Description**<br>ID of the parent TagDefinition object that owns the tag. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Restricted picklist<br>**Description**<br>Defines the visibility of a tag.<br>Valid values:<br>• `Public`—The tag can be viewed and manipulated by all users in an organization.<br>• `Personal`—The tag can be viewed or manipulated only by a user with a matching `OwnerId`. |

# Usage

DashboardTag stores the relationship between its parent TagDefinition and the Dashboard being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

Dashboard

# DataAssessmentFieldMetric

Represents summary statistics for matched, blank, and differing fields in account records of an org compared to records in Data.com. This object is available in API version 37.0 and later.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see Data.com Prospector and Clean Retirement.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

**Child Relationships**

DataAssessmentFieldMetric is a child object of DataAssessmentMetric object.

## Fields

| Field Name | Details |
|---|---|
| `DataAssessmentMetricId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>A unique number that identifies the parent DataAssessmentMetric record.<br>This is a relationship field.<br>**Relationship Name**<br>DataAssessmentMetric<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>DataAssessmentMetric |
| `FieldName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the assessed field. |

| Field Name | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>An optional field used to name your record. |
| `NumMatchedBlanks` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of matched records that contain blank fields. |
| `NumMatchedDifferent` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of matched records that have a different value for this field. |
| `NumMatchedInSync` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of matched records that have the same value for this field. |
| `NumUnmatchedBlanks` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of unmatched records that contain blank fields. |

# DataAssessmentMetric

Represents a summary of statistics for fields matched and unmatched in your account records with Data.com account records. This object is available in API version 37.0 and later.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see Data.com Prospector and Clean Retirement.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
|---|---|
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>An optional field used to name your record. |
| `NumDuplicates` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of duplicate records. |
| `NumMatched` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of matched records. |
| `NumMatchedDifferent` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of records in your org matched with a Data.com record that have different fields. |

| Field Name | Details |
| --- | --- |
| `NumProcessed` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of records processed in the data assessment. |

| `NumUnmatched` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of records not matched. |

# DataAssessmentValueMetric

Summarizes the number of fields matched for your account records with Data.com account records.This object is available in API version 37.0 and later.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see Data.com Prospector and Clean Retirement.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

**Child Relationships**

DataAssessmentValueMetric is a child of DataAssessementFieldMetric.

## Fields

| Field Name | Details |
| --- | --- |
| `DataAssessmentFieldMetricId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>A unique number that identifies the parent DataAssessementFieldMetric record.<br>This is a relationship field.<br>**Relationship Name**<br>DataAssessmentFieldMetric<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>DataAssessmentFieldMetric |
| `FieldValue` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The value in the matched field. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>An optional field used to name your record. |
| `ValueCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of times this value appears in this field. |

# DatabaseSaveEventLog

Database Save events track when records are created,updated, or deleted This object is available in API version 64.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
|---|---|
| `BotIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the bot. |
| `BotSessionIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The bot session ID. |
| `DmlType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of DML operation. |
| `FirstObjectIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Only the first object ID is logged upon an update. During record updates, the ID of that specific row is logged. When multiple rows are updated, only a single ID is logged. |

| Field | Details |
| --- | --- |
| KeyPrefix | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The key prefix of the entity type that was saved |
| LoginKey | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. The session starts with a login event and ends with either a logout event or the user session expiring. For example, `lUqjLPQTWRdvRG4`. |
| PlannerIdentifier | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the agent planner. |
| RequestIdentifier | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same RequestIdentifier. |
| RowCount | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Total number of records in the result set. |
| SampleFactor | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Rate at which entities are logged. If the sample factor is 1 that means every entity saved was logged. If it is 100 that means that 1/100 logs. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API. |

# DatacloudCompany

Represents the fields for Data.com company records. This object is available in API version 30.0 or later.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields are removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see Data.com Prospector and Clean Retirement.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`

# Fields

| Field Name | Details |
| --- | --- |
| `ActiveContacts` | **Type**<br>int<br>**Properties**<br>Nillable<br>**Description**<br>The number of active contacts that are associated with a company. |
| `AnnualRevenue` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The amount of money that the company makes in 1 year. Annual revenue is measured in US dollars. |
| `City` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The name of the city where the company is located. |
| `CompanyId` | **Type**<br>string<br>**Properties**<br>Filter, Nillable<br>**Description**<br>A unique numerical identifier for the company and theData.com identifier for a company. |
| `Country` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>A string that represents the standard abbreviation for the country where the company is located. |

| Field Name | Details |
| --- | --- |
| `CountryCode` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist<br>**Description**<br>A standardized name for countries of the world. |
| `Description` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A brief synopsis of the company that provides a general overview of the company and what it does. |
| `DunsNumber` | **Type**<br>string<br>**Properties**<br>Filter, Nillable<br>**Description**<br>A randomly generated nine-digit number that's assigned by Dun & Bradstreet (D&B) to identify unique business establishments. |
| `EmployeeQuantityGrowthRate` | **Type**<br>double<br>**Properties**<br>Nillable<br>**Description**<br>The yearly growth rate of the number of employees in a company expressed as a decimal percentage. The data includes the total employee growth rate for the past two years. |
| `ExternalId` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>A unique numerical identifier for the company. The `ExternalId` is a system-generated number. |

| Field Name | Details |
| --- | --- |
| `Fax` | **Type**<br>phone<br>**Properties**<br>Nillable<br>**Description**<br>The telephone number that's used to send and receive faxes. |
| `FortuneRank` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Group, Nillable<br>**Description**<br>The numeric value of the company's Fortune 1000 ranking. A null or blank value means that the company isn't ranked as a Fortune 1000 company. |
| `FullAddress` | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>The complete address of a company, including Street, City, State, and Zip. |
| `IncludedInSnP500` | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>A true or false value. If `true`, the company is listed in the S&P 500 Index. If `false`, the company isn't listed in the S&P 500 Index. |
| `Industry` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A description of the type of industry such as Telecommunications, Agriculture, or Electronics. |
| `IsInCrm` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Group<br>**Description**<br>Whether the record is in Salesforce (true) or not (false). |
| `IsInactive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>A true or false response. True, the company record is not active. False, the company record is active. |
| `IsOwned` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create<br>**Description**<br>A true or false value. True, your organization owns the record. False, your organization doesn't own the record. |
| `NaicsCode` | **Type**<br>string<br>**Properties**<br>Filter, Nillable<br>**Description**<br>A value that represents the North American Industry Classification System (NAICS) code. NAICS was created to provide details about a business's service orientation. The code descriptions are focused on what a business does. |
| `NaicsDesc` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A description of the NAICS classification. |
| `Name` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The company's name. |
| `NumberOfEmployees` | **Type**<br>int<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The number of employees working for the company. |
| `Ownership` | **Type**<br>string<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The type of ownership of the company:<br>• `Public`<br>• `Private`<br>• `Government`<br>• `Other` |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Nillable<br>**Description**<br>A numeric string containing the primary telephone number for the company. |
| `PremisesMeasure` | **Type**<br>int<br>**Properties**<br>Group, Nillable<br>**Description**<br>A numeric value for the measurement of the premises. |
| `PremisesMeasureReliability` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Group, Nillable<br>**Description**<br>A descriptive accuracy of the measurement such as actual, estimated, or modeled. |
| `PremisesMeasureUnit` | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>A descriptive measurement unit such as acres, square meters, or square feet. |
| `PriorYearEmployees` | **Type**<br>int<br>**Properties**<br>Group, Nillable<br>**Description**<br>The total number of employees for the prior year. |
| `PriorYearRevenue` | **Type**<br>double<br>**Properties**<br>Nillable<br>**Description**<br>The annual revenue for the prior year. |
| `SalesTurnoverGrowthRate` | **Type**<br>double<br>**Properties**<br>Nillable<br>**Description**<br>The increase in annual revenue from the previous value for an equivalent period expressed as a decimal percentage. |
| `Sic` | **Type**<br>string<br>**Properties**<br>Filter, Nillable |

| Field Name | Details |
| --- | --- |
| | **Description**<br>A numeric value that represents the Standard Industrial Codes (SIC). SIC is a numbering convention that indicates what type of service a business provides. It is a four-digit value. |
| `SicCodeDesc` | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>The SIC numeric code and descsciption for a company. |
| `SicDesc` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A description of the SIC classification. |
| `Site` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist<br>**Description**<br>An organizational status of the company.<br>• Branch: a secondary location to a headquarter location<br>• Headquarter: a parent company with branches or subsidiaries<br>• Single Location: a single business with no subsidiaries or branches |
| `State` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The two-letter standard abbreviation for a state. |
| `StateCode` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist |

| Field Name | Details |
| --- | --- |
| | **Description**<br>A standard two-letter abbreviation for states and territories of the United States. The state where the company is located. The abbreviation can also be a province or other equivalent to a state, depending on the country where the company is located. |
| `Street` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A postal address for the company. |
| `TickerSymbol` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The symbol that uniquely identifies companies that are traded on public stock exchanges. |
| `TradeStyle` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A legal name under which a company conducts business. |
| `UpdatedDate` | **Type**<br>dateTime<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The last date and time when the information for this company was updated. |
| `Website` | **Type**<br>url<br>**Properties**<br>Nillable |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The standard URL for the company's home page. |
| `YearStarted` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The year when the company was founded. |
| `Zip` | **Type**<br>string<br>**Properties**<br>Filter, Nillable<br>**Description**<br>A numeric postal code that's designated for the address. |

## Usage

Use the DatacloudCompany object to search the Data.com database for companies with the specific criteria that you enter. Use this object to find company records that you are interested in purchasing for your organization. Data.com APIs use the term "company," which is similar to Salesforce term "accounts."

Important: DatacloudCompany can't be used in Apex test methods, because an external web service call is required to access it. These calls are not allowed in Apex test methods.

# DatacloudContact

The fields and properties for Data.com contact records. This object is available in API version 30.0 or later.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields are removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see Data.com Prospector and Clean Retirement.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

| Field Name | Details |
| --- | --- |
| `City` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The city where the company is located. |
| `CompanyId` | **Type**<br>string<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The unique numerical identifier for the company and the Data.com company identification number or Data.com Key. |
| `CompanyName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The name of the company. |
| `ContactId` | **Type**<br>string<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The unique numeric identifier for this contact. |
| `Country` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The standard abbreviation or name for the country where the company is located.<br>Note: You can enter a comma-separated list of countries; however, for a country that uses a comma in its name, leave out the comma. For example, enter "Taiwan, ROC" as `Taiwan ROC`. |

| Field Name | Details |
| --- | --- |
| `Department` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist<br>**Description**<br>The department in the company that the contact is affiliated with. The values of this field are fixed enumerated values.<br>• `Engineering`<br>• `Finance`<br>• `Human Resources`<br>• `IT`<br>• `Marketing`<br>• `Operations`<br>• `Other`<br>• `Sales`<br>• `Support` |
| `Email` | **Type**<br>email<br>**Properties**<br>Filter, Nillable<br>**Description**<br>A business email address for the contact. |
| `ExternalId` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>A unique system-generated numerical identifier for the contact. |
| `FirstName` | **Type**<br>string<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The first name of the contact. |

| Field Name | Details |
| --- | --- |
| `IsInCrm` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Group<br>**Description**<br>Whether the record is in Salesforce (true) or not (false). |
| `IsInactive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Whether the record is active (false) or not (true). |
| `IsOwned` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create<br>**Description**<br>• `True`: You own this record.<br>• `False`: You do not own this record. |
| `LastName` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The last name of the contact. |
| `Level` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist<br>**Description**<br>A human resource label that designates a person's level in the company. The values of this field are fixed enumerated values.<br>• `C-Level`<br>• `VP`<br>• `Director`<br>• `Manager` |

| Field Name | Details |
| --- | --- |
| | • `Staff`<br>• `Other` |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Nillable<br>**Description**<br>The direct-dial telephone number for the contact. |
| `SocialHandles` | **Type**<br>string<br>**Description**<br>The social handles for this contact. Social handles are a normalized URL and user name for social media accounts such as, LinkedIn, Facebook, and Twitter. This field is response-only.<br>The DatacloudSocialHandles object is a child of the DatacloudContact object. |
| `State` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The state where the company is located, which can also be a province or other equivalent to a state, depending on the country where the company is located. |
| `Street` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The street address for the company where the contact works. |
| `Title` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Title of the contact such as CEO or Vice President. |

| Field Name | Details |
| --- | --- |
| `UpdatedDate` | **Type**<br>dateTime<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The last date and time when the information for a contact was updated. |
| `Zip` | **Type**<br>string<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The postal or zip code for the address. |

## Usage

This object searches the Data.com database for contacts with the specific criteria that you enter. Use this object to find contact records that you are interested in purchasing for your organization.

Important: DatacloudContact can't be used in Apex test methods, because an external web service call is required to access it. These calls are not allowed in Apex test methods.

# DatacloudDandBCompany

Represents a set of read-only fields that are used to return D&B company data from Data.com API calls. This object is available in API version 30.0 or later.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see Data.com Prospector and Clean Retirement.

## Supported Calls

`describeSObjects()`, `query()`

# Fields

| Field Name | Details |
| --- | --- |
| `City` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The name of the city where the company is physically located. |
| `CompanyCurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Nillable, Restricted picklist<br>**Description**<br>The code used to represent a company's local currency. This data is provided by the International Organization for Standardization (ISO) and is based on their three-letter currency codes. For example, USD is the ISO code for United States Dollar. |

| `GeoCodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Nillable, Restricted picklist<br>**Description**<br>The level of accuracy of a location's geographical coordinates compared with its physical address. Available values include *`Rooftop level`*, *`Street level`*, *`Block level`*, *`Census tract level`*, *`Mailing address level`*, *`ZIP code level`*, *`Geocode could not be assigned`*, *`Places the address in the correct city`*, *`Not matched`*, *`State or Province Centroid`*, *`Street intersection`*, *`PO BOX location`*, *`Non-US rooftop accuracy`*, *`County Centroid`*, *`Sub Locality-Street Level`*, and *`Locality Centroid`* |

| Field Name | Details |
| --- | --- |
| `GlobalUltimateBusinessName` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The primary name of the Global Ultimate, which is the highest entity within an organization's corporate structure and may oversee branches and subsidiaries. |
| `GlobalUltimateDunsNumber` | **Type**<br>string<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The D-U-N-S number of the Global Ultimate, which is the highest-ranking entity within an organization's corporate structure and can oversee branches and subsidiaries. |
| `GlobalUltimateTotalEmployees` | **Type**<br>double<br>**Properties**<br>Nillable<br>**Description**<br>The total number of employees at the Global Ultimate, which is the highest entity within an organization's corporate structure and may oversee branches and subsidiaries. |
| `ImportExportAgent` | **Type**<br>picklist<br>**Properties**<br>Nillable, Restricted picklist<br>**Description**<br>Identifies whether a business imports goods or services, exports goods or services, and/or is an agent for goods. |
| `IncludedInSnP500` | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>A true or false value. If `true`, the company is listed in the S&P 500 Index. If `false`, the company isn't listed in the S&P 500 Index. |

| Field Name | Details |
| --- | --- |
| `Industry` | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>A description of the type of industry such as Telecommunications, Agriculture, or Electronics. |
| `IsOwned` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create<br>**Description**<br>A true or false value. True, your organization owns the record. False, your organization doesn't own the record. |
| `IsParent` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create,<br>**Description**<br>A true or false value. True, the company is a parent company. False, the company isn't a parent company. A parent company owns other companies. |
| `Latitude` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>Used with longitude to specify a precise location, which is used to assess the Geocode Accuracy. |
| `LegalStatus` | **Type**<br>picklist<br>**Properties**<br>Nillable, Restricted picklist<br>**Description**<br>Identifies the legal structure of an organization. Available values include *`Cooperative`*, *`Nonprofit organization`*, *`Local government body`*, *`Partnership of unknown type`*, and *`Foreign company`*. |

| Field Name | Details |
| --- | --- |
| `LocationStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Nillable, Restricted picklist<br>**Description**<br>Identifies the organizational status of a company. A numeric value represents each value.<br>**Organizational status** / **Numeric value**<br>*`Single location`*: The business has no branches or subsidiaries. — *0*<br>*`Headquarters/Parent`*: A parent company that owns more than 50 percent of another company. When the company also has branches, it's the headquarters. — *1*<br>*`Branch`*: A secondary location of a business. — *2*<br>Note: Only the numeric value is accepted in an API request. |
| `Longitude` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>Used with latitude to specify a precise location, which is used to assess the Geocode Accuracy. |
| `MailingCity` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The city where a company has its mail delivered. |
| `MailingCountry` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Nillable<br>**Description**<br>The country where a company has its mail delivered. |
| `MailingState` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The state where a company has its mail delivered. |
| `MailingStreet` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The street address where a company has its mail delivered. |
| `MailingZip` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The postal zip code for the company. |
| `MarketingPreScreen` | **Type**<br>picklist<br>**Properties**<br>Nillable, Restricted picklist<br>**Description**<br>The probability that a company pays with a significant delay compared to the agreed terms. The risk level is based on the standard Commercial Credit Score, and ranges from low risk to high risk. Available values are *`High risk of delinquency`*, *`Low risk of delinquency`*, and *`Moderate risk of delinquency`*.<br>Important: Use this information for marketing pre-screening purposes only. |

| Field Name | Details |
| --- | --- |
| `MarketingSegmentationCluster` | **Type**<br>picklist<br>**Properties**<br>Nillable, Restricted picklist<br>**Description**<br>Twenty-two distinct, mutually exclusive profiles, created as a result of cluster analysis of Dun & Bradstreet data for US organizations. Available values include *`High-Tension Branches of Insurance/Utility Industries`*, *`Rapid-Growth Large Businesses`*, *`Labor-Intensive Giants`*, *`Spartans`*, *`Main Street USA`*. |
| `MinorityOwned` | **Type**<br>picklist<br>**Properties**<br>Nillable, Restricted picklist<br>**Description**<br>Indicates whether an organization is owned or controlled by a member of a minority group. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The primary or registered name of a company. |
| `NationalId` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The identification number used in some countries for business registration and tax collection. |
| `NationalIdType` | **Type**<br>picklist<br>**Properties**<br>Nillable, Restricted picklist<br>**Description**<br>A code value that identifies the type of national identification number that's used. |

| Field Name | Details |
| --- | --- |
| `OutOfBusiness` | **Type**<br>picklist<br>**Properties**<br>Nillable, Restricted picklist<br>**Description**<br>Indicates whether the company at the specified address has discontinued operations. |
| `OwnOrRent` | **Type**<br>picklist<br>**Properties**<br>Nillable, Restricted picklist<br>**Description**<br>Indicates whether a company owns or rents the building it occupies. |
| `ParentOrHqBusinessName` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The primary name of the parent or headquarters company. |
| `ParentOrHqDunsNumber` | **Type**<br>string<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The D-U-N-S number for the parent or headquarters. |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Nillable<br>**Description**<br>A company's primary telephone number. |
| `PremisesMeasure` | **Type**<br>int<br>**Properties**<br>Group, Nillable |

| Field Name | Details |
| --- | --- |
| | **Description**<br>A numeric value for the measurement of the premises. |
| `PremisesMeasureReliability` | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>A descriptive accuracy of the measurement such as actual, estimated, or modeled. |
| `PremisesMeasureUnit` | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>A descriptive measurement unit such as acres, square meters, or square feet. |
| `PrimaryNaics` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The six-digit North American Industry Classification System (NAICS) code is the standard used by business and government to classify business establishments according to their economic activity for the purpose of collecting, analyzing, and publishing statistical data related to the US business economy. |
| `PrimaryNaicsDesc` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A brief description of an organization's line of business, based on its NAICS code. |
| `PrimarySic` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The four-digit SIC code that's used to categorize business establishments by industry. |

| Field Name | Details |
| --- | --- |
| PrimarySic8 | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>The eight-digit Standard Industrial Classification (SIC) code is used to categorize business establishments by industry. The full list of values can be found at the Optimizer Resources page maintained by Dun & Bradstreet. Maximum size is 8 characters. |
| PrimarySic8Desc | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters. |
| PrimarySicDesc | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A brief description of an organization's line of business, based on its SIC code. |
| PriorYearEmployees | **Type**<br>int<br>**Properties**<br>Group, Nillable<br>**Description**<br>The total number of employees for the prior year. |
| PriorYearRevenue | **Type**<br>double<br>**Properties**<br>Nillable<br>**Description**<br>The annual revenue for the prior year. |
| PublicIndicator | **Type**<br>picklist |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Nillable, Restricted picklist<br>**Description**<br>Indicates whether ownership of the company is public or private. |
| `Revenue` | **Type**<br>double<br>**Properties**<br>Nillable<br>**Description**<br>The annual revenue of a company in US dollars. |
| `SalesTurnoverGrowthRate` | **Type**<br>double<br>**Properties**<br>Nillable<br>**Description**<br>The increase in annual revenue from the previous value for an equivalent period expressed as a decimal percentage. |
| `SalesVolume` | **Type**<br>double<br>**Properties**<br>Nillable<br>**Description**<br>The total annual sales revenue in the headquarters' local currency. Dun & Bradstreet tracks revenue data for publicly traded companies, Global Ultimates, Domestic Ultimates, and some headquarters. |
| `SalesVolumeReliability` | **Type**<br>picklist<br>**Properties**<br>Nillable, Restricted picklist<br>**Description**<br>The reliability of the `SalesVolume` figure. |
| `SecondNaics` | **Type**<br>string<br>**Properties**<br>Nillable |

| Field Name | Details |
| --- | --- |
| | **Description**<br>A NAICS code used to further classify an organization by industry. |
| `SecondNaicsDesc` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding NAICS code. |
| `SecondSic` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A SIC code used to further classify an organization by industry. |
| `SecondSic8` | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters. |
| `SecondSic8Desc` | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters. |
| `SecondSicDesc` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding SIC code. |

| Field Name | Details |
| --- | --- |
| SixthNaics | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A NAICS code used to further classify an organization by industry. |
| SixthNaicsDesc | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding SIC code. |
| SixthSic | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A SIC code used to further classify an organization by industry. |
| SixthSic8 | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters. |
| SixthSic8Desc | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters. |
| SixthSicDesc | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Nillable<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding SIC code. |
| `SmallBusiness` | **Type**<br>picklist<br>**Properties**<br>Nillable, Restricted picklist<br>**Description**<br>Indicates whether the company is designated a small business as defined by the Small Business Administration of the US government. |
| `State` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The state where a company is physically located. |
| `StockExchange` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The corresponding exchange for a company's stock symbol, for example, NASDAQ or NYSE. |
| `StockSymbol` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The abbreviation that's used to identify publicly traded shares of a particular stock. |
| `Street` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Nillable<br>**Description**<br>The street address where a company is physically located. |
| `Subsidiary` | **Type**<br>picklist<br>**Properties**<br>Nillable, Restricted picklist<br>**Description**<br>Indicates whether a company is more than 50 percent owned by another organization. |
| `ThirdNaics` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A NAICS code used to further classify an organization by industry. |
| `ThirdNaicsDesc` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding NAICS code. |
| `ThirdSic` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A SIC code used to further classify an organization by industry. |
| `ThirdSic8` | **Type**<br>string<br>**Properties**<br>Group, Nillable |

| Field Name | Details |
| --- | --- |
| | **Description**<br>An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters. |
| `ThirdSic8Desc` | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters. |
| `ThirdSicDesc` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A brief description of an organization's line of business, based on the corresponding SIC code. |
| `TradeStyle1` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A name, different from its legal name, that an organization may use for conducting business. Similar to "Doing business as" or "DBA". |
| `TradeStyle2` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A tradestyle used by the organization. |
| `TradeStyle3` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A tradestyle used by the organization. |

| Field Name | Details |
| --- | --- |
| `TradeStyle4` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A tradestyle used by the organization. |
| `TradeStyle5` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A tradestyle used by the organization. |
| `UsTaxId` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The identification number for the company used by the Internal Revenue Service (IRS) in the administration of tax laws. Also referred to as Federal Taxpayer Identification Number. |
| `Website` | **Type**<br>url<br>**Properties**<br>Filter, Group, Nillable<br>**Description**<br>An organization's primary website address. |
| `WomenOwned` | **Type**<br>picklist<br>**Properties**<br>Nillable, Restricted picklist<br>**Description**<br>Indicates whether a company is more than 50 percent owned or controlled by a woman. |
| `YearStarted` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Nillable<br>**Description**<br>The year when the company was established or the year when current ownership or management assumed control of the company. |
| `Zip` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>A five or nine-digit code that's used to help sort mail. |

## Usage

Use this object to return D&B Company information. These fields are read-only.

Important: DatacloudDandBCompany can't be used in Apex test methods, because an external web service call is required to access it. These calls are not allowed in Apex test methods.

# DatacloudOwnedEntity

Represents fields in the DatacloudOwnedEntity object. The DatacloudOwnedEntity object tracks user-purchased records. This object is available in API version 30.0 or later.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields are removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see Data.com Prospector and Clean Retirement.

## Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
| --- | --- |
| `DataDotComKey` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Sort<br>**Description**<br>The Data.com contact or company record identification number used by the DatacloudPurchaseUsage object to keep track of purchased records. This is equivalent to the Data.com record ID for a contact or company. |
| `DatacloudEntityType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Restricted picklist, Sort<br>**Description**<br>The type of Data.com record you want to purchase.<br>• 0—contact<br>• 1—company |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, Sort<br>**Description**<br>An optional field used to name your record. |
| `PurchaseType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>A read only field set by the API to identify the purchase type.<br>• Added<br>• Export<br>• API |
| `PurchaseUsageId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The unique identification number for the DatacloudPurchaseUsage object created by making a REST POST request. |

| Field Name | Details |
| --- | --- |
| | • 0—contact<br>• 1—company |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>A unique identifier for the user making the purchase. |

## Usage

The Datacloud object that tracks records that are purchased and owned by a specific user.

# DatacloudPurchaseUsage

Represents an object used to identify and track Data.com record purchases. This object is available in API version 30.0 or later.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields are removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see Data.com Prospector and Clean Retirement.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
| --- | --- |
| `DatacloudEntityType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of Data.com record you want to purchase.<br>• 0—indicates contact entity type. |

| Field Name | Details |
| --- | --- |
| | • 1—indicates company entity type. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An optional field. You can add a description for your purchase. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, Sort<br>**Description**<br>An optional field used to name your record. |
| `PurchaseType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>A read only field set by the API to identify the purchase type.<br>• Added<br>• Export<br>• API |
| `Usage` | **Type**<br>double<br>**Properties**<br>Filter, Sort<br>**Description**<br>A read only field set by the API. It is used to track the points used to purchase records. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>A read only field set by the API that identifies the user purchasing the records. |

| Field Name | Details |
| --- | --- |
| `UserType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A read only field set by the API with 2 user types.<br>• Monthly Usage<br>• List Pool User |

## Usage

The DatacloudPurchaseUsage object allows you to track Data.com record purchases for CRM users.

# DataDetectJobObjectSession

Represents an object-specific job session that's created whenever a DataDetect scan policy job session runs on a scan policy object. This object is available in API version 63.0 and later.

## Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

## Fields

| Field | Details |
| --- | --- |
| `CurrentObject` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of the scan policy object associated with the job object session. |
| `DataDetectJobSessionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the job session associated with a scan policy data scan.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>DataDetectJobSession<br>**Relationship Type**<br>Master-Detail<br>**Refers To**<br>DataDetectJobSession |
| `SessionEndTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Time and date when the scan policy object scan completes. |
| `ScannedRecordsCount` | **Type**<br>Long<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of records already scanned while the overall job is in progress. |
| `LastScannedRecord` | **Type**<br>String<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The Last scanned record identifier of the object. |
| `JobStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Status of the scan policy object scan. Possible values are:<br>• `Cancelled`<br>• `Cancelled and CsvNoPiiData - Scan cancelled. No sensitive data detected.`<br>• `Cancelled and CsvUploadFailed - Scan cancelled. Results upload failed.`<br>• `Cancelled and CsvUploadInProgress - Scan cancelled. Results upload in progress.` |

| Field | Details |
| --- | --- |
| | • `Cancelled and CsvUploadSuccess - Scan cancelled. Results upload completed successfully.`<br>• `Completed`<br>• `Completed and CsvNoPiiData - Scan completed. No sensitive data detected.`<br>• `Completed and CsvUploadFailed - Scan completed. Results upload failed.`<br>• `Completed and CsvUploadInProgress - Scan completed. Results upload in progress.`<br>• `Completed and CsvUploadSuccess - Scan completed. Results upload completed successfully.`<br>• `Failed`<br>• `Failed and CsvNoPiiData - Scan failed. No sensitive data detected.`<br>• `Failed and CsvUploadFailed - Scan failed. Results upload failed.`<br>• `Failed and CsvUploadInProgress - Scan failed. Results upload in progress.`<br>• `Failed and CsvUploadSuccess - Scan failed. Results upload completed successfully.`<br>• `PartialSuccess`<br>• `PartialSuccess and CsvNoPiiData - Scan partially successful. No sensitive data detected.`<br>• `PartialSuccess and CsvUploadFailed - Scan partially successful. Results upload failed.`<br>• `PartialSuccess and CsvUploadInProgress - Scan partially successful. Results upload in progress.`<br>• `PartialSuccess and CsvUploadSuccess - Scan partially successful. Results upload completed successfully.`<br>• `Running`<br>• `Scheduled`<br>• `TimedOut`<br>The default value is `Scheduled`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Auto-generated name of the job object session. |

| Field | Details |
| --- | --- |
| `SessionStartTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Time and date when the scan policy object scan begins. Scan policy object scan can start anytime within a 30-day window from the current date. |

Results upload completed successfully.<br>• Running<br>• Scheduled<br>• TimedOut<br>The default value is Scheduled. |

| Field | Details |
| --- | --- |
| `RunByUser` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>User who started the job session or data scan. |
| `SessionStartTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Time and date when the data scan begins. |

## Associated Objects

This object has this associated object. If the API version isn't specified, it's available in the same API version as this object. Otherwise, it's available in the specified API version and later.

**DataDetectJobSessionFeed**
Feed tracking is available for the object.

*Salesforce Help*: Data Detect

# DataDetectPolicy

Represents a set of parameters that specifies the types of sensitive data to be searched for in a data scan. DataDetect scan policies can also apply filters to a data scan, and select what specific objects and fields are to be scanned. This object is available in API version 60.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the scan policy. |
| `EndTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Time and date when the data scan completes. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the scan policy. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The UserID of the person who owns the record. This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |
| `ScanType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Designates whether the data scan type is `AIInference` or `PatternMatching`.<br>The default value is `PatternMatching`. |
| `StartTime` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Time and date when the data scan begins. Data scans can start anytime within a 30-day window from the current date. |

## Associated Objects

This object has this associated object. If the API version isn't specified, it's available in the same API version as this object. Otherwise, it's available in the specified API version and later.

**DataDetectPolicyShare**
Sharing is available for the object.

# DataDetectPolicyObject

Represents an object of the DataDetect scan policy to be scanned. This object is available in API version 62.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `DataDetectPolicyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the scan policy associated with this scan policy object.<br>This field is a relationship field.<br>**Relationship Name**<br>DataDetectPolicy<br>**Relationship Type**<br>Master-Detail |

| Field | Details |
| --- | --- |
| | **Refers To**<br>DataDetectPolicy |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Name of the scan policy object. |
| `ObjectReference` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Name of the scan policy object to be scanned. |

SEE ALSO:

*Salesforce Help*: Data Detect

# DataDetectScanResult

Represents the results of a DataDetect scan policy data scan. This object is available in API version 63.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `CreatedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Time and date when an instance of PII is added to the scan result. |

| Field | Details |
| --- | --- |
| `DataDetectJobSessionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the job session associated with the scan policy.<br>This field is a relationship field.<br>**Relationship Name**<br>DataDetectJobSession<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>DataDetectJobSession |
| `FieldName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>UDD name from standard fields, or custom field ID from custom fields. |
| `NamedEntityCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Number of times PII is found. |
| `NamedEntityType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Type of PII found in the record of the scan policy object. |
| `ObjectName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>KeyPrefix of the scan policy object that contains PII. |

| Field | Details |
| --- | --- |
| `RecordIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Unique identifier for the record. |

# DataDetectPolicyObjField

Represents an object field of the DataDetect scan policy object to be scanned. This object is available in API version 64.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `DataDetectPolicyObjectId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the scan policy object associated with the scan policy object's field.<br>This field is a relationship field.<br>**Relationship Name**<br>DataDetectPolicyObject<br>**Relationship Type**<br>Master-Detail<br>**Refers To**<br>DataDetectPolicyObject |
| `FieldName` | **Type**<br>string |

| Field | Details |
|---|---|
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Name of the scan policy object field. |

SEE ALSO:

*Salesforce Help*: Data Detect

# DataDetectPolicySnapshot

Represents the snapshot of a DataDetect scan policy and its components retrieved during a job session. This object is available in API version 64.0 and later.

## Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`,

## Fields

| Field | Details |
|---|---|
| `DataDetectPolicyId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the scan policy associated with the scan policy snapshot.<br>This field is a relationship field.<br>**Relationship Name**<br>DataDetectPolicy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>DataDetectPolicy |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Name of the scan policy snapshot. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the record owner. This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |
| `RevisionNumber` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Revision number of the scan policy snapshot associated with the scan policy. |
| `SerializedPolicy` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>Sensitive data category item associated with the scan policy. |

# DataDetPlcyDataSrchExps

Represents data search expressions for scanning DataDetect scan policies based on Java regex. This object is available in API version 64.0 and later.

Note: When working with regex, Salesforce recommends Java 17 or later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `DataDetectPolicyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the scan policy associated with the data search expression.<br>This field is a relationship field.<br>**Relationship Name**<br>DataDetectPolicy<br>**Relationship Type**<br>Master-Detail<br>**Refers To**<br>DataDetectPolicy |
| `Expression` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Regular expression that represents sensitive data to be scanned. |
| `IsCaseSensitive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Designates whether the expression is case-sensitive `(true)` or not `(false)`.<br>The default value is `false`. |
| `IsKeywordSearch` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
|---|---|
| | **Description**<br>Designates whether the expression can be used as a search keyword `(true)` or not `(false)`.<br>The default value is `false`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the expression. |

*Salesforce Help*: Data Detect

# DataDetPlcyMdatScanCrit

Represents inclusion and exclusion criteria that filter what DataDetect scan policy object fields are to be scanned based on metadata tags. This object is available in API version 64.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `Criteria` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Defines category of inclusion or exclusion criteria applied to fields during scan policy creation. Valid values are:<br>• `ComplianceCategory`—Compliance acts, definitions, or regulations related to the field's data.<br>• `DataSensitivity`—Level of data sensitivity related to the field's data. |

| Field | Details |
| --- | --- |
| | • `FieldUsage`—Data planned for deprecation, or intended to be hidden, related to the active and visible field's data. |
| `DataDetectPolicyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the policy associated with the data search expression.<br>This field is a relationship field.<br>**Relationship Name**<br>DataDetectPolicy<br>**Relationship Type**<br>Master-Detail<br>**Refers To**<br>DataDetectPolicy |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Name of the criteria. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Defines what criteria, `inclusion` or `exclusion`, is applied to a field in the policy scan object. |
| `Value` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Value of the criteria applied to filters. |

SEE ALSO:

*Salesforce Help*: Data Detect

# DataDetPlcySstvDataCatg

Represents the sensitive data categories that the DataDetect scan policy is required to scan. This object is available in API version 64.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `DataCategory` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Sensitive data category associated with the scan policy. |
| `DataDetectPolicyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the scan policy associated with the sensitive data category.<br>This field is a relationship field.<br>**Relationship Name**<br>DataDetectPolicy<br>**Relationship Type**<br>Master-Detail<br>**Refers To**<br>DataDetectPolicy |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Name of the sensitive data category. |

*Salesforce Help*: Data Detect

# DataEncryptionKey

The DataEncryptionKey object is part of the Bring Your Own Key (BYOK) feature, which allows users to upload a data encryption key (DEK) using a public key generated by the Salesforce Shield Key Management Service (KMS). Customers create their own DEKs and upload them to Salesforce. Users access this entity via the API to list DEK keys for auditing purposes. They can also programmatically use this object to create the certificate and to upload key material. This object is available in API version 63.0 and later.

DEKs are used to encrypt and decrypt data. They reside in either the Salesforce database or in an external KMS. They're created by root keys, and when persisted, wrapped by root keys as well.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `queryAll()`

## Special Access Rules

This object is available as part of the Shield and Salesforce Platform Encryption add-on subscriptions.

## Fields

| Field | Details |
| --- | --- |
| `CreatedBy` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The email address of the user who created the DEK. For example, `user@example.com`. |
| `DataEncryptionKeyCertName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the certificate whose public key is used to encrypt the `DEK` during a remote key callout. When you want to create a BYOK-compatible certificate, use this property in a |

| Field | Details |
| --- | --- |
| | call to create() to name the certificate. You need to know the name to retrieve the certificate later. Specify only the file name. Salesforce will add the .crt extension when it creates the file. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The user-defined description of the root key. |
| `DoesUseKeyDerivation` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the DEK is intended to be used as part of a derived key (`true`) or not (`false`). See Components Involved in Deriving Keys for information on derived keys.<br>The default value is `false`. |
| `LastModifiedBy` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The email address of the user who most recently modified the key. For example, `user@example.com`. |
| `RootKeyIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The unique key identifier assigned by Salesforce to the root key used to create the DEK. |
| `RootKeyKmsIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The unique key identifier from the external KMS, such as an AWS Amazon Resource Name (ARN). For example,<br>`arn:aws:kms:us-west-2:123456789000:key/123ab456-7cd8-9012-3e4f-5gh678i901j2` |
| `SecretValue` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The encrypted 256-bit secret value encoded in base64. |
| `SessionToken` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Contains the token for the session that was active when the DEK was last wrapped. If the session is inactive, a new certificate is required in order to transmit the DEK. |
| `Source` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The source of the encryption key material. Values are:<br>• `AWS`—A tenant secret or DEK fetched from the Amazon Key Management Service DEKs with a `Source` value of `AWS` are listed as Fetched on the Key Management page in Setup.<br>• `Salesforce`—A Salesforce-generated DEK. |
| `Status` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The status of the key.<br>Possible values are:<br>• `Activation Pending`—Salesforce is waiting for confirmation of a valid key policy in the external key store.<br>• `Active`—Can be used to encrypt new DEKs and decrypt existing DEKs. |

| Field | Details |
| --- | --- |
| | • `Archived`—Can't encrypt new DEKs. Can be used to decrypt previously created DEKs.<br>• `Canceled`—Root key activation canceled by a user.<br>• `Inactive`—The root key, and the DEKs that it encrypts, are inaccessible. Inaccessible DEKs can't be used to decrypt data, which renders that data also inaccessible. |
| `Type` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The type of DEK. This value appears in the `Type` picklist:<br>• `Search Index`—search index files.<br>For Hyperforce orgs on API version 63.0 and later, create secrets of type `SearchIndex` using the DataEncryptionKey object. For Hyperforce orgs on API versions 62.0 and earlier, and for all non-Hyperforce orgs, create secrets of type `SearchIndex` using the TenantSecret object.<br>You also specify a type of `SearchIndex` when you are creating a BYOK-compatible certificate using the DataEncryptionKey object. |
| `Version` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The version number of this secret. The version number is unique within your org. |

## Usage

Four functions are available: `describe()`,`create()`, `query()` and `queryAll()`.

- Use `create()` to create BYOK-compatible certificates and DEKs.
- Use `query()` or `queryAll()` to list one or all of your DEKs.
- Use `describe()` to get information abut the DataEncryptionKey object.

You use `create()` and `queryAll()` together to upload a Search Index Encryption DEK. Check the Examples section for how to do each of these steps.

- Create a BYOK-compatible certificate with `create()`. This will create a temporary DEK to contain the certificate reference. Specify a Type of `Search Index` and a name for the certificate file.
- Use `queryAll()` to list your DEKs. The temporary DEK will include the name of your certificate file in the `DataEncryptionKeyCertName` attribute. It will also include a session token in the `sessionToken` attribute. Save this value for later.

- Downlad the certificate using the metadata object API. Specify `Certificate` for the object name node, and the `DataEncryptionKeyCertName` for the members node. The certificate file will be in the zip file returned by the metadata object API.
- Run the BYOK Search Index Encryption script to generate the **payload.bin** file which contains the plaintext of your new DEK. Use the certificate file you created when you run the script. Alternatively, generate a key using a method of your choice. It must meet the specifications outlined in Bring Your Own Key Overview.
- Generate a b64 string from the contents of the **payload.bin** file.
- Run the `DataEncryptionKey.create()` method again, this time with the the b64 string and the session token. Specify:

```
"SecretValue":"<b64 string>"
"SessionToken":"<session token string>"
"Type":"SearchIndex"
```

With success, the temporary DEK is replaced by the uploaded secret. The certificate is deleted, and the session token eventually expires. A call to `queryAll()` will show the new DEK. The DEK will also appear on the Search Index Encryption Key Management page.

# Examples

### Create a BYOK-compatible certificate with `create()`

To create a BYOK-compatible certificate, use a POST method to create an sObject of type `DataEncryptionKey`. Specify a Type of `search index` (case insensitive), and an appropriate string value for DataEncryptionKeyCertName. You need to name the certificate to retrieve it later. Specify just the name. Salesforce will add the .crt extension to the file.

```
curl --location 'https://DOMAIN.my.salesforce.com/services/data/v62.0/sobjects/'\
                    DataEncryptionKey/create'
     --header 'Content-Type: application/json' \
     --header 'Authorization: Bearer TOKEN' \
     --data '{
               "Type": "search index",
               "DataEncryptionKeyCertName": "my-byok-compatible-cert"
             }'
```

### List all DEKs with `queryAll()`

To retrieve DEKs, use `query` or `queryAll` on the `DataEncryptionKey` sObject. You must specify a limit for the query. All DEKs are retrieved, including archived DEKs. You use `queryAll` to get the session token.

```
curl --location
'https://DOMAIN.my.salesforce.com/services/data/v63.0/queryAll/?q=SELECT+FIELDS(ALL)+FROM+DataEncryptionKey+LIMIT+10'
 \
                    --header 'Authorization: Bearer TOKEN'
```

### Download your Certificate

Retrieve the certificate using Metadata API. object to download your new certificate.

```
<?xml version="1.0" encoding="UTF-8"?>
<Package xmlns="http://soap.sforce.com/2006/04/metadata">
   <types>
      <members>DataEncryptionKeyCertName</members>
      <name>Certificate</name>
   </types>
```

```
   <version>65.0</version>
</Package>
```

Your certificate will be contained in the cert folder.

### Create a DEK with `create()`

To create the final DEK, use a POST method to create an sObject of type `DataEncryptionKey`. Specify a Type of `search index` (case insensitive).

```
curl --location
'https://DOMAIN.my.salesforce.com/services/data/v63.0/sobjects/DataEncryptionKey/create'
 \
--header 'Content-Type: application/json' \
--header 'Authorization: Bearer TOKEN' \
--data '{
    "SecretValue":"b64-secret"
    "SessionToken":"session-token value"
    "Type": "search index"
}'
```

### Describe a DataEncryptionKey with `describe()`

To get information about the DataEncryptionKey sObject, use `describe`.

```
curl --location 'https://DOMAIN.my.salesforce.com/services/data/v62.0/sobjects/'\
                    DataEncryptionKey/describe'
                    --header 'Content-Type: application/json' \
                    --header 'Authorization: Bearer TOKEN'
```

On success, the response is the full JSON description of the DataEncryptionKey sObject.

### Return Values for Create()

The response for creating a certificate or DEK are the same. On success, the response is be similar to

```
{
   "totalSize": (COUNT),
   "done": true,
   "records": [
      {
         "attributes": {
         "type": "DataEncryptionKey",
         "url": "/services/data/v63.0/sobjects/DataEncryptionKey/(ID)"
         },
         ATTRIBUTE LIST
      },
   ]
```

On error, the response is similar to

```
[
   {
      "message": "ERROR MESSAGE",
      "errorCode": "ERROR CODE"
   }
]
```

# DataIntegrationRecordPurchasePermission

Indicates Lightning Data purchase credits that a Salesforce admin has granted to users.

This object is available in API versions 42.0 and later.

## Supported Calls

`describeSObjects()`, `create()`, `delete()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `ExternalObject` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the name of the data service record matched to the Salesforce record. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Indicates the ID of a user to whom purchase credits are assigned.<br>This is a relationship field.<br>**Relationship Name**<br>User<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| **`UserRecordPurchaseLimit`** | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Represents the number of purchase credits assigned to a user. |

# DataKitDeployEvent

Represents a data kit deployment event that notifies subscribers of the status of the data kit component deployment. This object is available in API version 61.0 or later.

## Supported Calls

`create()`, `describeSObjects()`

## Special Access Rules

Users that have access to Data Cloud.

## Fields

| Field | Details |
| --- | --- |
| `DataKitDeployStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Nillable, Restricted picklist<br>**Description**<br>The deployment status of the components deployed from a data kit. This field is available in API version 63.0 and later. Possible values are:<br>• `Active`<br>• `Deleting`<br>• `Error`<br>• `Inactive`<br>• `Processing` |
| `DataKitName` | **Type**<br>string<br>**Properties**<br>Create, Nillable<br>**Description**<br>Name of the data kit from which a component is deployed. |

| Field | Details |
| --- | --- |
| DataspaceName | **Type**<br>string<br>**Properties**<br>Create, Nillable<br>**Description**<br>Name of the data space into which a component is deployed. |
| DeployStartTime | **Type**<br>dateTime<br>**Properties**<br>Create, Nillable<br>**Description**<br>The date and time the deployment starts. |
| ErrorDetails | **Type**<br>textarea<br>**Properties**<br>Create, Nillable<br>**Description**<br>Explanation of the error. |
| EventCreationDate | **Type**<br>dateTime<br>**Properties**<br>Create, Nillable<br>**Description**<br>The date and time the data kit deploy creation event was created. |
| EventPublishDate | **Type**<br>dateTime<br>**Properties**<br>Create, Nillable<br>**Description**<br>The date and time of the data kit deploy publish event. |
| EventUuid | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The unique ID of the event. |

| Field | Details |
| --- | --- |
| IsDataKitDeployStatusSuccess | **Type**<br>string<br>**Properties**<br>Create, Nillable<br>**Description**<br>Status of the data kit component deployment. Possible values are:<br>• Active<br>• Failure |
| JobIdentifier | **Type**<br>string<br>**Properties**<br>Create, Nillable<br>**Description**<br>Data kit component deployment job identifier. |
| ReplayId | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The ID of the data kit deploy event replay. |
| TemplateName | **Type**<br>string<br>**Properties**<br>Create, Nillable<br>**Description**<br>The template name from which the data kit deploy event is created. |

# DataKitDeploymentLog

Represents the log details of a data kit component deployment. This object is available in API version 61.0 or later.

## Supported Calls

create(), delete(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(), search(), undelete(), update(), upsert()

## Special Access Rules

Users that have access to Data Cloud.

## Fields

| Field | Details |
|---|---|
| `BundleName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Name of the data stream bundle if a data stream is deployed from a data kit. |
| `ComponentName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Name of the component that's deployed from a data kit. |
| `ComponentTemplateId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the data kit template from which the component is deployed. This field is a polymorphic relationship field.<br>**Relationship Name**<br>ComponentTemplate<br>**Refers To**<br>DataSourceBundle |
| `ComponentType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of the component for which the deployment is tracked in the log details.<br>Possible values are:<br>• `MktCalculatedInsight`<br>• `MktDataLakeObject` |

| Field | Details |
| --- | --- |
| | • MktDataModelObject<br>• MktDataStream<br>• MktDataTransform<br>Possible values available in API version 63.0 and later are:<br>• ActivationTarget<br>• DataAction<br>• DataActionTarget<br>• DataGraph<br>• DataSemanticSearch<br>• EngagementSignal<br>• ExtDataShare<br>• IdentityResolution<br>• MarketSegment<br>• MarketSegmentActivation<br>• MktDataConnection<br>• MktMLModel<br>• PersonalizationObjective<br>• PersonalizationRecommender<br>Possible values available in API version 64.0 and later are:<br>• IrRelatedListEnrichment<br>• MktCalculatedInsight<br>• MktDataLakeObject<br>• MktDataStream<br>• MktDataTransform<br>• PersonalizationPoint<br>• PersonalizationSchema |
| DataKitName | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Name of the data kit being deployed. |
| DataPackageKitDefinition | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the data kit being deployed. Available in API version 63.0 and later.<br>Possible values are:<br>• `1dk.Collections`<br>• `1dk.SalesNextGenForecastingDatakit`<br>• `1dk.Test_Fbdk`<br>• `1dk.sf_mktg_ae__Marketing_Account_Engagement_CRM_Data` |
| `DataSpaceName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Name of the data space the components are deployed to. |
| `DeployJob` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The deployment job ID. |
| `DeploymentAction` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Deployment action of the data kit components.<br>Possible values are:<br>• `Deploy`<br>• `Undeploy` |
| `DeploymentError` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Contains the error details if the data kit deployment fails. |

| Field | Details |
| --- | --- |
| `DeploymentStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Deployment status of the data kit components.<br>Possible values are:<br>• `Failed`<br>• `Started`<br>• `Successful` |
| `FileBasedComponentTemplate` | **Type**<br>string<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>ID of the file-based component template that corresponds to the deployment log entry. Available in API version 63.0 and later. |
| `FlowInterviewIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Identifier of the flow interview if the deployment was triggered using a flow. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed the deployment log file. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this deployment log. |

| Field | Details |
| --- | --- |
| Name | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort, Update<br>**Description**<br>The name of the deployment log. |
| OwnerId | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user that owns the deployment.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |
| PublisherOrgComponentId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the component in the publisher org.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>PublisherOrgComponent<br>**Refers To**<br>MktCalculatedInsight, MktDataTransform |
| SubscriberOrgComponentId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the component in the subscriber org in which the components of a data kit are deployed.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>SubscriberOrgComponent |

| Field | Details |
| --- | --- |
| | **Refers To**<br>ActivationTarget, DataGraph, DataStream, ExtDataShare, IdentityResolution, MarketSegment, MarketSegmentActivation, MktCalculatedInsight, MktDataTransform |
| `TemplateVersion` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The version of the template from which the deployment was done. |

## Usage

Use the DataKitDeploymentLog object to track the deployment of a data kit component.

# DatasetExport

Represents a dataset exported from CRM Analytics. When a dataset is exported, the data is converted into a .csv file and the schema is stored in a separate JSON file. These files are stored in two objects: DatasetExport and DatasetExportPart. DatasetExport acts as the header and includes the JSON schema.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `CompressedMetadataLength` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field is required when a record in an object contains a BLOB (binary large object) field. In the DataExport object, Metadata is the BLOB field. |
| `Metadata` | **Type**<br>base64<br>**Properties**<br>Nillable |

| Field | Details |
| --- | --- |
| | **Description**<br>Contains the JSON schema that describes the data in the CSV. This schema includes column metadata such as type, format, and defaultValue. |
| `MetadataLength` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field is required when a record in an object contains a BLOB (binary large object) field. In the DataExport object, Metadata is the BLOB field. |
| `Owner` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>User ID of the owner, as specified in the `userId` parameter in the export node of the dataflow that created the record. Only the specified owner can read the content of the record. |
| `PublisherInfo` | **Type**<br>string<br>**Properties**<br>Filter, idLookup, Sort<br>**Description**<br>Identifies the export record to facilitate searching when a user has multiple export records. By default, this column is set to the ID of the dataflow that generated the export record, concatenated with the name of the specific export node. PublisherInfo is unique within your organization.<br>Note: A dataflow can have multiple export nodes. |
| `PublisherType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Target of the export, as specified in the `target` parameter in the export node of the dataflow that created the record. The value must be *`EinsteinDiscovery`*. |
| `Status` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Status of the export. The possible values are:<br>• New<br>• InProgress<br>• Completed<br>• Canceled<br>• Failed<br>Note: The content of the Metadata field can be downloaded when the status is Completed. |

## Usage

This object is used with the DatasetExportPart object for exporting data from a dataset in CRM Analytics for use in Einstein Discovery. An export is initiated using the export node in an Analytics dataflow.

SEE ALSO:

DatasetExportPart

# DatasetExportPart

Represents a dataset exported from CRM Analytics. When a dataset is exported, the data is converted into a .csv file and the schema is stored in a separate JSON file. These files are stored in two objects: DatasetExport and DatasetExportPart. DatasetExportPart contains parts of the .csv file.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `CompressedDataFileLength` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>This field is required when a record in an object contains a BLOB (binary large object) field. In the DataExportPart object, DataFile is the BLOB field. |
| `DataFile` | **Type**<br>base64<br>**Description**<br>Contains a part of the dataset data from the generated .csv file. Maximum size is 32 MB. |
| `DataFileLength` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>This field is required when a record in an object contains a BLOB (binary large object) field. In the DataExportPart object, DataFile is the BLOB field. |
| `DatasetExportId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the parent record that the part record is associated with. |
| `Owner` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>User ID of the owner, as specified in the `userId` parameter in the export node of the dataflow that created the record. Only the specified owner can read the content of the record. |
| `PartNumber` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Used with the DatasetExportId to uniquely identify the data part. Parts are assembled sequentially based on their numbers. |

## Usage

This object is used with the DatasetExport object for exporting data from a dataset in CRM Analytics for use in Einstein Discovery. An export is initiated using the export node in an Analytics dataflow.

SEE ALSO:

DatasetExport

# DataMaskCustomValueLibrary

Represents a set of user-inputted values in a custom library in Data Mask. This object is available in API version 64.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available with the Sandbox Data Mask managed package.

## Fields

| Field | Details |
|---|---|
| `ContentType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of value used in a field of the custom library.<br>Possible values are:<br>• `email`<br>• `number`<br>• `phone_number`<br>• `string`<br>• `url` |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The description of the value in the custom library. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Represents whether the library is active or inactive for use.<br>The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the custom library. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner of the custom library.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Group, User |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Represents how the values were added to the library.<br>Possible values are:<br>• `default`<br>• `user_defined` |
| `Values` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The content of the value field for masking data. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**DataMaskCustomValueLibraryOwnerSharingRule on page 65**
Sharing rules are available for the object.

**DataMaskCustomValueLibraryShare on page 67**
Sharing is available for the object.

# DataStatistics

For internal use only.

# DataUseLegalBasis

Represents the legal basis for contacting a customer, such as billing or contract. This object is available in API version 45.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available if Data Protection and Privacy is enabled.

## Fields

| Field Name | Details |
| --- | --- |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the data use legal basis. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Specifies a name for the legal basis. For example, "billing" or "contract". |

| Field Name | Details |
| --- | --- |
| OwnerId | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner of the account associated with this customer.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| Source | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates the source of the legal basis. For example, the URL of a contract. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**DataUseLegalBasisChangeEvent (API version 62.0)**
Change events are available for the object.

**DataUseLegalBasisHistory**
History is available for tracked fields of the object.

**DataUseLegalBasisOwnerSharingRule**
Sharing rules are available for the object.

**DataUseLegalBasisShare**
Sharing is available for the object.

# DataUsePurpose

Represents the reason for contacting a prospect or customer, such as for billing, marketing, or surveys. This object is available in API version 45.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available if Data Protection and Privacy is enabled.

## Fields

| Field Name | Details |
| --- | --- |
| `CanDataSubjectOptOut` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Required. Indicates whether the customer can decline contact for the described purpose. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates the purpose for contacting a customer. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |

| Field Name | Details |
| --- | --- |
| `LegalBasisId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Identifies the legal basis record associated with the data use purpose.<br>This is a relationship field.<br>**Relationship Name**<br>LegalBasis<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>DataUseLegalBasis |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. Identifies the reason for contacting a customer. For example, billing or marketing. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner of the account associated with this customer.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PurposeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The ID of an object containing data specific to the data use purpose.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Purpose<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Asset, CareProgram, CareRegisteredDevice, or Product2 |

## Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

**DataUsePurposeChangeEvent (API version 62.0)**
Change events are available for the object.

**DataUsePurposeHistory**
History is available for tracked fields of the object.

**DataUsePurposeOwnerSharingRule**
Sharing rules are available for the object.

**DataUsePurposeShare**
Sharing is available for the object.

# DataWeaveResource

Represents the DataWeaveScriptResource class that is generated for all DataWeave scripts. This object is available in API version 58.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

## Fields

| Field | Details |
| --- | --- |
| `ApiVersion` | **Type**<br>double |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Sort<br>**Description**<br>The API version of this component. |
| `BodyLength` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Size of the DataWeave script (in bytes). |
| `ContentType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Possible value:<br>• `dwl`: The metadata file for the DataWeave scripts that are deployed to an org. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique name of the object in the API. |
| `IsGlobal` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>When set to true, the generated`DataWeaveScriptResource` class is global. The default value is `false`. |
| `IsProtected` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Not used |

| Field | Details |
| --- | --- |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language of the MasterLabel. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Required. The name of the resource. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that aren't Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |

## Usage

Although the `DataWeaveResource` object supports the create and update field properties, a runtime exception occurs if you try to create, update, or delete using the API. Instead, use the Salesforce Extensions for Visual Studio Code.

# DatedConversionRate

Represents the dated exchange rates used by an organization for which the multicurrency and the effective dated currency features are enabled.

## Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`,

## Special Access Rules

Customer Portal users can't access this object.

## Fields

| Field | Details |
|---|---|
| `ConversionRate` | **Type**<br>double<br>**Properties**<br>Filter, Update<br>**Description**<br>Required. Conversion rate of this currency type against the corporate currency. |
| `IsoCode` | **Type**<br>picklist<br>**Properties**<br>Filter, Restricted picklist<br>**Description**<br>Required. ISO code of the currency. Must be one of the valid alphabetic, three-letter currency ISO codes defined by the ISO 4217 standard, such as `USD`, `GBP`, or `JPY`. Must be unique within your organization. Label is **Currency ISO Code**. |
| `NextStartDate` | **Type**<br>date<br>**Properties**<br>Filter, Nillable<br>**Description**<br>Read only. The date on which the next effective dated exchange rate will start. Effectively the day after the end date for this exchange rate. |
| `StartDate` | **Type**<br>date |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter<br>**Description**<br>The date on which the effective dated exchange rate starts. The timestamp is determined by the base calendar of the API. |

## Usage

This object is for multicurrency organizations with advanced currency management enabled. Use this object to define the exchange rates your organization uses for a date range. This object is not available in single-currency organizations, nor is it available if the organization does not have advanced currency management enabled.

# DealIndirectPartner

Represents an indirect partner's involvement in a deal. This object is available in API version 63.0 and later.

A DealIndirectPartner record can be created manually or through automation when a partner is associated with an opportunity, lead, or account, capturing role and contact information.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The account associated with the indirect partner on the deal.<br>This field is a relationship field.<br>**Relationship Name**<br>Account<br>**Refers To**<br>Account |
| `LastReferencedDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the record was last referenced by the user or system. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date and the timestamp when the record was last viewed in the Salesforce UI. Helps monitor user access and engagement. |
| `LeadId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Reference to a lead associated with this indirect partner record.<br>This field is a relationship field.<br>**Relationship Name**<br>Lead<br>**Refers To**<br>Lead |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>System-generated unique identifier for the record, used for lookup and reference purposes. |
| `OpportunityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Opportunity associated with the indirect partner.<br>This field is a relationship field.<br>**Relationship Name**<br>Opportunity |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Opportunity |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>User or group that owns this record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |
| `PartnerName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Name of the indirect partner participating in the deal. This field captures the business or entity name. |
| `PartnerRoleType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The role played by the indirect partner in the deal. Common values might include Reseller, Distributor, and so on. |
| `PrimaryContactFirstName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>First name of the primary contact at the partner organization. |
| `PrimaryContactLastName` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Last name of the primary contact at the partner organization. |
| `PrimaryContactName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Full name of the primary contact. This field may be auto-generated by combining first and last names or used for reporting purposes. |
| `PrimaryContactSalutation` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Salutation for the primary contact.<br>Possible values are:<br>• `Dr.`<br>• `Mr.`<br>• `Mrs.`<br>• `Ms.`<br>• `Mx.`<br>• `Prof.` |

# DeclinedEventRelation

Represents event participants (invitees or attendees) with the status `Declined` for a given event. This object is available in API versions 29.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

# Fields

| Field Name | Details |
| --- | --- |
| `EventId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the ID of the event.<br>This is a relationship field.<br>**Relationship Name**<br>Event<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Event |
| `RelationId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the ID of the invitee.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Relation<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Calendar, Contact, Lead, User |
| `RespondedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates the most recent date and time when the invitee declined an invitation to the event. |
| `Response` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the content of the response field. Label is `Comment`. |
| `Type` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates whether the invitee is a user, lead or contact, or resource. |

## Usage

**Query invitees who have declined an invitation to an event**

```
SELECT eventId, type, response FROM DeclinedEventRelation WHERE eventid='00UTD000000ZH5LA'
```

AcceptedEventRelation

UndecidedEventRelation

# DelegatedAccount

Represents the external managed account. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

You must have a Partner or Customer Community Plus license. You can't edit the visibility of DelegatedAccount metadata on user profiles.

## Fields

| Field | Details |
| --- | --- |
| `AccessBuyFor` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Update<br>**Description**<br>The access that an admin authorizes for an external user to buy for other accounts. This field is available in API version 50.0 and later. A B2B Commerce license is required to use AccessBuyFor. |
| `AccessManageUsers` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>The access that an admin authorizes for an external user to manage external users on other accounts. This includes managing permission sets, membership, passwords, and activation. This field is available in API version 50.0 and later. Delegated External User Administrator permission is required to use AccessManageUsers. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed. |
| `ManagedById` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the managing user.<br>This is a relationship field.<br>**Relationship Name**<br>ManagedBy |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the external managed account. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the record owner.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the managing users account. This field is available in API version 50.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |

| Field | Details |
| --- | --- |
| `TargetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the account being managed.<br>This is a relationship field.<br>**Relationship Name**<br>Target<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |

# DeleteEvent

Represents a record that has been soft deleted. Search on this object was available in API version 48.0, then removed in API version 50.0.

DeleteEvent is a read-only object. You can't create, update, or delete it directly. To create a DeleteEvent record, soft delete a record of another type, like an Account. To remove a DeleteEvent record, use the emptyRecycleBin() API or hard delete the corresponding `Record`.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `DeletedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the user who deleted the record.<br>This is a relationship field.<br>**Relationship Name**<br>DeletedBy<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>User |
| `DeletedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the record was deleted. |
| `Record` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the record that was deleted. |
| `RecordName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the record that was deleted. |
| `SobjectName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of record that was deleted, for example, Account. |

# DeliveryEstimationSetup

Shows the configuration options for the commerce delivery service offered through a web store or sales channel. Includes settings such as delivery location group, channel, fulfillment types, and default fulfillment time. This object is available in API version 61.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

# Special Access Rules

The DeliveryEstimationSetup object is available only if the B2B Commerce or D2C Commerce license is enabled.

# Fields

| Field | Details |
|---|---|
| ChannelId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID for the web store or sales channel associated with the delivery estimation configuration. |
| DefaultBusinessHoursId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID for the default business hours.<br>This is a relationship field.<br>**Relationship Name**<br>DefaultBusinessHours<br>**Refers To**<br>BusinessHours |
| DefaultPickupTime | **Type**<br>time<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Default pickup time. |
| DefaultProcessingTime | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Default processing time. |
| DefaultProcessingTimeUnit | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Default processing time unit. Possible values are:<br>• `Hours`<br>• `Days`<br>• `Weeks` |
| `ExternalReference` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Unique code, reference, or identifier for the delivery estimation configuration record used by external systems. Can be the name of the web store or sales channel associated with the configuration to ensure a unique ID within the organization.<br>For example, `DefaultWebstore123`. |
| `isEnabled` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the given delivery estimation configuration is active.<br>The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the record was last modified. Its label in the user interface is `Last Modified Date`. |
| `LastSyncedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>User ID of who performed the last sync for this delivery estimation configuration. This field is available in API version 62.0 and later. |

| Field | Details |
| --- | --- |
| | This is a relationship field.<br>**Relationship Name**<br>LastSyncedBy<br>**Refers To**<br>User |
| `LastSyncedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date the delivery estimation configuration was last synced. This field is available in API version 62.0 and later. |
| `LastSyncedMessage` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>Message that occurred during the last sync. This field is available in API version 62.0 and later. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Last time the delivery estimation configuration was viewed. |
| `LocationGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Represents a group of Omnichannel Inventory locations.<br>This is a relationship field.<br>**Relationship Name**<br>LocationGroup<br>**Refers To**<br>LocationGroup |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the delivery estimation setup configuration. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the user who currently owns this DeliveryEstimationSetup object. Default value is the user logged in to the API to perform the create.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |
| `ServiceRegion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>An org's commerce delivery service provisioning region (North America, Europe, or Asia) that's set when Delivery Estimation is enabled in the Order Management app. It can't be changed. If the field is empty, provisioning hasn't occurred yet. Available in API version 63.0 and later. |
| `SyncStatus` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Sync status of the delivery estimation setup configuration.<br>Possible values are:<br>• `Deleting`<br>• `Deprovisioned`<br>• `Error`<br>• `None` |

| Field | Details |
| --- | --- |
| | • `Synced`<br>• `Syncing`<br>The default value is `NONE`. This field is available in API version 62.0 and later. |

# DigitalSignature

Represents a signature captured on a service report in field service.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

## Special Access Rules

Field Service must be enabled.

## Fields

| Field Name | Details |
| --- | --- |
| `DigitalSignatureNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>An auto-generated number identifying the signature. |
| `DocumentBody` | **Type**<br>base64<br>**Properties**<br>Create<br>**Description**<br>The captured signature image. |
| `DocumentContentType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The data type of the captured signature. Possible values are:<br>• `audio/ogg`<br>• `video/3gpp2`<br>• `video/3gpp`<br>• `image/avif`<br>• `text/calendar`<br>• `audio/x-caf`<br>• `image/webp` |
| `DocumentLength` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The length of the captured signature. |
| `DocumentName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The name of the captured signature image. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the service appointment, work order, or work order line item that the service report is generated for.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AuthorizationFormConsent, Order, ServiceAppointment, WorkOrder, WorkOrderLineItem |

| Field Name | Details |
| --- | --- |
| `Place` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The place where the report was signed. |
| `SignatureType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The role of the person signing the service report. Your org comes with one signature type, `Default`. A service report template can only contain one signature per type. If you plan to collect multiple signatures on service reports, create additional values for the Signature Type field.<br>Create at least one value for every role that might need to sign a service report. For example, `Technician`, `Customer`, `Supervisor`, or `Supplier`. If some service reports will be signed by multiple people in one role—for example, all technicians present at an appointment—create numbered types: `Technician 1`, `Technician 2`, and so forth.<br>Note: You can create up to 1,000 signature types. You can't delete signature types, but you can deactivate them so they can't be used in service report templates. When you deactivate a type, it still appears on service report templates that used it, but you can't use it on new service report templates. |
| `SignedBy` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The name of the person signing. |
| `SignedDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The date and time of the signing. |

## Usage

Add signature blocks to service report templates to determine which signatures need to be gathered on reports that use the template. Service report templates can contain up to 20 signatures, and each signature must use a different Signature Type. For example, create a standard service report template that contains a customer signature and a technician signature.

To learn more about digital signatures, see Guidelines for Using Signatures on Service Reports.

## Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

**DigitalSignatureChangeEvent (Available in API version 57.0)**
Change events are available for the object.

# DigitalWallet

Represents a customer's digital wallet service. Salesforce Payments can use a digital wallet as a payment source when processing payments through a payment gateway. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

## Fields

| Field | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The account of the customer owns the digital wallet.<br>This field is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Account |
| `AuditEmail` | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Email address of the digital wallet owner where audit information about payments gets sent.<br>This field is available in API v49.0 and later. It doesn't appear in the UI by default for Salesforce orgs that upgraded from v48.0. Users must add it to the DigitalWallet page layout on their own. |
| `BillingName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Billing name linked to customer's digital wallet. Available in API version 64.0 and later. |
| `Comments` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Users can provide additional details about the digital wallet. Supports a maximum of 1000 characters. |
| `CompanyName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Company of the digital wallet owner. |
| `Customer` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Customer name of the digital wallet owner. |

| Field | Details |
| --- | --- |
| `DigitalWalletNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>System-generated reference number for the digital wallet. |
| `Email` | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Email of the digital wallet owner. |
| `GatewayToken` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Unencrypted unique token ID generated by the payment gateway to represent the digital wallet during transactions. This field is available for backward compatibility. To secure the token, use the `GatewayTokenEncrypted` field.<br>If you try to record a GatewayToken for a digital wallet that already has a GatewayToken or GatewayTokenEncrypted value, Salesforce throws an error. |
| `GatewayTokenDetails` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Unique ID generated by the payment gateway for the card for future transactions. |
| `GatewayTokenEncrypted` | **Type**<br>encryptedstring<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Encrypted unique token ID generated by the payment gateway to represent the digital wallet during transactions. Encrypted using Salesforce Classic Encryption for custom fields.<br>Available in API v52.0 and later. |

| Field | Details |
| --- | --- |
| IpAddress | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The IP address of the digital wallet owner.<br>This field is available in API v49.0 and later. It doesn't appear in the UI by default for Salesforce orgs that upgraded from v48.0. Users must add it to the DigitalWallet page layout on their own. |
| IsAutoPayEnabled | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>Indicates whether the payment method can be used for recurring payments (True) or not (False). The default value is False.<br>This field is available in API v55.0 and later. For orgs that upgraded from v54.0, you must add this field to the Digital Wallet page layout in the UI. It isn't automatically added. |
| LastReferencedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| LastViewedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible the user only referenced this record (LastReferencedDate) but not viewed it. |
| MacAddress | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The MAC address of the digital wallet owner. |

| Field | Details |
| --- | --- |
| | This field is available in API v49.0 and later. It doesn't appear in the UI by default for Salesforce orgs that upgraded from v48.0. Users must add it to the DigitalWallet page layout on their own. |
| `NickName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>User-defined nickname for the digital wallet. |
| `PaymentGatewayId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Gateway used with transactions for the digital wallet.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentGateway<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentGateway |
| `PaymentMethodAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>Full address associated with the digital wallet payment method. For more information about address fields, see Address Compound Fields |
| `PaymentMethodCity` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Part of the address for the payment method. |
| `PaymentMethodCountry` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Part of the address for the payment method. |
| `PaymentMethodDetails` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Optional information about the payment method type. This field is available in API version 57.0 and later. |
| `PaymentMethodGeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Accuracy level of the geocode for the payment method address. An accuracy level contains information about the location of a latitude and longitude. For more information about geolocation fields, see Geolocation Compound Field.<br>Possible values are:<br>• `Address`<br>• `Block`<br>• `City`<br>• `County`<br>• `ExtendedZip`<br>• `NearAddress`<br>• `Neighborhood`<br>• `State`<br>• `Street`<br>• `Unknown`<br>• `Zip` |
| `PaymentMethodLatitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Latitude of the payment method address. Used with the PaymentMethodLongitude to specify the precise geolocation of the address. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `PaymentMethodLongitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Latitude of the payment method address. Used with the PaymentMethodLatitude to specify the precise geolocation of the address. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `PaymentMethodPostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Part of the address for the payment method. |
| `PaymentMethodState` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Part of the address for the payment method. |
| `PaymentMethodStreet` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Part of the address for the payment method. |
| `PaymentMethodSubType` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>More information about the payment method. For example, if the PaymentMethodType is Visa, this field can be digital wallet. This field is available in API version 57.0 and later. |

| Field | Details |
| --- | --- |
| `PaymentMethodType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Payment method used for the transaction. Possible values include credit cards such as Visa and American Express, digital wallets like Apple Pay and PayPal, direct debits such as ACH, BECS, Bacs, and non-card payments methods such as EPS, SEPA, and iDEAL. This field is available in API version 57.0 and later. |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Phone number of the digital wallet owner.<br>This field is available in API v49.0 and later. It doesn't appear in the UI by default for Salesforce orgs that upgraded from v48.0. Users must add it to the DigitalWallet page layout on their own. |
| `ProcessingMode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Defines whether the digital wallet is used for transactions made inside or outside the payment platform.<br>Possible values are:<br>• `External`—Transactions happened outside of the Salesforce payments platform.<br>• `Salesforce`—Salesforce made and recorded an external call to the payment platform.<br>This field is available in API v49.0 and later. It doesn't appear in the UI by default for Salesforce orgs that upgraded from v48.0. Users must add it to the DigitalWallet page layout on their own.<br>Important: `ProcessingMode` is required to create a DigitalWallet entity. |
| `SavedPaymentMethodId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the saved payment method record. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>SavedPaymentMethod<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>SavedPaymentMethod |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Defines the state of the digital wallet as a payment source.<br>Possible values are:<br>• `Active`—Customers can make payments with the digital wallet.<br>• `Canceled`—The digital wallet can no longer be used for payments. This status can't be changed.<br>• `InActive`—The digital wallet can't be used for payments until a user changes its status to Active. |

# DirectMessage

Represents a direct message conversation between multiple users in Chatter. This object is available in API version 38.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

## Special Access Rules

You must have the Manage Chatter Messages and Direct Messages permission enabled to access the DirectMessage object.

## Fields

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>A default value that isn't visible to users. |
| `Subject` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Subject of the overall direct message conversation. |

## Usage

DirectMessage is an object used by Salesforce to control DirectMessage conversations. It represents a record of a direct message conversation, but doesn't include conversation data, such as posts or comments. It is most frequently used to moderate direct message data in order to meet data compliance regulations.

# Division

A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.

## Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

- Divisions must be enabled for your organization to access this object. To discover whether divisions have been enabled for an organization, inspect the User or Group object for the `DefaultDivision` field—if it is present, then divisions have been enabled, and this field (the field is named Division in objects other than User and Group) will be available in all relevant objects.
- Customer Portal users can't access this object.

## Fields

| Field | Details |
| --- | --- |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the division is active (`true`) or not (`false`). Label is **Active**. |
| `IsGlobalDivision` | **Type**<br>boolean<br>**Properties**<br>Defaulted on createFilter<br>**Description**<br>Indicates whether the division is your organization's global default division (`true`) or not (`false`). Label is **Global Division**. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>A descriptive name for the division. Limit: 80 characters. |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The order in which this division name appears in the Division picklist field when creating or editing users in the Salesforce user interface. |

## Usage

The values available for that field are the global division ID for the organization, created when divisions are first enabled, and any other division IDs that have been created. The division ID associated with a user is populated in the objects owned or created by the user.

You can use the division ID to make searches, reports, and list views run more quickly and return more relevant results if an organization has very large data sets. For more information, see the Salesforce online help, in the Fields description for the object.

You can use WITH in SOSL to pre-filter results based on division. This is faster than specifying the division in a WHERE clause.

Note: The User object has a `Division` field that is unrelated to this object. The `Division` field is a standard text field similar to Company or Department that has no special properties. Do not confuse it with the `DefaultDivision` field, which does relate to this object.

SEE ALSO:

Overview of Salesforce Objects and Fields

# DivisionLocalization

When the Translation Workbench is enabled for your organization, the DivisionLocalization object provides the translation of the label for a division.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

- Your organization must be using Professional, Enterprise, Developer, Unlimited, or Performance Edition and be enabled for the Translation Workbench.
- To view this object, you must have the "View Setup and Configuration" permission.

## Fields

| Field | Details |
|---|---|
| `Language` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Restricted picklist<br>**Description**<br>The language for this translated label. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. |

| Field | Details |
| --- | --- |
| | • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Nillable<br>**Description**<br>The ID of the Division associated with the label that is being translated. |
| `Value` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The actual translated label for the division. Label is **Translation**. |

## Usage

Use this object to translate the labels of your divisions into the different languages supported by Salesforce.

# DocAtchDownloadEventLog

Document Attachment Downloads events contain details of document and attachment downloads. This object is available in API version 65.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `FileType` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of the file or attachment. |
| `ObjectIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the object that's associated with the document or attachment. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |

# Document

Represents a file that a user has uploaded. Unlike Attachment records, documents are not attached to a parent object.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

You must have the "Edit" permission on documents and the appropriate access to the Folder that contains a document in order to create or update a document in that Folder.

## Fields

| Field | Details |
|---|---|
| `AuthorId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the User who is responsible for the Document.<br>This is a relationship field.<br>**Relationship Name**<br>Author<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `Body` | **Type**<br>base64<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Required. Encoded file data. If specified, then do not specify a URL. |
| `BodyLength` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Size of the file (in bytes). |
| `ContentType` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Type of content. Label is **Mime Type**. Limit: 120 characters.<br>If the `Don't allow HTML uploads as attachments or document records` security setting is enabled for your organization, you cannot upload files with the following file extensions: `.htm`, `.html`, `.htt`, `.htx`, `.mhtm`, `.mhtml`, `.shtm`, `.shtml`, `.acgi`, `.svg`. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Text description of the Document. Limit: 255 characters. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is **Document Unique Name**.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. |
| `FolderId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. ID of the Folder that contains the document.<br>This is a relationship field.<br>**Relationship Name**<br>Folder<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Folder, User |
| `IsBodySearchable` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the contents of the object can be searched using a SOSL `FIND` call. The `ALL FIELDS` search group includes the content as a searchable field. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `IsInternalUseOnly` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the object is only available for internal use (`true`) or not (`false`). Label is **Internal Use Only**. |
| `IsPublic` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the object is available for external use (`true`) or not (`false`). Label is **Externally Available**. |
| `Keywords` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Keywords. Limit: 255 characters. |

| Field | Details |
| --- | --- |
| `LastReferencedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. Name of the document. Label is **Document Name**. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort, Nillable<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |

| Field | Details |
| --- | --- |
| `Type` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>File type of the Document. In general, the values match the file extension for the type of Document (such as pdf or jpg). Label is **File Extension**. |
| `Url` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Group, Sort, Update<br>**Description**<br>URL reference to the file (instead of storing it in the database). If specified, do not specify the `Body` or `BodyLength`. |

## Usage

When creating or updating a document, you can specify a value in either the `Body` or `Url` fields, but not both.

## Encoded Data

The API sends and receives the binary file data encoded as a base64 data type. Prior to creating a record, clients must encode the binary file data as base64. Upon receiving an API response, clients must decode the base64 data to binary (this conversion is usually handled for you by the SOAP client).

## Maximum Document Size

You can only create or update documents to a maximum size of 5 MB.

Overview of Salesforce Objects and Fields

# DocumentAttachmentMap

Maps the relationship between an EmailTemplate and its attachment, which is stored as a Document.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

| Field | Details |
|---|---|
| `DocumentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the document that this object tracks. |
| `DocumentSequence` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Represents the order that the attachments will be included in the email defined by the EmailTemplate specified by the `DocumentId`. Label is **Attachment Sequence**. The first attachment is given a value of 0, and each subsequent attachment is given a value incremented by 1. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the EmailTemplate parent. The attachment identified by `DocumentId` is attached to the EmailTemplate specified in this field. |

## Usage

Use this object to map the relationship of an EmailTemplate to its attachments, and to specify the order of the attachments.

SEE ALSO:

EmailTemplate

# DocumentRecipient

Connects a Service Report to a Digital Signature. This object is available in API version 55.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `DigitalSignatureId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Digital Signature to be used on the Service Report.<br>This field is a relationship field.<br>**Relationship Name**<br>DigitalSignature<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>DigitalSignature |
| `DigitalSignatureUrl` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Link to request signature from Experience Cloud site. |
| `DocumentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The document sent to the recipient.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Document<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ServiceReport |

| Field | Details |
| --- | --- |
| `DocumentRecipient` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Number automatically assigned to a new record. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the owner of this object. ID of the creator of this object.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| QuoteDocumentId | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The quote document sent to the recipient.<br>This field is a relationship field.<br>**Relationship Name**<br>QuoteDocument<br>**Refers To**<br>QuoteDocument |
| `RecipientId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The recipient to sign the document.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Recipient<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact, User |
| `SignatureIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A unique identifier that associates `DocumentRecipient` with a signature Lightning web component (LWC) on the report page layout, telling you where on the report the signature goes. |
| `SignatureStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The status of the signature. The default value is `Completed`. Possible values are:<br>• `Completed`<br>• `Skipped` |

| Field | Details |
| --- | --- |
| `SignatureStatusReason` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>An explanation for the signature status. For example, a reason why the signature was skipped. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The status of the document recipient record.<br>Possible values are:<br>• `Completed`<br>• `Declined`<br>• `Delivered`<br>• `None`<br>• `Sent`<br>The default value is `None`. |
| `StatusReason` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The final status reason. |

# Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**DocumentRecipientFeed on page 55**
Feed tracking is available for the object.

**DocumentRecipientOwnerSharingRule on page 65**
Sharing rules are available for the object.

**DocumentRecipientShare on page 67**
Sharing is available for the object.

# DocumentTag

Associates a word or short phrase with a Document.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
|---|---|
| `ItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter<br>**Description**<br>ID of the tagged item. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter<br>**Description**<br>Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically. |
| `TagDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter<br>**Description**<br>ID of the parent TagDefinition object that owns the tag. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Restricted picklist<br>**Description**<br>Defines the visibility of a tag.<br>Valid values:<br>• `Public`—The tag can be viewed and manipulated by all users in an organization. |

| Field Name | Details |
| --- | --- |
| | • `Personal`—The tag can be viewed or manipulated only by a user with a matching `OwnerId`. |

## Usage

DocumentTag stores the relationship between its parent TagDefinition and the Document being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

# Domain

Read-only object that represents a custom Web address assigned to a site in your organization. This object is available in API version 26.0 and later.

To access this object, Salesforce Sites, Digital Experiences, or Site.com must be enabled for your organization. `DomainSite` contains records for domains that serve your Experience Cloud sites only when enhanced domains are deployed. The system-managed site hostnames for those Experience Cloud sites end in `.my.site.com`. This object doesn't contain records for legacy domains that serve Experience Cloud sites with hostnames that end in `.force.com`.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

- Customer Portal users can't access this object.
- To view this object, you must have either the View Setup and Configuration or Manage Custom Domains permission.
- Site.com Publisher users have read-only API access to the Domain and DomainSite objects.

## Fields

| Field | Description |
| --- | --- |
| `CnameTarget` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The canonical name (CNAME) of the external host or server. If you use a custom domain with a non-Salesforce provider, such as your own external server or CDN provider, to serve your domain, this field points to the CNAME of the external provider. This field is available in API version 43.0 and later. |

| Field | Description |
| --- | --- |
| `Domain` | **Type**<br>string<br>**Properties**<br>Filter, idLookup, Sort<br>**Description**<br>The branded custom Web address within the global namespace identified by this domain's type. In the Domain Name System (DNS) global namespace, this field is the custom Web address that you registered with a third-party domain name registrar. The custom Web address can be used to access the site of this domain. |
| `DomainType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The global namespace that this custom Web address belongs to. This value is set to DNS for custom Web addresses in the global DNS.<br>DomainType can have the following value:<br>• `DNS`—Domain Name System (DNS) |
| `HttpsOption` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Current HTTPS option. Values include:<br>• `CdnPartner`—Salesforce serves the custom domain, such as `https://www.example.com`, with the Salesforce Content Delivery Network (CDN) partner.<br>• `Community`—The system-managed Experience Cloud sites domain that ends in `.force.com`. This option applies only to orgs without enhanced domains.<br>• `CommunityAlt`—The system-managed Experience Cloud sites domain that ends in `.my.site.com`. This option applies only to orgs with enhanced domains.<br>• `ExternalHttps`—An external service or CDN serves the custom domain, such as `https://www.example.com`.<br>• `LegacyDomain`—A previous system-managed domain for this org. This option is rarely used. |

| Field | Description |
| --- | --- |
| | • `NoHttps`—Salesforce serves the custom domain, such as `http://www.example.com`, via HTTP. Used to configure your custom domain before selecting a permanent HTTPS option.<br>• `OrgDomain`—The system-managed My Domain login URL for this org.<br>• `Sites`—The system-managed Salesforce Sites domain that ends in `.force.com`. This option applies only to orgs without enhanced domains.<br>• `SitesAlt`—The system-managed Salesforce Sites domain that ends in `.my.salesforce-sites.com`. This option applies only to orgs with enhanced domains.<br>• `SitesRuntime`—Salesforce serves the custom domain, such as `https://www.example.com`, using your HTTPS certificate on Salesforce servers.<br>This field is available in API version 47.0 and higher.<br>To get the current system-managed domains for your org, use the Domain Apex class. |
| `OptionsHstsPreload` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the `preload` directive is added to the HSTS header so that the domain is eligible for HSTS preloading registration (`true`) or not (`false`). This field is available in API version 52.0 and later.<br>After this field is set to `true`, to ensure that HTTPS connections are always used in browsers that support HSTS, you must also register the domain at https://hstspreload.org.<br>We only modify the HSTS headers of domains that are eligible for registration. Domain names can consist of a public suffix plus one additional label. For more information, see Add a Domain in Salesforce Help. |

## Usage

Use this read-only object to query the domains that are associated with each site in your organization.

# DomainSite

Read-only junction object that joins the Site and Domain objects. This object is available in API version 26.0 and later.

To access this object, Salesforce Sites, Digital Experiences, or Site.com must be enabled. `DomainSite` contains records for domains that serve your Experience Cloud sites only when enhanced domains are deployed. The system-managed site hostnames for those

Experience Cloud sites end in `.my.site.com`. This object doesn't contain records for legacy domains that serve Experience Cloud sites with hostnames that end in `.force.com`.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

- Customer Portal users can't access this object.
- To view this object, you must have either the View Setup and Configuration or Manage Custom Domains permission.
- Site.com Publisher users have read-only API access to the Domain and DomainSite objects.

## Fields

| Field | Description |
|---|---|
| `DomainId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the associated Domain.<br>This is a relationship field.<br>**Relationship Name**<br>Domain<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Domain |
| `PathPrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Shows where a site's root exists on a domain. Can only be set for custom Web addresses. Always begins with a `/`. |
| `SiteId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort |

| Field | Description |
| --- | --- |
| | **Description**<br>The ID of the associated Site.<br>This is a relationship field.<br>**Relationship Name**<br>Site<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Site |

## Usage

Use this read-only object to query or retrieve information about your sites.

# DsarPolicy

Represents a Data Subject Access Request (DSAR) policy created in the Privacy Center managed package. DSAR policies anonymize or transfer personal data from your org at your customer's request. This object is available in API version 50.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

This object is for Privacy Center customers with the ReadAllData or PrivacyDataAccess permissions.

## Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Description of the policy. The description is limited to 255 characters. |
| `DeveloperName` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Sort<br>**Description**<br>Developer name of the policy.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this policy can be used (`true`) or not (`false`) for data subject (customer) requests. The default value is `false`. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language of the MasterLabel.<br>Possible values are:<br>• `da`—Danish<br>• `de`—German<br>• `en_US`—English<br>• `es`—Spanish<br>• `es_MX`—Spanish (Mexico)<br>• `fi`—Finnish<br>• `fr`—French<br>• `it`—Italian<br>• `ja`—Japanese<br>• `ko`—Korean<br>• `nl_NL`—Dutch<br>• `no`—Norwegian<br>• `pt_BR`—Portuguese (Brazil)<br>• `ru`—Russian<br>• `sv`—Swedish<br>• `th`—Thai<br>• `zh_CN`—Chinese (Simplified) |

| Field | Details |
| --- | --- |
| | • `zh_TW`—Chinese (Traditional) |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Label of the policy. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as the object.

**DsarPolicyLog**
Sharing is available for the object.

# DsarPolicyLog

Represents the history of Data Subject Access Request (DSAR) policy execution requests. This log records the status and results of executed DSAR policies for a customer. This object is available in API version 50.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

This object is for Privacy Center customers with the ReadAllData or PrivacyDataAccess permissions.

## Fields

| Field | Details |
| --- | --- |
| `CompletionDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the data subject access request was completed. Available in API version 51.0 and later. |

| Field | Details |
| --- | --- |
| `DataSubjectId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15–18 character ID of the data subject making the request. Available in API version 51.0 and later. |
| `DeletedDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the file generated for the data subject's request is deleted. Available in API version 51.0 and later. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Developer name of the policy.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `DownloadedDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The most recent date and time when the data subject downloaded the file generated at their request. Available in API version 51.0 and later. |
| `DsarError` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Represents an error in generating the file for the data subject access request. Available in API version 51.0 and later. |

| Field | Details |
| --- | --- |
| `DsarPolicyId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the DSAR policy. |
| `FileURL` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The result of the DSAR policy execution. The URL links to a downloadable file that contains the customer data. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language of the MasterLabel.<br>Possible values are:<br>• `da`—Danish<br>• `de`—German<br>• `en_US`—English<br>• `es`—Spanish<br>• `es_MX`—Spanish (Mexico)<br>• `fi`—Finnish<br>• `fr`—French<br>• `it`—Italian<br>• `ja`—Japanese<br>• `ko`—Korean<br>• `nl_NL`—Dutch<br>• `no`—Norwegian<br>• `pt_BR`—Portuguese (Brazil)<br>• `ru`—Russian<br>• `sv`—Swedish<br>• `th`—Thai<br>• `zh_CN`—Chinese (Simplified) |

| Field | Details |
| --- | --- |
| | • `zh_TW`—Chinese (Traditional) |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Label of the policy. |
| `RequestDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when a data subject requested access to their data in the org. Available in API version 51.0 and later. |
| `RequestStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The status of the policy execution.<br>Possible values are:<br>• `Complete`<br>• `Deleted`<br>• `Downloaded`<br>• `Expired`<br>• `Failed`<br>• `In Progress` |
| `RequestUserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the org employee or admin making the request on behalf of the data subject. Available in API version 51.0 and later. |

## Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as the object.

**DsarPolicy**
Sharing is available for the object.

# DuplicateJob

Represents an instance of a job that identifies duplicates among existing records in the system.

This object is available in API versions 42.0 and later.

A duplicate job is the parent of the DuplicateRecordSet instances that it generates. The duplicate record items in a set generated by a duplicate job are of one object type.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

## Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

## Fields

| Field Name | Details |
|---|---|
| `DuplicateJobDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>The ID of the corresponding duplicate job definition. |
| `DuplicateJobStatus` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The current status of a duplicate job. Valid values are `Not Started`, `In Progress`, `Completed`, `Canceled`, `Failed`, `Results Deleted`. |
| `EndDateTime` | **Type**<br>dateTime |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when a duplicate job was completed. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when a duplicate job was last referenced. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when a duplicate job was last viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of a duplicate job. |
| `NumDuplicateRecordItems` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The total number of duplicate records identified as a result of invoking a duplicate job. |
| `NumDuplicateRecordSets` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of duplicate record sets identified as a result of invoking a duplicate job. |

| Field Name | Details |
| --- | --- |
| `NumRecordsScanned` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of records scanned as a result of invoking a duplicate job. |
| `ResultListViewId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>List view metadata for displaying the duplicate record sets identified as result of invoking a duplicate job. |
| `StartDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort<br>**Description**<br>The date and time when a duplicate job was invoked. |

# DuplicateJobDefinition

Setup object defining a job that identifies duplicate record items globally.

This object is available in API versions 42.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

# Fields

| Field Name | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The name of the user who created a duplicate job.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language in the user's personal settings. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The label of the duplicate job. |
| `SobjectSubtype` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The object subtype. Valid values are `Person Account` or `None`. |
| `SobjectType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The object type: account, contact, or lead. |

# DuplicateJobMatchingRule

Represents a MatchingRule to be used with a DuplicateJob sharing the corresponding DuplicateJobMatchingRuleDefinition.

This object is available in API versions 42.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

## Fields

| Field Name | Details |
|---|---|
| `DuplicateJobId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the corresponding DuplicateJob. |
| `DuplicateJobMatchRuleDefId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the matching rule defined for the corresponding DuplicateJobMatchingRuleDefinition. |
| `MatchingRuleBooleanFilter` | **Type**<br>textarea<br>**Properties**<br>Filter, Sort<br>**Description**<br>Boolean logic of the MatchingRule for this DuplicateJobMatchingRule. |
| `MatchingRuleDescription` | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Description of the matching rule for this DuplicateJobMatchingRule. |
| `MatchingRuleName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The name of the matching rule defined for this particular DuplicateJob invocation. |

# DuplicateJobMatchingRuleDefinition

Setup object specifying a MatchingRule to use with DuplicateJob instances that share a DuplicateJobDefinition.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

This object is available in API versions 42.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `search()`

## Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `DuplicateJobDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of DuplicateJobDefinition (master) for this DuplicateJobMatchingRuleDefinition (detail). |
| `MatchingRuleId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the MatchingRule to be used with this DuplicateJobMatchingRuleDefinition. |

# DuplicateRecordItem

Represents a record that's been identified as a duplicate. DuplicateRecordItems are included in a DuplicateRecordSet, which are processed in duplicate jobs. Use this object to create custom report types for duplicates.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access this object, enable Duplicate Management. A Salesforce admin can grant access to any user with a Sales Cloud or CRM user license.

## Fields

| Field Name | Details |
| --- | --- |
| `DuplicateRecordSetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The duplicate record set that the duplicate record item is assigned to.<br>This is a relationship field.<br>**Relationship Name**<br>DuplicateRecordSet<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>DuplicateRecordSet |
| `Name` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The autogenerated name that's given to the Duplicate Record Item. Label is `Duplicate Record Item Name`. |
| `RecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The name of the record as it appears on the record's detail page.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Record<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Contact, Individual, Lead |

# DuplicateRecordSet

Represents a group of records that have been identified as duplicates. Each duplicate record set contains one or more duplicate record items. Use this object to create custom report types and view the results of duplicate jobs.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access this object, activate duplicate rules. A Salesforce admin must give users read and write access.

## Fields

| Field Name | Details |
| --- | --- |
| `DuplicateRuleId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The duplicate rule used to identify this list of duplicate records.<br>**Label**<br>Duplicate Rule ID<br>This is a relationship field.<br>**Relationship Name**<br>DuplicateRule<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>DuplicateRule |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The autogenerated name that's given to the duplicate record set. Label is `Duplicate Record Set Name`. |
| `RecordCount` | **Type**<br>int |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of record items in the set. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The `ParentId` represents the parent of a duplicate rule or duplicate job. A `ParentId` is polymorphic. The label is Parent. This field is available in API versions 42.0 and later. |

# DuplicateRule

Represents a duplicate rule for detecting duplicate records.

## Supported Calls

`describeSObjects()`, `describeLayout()`, `query()`, `retrieve()`, `search()`

## Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The developer name for the duplicate rule.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `IsActive` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a duplicate rule is active (`true`) or not (`false`). This field is read only. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language for the duplicate rule. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. This field is available in API version 41.0 or later. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The label for the duplicate rule. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the |

| Field Name | Details |
| --- | --- |
| | installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `SobjectSubtype` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The subtype of object the duplicate rule is defined for. This field is available in API version 39.0 or later.<br>Possible values are:<br>• `None`<br>• `PersonAccount`<br>The default value is `None`. |
| `sObjectType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of object the duplicate rule is defined for.<br>Possible values are:<br>• `Account`<br>• `Contact`<br>• `Individual`<br>• `Lead` |

## Usage

You can use the API to view a duplicate rule's details. To create, edit, or delete duplicate rules, use the UI.

Use DuplicateRule to get the sObject type.

DuplicateRule is unavailable in some orgs.

# DynamicDataCapture

DynamicDataCapture is a junction object that adds a Form tab to Work Order Overview, and to the related list of a work order, work order line item, or service appointment in the Field Service mobile app. This object is available in API version 62.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `ActionDefinition` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The associated Data Capture Flow to execute. |
| `ActionType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of platform action that the form is associated with. Possible values are:<br>Possible values are:<br>• `Flow`<br>The default value is `Flow`. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The description of the form. |
| `ExecutionOrder` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The order in which the Data Capture flow is executed. Positive integer values or null are supported. |
| `IsRequired` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Boolean value that specifies if this form needs to be completed before moving on to the next form. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The order in which the Data Capture flow is executed. Positive integer values or null are supported. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the form. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID that refers to user who owns the Dynamic Data Capture object.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |
| `ParentRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID that refers to a work order, work order line item, or service appointment that serves as the parent record for junction object.<br>This field is a polymorphic relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>ParentRecord<br>**Relationship Type**<br>Parent-child<br>**Refers To**<br>ServiceAppointment, WorkOrder, WorkOrderLineItem (the parent object) |
| `ParentRecordType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of parent object associated with the junction object.<br>Possible values are:<br>• `Work Order`<br>• `Work Order Line Item`<br>• `Service Appointment` |
| `PausedFlowInterviewId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the flow interview that has been paused by a user.<br>This field is a relationship field.<br>**Relationship Name**<br>PausedFlowInterview<br>**Refers To**<br>FlowInterview |
| `ProcessType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The flow process type for the form.<br>Possible values are:<br>• `DataCaptureFlow`—Data Capture Flow<br>The default value is `DataCaptureFlow`. |

| Field | Details |
| --- | --- |
| `ServiceDocumentTemplate` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description** |
| `ServiceReportLanguage` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description** |
| `StatusCategory` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The category that each status value belongs to.<br>Possible values are:<br>• `Completed`<br>• `InProgress`—In Progress<br>• `New`<br>• `NotApplicable`—Not Applicable<br>• `Paused`<br>The default value is `New`. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**DynamicDataCaptureOwnerSharingRule** **on page 65(API Version 64.0)**
Sharing rules are available for the object.

**DynamicDataCaptureShare** **on page 67(API Version 64.0)**
Sharing is available for the object.

# ElectronicMediaGroup

Represents the type of media that you can associate with a product or category.This object is available in API version 49.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access a web store.

## Fields

| Field | Details |
|---|---|
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The default value is `USD`. |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Description of the store. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |

| Field | Details |
| --- | --- |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Name of the media group. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the owner of the ElectronicMediaGroup object. For external routing, allows the object to be used in the Streaming API to listen to events whenever a ElectronicMediaGroup record is created, modified, or deleted. |
| `UsageType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Possible values are:<br>• `Attachment`<br>• `Banner`<br>• `Listing`<br>• `Standard`<br>• `Tile` |

# ElectronicMediaUse

Represents the usage of media. This object is available in API version 49.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access a web store.

## Fields

| Field | Details |
| --- | --- |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The default value is `USD`. Possible values are:<br>• `USD`—U.S. Dollar |
| `ElectronicMediaGroupId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the electronic media group. |
| `ElectronicMediaId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the electronic media. |
| `ImplementorType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of implementor. Available implementors of ElectronicMediaUse include:<br>• ProductMedia<br>• ProductCategoryMedia |

| Field | Details |
| --- | --- |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The order that electronic media is displayed in. |

# EmailContent

Represents a marketing email asset for use with Account Engagement. This object is available in API version 50.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

EmailContent is only available for orgs that use Account Engagement. The Manage Email Content user permission is required. Users also need the CRM User, Sales, or Service User permission set. EmailContent isn't available for custom portal or guest users.

## Fields

| Field | Details |
| --- | --- |
| `ClickThroughRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of visitors who click links contained in emails delivered (sent minus bounces) to them. Multiple clicks for a same link are counted. |
| `ClickToOpenRatio` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The number of unique clicks divided by unique HTML opens. |

| Field | Details |
| --- | --- |
| `DeliveryRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of the emails that were delivered compared to the number that bounced (soft and hard). Note: this data includes emails that were delivered to the recipient's spam folder. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Description of the email content, for example, Promotion Mass Mailing. |
| `HtmlBody` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The body of the email in HTML format. The field is read-only. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp that indicates when the current user last viewed the record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, the record could have been referenced (LastReferencedDate) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Name of the email asset. |
| `OpenRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of unique HTML opens compared to the total number of emails delivered (sent minus bounces). |
| `OptOutRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of users that have opted out compared to the total number of emails sent. |
| `SpamComplaintRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of spam complaints compared to the total number emails sent. |
| `Subject` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>Content of the subject line. |
| `TemplateId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The Email Template field is mostly read-only. You can populate the Email Template field only during record create to prevent overwriting data on the email content record. |
| `TextBody` | **Type**<br>textarea |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Nillable, Update<br>**Description**<br>The body of the email in plain text format. The character limit is 384, 000. |
| `TotalDelivered` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of emails minus hard and soft bounces. Note: this data includes emails that were delivered to the recipient's spam folder. |
| `TotalHardBounced` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of emails that permanently returned to the sender because the address is invalid. A hard bounce can occur because the domain name doesn't exist or because the recipient is unknown. |
| `TotalOpens` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of times a prospect's email client loaded the images in the HTML version of the email. We also record an open if the prospect clicks a link within the HTML or text email without downloading images. A click indicates that they viewed the message. Some email clients (Outlook, Apple Mail, Thunderbird) do not display images by default. Account Engagement counts an open each time the images load. |
| `TotalSent` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>Read-only field. The total number of list emails sent, including bounced, opted-out, and invalid To: addresses. |
| `TotalSoftBounced` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>Read-only field. The total number of times a recipient's mail server acknowledged the email, but returned it to the sender. Sometimes it is because the recipient's mailbox is full or the mail server is temporarily unavailable. After 5 soft bounces, Account Engagement opts the prospect out of emails. |
| `TotalSpamComplaints` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>Read-only field. The total number of prospects that reported the email as spam. |
| `TotalTrackedLinkClicks` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>Read-only field. The number of times prospects clicked a link in the email. |
| `UniqueClickThroughRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Read-only field. The percentage of visitors who clicked a link contained in an email |
| `UniqueOpens` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>Read-only field. The number of prospects who loaded the images in the HTML version of the email. The Unique Opens category counts each recipient only one time, even if the prospect loaded images more than once. |
| `UniqueOptOuts` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Read-only field. The total number of prospects that have clicked the link to unsubscribe or opted out of all emails in the Email Preference Center. They are removed from future email sends. |
| `UniqueTrackedLinkClicks` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>Read-only field. The number of times a prospect clicked a link in the email. This metric doesn't include multiple clicks of the same link. |

# EmailDomainFilter

Represents a filter that determines whether an email relay is restricted to a specific list of domains. This object is available in API version 43.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

You must have the "Email Administration," "Customize Application," and "View Setup" user permissions to use this object.

You must create an email relay in Setup or through the EmailRelay object before you can use the `EmailDomainFilter` object.

## Fields

| Field Name | Details |
| --- | --- |
| `EmailRelayId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the EmailRelay record.<br>This is a relationship field.<br>**Relationship Name**<br>EmailRelay |

| Field Name | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>EmailRelay |
| `FromDomain` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Restricts the email relay to send emails based on the sender domains (`FromDomain`) listed in this field. This field is optional, accepts a list of comma-separated values, and supports the wildcard character. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the email domain filter is active (`true`) or not (`false`). Use this field to enable or disable the email domain filter. |
| `PriorityNumber` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort, Update<br>**Description**<br>Indicates the order in which the email domain filter is processed. Filters are evaluated in ascending order. The priority number must be unique. If this field is left blank, it is assigned the next available number and is processed last. Processing stops after the first matching filter is applied. |
| `ToDomain` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Restricts the email relay to send emails based on the recipient domains (`ToDomain`) listed in this field. This field is optional, accepts a list of comma-separated values, and supports the wildcard character. |

## Usage

Tip: If you also plan to activate Bounce Management and Email Compliance Management, confirm with your email admin that your company allows relaying email sent from Salesforce. For more information on bounce management, see Configure Deliverability Settings for Emails Sent from Salesforce.

# EmailDomainKey

Represents a domain key for an organization's domain, used to authenticate outbound email that Salesforce sends on the organization's behalf. This object is available in API version 28.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

We've upgraded and replaced the original DKIM (DomainKeys Identified Mail) key feature, so that you can create a DKIM key with increased email security. For more information, see Setting Up More Secure DKIM Keys.

## Fields

| Field Name | Details |
|---|---|
| `AlternatePublicKey` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>Read-only. Alternate public keys are used by Salesforce to auto-rotate domain keys. This field is available in API version 44.0 and later after activating the Critical Update. |
| `AlternateSelector` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The text used to distinguish the DKIM key from any other DKIM keys your organization uses for the specified domain. This field is available in API version 44.0 and later after activating the Critical Update. |

| Field Name | Details |
| --- | --- |
| `AlternateTxtRecordName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The alternate TXT record name is used to create the CNAME record. Refer to the Usage section for more information. This field is available in API version 44.0 and later after activating the Critical Update. |
| `Domain` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The organization's domain name that the DKIM key is generated for. |
| `DomainMatch` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The specificity of match required on the sending domain name before signing with this DKIM key. Valid values are:<br>• `DomainOnly`—Sign if sending domain matches at the domain level only (example.com but not mail.example.com)<br>• `SubdomainsOnly`—Sign if sending domain matches at the subdomain level only (mail.example.com but not example.com)<br>• `DomainAndSubdomains`—Sign if sending domain matches at the domain and subdomain levels (example.com and mail.example.com) |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this DKIM key is active (`true`) or not (`false`). |
| `KeySize` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates the RSA key size, in bits. The possible values are:<br>• 1024<br>• 2048<br>This field is available in API version 45.0 and later. |
| `PrivateKey` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Once you activate the Critical Update, this field is no longer visible.<br>The private portion of the DKIM key pair used to encrypt mail headers from your domain. Salesforce generates an encrypted `PrivateKey` if you don't specify a value when creating the DKIM key. If you do specify a value, it must be an existing valid `PrivateKey` from another EmailDomainKey object.<br>This field doesn't contain the actual private key, but a value that represents the key in our system. Therefore:<br>• The actual private key can't be leaked.<br>• You can't use the value to do your own email signing. |
| `PublicKey` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Part of the domain key pair that mail recipients retrieve to decrypt the DKIM header and verify your domain. Add the `PublicKey` value to your domain's DNS records before you start signing with this domain key. |
| `Selector` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Text used to distinguish the DKIM key from any other DKIM keys your organization uses for the specified domain. |
| `TxtRecordName` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Read-only. The TXT record name is used to create the CNAME record. Refer to the Usage section for more information. This field is available in API version 44.0 and later after activating the Critical Update. |
| `TxtRecordsPublishState` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The possible values are:<br>• Published<br>• Publishing in progress<br>• Publishing failed<br>This field is available in API version 44.0 and later after activating the Critical Update. |

# Usage

**Create DKIM Keys with Increased Security**

1. If your Salesforce org was created before Winter '19, enable the Critical Update. From Setup, enter *`Critical Updates`* in the Quick Find box, and then select **Critical Updates**. For Enable Redesigned DomainKeys Identified Mail (DKIM) Key Feature with Increased Email Security, click **Activate**.
2. Insert `Domain`, `DomainMatch`, `Selector`, and `AlternateSelector`. Salesforce publishes your TXT record to DNS.
3. Retrieve the `TxtRecordName` and `AlternateTxtRecordName` and use them to create and publish the CNAME and Alternate CNAME record to your domain's DNS.
   a. Create CNAME record using: ***`<selector>`***`._domainkey.`***`<domain>`*** `IN CNAME` ***`txtRecordName`***.
   b. Create Alternate CNAME record using: ***`<alternateSelector>`***`._domainkey.`***`<domain>`*** `IN CNAME` ***`alternateTxtRecordName`***.
4. Set the `IsActive` field to true.

**Create DKIM Keys (pre-Winter '19 Version)**

Note: The critical update activates for everyone on October 15, 2019. After that date, this approach to creating DKIM keys will no longer be available.

When you create a DKIM key, Salesforce generates a public and private key pair. Publish the public key in the DNS.

For each domain key you create, we recommend this sequence:

1. Insert the `Domain`, `DomainMatch`, and `Selector`.

2. Update your domain's DNS records.
   a. Locate the DNS record at ***selector***`._domainkey.`***domain***. For example, `mail._domainkey.mail.example.com`.
   b. Add the `PublicKey` value, like this: `V=DKIM1; p=`***public_key***.

   DKIM Signing Outbound Email

   a. In addition, you can optionally put the record in testing mode, which instructs recipients to not make decisions based on the email signature. Add parameter `t=y` to the DNS entry: `V=DKIM1; t=y; p=`***public_key***.
3. Update the key via the API or UI to be active.

# EmailInsight

Represents an insight generated from an email interaction. EmailInsights acts as a central place to store various types of insights related to email messages. The insights stored include status, type, and time of generation. Only certain types of insights can be created based on a pre-configured list of insight types. This object is available in API version 63.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

EmailStream and SiqC2CProvisioned permissions must be enabled.

EmailStreamPref, SiqOrgProvisioned, and SyncEmailToCoreActivity Org prefs must be enabled.

To be able to see SyncEmailToCoreActivity pref, EACLegacyEmailSyncAWS Org perm, AnalyticsActivity, UnifiedActivities, and ActivityMetrics must be disabled. In addition, license to Standard Einstein Activity Capture and turning on Einstein Activity Capture and EmailInsights provisions the required permissions and prefs.

## Fields

| Field | Details |
|---|---|
| `EmailMessageId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Required. The ID of the email message the insight is generated for.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>EmailMessage<br>**Refers To**<br>EmailMessage |
| `GeneratedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort<br>**Description**<br>Required. The date and time when the insight was generated in the legacy system. |
| `InsightTypeDescription` | **Type**<br>textarea<br>**Properties**<br>None<br>**Description**<br>Required. Description of the insight type. |
| `InsightTypeIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Required. The ID of the insight type based on which the insight is generated. |
| `InsightTypeLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Required. The display name of the insight type. |
| `IsLocked` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the email insight record is locked or not.<br>The default value is false. |

| Field | Details |
| --- | --- |
| `LegacyInsightIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Required. The unique ID of the insight that was generated and stored in the legacy system. |
| `MayEdit` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the email insight record can be edited or not.<br>The default value is false. |
| `RowVersion` | **Type**<br>string<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>A system-generated, read-only field that tracks the version of a record. Each time a record is created or updated, the RowVersion value increments, providing a mechanism to detect changes and manage concurrency. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Required. The status of the insight record.<br>Possible values are:<br>• `Active`<br>• `Completed`<br>• `Deprecated`<br>• `Dismissed`<br>The default value is `Active`. |

# EmailInsightAction

Represents the actions that have been taken, or could be taken, in relation to email insights. It logs different types of actions and associated metadata, helping to track and manage the activities and decisions made based on email insights. This object is available in API version 63.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

EmailStream and SiqC2CProvisioned permissions must be enabled.

EmailStreamPref, SiqOrgProvisioned, and SyncEmailToCoreActivity Org prefs must be enabled.

To be able to see SyncEmailToCoreActivity pref, EACLegacyEmailSyncAWS Org perm, AnalyticsActivity, UnifiedActivities, and ActivityMetrics must be disabled. In addition, license to Standard Einstein Activity Capture and turning on Einstein Activity Capture and EmailInsights provisions the required permissions and prefs.

## Fields

| Field | Details |
| --- | --- |
| `ActionMetadata` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The metadata for the action. |
| `EmailInsightId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Required. The ID of the email insight where the action is applied.<br>This field is a relationship field.<br>**Relationship Name**<br>EmailInsight<br>**Refers To**<br>EmailInsight |
| `InsightAction` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Required. The action that's taken on the email insight.<br>Possible values are:<br>• `CreateCalendarEvent`<br>• `CreateTaskWithDate`<br>• `EciCreateEmail`<br>• `EciScheduleMeetings`<br>• `EciSendEmail`<br>• `EmailReply`<br>• `EmailReplyLater`<br>• `EmailReplyWithTemplate`<br>• `InsertFreeTime`<br>• `PostOnChatter`<br>• `ViewCalendar`<br>• `ViewContactProfile`<br>The default value is `EmailReply`. |
| `IsLocked` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the email insight action record is locked or not.<br>The default value is false. |
| `MayEdit` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the email insight action record can be edited or not.<br>The default value is false. |
| `RowVersion` | **Type**<br>string<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>A system-generated, read-only field that tracks the version of a record. Each time a record is created or updated, the RowVersion value increments, providing a mechanism to detect changes and manage concurrency. |

# EmailMessage

Represents an email in Salesforce.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

EmailMessage is only available for orgs that use Email-to-Case or Enhanced Email, which is automatically enabled for most customers.

To use reply and forward functionality, `FromAddress` must specify an email address that exists in EmailMessageRelation, with a `RelationType` of `FromAddress`.

The `Status` field is mostly read-only. You can change the status only from *`New`* to *`Read`*.

The `HtmlBody` and `RelatedToId` fields are supported in Classic list views but not in Lightning list views. In related lists and search results in Lightning Experience, these fields either don't appear, show blank values, or result in an error.

`update()` is supported when an email record is in `Draft` status, and `IsPrivateDraft` is `false`. It's also supported if the email status is `Draft`, `IsPrivateDraft` is `true`, and `CreatedBy` is associated with the current user. When the email record isn't in `Draft` status, the `IsExternallyVisible` field and custom fields only can be updated.

Set the Update Email Messages user permission for users, such as an Automated Case User, who run automated processes that modify email message-related records. With the Update Email Message permission set, users' processes can modify EmailMessageRelation and ContentDocumentLink records that are related to an email message that isn't in Draft status. Don't set this user permission for other users.

Access to an email message depends on the associated object. The user who created the email is specified in `CreatedById` and always has access, unless that user is a guest user. Guest users have read access if the message is marked as `IsExternallyVisible`.

The object that's used to determine access differs for Email-to-Case and Enhanced Email.

- Email-to-Case—When Email-to-Case is enabled and the email is Case-based (the `ParentId` field is Case), access depends on the user's access to the related Case record. If the email message is a draft, only the user in the `CreatedById` field or users with the Modify All Data permission can access it.
- Enhanced Email—Access is activity-based. The `ActivityId` field specifies an associated Task record. You can control access to activity-based objects with the Access Activities permission. Users with the Modify All Data permission can also access the message.

When you use the API to insert EmailMessage records in bulk, the same access rules apply: access is based on cases in `ParentId` fields or by tasks in `ActivityId` fields. When inserting a single record, set the `CreatedById` field to the user performing the operation or leave it blank.

# Fields

| Field | Details |
| --- | --- |
| `ActivityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the activity that is associated with the email. Usually represents an open task that is created for the case owner when a new unread email message is received. `ActivityId` can only be specified for emails on cases. It's auto-created for other entities. |
| `AttachmentIds` | **Type**<br>string<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A comma-separated list of email attachments. This is used by the Send Email quick action when you use Salesforce Classic email templates. Maximum length is 32, 768 characters. |
| `AutomationType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>A picklist value that determines if an outgoing email was manually created or AI-generated.<br>Possible values are:<br>• `AiAssisted`–Email is AI-generated, but sent by human.<br>• `AiAutomated`–Email is generated and sent by AI.<br>• `Null`–Email is created and sent by human. |
| `BccAddress` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A string array of email addresses for recipients who were sent a visually impaired carbon copy of the email message. Include only email addresses that aren't associated with Contact, Lead, or User records in Salesforce. If the recipient is a contact, lead, or user, add their ID to the `BccIds` field instead of adding their email address to the |

| Field | Details |
| --- | --- |
| | `BccAddress` field. When adding their ID, the email message is automatically associated with the contact, lead, or user. For an Experience Cloud site user who isn't the sender of the email, this field returns null.<br>You can't send emails unless there's at least one recipient. |
| `BccIds` | **Type**<br>JunctionIdList<br>**Properties**<br>Create, Update<br>**Description**<br>A string array of IDs for contacts, leads, and users who were sent a visually impaired carbon copy of the email message. Each ID is linked to an `EmailMessageRelation` record, which represents the relationship between an email message and a Contact, Lead, or User record. For an Experience Cloud site user who isn't the sender of the email, this list is empty.<br>Adding a `JunctionIdList` field name to the `fieldsToNull` property deletes all related junction records. This action can't be undone. |
| `CcAddress` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A string array of email addresses for recipients who were sent a carbon copy of the email message. Include only email addresses that aren't associated with Contact, Lead, or User records in Salesforce. If the recipient is a contact, lead, or user, add their ID to the `CcIds` field instead of adding their email address to the `CcAddress` field. Then the email message is automatically associated with the contact, lead, or user.<br>You can't send emails unless there's at least one recipient. |
| `CcIds` | **Type**<br>JunctionIdList<br>**Properties**<br>Create, Update<br>**Description**<br>A string array of IDs for contacts, leads, and users who were sent a carbon copy of the email message. Each ID is linked to an `EmailMessageRelation` record, which represents the relationship between an email message and a Contact, Lead, or User record.<br>Adding a `JunctionIdList` field name to the `fieldsToNull` property deletes all related junction records. This action can't be undone. |

| Field | Details |
| --- | --- |
| `ClientThreadIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A value used by third-party email clients to identify which thread an email belongs to. See Email-to-Case Threading for more information.<br>Available in API versions 56.0 and later. |
| `ContentDocumentIds` | **Type**<br>JunctionIdList<br>**Properties**<br>Create, Update<br>**Description**<br>A string array of IDs for content documents such as files and attachments that are associated with an email. Each ID is linked to a `ContentDocumentLink` record, which represents the relationship between an email message and a content document record.<br>Adding a `JunctionIdList` field name to the `fieldsToNull` property deletes all related junction records. This action can't be undone. |
| `Division` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled. |
| `EmailRoutingAddressId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Stores the ID of the email routing address used to create the email. This value is set when the email is processed by Email-to-Case service. When this field is set, EmailMessage.Incoming cannot be `false`.<br>**Relationship Name**<br>EmailRoutingAddress |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>EmailRoutingAddress |
| `EmailTemplateId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The email template, if any, that was chosen for the email. This field is populated in Lightning Experience only.<br>This is a relationship field.<br>**Relationship Name**<br>EmailTemplate<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EmailTemplate |
| `FirstOpenedDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date the email was first opened.<br>To see this field, enable email tracking in your org. |
| `FromAddress` | **Type**<br>email<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The address that originated the email. When using this field, specify an email address that exists in EmailMessageRelation, with a `RelationType` of `FromAddress`.<br>EmailMessages in Draft status with `IsPrivateDraft` set to `true` must use the user's address, a verified org-wide email address, or a verified Email-to-Case routing address in the `FromAddress` field. |
| `FromId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The contact, lead, or user who sent the email. Maximum length is 18 characters. |
| `FromName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The sender's name. When using this field, specify an email address that exists in EmailMessageRelation, with a `RelationType` of `FromAddress`. |
| `HasAttachment` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the email was sent with an attachment (`true`) or not (`false`). |
| `Headers` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The Internet message headers of the incoming email. Used for debugging and tracing purposes. Doesn't apply to outgoing emails. |
| `HtmlBody` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The body of the email in HTML format.<br>You can't send emails unless at least one of these fields has content.<br>• Subject field<br>• HTML Body or Text Body field<br>As the sender, you can provide the content, or it can be automatically inserted using predefined values. An email template can also include the content for these fields. |

| Field | Details |
| --- | --- |
| `Incoming` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the email was received (`true`) or sent (`false`). |
| `IsBounced` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the email bounced.<br>This field is set to True for bounced emails in orgs using Lightning Threading. It's not set to True for orgs using Ref ID threading.<br>To see this field, enable bounce management in your org. |
| `IsClientManaged` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>If EmailMessage is created with `IsClientManaged` set to `true`, users can modify `EmailMessage.ContentDocumentIds` to link file attachments even when the `Status` of the EmailMessage isn't set to `Draft`. When this field is set to `true` and Enhanced Email is enabled, a Task record is created for the EmailMessage regardless of Email-to-Case settings. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `IsExternallyVisible` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>If the Experience Cloud site case feed is enabled, `IsExternallyVisible` controls the external visibility of emails in sites. When `IsExternallyVisible` is set to `true`—its default value—external users see the email message in the case feed.<br>• Emails remain visible in the Emails related list whether or not this field is set to true. For security reasons, we recommend that you remove this related list from your case page layout for external community users.<br>• Only emails with a value in the `ParentId` field can be made externally visible in sites.<br>• This field can't be updated if the email's `Status` is set to `Draft`.<br>• The `Enable Case Feeds in Experience Cloud Sites` organization preference in Setup makes case-related emails, comments, and updates visible to site members.<br>When this preference is off, `IsExternallyVisible` is True by default for the EmailMessage. When this preference is on, `IsExternallyVisible` defaults to True only if the case contact email is the sender or the recipient of the `EmailMessage.` Otherwise, `IsExternallyVisible` defaults to False. |
| `IsOpened` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the email has been opened.<br>To see this field, enable email tracking in your org. |
| `IsPrivateDraft` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `IsPrivateDraft` is set to `true`, then only the `CreatedById` user can view, update, and send this email draft. If `IsPrivateDraft` is set to `false`, then any user with permissions to work on the case can see these drafts. After the email is sent, then this field is updated to be `false`. Public drafts are loaded and visible in Salesforce Classic while Private Drafts are only used in Lightning Experience. |
| `IsTracked` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the email is being tracked.<br>To see this field, enable email tracking in your org. |
| `LastOpenedDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date the email was last opened.<br>To see this field, enable email tracking in your org. |
| `MessageDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date the email was created.<br>For inbound emails, Email-to-Case sets this field using the Date header. The Date header is set by the email client and is subject to the sender's time preferences. |
| `MessageIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort, Update<br>**Description**<br>The ID of the email message. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>A name for the email message that's derived from the first 255 characters of the Subject field. If the Subject field is empty, a localized string of `[No Subject]` is used. This field is read-only and can't be created or updated. Available in API versions 56.0 and later. |
| `ParentId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the case that's associated with the email.<br>This is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Case |
| `RelatedToId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The `RelatedToId` represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. RelatedTolds are polymorphic. Polymorphic means a RelatedTold is equivalent to the ID of a related object.<br>You must have access to at least one entity listed under Refers To to access RelatedTold.<br>You can update `RelatedToId` when `IsClientManaged` is set to `true`.<br>`RelatedtoId` and `ParentId` should have the same value when `ParentId` is set. You might see unexpected results otherwise.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>RelatedTo<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, |

| Field | Details |

| | CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CommSubscriptionConsent, ContactEncounter, ContactEncounterParticipant, ContactRequest, Contract, CoverageBenefit, CoverageBenefitItem, CreditMemo, DelegatedAccount, DocumentChecklistItem, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, ListEmail, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PartyConsent, PersonLifeEvent, PlanBenefit, PlanBenefitItem, ProcessException, Product2, ProductItem, ProductRequest, ProductRequestLineItem, ProductTransfer, PurchaserPlan, ReceivedDocument, ResourceAbsence, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, Shift, Shipment, ShipmentItem, Solution, Visit, VisitedParty, VolunteerProject, WorkOrder, WorkOrderLineItem |
| `ReplyToEmailMessageId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the inbound or outbound email message the current email message is a reply to. It's not possible to reply to a message whose `Status` is `Draft`.<br>This is a relationship field.<br>This is only set for Case related Email replies at setup.<br>**Relationship Name**<br>ReplyToEmailMessage<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EmailMessage |
| `Source` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>When Sync Email as Salesforce Activity is enabled, this value reflects from where the email was captured automatically. Available in API version 64.0 and later.<br>Possible values are:<br>• `Einstein Activity Capture`–Captured as an entire email message by Einstein Activity Capture. |

| Field | Details |
| --- | --- |
| | • `Einstein Activity Capture Limited`–Captured as a header-only email by Einstein Activity Capture. The sender, recipients, date, and time of the message were captured, not the subject or body.<br>• `Email Integration App Manual`-Captured to track the email message records created or edited from the mailapp.<br>• `Migrated Captured Email`-An email that was captured in Einstein Activity Capture and migrated to an updated version of Einstein Activity Capture in which Sync Email as Activity is turned on. Available in API version 65.0 and later.<br>• `Migrated Captured Email Header Only`-An email that was captured in Einstein Activity Capture and migrated as header-only data to an updated version of Einstein Activity Capture in which Sync Email as Activity is turned on. Available in API version 65.0 and later. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The status of the email.<br>The `Status` field is mostly read-only. You can change the status only from *`New`* to *`Read`*.<br>Possible values are:<br>• `0` (New)<br>• `1` (Read)<br>• `2` (Replied)<br>• `3` (Sent)<br>• `4` (Forwarded)<br>• `5` (Draft)<br>For emails not sent as part of a case, only the status `3` (Sent) is valid. |
| `Subject` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The subject line of the email.<br>You can't send emails unless at least one of these fields has content.<br>• Subject field<br>• HTML Body or Text Body field<br>As the sender, you can provide the content, or it can be automatically inserted using predefined values. An email template can also include the content for these fields. |

| Field | Details |
| --- | --- |
| `TextBody` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The body of the email, in plain text format. If `TextBody` isn't set, then it's extracted from `HtmlBody`.<br>You can't send emails unless at least one of these fields has content.<br>• Subject field<br>• HTML Body or Text Body field<br>As the sender, you can provide the content, or it can be automatically inserted using predefined values. An email template can also include the content for these fields |
| `ThreadIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort, Update<br>**Description**<br>The ID of the email thread the email message belongs to. This field is used by features that sync emails directly from an inbox into Salesforce. This field is not used by On-Demand Email-to-Case. |
| `ToAddress` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A string array of email addresses for recipients who were sent the email message. Include only email addresses that aren't associated with Contact, Lead, or User records in Salesforce. If the recipient is a contact, lead, or user, add their ID to the `ToIds` field instead of adding their email address to the `ToAddress` field. Then the email message is automatically associated with the contact, lead, or user.<br>You can't send emails unless there's at least one recipient. |
| `ToIds` | **Type**<br>JunctionIdList<br>**Properties**<br>Create, Update<br>**Description**<br>A string array of IDs for contacts, leads, and users who were sent a carbon copy of the email message. Each ID is linked to an `EmailMessageRelation` record, which |

| Field | Details |
| --- | --- |
| | represents the relationship between an email message and a Contact, Lead, or User record.<br><br>Adding a `JunctionIdList` field name to the `fieldsToNull` property deletes all related junction records. This action can't be undone. |
| `ValidatedFromAddress` | **Type**<br>picklist<br><br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br><br>**Description**<br><br>A picklist value with either the sender's address, org-wide email addresses, or Email-to-Case routing address. The email address must be verified. If the sender's email address is used, the sender must be the current user.<br><br>`ValidatedFromAddress` isn't suitable for use in Group By or Sort By statements. Use `FromAddress` instead. |

## Usage

EmailMessage is limited to 50 custom fields.

If your org uses Email-to-Case, a case is created when an email is sent to one of your company's addresses. The email, which is related to the case by the `ParentID` field, is stored as an EmailMessage record. When users view the email, they see the EmailMessage record.

If your org uses Enhanced Email, each email is stored as an EmailMessage record and a Task record. When users view an email, they see the EmailMessage record.

Note: In an org with Email-to-Case enabled, an inbound (Incoming = true) email with case as the parent record won't create a task automatically. This functionality respects the Create Task from Email setting for each Email-to-Case routing address.

If you would like to change the recipients or contents of an outbound email, don't use automation tools, like Flows or Apex triggers, to update EmailMessage records. Unless they are for a draft, updates to EmailMessage records will not be reflected in the actual sent email. To update an email's data before it's sent, use Quick Action predefined values or a QuickActionDefaultsHandler.

When a Flow creates an EmailMessage with set values in the audit fields (like CreatedBy and CreatedDate), any FeedItem automatically created for that EmailMessage will not share the same audit field values.

## Sample Code—Apex

This sample logs email activity in Salesforce.

```
// if EnhancedEmail Perm is not enabled, continue logging the email as a task

// if EnhancedEmail Perm is enabled, create an EmailMessage object
EmailMessage emailMessage = new EmailMessage();
emailMessage.status = '3'; // email was sent
emailMessage.relatedToId = '006B0000003weZGIAY'; // related to record e.g. an opportunity
emailMessage.fromAddress = 'sender@example.com'; // from address
emailMessage.fromName = 'Dan Perkins'; // from name
```

```
emailMessage.subject = 'This is the Subject!'; // email subject
emailMessage.htmlBody = '<html><body><b>Hello</b></body></html>'; // email body
// Contact, Lead or User Ids of recipients
String[] toIds = new String[]{'003B000000AxcEjIAJ'};
emailMessage.toIds = toIds;
// additional recipients who don't have a corresponding contact, lead or user id in the
Salesforce org (optional)
emailMessage.toAddress = 'emailnotinsalesforce@toexample.com, anotherone@toexample.com';
insert emailMessage; // insert

// Add Email Message Relation for id of the sender
EmailMessageRelation emr = new EmailMessageRelation();
emr.emailMessageId = emailMessage.id;
emr.relationId = '005B0000003qHvOIAU'; // user id of the sender
emr.relationType = 'FromAddress';
insert emr;
```

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**EmailMessageChangeEvent (API version 48.0)**

Change events are available for the object.

SEE ALSO:

Case

Overview of Salesforce Objects and Fields

# EmailMessageMigration

For internal use only.

# EmailMessageRelation

Represents the relationship between an email and contacts, leads, and users. This object is available in API version 37.0 and later.

## Special Access Rules

EmailMessageRelation is only available for organizations that use Email-to-Case or Enhanced Email, which is automatically enabled for most customers.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

# Fields

| Field Name | Details |
| --- | --- |
| `EmailMessageId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the `EmailMessage` record.<br>This is a relationship field.<br>**Relationship Name**<br>EmailMessage<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EmailMessage |
| `RelationAddress` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The email address of the sender or recipient.<br>Note: If a record relates an email to an existing contact, lead, or user record in Salesforce, the value of `RelationAddress` is the current value of the email address. If the value is not set, it is auto-populated from `RelationId`. |
| `RelationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The `RecordId` of the sender or recipient.<br>Note: If a record relates an email to an email address that's not associated with an existing contact, lead, or user record in Salesforce, the value of `RelationId` is null.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Relation |

| Field Name | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Contact, Lead, User |
| `RelationObjectType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API name of the object type of the `RecordId` in the `RelationId` field. It can be a contact, lead, or user. |
| `RelationType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of relationship the contact, lead, or user has with the email message. Possible values include:<br>• `ToAddress`<br>• `CcAddress`<br>• `BccAddress`<br>• `FromAddress`<br>• `OtherAddress`<br>For an Experience Cloud site user who is not the sender of the email, no `BccAddress` relations are returned. |

## Usage

EmailMessageRelation allows an email to be related to contacts, leads, and users.

# EmailRelay

Represents the configuration for sending an email relay. An email relay routes email sent from Salesforce through your company's email servers. This object is available in API version 43.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

You must have the Email Administration, Customize Application, and View Setup user permissions to use this object.

## Fields

| Field Name | Details |
| --- | --- |
| `AuthType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted Picklist, Sort, Update<br>**Description**<br>Specifies which SASL mechanism Salesforce uses for SMTP authentication. This field is available when Enable SMTP Auth is selected. Select an option:<br>• PLAIN- Salesforce uses PLAIN SASL mechanism for SMTP authentication. Default.<br>• LOGIN- Salesforce uses LOGIN SASL mechanism for SMTP authentication<br>This field is available in API version 52.0 and later. |
| `Host` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Indicates the host name or IP address of your company's SMTP server. |
| `IsRequireAuth` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether (true) or not (false) authentication is required. When setting this field to true, the `TlsSetting` must be set to **`RequiredVerify`**. This field is available in API version 44.0 and later. |
| `Password` | **Type**<br>encryptedstring<br>**Properties**<br>Create, Nillable, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Specifies the password for relay host STMP authentication. When `IsRequireAuth` is set to true, this field is required. This field is available in API version 44.0 and later. |
| `Port` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the port number of your company's SMTP server.<br>• 25<br>• 587<br>• 10025<br>• 11025 |
| `TlsSetting` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Specifies whether Salesforce uses TLS for SMTP sessions.<br>• `Off`: TLS is turned off. SMTP session continues through an insecure connection.<br>• `Preferred`: If the remote server supports TLS, Salesforce upgrades the current SMTP session to use TLS. If TLS is unavailable, Salesforce continues the session without TLS.<br>• `Required`: Salesforce continues the session only if the remote server supports TLS. If TLS is unavailable, Salesforce terminates the session without delivering the email.<br>• `PreferredVerify`: If the remote server supports TLS, Salesforce upgrades the current SMTP session to use TLS. Before the session begins, Salesforce verifies that the certificate is signed by a valid certificate authority, and that the common name presented in the certificate matches the domain or mail exchange of the current connection. If TLS is available but the certificate is not signed or the common name does not match, Salesforce disconnects the session and does not deliver the email. If TLS is unavailable, Salesforce continues the session without TLS.<br>• `RequiredVerify`: Salesforce continues the session only if the remote server supports TLS, the certificate is signed by a valid certificate authority, and the common name presented in the certificate matches the domain or |

| Field Name | Details |
| --- | --- |
| | mail exchange to which Salesforce is connected. If any of these criteria are not met, Salesforce terminates the session without delivering the email. |
| `Username` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Specifies the username for relay host STMP authentication. When `IsRequireAuth` is set to true, this field is required. This field is available in API version 44.0 and later. |

## Usage

An email relay must be associated with an active email domain filter to take effect. If you set up multiple email relays in one org, they are processed in the priority order of their email domain filters.

Tip: If you also plan to activate Bounce Management and Email Compliance Management, confirm with your email admin that your company allows relaying email sent from Salesforce. For more information on bounce management, see Configure Deliverability Settings for Emails Sent from Salesforce.

EmailDomainFilter

# EmailRoutingAddress

An email address used for Email-to-Case. Email routing addresses store a unique email services address provided by Salesforce and configuration options for emails received by this address.

## Supported Calls

`create()`, `describeSObjects()`, `delete()`, `update()`, `query()`, `retrieve()`, `upsert()`

## Special Access Rules

To access this object, Email-to-Case must be enabled. Only admin users can access this object.

## Fields

| Field | Details |
| --- | --- |
| `PersonalName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The display name of the EmailRoutingAddress. Maximum size is 300 characters. |
| `Address` | **Type**<br>email<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The email address to which your customers direct their questions. Emails are forwarded from this address. |
| `EmailServicesAddress` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A unique, Salesforce-generated email address. This field value is read-only and can't be modified. Emails are forwarded to this address. |

EmailServicesAddress

# EmailServicesAddress

An email service address.

Each email service has one or more email addresses to which users can send messages for processing. An email service only processes messages it receives at one of its addresses.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

## Fields

| Field | Details |
| --- | --- |
| `AuthorizedSenders` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Configures the email service address to only accept messages from the email addresses or domains listed in this field. If the email service address receives a message from an unlisted email address or domain, the email service performs the action specified in the `AuthorizationFailureAction` field of its associated email service. Leave this field blank if you want the email service address to receive email from any email address. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. This 25-character field must be unique among other EmailServicesAddress records under the same EmailServiceFunction parent.<br>In managed packages, this field prevents naming conflicts on package installations. This field is automatically generated, but you can supply your own value if you create the record using the API. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance might be slow while Salesforce generates one for each record. |
| `EmailDomainName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A read only field you can query that contains the system-generated domain part of this email service address. The system generates a unique domain-part for each email service address to ensure that no two email service addresses are identical. |

| Field | Details |
| --- | --- |
| FunctionId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the email service for which the email service address receives messages.<br>This is a relationship field.<br>**Relationship Name**<br>Function<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EmailServicesFunction |
| IsActive | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this object is active (true) or not (false). |
| LocalPart | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The local-part of the email service address. The local-part of the address is the string that comes before the @ symbol.<br>For the local-part of a Salesforce email address, all alphanumeric characters are valid, plus the following special characters:<br>`! # $ % & amp; ' * / = ? ^ _ + - ` { \| } ~ ,`<br>The dot character (.) is also valid as long as it's not the first or last character.<br>Email addresses aren't case-sensitive. |
| RunAsUserId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The username of the user whose permissions the email service assumes when processing messages sent to this address. |

## Usage

This object supports the email services feature, which allows you to create automated processes that use Apex classes to process the contents, headers, and attachments of inbound email. For example, you can create an email service that automatically creates contact records based on contact information in messages.

EmailServicesFunction

# EmailServicesFunction

An email service.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

## Fields

| Field | Details |
|---|---|
| `AddressInactiveAction` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates what the email service does with messages received at an email address that is inactive.<br>One of the following values:<br>• `UseSystemDefault`—The system default is used. (In API version 41.0 and earlier, the value specified for this choice is `0`.)<br>• `Bounce`—The email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is `1`.)<br>• `Discard`—The email service deletes the message without notifying the sender. (In API version 41.0 and earlier, the value specified for this choice is `2`.)<br>• `Requeue`—The email service queues the message for processing in the next 24 hours. If the message is not processed within 24 hours, the email service returns the message |

| Field | Details |
| --- | --- |
| | to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is `3`.) |
| `ApexClassId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required. The ID of the Apex class that the email service uses to process inbound messages.<br>This field is required for API version 12.0 and later. |
| `AttachmentOption` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the types of attachments the email service accepts. One of the following values:<br>• `None`—The email service accepts the message but discards any attachment. (In API version 41.0 and earlier, the value specified for this choice is `0`.)<br>• `NoContent`—The attachment metadata (filename, MIME type, and so on) is provided to the Apex class, but the body is set to `null`. There was no previous numeric value for this choice.<br>• `TextOnly`—The email service only accepts the following types of attachments:<br>– Attachments with a Multipurpose Internet Mail Extension (MIME) type of text.<br>– Attachments with a MIME type of application/octet-stream and a file name that ends with either a .vcf or .vcs extension. These are saved as text/x-vcard and text/calendar MIME types, respectively.<br>(In API version 41.0 and earlier, the value specified for this choice is `1`.)<br>• `BinaryOnly`—The email service only accepts binary attachments, such as image, audio, application, and video files. (In API version 41.0 and earlier, the value specified for this choice is `2`.)<br>• `All`—The email service accepts any type of attachment. (In API version 41.0 and earlier, the value specified for this choice is `3`.) |
| `AuthenticationFailureAction` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates what the email service does with messages that fail or do not support any of the authentication protocols if the `IsAuthenticationRequired` field is true. |

| Field | Details |
| --- | --- |
| | One of the following values:<br>• `UseSystemDefault`—The system default is used. (In API version 41.0 and earlier, the value specified for this choice is `0`.)<br>• `Bounce`—The email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is `1`.)<br>• `Discard`—The email service deletes the message without notifying the sender. (In API version 41.0 and earlier, the value specified for this choice is `2`.)<br>• `Requeue`—The email service queues the message for processing in the next 24 hours. If the message is not processed within 24 hours, the email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is `3`.) |
| `AuthorizationFailureAction` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Group, Sort, Create, Filter, Nillable, Restricted picklist, Update<br>**Description**<br>Indicates what the email service does with messages received from senders who are not listed in the `AuthorizedSenders` field on either the email service or email service address.<br>One of the following values:<br>• `UseSystemDefault`—The system default is used. (In API version 41.0 and earlier, the value specified for this choice is `0`.)<br>• `Bounce`—The email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is `1`.)<br>• `Discard`—The email service deletes the message without notifying the sender. (In API version 41.0 and earlier, the value specified for this choice is `2`.)<br>• `Requeue`—The email service queues the message for processing in the next 24 hours. If the message is not processed within 24 hours, the email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is `3`.) |
| `AuthorizedSenders` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Configures the email service to only accept messages from the email addresses or domains listed in this field. If the email service receives a message from an unlisted email address or domain, the email service performs the action specified in the |

| Field | Details |
| --- | --- |
| | `AuthorizationFailureAction` field. Leave this field blank if you want the email service to receive email from any email address. |
| `ErrorRoutingAddress` | **Type**<br>email<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The destination email address for error notification email messages when `IsErrorRoutingEnabled` is `true`. |
| `FunctionInactiveAction` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates what the email service does with messages it receives when the email service itself is inactive.<br>One of the following values:<br>• `UseSystemDefault`—The system default is used. (In API version 41.0 and earlier, the value specified for this choice is `0`.)<br>• `Bounce`—The email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is `1`.)<br>• `Discard`—The email service deletes the message without notifying the sender. (In API version 41.0 and earlier, the value specified for this choice is `2`.)<br>• `Requeue`—The email service queues the message for processing in the next 24 hours. If the message is not processed within 24 hours, the email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is `3`.) |
| `FunctionName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the email service. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether this object is active (`true`) or not (`false`). |
| `IsAuthenticationRequired` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Configures the email service to verify the legitimacy of the sending server before processing a message. The email service uses the SPF, SenderId, and DomainKeys protocols to verify the sender's legitimacy: If the sending server passes at least one of these protocols and does not fail any, the email service accepts the email. If the server fails a protocol or does not support any of the protocols, the email service performs the action specified in the `AuthenticationFailureAction` field. |
| `IsErrorRoutingEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>When incoming email messages can't be processed, indicates whether error notification email messages are routed to a chosen address or to the senders. |
| `IsTextAttachmentsAsBinary` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If `true`, text attachments are supplied to the Apex code as a `Messaging.BinaryAttachment` instead of as a `Messaging.TextAttachment`. This means that the body is supplied as an Apex Blob instead of as an Apex String. |
| `IsTextTruncated` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>This field is deprecated. It is not available as of API version 23.0 and is deprecated and hidden in versions 17.0 through 22.0. In all API versions, the email service now accepts inbound email messages up to the 10 MB size limit, without truncating the text. Previously, it indicated whether the email service truncated and accepted email messages with HTML body text, |

| Field | Details |
| --- | --- |
| | plain body text, and text attachments over approximately 100,000 characters (`true`) or rejected these email messages and notified the sender (`false`). |
| `IsTlsRequired` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Not currently in use. |
| `OverLimitAction` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates what the email service does with messages if the total number of messages processed by all email services combined has reached the daily limit for your organization.<br>One of the following values:<br>• `UseSystemDefault`—The system default is used. (In API version 41.0 and earlier, the value specified for this choice is `0`.)<br>• `Bounce`—The email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is `1`.)<br>• `Discard`—The email service deletes the message without notifying the sender. (In API version 41.0 and earlier, the value specified for this choice is `2`.)<br>• `Requeue`—The email service queues the message for processing in the next 24 hours. If the message is not processed within 24 hours, the email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is `3`.)<br>The system calculates the limit by multiplying the number of user licenses by 1,000. |

## Usage

This object supports the email services feature, which allows you to create automated processes that use Apex classes to process the contents, headers, and attachments of inbound email. For example, you can create an email service that automatically creates contact records based on contact information in messages.

EmailTemplate

# EmailTemplate

Represents a template for an email, mass email, list email, or Sales Engagement email. Supported in first-generation managed packages only.

Note: You can't send a mass email using a Visualforce email template.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

| Field | Details |
|---|---|
| `ApiVersion` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The API version for this class. Every class has an API version specified at creation. |
| `Body` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Content of the email. Limit: 384 KB. |
| `BrandTemplateId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required. ID of the BrandTemplate associated with this email template. The brand template supplies letterhead information for the email template. |
| `DeliveryRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Read-only. The percentage of the emails that were delivered compared to the number that bounced (soft and hard). Note: this data includes emails that were delivered to the recipient's spam folder. |

| Field | Details |
| --- | --- |
| | This field is available in API version 46.0 and later. To access this field, your org must use Sales Engagement and users need the Sales Engagement User or Sales Engagement Cadence Creator permission set. This field value includes emails sent via the ListEmail object or Sales Engagement cadences. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Description of the template, for example, Promotion Mass Mailing. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is **Template Unique Name**.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. |
| `Encoding` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Character set encoding for the template. |
| `EnhancedLetterheadId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the enhanced letterhead associated with the email template.<br>Note: To use an enhanced letterhead, associate it with a Lightning email template that uses the HML merge language. |

| Field | Details |
| --- | --- |
| | This is a relationship field.<br>**Relationship Name**<br>EnhancedLetterhead<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EnhancedLetterhead |
| `EntityType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort,<br>**Description**<br>When `UIType` is `2` (Lightning Experience) or `3` (Lightning ExperienceSample), `EntityType` indicates which entities this template can be used with (for example, account or lead). Valid values are standard object ID prefixes: 001 for account, 003 for contact, 006 for opportunity, and 00Q for lead, 500 for case, and 701 for campaign.<br>This field has been removed in API version 39.0. Use `RelatedEntityType` instead. |
| `FolderId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the folder that contains the template.<br>This is a relationship field.<br>**Relationship Name**<br>Folder<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Folder, Organization, User |
| `FolderName` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The name of the folder that contains the template. |

| Field | Details |
| --- | --- |
| `HasSalesforceFiles` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If the email template has attachments from Salesforce Files. The default value is false. |
| `HtmlValue` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>This field contains the content of the email message, including HTML coding to render the email message. Limit: 384 KB. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates that this template is active if `true`, or inactive if `false`. |
| `IsBuilderContent` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If the email template was made in Email Template Builder. The default value is false. |
| `LastUsedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date and time when this email template was last used.<br>Used with Salesforce Classic templates.<br>Not typically used with Lightning Experience templates. |
| `Markup` | **Type**<br>textarea |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Nillable, Update<br>**Description**<br>The Visualforce markup, HTML, JavaScript, or any other Web-enabled code that defines the content of the template. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the template. Label is **Email Template Name**. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.<br>This field can't be accessed unless the logged-in user has the Customize Application permission. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the owner of the template.<br>This is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `RelatedEntityType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>When `UIType` is `2` (Lightning Experience) or `3` (Lightning ExperienceSample), `RelatedEntityType` indicates which entities this template can be used with. Valid values are the entity API name: "Account" for account, "Contact" for contact, "Opportunity" for opportunity, "Lead" for lead, and so on. The value can be any entity the user has read access to (including custom entities) but not virtual entities, setup entities, or platform entities.<br>No restrictions exist at the schema level. |
| `Subject` | **Type**<br>string<br>**Properties**<br>Create, Nillable, Sort, Update<br>**Description**<br>Content of the subject line.<br>The limit is 1,000 characters for Lightning email templates and 230 characters for Classic email templates. |
| `TemplateStyle` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Style of the template.<br>Possible values are:<br>• `formalLetter`—Formal Letter<br>• `freeForm`—Free Form Letter<br>• `newsletter`—Newsletter<br>• `none`—No Email Layout<br>• `products`—Products<br>• `promotionLeft`—Promotion (Left) |

| Field | Details |
| --- | --- |
| | • `promotionRight`—Promotion (Right) |
| `TemplateType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Type of template.<br>Possible values are:<br>• `custom`—Custom<br>• `html`—HTML<br>• `text`—Text<br>• `visualforce`—Visualforce |
| `TimesUsed` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number of times this email template has been used.<br>Used with Salesforce Classic templates.<br>Not typically used with Lightning Experience templates. |
| `TotalDelivered` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Read-only. The total number of emails sent minus hard and soft bounces. Note: this data includes emails that were delivered to the recipient's spam folder.<br>This field is available in API version 46.0 and later. To access this field, your org must use Sales Engagement and users need the Sales Engagement User or Sales Engagement Cadence Creator permission set. This field value includes emails sent via the ListEmail object or Sales Engagement cadences. |
| `TotalHardBounced` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Read-only. The total number of emails that permanently bounced back to the sender because the address is invalid. A hard bounce can occur because the domain name doesn't exist or because the recipient is unknown.<br>This field is available in API version 46.0 and later. To access this field, your org must use Sales Engagement and users need the Sales Engagement User or Sales Engagement Cadence Creator permission set. This field value includes emails sent via the ListEmail object or Sales Engagement cadences. |
| `TotalOpens` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>Read-only. The total number of times a prospect's email client loaded the images in the HTML version of the email. We also record an open if the prospect clicks a link within the HTML or text email without downloading images. A click indicates that they viewed the message. Some email clients (Outlook, Apple Mail, Thunderbird) don't display images by default. Pardot counts an open each time the images load.<br>This field is available in API version 46.0 and later. To access this field, your org must use Sales Engagement and users need the Sales Engagement User or Sales Engagement Cadence Creator permission set. This field value includes emails sent via the ListEmail object or Sales Engagement cadences. |
| `TotalSent` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Read-only. The total number of emails sent, including bounced, opted-out, and invalid To: addresses.<br>This field is available in API version 46.0 and later. To access this field, your org must use Sales Engagement and users need the Sales Engagement User or Sales Engagement Cadence Creator permission set. This field value includes emails sent via the ListEmail object or Sales Engagement cadences. |
| `TotalSoftBounced` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Read-only. The total number of times a recipient's mail server acknowledged the email, but returned it to the sender. Sometimes it is because the recipient's mailbox is full or the mail server is temporarily unavailable. A soft bounce message can sometimes be delivered at another time. After 5 soft bounces, Pardot opts the prospect out of emails.<br>This field is available in API version 46.0 and later. To access this field, your org must use Sales Engagement and users need the Sales Engagement User or Sales Engagement Cadence Creator permission set. This field value includes emails sent via the ListEmail object or Sales Engagement cadences. |
| `UIType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the user interface where this template is usable.<br>Possible values are:<br>• `Aloha`<br>• `SFX`<br>• `SFX_Sample`—SFXSample |

# Usage

To retrieve this object, issue a describe call on an object, which returns a query result for each activity since the object was created. You can't query these records.

# Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**EmailTemplateChangeEvent (API version 48.0)**
Change events are available for the object.

# EmailTemplateMonthlyMetric

Represents the monthly engagement metrics for an email template. This object is available in API version 53.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Sales Engagement must be enabled.

## Fields

| Field | Details |
|---|---|
| `AllEmailsBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total of hard and soft bounced emails for this email template in the month.<br>This is a calculated field. |
| `AllEmailsDeliveredCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of successfully delivered emails for this email template in the month.<br>This is a calculated field. |
| `AllEmailsHardBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of hard bounced emails for this email template in the month. |
| `AllEmailsLinkClickedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of emails containing a link clicked by the recipient for this email template in the month. |
| `AllEmailsNotDeliveredCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails not delivered for this email template in the month. This field is available in API version 54.0 and later. |
| `AllEmailsOpenedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails opened by the recipient for this email template in the month. |
| `AllEmailsOutOfOfficeCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails that triggered an out-of-office reply for this email template in the month. |
| `AllEmailsRepliedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails replied to for this email template in the month. |
| `AllEmailsSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent for this email template in the month.<br>This is a calculated field. |

| Field | Details |
| --- | --- |
| `AllEmailsSoftBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails soft bounced for this email template in the month. |
| `AllEmailsTrackedSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent with engagement tracking enabled for this email template in the month. |
| `AllEmailsUntrackedSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent without engagement tracking for this email template in the month. |
| `DeliveredRecipientCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients who were successfully delivered an email for this email template in the month. This field is available in API version 54.0 and later.<br>This is a calculated field. |
| `DeliveredRecipientRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of unique recipients that received an email you sent. This field is available in API version 54.0 and later.<br>This is a calculated field. |

| Field | Details |
| --- | --- |
| EmailTemplateId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the related email template.<br>This is a relationship field.<br>**Relationship Name**<br>EmailTemplate<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EmailTemplate |
| HardBounceTrackableSends | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent with hard bounce tracking. This field is available in API version 54.0 and later. |
| HrdBncTrackableRecipientSends | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients who received an email with hard bounce tracking. This field is available in API version 54.0 and later. |
| IsLocked | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the monthly metric record is locked or not.<br>The default value is 'false'. |
| LinkClickTrackableSends | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent with link click tracking for the email template in the month. This field is available in API version 54.0 and later. |
| LinkClkTrackableRecipientSends | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients who received an email with link tracking for the email template in the month. This field is available in API version 54.0 and later. |
| MayEdit | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the monthly metric record can be edited or not.<br>The default value is 'false'. |
| Month | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The month in which the engagement occurred. |
| MonthInt | **Type**<br>int<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The month in which the engagement occurred, in yyyymm format. |
| OooTrackableRecipientSends | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of recipients who received an email with out-of-office tracking for the email template in the month. Out-of-office tracking requires Inbox. This field is available in API version 54.0 and later. |
| `OpenTrackableRecipientSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients who received an email with open tracking for the email template in the month. This field is available in API version 54.0 and later. |
| `OpenTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent with open tracking for the email template in the month. This field is available in API version 54.0 and later. |
| `OutOfOfficeTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent with out-of-office tracking for the email template in the month. This field is available in API version 54.0 and later. |
| `RecipientReplies` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of unique recipients who replied to an email for this email template in the month. This field is available in API version 54.0 and later. |
| `RecipientSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of unique email recipients for this email template in the month. This field is available in API version 54.0 and later. |
| `RecipientsHardBounced` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients that hard-bounced an email for this email template in the month. Hard bounces can mean that the recipient's email address doesn't exist or is misspelled. This field is available in API version 54.0 and later. |
| `RecipientsOutOfOffice` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients that responded with an out-of-office reply for the email template in the month. This field is available in API version 54.0 and later. |
| `RecipientsSoftBounced` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients that soft-bounced an email for the email template in the month. A soft bounce often indicates a temporary issue with the recipient's email server, such as a full inbox. This field is available in API version 54.0 and later. |
| `ReplyTrackableRecipientSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients who received an email with reply tracking for this email template in the month. This field is available in API version 54.0 and later. |
| `ReplyTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of emails sent with reply tracking for the email template in the month. This field is available in API version 54.0 and later. |
| SftBncTrackableRecipientSends | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients who received an email with soft bounce tracking for the email template in the month. This field is available in API version 54.0 and later. |
| SoftBounceTrackableSends | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent with soft bounce tracking for the email template in the month. This field is available in API version 54.0 and later. |
| SomeEmailsDeliveredCount | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of sent emails that were successfully delivered to at least one of its recipients for the email template in the month. This field is available in API version 54.0 and later.<br>This is a calculated field. |
| SomeEmailsDeliveredRate | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of sent and tracked emails that were successfully delivered to at least one of their recipients for the email template in the month. This field is available in API version 54.0 and later.<br>This is a calculated field. |
| TrackableRecipientSendHrdBncRt | **Type**<br>percent |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to unique recipients with hard bounce tracking that hard bounced for the email template in the month. This field is available in API version 54.0 and later.<br>This is a calculated field. |
| TrackableRecipientSendOooRate | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent with out-of-office tracking that received out-of-office replies from unique recipients for the email template in the month. This field is available in API version 54.0 and later.<br>This is a calculated field. |
| TrackableRecipientSendReplyRt | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent with reply tracking that received replies from unique recipients for the email template in the month. This field is available in API version 54.0 and later.<br>This is a calculated field. |
| TrackableRecipientSendSftBncRt | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to unique recipients with soft bounce tracking that soft-bounced for the email template in the month. This field is available in API version 54.0 and later.<br>This is a calculated field. |
| TrackableSendHardBounceRate | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The percentage of emails sent with hard bounce tracking that hard bounced for the email template in the month. This field is available in API version 54.0 and later.<br>This is a calculated field. |
| `TrackableSendLinkClickRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent with link tracking that had link clicks for the email template in the month. This field is available in API version 54.0 and later.<br>This is a calculated field. |
| `TrackableSendOpenRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent with open tracking that were opened by the recipient for the email template in the month. This field is available in API version 54.0 and later.<br>This is a calculated field. |
| `TrackableSendOutOfOfficeRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent with out-of-office tracking that received out-of-office replies for the email template in the month. This field is available in API version 54.0 and later.<br>This is a calculated field. |
| `TrackableSendReplyRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent with reply tracking that received replies for the email template in the month. This field is available in API version 54.0 and later.<br>This is a calculated field. |

| Field | Details |
| --- | --- |
| TrackableSendSoftBounceRate | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent with soft bounce tracking that soft bounced for the email template in the month. This field is available in API version 54.0 and later.<br>This is a calculated field. |
| UniqueEmailsLinkClickedCount | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of link clicks by unique recipients for the email template in the month. |
| UniqueEmailsOpenedCount | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of times an email you sent was opened by a unique recipient for the email template in the month. When you send a list email, this field increments each time a recipient opens the received email. |
| UniqueEmailsRepliedCount | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of replies from unique recipients for the email template in the month. |

# EmbeddedServiceDetail

Represents a metadata catalog object that exposes fields from the underlying Embedded Service setup objects defined in each EmbeddedServiceConfig deployment for guest users. Guest users don't have direct access to the Embedded Service setup objects. Available in API version 39.0 and later.

## Supported SOAP Calls

`describeSObjects()`, `query()`

## Supported REST HTTP Methods

`GET`

## Fields

| Field | Details |
|---|---|
| `AvatarImg` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL of the image used as the agent avatar image. |
| `ContrastInvertedColor` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Accent branding color used in the embedded component, displayed as a hexadecimal value. Changes made to this field in the API aren't reflected in the embedded component. |
| `ContrastPrimaryColor` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Value of the `ContrastPrimaryColor` field in the EmbeddedServiceBranding setup object. |
| `CustomMinimizedComponent` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The custom Aura component that's used for the minimized state for this Embedded Chat deployment. |
| `CustomPrechatComponent` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The custom Aura component that's used for the pre-chat page for this Embedded Chat deployment. |
| `DurableId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Developer name for the EmbeddedServiceConfig. |
| `FieldServiceConfirmCardImg` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL of the image used for the confirmation card in embedded Appointment Management (beta). |
| `FieldServiceHomeImg` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL of the image used for the home screen in embedded Appointment Management (beta). |
| `FieldServiceLogoImg` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL of the logo used for the home screen in embedded Appointment Management (beta). |
| `Font` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Font used in the chat text of the Embedded Chat window. |
| `FontSize` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Font size for the embedded component.<br>Possible values are:<br>• Small<br>• Medium<br>• Large |
| `HeaderBackgroundImg` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL of the image used for the header background in Embedded Chat. This field is removed in API version 49.0 and later. The header background image is no longer supported. |
| `Height` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Height of the embedded component. |
| `IsFieldServiceEnabled` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Specifies whether Field Service is enabled for this Embedded Service deployment (`true`) or not (`false`). Embedded Appointment Management is currently beta. |
| `IsLiveAgentEnabled` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Specifies whether Chat is enabled for this Embedded Service deployment (`true`) or not (`false`). |

| Field | Details |
| --- | --- |
| `IsOfflineCaseEnabled` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Specifies whether offline support is enabled for this Embedded Chat deployment (`true`) or not (`false`). |
| `IsPrechatEnabled` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Value of the `PrechatEnabled` field in the EmbeddedServiceLiveAgent setup object. |
| `IsQueuePositionEnabled` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Specifies whether queue position (displaying the customer's place in line while they wait for an agent) is enabled for this Embedded Chat deployment (`true`) or not (`false`). |
| `NavBarColor` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Value of the `NavBarColor` field in the EmbeddedServiceBranding setup object. |
| `NavBarTextColor` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field is used to set the text color for the header. |
| `OfflineCaseBackgroundImg` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>URL of the image used for the background for the offline support case form in Embedded Chat. |
| `PrechatBackgroundImg` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL of the image used for the background for the pre-chat form in Embedded Chat. |
| `PrimaryColor` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Value of the `PrimaryColor` field in the EmbeddedServiceBranding setup object. |
| `SecondaryColor` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable Sort<br>**Description**<br>Value of the `SecondaryColor` field in the EmbeddedServiceBranding setup object. |
| `SecondaryNavBarColor` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable Sort<br>**Description**<br>This field is used to set the color of a secondary header. |
| `ShouldHideAuthDialog` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Specifies whether the prompt that the customer log in again during a flow should be hidden (`true`) or not (`false`). When it's hidden, the customer is taken directly to your login page. |
| `ShouldShowExistingAppointment` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Specifies whether to display a button on the home screen for customers to access their existing appointments (`true`) or not (`false`) for embedded Appointment Management (beta). |
| `ShouldShowNewAppointment` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Specifies whether to display a button on the home screen for customers to create a new appointment (`true`) or not (`false`) for embedded Appointment Management (beta). |
| `Site` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable Sort<br>**Description**<br>Value of the `Site` field in the EmbeddedServiceConfig setup object. |
| `SmallCompanyLogoImg` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL of the logo image used with Embedded Chat. |
| `WaitingStateBackgroundImg` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL of the image used for the background image in Embedded Chat while the customer waits to be connected with a support agent. |
| `Width` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Width of the embedded component. |

Note: Any changes you make to the image fields override what you've entered in Setup. We recommend setting your image URLs in Setup.

# EmbeddedServiceLabel

Represents a customized label in Embedded Chat or embedded Appointment Management.This object is available in API version 44.0 and later.

## Supported SOAP Calls

`describeSObjects()`, `query()`

## Supported REST HTTP Methods

`GET`

## Fields

| Field | Details |
| --- | --- |
| `CustomLabelName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The developer name for the custom label. |
| `DurableId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique name containing `EmbeddedServiceConfig.labelKey`. |
| `EmbeddedServiceConfigDeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Developer name for the EmbeddedServiceConfig. |
| `LabelKey` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of label for this embedded component. The value corresponds to the label within a label group (substate of chat state or page type). |

# Employee

Represents an employee within a company or organization. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()` `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access this object, you must have a Workplace Command Center permission set license and the Provides access to Workplace Command Center features system permission or have the Employee Management and Employee User add-on licenses.

## Fields

| Field | Details |
| --- | --- |
| `AboutMe` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Information about the employee, such as areas of interest or skills. Values can be provided on Employee's profile page. This field is available even if Chatter is disabled. |
| `AlternateEmail` | **Type**<br>email |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The employee's alternate email address. |
| `Availability` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The employee's availability status.<br>Possible values are:<br>• `In The Office`<br>• `Out Of Office`<br>• `Out Sick`<br>• `PTO`<br>• `Volunteering Time Off`<br>• `Working Remotely` |
| `AvailabilityEndDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The end date of the Employee's availability, inclusive of the date. |
| `AvailabilityStartDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The start date of the Employee's availability, inclusive of the date. |
| `BannerPhotoUrl` | **Type**<br>url<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Read only. The URL for the employee's banner photo. Available in API v51.0 and later. |

| Field | Details |
| --- | --- |
| `CurrentWellnessStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The employee's current wellness status.<br>Possible values are:<br>• `Available To Work`<br>• `Remote Work Only`<br>• `Unavailable`<br>• `Unknown` |
| `DateOfBirth` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The employee's date of birth. |
| `Email` | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort, Update<br>**Description**<br>The employee's email address. This field is unique within your organization. |
| `EmployeeNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. The employee's employment ID for the organization they were hired into. This field is unique within your organization. |
| `EmployeeStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The employee's current work status.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `Active`<br>• `Inactive`<br>• `Leave`<br>• `Terminated` |
| `EmploymentType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The employee's full-time or part-time status.<br>Possible values are:<br>• `Full-Time`<br>• `Part-Time` |
| `FirstName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The employee's first name. |
| `FullPhotoUrl` | **Type**<br>url<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Read only. The URL for the employee's profile photo. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo isn't guaranteed to return a photo. Query this field for the URL of the most recent photo. Available in API v51.0 and later. |
| `Gender` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The employee's gender.<br>Possible values are:<br>• `Female`<br>• `Male` |

| Field | Details |
| --- | --- |
| | • `Non-Binary / Non-Conforming`<br>• `Other`<br>• `Prefer Not to State`<br>• `Transgender Female`<br>• `Transgender Male` |
| `HomeAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The employee's home address. |
| `HomeCity` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The city for the employee's home address. |
| `HomeCountry` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The county for the employee's home address. |
| `HomeGeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The level of accuracy of an employee's home address geographical coordinates compared with its physical address. A geocoding service typically provides this value based on the address's latitude and longitude coordinates.<br>Possible values are:<br>• `Address`<br>• `Block`<br>• `City`<br>• `County`<br>• `ExtendedZip` |

| Field | Details |
| --- | --- |
| | • NearAddress<br>• Neighborhood<br>• State<br>• Street<br>• Unknown<br>• Zip |
| HomeLatitude | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with HomeLongitude to specify the precise geolocation of the employee's home address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. |
| HomeLongitude | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with HomeLatitude to specify the precise geolocation of the employee's home address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. |
| HomePhone | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The employee's home phone number. |
| HomePostalCode | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The postal code for the employee's home address. |
| HomeState | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The state for the employee's home address. |
| `HomeStreet` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The street for the employee's home address. |
| `IndividualId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A reference to the Individual record that this employee is assigned to. |
| `InternalOrganizationUnitId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A reference to the InternalOrganizationUnit this employee is assigned to. |
| `JobProfile` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The employee's job profile at the company. |
| `LastName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The employee's last name. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. |
| `LocationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A reference to the Location that this employee is assigned to. |
| `ManagerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A reference to the Employee record of the employee's manager. |
| `MediumPhotoUrl` | **Type**<br>url<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Read only. The URL for the medium-sized employee's profile photo. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo isn't guaranteed to return a photo. Query this field for the URL of the most recent photo. Available in API v51.0 and later. |
| `MiddleName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The employee's middle name. |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>A compound field of `Employee.FirstName`, `Employee.MiddleName`, and `Employee.LastName`. |
| `NameSuffix` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The employee's suffix. |
| `OutOfOfficeMessage` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The message portion of the employee availability. This message can provide reasons or details about the change in availability. The maximum length of this string is 40 characters. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who currently owns this record. Default value is the user logged in to the API to perform the create operation. |
| `PreferredFirstName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name the employee prefers to be called. |
| `PreferredPronoun` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The employee's preferred pronoun.<br>Possible values are:<br>• `He/Him/His`<br>• `Other/Ask Me`<br>• `She/Her/Hers`<br>• `They/Them/Theirs` |
| `RelatedPersonId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Links an employee to a person account with a unique value. Reserved for future use. Don't edit it. |
| `SmallPhotoUrl` | **Type**<br>url<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Read only. The URL for the small-sized employee's profile photo. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo isn't guaranteed to return a photo. Query this field for the URL of the most recent photo. Available in API v51.0 and later. |
| `StatusAsOf` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Required. Start date of the employee's current status. |
| `StatusEndDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Planned end date for the employee's status. |

| Field | Details |
| --- | --- |
| `TimeZone` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The time zone which the employee's work hours fall within. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Lookup field to associate an Employee record with a user in the org. The field is optional and unique. |
| `WorkPhone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The employee's formatted work phone number including country code and extension. |
| `WorkerType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Required. The type of worker for the employee.<br>Possible values are:<br>• `Alumnus`<br>• `Contractor`<br>• `Employee`<br>• `Intern`<br>• `Temporary` |
| `WorkingHoursEnd` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The end time of the employee's working hours. |

| Field | Details |
| --- | --- |
| `WorkingHoursStart` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The start time of the employee's working hours. |

## Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

**EmployeeHistory (API version 49.0)**
History is available for tracked fields of the object.

**EmployeeOwnerSharingRule**
Sharing rules are available for the object.

**EmployeesShare (API version 49.0)**
Sharing is available for the object.

# Employee2

Represents an employee within a company or an organization. This object is available in API version 62.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available if Talent Recruitment Management is enabled in your org. To access the object, you need one of these permission sets.

| User Type | Permission Set |
| --- | --- |
| Internal Users | Talent Recruitment Management Specialist Access |
| Salesforce Platform Users | Talent Recruitment Management Hiring Manager Access |

| User Type | Permission Set |
| --- | --- |
| | OR<br>Talent Recruitment Management Employee Access |

## Fields

| Field | Details |
| --- | --- |
| `AlternateEmail` | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The employee's alternate email address. |
| `ContactId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The contact associated with the employee.<br>**Relationship Name**<br>Contact<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>Contact (the master object) |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The ISO currency code for the post-authorization request.<br>Valid value is:<br>• `USD`—U.S. Dollar<br>The default value is `USD`. |
| `EmployeeNumber` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The employee's unique ID for their organization. |
| `EmployeeStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The employee's current work status.<br>Valid values are:<br>• `Active`<br>• `Inactive`<br>• `Leave`<br>• `Terminated` |
| `EmployeeType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The employee's full-time or part-time status.<br>Valid values are:<br>• `Alumnus`<br>• `Contractor`<br>• `Permanent`<br>• `Intern`<br>• `Temporary` |
| `EmploymentType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The employee's full-time or part-time status.<br>Valid values are:<br>• `Full-Time`<br>• `Part-Time` |

| Field | Details |
| --- | --- |
| `InternalOrganizationUnitId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The internal organization unit associated with the employee.<br>**Relationship Name**<br>InternalOrganizationUnit<br>**Refers To**<br>InternalOrganizationUnit |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that the user only accessed the record or a related list view (`LastReferencedDate`), but not viewed the record itself. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the employee record. |
| `StatusEndDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The planned end date for the employee's status. |

| Field | Details |
| --- | --- |
| `StatusStartDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The start date of the employee's current status. |

# EmployeeCrisisAssessment

Represents a crisis assessment of an Employee. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts.

For Work.com, when an employee responds to a wellness survey, an EmployeeCrisisAssessment record is created based on an employee's answers.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access this object, you must be assigned a Workplace Command Center permission set license and the Provides access to Workplace Command Center features system permission.

## Fields

| Field | Details |
| --- | --- |
| `Assessment` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The employee's COVID-19 status at the time of the assessment.<br>Possible values are:<br>• `COVID-19 Immune or Recovered`<br>• `COVID-19 No Symptoms`<br>• `COVID-19 Symptoms or Exposed`<br>• `COVID-19 Test Negative`<br>• `COVID-19 Test Positive` |

| Field | Details |
| --- | --- |
| | • `Declined` |
| `AssessmentDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The date of the assessment. Required |
| `AssessmentNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The assessment record number. |
| `CrisisId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The Crisis that this assessment is associated with. |
| `EmployeeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The Employee that this assessment is associated with. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who currently owns this record. Default value is the user logged in to the API to perform the create operation. |
| `SourceAssessment` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The record in the source system that drove this assessment. |
| `SourceSystem` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The source system that drove this assessment. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**EmployeeCrisisAssessmentHistory (API version 49.0)**
History is available for tracked fields of the object.

**EmployeeCrisisAssessmentOwnerSharingRule**
Sharing rules are available for the object.

**EmployeeCrisisAssessmentShare (API version 49.0)**
Sharing is available for the object.

SEE ALSO:

*Workplace Command Center for Work.com Developer Guide*: Extend Work.com with Custom Solutions

# EmpUserProvisioningProcess

Represents an employee-user provisioning process. This object is available in API version 52.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object requires a Workplace Command Center add-on license, or an Employee Experience add-on license.

## Fields

| Field | Details |
|---|---|
| `EndTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time that the user provisioning process ended. |
| `ErrorRecordCount` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of records that encountered an error during the user provisioning process. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the user provisioning process was last referenced, with a precision of one second. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The date and time when the user provisioning process was last viewed, with a precision of one second. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the user provisioning process. |
| `ProcessStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The status of the user provisioning process.<br>Possible values are:<br>• `Aborted`<br>• `Cancelled`<br>• `Failed`<br>• `Finished`<br>• `Initializing`<br>• `Processing`<br>• `Queued` |
| `StartTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time that the user provisioning process started. |
| `SuccessRecordCount` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of records that were successfully provisioned during the user provisioning process. |

| Field | Details |
| --- | --- |
| `TotalRecordCount` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The total number of records in the user provisioning process. |

## Usage

Use the EmpUserProvisioningProcess to view the status of an employee-user provisioning process.

# EmpUserProvisionProcessErr

Represents an employee-user provisioning process error. This object is available in API version 52.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object requires a Workplace Command Center add-on license, or an Employee Experience add-on license.

## Fields

| Field | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the Person Account linked to the employee record associated with the error.<br>This is a relationship field.<br>**Relationship Name**<br>Account<br>**Refers To**<br>Account |

| Field | Details |
| --- | --- |
| `EmployeeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the employee record associated with the error.<br>This is a relationship field.<br>**Relationship Name**<br>Employee<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Employee |
| `ErrorCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The error code if the provisioning isn't successful. |
| `ErrorMessage` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If an error occurred, this field contains the error message. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the error was last referenced, with a precision of one second. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the error was last viewed, with a precision of one second. |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the error. |
| `ProvisioningProcessId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the associated user provisioning process.<br>This is a relationship field.<br>**Relationship Name**<br>ProvisioningProcess<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EmpUserProvisioningProcess |

## Usage

Use the EmpUserProvisionProcessErr to view the errors for an employee-user provisioning process.

# EnablementMeasureDefinition

Represents an Enablement measure, which specifies the job-related activity that a user performs to complete a milestone or outcome in an Enablement program. A measure identifies a source object and optional related objects, with optional field filters and filter logic, for tracking the activity. This object also represents Enablement measure information in Metadata API. This object is available in API version 56.0 and later.

**Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.

## Fields

| Field | Details |
|---|---|
| `AggregateFieldApiName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The unique name in the API for the field that the `AggregateFunction` uses for calculating.<br>For example, if you're measuring how much revenue a sales rep has won, the value of `aggregateFunction` is `Sum` and the value of `aggregateFieldApiName` is `Amount`, which is the API name of the Amount field on the Opportunity object. |
| `AggregateFunction` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The method for calculating progress towards the milestone or outcome from records that qualify for the measure's criteria.<br>Possible values are:<br>• `Average`<br>• `Count`<br>• `Sum`<br>For example, if you're measuring the number of deals won, the function is `Count`.<br>If the function is `Average` or `Sum`, then `AggregateFieldApiName` specifies the API name of the field to use for calculating progress. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>An internal description for the measure to help Enablement admins understand the activity that's tracked. |

| Field | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. The name:<br>• must be 40 characters or fewer<br>• must begin with a letter<br>• can contain only underscores and alphanumeric characters<br>• can't include spaces<br>• can't end with an underscore<br>• can't contain 2 consecutive underscores<br>In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. |
| `DisplayFieldApiName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The unique name in the API for the field that primarily identifies records that qualify for the activity you're measuring. For example, if you're measuring the number of deals won, you're tracking the Opportunity object, and maybe you want to identify opportunities by their name. In this case, this field can be `Name`, the API name of the Opportunity Name field on the Opportunity object. |
| `IsValid` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Specifies whether the measure is valid. A measure becomes invalid and stops tracking progress under these circumstances:<br>• An object or field is removed.<br>• An object label or API name is renamed.<br>• A field's API name is renamed.<br>Default is `false`. A measure only becomes invalid after a breaking change is saved the corresponding outcome or milestone progress is calculated. See Considerations for Creating and Editing Measures. |

| Field | Details |
| --- | --- |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Reserved for future use. Don't edit this field. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Label for this EnablementMeasureDefinition value. This display value is the internal label that doesn't get translated. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that aren't Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.<br>Available in API version 62.0 and later. |
| `PublishedDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the measure was activated for use in Enablement programs. |

| Field | Details |
| --- | --- |
| `SourceMeasureObjectId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the EnblMeasureObjectDefinition that specifies the criteria for the source object that tracks the activity you're measuring. This field is a relationship field.<br>**Relationship Name**<br>SourceMeasureObject<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EnblMeasureObjectDefinition |
| `SourceObjectApiName` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The unique name in the API for the source object that tracks the activity you're measuring. This value is a derived value. For example, if you're measuring the number of deals won, this value is `Opportunity`, the API name for the Opportunity object. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The availability of the measure for use in Enablement programs.<br>Possible values are:<br>• `Archived`—Available in API versions 56.0 to 60.0.<br>• `Draft`—The measure is saved, but not activated for use in programs.<br>• `Published`—The measure is activated for use in programs. In Lightning Experience, this value is Active. |

# Usage

An EnablementMeasureDefinition can have multiple EnblMeasureObjectDefinition references, depending on the number of related objects in the measure. Consider an example measure that tracks activity on the Opportunity source object and the Account related object.

- The EnablementMeasureDefinition identifies the Opportunity source object.

- An EnblMeasureObjectDefinition specifies the criteria on the Opportunity source object.
- An EnblMeasureObjectDefinition specifies the criteria on the Account related object.

# EnablementProgram

Represents an Enablement program, which includes exercises and measurable milestones to help users such as sales reps achieve specific outcomes related to your company's revenue goals. This object is available in API version 56.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a supported Partner Relationship Management (PRM) add-on license.

## Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Update<br>**Description**<br>A summary of the program's goals and content that's visible to users. |
| `DoesAllowSelfEnrollment` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether users can self-enroll in programs that are shared with them (`true`) or take only assigned programs (`false`). The default value is `false`. |

| Field | Details |
| --- | --- |
| EnablementProgramDefinitionId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The representation for the program in Metadata API. This field is a relationship field.<br>Available in API version 61.0 and later.<br>**Relationship Name**<br>EnablementProgramDefinition<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EnablementProgramDefinition |
| IsOutcomeBased | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the program includes a final, measurable outcome (`true`) or not (`false`). The default value is `false`. |
| LastReferencedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record. |
| LastViewedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record. If this value is null, maybe the user accessed this record (`LastReferencedDate`) but not viewed it yet. |
| Name | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the program that's visible to users. For example, `AE Onboarding`, `Event Prep`, or `New Product Launch`. |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the supported Experience Cloud site where a partner program is available. For site requirements, see Considerations for Partner Enablement Programs.<br>Available in API version 60.0 and later.<br>**Relationship Name**<br>Network<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Network |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the owner of the program. This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PublishedDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date that the program is published. |

| Field | Details |
| --- | --- |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The status of the program. Only a published program is available for an Enablement admin to assign to users or share with users so they can self-enroll.<br>Possible values are:<br>• `Archived`<br>• `Draft`<br>• `Published` |
| `TotalAssigned` | **Type**<br>int<br>**Properties**<br>Nillable<br>**Description**<br>The number of assignments in this program. For example, if the program is assigned to 3 users, then `TotalAssigned=3`. |
| `TotalBehind` | **Type**<br>int<br>**Properties**<br>Nillable<br>**Description**<br>The number of assignments that are behind in this program. For example, if the program is assigned to 3 users, and 2 users are behind on their assignments, then `TotalBehind=2` |
| `TotalCompleted` | **Type**<br>int<br>**Properties**<br>Nillable<br>**Description**<br>The number of completed assignments in this program. For example, if the program is assigned to 3 users, and 1 user has completed the program, then `TotalCompleted=1`. |
| `TotalDays` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Total days of the program. This value is derived from the latest day of all items in the program, including exercises, milestones, and the outcome. This field is a calculated field. For example, a program has Task A on day 1 and Task B on day 2. Since Task B has the latest days of all tasks, then `TotalDays=2`. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of the program. Possible values are:<br>• `Enablement`—A sales program in Lightning Experience.<br>• `PtnrEnablement`—A partner program in a supported Experience Cloud site. Available in API version 60.0 and later.<br>• `EmployeeServiceEnablement`—An employee enablement program in Employee Portal. Available in API version 63.0 and later. |

## Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

**EnablementProgramOwnerSharingRule (API version 60.0)**
Sharing rules are available for the object.

**EnablementProgramShare (API version 60.0)**
Sharing is available for the object.

# EnablementProgramDefinition

Represents Enablement program information in Metadata API. This object is available in API version 61.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

To access this object, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.

# Fields

| Field | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique name of the object in the API. The name:<br>• must be 40 characters or fewer<br>• must begin with a letter<br>• can contain only underscores and alphanumeric characters<br>• can't include spaces<br>• can't end with an underscore<br>• can't contain 2 consecutive underscores<br>In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. |
| `EnablementProgramId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The Enablement program to reference in Metadata API.<br>This field is a relationship field.<br>**Relationship Name**<br>EnablementProgram<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EnablementProgram |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Reserved for future use. Don't edit this field. |
| `MasterLabel` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Sort<br>**Description**<br>Label for this EnablementProgramDefinition value. This display value is the internal label that doesn't get translated. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that aren't Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.<br>Available in API version 62.0 and later. |

# EnblMeasureObjectDefinition

Represents the criteria for an object that tracks the job-related activity for an Enablement measure in an Enablement program. A separate EnblMeasureObjectDefinition is used for a measure's source object and each optional related object. This object is available in API version 56.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.

## Fields

| Field | Details |
|---|---|
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. The name:<br>• must be 40 characters or fewer<br>• must begin with a letter<br>• can contain only underscores and alphanumeric characters<br>• can't include spaces<br>• can't end with an underscore<br>• can't contain 2 consecutive underscores<br>In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. |
| `EnablementMeasureDefinitionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The measure that the EnblMeasureObjectDefinition applies to. This field is a relationship field.<br>**Relationship Name**<br>EnablementMeasureDefinition<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EnablementMeasureDefinition |
| `FilterLogic` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>An expression that determines how to evaluate the optional field filters for the object. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Reserved for future use. Don't edit this field. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Label for the EnblMeasureObjectDefinition value. This display value is the internal label that doesn't get translated. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that aren't Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.<br>Available in API version 62.0 and later. |
| `ObjectApiName` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The unique name in the API for the measure's source object or optional related object that the EnblMeasureObjectDefinition describes.<br>For example, if you're measuring the number of deals won for a specific product, this field on one EnblMeasureObjectDefinition references the API name of the Opportunity source object and this field on another EnblMeasureObjectDefinition references the API name of the Opportunity Product related object. |
| `SequenceNumber` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>A number that specifies the order of the EnblMeasureObjectDefinition, relative to other EnblMeasureObjectDefinition records under the same EnablementMeasureDefinition, starting at 1. |

## Usage

An EnablementMeasureDefinition can have multiple EnblMeasureObjectDefinition references, depending on the number of related objects in the measure. Consider an example measure that tracks activity on the Opportunity source object and the Account related object.

- The EnablementMeasureDefinition identifies the Opportunity source object.
- An EnblMeasureObjectDefinition specifies the criteria on the Opportunity source object.
- An EnblMeasureObjectDefinition specifies the criteria on the Account related object.

# EnblPgmTaskMeasureProgress

Represents a user's progress through the object and field requirements that an Enablement measure defines for an outcome or milestone in an Enablement program. This object is available in API version 61.0 and later.

**Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a supported Partner Relationship Management (PRM) add-on license.

## Fields

| Field | Details |
|---|---|
| `ContributingRecordCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of records that qualify for a user's progress towards completing an outcome or milestone. To qualify, the activity must meet the criteria that the corresponding Enablement measure defines for specific objects, fields, and field values. |
| `EnblProgramTaskMeasureId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the record that represents the connection between a specific Enablement measure and a specific milestone or outcome in an Enablement program.<br>This field is a relationship field.<br>**Relationship Name**<br>EnblProgramTaskMeasure<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EnblProgramTaskMeasure |
| `EnblProgramTaskProgressId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the record that represents the progress through the milestone or outcome.<br>This field is a relationship field.<br>**Relationship Name**<br>EnblProgramTaskProgress<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>EnblProgramTaskProgress (the master object) |
| `MeasureComputationResult` | **Type**<br>double<br>**Properties**<br>Filter, Sort<br>**Description**<br>The calculated progress through the measure's requirements for a milestone or outcome. For example, if the measure is the dollar amount of all closed opportunities, then the field value is measured in dollars.<br>For a composite milestone or a composite outcome, this value represents the progress through only one measure associated with the milestone or outcome. |

# EnblProgramSection

Represents an optional section in an Enablement program. A section can include other program items, such as milestones and exercises. This object is available in API version 60.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a supported Partner Relationship Management (PRM) add-on license.

# Fields

| Field | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique name of the object in the API. The name:<br>• must be 40 characters or fewer<br>• must begin with a letter<br>• can contain only underscores and alphanumeric characters<br>• can't include spaces<br>• can't end with an underscore<br>• can't contain 2 consecutive underscores<br>In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Available in API version 61.0 and later. |
| `EnablementProgramId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The Enablement program that contains the section. This field is a relationship field.<br>**Relationship Name**<br>EnablementProgram<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EnablementProgram |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The title of the section that's visible to users when they take the program. |
| `SequenceNumber` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Sort<br>**Description**<br>A number that specifies the order of the section, relative to other sections, starting at 0. |

# EnblProgramTaskDefinition

Represents an outcome, a milestone, or an exercise in an Enablement program. A program task is also known as a program item. This object is available in API version 60.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a supported Partner Relationship Management (PRM) add-on license.

## Fields

| Field | Details |
| --- | --- |
| `CompositeMilestoneType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of logic to use for evaluating the activity from two Enablement measures in a composite milestone.<br>Possible values are:<br>• `Addition`<br>• `Division`<br>• `Percentage` |

| Field | Details |
| --- | --- |
| | Available in API version 61.0 and later. |
| `CustomEnblPgmTaskSubCategoryId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the EnblProgramTaskSubCategory record associated with a custom exercise type. This field is required when the `TaskSubCategory` field's value is `CustomExercise`.<br>This field is a relationship field.<br>Available in API version 62.0 and later.<br>**Relationship Name**<br>CustomEnblPgmTaskSubCategory<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EnblProgramTaskSubCategory |
| `Day` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The day of the program when the item is due, relative to the program's start date. For example, if a user is expected to complete an exercise where they watch a product demo by day 2, this field's value is 2. For an outcome, this field specifies the number of days the full program takes. For example, if your program lasts 60 days, the value of this field is 60 for the outcome. This field's value contributes to the program's due date that users see when they take the program. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create<br>**Description**<br>A summary of the outcome, milestone, or exercise that's visible to users when they take the program. |
| `EnablementProgramId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the Enablement program that contains the outcome, milestone, or exercise. This field is a relationship field.<br>**Relationship Name**<br>EnablementProgram<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EnablementProgram |
| `EnblProgramSectionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of an optional program section that contains the milestone or exercise. This field is a relationship field.<br>**Relationship Name**<br>EnblProgramSection<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EnblProgramSection |
| `IsMilestoneAnOutcome` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the program item is the program's final outcome (`true`) or an incremental milestone (`false`). The default value is `false`. |
| `LearningItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the learning item record for the outcome, milestone, or exercise. This field is a relationship field.<br>**Relationship Name**<br>LearningItem |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>LearningItem |
| `MilestoneTarget` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The target value for a user to achieve to get credit for completing the outcome or milestone. The unit depends on the specific measure used with the outcome or milestone. For example, if the measure is the dollar amount of all closed opportunities, then the field value is measured in dollars. |
| `MinimumSampleSize` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of records to evaluate when calculating progress for an outcome or milestone that uses an average-based measure. Use this field with `MilestoneTarget`. For example, if you want users to achieve an average deal size of $50,000 after closing 4 deals, then this field's value is `4` and `MilestoneTarget` is `50000`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The title of the outcome, milestone, or exercise that's visible to users when they take the program. |
| `SequenceNumber` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>A number that specifies the order of the milestone or exercise, relative to other milestones or exercises that have the same due date in the program or in the same section, starting at 0. This number determines the order of items that users see for that day in the program. |

| Field | Details |
| --- | --- |
| `StandardCustomExerciseType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Reserved for future use. |
| `TaskCategory` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of program item. Possible values are:<br>• `Exercise`<br>• `Milestone`<br>`Milestone` is used for both the program's final outcome and incremental milestones. |
| `TaskSubCategory` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of exercise. This value determines the content associated with the exercise. For example, if the field value is `Video`, the exercise must reference video content from the Enablement workspace in the Digital Experiences app. The `LearningItemId` field specifies the reference to that video content. Possible values are:<br>• `ActionItem`<br>• `AudioRecording`<br>• `CustomExercise`—Available in API version 62.0 and later.<br>• `Document`<br>• `FeedbackRequest`<br>• `Other`<br>• `OtherExercise`<br>• `ScheduledEvent`<br>• `StandardCustomExercise`—Reserved for future use.<br>• `TextLesson`<br>• `Trailhead`<br>• `Video` |

# EnblProgramTaskMeasure

Represents the connection between an Enablement measure and a specific milestone or outcome in an Enablement program. This object is available in API version 61.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

To access this object, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.

## Fields

| Field | Details |
|---|---|
| `EnablementMeasureDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the Enablement measure to use with a milestone or outcome.<br>This field is a relationship field.<br>**Relationship Name**<br>EnablementMeasureDefinition<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EnablementMeasureDefinition |
| `EnblProgramTaskDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the outcome or milestone that uses the Enablement measure.<br>This field is a relationship field.<br>**Relationship Name**<br>EnblProgramTaskDefinition |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Master-detail<br>**Refers To**<br>EnblProgramTaskDefinition (the master object) |
| `SequenceNumber` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A number that specifies the order of the Enablement measure when multiple measures are used with one outcome or milestone, starting at 0. For example, in a composite milestone that uses the Percentage function, the measure that provides the numerator value is sequence 0 and the measure that provides the denominator value is sequence 1. |

# EnblProgramTaskProgress

Represents a user's progress towards completing an outcome, a milestone, or an exercise in an Enablement program. This object is available in API version 60.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a supported Partner Relationship Management (PRM) add-on license.

## Fields

| Field | Details |
| --- | --- |
| `CompletedDateTime` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date that the user completed the outcome, milestone, or exercise. |
| `CompletedOnDay` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number of days that the user took to complete the outcome, milestone, or exercise. |
| `CompletedPercent` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Percentage of the outcome, milestone, or exercise that's complete. |
| `ContributingRecordCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of records that qualify for a user's progress towards completing an outcome or milestone. To qualify, the activity must meet the criteria that the corresponding Enablement measure defines for specific objects, fields, and field values.<br>Available in API version 61.0 and later. |
| `DueDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The date the outcome, milestone, or exercise is due. |
| `EnblProgramTaskDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the outcome, milestone, or exercise definition. This field is a relationship field.<br>**Relationship Name**<br>EnblProgramTaskDefinition<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EnblProgramTaskDefinition |
| `IsCompleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Whether the outcome, milestone, or exercise is complete (`true`) or not (`false`). The default value is `false`. |
| `IsNoLongerTracking` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If the user hasn't completed the outcome or milestone and 30 days have elapsed since the program's due date, the value is `true`. Otherwise, the value is `false`. The default value is `false`. For details, see Completion Statuses in Enablement Analytics. |
| `LearningItemProgressId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the record that tracks the user's progress through the program that includes this outcome, milestone, or exercise. This field is a relationship field.<br>**Relationship Name**<br>LearningItemProgress<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>LearningItemProgress |
| `MilestoneComputationResult` | **Type**<br>double |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Derived from the associated EnblProgramTaskDefinition record. For example, if a milestone has a single measure A with a result of 5, this field's value is 5. |
| `ProgressStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Status of the outcome, milestone, or exercise progress. Possible values are:<br>• `Behind`<br>• `Completed Late`<br>• `Completed On Time`<br>• `No Longer Tracking`<br>• `Not Completed`<br>• `Overdue`<br>For details, see Completion Statuses in Enablement Analytics. |

# EnblProgramTaskSubCategory

Represents a custom exercise type that an Enablement admin adds to an Enablement program in Program Builder. A custom exercise type also requires a corresponding EnblProgramTaskDefinition record for Program Builder and corresponding LearningItem and LearningItemType records for when users take the exercise in the Guidance Center. This object is available in API version 62.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.

Important: Custom exercises aren't compatible with Partner Enablement programs.

# Fields

| Field | Details |
|---|---|
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. The name:<br>• must be 40 characters or fewer<br>• must begin with a letter<br>• can contain only underscores and alphanumeric characters<br>• can't include spaces<br>• can't end with an underscore<br>• can't contain 2 consecutive underscores<br>In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. |
| `Icon` | **Type**<br>textarea<br>**Properties**<br>Create, Update<br>**Description**<br>The icon to use for the custom exercise type in Program Builder.<br>Use the format ***`iconType:iconName`***, where the values correspond to icon categories and names from the Salesforce Lightning Design System.<br>• ***`iconType`*** is the type of icon, such as `standard` or `doctype`.<br>• ***`iconName`*** is the icon name, such as `flow` or `slide`.<br>For example, to use the Standard type Flow icon, this value is `standard:flow`. For details, see Implement Custom Exercise Types for Enablement Programs in the *Sales Programs and Partner Tracks with Enablement Developer Guide*. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Reserved for future use. Don't edit this field. |
| `LearningItemTypeId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the learning item type record that represents this custom exercise type in the Guidance Center when users take a program.<br>This field is a relationship field.<br>**Relationship Name**<br>LearningItemType<br>**Refers To**<br>LearningItemType |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Label for this EnblProgramTaskSubCategory value. This display value is the internal label that doesn't get translated. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that aren't Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |

# EngagementChannelType

Represents a channel through which a customer can be reached for communication. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `ContactPointType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The contact point type of the channel.<br>Possible values are:<br>• `Email`<br>• `MailingAddress`<br>• `Phone`<br>• `Social`<br>• `Web` |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. Name of the communication subscription consent record. |

| Field | Details |
| --- | --- |
| OwnerId | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the account owner associated with this customer.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**EngagementChannelTypeChangeEvent (API version 61.0)**
Change events are available for the object.

**EngagementChannelTypeFeed**
Feed tracking is available for the object.

**EngagementChannelTypeHistory**
History is available for tracked fields of the object.

**EngagementChannelTypeOwnerSharingRule**
Sharing rules are available for the object.

**EngagementChannelTypeShare**
Sharing is available for the object.

# EnhancedLetterhead

Represents an enhanced letterhead that can be associated with a Lightning email template that doesn't use the Salesforce Merge Language (SML). This object is available in API version 46.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

# Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the contents of the header and footer. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date and time when this enhanced letterhead was last used. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date and time when this enhanced letterhead was last viewed. |
| `LetterheadFooter` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The contents of the enhanced letterhead's footer. |
| `LetterheadHeader` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The contents of the enhanced letterhead's header. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of the enhanced letterhead, such as Standard Company Letterhead. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**EnhancedLetterheadFeed**
Feed tracking is available for the object.

# Entitlement

Represents the customer support an account or contact is eligible to receive. This object is available in API version 18.0 and later. Entitlements may be based on an asset, product, or service contract.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the Account associated with the entitlement. |
| `AssetId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Required. ID of the Asset associated with the entitlement. Must be a valid asset ID. |
| `AssetWarrantyID` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The identifier of the asset warranty record. Must be a valid asset warranty ID. AssetWarranty is available only with Field Service. |
| `BusinessHoursId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Required. ID of the BusinessHours associated with the entitlement. Must be a valid business hours ID. |
| `CasesPerEntitlement` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of cases the entitlement supports.<br>This field is only available if `IsPerIncident` is `true`. |
| `ContractLineItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Required. ID of the ContractLineItem associated with the entitlement. Must be a valid ID. |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The last day the entitlement is in effect. |
| `IsPerIncident` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Update<br>**Description**<br>Indicates whether the entitlement is limited to supporting a specific number of cases (`true`) or not (`false`). |

| Field | Details |
| --- | --- |
| `LastReferencedDate` | **Type**<br>date<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>date<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `LocationID` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the Location associated with the entitlement. Must be a valid location ID. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Required. Name of the entitlement. |
| `SvcApptBookingWindowsId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Nillable, Update<br>**Description**<br>The operating hours that the entitlement's work orders should respect. The label in the user interface is `Operating Hours`. Available only if Field Service is enabled. |
| `RemainingCases` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The number of cases the entitlement can support. This field decreases in value by one each time a case is created with the entitlement.<br>This field is only available if `IsPerIncident` is selected. |
| `RemainingWorkOrders` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of agreed work orders remaining to be created. |
| `ServiceContractId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>Required. ID of the ServiceContract associated with the entitlement. Must be a valid ID. |
| `SlaProcessId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>ID of the SlaProcess associated with the entitlement. This field is available in version 19.0 and later. |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The first date the entitlement is in effect. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Nillable |

| Field | Details |
| --- | --- |
| | **Description**<br>Status of the entitlement, such as `Expired`. |
| `SvcApptBookingWindows` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Nillable, Update<br>**Description**<br>The operating hours of the entitlement. This field is visible only if Field Service is enabled. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Update<br>**Description**<br>The type of entitlement, such as Web or phone support. |
| `WorkOrdersPerEntitlement` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Total number of work orders available for this entitlement. |

# Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**EntitlementChangeEvent (API version 44.0)**
Change events are available for the object.

**EntitlementFeed (API version 23.0)**
Feed tracking is available for the object.

**EntitlementHistory**
History is available for tracked fields of the object.

SEE ALSO:

EntitlementContact

SlaProcess

# EntitlementContact

Represents a Contact eligible to receive customer support via an Entitlement. This object is available in API version 18.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

## Fields

| Field | Details |
|---|---|
| `ContactId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the Contact associated with the entitlement. Must be a valid ID. |
| `EntitlementId` | **Type**<br>reference<br>**Properties**<br>Create, Filter<br>**Description**<br>Required. ID of the Entitlement associated with the entitlement contact. Must be a valid ID. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Nillable<br>**Description**<br>Required. Name of the entitlement contact. |

## Usage

Use to query and manage entitlement contacts.

SEE ALSO:

Entitlement

# EntitlementTemplate

Represents predefined terms of customer support for a product (Product2). This object is available in API version 18.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only Salesforce admins, users with access to the Case, Entitlement, or Work Order objects, and users with the View Setup and Configuration permission can access this object.

## Fields

| Field | Details |
|---|---|
| `BusinessHoursId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>ID of the BusinessHours associated with the entitlement template. Must be a valid business hours ID. |
| `CasesPerEntitlement` | **Type**<br>int<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The total number of cases the entitlement template supports.<br>This field is only available if `IsPerIncident` is `true`. |
| `IsPerIncident` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Update<br>**Description**<br>Indicates whether the entitlement template is limited to supporting a specific number of cases (`true`) or not (`false`). |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, idLookup, Update<br>**Description**<br>Required. Name of the entitlement template. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.<br>Available in version 34.0 and later. |
| `SlaProcessId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>ID of the SlaProcess associated with the entitlement template. This field is available in API version 19.0 and later. |

| Field | Details |
| --- | --- |
| `Term` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Update<br>**Description**<br>Number of days that the entitlement template is valid. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The type of entitlement template, such as Web or phone support. |

## Usage

Use this object to manage entitlement templates.

# EntityHistory

Represents historical information about an object's changed field values. This object is only available to users with the "View All Data" permission. This object is unavailable beginning with API version 8.0. Use the object-specific Historyobjects instead.

## Supported Calls

`describeSObjects()`, `getUpdated()`, `getDeleted()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

## Fields

| Field | Details |
| --- | --- |
| `FieldName` | **Type**<br>picklist<br>**Properties**<br>Filter, Restricted picklist<br>**Description**<br>ID of the standard or custom field. |

| Field | Details |
| --- | --- |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `NewValue` | **Type**<br>anyType<br>**Properties**<br>Nillable<br>**Description**<br>New value of the modified field. |
| `OldValue` | **Type**<br>anyType<br>**Properties**<br>Nillable<br>**Description**<br>Previous value of the modified field. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Filter<br>**Description**<br>ID of the object that contains the field. |
| `ParentSobjectType` | **Type**<br>picklist<br>**Properties**<br>Filter, Restricted picklist<br>**Description**<br>The kind of object that contains the field. |

# Usage

In API version 7.0 and later, this object works with Case, Contract, and Solution objects:

- This object is always read-only in the online application.

- When a field is modified, this object records both the old and new field values. There are exceptions to this behavior for certain fields such as long text areas and multi-select picklists. These fields appear in this object to indicate that the field was changed, but the old and new values are not recorded.
- Two rows are added to this object when foreign key fields change. One row contains the foreign key object names that display in the online application. For example, "Jane Doe" is recorded as the name of a contact. The other row contains the actual foreign key ID that is only returned to and visible from the API.
- Up to a total of twenty fields (standard or custom) can be tracked for a given object.
- In the online application, you can specify which fields are tracked or not tracked at any time.
- As soon as tracking is turned on for a field, all changes to its value are recorded in the database.
- Turning off tracking for a field stops further changes from being recorded, but the history data is not deleted.
- Be advised that deleting a custom field also permanently deletes the history data for that custom field.

# EntityMilestone

Represents a required step in a customer support process on a work order. The Salesforce user interface uses the term "object milestone. This object is available in API version 37.0 and later.

Note: Milestones on cases use the CaseMilestone object type.

## Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`

## Special Access Rules

- As of Summer '20 and later, only Salesforce admins, users with access to the Case, Entitlement, or Work Order objects, and users with the View Setup and Configuration permission can access this object.
- Entitlement management must be enabled.
- Work orders or Field Service must be enabled.

## Fields

| Field Name | Details |
|---|---|
| `ActualElapsedTimeInDays` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The number of days that it took to complete a milestone. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time) |

| Field Name | Details |
| --- | --- |
| | Note: To display this field, select **Enable stopped time and actual elapsed time** on the Entitlement Settings page and add the field to the object milestone page layout. |
| `ActualElapsedTimeInHrs` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The number of hours that it took to complete a milestone. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time)<br>Note: To display this field, select **Enable stopped time and actual elapsed time** on the Entitlement Settings page and add the field to the object milestone page layout. |
| `ActualElapsedTimeInMins` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of minutes that it took to complete a milestone. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time)<br>Note: To display this field, select **Enable stopped time and actual elapsed time** on the Entitlement Settings page and add the field to the object milestone page layout. |
| `BusinessHoursId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The business hours on the milestone. If business hours aren't specified, the entitlement process business hours are used. If business hours are also not specified on the entitlement process, the business hours on the record are used. |
| `CompletionDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>The date and time the milestone was completed. |

| Field Name | Details |
| --- | --- |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. |
| `ElapsedTimeInDays` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The number of days it took to complete a milestone, including time during which the milestone was stopped. Automatically calculated to include the business hours on the record. Elapsed time is calculated only after the Completion Date field is populated. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time). |
| `ElapsedTimeInHrs` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The number of hours it took to complete a milestone, including time during which the milestone was stopped. Automatically calculated to include the business hours on the record. Elapsed time is calculated only after the Completion Date field is populated. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time). |
| `ElapsedTimeInMins` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of minutes it took to complete a milestone, including time during which the milestone was stopped. Automatically calculated to include the business hours on the record. Elapsed time is calculated only after the Completion Date field is populated. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time). |
| `IsCompleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Green checkmark icon that indicates a milestone completion. |
| `IsViolated` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Red exclamation point icon that indicates a milestone violation. |
| `MilestoneTypeId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the milestone (for instance, First Response). |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>The name of the milestone. |
| `ParentEntityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the record—for example, a work order—that contains the milestone. |
| `SlaProcessId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The entitlement process associated with the milestone. |
| `StartDate` | **Type**<br>dateTime |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>The date and time that milestone tracking started. |
| `StoppedTimeInDays` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The number of days that an agent has been blocked from completing a milestone. For example, an agent may be waiting for a customer to reply with more information.<br>Note: To display this field, select **Enable stopped time and actual elapsed time** on the Entitlement Settings page and add the field to the object milestone page layout. |
| `StoppedTimeInHrs` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The number of hours that an agent has been blocked from completing a milestone. For example, an agent may be waiting for a customer to reply with more information.<br>Note: To display this field, select **Enable stopped time and actual elapsed time** on the Entitlement Settings page and add the field to the object milestone page layout. |
| `StoppedTimeInMins` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of minutes that an agent has been blocked from completing a milestone. For example, an agent may be waiting for a customer to reply with more information.<br>Note: To display this field, select **Enable stopped time and actual elapsed time** on the Entitlement Settings page and add the field to the object milestone page layout. |

| Field Name | Details |
| --- | --- |
| `TargetDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time to complete the milestone. |
| `TargetResponseInDays` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The number of days to complete the milestone. Automatically calculated to include the business hours on the record. |
| `TargetResponseInHrs` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The number of hours to complete the milestone. Automatically calculated to include the business hours on the record. |
| `TargetResponseInMins` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of minutes to complete the milestone. Automatically calculated to include the business hours on the record. |
| `TimeRemainingInDays` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The days that remain before a milestone violation. Automatically calculated to include the business hours on the record. |
| `TimeRemainingInHrs` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The hours that remain before a milestone violation. Automatically calculated to include the business hours on the record. |
| `TimeRemainingInMins` | **Type**<br>string<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>The minutes that remain before a milestone violation. Automatically calculated to include the business hours on the record. |
| `TimeSinceTargetInDays` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The days that have elapsed since a milestone violation. Automatically calculated to include the business hours on the record. |
| `TimeSinceTargetInHrs` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The hours that have elapsed since a milestone violation. Automatically calculated to include the business hours on the record. |
| `TimeSinceTargetInMins` | **Type**<br>string<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>The minutes that have elapsed since a milestone violation. Automatically calculated to include the business hours on the record. |

## Usage

When you create an entitlement process, you select its type based on the type of record that you want the process to run on: Case or Work Order. Processes created before Summer '16 use the Case type. When a Work Order entitlement process runs on a work order, the

resulting milestones on the work order are object milestones. Conversely, when a Case entitlement process runs on a case, the resulting milestones are case milestones, a separate standard object.

Tip: If an entitlement has an entitlement process associated with it, don't use the entitlement for multiple types of support records. An entitlement process works only on records that match the process's type. For example, when a Case entitlement process is applied to an entitlement, the process runs only on cases associated with that entitlement. If a work order is also associated with the entitlement, the process doesn't run on the work order. To ensure that the milestones you set up work as expected, associate a customer's work orders and cases with different entitlements.

Customize page layouts, validation rules, and more for object milestones from the Object Milestones node in Setup under Entitlement Management.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**EntityMilestoneFeed**
Feed tracking is available for the object.

**EntityMilestoneHistory**
History is available for tracked fields of the object.

# EntitySubscription

Represents a subscription for a user following a record or another user. This object is available in API version 34.0 and later.

A user can subscribe to a record or to another user. Changes to the record and updates from the users are displayed in the Chatter feed on the user's home page, which is a useful way to stay up-to-date with other users and with changes made to records in Salesforce. Feeds are available in API version 18.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Experience Cloud site where the user is following the record or user. This field is available in API version 26.0 and later, if digital experiences is enabled for your org. |
| `ParentId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the record or user which the user is following.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Accreditation, ActivationTarget, ActivationTrgtIntOrgAccess, ApiAnomalyEventStore, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskIndDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CodeSet, CollaborationGroup, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, ConsumptionSchedule, Contact, ContactEncounter, ContactEncounterParticipant, ContentDocument, Contract, CoverageBenefit, CoverageBenefitItem, CredentialStuffingEventStore, CreditMemo, CreditMemoLine, Dashboard, DashboardComponent, DataStream, DelegatedAccount, DocumentChecklistItem, EngagementChannelType, EnhancedLetterhead, EnrollmentEligibilityCriteria, Event, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, Identifier, Image, IndividualApplication, Invoice, InvoiceLine, Lead, Location, MarketSegment, MarketSegmentActivation, MemberPlan, MessagingSession, MktCalculatedInsight, OperatingHours, Opportunity, Order, OrderItem, OtherComponentTask, PartyConsent, PersonEducation, PersonLanguage, PersonLifeEvent, PersonName, PlanBenefit, PlanBenefitItem, Product2, ProductFulfillmentLocation, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, ProviderSearchSyncLog, PurchaserPlan, PurchaserPlanAssn, ReceivedDocument, Report, ReportAnomalyEventStore, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SessionHijackingEventStore, Shift, Shipment, ShipmentItem, Site, SkillRequirement, SocialPost, Solution, Task, ThreatDetectionFeedback, Topic, User, Visit, VisitedParty, Visitor, VoiceCall, |

| Field | Details |
| --- | --- |
| | VolunteerProject, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup, WorkTypeGroupMember |
| `SubscriberId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the user who is following the record or user.<br>This is a relationship field.<br>**Relationship Name**<br>Subscriber<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

## Usage

Consider this when following records and users:

- Users can only follow records that they can see.
- Users can see which records other users are following, unless they don't have access to the records.
- Administrators and users with the "Modify All Data" permission can configure a user to follow records that the user has read access to.
- Administrators and users with the "Modify All Data" permission can configure users to stop following records.
- Following topics is available in API version 29.0 and later. For this reason, a topic ID is now a supported value for the `ParentId` field.
- If you deactivate a user, any EntitySubscription where the user is associated with the ParentId or SubscriberId field, meaning all subscriptions both to and from the user, are soft deleted. If the user is reactivated, the subscriptions are restored. However, if you deactivate multiple users at once and these users follow each other, their subscriptions are hard deleted. In this case, the user-to-user EntitySubscription is deleted twice (double deleted). Such subscriptions can't be restored upon user reactivation.

When using `query()` with EntitySubscription,

- Note the following SOQL restriction. No SOQL limit if logged-in user has "View All Data" permission. If not, specify a LIMIT clause of 1,000 records or fewer.
- A query using a `WHERE` clause can only filter by fields on the EntitySubscription object.
- If user sharing is enabled and the querying user is not an administrator, a SOQL query must be constrained either by the `ParentId` or `SubscriberId`. Otherwise, the query behavior at run time is undefined, meaning the result set can be incomplete or inconsistent from invocation to invocation. For an unconstrained query, the sharing check limits imposed on a non-adminstrative user are likely to be exceeded before the query completes, because access checks are run against both parent and subject, for each row of the result set. We recommend using the Connect REST API to query EntitySubscription data instead of running a SOQL query.

- Users without the "View All Data" permission
  - Need read access on the object associated with the `ParentId` field to see which users are following records for the object.
  - Can use an `ORDER BY` clause in a query only to order by fields on the EntitySubscription object. For example, if the subscription relates to an Account record, the query can `ORDER BY ParentId`, but it can't `ORDER BY Account.Name`.
  - Don't always get all matching subscriptions when running a query. For these users, a query evaluates visibility criteria on a maximum of 500 records to reduce the prospect of long-running queries. If a user runs a query to see the CEO's subscriptions, it might scan a large number of records. The query only returns matches within the first 500 records scanned. It is possible that there are more subscriptions that are visible to the user, but they are not returned. To mitigate this, we recommend using a `WHERE` clause, if possible, to reduce the scope of the query.

## Sample—SOQL

The following SOQL query returns subscriptions for all the accounts that a subscriber is following that have more than 10 employees:

```
SELECT Id
FROM EntitySubscription
WHERE SubscriberId = '005U0000000Rg2CIAS'
AND ParentId IN (
  SELECT Id FROM Account
  WHERE NumberOfEmployees > 10
)
LIMIT 200
```

Custom Object__Feed

# EnvironmentHubMember

Represents a member organization in the Environment Hub. This object is available in API version 29.0 and later.

Note: You can create only 20 member orgs per day. If you need to create additional orgs, log a support case in the Salesforce Partner Community. For product, specify **Platform**. For topic, specify **AppExchange & Managed Packages**.

## Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`

## Fields

| Field Name | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Nillable, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>A brief description of this org. |
| `DisplayName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable,Sort, Update<br>**Description**<br>The name that the user has specified for this member org. |
| `EnvironmentHubId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The Org ID of this member's Environment Hub org. |
| `Instance` | **Type**<br>String<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of the instance where the Environment Hub member org resides. |
| `IsFedIdSsoMatchAllowed` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if single sign-on (SSO) has been enabled based on matching the Federation ID. The default is `false`. |
| `IsSandbox` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if the member org is a sandbox (`true`) or not (`false`). This field is available in API version 36.0 and later. |
| `MemberEntity` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The unique Org ID of the member org for this record. |
| `MemberType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of member org for this record. Possible values include `Branch Org`, `Patch Org`, `Release Org`, `Sandbox Org`, `Trialforce Management Org`, and `Trialforce Source Org`.<br>Note: Only one member type at a time is stored. Member type is determined according to this hierarchy: (1) Sandbox, (2) Release, (3) Trialforce Source Org (TSO), (4) Patch, (5) Branch, and (6) Trialforce Management Org (TMO). For example, if an org is both a sandbox and a TMO, the value of `MemberType` is `Sandbox Org`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the member org for this record. |
| `OrgEdition` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The org's edition, for example, Enterprise Edition or Unlimited Edition. |
| `OrgStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The licensing or creation status of this org. Possible values include `Active`, `Demo`, `Deleted`, `Free`, `Inactive`, and `Trial`. |

| Field Name | Details |
| --- | --- |
| `Origin` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The method by which this org was added to the Environment Hub. Possible values are `autoDiscovered`, `userAdded`, and `provisioned`. |
| `SSOMappedUsers` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of mapped users in this member org. This field is available in API version 36.0 and later. |
| `ServiceProviderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the service provider for this member org. This field is available in API version 36.0 and later. |
| `ShouldAddRelatedOrgs` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Status of the connection of related orgs to the hub. Possible values are `done`, `notRequested`, `pending`, and `requested`. |
| `ShouldEnableSSO` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If SSO should be enabled when this member org is added. The default is `false`. |
| `SsoStatus` | **Type**<br>picklist |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If SSO has been enabled for this org. Possible values are:<br>• `Enabled`—Single sign-on is enabled.<br>• `Disabled`—Single sign-on is disabled.<br>• `Pending`—Single sign-on is in the process of being enabled.<br>• `Failed`—Single sign-on enablement failed. Contact Salesforce support for assistance. |
| `SsoUsernameFormula` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The custom formula for matching users in the hub and member orgs. |

## Usage

Use this object to access and modify settings of member orgs in the Environment Hub.

# Event

Represents an event in the calendar. In the user interface, event and task records are collectively referred to as activities.

**Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

**Note:**

- An EventRelation object can't be related to a child event, and child events don't include the invitee related list.
- `query()`, `delete()`, and `update()` aren't allowed with events related to more than one contact in API versions 25.0 and earlier.
- `create()` and `update()` aren't available for read-only fields on Lightning Experience event series.
- `upsert()` and `undelete()` aren't supported for syncing changes made to events through the API using the feature Lightning Sync.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

# Fields

| Field | Details |
|---|---|
| `AcceptedEventInviteeIds` | **Type**<br>JunctionIdList<br>**Properties**<br>Create, Update<br>**Description**<br>A string array of contact or lead IDs who accepted this event. This `JunctionIdList` is linked to the `AcceptedEventRelation` child relationship.<br>Warning: Adding a `JunctionIdList` field name to the `fieldsToNull` property deletes all related junction records. This action can't be undone. |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Represents the ID of the related account. The `AccountId` is determined as follows.<br>If the value of `WhatId` is any of the following objects, then Salesforce uses that object's `AccountId`.<br>• Account<br>• Opportunity<br>• Contract<br>• Custom object that's a child of Account<br>If the value of the `WhatId` field is any other object, and the value of the `WhoId` field is a contact object, then Salesforce uses that contact's `AccountId`. If your org uses Shared Activities, Salesforce uses the `AccountId` of the primary contact.<br>Otherwise, Salesforce sets the value of the `AccountId` field to `null`.<br>For information on IDs, see ID Field Type.<br>This is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `ActivityDate` | **Type**<br>date |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Contains the event's due date if the `IsAllDayEvent` flag is set to `true`. Doesn't contain the event's latest due date if the `IsAllDayEvent` flag is set to `false`. When `IsAllDayEvent` flag is set to `true`, use `ActivityDateTime` or `StartDateTime`. This field is a date field with a timestamp that's always set to midnight in the Coordinated Universal Time (UTC) time zone. Don't attempt to alter the timestamp to account for time zone differences. Label is **Due Date Only**.<br>This field is required in API versions 12.0 and earlier if the `IsAllDayEvent` flag is set to `true`.<br>The value for this field and `StartDateTime` must match, or one of them must be `null`. |
| `ActivityDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Contains the event's due date if the `IsAllDayEvent` flag is set to `false`. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. Label is **Due Date Time**.<br>This field is required in API versions 12.0 and earlier if the `IsAllDayEvent` flag is set to `false`.<br>The value for this field and `StartDateTime` must match, or one of them must be `null`. |
| `ClientGuid` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The client globally unique identifier identifies the external API client used to create the event. Label is **Client GUID**. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. |

| Field | Details |
| --- | --- |
| `DeclinedEventInviteeIds` | **Type**<br>JunctionIdLIst<br>**Properties**<br>Create, Update<br>**Description**<br>A string array of contact, lead, or user IDs who declined this event. This `JunctionIdList` is linked to the `DeclinedEventRelation` child relationship.<br>Warning: Adding a `JunctionIdList` field name to the `fieldsToNull` property deletes all related junction records. This action can't be undone. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Contains a text description of the event. Limit: 32,000 characters. |
| `Division` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled. |
| `DurationInMinutes` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Contains the event length, in minutes. Even though this field represents a temporal value, it's an integer type—not a Date/Time type.<br>Required in API versions 12.0 and earlier if `IsAllDayEvent` is false.<br>In API versions 13.0 and later, this field is optional, depending on the following:<br>• If `IsAllDayEvent` is true, you can supply a value for either `DurationInMinutes` or `EndDateTime`. Supplying values in both fields is allowed if the values add up to the same amount of time. If both fields are `null`, the duration defaults to one day. |

| Field | Details |
| --- | --- |
| | • If `IsAllDayEvent` is false, a value must be supplied for either `DurationInMinutes` or `EndDateTime`. Supplying values in both fields is allowed if the values add up to the same amount of time.<br>If the multiday event feature is enabled, then API versions 13.0 and later support values greater than 1440 for the `DurationInMinutes` field. API versions 12.0 and earlier can't access event objects whose `DurationInMinutes` is greater than 1440. For more information, see **Multiday Events**.<br>Depending on your API version, errors with the `DurationInMinutes` and `EndDateTime` fields may appear in different places.<br>• Versions 38.0 and before—Errors always appear in the `DurationInMinutes` field.<br>• Versions 39.0 and later—If there's no value for the `DurationInMinutes` field, errors appear in the `EndDateTime` field. Otherwise, they appear in the `DurationInMinutes` field. |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Read-only. Available in API versions 46.0 and later. This field supplies the date value that appears in the EndDateTime field. This field is a date field with a timestamp that is always set to midnight in the Coordinated Universal Time (UTC) time zone. |
| `EndDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Available in API versions 13.0 and later. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate.<br>This field is optional, depending on the following:<br>• If `IsAllDayEvent` is true, you can supply a value for either `DurationInMinutes` or `EndDateTime`. Supplying values in both fields is allowed if the values add up to the same amount of time. If both fields are `null`, the duration defaults to one day.<br>• If `IsAllDayEvent` is false, a value must be supplied for either `DurationInMinutes` or `EndDateTime`. Supplying values in both fields is allowed if the values add up to the same amount of time.<br>Depending on your API version, errors with the `DurationInMinutes` and `EndDateTime` fields may appear in different places.<br>• Versions 38.0 and before—Errors always appear in the `DurationInMinutes` field. |

| Field | Details |
| --- | --- |
| | • Versions 39.0 and later—If there's no value for the `DurationInMinutes` field, errors appear in the `EndDateTime` field. Otherwise, they appear in the `DurationInMinutes` field. |
| `EventSubtype` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Provides standard subtypes to facilitate creating and searching for events. This field isn't updateable. |
| `EventWhoIds` | **Type**<br>JunctionIdList<br>**Properties**<br>Create, Update<br>**Description**<br>A string array of contact or lead IDs used to create many-to-many relationships with a shared event. `EventWhoIds` is available when the shared activities setting is enabled. The first contact or lead ID in the list becomes the primary `WhoId` if you don't specify a primary `WhoId`. If you set the `EventWhoIds` field to null, all entries in the list are deleted and the value of `WhoId` is added as the first entry.<br>Warning: Adding a `JunctionIdList` field name to the `fieldsToNull` property deletes all related junction records. This action can't be undone. |
| `GroupEventType` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Read-only. Available in API versions 19.0 and later.<br>The possible values are:<br>• `0` (Non–group event)—An event with no invitees.<br>• `1` (Group event)—An event with invitees.<br>• `2` (Proposed event)—An event created when a user requests a meeting with a contact, lead, or person account using the Salesforce user interface. When the user confirms the meeting, the proposed event becomes a group event. You can't create, edit, or delete proposed events in the API. This value is no longer used in API version 41.0 and later.<br>• `3` (IsRecurrence2 Series Pattern)—An event representing a template for a series recurrence pattern in Lightning Experience. You can't view, create, edit, or delete these events in the API. |

| Field | Details |
| --- | --- |
| `IsAllDayEvent` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the `ActivityDate` field (`true`) or the `ActivityDateTime` field (`false`) is used to define the date or time of the event. Label is **All-Day Event**. See also `DurationInMinutes` and `EndDateTime`. |
| `IsArchived` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the event has been archived. |
| `IsChild` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the event is a child of another event (`true`) or not (`false`).<br>For a child event, you can update `IsReminderSet` and `ReminderDateTime` only. You can query and delete a child event. If the objects related to the child event are different from those objects related to the parent event (this difference is possible if you use API version 25.0 or earlier) and one of the objects related to the child event is deleted, the objects related to the parent event are updated to ensure data integrity. |
| `IsClientManaged` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the event is managed by an external client. If the value of this field is false, the event isn't owned or managed by an external client, and Salesforce can be used to update it. If the value is true, Salesforce can be used to change only noncritical fields on the event. Label is **Is Client Managed**. |
| `IsGroupEvent` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the event is a group event—that is, whether it has invitees (`true`) or not (`false`). |
| `IsPrivate` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether users other than the creator of the event can (`false`) or can't (`true`) see the event details when viewing the event user's calendar. However, users with the View All Data or Modify All Data permission can see private events in reports and searches, or when viewing other users' calendars. Private events can't be associated with opportunities, accounts, cases, campaigns, contracts, leads, or contacts. Label is **Private**. |
| `IsRecurrence` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a Salesforce Classic event is scheduled to repeat itself (`true`) or only occurs one time (`false`). This field is read-only when updating records, but not when creating them. If this field value is `true`, then `RecurrenceEndDateOnly`, `RecurrenceStartDateTime`, `RecurrenceType`, and any recurrence fields associated with the given recurrence type must be populated. Label is **Create recurring series of events**. |
| `IsRecurrence2` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Read-only. This field is available in API version 44.0 and later. Indicates whether a Lightning Experience event is scheduled to repeat (`true`) or only occurs one time (`false`) . If this field value is true, then `Recurrence2PatternText` and `Recurrence2PatternVersion` must be populated. Label is **Repeat**. |
| `IsRecurrence2Exception` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Read-only. This field is available in API version 44.0 and later. Indicates whether an individual event in a Lightning Experience event series has a recurrence pattern that's different from the rest of the series, making it an exception. |
| `IsRecurrence2Exclusion` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Read-only. This field is available in API version 44.0 and later. Indicates when updates to a Lightning Experience event series recurrence pattern have been made, but affect future event occurrences only. For past event occurrences, `IsRecurrence2Exclusion` is set to `true`, excluding past occurrences from the series recurrence pattern. |
| `IsReminderSet` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the activity is a reminder (`true`) or not (`false`).<br>To set `IsReminderSet` to `true`, the `ReminderDateTime` field must contain a valid date and time to trigger the reminder. |
| `IsVisibleInSelfService` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether an event associated with an object can be viewed in the Customer Portal (`true`) or not (`false`). If your org has enabled digital experiences, events marked `IsVisibleInSelfService` are visible to any external user in the Experience Cloud site, as long as the user has access to the record the event was created on. This field is available when<br>• Customer Portal or partner portal is enabled<br>OR<br>• Digital experiences is enabled and you have Customer Portal or partner portal licenses |
| `Location` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Contains the location of the event. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Contains the ID of the user or public calendar who owns the event. Label is **Assigned to ID**.<br>This is a polymorphic relationship field.<br>Important: By default, the event is assigned to the user who created it. If the event is created by the Automated Process user, add a different value for OwnerId. The Automated Process user isn't a valid value for the OwnerId field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Calendar, User |
| `Recurrence2PatternStartDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Read-only. This field is available in API version 44.0 and later. Indicates the date and time when the Lightning Experience event series begins. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. |
| `Recurrence2PatternText` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable<br>**Description**<br>The RRULE that describes the recurrence pattern for Lightning Experience event series. Supports a subset of the RFC 5545 standard for internet calendaring and scheduling. See the Event Series section in this topic for usage examples. This field has a maximum length of 512 characters.<br>This field is available in API version 44.0 and later, and has the `Create` property in API version 52.0 and later. |

| Field | Details |
| --- | --- |
| `Recurrence2PatternTimeZone` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field is available in API version 44.0 and later. Indicates the time zone in which the Lightning Experience event series was created or updated. This field uses standard Java TimeZone IDs. For example, America/Los_Angeles. |
| `Recurrence2PatternVersion` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort,<br>**Description**<br>For internal use only. This field is available in API version 44.0 and later. |
| `RecurrenceActivityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Read-only. Not required on create. Contains the ID of the main record of the Salesforce Classic recurring event. Subsequent occurrences have the same value in this field. |
| `RecurrenceDayOfMonth` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates the day of the month on which the event repeats. |
| `RecurrenceDayOfWeekMask` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates the day or days of the week on which the Salesforce Classic recurring event repeats. This field contains a bitmask. The values are as follows:<br>• Sunday = `1`<br>• Monday = `2`<br>• Tuesday = `4` |

| Field | Details |
| --- | --- |
| | • Wednesday = `8`<br>• Thursday = `16`<br>• Friday = `32`<br>• Saturday = `64`<br>Multiple days are represented as the sum of their numerical values. For example, Tuesday and Thursday = 4 + 16 = 20. |
| `RecurrenceEndDateOnly` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates the last date on which the event repeats. For multiday Salesforce Classic recurring events, this date is the day on which the last occurrence starts. This field is a date field with a timestamp that is always set to midnight in the Coordinated Universal Time (UTC) time zone. Don't attempt to alter the timestamp to account for time zone differences. |
| `RecurrenceInstance` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the frequency of the Salesforce Classic event's recurrence. For example, `2nd` or `3rd`. |
| `RecurrenceInterval` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates the interval between Salesforce Classic recurring events. |
| `RecurrenceMonthOfYear` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the month in which the Salesforce Classic recurring event repeats. |
| `RecurrenceStartDateTime` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Indicates the date and time when the Salesforce Classic recurring event begins. The value must precede the `RecurrenceEndDateOnly`. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. |
| `RecurrenceTimeZoneSidKey` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the time zone associated with a Salesforce Classic recurring event. For example, "UTC-8:00" for Pacific Standard Time. |
| `RecurrenceType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates how often the Salesforce Classic event repeats. For example, daily, weekly, or every nth month (where "nth" is defined in `RecurrenceInstance`). |
| `ReminderDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Represents the time when the reminder is scheduled to fire, if `IsReminderSet` is set to `true`. If `IsReminderSet` is set to `false`, then the user may have deselected the reminder checkbox in the Salesforce user interface, or the reminder has already fired at the time indicated by the value. |
| `ShowAs` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates how this event appears when another user views the calendar: Busy, Out of Office, or Free. Label is **Show Time As**. |

| Field | Details |
| --- | --- |
| `StartDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Indicates the start date and time of the event. Available in versions 13.0 and later.<br>If the Event `IsAllDayEvent` flag is set to true (indicating that it's an all-day Event), then the event start date information is contained in the `StartDateTime` field. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate.<br>If the Event `IsAllDayEvent` flag is set to false (indicating that it isn't an all-day event), then the event start date information is contained in the `StartDateTime` field. The time portion is always transferred in the Coordinated Universal Time (UTC) time zone. You need to translate the time portion to or from a local time zone for the user or the application, as appropriate.<br>If this field has a value, then `ActivityDate` and `ActivityDateTime` must either be `null` or match the value of this field. |
| `Subject` | **Type**<br>combobox<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The subject line of the event, such as Call, Email, or Meeting. Limit: 255 characters. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates the event type, such as Call, Email, or Meeting. |
| `UndecidedEventInviteeIds` | **Type**<br>JunctionIdList<br>**Properties**<br>Create, Update<br>**Description**<br>A string array of contact, lead, or user IDs who are undecided about this event. This `JunctionIdList` is linked to the `UndecidedEventRelation` child relationship.<br>Warning: Adding a `JunctionIdList` field name to the `fieldsToNull` property deletes all related junction records. This action can't be undone. |

| Field | Details |
| --- | --- |
| `WhatCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Available if your organization has enabled Shared Activities. Represents the count of related EventRelations pertaining to the `WhatId`. The count of the `WhatId` must be *1* or less. |
| `WhatId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The `WhatId` represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. `WhatId`s are polymorphic. Polymorphic means a `WhatId` is equivalent to the ID of a related object. The label is `Related To ID`.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>What<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CommSubscriptionConsent, ContactEncounter, ContactEncounterParticipant, ContactRequest, Contract, CoverageBenefit, CoverageBenefitItem, CreditMemo, DelegatedAccount, DocumentChecklistItem, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, ListEmail, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PartyConsent, PersonLifeEvent, PlanBenefit, PlanBenefitItem, ProcessException, Product2, ProductItem, ProductRequest, ProductRequestLineItem, ProductTransfer, PurchaserPlan, |

| Field | Details |
| --- | --- |
| | ReceivedDocument, ResourceAbsence, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, Shift, Shipment, ShipmentItem, Solution, Visit, VisitedParty, VolunteerProject, WorkOrder, WorkOrderLineItem |
| `WhoCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Available to organizations that have Shared Activities enabled. Represents the count of related EventRelations pertaining to the `WhoId`. |
| `WhoId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The WhoId represents a human such as a lead or a contact. WhoIds are polymorphic. Polymorphic means a WhoId is equivalent to a contact's ID or a lead's ID. The label is `Name ID`.<br>If Shared Activities is enabled, the value of this field is the ID of the related lead or primary contact. If you add, update, or remove the WhoId field, you might encounter problems with triggers, workflows, and data validation rules that are associated with the record. The label is `Name ID`.<br>If the `JunctionIdList` field is used, all `WhoId`s are included in the relationship list.<br>Beginning in API version 37.0, if the contact or lead ID in the `WhoId` field isn't in the `EventWhoIds` list, no error occurs and the ID is added to the `EventWhoIds` as the primary `WhoId`. If `WhoId` is set to null, an arbitrary ID from the existing `EventWhoIds` list is promoted to the primary position.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Who<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact, Lead |

# Usage

Use Event to manage calendar appointments.

**Querying and Filtering Events**

Queries on events are denied before they time out if they involve amounts of data that are deemed too large. In such cases, the exception code `OPERATION_TOO_LARGE` is returned. If you receive `OPERATION_TOO_LARGE`, refactor your query to return or scan a smaller amount of data.

When querying for events with a specific due date, you must filter on both the `ActivityDateTimeand` and `ActivityDate` fields. For example to find all events with a due date of February 14, 2003, you need two filters:

- One filter with the `ActivityDate` field equal to the Coordinated Universal Time (UTC) time zone on February 14, 2003.
- One filter with the `ActivityDate` field greater than or equal to midnight on February 14, 2003 in the user's local time zone AND less than or equal to midnight on February 15, 2003 in the user's local time zone.

Alternatively, in API version 13.0 and later, you can find events with a specific due date by filtering on `StartDateTime`. For example, to find all events with a due date of February 14, 2003, filter with the `StartDateTime` greater than or equal to midnight on February 14, 2003 in the user's local time zone AND less than or equal to midnight on February 15, 2003 in the user's local time zone.

The `EventId` field of an EventRelation object always points to the master record. An invitee on a group event can query the EventRelation object to view the master record.

**Multiday Events**

- Multiday events are available in API version 13.0 and later. Also, in earlier versions SOQL queries don't return multiday events.
- Multiday events are enabled through the user interface from Setup by entering *`Activity Settings`* in the `Quick Find` box, then selecting **Activity Settings**.
- If the multiday event feature is enabled, then API versions 13.0 and later support values greater than 1440 for the `DurationInMinutes` field. API versions 12.0 and earlier can't access event objects whose `DurationInMinutes` is greater than 1440.
- Multiday events can't exceed 14 days.

**Event Series and Recurring Events**

In Lightning Experience, events with multiple occurrences are called event series, and are indicated when the `IsRecurrence2` field is set to `true`. In Salesforce Classic, events with multiple occurrences are called recurring events, and are indicated when the `IsRecurrence` field is set to `true`. Both fields can't be set to true for the same event.

- Lightning Experience event series are available in API version 44.0 and later as read-only fields. Recurrence patterns, specified by the Recurrence2PatternText field, are creatable in API version 52.0 and later. Salesforce Classic recurring events are available in API version 7.0 and later. In earlier versions, SOQL queries don't return any Lightning Experience event series.
- After an event is created, you can't change the values of `IsRecurrence2` or `IsRecurrence` from `true` to `false` or vice versa.
- You can't set fields associated with `IsRecurrence2` for events where `IsRecurrence` is set to `true`, or vice versa.
- For Lightning Experience event series where `IsRecurrence2` is `true`, if you'd like to delete a single or all remaining events, use the REST API call. For Salesforce Classic recurring events where `IsRecurrence` is `true`, all past and future events in the series are removed when you delete the recurring event series through the API. However, when you delete the recurring event series through the user interface, only future occurrences are removed.
- For Lightning Experience event series in API version 58.0 and later, when you change a future event, events in the entire series also change. When you change a past event, `IsRecurrence2Exception` is set to `true` and only that past event changes.
- When creating a Salesforce Classic recurring event series, the duration of the event must be 24 hours or less. When the Salesforce Classic recurring event series is created, you can extend the length of individual occurrences beyond 24 hours if Multiday events are enabled; see **Multiday Events**.
- For Salesforce Classic recurring events, `RecurrenceStartDateTime`, `RecurrenceEndDateOnly`, `RecurrenceType`, and any properties associated with the given recurrence type (see the Recurrence Field Usage for Salesforce Classic Recurring Events table) must be populated.

- When updating a Salesforce Classic recurring event series, it's not possible to update the `EventRelation` for the event series object and the EventRelation for the series object occurrences at the same time.
- Lightning Experience event series have no series ID, so it's not possible to locate other occurrences in the series. In Salesforce Classic recurring events, you can use `RecurrenceActivityId` to locate other occurrences.
- For both Lightning Experience event series and Salesforce Classic recurring events, when a series repeats every day, month, or year, you can only schedule occurrences one time per day, month, or year. The week option lets you schedule occurrences multiple days per week.

Limits for Lightning Experience event series and limits for Salesforce Classic recurring events also apply.

**Lightning Experience Event Series and Recurring Events**

Use the `Recurrence2PatternText` field to specify the recurrence pattern for Lightning Experience event series. These recurrence patterns, called reference rules or RRULES, support a subset of the RFC 5545 standards. This table includes common RRULE examples.

| Recurrence Pattern | RRULE Example |
|---|---|
| Every day for five days | `RRULE:FREQ=DAILY;INTERVAL=1;COUNT=5` |
| Every Monday, Tuesday, Wednesday, Thursday, and Friday with no end date | `RRULE:FREQ=WEEKLY;INTERVAL=1;BYDAY=MO,TU,WE,TH,FR` |
| Every two weeks on Monday and Friday for 10 occurrences | `RRULE:FREQ=WEEKLY;INTERVAL=2;BYDAY=MO,FR;COUNT=10` |
| Monthly on the first day of the month until January 1, 2020 | `RRULE:FREQ=MONTHLY;INTERVAL=1;BYMONTHDAY=1;UNTIL=20200101T100000Z` |
| Yearly on July 4th for three years (in this example, specify the date using StartDateTime) | `RRULE:FREQ=YEARLY;INTERVAL=1;BYMONTH=7;BYMONTHDAY=4;COUNT=3` |
| Daily until January 1, 2022 with no end date | `RRULE:FREQ=DAILY;UNTIL=20220101T000000Z` |
| Every third Friday of the month with no end date | `RRULE:FREQ=MONTHLY;BYSETPOS=3;BYDAY=FR` |

The RRULE defined by `Recurrence2PatternText` supports a subset of the RFC 5545 standard for internet calendaring and scheduling. Supported RRULE parts include FREQ, BYMONTH, BYMONTHDAY, BYDAY, WKST, BYSETPOS, INTERVAL, UNTIL, and COUNT.

When the event record is saved, the RRULE might be modified to follow the required format:

- The RRULE parts are placed in the following order: FREQ, BYMONTH, BYMONTHDAY, BYDAY, WKST, BYSETPOS, INTERVAL, UNTIL, and COUNT.
- Any missing default values are inserted. For example, if the RRULE doesn't include INTERVAL, then `INTERVAL=1` is added.
- The RRULE is prefaced with `RRULE:` if that preface is missing.

| RRULE Part | Supported RFC 5545 Implementation |
|---|---|
| FREQ | Required. Indicates the type of recurrence rule. Allowed values are:<br>• `DAILY`—supported parts include FREQ, INTERVAL, UNTIL, and COUNT.<br>• `WEEKLY`—supported parts include INTERVAL, UNTIL, COUNT, BYDAY, and WKST. BYDAY is required, but can't be preceded by a number.<br>For example, to indicate weekly on Tuesday and Thursday until September 1, 2023, use `RRULE:FREQ=WEEKLY;UNTIL=20230901T000000Z;BYDAY=TU,TH`<br>• `MONTHLY`—supported patterns include: |

| RRULE Part | Supported RFC 5545 Implementation |
| --- | --- |
| | – BYMONTHDAY<br>For example, to indicate monthly on the third day of the month use: `RRULE:FREQ=MONTHLY;BYMONTHDAY=3`<br>– BYDAY and BYSETPOS<br>For example, to indicate the last weekday of the month, use `RRULE:FREQ=MONTHLY;BYDAY=MO,TU,WE,TH,FR;BYSETPOS=-1`<br>– BYDAY, where the BYDAY values are specified with a numeric value<br>For example, to indicate monthly on the first Friday for 10 occurrences, use `RRULE:FREQ=MONTHLY;COUNT=10;BYDAY=1FR`<br>• `YEARLY`—supported patterns include:<br>– BYMONTH, BYDAY, and BYSETPOS<br>For example, to indicate every year on the second Friday of January, use `RRULE:FREQ=YEARLY;BYMONTH=1;BYDAY=FR;BYSETPOS=2`<br>– BYMONTH and BYMONTHDAY<br>For example, to indicate every year on October 31, use `RRULE:FREQ=YEARLY;BYMONTH=10;BYMONTHDAY=31`<br>For example, to create a maintenance pattern such as twice in May, and September on 7th and 15th; and one time in June/July/August on the 1st, use two RRULEs: `RRULE: FREQ=MONTHLY; BYMONTH=5,9; BYMONTHDAY=7, 15 RRULE:FREQ=MONTHLY; BYMONTH=6,7,8; BYMONTHDAY=1` |
| BYMONTH | The month. Valid values are `1` to `12`. |
| BYMONTHDAY | The day of the month. Valid values are `1` to `31`. If BYMONTHDAY is `31` and the month has fewer than 31 days, the event is created on the last day of the month. |
| BYDAY | A comma-separated list of days of the week. Valid values are `SU`, `MO`, `TU`, `WE`, `TH`, `FR`, `SA`. For RRULES with yearly or monthly frequency, BYDAY must be one of:<br>• a single day<br>• weekend days<br>• weekdays<br>• every day of the week<br>Each BYDAY value can be preceded by an integer that indicates the nth occurrence of a specific day within the monthly or yearly RRULE. Allowed values are `-1`, `1`, `2`, `3`, and `4`. You can't use different numbers in the BYDAY values. For example, this RRULE isn't supported: `RRULE:FREQ=MONTHLY;INTERVAL=2;COUNT=10;BYDAY=1SU,-1SU` If BYDAY values are prefaced with a number, the RRULE can't include BYSETPOS. |
| WKST | Specifies the day on which the workweek starts. Valid values are `MO`, `TU`, `WE`, `TH`, `FR`, `SA`, and `SU`. Default value is based on the user's locale. |

| RRULE Part | Supported RFC 5545 Implementation |
|---|---|
| BYSETPOS | A comma-separated list of values that correspond to the nth occurrence within the set of recurrence instances specified by the rule. Valid values are `-1`, `1`, `2`, `3`, or `4`. Default value is `1`.<br>For example, to indicate the last weekday of the month, use:<br>`RRULE:FREQ=MONTHLY;BYDAY=MO,TU,WE,TH,FR;BYSETPOS=-1` |
| INTERVAL | The repetition interval. Valid values are:<br>• an integer between `1` and `999` if FREQ=DAILY<br>• an integer between `1` and `99` if FREQ=WEEKLY or FREQ=MONTHLY<br>• `1` if FREQ=YEARLY<br>Default value is `1`. |
| UNTIL | Specifies the datetime in UTC format when the recurrence rule stops. The supported format is yyyyMMddTHHmmssZ, for example: 20210419T083000Z.<br>An RRULE can't contain both UNTIL and COUNT. A recurring event without either UNTIL or COUNT repeats indefinitely. |
| COUNT | The number of occurrences. Allowed values are 1 to 999.<br>An RRULE can't contain both UNTIL and COUNT. A recurring event without either UNTIL or COUNT repeats indefinitely. |
| BYWEEKNO | Specifies a comma-separated list of values that specify weeks of the year. Valid values are:<br>• `1` to `53`<br>• `-53` to `-1`<br>For example, to indicate specific weeks in a year, use: `RRULE: BYWEEKNO=20, -20`.<br>This rule part can't be used when the FREQ rule part is set to anything other than YEARLY. For example, 3 represents the third week of the year.<br>Note: Assuming a Monday week start, week 53 can only occur when Thursday is January 1 or if it's a leap year and Wednesday is January 1. |
| BYYEARDAY | Specifies a comma-separated list of values that specify days of the year. Valid values are:<br>• `1` to `366`<br>• `-366` to `-1`<br>For example, to indicate specific days in a year, use: `RRULE:BYYEARDAY=1,100,200`; or, `RRULE:BYYEARDAY=1,-2`. |

### Salesforce Classic Event Series and Recurring Events

This table describes the usage of recurrence fields for Salesforce Classic recurring events. Each recurrence type must have all of its properties set. All unused properties must be set to null.

| RecurrenceType Value | Properties | Example Pattern |
|---|---|---|
| RecursDaily | RecurrenceInterval | Every second day |

| RecurrenceType Value | Properties | Example Pattern |
|---|---|---|
| RecursEveryWeekday | RecurrenceDayOfWeekMask | Every weekday - can't be Saturday or Sunday |
| RecursMonthly | RecurrenceDayOfMonth<br>RecurrenceInterval | Every second month, on the third day of the month |
| RecursMonthlyNth | RecurrenceInterval RecurrenceInstance<br>RecurrenceDayOfWeekMask | Every second month, on the last Friday of the month |
| RecursWeekly | RecurrenceInterval<br>RecurrenceDayOfWeekMask | Every three weeks on Wednesday and Friday |
| RecursYearly | RecurrenceDayOfMonth<br>RecurrenceMonthOfYear | Every March on the 26th day of the month |
| RecursYearlyNth | RecurrenceDayOfWeekMask<br>RecurrenceInstanceRecurrenceMonthOfYear | The first Saturday in every October |

**Attendees, Invitees, and Resources**

The field `GroupEventType` indicates that event participants are included on an event. You can add a resource to an event only when the resource is available. The only attendance status that can be assigned to resources is Accepted. Events can't be saved when resources you've added aren't available.

**JunctionIdList**

To create an event using `JunctionIdList`, IDs are pulled from the related contacts and both the event and the `EventRelation` records are created in one API call. If the `EventRelation` fails, the event is rolled back because it's all done in a single API call.

```
public void createEventNew(Contact[] contacts) {
 String[] contactIds = new String[contacts.size()];
 for (int i = 0; i < contacts.size(); i++) {
  contactIds[i] = contacts[i].getID();
 }
 Event event = new Event();
 event.setSubject("New Event");
 event.setEventWhoIds(contactIds);
 SaveResult[] results = null;
 try {
  results = connection.create(new Event[] {
   task
  });
 } catch (ConnectionException ce) {
  ce.printStackTrace();
 }
}
```

**Syncing Events with Lightning Sync**

Attendee statuses (Accepted or Maybe, Declined, or No Response) sync from Microsoft® Exchange or Google to Salesforce, but not from Salesforce to Exchange or Google. Be wary of creating API flows that update attendee status in Salesforce for users set up to sync both ways. Eventually the original Exchange or Google status overrides the update made in Salesforce.

**Shared Field-Level Security for Event and Task Objects**

Metadata deployments for the Event object must include the field-level security for the Task object. Shared field-level security prevents each object from changing the field-level security of the associated object.

Metadata deployments that include field-level security for only one of either the Event or Task objects can cause field-level security changes to the other object that aren't reflected in the metadata.

- If field-level security is enabled for one object, then field-level security is enabled for both objects.
- If field-level security is disabled for one object, then it's disabled for both objects.

Note: A missing entry in the metadata is treated as field-level security being disabled.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**EventChangeEvent (API version 44.0)**
Change events are available for the object.

**EventFeed (API version 20.0)**
Feed tracking is available for the object.

SEE ALSO:

Overview of Salesforce Objects and Fields

# EventLogFile

Represents event log files for event monitoring. The event monitoring product gathers information about your Salesforce org's operational events, which you can use to analyze usage trends and user behavior. This object is available in API version 32.0 and later. The `Interval` and `Sequence` fields are available only in API version 37.0 and later.

You can interact with event monitoring data by querying fields on the EventLogFile object (like `EventType` and `LogDate`). `CreatedDate` tracks when the log file was generated. To view the underlying event data, query the `LogFile` field. The `EventType` determines the schema of this field. Log files don't count towards your org's data or file storage allocations. For more information, see EventLogFile Supported Event Types.

Composite requests that include multiple API requests in a single call aren't supported. In the event of a composite request, EventLogFile captures only the parent request.

Note: Log data schema for each `EventType` can change. With each new release, use the `LogFileFieldNames` and `LogFileFieldTypes` fields to validate the schema changes. In the unlikely case in which no log files are generated for 24 hours, contact Salesforce Customer Support.

Tip: Debug and troubleshoot performance issues by correlating logs using the customizable Request Identifier field, available in all Event Monitoring logs. To correlate logs pertaining to an API request call, set the `X-SFDC-REQUEST-ID` header with a 32 character OTEL compatible TraceId or a 22 -character alphanumeric Id. Using SOQL, search for the Event Monitoring logs with this RequestId to correlate the logs and see the unit of work performed as a part of the API transaction.

For details about event monitoring, see the Trailhead Event Monitoring module.

## Special Access Rules

Accessing this object requires View Event Log Files and API Enabled user permissions. Users with View All Data permission can view event log files.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Note: You can only delete event log file data if you enable the **Delete event monitoring data** setting in Setup.

## Fields

| Field | Details |
|---|---|
| `ApiVersion` | **Type**<br>double<br>**Properties**<br>Filter, Sort<br>**Description**<br>The specific API version for this log file. This field is available in API version 30.0 and later. |
| `EventType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The event type—API, Login, Report, URI, and so forth. Use to determine which files were generated for your org. For the corresponding `LogFile` schema, see EventLogFile Supported Event Types. |
| `Interval` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The generation schedule for the event log file. Possible values are:<br>• `Daily`<br>• `Hourly`<br>This field is available in API version 37.0 and later. This field is available in API version 37.0 and later to customers with hourly Event Log Files. |
| `LogDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Sort<br>**Description**<br>The date and time of the log file's creation. For daily event log files, tracks usage activity for a 24-hour period, from 12:00 a.m. to 11:59 p.m. UTC time. For hourly event log files, indicates the hour in which the log file was generated. For example, for events that occur between 11:00 AM and 12:00 PM on 3/7/2016, this field's value is 2016-03-07T11:00:00.000Z.<br>Note: For hourly event log files, we recommend using `CreatedDate` to query the date and time that an EventLogFile object was created. |
| `LogFile` | **Type**<br>base64<br>**Description**<br>Encoded file data in `.csv` format. The `EventType` field defines the schema for this data. |
| `LogFileContentType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The content type of the log file; always `.csv`. |
| `LogFileFieldNames` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The ordered list of fields in the log file data.<br>Note: `LogFileFieldNames` and `LogFileFieldTypes` are specific to each `EventType`. For example, `LogFileFieldNames` has a different value for an API `EventType` and a Login `EventType`. |
| `LogFileFieldTypes` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The ordered list of field types in the log file data (`String`, `Id`, and so forth).<br>Note: `LogFileFieldNames` and `LogFileFieldTypes` are specific to each `EventType`. For example, `LogFileFieldTypes` has a different value for an API `EventType` and a Login `EventType`. |

| Field | Details |
| --- | --- |
| `LogFileLength` | **Type**<br>double<br>**Properties**<br>Filter, Sort<br>**Description**<br>The log file length in bytes. You can use this field to plan storage needs for your log files. |
| `Sequence` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number for the portion of the event log file data captured in an hour. For 24-hour event log file generation, the value of this field is 0. For hourly event log files, the initial value is 1. This value increases by 1 when events are added in the same hour after the latest event log file is created. The value resets to 1 in the subsequent hour. For example, you have activity between 2:00 and 3:00 PM. Two-log files are generated that contain the event log data for that hour, with `Sequence` values of 1 and 2. For event log data that occurs at 3:01 PM, the `Sequence` value resets to 1. This field is available in API version 37.0 and later. |

EventLogFile Supported Event Types

The `EventType` field in the EventLogFile object supports these events. Some common fields, such as `CPU_TIME` and `RUN_TIME`, can have null or zero values depending on how the events are generated for a given feature. Sometimes, three quotation marks appear around event data containing special characters in the CSV file. The third quotation mark is necessary for tools and applications to parse the field data at the correct field value boundary.

# EventLogFile Supported Event Types

The `EventType` field in the EventLogFile object supports these events. Some common fields, such as `CPU_TIME` and `RUN_TIME`, can have null or zero values depending on how the events are generated for a given feature. Sometimes, three quotation marks appear around event data containing special characters in the CSV file. The third quotation mark is necessary for tools and applications to parse the field data at the correct field value boundary.

We generate some text messages in quotes, as in "example message". To preserve the original value, we add two more quotes and the final value looks like """example message""" in the CSV file.

Note: The Apex Unexpected Exception, API Total Usage, CORS Violation Record, CSP Violation, Hostname Redirects, Insecure External Assets, Login, and Logout events are available in supported Salesforce editions at no additional cost. To purchase the remaining event types, contact Salesforce.

Apex Callout Event Type

Apex Callout events contain details about callouts (external requests) during Apex code execution.

Apex Execution Event Type

Apex Execution events contain details about Apex classes that are used.

### Apex REST API Event Type

Apex REST API events capture information about every Apex REST API request.

### Apex SOAP Event Type

Apex SOAP events contain details about custom SOAP web service calls.

### Apex Trigger Event Type

Apex Trigger events contain details about triggers that fire in an organization.

### Apex Unexpected Exception Event Type

The Apex Unexpected Exception event type captures information about unexpected exceptions in Apex code execution. This event type is available in the EventLogFile object in API version 45.0 and later. Unexpected exception information is not captured in the EventLogFile object with `@IsTest` and anonymous Apex.

### API Total Usage

API Total usage events contain details about Platform SOAP API, Platform REST API, and Bulk API requests.

### Asynchronous Report Run Event Type

Asynchronous Report Run events are created for reporting requests that are scheduled. This category includes dashboard refreshes, asynchronous reports, schedule reports, and analytics snapshots.

### Aura Request Event Type

Aura Request events contain details of requests to Apex methods from Aura and Lightning web components. For example, you can benchmark request time or identify the URI of an unsuccessful request.

### Blocked Redirect Event Type

Blocked redirect events capture information about blocked redirections from Salesforce to untrusted and malformed URLs. The Blocked Redirect event type is available in the EventLogFile object in API version 63.0 and later.

### Bulk API Event Type

Bulk API events contain details about Bulk API requests.

### Bulk API Request Event Type

The Bulk API request event captures when Bulk API requests are received to create a job, update a job, create a batch, update a batch, and when a job completes.

### Bulk API 2.0 Event Type

BulkApi2 events contain details about Bulk API 2.0 requests.

### Change Set Operation Event Type

Change Set Operation events contain information from change set migrations.

### Composite API Event Type

Composite API events contain details about composite API requests. One composite API event is generated for each composite API and composite graph API call. This event type is available in API version 64.0 and later.

### Composite API Subrequest Event Type

Composite API subrequest events contain details about composite API subrequests. One composite API subrequest event is generated for each subrequest or collated set of subrequests. For example, if a composite API request contains five subrequests and four of the subrequests are collated, then two composite API subrequest events are generated. This example also applies to composite graph API. This event type is available in API version 64.0 and later.

### Concurrent Long-Running Apex Limit Event Type

Concurrent Long-Running Apex Limit events contain information about long-running concurrent Apex requests in your org that Salesforce terminated after reaching your org's concurrency limit. Requests with an established Apex context that execute for 5 seconds are counted towards your org's limit of concurrent long-running requests. (Asynchronous requests don't count towards the limit.) When the long-running requests exceed the org default limit, all new Apex invocation requests are denied. This event type is available in the EventLogFile object in API version 45.0 and later.

### Console Event Type

Console events contain information about the performance and use of Salesforce Consoles. The Console events are logged whenever a Console tab is opened with a sidebar component. Outside of that, when Console tabs are opened, a regular view record detail event is served just like in Salesforce Classic.

### Content Distribution Event Type

Content Distribution events contain information about content distributions and deliveries to users.

### Content Document Link Event Type

Content Document Link events contain sharing information for content documents.

### Content Transfer Event Type

Content Transfer events contain information about content transfer events, such as downloads, uploads, and previews. This information includes events performed on files and attachments to records.

### Continuation Callout Summary Event Type

Continuation Callout Summary events contain information about all of the asynchronous callouts performed during a transaction, their response status codes, execution times, and URL endpoint destinations. This event type is available in the EventLogFile object in API version 43.0 and later.

### CORS Violation Record Event Type

CORS Violation Record events capture information about Cross-Origin Resource Sharing (CORS) violations. Cross-origin requests to Lightning apps are blocked unless the request comes from a URL listed in your CORS allowlist.

### CSP Violation Event Type

CSP violation events capture details about blocked resource requests from Lightning Experience pages based on your content security policy (CSP). The CSP Violation event type is available in the EventLogFile object in API version 63.0 and later.

### Dashboard Event Type

Dashboard events contain details about report requests from dashboards. These requests are triggered by dashboard refreshes, subscriptions, and filter changes.

### Database Save Event Type

Database Save events track when records are created, updated, or deleted. This object is available in API version 63.0 and later.

### Document Attachment Downloads Event Type

Document Attachment Downloads events contain details of document and attachment downloads.

### External Cross-Org Callout Event Type

External Cross-Org Callout events represent external data callouts via the cross-org adapter for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

### External Custom Apex Callout Event Type

External Custom Apex Callout events represent external data callouts via custom adapters for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

### External Data Source Callout Event Type

External Data Source Callout events represent external data callouts via the Salesforce Connect adapters for Amazon DynamoDB and Amazon Athena. This event type is available in the EventLogFile object in API version 56.0 and later.

### External OData Callout Event Type

External OData Callout events represent external data callouts via the OData 2.0 and OData 4.0 adapters for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

### Flow Execution Event Type

Flow Execution events contain information about flows that were executed including details such as total execution time, number of interviews, and number of errors.

### Group Membership Event Type

Group Membership events capture details about changes to public group and queue membership, such as when members are added to or removed from the public group or queue.

### Hostname Redirects Event Type

Hostname Redirect events contain details about blocked and successful redirections for your previous My Domain hostnames. The Hostname Redirects event type is available in the EventLogFile object in API version 56.0 and later.

### Insecure External Assets Event Type

Insecure External Assets events contain information about external assets. External assets include images or videos accessed by users over an insecure HTTP protocol. The event lists all your Salesforce pages that contain assets hosted insecurely on third-party sites that users loaded with a Chrome, Firefox, Microsoft Edge, or Safari browser. The `INSECURE_URI` field contains the URI being used to load the asset insecurely. The Insecure External Assets event type is available in the EventLogFile object in API version 42.0 and later.

### Insufficient Access Event Type

Insufficient Access events contain details about errors relating to insufficient record access, so that you can troubleshoot and resolve access issues for your users.

### Invocable Action Event Type

Invocable Action events capture the calls to Salesforce Invocable Actions. This is particularly useful to monitor actions invoked during Agentforce flows. This event type is available in API versions 64.0 and later.

### Knowledge Article View Event Type

Knowledge Article View events contain user activity with your knowledge base.

### Lightning Error Event Type

Lightning Error events represent errors that occurred during user interactions with Lightning Experience and the Salesforce mobile app. This event type is available in the EventLogFile object in API version 39.0 and later.

### Lightning Interaction Event Type

Lightning Interaction events track user actions in Lightning Experience and the Salesforce mobile app, such as the user clicking, tapping, or scrolling on a page. This event type is available in the EventLogFile object in API version 39.0 and later.

### Lightning Logger Event Type

Lightning Logger events contain information from observed Lightning component logs. This event type is available in the EventLogFile object in API version 58.0 and later.

### Lightning Page View Event Type

Lightning Page View events represent information about the page on which the event occurred in Lightning Experience and the Salesforce mobile app, such as the page's load time. This event type is available in the EventLogFile object in API version 39.0 and later.

### Lightning Performance Event Type

Lightning Performance events track trends in Lightning Experience and Salesforce mobile app performance. This event type is available in the EventLogFile object in API version 39.0 and later.

### Login Event Type

Login events contain details about your org's user login history.

### Login As Event Type

Login As events contain details about what a Salesforce admin did while logged in as another user.

### Logout Event Type

Contains details of user sessions ending or being revoked.

### Metadata API Operation Event Type

Metadata API Operation events contain details of Metadata API retrieval and deployment requests.

### Multiblock Report Event Type

Multiblock Report events contain details about Joined Report reports.

### Named Credential Event Type

The Named Credential event type captures information about Apex callouts that use named credentials as their endpoints. Use this event type to audit the installed managed packages that use named credentials. If you don't recognize the package namespace in the named credential event log file, then you can investigate whether a security breach has occurred. This event type is available in the EventLogFile object in API version 53.0 and later.

### One Commerce Usage Event Type

One Commerce Usage events capture information about your Commerce instance. This event type is available in the EventLogFile object in API version 51.0 and later.

### Package Install Event Type

Package Install events contain details about package installation in the organization.

### Permission Update Event Type

Permission update events represent changes to object, field, and user permissions and setup entity access that occur in profiles and permission sets. The event type also tracks if you clone profiles or change whether session activation is required in permission sets or permission set groups.

### Platform Encryption Event Type

Platform Encryption event contains information about tenant secret and derived encryption key usage. This event type is available in API versions 41.0 and later.

### Pricing Event Type

Pricing events contain information about pricing procedures that were executed, including details such as pricing procedures used, the pricing APIs, and pricing details and status.

### Queued Execution Event Type

Queued Execution events contain details about queued executions—for example, batch Apex.

### Report Event Type

Report events contain information about what happened when a user ran a report. This event type includes all activity that's in the Report Export event type, plus more. For example, it has user activity for reports exported as both Formatted Report and Details Only output.

### Report Export Event Type

Report Export events contain details about reports that a user exported. For example, this event type captures when a user exports a report as Details Only output. But it doesn't capture reports that users export as Formatted Report or XLSX Detail output. For that data, see the Report event type.

### REST API Event Type

REST API events contain details about REST-specific requests.

### Sandbox Event Type

Sandbox events contain details about sandbox copies.

### Search Event Type

Search events contain details about the user's search query. All searches within the app, including Experience Cloud sites, are included. However, unauthenticated users won't have a unique Salesforce user ID.

### Search Click Event Type

Search Click events contain details about the user's interaction with the search results in the search results page. Interactions with search results in the instant result dialog are not recorded by this event. All searches within the app, including Experience Cloud sites, are included. However, unauthenticated users won't have a unique Salesforce user ID.

### Sites Event Type

Sites events contain details of Site.com requests. Requests can originate from the browser (UI).

### SOAP API Event Type

SOAP API events contain details about your org's SOAP API request activity.

### Time-Based Workflow Event Type

Time-Based Workflow events contain details about queue activity monitoring.

### Transaction Security Event Type

Transaction Security events contain details about policy execution. This event type is supported in API version 55.0 and later.

### UI Telemetry Navigation Timing Event Type

UI Telemetry Navigation Timing events capture network performance metrics related to page navigation. The event extends from the UI Telemetry Resource Timing Event on page 2379 and includes requests initiated with either the Fetch API or the XMLHttpRequest API. This object is available in API version 61.0 and later.

### UI Telemetry Resource Timing Event

UI Telemetry Resource Timing events capture network performance metrics related to loading an application's resources. The event includes requests initiated with either the Fetch API or the XMLHttpRequest API. This object is available in API version 61.0 and later.

### Unique Query Event Type

Unique Query events capture specific search queries (SOQL), filter IDs, and report IDs that are processed, along with the underlying database queries (SQL). This event type is available in API versions 64.0 and later.

### URI Event Type

URI events contain details about user interaction with the web browser UI.

### Visualforce Request Event Type

Visualforce Request events contain details of Visualforce requests. Requests can originate from the browser (UI).

### Wave Change Event Type

Wave Change events represent route or page changes made in the CRM Analytics user interface. A Wave Change event type is captured every time the user opens a new CRM Analytics asset or tab, switches between tabs, or changes dashboard pages. Wave Change events are logged when opening new tabs and switching back to previously opened tabs.

### Wave Download Event Type

Wave Download events represent downloads made from lens explorations and dashboard widgets in the CRM Analytics user interface. A Wave Download event type is captured when a user downloads images ( .png ), Microsoft® Excel® data ( .xls ), or comma-separated values ( .csv ) files.

### Wave Interaction Event Type

Wave Interaction events represent route or page changes made in the CRM Analytics user interface. A Wave Interaction event type is captured when a tab is closed. It also collates the interaction statistics over the life of the tab, including total open time, read time, and so on. These statistics are aggregated as you go to other tabs and return, and logged only once when the tab is closed.

Wave Performance Event Type

Wave Performance events help you track trends in your Analytics performance.

EventLogFile

## Apex Callout Event Type

Apex Callout events contain details about callouts (external requests) during Apex code execution.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| `BOT_IDENTIFIER` | **Type**<br>string<br>**Description**<br>The ID of the bot. |
| `BOT_SESSION_IDENTIFIER` | **Type**<br>string<br>**Description**<br>The bot session ID. |
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `ApexCallout`. |

| | |
|---|---|
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| `METHOD` | **Type**<br>String<br>**Description**<br>The HTTP method of the callout.<br>**Example**<br>For example: `GET`, `POST`, `PUT`, and so on. |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `PLANNER_IDENTIFIER` | **Type**<br>string<br>**Description**<br>The ID of the agent planner. |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `REQUEST_SIZE` | **Type**<br>Number<br>**Description**<br>The size of the callout request body, in bytes. |
| `RESPONSE_SIZE` | **Type**<br>Number<br>**Description**<br>The size of the callout response, in bytes. |

| | |
|---|---|
| RUN_TIME | **Type**<br>Number<br>**Description**<br>Not used for this event type. Use the TIME field instead. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: d7DEq/ANa7nNZZVD. |
| STATUS_CODE | **Type**<br>Number<br>**Description**<br>The HTTP status code for the response. |
| SUCCESS | **Type**<br>Boolean<br>**Description**<br>Indicates if the HTTP callout was sent and a response was returned (1) or not (0). |
| TIME | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds (ms). |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: 20130715233322.670. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).<br>For example: 2015-07-27T11:32:59.555Z. Timezone is GMT. |

| | |
|---|---|
| `TYPE` | **Type**<br>String<br>**Description**<br>The type of Apex callout.<br>For example: `REST` or `AJAX`. |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `URL` | **Type**<br>String<br>**Description**<br>The callout endpoint URL.<br>**Example**<br>`www.salesforce.com` |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |

# Apex Execution Event Type

Apex Execution events contain details about Apex classes that are used.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

## Fields

| Field | Details |
| --- | --- |
| BOT_IDENTIFIER | **Type**<br>string<br>**Description**<br>The ID of the bot. |
| BOT_SESSION_IDENTIFIER | **Type**<br>string<br>**Description**<br>The bot session ID. |
| CALLOUT_TIME | **Type**<br>Number<br>**Description**<br>Time spent waiting on webservice callouts, in milliseconds. |
| CLIENT_IP | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". If the user's session context isn't available, this field returns a blank value. |
| CPU_TIME | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| DB_TOTAL_TIME | **Type**<br>Number<br>**Description**<br>Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this |

| | |
|---|---|
| | field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code. |
| `ENTRY_POINT` | **Type**<br>String<br>**Description**<br>The entry point for this Apex execution.<br>**Example**<br>• `GeneralCloner.cloneAndInsertRecords`<br>• `VF- /apex/CloneUser` |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `ApexExecution`. |
| `EXEC_TIME` | **Type**<br>Number<br>**Description**<br>The end-to-end Apex execution time (in milliseconds). |
| `IS_LONG_RUNNING_REQUEST` | **Type**<br>Boolean<br>**Description**<br>Indicates whether the request is counted against your org's concurrent long-running Apex request limit (`true`) or not (`false`).<br>Note: Asynchronous Apex jobs (batch, queueable, scheduled, and future), background processes, and bulk API requests aren't counted against the concurrent long-running limit. |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| `NUMBER_SOQL_QUERIES` | **Type**<br>Number |

| | |
|---|---|
| | **Description**<br>The number of SOQL queries that were executed during the event.<br>This value is the aggregate across all namespaces, and can exceed the per-namespace limits. For test executions, the aggregate total value across all test methods executed in the request is used. If you're using this value to track limit consumption, consider filtering out test execution quiddities (indicated by the QUIDDITY field). |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `PLANNER_IDENTIFIER` | **Type**<br>string<br>**Description**<br>The ID of the agent planner. |
| `QUIDDITY` | **Type**<br>String<br>**Description**<br>The type of outer execution associated with this event.<br>**Example**<br>• `A`–ACS Batch Apex<br>• `B`–Bulk API and Bulk API 2.0<br>• `BA`–Start method of a Batch Apex job<br>• `C`–Scheduled Apex<br>• `CI`–Commerce Integration<br>• `DL`– Discoverable Login page<br>• `E`–Inbound Email Service<br>• `F`–Future<br>• `FC`–Function Callback<br>• `H`–Apex REST<br>• `I`–Invocable Action<br>• `K`–Quick Action<br>• `L`–Lightning<br>• `M`–Remote Action<br>• `P`–Not used in API version 63.0 and later. |

- `PEPC`–Platform Event Publish Callback
- `PI`–Post install script for a managed package
- `Q`–Queueable
- `QTXF`–Transaction Finalizer for Queueable
- `R`–Synchronous uncategorized (which is where all transactions not specified elsewhere end up)
- `S`–QueryLocator Batch Apex (Batch Apex jobs run faster when the start method returns a QueryLocator object that doesn't include related records via a subquery. See Batch Apex Best Practices in Using Batch Apex.)
- `TA`–Tests Async
- `TD`–Tests Deployment
- `TS`–Tests Synchronous
- `UD`–Undefined is the default when an event hasn't been assigned a more descriptive quiddity.
- `V`–Visualforce
- `W`–SOAP Webservices
- `X`–Execute Anonymous

Note: Implementations of the Process.Plugin interface use the quiddity value **R**.

`REQUEST_ID`

**Type**
String

**Description**
The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: `3nWgxWbDKWWDIk0FKfF5DV`.

`RUN_TIME`

**Type**
Number

**Description**
The amount of time that the request took in milliseconds.

Requests with a value over five seconds are considered long-running requests for the purposes of the Concurrent Long-Running Apex Limit.

Note: HTTP callout processing time isn't included when calculating the 5-second limit. We pause the timer for the callout and resume it when the callout completes.

`SESSION_KEY`

**Type**
String

| | |
|---|---|
| | **Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: `d7DEq/ANa7nNZZVD`. |
| `TIMESTAMP` | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id |

| | |
|---|---|
| | **Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `0059000000I1SNIA0`. |

## Apex REST API Event Type

Apex REST API events capture information about every Apex REST API request.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide. For information about Apex REST, see Introduction to Apex REST.

### Fields

| Field | Details |
|---|---|
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CONNECTED_APP_ID` | **Type**<br>String<br>**Description**<br>The 15-character ID of the connected app associated with the API call. For example, `0H4RM00000000Kr0AI`. |
| `CLIENT_NAME` | **Type**<br>String<br>**Description**<br>The name of the client that's using Salesforce services. |
| `CPU_TIME` | **Type**<br>Number |

| | |
|---|---|
| | **Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DB_BLOCKS` | **Type**<br>Number<br>**Description**<br>Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance. |
| `DB_CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request. |
| `DB_TOTAL_TIME` | **Type**<br>Number<br>**Description**<br>The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code. |
| `ENTITY_NAME` | **Type**<br>Set<br>**Description**<br>API objects that are accessed.<br>For example: `Account`, `Opportunity`, `Contact`, and so on. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `ApexRestApi`. |
| `EXCEPTION_MESSAGE` | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The returned exception message, used to debug issues. Provide this message when seeking support. |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| MEDIA_TYPE | **Type**<br>String<br>**Description**<br>The media type of the response. |
| METHOD | **Type**<br>String<br>**Description**<br>The HTTP method of the request.<br>For example: `GET`, `POST`, `PUT`, and so on. |
| NUMBER_FIELDS | **Type**<br>Number<br>**Description**<br>The number of fields or columns, where applicable. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| QUERY | **Type**<br>String<br>**Description**<br>The data that was queried. |
| REQUEST_SIZE | **Type**<br>Number<br>**Description**<br>The size of the callout request body, in bytes. |

| | |
|---|---|
| REQUEST_STATUS | **Type**<br>String<br>**Description**<br>The status of the request for a page view or user interface action.<br>For example:<br>• S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.<br>• F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.<br>• U—Undefined<br>• A—Authorization Error<br>• R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.<br>• N—Not Found. 404 error.<br>This field can have a blank value. |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.<br>For example: 3nWgxWbDKWWDIk0FKfF5DV. |
| RESPONSE_SIZE | **Type**<br>Number<br>**Description**<br>The size of the callout response, in bytes. |
| ROWS_PROCESSED | **Type**<br>Number<br>**Description**<br>The number of rows that were processed in the request.<br>For example: 150. |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |

| | |
|---|---|
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: d7DEq/ANa7nNZZVD. |
| STATUS_CODE | **Type**<br>Number<br>**Description**<br>The HTTP status code for the response. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: 20130715233322.670. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).<br>For example: 2015-07-27T11:32:59.555Z. Timezone is GMT. |
| URI | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: /home/home.jsp. |
| URI_ID_DERIVED | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| USER_AGENT | **Type**<br>Number |

| | |
|---|---|
| | **Description**<br>The numeric code for the type of client used to make the request (for example, the browser, application, or API). |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |
| `USER_TYPE` | **Type**<br>String<br>**Description**<br>The category of user license.<br>Possible values are:<br>• `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.<br>• `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.<br>• `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.<br>• `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.<br>• `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. |

- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

## Apex SOAP Event Type

Apex SOAP events contain details about custom SOAP web service calls.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| `CLASS_NAME` | **Type**<br>String<br>**Description**<br>The Apex class name. If the class is part of a managed package, this string includes the package namespace. |
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CLIENT_NAME` | **Type**<br>String<br>**Description**<br>The name of the client that's using Salesforce services. This field is an optional parameter that can be passed in API calls. |

| | |
|---|---|
| | If blank, the caller didn't specify a client in the CallOptions header. |
| CPU_TIME | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| DB_TOTAL_TIME | **Type**<br>Number<br>**Description**<br>Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code. |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always `ApexSoap`. |
| LIMIT_USAGE_PERCENT | **Type**<br>Number<br>**Description**<br>The percentage of Apex SOAP calls that were made against the organization's limit. |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| METHOD_NAME | **Type**<br>String<br>**Description**<br>The name of the calling Apex method. |
| ORGANIZATION_ID | **Type**<br>Id |

**Description**
The 15-character ID of the organization.

For example: `00D000000000123`.

`QUERY`

**Type**
String

**Description**
The SOQL query, if one was performed.

`REQUEST_ID`

**Type**
String

**Description**
The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: `3nWgxWbDKWWDIk0FKfF5DV`.

`REQUEST_STATUS`

**Type**
String

**Description**
The status of the request for a page view or user interface action.

For example:

- `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- `U`—Undefined
- `A`—Authorization Error
- `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- `N`—Not Found. 404 error.

This field can have a blank value.

`RUN_TIME`

**Type**
Number

**Description**
The amount of time that the request took in milliseconds.

Requests with a value over five seconds are considered long-running requests for the purposes of the Concurrent Long-Running Apex Limit.

Note: HTTP callout processing time isn't included when calculating the 5-second limit. We pause the timer for the callout and resume it when the callout completes.

| | |
|---|---|
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: `d7DEq/ANa7nNZZVD`. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| URI | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| URI_ID_DERIVED | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| USER_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API. |

For example: `00530000009M943`

`USER_ID_DERIVED`

**Type**
Id

**Description**
The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: `00590000000I1SNIA0`.

`USER_TYPE`

**Type**
String

**Description**
The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.

- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

## Apex Trigger Event Type

Apex Trigger events contain details about triggers that fire in an organization.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
|---|---|
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DB_TOTAL_TIME` | **Type**<br>Number<br>**Description**<br>Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code. |
| `ENTITY_NAME` | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The name of the object affected by the trigger. |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always `ApexTrigger`. |
| EXEC_TIME | **Type**<br>Number<br>**Description**<br>The end-to-end Apex execution time (in milliseconds). |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| REQUEST_STATUS | **Type**<br>String<br>**Description**<br>The status of the request for a page view or user interface action.<br>For example: |

| | |
|---|---|
| | • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.<br>• F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.<br>• U—Undefined<br>• A—Authorization Error<br>• R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.<br>• N—Not Found. 404 error.<br>This field can have a blank value. |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>This field is always null. To view the end-to-end Apex execution time (in milliseconds), refer to the EXEC_TIME field. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: d7DEq/ANa7nNZZVD. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: 20130715233322.670. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).<br>For example: 2015-07-27T11:32:59.555Z. The timezone is GMT. |
| TRIGGER_ID | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The 15-character ID of the trigger that was fired. |
| `TRIGGER_NAME` | **Type**<br>String<br>**Description**<br>For triggers coming from managed packages, `TRIGGER_NAME` includes a namespace prefix separated with a `.` character. If no namespace prefix is present, the trigger is from an unmanaged trigger.<br>Examples:<br>• `examplePackage.managedExampleTrigger` - Managed trigger from the examplePackage namespace<br>• `unmanagedExampleTrigger` - Unmanaged trigger |
| `TRIGGER_TYPE` | **Type**<br>String<br>**Description**<br>The type of this trigger.<br>**Possible Values**<br>• AfterInsert<br>• AfterUpdate<br>• BeforeInsert<br>• BeforeUpdate |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API. |

For example: `00530000009M943`

`USER_ID_DERIVED`

**Type**
Id

**Description**
The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: `00590000000I1SNIA0`.

`USER_TYPE`

**Type**
String

**Description**
The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.

- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

EventLogFile

## Apex Unexpected Exception Event Type

The Apex Unexpected Exception event type captures information about unexpected exceptions in Apex code execution. This event type is available in the EventLogFile object in API version 45.0 and later. Unexpected exception information is not captured in the EventLogFile object with `@IsTest` and anonymous Apex.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
|---|---|
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `ApexUnexpectedException`. |
| `EXCEPTION_CATEGORY` | **Type**<br>String<br>**Description**<br>The category of the unexpected Apex exception. Provides a breakdown of unhandled exceptions based on the type. For example, the `LimitException` exception type is split into subcategories that indicate if you exceeded a limit, such as the total heap size or CPU time.<br>Possible values:<br>• Subcategories of `LimitException` that indicate the Apex limit you've exceeded. Examples:<br>– `LimitException: CpuTime`: Maximum CPU time on the Salesforce servers.<br>– `LimitException: HeapSize`: Total heap size.<br>– `LimitException: Queries`: Total number of SOQL queries issued.<br>– `LimitException: QueryRows`: Total number of records retrieved by SOQL queries.<br>– `LimitException: DmlStatements`: Total number of DML statements issued.<br>– `LimitException: Callouts`: Total number of callouts (HTTP requests or web services calls) in a transaction. |

| Field | Details |
| --- | --- |
| | See Execution Governors and Limits for other limits.<br>• `CustomException`: Unhandled custom exception.<br>• An Apex exception that isn't limit-related; see Exception Class and Built-In Exceptions<br>This field is available in API version 57.0 and later.<br>**Example**<br>`LimitException: CpuTime` |
| `EXCEPTION_MESSAGE` | **Type**<br>Text<br>**Description**<br>The exception's message.<br>**Example**<br>Divide by 0 |
| `EXCEPTION_TYPE` | **Type**<br>String<br>**Description**<br>The class type of the unexpected exception.<br>**Example**<br>`System.MathException` |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the org.<br>For example: `00D000000000123`. |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `STACK_TRACE` | **Type**<br>Text<br>**Description**<br>The stack trace for the exception.<br>Note: If the exception is thrown from a managed package, `STACK_TRACE` is omitted. |

| Field | Details |
| --- | --- |
| | **Example**<br>`Class.OpportunityUtility.insert: line 22, column 1`<br>`AnonymousBlock: line 1, column 1` |
| `TIMESTAMP` | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `2024-08-08T06:08:02.755+0000`. |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943`. |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |

## API Total Usage

API Total usage events contain details about Platform SOAP API, Platform REST API, and Bulk API requests.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

## Fields

| Field | Details |
| --- | --- |
| API_CLIENT_CATEGORY | **Type**<br>String<br>**Description**<br>The category of the client making the API request.<br>Possible values are:<br>• AGENTFORCE_AGENT—API request is from an Agentforce agent.<br>• EXTERNAL_APPLICATION—API request is from an external app defined in the org.<br>• LIGHTNING_UI—API request is from the Lightning UI.<br>• SALESFORCE—API request is from an internal Salesforce app or service.<br>• UNKNOWN—API request is from an unrecognized category. |
| API_FAMILY | **Type**<br>String<br>**Description**<br>The API family. For example, REST, SOAP, or Bulk. |
| API_RESOURCE | **Type**<br>String<br>**Description**<br>The API method or resource. For example, describeSObjects for SOAP, or /v21.0/sobjects/Account/001xx000003DGQW for REST. |
| API_VERSION | **Type**<br>Number<br>**Description**<br>The API version. For example, 21.0. |
| BOT_IDENTIFIER | **Type**<br>string<br>**Description**<br>The ID of the bot. |
| BOT_SESSION_IDENTIFIER | **Type**<br>string |

| | |
|---|---|
| | **Description**<br>The bot session ID. |
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CLIENT_NAME` | **Type**<br>String<br>**Description**<br>The name of the client making the API request. Includes values passed via the Sforce-Call-Options header. |
| `CONNECTED_APP_ID` | **Type**<br>String<br>**Description**<br>The ID of the connected app making the API request.<br>If the connected app ID includes the prefix *0H4*, append it to the connected app ID in the My Domain URL to access app details (`https://`***MyDomainName***`.my.salesforce.com/`***0H4***`xxxxxxxxxxxx`). If, however, the connected app ID uses the prefix *888*, contact Salesforce Customer Support for app details. |
| `CONNECTED_APP_NAME` | **Type**<br>String<br>**Description**<br>The name of the connected app making the API request. |
| `COUNTS_AGAINST_API_LIMIT` | **Type**<br>Boolean<br>**Description**<br>Whether the request counted against the API limit (`true`) or not (`false`). |
| `ENTITY_NAME` | **Type**<br>Set<br>**Description**<br>The name of the object accessed by the API request. |

| | |
|---|---|
| | For example: `Account`, `Opportunity`, `Contact`, and so on. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `ApiTotalUsage`. |
| `HTTP_METHOD` | **Type**<br>String<br>**Description**<br>The HTTP method. For example, `GET`. |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `PLANNER_IDENTIFIER` | **Type**<br>string<br>**Description**<br>The ID of the agent planner. |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `STATUS_CODE` | **Type**<br>Number<br>**Description**<br>The HTTP response status code for the request. |
| `TIMESTAMP` | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |

| | |
|---|---|
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).<br>For example: 2015-07-27T11:32:59.555Z. Timezone is GMT. |
| USER_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the API.<br>For example: 00530000009M943 |
| USER_NAME | **Type**<br>String<br>**Description**<br>The username of the user who's using Salesforce services through the API. |

## Asynchronous Report Run Event Type

Asynchronous Report Run events are created for reporting requests that are scheduled. This category includes dashboard refreshes, asynchronous reports, schedule reports, and analytics snapshots.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
|---|---|
| AVERAGE_ROW_SIZE | **Type**<br>Number<br>**Description**<br>The average row size of all rows in the Asynchronous Report Run event, in bytes. A large average size, coupled with a high ROW_COUNT, can indicate that a user is downloading information for fraudulent purposes. For example, a salesperson who downloads all sales leads before departing for a competitor.<br>**Example**<br>700 |

| | |
|---|---|
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DASHBOARD_ID` | **Type**<br>String<br>**Description**<br>The 15-character ID of the dashboard that was run. |
| `DB_TOTAL_TIME` | **Type**<br>Number<br>**Description**<br>The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code. |
| `DB_BLOCKS` | **Type**<br>Number<br>**Description**<br>Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance. |
| `DB_CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request. |

| | |
|---|---|
| DISPLAY_TYPE | **Type**<br>String<br>**Description**<br>The report display type, indicating the run mode of the report.<br>Possible values are:<br>• D—Dashboard<br>• S—Show Details<br>• H—Hide Details |
| ENTITY_NAME | **Type**<br>String<br>**Description**<br>The name of the object affected by the trigger. |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always AsynchronousReportRun. |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: GeJCsym5eyvtEK2I. |
| NUMBER_BUCKETS | **Type**<br>Number<br>**Description**<br>The number of buckets that were used in the report. |
| NUMBER_COLUMNS | **Type**<br>Number<br>**Description**<br>The number of columns in the report. |
| NUMBER_EXCEPTION_FILTERS | **Type**<br>Number<br>**Description**<br>The number of exception filters that are used in the report. |

`ORGANIZATION_ID`

**Type**
Id

**Description**
The 15-character ID of the organization.

For example: `00D000000000123`.

`ORIGIN`

**Type**
String

**Description**
The context in which the report executed, such as from a UI (Classic, Lightning, Mobile), through an API (synchronous, asynchronous, Apex), or through a dashboard.

**Possible Values**

- `ReportOpenedFromMobileDashboard`: Report executed when a user clicked a dashboard component on a mobile device and drilled down to a report.
- `DashboardComponentUpdated`: Report executed when a user refreshed a dashboard component.
- `DashboardComponentPreviewed`: Report executed from a Lightning dashboard component preview.
- `ReportRunUsingSynchronousApi`: Report executed from a synchronous API.
- `ReportRunUsingAsynchronousApi`: Report executed from an asynchronous API.
- `ReportRunUsingApexSynchronousApi`: Report executed from the synchronous Apex API.
- `ReportRunUsingApexAsynchronousApi`: Report executed from the asynchronous Apex API.
- `ReportExported`: Report executed from a printable view or report export that was not asynchronous nor an API export.
- `ReportRunFromClassic`: Report executed from the Run Report option of Salesforce Classic.
- `ReportRunFromMobile`: Report executed from the Run Report option of the mobile Salesforce app.
- `ReportRunFromLightning`: Report executed from the Run option in Lightning Experience from a non-mobile browser.
- `ReportRunFromRestApi`: Report executed from the REST API.
- `ReportPreviewed`: Report executed when a user got preview results while using the report builder.
- `ReportScheduled`: Report was scheduled.

- `ProbeQuery`: Report executed from a probe query.
- `ReportRunFromReportingSnapshot`: Report executed through Snapshot Analytics.
- `ReportExportedAsynchronously`: Report was exported asynchronously.
- `ReportExportedUsingExcelConnector`: Report was exported using the Excel connector.
- `ChartRenderedOnVisualforcePage`: Report executed from a rendered chart on a VisualForce Page.
- `ChartRenderedInEmbeddedAnalyticsApp`: Report executed from a rendered chart in an embedded Analytics app.
- `ReportRunAndNotificationSent`: Report executed through the notifications API.
- `ChartRenderedOnHomePage`: Report executed from a rendered chart on the home page.
- `ReportResultsAddedToWaveTrending`: Report executed when a user trended a report in CRM Analytics.
- `ReportAddedToCampaign`: Report was added from an Add to Campaign action.
- `ReportResultsAddedToEinsteinDiscovery`: Report executed synchronously from Einstein Discovery.
- `Unknown`: Report execution origin is unknown.
- `Test`: Report execution resulted from a test.

`RENDERING_TYPE`

**Type**
String

**Description**
Describes the format of the report output in Salesforce Classic. If the report was exported in Lightning Experience, this field is blank.

**Possible Values**

- `W`: Web (HTML)
- `E`: Email
- `P`: Printable
- `X`: Excel
- `C`: Comma-separated values (CSV)
- `J`: JavaScript Object Notation (JSON)
- `D`: Dummy data

`REPORT_ID`

**Type**
Id

| | |
|---|---|
| | **Description**<br>The 15-character ID of the report that was run. |
| REPORT_ID_DERIVED | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the report that was run. |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.<br>For example: 3nWgxWbDKWWDIk0FKfF5DV. |
| REQUEST_STATUS | **Type**<br>String<br>**Description**<br>The status of the request for a page view or user interface action.<br>For example:<br>• S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.<br>• F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.<br>• U—Undefined<br>• A—Authorization Error<br>• R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.<br>• N—Not Found. 404 error.<br>This field can have a blank value. |
| ROW_COUNT | **Type**<br>Number<br>**Description**<br>The number of rows that were processed in the Asynchronous Report Run event. High row counts, coupled with a high AVERAGE_ROW_SIZE, can indicate that a user is downloading information for fraudulent purposes. For example, |

| | |
|---|---|
| | a salesperson who downloads all sales leads before departing for a competitor.<br>**Example**<br>150 |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: `d7DEq/ANa7nNZZVD`. |
| SORT | **Type**<br>String<br>**Description**<br>The sort column and order that was used in the report. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| URI | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |

`URI_ID_DERIVED`

**Type**
ID

**Description**
The 18-character case insensitive ID of the URI of the page that's receiving the request.

`USER_ID`

**Type**
Id

**Description**
The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: `00530000009M943`

`USER_ID_DERIVED`

**Type**
Id

**Description**
The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: `00590000000I1SNIA0`.

`USER_TYPE`

**Type**
String

**Description**
The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared

with users below them in the customer portal role hierarchy.

- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

## Aura Request Event Type

Aura Request events contain details of requests to Apex methods from Aura and Lightning web components. For example, you can benchmark request time or identify the URI of an unsuccessful request.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| `ACTION_MESSAGE` | **Type**<br>String<br>**Description**<br>The action (Apex method) names and times for all the actions in the request in the format:<br>`action1Name=action1Time;action2Name=action2Time...` |
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CPU_TIME` | **Type**<br>Number |

**Description**
The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

`DB_TOTAL_TIME`

**Type**
Number

**Description**
The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.

`EVENT_TYPE`

**Type**
String

**Description**
The type of event. The value is always `AuraRequest`.

`LOGIN_KEY`

**Type**
String

**Description**
The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: `GeJCsym5eyvtEK2I`.

`ORGANIZATION_ID`

**Type**
Id

**Description**
The 15-character ID of the organization.

For example: `00D000000000123`.

**Example**

`REQUEST_ID`

**Type**
String

**Description**
The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: `3nWgxWbDKWWDIk0FKfF5DV`.

`REQUEST_METHOD`

**Type**
String

| | |
|---|---|
| | **Description**<br>The HTTP method of the request, such as GET or POST. |
| REQUEST_STATUS | **Type**<br>String<br>**Description**<br>The status of the request for a page view or user interface action.<br>For example:<br>• S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.<br>• F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.<br>• U—Undefined<br>• A—Authorization Error<br>• R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.<br>• N—Not Found. 404 error.<br>This field can have a blank value. |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: d7DEq/ANa7nNZZVD. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: 20130715233322.670. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime |

| | |
|---|---|
| | **Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the resource that's receiving the request.<br>For example: `/aura`. |
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_AGENT` | **Type**<br>String<br>**Description**<br>The numeric code for the type of client used to make the request (for example, the browser, application, or API). |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |
| `USER_TYPE` | **Type**<br>String<br>**Description**<br>The category of user license.<br>Possible values are: |

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

EventLogFile Supported Event Types

EventLogFile

## Blocked Redirect Event Type

Blocked redirect events capture information about blocked redirections from Salesforce to untrusted and malformed URLs. The Blocked Redirect event type is available in the EventLogFile object in API version 63.0 and later.

This event is free for all customers with a 24-hour data retention period. The blocked redirects event is available in the API but not in the Event Monitoring Analytics app.

For details about event monitoring, see the Trailhead Event Monitoring module or the REST API Developer's Guide.

Blocked redirect events capture these redirections when the target URL isn't a RedirectWhitelistUrl or when the target URL fails a syntax check.

- An anchor link within a page or component that includes a redirection. For example, `<a href="/?startURL=targetUrl">linkText</a>` includes a redirection via the startURL parameter.
- A parameter within a page that redirects the user. For example, this form action redirects the user through the saveURL parameter: `<form action="/xyz?saveURL=targetURL">`.

Within pages and components, a direct anchor link to an external URL is always allowed, even if the target URL isn't a RedirectWhitelistUrl. For those direct anchor links, if the target URL fails a syntax check, the user receives an error but the redirection isn't captured as a blocked redirect event. An example of a direct anchor link is `<a href="targetUrl">linkText</a>`.

For hyperlinks within URL and Long Text Area fields, blocked redirections to untrusted URLs are captured as blocked redirect events only when the user who clicked the hyperlink accessed Salesforce via Salesforce Classic. If those users see a warning message and can proceed to the untrusted URL, that event isn't captured as a blocked redirect event.

Note: To help preserve performance, Salesforce uses throttling, a technique that limits the number of generated blocked redirect events when the volume is exceptionally high. Therefore, if your org generates a high volume of blocked redirections over a short period of time, some of those redirections can fail to generate a blocked redirect event.

## Fields

| Field | Details |
|---|---|
| `BLOCKED_URI` | **Type**<br>String<br>**Description**<br>The full string of the target for the redirection.<br>**Example**<br>https://www.example.com/shop.htm |
| `BLOCKED_URI_DOMAIN` | **Type**<br>String<br>**Description**<br>If `BLOCKED_URI` is a URL, the domain for that URL. To allow future redirections to the `BLOCKED_URI`, `BLOCKED_URI_DOMAIN` is the value to add to RedirectWhitelistUrl.<br>**Example**<br>www.example.com |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `BlockedRedirect`. |
| `MALFORMED_URL` | **Type**<br>Boolean<br>**Description**<br>Indicates whether this redirection was blocked because the target URL failed a syntax check (1) or not (0).<br>Here are examples of malformed URLs. |

| Field | Details |
| --- | --- |
| | • https://www.example.com/$t61'3<br>• https://malformed^url.example.com |
| ORIGIN | **Type**<br>String<br>**Description**<br>The origin that caused the request to the BLOCKED_URI. For example, if a form on an Experience Cloud Visualforce site page redirects a user to an untrusted URL via the saveURL parameter, ORIGIN contains the base URL of that site. |
| REFERRER | **Type**<br>String<br>**Description**<br>The absolute or partial address from which the request to the BLOCKED_URI came. The Referrer-Policy HTTP Header of the request determines how much of the URL is shared. |
| REMOTE_ADDRESS | **Type**<br>String<br>**Description**<br>Remote IP address of the client making the request. |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.<br>**Example**<br>0000000062_0000x8Lz- |
| TIMESTAMP | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in GMT.<br>**Example**<br>20220715233322.670 |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). The time zone is always GMT. |

| Field | Details |
| --- | --- |
| | **Example**<br>`2022-07-27T11:32:59.555Z.` |

### Usage

Only one blocked redirect log file is available at a time. When the daily incremental event log file is generated during the daily background process, the new file replaces the existing file.

If the log file doesn't exist, either the log generation process hasn't run yet or there's no redirection data to report for that 24-hour window. The log file is generated only when at least one redirection occurred for the day.

To collect blocked redirect logs for multiple days, schedule a daily query of the Blocked Redirect event type via REST API. For example, you can configure a cron job in Unix or a scheduled task in Windows to run the query.

## Bulk API Event Type

Bulk API events contain details about Bulk API requests.

Note: This event type does not include Bulk API 2.0 requests. For information about the BulkApi2 event type, see Bulk API 2.0 Event Type on page 2130.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| `BATCH_ID` | **Type**<br>String<br>**Description**<br>The 15-character ID of the Bulk API batch. |
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |

| | |
|---|---|
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `ENTITY_TYPE` | **Type**<br>String<br>**Description**<br>The type of entity that the Bulk API used. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `BulkApi`. |
| `JOB_ID` | **Type**<br>String<br>**Description**<br>The 15-character ID of the Bulk API job. |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| `MESSAGE` | **Type**<br>EscapedString<br>**Description**<br>Any success or error message that's associated with the request. |
| `NUMBER_FAILURES` | **Type**<br>Number<br>**Description**<br>The number of failures that were returned with the request. |
| `OPERATION_TYPE` | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The type of Bulk API operation that was performed. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| ROWS_PROCESSED | **Type**<br>Number<br>**Description**<br>The number of rows that were processed in the request.<br>For example: `150`. |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: `d7DEq/ANa7nNZZVD`. |
| SUCCESS | **Type**<br>Boolean<br>**Description**<br>Whether the batch was successful. |
| TIMESTAMP | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |

# Bulk API Request Event Type

The Bulk API request event captures when Bulk API requests are received to create a job, update a job, create a batch, update a batch, and when a job completes.

Note: This event type doesn't include Bulk API 2.0 requests. For information about the BulkApi2 event types, see Bulk API 2.0 Event Type on page 2130.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

## Fields

| Field | Details |
|---|---|
| API_VERSION | **Type**<br>Number<br>**Description**<br>The API version. |
| BATCH_ID | **Type**<br>String<br>**Description**<br>The 15-character ID of the Bulk API batch. |
| CLIENT_IP | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| CLIENT_NAME | **Type**<br>EscapedString<br>**Description**<br>The name of the client making the request. |
| CONCURRENCY_MODE | **Type**<br>String<br>**Description**<br>The concurrency mode selected by the user. |
| CONNECTED_APP_ID | **Type**<br>String<br>**Description**<br>The ID of the connected app making a request. |

| | |
|---|---|
| CPU_TIME | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| ERROR_MESSAGE | **Type**<br>EscapedString<br>**Description**<br>The type of entity that the Bulk API used. |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always BulkApiRequest. |
| JOB_ID | **Type**<br>String<br>**Description**<br>The 15-character ID of the Bulk API job. |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| OPERATION_TYPE | **Type**<br>String<br>**Description**<br>The type of Bulk API operation. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| REQUEST_ID | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `REQUEST_PATH` | **Type**<br>String<br>**Description**<br>The path of the request. |
| `RUN_TIME` | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| `SESSION_KEY` | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: `d7DEq/ANa7nNZZVD`. |
| `STATUS_CODE` | **Type**<br>Number<br>**Description**<br>The HTTP Status code indicating whether the batch was successful. |
| `SUCCESS` | **Type**<br>Boolean<br>**Description**<br>Whether the batch was successful. |
| `TIMESTAMP` | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime |

| | |
|---|---|
| | **Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. The timezone is GMT. |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `URI_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The ID of the user making the request. |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |

## Bulk API 2.0 Event Type

BulkApi2 events contain details about Bulk API 2.0 requests.

Note: This event type does not include Bulk API requests. For information about the BulkApi event type, see Bulk API Event Type on page 2123.

You can monitor the following Bulk API 2.0 parameters:

- The type of data processed via Bulk API 2.0 operations, and how much of that data was processed.
- Bulk API 2.0 limits.
- For jobs, track how long it takes to complete, database, and CPU usage.
- Understand users and the operations they performed.
- Detailed errors and failures.

BulkApi2 events represent the steps in the Bulk API 2.0 workflow and changes in job state.

For a Bulk API 2.0 **Ingest** job, an event is emitted when a job is marked:

- created
  - Note: For multi-part requests, there is no "created" event emitted, only an uploadComplete event.
- uploadComplete
- inProgress
- with a processing update
- complete
- aborted
- deleted

For a Bulk API 2.0 **Query** job, an event is emitted when a job is marked:

- created
- uploadComplete
- inProgress
- with a processing update
- complete
- aborted
- deleted

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

## Fields

| Field | Details |
| --- | --- |
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `ENTITY_TYPE` | **Type**<br>String<br>**Description**<br>The type of entity that Bulk API 2.0 used. |

| | |
|---|---|
| | For example, `Account` or `Contact`. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `BulkApi2`. |
| `JOB_ID` | **Type**<br>String<br>**Description**<br>The 15-character ID of the Bulk API 2.0 job. |
| `JOB_STATUS` | **Type**<br>String<br>**Description**<br>The job's current status. |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| `OPERATION_TYPE` | **Type**<br>String<br>**Description**<br>The type of Bulk API 2.0 operation that was performed. |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `RECORDS_FAILED` | **Type**<br>Number<br>**Description**<br>The total number of records that failed.<br>For example: `150`. |
| `RECORDS_PROCESSED` | **Type**<br>Number |

**Description**
Number of records processed for this event.

For example: `980`.

Note: The number of records processed is reported differently for ingest and query jobs.

For *ingest* jobs:

- Events with a status of `InProgress` report (if applicable) the number of records processed.

For *query* jobs:

- Events with a status of `JobComplete` or `InProgress` report (if applicable) the number of records processed.

`RESULT_SIZE_MB`

**Type**
Number

**Description**
Number of megabytes returned in query. Empty for ingest jobs.

For example: `670`.

Note: RESULT_SIZE_MB currently does not emit events, but is shown here as a placeholder for future enhancement.

`REQUEST_ID`

**Type**
String

**Description**
The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: `3nWgxWbDKWWDIk0FKfF5DV`.

`RUN_TIME`

**Type**
Number

**Description**
The amount of time that the request took in milliseconds.

`SESSION_KEY`

**Type**
String

**Description**
The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: `d7DEq/ANa7nNZZVD`.

`TIMESTAMP`

**Type**
String

| | |
|---|---|
| | **Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case-safe ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case-safe ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |

## Change Set Operation Event Type

Change Set Operation events contain information from change set migrations.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

## Fields

| Field | Details |
| --- | --- |
| CHANGE_SET_NAME | **Type**<br>String<br>**Description**<br>The name of the change set. |
| CLIENT_IP | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| CPU_TIME | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always `ChangeSetOperation`. |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| OPERATION | **Type**<br>String<br>**Description**<br>The operation that's being performed.<br>**Possible Values**<br>• DELETE |

- DEPLOY
- UPLOAD
- VALIDATE

| | |
|---|---|
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: 00D000000000123. |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.<br>For example: 3nWgxWbDKWWDIk0FKfF5DV. |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: d7DEq/ANa7nNZZVD. |
| TARGET_ORG_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization that's receiving the change set. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: 20130715233322.670. |

| | |
|---|---|
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |

## Composite API Event Type

Composite API events contain details about composite API requests. One composite API event is generated for each composite API and composite graph API call. This event type is available in API version 64.0 and later.

## Fields

| Field | Details |
| --- | --- |
| ALL_OR_NONE | **Type**<br>boolean<br>**Description**<br>Indicates whether the entire request is rolled back when the update of any object fails (true), or if the call should continue with the independent update of other objects in the request (false). The default is false. If true, it overrides the ALL_OR_NONE setting in subrequests. |
| CLIENT_IP | **Type**<br>String<br>**Description**<br>The IP address of the client that's using the API. |
| CPU_TIME | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds to complete the request. |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of the event. The value is always CompositeApi. |
| FAILURE_REASON | **Type**<br>String<br>**Description**<br>An error code giving the reason for a failed request. |
| IS_REQUEST_COLLATION_ON | **Type**<br>boolean<br>**Description**<br>The setting for subrequest collation. |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>Identifies all related events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I` |
| NUM_GRAPH_DEPTH | **Type**<br>Number |

| Field | Details |
| --- | --- |
| | **Description**<br>The depth of the graph. When multiple graphs are present, this number is the depth of the deepest graph. |
| NUM_RETRIES | **Type**<br>Number<br>**Description**<br>Number of attempted retries while processing the graph. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization that made the request. For example: `00D000000000123` |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>A unique ID identifying the composite API request. |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time in milliseconds to complete the request. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. For example: `20130715233322.670` |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The date and time that the event was generated. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The date and time, in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ), that the event was generated. The timezone is GMT. For example: `2015-07-27T11:32:59.555Z` |

| Field | Details |
| --- | --- |
| URI | **Type**<br>String<br>**Description**<br>The resource URI. |
| URI_ID_DERIVED | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| USER_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user that's using the API. For example: `00530000009M943` |
| USER_ID_DERIVED | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user that's using the API. For example: `00590000000I1SNIA0` |

## Composite API Subrequest Event Type

Composite API subrequest events contain details about composite API subrequests. One composite API subrequest event is generated for each subrequest or collated set of subrequests. For example, if a composite API request contains five subrequests and four of the subrequests are collated, then two composite API subrequest events are generated. This example also applies to composite graph API. This event type is available in API version 64.0 and later.

### Fields

| Field | Details |
| --- | --- |
| CANCELLED_REASON | **Type**<br>String<br>**Description**<br>If the subrequest was canceled, shows the reason. |

| Field | Details |
| --- | --- |
| CLIENT_IP | **Type**<br>String<br>**Description**<br>The IP address of the client that's using the API. |
| CPU_TIME | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds to complete the request. |
| DB_TOTAL_TIME | **Type**<br>Number<br>**Description**<br>Time (in nanoseconds) spent waiting for database processing in aggregate for all operations in the subrequest or set of collated subrequests. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code. |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of the event. The value is always CompositeApiSubrequest. |
| INITIAL_REFERENCE_IDS | **Type**<br>String<br>**Description**<br>The original reference IDs of subrequests that were collated into the current subrequest. |
| IS_CANCELLED | **Type**<br>boolean<br>**Description**<br>True if the subrequest call was canceled. |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>Identifies all related events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example:<br>`GeJCsym5eyvtEK2I` |
| METHOD | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The HTTP method of the request. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization that made the request. For example: `00D000000000123` |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>A unique ID identifying the composite API request. |
| REQUEST_STATUS | **Type**<br>String<br>**Description**<br>The status of the subrequest or collated set of subrequests. For example:<br>• S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.<br>• F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.<br>• U—Undefined<br>• A—Authorization Error<br>• R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.<br>• N—Not Found. 404 error.<br>This field can have a blank value. |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time in milliseconds to complete the request. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. For example: `20130715233322.670` |
| STATUS_CODE | **Type**<br>Number |

| Field | Details |
| --- | --- |
| | **Description**<br>The HTTP status code for the response. |
| SUCCESS | **Type**<br>boolean<br>**Description**<br>True if the subrequest call succeeded. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The date and time that the event was generated. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The date and time, in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ), that the event was generated. The timezone is GMT. For example: `2015-07-27T11:32:59.555Z` |
| URI | **Type**<br>String<br>**Description**<br>The resource URI. |
| URI_ID_DERIVED | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| USER_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user that's using the API. For example: `00530000009M943` |
| USER_ID_DERIVED | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user that's using the API. For example: `00590000000I1SNIA0` |

| Field | Details |
| --- | --- |
| USER_TYPE | **Type**<br>String<br>**Description**<br>The category of user license. Possible values are:<br>• CsnOnly—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.<br>• CspLitePortal—CSP Lite Portal license. Users whose access is limited because they're organization customers and they access the application through a customer portal or an Experience Cloud site.<br>• CustomerSuccess—Customer Success license. Users whose access is limited because they're organization customers and they access the application through a customer portal.<br>• Guest—Users whose access is limited so that your customers can view and interact with your site without logging in.<br>• PowerCustomerSuccess—Power Customer Success license. Users whose access is limited because they're organization customers and they access the application through a customer portal. Users with this license type can view and edit data that they directly own or data owned by or shared with users below them in the customer portal role hierarchy.<br>• PowerPartner—Power Partner license. Users whose access is limited because they're partners and they typically access the application through a partner portal or site.<br>• SelfService—Users whose access is limited because they're organization customers and they access the application through a self-service portal.<br>• Standard—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses and admins for this org. |

## Concurrent Long-Running Apex Limit Event Type

Concurrent Long-Running Apex Limit events contain information about long-running concurrent Apex requests in your org that Salesforce terminated after reaching your org's concurrency limit. Requests with an established Apex context that execute for 5 seconds are counted towards your org's limit of concurrent long-running requests. (Asynchronous requests don't count towards the limit.) When the long-running requests exceed the org default limit, all new Apex invocation requests are denied. This event type is available in the EventLogFile object in API version 45.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

## Fields

| Field | Details |
| --- | --- |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `ConcurrentLongRunningApexLimit`. |
| `NUMBER_REQUESTS` | **Type**<br>Number<br>**Description**<br>Count of requests with an established Apex context executing for longer than 5 seconds in your org. |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `REQUEST_URI` | **Type**<br>String<br>**Description**<br>URI of the long-running Apex request that Salesforce terminated.<br>**Example**<br>/apex/ApexClassName |
| `REQUESTS_LIMIT` | **Type**<br>Number<br>**Description**<br>Maximum count of requests with an established Apex context that can execute for longer than 5 seconds. When `NUMBER_REQUESTS` reaches this limit, then additional long-running Apex requests are terminated. (Asynchronous requests don't count towards the limit.)<br>See *Apex Developer Guide*: Lightning Platform Apex Limits.<br>**Example**<br>10 |

| Field | Details |
| --- | --- |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: 20130715233322.670. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).<br>For example: 2015-07-27T11:32:59.555Z. Timezone is GMT. |
| USER_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: 00530000009M943 |

### Usage

For example, you can monitor Concurrent Long-Running Apex Limit log counts to get a benchmark or plot a count by hour. To identify where the limit was exceeded, see the REQUEST_URI field. Then, cross-reference this data with Apex Execution event data where the average RUN_TIME exceeds 5 seconds. To identify synchronous requests only, cross-reference event data with the QUIDDITY field in Apex Execution event data. For example, QUIDDITY NOT IN (A,BA,F,Q,S) and CALLOUT_TIME (>5000).

## Console Event Type

Console events contain information about the performance and use of Salesforce Consoles. The Console events are logged whenever a Console tab is opened with a sidebar component. Outside of that, when Console tabs are opened, a regular view record detail event is served just like in Salesforce Classic.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |

| | |
|---|---|
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `COMPONENT_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the component. |
| `COMPONENT_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character, case-insensitive ID of the component. |
| `CONSOLE_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the console. |
| `CONSOLE_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character, case-insensitive ID of the console. |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DB_TOTAL_TIME` | **Type**<br>Number<br>**Description**<br>The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code. |

| | |
|---|---|
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `Console`. |
| `LICENSE_CONTEXT` | **Type**<br>String<br>**Description**<br>The license context in which a user is using a console.<br>**Example**<br>service, salesandservice, sales |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `RECORD_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the record that's associated with the console. |
| `RECORD_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character, case-insensitive ID of the record that's associated with the console. |
| `REQUEST_ID` | **Type**<br>String |

**Description**
The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: `3nWgxWbDKWWDIk0FKfF5DV`.

`REQUEST_STATUS`

**Type**
String

**Description**
The status of the request for a page view or user interface action.

For example:

- `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- `U`—Undefined
- `A`—Authorization Error
- `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- `N`—Not Found. 404 error.

This field can have a blank value.

`RUN_TIME`

**Type**
Number

**Description**
The amount of time that the request took in milliseconds.

`SESSION_KEY`

**Type**
String

**Description**
The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: `d7DEq/ANa7nNZZVD`.

`TIMESTAMP`

**Type**
String

**Description**
The access time of Salesforce services in GMT.

For example: `20130715233322.670`.

`TIMESTAMP_DERIVED`

**Type**
DateTime

**Description**
The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).

For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.

`URI`

**Type**
String

**Description**
The URI of the page that's receiving the request.

For example: `/home/home.jsp`.

`URI_ID_DERIVED`

**Type**
ID

**Description**
The 18-character case insensitive ID of the URI of the page that's receiving the request.

`USER_ID`

**Type**
Id

**Description**
The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: `00530000009M943`

`USER_ID_DERIVED`

**Type**
Id

**Description**
The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: `00590000000I1SNIA0`.

`USER_TYPE`

**Type**
String

**Description**
The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.

- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

## Content Distribution Event Type

Content Distribution events contain information about content distributions and deliveries to users.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| `ACTION` | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The action that's used when a delivery is viewed.<br>**Possible Values**<br>• `VIEW`<br>• `INSERT`<br>• `UPDATE` |
| `DELIVERY_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the content delivery. |
| `DELIVERY_LOCATION` | **Type**<br>String<br>**Description**<br>The location of the delivery. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `ContentDistribution`. |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `RELATED_ENTITY_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the record that's associated with the delivery distribution. |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |

| | |
|---|---|
| `TIMESTAMP` | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |
| `VERSION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the content version. |

SEE ALSO:

EventLogFile Supported Event Types

EventLogFile

## Content Document Link Event Type

Content Document Link events contain sharing information for content documents.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

## Fields

| Field | Details |
| --- | --- |
| `DOCUMENT_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the document that's being shared. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `ContentDocumentLink`. |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `SHARED_WITH_ENTITY_ID` | **Type**<br>Id<br>**Description**<br>Who the document was shared with. |
| `SHARING_OPERATION` | **Type**<br>String<br>**Description**<br>The type of sharing operation on the document.<br>**Possible Values**<br>• `INSERT`<br>• `UPDATE`<br>• `DELETE` |

`SHARING_PERMISSION`

**Type**
String

**Description**
What permissions the document was shared with.

**Possible Values**

- `V`: Viewer
- `C`: Collaborator
- `I`: Inferred—that is, the sharing permissions were inferred from a relationship between the viewer and document. For example, a document's owner has a sharing permission to the document itself. Or, a document can be a part of a content collection, and the viewer has sharing permissions to the collection rather than explicit permissions to the document directly.

`TIMESTAMP`

**Type**
String

**Description**
The access time of Salesforce services in GMT.

For example: `20130715233322.670`.

`TIMESTAMP_DERIVED`

**Type**
DateTime

**Description**
The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).

For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.

`USER_ID`

**Type**
Id

**Description**
The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: `00530000009M943`

`USER_ID_DERIVED`

**Type**
Id

**Description**
The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: `00590000000I1SNIA0`.

## Content Transfer Event Type

Content Transfer events contain information about content transfer events, such as downloads, uploads, and previews. This information includes events performed on files and attachments to records.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
|---|---|
| `DOCUMENT_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the document that's being shared. |
| `DOCUMENT_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the document that's being shared. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `ContentTransfer`. |
| `FILE_PREVIEW_TYPE` | **Type**<br>String<br>**Description**<br>The content type of the file preview. |
| `FILE_TYPE` | **Type**<br>String<br>**Description**<br>The content type of the file version. |

`ORGANIZATION_ID`

**Type**
Id

**Description**
The 15-character ID of the organization.

For example: `00D000000000123`.

`REQUEST_ID`

**Type**
String

**Description**
The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: `3nWgxWbDKWWDIk0FKfF5DV`.

`SIZE_BYTES`

**Type**
Number

**Description**
The size of the file transfer, in bytes.

`TIMESTAMP`

**Type**
String

**Description**
The access time of Salesforce services in GMT.

For example: `20130715233322.670`.

`TIMESTAMP_DERIVED`

**Type**
DateTime

**Description**
The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).

For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.

`TRANSACTION_TYPE`

**Type**
String

**Description**
The operation that was performed, including operations on files and attachments to records. For example, you can track operations in the Attachments related list on a case.

**Possible Values**

- `VersionDownloadAction` and `VersionDownloadApi` represent downloads via the user interface and API respectively.

| | |
|---|---|
| | • `VersionRenditionDownload` represents a file preview action.<br>• `saveVersion` represents a file that's being uploaded. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |
| `VERSION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the content version. |
| `VERSION_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the content version. |

## Continuation Callout Summary Event Type

Continuation Callout Summary events contain information about all of the asynchronous callouts performed during a transaction, their response status codes, execution times, and URL endpoint destinations. This event type is available in the EventLogFile object in API version 43.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or the REST API Developer's Guide.

## Fields

| Field | Details |
| --- | --- |
| CONTINUATION_ID | **Type**<br>String<br>**Description**<br>A unique ID identifying a sequence of events within a request.<br>**Example**<br>SFDC-Continuation-14e3cg85-961d-389e-7bz1-3d171543162a |
| DURATION | **Type**<br>Number<br>**Description**<br>Total duration of continuation, in milliseconds. |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always `ContinuationCalloutSummary`. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| ORIGIN_REQUEST_ID | **Type**<br>Id<br>**Description**<br>The ID of the request that initiated a callout.<br>**Example**<br>TID:5lLoVKlztX_rDDJcp7 |
| REQUEST_FORM_SIZE | **Type**<br>String<br>**Description**<br>Continuation request form size, in bytes. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values. |
| REQUEST_ID | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `RESPONSE_SIZE` | **Type**<br>String<br>**Description**<br>The size of the callout response, in bytes. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values. |
| `STATUS_CODE` | **Type**<br>String<br>**Description**<br>The HTTP status or internal code returned by the remote endpoint. A status code of 200 indicates that the request was successful. Other status code values indicate the type of problem that was encountered. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values.<br>**Examples**<br>• 2000—The timeout was reached, and the server didn't get a chance to respond.<br>• 2001—There was a connection failure.<br>• 2002—Exceptions occurred.<br>• 2003—The response hasn't arrived (which also means that the Apex asynchronous callout framework hasn't resumed).<br>• 2004—The response size is too large (greater than 1 MB). |
| `SUCCESS` | **Type**<br>Boolean<br>**Description**<br>Indicates whether the continuation was successful (`1`) or not (`0`). |
| `TIMESTAMP` | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). |

| Field | Details |
| --- | --- |
| | For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `URL` | **Type**<br>String<br>**Description**<br>The callout endpoint URL. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values.<br>**Example**<br>http://prod.location.amazonaws.com:1000/orders/order/_search |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |
| `VF_CONTROLLER_SIZE` | **Type**<br>String<br>**Description**<br>Continuation Visualforce controller size, in bytes. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values. |

## CORS Violation Record Event Type

CORS Violation Record events capture information about Cross-Origin Resource Sharing (CORS) violations. Cross-origin requests to Lightning apps are blocked unless the request comes from a URL listed in your CORS allowlist.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

## Fields

| Field | Details |
| --- | --- |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `CorsViolation`. |
| `HOST` | **Type**<br>String<br>**Description**<br>The URL of the requested Salesforce resource.<br>If JavaScript code at `https://www.example.com` requests a resource from `https://www.salesforce.com`, the origin is `https://www.example.com` and the host is `https://www.salesforce.com`. |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `ORIGIN` | **Type**<br>String<br>**Description**<br>The URL of the site making the cross-origin request to Salesforce.<br>If JavaScript code at `https://www.example.com` requests a resource from `https://www.salesforce.com`, the origin is `https://www.example.com` and the host is `https://www.salesforce.com`. |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |

| | |
|---|---|
| `TIMESTAMP` | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |

## CSP Violation Event Type

CSP violation events capture details about blocked resource requests from Lightning Experience pages based on your content security policy (CSP). The CSP Violation event type is available in the EventLogFile object in API version 63.0 and later.

This event is free for all customers with a 24-hour data retention period. The CSP violation event is available in the API but not in the Event Monitoring Analytics app.

For details about event monitoring, see the Trailhead Event Monitoring module or the REST API Developer's Guide.

Note: To help preserve performance, Salesforce uses throttling, a technique that limits the number of generated CSP violation events when the volume is exceptionally high. Therefore, if your org generates a high volume of CSP violations over a short period of time, some of those violations can fail to generate a CSP violation event.

### Fields

| Field | Details |
|---|---|
| `BLOCKED_URI` | **Type**<br>String<br>**Description**<br>The full string of the blocked resource. If the call to the blocked resource used a URL, `BLOCKED_URI` is the full URL. Or, for violations with a `DIRECTIVE` of `script-src` directives, `inline` or `eval`.<br>**Examples**<br>• https://www.example.com/images/picture.png<br>• file://host1:0002/media/video.mp4<br>• inline |
| `BLOCKED_URI_DOMAIN` | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>If `BLOCKED_URI` is a URL, the domain for that URL. To allow resources to be loaded from the `BLOCKED_URI`, `BLOCKED_URI_DOMAIN` is the `endpointUrl` value to add or update in the CspTrustedSite Metadata API.<br>**Example**<br>www.example.com |
| `COLUMN_NUMBER` | **Type**<br>Number<br>**Description**<br>The column number in the document or worker script at which the violation occurred. This value is relevant only when `DIRECTIVE` is `script-src`.<br>For those violations, use this value with `LINE_NUMBER` to identify the location of the violation.<br>**Example**<br>27 |
| `CONTEXT` | **Type**<br>String<br>**Description**<br>The content security policy (CSP) context for the request. The CSP context controls which pages can load content from a CspTrustedSite.<br>CSP violation events capture details about blocked resource requests from only Lightning Experience pages, this value is always `Lightning`. |
| `DIRECTIVE` | **Type**<br>String<br>**Description**<br>The CSP directive that blocked the resource request.<br>**Possible Values**<br>• `font-src`<br>• `frame-src`<br>• `img-src`<br>• `media-src`<br>• `style-src`<br>• `script-src`<br>For information on these directives and a full list of all CSP directives, see MDN Web Docs: Content-Security-Policy. |
| `DISPOSITION` | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The CSP violation handling instruction for the user agent at the time of the violation.<br>**Possible Values**<br>• `enforce`—Enforce the policy violation. For violations with this `DISPOSITION`, the resource request was blocked.<br>• `report`—Report the policy violation. For violations with this `DISPOSITION`, the resource request wasn't blocked, but the violation was reported. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `CspViolation` |
| `LINE_NUMBER` | **Type**<br>Number<br>**Description**<br>The line number in the document or worker script at which the violation occurred. This value is relevant only when `DIRECTIVE` is `script-src`. For those violations, use this value with `COLUMN_NUMBER` to identify the location of the violation.<br>**Example**<br>12 |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>**Example**<br>`0000000062_0000x8Lz-` |
| `RESOURCE_SAMPLE` | **Type**<br>String<br>**Description**<br>A sample of the resource that caused the violation, usually the first 40 characters, or the empty string.<br>**Example**<br>`var lastRow = 4;greyLink('fRemoveRowLink`<br>`var SFDCSessionVars={\"server\":\"https:\\/\\`<br>`LoginHint.getSavedIdentities(false);` |

| Field | Details |
| --- | --- |
| | `LoginHint.saveHintEdit();`<br><br>`function handleLogin(){document.login.un…` |
| SOURCE | **Type**<br>String<br>**Description**<br>The page where this CSP violation originated. For example, if your CSP policy prevented an image from loading on a Visualforce page, SOURCE contains the URL of that page.<br>**Example**<br>`https://MyDomainName.my.salesforce.com/apex/HelloWorld` |
| SOURCE_FILE | **Type**<br>String<br>**Description**<br>The URL of the script in which the violation occurred. If the violation didn't occur in a script, SOURCE_FILE is null.<br>**Example**<br>https://www.example.com/script_xyz.js |
| TIMESTAMP | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in GMT.<br>**Example**<br>`20220715233322.670` |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). The time zone is always GMT.<br>**Example**<br>`2022-07-27T11:32:59.555Z.` |

## Usage

Only one CSP violation event log file is available at a time. When the daily incremental event log file is generated during the daily background process, the new file replaces the existing file.

If the event log file doesn't exist, either the log generation process hasn't run yet or there's no violation data to report for that 24-hour window. The event log file is generated only when at least one violation occurred for the day.

To collect CSP violation logs for multiple days, schedule a daily query of the CSP Violation event type via REST API. For example, you can configure a cron job in Unix or a scheduled task in Windows to run the query.

## Dashboard Event Type

Dashboard events contain details about report requests from dashboards. These requests are triggered by dashboard refreshes, subscriptions, and filter changes.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DASHBOARD_COMPONENT_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the dashboard component. |
| `DASHBOARD_ID` | **Type**<br>String<br>**Description**<br>The 15-character ID of the dashboard that was run. |
| `DASHBOARD_ID_DERIVED` | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The 18-character case insensitive ID of the dashboard that was run. |
| DASHBOARD_TYPE | **Type**<br>String<br>**Description**<br>The type of dashboard.<br>**Possible Values**<br>• R: Run as running user<br>• C: Run as context user<br>• S: Run as specific user |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always Dashboard. |
| IS_SCHEDULED | **Type**<br>Boolean<br>**Description**<br>1 if the dashboard component ran successfully, 0 if it didn't. |
| IS_SUCCESS | **Type**<br>Boolean<br>**Description**<br>1 if the dashboard component ran successfully, 0 if it didn't. |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: GeJCsym5eyvtEK2I. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: 00D000000000123. |

| | |
|---|---|
| REPORT_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the report that was run. |
| REPORT_ID_DERIVED | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the report that was run. |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.<br>For example: 3nWgxWbDKWWDIk0FKfF5DV. |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: d7DEq/ANa7nNZZVD. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: 20130715233322.670. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). |

| | |
|---|---|
| | For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user the dashboard is running as.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user the dashboard is running as.<br>For example: `00590000000I1SNIA0`. |
| `VIEWING_USER_ID` | **Type**<br>Id<br>**Description**<br>The ID of the user who's viewing the dashboard. |

## Database Save Event Type

Database Save events track when records are created, updated, or deleted. This object is available in API version 63.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

## Fields

| Field | Details |
| --- | --- |
| DML_TYPE | **Type**<br>String<br>**Description**<br>The type of DML statement. |
| EVENT_TYPE | **Type**<br>Id<br>**Description**<br>The type of event. |
| FIRST_ENTITY_ID | **Type**<br>String<br>**Description**<br>The first ID that is logged when an update occurs. If a single record is updated, the ID of that row is logged. If multiple records are updated, only one ID is logged. |
| KEY_PREFIX | **Type**<br>String<br>**Description**<br>The key prefix of the entity type that was saved. |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. |
| NUM_ROWS | **Type**<br>String<br>**Description**<br>The number of entities that were saved. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization. |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>Globally unique id for a given request. |

| Field | Details |
| --- | --- |
| SAMPLE_FACTOR | **Type**<br>Number<br>**Description**<br>The ratio of saved entities that were logged. A value of 1 means every entity saved was logged. A value of 100 means that 1 out of 100 entities saved was logged. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>**Example**<br>d7DEq/ANa7nNZZVD |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The Timestamp at which the log event was generated. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).<br>**Example**<br>2015-07-27T11:32:59.555Z |
| USER_ID | **Type**<br>Id<br>**Description**<br>The ID of the user who's using Salesforce services through the UI or the API.<br>**Example**<br>005XXXXXXXXXXX |

## Document Attachment Downloads Event Type

Document Attachment Downloads events contain details of document and attachment downloads.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

## Fields

| Field | Details |
| --- | --- |
| ENTITY_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the entity that's associated with the document or attachment. |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always DocumentAttachmentDownoads. |
| FILE_TYPE | **Type**<br>String<br>**Description**<br>The type of the file or attachment. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: 00D000000000123. |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.<br>For example: 3nWgxWbDKWWDIk0FKfF5DV. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: 20130715233322.670. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime |

| | |
|---|---|
| | **Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |

EventLogFile

## External Cross-Org Callout Event Type

External Cross-Org Callout events represent external data callouts via the cross-org adapter for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer Guide.

Note: For the cross-org adapter for Salesforce Connect, event monitoring currently doesn't track search callouts.

### Fields

| Field | Details |
|---|---|
| `ACTION` | **Type**<br>String<br>**Description**<br>Action performed by the callout.<br>**Possible Values**<br>• query |

| Field | Details |
| --- | --- |
| | • upsert<br>• delete |
| ENTITY | **Type**<br>String<br>**Description**<br>Name of the external object being accessed.<br>**Example**<br>Order |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>Type of event. Value is always `ExternalCrossOrgCallout`. |
| EXECUTE_MS | **Type**<br>Number<br>**Description**<br>How long it took (in milliseconds) for Salesforce to prepare and execute the query. Available in API version 42.0 and later.<br>**Example**<br>1 |
| FETCH_MS | **Type**<br>Number<br>**Description**<br>How long it took (in milliseconds) to retrieve the query results from the external system. Available in API version 42.0 and later.<br>**Example**<br>452 |
| FILTER | **Type**<br>Text<br>**Description**<br>Field expressions to filter which rows to return. Corresponds to `WHERE` in SOQL queries.<br>**Example**<br>WHERE CustomerId='123456' |
| HAVING | **Type**<br>Text<br>**Description**<br>Reserved for future use. |

| Field | Details |
| --- | --- |
| LIMIT | **Type**<br>Number<br>**Description**<br>Maximum number of rows to return for a query. Corresponds to `LIMIT` in SOQL queries.<br>**Example**<br>200 |
| MESSAGE | **Type**<br>String<br>**Description**<br>Error or warning message associated with the failed query callout. Value is always empty for upsert and delete callouts.<br>**Example**<br>System.UnexpectedException: Query is either selecting too many fields or the filter conditions are too complicated |
| OFFSET | **Type**<br>Number<br>**Description**<br>Number of rows to skip when paging through a result set.<br>Corresponds to `OFFSET` in SOQL queries. If a SOQL query doesn't define an `OFFSET`, the value is -1.<br>**Example**<br>0 (default) |
| ORDERBY | **Type**<br>String<br>**Description**<br>Field or column to use for sorting query results, and whether to sort the results in ascending (default) or descending order. Corresponds to `ORDER BY` in SOQL queries.<br>**Examples**<br>• ORDER BY ShipName<br>• ORDER BY ShipName DESC |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>15-character ID of the organization.<br>**Example**<br>00D000000000123 |

| Field | Details |
| --- | --- |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>Unique ID of a transaction. A transaction can contain one or more events. All events in a transaction have the same REQUEST_ID.<br>**Example**<br>4A13-HSKv3CKs-0FKfceaV |
| ROWS | **Type**<br>Number<br>**Description**<br>Total number of records in the result set. Value is always 0 for upsert and delete callouts.<br>**Example**<br>200 |
| ROWS_FETCHED | **Type**<br>Number<br>**Description**<br>Reserved for future use. |
| SELECT | **Type**<br>String<br>**Description**<br>Comma-separated list of fields being queried. Corresponds to `SELECT` in SOQL queries.<br>**Example**<br>SELECT Id,Name,CustomerID,OrderDate |
| STATUS | **Type**<br>Boolean<br>**Description**<br>Whether the query was successful. Value is always empty for upsert and delete callouts.<br>**Possible Values**<br>• 1—Success<br>• 0—Failed |
| SUBQUERIES | **Type**<br>Number<br>**Description**<br>The number of subqueries that the query is split into. |

| Field | Details |
| --- | --- |
| THROUGHPUT | **Type**<br>Number<br>**Description**<br>Reserved for future use. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| TOTAL_MS | **Type**<br>Number<br>**Description**<br>How long it took (in milliseconds) to prepare and execute the query and to retrieve the query results.<br>**Example**<br>453 |
| USER_ID | **Type**<br>Id<br>**Description**<br>15-character ID of the user accessing the external system.<br>**Example**<br>00530000009M943 |
| USING_MRU | **Type**<br>Boolean |

| Field | Details |
| --- | --- |
| | **Description**<br>Reserved for future use. |

## External Custom Apex Callout Event Type

External Custom Apex Callout events represent external data callouts via custom adapters for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer Guide.

### Fields

| Field | Details |
| --- | --- |
| `ACTION` | **Type**<br>String<br>**Description**<br>Action performed by the callout.<br>**Possible Values**<br>• query<br>• upsert<br>• delete |
| `ENTITY` | **Type**<br>String<br>**Description**<br>Name of the external object being accessed.<br>**Example**<br>Order |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>Type of event. Value is always `ExternalCustomApexCallout`. |
| `EXECUTE_MS` | **Type**<br>Number |

| Field | Details |
| --- | --- |
| | **Description**<br>How long it took (in milliseconds) for Salesforce to prepare and execute the query. Available in API version 42.0 and later.<br>**Example**<br>102 |
| FETCH_MS | **Type**<br>Number<br>**Description**<br>How long it took (in milliseconds) to retrieve the query results from the external system. Available in API version 42.0 and later.<br>**Example**<br>607 |
| FILTER | **Type**<br>Text<br>**Description**<br>Field expressions to filter which rows to return. Corresponds to `WHERE` in SOQL queries.<br>**Example**<br>Filter:[columnName=CustomerID, columnValue=537, subfilters=null, tableName=Order, type=EQUALS] |
| LIMIT | **Type**<br>Number<br>**Description**<br>Maximum number of rows to return for a query. Corresponds to `LIMIT` in SOQL queries.<br>**Example**<br>200 |
| MESSAGE | **Type**<br>String<br>**Description**<br>Error or warning message associated with the failed call.<br>**Example**<br>System.UnexpectedException: Query is either selecting too many fields or the filter conditions are too complicated |
| OFFSET | **Type**<br>Number<br>**Description**<br>Number of rows to skip when paging through a result set. Corresponds to `OFFSET` in SOQL queries. |

| Field | Details |
| --- | --- |
| | **Example**<br>0 (default) |
| ORDERBY | **Type**<br>String<br>**Description**<br>Field or column to use for sorting query results, and whether to sort the results in ascending (default) or descending order. Corresponds to `ORDER BY` in SOQL queries.<br>**Examples**<br>(Order:[columnName=OrderDate, direction=ASCENDING, tableName=Order]) |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>15-character ID of the organization.<br>**Example**<br>00D000000000123 |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>Unique ID of a transaction. A transaction can contain one or more events. All events in a transaction have the same REQUEST_ID.<br>**Example**<br>4A13-HSKv3CKs-0FKfceaV |
| ROWS | **Type**<br>Number<br>**Description**<br>Total number of records in the result set.<br>The value is always -1 if the custom adapter's `DataSource.Provider` class doesn't declare the `QUERY_TOTAL_SIZE` capability.<br>**Example**<br>200 |
| ROWS_FETCHED | **Type**<br>Number<br>**Description**<br>Number of rows fetched by the callout. Available in API version 42.0 and later.<br>**Example**<br>200 |

| Field | Details |
| --- | --- |
| SELECT | **Type**<br>String<br>**Description**<br>Comma-separated list of fields being queried. Corresponds to `SELECT` in SOQL queries.<br>**Example**<br>(ColumnSelection:[aggregation=NONE, columnName=Name, tableName=Order], ColumnSelection:[aggregation=NONE, columnName=CustomerID, tableName=Order], ColumnSelection:[aggregation=NONE, columnName=OrderDate, tableName=Order]) |
| STATUS | **Type**<br>Boolean<br>**Description**<br>Whether the query was successful.<br>**Possible Values**<br>• 1—Success<br>• 0—Failed<br>• Empty—Failed with no logged status or message |
| THROUGHPUT | **Type**<br>Number<br>**Description**<br>Number of records retrieved in one second.<br>**Example**<br>302.57 |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| SUBQUERIES | **Type**<br>Number<br>**Description**<br>Reserved for future use. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). |

| Field | Details |
| --- | --- |
| | For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `TOTAL_MS` | **Type**<br>Number<br>**Description**<br>How long it took (in milliseconds) to prepare and execute the query and to retrieve the query results.<br>**Example**<br>709 |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>15-character ID of the user accessing the external system.<br>**Example**<br>00530000009M943 |

## External Data Source Callout Event Type

External Data Source Callout events represent external data callouts via the Salesforce Connect adapters for Amazon DynamoDB and Amazon Athena. This event type is available in the EventLogFile object in API version 56.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer Guide.

### Fields

| Field | Details |
| --- | --- |
| `ACTION` | **Type**<br>String<br>**Description**<br>Action performed by the callout.<br>**Possible Values**<br>For Amazon DynamoDB data source:<br>• query<br>• insert<br>• delete<br>• update |

| Field | Details |
| --- | --- |
| | • upsert<br>For Amazon Athena data source:<br>• query |
| DATA_SOURCE_NAME | **Type**<br>String<br>**Description**<br>Name of the external data source being accessed. |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>Type of event. Value is always `ExternalDataSourceCallout`. |
| EXTERNAL_OBJECT | **Type**<br>String<br>**Description**<br>Name of the external object being accessed. |
| FETCH_MS | **Type**<br>Number<br>**Description**<br>How long it took (in milliseconds) to retrieve the query results from the external data source.<br>**Example**<br>127 |
| FILTER | **Type**<br>Text<br>**Description**<br>Field expressions to filter which rows to return. Corresponds to `WHERE` in queries. |
| LIMIT | **Type**<br>Number<br>**Description**<br>Maximum number of rows to return for a query. Corresponds to Limit parameter in ExecuteStatement operation for an Amazon DynamoDB data source. |
| MESSAGE | **Type**<br>String<br>**Description**<br>Error or warning message associated with the failed call. |

| Field | Details |
| --- | --- |
| NEXT_LINK | **Type**<br>String<br>**Description**<br>Next link that the callout used to request a subsequent page of rows. A next link is provided in a previous response when the response includes only part of the result set.<br>For requests to AWS data sources, this field stores the `nextToken` parameter that contains a unique hash string. |
| OFFSET | **Type**<br>Number<br>**Description**<br>Number of rows to skip when paging through a result set. Corresponds to `OFFSET` in queries to Amazon Athena. This field is not supported by queries to Amazon DynamoDB. |
| OPERATION | **Type**<br>String<br>**Description**<br>The operation that's being performed. |
| ORDERBY | **Type**<br>String<br>**Description**<br>Field or column to use for sorting query results, and whether to sort the results in ascending (default) or descending order. Corresponds to `ORDER BY` in queries.<br>**Example**<br>• Country ASC<br>• CustomerName DESC |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>15-character ID of the organization.<br>**Example**<br>00D000000000123 |
| PARENT_CALLOUT | **Type**<br>String<br>**Description**<br>If the callout requested a subsequent page of rows, this field identifies the initial callout whose request resulted in the multi-page result set.<br>**Example**<br>4EoZtuBzzRlXSk-ysRdf1F-1 |

| Field | Details |
| --- | --- |
| PROVIDER_TYPE | **Type**<br>String<br>**Description**<br>Whether the callout was made by Salesforce Connect adapter for Amazon DynamoDB or Amazon Athena.<br>**Possible Values**<br>• amazonDynamodb<br>• amazonAthena |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>Unique ID of a transaction. A transaction can contain one or more events. All events in a transaction have the same REQUEST_ID.<br>**Example**<br>4A13-HSKv3CKs-0FKfceaV |
| RESPONSE_SIZE | **Type**<br>Number<br>**Description**<br>The size of the callout response, in bytes. |
| ROWS_FETCHED | **Type**<br>Number<br>**Description**<br>Number of records fetched by the callout. The records fetched by a callout can be a subset of a large result set.<br>**Example**<br>200 |
| SEARCH | **Type**<br>String<br>**Description**<br>Search query string. |
| SELECT | **Type**<br>String<br>**Description**<br>Comma-separated list of fields being queried. Corresponds to SELECT in queries.<br>To query, Salesforce Connect adapter uses PartiQL with Amazon DynamoDB and SQL with Amazon Athena. |

| Field | Details |
| --- | --- |
| | **Example**<br>CustomerID,OrderDate,OrderID,ShipCity,ShipCountry |
| STATUS | **Type**<br>Boolean<br>**Description**<br>Whether the query was successful.<br>**Possible Values**<br>• 1—Success<br>• 0—Failed |
| STATUS_CODE | **Type**<br>Number<br>**Description**<br>The HTTP response status code for the request. |
| TABLE_NAME | **Type**<br>String<br>**Description**<br>Name of the table being queried in the AWS data source. |
| THROUGHPUT | **Type**<br>Number<br>**Description**<br>Number of records retrieved in one second.<br>**Example**<br>3025.67 |
| TIMESTAMP | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |

| Field | Details |
| --- | --- |
| TOTAL_MS | **Type**<br>Number<br>**Description**<br>How long it took (in milliseconds) to prepare and execute the query and to retrieve the query results. |
| USER_ID | **Type**<br>Id<br>**Description**<br>15-character ID of the user accessing the external data source.<br>**Example**<br>00530000009M943 |

## External OData Callout Event Type

External OData Callout events represent external data callouts via the OData 2.0 and OData 4.0 adapters for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer Guide.

### Fields

| Field | Details |
| --- | --- |
| ACTION | **Type**<br>String<br>**Description**<br>Action performed by the callout.<br>**Possible Values**<br>• query<br>• upsert<br>• delete |
| BYTES | **Type**<br>Number<br>**Description**<br>Size of the result set in bytes. |
| ENTITY | **Type**<br>String<br>**Description**<br>Name of the external object being accessed. |

| Field | Details |
| --- | --- |
| | **Example**<br>Order |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>Type of event. Value is always `ExternalODataCallout`. |
| EXECUTE_MS | **Type**<br>Number<br>**Description**<br>How long it took (in milliseconds) for Salesforce to prepare and execute the query. Available in API version 42.0 and later.<br>**Example**<br>21 |
| EXPAND | **Type**<br>String<br>**Description**<br>Reserved for future use. |
| FETCH_MS | **Type**<br>Number<br>**Description**<br>How long it took (in milliseconds) to retrieve the query results from the external system. Available in API version 42.0 and later.<br>**Example**<br>127 |
| FILTER | **Type**<br>Text<br>**Description**<br>Field expressions to filter which rows to return. Corresponds to `WHERE` in SOQL queries and `$filter` in OData queries.<br>**Example**<br>CustomerID eq 12345 |
| LIBRARY | **Type**<br>String<br>**Description**<br>Reserved for future use. |

| Field | Details |
| --- | --- |
| LIMIT | **Type**<br>Number<br>**Description**<br>Maximum number of rows to return for a query. Corresponds to `LIMIT` in SOQL queries and `$top` in OData queries.<br>**Example**<br>200 |
| MESSAGE | **Type**<br>String<br>**Description**<br>Error or warning message associated with the failed call.<br>**Example**<br>The OData query result was too large, so the external data didn't load. |
| NEXT_LINK | **Type**<br>String<br>**Description**<br>OData next link that the callout used to request a subsequent page of rows. A next link is provided in a previous response from the OData producer when the response includes only part of the result set.<br>Available in API version 42.0 and later. However, this field isn't supported for the OData 2.0 adapter on orgs created before Spring '18.<br>**Example**<br>http://services.example.org/Warehouse.svc/Orders?$count=true&$select=CustomerID,OrderID,RequiredDate,ShippedDate&$top=301&$skiptoken=10447 |
| OFFSET | **Type**<br>Number<br>**Description**<br>Number of rows to skip when paging through a result set.<br>Corresponds to `OFFSET` in SOQL queries and `$skip` in OData queries.<br>**Example**<br>10 |
| ORDERBY | **Type**<br>String<br>**Description**<br>Field or column to use for sorting query results, and whether to sort the results in ascending (default) or descending order. Corresponds to `ORDER BY` in SOQL queries and `$orderby` in OData queries. |

| Field | Details |
| --- | --- |
| | **Examples**<br>• ShipName<br>• ShipName desc |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>15-character ID of the organization.<br>**Example**<br>00D000000000123 |
| PARENT_CALLOUT | **Type**<br>String<br>**Description**<br>If the callout requested a subsequent page of rows, this field identifies the initial callout whose request resulted in the multi-page result set.<br>Available in API version 42.0 and later. However, this field isn't supported for the OData 2.0 adapter on orgs created before Spring '18.<br>**Example**<br>4EoZtuBzzRlXSk-ysRdf1F-1 |
| PROVIDER_TYPE | **Type**<br>String<br>**Description**<br>Whether the OData 2.0 or OData 4.0 adapter made the callout.<br>**Possible Values**<br>• OData—OData 2.0 adapter<br>• OData4—OData 4.0 adapter |
| RATE_LIMIT_USAGE_PERCENT | **Type**<br>Number<br>**Description**<br>Consumed percentage of the org's limit of OData callouts per hour.<br>**Example**<br>2.5—2.5% of the hourly callout limit has been consumed |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>Unique ID of a transaction. A transaction can contain one or more events. All events in a transaction have the same REQUEST_ID. |

| Field | Details |
| --- | --- |
| | **Example**<br>4A13-HSKv3CKs-0FKfceaV |
| REQUESTS | **Type**<br>Number<br>**Description**<br>Reserved for future use. |
| ROWS | **Type**<br>Number<br>**Description**<br>Total number of records in the result set. Available in API version 42.0 and later.<br>**Example**<br>830 |
| ROWS_FETCHED | **Type**<br>Number<br>**Description**<br>Number of records fetched by the callout. The records fetched by a callout can be a subset of a large result set.<br>Available in API version 42.0 and later. However, this field isn't supported for the OData 2.0 adapter on orgs created before Spring '18.<br>**Example**<br>200 |
| SEARCH | **Type**<br>String<br>**Description**<br>Search query string. Corresponds to condition expressions in SOSL.<br>**Example**<br>contains(CustomerID,'10248') eq true or contains(ShipName,'10248') eq true |
| SELECT | **Type**<br>String<br>**Description**<br>Comma-separated list of fields being queried. Corresponds to `SELECT` in SOQL queries and `$select` in OData queries.<br>**Example**<br>CustomerID,OrderDate,OrderID,ShipCity,ShipCountry |
| STATUS | **Type**<br>Boolean |

| Field | Details |
| --- | --- |
| | **Description**<br>Whether the query was successful.<br>**Possible Values**<br>• 1—Success<br>• 0—Failed |
| THROUGHPUT | **Type**<br>Number<br>**Description**<br>Number of records retrieved in one second.<br>Available in API version 42.0 and later. However, this field isn't supported for the OData 2.0 adapter on orgs created before Spring '18.<br>**Example**<br>3025.67 |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| TOTAL_MS | **Type**<br>Number<br>**Description**<br>How long it took (in milliseconds) to prepare and execute the query and to retrieve the query results. |
| USER_ID | **Type**<br>Id<br>**Description**<br>15-character ID of the user accessing the external system. |

| Field | Details |
| --- | --- |
| | **Example**<br>00530000009M943 |

## Flow Execution Event Type

Flow Execution events contain information about flows that were executed including details such as total execution time, number of interviews, and number of errors.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| `BOT_IDENTIFIER` | **Type**<br>string<br>**Description**<br>The ID of the bot. |
| `BOT_SESSION_IDENTIFIER` | **Type**<br>string<br>**Description**<br>The bot session ID. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `FlowExecution`. |
| `TIMESTAMP` | **Type**<br>String<br>**Description**<br>The time that the flow was executed in GMT.<br>For example: `20210606032436.520`. |
| `REQUEST_ID` | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `TID:000000000000c00fff`. |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who executed the flow through the UI or the API.<br>For example: `00530000009M943` |
| `PLANNER_IDENTIFIER` | **Type**<br>string<br>**Description**<br>The ID of the agent planner. |
| `PROCESS_TYPE` | **Type**<br>String<br>**Description**<br>The type of the flow. Valid values are:<br>• `ActionableEventManagementFlow`—A flow that triggers an actionable event orchestration process in the background and automatically executes different types of actions based on the event type. This value is available in API version 62.0 and later.<br>• `ActionCadenceAutolaunchedFlow`—A flow that's executed when a user completes a cadence step. This value is available in API version 56.0 and later.<br>• `ActionCadenceStepFlow`—A screen flow used as a cadence step. This value is available in API version 56.0 and later.<br>• `ActivityObjectMatchingFlow`—A flow that launches when Einstein Activity Capture detects and captures a new activity, such as an email. This type of flow runs in the background without user interaction. This value is available with Sync Email as Salesforce Activity in API version 64.0 and later.<br>• `Appointments`—A flow for Lightning Scheduler. This value is available in API version 44.0 and later.<br>• `ApprovalWorkflow`—An orchestration that's used for an approval process. This value is available in API version 63.0 and later.<br>• `AutoLaunchedFlow`—A flow that doesn't require user interaction. |

| Field | Details |
| --- | --- |
| | • `CheckoutFlow`—A flow used in Lightning B2B Commerce to create a checkout in a store. This value is available in API version 48.0 and later.<br>• `ContactRequestFlow`—A flow that lets customers request to be contacted by customer support. This flow is used to create contact request records. This value is available in API version 45.0 and later.<br>• `CustomerLifecycle`—A Salesforce Surveys flow that lets you associate survey questions with different stages in customer lifecycles. This value is available in API version 49.0 and later and only when the Customer Lifecycle Designer license is enabled.<br>• `CustomEvent`—A process that is invoked when it receives a platform event message. In the UI, it's an event process. This value is available in API version 41.0 and later.<br>• `DataCaptureFlow`— In the UI, Data Capture flows configure the Form tab in the Field Service mobile app. When the Data Capture flow is launched, its Flow metadata is publicly available in JavaScript format. This value is available in API version 62.0 and later.<br>• `DcvrFrameworkDataCaptureFlow`—A screen flow that presents assessment questions from Discovery Framework. Launches when invoked by a user on a mobile device. This type of flow collects or displays information, requires user interaction, and works offline or online. This value is available in API version 62.0 and later.<br>• `EvaluationFlow`—A flow for evaluating custom entry and exit conditions in an orchestration. Uses the `isOrchestrationConditionMet` output variable and discards values from any other output variables. This value is available in API version 54.0 and later.<br>• `FieldServiceMobile`—A flow for the Field Service mobile app. This value is available in API version 39.0 and later.<br>• `FieldServiceWeb`—A flow for embedded Appointment Booking. Its UI label is Field Service Embedded Flow. This value is available in API version 41.0 and later.<br>• `Flow`—A flow that requires user interaction because it contains one or more screens or local actions, choices, or dynamic choices. In the UI and Salesforce Help, it's a screen flow. Screen flows can be launched from the UI, such as with a flow action, Lightning page, or web tab.<br>• `FSCLending`—A flow for Financial Services Cloud Mortgage. This value is available in API version 46.0 and later.<br>• `IdentityUserRegistrationFlow`—A flow to handle user registration and updates for single sign-on with the authentication provider framework. Available in API version 64.0 and later.<br>• `IndicatorResultFlow`—A flow for Outcome Management that calculates and creates indicator results for a selected indicator performance period. This value is available with the Outcome Management license in API version 60.0 and later.<br>• `IndividualObjectLinkingFlow`—A flow that associates individuals with interactions such as voice calls, messaging sessions, or case-related emails. This value is available in API version 58.0 and later.<br>• `InvocableProcess`—A process that another process or the Invocable Actions resource in REST API invokes. This value is available in API version 38.0 and later.<br>• `Journey`—An audience-driven flow for Marketing Cloud. This value is available in API version 57.0 and later. |

| Field | Details |
| --- | --- |
| | • `LoginFlow`—A flow for login. This value is available in API version 51.0 and later.<br>• `LoyaltyManagementFlow`—A flow for the Loyalty Management app that's invokable by loyalty program processes. This value is available in API version 54.0 and later.<br>• `Orchestrator`—An orchestration that organizes flows into groups of steps contained in a series of stages. This value is available in API version 53.0 and later.<br>• `PromptFlow`—A flow for Prompt Builder. Pass data between Prompt Builder and the flow. This value is available in API version 60.0 and later.<br>• `RecommendationStrategy`—Build recommendations for your users. A recommendation launches its assigned flow. This value is available in API version 54.0 and later. See Flow Builder Strategies.<br>• `RoutingFlow`—A flow for Salesforce Omni-Channel routing and other business logic. This value is available in API version 52.0 and later.<br>• `Survey`—A flow for Salesforce Surveys. From the UI, this type of flow is created in Survey Builder. This value is available in API version 42.0 and later.<br>• `SurveyEnrich`—A Salesforce Surveys flow that uses the Survey Data Mapper. From the UI, this type of flow is created in the Survey Builder and requires an associated survey flow type. This value is available in API version 49.0 or later and only when the Customer Lifecycle Designer license is enabled.<br>• `Workflow`—A process that is invoked when a record is created or edited. In the UI and Salesforce Help, it's a record change process.<br>These values are reserved for future use.<br>• `ActionCadenceFlow`<br>• `ActionPlan`<br>• `AppProcess`<br>• `ApprovalWorkflow`<br>• `CartAsyncFlow`<br>• `DigitalForm`<br>• `JourneyBuilderIntegration`<br>• `LoginFlow`<br>• `ManagedContentFlow`<br>• `OrchestrationFlow`<br>• `SalesEntryExperienceFlow`<br>• `TransactionSecurityFlow`<br>• `UserProvisioningFlow` |
| `FLOW_VERSION_ID` | **Type**<br>Id<br>**Description**<br>The ID of the flow version that was executed. |

| Field | Details |
| --- | --- |
| FLOW_LOAD_TIME | **Type**<br>Number<br>**Description**<br>The time in milliseconds to load the flow's metadata. |
| TOTAL_EXECUTION_TIME | **Type**<br>Number<br>**Description**<br>The total time in milliseconds to start and finish all flow interviews. |
| NUMBER_OF_INTERVIEWS | **Type**<br>Number<br>**Description**<br>The number of flow interviews that started after the flow version was executed. |
| NUMBER_OF_ERRORS | **Type**<br>Number<br>**Description**<br>The number of errors for all flow interviews after the flow version was executed. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The time that the flow was executed in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).<br>For example: 2015-07-27T11:32:59.555Z. Timezone is GMT. |

## Group Membership Event Type

Group Membership events capture details about changes to public group and queue membership, such as when members are added to or removed from the public group or queue.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| CLIENT_IP | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. |

| Field | Details |
| --- | --- |
| | **Example**<br>`96.43.144.26` |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity that took place in the app server layer. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `GroupMembership`. |
| `GROUP_ID` | **Type**<br>Id<br>**Description**<br>ID of the group whose membership changed.<br>**Example**<br>`00GXXXXXXXXXXX` |
| `GROUP_TYPE` | **Type**<br>String<br>**Description**<br>The type of group. Valid values are:<br>• `R`—Public group<br>• `Q`—Queue<br>**Example**<br>`R` |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>**Example**<br>`GeJCsym5eyvtEK2I` |
| `MEMBER_ID` | **Type**<br>Id |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the member added to or removed from the group. Public groups can contain individual users, other groups, or users in a specified role or territory. Queues can contain individual users, roles, public groups, territories, connections, or partner users.<br>**Example**<br>`005XXXXXXXXXXXX` or `00GXXXXXXXXXXXX` |
| `OPERATION` | **Type**<br>String<br>**Description**<br>The operation that occurred, such as a member being added to or removed from a group. Valid values are:<br>• `AddedGroupMember`<br>• `DeletedGroupMember`<br>**Example**<br>`DeletedGroupMember` |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>**Example**<br>`00DXXXXXXXXXXX` |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>**Example**<br>`3nWgxWbDKWWDIk0FKfF5DV` |
| `RUN_TIME` | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds.<br>**Example**<br>115 |
| `SESSION_KEY` | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>**Example**<br>`d7DEq/ANa7nNZZVD` |
| `TIMESTAMP` | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>**Example**<br>`20130715233322.670` |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>**Example**<br>`2015-07-27T11:32:59.555Z` |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>**Example**<br>`/home/home.jsp` |
| `URI_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request.<br>**Example**<br>`005XXXXXXXXXYAY` |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>**Example**<br>`005XXXXXXXXXXX` |

| Field | Details |
| --- | --- |
| USER_ID_DERIVED | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>**Example**<br>005XXXXXXXXXXXIA0 |

EventLogFile

## Hostname Redirects Event Type

Hostname Redirect events contain details about blocked and successful redirections for your previous My Domain hostnames. The Hostname Redirects event type is available in the EventLogFile object in API version 56.0 and later.

Note: The HostnameRedirects event type is disabled by default. To enable this event type, use the `logRedirections` field on the MyDomainSettings Metadata API type or enable the **Log Redirections** setting in the Routing section of the My Domain Setup page.

This event is free for all customers with a 24-hour data retention period. The hostname redirections event is available in the API but not in the Event Monitoring Analytics app. You can also download the latest hostname redirections event log file through a button on the My Domain page.

For details about event monitoring, see the Trailhead Event Monitoring module or the REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always `HostnameRedirects`. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>**Example**<br>20220715233322.670 |

| Field | Details |
| --- | --- |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.<br>**Example**<br>0000000062_0000x8Lz- |
| ORGANIZATION_ID | **Type**<br>ID<br>**Description**<br>The 15-character ID of the org.<br>**Example**<br>00D000000000345 |
| USER_ID | **Type**<br>ID<br>**Description**<br>This field is unused in the HostnameRedirects event type. The value is always null. |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>This field is unused in the HostnameRedirects event type. The value is always 0. |
| CPU_TIME | **Type**<br>Number<br>**Description**<br>This field is unused in the HostnameRedirects event type. The value is always null. |
| URI | **Type**<br>String<br>**Description**<br>This field is unused in the HostnameRedirects event type. The value is always null. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>This field is unused in the HostnameRedirects event type. The value is always null. |
| LOGIN_KEY | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>This field is unused in the HostnameRedirects event type. The value is always null. |
| MESSAGE | **Type**<br>String<br>**Description**<br>This field is unused in the HostnameRedirects event type. The value is always null. |
| DOMAIN | **Type**<br>Url<br>**Properties**<br>Filter, Sort<br>**Description**<br>This field is unused in the HostnameRedirects event type. The value is always null. |
| SOURCE_HOSTNAME | **Type**<br>String<br>**Description**<br>The hostname of the URL from which the redirection originated.<br>**Example**<br>If `https://`***`oldMyDomainName`***`.my.salesforce.com` is redirected to `https://`***`newMyDomainName`***`.my.salesforce.com`, the value of this field is ***`oldMyDomainName`***`.my.salesforce.com` |
| TARGET_HOSTNAME | **Type**<br>String<br>**Description**<br>The hostname of the URL to which the user or API was redirected.<br>**Example**<br>If `https://`***`oldMyDomainName`***`.my.salesforce.com` is redirected to `https://`***`newMyDomainName`***`.my.salesforce.com`, the value of this field is ***`newMyDomainName`***`.my.salesforce.com` |
| PATH | **Type**<br>String<br>**Description**<br>The path of the originating URL request, up to the first question mark (?). The path is also used in the redirection target URL. However, this field doesn't include the query string, if present.<br>**Example**<br>If the user is redirected from `https://MyOldCompany.my.site.com/shop?q=sneakers` to |

| Field | Details |
| --- | --- |
| | `https://MyNewCompany.my.site.com/shop?q=sneakers`, the value of this field is `/shop`. |
| `REDIRECT_REASON` | **Type**<br>String<br>**Description**<br>The reason for the hostname redirect event.<br>**Possible Values**<br>• `Redirected due to a hostname mismatch.`—The referring hostname was redirected to the current My Domain equivalent.<br>• `Redirection suppressed to prevent Lightning Out integration failure.`—The `*.force.com` site URL can't be redirected for use with Lightning Out. To prevent issues, the original URL was processed as-is. To avoid issues after `*.force.com` site hostname redirections are stopped, update hard-coded references to the hostname in your Lightning Out integrations. For a Lightning Out code example that uses a site hostname, see Share Lightning Out Apps with Unauthenticated Users in the Salesforce Lightning Component Library.<br>• `Redirection was blocked because redirections for this hostname are disabled.`—Only your last set of My Domain login hostnames is redirected. Those redirections are blocked when the My Domain Routing option **Redirect previous My Domain URLs to your current My Domain** is deselected or because you removed your previous My Domain. That option applies to legacy (non-enhanced) hostnames in production orgs until Spring '25. In non-production orgs, that option has no impact on redirections for legacy hostnames in Winter '25 and later. Non-production orgs include sandboxes, Developer Edition orgs, demo orgs, patch orgs, scratch orgs, and Trailhead Playgrounds. For information<br>If the `SOURCE_HOSTNAME` is a legacy `*.force.com` site hostname, the redirection was blocked because the **Redirect** *`previousSiteHostnames`* **URLs to your current My Domain site URLs** Routing option was deselected on the My Domain Setup page. That option is available in production orgs until Spring '25. In non-production orgs, that option was removed in Winter '25. Non-production orgs include sandboxes, Developer Edition orgs, demo orgs, patch orgs, scratch orgs, and Trailhead Playgrounds.<br>• `Redirection was blocked because redirections for the legacy SOURCE_HOSTNAME are no longer supported.`—If your org was created before June 2022, Salesforce served the org on a different set of hostnames until enhanced domains were deployed. The `SOURCE_HOSTNAME` is one of those hostnames. For non-production orgs, redirections for those hostnames stopped in Winter '25. |
| `IS_BLOCKED_REDIRECTION` | **Type**<br>Boolean<br>**Description**<br>Indicates whether the redirection was blocked. |

| Field | Details |
| --- | --- |
| | **Possible Values**<br>• 1—The redirection was blocked and returned an HTTP 404 response.<br>• 0—The redirection proceeded and returned an HTTP 301 or 307 response. |
| REFERRER | **Type**<br>String<br>**Description**<br>The absolute or partial address from which the request to the SOURCE_HOSTNAME came. The Referrer-Policy HTTP Header of the request determines how much of the URL is shared.<br>For example, if a user clicked a link to the SOURCE_HOSTNAME from a web page, and that web page is on a different domain:<br>• if the Referrer-Policy HTTP Header is no-referrer-when-downgrade, REFERRER includes the origin, path, and query-string parameters up to the first hash (#), if present.<br>• if the Referrer-Policy HTTP Header is strict-origin-when-cross-origin, REFERRER includes the origin only.<br>• if the Referrer-Policy HTTP Header is same-origin, REFERRER is null.<br>**Examples**<br>• https://www.example.com<br>• https://www.example.com/page/page/index.htm<br>• https://www.example.com/page/index.htm?q="Salesforce" |
| ORIGIN | **Type**<br>String<br>**Description**<br>The origin (protocol, hostname, and port) that caused the request to the SOURCE_HOSTNAME. For example, if a website on a different domain makes an XMLHttpRequest (XHR) to SOURCE_HOSTNAME, ORIGIN contains the base URL of that website.<br>The port isn't included in the origin information with all requests. ORIGIN can be null in a number of situations, including but not limited to cross-origin requests and origins with a restrictive Referrer-Policy header. For example, if the request to the SOURCE_HOSTNAME is sent from a site external to Salesforce with a RequestMode of no-cors, ORIGIN is null.<br>**Examples**<br>• https://www.example.com<br>• https://www.example.com:443 |
| TIMESTAMP_DERIVED | **Type**<br>DateTime |

| Field | Details |
| --- | --- |
| | **Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`). The time zone is always GMT.<br>**Example**<br>`2022-07-27T11:32:59.555Z.` |
| `USER_ID_DERIVED` | **Type**<br>String<br>**Description**<br>This field is unused in the HostnameRedirects event type. The value is always null. |
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that made this request.<br>**Possible Values/Example**<br>`111.43.144.26` |
| `URI_ID_DERIVED` | **Type**<br>String<br>**Description**<br>This field is unused in the HostnameRedirects event type. The value is always null. |

## Usage

Use the information in the Hostname Redirects event log to determine the hostnames to update in your org after you deploy a change to your My Domain name. You can also use the log to develop communications to your customers and users about the changed hostnames. For example, you can encourage users to use the new hostnames and update their bookmarks. For more information on the steps to take after a My Domain change, see Update Your Org and Test My Domain Changes in Salesforce Help.

To access the log, use the HostnameRedirects event type from the EventLogFile object. Alternatively, you can download the current hostname redirections event log by clicking **Download Redirections Log** on the My Domain Setup page.

Each event, or each row in the redirection log, represents a redirection for a specific requested URL. Subsequent requests to the same URL within the hour following that request, however, aren't logged. If your last My Domain change included enhanced domains deployment, the log includes redirections for the old hostnames listed on My Domain URL Format Changes with Enhanced Domains Deployment in Salesforce Help.

Note: To keep the size of the log file manageable, the log includes one entry for each redirected hostname and path combination within an hour. As a result, the log includes all redirected hostname and path combinations, but only includes the first redirection within each hour.

For example, if `https://MyCompany.my.site.com/shop` is redirected at 02:01 PM and `https://MyCompany.my.site.com/shop?q=sneakers` is redirected for another user at 02:02 PM, only the redirection that occurred at 02:01 PM is captured for `MyCompany.my.site.com/shop` for that hour. But if

`https://MyCompany.my.site.com/help` is redirected at 2:05 PM, that redirection is captured on a new line because the `MyCompany.my.site.com/help` hostname and path combination differs from `MyCompany.my.site.com/shop`.

Similarly, if the redirection of `https://MyCompany.my.site.com/contactUs` is blocked at 07:02 AM and `https://MyCompany.my.site.com/contactUs` is redirected at 07:11 AM, only the blocked redirection for `MyCompany.my.site.com/contactUs` is captured in the log for that hour.

Only one hostname redirection log file is available at a time. When the daily incremental event log file is generated during the daily background process, the new file replaces the existing file. When you download the redirections log from the My Domain Setup page, you get the latest daily log file in CSV format.

If the log file doesn't exist, either the log generation process hasn't run yet or there's no redirection data to report for that 24-hour window. The log file is generated only when at least one redirection occurred for the day.

To collect hostname redirection logs for multiple days, schedule a daily query of the Hostname Redirects event type via REST API. For example, you can configure a cron job in Unix or a scheduled task in Windows to run the query.

## Salesforce CLI Example

To use Salesforce CLI to query the Hostname redirects log, use the `sf data query` command to query the HostnameRedirects EventType.

First, download and install Salesforce CLI.

**Example**

This Unix example authorizes Salesforce CLI to access your org and sets `orgAlias` to your org login URL. This method prompts you to log in to your org via a browser to grant Salesforce CLI access. To query event log files, log in as a user with the View Event Log Files and API Enabled permissions.

```
sf org web login --alias orgAlias --instance-url https://MyDomainName.my.salesforce.com
```

**Example response**

After you authenticate with a user via a browser, this response confirms that Salesforce CLI is authorized for use in your org.

```
Successfully authorized admin@mycompany.com with org ID 00D00000000000aIW
```

Then export the HostnameRedirects log to a CSV file.

**Example**

This example exports the HostnameRedirects EventType to a CSV file in your org, where `orgAlias` is your org's alias within Salesforce CLI.

```
ORGALIAS=orgAlias; QUERYRESULT=$(sf data query --target-org "$ORGALIAS" --query "SELECT
 LogDate, LogFile FROM EventLogFile WHERE EventType='HostnameRedirects' ORDER BY
CreatedDate DESC LIMIT 1" --json); QUERYSTATUS=$(echo "$QUERYRESULT"|grep \"status\"|cut
 -d : -f 2|cut -d , -f 1); if [[ "$QUERYSTATUS" -eq 0 ]]; then LOGDATE=$(echo
"$QUERYRESULT"|grep LogDate|cut -d \" -f 4|cut -d T -f 1); if [[ "$LOGDATE" == "" ]];
then echo "No daily event log file exists for hostname redirects."; else
DOWNLOADPATH=$(echo "$QUERYRESULT"|grep \"url\"|cut -d \" -f 4); ORGDISPLAY=$(sf org
display --target-org "$ORGALIAS" --json 2> /dev/null); SESSION=$(echo "$ORGDISPLAY"|grep
 accessToken|cut -d \" -f 4); ORGURL=$(echo "$ORGDISPLAY"|grep instanceUrl|cut -d \" -f
 4); curl -H "Authorization: Bearer ${SESSION}" --silent ${ORGURL}${DOWNLOADPATH}/LogFile
 > HostnameRedirectEvent-${LOGDATE}.csv; fi; else echo "$QUERYRESULT"; fi
```

For more information on Salesforce CLI, see the Salesforce CLI Setup Guide, Salesforce CLI Command Reference, and the Salesforce DX Developer Guide.

## REST API Example

To use REST API to query the Hostname Redirects event log, use the Query resource to retrieve field values from a record. Specify the fields you want to retrieve in the fields parameter and use the GET method of the resource.

**Example**

This example retrieves the HostnameRedirects event log based on `Field` and `EventType` via a GET request. Replace `token` with your access token. In a production org, replace `MyDomainName` with your My Domain name. In a sandbox, replace `MyDomainName.my.salesforce.com` with your org's My Domain login hostname.

```
curl https://MyDomainName.my.salesforce.com/services/data/v65.0/query?q=SELECT+
LogDate%2C+LogFile+FROM+EventLogFile+WHERE+EventType%3D%27HostnameRedirects%27
+ORDER+BY+CreatedDate+DESC+LIMIT+1 -H "Authorization: Bearer token"
```

**Example raw response**

```
{"totalSize":1,"done":true,"records":[{"attributes":
{"type":"EventLogFile","url":"/services/data/v56.0/sobjects/EventLogFile/
0AT00000003KxUSWA0"},"LogDate":"2022-08-03T00:00:00.000+0000","LogFile":"
/services/data/v56.0/sobjects/EventLogFile/0AT00000003KxUSWA0/LogFile"}]}
```

The log file can be downloaded by using curl with the same Authorization header while setting the URL path to the `LogFile` value from the output.

For more information on accessing event log files via REST API, see Using Event Monitoring in the REST API Developer Guide.

EventLogFile

## Insecure External Assets Event Type

Insecure External Assets events contain information about external assets. External assets include images or videos accessed by users over an insecure HTTP protocol. The event lists all your Salesforce pages that contain assets hosted insecurely on third-party sites that users loaded with a Chrome, Firefox, Microsoft Edge, or Safari browser. The `INSECURE_URI` field contains the URI being used to load the asset insecurely. The Insecure External Assets event type is available in the EventLogFile object in API version 42.0 and later.

Assets over HTTP can be manipulated through man-in-the-middle and other types of attacks. These attacks can trick users into sending their Salesforce credentials to malicious sites. Always use HTTPS in your custom code and templates for any asset you're loading from external sites.

**Important:** Because HTTPS connections are required to load external assets, Insecure External Assets events no longer apply. In Spring '25 and later, this event type captures no data.

To view blocked redirections and content security policy (CSP) violations for your org, use the BrowserPolicyViolation object.

For details about event monitoring, see the Trailhead Event Monitoring module or the REST API Developer's Guide.

### Fields

| Field | Details |
|---|---|
| `ASSET_TYPE` | **Type**<br>String<br>**Description**<br>Type of insecure asset.<br>**Possible Values**<br>• `Base URI`<br>• `Connect`<br>• `Font`<br>• `Frame Ancestor`: External page that embeds the Salesforce page in an iframe<br>• `Frame`<br>• `Image` |

| Field | Details |
| --- | --- |
| | • `Media`<br>• `Object`<br>• `Other`<br>• `Plugin Types`<br>• `Script`<br>• `Style` |
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DISPOSITION` | **Type**<br>String<br>**Description**<br>If the insecure external asset is related to your content security policy (CSP), the HTTP header that identified the insecure asset.<br>Available in API version 61.0 and later.<br>**Possible Values**<br>• `enforce`—The `Content-Security-Policy` header identified the insecure external asset.<br>• `report`—The `Content-Security-Policy-Report-Only` header identified the insecure external asset. |
| `DOCUMENT_URI` | **Type**<br>String<br>**Description**<br>URL of the page that contains the insecure asset, excluding the query parameter.<br>**Example**<br>https://company.my.salesforce.com/00XXXXXXXXX |
| `EVENT_TYPE` | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The type of event. The value is always `InsecureExternalAssets`. |
| `INSECURE_URI` | **Type**<br>String<br>**Description**<br>Insecure external asset URL being used to load an asset insecurely. For example, loading Javascript libraries using **`http:`**`//ajax.googleapis.com/` in your custom code logs an Insecure External Asset Event with the `INSECURE_URI` field set to this URL. Find this reference in your code and update it to use **`https:`**`//ajax.googleapis.com/` instead.<br>**Example**<br>http://pbs.twimg.com/profile_images/569909141207081 6/Z4Stwts_normal.jpeg |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| `NETWORK_ID` | **Type**<br>String<br>**Description**<br>The ID of the Experience Cloud site related to the request, if applicable.<br>Available in API version 61.0 and later. |
| `ORGANIZATION_ID` | **Type**<br>String<br>**Description**<br>The 15-character ID of the org.<br>**Example**<br>00D000000000123 |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |

| Field | Details |
| --- | --- |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: `d7DEq/ANa7nNZZVD`. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| TYPE | **Type**<br>String<br>**Description**<br>Type of Salesforce page.<br>**Possible Values**<br>• `Appserver`—Page without My Domain subdomain (for example, https://na44.salesforce.com)<br>• `Communities`—Customer Experience Cloud site<br>• `Email`—Email preview<br>• `Login`—Login page (for example, https://login.salesforce.com)<br>• `Mydomain`—Page on My Domain subdomain (for example, https://mycompany.my.salesforce.com)<br>• `Sites`—Customer site<br>• `Static`—Static content (for example, https://sfdcstatic.com)<br>• `Unknown`—other type of page |

| Field | Details |
| --- | --- |
| UNIQUE_ID | **Type**<br>String<br>**Description**<br>The 32-character ID of the event log file in which the insecure external asset event data is found.<br>**Example**<br>44e128a5-ac7a-4c9a-be4c-224b6bf81b20 |
| URI | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| URI_ID_DERIVED | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| USER_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| USER_ID_DERIVED | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |

## Usage

`UNIQUE_ID` is used by Salesforce Customer Support to troubleshoot any issues that occur.

# Insufficient Access Event Type

Insufficient Access events contain details about errors relating to insufficient record access, so that you can troubleshoot and resolve access issues for your users.

Note: Insufficient access errors resulting from bulk operations involving two or more records aren't logged.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

For more information on interpreting Insufficient Access events, see this knowledge article.

## Fields

| Field | Details |
|---|---|
| ACCESS_ERROR | **Type**<br>String<br>**Description**<br>The type of insufficient access error that the user received. Valid values are:<br>• DATA_NOT_AVAILABLE—The record is no longer accessible. For example, a record was deleted and moved to the Recycle Bin.<br>• INVALID_TYPE—The record type doesn't exist.<br>• NO_ACCESS—The user doesn't have the required access level to complete the attempted action on the record.<br>**Example**<br>NO_ACCESS |
| ACTUAL_LOGGED_IN_USER_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who initiated the action that caused the insufficient access error. For example, a user attempts to transfer ownership of a record to a teammate, but the operation fails because the teammate doesn't have the required access. In this scenario, the ACTUAL_LOGGED_IN_USER_ID is the user who attempted to transfer access, and the USER_ID is their teammate.<br>**Example**<br>005XXXXXXXXXXX |
| ENTITY_TYPE | **Type**<br>String<br>**Description**<br>The object for which the user received the insufficient access error. Access errors for the account, case, contact, and opportunity objects are supported.<br>**Example**<br>Account |

| Field | Details |
| --- | --- |
| ERROR_DESCRIPTION | **Type**<br>String<br>**Description**<br>Description of the insufficient access error that the user received.<br>**Example**<br>User 005XXXXXXXXXXX doesn't have full access for the record 001XXXXXXXXXXX. |
| ERROR_TIMESTAMP | **Type**<br>String<br>**Description**<br>The time in GMT that the insufficient access error occurred.<br>**Example**<br>20130715233322.670 |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always InsufficientAccess. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>**Example**<br>00DXXXXXXXXXXX |
| RECORD_ID | **Type**<br>String<br>**Description**<br>The ID of the record that the user doesn't have access to.<br>**Example**<br>001XXXXXXXXXXX |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.<br>**Example**<br>3nWgxWbDKWWDIk0FKfF5DV |

| Field | Details |
| --- | --- |
| REQUESTED_ACCESS_LEVEL | **Type**<br>String<br>**Description**<br>The access level required by the user's attempted action on the record. Valid values are:<br>• DELETE<br>• FULL<br>• READ<br>• TRANSFER<br>• WRITE<br>**Example**<br>FULL |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>**Example**<br>20130715233322.670 |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).<br>**Example**<br>2015-07-27T11:32:59.555Z |
| USER_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user for whom the insufficient access error occurred, either when the user couldn't access a record, the user couldn't complete an operation, or the user was the intended recipient of a record transfer that failed because the user didn't have the required access.<br>**Example**<br>005XXXXXXXXXXX |
| USER_ID_DERIVED | **Type**<br>Id |

| Field | Details |
| --- | --- |
| | **Description**<br>The 18-character case-insensitive ID of the user for whom the insufficient access error occurred, either when the user couldn't access a record or the user was the intended recipient of a record transfer that wasn't completed.<br>**Example**<br>`005XXXXXXXXXXXXIA0` |

## Invocable Action Event Type

Invocable Action events capture the calls to Salesforce Invocable Actions. This is particularly useful to monitor actions invoked during Agentforce flows. This event type is available in API versions 64.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| `ACTION_NAME` | **Type**<br>String<br>**Description**<br>Name of the action. |
| `ACTION_TYPE` | **Type**<br>String<br>**Description**<br>InvocableActionType being referenced. |
| `ACTION_VERSION` | **Type**<br>String<br>**Description**<br>The invocable action version. |
| `API_CALLER` | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>Identifier of the API caller. This is only populated when the action is invoked from a REST API call |
| `BOT_IDENTIFIER` | **Type**<br>string<br>**Description**<br>The ID of the bot. |
| `BOT_SESSION_IDENTIFIER` | **Type**<br>string<br>**Description**<br>The bot session ID. |
| `DURATION` | **Type**<br>String<br>**Description**<br>Time (in nanos) taken to process this set of requests. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `InvocableAction`. |
| `FLOW_PROCESS_TYPE` | **Type**<br>String<br>**Description**<br>The process type of the calling flow. |
| `FLOW_VERSION_ID` | **Type**<br>String<br>**Description**<br>The ID of the version of the calling flow. |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The number of invoked requests. |
| `PLANNER_IDENTIFIER` | **Type**<br>string<br>**Description**<br>The ID of the agent planner. |

| | |
|---|---|
| REQUEST_COUNT | **Type**<br>Number<br>**Description**<br>The number of invoked requests. |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT. |
| USER_ID | **Type**<br>String<br>**Description**<br>ID of the user employing salesforce.com services, whether through the user interface or API |

## Knowledge Article View Event Type

Knowledge Article View events contain user activity with your knowledge base.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
|---|---|
| ARTICLE_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the article. |

| | |
|---|---|
| | For example: `00Dxx0000001gEb`. |
| `ARTICLE_STATUS` | **Type**<br>Character<br>**Description**<br>Possible values are:<br>• `D`—Draft<br>• `O`—Online<br>• `A`—Archived |
| `ARTICLE_VERSION` | **Type**<br>Number<br>**Description**<br>Article version number.<br>For example: `2`. |
| `ARTICLE_VERSION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the article version.<br>For example: `ka0R00000005rt6`. |
| `CONTEXT` | **Type**<br>String<br>**Description**<br>Context of the request.<br>**Description**<br>Possible values are:<br>• `Apex`<br>• `API`<br>• empty string |
| `ENTITY` | **Type**<br>String<br>**Description**<br>Entity requested.<br>For example: `Knowledge__kav`. |
| `EVENT_TYPE` | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The type of event. The value is always `KnowledgeArticleView`. |
| `LANGUAGE` | **Type**<br>String<br>**Description**<br>iso-code of the language.<br>For example: `en_US/`<br>**Example** |
| `LARGE_LANGUAGE_MODEL` | **Type**<br>String<br>**Description**<br>The name of the large language model (LLM) that generated the knowledge article version. |
| `LAST_VERSION` | **Type**<br>Boolean<br>**Description**<br>`True` if it is the last version.<br>Possible values are:<br>• `True`<br>• `False` |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `SESSION_ID` | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>Session ID of the request.<br>For example: `gV7pCSW2vGaaJNFi3GSpuPIjNbKVbSxRvx34LJsIvuc=`.<br>**Example** |
| `TIMESTAMP` | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. The timezone is GMT. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |
| `USER_TYPE` | **Type**<br>Character<br>**Description**<br>User type of the request.<br>Possible values are:<br>• `A`—App<br>• `C`—Customer Portal<br>• `P`—Partner Portal |

## Lightning Error Event Type

Lightning Error events represent errors that occurred during user interactions with Lightning Experience and the Salesforce mobile app. This event type is available in the EventLogFile object in API version 39.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
|---|---|
| `APP_NAME` | **Type**<br>String<br>**Description**<br>The name of the application that the user accessed. |
| `BROWSER_NAME` | **Type**<br>String<br>**Description**<br>The name of the browser that the user accessed.<br>**Example**<br>`Chrome`, `Safari` |
| `BROWSER_VERSION` | **Type**<br>String<br>**Description**<br>The version of the browser that the user accessed in `major.minor version` format. Some browsers don't provide a minor version. |
| `CLIENT_GEO` | **Type**<br>String<br>**Description**<br>The geolocation of the client in the form of `<Country>/<State\|Province>`.<br>**Example**<br>`United States/California` |
| `CLIENT_ID` | **Type**<br>String<br>**Description**<br>The API client ID. |

| Field | Details |
| --- | --- |
| CLIENT_IP | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>**Example**<br>`96.43.144.26` |
| COMPONENT_NAME | **Type**<br>String<br>**Description**<br>The internal name of the standard component that generated the error. The Salesforce developer assigned the name when the standard component was created.<br>**Example**<br>`SaveEdit`, `Lead.CCPM_sendSMS`, `ChangeOwnerOne` |
| CONNECTION_TYPE | **Type**<br>String<br>**Description**<br>The type of connection.<br>**Possible Values**<br>• `CDMA1x`<br>• `CDMA`<br>• `EDGE`<br>• `EVDO0`<br>• `EVDOA`<br>• `EVDOB`<br>• `GPRS`<br>• `HRPD`<br>• `HSDPA`<br>• `HSUPA`<br>• `LTE`<br>• `WIFI` |
| DEVICE_ID | **Type**<br>String<br>**Description**<br>The unique identifier used to identify a device when tracking events. `DEVICE_ID` is a generated value that's created when the mobile app is initially run after installation. |

| Field | Details |
| --- | --- |
| DEVICE_MODEL | **Type**<br>String<br>**Description**<br>The name of the device model.<br>**Example**<br>iPad, iPhone |
| DEVICE_PLATFORM | **Type**<br>String<br>**Description**<br>The type of application experience in name:experience:form format.<br>**Possible Values**<br>• name: APP_BUILDER, CUSTOM, S1, SFX<br>• experience: BROWSER, HYBRID<br>• form: DESKTOP, PHONE, TABLET |
| DEVICE_SESSION_ID | **Type**<br>Id<br>**Description**<br>The unique identifier of the user's session based on page load time. If the user reloads a page, it starts a new session.<br>**Example**<br>321a1ddfaf924803a075f1e69fc87bc06f53ccd0 |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always LightningError. |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>**Example**<br>GeJCsym5eyvtEK2I |
| MESSAGE | **Type**<br>String<br>**Description**<br>The error message generated. |

| Field | Details |
| --- | --- |
| ORGANIZATION_ID | **Type**<br>String<br>**Description**<br>The 15-character ID of the org.<br>**Example**<br>00D000000000123 |
| OS_NAME | **Type**<br>String<br>**Description**<br>The operating system name, derived from USER_AGENT.<br>**Example**<br>Android, iOS, OSX, Windows |
| OS_VERSION | **Type**<br>String<br>**Description**<br>The operating system version, derived from USER_AGENT. |
| PAGE_APP_NAME | **Type**<br>String<br>**Description**<br>The internal name of the application that the user accessed from the App Launcher.<br>**Example**<br>LightningSales |
| PAGE_CONTEXT | **Type**<br>String<br>**Description**<br>Context of the page where the event occurred.<br>**Example**<br>clients:cardsContainer |
| PAGE_ENTITY_ID | **Type**<br>Id<br>**Description**<br>The unique entity identifier of the event.<br>**Example**<br>0013000000I3zJAAAZ |

| Field | Details |
| --- | --- |
| PAGE_ENTITY_TYPE | **Type**<br>String<br>**Description**<br>The entity type of the event.<br>**Example**<br>`Task`, `Account` |
| PAGE_START_TIME | **Type**<br>Number<br>**Description**<br>The time when the page was initially loaded, measured in milliseconds.<br>**Example**<br>`1471564788642` |
| PAGE_URL | **Type**<br>String<br>**Description**<br>Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with `PAGE_URL`.<br>**Example**<br>`/sObject/0064100000JXITSAA5/view` |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>**Example**<br>`3nWgxWbDKWWDIk0FKfF5DV` |
| SDK_APP_TYPE | **Type**<br>String<br>**Description**<br>The mobile SDK application type.<br>**Possible Values**<br>• `HYBRID`<br>• `HYBRIDLOCAL`<br>• `HYBRIDREMOTE`<br>• `NATIVE`<br>• `REACTNATIVE` |

| Field | Details |
| --- | --- |
| SDK_APP_VERSION | **Type**<br>String<br>**Description**<br>The mobile SDK application version number.<br>**Example**<br>5.0 |
| SDK_VERSION | **Type**<br>String<br>**Description**<br>The mobile SDK version number.<br>**Example**<br>2.1.0 |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When a user logs out and logs in again, a new session is started.<br>**Example**<br>cdd09305cb6babf34059e27f70e47f1b11dec868 |
| STACK_TRACE | **Type**<br>String<br>**Description**<br>The stack trace contains the location in the code where the error occurred along with the calling frames that led to the error. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>**Example**<br>20130715233322.670 |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).<br>**Example**<br>2015-07-27T11:32:59.555Z. The timezone is GMT. |

| Field | Details |
| --- | --- |
| `UI_EVENT_ID` | **Type**<br>String<br>**Description**<br>ID of the Lightning event type.<br>**Possible Values**<br>• `ltng:error`<br>• `ltng:interaction`<br>• `ltng:pageView`<br>• `ltng:performance` |
| `UI_EVENT_SEQUENCE_NUM` | **Type**<br>Number<br>**Description**<br>An auto-incremented sequence number of the current event since the session started. |
| `UI_EVENT_SOURCE` | **Type**<br>String<br>**Description**<br>The source of the error event.<br>**Examples**<br>Here are some examples of error flags returned in this field.<br>• `AuraError`<br>• `Error`<br>• `InvalidStateError`<br>• `RangeError`<br>• `ReferenceError`<br>• `SecurityError`<br>• `SyntaxError`<br>• `TypeError`<br>• `unknown` |
| `UI_EVENT_TIMESTAMP` | **Type**<br>Number<br>**Description**<br>The time at which this event occurred, measured in milliseconds.<br>**Example**<br>`1479769912796` |
| `UI_EVENT_TYPE` | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The type of error event.<br>**Example**<br>`error`, `info`, `warn` |
| `USER_AGENT` | **Type**<br>String<br>**Description**<br>The numeric code for the type of client used to make the request (for example, browser, application, or API) as a string. |
| `USER_ID` | **Type**<br>String<br>**Description**<br>The 15-character ID of the user accessing Salesforce services through the UI or API.<br>**Example**<br>`00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API.<br>**Example**<br>`00590000000I1SNIA0` |
| `USER_TYPE` | **Type**<br>String<br>**Description**<br>The category of user license of the user accessing Salesforce services through the UI or API.<br>**Possible Values**<br>• `A`: Automated Process<br>• `b`: High Volume Portal<br>• `C`: Customer Portal User<br>• `D`: External Who<br>• `F`: Self Service<br>• `G`: Guest<br>• `L`: Package License Manager<br>• `N`: Salesforce to Salesforce<br>• `n`: CSN Only<br>• `O`: Power Custom |

## Lightning Interaction Event Type

Lightning Interaction events track user actions in Lightning Experience and the Salesforce mobile app, such as the user clicking, tapping, or scrolling on a page. This event type is available in the EventLogFile object in API version 39.0 and later.

Warning: The Lightning Interaction Event type is a best effort logging of user interactions but is not intended to meet privacy and security audit requirements. Not all interactions or CRUD operations are tracked and data loss may occur.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| APP_NAME | **Type**<br>String<br>**Description**<br>The name of the application that the user accessed. |
| BROWSER_NAME | **Type**<br>String<br>**Description**<br>The name of the browser that the user accessed.<br>**Example**<br>Chrome, Safari |
| BROWSER_VERSION | **Type**<br>String<br>**Description**<br>The version of the browser that the user accessed in major.minor version format. Some browsers don't provide a minor version. |

| Field | Details |
| --- | --- |
| CLIENT_GEO | **Type**<br>String<br>**Description**<br>The geolocation of the client in the form of <Country>/<State\|Province>.<br>**Example**<br>United States/California |
| CLIENT_ID | **Type**<br>String<br>**Description**<br>The API client ID. |
| CLIENT_IP | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>**Example**<br>96.43.144.26 |
| COMPONENT_NAME | **Type**<br>String<br>**Description**<br>The internal name of the standard component that the user interacted with. The Salesforce developer assigned the name when the standard component was created.<br>**Example**<br>SaveEdit, Lead.CCPM_sendSMS, ChangeOwnerOne |
| CONNECTION_TYPE | **Type**<br>String<br>**Description**<br>The type of connection.<br>**Possible Values**<br>• CDMA1x<br>• CDMA<br>• EDGE<br>• EVDO0<br>• EVDOA<br>• EVDOB<br>• GPRS |

| Field | Details |
| --- | --- |
| | • HRPD<br>• HSDPA<br>• HSUPA<br>• LTE<br>• WIFI |
| DEVICE_ID | **Type**<br>String<br>**Description**<br>The unique identifier used to identify a device when tracking events. DEVICE_ID is a generated value that's created when the mobile app is initially run after installation. |
| DEVICE_MODEL | **Type**<br>String<br>**Description**<br>The name of the device model.<br>**Example**<br>iPad, iPhone |
| DEVICE_PLATFORM | **Type**<br>String<br>**Description**<br>The type of application experience in name:experience:form format.<br>**Possible Values**<br>• name: APP_BUILDER, CUSTOM, S1, SFX<br>• experience: BROWSER, HYBRID<br>• form: DESKTOP, PHONE, TABLET |
| DEVICE_SESSION_ID | **Type**<br>Id<br>**Description**<br>The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started.<br>**Example**<br>321a1ddfaf924803a075f1e69fc87bc06f53ccd0 |
| DURATION | **Type**<br>Number<br>**Description**<br>The duration in milliseconds since the page start time. |

| Field | Details |
| --- | --- |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always `LightningInteraction`. |
| GRANDPARENT_UI_ELEMENT | **Type**<br>String<br>**Description**<br>Grandparent scope of the page element where the event occurred. |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>**Example**<br>`GeJCsym5eyvtEK2I` |
| ORGANIZATION_ID | **Type**<br>String<br>**Description**<br>The 15-character ID of the org.<br>**Example**<br>`00D000000000123` |
| OS_NAME | **Type**<br>String<br>**Description**<br>The operating system name, derived from `USER_AGENT`.<br>**Example**<br>`Android`, `iOS`, `OSX`, `Windows` |
| OS_VERSION | **Type**<br>String<br>**Description**<br>The operating system version, derived from `USER_AGENT`. |
| PAGE_APP_NAME | **Type**<br>String<br>**Description**<br>The internal name of the application that the user accessed from the App Launcher. |

| Field | Details |
| --- | --- |
| | **Example**<br>`LightningSales` |
| `PAGE_CONTEXT` | **Type**<br>String<br>**Description**<br>Context of the page where the event occurred.<br>**Example**<br>`clients:cardsContainer`<br>Note: A value of `UNKNOWN` means that the page hasn't finished loading, so the context can't be identified. |
| `PAGE_ENTITY_ID` | **Type**<br>Id<br>**Description**<br>The unique entity identifier of the event.<br>**Example**<br>`0013000000I3zJAAAZ` |
| `PAGE_ENTITY_TYPE` | **Type**<br>String<br>**Description**<br>The entity type of the event.<br>**Example**<br>`task`, `contacts`<br>Note: A value of `UNKNOWN` means that the page hasn't finished loading or the page isn't displaying a record, so the entity type can't be identified. |
| `PAGE_START_TIME` | **Type**<br>Number<br>**Description**<br>The time when the page was initially loaded, measured in milliseconds.<br>**Example**<br>`1471564788642` |
| `PAGE_URL` | **Type**<br>String<br>**Description**<br>Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with `PAGE_URL`. |

| Field | Details |
| --- | --- |
| | **Example**<br>`/sObject/0064100000JXITSAA5/view`<br>Note: A value of `UNKNOWN` means that the page hasn't finished loading, so the URL can't be identified. |
| `PARENT_UI_ELEMENT` | **Type**<br>String<br>**Description**<br>Parent scope of the page element where the event occurred. |
| `RECORD_ID` | **Type**<br>String array<br>**Description**<br>The IDs of one or more records that the user interacted with. For more information on the user interaction, see `UI_EVENT_TYPE` and `UI_EVENT_SOURCE` fields.<br>**Example**<br>`["5004100000JaGGLAA3", "5004100000Dn79CAAR", "50041000007KeugAAC"]` |
| `RECORD_TYPE` | **Type**<br>String<br>**Description**<br>The type of record object that the user interacted with.<br>**Example**<br>`Account`, `Opportunity` |
| `RELATED_LIST` | **Type**<br>String<br>**Description**<br>The type of related list that the user clicked.<br>**Example**<br>`Opportunity` |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>**Example**<br>`3nWgxWbDKWWDIk0FKfF5DV` |

| Field | Details |
| --- | --- |
| SDK_APP_TYPE | **Type**<br>String<br>**Description**<br>The mobile SDK application type.<br>**Possible Values**<br>• HYBRID<br>• HYBRIDLOCAL<br>• HYBRIDREMOTE<br>• NATIVE<br>• REACTNATIVE |
| SDK_APP_VERSION | **Type**<br>String<br>**Description**<br>The mobile SDK application version number.<br>**Example**<br>5.0 |
| SDK_VERSION | **Type**<br>String<br>**Description**<br>The mobile SDK version number.<br>**Example**<br>2.1.0 |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When the user logs out and logs in again, a new session is started.<br>**Example**<br>cdd09305cb6babf34059e27f70e47f1b11dec868 |
| TARGET_UI_ELEMENT | **Type**<br>String<br>**Description**<br>The target page element where the event occurred.<br>**Example**<br>tabitem-link |

| Field | Details |
| --- | --- |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: 20130715233322.670. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).<br>**Example**<br>2015-07-27T11:32:59.555Z. The timezone is GMT. |
| UI_EVENT_ID | **Type**<br>String<br>**Description**<br>Id of the Lightning event type.<br>**Possible Values**<br>• ltng:error<br>• ltng:interaction<br>• ltng:pageView<br>• ltng:performance |
| UI_EVENT_SEQUENCE_NUM | **Type**<br>Number<br>**Description**<br>An auto-incremented sequence number of the current event since the session started. |
| UI_EVENT_SOURCE | **Type**<br>String<br>**Description**<br>The user action on the record or records in RECORD_ID. This field's value indicates whether the user's action was on a single record or multiple records. For example, read indicates that one record was read (such as on a record detail page); reads indicates that multiple records were read (such as in a list view).<br>**Examples**<br>• click<br>• create<br>• delete<br>• hover |

| Field | Details |
| --- | --- |
| | • `read`<br>• `update` |

EventLogFile Supported Event Types

EventLogFile

## Lightning Logger Event Type

Lightning Logger events contain information from observed Lightning component logs. This event type is available in the EventLogFile object in API version 58.0 and later.

To enable Lightning Logger events, from Setup, in the Quick Find box, enter `event`, and then select **Event Monitoring Settings**. Turn on Lightning Logger Events.

Note: The browser sends Lightning Logger event logs to the server in batches. Batches are sent when the user interacts with the page and when the page closes or refreshes. If the user experiences connectivity issues or if their login session expires due to browser inactivity, any pending Lightning Logger event logs on the browser are erased. There isn't a way to retrieve these lost logs.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| APP_NAME | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The name of the application the user accessed. |
| BROWSER_NAME | **Type**<br>String<br>**Description**<br>The name of the browser that the user accessed.<br>**Example**<br>Chrome, IE, Safari, Gecko |
| BROWSER_VERSION | **Type**<br>String<br>**Description**<br>The user's browser version in `major.minor` format. Some browsers don't provide a minor version. |
| CLIENT_GEO | **Type**<br>String<br>**Description**<br>The geolocation of the client in the form of <Country>/<State\|Province>.<br>**Example**<br>United States/California |
| CLIENT_ID | **Type**<br>String<br>**Description**<br>The API client ID. |
| CLIENT_IP | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP, such as a login from AppExchange, is shown as "Salesforce.com IP".<br>**Example**<br>`96.43.144.26` |
| CONNECTION_TYPE | **Type**<br>String<br>**Description**<br>The type of connection. |

**Possible Values**

- `CDMA1x`
- `CDMA`
- `EDGE`
- `EVDO0`
- `EVDOA`
- `EVDOB`
- `GPRS`
- `HRPD`
- `HSDPA`
- `HSUPA`
- `LTE`
- `WIFI`

`DEVICE_MODEL`

**Type**
String

**Description**
The name of the device model.

**Example**
iPad, iPhone

`DEVICE_PLATFORM`

**Type**
String

**Description**
The type of application experience in `name:experience:form` format.

**Possible Values**
Name

- `APP_BUILDER`
- `CUSTOM`
- `S1`
- `SFX`

Experience

- `BROWSER`
- `HYBRID`

Form

- `DESKTOP`
- `PHONE`
- `TABLET`

| | |
|---|---|
| `DEVICE_SESSION_ID` | **Type**<br>Id<br>**Description**<br>The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started.<br>**Example**<br>321a1ddfaf924803a075f1e69fc87bc06f53ccd0 |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `LightningLogger`. |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>**Example**<br>GeJCsym5eyvtEK2I |
| `MESSAGE` | **Type**<br>String<br>**Description**<br>The message passed to the `lightning/logger log()` method. The message can be a JSON object or a string. String length is limited to 4 KB (4096 characters). |
| `ORGANIZATION_ID` | **Type**<br>String<br>**Description**<br>The 15-character ID of the org.<br>**Example**<br>00D000000000123 |
| `OS_NAME` | **Type**<br>String<br>**Description**<br>The operating system name, derived from the User Agent.<br>**Example**<br>Android, iOS, OSX, Windows |

| | |
|---|---|
| OS_VERSION | **Type**<br>String<br>**Description**<br>The operating system version, derived from the User Agent. |
| PAGE_CONTEXT | **Type**<br>String<br>**Description**<br>The name of the component hosting the main page content.<br>**Example**<br>clients:cardsContainer |
| PAGE_ENTITY_ID | **Type**<br>Id<br>**Description**<br>The entity ID (if any) of the record being displayed.<br>**Example**<br>0013000000I3zJAAAZ |
| PAGE_ENTITY_TYPE | **Type**<br>String<br>**Description**<br>The entity type of the page being displayed.<br>**Example**<br>Task, contacts |
| PAGE_URL | **Type**<br>String<br>**Description**<br>Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with PAGE_URL.<br>**Example**<br>/sObject/0064100000JXITSAA5/view |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. |

| | |
|---|---|
| | **Example**<br>3nWgxWbDKWWDIk0FKfF5DV |
| SDK_APP_TYPE | **Type**<br>String<br>**Description**<br>The mobile SDK application type.<br>**Possible Values**<br>• HYBRID<br>• HYBRIDLOCAL<br>• HYBRIDREMOTE<br>• NATIVE<br>• REACTNATIVE |
| SDK_APP_VERSION | **Type**<br>String<br>**Description**<br>The mobile SDK application version number.<br>**Example**<br>5.0 |
| SDK_VERSION | **Type**<br>String<br>**Description**<br>The mobile SDK version number.<br>**Example**<br>2.1.0 |
| SEQUENCE | **Type**<br>Number<br>**Description**<br>An auto-incremented sequence number of the current event since the session started. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. Use this value to identify all events in Lightning Experience within a session. When the user logs out and logs in again, a new session is started.<br>**Example**<br>cdd09305cb6babf34059e27f70e47f1b11dec868 |

| | |
|---|---|
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>**Example**<br>20130715233322.670 |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).<br>**Example**<br>2015-07-27T11:32:59.555Z. The timezone is GMT. |
| UI_EVENT_RELATIVE_TIMESTAMP | **Type**<br>Number<br>**Description**<br>Difference in milliseconds between when the message was logged and when the browser tab was opened.<br>**Example**<br>29322.23 |
| UI_EVENT_TIMESTAMP | **Type**<br>Number<br>**Description**<br>The time at which this event occurred, measured in milliseconds.<br>**Example**<br>1479769912796 |
| USER_ID | **Type**<br>String<br>**Description**<br>The 15-character ID of the user accessing Salesforce services through the UI or API.<br>**Example**<br>00530000009M943 |
| USER_ID_DERIVED | **Type**<br>Id |

**Description**
The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API.

**Example**
0059000000001SNIA0

`USER_TYPE`

**Type**
String

**Description**
The category of user license of the user accessing Salesforce services through the UI or API.

**Possible Values**

- `A`: Automated Process
- `b`: High Volume Portal
- `C`: Customer Portal User
- `D`: External Who
- `F`: Self-Service
- `G`: Guest
- `L`: Package License Manager
- `N`: Salesforce to Salesforce
- `n`: CSN Only
- `O`: Power Custom
- `o`: Custom
- `P`: Partner
- `p`: Customer Portal Manager
- `S`: Standard
- `X`: Salesforce Administrator

## Lightning Page View Event Type

Lightning Page View events represent information about the page on which the event occurred in Lightning Experience and the Salesforce mobile app, such as the page's load time. This event type is available in the EventLogFile object in API version 39.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
|---|---|
| `APP_NAME` | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of the application that the user accessed. |
| BROWSER_NAME | **Type**<br>String<br>**Description**<br>The name of the browser that the user accessed.<br>**Example**<br>`Chrome`, `Safari` |
| BROWSER_VERSION | **Type**<br>String<br>**Description**<br>The version of the browser that the user accessed in `major.minor version` format. Some browsers don't provide a minor version. |
| CLIENT_GEO | **Type**<br>String<br>**Description**<br>The geolocation of the client in the form of `<Country>/<State\|Province>`.<br>**Example**<br>`United States/California` |
| CLIENT_ID | **Type**<br>String<br>**Description**<br>The API client ID. |
| CLIENT_IP | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as `Salesforce.com IP`.<br>**Example**<br>`96.43.144.26` |
| CONNECTION_TYPE | **Type**<br>String<br>**Description**<br>The type of connection. |

| Field | Details |
| --- | --- |
| | **Possible Values**<br>• CDMA1x<br>• CDMA<br>• EDGE<br>• EVDO0<br>• EVDOA<br>• EVDOB<br>• GPRS<br>• HRPD<br>• HSDPA<br>• HSUPA<br>• LTE<br>• WIFI |
| DEVICE_ID | **Type**<br>String<br>**Description**<br>The unique identifier used to identify a device when tracking events. DEVICE_ID is a generated value that's created when the mobile app is initially run after installation. |
| DEVICE_MODEL | **Type**<br>String<br>**Description**<br>The name of the device model.<br>**Example**<br>iPad, iPhone |
| DEVICE_PLATFORM | **Type**<br>String<br>**Description**<br>The type of application experience in name:experience:form format.<br>**Possible Values**<br>• name: APP_BUILDER, CUSTOM, S1, SFX<br>• experience: BROWSER, HYBRID<br>• form: DESKTOP, PHONE, TABLET |
| DEVICE_SESSION_ID | **Type**<br>Id |

| Field | Details |
| --- | --- |
| | **Description**<br>The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started.<br>**Example**<br>`321a1ddfaf924803a075f1e69fc87bc06f53ccd0` |
| `DURATION` | **Type**<br>Number<br>**Description**<br>If the page completes loading, then `DURATION` indicates the duration of time in milliseconds between `PAGE_START_TIME` and when the loading completes. In this case, `DURATION` corresponds to `EFFECTIVE_PAGE_TIME`.<br>If the page doesn't complete loading, then `DURATION` indicates the duration of time in milliseconds between `PAGE_START_TIME` and when the user navigates to another page. |
| `EFFECTIVE_PAGE_TIME` | **Type**<br>Double<br>**Description**<br>Indicates how many milliseconds it takes for the page to load before a user can interact with the page. Multiple factors can affect effective page time (EPT), such as network speed, hardware performance, or page complexity. |
| `EFFECTIVE_PAGE_TIME_DEVIATION` | **Type**<br>Boolean<br>**Description**<br>When a deviation is detected, `EFFECTIVE_PAGE_TIME_DEVIATION` records `true`. The default value is `false`. |
| `EFFECTIVE_PAGE_TIME_DEVIATION_ERROR_TYPE` | **Type**<br>String<br>**Description**<br>Indicates the origin of an error. This field is populated when EFFECTIVE_PAGE_TIME_DEVIATION_REASON contains the PAGE_HAS_ERROR value.<br>**Possible Values**<br>• `CUSTOM`—An error originating from the customer's system or network.<br>• `SYSTEM`—An error originating in Salesforce. |
| `EFFECTIVE_PAGE_TIME_DEVIATION_REASON` | **Type**<br>String<br>**Description**<br>The reason for deviation in page loading time. |

| Field | Details |
| --- | --- |
| | **Possible Values**<br>• `PageHasError`—An undefined page loading error occurred.<br>• `PageNotLoaded`—If a customer navigates away from a page while loading processes are in progress, the page doesn't finish loading.<br>• `PreviousPageNotLoaded`—When navigating to a new page, and the previous page hasn't completed loading, the next page is considered to have a deviation. Incomplete loading processes on a previous page can affect how the next page loads.<br>• `InteractionsBeforePageLoaded`—A user interacts with a page element before the page is fully loaded.<br>• `PageInBackgroundBeforeLoaded`—A background loading process runs on a page. Background processes run when a user navigates away from a page to another browser tab. The browser de-prioritizes the page in the background until the user activates the page's tab. Because a user can leave a page in the background for a long time, the page is expected to have a high Effective Page Time (EPT). |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `LightningPageView`. |
| `GRANDPARENT_UI_ELEMENT` | **Type**<br>String<br>**Description**<br>The grandparent scope of the page element where the event occurred. |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>**Example**<br>`GeJCsym5eyvtEK2I` |
| `ORGANIZATION_ID` | **Type**<br>String<br>**Description**<br>The 15-character ID of the org.<br>**Example**<br>`00D000000000123` |
| `OS_NAME` | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The operating system name, derived from `USER_AGENT`.<br>**Example**<br>`Android`, `iOS`, `OSX`, `Windows` |
| `OS_VERSION` | **Type**<br>String<br>**Description**<br>The operating system version, derived from `USER_AGENT`. |
| `PAGE_APP_NAME` | **Type**<br>String<br>**Description**<br>The internal name of the application that the user accessed from the App Launcher.<br>**Example**<br>`LightningSales` |
| `PAGE_CONTEXT` | **Type**<br>String<br>**Description**<br>The name of the component hosting the main content of the page.<br>**Example**<br>`clients:cardsContainer` |
| `PAGE_ENTITY_ID` | **Type**<br>Id<br>**Description**<br>The ID of the record that the user accessed which triggered the event on the page.<br>**Example**<br>`0013000000I3zJAAAZ` |
| `PAGE_ENTITY_TYPE` | **Type**<br>String<br>**Description**<br>The entity type of the event.<br>**Example**<br>`Task`, `contacts` |
| `PAGE_FLEXI_PAGE_NAME_OR_ID` | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The page name or identifier.<br>**Example**<br>`runtime_sales_seller_home__SellerHome_L` |
| `PAGE_FLEXI_PAGE_TYPE` | **Type**<br>String<br>**Description**<br>The page type.<br>**Example**<br>`HomePage` |
| `PAGE_START_TIME` | **Type**<br>Number<br>**Description**<br>The time when the page starts loading, measured in milliseconds.<br>**Example**<br>`1471564788642` |
| `PAGE_URL` | **Type**<br>String<br>**Description**<br>Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with `PAGE_URL`.<br>**Example**<br>`/sObject/0064100000JXITSAA5/view` |
| `PARENT_UI_ELEMENT` | **Type**<br>String<br>**Description**<br>The parent scope of the page element where the event occurred. |
| `PREVPAGE_APP_NAME` | **Type**<br>String<br>**Description**<br>The internal name of the previous application that the user accessed from the App Launcher.<br>**Example**<br>`LightningSales` |
| `PREVPAGE_CONTEXT` | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The context of the previous page where the event occurred.<br>**Example**<br>`clients:cardsContainer` |
| `PREVPAGE_ENTITY_ID` | **Type**<br>Id<br>**Description**<br>The unique previous page entity identifier of the event. |
| `PREVPAGE_ENTITY_TYPE` | **Type**<br>String<br>**Description**<br>The previous page entity type of the event.<br>**Example**<br>`Task`, `contacts` |
| `PREVPAGE_URL` | **Type**<br>String<br>**Description**<br>The relative URL of the previous Lightning Experience or Salesforce mobile app page that the user opened.<br>**Example**<br>`/sObject/006410000` |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>**Example**<br>`3nWgxWbDKWWDIk0FKfF5DV` |
| `SDK_APP_TYPE` | **Type**<br>String<br>**Description**<br>The mobile SDK application type.<br>**Possible Values**<br>• `HYBRID`<br>• `HYBRIDLOCAL`<br>• `HYBRIDREMOTE` |

| Field | Details |
| --- | --- |
| | • NATIVE<br>• REACTNATIVE |
| SDK_APP_VERSION | **Type**<br>String<br>**Description**<br>The mobile SDK application version number.<br>**Example**<br>5.0 |
| SDK_VERSION | **Type**<br>String<br>**Description**<br>The mobile SDK version number.<br>**Example**<br>2.1.0 |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When the user logs out and logs in again, a new session is started.<br>**Example**<br>cdd09305cb6babf34059e27f70e47f1b11dec868 |
| TARGET_UI_ELEMENT | **Type**<br>String<br>**Description**<br>The target page element where the event occurred.<br>**Example**<br>tabitem-link |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: 20130715233322.670. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime |

| Field | Details |
| --- | --- |
| | **Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. The timezone is GMT. |
| `UI_EVENT_ID` | **Type**<br>String<br>**Description**<br>Id of the Lightning event type.<br>**Possible Values**<br>• `ltng:error`<br>• `ltng:interaction`<br>• `ltng:pageView`<br>• `ltng:performance` |
| `UI_EVENT_SEQUENCE_NUM` | **Type**<br>Number<br>**Description**<br>An auto-incremented sequence number of the current event since the session started. |
| `UI_EVENT_SOURCE` | **Type**<br>String<br>**Description**<br>This field is being deprecated and is mostly null, except in mobile app views where it indicates the page type of views where the context is “native.” |
| `UI_EVENT_TIMESTAMP` | **Type**<br>Number<br>**Description**<br>The time at which this event occurred, measured in milliseconds.<br>**Example**<br>`1479769912796` |
| `USER_AGENT` | **Type**<br>String<br>**Description**<br>The type of client used to make the request (for example, the browser, application, or API) as a string. |
| `USER_ID` | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The 15-character ID of the user accessing Salesforce services through the UI or API.<br>**Example**<br>`00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API.<br>**Example**<br>`00590000000I1SNIA0` |
| `USER_TYPE` | **Type**<br>String<br>**Description**<br>The category of user license of the user accessing Salesforce services through the UI or API.<br>**Possible Values**<br>• `A`: Automated Process<br>• `b`: High Volume Portal<br>• `C`: Customer Portal User<br>• `D`: External Who<br>• `F`: Self-Service<br>• `G`: Guest<br>• `L`: Package License Manager<br>• `N`: Salesforce to Salesforce<br>• `n`: CSN Only<br>• `O`: Power Custom<br>• `o`: Custom<br>• `P`: Partner<br>• `p`: Customer Portal Manager<br>• `S`: Standard<br>• `X`: Salesforce Administrator |

# Lightning Performance Event Type

Lightning Performance events track trends in Lightning Experience and Salesforce mobile app performance. This event type is available in the EventLogFile object in API version 39.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

## Fields

| Field | Details |
|---|---|
| `APP_NAME` | **Type**<br>String<br>**Description**<br>The name of the application that the user accessed. |
| `BROWSER_NAME` | **Type**<br>String<br>**Description**<br>The name of the browser that the user accessed.<br>**Example**<br>`Chrome`, `Safari` |
| `BROWSER_VERSION` | **Type**<br>String<br>**Description**<br>The version of the browser that the user accessed in `major.minor version` format. Some browsers don't provide a minor version. |
| `CLIENT_GEO` | **Type**<br>String<br>**Description**<br>The geolocation of the client in the form of `<Country>/<State\|Province>`.<br>**Example**<br>`United States/California` |
| `CLIENT_ID` | **Type**<br>String<br>**Description**<br>The API client ID. |
| `CLIENT_IP` | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CONNECTION_TYPE` | **Type**<br>String<br>**Description**<br>The type of connection.<br>**Possible Values**<br>• `CDMA1x`<br>• `CDMA`<br>• `EDGE`<br>• `EVDO0`<br>• `EVDOA`<br>• `EVDOB`<br>• `GPRS`<br>• `HRPD`<br>• `HSDPA`<br>• `HSUPA`<br>• `LTE`<br>• `WIFI` |
| `DEVICE_ID` | **Type**<br>String<br>**Description**<br>The unique identifier used to identify a device when tracking events. `DEVICE_ID` is a generated value that's created when the mobile app is initially run after installation. |
| `DEVICE_MODEL` | **Type**<br>String<br>**Description**<br>The name of the device model.<br>**Example**<br>`iPad`, `iPhone` |
| `DEVICE_PLATFORM` | **Type**<br>String<br>**Description**<br>The type of application experience in `name:experience:form` format. |

| Field | Details |
| --- | --- |
| | **Possible Values**<br>• `name`: `APP_BUILDER`, `CUSTOM`, `S1`, `SFX`<br>• `experience`: `BROWSER`, `HYBRID`<br>• `form`: `DESKTOP`, `PHONE`, `TABLET` |
| `DEVICE_SESSION_ID` | **Type**<br>Id<br>**Description**<br>The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started.<br>**Example**<br>`321a1ddfaf924803a075f1e69fc87bc06f53ccd0` |
| `DURATION` | **Type**<br>Number<br>**Description**<br>The duration in milliseconds since the page start time. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `LightningPerformance`. |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>**Example**<br>`GeJCsym5eyvtEK2I` |
| `ORGANIZATION_ID` | **Type**<br>String<br>**Description**<br>The 15-character ID of the org.<br>**Example**<br>`00D000000000123` |
| `OS_NAME` | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The operating system name, derived from `USER_AGENT`.<br>**Example**<br>`Android`, `iOS`, `OSX`, `Windows` |
| `OS_VERSION` | **Type**<br>String<br>**Description**<br>The operating system version, derived from `USER_AGENT`. |
| `PAGE_START_TIME` | **Type**<br>Number<br>**Description**<br>The time when the page was initially loaded, measured in milliseconds.<br>**Example**<br>`1471564788642` |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>**Example**<br>`3nWgxWbDKWWDIk0FKfF5DV` |
| `SDK_APP_TYPE` | **Type**<br>String<br>**Description**<br>The mobile SDK application type.<br>**Possible Values**<br>• `HYBRID`<br>• `HYBRIDLOCAL`<br>• `HYBRIDREMOTE`<br>• `NATIVE`<br>• `REACTNATIVE` |
| `SDK_APP_VERSION` | **Type**<br>String<br>**Description**<br>The mobile SDK application version number. |

| Field | Details |
| --- | --- |
| | **Example**<br>`5.0` |
| `SDK_VERSION` | **Type**<br>String<br>**Description**<br>The mobile SDK version number.<br>**Example**<br>`2.1.0` |
| `SESSION_KEY` | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When the user logs out and logs in again, a new session is started.<br>**Example**<br>`cdd09305cb6babf34059e27f70e47f1b11dec868` |
| `TIMESTAMP` | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>**Example**<br>`20130715233322.670` |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>**Example**<br>`2015-07-27T11:32:59.555Z`. The timezone is GMT. |
| `UI_EVENT_ID` | **Type**<br>String<br>**Description**<br>Id of the Lightning event type.<br>**Possible Values**<br>• `ltng:error`<br>• `ltng:interaction` |

| Field | Details |
| --- | --- |
| | • `ltng:pageView`<br>• `ltng:performance`<br>Note: Any other value, such as `ltng:bootstrap`, is for internal usage only. |
| `UI_EVENT_SOURCE` | **Type**<br>String<br>**Description**<br>The user action on the record or records. This field's value indicates whether the user's action was on a single record or multiple records. For example, `read` indicates that one record was read (such as on a record detail page); `reads` indicates that multiple records were read (such as in a list view).<br>**Example**<br>• `click`<br>• `create`<br>• `delete`<br>• `hover`<br>• `read`<br>• `update` |
| `UI_EVENT_TIMESTAMP` | **Type**<br>Number<br>**Description**<br>The time at which this event occurred, measured in milliseconds.<br>**Example**<br>`1479769912796` |
| `UI_EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of performance event.<br>**Example**<br>`bootstrap`, `defs`, `performance` |
| `USER_AGENT` | **Type**<br>String<br>**Description**<br>The numeric code for the type of client used to make the request (for example, browser, application, or API) as a string. |
| `USER_ID` | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The 15-character ID of the user accessing Salesforce services through the UI or API.<br>**Example**<br>`00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API.<br>**Example**<br>`00590000000I1SNIA0` |
| `USER_TYPE` | **Type**<br>String<br>**Description**<br>The category of user license of the user accessing Salesforce services through the UI or API.<br>**Possible Values**<br>• `A`: Automated Process<br>• `b`: High Volume Portal<br>• `C`: Customer Portal User<br>• `D`: External Who<br>• `F`: Self Service<br>• `G`: Guest<br>• `L`: Package License Manager<br>• `N`: Salesforce to Salesforce<br>• `n`: CSN Only<br>• `O`: Power Custom<br>• `o`: Custom<br>• `P`: Partner<br>• `p`: Customer Portal Manager<br>• `S`: Standard<br>• `X`: Salesforce Administrator |

EventLogFile

# Login Event Type

Login events contain details about your org's user login history.

Note: The Login event type is used by EventLogFile (ELF). It isn't a real-time event. For the LoginEvent real-time event, which is part of Real-Time Event Monitoring (RTEM), see LoginEvent in the *Platform Events Developer Guide*.

For details about event monitoring, see the Trailhead Event Monitoring module or the REST API Developer Guide.

## Fields

| Field | Details |
|---|---|
| `API_TYPE` | **Type**<br>String<br>**Description**<br>The type of API request.<br>Possible values are:<br>• `D`—Apex Class<br>• `E`—SOAP Enterprise<br>• `M`—SOAP Metadata<br>• `P`—SOAP Partner<br>• `S`—SOAP Apex<br>• `T`—SOAP Tooling<br>• `f`—Feed<br>• `l`—Live Agent<br>• `p`—SOAP ClientSync |
| `API_VERSION` | **Type**<br>String<br>**Description**<br>The version of the API that's being used.<br>For example: `36.0`. |
| `AUTHENTICATION_METHOD_REFERENCE` | **Type**<br>String<br>**Description**<br>The authentication method used by a third-party identification provider for an OpenID Connect single sign-on protocol. This field is available in API version 51.0 and later. |
| `AUTHENTICATION_SERVICE_ID` | **Type**<br>Id |

| | |
|---|---|
| | **Description**<br>The 15-character ID for the authentication service used to log in. This field stores IDs for these authentication services.<br>• SAML single sign-on providers<br>• Token exchange handlers<br>Available in API version 60.0 and later. |
| `BROWSER_TYPE` | **Type**<br>String<br>**Description**<br>The identifier string returned by the browser used at login.<br>Example values are:<br>• `Go-http-client/1.1`<br>• `Mozilla/5.0 (Macintosh; Intel Mac OS X 10.12; rv%3A50.0) Gecko/20100101 Firefox/50.0`<br>• `Mozilla/5.0 (Macintosh; Intel Mac OS X 10_11_6) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/51.0.2704.84 Safari/537.36` |
| `CIPHER_SUITE` | **Type**<br>String<br>**Description**<br>The TLS cipher suite used for the login. Values are OpenSSL-style cipher suite names, with hyphen delimiters. For more information, see OpenSSL Cryptography and SSL/TLS Toolkit. |
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `COUNTRY_CODE` | **Type**<br>String<br>**Description**<br>The country code associated with the IP address of the user logging in. |

| | |
|---|---|
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DB_TOTAL_TIME` | **Type**<br>Number<br>**Description**<br>The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `Login`. |
| `FORWARDED_FOR_IP` | **Type**<br>String<br>**Description**<br>The value in the `X-Forwarded-For` header of HTTP requests sent by the client. For logins that use one or more HTTP proxies, the `X-Forwarded-For` header is sometimes used to store the origin IP and all proxy IPs.<br>The `FORWARDED_FOR_IP` field stores whatever value the client sends, which might not be an IP address. The maximum length is 256 characters. Longer values are truncated. The `FORWARDED_FOR_IP` field isn't populated for logins completed via OAuth flows or single sign-on (SSO).<br>Available in API version 61.0 and later. |
| `HTTP_REFERER` | **Type**<br>String<br>**Description**<br>The referring URI of the page that's receiving the request. |
| `LOGIN_KEY` | **Type**<br>String |

**Description**
The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: `GeJCsym5eyvtEK2I`.

`LOGIN_STATUS`

**Type**
String

**Description**
The status of the login attempt. For successful logins, the value is LOGIN_NO_ERROR. All other values indicate errors or authentication issues. For details, see Login Event Type — LOGIN_STATUS Values on page 2274.

`LOGIN_SUB_TYPE`

**Type**
picklist

**Properties**
Nillable, Restricted picklist

**Description**
The type of login flow used. See the `LoginSubType` field of LoginHistory in the Object Reference guide for the list of possible values.

Label is **Login Subtype**.

`LOGIN_TYPE`

**Type**
String

**Description**
The type of login used to access the session.

Possible values are:

- `7`—AppExchange
- `A`—Application
- `s`—Certificate-based login
- `k`—Chatter Communities External User
- `n`—Chatter Communities External User Third Party SSO
- `x`—Cross Tenant Login (for internal use only)
- `r`—Employee Login to Community
- `z`—Lightning Login
- `l`—Networks Portal API Only
- `6`—Remote Access Client
- `i`—Remote Access 2.0
- `I`—Other Apex API
- `R`—Partner Product

- w—Passwordless Login
- 3—Customer Service Portal
- q—Partner Portal Third-Party SSO
- 9—Partner Portal
- 5—SAML Idp Initiated SSO
- m—SAML Chatter Communities External User SSO
- b—SAML Customer Service Portal SSO
- c—SAML Partner Portal SSO
- h—SAML Site SSO
- 8—SAML Sfdc Initiated SSO
- E—SelfService
- j—Third Party SSO

| | |
|---|---|
| LOGIN_URL | **Type**<br>String<br>**Description**<br>The URL of the login page. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: 00D000000000123. |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.<br>For example: 3nWgxWbDKWWDIk0FKfF5DV. |
| REQUEST_STATUS | **Type**<br>String<br>**Description**<br>The status of the request for a page view or user interface action.<br>For example:<br>• S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. |

| | |
|---|---|
| | • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.<br>• U—Undefined<br>• A—Authorization Error<br>• R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.<br>• N—Not Found. 404 error.<br>This field can have a blank value. |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For Login Event Type, this field is usually null because the event is captured before a session is created.<br>**Example**<br>d7DEq/ANa7nNZZVD |
| SOURCE_IP | **Type**<br>IP<br>**Description**<br>The IP address of the incoming client request that first reaches Salesforce during a login. For example, 126.7.4.2. For clients that redirect through one or more HTTP proxies, this field stores the IP address of the first proxy to reach Salesforce. To better identify the origin IP for these cases, check the FORWARDED_FOR_IP field instead. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: 20130715233322.670. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime |

**Description**
The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).

For example: `2015-07-27T11:32:59.555Z`. Time zone is GMT.

`TLS_PROTOCOL`

**Type**
String

**Description**
The TLS protocol used for the login.

**Example**
There are 3 possible values.

- 1.0
- 1.1
- 1.2

`URI`

**Type**
String

**Description**
The URI of the page that's receiving the request.

For example: `/home/home.jsp`.

`URI_ID_DERIVED`

**Type**
ID

**Description**
The 18-character case insensitive ID of the URI of the page that's receiving the request.

`USE_API_TOKEN`

**Type**
String

**Description**
Login with API Token - T token, or P password.

`USER_ID`

**Type**
Id

**Description**
The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: `00530000009M943`

`USER_ID_DERIVED`

**Type**
Id

**Description**
The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: `0059000000I1SNIA0`.

`USER_NAME`

**Type**
String

**Description**
The username that's used for login.

`USER_TYPE`

**Type**
String

**Description**
The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.

- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

Login Event Type — LOGIN_STATUS Values
When users attempt to log in to your org, the success or failure of their login attempts is tracked in event log file data. Specifically, the LOGIN_STATUS field in the Login event type contains the result of these login attempts. The data in LOGIN_STATUS can help you determine whether your users' login attempts were successful. This field is available in the Login event type in the EventLogFile object in API version 39.0 and later.

## Login Event Type — LOGIN_STATUS Values

When users attempt to log in to your org, the success or failure of their login attempts is tracked in event log file data. Specifically, the LOGIN_STATUS field in the Login event type contains the result of these login attempts. The data in LOGIN_STATUS can help you determine whether your users' login attempts were successful. This field is available in the Login event type in the EventLogFile object in API version 39.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

| API Error Code | Details (If Available) |
|---|---|
| LOGIN_CHALLENGE_ISSUED | Failed: Computer activation required |
| LOGIN_CHALLENGE_PENDING | Failed: Computer activation pending |
| LOGIN_DATA_DOWNLOAD_ONLY | |
| LOGIN_END_SESSION_TXN_SECURITY_POLICY | |
| LOGIN_ERROR_API_TOO_OLD | Failed: API Version Removed. The API version specified for login is below the minimum supported value, and has been removed. Update to a newer, supported API version. |
| LOGIN_ERROR_APPEXCHANGE_DOWN | Unable to process your login request |
| LOGIN_ERROR_ASYNC_USER_CREATE | |
| LOGIN_ERROR_AVANTGO_DISABLED | |
| LOGIN_ERROR_AVANTGO_TRIAL_EXP | |
| LOGIN_ERROR_CLIENT_NO_ACCESS | |
| LOGIN_ERROR_CLIENT_REQ_UPDATE | Failed: Client update required |
| LOGIN_ERROR_CSS_FROZEN | |

| API Error Code | Details (If Available) |
|---|---|
| LOGIN_ERROR_CSS_PW_LOCKOUT | |
| LOGIN_ERROR_DUPLICATE_USERNAME | |
| LOGIN_ERROR_EXPORT_RESTRICTED | Restricted country |
| LOGIN_ERROR_GLOBAL_BLOCK_DOMAIN | Restricted domain |
| LOGIN_ERROR_HT_DOWN | |
| LOGIN_ERROR_HTP_METHD_INVALID | Failed: Invalid HTTP method |
| LOGIN_ERROR_INSECURE_LOGIN | Failed: Login over insecure channel |
| LOGIN_ERROR_INVALID_GATEWAY | Invalid gateway |
| LOGIN_ERROR_INVALID_ID_FIELD | |
| LOGIN_ERROR_INVALID_PASSWORD | Invalid password |
| LOGIN_ERROR_LOGINS_EXCEEDED | Maximum logins exceeded |
| LOGIN_ERROR_MUST_USE_API_TOKEN | Failed: API security token required |
| LOGIN_ERROR_MUTUAL_AUTHENTICATION | Mutual authentication failed |
| LOGIN_ERROR_NETWORK_INACTIVE | Invalid - Experience Cloud site offline |
| LOGIN_ERROR_NO_HT_ACCESS | |
| LOGIN_ERROR_NO_NETWORK_ACCESS | No Experience Cloud site access |
| LOGIN_ERROR_NO_NETWORK_INFO | |
| LOGIN_ERROR_NO_PORTAL_ACCESS | Invalid profile association |
| LOGIN_ERROR_NO_SET_COOKIES | |
| LOGIN_ERROR_OFFLINE_DISABLED | Offline disabled |
| LOGIN_ERROR_OFFLINE_TRIAL_EXP | Offline trial expired |
| LOGIN_ERROR_ORG_CLOSED | Organization closed |
| LOGIN_ERROR_ORG_DOMAIN_ONLY | Restricted domain |
| LOGIN_ERROR_ORG_IN_MAINTENANCE | Organization is in maintenance |
| LOGIN_ERROR_ORG_INACTIVE | Organization is inactive |
| LOGIN_ERROR_ORG_IS_DOT_ORG | Organization is a DOT |
| LOGIN_ERROR_ORG_LOCKOUT | Organization locked |
| LOGIN_ERROR_ORG_SIGNING_UP | |
| LOGIN_ERROR_ORG_SUSPENDED | Organization suspended |
| LOGIN_ERROR_OUTLOOK_DISABLED | Outlook integration disabled |

| API Error Code | Details (If Available) |
|---|---|
| LOGIN_ERROR_PAGE_REQUIRES_LOGIN | |
| LOGIN_ERROR_PASSWORD_EMPTY | |
| LOGIN_ERROR_PASSWORD_LOCKOUT | Password lockout |
| LOGIN_ERROR_PORTAL_INACTIVE | Invalid - Portal disabled |
| LOGIN_ERROR_RATE_EXCEEDED | Login rate exceeded |
| LOGIN_ERROR_RESTRICTED_DOMAIN | Restricted IP |
| LOGIN_ERROR_RESTRICTED_TIME | Restricted time |
| LOGIN_ERROR_SESSION_TIMEOUT | |
| LOGIN_ERROR_SSO_PWD_INVALID | Invalid password |
| LOGIN_ERROR_SSO_SVC_DOWN | Your company's authentication service is down |
| LOGIN_ERROR_SSO_URL_INVALID | The Single Sign-On Gateway URL is invalid |
| LOGIN_ERROR_STORE | |
| LOGIN_ERROR_STORE_DOWN | |
| LOGIN_ERROR_SWITCH_SFDC_INSTANCE | |
| LOGIN_ERROR_SWITCH_SFDC_LOGIN | |
| LOGIN_ERROR_SYNCOFFLINE_DISBLD | Failed: Mobile disabled |
| LOGIN_ERROR_SYSTEM_DOWN | |
| LOGIN_ERROR_UNKNOWN_ERROR | Login invalid |
| LOGIN_ERROR_USER_API_ONLY | Failed: API-only user |
| LOGIN_ERROR_USER_FROZEN | User is frozen |
| LOGIN_ERROR_USER_INACTIVE | User is inactive |
| LOGIN_ERROR_USER_NON_MOBILE | Failed: Mobile license required |
| LOGIN_ERROR_USER_STORE_ACCESS | |
| LOGIN_ERROR_USERNAME_EMPTY | |
| LOGIN_ERROR_WIRELESS_DISABLED | Wireless disabled |
| LOGIN_ERROR_WIRELESS_TRIAL_EXP | Wireless trial expired |
| LOGIN_LIGHTNING_LOGIN | Lightning Login required |
| LOGIN_NO_ERROR | |
| LOGIN_OAUTH_API_DISABLED | Failed: OAuth API access disabled |
| LOGIN_OAUTH_CONSUMER_DELETED | Failed: Consumer Deleted |

| API Error Code | Details (If Available) |
|---|---|
| LOGIN_OAUTH_DS_NOT_EXPECTED | Failed: Activation secret not expected |
| LOGIN_OAUTH_EXCEED_GET_AT_LMT | Failed: Get Access Token Limit Exceeded |
| LOGIN_OAUTH_INVALID_CODE_CHALLENGE | Failed: Invalid Code Challenge |
| LOGIN_OAUTH_INVALID_CODE_VERIFIER | Failed: Invalid Code Verifier |
| LOGIN_OAUTH_INVALID_DEVICE | Failed: Device Id missing or not registered |
| LOGIN_OAUTH_INVALID_DS | Failed: Activation secret invalid |
| LOGIN_OAUTH_INVALID_DSIG | Failed: Signature Invalid |
| LOGIN_OAUTH_INVALID_IP | Failed: IP Address Not Allowed |
| LOGIN_OAUTH_INVALID_NONCE | Failed: Invalid Nonce |
| LOGIN_OAUTH_INVALID_SIG_METHOD | Failed: Invalid Signature Method |
| LOGIN_OAUTH_INVALID_TIMESTAMP | Failed: Invalid Timestamp |
| LOGIN_OAUTH_INVALID_TOKEN | Failed: Invalid Token |
| LOGIN_OAUTH_INVALID_VERIFIER | Failed: Invalid Verifier |
| LOGIN_OAUTH_INVALID_VERSION | Failed: Version Not Supported |
| LOGIN_OAUTH_MISSING_DS | Activation secret missing |
| LOGIN_OAUTH_NO_CALLBACK_URL | Failed: Invalid Callback URL |
| LOGIN_OAUTH_NO_CONSUMER | Missing Consumer Key Parameter |
| LOGIN_OAUTH_NO_TOKEN | Missing OAuth Token Parameter |
| LOGIN_OAUTH_NONCE_REPLAY | Failed: Nonce Replay Detected |
| LOGIN_OAUTH_PACKAGE_MISSING | Package for this consumer is not installed in your organization |
| LOGIN_OAUTH_PACKAGE_OLD | Installed package for this consumer is out of date |
| LOGIN_OAUTH_UNEXPECTED_PARAM | Failed: Unexpected parameter |
| LOGIN_ORG_TRIAL_EXP | Trial Expired |
| LOGIN_READONLY_CANNOT_VALIDATE | |
| LOGIN_SAML_INVALID_AUDIENCE | Failed: Audience Invalid |
| LOGIN_SAML_INVALID_CONFIG | Failed: Configuration Error/Perm Disabled |
| LOGIN_SAML_INVALID_FORMAT | Failed: Assertion Invalid |
| LOGIN_SAML_INVALID_IN_RES_TO | Failed: InResponseTo Invalid |
| LOGIN_SAML_INVALID_ISSUER | Failed: Issuer Mismatched |
| LOGIN_SAML_INVALID_ORG_ID | Failed: Invalid Organization Id |

| API Error Code | Details (If Available) |
|---|---|
| LOGIN_SAML_INVALID_PORTAL_ID | Failed: Invalid Portal Id |
| LOGIN_SAML_INVALID_RECIPIENT | Failed: Recipient Mismatched |
| LOGIN_SAML_INVALID_SESSION_LEVEL | |
| LOGIN_SAML_INVALID_SIGNATURE | Failed: Signature Invalid |
| LOGIN_SAML_INVALID_SITE_URL | Failed: Invalid Site URL |
| LOGIN_SAML_INVALID_STATUS | Failed: Status Invalid |
| LOGIN_SAML_INVALID_SUB_CONFIRM | Failed: Subject Confirmation Error |
| LOGIN_SAML_INVALID_TIMESTAMP | Failed: Assertion Expired |
| LOGIN_SAML_INVALID_USERNAME | Failed: Username Or SSO Id Invalid |
| LOGIN_SAML_INVALID_VERSION | |
| LOGIN_SAML_MISMATCH_CERT | Failed: Signature Invalid/Configured Certificate Mismatch |
| LOGIN_SAML_MISSING_ORG_ID | Failed: Missing Organization Id for Portal login |
| LOGIN_SAML_MISSING_PORTAL_ID | Failed: Missing Portal Id |
| LOGIN_SAML_PROVISION_ERROR | Failed: SAML Provision Error |
| LOGIN_SAML_REPLAY_ATTEMPTED | Failed: Replay Detected |
| LOGIN_SAML_SITE_INACTIVE | Failed: Specified Site is Inactive |
| LOGIN_TWOFACTOR_REQ | Multi-factor (formerly called two-factor) is required |

### Usage

Use LOGIN_STATUS to determine whether your users' login attempts were successful. For example, you can determine whether a departed employee attempted to log in successfully or unsuccessfully.

| A | B | C | D | E | F | G | H | I | J | K |
|---|---|---|---|---|---|---|---|---|---|---|
| EVENT_TYPE | CLIENT_IP | URI | SESSION_KEY | LOGIN_KEY | REQUEST_STATUS | USER_NAME | TIMESTAMP_DERIVED | USER_ID_DERIVED | URI_ID_DERIVED | LOGIN_STATUS |
| Login | 1.2.3.4 | /my/uri/path/005B0000000GSwO | sidHash_basic | loginHash_basic | requestStatus_common | userName_L | 2015-01-01T00:00:00.000 | 001xx0000000useAAA | 005B0000000GSwOIAW | LOGIN_NO_ERROR |

## Login As Event Type

Login As events contain details about what a Salesforce admin did while logged in as another user.

Note: Login As Event Type is used by EventLogFile (ELF). It isn't a real-time event. For the LoginAsEvent real-time event, which is part of Real-Time Event Monitoring (RTEM), see LoginAsEvent in the *Platform Events Developer Guide*.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Note: Bolster your security posture by receiving alerts and blocking potentially malicious LoginAsEvent activities with a Transaction Security policy.

## Fields

| Field | Details |
|---|---|
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DELEGATED_USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or API. In this case, the user who's doing the impersonation. |
| `DELEGATED_USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or API. In this case, the user who's doing the impersonation. |
| `DELEGATED_USER_NAME` | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The username of the user who's using Salesforce services through the UI or API. In this case, the user who's doing the impersonation. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `LoginAs`. |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `RUN_TIME` | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| `SESSION_KEY` | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. |

| | |
|---|---|
| | For example: `d7DEq/ANa7nNZZVD`. |
| `TIMESTAMP` | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. |

For example: `0059000000I1SNIA0`.

EventLogFile Supported Event Types

EventLogFile

## Logout Event Type

Contains details of user sessions ending or being revoked.

Note: Logout Event Type is used by EventLogFile (ELF). It isn't a real-time event. For the LogoutEvent real-time event, which is part of Real-Time Event Monitoring (RTEM), see LogoutEvent in the *Platform Events Developer Guide*.

These scenarios count as logout events.

- Logging out via the UI
- Session expiration
- Revoking access for a connected app
- Calling the Salesforce revocation endpoint
- Salesforce disabling a connected app
- Note: For batch operations where multiple sessions are revoked at once, Salesforce records only one logout event. You can tell that it's a batch operation because there's no user ID.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
|---|---|
| `API_TYPE` | **Type**<br>String<br>**Description**<br>The type of API request.<br>Possible values are:<br>• `D`—Apex Class<br>• `E`—SOAP Enterprise<br>• `M`—SOAP Metadata<br>• `P`—SOAP Partner<br>• `S`—SOAP Apex<br>• `T`—SOAP Tooling<br>• `f`—Feed<br>• `l`—Live Agent<br>• `p`—SOAP ClientSync |

`API_VERSION`

**Type**
String

**Description**
The version of the API that's being used.

For example: `36.0`.

`APP_TYPE`

**Type**
Number

**Description**
The application type that was in use upon logging out.

**Example Values**

- `1000`: Application
- `1007`: SFDC Application
- `1014`: Chat
- `2501`: CTI
- `2514`: OAuth
- `3475`: SFDC Partner Portal

`BROWSER_TYPE`

**Type**
String

**Description**
The identifier string returned by the browser used at login.

Example values are:

- `Go-http-client/1.1`
- `Mozilla/5.0 (Macintosh; Intel Mac OS X 10.12; rv%3A50.0) Gecko/20100101 Firefox/50.0`
- `Mozilla/5.0 (Macintosh; Intel Mac OS X 10_11_6) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/51.0.2704.84 Safari/537.36`

`CLIENT_IP`

**Type**
String

**Description**
The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".

For example: `96.43.144.26`.

`CLIENT_VERSION`

**Type**
Number

| | |
|---|---|
| | **Description**<br>The version of the client that was in use upon logging out. |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always `Logout`. |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| PLATFORM_TYPE | **Type**<br>Number<br>**Description**<br>The code for the client platform. If a timeout caused the logout, this field is null.<br>**Example Values**<br>• `1000`: Windows<br>• `1008`: Windows 2003<br>• `1013`: Windows 8.1<br>• `1015`: Windows 10<br>• `2003`: Macintosh/Apple OSX<br>• `4000`: Linux<br>• `5005`: Android<br>• `5006`: iPhone<br>• `5007`: iPad<br>• `5200`: Android 10.0 |
| REQUEST_ID | **Type**<br>String |

**Description**
The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: `3nWgxWbDKWWDIk0FKfF5DV`.

`RESOLUTION_TYPE`

**Type**
Number

**Description**
The screen resolution of the client. If a timeout caused the logout, this field is null.

`SESSION_KEY`

**Type**
String

**Description**
The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: `d7DEq/ANa7nNZZVD`.

`SESSION_LEVEL`

**Type**
String

**Description**
The security level of the session that was used when logging out.

**Possible Values**

- `1`: Standard Session
- `10`: High-Assurance Session

`SESSION_TYPE`

**Type**
String

**Description**
The session type that was used when logging out.

**Possible Values**

- `A`: API
- `I`: APIOnlyUser
- `N`: ChatterNetworks
- `Z`: ChatterNetworksAPIOnly
- `C`: Content
- `P`: OauthApprovalUI
- `O`: Oauth2
- `T`: SiteStudio

- R: SitePreview
- S: SubstituteUser
- B: TempContentExchange
- G: TempOauthAccessTokenFrontdoor
- Y: TempVisualforceExchange
- F: TempUIFrontdoor
- U: UI
- E: UserSite
- V: Visualforce
- W: WDC_API

`TIMESTAMP`

**Type**
String

**Description**
The access time of Salesforce services in GMT.

For example: `20130715233322.670`.

When a customer logs out by using the **Logout** button, the `TIMESTAMP` field records the actual logout time. However, when a customer is logged out automatically, Salesforce detects the event by using a process that runs every 15 minutes. `TIMESTAMP` values can reflect a logout time up to 15 minutes later than the actual automatic logout time.

`TIMESTAMP_DERIVED`

**Type**
DateTime

**Description**
The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).

For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.

`USER_ID`

**Type**
Id

**Description**
The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: `00530000009M943`

`USER_ID_DERIVED`

**Type**
Id

**Description**
The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

| | |
|---|---|
| | For example: `0059000000I1SNIA0`. |
| `USER_INITIATED_LOGOUT` | **Type**<br>Boolean<br>**Description**<br>The value is 1 if the user intentionally logged out of the organization by clicking the **Logout** button. If the user's session timed out due to inactivity or another implicit logout action, the value is 0. |
| `USER_TYPE` | **Type**<br>String<br>**Description**<br>The category of user license of the user that logged out.<br>**Possible Values**<br>• `A`: Automated Process<br>• `b`: High Volume Portal<br>• `C`: Customer Portal User<br>• `D`: External Who<br>• `F`: Self-Service<br>• `G`: Guest<br>• `L`: Package License Manager<br>• `N`: Salesforce to Salesforce<br>• `n`: CSN Only<br>• `O`: Power Custom<br>• `o`: Custom<br>• `P`: Partner<br>• `p`: Customer Portal Manager<br>• `S`: Standard<br>• `X`: Salesforce Administrator |

## Metadata API Operation Event Type

Metadata API Operation events contain details of Metadata API retrieval and deployment requests.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

## Fields

| Field | Details |
| --- | --- |
| API_VERSION | **Type**<br>String<br>**Description**<br>The version of the API that's being used.<br>For example: 36.0. |
| CLIENT_ID | **Type**<br>String<br>**Description**<br>The API client ID. |
| CLIENT_IP | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: 96.43.144.26. |
| CPU_TIME | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always MetadataApiOperation. |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: GeJCsym5eyvtEK2I. |

| | |
|---|---|
| `OPERATION` | **Type**<br>String<br>**Description**<br>The operation that's being performed.<br>**Possible Values**<br>• `meta_deploy`<br>• `meta_list`<br>• `meta_retrieve`<br>• `meta_synchronous_create`<br>• `meta_synchronous_read`<br>• `meta_synchronous_upsert` |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `RUN_TIME` | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| `SESSION_KEY` | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: `d7DEq/ANa7nNZZVD`. |
| `TIMESTAMP` | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |

# Multiblock Report Event Type

Multiblock Report events contain details about Joined Report reports.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

## Fields

| Field | Details |
| --- | --- |
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DB_TOTAL_TIME` | **Type**<br>Number<br>**Description**<br>The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `MultiblockReport`. |
| `HAS_CHART` | **Type**<br>Boolean<br>**Description**<br>True if the report has a chart. |
| `LOGIN_KEY` | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| `MASTER_REPORT_ID` | **Type**<br>String<br>**Description**<br>The 15-character ID of the master report. |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `REQUEST_STATUS` | **Type**<br>String<br>**Description**<br>The status of the request for a page view or user interface action.<br>For example:<br>• `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.<br>• `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.<br>• `U`—Undefined<br>• `A`—Authorization Error<br>• `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.<br>• `N`—Not Found. 404 error.<br>This field can have a blank value. |

| | |
|---|---|
| `RUN_TIME` | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| `SESSION_KEY` | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: `d7DEq/ANa7nNZZVD`. |
| `TIMESTAMP` | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id |

**Description**
The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: `00530000009M943`

`USER_ID_DERIVED`

**Type**
Id

**Description**
The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: `00590000000I1SNIA0`.

`USER_TYPE`

**Type**
String

**Description**
The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.

- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

EventLogFile Supported Event Types

EventLogFile

## Named Credential Event Type

The Named Credential event type captures information about Apex callouts that use named credentials as their endpoints. Use this event type to audit the installed managed packages that use named credentials. If you don't recognize the package namespace in the named credential event log file, then you can investigate whether a security breach has occurred. This event type is available in the EventLogFile object in API version 53.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| `CALLER_PACKAGE_NAMESPACE` | **Type**<br>String<br>**Description**<br>If an Apex callout using a Named Credential endpoint is initiated from a package, then this field contains the package's namespace. If the callout isn't initiated from a package, then this field is empty.<br>**Example**<br>Acme |
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |

| Field | Details |
| --- | --- |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always `NamedCredential`. |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| NAMED_CREDENTIAL_NAME | **Type**<br>String<br>**Description**<br>The name of the named credential that's the endpoint of the Apex callout.<br>**Example**<br>My_Named_Credential |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the org.<br>**Example**<br>`00D000000000123` |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| SESSION_KEY | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: `d7DEq/ANa7nNZZVD`. |
| `TIMESTAMP` | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case-safe ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case-safe ID of the user who's using Salesforce services through the UI or the API. |

| Field | Details |
| --- | --- |
| | For example: `00590000000I1SNIA0`. |

## One Commerce Usage Event Type

One Commerce Usage events capture information about your Commerce instance. This event type is available in the EventLogFile object in API version 51.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| `BROWSER_DEVICE_TYPE` | **Type**<br>Number<br>**Description**<br>A code used to identify the browser and device type.<br>The code is in the format "BBVVVXYZ," with the following signification:<br>• BB — Two digits that indicate the browser type.<br>– IE: "10"<br>– CHROME: "13"<br>– FIREFOX: "11"<br>– SAFARI: "14"<br>– OPERA: "15"<br>– ANDROID_WEBKIT: "16"<br>– NETSCAPE: "17"<br>– OTHER_WEBKIT: "18"<br>– OTHER_GECKO: "19"<br>– OTHER_KHTML: "20"<br>– OTHER_MOBILE: "21"<br>– SALESFORCE_DESKTOP: "22"<br>– BLACKBERRY: "23"<br>– GOOD_ACCESS: "24"<br>– EDGE: "25" |

| Field | Details |
| --- | --- |
| | – SALESFORCE_MOBILE: "26"<br>• VVV—Three digits that indicate version, leading zeroes.<br>• XYZ—Browser-type specific flags or options. Each digit in XYZ represents a different flag depending on the BrowserType:<br>– X=1: If the parser recognizes a "touch" browser. Here, touch means the older touch native client, not that the device supports touch.<br>– Y=1: If the parser recognizes a browser in compatibility mode. Only for IE.<br>– Z=1: If the browser is recognized as `MOBILE`.<br>– Z=2: If the browser is recognized as `PHONE`.<br>– Z=3: If the browser is recognized as `TABLET`.<br>– Z=4: If the browser is a recognized as `MEDIA PLAYER`.<br>– Z=6: Only for Opera Mini. |
| `B2B_EDITION` | **Type**<br>String<br>**Description**<br>Edition of B2B Commerce. Edition can include Lightning (LB2B), CCRZ, or future flavors. |
| `B2B_VERSION` | **Type**<br>String<br>**Description**<br>This field is optional. For the managed package, then `B2B_VERSION` includes Major, Minor, Patch revision numbers. For Lightning `B2B_VERSION` includes the optional service version. |
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". If the user's session context isn't available, this field returns a blank value. |
| `CONTEXT_ID` | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The `contextId` (Key Business Domain Value) in which the operation is done. For example, for Cart, the `contextId` is `cartId`. |
| `CONTEXT_MAP` | **Type**<br>String<br>**Description**<br>This field is optional. It holds a JSON string with additional operational context. |
| `CORRELATION_ID` | **Type**<br>String<br>**Description**<br>This field holds correlations, such as client to server and other asynchronous calls to B2B subsystems. |
| `COUNT` | **Type**<br>String<br>**Description**<br>The number of records impacted by this operation. |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DB_TOTAL_TIME` | **Type**<br>Number<br>**Description**<br>Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code. |
| `EFFECTIVE_ACCOUNT_ID` | **Type**<br>String<br>**Description**<br>The B2B Effective Account ID in context of the operation. |

| Field | Details |
| --- | --- |
| ERROR_CODE | **Type**<br>String<br>**Description**<br>The API error code that appears when an operation fails. If there is no error the value is `null`. |
| ERROR_MESSAGE | **Type**<br>String<br>**Description**<br>Error message that appears when an operation fails. If there is no error the value is `null`. |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always OneCommerceUsage. |
| IS_RETRY | **Type**<br>String<br>**Description**<br>The field is `True` if the operation resulted in a retry, otherwise it's `False`. Understanding the frequency of operation retries helps determine the health of a service. The default value is `False`. |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| OPERATION | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of the B2B service.<br>For example: `CreateCart` or `KeywordSearch`. |
| `OPERATION_STAGE` | **Type**<br>String<br>**Description**<br>This field is optional. Used to capture more granular operation level stages. |
| `OPERATION_STATE` | **Type**<br>String<br>**Description**<br>This field is optional. An enum for the state of the operation.<br>For example: `CartLocked`, `OrderCancelled`, `InProgress`, `New`, `Update`, and `Pending`. |
| `OPERATION_STATUS` | **Type**<br>String<br>**Description**<br>Enum with the outcome of the operation.<br>For example: `Success` or `Fail`. |
| `OPERATION_TIME` | **Type**<br>String<br>**Description**<br>Total time of the operation in milliseconds. |
| `OS_VERSION` | **Type**<br>String<br>**Description**<br>Code used to identify the operating system and version. The value is equal to 9999 for an unknown platform. |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |

| Field | Details |
| --- | --- |
| REQUEST_STATUS | **Type**<br>String<br>**Description**<br>The status of the request for a page view or user interface action.<br>For example:<br>• S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.<br>• F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.<br>• U—Undefined<br>• A—Authorization Error<br>• R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.<br>• N—Not Found. 404 error.<br>This field can have a blank value. |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds.<br>Requests with a value over five seconds are considered long-running requests for the purposes of the Concurrent Long-Running Apex Limit.<br>Note: HTTP callout processing time isn't included when calculating the 5-second limit. We pause the timer for the callout and resume it when the callout completes. |
| SERVICE_NAME | **Type**<br>String<br>**Description**<br>Enum of B2B Services.<br>For example: Cart, Pricing, Products, Order, Search, and so on. |
| SESSION_KEY | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: `d7DEq/ANa7nNZZVD`. |
| `TIMESTAMP` | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id |

| Field | Details |
| --- | --- |
| | **Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |
| `USER_TYPE` | **Type**<br>String<br>**Description**<br>The category of user license.<br>Possible values are:<br>• `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.<br>• `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.<br>• `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.<br>• `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.<br>• `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.<br>• `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.<br>• `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.<br>• `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org. |
| `WEBSTORE_ID` | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>This field is optional. The ID of the webstore associated with the store (site). |
| WEBSTORE_TYPE | **Type**<br>String<br>**Description**<br>The type of webstore.<br>For example: B2B, B2C, and OMS. |

## Package Install Event Type

Package Install events contain details about package installation in the organization.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| CLIENT_IP | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: 96.43.144.26. |
| CPU_TIME | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| EVENT_TYPE | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The type of event. The value is always `PackageInstall`. |
| `FAILURE_TYPE` | **Type**<br>String<br>**Description**<br>A general categorization of any error that's encountered. |
| `IS_MANAGED` | **Type**<br>Boolean<br>**Description**<br>True if the operation is performed on a managed package. |
| `IS_PUSH` | **Type**<br>Boolean<br>**Description**<br>True if the package was installed as a result of a push upgrade. |
| `IS_RELEASED` | **Type**<br>Boolean<br>**Description**<br>True if the operation is performed on a released package. |
| `IS_SUCCESSFUL` | **Type**<br>Boolean<br>**Description**<br>True if the package was successfully installed. |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| `OPERATION_TYPE` | **Type**<br>String<br>**Description**<br>The type of package operation.<br>**Possible Values**<br>• INSTALL<br>• UPGRADE |

- EXPORT
- UNINSTALL
- VALIDATE_PACKAGE
- INIT_EXPORT_PKG_CONTROLLER

| | |
|---|---|
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: 00D000000000123. |
| PACKAGE_NAME | **Type**<br>String<br>**Description**<br>The name of the package that's being installed. |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.<br>For example: 3nWgxWbDKWWDIk0FKfF5DV. |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: d7DEq/ANa7nNZZVD. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: 20130715233322.670. |

| | |
|---|---|
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |

# Permission Update Event Type

Permission update events represent changes to object, field, and user permissions and setup entity access that occur in profiles and permission sets. The event type also tracks if you clone profiles or change whether session activation is required in permission sets or permission set groups.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

Note: This event type tracks if Salesforce updates object or field permissions in standard profiles, in addition to changes you make to your custom profiles, permission sets, and permission set groups.

## Fields

| Field | Details |
|---|---|
| `CONTEXT` | **Type**<br>String<br>**Description**<br>Reserved for future use. |
| `DESCRIPTION` | **Type**<br>String<br>**Description**<br>A description of the update that occurred in the profile, permission set, or permission set group.<br>**Example**<br>`UserPerm: ConvertLeads disabled` |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `PermissionUpdate`. |
| `FEATURE_ID` | **Type**<br>Id<br>**Description**<br>The ID of the feature, such as a profile, permission set, or permission set group, that was updated. |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>**Example**<br>`GeJCsym5eyvtEK2I` |

| Field | Details |
| --- | --- |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>**Example**<br>00DXXXXXXXXXXX |
| PERMISSION_TYPE | **Type**<br>String<br>**Description**<br>The type of permission, such as user, object, or field, or setup entity access, such as tab settings or Apex class access, that was updated.<br>**Example**<br>EntityObject |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.<br>**Example**<br>3nWgxWbDKWWDIk0FKfF5DV |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>**Example**<br>d7DEq/ANa7nNZZVD |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>**Example**<br>20130715233322.670 |
| TIMESTAMP_DERIVED | **Type**<br>DateTime |

| Field | Details |
| --- | --- |
| | **Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>**Example**<br>`2015-07-27T11:32:59.555Z` |
| `UPDATE_TYPE` | **Type**<br>String<br>**Description**<br>For object permissions, user permissions, and setup entity access, the type of update that occurred. For example, a permission was updated or deleted.<br>For other changes in profiles, permission sets, or permission set groups, this information is tracked in the `DESCRIPTION` field.<br>**Example**<br>`delete` |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who made the permission update.<br>**Example**<br>`005XXXXXXXXXXXX` |

## Platform Encryption Event Type

Platform Encryption event contains information about tenant secret and derived encryption key usage. This event type is available in API versions 41.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| `ACTION` | **Type**<br>String<br>**Description**<br>The name and type of the event.<br>**Possible Values**<br>• TS Imported: A tenant secret generated by the Shield Key Management Service (KMS), or customer-supplied key material, imported by a customer. |

- TS Generated: A tenant secret generated by the Shield Key Management Service (KMS).
- Key Derived: An encryption key derived from a tenant secret for encryption or decryption.
- TS Wrapped: A tenant secret generated by the Shield Key Management Service (KMS), or customer-supplied key material, encrypted for storage.
- Key Delivered: A data encryption key delivered for encryption or decryption.
- TS Stored: A tenant secret generated by the Shield Key Management Service (KMS), or customer-supplied key material, stored encrypted in the database.
- TS Read: An encrypted tenant secret generated by the Shield Key Management Service (KMS), or encrypted customer-supplied key material, that is loaded for encryption or decryption.
- TS Unwrapped: An encrypted tenant secret generated by the Shield Key Management Service (KMS), or encrypted customer-supplied key material, unwrapped for use by the KMS.
- TS Exported: An encrypted tenant secret exported by a customer.
- TS Destroyed: A tenant secret and related data encryption key destroyed by a customer.

`CLIENT_IP`

**Type**
String

**Description**
The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".

For example: `96.43.144.26`.

`CPU_TIME`

**Type**
Number

**Description**
The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

`EVENT_TYPE`

**Type**
String

**Description**
The type of event. The value is always `PlatformEncryption`.

`KEY_ID`

**Type**
String

**Description**
The 15-character ID of the tenant secret.

**Example**
02GD000000096Cb

`KEY_ID_DERIVED`

**Type**
String

**Description**
The 18-character ID of the derived encryption key.

**Example**
02GD000000096CbMAI

`KEY_TYPE`

**Type**
String

**Description**
The type of tenant secret.

**Possible Values**

- Data
- DeterministicData
- Analytics
- OauthSecret (internal use only)
- SearchIndex

`LOGIN_KEY`

**Type**
String

**Description**
The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: `GeJCsym5eyvtEK2I`.

`METHOD`

**Type**
String

**Description**
The string that identifies a change in tenant secret Active state. For example, tenant secrets become active when they are created, and are made inactive when they are exported.

**Examples**

- TS Exported: User ID
- TS Generated: HSM or BYOK

| | |
|---|---|
| | • TS Unwrapped: Tenant Secret or BYOK |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: 00D000000000123. |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.<br>For example: 3nWgxWbDKWWDIk0FKfF5DV. |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: d7DEq/ANa7nNZZVD. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: 20130715233322.670. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).<br>For example: 2015-07-27T11:32:59.555Z. Timezone is GMT. |

| | |
|---|---|
| URI | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| URI_ID_DERIVED | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| USER_ID | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |
| USER_ID_DERIVED | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |

## Pricing Event Type

Pricing events contain information about pricing procedures that were executed, including details such as pricing procedures used, the pricing APIs, and pricing details and status.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
|---|---|
| CLIENT_IP | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". If the user's session context isn't available, this field returns a blank value. |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `Pricing`. |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000062`. |
| `PRICING_API_ENDPOINT` | **Type**<br>String<br>**Description**<br>The starting point of the Pricing API or Headless Pricing API.<br>For example: `Pricing API`. |
| `PRICING_DETAILS` | **Type**<br>String<br>**Description**<br>The details of the pricing event that describes if the pricing API was executed or failed.<br>For example: `Pricing element was processed.`. |

| | |
|---|---|
| PRICING_ERROR_CODE | **Type**<br>String<br>**Description**<br>The API error code that appears when pricing execution fails. If there is no error, the value is null.<br>For example: INTERNAL_ERROR. |
| PRICING_LOG_NAME | **Type**<br>String<br>**Description**<br>The detailed pricing log message generated.<br>For example: The Headless Pricing API was run in:{0}. |
| PRICING_PROCEDURE | **Type**<br>String<br>**Description**<br>The name of the pricing procedure used to perform pricing calculations.<br>For example: Default Pricing Procedure. |
| PRICING_STATUS | **Type**<br>String<br>**Description**<br>The status of the request for pricing execution.<br>For example: Completed or Failed. |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds.<br>For example: 1851629863. |
| SESSION_KEY | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. |
| `TIMESTAMP` | **Type**<br>String<br>**Description**<br>The time that the pricing was executed in GMT.<br>For example: `20170606170000.000`. |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The time that the pricing was executed in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2017-06-06T1700.000Z`. Timezone is GMT. |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who executed pricing through the UI or the API.<br>For example: `005SG000000eu6j` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. |

For example: `001xx0000000useAAA`.

## Queued Execution Event Type

Queued Execution events contain details about queued executions—for example, batch Apex.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds that it took to complete the batch apex request. This field indicates the amount of activity taking place in the app server layer, allowing you to identify pieces of Apex or Visualforce code that need refactoring. |
| `DB_TOTAL_TIME` | **Type**<br>Number<br>**Description**<br>The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code. |
| `ENTRY_POINT` | **Type**<br>String<br>**Description**<br>The name of the Apex class that serves as the execution point for the batch job.<br>Note: This field contains data only for Batch Apex. It is unpopulated for Future and Queueable processes. |

| Field | Details |
| --- | --- |
| | **Example**<br>TaskPhoneExtensionBatchUpdate |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always `QueuedExecution`. |
| JOB_ID | **Type**<br>String<br>**Description**<br>The ID of the batch Apex job.<br>**Example**<br>7073000000lDquo |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| REQUEST_STATUS | **Type**<br>String<br>**Description**<br>The status of the request for a page view or user interface action. |

| Field | Details |
| --- | --- |
| | For example:<br>• S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.<br>• F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.<br>• U—Undefined<br>• A—Authorization Error<br>• R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.<br>• N—Not Found. 404 error.<br>This field can have a blank value. |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: d7DEq/ANa7nNZZVD. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: 20130715233322.670. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).<br>For example: 2015-07-27T11:32:59.555Z. Timezone is GMT. |

| Field | Details |
| --- | --- |
| URI | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| URI_ID_DERIVED | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| USER_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| USER_ID_DERIVED | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |
| USER_TYPE | **Type**<br>String<br>**Description**<br>The category of user license.<br>Possible values are:<br>• `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.<br>• `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.<br>• `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. |

| Field | Details |
| --- | --- |
| | • `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.<br>• `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.<br>• `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.<br>• `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.<br>• `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org. |

EventLogFile

## Report Event Type

Report events contain information about what happened when a user ran a report. This event type includes all activity that's in the Report Export event type, plus more. For example, it has user activity for reports exported as both Formatted Report and Details Only output.

Note: Exporting a report directly from the report result captures the event in both the Report and Report Export logs.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| `AVERAGE_ROW_SIZE` | **Type**<br>Number<br>**Description**<br>The average row size of all rows in the Report event, in bytes. A large average size, coupled with a high `ROW_COUNT`, can indicate that a user is downloading information for fraudulent |

| | |
|---|---|
| | purposes. For example, a salesperson who downloads all sales leads before departing for a competitor.<br>**Example**<br>700 |
| CLIENT_IP | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| CPU_TIME | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| DB_BLOCKS | **Type**<br>Number<br>**Description**<br>Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance. |
| DB_CPU_TIME | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request. |
| DB_TOTAL_TIME | **Type**<br>Number<br>**Description**<br>The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code. |
| DISPLAY_TYPE | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The report display type, indicating the run mode of the report.<br>Possible values are:<br>• `D`—Dashboard<br>• `S`—Show Details<br>• `H`—Hide Details |
| `ENTITY_NAME` | **Type**<br>String<br>**Description**<br>The name of the object affected by the trigger. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `Report`. |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| `NUMBER_BUCKETS` | **Type**<br>Number<br>**Description**<br>The number of buckets that were used in the report. |
| `NUMBER_COLUMNS` | **Type**<br>Number<br>**Description**<br>The number of columns in the report. |
| `NUMBER_EXCEPTION_FILTERS` | **Type**<br>Number<br>**Description**<br>The number of exception filters that are used in the report. |
| `ORGANIZATION_ID` | **Type**<br>Id |

**Description**
The 15-character ID of the organization.

For example: `00D000000000123`.

`ORIGIN`

**Type**
String

**Description**
The context in which the report executed, such as from a UI (Classic, Lightning, Mobile), through an API (synchronous, asynchronous, Apex), or through a dashboard.

**Possible Values**

- `ReportOpenedFromMobileDashboard`: Report executed when a user clicked a dashboard component on a mobile device and drilled down to a report.
- `DashboardComponentUpdated`: Report executed when a user refreshed a dashboard component.
- `DashboardComponentPreviewed`: Report executed from a Lightning dashboard component preview.
- `ReportRunUsingSynchronousApi`: Report executed from a synchronous API.
- `ReportRunUsingAsynchronousApi`: Report executed from an asynchronous API.
- `ReportRunUsingApexSynchronousApi`: Report executed from the synchronous Apex API.
- `ReportRunUsingApexAsynchronousApi`: Report executed from the asynchronous Apex API.
- `ReportExported`: Report executed from a printable view or report export that was not asynchronous nor an API export.
- `ReportRunFromClassic`: Report executed from the Run Report option of Salesforce Classic.
- `ReportRunFromMobile`: Report executed from the Run Report option of the mobile Salesforce app.
- `ReportRunFromLightning`: Report executed from the Run option in Lightning Experience from a non-mobile browser.
- `ReportRunFromRestApi`: Report executed from REST API.
- `ReportPreviewed`: Report executed when a user got preview results while using the report builder.
- `ReportScheduled`: Report was scheduled.
- `ProbeQuery`: Report executed from a probe query.

- `ReportRunFromReportingSnapshot`: Report executed through Snapshot Analytics.
- `ReportExportedAsynchronously`: Report was exported asynchronously.
- `ReportExportedUsingExcelConnector`: Report was exported using the Excel connector.
- `ChartRenderedOnVisualforcePage`: Report executed from a rendered chart on a VisualForce Page.
- `ChartRenderedInEmbeddedAnalyticsApp`: Report executed from a rendered chart in an embedded Analytics app.
- `ReportRunAndNotificationSent`: Report executed through the notifications API.
- `ChartRenderedOnHomePage`: Report executed from a rendered chart on the home page.
- `ReportResultsAddedToWaveTrending`: Report executed when a user trended a report in CRM Analytics.
- `ReportAddedToCampaign`: Report was added from an Add to Campaign action.
- `ReportResultsAddedToEinsteinDiscovery`: Report executed synchronously from Einstein Discovery.
- `Unknown`: Report execution origin is unknown.
- `Test`: Report execution resulted from a test.

`RENDERING_TYPE`

**Type**
String

**Description**
Describes the format of the report output in Salesforce Classic. If the report was exported in Lightning Experience, this field is blank.

**Possible Values**

- `W`: Web (HTML)
- `E`: Email
- `P`: Printable
- `X`: Excel
- `C`: Comma-separated values (CSV)
- `J`: JavaScript Object Notation (JSON)
- `D`: Dummy data

`REPORT_ID`

**Type**
Id

**Description**
The 15-character ID of the report that was run.

`REPORT_ID_DERIVED`

**Type**
Id

**Description**
The 18-character case insensitive ID of the report that was run.

`REQUEST_ID`

**Type**
String

**Description**
The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: `3nWgxWbDKWWDIk0FKfF5DV`.

`REQUEST_STATUS`

**Type**
String

**Description**
The status of the request for a page view or user interface action.

For example:

- `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- `U`—Undefined
- `A`—Authorization Error
- `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- `N`—Not Found. 404 error.

This field can have a blank value.

`ROW_COUNT`

**Type**
Number

**Description**
The number of rows that were processed in the Report event. High row counts, coupled with a high `AVERAGE_ROW_SIZE`, can indicate that a user is downloading information for fraudulent purposes. For example, a salesperson who downloads all sales leads before departing for a competitor.

**Example**
150

| | |
|---|---|
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: `d7DEq/ANa7nNZZVD`. |
| SORT | **Type**<br>String<br>**Description**<br>The sort column and order that was used in the report. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| UI_NUMBER_COLUMNS | **Type**<br>Number<br>**Description**<br>The number of columns in the report. The fields that have multiple components (for example, addresses) are considered as a single column. |
| URI | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request. |

For example: `/home/home.jsp`.

`URI_ID_DERIVED`

**Type**
ID

**Description**
The 18-character case insensitive ID of the URI of the page that's receiving the request.

`USER_ID`

**Type**
Id

**Description**
The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: `00530000009M943`

`USER_ID_DERIVED`

**Type**
Id

**Description**
The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: `00590000000I1SNIA0`.

`USER_TYPE`

**Type**
String

**Description**
The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through

a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.

- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

## Usage

**Example: Identify Large Report Exports by User**

Get Report event type data from the EventLogFile object using REST:

```
/services/data/v40.0/query?q=SELECT+Id+,+EventType+,+LogFile+,+LogDate+,+LogFileLength+FROM+EventLogFile+WHERE+

    LogDate+>+Yesterday+AND+EventType+=+'Report'
```

After you download the report data to a ReportData database table, query it and filter on reports that were exported with high row counts and size:

```
SELECT USER_ID FROM ReportData WHERE (RENDERING_TYPE=C OR RENDERING_TYPE=X OR
RENDERING_TYPE=P) AND ROW_COUNT>150000 AND AVERAGE_ROW_SIZE>1500
```

# Report Export Event Type

Report Export events contain details about reports that a user exported. For example, this event type captures when a user exports a report as Details Only output. But it doesn't capture reports that users export as Formatted Report or XLSX Detail output. For that data, see the Report event type.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

## Fields

| Field | Details |
| --- | --- |
| `CLIENT_IP` | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CLIENT_INFO` | **Type**<br>String<br>**Description**<br>Information about the client that's using Salesforce services. |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `ReportExport`. |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `REPORT_DESCRIPTION` | **Type**<br>String<br>**Description**<br>Information about the report that was run. |

| | |
|---|---|
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.<br>For example: 3nWgxWbDKWWDIk0FKfF5DV. |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: d7DEq/ANa7nNZZVD. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: 20130715233322.670. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).<br>For example: 2015-07-27T11:32:59.555Z. Timezone is GMT. |
| URI | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: /home/home.jsp. |
| URI_ID_DERIVED | **Type**<br>ID |

| | |
|---|---|
| | **Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |

## REST API Event Type

REST API events contain details about REST-specific requests.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
|---|---|
| `BOT_IDENTIFIER` | **Type**<br>string<br>**Description**<br>The ID of the bot. |
| `BOT_SESSION_IDENTIFIER` | **Type**<br>string<br>**Description**<br>The bot session ID. |

| | |
|---|---|
| CLIENT_IP | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| CLIENT_NAME | **Type**<br>String<br>**Description**<br>The name of the client that's using Salesforce services. This field is an optional parameter that can be passed in API calls. |
| CONNECTED_APP_ID | **Type**<br>Reference<br>**Description**<br>The 15-character ID of the connected app associated with the API call. For example, `0H4RM00000000Kr0AI`. |
| CPU_TIME | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| DB_BLOCKS | **Type**<br>Number<br>**Description**<br>Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance. |
| DB_CPU_TIME | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request. |
| DB_TOTAL_TIME | **Type**<br>Number |

| | |
|---|---|
| | **Description**<br>The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code. |
| `ENTITY_NAME` | **Type**<br>Set<br>**Description**<br>The name of the object accessed by the API request.<br>For example: `Account`, `Opportunity`, `Contact`, and so on. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `RestApi`. |
| `EXCEPTION_MESSAGE` | **Type**<br>String<br>**Description**<br>The returned exception message, used to debug issues. Provide this message when seeking support. |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| `MEDIA_TYPE` | **Type**<br>String<br>**Description**<br>The media type of the response. |
| `METHOD` | **Type**<br>String<br>**Description**<br>The HTTP method of the request.<br>For example: `GET`, `POST`, `PUT`, and so on. |

| | |
|---|---|
| NUMBER_FIELDS | **Type**<br>Number<br>**Description**<br>The number of fields or columns, where applicable. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: 00D000000000123. |
| PLANNER_IDENTIFIER | **Type**<br>string<br>**Description**<br>The ID of the agent planner. |
| QUERY | **Type**<br>String<br>**Description**<br>The data that was queried. |
| REQUEST_SIZE | **Type**<br>Number<br>**Description**<br>The size of the callout request body, in bytes. |
| REQUEST_STATUS | **Type**<br>String<br>**Description**<br>The status of the request for a page view or user interface action.<br>For example:<br>• S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.<br>• F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.<br>• U—Undefined<br>• A—Authorization Error<br>• R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.<br>• N—Not Found. 404 error. |

| | |
|---|---|
| | This field can have a blank value. |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.<br>For example: 3nWgxWbDKWWDIk0FKfF5DV. |
| RESPONSE_SIZE | **Type**<br>Number<br>**Description**<br>The size of the callout response, in bytes. |
| ROWS_PROCESSED | **Type**<br>Number<br>**Description**<br>The number of rows that were processed in the request.<br>For example: 150. |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: d7DEq/ANa7nNZZVD. |
| STATUS_CODE | **Type**<br>Number<br>**Description**<br>The HTTP response status code for the request. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT. |

| | |
|---|---|
| | For example: `20130715233322.670`. |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_AGENT` | **Type**<br>Number<br>**Description**<br>The numeric code for the type of client used to make the request (for example, the browser, application, or API). |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |

`USER_TYPE`

**Type**
String

**Description**
The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

## Sandbox Event Type

Sandbox events contain details about sandbox copies.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

## Fields

| Field | Details |
| --- | --- |
| CURRENT_SANDBOX_ORG_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the current sandbox organization. |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always `Sandbox`. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| PENDING_SANDBOX_ORG_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the target sandbox org. |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| SANDBOX_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the sandbox organization. |
| STATUS | **Type**<br>String<br>**Description**<br>The status of the sandbox copy. |

| | |
|---|---|
| `TIMESTAMP` | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |

## Search Event Type

Search events contain details about the user's search query. All searches within the app, including Experience Cloud sites, are included. However, unauthenticated users won't have a unique Salesforce user ID.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
|---|---|

| | |
|---|---|
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `Search`. |
| `NUM_RESULTS` | **Type**<br>Number<br>**Description**<br>Number of results returned by the search query.<br>**Possible Values**<br>• 0<br>• 25<br>• 1000 |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `PREFIXES_SEARCHED` | **Type**<br>String<br>**Description**<br>Space-separated list of key prefixes that were searched.<br>**Example**<br>001 006 ka0 |
| `QUERY_ID` | **Type**<br>String<br>**Description**<br>Unique ID of the search query.<br>**Example**<br>-2vx8relit08r |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |

| | |
|---|---|
| SEARCH_QUERY | **Type**<br>String<br>**Description**<br>The first 100 characters of the search query.<br>**Example**<br>Salesforce |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: 20130715233322.670. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).<br>For example: 2015-07-27T11:32:59.555Z. Timezone is GMT. |
| USER_ID | **Type**<br>Id<br>**Description**<br>The 15-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: 00590000000I1SNIA0. |

## Search Click Event Type

Search Click events contain details about the user's interaction with the search results in the search results page. Interactions with search results in the instant result dialog are not recorded by this event. All searches within the app, including Experience Cloud sites, are included. However, unauthenticated users won't have a unique Salesforce user ID.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
|---|---|

| | |
|---|---|
| `CLICKED_RECORD_ID` | **Type**<br>String<br>**Description**<br>The 15-character ID of the result the user clicked in the search results page.<br>**Example**<br>a07B00000031pRV |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `SearchClick`. |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `QUERY_ID` | **Type**<br>String<br>**Description**<br>Unique ID of the search query.<br>**Example**<br>-2vx8relit08r |
| `RANK` | **Type**<br>Number<br>**Description**<br>Ranking of the result clicked in the search results page.<br>**Example**<br>2 |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `TIMESTAMP` | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |

## Sites Event Type

Sites events contain details of Site.com requests. Requests can originate from the browser (UI).

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
|---|---|
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CPU_TIME` | **Type**<br>Number |

| | |
|---|---|
| | **Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| DB_TOTAL_TIME | **Type**<br>Number<br>**Description**<br>The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code. |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always Sites. |
| HTTP_HEADERS | **Type**<br>String<br>**Description**<br>The HTTP headers that were sent in the request. |
| HTTP_METHOD | **Type**<br>String<br>**Description**<br>The HTTP method of the request.<br>For example: GET, POST, PUT, and so on. |
| IS_API | **Type**<br>Boolean<br>**Description**<br>True if this page was an API or Web Services request. |
| IS_ERROR | **Type**<br>Boolean<br>**Description**<br>True if this page was an error page. |
| IS_FIRST_REQUEST | **Type**<br>Boolean |

| | |
|---|---|
| | **Description**<br>1 if this page is the first Visualforce transaction in the request, or 0 if it isn't. |
| IS_GUEST | **Type**<br>Boolean<br>**Description**<br>True if this page was a guest (unauthenticated) request. |
| IS_SECURE | **Type**<br>Boolean<br>**Description**<br>True if this request is secure. |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| PAGE_NAME | **Type**<br>String<br>**Description**<br>The name of the Visualforce page that was requested. |
| QUERY | **Type**<br>String<br>**Description**<br>The SOQL query, if one was performed. |
| REQUEST_ID | **Type**<br>String |

**Description**
The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: `3nWgxWbDKWWDIk0FKfF5DV`.

`REQUEST_STATUS`

**Type**
String

**Description**
The status of the request for a page view or user interface action.

For example:

- `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- `U`—Undefined
- `A`—Authorization Error
- `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- `N`—Not Found. 404 error.

This field can have a blank value.

`REQUEST_TYPE`

**Type**
String

**Description**
The request type.

Possible values are:

- `page`—a normal request for a page
- `content_UI`—a content request for a page that originated in the user interface
- `content_apex`—a content request initiated by an Apex call
- `PDF_UI`—a request for a page in PDF format through the user interface
- `PDF_apex`—a request for PDF format by an Apex call (usually a Web Service call)

`RUN_TIME`

**Type**
Number

| | |
|---|---|
| | **Description**<br>The amount of time that the request took in milliseconds. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: `d7DEq/ANa7nNZZVD`. |
| SITE_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the Site.com site. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| URI | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| URI_ID_DERIVED | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |

`USER_ID`

**Type**
Id

**Description**
The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: `00530000009M943`

`USER_ID_DERIVED`

**Type**
Id

**Description**
The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: `00590000000I1SNIA0`.

`USER_TYPE`

**Type**
String

**Description**
The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.

- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

## SOAP API Event Type

SOAP API events contain details about your org's SOAP API request activity.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| `API_TYPE` | **Type**<br>String<br>**Description**<br>The type of API request.<br>Possible values are:<br>• `D`—Apex Class<br>• `E`—SOAP Enterprise<br>• `M`—SOAP Metadata<br>• `P`—SOAP Partner<br>• `S`—SOAP Apex<br>• `T`—SOAP Tooling<br>• `f`—Feed<br>• `l`—Live Agent<br>• `p`—SOAP ClientSync |
| `API_VERSION` | **Type**<br>String<br>**Description**<br>The version of the API that's being used.<br>For example: `36.0`. |

`CLIENT_IP`

**Type**
String

**Description**
The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".

For example: `96.43.144.26`.

`CLIENT_NAME`

**Type**
String

**Description**
The name of the client that's using Salesforce services. This field is an optional parameter that can be passed in API calls. If blank, the caller didn't specify a client in the CallOptions header.

`CPU_TIME`

**Type**
Number

**Description**
The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

`DB_BLOCKS`

**Type**
Number

**Description**
Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.

`DB_CPU_TIME`

**Type**
Number

**Description**
The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.

`DB_TOTAL_TIME`

**Type**
Number

**Description**
The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.

| | |
|---|---|
| ENTITY_NAME | **Type**<br>Set<br>**Description**<br>The name of the object accessed by the API request.<br>For example: `Account`, `Opportunity`, `Contact`, and so on. |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always `API`. |
| EXCEPTION_MESSAGE | **Type**<br>String<br>**Description**<br>The exception message for a SOAP API request. An exception message gives details about errors in handling an API request, such as why an API request failed.<br>For example: `common.exception.ApiException: startDate cannot be more than 30 days ago`. |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| METHOD_NAME | **Type**<br>String<br>**Description**<br>The name of the calling Apex method. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| QUERY | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The data that was queried. |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `REQUEST_SIZE` | **Type**<br>Number<br>**Description**<br>The size of the callout request body, in bytes. |
| `REQUEST_STATUS` | **Type**<br>String<br>**Description**<br>The status of the request for a page view or user interface action.<br>For example:<br>• `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.<br>• `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.<br>• `U`—Undefined<br>• `A`—Authorization Error<br>• `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.<br>• `N`—Not Found. 404 error.<br>This field can have a blank value. |
| `RESPONSE_SIZE` | **Type**<br>Number<br>**Description**<br>The size of the callout response, in bytes. |
| `ROWS_PROCESSED` | **Type**<br>Number |

| | |
|---|---|
| | **Description**<br>The number of rows that were processed in the request.<br>For example: `150`. |
| `RUN_TIME` | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| `SESSION_KEY` | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: `d7DEq/ANa7nNZZVD`. |
| `TIMESTAMP` | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |

`USER_ID`

**Type**
Id

**Description**
The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: `00530000009M943`

`USER_ID_DERIVED`

**Type**
Id

**Description**
The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: `00590000000I1SNIA0`.

`USER_TYPE`

**Type**
String

**Description**
The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.

- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

## Time-Based Workflow Event Type

Time-Based Workflow events contain details about queue activity monitoring.

For details about event monitoring, see the Trailhead Event Monitoring module or the REST API Developer's Guide.

### Fields

Note: Time-Based Workflow events only support workflow rules, and not flow scheduled path time-queue records. Event logs do not show flow scheduled path time-queue records.

| Field | Details |
| --- | --- |
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DATA` | **Type**<br>String<br>**Description**<br>The record details of time queue activity. |

| | |
|---|---|
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `TimeBasedWorkflow`. |
| `LOG_GROUP_ID` | **Type**<br>String<br>**Description**<br>Marks log records that are committed or rolled back. |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| `NUMBER_OF_RECORDS` | **Type**<br>Number<br>**Description**<br>The number of processed records. |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `RUN_TIME` | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |

| | |
|---|---|
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: d7DEq/ANa7nNZZVD. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: 20130715233322.670. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).<br>For example: 2015-07-27T11:32:59.555Z. Timezone is GMT. |
| TYPE | **Type**<br>String<br>**Description**<br>The type of time-based workflow event.<br>• UIDEL—An entry was deleted from the Time-Based Automations page in Setup.<br>• ERRDEL—An entry was deleted from the workflow queue, because there was an error reading the record that triggered the workflow rule. The associated time-dependent actions weren't processed.<br>• DELETE—An entry was deleted from the workflow queue, because it's no longer relevant. For example, the criteria are no longer met by the associated record. If the evaluation date for the entry changed, the entry is re-added with the updated evaluation date.<br>• PROC—An entry was deleted from the workflow queue after processing a time-dependent action. |
| URI | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |

## Transaction Security Event Type

Transaction Security events contain details about policy execution. This event type is supported in API version 55.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
|---|---|
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal |

| | |
|---|---|
| | IP, such as a login from AppExchange, is shown as "Salesforce.com IP".<br>For example: `96.43.144.26` |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `EVALUATION_TIME_MS` | **Type**<br>Number<br>**Description**<br>The time in milliseconds used to evaluate the policy. |
| `EVENT_TIMESTAMP` | **Type**<br>String<br>**Description**<br>The time at which the Transaction Security event was generated in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). This value can be earlier than TIMESTAMP_DERIVED by the amount of time taken to log the event.<br>For example: `2015-07-27T11:32:59.555Z` |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `TransactionSecurity`. |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. |

| | |
|---|---|
| | For example: `GeJCsym5eyvtEK2I` |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123` |
| `POLICY_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the policy being evaluated.<br>For example: `00530000009M943` |
| `POLICY_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case-insensitive ID of the policy being evaluated.<br>For example: `00590000000I1SNIA0` |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV` |
| `RESULT` | **Type**<br>String<br>**Description**<br>The outcome of evaluating the policy.<br>For example: `TRIGGEREDzzz` or `NOT TRIGGERED` |
| `RUN_TIME` | **Type**<br>Number |

| | |
|---|---|
| | **Description**<br>The amount of time that the request took in milliseconds. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: `d7DEq/ANa7nNZZVD` |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670` |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| URI | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp` |
| URI_ID_DERIVED | **Type**<br>ID |

| | |
|---|---|
| | **Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0` |

## UI Telemetry Navigation Timing Event Type

UI Telemetry Navigation Timing events capture network performance metrics related to page navigation. The event extends from the UI Telemetry Resource Timing Event on page 2379 and includes requests initiated with either the Fetch API or the XMLHttpRequest API. This object is available in API version 61.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer Guide.

For information about navigation timing attributes, including a diagram of the order that attributes follow, see section 4.1 of the W3 Standards on Navigation Timing Level 2.

### Fields

| Field | Details |
|---|---|
| `APP_NAME` | **Type**<br>String<br>**Description**<br>The name of the application that the user accessed. |

| Field | Details |
| --- | --- |
| BROWSER_NAME | **Type**<br>String<br>**Description**<br>The name of the browser that the user accessed.<br>**Example**<br>`Chrome`, `Safari` |
| BROWSER_VERSION | **Type**<br>String<br>**Description**<br>The version of the browser that the user accessed in `major.minor version` format. Some browsers don't provide a minor version. |
| CLIENT_GEO | **Type**<br>String<br>**Description**<br>The geolocation of the client in the form of `<Country>/<State\|Province>`.<br>**Example**<br>`United States/California` |
| CLIENT_ID | **Type**<br>String<br>**Description**<br>The API client ID. |
| CLIENT_IP | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP, such as a login from AppExchange, is shown as `Salesforce.com IP`.<br>**Example**<br>`96.43.144.26` |
| CONNECT_END | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser establishes a connection to a server so that it can retrieve a resource.<br>To calculate the Transport Control Protocol (TCP) handshake time, subtract the `CONNECT_START` time from the `CONNECT_END` time. |

| Field | Details |
| --- | --- |
| CONNECT_START | **Type**<br>Number<br>**Description**<br>The time in milliseconds after the browser completes the Domain Name System (DNS) lookup and begins connecting to a server so that it can retrieve a resource.<br>To calculate the Transport Control Protocol (TCP) handshake time, subtract the CONNECT_START time from the CONNECT_END time. |
| CONNECTION_TYPE | **Type**<br>String<br>**Description**<br>The type of connection.<br>**Possible Values**<br>• CDMA1x<br>• CDMA<br>• EDGE<br>• EVDO0<br>• EVDOA<br>• EVDOB<br>• GPRS<br>• HRPD<br>• HSDPA<br>• HSUPA<br>• LTE<br>• WIFI |
| DECODED_BODY_SIZE | **Type**<br>Number<br>**Description**<br>The size in octets of the HTTP message body after the removal of any applied content encoding. |
| DEVICE_MODEL | **Type**<br>String<br>**Description**<br>The name of the device model.<br>**Example**<br>iPad, iPhone |

| Field | Details |
| --- | --- |
| DEVICE_PLATFORM | **Type**<br>String<br>**Description**<br>The type of application experience in `name:experience:form` format.<br>**Possible Values**<br>• `name`: `APP_BUILDER`, `CUSTOM`, `S1`, `SFX`<br>• `experience`: `BROWSER`, `HYBRID`<br>• `form`: `DESKTOP`, `PHONE`, `TABLET` |
| DEVICE_SESSION_ID | **Type**<br>String<br>**Description**<br>The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started.<br>**Example**<br>`321a1ddfaf924803a075f1e69fc87bc06f53ccd0` |
| DOM_COMPLETE | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the page's `readyState` property is set to `complete`. Indicates that the page and its subresources have finished loading. |
| DOM_CONTENT_LOADED_EVENT_END | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the page's `DOMContentLoaded` event handler completes.<br>To calculate the processing time for the `DOMContentLoaded` event handler, subtract the `DOM_CONTENT_LOADED_EVENT_START` time from the `DOM_CONTENT_LOADED_EVENT_END` time. |
| DOM_CONTENT_LOADED_EVENT_START | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the page's `DOMContentLoaded` event handler starts.<br>To calculate the processing time for the `DOMContentLoaded` event handler, subtract the `DOM_CONTENT_LOADED_EVENT_START` time from the `DOM_CONTENT_LOADED_EVENT_END` time. |

| Field | Details |
| --- | --- |
| DOM_INTERACTIVE | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the page's readyState is set to interactive. Indicates that the page has finished loading, but subresources, such as images and scripts, are still loading. |
| DOMAIN_LOOKUP_END | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser completes a DNS lookup for a resource.<br>To calculate the DNS lookup time, subtract the DOMAIN_LOOKUP_START time from the DOMAIN_LOOKUP_END time. |
| DOMAIN_LOOKUP_START | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser starts a DNS lookup for a resource.<br>To calculate the DNS lookup time, subtract the DOMAIN_LOOKUP_START time from the DOMAIN_LOOKUP_END time. |
| DURATION | **Type**<br>Number<br>**Description**<br>The total duration in milliseconds of the event from the START_TIME to the LOAD_EVENT_END time. |
| ENCODED_BODY_SIZE | **Type**<br>Number<br>**Description**<br>The size in octets of the HTTP message body before the removal of any applied content encoding. |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always UITelemetryNavigationTiming. |
| FETCH_START | **Type**<br>Number |

| Field | Details |
| --- | --- |
| | **Description**<br>The time in milliseconds when the browser starts to fetch a resource from the server, not including redirects. Occurs before the DNS lookup and the connection to the server is established.<br>To calculate the total time used to fetch a resource without redirects, subtract the `FETCH_START` time from the `RESPONSE_END` time. |
| `FIRST_INTERIM_RESPONSE_START` | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser receives the first byte of the interim 1xx response from the server.<br>To calculate the time from when the browser sends a request to when it starts to receive an interim response, subtract the `REQUEST_START` time from the `FIRST_INTERIM_RESPONSE_START` time. |
| `INITIATOR_TYPE` | **Type**<br>String<br>**Description**<br>The HTML element that initiates the resource load.<br>**Example**<br>`css`, `image`, `link` |
| `LOAD_EVENT_END` | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the page's `load` event handler completes.<br>To calculate the processing time for the `load` event handler, subtract the `LOAD_EVENT_START` time from the `LOAD_EVENT_END` time. |
| `LOAD_EVENT_START` | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the page's `load` event handler begins.<br>To calculate the processing time for the `load` event handler, subtract the `LOAD_EVENT_START` time from the `LOAD_EVENT_END` time. |
| `LOGIN_KEY` | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>**Example**<br>`GeJCsym5eyvtEK2I` |
| `NAVIGATION_TYPE` | **Type**<br>String<br>**Description**<br>The type of navigation timing data.<br>**Possible Values**<br>• `navigate`: a user interaction or a script initiated navigation.<br>• `reload`: a reload initiated navigation.<br>• back_forward: navigation traverses the browser's history.<br>• `prerender`: a prerender hint initiated navigation. |
| `NEXT_HOP_PROTOCOL` | **Type**<br>String<br>**Description**<br>The Application-Layer Protocol Negotiation (ALPN) Protocol ID that fetches the resource.<br>**Possible Values**<br>`http/0.9`, `http/1.0`, `h2`, `h2c`, `h3` |
| `ORGANIZATION_ID` | **Type**<br>String<br>**Description**<br>The 15-character ID of the org.<br>**Example**<br>`00D000000000123` |
| `OS_NAME` | **Type**<br>String<br>**Description**<br>The operating system name, derived from `USER_AGENT`.<br>**Example**<br>`Android`, `iOS`, `OSX` |
| `OS_VERSION` | **Type**<br>String<br>**Description**<br>The operating system version, derived from `USER_AGENT`. |

| Field | Details |
| --- | --- |
| PAGE_CONTEXT | **Type**<br>String<br>**Description**<br>The name of the component hosting the main content of the page.<br>**Example**<br>`clients:cardsContainer` |
| PAGE_ENTITY_ID | **Type**<br>String<br>**Description**<br>The unique entity identifier of the event.<br>**Example**<br>`0013000000I3zJAAAZ` |
| PAGE_ENTITY_TYPE | **Type**<br>String<br>**Description**<br>The entity type of the event.<br>**Example**<br>`task`, `contacts` |
| PAGE_URL | **Type**<br>String<br>**Description**<br>The relative URL of the top-level Lightning Experience page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with `PAGE_URL`.<br>**Example**<br>`/sObject/0064100000JXITSAA5/view` |
| REDIRECT_COUNT | **Type**<br>Number<br>**Description**<br>The total number of redirects since the last non-redirect navigation in the current browsing context. |
| REDIRECT_END | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser receives the last byte of the response of the final redirect. |

| Field | Details |
| --- | --- |
| | To calculate the total redirection time, subtract the `REDIRECT_START` time from the `REDIRECT_END` time. |
| `REDIRECT_START` | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser starts to fetch a resource that initiates a redirect.<br>To calculate the total redirection time, subtract the `REDIRECT_START` time from the `REDIRECT_END` time. |
| `RENDER_BLOCKING_STATUS` | **Type**<br>String<br>**Description**<br>The status that indicates whether the resource can block or delay the browser from rendering page content.<br>**Possible Values**<br>• `blocking`: the resource can block rendering.<br>• code`non-blocking`: the resource doesn't block rendering. |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>**Example**<br>`3nWgxWbDKWWDIk0FKfF5DV` |
| `REQUEST_START` | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser starts to request the resource from the server.<br>To calculate the total request time, subtract the `REQUEST_START` time from the `RESPONSE_START` time. |
| `RESPONSE_END` | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser receives the resource's last byte or when the transport connection closes, whichever comes first.<br>To calculate the total time used to fetch a resource without redirects, subtract the `FETCH_START` time from the `RESPONSE_END` time. |

| Field | Details |
| --- | --- |
| RESPONSE_START | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser receives the first byte of the response from the server.<br>To calculate the total request time, subtract the REQUEST_START time from the RESPONSE_START time. |
| RESPONSE_STATUS | **Type**<br>Number<br>**Description**<br>The HTTP response status code.<br>**Example**<br>200 |
| SDK_APP_TYPE | **Type**<br>String<br>**Description**<br>The mobile SDK application type.<br>**Possible Values**<br>• HYBRID<br>• HYBRIDLOCAL<br>• HYBRIDREMOTE<br>• NATIVE<br>• REACTNATIVE |
| SDK_APP_VERSION | **Type**<br>String<br>**Description**<br>The mobile SDK application version number.<br>**Example**<br>5.0 |
| SDK_VERSION | **Type**<br>String<br>**Description**<br>The mobile SDK version number.<br>**Example**<br>2.1.0 |

| Field | Details |
| --- | --- |
| SECURE_CONNECT_START | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser begins the handshake process that secures the connection.<br>To calculate the Transport Layer Security (TLS) time, subtract the SECURE_CONNECT_START time from the REQUEST_START time. |
| SERVER_REQUEST_ID | **Type**<br>String<br>**Description**<br>The request ID for the server request that's used to find associated server logs.<br>**Example**<br>346000000087551ecb |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When the user logs out and logs in again, a new session starts.<br>**Example**<br>cdd09305cb6babf34059e27f70e47f1b11dec868 |
| START_TIME | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser starts to fetch the resource, including redirects. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>**Example**<br>20130715233322.670 |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). |

| Field | Details |
| --- | --- |
| | **Example**<br>`2015-07-27T11:32:59.555Z`. The timezone is GMT. |
| `TRANSFER_SIZE` | **Type**<br>Number<br>**Description**<br>The size in octets of the resource, including the response header and the response payload body. |
| `UI_EVENT_RELATIVE_TIMESTAMP` | **Type**<br>Number<br>**Description**<br>The difference in milliseconds between when the event is logged and when the browser tab is opened.<br>**Example**<br>`29322.23` |
| `UI_EVENT_TIMESTAMP` | **Type**<br>Number<br>**Description**<br>The time at which this event occurs, measured in milliseconds.<br>**Example**<br>`1479769912796` |
| `UI_ROOT_ACTIVITY_ID` | **Type**<br>String<br>**Description**<br>The ID of the root activity when the event occurs. |
| `UI_THREAD_RESPONSE_DELAY` | **Type**<br>Number<br>**Description**<br>The time in milliseconds from when the browser receives the response to when it executes the callback. This delay occurs if the main Javascript thread is busy when the response is received. |
| `UNLOAD_EVENT_END` | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the page's `unload` event handler completes.<br>To calculate the processing time for the `unload` event handler, subtract the `UNLOAD_EVENT_START` time from the `UNLOAD_EVENT_END` time. |

| Field | Details |
| --- | --- |
| UNLOAD_EVENT_START | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the page's `unload` event handler starts.<br>To calculate the processing time for the `unload` event handler, subtract the `UNLOAD_EVENT_START` time from the `UNLOAD_EVENT_END` time. |
| URL | **Type**<br>String<br>**Description**<br>The URL of the request. |
| USER_ID | **Type**<br>String<br>**Description**<br>The 15-character ID of the user accessing Salesforce services through the UI or API.<br>**Example**<br>`00530000009M943` |
| USER_ID_DERIVED | **Type**<br>Id<br>**Description**<br>The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API.<br>**Example**<br>`00590000000I1SNIA0` |
| USER_TYPE | **Type**<br>String<br>**Description**<br>The category of user license of the user accessing Salesforce services through the UI or API.<br>**Possible Values**<br>• `A`: Automated Process<br>• `b`: High Volume Portal<br>• `C`: Customer Portal User<br>• `D`: External Who<br>• `F`: Self-Service<br>• `G`: Guest<br>• `L`: Package License Manager<br>• `N`: Salesforce to Salesforce |

| Field | Details |
| --- | --- |
| | • n: CSN Only<br>• O: Power Custom<br>• o: Custom<br>• P: Partner<br>• p: Customer Portal Manager<br>• S: Standard<br>• X: Salesforce Administrator |
| WORKER_START | **Type**<br>Number<br>**Description**<br>If a service worker is installed, the time in milliseconds when the active service worker receives the fetch event.<br>To measure the service worker processing time, subtract the WORKER_START time from the FETCH_START time. |

## UI Telemetry Resource Timing Event

UI Telemetry Resource Timing events capture network performance metrics related to loading an application's resources. The event includes requests initiated with either the Fetch API or the XMLHttpRequest API. This object is available in API version 61.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer Guide.

For information about resource timing attributes, including a diagram of the order that attributes follow, see section 4.6 of the W3 Standards on Resource Timing.

### Fields

| Field | Details |
| --- | --- |
| APP_NAME | **Type**<br>String<br>**Description**<br>The name of the application that the user accessed. |
| BROWSER_NAME | **Type**<br>String<br>**Description**<br>The name of the browser that the user accessed. |

| Field | Details |
| --- | --- |
| | **Example**<br>`Chrome, Safari` |
| `BROWSER_VERSION` | **Type**<br>String<br>**Description**<br>The version of the browser that the user accessed in `major.minor version` format. Some browsers don't provide a minor version. |
| `CLIENT_GEO` | **Type**<br>String<br>**Description**<br>The geolocation of the client in the form of `<Country>/<State\|Province>`.<br>**Example**<br>`United States/California` |
| `CLIENT_ID` | **Type**<br>String<br>**Description**<br>The API client ID. |
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP, such as a login from AppExchange, is shown as "Salesforce.com IP."<br>**Example**<br>`96.43.144.26` |
| `CONNECT_END` | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser establishes a connection to a server so that it can retrieve a resource.<br>To calculate the Transport Control Protocol (TCP) handshake time, subtract the `CONNECT_START` time from the `CONNECT_END` time. |
| `CONNECT_START` | **Type**<br>Number |

| Field | Details |
| --- | --- |
| | **Description**<br>The time in milliseconds after the browser completes the Domain Name System (DNS) lookup and begins connecting to a server so that it can retrieve a resource.<br>To calculate the Transport Control Protocol (TCP) handshake time, subtract the `CONNECT_START` time from the `CONNECT_END` time. |
| `CONNECTION_TYPE` | **Type**<br>String<br>**Description**<br>The type of connection.<br>**Possible Values**<br>• `CDMA1x`<br>• `CDMA`<br>• `EDGE`<br>• `EVDO0`<br>• `EVDOA`<br>• `EVDOB`<br>• `GPRS`<br>• `HRPD`<br>• `HSDPA`<br>• `HSUPA`<br>• `LTE`<br>• `WIFI` |
| `DECODED_BODY_SIZE` | **Type**<br>Number<br>**Description**<br>The size in octets of the HTTP message body after the removal of any applied content encoding. |
| `DEVICE_MODEL` | **Type**<br>String<br>**Description**<br>The name of the device model.<br>**Example**<br>`iPad`, `iPhone` |
| `DEVICE_PLATFORM` | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The type of application experience in `name:experience:form` format.<br>**Possible Values**<br>• `name`: `APP_BUILDER`, `CUSTOM`, `S1`, `SFX`<br>• `experience`: `BROWSER`, `HYBRID`<br>• `form`: `DESKTOP`, `PHONE`, `TABLET` |
| `DEVICE_SESSION_ID` | **Type**<br>String<br>**Description**<br>The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started.<br>**Example**<br>`321a1ddfaf924803a075f1e69fc87bc06f53ccd0` |
| `DOMAIN_LOOKUP_END` | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser completes a DNS lookup for a resource.<br>To calculate the DNS lookup time, subtract the `DOMAIN_LOOKUP_START` time from the `DOMAIN_LOOKUP_END` time. |
| `DOMAIN_LOOKUP_START` | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser starts a DNS lookup for a resource.<br>To calculate the DNS lookup time, subtract the `DOMAIN_LOOKUP_START` time from the `DOMAIN_LOOKUP_END` time. |
| `DURATION` | **Type**<br>Number<br>**Description**<br>The total duration in milliseconds of the event from the `START_TIME` to the `RESPONSE_END` time. |
| `ENCODED_BODY_SIZE` | **Type**<br>Number<br>**Description**<br>The size in octets of the HTTP message body before the removal of any applied content encoding. |

| Field | Details |
| --- | --- |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always `UITelemetryResourceTiming`. |
| FETCH_START | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser starts to fetch a resource from the server, not including redirects. Occurs before the DNS lookup and the connection to the server is established.<br>To calculate the total time used to fetch a resource without redirects, subtract the `FETCH_START` time from the `RESPONSE_END` time. |
| FIRST_INTERIM_RESPONSE_START | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser receives the first byte of the interim 1xx response from the server.<br>To calculate the time from when the browser sends a request to when it starts to receive an interim response, subtract the `REQUEST_START` time from the `FIRST_INTERIM_RESPONSE_START` time. |
| INITIATOR_TYPE | **Type**<br>String<br>**Description**<br>The HTML element that initiates the resource load.<br>**Example**<br>`css`, `image`, `link` |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>**Example**<br>`GeJCsym5eyvtEK2I` |
| NEXT_HOP_PROTOCOL | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The Application-Layer Protocol Negotiation (ALPN) Protocol ID that fetches the resource.<br>**Possible Values**<br>`http/0.9`, `http/1.0`, `h2`, `h2c`, `h3` |
| `ORGANIZATION_ID` | **Type**<br>String<br>**Description**<br>The 15-character ID of the org.<br>**Example**<br>`00D000000000123` |
| `OS_NAME` | **Type**<br>String<br>**Description**<br>The operating system name, derived from `USER_AGENT`.<br>**Example**<br>`Android`, `iOS`, `OSX`, `Window` |
| `OS_VERSION` | **Type**<br>String<br>**Description**<br>The operating system version, derived from `USER_AGENT`. |
| `PAGE_CONTEXT` | **Type**<br>String<br>**Description**<br>The name of the component hosting the main content of the page.<br>**Example**<br>`clients:cardsContainer` |
| `PAGE_ENTITY_ID` | **Type**<br>String<br>**Description**<br>The unique entity identifier of the event.<br>**Example**<br>`0013000000I3zJAAAZ` |
| `PAGE_ENTITY_TYPE` | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The entity type of the event.<br>**Example**<br>`task`, `contacts` |
| `PAGE_URL` | **Type**<br>String<br>**Description**<br>Relative URL of the top-level Lightning Experience page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with `PAGE_URL`.<br>**Example**<br>`/sObject/0064100000JXITSAA5/view` |
| `REDIRECT_END` | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser receives the last byte of the response of the final redirect.<br>To calculate the total redirection time, subtract the `REDIRECT_START` time from the `REDIRECT_END` time. |
| `REDIRECT_START` | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser starts to fetch a resource that initiates a redirect.<br>To calculate the total redirection time, subtract the `REDIRECT_START` time from the `REDIRECT_END` time. |
| `RENDER_BLOCKING_STATUS` | **Type**<br>String<br>**Description**<br>The status that indicates whether the resource can block or delay the browser from rendering page content.<br>**Possible Values**<br>• `blocking`: the resource can block rendering.<br>• code`non-blocking`: the resource doesn't block rendering. |
| `REQUEST_ID` | **Type**<br>String |

| Field | Details |
| --- | --- |
| | **Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>**Example**<br>`3nWgxWbDKWWDIk0FKfF5DV` |
| `REQUEST_START` | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser starts to request the resource from the server.<br>To calculate the total request time, subtract the `REQUEST_START` time from the `RESPONSE_START` time. |
| `RESPONSE_END` | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser receives the resource's last byte or when the transport connection closes, whichever comes first.<br>To calculate the total time used to fetch a resource without redirects, subtract the `FETCH_START` time from the `RESPONSE_END` time. |
| `RESPONSE_START` | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser receives the first byte of the response from the server.<br>To calculate the total request time, subtract the `REQUEST_START` time from the `RESPONSE_START` time. |
| `RESPONSE_STATUS` | **Type**<br>Number<br>**Description**<br>The HTTP response status code.<br>**Example**<br>`200` |
| `SDK_APP_TYPE` | **Type**<br>String<br>**Description**<br>The mobile SDK application type. |

| Field | Details |
| --- | --- |
| | **Possible Values**<br>• HYBRID<br>• HYBRIDLOCAL<br>• HYBRIDREMOTE<br>• NATIVE<br>• REACTNATIVE |
| SDK_APP_VERSION | **Type**<br>String<br>**Description**<br>The mobile SDK application version number.<br>**Example**<br>5.0 |
| SDK_VERSION | **Type**<br>String<br>**Description**<br>The mobile SDK version number.<br>**Example**<br>2.1.0 |
| SECURE_CONNECT_START | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser begins the handshake process that secures the connection.<br>To calculate the Transport Layer Security (TLS) time, subtract the SECURE_CONNECT_START time from the REQUEST_START time. |
| SERVER_REQUEST_ID | **Type**<br>String<br>**Description**<br>The requestId for the server request that's used to find associated server logs.<br>**Example**<br>346000000087551ecb |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When the user logs out and logs in again, a new session starts. |

| Field | Details |
| --- | --- |
| | **Example**<br>`cdd09305cb6babf34059e27f70e47f1b11dec868` |
| START_TIME | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the browser starts to fetch the resource, including redirects. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>**Example**<br>`20130715233322.670` |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).<br>**Example**<br>`2015-07-27T11:32:59.555Z`. The timezone is GMT. |
| TRANSFER_SIZE | **Type**<br>Number<br>**Description**<br>The size in octets of the resource, including the response header and the response payload body. |
| UI_EVENT_RELATIVE_TIMESTAMP | **Type**<br>Number<br>**Description**<br>The difference in milliseconds between when the event is logged and when the browser tab is opened.<br>**Example**<br>`29322.23` |
| UI_EVENT_TIMESTAMP | **Type**<br>Number<br>**Description**<br>The time at which this event occurs, measured in milliseconds. |

| Field | Details |
| --- | --- |
| | **Example**<br>`1479769912796` |
| `UI_ROOT_ACTIVITY_ID` | **Type**<br>String<br>**Description**<br>The ID of the root activity when the event occurs. |
| `UI_THREAD_RESPONSE_DELAY` | **Type**<br>Number<br>**Description**<br>The time in milliseconds from when the browser receives the response to when it executes the callback. This delay occurs if the main Javascript thread is busy when the response is received. |
| `URL` | **Type**<br>String<br>**Description**<br>The URL of the request. |
| `USER_ID` | **Type**<br>String<br>**Description**<br>The 15-character ID of the user accessing Salesforce services through the UI or API.<br>**Example**<br>`00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API.<br>**Example**<br>`00590000000I1SNIA0` |
| `USER_TYPE` | **Type**<br>String<br>**Description**<br>The category of user license of the user accessing Salesforce services through the UI or API.<br>**Possible Values**<br>• `A`: Automated Process<br>• `b`: High Volume Portal |

| Field | Details |
| --- | --- |
| | • C: Customer Portal User<br>• D: External Who<br>• F: Self-Service<br>• G: Guest<br>• L: Package License Manager<br>• N: Salesforce to Salesforce<br>• n: CSN Only<br>• O: Power Custom<br>• o: Custom<br>• P: Partner<br>• p: Customer Portal Manager<br>• S: Standard<br>• X: Salesforce Administrator |
| WORKER_START | **Type**<br>Number<br>**Description**<br>The time in milliseconds when the active service worker receives the `fetch` event, if a service worker is installed.<br>To measure the service worker processing time, subtract the `WORKER_START` time from the `FETCH_START` time. |

## Unique Query Event Type

Unique Query events capture specific search queries (SOQL), filter IDs, and report IDs that are processed, along with the underlying database queries (SQL). This event type is available in API versions 64.0 and later.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| BOT_IDENTIFIER | **Type**<br>string<br>**Description**<br>The ID of the bot. |

| | |
|---|---|
| `BOT_SESSION_IDENTIFIER` | **Type**<br>string<br>**Description**<br>The bot session ID. |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `PLANNER_IDENTIFIER` | **Type**<br>string<br>**Description**<br>The ID of the agent planner. |
| `QUERY_IDENTIFIER` | **Type**<br>String<br>**Description**<br>The text of the SOQL query run or the Id of the report or list view run. |
| `QUERY_TYPE` | **Type**<br>String<br>**Description**<br>The input type to the optimizer that was translated.<br>**Possible Values**<br>• soql<br>• filter<br>• report |
| `SESSION_KEY` | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: `d7DEq/ANa7nNZZVD`. |
| `SQL_ID` | **Type**<br>String<br>**Description**<br>The unique identifier generated for the database query. |

## URI Event Type

URI events contain details about user interaction with the web browser UI.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
|---|---|
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DB_BLOCKS` | **Type**<br>Number<br>**Description**<br>Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance. |

`DB_CPU_TIME`

**Type**
Number

**Description**
The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.

`DB_TOTAL_TIME`

**Type**
Number

**Description**
The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.

`EVENT_TYPE`

**Type**
String

**Description**
The type of event. The value is always `URI`.

`LOGIN_KEY`

**Type**
String

**Description**
The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: `GeJCsym5eyvtEK2I`.

`ORGANIZATION_ID`

**Type**
Id

**Description**
The 15-character ID of the organization.

For example: `00D000000000123`.

`REFERRER_URI`

**Type**
String

**Description**
The referring URI of the page that's receiving the request.

`REQUEST_ID`

**Type**
String

**Description**
The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: `3nWgxWbDKWWDIk0FKfF5DV`.

`REQUEST_STATUS`

**Type**
String

**Description**
The status of the request for a page view or user interface action.

For example:

- `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- `U`—Undefined
- `A`—Authorization Error
- `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- `N`—Not Found. 404 error.

This field can have a blank value.

`RUN_TIME`

**Type**
Number

**Description**
The amount of time that the request took in milliseconds.

`SESSION_KEY`

**Type**
String

**Description**
The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: `d7DEq/ANa7nNZZVD`.

`TIMESTAMP`

**Type**
String

**Description**
The access time of Salesforce services in GMT.

For example: `20130715233322.670`.

`TIMESTAMP_DERIVED`

**Type**
DateTime

**Description**
The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).

For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.

`URI`

**Type**
String

**Description**
The URI of the page that's receiving the request. For more granular URI information for Lightning Experience and the Salesforce app, see the Lightning Error, Lightning Interaction, Lightning Page View, and Lightning Performance event types.

**Examples**
`/aura` (Lightning Experience), `/lightning` (Lightning Experience and the Salesforce app), `/home/home.jsp` (Salesforce Classic)

`URI_ID_DERIVED`

**Type**
ID

**Description**
The 18-character case insensitive ID of the URI of the page that's receiving the request.

`USER_ID`

**Type**
Id

**Description**
The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: `00530000009M943`

`USER_ID_DERIVED`

**Type**
Id

**Description**
The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: `00590000000I1SNIA0`.

`USER_TYPE`

**Type**
String

**Description**
The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

## Visualforce Request Event Type

Visualforce Request events contain details of Visualforce requests. Requests can originate from the browser (UI).

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
|---|---|

| | |
|---|---|
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CONTROLLER_TYPE` | **Type**<br>Number<br>**Description**<br>The type of controller that's used by the requested Visualforce page.<br>**Possible Values**<br>• 0: NOT_SPECIFIED—The controller type is not specified.<br>• 1: STANDARD—The controller is a standard controller.<br>• 2: CUSTOM—The controller is a custom controller or controller extension.<br>• 3: JAVA—For internal use only.<br>• 4: STANDARD_SET—The controller is a standard list controller.<br>• 5: SPRING—Not used. |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DB_BLOCKS` | **Type**<br>Number<br>**Description**<br>Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance. |
| `DB_CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request. |

| | |
|---|---|
| `DB_TOTAL_TIME` | **Type**<br>Number<br>**Description**<br>The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DB_CPU_TIME`. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `VisualforceRequest`. |
| `HTTP_METHOD` | **Type**<br>String<br>**Description**<br>The HTTP method of the request.<br>For example: `GET`, `POST`, `PUT`, and so on. |
| `IS_AJAX_REQUEST` | **Type**<br>Boolean<br>**Description**<br>The value is `true` if the request is a partial page request. |
| `IS_FIRST_REQUEST` | **Type**<br>Boolean<br>**Description**<br>1 if this page is the first Visualforce transaction in the request, or 0 if it isn't. |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| `MANAGED_PACKAGE_NAMESPACE` | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>If the page is part of a managed package, the namespace of that package. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| PAGE_NAME | **Type**<br>String<br>**Description**<br>The name of the Visualforce page that was requested. |
| QUERY | **Type**<br>String<br>**Description**<br>The query string used to access the requested Visualforce page.<br>**Example**<br>Let's assume that the requested Visualforce page (`/apex/myAccountDetailPage?id=001xx000003GYv6AAG`) shows details of the account whose ID is in the URL. The value of `QUERY` in this case is `?id=001xx000003GYv6AAG`. |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| REQUEST_SIZE | **Type**<br>Number<br>**Description**<br>The size of the request body, in bytes. Value is -1 if the request body content is larger than 2GB, or if the request has no body (for example, a typical GET request). |
| REQUEST_STATUS | **Type**<br>String |

**Description**
The status of the request for a page view or user interface action.

For example:

- `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- `U`—Undefined
- `A`—Authorization Error
- `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- `N`—Not Found. 404 error.

This field can have a blank value.

`REQUEST_TYPE`

**Type**
String

**Description**
The request type.

Possible values are:

- `page`—a normal request for a page
- `content_UI`—a content request for a page that originated in the user interface
- `content_apex`—a content request initiated by an Apex call
- `PDF_UI`—a request for a page in PDF format through the user interface
- `PDF_apex`—a request for PDF format by an Apex call (usually a Web Service call)

`RESPONSE_SIZE`

**Type**
Number

**Description**
The size of the response, in bytes.

`RUN_TIME`

**Type**
Number

**Description**
The amount of time that the request took in milliseconds.

| | |
|---|---|
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: `d7DEq/ANa7nNZZVD`. |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| URI | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| URI_ID_DERIVED | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| USER_AGENT | **Type**<br>Number<br>**Description**<br>The numeric code for the type of client used to make the request (for example, the browser, application, or API). |
| USER_ID | **Type**<br>Id |

**Description**
The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: `00530000009M943`

`USER_ID_DERIVED`

**Type**
Id

**Description**
The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: `00590000000I1SNIA0`.

`USER_TYPE`

**Type**
String

**Description**
The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.

| | |
|---|---|
| | • `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org. |
| `VIEW_STATE_SIZE` | **Type**<br>Number<br>**Description**<br>The size of the Visualforce view state, in bytes. |

EventLogFile Supported Event Types

EventLogFile

## Wave Change Event Type

Wave Change events represent route or page changes made in the CRM Analytics user interface. A Wave Change event type is captured every time the user opens a new CRM Analytics asset or tab, switches between tabs, or changes dashboard pages. Wave Change events are logged when opening new tabs and switching back to previously opened tabs.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
|---|---|
| `ANALYTICS_MODE` | **Type**<br>String<br>**Description**<br>The location in which the dashboard is displayed. In the Salesforce mobile app, embedded dashboards are logged as `embedded` first. When a user interacts with the dashboard, a full-screen dashboard is displayed to allow for user interaction, and is logged as `mobileNative`.<br>Possible values are:<br>• `studio`—Analytics Studio<br>• `tab`—Analytics tab<br>• `embedded`— Embedded in Aura or Lightning.<br>• `embeddedInCommunities`—Embedded in Experience Cloud. |

- `mobileNative`—CRM Analytics mobile app for iOS/Android or Salesforce mobile app for iOS/Android

| | |
|---|---|
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `WaveChange`. |
| `IS_MOBILE` | **Type**<br>Boolean<br>**Description**<br>If `true`, the dashboard is displayed in the Tableau CRM mobile app for iOS and Android, in the Salesforce mobile app for iOS and Android, or in a mobile browser. |
| `IS_NEW` | **Type**<br>Boolean<br>**Description**<br>The field indicates that this action opens a new tab or goes back to a previously opened tab. If the change routes to a new page, the value of this field is true. |

| | |
|---|---|
| | If it routes to an existing page, this field is false. |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `PAGE_CONTEXT` | **Type**<br>String<br>**Description**<br>The context of the page in which the dashboard is displayed. In the Salesforce mobile app, embedded dashboards are logged as `aura` first. When a user interacts with the dashboard, a full-screen dashboard is displayed to allow for user interaction, and is logged as `iOS` or `android`.<br>Possible values are:<br>• `aura`—Lightning Components<br>• `vf`—Visualforce<br>• `iOS`— CRM Analytics or Salesforce mobile app for iOS<br>• `android`— CRM Analytics or Salesforce mobile app for Android |
| `PAGE_ID` | **Type**<br>String<br>**Description**<br>The ID of the CRM Analytics dashboard page. |

| | |
|---|---|
| | This field is only available in v58.0 and higher. |
| RECORD_ID | **Type**<br>String<br>**Description**<br>The Salesforce ID of the CRM Analytics object. |
| REOPEN_COUNT | **Type**<br>Number<br>**Description**<br>If IS_NEW is false, the number of times that an existing page opens. |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.<br>For example: 3nWgxWbDKWWDIk0FKfF5DV. |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| SAVED_VIEW_ID | **Type**<br>String<br>**Description**<br>The ID of the CRM Analytics dashboard saved view. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. |

| | |
|---|---|
| | For example: `d7DEq/ANa7nNZZVD`. |
| `TAB_ID` | **Type**<br>String<br>**Description**<br>The ID of the particular Analytics tab in the user interface.<br>For example: `dashboard-0FKB0000000Ec64GDK`. |
| `TIMESTAMP` | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `TIMESTAMP_DERIVED` | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).<br>For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `TYPE` | **Type**<br>String<br>**Description**<br>The CRM Analytics object type. |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `URI_ID_DERIVED` | **Type**<br>ID |

| | |
|---|---|
| | **Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943`. |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |
| `VIEW_MODE` | **Type**<br>String<br>**Description**<br>The view mode for the CRM Analytics asset. Possible values include `view`, `edit`, `present`, `json`, or `print`. |
| `WAVE_SESSION_ID` | **Type**<br>String<br>**Description**<br>The ID of a particular session of CRM Analytics. Use this field to determine which log lines originated from a particular session. |
| `WAVE_TIMESTAMP` | **Type**<br>Number |

**Description**
The time at which this log line was generated.

## Wave Download Event Type

Wave Download events represent downloads made from lens explorations and dashboard widgets in the CRM Analytics user interface. A Wave Download event type is captured when a user downloads images ( .png ), Microsoft® Excel® data ( .xls ), or comma-separated values ( .csv ) files.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| `ASSET_ID` | **Type**<br>ID<br>**Description**<br>The ID of the asset the user downloads from. |
| `ASSET_TYPE` | **Type**<br>String<br>**Description**<br>The type of the asset the user downloads from.<br>**Values**<br>• `Lens`—A *lens* is a view into a dataset used in an exploratory mode or to get insight to a specific business question. The lens can be saved and shared independently. It can also be clipped to a dashboard.<br>• `Dashboard`—A *dashboard* is a curated set of charts, metrics, and tables based on the data in one or more lenses. |
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>**Example**<br>96.43.144.26 |

| Field | Details |
| --- | --- |
| CPU_TIME | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| DATASET_IDS | **Type**<br>String<br>**Description**<br>Comma-separated list of IDs of utilized data sets. |
| DOWNLOAD_ERROR | **Type**<br>String<br>**Description**<br>The message for the error blocking the download request, if any. |
| DOWNLOAD_FORMAT | **Type**<br>String<br>**Description**<br>The data format of the export.<br>**Values**<br>• `png`—Image<br>• `csv`—Comma-separated values<br>• `xls`— Microsoft Excel |
| EVENT_TYPE | **Type**<br>String<br>**Description**<br>The type of event. The value is always `WaveDownload`. |
| LOGIN_KEY | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>**Example**<br>GeJCsym5eyvtEK2I |
| NUMBER_OF_RECORDS | **Type**<br>Number |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of records exported. |
| ORGANIZATION_ID | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>**Example**<br>00D000000000123 |
| REQUEST_ID | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.<br>**Example**<br>3nWgxWbDKWWDIk0FKfF5DV |
| RUN_TIME | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| SESSION_KEY | **Type**<br>String<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>**Example**<br>d7DEq/ANa7nNZZVD |
| TIMESTAMP | **Type**<br>String<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: 20130715233322.670. |
| TIMESTAMP_DERIVED | **Type**<br>DateTime<br>**Description**<br>The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). |

| Field | Details |
| --- | --- |
| | For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT. |
| `URI` | **Type**<br>String<br>**Description**<br>The URI of the page that's receiving the request.<br>**Example**<br>`/home/home.jsp` |
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>**Example**<br>`00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>**Example**<br>`00590000000I1SNIA0` |
| `USER_TYPE` | **Type**<br>String<br>**Description**<br>The type of Salesforce user. |
| `WAVE_SESSION_ID` | **Type**<br>String<br>**Description**<br>The ID of a particular session of CRM Analytics. Use this field to determine which log lines originated from a particular session. |
| `WAVE_TIMESTAMP` | **Type**<br>Number |

| Field | Details |
| --- | --- |
| | **Description**<br>The time at which this log line was generated. |

## Wave Interaction Event Type

Wave Interaction events represent route or page changes made in the CRM Analytics user interface. A Wave Interaction event type is captured when a tab is closed. It also collates the interaction statistics over the life of the tab, including total open time, read time, and so on. These statistics are aggregated as you go to other tabs and return, and logged only once when the tab is closed.

Note: Because Wave Interaction events are logged only when the tab or browser window is closed, these events might not match Wave Change events exactly if a user allows their Salesforce session to time out before closing.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `WaveInteraction`. |
| `LOGIN_KEY` | **Type**<br>String<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. |

| | |
|---|---|
| | For example: `GeJCsym5eyvtEK2I`. |
| `NUM_CLICKS` | **Type**<br>Number<br>**Description**<br>The number of clicks performed on a page in the CRM Analytics user interface. |
| `NUM_SESSIONS` | **Type**<br>Number<br>**Description**<br>The number of times a user returned to a particular page. |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `READ_TIME` | **Type**<br>Number<br>**Description**<br>The amount of time a user spent on a particular tab. |
| `RECORD_ID` | **Type**<br>String<br>**Description**<br>The Salesforce ID of the CRM Analytics object. |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `RUN_TIME` | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |
| `SESSION_KEY` | **Type**<br>String |

**Description**
The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: `d7DEq/ANa7nNZZVD`.

`TAB_ID`

**Type**
String

**Description**
The ID of the particular Analytics tab in the user interface.

**Example**
dashboard-0FKB0000000Ec64GDK

`TIMESTAMP`

**Type**
String

**Description**
The access time of Salesforce services in GMT.

For example: `20130715233322.670`.

`TIMESTAMP_DERIVED`

**Type**
DateTime

**Description**
The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).

For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.

`TOTAL_TIME`

**Type**
Number

**Description**
The total amount of time a tab was open in milliseconds.

`TYPE`

**Type**
String

**Description**
The CRM Analytics object type.

`URI`

**Type**
String

**Description**
The URI of the page that's receiving the request.

For example: `/home/home.jsp`.

| | |
|---|---|
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |
| `VIEW_MODE` | **Type**<br>String<br>**Description**<br>The view mode for the CRM Analytics asset. Possible values include `view`, `edit`, `present`, `json`, or `print`. |
| `WAVE_SESSION_ID` | **Type**<br>String<br>**Description**<br>The ID of a particular session of CRM Analytics. Use this field to determine which log lines originated from a particular session. |
| `WAVE_TIMESTAMP` | **Type**<br>Number<br>**Description**<br>The time at which this log line was generated. |

## Wave Performance Event Type

Wave Performance events help you track trends in your Analytics performance.

For details about event monitoring, see the Trailhead Event Monitoring module or REST API Developer's Guide.

### Fields

| Field | Details |
| --- | --- |
| `CLIENT_IP` | **Type**<br>String<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CPU_TIME` | **Type**<br>Number<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `EPT` | **Type**<br>Number<br>**Description**<br>The experienced page time in milliseconds. |
| `EVENT_TYPE` | **Type**<br>String<br>**Description**<br>The type of event. The value is always `WavePerformance`. |
| `IS_INITIAL` | **Type**<br>Boolean<br>**Description**<br>Indicates whether the event is for the initial load of dashboard (`true`) or not (`false`). |
| `LOGIN_KEY` | **Type**<br>String |

| | |
|---|---|
| | **Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| `NAME` | **Type**<br>String<br>**Description**<br>The asset title or query string. |
| `ORGANIZATION_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the organization.<br>For example: `00D000000000123`. |
| `QUERY_ID` | **Type**<br>String<br>**Description**<br>This field is deprecated in API version 50.0. The number of queries can be determined using the Uri Event type logs, referenced here on page 2392 |
| `RECORD_ID` | **Type**<br>String<br>**Description**<br>The Salesforce ID of the CRM Analytics object. |
| `REQUEST_ID` | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `RUN_TIME` | **Type**<br>Number<br>**Description**<br>The amount of time that the request took in milliseconds. |

`SESSION_KEY`

**Type**
String

**Description**
The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: `d7DEq/ANa7nNZZVD`.

`TAB_ID`

**Type**
String

**Description**
The ID of the particular Analytics tab in the user interface.

**Example**
dashboard-0FKB0000000Ec64GDK

`TIMESTAMP`

**Type**
String

**Description**
The access time of Salesforce services in GMT.

For example: `20130715233322.670`.

`TIMESTAMP_DERIVED`

**Type**
DateTime

**Description**
The access time of Salesforce services in ISO8601-compatible format (`YYYY-MM-DDTHH:MM:SS.sssZ`).

For example: `2015-07-27T11:32:59.555Z`. Timezone is GMT.

`TYPE`

**Type**
String

**Description**
The CRM Analytics object type. This field is scheduled for deprecation in v59.0. Use the new `IS_INITIAL` field to determine the log line type.

`URI`

**Type**
String

**Description**
The URI of the page that's receiving the request.

For example: `/home/home.jsp`.

| | |
|---|---|
| `URI_ID_DERIVED` | **Type**<br>ID<br>**Description**<br>The 18-character case insensitive ID of the URI of the page that's receiving the request. |
| `USER_ID` | **Type**<br>Id<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `USER_ID_DERIVED` | **Type**<br>Id<br>**Description**<br>The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00590000000I1SNIA0`. |
| `VIEW_MODE` | **Type**<br>String<br>**Description**<br>The view mode for the CRM Analytics asset. Possible values include `view`, `edit`, `present`, `json`, or `print`. |
| `WAVE_SESSION_ID` | **Type**<br>String<br>**Description**<br>The ID of a particular session of CRM Analytics. Use this field to determine which log lines originated from a particular session. |
| `WAVE_TIMESTAMP` | **Type**<br>Number<br>**Description**<br>The time at which this log line was generated. |

# EventRelation

Represents a person (a user, lead, or contact) or a resource (such as a conference room) invited to an event. This object lets you add or remove invitees from an event and use the API to manage invitees' responses to invitations. If Shared Activities is enabled, EventRelation can also represent other objects that are related to an event. EventRelation does not support triggers, workflow, or data validation rules.

EventRelation allows a variable number of relationships and handles deleted events differently, depending on whether Shared Activities is enabled.

A non-recurring event can have up to 1,000 invitees. A recurring event can have up to 100 invitees.

**If Shared Activities Isn't Enabled**

- EventRelation records only represent invitees (contacts, users, and resources).
- An event can be related to one contact or lead.

**If Shared Activities Is Enabled**

- EventRelation records can represent:
  - Invitees (`IsInvitee=` is set to `true`)

    OR
  - Related contacts or lead (`IsParent` is set to `true`)
- An event can be related to up to 50 contacts or one lead. These people may or may not be invitees. The number of allowed invitees is not affected by the number of related contacts. If a contact or lead is also an invitee, there is one EventRelation record for that person with `IsInvitee` and `IsParent` are set to `true`.
- An event can be related to a lead, contact, resource, account, or opportunity.
- An event can be related to a custom object that has the `HasActivities` attribute set to `true`.
- If you delete an event, then relations between the event and any specified contacts, leads, and other records are also deleted.
- If you delete the EventRelation record representing a relation then the corresponding relation field may be cleared on the event.
- If you delete the EventRelation record representing the `WhoId` on an event, then another Who, if any, from the event's `EventWhoIds` field will be promoted to the `WhoId`.
- If you restore a deleted event, relations between the event and any specified contacts, leads, and records are also restored. The `WhoId`, `WhatId`, and `AccountId` field values are recalculated using the field values on EventRelation.

Whether or not Shared Activities is enabled, an event can be related to one other kind of record, such as an account, an opportunity, or a custom object.

Note:

- With API versions 26.0 and later, the EventRelation object replaces the EventAttendee object, and the EventAttendee object is no longer visible. You can still query the EventAttendee object using packages that support API versions 25.0 and earlier, or by using Apex.
- An EventRelation object can't be created for a child event.
- EventRelation includes deactivated users.
- In API versions 25.0 and earlier, you can't use `query()`, `delete()`, or `update()` with events related to more than one contact.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Contains the Account ID of the relation. For information on IDs, see ID Field Type. `AccountId` is visible when Shared Activities is enabled. |
| `EventId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Contains the ID of the event. This value can't be changed after it's been specified.<br>This is a relationship field.<br>**Relationship Name**<br>Event<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Event |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is `Deleted`. |
| `IsInvitee` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the relation is an invitee.<br>• `IsInvitee` is visible while Shared Activities is being enabled, after it has been enabled, and while it is being disabled.<br>• `IsInvitee` defaults to `true` while Shared Activities is being enabled, after it has been enabled, and while it is being disabled if `IsInvitee`, `IsParent`, and `IsWhat` are not set. This configuration ensures compatibility when Shared Activities isn't enabled and EventRelation represents event invitees only.<br>• `IsInvitee` defaults to `false` when Shared Activities is enabled if `IsParent` is set to `true`. |
| `IsParent` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>`IsParent` is visible only when Shared Activities is enabled. When `false`, indicates that the relation is an invitee (a contact, lead, or user). When `true`, indicates that the relation is a Who or What, as determined by `IsWhat` field. |
| `IsWhat` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>`IsWhat` is visible only when Shared Activities is enabled. The value is relevant only if `IsParent` is `true`. When `IsWhat` is `true`, the relation specified by `RelationId` is a What (an account, opportunity, custom object, etc.). When `IsWhat` is `false`, the relation specified by `RelationId` is a Who (a contact, lead, or user). |
| `RelationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Contains the ID of the person (User, Contact, or Lead) or the resource invited to an event. When Shared Activities is enabled, `RelationId` can also contain the ID of an account, opportunity, or other object related to an event.<br>This value can't be changed after it's been specified.<br>This is a polymorphic relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Relation<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Calendar, Contact, Lead, User |
| `RespondedDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Indicates the most recent date and time when the invitee responded to an invitation to an event. |
| `Response` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Contains optional text that the invitee can enter when responding to an invitation to an event. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the invitee status with one of the following values:<br>• `New`: Invitee has received the invitation but hasn't yet responded. This value is the default.<br>• `Declined`: Invitee has declined the invitation.<br>• `Accepted`: Invitee has accepted the invitation.<br>Note: `Uninvited` and `Maybe` aren't currently supported. |

## Usage

- Invitee related lists display slightly different content. In the Salesforce mobile app, the invitee related list includes invitees only, whereas in the full site, it also includes the event owner. To reproduce the full site functionality in the Salesforce mobile app, use the following API queries.

If you use Shared Activities in your Salesforce org, use this query:

```
SELECT RelationId FROM EventRelation WHERE isInvitee = true AND eventId='[Event_Id]'
```

where *Event_Id* is the child event's ID.

If you don't use Shared Activities, use this query:

```
SELECT RelationId FROM EventRelation WHERE eventId='[Event_Id]'
```

These queries get the main event's relations and display them for the given child event. To further filter the results, add a `WHERE` clause.

**Assigning resource attendance status**

You can add a resource to an event only when the resource is available. The only attendance status that can be assigned to resources is Accepted. Events can't be saved when resources you've added aren't available.

**Create an invitee if Shared Activities is enabled (or during the process of enabling it or rolling back)**

If the invitee is already a contact or lead, update `IsInvitee` to `true`.

If the invitee is not already a contact or lead, create an EventRelation object for the invitee with `IsInvitee` set to `true`.

**Create an invitee if Shared Activities is not enabled**

Create an EventRelation object for the invitee.

**Insert a contact or lead relation**

```
EventRelation er = new EventRelation(EventId = '00UD0000005zijH',
    RelationId = '003D000000Q8aeV', isParent = true, isInvitee = false);
insert er;
```

**Determine what events a given invitee is attending**

To determine all the events that a particular person is attending during a given time period (for example, next week), you can have a client application query the Event object for a given date range, iterate through the results, and, for each event, query the EventRelation object to determine whether the particular person (`RelationId`) has accepted an invitation to that event.

**Insert an invitee relation**

If `isParent`, `isWhat` and `IsInvitee` are not set, and `RelationId` is a contact, lead, user, or calendar, `IsInvitee` defaults to `true`. This means if an EventRelation isn't specifically inserted as a relation to a contact or lead, it's treated as an Invitee relation by default.

```
EventRelation er = new EventRelation(EventId = '00UD0000005zijH',
    RelationId = '003D000000Q8adV');
insert er;
```

**Query relations to a contact or a lead**

```
List<EventRelation> whoRelations = [SELECT Id, Relation.Name FROM
    EventRelation WHERE EventId = '00UD0000005zijD' AND isParent = true AND isWhat =
false];
```

**Query invitee relations**

```
List<EventRelation> inviteeRelations = [SELECT Id, Relation.Name FROM
    EventRelation WHERE EventId = '00UD0000005zijD' AND isInvitee = true];
```

**Update an invitee relation to a contact or lead invitee relation**

```
EventRelation er = [SELECT Id FROM EventRelation WHERE EventId =
    '00UD0000005zijD' AND isInvitee = true and isParent = false LIMIT 1];
er.isParent = true;
update er;
```

**Update a contact or lead relation to a contact or lead invitee relation**

```
EventRelation er = [SELECT Id FROM EventRelation WHERE EventId =
    '00UD0000005zijD' AND isParent = true and isInvitee = false LIMIT 1];
er.isInvitee = true;
update er;
```

**Reproduce invitee related list functionality in the Salesforce mobile app**

Invitee related lists display slightly different content in the Salesforce mobile app and the full site. In the app, the invitee related list includes invitees only, whereas in the full site, it also includes the event owner.

If you use Shared Activities in your Salesforce org, use the following query to reproduce the full site functionality in the Salesforce mobile app:

```
SELECT RelationId FROM EventRelation WHERE isInvitee = true AND eventId='[Event_Id]'
```

where *Event_Id* is the child event's ID.

If you don't use Shared Activities, use this query:

```
SELECT RelationId FROM EventRelation WHERE eventId='[Event_Id]'
```

These queries get the main event's relations and display them for the given child event. To further filter the results, add a `WHERE` clause.

**Send email notifications**

To send email notifications for a given event, query EventRelation for the event, iterate through the list, examine the status, and send email notifications to every person who accepted the invitation.

**Syncing Events with Lightning Sync**

Attendee statuses (Accepted or Maybe, Declined, or No Response) sync from Microsoft® Exchange or Google to Salesforce, but not from Salesforce to Exchange or Google. Be wary of creating API flows that update attendee status in Salesforce for users set up to sync both ways. Eventually the original Exchange or Google status overrides the update made in Salesforce.

# Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**EventRelationChangeEvent (API version 44.0)**

Change events are available for the object.

Event

EventWhoRelation

Overview of Salesforce Objects and Fields

# EventBusSubscriber

Represents a trigger, process, or flow that's subscribed to a platform event or a change data capture event. Doesn't include CometD or Pub/Sub API subscribers.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

EventBusSubscriber is read only and can only be queried. As of Summer '20 and later, only your Salesforce org's internal users can access this object.

## Fields

| Field | Details |
|---|---|
| `ExternalId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the subscriber. For example, the trigger ID. |
| `IsPartitioned` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the platform event Apex trigger is configured with parallel subscriptions (`true`) or not (`false`). The default value is `false`. See Platform Event Processing at Scale with Parallel Subscriptions for Apex Triggers in the *Platform Events Developer Guide*.<br>This field is available in API version 62.0 and later. |
| `LastError` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The error message that the last thrown `EventBus.RetryableException` contains. This field applies to Apex triggers only. Available in API version 43.0 and later. |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the subscribed item, such as the trigger or process name. If the subscribed item's name is "Process", at least one flow Pause element is subscribed to the event. |
| `Position` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The replay ID of the last event that the subscriber processed. |
| `Retries` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of times the trigger was retried due to throwing the `EventBus.RetryableException`. This field applies to Apex triggers only. Available in API version 43.0 and later. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates the status of the subscriber. Can be one of these values:<br>• `Error`— The subscriber was disconnected and stopped receiving published events. A trigger reaches this state when it exceeds the number of maximum retries with the `EventBus.RetryableException`. Trigger assertion failures and unhandled exceptions don't cause the error state. We recommend limiting the retries to fewer than nine times to avoid reaching this state. When you fix and save the trigger, or for a managed package trigger, if you redeploy the package, the trigger resumes automatically from the tip, starting from new events. Also, you can resume a trigger subscription in the subscription detail page that you access from the platform event page.<br>• `Repartitioning`—The system is in the process of modifying the trigger's parallel subscription configuration.<br>• `Running`—The subscriber is actively listening to events. If you modify the subscriber, the subscription continues to process events. |

| Field | Details |
| --- | --- |
| | • `Suspended`—The subscriber is disconnected and can't receive events because a Salesforce admin suspended it or due to an internal error. You can resume a trigger subscription in the subscription detail page that you access from the platform event page. To resume a process, deactivate it and then reactivate it. If you modify the subscriber, the subscription resumes automatically from the tip, starting from new events.<br>For more information, see View and Manage an Event's Subscribers on the Platform Event's Detail Page in the *Platform Events Developer Guide*. |
| `Tip` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The replay ID of the last published event.<br>Note: For high-volume platform events and change events, the value for Tip isn't available and is always -1. |
| `Topic` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the subscription channel that corresponds to a platform event or change event. For a platform event, the topic name is the event name appended with `__e`, such as `MyEvent__e`. For a change event, the topic is the name of the change event, such as `AccountChangeEvent`. |
| `Type` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The subscriber type (`ApexTrigger`). If the subscriber is a process or flow Pause element, the type is blank. |

# Usage

Use EventBusSubscriber to query details about subscribers to a platform event. You can get all subscribers for a particular event by filtering on the `Topic` field, as follows.

```
SELECT ExternalId, Name, Position, Status, Tip, Type
FROM EventBusSubscriber
WHERE Topic='Low_Ink__e'
```

# EventRelayConfig

Represents the configuration of an event relay, which relays platform events and change data capture events from Salesforce to Amazon EventBridge. This object is available in API version 56.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

- To retrieve or query this object, you must have the View Setup and Configuration permission.
- This object is read-only. To configure an event relay, use EventRelayConfig in Tooling API or EventRelayConfig in Metadata API.

## Fields

| Field | Details |
|---|---|
| `DestinationResourceName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The developer name of the named credential, which stores the AWS account information. The `destinationResourceName` value contains the `callout:` prefix. For example: `callout:MyRelayNamedCredential` |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is **Record Type Name**. This field is automatically generated, but you can supply your own value if you create the record using the API. |
| `EventChannel` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The full name of the event channel used in the event relay. For example: `MyRelayChannel__chn` |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language of the EventRelayConfig.<br>Possible values are:<br>• `da`—Danish<br>• `de`—German<br>• `en_US`—English<br>• `es`—Spanish<br>• `es_MX`—Spanish (Mexico)<br>• `fi`—Finnish<br>• `fr`—French<br>• `it`—Italian<br>• `ja`—Japanese<br>• `ko`—Korean<br>• `nl_NL`—Dutch<br>• `no`—Norwegian<br>• `pt_BR`—Portuguese (Brazil)<br>• `ru`—Russian<br>• `sv`—Swedish<br>• `th`—Thai<br>• `zh_CN`—Chinese (Simplified)<br>• `zh_TW`—Chinese (Traditional) |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Label for the EventRelayConfig. In the UI, this field is Event Relay Config. |

| Field | Details |
| --- | --- |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix associated with this object. Each Developer Edition organization that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation.<br>The namespace prefix can have one of the following values:<br>• In Developer Edition organizations, the namespace prefix is set to the namespace prefix of the organization for all objects that support it. There is an exception if an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition organization of the package developer.<br>• In organizations that are not Developer Edition organizations, `NamespacePrefix` is only set for objects that are part of an installed managed package. There is no namespace prefix for all other objects. |
| `RelayOption` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>A JSON-encoded string that contains an option for resuming an event relay after the system recovers from an error. This option is used if the event relay can't resume after the last relayed event. The options available are:<br>• `"{\"ReplayRecovery\":\"LATEST\"}"`—(Default) Start relaying events from new events received in the event bus. Use this option if you aren't interested in missed events while the relay was down.<br>• `"{\"ReplayRecovery\":\"EARLIEST\"}"`—Resend all events stored in the event bus and relay new events thereafter. The event bus stores events for up to three days. Use this option if you want to reprocess all stored events and catch up on missed events. |
| `State` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The execution state of the event relay. Possible values are: |

| Field | Details |
| --- | --- |
| | • `RUN`—The event relay is running and actively relaying event messages from Salesforce to Amazon EventBridge.<br>• `PAUSE`—An administrator paused the event relay. No events are relayed to Amazon EventBridge during this status. All current state information is saved.<br>• `STOP`—(Default) The event relay is stopped and no events are relayed to Amazon EventBridge. All current state information is deleted. |
| `UsageType` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Reserved for future use. |

# EventRelayFeedback

Represents execution state information about an event relay from Salesforce to Amazon EventBridge for platform events and change data capture events. Query this object to get information such as the event relay status and any error message. This object is available in API version 56.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `ErrorCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The error code of the last error that occurred during the relay of event messages. For a list of possible error codes and messages, see Error Codes. |
| `ErrorIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The identifier of an unexpected system error that occurred during the relay of event messages. |
| `ErrorMessage` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The error message of the last error that occurred during the relay of event messages. For a list of possible error codes and messages, see Error Codes. |
| `ErrorTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time in the UTC time zone when the last error occurred during the relay of event messages. |
| `EventRelayConfigId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the event relay configuration that this feedback record is collecting the execution information of.<br>This field is a relationship field.<br>**Relationship Name**<br>EventRelayConfig<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EventRelayConfig |
| `EventRelayNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The number that identifies the EventRelayFeedback record. This field is of type Auto Number. |

| Field | Details |
| --- | --- |
| `LastRelayedEventTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time in the UTC time zone when the last event was relayed to Amazon EventBridge. |
| `RemoteResource` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the partner event source associated with the event relay. It is in the format `aws.partner/salesforce.com/`***`orgID`***`/`***`channelID`***. For example: `aws.partner/salesforce.com/00DRM000000Fxts2AC/0YLRM0000004Dfg4AE`. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The status of the event relay.<br>Possible values are:<br>• `ERROR`— The event relay encountered an error while running or during a state change that the administrator initiates. During the `ERROR` state, no events are relayed to Amazon EventBridge. The system attempts periodically to recover from the error. If it succeeds, the `Status` field value changes to `RUNNING` or to the new state that the administrator selected. The event relay attempts to resume sending events from the event bus from where it left off. In rare occasions, if it can't resume after the last relayed event, it uses the error recovery option in the `relayOption` field of EventRelayConfig to determine where to resume from.<br>• `DELETED`—Reserved for future use.<br>• `PAUSED`— An administrator paused the event relay. No events are relayed to Amazon EventBridge during this status. When an administrator resumes the event relay, events are relayed from the last position in the event bus, as long as they're within the retention window.<br>• `RUNNING`— The event relay is running and actively relaying events from Salesforce to Amazon EventBridge.<br>• `STOPPED`—The event relay is stopped and no events are relayed to Amazon EventBridge. Some state information stored in EventRelayFeedback fields is deleted, such as `LastRelayedEventTime` and error fields. When the event relay is resumed, only new events are relayed. |

| Field | Details |
| --- | --- |
| | The default value is `STOPPED`. |
| `UsageType` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Reserved for future use. |

## Error Codes

This table contains the error codes and messages that a query on EventRelayFeedback can return in the `ErrorCode` and `ErrorMessage` fields.

| Error Code | Error Description |
| --- | --- |
| `sfdc.platform.eventbus.relay.aws.partner.eventsource.invalid` | The configured event relay's AWS named credentials are invalid. |
| `sfdc.platform.eventbus.relay.aws.partner.eventsource.connect.error` | The configured event relay encountered an error while connecting to Amazon EventBridge. |
| `sfdc.platform.eventbus.relay.feature.not.supported` | The event relay is configured with an unsupported feature, such as event encryption and change data capture event enrichment. |
| `sfdc.platform.eventbus.relay.event.delivery.limit.error` | You've exceeded the event delivery limit for your org. |
| `sfdc.platform.eventbus.relay.temporarily.unavailable` | The event relay is temporarily unavailable due to an internal error. |

# EventTag

Associates a word or short phrase with an Event.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
| --- | --- |
| `ItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter |

| Field Name | Details |
| --- | --- |
| | **Description**<br>ID of the tagged item. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter<br>**Description**<br>Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically. |
| `TagDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter<br>**Description**<br>ID of the parent TagDefinition object that owns the tag. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Restricted picklist<br>**Description**<br>Defines the visibility of a tag.<br>Valid values:<br>• `Public`—The tag can be viewed and manipulated by all users in an organization.<br>• `Personal`—The tag can be viewed or manipulated only by a user with a matching `OwnerId`. |

# Usage

EventTag stores the relationship between its parent TagDefinition and the Event being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

# EventWhoRelation

Represents the relationship between an event and a lead or contacts. This derived object is a filtered version of the EventRelation on page 2421 object; that is, IsParent is `true` and IsWhat is `false`. It doesn't represent relationships to invitees or to accounts, opportunities, or other objects. This object is available in API versions 29.0 and later.

EventWhoRelation allows a variable number of relationships: one lead or up to 50 contacts. Available only if you've enabled Shared Activities for your organization.

Note: EventWhoRelation objects aren't created for child events.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
|---|---|
| `EventId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the ID of the event. |
| `RelationId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the ID of the contacts or lead related to the event. |
| `Type` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates whether the person related to the event is a contact or lead. |

## Usage

**Apex example that queries relations to a contact or lead**

```
List<EventWhoRelation> whoRelations = [SELECT Id, Relation.Name FROM
EventWhoRelation WHERE EventId = '00UD0000005zijD'];
```

SEE ALSO:

Event

EventRelation

# Expense

Represents an expense linked to a work order. Service resource technicians can log expenses, such as tools or travel costs. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the account associated with the linked work order. |
| `Amount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The amount of the expense. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A description for the expense. |
| `Discount` | **Type**<br>percent<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The percentage deducted from the `Subtotal` price. Available in version 51.0 and later. |
| `ExpenseEndDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If the expense was incurred over multiple days, the Expense End Date is the last day that the expense covers. |
| `ExpenseNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The number that uniquely identifies the expense. |
| `ExpenseStartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If the expense was incurred over multiple days, the Expense Start Date is the first day that the expense covers. |

| Field | Details |
| --- | --- |
| `ExpenseType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The type of expense. Possible values are:<br>• `Billable`<br>• `Non-Billable`<br>The default value is `Billable`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who owns the expense record. |
| `Quantity` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The number of items purchased in this record. Available in version 51.0 and later. |
| `Subtotal` | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The subtotal price calculated as the product of `Quantity` and `UnitPrice`. Available in version 51.0 and later.<br>This is a calculated field. |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A title that identifies the expense.<br>This field is available in API version 50.0 and later. |
| `TotalPrice` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total price of the transaction which is equal to the discounted subtotal: `Subtotal` - (`Discount` * `Subtotal`). Available in version 51.0 and later.<br>This is a calculated field. |
| `TransactionDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The day that the expense was incurred, or the payment date for the expense. |
| `UnitPrice` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The price of one item on the record. Available in version 51.0 and later. |
| `WorkOrderId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the work order associated with the expense. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**ExpenseChangeEvent (API version 55.0)**
Change events are available for the object.

**ExpenseFeed**
Feed tracking is available for the object.

**ExpenseHistory**
History is available for tracked fields of the object.

**ExpenseOwnerSharingRule**
Sharing rules are available for the object.

**ExpenseShare**
Sharing is available for the object.

# ExpenseReport

Represents a report that summarizes expenses. This object is available in API version 50.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization. |

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A description for the expense report. |
| `ExpenseReportNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>An auto-generated number identifying the expense report. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who owns the expense report record. |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>A title that identifies the expense report. |
| `TotalExpenseAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of all expense entries in the report.<br>This is a calculated field. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**ExpenseReportFeed**
Feed tracking is available for the object.

**ExpenseReportHistory**
History is available for tracked fields of the object.

**ExpenseReportShare**
Sharing is available for the object.

# ExpenseReportEntry

Represents an entry in an expense report. This object is available in API version 50.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `Amount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of the expense. |

| Field | Details |
| --- | --- |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization. |
| `ExpenseId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The expense that corresponds to the expense report entry. |
| `ExpenseReportEntryNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>An auto-generated number identifying the expense report entry. |
| `ExpenseReportId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The expense report that's associated with the expense report entry. |
| `ExpenseType` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The type of expense. Possible values are:<br>• `Billable`<br>• `Non-Billable`<br>The default value is `Billable`. |
| `LastReferencedDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. |
| `Title` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A title that identifies the expense. |
| `TransactionDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The day that the expense was incurred, or the payment date for the expense. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**ExpenseReportEntryFeed**
Feed tracking is available for the object.

**ExpenseReportEntryHistory**
History is available for tracked fields of the object.

# ExpressionFilter

Represents a logical expression that's used to control the execution of macro instructions. This object is available in API version 46.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `ContextId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. The ID of the MacroInstruction object that contains the expression. |
| `FilterConditionLogic` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Optional. The filter conditions to use and the order in which to apply them. For example, '1 AND 2' evaluates condition 1 and then condition 2. |
| `FilterDescription` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Optional. A description of the filter expression that helps to explain the logic to users. For example, 'Applies to New cases.' |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Optional. A label for the expression. |

## Usage

The ExpressionFilter object is used with the `IF` and `ELSEIF` operations in a MacroInstruction. It lets you specify a logical expression that determines whether macro instructions are executed. The object indicates whether any or all conditions must be true.

To represent the conditions that are evaluated, this object uses one or more ExpressionFilterCriteria child objects. The ExpressionFilter to be used with each criteria is specified in the ExpressionFilterCriteria's ExpressionFilterId field.

For example, to represent the following conditional statement, the ExpressionFilter object specifies the `FilterConditionLogic` field as `1 AND 2`, where 1 and 2 are ExpressionFilterCriteria objects. In this example, condition 1 is `Case.Status EQUALS New`, and condition 2 is `Case.Origin EQUALS Phone`.

```
IF (Case.Status EQUALS New) AND (Case.Origin EQUALS Phone)
      Select Email QuickAction
      Set Subject…
      Set To…
      Set Body…
      Submit
ENDIF
```

# ExpressionFilterCriteria

Represents a condition in an expression that's used to control the execution of macro instructions. This object is available in API version 46.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `ExpressionFilterId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. The ID of the ExpressionFilter object that references this condition. |
| `FilterTarget` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required. The target object or field used in the condition. For example, to create a condition that applies to new cases, use `Case.Status` as the `FilterTarget`. |
| `FilterTargetValue` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Optional. The value that's compared to the value of the FilterTarget. For example, to create a condition that applies to new cases, use `New` as the `FilterTargetValue`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Optional. A label for the condition. |
| `Operation` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Required. Specifies the operator used to compare the target field and the target value. For example, to create a condition that applies to new cases, use EQUALS for the `Operation` field, as in `Case.Status EQUALS New`.<br>• `EQUALS`<br>• `NOTEQUALS`<br>• `CONTAINS`<br>• `NOTCONTAIN` |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required. The order in which the criteria are evaluated. |

# Usage

ExpressionFilterCriteria is a child object of the ExpressionFilter object. Use these objects with the `IF` and `ELSEIF` operations in a MacroInstruction to control instruction execution. Each condition in a ExpressionFilterCriteria compares a target object or field to a value using a condition operator; for example, `Case.Status EQUALS New`.

# ExpressionSetConstraintObj

Represents the association between a Product object and the constraint model tags defined in a given constraint model. This object is available in API version 63.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available in orgs where Revenue Cloud is enabled.

## Fields

| Field | Details |
|---|---|
| `ConstraintModelTag` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The product tag that is defined in the constraint model, for example, `Laptop`. |
| `ConstraintModelTagType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of the product tag that is defined in the constraint model.<br>Possible values are:<br>• `Port`<br>• `Type`<br>The default value is `Type`. |
| `ExpressionSetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The expression set associated with the expression set constraint object.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>ExpressionSet<br>**Refers To**<br>ExpressionSet |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user accessed this record or list view (LastReferencedDate) but didn't view it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the expression set constraint. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>For internal use only.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |

| Field | Details |
| --- | --- |
| `ReferenceObjectId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The object associated with the expression set constraint object.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ReferenceObject<br>**Refers To**<br>Product2, ProductClassification, ProductRelatedComponent |

# ExtDataShare

Represents a data share, which is a collection of Data Cloud objects that can be shared with other Data Cloud orgs or third-party partners. This object is available in API version 56.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `DataShareType` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of data share, indicating the direction of data flow. If `Outbound`, the data share was created on this Data Cloud org and is shared to third-party partners or with another Data Cloud org. If `Inbound`, the data share comes from another Data Cloud org and is shared to this Data Cloud org.<br>Possible values are:<br>• `Inbound`<br>• `Outbound`<br>The default value is `Outbound`. |

| Field | Details |
| --- | --- |
| DataSpaceId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the data space under which the data share was created.<br>This field is a relationship field.<br>**Relationship Name**<br>DataSpace<br>**Refers To**<br>DataSpace |
| InboundDataShareName | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The name of the data share in the source Data Cloud org. |
| InboundDataShareOrgIdentifier | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the source Data Cloud org that shared a data share with the target org. |
| LastReferencedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record. |
| LastViewedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. |

| Field | Details |
| --- | --- |
| | If this value is null, and `LastReferenceDate` is not null, the user accessed this record or list view indirectly. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the data share. |
| `ObjectCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of Data Cloud objects added to this data share. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ExtDataShareChangeEvent on page 68**
Change events are available for the object.

**ExtDataShareFeed on page 55**
Feed tracking is available for the object.

**ExtDataShareHistory on page 63**
History is available for tracked fields of the object.

**ExtDataShareOwnerSharingRule on page 65**
Sharing rules are available for the object.

**ExtDataShareShare on page 67**
Sharing is available for the object.

# ExternalAccountHierarchy

Represents the external account hierarchy, which works like a role-based hierarchy. Use ExternalAccountHierarchy to allow partner and customer users to share data with other external accounts in their hierarchy.This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

You must have a Partner or Customer Community Plus license.

## Fields

| Field | Details |
|---|---|
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the account in the external account hierarchy. |
| CurrencyISOCode | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Possible values are:<br>• `GBP`— British Pound<br>• `USD`— U.S. Dollar<br>The default value is `USD`. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The description of the external account hierarchy. |
| `HierarchyType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `CustomerPortal` — Customer<br>• `Partner`<br>The default value is `Partner`. |
| `IsAccessibleToParent` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Allows data to be shared with parent account in the account hierarchy. The default value is `true`. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>When true, the hierarchy is turned on. The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the external account hierarchy. |

| Field | Details |
| --- | --- |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the account owner. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the parent account. |

# ExternalAccountHierarchyHistory

Represents the history of changes to values in the fields of an external account hierarchy. This object is available in API version 50.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

## Special Access Rules

You must have a Partner or Customer Community Plus license.

## Fields

| Field | Details |
| --- | --- |
| `DataType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Possible values are:<br>• Address<br>• AnyType |

# ExternalClientApplication

For internal use only.

# ExternalDataSource

Represents an external data source, which defines connection details for integration with data and content that are stored outside the Salesforce org. This object is available in API version 27.0 and later.

Note: All credentials stored within this entity are encrypted under a framework that is consistent with other encryption frameworks on the platform. Salesforce encrypts your credentials by auto-creating org-specific keys. Credentials encrypted using the previous encryption scheme have been migrated to the new framework.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

From API version 48.0 onwards, only authenticated internal and external users can access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `AuthProviderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Salesforce ID of the authentication provider, which defines the service that provides the login process and approves access to the external system.<br>Only users with the “Customize Application” and “Manage AuthProviders” permissions can view this field. |

| Field Name | Details |
| --- | --- |
| | This field is available in API version 39.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>AuthProvider<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AuthProvider |
| `CustomConfiguration` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>A JSON-encoded configuration string that defines parameters specific to the type of external data source. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. |
| `Endpoint` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The URL of the external system, or if that URL is defined in a named credential, the named credential URL.<br>A named credential URL contains the scheme `callout:`, the name of the named credential, and an optional path. For example: `callout:My_Named_Credential/some_path`. You can append a query string to a named credential URL. Use a question mark (?) as the |

| Field Name | Details |
| --- | --- |
| | separator between the named credential URL and the query string. For example: `callout:My_Named_Credential/some_path?format=json`. |
| `isWritable` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Lets the Lightning Platform and users in this org create, update, and delete records for external objects associated with the external data source. The external object data is stored outside the org. By default, external objects are read only.<br>Available only for Salesforce Connect external data sources. Available in API version 35.0 and later. However, with the cross-org adapter for Salesforce Connect, you can set this field to `true` only in API version 39.0 and later. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language of the `MasterLabel`. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Master label for the external data source. This internal label doesn't get translated. |
| `NamedCredentialId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The Salesforce ID of the referenced named credential for an external data source. Required for Salesforce Connect adapters for Amazon DynamoDB, Amazon Athena, GraphQL, and OData 4.01. For connecting to other external data sources, the field must be null. This field is available in API version 58.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>NamedCredential |

| Field Name | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>NamedCredential |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation. |
| `PrincipalType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Specifies whether the org uses one set (`NamedUser`), multiple sets (`PerUser`), or no (`Anonymous`) credentials to access the external system. Each set of credentials corresponds to a login account on the external system. Corresponds to `Identity Type` in the user interface. |
| `Protocol` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Specifies whether to use OAuth, password authentication, or no authentication to access the external system.<br>Some types of external data sources support only one value.<br>• For cloud-based Files Connect external systems, select **Oauth 2.0**.<br>• For on-premises systems, select **Password Authentication**.<br>• For Simple URL data sources, select **No Authentication**.<br>Additional authentication protocols are supported for the Amazon DynamoDB, Amazon Athena, Snowflake, GraphQL, and OData 4.01 external data sources.<br>• AwsSv4<br>• Basic<br>• Custom |

| Field Name | Details |
| --- | --- |
| | • Jwt<br>• JwtExchange |
| `Repository` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Used for SharePoint Online. An optional name of the repository in the data source. Not applicable to all data source types. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Specifies the adapter that connects to the external system. |

## Usage

Define an external data source to connect to data or content that's stored outside the Salesforce org. Then create external objects, which map to the external system's data and behave similarly to custom objects.

Note: Some external data source fields rely on per-user authentication to connect with an external system. If an admin edits one of these fields, then the previously authenticated credentials can get invalidated, requiring individual users to reauthenticate.

SEE ALSO:

ExternalDataUserAuth

NamedCredential

# ExternalDataUserAuth

Stores authentication settings for a Salesforce user to access an external system. The external system must be defined in an external data source or a named credential that's configured to use per-user authentication. This object is available in API version 27.0 and later.

Note: All credentials stored within this entity are encrypted under a framework that is consistent with other encryption frameworks on the platform. Salesforce encrypts your credentials by auto-creating org-specific keys. Credentials encrypted using the previous encryption scheme have been migrated to the new framework.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

# Fields

| Field Name | Details |
| --- | --- |
| `AuthProviderId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Salesforce ID of the authentication provider, which defines the service that provides the login process and approves access to the external system.<br>Only users with the “Customize Application” and “Manage AuthProviders” permissions can view this field.<br>This field is available in API version 39.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>AuthProvider<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AuthProvider |
| `ExternalDataSourceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Salesforce ID of the external data source or named credential that defines the external system.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>ExternalDataSource<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ExternalDataSource, NamedCredential |
| `Password` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Password portion of the credentials for the Salesforce user to access the external system. |
| `Protocol` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies whether to use OAuth, password authentication, or no authentication when the user accesses the external system.<br>Additional authentication protocols are supported for the Amazon DynamoDB, Amazon Athena, Snowflake, GraphQL, and OData 4.01 external data sources.<br>• AwsSv4<br>• Basic<br>• Custom<br>• Jwt<br>• JwtExchange |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the Salesforce user who's accessing the external system.<br>This is a relationship field.<br>**Relationship Name**<br>User<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `Username` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Username portion of the credentials for the Salesforce user to access the external system. |

## Usage

These authentication settings enable a Salesforce user to access an external system. The external system is defined in Salesforce as one of the following.

- External data source—Provides access to external objects, whose data is stored outside the Salesforce organization.
- Named credential—Enables the user's actions to trigger authenticated callouts to the endpoint that's specified in the named credential.

If you grant users access to the external data source or named credential via permission sets or profiles, those users can manage their own authentication settings. See Store Authentication Settings for External Systems in the Salesforce Help.

SEE ALSO:

ExternalDataSource

NamedCredential

# ExternalEncryptionRootKey

Represents metadata about root keys stored in third-party key stores that are used to generate and secure keys that encrypt Salesforce data. This object is available in API version 58.0 and later.

Root keys are used to generate data encryption keys (DEKs) in Salesforce, which are in turn used to encrypt and decrypt data. Root keys are also used as wrapping keys to secure DEKs in the Salesforce database.

## Supported Calls

`describeSObjects()`, `query()`, `update()`

## Special Access Rules

This object is available as part of the Shield and Salesforce Platform Encryption add-on subscriptions. Access to this object also requires the Cache-Only Key Service add-on subscription.

## Fields

| Field | Details |
|---|---|
| `ActivatedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>The date the key was activated in Salesforce. |
| `CreatedBy` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The email address of the user who created the root key. For example, `user@example.com`. |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The user-defined description of the root key. |
| `LastModifiedBy` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The email address of the user who most recently modified the key. For example, `user@example.com`. |
| `Region` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The region for the customer managed key. For example, if the `RootKeyService` is `AWS`, the region is an Amazon Web Services (AWS) region such as `us-east1`. |
| `RootKeyIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>The unique key identifier from the external KMS, such as an AWS Amazon Resource Name (ARN). For example, `arn:aws:kms:us-west-2:123456789000:key/123ab456-7cd8-9012-3e4f-5gh678i901j2` |
| `RootKeyService` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The external key management service connected to Salesforce. For example, `AWS`. |
| `Status` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The status of the key. This is the only value that can be changed using update(). You can only change the status from Active to Inactive, or from Inactive to Active.<br>Possible values are:<br>• `Activation Pending`—Salesforce is waiting for confirmation of a valid key policy in the external key store.<br>• `Active`—Can be used to encrypt new DEKs and decrypt existing DEKs.<br>• `Archived`—Can't encrypt new DEKs. Can be used to decrypt previously created DEKs.<br>• `Canceled`—Root key activation canceled by a user.<br>• `Inactive`—The root key, and the DEKs that it encrypts, are inaccessible. Inaccessible DEKs can't be used to decrypt data, which renders that data also inaccessible.<br>• `Unavailable`—The root key, and the DEKs that it encrypts, cannot be accessed. The root key has been removed or deactivated by the managing KMS. |

# Usage

Three functions are available: `describeSObjects()`,`query()`, and `update()`

**Describe an external root key with `describeSObjects()`**

To get information about the ExternalEncryptionRootKey sObject, use `describe`.

```
curl --location 'https://DOMAIN.my.salesforce.com/services/data/v62.0/sobjects/'\
ExternalEncryptionRootKey/describe'
--header 'Content-Type: application/json' \
--header 'Authorization: Bearer TOKEN'
```

On success, the response is the full JSON description of the ExternalEncryptionRootKey sObject.

**Get info on an external root key with `query()`**

To get information about a specific root key, use `query` on the `ExternalEncryptionRootKey` sObject. Use the Identifier value as listed on the Key Management Page for the root key Id in the WHERE clause.

```
curl --location 'https://DOMAIN.my.salesforce.com/services/data/v62.0/query?' \
?q=SELECT+FIELDS(ALL)+FROM+ExternalEncryptionRootKey+WHERE+Id='48q001t5ddzbucnAAA'+\
--header 'Content-Type: application/json' \
--header 'Authorization: Bearer TOKEN'
```

On success, the response is be similar to

```
{
    "totalSize": 1,
    "done": true,
    "records": [
        {
            "attributes": {
                "type": "ExternalEncryptionRootKey",
                "url":
"/services/data/v62.0/sobjects/ExternalEncryptionRootKey/48q001t5ddzbucnAAA"
            },
            "Id": "48q001t5ddzbucnAAA",
            "RootKeyIdentifier": "97ee8238-c5ac-4320-a2d0-a728aaefd567",
            "CreatedDate": "2024-08-05T17:32:11.841+0000",
            "CreatedBy": "charley.t.pulasky@wise-raccoon-od1ly6.com",
            "LastModifiedDate": "2025-02-12T18:36:11.063+0000",
            "LastModifiedBy": "charley.t.pulasky@wise-raccoon-od1ly6.com",
            "RootKeyService": "SF",
            "Region": "KEY REGION",
            "Status": "Active",
            "Description": null,
            "ActivatedDate": null
        }
    ]
}
```

**Update Status on an external root key with `update()`**

To update the status of an `ExternalEncryptionRootKey` from `Active` to `Inactive`, or from `Inactive` to `Active`, use PATCH on the specific key object. Use the vaule for `Identifier` as listed on the Key Management Page for the root key identifier.

```
curl --location --request PATCH
'https://DOMAIN.my.salesforce.com/services/data/v62.0/sobjects/ExternalEncryptionRootKey/ROOTKEYIDENTIFIER'
 \
--header 'Content-Type: application/json' \
--header 'Authorization: Bearer TOKEN'\
--data '{
 "Status": "Active"
}'
```

On success, the response is be similar to I SEE NO RESPONSE.

# ExternalEvent

Holds native iOS or Android calendar event details for the Salesforce Today feature in the Salesforce mobile app. This object is available in API version 35.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The Salesforce Today app is available in Salesforce for Android and Salesforce for iOS. It's not available in the Salesforce desktop site. Access to Today is available only if you grant Calendar permission to the Salesforce mobile app.

## Fields

| Field | Details |
|---|---|
| `ExternalId` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the external event. |
| `Location` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The site where the external event takes place. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the external event's organizer. |
| `Notes` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Additional details about the external event. |
| `Time` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The time the external event is held. |

| Field | Details |
| --- | --- |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The title of the external event. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ExternalEventChangeEvent on page 68**
Change events are available for the object.

# ExternalEventMapping

Holds native iOS or Android calendar event details for the Salesforce Today feature in the Salesforce mobile app. This object is available in API version 35.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The Salesforce Today app is available in Salesforce for Android and Salesforce for iOS. It's not available in the Salesforce desktop site. Access to Today is available only if you grant Calendar permission to the Salesforce mobile app.

## Fields

| Field | Details |
| --- | --- |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date the external event ends. |

| Field | Details |
| --- | --- |
| `EventId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the Salesforce event created by the external event.<br>This field is a relationship field.<br>**Relationship Name**<br>Event<br>**Refers To**<br>Event |
| `ExternalId` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort, Update<br>**Description**<br>The ID of the external event. |
| `IsLocked` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Returns `true` if the external event is locked, or `false` if it's not.<br>The default value is `false`. |
| `IsRecurring` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the external event is recurring (true) or not (fales).<br>The default value is `false`. |
| `MayEdit` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>Indicates whether the external event can be edited (`true`) or not (`false`). |

| Field | Details |
| --- | --- |
| | The default value is `false`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the external event's organizer. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the creator of the external event.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date the external event begins. |

# ExternalSocialAccount

Represents a managed social media account on a social network such as Facebook or Twitter. This object is available in API version 29.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

# Fields

| Field Name | Details |
| --- | --- |
| `AuthorizedBy` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of the Radian6 user who added the social account to Radian6. |
| `DataSourceId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Radian6 data source for the social account. |
| `DefaultResponseAccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the managed social account to use by default when responding.<br>This is a relationship field.<br>**Relationship Name**<br>DefaultResponseAccount<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ExternalSocialAccount |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique name of the record in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. This field is automatically generated but you can supply your own value if you create the record using the API. |

| Field Name | Details |
| --- | --- |
| | Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `ExternalAccountId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the social account on the social network. |
| `ExternalPictureURL` | **Type**<br>url<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL to the picture of the social account on the social network. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Specifies whether the social account is active or not. |
| `IsAuthenticated` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Specifies whether the social account is authenticated or not. |
| `IsCaseCreationEnabled` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Specifies whether case creation for the social account is enabled or not. |

| Field Name | Details |
| --- | --- |
| `IsDataSourceActive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Specifies whether the data source is active or not. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Specifies the language of the social account. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Master label for the social account. This display value is the internal label and does not get translated. |
| `ProfileUrl` | **Type**<br>url<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL for the profile. |
| `Provider` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Social network, such as Facebook or Twitter, of the social account. |
| `ProviderUserId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>User ID for the social network of the social account. |
| `RuleId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Radian6 rule for the account. |
| `SocialPropertyId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Radian6 social property for the account. |
| `TopicId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the topic for the social account. |
| `UniqueName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Unique name for the social account. |
| `Username` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Username for the social account. |

## Usage

Although available, many of the Radian6-related fields are no longer accurate or used. We recommend using Social Engagement Resources in *Connect REST API Developer Guide*.

# ExtKnowledgeConnector

Represents a connector to a third-party knowledge source for Unified Knowledge. This object is available in API version 60.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Knowledge must be enabled in your org. Salesforce Knowledge users, unlike customer and partner users, must also be granted the Knowledge User feature license.

## Fields

| Field | Details |
|---|---|
| `IsLocked` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the automated action condition record is locked or not.<br>The default value is `false`. |
| `LastSyncDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates when the connector last synced with the third-party knowledge source to import articles into Salesforce. |
| `LastSyncStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates the status of the connector's last sync of articles from the third-party knowledge source into Salesforce.<br>Possible values are:<br>• `articleLimitExceeded`—Exceeded article or version limits<br>• `completed`—Completed<br>• `completedWithErrors`—Completed with errors<br>• `ended`—Ended<br>• `failed`—Failed<br>• `initiating`—Started<br>• `invalidCredentials`—Invalid credentials<br>• `polling`—Polling for Zoomin sync to complete<br>• `queued`—Queued<br>• `syncing`—Syncing<br>• `timedOut`—Timed Out<br>• `unavailable`—Zoomin unavailable |
| `MayEdit` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the automated import article condition record can be edited or not.<br>The default value is `false`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The connector's label in Unified Knowledge setup. |
| `NamedCredentialId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Salesforce ID of the named credential that's used for a request. The named credential identifies the third-party system and the third-party authentication settings.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>NamedCredential<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>NamedCredential |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The user ID of the owner of the connector.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PartnerConnectorIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description** |
| `ShouldOpenInSource` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether articles imported into Salesforce open in the third-party source from links in Salesforce.<br>The default value is `false`. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ExtKnowledgeConnectorOwnerSharingRule on page 65**
Sharing rules are available for the object.

**ExtKnowledgeConnectorShare on page 67**
Sharing is available for the object.

# ExtlClntAppOauthPlcyCnfg

For internal use only.

# ExtlClntAppOauthSettings

For internal use only.

# ExtlClntAppPlcyCnfg

For internal use only.

# ExtlRecShrCnct

Represents authentication data to make outbound calls to and inbound calls from an external system to publish events for Partner Connect. This object is available in API version 62.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

## Special Access Rules

To see this object, enable Partner Connect or Partner Connect for Vendors. See Set Up Partner Connect as a Partner and Set Up Partner Connect as a Vendor in *Salesforce Help*.

## Fields

| Field | Details |
|---|---|
| `CnctName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Name of the connection. |

| Field | Details |
| --- | --- |
| `CnctRole` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>System's role in the connection.<br>Possible values are:<br>• `Partner`<br>• `Vendor` |
| `CnctStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Status of the connection.<br>Possible values are:<br>• `Disabled`<br>• `Enabled`<br>• `Error`<br>• `Pending`<br>• `Unknown` |
| `ExternalClientApplicationId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of external client app representing your org's connection to the external system.<br>This field is a relationship field.<br>**Relationship Name**<br>ExternalClientApplication<br>**Refers To**<br>ExternalClientApplication |
| `ExtlSystem` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the external system. |
| `NamedCredentialId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the named credential.<br>This field is a relationship field.<br>**Relationship Name**<br>NamedCredential<br>**Refers To**<br>NamedCredential |

# ExtlRecShrCnctAccnt

Represents an association between an account and an external record share connection for Partner Connect. This object is available in API version 62.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

To see this object, enable Partner Connect or Partner Connect for Vendors. See Set Up Partner Connect as a Partner and Set Up Partner Connect as a Vendor in *Salesforce Help*.

## Fields

| Field | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the account.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Account<br>**Refers To**<br>Account |
| `ExtlRecShrCnctId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the ExtlRecShrCnct record.<br>This field is a relationship field.<br>**Relationship Name**<br>ExtlRecShrCnct<br>**Refers To**<br>ExtlRecShrCnct |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>For internal use only. |

# ExtlRecShrField

Represents an imported, exported, or updated external record share field for Partner Connect. This object is available in API version 63.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To see this object, enable Partner Connect or Partner Connect for Vendors. See Set Up Partner Connect as a Partner and Set Up Partner Connect as a Vendor in *Salesforce Help*.

# Fields

| Field | Details |
|---|---|
| `ExtlRecShrObjectId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the ExtlRecShrObject record.<br>This field is a relationship field.<br>**Relationship Name**<br>ExtlRecShrObject<br>**Refers To**<br>ExtlRecShrObject |
| `FieldDefaultValue` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Default value of the field. |
| `FieldSetType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Set of fields associated with this record.<br>Possible values are:<br>• `ExportedFields`<br>• `ImportedFields`<br>• `InternalFields` |
| `IsFieldNillable` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this field can be set to null (`true`) or not (`false`).<br>The default value is `false`. |

| Field | Details |
| --- | --- |
| `SendFieldUpdates` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether updates are tracked for this field, sent to the connected org, and stored in the ExtlRecShrLead or ExlRecShrOpportunity objects (`true`) or not (`false`).<br>The default value is `false`. |
| `SharedFieldDevName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Developer name of the field. |
| `SharedFieldLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Label of the field. |
| `SharedFieldLength` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Maximum length of the field. |
| `SharedFieldType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Field type of the imported, exported, or updated field.<br>Possible values are:<br>• `Address`<br>• `AddressCountry`<br>• `AddressState`<br>• `Boolean` |

| Field | Details |
| --- | --- |
| | • Currency<br>• DateOnly<br>• DateTime<br>• Double<br>• DynamicEnum<br>• Email<br>• EntityId<br>• EnumOrId<br>• Fax<br>• Integer<br>• MultiLineText<br>• Percent<br>• Phone<br>• StaticEnum<br>• Text<br>• Url |

# ExtlRecShrFieldMap

Represents the external record share field mapping between the sender and receiver for Partner Connect. This object is available in API version 62.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To see this object, enable Partner Connect or Partner Connect for Vendors. See Set Up Partner Connect as a Partner and Set Up Partner Connect as a Vendor in *Salesforce Help*.

## Fields

| Field | Details |
| --- | --- |
| ImportedFieldId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the ExtlRecShrField record containing the field data sent from the external system.<br>This field is a relationship field.<br>**Relationship Name**<br>ImportedField<br>**Refers To**<br>ExtlRecShrField |
| `InternalFieldId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the ExtlRecShrField record containing the field data received on the internal system.<br>This field is a relationship field.<br>**Relationship Name**<br>InternalField<br>**Refers To**<br>ExtlRecShrField |

# ExtlRecShrLead

Represents the Lead record of a vendor org if you're a partner. If you're a vendor for Partner Connect, this object represents a partner org. This object is available in API version 62.0 and later.

In a related list, the label of this object is Connected External Leads.

**Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

To see this object, enable Partner Connect or Partner Connect for Vendors. See Set Up Partner Connect as a Partner and Set Up Partner Connect as a Vendor in *Salesforce Help*.

## Fields

| Field | Details |
|---|---|
| `ExtlRecShrCnctId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the external record share connection.<br>This field is a relationship field.<br>**Relationship Name**<br>ExtlRecShrCnct<br>**Refers To**<br>ExtlRecShrCnct |
| `LeadId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the partner lead.<br>This field is a relationship field.<br>**Relationship Name**<br>Lead<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>Lead (the master object) |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>For internal use only. |

# ExtlRecShrObject

Represents a shared object for Partner Connect. This object is available in API version 62.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To see this object, enable Partner Connect or Partner Connect for Vendors. See Set Up Partner Connect as a Partner and Set Up Partner Connect as a Vendor in *Salesforce Help*.

## Fields

| Field | Details |
|---|---|
| `DefaultRecordOwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the shared record owner. The owner can be a user or a queue, represented by a Group ID.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>DefaultRecordOwner<br>**Refers To**<br>Group, User |
| `ExtlObjectType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Object type in the external org or system that is part of the object field mapping.<br>Possible values are:<br>• `ExtlRecShrLead`<br>• `ExtlRecShrOpportunity`<br>• `Lead`<br>• `Opportunity` |
| `ExtlRecShrCnctId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the external record share connection.<br>This field is a relationship field.<br>**Relationship Name**<br>ExtlRecShrCnct<br>**Refers To**<br>ExtlRecShrCnct |

| `InternalObjectType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Object type in your org or system used to group field selections and field mappings.<br>Possible values are:<br>• `ExtlRecShrLead`<br>• `ExtlRecShrOpportunity`<br>• `Lead`<br>• `Opportunity` |

# ExtlRecShrOpportunity

Represents the opportunity for Partner Connect in the vendor org if you're a partner and the partner org if you're the vendor. This object is available in API version 62.0 and later.

The label of this object in the related list is Connected External Leads.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

To see this object, enable Partner Connect or Partner Connect for Vendors. See Set Up Partner Connect as a Partner and Set Up Partner Connect as a Vendor in *Salesforce Help*.

## Fields

| Field | Details |
|---|---|
| `ExtlRecShrCnctId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the external record share connection.<br>This field is a relationship field.<br>**Relationship Name**<br>ExtlRecShrCnct<br>**Refers To**<br>ExtlRecShrCnct |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>For internal use only. |
| `OpportunityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the associated opportunity.<br>This field is a relationship field.<br>**Relationship Name**<br>Opportunity<br>**Relationship Type**<br>Master-detail |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Opportunity (the master object) |

# ExtlRecShrPcklstOptn

Represents a picklist option of an external record share picklist field shared between a partner and vendor for Partner Connect. This object is available in API version 62.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To see this object, enable Partner Connect or Partner Connect for Vendors. See Set Up Partner Connect as a Partner and Set Up Partner Connect as a Vendor in *Salesforce Help*.

## Fields

| Field | Details |
| --- | --- |
| `ExtlRecShrFieldId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the associated external record share field of type picklist.<br>This field is a relationship field.<br>**Relationship Name**<br>ExtlRecShrField<br>**Refers To**<br>ExtlRecShrField |
| `IsDefaultOption` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this picklist option is set as the default option (`true`) or not (`false`).<br>The default value is `false`. |

| Field | Details |
| --- | --- |
| `SharedOptionLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Label of the picklist option. |
| `SharedOptionValue` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Value of the picklist option. |

# ExtlRecShrPicklistMap

Represents the external record share picklist field mapping between the partner and vendor system for Partner Connect. This object is available in API version 62.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To see this object, enable Partner Connect or Partner Connect for Vendors. See Set Up Partner Connect as a Partner and Set Up Partner Connect as a Vendor in *Salesforce Help*.

## Fields

| Field | Details |
| --- | --- |
| `ImportedPcklstOptionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the external record share picklist option of the external system.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>ImportedPcklstOption<br>**Refers To**<br>ExtlRecShrPcklstOptn |
| `InternalPcklstOptionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the external record share picklist option of the internal system.<br>This field is a relationship field.<br>**Relationship Name**<br>InternalPcklstOption<br>**Refers To**<br>ExtlRecShrPcklstOptn |

# ExtlRecShrRecordMap

Represents the lead or opportunity being mapped between a partner and vendor for Partner Connect. This object is available in API version 62.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

To see this object, enable Partner Connect or Partner Connect for Vendors. See Set Up Partner Connect as a Partner and Set Up Partner Connect as a Vendor in *Salesforce Help*.

## Fields

| Field | Details |
| --- | --- |
| `ExtlRecShrCnctId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the external record share connection.<br>This field is a relationship field.<br>**Relationship Name**<br>ExtlRecShrCnct<br>**Refers To**<br>ExtlRecShrCnct |
| `ExtlRecord` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the lead or opportunity record on the external system. |
| `InboundStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Status of imports and updates received.<br>Possible values are:<br>• `ImportSuccess`<br>• `ImportConctExtlRecError`<br>• `UpdateSuccess`<br>• `UpdateFieldMapError`<br>• `UpdateConctExtlRecError`<br>• `UpdateUnknownError` |
| `InternalRecordId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the lead or opportunity record on the internal system.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>InternalRecord |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Master-detail<br>**Refers To**<br>Lead, Opportunity (the master object) |
| `IsImported` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the record originated on the internal system (`true`) or external system (`false`).<br>The default value is `false`. |
| `LastModifiedSent` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp of the last record update between the vendor and partner. This field doesn't capture when the result is received. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>For internal use only. |
| `OutboundStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Status of exports, updates, and results received.<br>Possible values are:<br>• `ExportSuccess`<br>• `ExportInProgress`<br>• `ExportSuccessSkipped`<br>• `ExportSuccessPartial`<br>• `ExportPublishFieldMapError` |

| Field | Details |
| --- | --- |
| | • ExportSubscribeFieldMapError<br>• ExportPublishEventError<br>• ExportPublishUnknownError<br>• ExportSubscribeUnknownError<br>• ExportPublishConnectionError<br>• UpdateInProgress<br>• UpdateInProgressUpdateSuccess<br>• UpdatePublishFieldMapErrorUpdateSubscribeRecordNotFound<br>• UpdatePublishFieldMapError<br>• UpdateSubscribeFieldMapError<br>• UpdatePublishConnectionError<br>• UpdatePublishEventError<br>• UpdatePublishUnknownError<br>• UpdateSubscribeUnknownError |
| UniqueRecordKey | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Record key used internally for indexing. If IsImported is false, then this field contains the InternalRecordId value. If IsImported is true, this field contains the ExtlRecord value.<br>This field is a calculated field. |

# FeedAttachment

Represents an attachment to a feed item, such as a file attachment or a link. Use FeedAttachment to add various attachments to one feed item. This object is available in API version 36.0 and later.

## Supported Calls

create(), delete(), describeSObjects(), idEnabled(), query(), retrieve(), update(), upsert()

## Special Access Rules

- You can read, create, update, or delete a FeedAttachment only if you have the corresponding access to the associated FeedItem.
- Inline images aren't creatable, updatable, or deletable through SOAP API.

# Fields

| Field Name | Details |
|---|---|
| `FeedEntityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the associated feed entity that contains this attachment. |
| `RecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the record that this feed attachment contains. For inline images, `RecordId` is a ContentDocument ID. For content attachments, `RecordId` is a ContentVersion ID, For feed items, `RecordId` is a FeedItem ID. |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The title of this feed attachment. When `Type` is `Link`, `Title` value is the label for the attachment link. Otherwise, `Title` value isn't used. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of this feed attachment. Valid values are:<br>• 0 `Content`—A content attachment.<br>• 1 `InlineImage`—An inline image. The system creates an inline image attachment when an image is added to the body of the associated FeedItem. You can't add an inline image directly using FeedAttachment.<br>• 2 `Link`—A link.<br>• 3 `FeedEntity`—A feed entity, for example, a post that is shared. Available in API version 39 and later in Lightning Experience.<br>• 4 `ChatterExtension`—a Rich Publisher App that's integrated with the Chatter publisher. |

| Field Name | Details |
| --- | --- |
| | • 5 `Record`—A record. |
| `Value` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The string value of this FeedAttachment. This field is optional. If the feed attachment is a Link FeedAttachment, the value is the link URL string. |

## Usage

- This Apex example shows how to add an attachment to a Lead using API version 36.0 and later. First, post a feed item.

```
//create and insert post
FeedItem post = new FeedItem();
post.Body = 'HelloThere';
post.ParentId = 'ID_OF_LEAD_ENTITY';
post.Title = 'FileName';
insert post;
```

  Then insert the attachment.

```
//create and associate a content attachment to the post
FeedAttachment feedAttachment = new FeedAttachment();
feedAttachment.FeedEntityId = post.Id;
feedAttachment.RecordId = 'ID_OF_CONTENT_VERSION';
feedAttachment.Title = 'FileName';
feedAttachment.Type = 'CONTENT';
insert feedAttachment;
```

- You can create only one link attachment (`FeedAttachment` of type `Link`) per feed item.
- If the feed item type is one of the following, you can add content or link feed attachments to a FeedItem.
  - `AdvancedTextPost`
  - `TextPost`
  - `ContentPost`
  - `LinkPost`
  - `QuestionPost`
- When a `FeedAttachment` is added or removed from a feed item, Salesforce updates the type of the feed item to its most appropriate value, as follows.
  - If all content feed attachments are removed from a feed item of type `ContentPost`, the type of this feed item is updated to `TextPost`.
  - Conversely, if a content feed attachment is added to a feed item of type `TextPost`, the type of this feed item is updated to `ContentPost`.

  - If all link feed attachments are removed from a feed item of type `LinkPost`, the type of this feed item is updated to `TextPost`.
  - Conversely, if a link feed attachment is added to a feed item of type `TextPost`, the type of this feed item is updated to `LinkPost`.
  - The type of all other feed items, such as `QuestionPost` or `AdvancedTextPost` feed items, doesn't change when any feed attachments are added or removed.
  - If a content feed attachment is added to a feed item of type `LinkPost`, the feed item type is updated to `ContentPost`.
  - If all content attachments are removed from a feed item of type `ContentPost`, but there's also a link attachment, the feed item type is updated to `LinkPost`.
- Users without administrator privileges can't retrieve a FeedAttachment by its ID in a SOQL query. They can retrieve attachments by specifying the associated `FeedEntityId`, as follows:

```
SELECT Id FROM FeedAttachment WHERE FeedEntityId = 'some_feedItem_id'
```

- Alternatively, retrieve attachments by using a SOQL query on FeedItem with a subquery on the FeedAttachments child relationship, as follows.

```
SELECT Body, (SELECT RecordId, Title, Type, Value FROM FeedAttachments)
FROM FeedItem
WHERE Id = 'some_feedItem_id'
```

- FeedAttachment is not a triggerable object. You can access feed attachments in FeedItem *update* triggers by retrieving them through a SOQL query. For a trigger example, and to learn about trigger considerations for FeedAttachment, see Triggers for Chatter Objects in the *Apex Developer Guide*.

# FeedComment

Represents a comment added to a feed by a user. This object is available in API version 18.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

Note the following when working with feed comments.

- You must have read access to the feed's parent type to see a FeedComment record.
- You must be able to access the feed to add a comment.
- If the comment is related to a user record, the user can delete the comment. For example, if John Smith makes a comment on Sasha Jones' profile feed, Sasha can delete the comment.
- If the context user has the Insert System Field Values for Chatter Feeds user permission, the `create` field property is available on `CreatedBy` and `CreatedDate` system fields. During migration, the context user can set these fields to the original post's author and creation date. The fields can't be updated after migration.

You can delete all feed items you created. To delete feed items you didn't create, you must have one of these permissions:

- Modify All Data

- Modify All Records on the object associated with the feed and delete permission on the parent feed
- Moderate Chatter

  Note: Users with the Moderate Chatter permission can delete only the feed items and comments they can see.

- Manage Unlisted Groups

  Only users with this permission can delete items in unlisted groups.

## Fields

| Field | Details |
|---|---|
| `CommentBody` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The text in the comment. |
| `CommentType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of comment:<br>• `ContentComment`—an uploaded file on a comment<br>• `TextComment`—a direct text entry on a comment<br>Before API version 24.0, a text entry was required on a comment. As of version 24.0, a text entry is optional if the `CommentType` is `ContentComment`. |
| `FeedItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the feed item containing the comment. |
| `HasEntityLinks` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the feed `CommentBody` includes at least one link to a record. |

| Field | Details |
| --- | --- |
| | Note: This field is available starting in API version 43.0. |
| `InsertedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the `InsertedBy` value is set to the ID of the context user.<br>This is a relationship field.<br>**Relationship Name**<br>InsertedBy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `IsRichText` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the feed `CommentBody` contains rich text. If you post a rich text feed comment using SOAP API, set `IsRichText` to `true` and escape HTML entities from the body. Otherwise, the comment is rendered as plain text.<br>Rich text supports the following HTML tags:<br>• `<p>`<br>Tip: Though the `<br>` tag isn't supported, you can use `<p> </p>` to create lines.<br>• `<a>`<br>• `<b>`<br>• `<code>`<br>• `<i>`<br>• `<u>`<br>• `<s>`<br>• `<ul>`<br>• `<ol>`<br>• `<li>` |

| Field | Details |
| --- | --- |
| | • `<img>`<br>The `<img>` tag is accessible only through the API and must reference files in Salesforce similar to this example: `<img src="sfdc://069B0000000omjh"></img>`<br>Note: This attribute is available as of API version 38.0. In API version 38.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 37.0 and prior, all rich text appears as a plain-text representation. |
| `IsVerified` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Determines whether a comment on a question is marked as Company Verified.<br>This field is available in API version 41.0 and later. |
| `LastEditById` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the user who last edited the feed comment. |
| `LastEditDate` | **Type**<br>datetime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The date the feed comment was last edited. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of a record associated with the feed comment. For example, if you are commenting on a change to a field on Account, `ParentId` is set to the account ID. |
| `RelatedRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the ContentVersion record associated with a `ContentComment`. This field is null for all comments except `ContentComment`.<br>For example, set this field to an existing ContentVersion ID and set the `CommentType` to `ContentComment`. |
| `Revision` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The number of times the comment was revised. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies whether this feed comment is published and visible to all who can access the parent feed item. To change a comment's status, the comment's parent feed item must be in a published state. This field is available in API version 38.0 and later.<br>Possible values are:<br>• `Published`—The comment is visible to all who can access the parent feed item.<br>• `PendingReview`—The comment is visible to its author. Users see the parent feed item and have View All Data or Can Approve Feed Post and Comment permission also see the comment. The author can delete the comment as can users who see the comment and have Can Approve Feed Post and Comment or Modify All Data permission. If the parent feed item is published, the author can edit the comment. Users who see the comment and have Can Approve Feed Post and Comment or Modify All Data permission can also edit the comment. Users with Can Approve Feed Post and Comment or Modify All Data permission can change comment status from Published to PendingReview and from PendingReview to Published.<br>Some actions are blocked when a feed comment is pending review:<br>– Select as Best—When a feed comment that is marked as best answer becomes unpublished, it's removed as the best answer. If the comment is published, its best answer status is not restored.<br>– Like and unlike<br>• `Isolated`—The comment is visible only to admins. After an item is isolated, the author no longer has view or edit access. The admin user can edit, view, and delete isolated feed comments. |

| Field | Details |
| --- | --- |
| SystemModstamp | **Type**<br>datetime<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Date and time when a user or automated process (such as a trigger) last modified this record. In this context, "trigger" refers to Salesforce code that runs to implement standard functionality, and not an Apex trigger. SystemModstamp is a read-only system field, available in FeedComment as of API version 37.0. |
| ThreadChildrenCount | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The count of comments associated with this parent feed object. The feed object can be either a Feed Item or a Feed Comment. The count shows how many comments are directly subordinate to the parent. This field is available on the object when **Allow discussion threads** is selected in the Administration Workspace. This field is available in API version 44.0 and later. |
| ThreadLastUpdatedDate | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The date and time the thread on this comment was last updated. This field is available on the object when **Allow discussion threads** is selected in the Administration Workspace. This field is available in API version 44.0 and later. |
| ThreadLevel | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The identifier that shows the level of this Feed Comment in a thread. By default, there are a maximum of three levels in a thread. The ThreadLevel value shows in which of the three levels this comment falls. This field is available on the object when **Allow discussion threads** is selected in the Administration Workspace. This field is available in API version 44.0 and later. |
| ThreadParentId | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The identifier of the feed item that is the parent of this comment. This field is available on the object when **Allow discussion threads** is selected in the Administration Workspace. This field is available in API version 44.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>ThreadParent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FeedComment |

# Usage

- As of API version 23.0 and later, if you have View All Data permission, you can query FeedComment records directly without an ID filter. If you don't have View All Data permission, you can't query FeedComment records directly, with or without an ID filter.

  For example, the following query returns general information about a feed:

```
SELECT ID, CreatedDate, CreatedById, CreatedBy.FirstName,
           CreatedBy.LastName, ParentId, Parent.Name, Body
FROM FeedItem
WHERE CreatedDate > LAST_MONTH
ORDER BY CreatedDate DESC, Id DESC
```

- You can search for text in comments using SOSL. For example, the following Java class uses `search()` to find the string "foo" in any field of a record:

```
public void searchSample() {
  try {
    SearchResult sr = connection.search("find {foo} in all fields " +
        "returning feedcomment(Id, FeedItemId, CommentBody)");
    // Put the results into an array of SearchRecords
    SearchRecord[] records = sr.getSearchRecords();
    // Check the length of the returned array of records to see
    // if the search found anything
    if (records != null && records.length > 0) {
      System.out.println("Found " + records.length + " comments: ");
      // Display each comment
      for (SearchRecord record : records) {
        FeedComment comment = (FeedComment) record.getRecord();
        System.out.println(comment.getId() + ": " +
            comment.getCommentBody());
      }
    } else {
      System.out.println("No records were found for the search.");
```

```
    }
  } catch (ConnectionException ce) {
    ce.printStackTrace();
  }
}
```

- If you use an Apex trigger to modify the `Body` of a FeedComment object, all mentions hyperlinks are converted to plain text. The mentioned users don't get email notifications.

Note: This object is hard deleted. It isn't sent to the Recycle Bin.

SEE ALSO:

Custom Object__Feed

# FeedItem

FeedItem represents an entry in the feed, such as changes in a record feed, including text posts, link posts, and content posts. This object is available in API version 21.0 and later. This object replaces FeedPost.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

- You can delete all feed items you created. To delete feed items you didn't create, you must have one of these permissions:
  - Modify All Data
  - Modify All Records on the feed item's parent object, for example, Account for a feed item on an account feed
  - Moderate Chatter

    Note: Users with the Moderate Chatter permission can delete only the feed items and comments that they can see.

  Only users with this permission can delete items in unlisted groups.
- Guest users can't insert system field values for Chatter feeds. Even if you try to assign the CanInsertFeedSystemFields permission to a Guest User, the permission isn't granted.

Only users with the Modify All Data permission can delete a feed item of `Type TrackedChange`.

If the context user has the Insert System Field Values for Chatter Feeds user permission, the `create` field property is available on `CreatedBy` and `CreatedDate` system fields. During migration, the context user can set these fields to the original post's author and creation date. The fields can't be updated after migration.

# Fields

| Field Name | Details |
|---|---|
| `BestCommentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the comment marked as best answer on a question post.<br>This is a relationship field.<br>**Relationship Name**<br>BestComment<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FeedComment |
| `Body` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Sort, Update<br>**Description**<br>The body of the feed item. Required when `Type` is `TextPost` or `AdvancedTextPost`. Optional when `Type` is `ContentPost` or `LinkPost`.<br>Although a value for `Body` isn't required for the `ContentPost` type, an attachment is required. If an attachment isn't present, the type changes to `TextPost` or `AdvancedTextPost`, depending on the API version. `TextPost` and `AdvancedTextPost` do require a value for `Body`.<br>Tip: See the `IsRichText` field for a list of HTML tags supported in the body of rich text posts. |
| `CommentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of comments associated with this feed item.<br>Tip: In a feed that supports pre-moderation, `CommentCount` isn't updated until a comment is published. For example, say that you comment on a post that already has one published comment and your comment triggers moderation. Now there are two comments on the post, but the count says |

| Field Name | Details |
| --- | --- |
| | there's only one. In a moderated feed, comments aren't counted until approved by an admin or someone with Can Approve Feed Post and Comment or Modify All Data.<br>Feed moderation has implications on how you retrieve feed comments. In a moderated feed, rather than retrieving comments by looping through `CommentCount`, go through pagination until the end of comments is returned. |
| `ConnectionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>When a PartnerNetworkConnection modifies a record that is tracked, the `CreatedBy` field contains the ID of the system administrator. The `ConnectionId` contains the ID of the PartnerNetworkConnection. Available if Salesforce to Salesforce is enabled for your org. |
| `ContentData` | **Type**<br>base64<br>**Properties**<br>Create, Nillable<br>**Description**<br>This field was removed in API version 35.0, and is available in earlier versions for backward compatibility only. This field is required if `Type` is `ContentPost`. Encoded file data in any format, and can't be 0 bytes. Setting this field automatically sets `Type` to `ContentPost`. |
| `ContentDescription` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Sort<br>**Description**<br>This field was removed in API version 35.0, and is available in earlier versions for backward compatibility only. The description of the file specified in `ContentData`. |
| `ContentFileName` | **Type**<br>string<br>**Properties**<br>Create, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>This field was removed in API version 35.0, and is available in earlier versions for backward compatibility only. The name of the file uploaded to the feed. Setting `ContentFileName` automatically sets `Type` to `ContentPost`. |
| `ContentSize` | **Type**<br>int<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>This field was removed in API version 35.0, and is available in earlier versions for backward compatibility only. This field is the size of the file (in bytes) uploaded to the feed. This field is read-only and is automatically determined during insert. |
| `ContentType` | **Type**<br>string<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>This field was removed in API version 35.0, and is available in earlier versions for backward compatibility only. This field is the MIME type of the file uploaded to the feed. This field is read-only and is automatically determined during insert. |
| `FeedPostId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field was removed in API version 22.0, and is available in earlier versions for backward compatibility only.<br>ID of the associated FeedPost. A FeedPost represents the following types of changes in a feed item: changes to tracked fields, text posts, link posts, and content posts. |
| `HasContent` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the feed item has content. |
| `HasFeedEntity` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the feed item has a feed entity, for example, a post, as an attachment. Available in API version 39 and later when sharing a feed entity in Lightning Experience. |
| `HasLink` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the feed item has a link attached. |
| `HasVerifiedComment` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Determines whether a question has an answer that is marked as Company Verified.<br>This field is available in API version 41.0 and later. |
| `InsertedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the `InsertedBy` value is set to the ID of the context user.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>InsertedBy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `IsClosed` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>As of API version 43, a read-only field that indicates whether the feed item is open or closed to new actions. A value of `true` places restrictions on the actions a user can take on a feed item and its comments. For more information, see the Usage section. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Standard system field. Indicates whether the record has been moved to the Recycle Bin (`true`) or not (`false`). |
| `IsRichText` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the feed item `Body` contains rich text. If you post a rich text feed comment using SOAP API, set `IsRichText` to `true` and escape HTML entities from the body. Otherwise, the post is rendered as plain text.<br>Rich text supports the following HTML tags:<br>• `<p>`<br>Tip: Though the `<br>` tag isn't supported, you can use `<p> </p>` to create lines.<br>• `<a>`<br>• `<b>`<br>• `<code>`<br>• `<i>`<br>• `<u>`<br>• `<s>`<br>• `<ul>`<br>• `<ol>`<br>• `<li>`<br>• `<img>` |

| Field Name | Details |
| --- | --- |
| | The `<img>` tag is accessible only through the API and must reference files in Salesforce similar to this example: `<img src="sfdc://069B0000000omjh"></img>`<br><br>Note: In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation. |
| `LastEditById` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the user who last edited the feed item. |
| `LastEditDate` | **Type**<br>datetime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The date the feed item was last edited. |
| `LikeCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of likes associated with this feed item. |
| `LinkUrl` | **Type**<br>url<br>**Properties**<br>Create, Nillable, Sort<br>**Description**<br>The URL of a `LinkPost`. |
| `NetworkScope` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Specifies whether this feed item is available in the default Experience Cloud site, a specific Experience Cloud site, or all sites. This field is available in API version 26.0 and later, if digital experiences is enabled for your org.<br>`NetworkScope` can have the following values:<br>• `NetworkId`—The ID of the Experience Cloud site in which the FeedItem is available. If left empty, the feed item is only available in the default Experience Cloud site.<br>• `AllNetworks`—The feed item is available in all Experience Cloud sites.<br>Note the following exceptions for `NetworkScope`:<br>• Only feed items with a Group or User parent can set a `NetworkId` or a null value for `NetworkScope`.<br>• For feed items with a record parent, users can set `NetworkScope` only to `AllNetworks`.<br>• You can't filter a feed item on the `NetworkScope` field. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the object type to which the feed item is related. For example, set this field to a `UserId` to post to someone's profile feed, or an `AccountId` to post to a specific account.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Accreditation, ActivationTarget, ActivationTrgtIntOrgAccess, ApiAnomalyEventStore, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskIndDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, |

| Field Name | Details |
| --- | --- |
| | CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CodeSet, CollaborationGroup, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, ConsumptionSchedule, Contact, ContactEncounter, ContactEncounterParticipant, ContentDocument, Contract, CoverageBenefit, CoverageBenefitItem, CredentialStuffingEventStore, CreditMemo, CreditMemoLine, Dashboard, DashboardComponent, DataStream, DelegatedAccount, DocumentChecklistItem, EngagementChannelType, EnhancedLetterhead, EnrollmentEligibilityCriteria, Event, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, Identifier, Image, IndividualApplication, Invoice, InvoiceLine, Lead, Location, MarketSegment, MarketSegmentActivation, MemberPlan, MessagingSession, MktCalculatedInsight, OperatingHours, Opportunity, Order, OrderItem, OtherComponentTask, PartyConsent, PersonEducation, PersonLanguage, PersonLifeEvent, PersonName, PlanBenefit, PlanBenefitItem, Product2, ProductFulfillmentLocation, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, ProviderSearchSyncLog, PurchaserPlan, PurchaserPlanAssn, ReceivedDocument, Report, ReportAnomalyEventStore, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SessionHijackingEventStore, Shift, Shipment, ShipmentItem, Site, SkillRequirement, SocialPost, Solution, Task, ThreatDetectionFeedback, Topic, User, Visit, VisitedParty, Visitor, VoiceCall, VolunteerProject, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup, WorkTypeGroupMember |
| `RelatedRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Group, Nillable, Sort<br>**Description**<br>ID of the ContentVersion record associated with a `ContentPost`. For WDC thanks posts, it's the ID of the WorkThanks object associated with a `RypplePost`. This field is typically null for all posts except `ContentPost` and `RypplePost`.<br>For example, set this field to an existing ContentVersion ID and post it to a feed with `Type` set to `ContentPost`. |
| `Revision` | **Type**<br>int |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The revision number of the feed item. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies whether this feed item is published and visible to all who can access the feed. This field is available in API version 37.0 and later.<br>Possible values are:<br>• `Published`—The item's visible to all with access to the feed.<br>• `PendingReview`—The item's visible to its author and users who see the item and have View All Data or Can Approve Feed Post and Comment permission. Some people can delete and edit the item. They include the author and users who see the item and have Can Approve Feed Post and Comment or Modify All Data permission.<br>Note: These permissions don't apply when you retrieve feed items using SOQL. To filter out Pending Review feed items you must add an explicit clause.<br>Some actions are blocked when a feed item is pending review:<br>– Comment<br>– Like and unlike<br>– Bookmark<br>– Share<br>• `Isolated`—The item is visible only to admins. After an item is isolated, the author no longer has view or edit access. The admin user can edit, view, and delete isolated feed items. |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The title of the feed item. When the `Type` is `LinkPost`, the `LinkUrl` is the URL and this field is the link name. The `Title` field can be updated on posts of `Type QuestionPost`. |

| Field Name | Details |
| --- | --- |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of feed item. Except for `ContentPost`, `LinkPost`, `QuestionPost`, and `TextPost`, all the FeedItem types listed here are system-generated. In most situations, we recommend that you don't create system-generated fields using Apex or our APIs. One exception is during Chatter data migrations, which can require admins to migrate system-generated post types.<br>• `ActivityEvent`—indirectly generated event when a user or the API adds a Task associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a Task or Event associated with a case record (excluding email and call logging).<br>For a recurring Task with CaseFeed disabled, one event is generated for the series only. For a recurring Task with CaseFeed enabled, events are generated for the series and each occurrence.<br>• `AdvancedTextPost`—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post.<br>• `AnnouncementPost`—Not used.<br>• `ApprovalPost`—generated when a user submits an approval.<br>• `BasicTemplateFeedItem`—Not used.<br>• `CanvasPost`—a post made by a canvas app posted on a feed.<br>• `CollaborationGroupCreated`—generated when a user creates a public group.<br>• `CollaborationGroupUnarchived`—Not used.<br>• `ContentPost`—a post with an attached file.<br>• `CreatedRecordEvent`—generated when a user creates a record from the publisher.<br>• `DashboardComponentAlert`—generated when a dashboard metric or gauge exceeds a user-defined threshold.<br>• `DashboardComponentSnapshot`—created when a user posts a dashboard snapshot on a feed.<br>• `LinkPost`—a post with an attached URL.<br>• `PollPost`—a poll posted on a feed.<br>• `ProfileSkillPost`—generated when a skill is added to a user's Chatter profile.<br>• `QuestionPost`—generated when a user posts a question.<br>• `ReplyPost`—generated when Chatter Answers posts a reply. |

| Field Name | Details |
| --- | --- |
| | • `RypplePost`—generated when a user creates a Thanks badge in WDC.<br>• `TextPost`—a direct text entry on a feed.<br>• `TrackedChange`—a change or group of changes to a tracked field.<br>• `UserStatus`—automatically generated when a user adds a post. Deprecated.<br>The following values appear in the `Type` picklist for all feed objects but apply only to CaseFeed:<br>• `AttachArticleEvent`—generated event when a user attaches an article to a case.<br>• `CallLogPost`—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event.<br>• `CaseCommentPost`—generated event when a user adds a case comment for a case object.<br>• `ChangeStatusPost`—generated event when a user changes the status of a case.<br>• `ChatTranscriptPost`—generated event when Chat transcript is saved to a case.<br>• `EmailMessageEvent`—generated event when an email related to a case object is sent or received.<br>• `FacebookPost`—generated when a Facebook post is created from a case. Deprecated.<br>• `MilestoneEvent`—generated when a case milestone is completed or reaches violation status.<br>• `SocialPost`—generated when a social post is created from a case.<br>Note: If you set `Type` to `ContentPost`, also specify `ContentData` and `ContentFileName`. |
| `Visibility` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies whether this feed item is available to all users or internal users only. This field is available in API version 26.0 and later, if digital experiences is enabled for your org.<br>`Visibility` can have the following values:<br>• `AllUsers`—The feed item is available to all users who have permission to see the feed item.<br>• `InternalUsers`—The feed item is available to internal users only.<br>Note the following exceptions for `Visibility`: |

| Field Name | Details |
| --- | --- |
| | • For record posts, `Visibility` is set to `InternalUsers` for all internal users by default.<br>• External users can set `Visibility` only to `AllUsers`.<br>• `Visibility` can be updated on record posts.<br>• The `Update` property is supported only for feed items posted on records. |

## Usage

- When a feed item's `IsClosed` field is set to true, some actions are blocked and others are blocked to most users. This table sets out the actions that are blocked when a feed item is closed.

| Action | Availability on a Closed Conversation |
| --- | --- |
| Add a comment | Blocked |
| Answer a question | Blocked |
| Vote on a poll | Blocked |
| Edit a feed item or its comments or answers | Blocked to author; available to admins, moderators, and people with the Close Conversation Threads in Feeds permission<br>Editing is blocked specifically for the feed item title, feed item body, and feed content body fields. |
| Edit a topic | Available |
| Delete a feed item or its comments or answers | Blocked to author; available to admins, moderators, and people with the Close Conversation Threads in Feeds permission |
| Publish a pending review comment (moderation) | Available to admins and moderators |
| Like or unlike; upvote or downvote | Available |
| Select or remove a best answer | Blocked to author; available to admins, moderators, and people with the Close Conversation Threads in Feeds permission |
| Company verify; remove verification | Available only to people with the Verify Answers to Chatter Questions permission |
| Flag | Available |
| Share | Available |
| Bookmark | Available |
| Mute and unmute | Available |
| Escalate to case | Available only to people permitted to escalate a feed item to a case |

- This Apex example shows how to add a feed item with an attachment to a lead using API version 36.0 and later. First, post a feed item.

```
//create and insert post
FeedItem post = new FeedItem();
post.Body = 'HelloThere';
post.ParentId = 'ID_OF_LEAD_ENTITY';
post.Title = 'FileName';
insert post;
```

  Then insert the attachment.

```
//create and associate a content attachment to the post
FeedAttachment feedAttachment = new FeedAttachment();
feedAttachment.FeedEntityId = post.Id;
feedAttachment.RecordId = 'ID_OF_CONTENT_VERSION';
feedAttachment.Title = 'FileName';
feedAttachment.Type = 'CONTENT';
insert feedAttachment;
```

- If you're using API version 23.0 or later and have View All Data permission, you can directly query for a FeedItem. The following example returns the 20 most recent feed items.

```
SELECT ID, CreatedDate, CreatedById, CreatedBy.FirstName, CreatedBy.LastName, ParentId,
 Parent.Name, Body,
 (SELECT ID, FieldName, OldValue, NewValue FROM FeedTrackedChanges ORDER BY ID DESC)
FROM FeedItem
WHERE CreatedDate > LAST_MONTH
ORDER BY CreatedDate DESC
```

- If you're using an earlier API version than version 23.0, query FeedItem objects through a feed (such as AccountFeed or OpportunityFeed). The following example returns all feed items for a given account, ordered by date descending:

```
SELECT Id, Type, FeedItem.Body
FROM AccountFeed
WHERE ParentId = AccountId ORDER BY CreatedDate DESC
```

  Note: Provide the `ParentId` for API version 22.0 and earlier.

- A feed item of type `UserStatus` is automatically created when a user adds a post to update the status. You can't explicitly create a feed item of type `UserStatus`.
- The FeedItem object doesn't support aggregate functions in queries.
- If the context user has the Insert System Field Values for Chatter Feeds user permission, the `create` field property is available on `CreatedBy` and `CreatedDate` system fields. During migration, the context user can set these fields to the original post's author and creation date. The fields can't be updated after migration.
- The size limit for an attachment on a feed is 2 GB.
- You can't use the content fields to update or delete the content.
- You can't filter or update the content fields.
- Deleting a feed item via the API also deletes the associated content. Likewise, undeleting a feed item restores associated content.

  Note: This object is hard deleted. It isn't sent to the Recycle Bin.

- After uploading to a feed, it's possible for an attachment or document to be deleted, marked private, or hidden by sharing rules. In this case, all content fields in a FeedItem object appear as `null` in a SOQL query.
- You can't explicitly create or delete a FeedTrackedChange record.
- Imagine that you insert a feed item or feed comment of `Type ContentPost` on a User or Group to create a file. Then the `NetworkScope` field value of the feed item is passed to the file.
- If you use an Apex trigger to modify the `Body` of a FeedItem object, all mentions hyperlinks are converted to plain text. The mentioned users don't get email notifications.
- If you insert rich text into the feed item body, make sure that the case of the opening and closing HTML tags matches. For example, `<b>This is bold text</B>` generates an error.
- To check file sharing with Apex triggers, write triggers on ContentDocumentLink instead of FeedItem. For an example, see ContentDocumentLink.
- In API version 36.0 and later, use FeedAttachment to attach one or more content items to a feed item. As a result of support for multiple attachments through FeedAttachment, all fields related to content attachments have been removed. These fields are: `ContentData`, `ContentDescription`, `ContentFileName`, `ContentSize`, and `ContentType`.
- For all API versions of FeedItem, you can't query a FeedItem object using the `System Modstamp` filter.
- When you use the FeedItem object to create a record-triggered flow, and the flow tries to update a field on the parent record, the field may not update in the UI until the page is refreshed.

# FeedLike

Indicates that a user has liked a feed item. This object is available in API version 21.0 and later.

FeedLike records represent likes on posts and not likes on comments. Likes on comments can't be queried via the API. A FeedLike is a child object of an associated FeedItem, FeedTrackedChange, or object feed, such as AccountFeed.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`

## Special Access Rules

If the context user has the Insert System Field Values for Chatter Feeds user permission, the `create` field property is available on `CreatedBy` and `CreatedDate` system fields. During migration, the context user can set these fields to the original post's author and creation date. The fields can't be updated after migration.

## Fields

| Field Name | Details |
|---|---|
| `FeedItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the feed item that the user liked. |

| Field Name | Details |
| --- | --- |
| `FeedEntityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of a feed item or feed comment the user liked.<br>If the user liked a comment, `FeedEntityId` is set to the ID of the comment. If the user liked a feed item, `FeedEntityId` is set to the ID of the feed item.<br>This field is optional. The default value is the ID of the feed item. |
| `InsertedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the `InsertedBy` value is set to the ID of the context user.<br>This is a relationship field.<br>**Relationship Name**<br>InsertedBy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

## Usage

You can't query FeedLike records directly. They can only be queried via the entity feed, such as AccountFeed.

FeedLike records represent likes on posts and not likes on comments. Likes on comments can’t be queried via the API.

# FeedPollChoice

Shows the choices for a poll posted in the feed. This object is available in API version 29.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

To delete feed items they didn't create, users must have one of these permissions:

- Modify All Data
- Modify All Records on the parent object, for example on Account for a poll on an AccountFeed
- Moderate Chatter

  Note: Users with the Moderate Chatter permission can delete only the feed items and comments they can see.

  Only users with this permission can delete items in unlisted groups.

## Fields

| Field Name | Details |
|---|---|
| `ChoiceBody` | **Type**<br>textarea<br>**Properties**<br>Group<br>**Description**<br>A choice in the poll. |
| `FeedItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the feed item for the poll. |
| `Position` | **Type**<br>int<br>**Properties**<br>Group, Sort<br>**Description**<br>Shows the position of the poll choice. |

## Usage

Use this object to query all of the choices associated with a particular poll. To view how people voted on the poll, see the FeedPollVote object.

# FeedPollVote

Shows how users voted on a poll posted in the feed. This object is available in API version 29.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
|---|---|
| `ChoiceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group<br>**Description**<br>Indicates which choice a user selected on a poll posted in a feed.<br>This is a relationship field.<br>**Relationship Name**<br>Choice<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FeedPollChoice |
| `FeedItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the feed item for the poll. |

## Usage

Use this object to query how users voted on a particular poll.

# FeedPost

FeedPost represents the following types of changes in a record feed, such as AccountFeed: text posts, link posts, and content posts. This object is available in API version 18.0 through 21.0. FeedPost is no longer available in later versions. Starting with API version 21.0, use FeedItem to represent text posts, link posts, and content posts in feeds.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `search()`

## Special Access Rules

You can delete all feed items you created. To delete feed items you didn't create, you must have one of these permissions:

- "Modify All Data"
- "Modify All Records" on the object associated with the feed and delete permission on the parent feed
- "Moderate Chatter"

  Note: Users with the "Moderate Chatter" permission can delete only the feed items and comments they can see.

- Manage Unlisted Groups

  Only users with this permission can delete items in unlisted groups.

Only users with the Modify All Data permission can delete a feed item of `Type TrackedChange`.

If the context user has the Insert System Field Values for Chatter Feeds user permission, the `create` field property is available on `CreatedBy` and `CreatedDate` system fields. During migration, the context user can set these fields to the original post's author and creation date. The fields can't be updated after migration.

## Fields

| Field | Details |
|---|---|
| `Body` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The content of the FeedPost. Required when `Type` is `TextPost` or `AdvancedTextPost`. Optional when `Type` is `ContentPost` or `LinkPost`. |
| `ContentData` | **Type**<br>base64<br>**Properties**<br>Create, Nillable<br>**Description**<br>This field is required if `Type` is `ContentPost`. Encoded file data in any format, and can't be 0 bytes. Setting this field automatically sets `Type` to `ContentPost`. |
| `ContentDescription` | **Type**<br>string<br>**Properties**<br>Create, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The description of the file specified in `ContentData`. |
| `ContentFileName` | **Type**<br>string<br>**Properties**<br>Create, Group, Nillable, Sort<br>**Description**<br>This field is required if `Type` is `ContentPost`. The name of the file uploaded to the feed. Setting `ContentFileName` automatically sets `Type` to `ContentPost`. |
| `ContentSize` | **Type**<br>int<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>This field is the size of the file (in bytes) uploaded to the feed. This field is read-only and is automatically determined during insert. |
| `ContentType` | **Type**<br>string<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>This field is the MIME type of the file uploaded to the feed. This field is read-only and is automatically determined during insert. |
| `FeedItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the feed containing the FeedPost. |
| `InsertedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the `InsertedBy` value is set to the ID of the context user. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the record has been moved to the Recycle Bin (`true`) or not (`false`). This field is a standard system field. |
| `LinkUrl` | **Type**<br>url<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The URL of a `LinkPost`. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the object type to which the FeedPost is related. For example, set this field to a `UserId` to post to someone's profile feed, or an `AccountId` to post to a specific account. |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The title of the FeedPost. When the `Type` is `LinkPost`, the `Body` is the URL and the `Title` is the label for the link. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The type of FeedPost:<br>• `UserStatus`—automatically generated when a user updates their status<br>• `TrackedChange`—ignore<br>• `TextPost`—a direct text entry on a feed<br>• `LinkPost`—a URL posting on a feed<br>• `ContentPost`—an uploaded file on a feed<br>Note: If you set `Type` to `ContentPost`, you must specify `ContentData` and `ContentFileName`. |

## Usage

- You can't directly query for a FeedPost. FeedPosts are always associated with a feed item, so you can query for them through the feeds. The following example returns all feed items for a given account, ordered by date descending:

```
SELECT Id, Type, FeedPost.Body
FROM AccountFeed
WHERE ParentId = AccountId ORDER BY CreatedDate DESC
```

- A FeedPost of type `UserStatus` is automatically created when a user adds a post to update the current status. You can't explicitly create a FeedPost of type `UserStatus`.
- The size limit for an attachment on a profile, news, or record feed is 2 GB.
- You can't use the content fields to update or delete the content.
- You can't filter or update the content fields.
- Deleting a FeedPost via the API also deletes the associated content and FeedPost objects. Likewise, undeleting a FeedPost restores associated content and FeedPost objects.

  Note: This object is hard deleted. It isn't sent to the Recycle Bin.

- After uploading to a feed, it is possible for an attachment or document to be deleted, marked private, or hidden by sharing rules. In this case, all content fields in FeedPost appear as `null` in a SOQL query.
- You can't explicitly create or delete a FeedTrackedChange record.

# FeedRevision

Holds the revision history of a specific feed item or comment, including a list of attributes that changed for each revision. This object is available in API version 34.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

# Fields

| Field Name | Details |
| --- | --- |
| `Action` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Holds the type of modification to the underlying feed item or comment attribute. `Action` can have the value `Changed`. |
| `EditedAttribute` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Identifies the part of the feed item or comment which was modified. A single revision can have many edited attributes. |
| `FeedEntityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Identifies the modified feed item or comment. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the record has been moved to the Recycle Bin (`true`) or not (`false`). This field is a standard system field. |
| `IsValueRichText` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the feed item `Body` contains rich text. If you post a rich text feed comment using SOAP API, set `IsRichText` to `true` and escape HTML entities from the body. Otherwise, the post is rendered as plain text.<br>Rich text supports the following HTML tags: |

| Field Name | Details |
| --- | --- |
| | • `<p>`<br><br>Tip: Though the `<br>` tag isn't supported, you can use `<p> </p>` to create lines.<br><br>• `<a>`<br>• `<b>`<br>• `<code>`<br>• `<i>`<br>• `<u>`<br>• `<s>`<br>• `<ul>`<br>• `<ol>`<br>• `<li>`<br>• `<img>`<br><br>The `<img>` tag is accessible only through the API and must reference files in Salesforce similar to this example: `<img src="sfdc://069B0000000omjh"></img>`<br><br>Note: In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation. |
| `OriginNetworkId` | **Type**<br>reference<br><br>**Properties**<br>Filter, Group, Nillable, Sort<br><br>**Description**<br>The ID of the Experience Cloud site in which a user modified the feed item or comment. This field is only available, if digital experiences is enabled for your org. |
| `Revision` | **Type**<br>int<br><br>**Properties**<br>Filter, Group, Nillable, Sort<br><br>**Description**<br>The revision number of the feed item or comment. |
| `Value` | **Type**<br>textarea<br><br>**Properties**<br>Nillable |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Identifies the value of the `EditedAttribute` field before the update. |

## Usage

This object tracks the changes made to a feed item or feed comment and stores a list of attributes that changed for each revision.

- To query the FeedRevision object, users need the View All Data permission or supply a WHERE clause on the `FeedEntityId`.

# feedSignal

Attach feed signals, like `UpDownVote`, `UserVerified`, and `Verified`, to a feed post or comment. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`

## Fields

| Field | Details |
| --- | --- |
| `FeedEntityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the Feed entity. |
| `FeedItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the feed post or comment.<br>Possible values are:<br>• `FeedItem`<br>• `FeedComment` |
| `InsertedById` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of user who inserted the signal.<br>This is a relationship field.<br>**Relationship Name**<br>InsertedBy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `SignalType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of signal.<br>Possible values are:<br>• `UpDownVote`<br>• `UserVerified`<br>• `Verified` |
| `SignalValue` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The value of the signal. For example, for `UpDownVote`, the value specifies whether the signal is an upvote or a downvote. |

# FeedTrackedChange

Represents an individual field change or set of field changes. A FeedTrackedChange is a child object of a record feed, such as AccountFeed. This object is available in API version 18.0 and later.

## Supported Calls

`describeSObjects()`

# Fields

| Field | Details |
|---|---|
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Group, Restricted picklist, Sort<br>**Description**<br>Available only for organizations with the multicurrency feature enabled. Contains the ISO currency code for the field, if `FieldName` is a currency field. |
| `FeedItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the parent feed that tracks the field change. |
| `FieldName` | **Type**<br>string<br>**Properties**<br>Group, Sort<br>**Description**<br>The name of the field that was changed.<br>Note: This field also tracks other events that are not related to an individual field for a parent feed. These events occur as the parent record advances through its pipeline. For example, a value of `leadConverted` indicates that a lead has been converted to an opportunity. For a full list of values, see Tracking of Special Events. |
| `NewValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The new value of the field that was changed. |
| `OldCurrencyIsoCode` | **Type**<br>string<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>Available only for organizations with the multicurrency feature enabled. Contains the ISO currency code for the `OldValue` field, if `FieldName` is a currency field. |

| Field | Details |
| --- | --- |
| `OldValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The last value of the field before it was changed. |

## Usage

A user can subscribe to a record or to another user. Changes to the record and updates from the users are displayed in the Chatter feed on the user's home page, which is a useful way to stay up-to-date with other users and with changes made to records in Salesforce. Feeds are available in API version 18.0 and later.

If you move a custom field to the Recycle Bin, all FeedTrackedChange records that track historical changes to the custom field are automatically deleted and are not restored if the custom-field is undeleted.

The following sections outline the difference between standard feeds and custom feeds.

## Standard Feeds

A standard feed is a record feed, such as AccountFeed. FeedTrackedChange records for standard feeds can only be queried via the parent feed object.

Note the following when working with standard feed items:

- Feed items for standard feeds are read only in the API.
- A FeedTrackedChange record is visible when you have read access on the record feed, and when the field is visible in the field-level security settings.

## Custom Feeds

If you want more control over the information provided in a record feed, such as AccountFeed, you can create a custom feed. A custom feed can replace or augment an existing record feed. For example, you might want to:

- Disable the standard account record feed and use an Apex trigger to generate FeedTrackedChange records for the events that you want to track in the feed instead.
- Augment the standard contact record feed by writing an API client that inserts feed items for events that are not tracked in the standard feed.

## Tracking of Special Events

The `FieldName` field also tracks other events that are not related to an individual field for a parent feed. These events occur as the parent record advances through its pipeline. For example, a value of `leadConverted` indicates that a lead has been converted to an opportunity.

Valid values for the `FieldName` field for multiple objects:

- `created`

- ownerAccepted
- ownerAssignment

Additional valid values for the FieldName field for individual objects:

**Account**

- accountCreatedFromLead
- accountMerged
- accountUpdatedByLead
- personAccountUpdatedByLead

**Case**

- closed
- ownerEscalated

**Contact**

- contactCreatedFromLead
- contactMerged
- contactUpdatedByLead

**Contract**

- contractActivation
- contractApproval
- contractConversion
- contractExpiration
- contractTermination

**Lead**

- leadConverted
- leadMerged

**Opportunity**

- opportunityCreatedFromLead

SEE ALSO:

Custom Object__Feed

# FieldHistoryArchive

Represents field history values for all objects that retain field history. FieldHistoryArchive is a big object, available only to users with the "Retain Field History" permission. This object is available in API version 29.0 and later.

Each instance of the FieldHistoryArchive object represents a single change in the value of a field. FieldHistoryArchive stores history for both standard and custom fields.

The Field field returns the name of the field unless the parent field or object is deleted, in which case it returns the field ID. You can use the ID to retrieve the old field and object name from the FieldNameAfterArchival and ParentNameAfterArchival fields, respectively.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

| Field Name | Details |
| --- | --- |
| `ArchiveFieldName` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The name of the field at the time the data was archived. If the field name changed, the name is sometimes not the same for all records related to a single field. |
| `ArchiveParentName` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The name of the parent object at the time the data was archived. If the object name changed, the name is sometimes not the same for all records related to a single field. |
| `ArchiveParentType` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The type of the field at the time the data was archived. If the field type changed, the type is sometimes not the same for all records related to a single field. |
| `ArchiveTimestamp` | **Type**<br>dateTime<br>**Properties**<br>Nillable<br>**Description**<br>The date and time at which the data was archived. |
| `CreatedById` | **Type**<br>reference<br>**Properties**<br>Nillable |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The user ID of the user who created the original record. |
| `CreatedDate` | **Type**<br>dateTime<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The date and time at which the original record was created. |
| `Field` | **Type**<br>picklist<br>**Properties**<br>Restricted picklist<br>**Description**<br>The name of the field that was changed. If the field is deleted from the parent object, the `Field` field contains the field ID instead. |
| `FieldHistoryType` | **Type**<br>picklist<br>**Properties**<br>Filter, Nillable, Restricted picklist, Sort<br>**Description**<br>The name of the object that contains the field history. Possible values are:<br>• `Account`<br>• `Article`<br>• `Asset`<br>• `AuthorizationFormConsent` – Available in version 58.0 and later.<br>• `Case`<br>• `CommSubscriptionConsent` – Available in version 58.0 and later.<br>• `Contact`<br>• `ContactPointConsent` – Available in version 58.0 and later.<br>• `ContactPointTypeConsent` – Available in version 58.0 and later.<br>• `Contract`<br>• `ContractLineItem`<br>• `Crisis`<br>• `Employee`<br>• `EmployeeCrisisAssessment`<br>• `Entitlement`<br>• `Individual` |

| Field Name | Details |
| --- | --- |
| | • `InternalOrganizationUnit`<br>• `Knowledge`<br>• `Lead`<br>• `Opportunity`<br>• `Order`<br>• `OrderItem`<br>• `PartyConsent` – Available in version 58.0 and later.<br>• `Pricebook2`<br>• `PricebookEntry`<br>• `Product2`<br>• `ServiceAppointment`<br>• `ServiceContract`<br>• `Solution`<br>• `WorkOrder`<br>• `WorkOrderLineItem` |
| `HistoryId` | **Type**<br>reference<br>**Properties**<br>Filter, Sort<br>**Description**<br>The ID of the relevant history object (for example, AccountHistory). This field is available in versions 42.0 and later. |
| `Id` | **Type**<br>ID<br>**Properties**<br>Defaulted on create, Filter, idLookup<br>**Description**<br>The ID of the archived record. It's useful to have a field's ID for fields that you've deleted. (Field names aren't retained in history when you delete fields from Salesforce.) |
| `NewValue` | **Type**<br>anyType<br>**Properties**<br>Nillable<br>**Description**<br>The new value of the modified field. |

| Field Name | Details |
| --- | --- |
| `OldValue` | **Type**<br>anyType<br>**Properties**<br>Nillable<br>**Description**<br>The previous value of the modified field. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Filter, Sort<br>**Description**<br>The ID of the object that contains the field (the parent object). |

## Usage

When sorting fields, order them as follows:

1. `FieldHistoryType ASC`
2. `ParentID ASC`
3. `CreatedDate DESC`

SEE ALSO:

*Developer Guide*:Big Objects Implementation Guide

# FieldChangeSnapshot

Use this virtual object to learn which opportunities' close dates changed during the specified time period. This object is available in API version 52.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To use FieldChangeSnapshot, set up historical trend reporting for opportunities in your org. You must also have the Pipeline Inspection user permission and the Pipeline Inspection setting enabled.

# Fields

| Field | Details |
| --- | --- |
| `CurrentValueDateOnly` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable<br>**Description**<br>The current value of a date field on the opportunity. |
| `FieldName` | **Type**<br>string<br>**Properties**<br>Filter, Group<br>**Description**<br>The name of the field to get the change history for. Possible values are:<br>• `CloseDate` |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group<br>**Description**<br>The ID of the opportunity to get the change history for.<br>This is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Opportunity |
| `ValidFrom` | **Type**<br>dateTime<br>**Properties**<br>Filter<br>**Description**<br>The date and time that specifies the beginning of the time period. |
| `ValidTo` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter<br>**Description**<br>The date and time that specifies the end of the time period. |

## Usage

Use FieldChangeSnapshot to learn about the first change made to the specified opportunity during the specified time period. Subsequent changes are not returned.

Example: Suppose that last week you changed an opportunity's close date to June 1, 2021. Assuming the opportunity had the ID '006R0000XXXXXXXXXX', the following query would return the `CurrentValueDateOnly` of June 1, 2021:

```
Select CurrentValueDateOnly from FieldChangeSnapshot where ParentID =
'006R0000XXXXXXXXXX' and FieldName = 'CloseDate' and ValidTo = LAST_WEEK AND ValidFrom
 = LAST_WEEK and CurrentValueDateOnly < 2021-07-01
```

# FieldPermissions

Represents the enabled field permissions for the parent PermissionSet. This object is available in API version 24.0 and later.

To grant a user access to a field, associate a FieldPermissions record with a PermissionSet that's assigned to a user. FieldPermissions records are only supported in PermissionSet, not in Profile.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

In API version 49.0 and later, only users with the View Setup and Configuration permission can access this object.

## Fields

In API version 50.0 and later, for lookup field inserts and queries, you can leave off the Id in the field name or include it. The rows returned always use the API name. For example:

```
SELECT SobjectType, Field
FROM FieldPermissions
WHERE Field='Contact.Account'
```

and

```
SELECT SobjectType, Field
FROM FieldPermissions
WHERE Field='Contact.AccountId'
```

both return

```
Contact, Contact.AccountId
```

| Field Name | Details |
|---|---|
| `Field` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The field's API name. This name must be prefixed with the `SobjectType`. For example, `Merchandise__c.Description__c` |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The `Id` of the field's parent PermissionSet.<br>This is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PermissionSet |
| `PermissionsEdit` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If `true`, users assigned to the parent PermissionSet can edit this field. Requires `PermissionsRead` for the same field to be `true`. |
| `PermissionsRead` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If `true`, users assigned to the parent PermissionSet can view this field. A FieldPermissions record must have at minimum `PermissionsRead` set to `true`, or it will be deleted. |

| Field Name | Details |
| --- | --- |
| `SobjectType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The object's API name. For example, `Merchandise__c`. |

## Usage

FieldPermissions work similarly to ObjectPermissions. However, FieldPermissions includes a `Field` attribute to return the name of the field.

For example, the following query returns all FieldPermissions records that have at least the "Read" permission. The results include the field, object, and permission set names.

```
SELECT SobjectType, Field, PermissionsRead, Parent.Name
FROM FieldPermissions
WHERE PermissionsRead = True
```

Include the field's parent object when querying FieldPermissions. For example, to find all rows that match the Account object's `Type` field, create the following query:

```
SELECT Id, SobjectType, Field
FROM FieldPermissions
WHERE Field = 'Account.Type' AND SobjectType = 'Account'
```

To find which permission sets are backed by profiles with the Account object, you can use a query like the following example:

```
SELECT Id, ParentId, SobjectType, Field, PermissionsEdit, PermissionsRead, Parent.Name
FROM FieldPermissions
WHERE SobjectType = 'Account' and Parent.IsOwnedByProfile = true
ORDER BY SObjectType, Field
```

Both `SobjectType` and `Field` must be included in the `SELECT` line of the query. Provide the full API name of the field in the form of `SobjectType.Field` when querying for a field.

Note: When using the FieldPermission object to download records, depending on the SOQL query you use, you might not receive all expected records. Results can also appear incomplete. However, all records do download; fields that don't support field security and rows for entities not visible to the org are hidden.

## Special Properties for Field Permissions

The auto-number and formula fields have special rules for how field permissions work. Both have FieldPermissions records, but inserting and updating is limited to `PermissionsRead`. `PermissionsEdit` isn't allowed for either field type, since these fields must be read-only for users.

The following field types don't return a FieldPermissions record because they are assumed to always be readable.

- `Id`
- `CreatedById`

- `CreatedDate`
- `IsDeleted`
- `LastModifiedById`
- `LastModifiedDate`
- `SystemModStamp`

The following field types don't return a FieldPermissions record because they are assumed to always be readable and writable.

- `OwnerId`
- Master-detail custom (relationship) fields
- Universally required custom fields

As a result, the following query returns no records, even though users do have some access to some of the fields.

```
SELECT Field, SobjectType, PermissionsRead
FROM FieldPermissions
WHERE Field='Id'
```

To determine if a field can return a FieldPermissions record, you can call a `describeSObject()` on the field. For example, `describeSObject('Merchandise__c')`, returns all the properties of the Merchandise custom object, including field properties. If you use a field whose `permissionable` property is `false` (like the field types listed in this section), you can't query, insert, update, or delete field permissions records, because they don't exist.

If the View All Fields object permission is enabled for an object in the permission set, the `PermissionsRead` field equals `true` for all queried fields for that object.

## Working with Custom Activity Fields

While tasks and events are considered separate objects, they share a common set of activity custom fields. As a result, when a custom task field is created, a custom event field is also created, and vice versa. You can display the custom field on the event layout, task layout, or both event and task layouts.

Although custom activity fields are shared between tasks and events, you see separate FieldPermissions records for the task and event. However, changes made to one field permission record are automatically made to the other. For example, if you create a custom activity field, assign field permissions to it in a permission set, and run the following query, the query returns two records with the same permission value.

```
SELECT Field, Id, ParentId, PermissionsEdit, PermissionsRead, SobjectType
FROM FieldPermissions
WHERE SobjectType = 'event' OR SobjectType ='task'
```

If you then update one of the records with another set of field permission values and run the query, the same permission values for both records are returned.

## Nesting Field Permissions

You can nest FieldPermissions in a PermissionSet query. For example, the following returns any permission sets where "Edit Read Only Fields" is `true`. Also, the result set includes both the "Read" and "Edit" field permission on the Merchandise object. Get similar results by nesting the SOQL with a field permission query using the relationship name for field permissions: `FieldPerms`.

```
SELECT PermissionsEditReadonlyFields,
(SELECT SobjectType, Field, PermissionsRead, PermissionsEdit
FROM FieldPerms
```

```
WHERE SobjectType = 'Merchandise__c')
FROM PermissionSet
WHERE PermissionsEditReadonlyFields = true
```

As a result, it's possible to traverse the relationship between the PermissionSet and any child-related objects (in this case, FieldPermissions). You can do this from the PermissionSet object by using the child relationship (`ObjectPerms`, `FieldPerms`, and so on) or from the child object by referencing the PermissionSet with `Parent.`***`permission_set_attribute`***.

It's important to consider when to use a conditional `WHERE` statement to restrict the result set. To query based on an attribute on the permission set object, nest the SOQL with the child relationship. However, to query based on an attribute on the child object, you must reference the permission set parent attribute in your query.

The following two queries return the same columns with different results, based on whether you use the child relationship or parent notation.

```
SELECT PermissionsEditReadonlyFields,
(SELECT SobjectType, Field, PermissionsRead, PermissionsEdit
FROM FieldPerms
WHERE SobjectType = 'Merchandise__c')
FROM PermissionSet
WHERE PermissionsEditReadonlyFields = true
```

Versus:

```
SELECT SobjectType, Field, PermissionsRead, PermissionsEdit, Parent.Name,
   Parent.PermissionsEditReadonlyFields
FROM FieldPermissions
WHERE SObjectType='Merchandise__c'
```

# Muting Permissions

Field permissions with a parent muting permission set act differently than those enabled in a regular permission set. For a regular permission set, if a FieldPermissions record grants full access to a field (for example, granting read and edit access), users have full access to that field.

With muting permission sets, a FieldPermissions record defines the muting of access. So if a muting permission set is set for read and edit, the read and edit access is muted.

For example, we have a permission set and a muting permission set that controls access to the Account object's fields. Each permission set has settings for the Website field.

Regular Permission Set

| Field | PermissionsRead | PermissionsEdit | Result |
|---|---|---|---|
| Account.Website | `true` | `false` | The Account.Website field is read only. |
| Account.Website | `true` | `true` | The Account.Website field has both read and edit permissions. |

Muting Permission Set

| Field | PermissionsRead | PermissionsEdit | Result |
|---|---|---|---|
| Account.Website | `false` | `true` | Edit permissions on the Account.Website fields are muted. |
| Account.Website | `true` | `true` | Read and edit permissions on the Account.Website field are muted. |

Field permissions are aggregated by combining the permissions granted by the permission set and the permissions muted by the muting permission set. For example, if you have a permission set that grants read and edit permissions for a field, and a muting permission that mutes the same field's edit permission, the result is that only the read permission is enabled.

ObjectPermissions

# FieldSecurityClassification

Represents a field's data sensitivity value selected from the SecurityClassification picklist. This object is available in API version 46.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

To view this object, you need the Customize Application or Modify Data Classification permission.

## Fields

| Field Name | Details |
|---|---|
| `ApiName` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The API name of the data sensitivity picklist value. Default values:<br>• Public<br>• Internal<br>• Confidential |

| Field Name | Details |
| --- | --- |
| | • Restricted<br>• MissionCritical |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The description of the data sensitivity picklist value. |
| `IsHighRiskLevel` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates that fields with this picklist value contain data highly sensitive to your company. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The data sensitivity picklist value. Default values:<br>• Public<br>• Internal<br>• Confidential<br>• Restricted<br>• MissionCritical |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The value's position in the picklist. |

## Usage

Use this object to return information about data sensitivity values in the SecurityClassification picklist. This object is read-only, but you can update the SecurityClassification picklist using the StandardValueSet Metadata API type.

# FieldServiceMobileSettings

Represents a configuration of settings that control the Field Service iOS and Android mobile app experience. This object is available in API version 38.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Field Service must be enabled.

## Fields

| Field Name | Details |
|---|---|
| `AscAutomaticMode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Describes how status changes are handled. Possible values are:<br>• `Off`—No automatic status changes.<br>• `Manual`—The mobile worker can cancel or update the status change.<br>• `Timed`—The mobile worker has a time period to prevent the status change. When the timer ends, the status changes.<br>• `Automated`—The mobile worker is notified that the status has changed. |
| AscCancellationTimerInSec | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>For the Timed mode only. Time that the user has to cancel the appointment status change. |
| AscCompletedStatus | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Status that indicates that a mobile worker completed a service appointment. Possible values are:<br>• `Canceled`<br>• `Cannot Complete`<br>• `Completed`<br>• `Dispatched`<br>• `In Progress`<br>• `None`<br>• `Scheduled` |
| `AscOnSiteStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Status that indicates that a mobile worker is at a service appointment. Possible values are:<br>• `Canceled`<br>• `Cannot Complete`<br>• `Completed`<br>• `Dispatched`<br>• `In Progress`<br>• `None`<br>• `Scheduled` |
| `AscRadiusInMeters` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Service appointment radius that can trigger a status change. |
| `AscTimeLimitationInMin` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>A time period when status changes can occur, before an appointment's scheduled start time and after the scheduled end time. The time is applied only if IsAscTimeLimitEnabled is `true`. |
| `AscTravelStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Status that indicates that a mobile worker is traveling to a service appointment. Possible values are:<br>• `Canceled`<br>• `Cannot Complete`<br>• `Completed`<br>• `Dispatched`<br>• `In Progress`<br>• `None`<br>• `Scheduled` |
| `BgGeoLocationAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The accuracy of geolocation tracking of services resources while the app is running in the background. Lowering accuracy reduces battery consumption for mobile devices. Available in API version 41.0 and later. Picklist options:<br>• `Medium`—Accurate to within about 100 meters.<br>• `Coarse`—Accurate to within about 1 kilometer.<br>• `Very Coarse`—Accurate to within about 3 kilometers.<br>The default value is `Coarse`. |
| `BgGeoLocationMinUpdateFreqMins` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The frequency of geolocation poling of services resources while the app is running in the background. Less frequent poling decreases battery consumption for |

| Field Name | Details |
| --- | --- |
| | mobile devices. The label in the UI is **Minimum Update Frequency of Geo Location in Minutes (Background)**. Available in API version 41.0 and later. |
| `BrandInvertedColor` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The color of toasts and the contrast color of the floating action button. |
| `ContrastInvertedColor` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The color of secondary backgrounds in the UI. |
| `ContrastPrimaryColor` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The color of primary text. |
| `ContrastQuaternaryColor` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The color of secondary lines that delineate different areas of the UI. |
| `ContrastQuinaryColor` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The color of primary backgrounds in the UI. |
| `ContrastSecondaryColor` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The color of secondary text. |
| `ContrastTertiaryColor` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The color of the icons on the settings screen and of primary lines that delineate different areas of the UI. |
| `DaysBeforeCurrentServiceDate` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Days before the current service date during which to prime service documents for offline use. |
| `DayAfterCurrentServiceDate` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Days after the current service date during which to prime service documents for offline use. |
| `DefaultListViewDeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The API name of the default service appointment list view on the schedule screen. |
| DestinationType | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Determines if the mobile worker navigates to the destination based on the address or based on the latitude and longitude. Possible values are:<br>• `Address` |

| Field Name | Details |
| --- | --- |
| | • `Latitude and Longitude`<br>The default value is `Address`. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The API name of the set of field service mobile settings.<br>Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `FeedbackPrimaryColor` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The color of error messages. |
| `FeedbackSecondaryColor` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The color of success messages. |
| `FeedbackSelectedColor` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Group, Sort, Update<br>**Description**<br>The color indicating the user's current selection. |
| `FutureDaysInDatePicker` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The number of days into the future that a user can select from the date picker on the schedule screen. |

| Field Name | Details |
| --- | --- |
| `GeoLocationAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The accuracy of service resource geolocation tracking. Lowering accuracy reduces battery consumption for mobile devices. Picklist values:<br>• `Fine`—Accurate to within 10 meters.<br>• `Medium`—Accurate to within 100 meters.<br>• `Coarse`—Accurate to within 1 kilometer.<br>The default value is `Medium`. |
| `GeoLocationMinUpdateFreqMins` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The minimum number of minutes between attempts to poll geolocation. |
| `IsAscTimeLimitEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether AscTimeLimitationInMin is applied. Default is `true` |
| `IsAssignmentNotification` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Controls whether service appointment notifications are sent when the service resource is assigned the appointment. Default is `false`. This field is available in API version 46.0 and later. |
| `IsDefault` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates that the set of field service mobile settings is the default set that is automatically assigned to users. You can't make a different settings record the default, but you can modify the default settings record. Default is `false`. Available in API version 41.0 and later. |
| `IsDispatchNotification` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Controls whether service appointment notifications are sent when the service resource is dispatched for the appointment. Default is `false`. This field is available in API version 46.0 and later. |
| IsLimitedLocTrackingEnabled | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>When limited tracking for Appointment Assistant is enabled, the mobile worker's location is shown only on the way to a service appointment. The default value is `false`. |
| IsOptimizedImageUploadEnabled | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether to configure the size of images uploaded by your mobile workers. To optimize upload speeds, you can limit your file size to a defined maximum size using the OptimizeImageSizeInMb field. Resizing your images affects the resolution of your images. The default value is `false`. |
| `IsScheduleViewResourceAbsences` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether resource absences appear in the Schedule tab of the mobile app. This field is available in API version 55.0 and later. |

| Field Name | Details |
| --- | --- |
| `IsSendLocationHistory` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Controls whether geolocation tracking of services resources is enabled. Default is `false`. |
| `IsShowEditFullRecord` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Controls whether users can edit records with the field service mobile app. Default is `false`. |
| `IsTimeSheetEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Controls whether users can access time sheets on their mobile devices (Beta). Default is `false`. |
| `IsTimeZoneEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Controls whether the time zone of timesheet entries on the mobile app is recorded. The current time zone is recorded in the `LocationTimeZone` field of the TimeSheetEntry object. Default is `false`. Available in API version 50.0 and later. |
| `IsUseSalesforceMobileActions` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Reserved for future use. |

| Field Name | Details |
| --- | --- |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The localization preference for a user. The format is a two letter language code and, if there's a dialect, followed by the two letter dialect, for example, `fr` for French, and `fr_BE` for Belgian French |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The label in the UI for the set of field service mobile settings. Available in API version 41.0 and later. |
| `MaxNumberOfServiceAppointments` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Sets the maximum number of service appointments to use for offline priming of service documents. If you don't have dates on your service appointments, this setting helps to optimize offline priming in place of `DaysBeforeCurrentServiceDate` and `DaysBeforeCurrentServiceDate` fields. |
| `MetadataCacheTimeDays` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The number of days that org metadata, such as layouts, is kept in the app's local cache of memory. |
| `NavbarBackgroundColor` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The color of the top bar in the app. |

| Field Name | Details |
| --- | --- |
| `NavbarInvertedColor` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Group, Sort, Update<br>**Description**<br>The secondary color of the tap bar in the app. |
| OptimizeImageSizeInMb | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Configure the size of images uploaded by your mobile workers. To optimize upload speeds, you can limit your file size to a defined maximum size. Resizing your images affects the resolution of your images. Enter 0.2 or higher. Used only if IsOptimizedImageUploadEnabled is `true`. |
| `PastDaysInDatePicker` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The number of days into the past that a user can select from the date picker on the schedule screen. |
| `PrimaryBrandColor` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The main branding color used throughout the UI. |
| `QuickStatusChangeFlowName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of an existing Field Service flow with a Quick Status Change action to change the work order or service appointment status or both. This applies to flows invoked on the mobile app only. This field is available in API version 51.0 and later. |

| Field Name | Details |
| --- | --- |
| `RecordDataCacheTimeMins` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The number of minutes that record data is kept in the app's local cache of memory. |
| `SecondaryBrandColor` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The color of action buttons. |
| `TimeIntervalSetupMins` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Controls the spacing of picklist options for time values such as when creating resource absences. |
| `UpdateScheduleTimeMins` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The minimum number of minutes between attempts to update a user's schedule.The user's schedule might not refresh on this cadence if the user's device isn't connected to a network or doesn't have adequate battery life. |

## Usage

Field Service Mobile settings allow you to create sets of settings to apply to different field service mobile users. The settings apply to both the Android and iOS versions of the app.

For example, suppose you want to accommodate workers that are color blind, or who work in dark or bright conditions. You can choose different branding options for different workers to suit their needs, and assign them to their profiles.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**FieldServiceMobileSettingsChangeEvent (API version 55.0)**
Change events are available for the object.

# FieldServiceOrgSettings

Represents the org settings for Field Service, such as Appointment Assistant settings. If Field Service is enabled, the org contains one read-only record of this object. This object is available in API version 51.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

To see this object, Field Service must be enabled. For specified fields in the table, Appointment Assistant must also be enabled.

## Fields

| Field | Details |
|---|---|
| `ApptAssistantExpiration` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The expiry time in minutes of when the customer stops seeing the mobile worker's location. Appointment Assistant must also be enabled to see this field. |
| `ApptAssistantInfoUrl` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The page URL that enables Appointment Assistant. Appointment Assistant must also be enabled to see this field. |
| `ApptAssistantRadiusUnit` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The unit of the radius of the service appointment that prompts the Last Mile event for Appointment Assistant. Appointment Assistant must also be enabled to see this field. |

| Field | Details |
| --- | --- |
| | Possible values are:<br>• `Kilometer`<br>• `Meter`<br>• `Mile`<br>• `Yard` |
| `ApptAssistantRadiusValue` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The radius of the service appointment that prompts the Last Mile event for Appointment Assistant. Appointment Assistant must also be enabled to see this field. |
| `ApptAssistantStatus` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The value that prompts the En Route event for Appointment Assistant. Appointment Assistant must also be enabled to see this field.<br>Possible values are:<br>• `Canceled`<br>• `Cannot Complete`<br>• `Completed`<br>• `Dispatched`<br>• `In Progress`<br>• `None`<br>• `Scheduled`<br>• `TestSharing`<br>The default value is 'None'. |
| `CanPopulateGoogleAddress` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Allows desktop and mobile to send geolocation and map data to Google and Apple. Available in API version 57.0 and later.<br>The default value is `true`. |

| Field | Details |
| --- | --- |
| `CanSendAppCenterCrashReports` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Allows Salesforce to send crash reports to Microsoft App Center. Available in API version 57.0 and later.<br>The default value is `true`. |
| `CanStoreMobileAnalytics` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Allows third parties to store mobile analytics. Available in API version 57.0 and later.<br>The default value is `true`. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique name of the object in the API.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `DoesAvlCalcInclOvertime` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Specifies whether overtime is included in work capacity availability calculations. Available in API version 59.0 and later.<br>The default value is `false`. |
| `DoesAvlCalcInclPrimOnly` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Specifies if primary members only are included in work capacity availability calculations. If the value is `false` both primary and secondary members of the service territory are included. Available in API version 59.0 and later.<br>The default value is `false`. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language of the field service org settings.<br>The format for the values is a two-letter language code in small letters, for example, `fr` for French. If the language has regional dialects, add the two-letter country code in capital letters, for example, use `fr_BE` for Belgian French. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The label of the field service org settings. |

# FileSearchActivity

Represents search activity on a file. This object is available in API version 38.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `AvgNumResults` | **Type**<br>double<br>**Properties**<br>Filter, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of search results returned for the search term. If Period is also included, this value is aggregated based on the time period specified. |
| `ClickRank` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The order that the file appeared in the search results when users clicked it from the list of results. |
| `CountQueries` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of searches for the period (day, month, or year). |
| `CountUsers` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of individual users who clicked the file. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Name of search activity. |
| `Period` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The time period that the search count is applied to. For example, a record where the Count is 70 and the Period is Monthly indicates that 70 searches took place over the past month. Totals are aggregated daily for the current month, monthly from the past full month through the past full year, and yearly beyond that. |

| Field | Details |
| --- | --- |
| | Possible values are:<br>• DAY<br>• MONTH<br>• YEAR |
| QueryDate | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The date of the search. |
| QueryLanguage | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language filter that's applied to the user's search. |
| SearchTerm | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The first 100 characters of the search term that was used to search published files. |

# FiscalYearSettings

Settings to define a custom or standard fiscal year for your organization. This object has a parent-child relationship with the Period object.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

As of Spring '20 and later, only partner users and standard users can access this object.

# Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Description of the setting. |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>End date of the fiscal year. |
| `IsStandardYear` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the fiscal year is a standard calendar year (`true`) or a custom fiscal year (`false`). |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>A name for the fiscal year. Limit: 80 characters. |
| `PeriodId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the associated fiscal period. |
| `PeriodLabelScheme` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The numbering scheme used for fiscal periods. |
| `PeriodPrefix` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The prefix of fiscal periods. For example, if `p` is the prefix, then the first period is "P1." |
| `QuarterLabelScheme` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The numbering scheme used for fiscal quarters. |
| `QuarterPrefix` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The prefix of fiscal quarters. For example, if "Q" is the prefix, then the fourth quarter would be "Q4." |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Start date of the fiscal year. |
| `WeekLabelScheme` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The numbering scheme used for weeks. |
| `WeekStartDay` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the day that starts the week, for example `Monday` or `Sunday` |
| `YearType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates one of two types of fiscal years, Standard or Custom. Standard denotes the standard Gregorian calendar, while Custom means a fiscal year with a custom structure. |

- Overview of Salesforce Objects and Fields

# FldSvcObjChg

Represents a change made to one of a service appointment's tracked fields. This object is available in API version 63.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

- Field Service must be enabled.
- The Field Service managed package must be installed.
- The **Track the lifecycle of service appointments** setting in **Setup** > **Field Service Settings** must be enabled.
- The Platform Integration User must have the Manage Service Appointment Lifecycle and the View Service Appointment Lifecycle permissions.
- To view this object, users must have the View Service Appointment Lifecycle user permission.

## Fields

| Field | Details |
| --- | --- |
| `Activity` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The available scheduling activities for the service appointment.<br>Possible values are:<br>• `AddedToBundle`—Currently not supported<br>• `BundleMemberAdded`—Currently not supported<br>• `BundleMemberRemoved`—Currently not supported<br>• `Created`<br>• `Deleted`<br>• `RemovedFromBundle`—Currently not supported<br>• `Rescheduled`—An appointment is considered rescheduled if a change is made to its assigned service resource or to its scheduled start time.<br>• `Scheduled`<br>• `ServiceResourceAssigned`<br>• `StatusChanged`—The service appointment status was changed. The manual activities of scheduling, rescheduling, and unscheduling are also reported as status changes because they change the status of an appointment.<br>• `Unscheduled`<br>• `Updated`—Captures changes made to one or more of the tracked scheduling fields that aren't associated with another activity. |
| `ActivityDetails` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Details about the scheduling activity such as the scheduling policy that was used and the unscheduling reason (when applicable). |
| `ActivityTimeStamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date and time of when the change to the service appointment was made. |
| `IsPrimary` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the change was made directly to the service appointment or indirectly. If the change was made directly to the appointment, it's flagged as Primary. If it was made to another appointment and affected this one, it's flagged as Secondary. |
| `OriginalSvcAppointment` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the service appointment that was changed. The field value isn't deleted when the Service Appointment object is deleted. |
| `ServiceAppointmentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the service appointment that was changed. Because this is a relationship field, the field value is deleted when the Service Appointment object is deleted.<br>This field is a relationship field.<br>**Relationship Name**<br>ServiceAppointment<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ServiceAppointment |
| `TimeZone` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The time zone of the service appointment or the assigned resource. |
| `Transaction` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The last transaction ID of the scheduling and optimization request that updated this object. The transaction ID is automatically generated and populated by the Enhanced Scheduling and Optimization engine. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user who made the change to the service appointment. If an activity is a scheduled job, it's registered with the System Administrator user who configured it.<br>This field is a relationship field.<br>**Relationship Name**<br>User<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

FldSvcObjChgDtl

# FldSvcObjChgDtl

Represents the details of a change made to one of a service appointment's tracked fields. This object is available in API version 63.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

- Field Service must be enabled.
- The Field Service managed package must be installed.
- The **Track the lifecycle of service appointments** setting in **Setup** > **Field Service Settings** must be enabled.
- The Platform Integration User must have the Manage Service Appointment Lifecycle and the View Service Appointment Lifecycle permissions.
- To view this object, users must have the View Service Appointment Lifecycle user permission.

## Fields

| Field | Details |
| --- | --- |
| `FieldChangedName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The API name of the field that was changed. |
| `FieldChangedValue` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The updated value of the field that was changed. |
| `FldSvcObjChgId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The parent record associated with the details of the change. The parent record has multiple detail records associated with it. Each record includes the name and the current value of the tracked fields.<br>This field is a relationship field.<br>**Relationship Name**<br>FldSvcObjChg<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FldSvcObjChg |

SEE ALSO:

FldSvcObjChg

# FlexQueueItem

Represents an asynchronous Apex job in the Apex flex queue. Provides information about the job type and flex queue position of the AsyncApexJob. This object is available in API version 36.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

In API version 49.0 and later, users must have the View Setup and Configuration permission to access this object.

## Fields

| Field Name | Description |
| --- | --- |
| `AsyncApexJobId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of an AsyncApexJob that's waiting in the flex queue.<br>This is a relationship field.<br>**Relationship Name**<br>AsyncApexJob<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AsyncApexJob |
| `FlexQueueItemId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The primary key for this FlexQueueItem. |
| `JobPosition` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The position in the flex queue of the waiting job. The highest-priority job in the queue is at position 0. |
| `JobType` | **Type**<br>picklist |

| Field Name | Description |
| --- | --- |
| | **Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of the job. Valid values are:<br>• `ApexToken`<br>• `BatchApex`<br>• `BatchApexWorker`<br>• `Future`<br>• `Queueable`<br>• `ScheduledApex`<br>• `SharingRecalculation`<br>• `TestRequest`<br>• `TestWorker`<br>Currently, queries are supported only on `BatchApex` jobs. |

## Usage

To find the position of an AsyncApexJob in the flex queue, query `JobPosition`. For example:

```
SELECT JobPosition FROM FlexQueueItem WHERE JobType = 'BatchApex' AND AsyncApexJobId =
'707xx000000DABC'
```

To find the job at a given position, query `AsyncApexJobId`. For example:

```
SELECT AsyncApexJobId FROM FlexQueueItem WHERE JobType = 'BatchApex' AND JobPosition = '2'
```

To find all batch jobs in the flex queue, query `JobType`. To get other information about the jobs, include AsyncApexJob in your query. For example:

```
SELECT JobType, JobPosition, AsyncApexJob.ApexClass.Name, AsyncApexJob.CreatedDate,
    AsyncApexJob.CreatedById FROM FlexQueueItem WHERE JobType='BatchApex' AND
    AsyncApexJob.ApexClass.Name LIKE '%BatchAJob%' ORDER BY JobPosition DESC
```

# FlowDefinitionView

Represents the description of a flow definition. This object is available in API version 46.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

# Fields

| Field | Details |
| --- | --- |
| `ActiveVersionId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the active flow version. |
| `ApiName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API name of the flow definition. |
| `ApiVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API version of the flow definition.<br>Available in API version 59.0 and later. |
| `AreMetricsLoggedToDataCloud` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this flow's metrics are logged in Data Cloud. The default value is false. This field is available in API version 63.0 and later. |
| `Builder` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the tool that created this flow. Possible values are:<br>• Cloud Flow Designer<br>• Flow Builder<br>• Swing Designer |

| Field | Details |
| --- | --- |
| | This field is available in API version 47.0 and later. |
| `CapacityCategory` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The category that determines the usage limits of the flow. Possible values are:<br>• Marketing Cloud Flow<br>This field is available in API version 62.0 and later. |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Flow definition information, specified by the org's admin. |
| `DurableId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the flow definition. |
| `Environments` | **Type**<br>multipicklist<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The environment in which the flow can run. Valid values are:<br>• `Default`—The flow can run from a Visualforce component, Lightning page, flow action, or custom Aura component.<br>• `Offline`—The flow can run only offline. Flow types that support offline flows must set this value. This value is available in API version 62.0 and later.<br>• `Slack`—The flow can run in Slack and the default environment. You specify the Slack flow environment when you save the flow.<br>This field is available in API version 55.0 to 62.0. This field is deprecated in API version 63.0 and later. |

| Field | Details |
| --- | --- |
| `HasAsyncAfterCommitPath` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the scheduled path runs asynchronously after a save. The default value is false. This field is available in API version 54.0 and later. |
| `InstalledPackageName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the installed package that includes this flow definition.<br>This field is available in API version 47.0 and later. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the latest version of the flow definition is the active flow version.<br>This field is available in API version 47.0 and later. |
| `IsOutOfDate` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the active flow version is the latest version of the flow definition.<br>This field is available in API version 47.0 and later. |
| `IsOverridable` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the flow is overridable. The default value is false. This field is available in API version 53.0 and later. |

| Field | Details |
| --- | --- |
| `IsSwingFlow` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the flow is built with Desktop Flow Designer.<br>This field is available in API version 49.0 and later. |
| `IsTemplate` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the process or flow is a template. The default value is `false`. When installed from managed packages, subscribers can't view or clone processes or flows because of intellectual property (IP) protection. But when those processes and flows are templates, subscribers can open them in a builder, clone them, and customize the clones.<br>This field is available in API version 47.0 and later. |
| `Label` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The label of the flow definition. |
| `LastModifiedBy` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of the user who last updated this flow definition.<br>This field is available in API version 47.0 and later. |
| `LatestVersionId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the latest flow version, regardless of the flow's status. |

| Field | Details |
| --- | --- |
| `ManageableState` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates the manageable state of the flow that is contained in a package. Possible values are:<br>• `beta`<br>• `deleted`<br>• `deprecated`<br>• `deprecatedEditable`<br>• `installed`<br>• `installedEditable`<br>• `released`<br>• `unmanaged`<br>This field is available in API version 47.0 and later. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix associated with the flow definition. |
| `OverriddenById` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The flow that's overriding the current flow. This is a relationship field. This field is available in API version 53.0 and later.<br>**Relationship Name**<br>OverriddenBy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowDefinitionView |
| `OverriddenFlowId` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The flow that the current flow is overriding. This is a relationship field. This field is available in API version 53.0 and later.<br>**Relationship Name**<br>OverriddenFlow<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowDefinitionView |
| `ProcessType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of the flow. Valid values are:<br>• `ActionableEventManagementFlow`—A flow that triggers an actionable event orchestration process in the background and automatically executes different types of actions based on the event type. This value is available in API version 62.0 and later.<br>• `ActionCadenceAutolaunchedFlow`—A flow that's executed when a user completes a cadence step. This value is available in API version 56.0 and later.<br>• `ActionCadenceStepFlow`—A screen flow used as a cadence step. This value is available in API version 56.0 and later.<br>• `ActivityObjectMatchingFlow`—A flow that launches when Einstein Activity Capture detects and captures a new activity, such as an email. This type of flow runs in the background without user interaction. This value is available with Sync Email as Salesforce Activity in API version 64.0 and later.<br>• `Appointments`—A flow for Lightning Scheduler. This value is available in API version 44.0 and later.<br>• `ApprovalWorkflow`—An orchestration that's used for an approval process. This value is available in API version 63.0 and later.<br>• `AutoLaunchedFlow`—A flow that doesn't require user interaction.<br>• `CheckoutFlow`—A flow used in Lightning B2B Commerce to create a checkout in a store. This value is available in API version 48.0 and later.<br>• `ContactRequestFlow`—A flow that lets customers request to be contacted by customer support. This flow is used to create contact request records. This value is available in API version 45.0 and later.<br>• `CustomerLifecycle`—A Salesforce Surveys flow that lets you associate survey questions with different stages in customer lifecycles. This value is available |

| Field | Details |
| --- | --- |
| | in API version 49.0 and later and only when the Customer Lifecycle Designer license is enabled.<br>• `CustomEvent`—A process that is invoked when it receives a platform event message. In the UI, it's an event process. This value is available in API version 41.0 and later.<br>• `DataCaptureFlow`— In the UI, Data Capture flows configure the Form tab in the Field Service mobile app. When the Data Capture flow is launched, its Flow metadata is publicly available in JavaScript format. This value is available in API version 62.0 and later.<br>• `DcvrFrameworkDataCaptureFlow`—A screen flow that presents assessment questions from Discovery Framework. Launches when invoked by a user on a mobile device. This type of flow collects or displays information, requires user interaction, and works offline or online. This value is available in API version 62.0 and later.<br>• `EvaluationFlow`—A flow for evaluating custom entry and exit conditions in an orchestration. Uses the `isOrchestrationConditionMet` output variable and discards values from any other output variables. This value is available in API version 54.0 and later.<br>• `FieldServiceMobile`—A flow for the Field Service mobile app. This value is available in API version 39.0 and later.<br>• `FieldServiceWeb`—A flow for embedded Appointment Booking. Its UI label is Field Service Embedded Flow. This value is available in API version 41.0 and later.<br>• `Flow`—A flow that requires user interaction because it contains one or more screens or local actions, choices, or dynamic choices. In the UI and Salesforce Help, it's a screen flow. Screen flows can be launched from the UI, such as with a flow action, Lightning page, or web tab.<br>• `FSCLending`—A flow for Financial Services Cloud Mortgage. This value is available in API version 46.0 and later.<br>• `IdentityUserRegistrationFlow`—A flow to handle user registration and updates for single sign-on with the authentication provider framework. Available in API version 64.0 and later.<br>• `IndicatorResultFlow`—A flow for Outcome Management that calculates and creates indicator results for a selected indicator performance period. This value is available with the Outcome Management license in API version 60.0 and later.<br>• `IndividualObjectLinkingFlow`—A flow that associates individuals with interactions such as voice calls, messaging sessions, or case-related emails. This value is available in API version 58.0 and later.<br>• `InvocableProcess`—A process that another process or the Invocable Actions resource in REST API invokes. This value is available in API version 38.0 and later.<br>• `Journey`—An audience-driven flow for Marketing Cloud. This value is available in API version 57.0 and later. |

| Field | Details |
| --- | --- |
| | • `LoginFlow`—A flow for login. This value is available in API version 51.0 and later.<br>• `LoyaltyManagementFlow`—A flow for the Loyalty Management app that's invokable by loyalty program processes. This value is available in API version 54.0 and later.<br>• `Orchestrator`—An orchestration that organizes flows into groups of steps contained in a series of stages. This value is available in API version 53.0 and later.<br>• `PromptFlow`—A flow for Prompt Builder. Pass data between Prompt Builder and the flow. This value is available in API version 60.0 and later.<br>• `RecommendationStrategy`—Build recommendations for your users. A recommendation launches its assigned flow. This value is available in API version 54.0 and later. See Flow Builder Strategies.<br>• `RoutingFlow`—A flow for Salesforce Omni-Channel routing and other business logic. This value is available in API version 52.0 and later.<br>• `Survey`—A flow for Salesforce Surveys. From the UI, this type of flow is created in Survey Builder. This value is available in API version 42.0 and later.<br>• `SurveyEnrich`—A Salesforce Surveys flow that uses the Survey Data Mapper. From the UI, this type of flow is created in the Survey Builder and requires an associated survey flow type. This value is available in API version 49.0 or later and only when the Customer Lifecycle Designer license is enabled.<br>• `Workflow`—A process that is invoked when a record is created or edited. In the UI and Salesforce Help, it's a record change process.<br>These values are reserved for future use:<br>• `ActionCadenceFlow`<br>• `ActionPlan`<br>• `AppProcess`<br>• `ApprovalWorkflow`<br>• `CartAsyncFlow`<br>• `DigitalForm`<br>• `JourneyBuilderIntegration`<br>• `LoginFlow`<br>• `ManagedContentFlow`<br>• `OrchestrationFlow`<br>• `SalesEntryExperienceFlow`<br>• `TransactionSecurityFlow`<br>• `UserProvisioningFlow`<br>This value has significant impact on validation when saving the flow and on the flow's runtime behavior. Don't change this value unless you understand the flow properties of the specified type.<br>Across flow versions, you can change the type only from `Flow` to `AutoLaunchedFlow` or vice versa. Before you change the flow type, make sure that |

| Field | Details |
| --- | --- |
| | the flow contains only the elements, resources, and functionality that the new flow type supports. |
| `RecordTriggerType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Specifies what type of record changes can start the flow. Possible values are:<br>• `Create`<br>• `CreateAndUpdate`<br>• `Delete`<br>• `None`<br>• `Update`<br>Available only when `triggerType` is `RecordBeforeSave`. This field is available in API version 54.0 and later. |
| `SourceTemplateId` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The template that the current flow was created from. This is a relationship field. This field is available in API version 53.0 and later.<br>**Relationship Name**<br>SourceTemplate<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowDefinitionView |
| `SupportedEnvironments` | **Type**<br>string<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The environment in which the flow can run. Valid values are:<br>• `Default`—The flow can run from a Visualforce component, Lightning page, flow action, or custom Aura component.<br>• `Offline`—The flow can run only offline. Flow types that support offline flows must set this value. |

| Field | Details |
| --- | --- |
| | • `Slack`—The flow can run in Slack and the default environment. You specify the Slack flow environment when you save the flow.<br>This field is available in API version 63.0 and later. |
| `TriggerObjectOrEventId` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>ID of the object or platform event that triggers this flow. This field is available in API version 53.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>TriggerObjectOrEvent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EntityDefinition |
| `TriggerObjectOrEventLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The label of the object or platform event that triggers this flow. This field is available in API version 53.0 and later. |
| `TriggerOrder` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The run order of a record-triggered flow, from 1 to 2,000. See "Guidelines for Defining the Run Order of Record-Triggered Flows for an Object" in Salesforce Help. Available in API version 54.0 and later. |
| `TriggerType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Specifies what causes the flow to run. If you exclude this field, the flow has no trigger and starts only when a user or app launches the flow. Valid values are:<br>• `AutomationEvent`—The flow starts when an automation event such as an SMS subscription occurs. This value is available in API version 62.0 and later.<br>• `Capability`—The flow starts when the specified capability that the flow integrates with is invoked. This value is available in API version 60.0 and later.<br>• `DataCloudDataChange`—The flow starts when data model object (DMO) or calculated insight object (CIO) conditions are met. This value is available in API version 59.0 and later.<br>• `DataGraphDataChange`—The flow starts when conditions are met in the specified data graph field. This value is available in API version 63.0 and later.<br>• `EventDrivenJourney`—Reserved for internal use.<br>• `ExternalSystemChange`—The flow starts when an external system change event is received. This value is available in API version 61.0 and later.<br>• `FormSubmissionEvent`—The flow runs when a user submits data via a webform. In Flow Builder, this value corresponds to `Form`. This value is available in API version 60.0 and later.<br>• `PlatformEvent`—The flow starts when a platform event message is received. This value is available in API version 49.0 and later.<br>• `RecordAfterSave`—The flow starts after a record is saved. This value is available in API version 49.0 and later.<br>• `RecordBeforeDelete`—Deleting a record triggers an autolaunched flow before the record is deleted from the database. This value is available in API version 50.0 and later.<br>• `RecordBeforeSave`—Creating and/or updating a record triggers an autolaunched flow to make additional updates to that record before it's saved to the database. This value is available in API version 48.0 and later.<br>• `Scheduled`—The flow starts at the scheduled time. This value is available in API version 47.0 and later.<br>• `Segment`— At the scheduled time, the flow send emails to individuals included in the chosen segment. This value is available in API version 56.0 and later.<br>Available only when `processType` is `AutoLaunchedFlow` or `PromptFlow`. This field is available in API version 47.0 and later. |
| `VersionNumber` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The flow's version number. This field is available in API version 54.0 and later. |

## Usage

Use this object to query information about flow definitions.

# FlowInterview

Represents a flow interview. A *flow interview* is a running instance of a flow. This object is available in API version 32.0 and later.

## Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

To delete a flow interview, you must have the "Manage Flow" user permission. All other calls require the "Run Flows" user permission or the `Flow User` field enabled on the user detail page. If **Override default behavior and restrict access to enabled profiles or permission sets** is selected for an individual flow, access to that specific flow and its interviews is given to users by profile or permission set.

## Fields

| Field Name | Details |
| --- | --- |
| `CurrentElement` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The flow element at which the interview is paused. |
| `FlowVersionViewId` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>This field is a relationship field. This field is available in API version 51.0 and later.<br>**Relationship Name**<br>FlowVersionView<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowVersionView |

| Field Name | Details |
| --- | --- |
| `Guid` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>Globally unique identifier for the interview. |
| `InterviewLabel` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Label for the interview. This label helps users and administrators differentiate interviews from the same flow.<br>In the user interface, this label appears in the Paused Flow Interviews component on the user's Home tab and in the list of paused flow interviews in Setup. |
| `InterviewStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Status of the interview. Valid values are:<br>• `Completed`—This flow is complete. There are no more records to process.<br>• `Error`—This flow has one or more errors. To resolve each error, check the error code for instructions.<br>• `Paused`—This flow is paused. No new processes are added until the flow is resumed.<br>• `Running`—This flow is running or is ready to run.<br>• `VersionPaused`—This flow version is paused. No more records are processed until the flow is resumed. This value is available in API version 60.0 and later.<br>This field is available in API version 50.0 and later. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name for the interview. |

| Field Name | Details |
| --- | --- |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the user who owns the interview. Only this user or an admin can resume the interview.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PauseLabel` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Information about why the interview was paused. This string is entered by the user who paused the flow interview. The label is **Why Paused**. |
| `WasPausedFromScreen` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Whether the flow interview was paused by a user from a flow Screen element (`true` ) or not (`false` ). This field is available in API version 46.0 and later. |

# Associated Objects

This object has these associated objects. Unless noted, these objects are available in the same API version as this object.

**FlowInterviewOwnerSharingRule**
Sharing rules are available for the object.

**FlowInterviewShare**
Sharing is available for the object.

# FlowInterviewLog

Represents the logs of a screen flow interview. An *interview* is an instance of a running or previously run flow.This object is available in API version 49.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

By default, only users with the View All Data permission can access the logs for flows that are run by other users. To let users access other users' flow logs, set up sharing settings with the `FlowInterviewLogOwnerSharingRule` object.

## Fields

| Field Name | Details |
|---|---|
| `FlowDeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The flow's API name. |
| `FlowInterviewGuid` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Globally unique identifier for the interview. |
| `FlowLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The flow's label. Only shows up in API results when users query FlowInterviewLog, or when they include this field in a report. |
| `FlowNamespace` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Namespace of the flow interview logged in the FlowInterviewLog. |
| `FlowVersionNumber` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of the flow version for a flow definition. Flow versions are counted sequentially from 1. |
| `InterviewDurationInMinutes` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total number of minutes between InterviewStartTimestamp and InterviewEndTimestamp, even if flow interview is paused. |
| `InterviewEndTimestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the interview ended. |
| `InterviewStartTimestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the interview started. |
| `InterviewStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Status of the interview. Valid values are:<br>• `Autosaved`—This value is available in API version 62.0 and later.<br>• `Completed` |

| Field Name | Details |
| --- | --- |
| | • `Error`<br>• `Expired`—This value is available in API version 62.0 and later.<br>• `Paused`<br>• `Running`<br>• `VersionPaused`—This value is available in API version 60.0 and later. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Autogenerated name of the flow interview log record. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The user who owns the FlowInterviewLog record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**FlowInterviewOwnerSharingRule**
Sharing rules are available for the object.

# FlowInterviewLogEntry

Represents the log of a specific element that's executed by a screen flow interview. An *interview* is an instance of a running or previously run flow. This object is available in API version 49.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

By default, only users with the View All Data permission can access the log entries for flows that are run by other users.

## Fields

| Field Name | Details |
| --- | --- |
| `DurationSinceStartInMinutes` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Number of minutes that elapsed since the flow interview started, even if flow interview is paused. |
| `ElementApiName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>API name of the flow element. |
| `ElementDurationInMinutes` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Number of minutes that elapsed since the element executed. For example, if a screen element takes users a long time to complete, consider simplifying the screen. |
| `ElementLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The flow element's label. |
| `FlowInterviewLogId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Sort<br>**Description**<br>This field is a relationship field.<br>**Relationship Name**<br>FlowInterviewLog<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowInterviewLog |
| `LogEntryTimestamp` | **Type**<br>datetime<br>**Properties**<br>Filter, Sort<br>**Description**<br>Date and time when the flow element started to execute. |
| `LogEntryType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of screen flow user action triggered the log entry. Valid values are:<br>• `Error`<br>• `FlowFinish-Finished Flow`<br>• `FlowPause-Paused Flow`<br>• `FlowResume-Resumed Flow`<br>• `FlowStart-Started Flow`<br>• `ScreenFinish-Clicked Finish`<br>• `ScreenNext-Clicked Next`<br>• `ScreenPrevious-Clicked Previous` |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Autogenerated name of the flow interview log entry. |

# FlowInterviewLogOwnerSharingRule

Represents the rules for sharing a FlowInterviewLog with users other than the owner.This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `AccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A value that represents the type of sharing being allowed.<br>Possible values are:<br>• `Edit`—Read/Write<br>• `Read`—Read Only |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A description of the sharing rule. Maximum size is 1,000 characters. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Rule Name** in the user interface. |

| Field | Details |
| --- | --- |
| | Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record. |
| `GroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID representing the source group. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to **Label** on the user interface. |
| `OptionsIncludeHVUOwnedRecords` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description** |
| `OptionsIncludeRecordsOwnedByAll` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description** |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID representing the target user or group that's given access. |

## Usage

Use this object to manage the sharing rules for FlowInterviewLog records. General sharing uses this object.

# FlowInterviewOwnerSharingRule

Represents the rules for sharing a FlowInterview with users other than the owner. This object is available in API version 33.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `AccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A value that represents the type of sharing being allowed. The possible values are:<br>• `Read`<br>• `Edit`—In API version 42.0 and later, when **Let users resume shared flow interviews** is enabled for your org, users can resume all flow interviews that they have edit access to. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A description of the sharing rule. Maximum size is 1000 characters. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Rule Name** in the user interface. |

| Field | Details |
| --- | --- |
| | Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record. |
| `GroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID representing the source group. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to **Label** on the user interface. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID representing the target user or group that's given access. |

## Usage

Use this object to manage the sharing rules for FlowInterview records. General sharing uses this object.

In API version 42.0 and later, when **Let users resume shared flow interviews** is enabled for your org, users can resume all flow interviews that they have edit access to. When that setting is disabled, only the owner or a flow admin can resume a flow interview. To disable this setting, go to your org's Process Automation Settings in Setup.

# FlowInterviewShare

Represents a sharing entry on a FlowInterview. This object is available in API version 33.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

| Field | Details |
|---|---|
| `AccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Level of access that the User or Group has to the FlowInterview. The possible values are:<br>• `Read`<br>• `Edit`—In API version 42.0 and later, when **Let users resume shared flow interviews** is enabled for your org, users can resume all flow interviews that they have edit access to.<br>• `All`—This value is not valid for creating or deleting records. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the FlowInterview associated with this sharing entry.<br>This is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowInterview |
| `RowCause` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited.<br>Valid values include:<br>• `Manual`—The User or Group has access because a user with "All" access manually shared the FlowInterview with them.<br>• `Owner`—The User is the owner of the FlowInterview.<br>• `Rule`—The User or Group has access via a FlowInterview sharing rule.<br>• `GuestRule`—The User or Group has access via a FlowInterview guest user sharing rule. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the User or Group that has been given access to the FlowInterview. This field can't be updated.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>UserOrGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

## Usage

This object lets you determine which users and groups can view and edit flow interviews that are owned by other users.

In API version 42.0 and later, when **Let users resume shared flow interviews** is enabled for your org, users can resume all flow interviews that they have edit access to. When that setting is disabled, only the owner or a flow admin can resume a flow interview. To disable this setting, go to your org's Process Automation Settings in Setup.

# FlowNavMetricEventLog

Flow Navigation Metric event logs contain metric data for flow interviews such as total execution time, number of interviews, and number of errors. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
|---|---|
| `BotIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the bot. |
| `BotSessionIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The bot session ID. |
| `ErrorCount` | **Type**<br>int<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The number of errors for all flow interviews after the flow version was executed. |
| `FlowLoadTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The time in milliseconds to load the flow's metadata. |

| Field | Details |
| --- | --- |
| `FlowVersionIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the flow version that was executed. |
| `InterviewCount` | **Type**<br>int<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The number of flow interviews that started after the flow version was executed. |
| `PlannerIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the agent planner. |
| `ProcessType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of the flow. Valid values are:<br>• `ActionableEventManagementFlow`—A flow that triggers an actionable event orchestration process in the background and automatically executes different types of actions based on the event type. This value is available in API version 62.0 and later.<br>• `ActionCadenceAutolaunchedFlow`—A flow that's executed when a user completes a cadence step. This value is available in API version 56.0 and later.<br>• `ActionCadenceStepFlow`—A screen flow used as a cadence step. This value is available in API version 56.0 and later.<br>• `ActivityObjectMatchingFlow`—A flow that launches when Einstein Activity Capture detects and captures a new activity, such as an email. This type of flow runs in the background without user interaction. This value is available with Sync Email as Salesforce Activity in API version 64.0 and later.<br>• `Appointments`—A flow for Lightning Scheduler. This value is available in API version 44.0 and later.<br>• `ApprovalWorkflow`—An orchestration that's used for an approval process. This value is available in API version 63.0 and later. |

| Field | Details |
| --- | --- |
| | • `AutoLaunchedFlow`—A flow that doesn't require user interaction.<br>• `CheckoutFlow`—A flow used in Lightning B2B Commerce to create a checkout in a store. This value is available in API version 48.0 and later.<br>• `ContactRequestFlow`—A flow that lets customers request to be contacted by customer support. This flow is used to create contact request records. This value is available in API version 45.0 and later.<br>• `CustomerLifecycle`—A Salesforce Surveys flow that lets you associate survey questions with different stages in customer lifecycles. This value is available in API version 49.0 and later and only when the Customer Lifecycle Designer license is enabled.<br>• `CustomEvent`—A process that is invoked when it receives a platform event message. In the UI, it's an event process. This value is available in API version 41.0 and later.<br>• `DataCaptureFlow`— In the UI, Data Capture flows configure the Form tab in the Field Service mobile app. When the Data Capture flow is launched, its Flow metadata is publicly available in JavaScript format. This value is available in API version 62.0 and later.<br>• `DcvrFrameworkDataCaptureFlow`—A screen flow that presents assessment questions from Discovery Framework. Launches when invoked by a user on a mobile device. This type of flow collects or displays information, requires user interaction, and works offline or online. This value is available in API version 62.0 and later.<br>• `EvaluationFlow`—A flow for evaluating custom entry and exit conditions in an orchestration. Uses the `isOrchestrationConditionMet` output variable and discards values from any other output variables. This value is available in API version 54.0 and later.<br>• `FieldServiceMobile`—A flow for the Field Service mobile app. This value is available in API version 39.0 and later.<br>• `FieldServiceWeb`—A flow for embedded Appointment Booking. Its UI label is Field Service Embedded Flow. This value is available in API version 41.0 and later.<br>• `Flow`—A flow that requires user interaction because it contains one or more screens or local actions, choices, or dynamic choices. In the UI and Salesforce Help, it's a screen flow. Screen flows can be launched from the UI, such as with a flow action, Lightning page, or web tab.<br>• `FSCLending`—A flow for Financial Services Cloud Mortgage. This value is available in API version 46.0 and later.<br>• `IdentityUserRegistrationFlow`—A flow to handle user registration and updates for single sign-on with the authentication provider framework. Available in API version 64.0 and later.<br>• `IndicatorResultFlow`—A flow for Outcome Management that calculates and creates indicator results for a selected indicator performance period. This value is available with the Outcome Management license in API version 60.0 and later.<br>• `IndividualObjectLinkingFlow`—A flow that associates individuals with interactions such as voice calls, messaging sessions, or case-related emails. This value is available in API version 58.0 and later.<br>• `InvocableProcess`—A process that another process or the Invocable Actions resource in REST API invokes. This value is available in API version 38.0 and later. |

| Field | Details |
| --- | --- |
| | • `Journey`—An audience-driven flow for Marketing Cloud. This value is available in API version 57.0 and later.<br>• `LoginFlow`—A flow for login. This value is available in API version 51.0 and later.<br>• `LoyaltyManagementFlow`—A flow for the Loyalty Management app that's invokable by loyalty program processes. This value is available in API version 54.0 and later.<br>• `Orchestrator`—An orchestration that organizes flows into groups of steps contained in a series of stages. This value is available in API version 53.0 and later.<br>• `PromptFlow`—A flow for Prompt Builder. Pass data between Prompt Builder and the flow. This value is available in API version 60.0 and later.<br>• `RecommendationStrategy`—Build recommendations for your users. A recommendation launches its assigned flow. This value is available in API version 54.0 and later. See Flow Builder Strategies.<br>• `RoutingFlow`—A flow for Salesforce Omni-Channel routing and other business logic. This value is available in API version 52.0 and later.<br>• `Survey`—A flow for Salesforce Surveys. From the UI, this type of flow is created in Survey Builder. This value is available in API version 42.0 and later.<br>• `SurveyEnrich`—A Salesforce Surveys flow that uses the Survey Data Mapper. From the UI, this type of flow is created in the Survey Builder and requires an associated survey flow type. This value is available in API version 49.0 or later and only when the Customer Lifecycle Designer license is enabled.<br>• `Workflow`—A process that is invoked when a record is created or edited. In the UI and Salesforce Help, it's a record change process.<br>These values are reserved for future use.<br>• `ActionCadenceFlow`<br>• `ActionPlan`<br>• `AppProcess`<br>• `ApprovalWorkflow`<br>• `CartAsyncFlow`<br>• `DigitalForm`<br>• `JourneyBuilderIntegration`<br>• `LoginFlow`<br>• `ManagedContentFlow`<br>• `OrchestrationFlow`<br>• `SalesEntryExperienceFlow`<br>• `TransactionSecurityFlow`<br>• `UserProvisioningFlow` |
| `RequestIdentifier` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestIdentifier`. For example: `TID:000000000000c00fff`. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The time that the flow was executed in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `TotalExecutionTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total time in milliseconds to start and finish all flow interviews. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who executed the flow through the UI or the API. For example: `00530000009M943`. |

# FlowOrchestration

Represents the details of an orchestration definition. This object is available in API version 62.0 and later.

## Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

# Fields

| Field | Details |
| --- | --- |
| `ActiveVersionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the active orchestration version. This field is a relationship field.<br>This field is a relationship field.<br>**Relationship Name**<br>ActiveVersion<br>**Refers To**<br>FlowOrchestrationVersion |
| `ApiName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API name of the the orchestration. |
| `ApiVersion` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API version of the active orchestration or the last saved orchestration. |
| `AverageRunTime` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The average duration of an orchestration run that has completed without error. |
| `CompletionRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of the total number of orchestration runs that have completed without error. |

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Nillable, Update<br>**Description**<br>The description of the flow orchestration. |
| `FailedRunCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of orchestration runs that have failed. |
| `InstalledPackageName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API name of the installed package that the orchestration is a part of. |
| `IsCitizenEnabled` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the orchestration can be modified by non-admins. Valid value is False.<br>The default value is `false`. |
| `IsOverridable` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the orchestration that's part of a managed package is overridable.<br>The default value is `false`. |
| `IsTemplate` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the orchestration record is a template.<br>The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. |
| `ManageableState` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Specifies the managable state of the orchestration that's contained in a package.<br>Valid values are:<br>• `beta`—Managed-Beta<br>• `deleted`—Managed-Proposed-Deleted<br>• `deprecated`—Managed-Proposed-Deprecated<br>• `deprecatedEditable`—SecondGen-Installed-Deprecated<br>• `installed`—Managed-Installed<br>• `installedEditable`—SecondGen-Installed-Editable<br>• `released`—Managed-Released<br>• `unmanaged`—Unmanaged |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort, Update<br>**Description**<br>The label of the orchestration. |

| Field | Details |
| --- | --- |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix associated with the orchestration record. |
| `OrchestrationDefinition` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Represents the orchestration definition. |
| `OrchestrationLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The label of the orchestration. |
| `OrchestrationType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The orchestration's flow type. FlowType consolidates ProcessType and TriggerType into one field. FlowType is used with permissions, so admins can control access to each flow type.<br>Valid values are:<br>• `OrchAutolnch`—Autolaunched No Trigger Orchestration: Launches when invoked by Apex, REST API, custom buttons, or custom links. An orchestration lets you create a multi-step, multi-user process.<br>• `OrchRecTrigAftSave`—Record-Triggered After Save Orchestration: Launches when a record is created or updated. An orchestration lets you create a multi-step, multi-user process. This type of flow runs in the background without user interaction.<br>• `CmsOrchAutolnch` —CMS Workflow Orchestration Autolaunched: Launches when invoked from the Workflows component in a CMS workspace. This type of orchestration lets you create a multi-step, multi-user process to create, edit, organize, and manage digital content from a centralized location |
| `OverriddenById` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the orchestration that's overriding the current orchestration.<br>This field is a relationship field.<br>**Relationship Name**<br>OverriddenBy<br>**Refers To**<br>FlowOrchestration |
| `OverriddenOrchestrationId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the orchestration that the current orchestration is overriding.<br>This field is a relationship field.<br>**Relationship Name**<br>OverriddenOrchestration<br>**Refers To**<br>FlowOrchestration |
| `RunCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of orchestration runs that have been started across all orchestration versions. |
| `SourceTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the template that the orchestration was created from.<br>This field is a relationship field.<br>**Relationship Name**<br>SourceTemplate<br>**Refers To**<br>FlowOrchestration |

| Field | Details |
| --- | --- |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The status of the record.<br>Valid values are:<br>• `Active`—Active<br>• `Draft`—Inactive<br>• `InvalidDraft`—Draft<br>• `Obsolete`—Inactive<br>• `UnderReview`—Under Review |
| `TriggerType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Specifies the trigger type for a record-triggered orchestration.<br>Valid values are:<br>• `RecordAfterSave`—Record—Run After Save |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**FlowOrchestrationChangeEvent on page 68**
Change events are available for the object.

# FlowOrchestrationInstance

Represents a run-time instance of an orchestration. This object is available in API version 53.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

## Special Access Rules

If sharing rules are defined for FlowOrchestrationInstance, they determine access to specific orchestration run records. Or the user must have the View All Data permission.

## Fields

| Field | Details |
| --- | --- |
| `CurrentStage` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API name of the stage that was running when the orchestration run was paused or failed because of an error in an action called by a step. This field is available in API version 62.0 and later. |
| `Duration` | **Type**<br>long<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The duration of the orchestration instance in seconds. Durations are incremented until the orchestration is completed, canceled, or ends in an error. This field is available in API version 62.0 and later. |
| `InterviewId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The globally unique flow interview ID associated with the orchestration instance.<br>This field is a relationship field.<br>**Relationship Name**<br>Interview<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowInterview |
| `LastReferencedDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The most recent time a user viewed a record related to the orchestration run. This field is available in API version 55.0 and later. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The most recent time a user viewed the orchestration run. This field is available in API version 55.0 and later. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name for the orchestration instance. |
| `OrchestrationDeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The developer name of the flow definition associated with the orchestration run. This field is available in API version 55.0 and later. |
| `OrchestrationLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The label of the orchestration. This field is available in API version 63.0 and later. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the automated process user. This field is available in API version 56.0 and later. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The status of the orchestration run. Valid values are:<br>• `Canceled`—The orchestration instance was canceled.<br>• `Completed`—The orchestration instance completed.<br>• `Error`—The orchestration instance, or a stage or step within the orchestration instance, encountered an error.<br>• `InProgress`—The orchestration instance is in progress.<br>• `Suspended`—The orchestration instance was suspended. |
| `TriggeringRecordId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the record that triggered the record-triggered orchestration. This field is available in API version 62.0 and later.<br>**Relationship Name**<br>TriggeringRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, AccountContactRole, AiEvalCopilotTestCaseRslt, AiEvalTestCaseCritRslt, AiEvalTestCaseResult, AiEvaluation, AiPromptBuilderGenResult, Announcement, ApexTestQueueItem, AppAnalyticsQueryRequest, Asset, AssetRelationship, AssociatedLocation, AsyncApexJob, Attachment, AuthorizationForm, AuthorizationFormConsent, AuthorizationFormDataUse, AuthorizationFormText, BackgroundOperation, Benificiary__c, BriefcaseAssignment, BusinessBrand, CalendarView, Case, CaseContactRole, CaseSolution, CollaborationGroup, CollaborationGroupMember, CollaborationGroupMemberRequest, CollaborationGroupRecord, CollaborationInvitation, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, ConferenceNumber, Contact, ContactPointAddress, ContactPointConsent, ContactPointEmail, |

| Field | Details |
| --- | --- |
| | ContactPointPhone, ContactPointTypeConsent, ContactRequest, ContentBody, ContentDistribution, ContentDocument, ContentDocumentLink, ContentDocumentSubscription, ContentFolder, ContentFolderLink, ContentFolderMember, ContentNotification, ContentVersion, ContentVersionComment, ContentVersionRating, ContentWorkspaceDoc, Contract, ContractContactRole, Customer, Dashboard, DashboardComponent, DataAssessmentFieldMetric, DataAssessmentMetric, DataAssessmentValueMetric, DataUseLegalBasis, DataUsePurpose, DelegatedAccount, DeleteEvent, Document, DuplicateRecordItem, DuplicateRecordSet, EmailMessage, EmailMessageRelation, EmailStatus, EngagementChannelType, EnhancedLetterhead, EntitySubscription, Event, EventRelation, EventRelayFeedback, ExternalEvent, ExternalEventMapping, FeedAttachment, FeedComment, FeedItem, FeedLike, FeedPollChoice, FeedPollVote, FeedRevision, FeedSignal, FeedTrackedChange, FileSearchActivity, FlowInterviewLog, FlowInterviewLogEntry, FlowOrchestration, FlowOrchestrationInstance, FlowOrchestrationLog, FlowOrchestrationStageInstance, FlowOrchestrationStepInstance, FlowOrchestrationVersion, FlowOrchestrationWorkItem, FlowRecord, FlowRecordElement, FlowRecordVersion, FlowRecordVersionOccurrence, FlowStageRelation, FlowTestResult, ForecastingAdjustment, ForecastingCustomData, ForecastingFact, ForecastingItem, ForecastingOwnerAdjustment, ForecastingQuota, Idea, Image, Individual, InstalledMobileApp, Lead, ListEmail, ListEmailIndividualRecipient, ListEmailRecipientSource, Location, LocationTrustMeasure, MLModel, MLModelFactor, MLModelFactorComponent, MLModelMetric, ManagedContent, ManagedContentChannel, ManagedContentSpace, ManagedContentVariant, MatchingInformation, MlFeatureValueMetric, NetworkActivityAudit, NetworkDiscoverableLogin, NetworkFeedResponseMetric, NetworkSelfRegistration, NetworkUserHistoryRecent, Note, ObjectDataImport, ObjectDataImportReference, ObjectMetadataTag, ObjectRelatedUrl, Opportunity, OpportunityContactRole, OpportunityLineItem, OpportunityRelatedDeleteLog, Order, OrderItem, OrgMetric, OrgMetricScanResult, OrgMetricScanSummary, Partner, Partner__c, PartyConsent, Pricebook2, PricebookEntry, ProcessException, ProcessInstance, ProcessInstanceNode, Product2, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, PromptAction, PromptError, PushTopic, QuickText, QuickTextUsage, Recommendation, RecommendationResponse, RecordAction, Report, Scorecard, ScorecardAssociation, ScorecardMetric, Seller, ServiceSetupProvisioning, SetupAssistantStep, SocialPersona, SocialPost, Solution, StreamingChannel, TableauHostMapping, Task, TodayGoal, Topic, TopicAssignment, User, UserAppInfo, UserAppMenuCustomization, UserDefinedLabel, UserDefinedLabelAssignment, UserEmailPreferredPerson, UserLocalWebServerIdentity, UserProvAccount, UserProvAccountStaging, UserProvMockTarget, UserProvisioningLog, UserProvisioningRequest, WorkAccess, WorkBadge, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkThanks |
| `TriggeringRecordType` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the Salesforce object configured to trigger the orchestration. This field is available in API version 64.0 and later. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**FlowOrchestrationInstanceFeed on page 55**
Feed tracking is available for the object.

**FlowOrchestrationInstanceHistory on page 63**
History is available for tracked fields of the object.

**FlowOrchestrationInstanceOwnerSharingRule on page 65**
Sharing rules are available for the object. This object is available in API version 56.0 and later.

**FlowOrchestrationInstanceShare on page 67**
Sharing is available for the object. This object is available in API version 56.0 and later.

# FlowOrchestrationLog

Represents logging data for a FlowOrchestrationInstance. This object is available in API version 54.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()` `update()`

## Special Access Rules

If sharing rules are defined for FlowOrchestrationInstance and the Inherit orchestration run sharing rules to control orchestration run log record access setting is enabled, then orchestration run log record access is inherited from related orchestration run records. If the Inherit orchestration run sharing rules to control orchestration run log record access setting isn't enabled, a user must have the Manage Flow permission. Or the user must have the View All Data permission.

## Fields

| Field | Details |
|---|---|
| `Actor` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>For an interactive step, the user that completed the work item.<br>For a background or MuleSoft step, the username of the user that the step ran as. |
| `Assignee` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>For an interactive step, the user, group, or queue assigned to a work item when the FlowOrchestrationLog relates to an interactive FlowOrchestrationStep. |
| `AssigneeType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>For an interactive step, the assignee type associated with an interactive step's work item. Valid values are:<br>• `Group`<br>• `Invalid`<br>• `Queue`<br>• `User` |
| `Comments` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The string stored in an output variable with the API name of Comments from a flow called by a completed orchestration step. |
| `Context` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the record where the assigned user completed the flow associated with an interactive step in the Work Guide component. |
| `Duration` | **Type**<br>long<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A long number that indicates the duration, in seconds, of the associated FlowOrchestrationInstance, FlowOrchestrationStage, FlowOrchestrationStep, or FlowOrchestrationWorkItem. |

| Field | Details |
| --- | --- |
| `Kind` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The milestone associated with the FlowOrchestrationLog. Valid values are:<br>• `CancelInstance`—The associated FlowOrchestrationInstance was canceled.<br>• `DiscontinueStage`—The associated FlowOrchestrationStage was discontinued.<br>• `DiscontinueStep`—The associated FlowOrchestrationStep was discontinued.<br>• `EndInstance`—The associated FlowOrchestrationInstance was completed successfully.<br>• `EndStage`—The associated FlowOrchestrationStage was exited successfully.<br>• `EndStep`—The associated FlowOrchestrationStep was exited successfully.<br>• `EndWorkItem`—The associated FlowOrchestrationWorkItem was completed successfully.<br>• `FailInstance`—The associated FlowOrchestrationInstance encountered an error.<br>• `FailStage`—The associated FlowOrchestrationStage encountered an error.<br>• `FailStep`—The associated FlowOrchestrationStep encountered an error.<br>• `ResumeInstance`—A failed or paused orchestration instance was resumed.<br>• `ReassignWorkItem`—The associated FlowOrchestrationWorkItem was reassigned.<br>• `RunRecallPath`—The associated approval submission was recalled.<br>• `StartInstance`—The associated FlowOrchestrationInstance started.<br>• `StartStage`—The associated FlowOrchestrationStage started.<br>• `StartStep`—The associated FlowOrchestrationStep started.<br>• `StartWorkItem`—The associated FlowOrchestrationWorkItem started.<br>• `SuspendInstance`—The associated FlowOrchestrationInstance was suspended.<br>• `SuspendStage`—The associated FlowOrchestrationStage was suspended. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, Sort<br>**Description**<br>The name for the FlowOrchestrationLog record. |
| `OrchestationInstanceId` | **Type**<br>reference<br>**Properties**<br>Filter, Sort, Group |

| Field | Details |
| --- | --- |
| | **Description**<br>The FlowOrchestrationInstance associated with the FlowOrchestrationLog.<br>This field is a relationship field.<br>**Relationship Name**<br>OrchestrationInstance<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowOrchestrationInstance |
| `OrchestrationName` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup , Sort<br>**Description**<br>The API name of the orchestration. |
| `OrchestrationVersion` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>An integer for the FlowDefinitionVersion of the orchestration associated with the FlowOrchestrationLog. |
| `StageName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API name of the stage in the associated orchestration. |
| `StepName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API name of the step in the associated orchestration. |
| `Timestamp` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Sort<br>**Description**<br>The date and time when the FlowOrchestrationLog milestone occured. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**FlowOrchestrationLogFeed on page 55**
Feed tracking is available for the object.

**FlowOrchestrationLogHistory on page 63**
History is available for tracked fields of the object.

**FlowOrchestrationLogOwnerSharingRule on page 65**
Sharing rules are available for the object.

**FlowOrchestrationLogShare on page 67**
Sharing is available for the object.

# FlowOrchestrationStageInstance

Represents a run-time instance of a stage in a run-time instance of an orchestration. This read-only object is available in API version 53.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

If sharing rules are defined for FlowOrchestrationStageInstance, they determine access to specific orchestration stage run records. Or the user must have the View All Data permission.

## Fields

| Field | Details |
| --- | --- |
| `Label` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The label for the flow orchestration stage instance. This label helps users and administrators differentiate between step instances from the same orchestration. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The API name for the flow orchestration stage instance. |
| `OrchestrationInstanceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the FlowOrchestrationInstance associated with the orchestration stage instance.<br>This field is a relationship field.<br>**Relationship Name**<br>OrchestrationInstance<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowOrchestrationInstance |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>The ID of the automated process user. This field is available in API version 56.0 and later.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `Position` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Sort<br>**Description**<br>For internal use only. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The run status of the orchestration stage instance. Valid values are:<br>• `Completed`—The stage instance completed.<br>• `Discontinued`—The stage was in progress or completed when the orchestration instance encountered an error.<br>• `Error`—The stage instance encountered an error, an instance of a background step within the stage encountered and error, or an autolaunched flow called by a background step within the stage encountered an error.<br>• `InProgress`—The stage instance is in progress.<br>• `Suspended`—The stage was in progress when the orchestration instance was manually suspended. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**FlowOrchestrationStageInstanceFeed on page 55**
Feed tracking is available for the object.

**FlowOrchestrationStageInstanceHistory on page 63**
History is available for tracked fields of the object.

**FlowOrchestrationStageInstanceOwnerSharingRule on page 65**
Sharing rules are available for the object.

**FlowOrchestrationStageInstanceShare on page 67**
Sharing is available for the object.

# FlowOrchestrationStepInstance

Represents a run-time instance of a step in a run-time instance of a stage of a run-time instance of an orchestration. This read-only object is available in API version 53.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

If sharing rules are defined for FlowOrchestrationStepInstance, they determine access to specific orchestration step run records. Or the user must have the View All Data permission.

## Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The description of the step. |
| `Label` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The label of the step. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The API name of the step. |
| `OrchestrationInstanceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the FlowOrchestrationInstance associated with the orchestration step instance.<br>This field is a relationship field.<br>**Relationship Name**<br>OrchestrationInstance |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>FlowOrchestrationInstance |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>The ID of the automated process user. This field is available in API version 56.0 and later.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `StageInstanceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the FlowOrchestrationStageInstance associated with the orchestration step instance.<br>This field is a relationship field.<br>**Relationship Name**<br>StageInstance<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowOrchestrationStageInstance |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The status of the orchestration step instance. Valid values are:<br>• `Completed`—The step instance completed. |

| Field | Details |
| --- | --- |
| | • `Discontinued`—The step instance was in progress or completed when it's associated stage instance completed, or the step was in progress or completed when the orchestration instance encountered an error.<br>• `Error`—The step instance encountered an error or the autolaunched flow associated with a step instance encountered an error.<br>• `InProgress`—The step instance is running, the step instance was in progress when its associated stage encountered an error, or the screen flow associated with the step instance encountered an error.<br>• `NotStarted`—The step instance was created, but hasn't met its entry condition. |
| `StepType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of step. Valid values are:<br>• `InteractiveStep`—Interactive Step<br>• `BackgroundStep`—Background Step<br>• `AynchronousBackgroundStep`—Asynchronous Background Step<br>This value is available in API version 54.0 and later. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**FlowOrchestrationStepInstanceFeed on page 55**
Feed tracking is available for the object.

**FlowOrchestrationStepInstanceHistory on page 63**
History is available for tracked fields of the object.

**FlowOrchestrationStepInstanceOwnerSharingRule on page 65**
Sharing rules are available for the object.

**FlowOrchestrationStepInstanceShare on page 67**
Sharing is available for the object.

# FlowOrchestrationVersion

Represents the version of an orchestration. This object is available in API version 62.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `ActivatedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user that activated the orchestration.<br>This field is a relationship field.<br>**Relationship Name**<br>ActivatedBy<br>**Refers To**<br>User |
| `ActivatedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the orchestration was activated. |
| `ApiVersion` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The API version of this orchestration record version. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The description of the flow orchestration version. |
| `FlowOrchestrationId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the parent orchestration running this version.<br>This field is a relationship field.<br>**Relationship Name**<br>FlowOrchestration<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>FlowOrchestration |
| `IsOverridable` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the orchestration that's part of a managed package is overridable.<br>The default value is `false`. |
| `IsTemplate` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the orchestration record version is a template.<br>The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The label of the orchestration. |
| `OrchestrationType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The orchestration's flow type. FlowType consolidates ProcessType and TriggerType into one field. FlowType is used with permissions, so admins can control access to each flow type.<br>Valid values are:<br>• `OrchAutolnch`—Autolaunched No Trigger Orchestration: Launches when invoked by Apex, REST API, custom buttons, or custom links. An orchestration lets you create a multi-step, multi-user process.<br>• `OrchRecTrigAftSave`—Record-Triggered After Save Orchestration: Launches when a record is created or updated. An orchestration lets you create a multi-step, multi-user process. This type of flow runs in the background without user interaction.<br>• `CmsOrchAutolnch`—CMS Workflow Orchestration Autolaunched: Launches when invoked from the Workflows component in a CMS workspace. This type of orchestration lets you create a multi-step, multi-user process to create, edit, organize, and manage digital content from a centralized location |
| `OverriddenById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the orchestration that's overriding the current orchestration.<br>This field is a relationship field.<br>**Relationship Name**<br>OverriddenBy<br>**Refers To**<br>FlowOrchestration |
| `OverriddenOrchestrationId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the orchestration that the current orchestration is overriding.<br>This field is a relationship field.<br>**Relationship Name**<br>OverriddenOrchestration<br>**Refers To**<br>FlowOrchestration |
| `RunInMode` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The mode that the orchestration runs in.<br>Possible values are:<br>• `DefaultMode`—The orchestration version runs in system or user context, depending on how the orchestration is launched.<br>• `SystemModeWithSharing`—The orchestration version always runs in system mode with sharing. The orchestration respects org-wide default settings, role hierarchies, sharing rules, manual sharing, teams, and territories. But it doesn't respect object permissions, field-level access, or other permissions of the running user.<br>• `SystemModeWithoutSharing`—The orchestration version can access all data. In the UI, this value appears as System Context without Sharing—Access All Data. |
| `SourceTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field is a relationship field.<br>**Relationship Name**<br>SourceTemplate<br>**Refers To**<br>FlowOrchestration |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the template that the orchestration was created from. This is a relationship field.(Refers to Orchestration Record).<br>Possible values are:<br>• `Active`—Active<br>• `Draft`—Inactive<br>• `InvalidDraft`—Draft<br>• `Obsolete`—Inactive<br>• `UnderReview`—Under Review |
| `TriggerObjectOrEventLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The label of the object or platform event that triggers this flow. |
| `VersionNumber` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The version number of the orchestration version. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**FlowOrchestrationVersionChangeEvent on page 68**
Change events are available for the object.

# FlowOrchestrationWorkItem

Represents a work item associated with a run-time instance of an interactive step in a run-time instance of an orchestration. This object is available in API version 54.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

## Special Access Rules

An assignee can see all work item records assigned to them. If sharing rules are defined for FlowOrchestrationWorkItem, they determine access to specific orchestration work item records for users other than the assignee. Or the user must have the View All Data permission.

## Fields

| Field | Details |
|---|---|
| `AssigneeId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>The ID of the user, group, or queue assigned to the orchestration work item.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Assignee<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group (Type = Regular), Group (Type = Queue), User |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The description of the orchestration work item. |
| `ElapsedTimeSinceAsgntInSec` | **Type**<br>long<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>When status is Assigned, the number of seconds that have passed since the work item was last assigned. When status is Completed, this value is null. This field is available in API version 63.0 and later. |
| `ElapsedTimeSinceCreationInSec` | **Type**<br>long<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>When status is Assigned, the number of seconds that have passed since the work item was created. When status is Completed, this value is null. This field is available in API version 63.0 and later. |
| `Label` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The label of the orchestration work item. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The most recent time a user viewed a record related to the orchestration work item. This field is available in API version 55.0 and later. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The most recent time a user viewed the orchestration work item. This field is available in API version 55.0 and later. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The API name of the orchestration work item. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>• When the assignee is an internal user: the ID of the internal user |

| Field | Details |
| --- | --- |
| | • When the assignee is a credentialed Experience Cloud site visitor: the ID of the credentialed Experience Cloud site visitor<br>• When the assignee is a group or queue: the ID of the automated process user<br>This field is available in API version 56.0 and later.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `RelatedRecordId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the context record, such as an account, case, or expense, that the orchestration work item is related to. An assigned user completes the associated orchestration work item on the page for this record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>RelatedRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>All objects except AccountContactRelation, AccountTeamMember, ActiveScratchOrg, ActivityMetric, ActivityMetricRollup,CampaignMember, CartCheckoutSession, CartDeliveryGroup, CartDeliveryGroupMethod, ChatterActivity,CollaborationGroupMember, ContentDesignKit, ContentDesignKitVersion, ConversationBroadcastEntry,ConversationReason, ConversationReasonExcerpt, ConversationReasonGroup, CustomPersonDataTemplate,ElectronicMediaGroup, EngagementScore, Event, FeedItem, FlowOrchestrationWorkItem, FtestDelPlatform1,FtestDelPlatform2, FtestFormulaFieldRefSql,HighScaleSample, HighScaleSampleItem, LegalEntity, LocationWaitlist, LocationWaitlistedParty,LocWaitlistMsgTemplate, ManagedContentVersion, MessagingEndUser, MessagingSession, MLModel,MLModelFactor, MLModelFactorComponent, NetworkMember, NetworkMemberChunk, OpportunityContactRole,OpportunityLineItem, OpportunityScore, OpportunityTeamMember, OrgSnapshot, PaymentTermItem,RequestsForAccessSIQ, ScoreIntelligence, ScratchOrgInfo, SharingRecordCollection, SharingRecordCollectionItem,SharingRecordCollectionMember, StreamActivityAccess, Survey, SurveyMessagingChannel, SurveyPage,SurveyQuestionChoice, SurveyVersion, Task, TenantSecurityAlertRuleSelectedTenant, TenantSecurityApiAnomaly,TenantSecurityConnectedApp, TenantSecurityCredentialStuffing, TenantSecurityHealthCheckBaselineTrend,TenantSecurityHealthCheckDetail, |

| ScreenFlowInputs | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The input parameters required by the screen flow. |

| Field | Details |
| --- | --- |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The status of the work item.<br>Valid values are:<br>• `Assigned`<br>• `Completed` |
| `StepInstanceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the flow orchestration step associated with the orchestration work item.<br>This field is a relationship field.<br>**Relationship Name**<br>StepInstance<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowOrchestrationStepInstance |

# Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**FlowOrchestrationWorkItemFeed on page 55**
Feed tracking is available for the object.

**FlowOrchestrationWorkItemHistory on page 63**
History is available for tracked fields of the object.

**FlowOrchestrationWorkItemOwnerSharingRule on page 65**
Sharing rules are available for the object.

**FlowOrchestrationWorkItemShare on page 67**
Sharing is available for the object.

# FlowRecord

Represents the details of a flow. This object is available in API version 58.0 and later.

## Supported Calls

`delete()`, `query()`, `update()`

## Fields

| Field Name | Details |
| --- | --- |
| `ActivationId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the marketing segment activation. This field is available in API version 64.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>Activation<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MarketSegmentActivation |
| `ActiveVersionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the active flow version. This field is available in API version 61.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>ActiveVersion<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowRecordVersion |

| Field Name | Details |
| --- | --- |
| `ApiVersion` | **Type**<br>double<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API version of the flow record. This field is available in API version 61.0 and later. |
| `AreMetricsLoggedToDataCloud` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this flow's metrics are logged in Data Cloud. The default value is false. This field is available in API version 63.0 and later. |
| `AssociatedRecordId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the record the flow is associated with.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>AssociatedRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Campaign |
| `Builder` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the tool that created this flow. Valid values are:<br>• `Cloud Flow Designer`<br>• `Flow Builder`<br>• `Swing Designer`<br>This field is available in API version 61.0 and later. |

| Field Name | Details |
| --- | --- |
| `CapacityCategory` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The category that determines the usage limits of the flow. Possible values are:<br>• Marketing Cloud Flow<br>This field is available in API version 62.0 and later. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The description of the flow. |
| `ErrorCode` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The error code if the flow element run encountered an error. Valid values are:<br>• `ACTIVATING_USER_ACCOUNT_DEACTIVATED`—We can't run this flow because the user who activated it has a deactivated user record.<br>• `ACTIVATING_USER_LOST_PERMISSIONS`—We can't run this flow because the user that activated it no longer has permission to it.<br>• `CANNOT_PUBLISH_SEGMENT`—We can't run this flow because we can't publish the segment it's using. Contact Salesforce Customer Support and ask for help with the error ID.<br>• `CANNOT_QUERY_SEGMENT_MEMBER_DATA`—We can't run this flow because we can't query the segment membership data it's using. Contact Salesforce Customer Support and ask for help with the error ID.<br>• `CANNOT_RUN_ACTIVATION_TRIGGERED_FLOW`—Something went wrong with your automation. Contact Salesforce Customer Support and ask for help with the error ID.<br>• `CANNOT_REFRESH_DATA_STREAM`—We can't run this flow because we can't refresh your data stream metadata. Contact Salesforce Customer Support and ask for help with the error ID.<br>• `CANNOT_REFRESH_IDENTITY_RES_DATA`—We can't run this flow because we can't refresh your identity resolution data. Contact Salesforce Customer Support and ask for help with the error ID. |

| Field Name | Details |
| --- | --- |
| | • `CANNOT_REFRESH_IDENTITY_RES_METADATA`—We can't run this flow because we can't refresh your identity resolution metadata. Contact Salesforce Customer Support and ask for help with the error ID.<br>• `CANNOT_UPDATE_DATASTREAM_METADATA`—We can't run this flow because we can't update your DataStream metadata. Contact Salesforce Customer Support and ask for help with the error ID.<br>• `CREATE_EXPERIMENT_ERROR`—We can't run this flow because an error occurred while executing the Path Experiment element. To try again, save and activate a new version of the flow.<br>• `DATA_ACTION_STATUS_ERROR`—We can't run this flow because we couldn't create the data action. To try again, save and activate a new version of the flow.<br>• `FLOW_FAILED_TO_START`—This flow failed to start. Contact Salesforce Customer Support and ask for help with the error ID.<br>This field is available in API version 59.0 and later. |
| `ErrorDetails` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The error ID. This field is available in API version 59.0 and later. |
| `FlowCategory` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The API name of a category. Sharing rules assign permissions to view and edit flows by category and subcategory. This field is available in API version 60.0 and later. |
| `FlowDefinition` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Represents the flow definition. |
| `FlowSubcategory` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The API name of a subcategory. Sharing rules assign permissions to view and edit flows by category and subcategory. This field is available in API version 60.0 and later. |
| `FlowType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The label of a flow type. `FlowType` consolidates `ProcessType` and `TriggerType` into one field. `FlowType` is used with permissions, so admins can control access to each flow type. Valid values are:<br>• `Action Cadence Step Screen Flow`—Launches from a cadence step. This type of flow collects or displays information and requires user interaction.<br>• `Action Plan Autolaunched Flow`—Launches an action plan task from an action plan when conditions in the associated action plan template process are met. This type of flow runs in the background without user interaction.<br>• `Activity-Object Matching No Trigger Flow`—Launches when Einstein Activity Capture detects and captures a new activity, such as an email. This type of flow runs in the background without user interaction. Requires Sync Email as Salesforce Activity to be enabled.<br>• `Activation-Triggered Autolaunched Flow`—Launches when an activation is published. This type of flow runs in the background without user interaction.<br>• `Admin Automation Event-Triggered Flow`—Launches when invoked by Apex, processes, REST API, and more. This type of flow runs in the background without user interaction.<br>• `Autolaunched Approval Orchestration`—Launches when invoked by Apex, REST API, custom buttons, or custom links. An approval orchestration lets you create a multi-step, multi-user approval process.<br>• `Autolaunched No Trigger Flow`—Launches when invoked by processes or code such as Apex and REST API. This type of flow runs in the background without user interaction.<br>• `Autolaunched No Trigger Orchestration`—Launches when invoked by Apex, REST API, custom buttons, or custom links. An orchestration lets you create a multi-step, multi-user process. |

| Field Name | Details |
| --- | --- |
| | • `Automation Event-Triggered Autolaunched Flow`—Launches when invoked by Apex, processes, REST API, and more. This type of flow runs in the background without user interaction.<br>• `Automation Event-Triggered Flow`—Launches when a user performs an automation event, like subscribing to SMS messages. This type of flow runs in the background without user interaction.<br>• `Automation Event-Triggered Flow v0`—Deprecated. Launches when a user performs an automation event, like subscribing to SMS messages. This type of flow runs in the background without user interaction.<br>• `Cart Async Autolaunched Flow`—Launches when invoked by a cart change, such as an Add to Cart. This type of flow runs in the background without user interaction.<br>• `Checkout Screen Flow`—Create a screen flow that implements a Commerce Cloud checkout process. This type of flow collects or displays information and requires user interaction.<br>• `CMS Workflow Orchestration Autolaunched`—Launches when invoked from the Workflows component in a CMS workspace. This type of orchestration lets you create a multi-step, multi-user process to create, edit, organize, and manage digital content from a centralized location.<br>• `Contact Request Screen Flow`—Launches when invoked by a customer, allowing them to enter contact details into a self-service form. This type of flow collects or displays information and requires user interaction.<br>• `Customer Lifecycle Record-Triggered After Save Flow`—Launches after a customer lifecycle map is saved and changes records related to the triggering record. This type of flow runs in the background without user interaction.<br>• `Data Cloud Data Change Flow`—Launches when a record from a Data Cloud data model object or a calculated insight object is changed and meets the specified conditions. This type of flow runs in the background without user interaction.<br>• `Data Graph-Triggered Autolaunched Flow`—Launches when invoked by Apex, processes, REST API, and more. This type of flow runs in the background without user interaction.<br>• `Data Graph-Triggered Flow`—Launches when invoked by Apex, processes, REST API, and more. This type of flow runs in the background without user interaction.<br>• `Data Graph-Triggered Flow v0`—Deprecated. Launches when invoked by Apex, processes, REST API, and more. This type of flow runs in the background without user interaction.<br>• `Digital Form Screen Flow`—Launches from app extensions. This type of flow collects or displays information and requires user interaction.<br>• `Discovery Framework Data Capture Screen Flow (Beta)` —Launches when invoked by a user on a mobile device and |

| Field Name | Details |
| --- | --- |
| | presents assessment questions from Discovery Framework. This type of flow collects or displays information and requires user interaction.<br>• `Employee Service Catalog Item Screen Flow`—Launches when invoked by a user and allows them to browse and order items from the Employee Service Catalog. This type of flow collects or displays information and requires user interaction.<br>• `Evaluation Autolaunched Flow`—Launches when invoked by an orchestration to evaluate custom criteria for a stage or step. To indicate that the criteria are met, set the output variable `isOrchestrationConditionMet` to `true`. This type of flow runs in the background without user interaction.<br>• `External System Change-Triggered Flow`—Launches when an event is received from an external system. This type of flow runs in the background without user interaction.<br>• `Event-Driven Flow`—Launches when an event is received. This type of flow runs in the background without user interaction.<br>• `Field Service Mobile Screen Flow`—Launches when invoked by a user in the Field Service mobile app. This type of flow collects or displays information and requires user interaction.<br>• `Field Service Web Screen Flow`—Launches from the Field Service app and lets users schedule, modify, or cancel an appointment in a web browser. This type of flow requires user interaction.<br>• `Form-Triggered Autolaunched Flow`—Launches when a web visitor submits a marketing form. This type of flow runs in the background without user interaction.<br>• `Form-Triggered Flow`—Launches when a web visitor submits a marketing form. This type of flow runs in the background without user interaction.<br>• `Form-Triggered Flow v0`—Deprecated. Launches when a web visitor submits a marketing form. This type of flow runs in the background without user interaction.<br>• `Identity User Registration Flow`—Launches when a user logs in via a single sign-on process that uses the authentication provider framework. After the third-party identity provider authenticates the user, the flow creates a user or updates an existing user. This type of flow runs in the background without user interaction.<br>• `Indicator Result Screen Flow`—Launches a screen flow when initiated by a user to calculate and create indicator results for a selected indicator performance period.<br>• `Individual-Object Linking Screen Flow`—Launches when invoked by an agent to link a record like a case or messaging session to a contact, lead, person account, or employee. This type of flow collects or displays information and requires user interaction. |

| Field Name | Details |
| --- | --- |
| | • `Login Screen Flow`—Launches when a user tries to log in to Salesforce. This type of flow extends Salesforce's default authentication process by sending users with certain profiles through a flow when they log in and requires user interaction.<br>• `Loyalty Management Autolaunched Flow`—Launches when invoked by a loyalty program process, and contains Assignment, Decision, and Action elements. The Action element in this type of flow supports Apex and quick actions. This type of flow runs in the background without user interaction.<br>• `Managed Content Autolaunched Flow`—Launches when invoked by the ManagedContentRelease translator. This type of flow runs in the background without user interaction.<br>• `Mortgage Lending Screen Flow`—Launches when invoked by a user and allows them to provide Financial Service Cloud mortgage application details. This type of flow requires user interaction.<br>• `Platform Event Triggered Flow`—Launches when a platform event occurs. This type of flow runs in the background without user interaction.<br>• `Process Builder Autolaunched Process`—Launched when invoked from a Process Builder process. This type of flow runs in the background without user interaction.<br>• `Process Builder Custom Event Process`—A process created in Process Builder that launches when a custom event message is received. This type of process runs in the background without user interaction.<br>• `Process Builder Workflow`—Launches when a record is created or updated. This type of process runs in the background without user interaction.<br>• `Prompt Template Capability-Triggered Flow`—Launches from a prompt template. This type of flow adds prompt instructions to the associated prompt template and runs in the background without user interaction.<br>• `Recommendation Strategy Autolaunched Flow`—Build a personalized list of recommendations. When a recommendation is selected, it launches its assigned flow. Used by Einstein Next Best Action. Show recommendations in Lightning App Builder with the Einstein Next Best Action component and in Experience Builder with the Suggested Actions component.<br>• `Record-Triggered After Save Flow`—Launches after a record is created or updated and has been saved. This type of flow can make changes only to records related to the triggering record and runs in the background without user interaction.<br>• `Record-Triggered After Save Approval Orchestration`—Launches when a record is created or updated. An approval orchestration lets you create a multi-step, multi-user approval process. |

| Field Name | Details |
| --- | --- |
| | • `Record-Triggered After Save Orchestration`—Launches when a record is created or updated. An orchestration lets you create a multi-step, multi-user process. This type of flow runs in the background without user interaction.<br>• `Record-Triggered Before Delete Flow`—Launches when a record is deleted. This type of flow runs in the background without user interaction.<br>• `Record-Triggered Before Save Flow`—Launches after a record is created or updated, but hasn't been saved. This type of flow can make changes only to the triggering record and runs in the background without user interaction.<br>• `Routing Autolaunched Flow`—Launches when a customer initiates a chat, voice, or messaging conversation and routes the work item to a queue, skill, agent, or bot. This type of flow runs in the background without user interaction.<br>• `Schedule-Triggered Flow`—Launches at a specified time and frequency for each record that meets the flow criteria. This type of flow runs in the background without user interaction.<br>• `Scheduler Appointments Screen Flow`—Launches when invoked by a user and lets them schedule appointments in Salesforce Scheduler. This type of flow collects or displays information and requires user interaction.<br>• `Screen Flow`—Launches from Lightning pages, Experience Cloud sites, quick actions and more. This type of flow collects or displays information and requires user interaction.<br>• `Segment-Triggered Autolaunched Flow`—Launches when activated or when scheduled for qualified Data Cloud segment members. This type of flow runs in the background without user interaction.<br>• `Segment-Triggered Flow`—Launches when activated or when scheduled for qualified Data Cloud segment members. This type of flow runs in the background without user interaction.<br>• `Segment-Triggered Flow v0`—Deprecated. Launches when activated or when scheduled for qualified Data Cloud segment members. This type of flow runs in the background without user interaction.<br>• `Stage Management Evaluation Autolaunched Flow`—Launches when invoked by a stage transition in Stage Management to evaluate custom criteria for a stage or step. To indicate that the criteria are met, set the output variable isCriteriaMet to True.<br>• `Survey Enrich Autolaunched Flow`—Launches in the context of a survey response and can't execute without a corresponding survey. Use it to conditionally map a response to a record, create records, or send notifications. This type of flow runs in the background without user interaction. |

| Field Name | Details |
| --- | --- |
| | • `Survey Screen Flow`—Launches when invoked by an internal or external survey participant. This type of flow saves participant feedback as survey response records and requires user interaction.<br>• `Transaction Security Autolaunched Flow`—Used by Condition Builder to declaratively build customized security policies to protect data. This type of flow runs in the background without user interaction.<br>• `User Provisioning Screen Flow`—Launches when invoked by a user and allows them to create a user account and link it to a third-party service or app. This type of flow requires user interaction.<br>This field is available in API version 60.0 and later. |
| `Id` | **Type**<br>text<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the flow. |
| `IsLightningAppEnabled` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this flow's flow type has been enabled in Lightning Experience apps. The default value is `false`. This field is available in API version 61.0 and later. |
| `IsOverridable` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the flow record version is overridable. The default value is `false`. This field is available in API version 61.0 and later. |
| `IsTemplate` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the flow record version is a template. Template flow record versions are automatically shared with all users in your Salesforce org. The default value is `false`. This field is available in API version 61.0 and later. |

| Field Name | Details |
| --- | --- |
| `IsPaused` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the segment-triggered flow is paused (`true`) or not (`false`). When the value is `true`, no additional records are processed until the flow is resumed. The default value is `false`. This field is available in API version 60.0 and later. |
| `Manageable State` | **Type**<br>boolean<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates the manageable state of the flow record that is contained in a package. Valid values are:<br>• beta<br>• deleted<br>• deprecated<br>• deprecatedEditable<br>• installed<br>• installedEditable<br>• released<br>• unmanaged<br>This field is available in API version 60.0 and later. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The label of the flow. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix associated with the flow record. This field is available in API version 61.0 and later. |

| Field Name | Details |
| --- | --- |
| `OverriddenById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the flow that's overriding the current flow. This field is available in API version 61.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>OverriddenBy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowRecord |
| `OverriddenFlowId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the flow that the current flow is overriding. This field is available in API version 61.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>OverriddenFlow<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowRecord |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who owns the flow.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup |

| Field Name | Details |
| --- | --- |
| | **Refers To**<br>Group, User |
| `ProgressStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The progress status of the flow. Valid values are:<br>• `Canceled`— Indicates a flow that has been deactivated by a user who doesn't process previously added records. No additional records are added to this flow.<br>• `Completed`— Indicates a flow that is complete. No additional records are eligible to be processed in this flow.<br>• `Draft`—Indicates a flow that is under construction and isn't active yet. This status can be invalid because it needs additional information before it can be activated by the user.<br>• `Error`—Indicates a flow that has been deactivated because it encountered an error. When the error occurs, the error details are emailed to up to 5 users with the Manage Flows permission who most recently logged into Salesforce.<br>• `Finishing`— Indicates a flow that has been deactivated by a user, but is finishing previously added records that are eligible to run to completion. No additional records are added to this flow.<br>• `InProgress`— Indicates a flow that is running or ready to run.<br>• `PreparingData`— Indicates a flow that is preparing the necessary data to run. This process can take up to 2 hours.<br>• `Scheduled`— Indicates a flow scheduled to start on the date and time selected by the user.<br>• `UnderReview`—Indicates a flow that is under review before it is activated. This value is available in API version 64.0 and later. |
| `ScheduledStartDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time that the flow is scheduled to start. |
| `SegmentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The ID of the segment used in the flow.<br>This field is a relationship field.<br>**Relationship Name**<br>Segment<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MarketSegment |
| `SourceTemplateId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the template from which the current flow was created. This field is available in API version 61.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>SourceTemplate<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowRecord |
| `TriggerObjectOrEventLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The label of the object or platform event that triggers this flow. This field is available in API version 61.0 and later. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The trigger type of the flow. Specifies what causes the flow to run. Valid values are: |

| Field Name | Details |
| --- | --- |
| | • `Activation`—The flow starts when an activation is published. This type of flow runs in the background without user interaction. This value is available in API version 64.0 and later.<br>• `AdminAutomationEvent`—The flow starts when an automation event is received. This type of flow runs in the background without user interaction. This value is available in API version 64.0 and later.<br>• `Automation Event`—The flow starts when an automation event such as an SMS subscription occurs. This value is available in API version 62.0 and later.<br>• `Capability`—The flow starts when the specified capability that the flow integrates with is invoked. This value is available in API version 60.0 and later.<br>• `DataCloudDataChange`—The flow starts when data model object (DMO) or calculated insight object (CIO) conditions are met. This value is available in API version 59.0 and later.<br>• `DataGraphDataChange`—The flow starts when conditions are met in the specified data graph field. This value is available in API version 63.0 and later.<br>• `EventDrivenJourney`—Reserved for internal use.<br>• `ExternalSystemChange`—The flow starts when an external system change event is received. This value is available in API version 61.0 and later.<br>• `FormSubmissionEvent`—The flow runs when a user submits data via a webform. In Flow Builder, this value corresponds to `Form`. This value is available in API version 60.0 and later.<br>• `PlatformEvent`—The flow starts when a platform event message is received. This value is available in API version 49.0 and later.<br>• `RecordAfterSave`—The flow starts after a record is saved. This value is available in API version 49.0 and later.<br>• `RecordBeforeDelete`—Deleting a record triggers an autolaunched flow before the record is deleted from the database. This value is available in API version 50.0 and later.<br>• `RecordBeforeSave`—Creating and/or updating a record triggers an autolaunched flow to make additional updates to that record before it's saved to the database. This value is available in API version 48.0 and later.<br>• `Scheduled`—The flow starts at the scheduled time. This value is available in API version 47.0 and later.<br>• `Segment`—The flow runs at the scheduled time of a segment. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**FlowRecordChangeEvent (API version 62.0)**

Change events are available for the object.

**FlowRecordOwnerSharingRule**
Sharing rules are available for the object.

**FlowRecordShare**
Sharing is available for the object.

# FlowRecordElement

Represents a single element within a flow version. This object is available in API version 58.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
|---|---|
| `ElementName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API name of the flow element. |
| `FlowRecordVersionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the flow version the flow element is part of.<br>This field is a relationship field.<br>**Relationship Name**<br>FlowRecordVersion<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>FlowRecordVersion (the master object) |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The date and time that the flow element was last used. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time that the flow element was last viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The label of the flow element. |

**FlowRecordElementChangeEvent (API version 62.0)**
Change events are available for the object.

# FlowRecordElementOccurrence

Represents the execution metrics for a single element within a flow version. This object is available in API version 62.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

## Fields

| Field | Details |
| --- | --- |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The ISO code for the currency associated with the flow. |

| Field | Details |
| --- | --- |
| | Possible values are:<br>• USD—U.S. Dollar<br>The default value is USD. |
| Entries | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of times the element was initiated in all flow interviews after the flow version was executed. |
| Errors | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of errors for the element in all flow interviews after the flow version was executed. |
| Exits | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of times the element was executed to completion in all flow interviews after the flow version was executed. |
| FlowRecordElementId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the flow element.<br>This field is a relationship field.<br>**Relationship Name**<br>FlowRecordElement<br>**Refers To**<br>FlowRecordElement |
| FlowRecordId | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the flow.<br>This field is a relationship field.<br>**Relationship Name**<br>FlowRecord<br>**Refers To**<br>FlowRecord |
| `FlowRecordVersionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the flow version.<br>This field is a relationship field.<br>**Relationship Name**<br>FlowRecordVersion<br>**Refers To**<br>FlowRecordVersion |
| `FlowRecordVersionOccurrenceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the flow occurrence.<br>This field is a relationship field.<br>**Relationship Name**<br>FlowRecordVersionOccurrence<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>FlowRecordVersionOccurrence (the master object) |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The API name of the flow element. |
| `Stopped` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of times execution of the element was stopped in all flow interviews after the flow version was executed. |
| `TotalDuration` | **Type**<br>long<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total time in milliseconds spent executing the element in all flow interviews. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**FlowRecordElementOccurrenceChangeEvent on page 68**
Change events are available for the object.

**FlowRecordElementOccurrenceFeed on page 55**
Feed tracking is available for the object.

**FlowRecordElementOccurrenceHistory on page 63**
History is available for tracked fields of the object.

**FlowRecordElementOccurrenceOwnerSharingRule on page 65**
Sharing rules are available for the object.

**FlowRecordElementOccurrenceShare on page 67**
Sharing is available for the object.

# FlowRecordRelation

Represents a relationship between a record and a flow interview. When a flow interview is paused, Salesforce uses the $Flow.CurrentRecord global variable in the flow to associate the interview with a record. Available in API version 42.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The auto-generated ID of this relation. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The flow interview that the record is related to.<br>This is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowInterview |
| `RelatedRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The record that the flow interview is related to. Make sure that this field contains only one ID, and that the ID is for a valid object.<br>Custom objects and most standard objects are supported.<br>This is a relationship field.<br>**Relationship Name**<br>RelatedRecord<br>**Relationship Type**<br>Lookup |

# FlowRecordVersion

Represents the version of a flow. This object is available in API version 58.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

# Fields

| Field Name | Details |
| --- | --- |
| `ActivatedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user that activated the flow. This field is available in API version 60.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>ActivatedBy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `ActivatedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the flow was activated. This field is available in API version 60.0 and later. |
| `ApiVersion` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The API version of the flow record version. This field is available in API version 61.0 and later. |
| `AreMetricsLoggedToDataCloud` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this flow's metrics are logged in Data Cloud. The default value is false. This field is available in API version 63.0 and later. |

| Field Name | Details |
| --- | --- |
| `Builder` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the tool that created this flow. Valid values are:<br>• `Cloud Flow Designer`<br>• `Flow Builder`<br>• `Swing Designer`<br>This field is available in API version 61.0 and later. |
| `CapacityCategory` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The category that determines the usage limits of the flow. Possible values are:<br>• Marketing Cloud Flow<br>This field is available in API version 62.0 and later. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The description of the flow record version. This field is available in API version 61.0 and later. |
| `Entries` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of entries in this flow. To use this field, your org must use Salesforce Enterprise and Unlimited Editions with Marketing Cloud Growth Edition. This field is available in API version 60.0 and later. |
| `Errors` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The number of errors in this flow. To use this field, your org must use Salesforce Enterprise and Unlimited Editions with Marketing Cloud Growth Edition. This field is available in API version 60.0 and later. |
| `Exits` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of exits from this flow. To use this field, your org must use Salesforce Enterprise and Unlimited Editions with Marketing Cloud Growth Edition. This field is available in API version 60.0 and later. |
| `FlowRecordId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the parent flow running this version.<br>This field is a relationship field.<br>**Relationship Name**<br>FlowRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowRecord |
| `FlowType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The label of a flow type. `FlowType` consolidates `ProcessType` and `TriggerType` into one field. `FlowType` is used with permissions, so admins can control access to each flow type. Valid values are:<br>• `Action Cadence Step Screen Flow`—Launches from a cadence step. This type of flow collects or displays information and requires user interaction.<br>• `Activation-Triggered Autolaunched Flow`—Launches when an activation is published. This type of flow runs in the background without user interaction. This value is available in API version 64.0 and later. |

| Field Name | Details |
| --- | --- |
| | • `Action Plan Autolaunched Flow`—Launches an action plan task from an action plan when conditions in the associated action plan template process are met. This type of flow runs in the background without user interaction.<br>• `Admin Automation Event-Triggered Flow`—Launches when invoked by Apex, processes, REST API, and more. This type of flow runs in the background without user interaction. This value is available in API version 64.0 and later.<br>• `Autolaunched Approval Orchestration`—Launches when invoked by Apex, REST API, custom buttons, or custom links. An approval orchestration lets you create a multi-step, multi-user approval process.<br>• `Autolaunched No Trigger Flow`—Launches when invoked by processes or code such as Apex and REST API. This type of flow runs in the background without user interaction.<br>• `Autolaunched No Trigger Orchestration`—Launches when invoked by Apex, REST API, custom buttons, or custom links. An orchestration lets you create a multi-step, multi-user process.<br>• `Automation Event-Triggered Flow`—Launches when invoked by Apex, processes, REST API, and more. This type of flow runs in the background without user interaction. This value is available in API version 64.0 and later.<br>• `Automation Event-Triggered Flow`—Launches when an automation event is received. This type of flow runs in the background without user interaction.<br>• `Cart Async Autolaunched Flow`—Launches when invoked by a cart change, such as an Add to Cart. This type of flow runs in the background without user interaction.<br>• `Checkout Screen Flow`—Create a screen flow that implements a Commerce Cloud checkout process. This type of flow collects or displays information and requires user interaction.<br>• `CMS Workflow Orchestration Autolaunched`—Launches when invoked from the Workflows component in a CMS workspace. This type of orchestration lets you create a multi-step, multi-user process to create, edit, organize, and manage digital content from a centralized location.<br>• `Contact Request Screen Flow`—Launches when invoked by a customer, allowing them to enter contact details into a self-service form. This type of flow collects or displays information and requires user interaction.<br>• `Customer Lifecycle Record-Triggered After Save Flow`—Launches after a customer lifecycle map is saved and changes records related to the triggering record. This type of flow runs in the background without user interaction.<br>• `Data Cloud Data Change Flow`—Launches when a record from a Data Cloud data model object or a calculated insight object is changed and |

| Field Name | Details |
| --- | --- |
| | meets the specified conditions. This type of flow runs in the background without user interaction.<br>• `Data Graph-Triggered Flow`—Launches when conditions are met in the specified data graph field. This type of flow runs in the background without user interaction. This value is available in API version 64.0 and later.<br>• `Data Graph-Triggered Flow v0`—Launches when conditions are met in the specified data graph field. This type of flow runs in the background without user interaction.<br>• `Digital Form Screen Flow`—Launches from app extensions. This type of flow collects or displays information and requires user interaction.<br>• `Discovery Framework Data Capture Screen Flow (Beta)` —Launches when invoked by a user on a mobile device and presents assessment questions from Discovery Framework. This type of flow collects or displays information and requires user interaction.<br>• `Employee Service Catalog Item Screen Flow`—Launches when invoked by a user and allows them to browse and order items from the Employee Service Catalog. This type of flow collects or displays information and requires user interaction.<br>• `Evaluation Autolaunched Flow`—Launches when invoked by an orchestration to evaluate custom criteria for a stage or step. To indicate that the criteria are met, set the output variable `isOrchestrationConditionMet` to `true`. This type of flow runs in the background without user interaction.<br>• `External System Change-Triggered Flow`—Launches when an event is received from an external system. This type of flow runs in the background without user interaction.<br>• `Event-Driven Flow`—Launches when an event is received. This type of flow runs in the background without user interaction.<br>• `Field Service Mobile Screen Flow`—Launches when invoked by a user in the Field Service mobile app. This type of flow collects or displays information and requires user interaction.<br>• `Field Service Web Screen Flow`—Launches from the Field Service app and lets users schedule, modify, or cancel an appointment in a web browser. This type of flow requires user interaction.<br>• `Form-Triggered Flow`—Launches when a web visitor submits a marketing form. This type of flow runs in the background without user interaction. This value is available in API version 64.0 and later.<br>• `Form-Triggered Flow v0`—Launches when a web visitor submits a marketing form. This type of flow runs in the background without user interaction.<br>• `Identity User Registration Autolaunched Flow`—Launches when a user logs in via a single sign-on process that uses the authentication provider framework. After the third-party identity provider authenticates the user, the flow creates a user or updates an existing user. |

| Field Name | Details |
| --- | --- |
| | This type of flow runs in the background without user interaction. This value is available in API version 64.0 and later.<br>• `Indicator Result Screen Flow`—Launches a screen flow when initiated by a user to calculate and create indicator results for a selected indicator performance period.<br>• `Individual-Object Linking Screen Flow`—Launches when invoked by an agent to link a record like a case or messaging session to a contact, lead, person account, or employee. This type of flow collects or displays information and requires user interaction.<br>• `Login Screen Flow`—Launches when a user tries to log in to Salesforce. This type of flow extends Salesforce's default authentication process by sending users with certain profiles through a flow when they log in and requires user interaction.<br>• `Loyalty Management Autolaunched Flow`—Launches when invoked by a loyalty program process, and contains Assignment, Decision, and Action elements. The Action element in this type of flow supports Apex and quick actions. This type of flow runs in the background without user interaction.<br>• `Managed Content Autolaunched Flow`—Launches when invoked by the ManagedContentRelease translator. This type of flow runs in the background without user interaction.<br>• `Mortgage Lending Screen Flow`—Launches when invoked by a user and allows them to provide Financial Service Cloud mortgage application details. This type of flow requires user interaction.<br>• `Platform Event Triggered Flow`—Launches when a platform event occurs. This type of flow runs in the background without user interaction.<br>• `Process Builder Autolaunched Process`—Launched when invoked from a Process Builder process. This type of flow runs in the background without user interaction.<br>• `Process Builder Custom Event Process`—A process created in Process Builder that launches when a custom event message is received. This type of process runs in the background without user interaction.<br>• `Process Builder Workflow`—Launches when a record is created or updated. This type of process runs in the background without user interaction.<br>• `Prompt Template Capability-Triggered Flow`—Launches from a prompt template. This type of flow adds prompt instructions to the associated prompt template and runs in the background without user interaction.<br>• `Recommendation Strategy Autolaunched Flow`—Build a personalized list of recommendations. When a recommendation is selected, it launches its assigned flow. Used by Einstein Next Best Action. Show |

| Field Name | Details |
| --- | --- |
| | recommendations in Lightning App Builder with the Einstein Next Best Action component and in Experience Builder with the Suggested Actions component.<br>• `Record-Triggered After Save Flow`—Launches after a record is created or updated and has been saved. This type of flow can make changes only to records related to the triggering record and runs in the background without user interaction.<br>• `Record-Triggered After Save Orchestration`—Launches when a record is created or updated. An orchestration lets you create a multi-step, multi-user process. This type of flow runs in the background without user interaction.<br>• `Record-Triggered After Save Orchestration`—Launches when a record is created or updated. An orchestration lets you create a multi-step, multi-user process. This type of flow runs in the background without user interaction.<br>• `Record-Triggered Before Delete Flow`—Launches when a record is deleted. This type of flow runs in the background without user interaction.<br>• `Record-Triggered Before Save Flow`—Launches after a record is created or updated, but hasn't been saved. This type of flow can make changes only to the triggering record and runs in the background without user interaction.<br>• `Routing Autolaunched Flow`—Launches when a customer initiates a chat, voice, or messaging conversation and routes the work item to a queue, skill, agent, or bot. This type of flow runs in the background without user interaction.<br>• `Schedule-Triggered Flow`—Launches at a specified time and frequency for each record that meets the flow criteria. This type of flow runs in the background without user interaction.<br>• `Scheduler Appointments Screen Flow`—Launches when invoked by a user and lets them schedule appointments in Salesforce Scheduler. This type of flow collects or displays information and requires user interaction.<br>• `Screen Flow`—Launches from Lightning pages, Experience Cloud sites, quick actions and more. This type of flow collects or displays information and requires user interaction.<br>• `Segment-Triggered Flow`—Launches when activated or when scheduled for qualified Data Cloud segment members. This type of flow runs in the background without user interaction. This value is available in API version 64.0 and later.<br>• `Segment-Triggered Flow v0`—Launches when activated or when scheduled for qualified Data Cloud segment members. This type of flow runs in the background without user interaction.<br>• `Survey Enrich Autolaunched Flow`—Launches in the context of a survey response and can't execute without a corresponding survey. Use |

| Field Name | Details |
| --- | --- |
| | it to conditionally map a response to a record, create records, or send notifications. This type of flow runs in the background without user interaction.<br>• `Survey Screen Flow`—Launches when invoked by an internal or external survey participant. This type of flow saves participant feedback as survey response records and requires user interaction.<br>• `Transaction Security Autolaunched Flow`—Used by Condition Builder to declaratively build customized security policies to protect data. This type of flow runs in the background without user interaction.<br>• `User Provisioning Screen Flow`—Launches when invoked by a user and allows them to create a user account and link it to a third-party service or app. This type of flow requires user interaction.<br>This field is available in API version 60.0 and later. |
| `Id` | **Type**<br>text<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the flow version. |
| `IsOverridable` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the flow record version is overridable. The default value is `false`. This field is available in API version 61.0 and later. |
| `IsPaused` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the segment-triggered flow is paused (`true`) or not (`false`). When the value is `true`, no additional records are processed until the flow is resumed. The default value is `false`. This field is available in API version 60.0 and later. |
| `IsTemplate` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the flow record version is a template. Template flow record versions are automatically shared with all users in your Salesforce org. The default value is `false`. This field is available in API version 61.0 and later. |
| `OverriddenById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the flow that's overriding the current flow. This field is available in API version 61.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>OverriddenBy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowRecord |
| `OverriddenFlowId` | **Type**<br>text<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the flow that the current flow is overriding. This field is available in API version 61.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>OverriddenFlow<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowRecord |
| `PausedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The date and time the segment-triggered flow was paused. This field is available in API version 60.0 and later. |
| `PausingUserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who paused the segment-triggered flow. This field is available in API version 60.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>PausingUser<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `ProgressStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The running status of the flow. Valid values are:<br>• `Canceled`— Specifies a flow that was deactivated by a user. The flow doesn't process previously added records and no additional records are added to this flow.<br>• `Completed`— Indicates a flow that is complete. No additional records are eligible to be processed in this flow.<br>• `Draft`— Indicates a flow that is under construction and isn't active yet. This status can be invalid because it needs additional information before a user can activate it.<br>• `Error`— Indicates a flow that has been deactivated because it encountered an error. When the error occurs, the error details are emailed to up to 5 users with the Manage Flows permission who most recently logged into Salesforce.<br>• `Finishing`— Indicates a flow that was deactivated by a user, but is finishing records previously added that are eligible to run to completion. No additional records are added to this flow.<br>• `InProgress`— Indicates a flow that is running or ready to run.<br>• `PreparingData`— Indicates a flow that is preparing the resources it requires to run. This process can take up to 2 hours. |

| Field Name | Details |
| --- | --- |
| | • `Scheduled`— Indicates a flow scheduled to start on the date and time selected by the user. |
| `ReasonPaused` | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The reason the segment-triggered flow was paused. This field is available in API version 60.0 and later. |
| `ResumedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time the segment-triggered flow resumed. This field is available in API version 60.0 and later. |
| `ResumingUserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who resumed the segment-triggered flow. This field is available in API version 60.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>ResumingUser<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `RunInMode` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The mode that the flow runs in. Valid values are:<br>• `DefaultMode`—The flow record version runs in system or user context, depending on how the flow is launched. |

| Field Name | Details |
| --- | --- |
| | • `SystemModeWithSharing`—The flow record version always runs in system mode with sharing. The flow respects org-wide default settings, role hierarchies, sharing rules, manual sharing, teams, and territories. But it doesn't respect object permissions, field-level access, or other permissions of the running user.<br>• `SystemModeWithoutSharing`—The flow record version can access all data. In the UI, this value appears as System Context without Sharing—Access All Data. This value is available in API version 49.0 and later.<br>This field is available in API version 61.0 and later. |
| `ScheduledStartDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time the flow started. This field is available in API version 60.0 and later. |
| `SourceTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the template from which the current flow was created. This field is available in API version 61.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>SourceTemplate<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowRecord |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The flow's status. Valid values are:<br>• `Active`<br>• `Draft`<br>• `InvalidDraft` |

| Field Name | Details |
| --- | --- |
| | • `Obsolete`<br>• `UnderReview`— This value is available in API version 64.0 and later.<br>This field is available in API version 61.0 and later. |
| `TriggerObjectOrEventLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The label of the object or platform event that triggers this flow. This field is available in API version 61.0 and later. |
| `VersionNumber` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The version number of the flow version. |

# FlowRecordVersionOccurrence

Represents an instance of a recurring flow that runs on a schedule. For example, a flow that runs weekly on Wednesdays creates an occurrence each time it runs. This object is available in API version 60.0 and later.

## Supported Calls

`describe()`, `read()`

## Fields

| Field | Details |
| --- | --- |
| `Entries` | **Type**<br>integer<br>**Properties**<br>Filter, Group, Query, Retrieve, Sort<br>**Description**<br>The number of entries for this occurrence. |
| `Errors` | **Type**<br>integer |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Query, Retrieve, Sort<br>**Description**<br>The number of errors for this occurrence. |
| `ErrorDetail` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A description of the error. This field is available in API version 63.0 and later. |
| `Exits` | **Type**<br>integer<br>**Properties**<br>Filter, Group, Query, Retrieve, Sort<br>**Description**<br>The number of exits for this occurrence. |
| `FlowRecordId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Query, Retrieve, Sort<br>**Description**<br>The ID of the associated flow record. |
| `FlowRecordVersionId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Query, Retrieve, Sort<br>**Description**<br>The ID of the associated version of the flow record. |
| `ProgressStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The running status of the flow interview.<br>Valid values are:<br>• `Canceled` |

| Field | Details |
| --- | --- |
| | Specifies a flow interview that was deactivated by a user. The flow doesn't process previously added records and no additional records are added to this flow.<br>• `Completed`<br>Indicates a flow interview that is complete. No additional records are eligible to be processed in this flow.<br>• `Error`<br>Indicates a flow interview that has been deactivated because it encountered an error. When the error occurs, the error details are emailed to up to 5 users with the Manage Flows permission who most recently logged into Salesforce.<br>• `Finishing`<br>Indicates a flow interview that was deactivated by a user, but is finishing records previously added that are eligible to run to completion. No additional records are added to this flow.<br>• `InProgress`<br>Indicates a flow interview that is running or ready to run.<br>• `PreparingData`<br>Indicates a flow interview that is preparing the resources it requires to run. This process can take up to 2 hours. |
| `ScheduledDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Group, Query, Retrieve, Sort<br>**Description**<br>The scheduled time and date of the occurrence. |
| `Stopped` | **Type**<br>integer<br>**Properties**<br>Filter, Group, Query, Retrieve, Sort<br>**Description**<br>The number of flows that were stopped for this occurrence. |

# FlowTestResult

Represents the results for a flow test associated with a flow version. This object is available in API version 55.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

To view test run details, you must have the View All Data user permission. You can view flow tests and test results without the View All Data permission.

## Fields

| Field | Details |
| --- | --- |
| `FlowDefinitionViewId` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The ID of the flow definition associated with the flow test result.<br>This is a relationship field.<br>**Relationship Name**<br>FlowDefinitionView<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowDefinitionView |
| `FlowTestViewId` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The ID of the flow test associated with the flow test result.<br>This is a relationship field.<br>**Relationship Name**<br>FlowTestView<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowTestView |
| `FlowVersionNumber` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The version number for the flow. |
| `FlowVersionViewId` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The ID of the flow version associated with the flow test result.<br>This is a relationship field.<br>**Relationship Name**<br>FlowVersionView<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowVersionView |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the flow test result. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the user who owns this test result.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

| Field | Details |
| --- | --- |
| `Result` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Specifies the flow test result.<br>Possible values are:<br>• `Error`<br>• `Fail`<br>• `Pass` |
| `TestEndDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the flow test ended. |
| `TestStartDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the flow test started. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**FlowTestResultShare**
Sharing is available for the object.

# FlowTestView

Represents the description of a flow test associated with a flow definition. This object is available in API version 55.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

# Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The description of the flow test associated with the flow test view. |
| `DurableId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the flow test associated with this flow test view. |
| `FlowDefinitionViewId` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The ID of the flow definition associated with the flow test view.<br>This is a relationship field.<br>**Relationship Name**<br>FlowDefinitionView<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowDefinitionView |
| `FlowTestApiName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API name of the flow test associated with the flow test view. |
| `FlowTestLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The label of the flow test associated with the flow test view. |

# FlowStageRelation

Represents a relationship between a paused flow interview and its stages. When a flow interview is paused, Salesforce creates a FlowStageRelation record for each stage that's set to the `$Flow.CurrentStage` or `$Flow.ActiveStages` global variable. Available in API version 43.0 and later.

## Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

## Fields

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The auto-generated ID of this relation. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The flow interview that the record is related to.<br>This is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowInterview |
| `StageLabel` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Label for the stage. If the stage is translated, the label respects the language of the user who is querying the label. |
| `StageOrder` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The order of this stage when the flow interview was paused. This order may differ from the order in the stage definition.<br>• If the type is Active, the order corresponds to the order of the stage in `$Flow.ActiveStages`.<br>• If the type is Current and corresponds to an active stage, the order matches the order of the active stage.<br>• If the type is Current and doesn't correspond to an active stage, the order is 0. |
| `StageType` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Type of stage. The valid values are:<br>• Current: Identifies that the stage is set to `$Flow.CurrentStage`.<br>• Active: Identifies that the stage is set to `$Flow.ActiveStages`. |

# Usage

You can use the FlowStageRelation records to represent the paused interview and its active and current stages visually.

For example, an Online Purchasing flow interview starts with several stages in $Flow.ActiveStages. If the interview is paused, Salesforce creates a FlowStageRelation record for each stage in `$Flow.ActiveStages` or `$Flow.CurrentStage`.

| StageLabel | StageType | StageOrder |
| --- | --- | --- |
| Review Cart | Active | 0 |
| Shipping Details | Active | 1 |
| Billing Details | Active | 2 |
| Payment Details | Active | 3 |

| StageLabel | StageType | StageOrder |
|---|---|---|
| Order Confirmation | Active | 4 |
| Shipping Details | Current | 1 |

# FlowVariableView

Represents a variable within the flow version. This object is available in API version 46.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

| Field | Details |
|---|---|
| `ApiName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API name of the flow variable. |
| `DataType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The data type of the flow variable. Valid values are:<br>• `Apex`—This value is available in API version 46.0 and later.<br>• `Boolean`<br>• `Currency`<br>• `Date`<br>• `DateTime`—This value is available in API version 30.0 and later.<br>• `Number`<br>• `Multipicklist`—This value is available in API version 34.0 and later.<br>• `Picklist`—This value is available in API version 34.0 and later.<br>• `String`<br>• `sObject` |

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Flow variable information, specified by the org's admin. |
| `DurableId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The Id of the flow variable. |
| `FlowVersionViewId` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The Id of the flow version.<br>This is a relationship field.<br>**Relationship Name**<br>FlowVersionView<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowVersionView |
| `IsCollection` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether or not the flow variable is a collection of values. |
| `IsInput` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicated whether or not the flow variable is available for input. |

| Field | Details |
| --- | --- |
| `IsOutput` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether or not the flow variable is available for output. |
| `ObjectType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If the data type is sObject, this field indicates which object. |

## Usage

Use this object to query information about flow variables. A query must be filtered by `FlowVersionViewId` to get results. Only variables with IsInput or IsOutput marked as true are visible.

# FlowVersionView

Represents the version of a flow definition. This object is available in API version 46.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

| Field | Details |
| --- | --- |
| `ApiVersion` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The API version for the flow definition. Every flow version has an API version specified at creation.<br>This field is available in API version 50.0 and later. |

| Field | Details |
| --- | --- |
| `ApiVersionRuntime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The API version for running the flow. This value determines which versioned run-time behavior improvements are adopted by the flow version.<br>If not specified when the flow or flow version is created, the latest available API version is used as the API version for running the flow. When an existing flow is saved as a new flow or flow version, the existing flow's run-time API version is used in the new flow or flow version.<br>This field is available in API version 50.0 and later. |
| `AreMetricsLoggedToDataCloud` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this flow's metrics are logged in Data Cloud. The default value is false. This field is available in API version 63.0 and later. |
| `CapabilityType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The capability that integrates with the flow. An example value is `PromptTemplateType://SalesEmail`. |
| `CapacityCategory` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The category that determines the usage limits of the flow. Possible values are:<br>• Marketing Cloud Flow<br>This field is available in API version 62.0 and later. |
| `Description` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Flow version information, specified by the org's admin. |
| `DurableId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the flow version. |
| `FlowDefinitionViewId` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The ID of the flow definition.<br>This field s a relationship field.<br>**Relationship Name**<br>FlowDefinitionView<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowDefinitionView |
| `IsSwingFlow` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the flow is built with Desktop Flow Designer.<br>This field is available in API version 49.0 and later.<br>Default: false |
| `IsTemplate` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the process or flow is a template. When installed from managed packages, processes and flows can't be viewed or cloned by subscribers because of intellectual property (IP) protection. But when those processes and flows are templates, subscribers can open them in a builder, clone them, and customize the clones. Available in API version 46.0 and later.<br>Default: false |
| `Label` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The label of the flow version. |
| `ProcessType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of the flow. Valid values are:<br>• `ActionableEventManagementFlow`—A flow that triggers an actionable event orchestration process in the background and automatically executes different types of actions based on the event type. This value is available in API version 62.0 and later.<br>• `ActionCadenceAutolaunchedFlow`—A flow executed when a user completes a cadence step. This value is available in API version 56.0 and later.<br>• `ActionCadenceStepFlow`—A screen flow used as a cadence step. This value is available in API version 56.0 and later.<br>• `ActivityObjectMatchingFlow`—A flow that launches when Einstein Activity Capture detects and captures a new activity, such as an email. This type of flow runs in the background without user interaction. This value is available with Sync Email as Salesforce Activity in API version 64.0 and later.<br>• `Appointments`—A flow for Lightning Scheduler. This value is available in API version 44.0 and later.<br>• `ActivityObjectMatchingFlow`—A flow that launches when Einstein Activity Capture detects and captures a new activity, such as an email. This type of flow runs in the background without user interaction. This value is available with Sync Email as Salesforce Activity in API version 63.0 and later.<br>• `ApprovalWorkflow`—An orchestration for approvals. This value is available in API version 62.0 and later.<br>• `AutoLaunchedFlow`—A flow that doesn't require user interaction. |

| Field | Details |
| --- | --- |
| | • `CheckoutFlow`—A flow used in Lightning B2B Commerce to create a checkout in a store. This value is available in API version 48.0 and later.<br>• `ContactRequestFlow`—A flow that lets customers request that customer support get back to them. This flow is used to create contact request records. This value is available in API version 45.0 and later.<br>• `CustomerLifecycle`—A Salesforce Surveys flow that lets you associate survey questions with different stages in customer lifecycles. This value is available in API version 49.0 and later and only when the Customer Lifecycle Designer license is enabled.<br>• `CustomEvent`—A process that is invoked when it receives a platform event message. In the UI, it's an event process. This value is available in API version 41.0 and later.<br>• `DataCaptureFlow`—A flow that configures the Form tab on Work Order Overview or the related list for a service appointment or a work order line item. This value is available in API version 62.0 and later.<br>• `DcvrFrameworkDataCaptureFlow`—A screen flow that presents assessment questions from Discovery Framework. Launches when invoked by a user on a mobile device. This type of flow collects or displays information, requires user interaction, and works offline or online. This value is available in API version 62.0 and later.<br>• `FieldServiceMobile`—A flow for the Field Service mobile app. This value is available in API version 39.0 and later.<br>• `FieldServiceWeb`—A flow for embedded Appointment Booking. Its UI label is Field Service Embedded Flow. This value is available in API version 41.0 and later.<br>• `Flow`—A flow that requires user interaction because it contains one or more screens or local actions, choices, or dynamic choices. In the UI and Salesforce Help, it's a screen flow. Screen flows can be launched from the UI, such as with a flow action, Lightning page, or web tab.<br>• `FSCLending`—A flow for Financial Services Cloud Mortgage. This value is available in API version 46.0 and later.<br>• `FSCLending`—A flow for login. This value is available in API version 51.0 and later.<br>• `IdentityUserRegistrationFlow`—A flow to handle user registration and updates for single sign-on with the authentication provider framework. Available in API version 64.0 and later.<br>• `IndicatorResultFlow`—A flow for Outcome Management that calculates and creates indicator results for a selected indicator performance period. This value is available with the Outcome Management license in API version 60.0 and later.<br>• `IndividualObjectLinkingFlow`—A screen flow that helps search for contacts, leads, person accounts, and employees and links them to support interactions. This value is available in API version 58.0 and later. |

| Field | Details |
| --- | --- |
| | • `InvocableProcess`—A process that can be invoked by another process or the Invocable Actions resource in REST API. This value is available in API version 38.0 and later.<br>• `LoyaltyManagementFlow`—A flow for the Loyalty Management app and can be invoked by loyalty program processes. This value is available in API version 54.0 and later.<br>• `PromptFlow`—A flow for Prompt Builder. Pass data between Prompt Builder and the flow. This value is available in API version 60.0 and later.<br>• `RoutingFlow`—A flow for Salesforce Omni-Channel routing and other business logic. This value is available in API version 52.0 and later.<br>• `StageManagementEvaluationFlow`—A flow for evaluating custom criteria for a stage or step in Stage Management. This value is available in API version 63.0 and later.<br>• `Survey`—A flow for Salesforce Surveys. From the UI, this type of flow is created in Survey Builder. This value is available in API version 42.0 and later.<br>• `SurveyEnrich`—A Salesforce Surveys flow that uses the Survey Data Mapper. From the UI, this type of flow is created in the Survey Builder and requires an associated survey flow type. This value is available in API version 49.0 or later and only when the Customer Lifecycle Designer license is enabled.<br>• `Workflow`—A process that is invoked when a record is created or edited. In the UI and Salesforce Help, it's a record change process.<br>These values are reserved for future use.<br>• `ActionCadenceFlow`<br>• `ActionPlan`<br>• `ActivitySmartMatchingFlow`<br>• `AppProcess`<br>• `CartAsyncFlow`<br>• `DigitalForm`<br>• `Journey`<br>• `JourneyBuilderIntegration`<br>• `LoginFlow`<br>• `ManagedContentFlow`<br>• `OrchestrationFlow`<br>• `RecommendationStrategy`<br>• `SalesEntryExperienceFlow`<br>• `TransactionSecurityFlow`<br>• `UserProvisioningFlow`<br>This value has significant impact on validation when saving the flow and on the flow's runtime behavior. Don't change this value unless you understand the flow properties of the specified type. |

| Field | Details |
| --- | --- |
| | Across flow versions, you can change the type only from `Flow` to `AutoLaunchedFlow` or vice versa. Before you change the flow type, make sure that the flow contains only elements, resources, and functionality that the new flow type supports. |
| `RunInMode` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The mode that the flow runs in. Valid values are:<br>• DefaultMode — The flow version runs in system or user context, depending on how the flow is launched.<br>• SystemModeWithSharing — The flow version always runs in system mode with sharing. The flow respects org-wide default settings, role hierarchies, sharing rules, manual sharing, teams, and territories. But it doesn't respect object permissions, field-level access, or other permissions of the running user. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The flow's status.<br>• `Active`<br>• `Draft`<br>• `Obsolete`<br>• `InvalidDraft` |
| `VersionNumber` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The flow's version number. |

## Usage

Use this object to query information about flow versions. A query must be filtered by `DurableId` or `FlowDefinitionViewId` to get results.

# Folder

Represents a repository for a Dashboard, Document, EmailTemplate, Macro, QuickText, or Report. Only one type of item can be contained in a folder.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

- You must have the "Modify All Data" permission to create, update, or delete document folders and email template folders.
- Guest and Customer Portal users can't access this object.
- To query this object, no special permissions are needed.
- As of API version 35.0, when a folder is shared with a role, it is only visible to users in that role. Superior roles in the role hierarchy don't gain visibility.
- If analytics folder sharing is turned on, then users need these permissions to create and manage report folders and dashboard folders:
  - `"Create Dashboard Folders"`
  - `"Create Report Folders"`
- To use folders for macros and quick text, enable folders for these objects in Setup on the Macro Settings and Quick Text Settings pages.

## Fields

| Field | Details |
|---|---|
| `AccessType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Required. Indicates who can access the Folder. Available values include:<br>• `Hidden`—Folder is hidden from everyone.<br>• `Public`—Folder is accessible by all users.<br>• `Shared`—Folder is accessible only by a User in a particular Group or UserRole. The API doesn't allow you to view, insert, or update which group or Role the Folder is shared with.<br>Note: If analytics folder sharing is turned on for your organization, then this field is present but not used. |

| Field | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is **Folder Unique Name**.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record. |
| `IsReadonly` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this Folder is read-only (`true`) or editable (`false`). Label is *`Read Only`*.<br>Note: If analytics folder sharing is turned on for your organization, then this field is present but not used. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Label of the folder as it appears in the user interface. Label is **Document Folder Label**. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values. |

| Field | Details |
| --- | --- |
| | • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the parent object, if any. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Required. Type of objects contained in the Folder. This field can't be updated. Available values include:<br>• `Dashboard`<br>• `Document`<br>• `Email` (for Salesforce Classic email templates)<br>• `EmailTemplate` (for Lightning email templates)<br>• `Macro`<br>• `QuickText`<br>• `Report` |

## Usage

Only one type of item can be contained in a folder, either Dashboard, Document, EmailTemplate, Macro, QuickText, or Report.

Overview of Salesforce Objects and Fields

# FolderedContentDocument

Represents the relationship between a parent and child ContentFolderItem in a ContentWorkspace.

## Supported Calls

`describeSObjects()`

## Fields

| Field Name | Details |
| --- | --- |
| `ContentDocumentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the ContentDocument that can be in a folder.<br>This is a relationship field.<br>**Relationship Name**<br>ContentDocument<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentDocument |
| `ContentSize` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>File size of the ContentDocument. |
| `FileExtension` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>File extension of the ContentDocument. |
| `FileType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>File type of the ContentDocument. |

| Field Name | Details |
| --- | --- |
| `IsFolder` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates that the FolderedContentDocument is a folder, rather than a file. |
| `ParentContentFolderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the ContentFoldr the ContentDocument resides in.<br>This is a relationship field.<br>**Relationship Name**<br>ParentContentFolder<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentFolder |
| `Title` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Name of the file or folder in a ContentFolder. |

# ForecastingAdjustment

This object represents an individual forecast manager's adjustment for a subordinate's or child territory's forecast via a ForecastingItem. Available in API versions 26.0 and later. This object is different from the ForecastingOwnerAdjustment object, which represents forecast users' adjustments of their *own* forecasts, including territory forecasts they own.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `AdjustedAmount` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The revenue amount of an individual forecast item, after an adjustment. |
| `AdjustedQuantity` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The quantity amount of an individual forecast item, after an adjustment. This field is available in API version 28.0 and later. |
| `AdjustmentNote` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A text note providing information about the adjustment. The maximum length is 255 characters. This field doesn't appear in reports. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The currency code of the adjustment. If omitted, the default is the user's personal currency. |
| `ForecastCategoryName` | **Type**<br>picklist |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The category within the sales cycle that an opportunity is assigned to based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted, and Closed. You can add a Most Likely category and can customize forecast category names in single category rollups. The forecast categories display information for that specific category; for example, Best Case only reflects amounts in the Best Case category. |
| `ForecastingGroupItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>If a forecast group is assigned to the forecast type, the ID of the group value that the manager adjustment belongs to. This field is a relationship field. Available in API version 60.0 and later.<br>**Relationship Name**<br>ForecastingGroupItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ForecastingGroupItem |
| `ForecastingItemCategory` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The category the forecast belongs to.<br>**For individual forecast category rollups, the possible values are:**<br>• `PipelineOnly`—Rollup from Pipeline opportunities only.<br>• `BestCaseOnly`—Rollup from Best Case opportunities only. The value in this category is adjustable.<br>• `MostLikelyOnly`—Rollup from Most Likely opportunities only. The value in this category is adjustable.<br>• `CommitOnly`—Rollup from Commit opportunities only. The value in this category is adjustable. |

| Field Name | Details |
| --- | --- |
| | **For cumulative forecast rollups, the possible values are:**<br>• `OpenPipeline`—Rollup from Pipeline, Best Case, Most Likely, and Commit opportunities.<br>• `BestCaseForecast`—Rollup from Best Case, Most Likely, Commit, and Closed opportunities. The value in this category is adjustable.<br>• `MostLikelyForecast`—Rollup from Most Likely, Commit, and Closed opportunities. The value in this category is adjustable.<br>• `CommitForecast`—Rollup from Commit and Closed opportunities. The value in this category is adjustable.<br>**For either cumulative or individual forecast category rollups, the possible values are:**<br>• `ClosedOnly` —Rollup from Closed opportunities only. |
| `ForecastingItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the related ForecastingItem. |
| `ForecastingTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the related ForecastingType. |
| `IsAmount` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `true`, then the adjustment is made in a revenue amount. If `false`, then `IsQuantity` must be `true`. This field is available in API version 28.0 and later. |
| `IsQuantity` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>If `true`, then the adjustment is made in a quantity amount. If `false`, then `IsAmount` must be `true`. This field is available in API version 28.0 and later. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create,Defaulted on create, Filter, Group, Sort<br>**Description**<br>The ID of the forecast owner. |
| `PeriodId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Period ID for the adjustment. Read only. |
| `ProductFamily` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The Product Family for the adjustment. Read only. This field is available in API version 29.0 and later. |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The start of the adjustment, expressed as month and year. The date can include any day in a given month. Stored using the first date of the month. |
| `Territory2Id` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the territory to forecast on. Available in API version 43.0 and later. |

## Usage

Use this object to obtain a manager's adjustment detail for a specified ForecastingItem. The ForecastingAdjustment object is visible to all users, but only forecast managers and users above them in the forecast hierarchy can read or write ForecastingAdjustment records.

Note: Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the ForecastingType object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

The `ForecastingItemCategory` field differs from the `ForecastCategoryName` field.

- The `ForecastCategoryName` field represents the forecast category of the *underlying opportunities* rolling up to forecast amounts. In organizations using cumulative forecast rollups, the `ForecastCategoryName` field can be null because the cumulative forecast amounts include opportunities from multiple forecast categories.
- The new `ForecastingItemCategory` field represents the *type of rollup* a forecast amount or adjustment is from. In organizations using individual forecast category columns, it contains the individual forecast rollup categories. In organizations using cumulative forecast rollups, it contains the cumulative rollup categories.

When inserting manager adjustments, the values you insert for `ForecastCategoryName` and `ForecastingItemCategory` must be compatible with each other. In organizations using cumulative forecast rollups, the `ForecastCategoryName` is nillable. The following pairs are valid.

**For individual forecast category rollups:**

- `ForecastCategoryName`: `BestCase`, `ForecastingItemCategory`: `BestCaseOnly`
- `ForecastCategoryName`: `MostLikely`, `ForecastingItemCategory`: `MostLikelyOnly`
- `ForecastCategoryName`: `Commit`, `ForecastingItemCategory`: `CommitOnly`

**For cumulative forecast category rollups:**

- `ForecastCategoryName`: `null`, `ForecastingItemCategory`: `BestCaseForecast`
- `ForecastCategoryName`: `null`, `ForecastingItemCategory`: `MostLikelyForecast`
- `ForecastCategoryName`: `null`, `ForecastingItemCategory`: `CommitForecast`

ForecastingQuota

# ForecastingColumnDefinition

Represents a custom calculated column or a custom reference data column in a forecast type. This object is available in API version 56.0 and later.

For a custom calculated column, a `Formula` field value is required. For a custom reference data column, a `ReferenceField` field value is required.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The developer (API) name of the custom calculated column or custom reference data column. |
| `ForecastingTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the forecast type. This field is a relationship field.<br>**Relationship Name**<br>ForecastingType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ForecastingType |
| `Formula` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required for custom calculated columns. The formula for the custom calculated column. Use API column names in your formula (such as ForecastAmount0), not column header names (such as Closed or Closed Only). For details on API column names, operators, and functions to use in formulas, see ForecastingColumnDefinition Formula Field Details.<br>**Example**<br>The following formula calculates the gap to quota: `ForecastingQuotaAmount - ForecastAmount0` |
| `Language` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the custom calculated column or custom reference data column. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The label for this object, which displays in Setup and in the column header on the forecasts page. The label is in the default language locale for the organization. If there's no default language locale, the label is in en_US. |
| `ReferenceField` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Required for custom reference data columns. The number or currency custom field from the ForecastingCustomData object. For example, `ForecastingCustomData.Realized_Revenue__c`. Data from this field appears in a column in the forecasts summary. This field is available in API version 58.0 and later. |
| `ResultField` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The field name to represent the custom calculated column or custom reference data column result. Possible values are:<br>**Custom Calculated Column Result**<br>• CalculatedAmount0 or CalculatedQuantity0<br>• CalculatedAmount1 or CalculatedQuantity1<br>• CalculatedAmount2 or CalculatedQuantity2<br>• CalculatedAmount3 or CalculatedQuantity3<br>• CalculatedAmount4 or CalculatedQuantity4<br>If the formula's result is null or invalid, "-" is the value. For example, if the formula divided by 0. If you want to show "-" for 0 or negative values in your forecast, use the IF function in your formula to detect 0 or negative numbers. |

| Field | Details |
| --- | --- |
| | **Custom Reference Data Column Result** Use the appropriate field based on whether your column output is of Currency or Number type.<br>• ExtensionCurrency0 or ExtensionNumber0<br>• ExtensionCurrency1 or ExtensionNumber1<br>• ExtensionCurrency2 or ExtensionNumber2<br>• ExtensionCurrency3 or ExtensionNumber3<br>• ExtensionCurrency4 or ExtensionNumber4 |

## Usage

Each forecast type can include any combination of custom calculated columns and reference data columns, as long as they don't exceed five in number. For example, a forecast type can have two custom calculated columns and three custom reference data columns.

Custom calculated columns can't be adjusted and aren't included in rollups. In the UI, custom calculated columns can't indicate changes in the last 7 days.

If you have at least one custom calculated column in an active or inactive forecast type, you can't do the following until you've removed the column.

- Switch from single category to cumulative rollups in Forecast Settings
- Enable the Most Likely category
- Disable Show Quotas (only if your custom calculated column's formula refers to a quota value)

ForecastingColumnDefinition Formula Field Details
Use these API names, operators, and functions to construct formulas for the Formula field in the ForecastingColumnDefinition object. The API names apply to both singular and cumulative category rollups. For simplification, we included only the single category rollup column header name next to each API name.

# ForecastingColumnDefinition Formula Field Details

Use these API names, operators, and functions to construct formulas for the Formula field in the ForecastingColumnDefinition object. The API names apply to both singular and cumulative category rollups. For simplification, we included only the single category rollup column header name next to each API name.

**API Column Names – General**

- ForecastingQuotaAmount – Quota (currency)
- ForecastingQuotaQuantity – Quota quantity (double)
- `DeveloperName` of any custom calculated column or custom reference data column shown in the forecasts page

**API Column Names for Forecast Category Columns**

If the Most Likely category isn't enabled:

- ForecastAmount0 or ForecastQuantity0 – Closed
- ForecastAmount1 or ForecastQuantity1 – Commit
- ForecastAmount2 or ForecastQuantity2 – Best Case

- ForecastAmount3 or ForecastQuantity3 – Pipeline

If the Most Likely category is enabled:

- ForecastAmount0 or ForecastQuantity0 – Closed
- ForecastAmount1 or ForecastQuantity1 – Commit
- ForecastAmount2 or ForecastQuantity2 – Most Likely
- ForecastAmount3 or ForecastQuantity3 – Best Case
- ForecastAmount4 or ForecastQuantity4 – Pipeline

**API Column Names for Adjustment Columns – Original Forecast Value Without Adjustments**

If your org shows adjustments in columns, use these API column names for the original forecast value without adjustments. Adjustment columns are available in API version 60.0 and later.

If the Most Likely category isn't enabled:

- AmountWithoutAdjustments1 or QuantityWithoutAdjustments1 – Commit
- AmountWithoutAdjustments2 or QuantityWithoutAdjustments2 – Best Case

If the Most Likely category is enabled:

- AmountWithoutAdjustments1 or QuantityWithoutAdjustments1 – Commit
- AmountWithoutAdjustments2 or QuantityWithoutAdjustments2 – Most Likely
- AmountWithoutAdjustments3 or QuantityWithoutAdjustments3 – Best Case

**API Column Names for Adjustment Columns – Team Adjustment Value**

If your org shows adjustments in columns, use these API column names for the team's adjusted value that includes a subordinate's owner and manager adjustments, but not a forecast manager's owner and manager adjustments. These adjustment columns are available in API version 61.0 and later.

If the Most Likely category isn't enabled:

- SubordinateOverrideAmount1 or SubordinateOverrideQuantity1 - Commit
- SubordinateOverrideAmount2 or SubordinateOverrideQuantity2 - Best Case

If the Most Likely category is enabled:

- SubordinateOverrideAmount1 or SubordinateOverrideQuantity1 - Commit
- SubordinateOverrideAmount2 or SubordinateOverrideQuantity2 - Most Likely
- SubordinateOverrideAmount3 or SubordinateOverrideQuantity3 - Best Case

Use these API column names for the team's adjusted value that includes owner adjustments without manager adjustments. The adjustment value includes a subordinate's manager adjustments that they made. These adjustment columns are available in API version 60.0 and later.

If the Most Likely category isn't enabled:

- AmountWithoutManagerAdjustment1 or QuantityWithoutManagerAdjustment1 – Commit
- AmountWithoutManagerAdjustment2 or QuantityWithoutManagerAdjustment2 – Best Case

If the Most Likely category is enabled:

- AmountWithoutManagerAdjustment1 or QuantityWithoutManagerAdjustment1 – Commit
- AmountWithoutManagerAdjustment2 or QuantityWithoutManagerAdjustment2 – Most Likely
- AmountWithoutManagerAdjustment3 or QuantityWithoutManagerAdjustment3 – Best Case

**API Column Names for Adjustment Columns – My Adjusted Value**

The column that represents the adjusted value from the forecast user viewing the page is the same as the API column name for the standard forecast category. Adjustment columns are available in API version 60.0 and later.

If the Most Likely category isn't enabled:

- ForecastAmount1 or ForecastQuantity1 – My Commit
- ForecastAmount2 or ForecastQuantity2 – My Best Case

If the Most Likely category is enabled:

- ForecastAmount1 or ForecastQuantity1 – My Commit
- ForecastAmount2 or ForecastQuantity2 – My Most Likely
- ForecastAmount3 or ForecastQuantity3 – My Best Case

**API Column Names for Custom Reference Data**

Use the appropriate field based on whether the custom reference data is of Currency or Number type.

- ExtensionCurrency0
- ExtensionCurrency1
- ExtensionCurrency2
- ExtensionCurrency3
- ExtensionCurrency4
- ExtensionNumber0
- ExtensionNumber1
- ExtensionNumber2
- ExtensionNumber3
- ExtensionNumber4

**Supported Math Operators**

- + (Add) – Calculates the sum of two values.
- - (Subtract) – Calculates the difference of two values.
- * (Multiply) – Multiplies its values.
- / (Divide) – Divides its values.
- () (Open Parenthesis and Closed Parenthesis) – Specifies that the expressions within the open parenthesis and close parenthesis are evaluated first. All other expressions are evaluated using standard operator precedence.

**Supported Logical Operators**

- = and == (Equal) – Evaluates if two values are equivalent. The = and == operators are interchangeable.
- <> and != (Not Equal) – Evaluates if two values aren't equivalent.
- < (Less Than) – Evaluates if a value is less than the value that follows this symbol.
- > (Greater Than) – Evaluates if a value is greater than the value that follows this symbol.
- <= (Less Than or Equal) – Evaluates if a value is less than or equal to the value that follows this symbol.
- >= (Greater Than or Equal) – Evaluates if a value is greater than or equal to the value that follows this symbol.

**Supported Functions**

- IF – Determines if expressions are true or false. Returns a given value if true and another value if false.
- NULL can be used as a constant. For example, `IF((expression) < 0, NULL, (expression))`.

# ForecastingColumnDefinitionLocalization

Represents the translated value of a custom calculated column or custom reference data column label when the Translation Workbench is enabled for your organization. This object is available in API version 56.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Translation Workbench must be enabled for your org.

## Fields

| Field | Details |

| NamespacePrefix | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation. |

| Field | Details |
| --- | --- |
| | The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the related custom column definition. This field is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ForecastingColumnDefinition |
| `Value` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The translated label of the custom calculated column or custom reference data column. |

# ForecastingCustomCategory

Represents a custom forecasting category used for forecast rollups. This object is available in API version 62.0 and later.

In API version 62.0, this object is available for rollup of Manager Judgments only.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

# Fields

| Field | Details |
| --- | --- |
| `CanHaveQuotas` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether forecasts in the custom category can have quotas. The default value is `false`. Available in API version 63.0 and later. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A user-defined description of the custom category. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The developer name of the custom category. |
| `DisplayPosition` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the placement of the custom category column among the other columns on the forecasts page. |
| `ForecastingSourceDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the forecasting source definition.<br>This field is a relationship field.<br>**Relationship Name**<br>ForecastingSourceDefinition |

| Field | Details |
| --- | --- |
| | **Refers To**<br>ForecastingSourceDefinition |
| `ForecastingTypeId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the related ForecastingType.<br>This field is a relationship field.<br>**Relationship Name**<br>ForecastingType<br>**Refers To**<br>ForecastingType |
| `IsAdjustable` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether forecast managers can adjust forecasts in the custom category. The default value is `false`. |
| `IsAmount` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `true`, then the adjustment is made in a revenue amount. If `false`, then `IsQuantity` must be `true`. The default value is `false`. Available in API version 63.0 and later. |
| `IsHidden` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the custom category is hidden. The default value is `false`. Available in API version 63.0 and later. |
| `IsOwnerAdjustable` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether all forecast users can adjust their own forecasts in the custom category, including the territory forecasts that they own. The default value is `false`. |
| `IsQuantity` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `true`, then the adjustment is made in a quantity amount. If `false`, then `IsAmount` must be `true`. The default value is `false`. Available in API version 63.0 and later. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language of the custom category. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The label for this column. The label is in the default language locale for the organization. If there's no default language locale, the label is in en_US. |
| `MeasureFieldOverride` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The measure that this custom category supports.<br>Possible values are:<br>• `Opportunity.Amount`<br>• `Opportunity.AmountCustom__c`<br>• `Opportunity.AmountRSF__c`<br>• `Opportunity.TotalOpportunityQuantity`<br>• `OpportunityLineItem.Quantity` |

| Field | Details |
| --- | --- |
| | • `OpportunityLineItem.TotalPrice`<br>• `OpportunityLineItem.oliCustomAmount__c`<br>• `OpportunityLineItemSplit.SplitAmount`<br>• `OpportunitySplit.SplitAmount`<br>• `OpportunitySplit.customAmount__c` |
| `UnitOfMeasure` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unit of measure for the specified custom category measure. Available in API version 63.0 and later. |

# ForecastingCustomData

Represents forecast data from external sources to display in the forecasts page. For example, risk or last year's revenue. This object is available in API version 58.0 and later.

This object doesn't support forecast rollups or adjustments. Number and currency columns are supported only.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Available in Enterprise Edition and above, and in Professional Edition with an add-on license. Access to this object requires the Manage Forecasts Custom Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `ForecastOwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the forecast owner. This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>ForecastOwner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `ForecastingGroupItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>If a forecast group is assigned to the forecast type, the ID of the group value that the custom data belongs to. This field is a relationship field. Available in API version 60.0 and later.<br>**Relationship Name**<br>ForecastingGroupItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ForecastingGroupItem |
| `ForecastingTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the forecast type. This field is a relationship field.<br>**Relationship Name**<br>ForecastingType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ForecastingType |
| `PeriodId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Read only. Period ID for the custom data. This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Period<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Period |
| `ProductFamily` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The user-defined product family available to forecast on. Each product family is unique. Possible values are:<br>• *`[user-defined]`*–For example, `Electronics` or `Appliances`.<br>• `None` |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The start of the custom data, expressed as month and year. The date can include any day in a given month. Stored using the first date of the month. |
| `Territory2Id` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the territory to forecast on. |

## Usage

Each record displays as a custom column on the forecasts summary page.

# ForecastingDisplayedFamily

Represents the table in Forecasts Settings where an admin selects the product families that users can forecast on in Lightning Experience. This object is available in API version 40.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `DisplayPosition` | **Type**<br>int<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>The order in which product families are displayed on the forecasts page. Each value is unique to a product family. |
| `ProductFamily` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The product family available to forecast on. Each product family is unique. |

# ForecastingFact

This object is read-only and links a ForecastingItem with its opportunities, such as opportunities that share the same owner or forecast category and have a closing date within the period of the forecasting item. Available in API versions 26 and greater.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

# Fields

| Field Name | Details |
| --- | --- |
| `ForecastCategoryName` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>A forecast category is the category within the sales cycle to which an opportunity is assigned based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted (not included in forecasts), and Closed. Salesforce admins can customize the forecast category names. |
| `ForecastedObjectId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Contains the Split ID of the forecasted OpportunitySplit object if the forecast data source is opportunity splits or the OpportunityLineItem ID of the forecasted opportunity if the data source is product families. If the data source is product families and the opportunity has no line item, this field is null. If the forecast data source is opportunities, this field is null. This field is available in API version 29 and later. Read-only. |
| `ForecastedSubObjectId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Possible values:<br>• If the forecast data source is OpportunityLineItemSplit, and the opportunity has line items and line item splits, then this field contains the ID of the forecasted OpportunityLineItemSplit object.<br>• If the forecast data source is OpportunityLineItemSplit, and the opportunity has line items but no line item splits, this field contains the ID of the forecasted OpportunitySplit object.<br>• If the forecast data source is OpportunityLineItemSchedule, this field contains the OpportunityLineItemSchedule ID of the forecasted opportunity.<br>• If the forecast data source is OpportunityLineItemSplit and the opportunity has no line item, this field is null.<br>• If the forecast data source is OpportunityLineItemSchedule and the opportunity has no line item, this field is null. |

| Field Name | Details |
| --- | --- |
| | This field is available in API version 58.0 and later. Read-only. This field is a polymorphic relationship field.<br>**Relationship Name**<br>null<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OpportunityLineItem, OpportunityLineItemSplit |
| `ForecastingItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the ForecastingItem. |
| `ForecastingTypeId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related ForecastingType. |
| `OpportunityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The opportunity ID. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the opportunity owner. |
| `PeriodId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Period ID for the forecast. |
| `TargetValue` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Target value of the forecast amount. |
| `Territory2Id` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the territory to forecast on. Available in API version 43 and later. |

## Usage

Use this object to get information about opportunities linked to forecasting items.

Note: Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the ForecastingType object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

SEE ALSO:

ForecastingAdjustment

ForecastingItem

ForecastingQuota

# ForecastingFilter

Represents the custom filter for including or excluding data from opportunity forecasts. This object is available in API version 54.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts permission OR Allow Forecasting permission OR delegated forecast manager status can access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The developer name of the forecast filter. |
| `FilterLogic` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The logic that controls the evaluation of conditions. Only `AND` is supported. For example, `1 AND 2 AND 3`. |
| `ForecastingTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the forecast type. Can be linked only to forecast types created in Summer '21 and later. This is a relationship field.<br>**Relationship Name**<br>ForecastingType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ForecastingType |

| Field Name | Details |
| --- | --- |
| `ForecastingTypeSourceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the forecast type source. Can be linked only to forecast type sources created in Summer '21 or later and with a forecast source definition with source object of 'Opportunity.' This is a relationship field.<br>**Relationship Name**<br>ForecastingTypeSource<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ForecastingTypeSource |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the forecast filter. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The label for this object, which displays in Setup. The label is in the default language locale for the organization. If there's no default language locale, the label is in en_US. |

# ForecastingFilterCondition

Represents the custom filter condition logic for including or excluding data from opportunity forecasts. This object is available in API version 54.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts permission OR Allow Forecasting permission OR delegated forecast manager status can access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The developer name of the forecast filter condition. |
| `FieldName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The name of the opportunity field to be filtered. |
| `ForecastingFilterId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the forecast filter. This is a relationship field.<br>**Relationship Name**<br>ForecastingFilter<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ForecastingFilter |
| `Language` | **Type**<br>picklist |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the forecast filter condition. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The label for this object, which displays in Setup. The label is in the default language locale for the organization. If there's no default language locale, the label is in en_US. |
| `Operation` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The operator in the filter condition. Possible values are:<br>• equals<br>• greaterOrEqual – greater than or equal to<br>• greaterThan<br>• lessOrEqual – less than or equal to<br>• lessThan<br>• notEqual |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The index value for the condition. This value represents the condition in the FilterLogic field in the ForecastingFilter object. For example, 1. |
| `Value` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The value of the filter condition. If multiple values are specified, they must be separated by a comma delimiter.<br>Note: If you have multiple currencies enabled, and add a custom filter on a currency field as part of your forecast type definition, the corporate currency at the time the filter was created is used. If you have a single currency enabled, the absolute value is used in your filter condition. |

## Usage

A forecast type can contain up to three filter conditions.

# ForecastingGroup

Represents groups used to roll up forecast totals on the forecasts page. For example, group forecasts by industry or sales type. This object is available in API version 60.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Available for forecast types created in Spring '24 or later and that are based on the Opportunity and Opportunity Product objects.

You can only add groups to new forecast types.

## Fields

| Field | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The developer (API) name of the forecast group. |

| Field | Details |
| --- | --- |
| `DisplayPosition` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The order in which forecasting dimensions are displayed on the forecasts page. Each value is unique to a dimension. |
| `ForecastingTypeId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the forecast type associated with the forecasting group.<br>This field is a relationship field.<br>**Relationship Name**<br>ForecastingType<br>**Refers To**<br>ForecastingType |
| `GroupField` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The field name of the custom picklist used as a group. Possible values include custom, single-selection picklists available in `SourceObject`. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the custom picklist identified as the group. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The label for this object, which displays in Setup. The label is in the default language locale for the organization. If there's no default language locale, the label is in en_US. |
| `SourceObject` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The entity the picklist used for the forecast group is on.<br>Possible values are:<br>• `Opportunity`<br>• `OpportunityLineItem`<br>• `Product2` |

## Usage

Each forecast group can apply to only one forecast type.

# ForecastingGroupItem

Represents the value within the picklist that is specified as the forecasting group for a forecast type. For example, if you have a forecasting group that identifies the industry an opportunity is part of, this object represents the value in the the industry picklist that's chosen to be part of the group. This object is available in API version 60.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `DisplayPosition` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Indicates the order in which the value displays among other values in the group on the forecasts page. |

| Field | Details |
| --- | --- |
| `ForecastingGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>This field is a relationship field.<br>**Relationship Name**<br>ForecastingGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ForecastingGroup |
| `SourceValueApiName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The API name that's derived from the group value. |
| `SourceValueLabel` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The label that's derived from the group value. |
| `SourceValueTranslatedLabel` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>If one exists, the translated version of the group value. |

## Usage

New forecast types based on opportunities or opportunity products can include a forecasting group. This group is based on a custom, single-selection picklist that's defined on the Opportunity, OpportunityLineItem, or Product2 objects. The picklist that's chosen for the group can contain more values than are needed for the type.

# ForecastingItem

This object is read-only used for individual forecast amounts. Users see amounts based on their perspectives and forecast roles. The amounts users see include one of these values when forecasting in revenue: `AmountWithoutAdjustments`, `AmountWithoutManagerAdjustment`, `ForecastAmount`, `OwnerOnlyAmount`. The amounts users see include one of these values when forecasting in quantity: `QuantityWithoutAdjustments`, `QuantityWithoutManagerAdjustment`, `ForecastQuantity`, `OwnerOnlyQuantity`. Available in API version 26.0 and later.

Other users can see the ForecastingItem object, but not its records. See these access guidelines.

- Users with the "View All Forecasts" permission have access to all ForecastingItem fields.
- Users without the "View All Forecasts" permission have access to all fields for their own subordinates and child territories.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

## Fields

| Field Name | Details |
|---|---|
| `AmountWithoutAdjustments` | **Type**<br>double<br>**Properties**<br>Filter, Sort, Nillable<br>**Description**<br>The sum of a person's owned revenue opportunities and the person's subordinates' and child territories' opportunities, without adjustments. Subordinates include everyone reporting up to a person in the role-based forecast hierarchy. This amount is visible only on reports. |
| `AmountWithoutManagerAdjustment` | **Type**<br>double<br>**Properties**<br>Filter, Sort, Nillable<br>**Description**<br>The forecast number as seen by the forecast owner. This number is the sum of the owner's revenue opportunities and the owner's subordinates' and child territories' opportunities, including adjustments made by the forecast owner on the owner's or subordinates' and child territories' forecasts. It doesn't include |

| Field Name | Details |
| --- | --- |
| | adjustments made by forecast managers above the owner in the forecast hierarchy. |
| AmountWithoutOwnerAdjustment | **Type**<br>double<br>**Properties**<br>Filter, Sort, Nillable<br>**Description**<br>The forecast amount as seen by the forecast owner without the owner's adjustment. This amount is the sum of the subordinate's and child territories' opportunities, including adjustments made by their manager or by the subordinate themselves, plus the rollup of the owner's own opportunities. *It doesn't include adjustments made by the forecast owner.* |
| ForecastAmount | **Type**<br>double<br>**Properties**<br>Filter, Sort, Nillable<br>**Description**<br>The revenue forecast from the forecast manager's perspective and the sum of the owner's and subordinates' and child territories' opportunities, including all forecast adjustments. |
| ForecastCategoryName | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>A forecast category is the category within the sales cycle to which an opportunity is assigned based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted (not included in forecasts), and Closed. Salesforce admins can add a Most Likely category and can customize the forecast category names in single category rollups. Change the forecast category name only. Changing a forecast category's API name can have unintended results. |
| ForecastQuantity | **Type**<br>double<br>**Properties**<br>Filter, Sort, Nillable |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The quantity forecast from the forecast manager's perspective and the sum of the owner's and subordinates' opportunities, including all forecast adjustments. This field is available in API version 28 and later. |
| `ForecastingGroupItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>If a forecast group is assigned to the forecast type, the ID of the group value that the forecast total belongs to. This field is a relationship field. Available in API version 60.0 and later.<br>**Relationship Name**<br>ForecastingGroupItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ForecastingGroupItem |
| `ForecastingItemCategory` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>This field indicates which type of forecast rollup the forecasting item belongs to. Depending on whether your organization uses individual forecast category rollups or cumulative forecast rollups, you have these possible values for the `ForecastingItemCategory` field.<br>***Individual forecast category rollups:***<br>• PipelineOnly - Rollup from Pipeline opportunities only.<br>• BestCaseOnly - Rollup from Best Case opportunities only. Adjustable.<br>• MostLikelyOnly - Rollup from Most Likely opportunities only. Adjustable.<br>• CommitOnly - Rollup from Commit opportunities only. Adjustable.<br>***Cumulative forecast rollups:***<br>• OpenPipeline - Rollup from Pipeline + Best Case + Most Likely + Commit opportunities.<br>• BestCaseForecast - Rollup from Best Case + Most Likely + Commit + Closed opportunities. Adjustable.<br>• MostLikelyForecast - Rollup from Most Likely + Commit + Closed opportunities. Adjustable. |

| Field Name | Details |
| --- | --- |
| | • CommitForecast - Rollup from Commit + Closed opportunities. Adjustable.<br>***Either cumulative or individual forecast category rollups:***<br>• ClosedOnly - Rollup from Closed opportunities only.<br>The `ForecastingItemCategory` field differs from the `ForecastCategoryName` field.<br>• The `ForecastCategoryName` field represents the forecast category of the *underlying opportunities* rolling up to forecast amounts. In organizations using cumulative forecast rollups, the `ForecastCategoryName` field can be null because the cumulative forecast amounts include opportunities from multiple forecast categories.<br>• The new `ForecastingItemCategory` field represents the *type of rollup* a forecast amount or adjustment is from. In organizations using individual forecast category columns, it contains the individual forecast rollup categories. In organizations using cumulative forecast rollups, it contains the cumulative rollup categories. |
| `ForecastingTypeId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the related ForecastingType. |
| `HasAdjustment` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>A flag that indicates the forecasting item includes a *manager* adjustment. This flag is true only when the item includes an adjustment and the user performing the query has read access to the adjustment. |
| `HasOwnerAdjustment` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>A flag that indicates the forecasting item includes an *owner* adjustment. This flag is true only when the item includes an adjustment and the user performing the query has read access to the adjustment. Available in API version 33.0 and later. |

| Field Name | Details |
| --- | --- |
| `IsAmount` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>True indicates that the adjustment is made in a revenue amount. If false, then `IsQuantity` must be true. This field is available in API version 28.0 and later. |
| `IsQuantity` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>True indicates that the adjustment is made in a quantity amount. If false, then `IsAmount` must be true. This field is available in API version 28.0 and later. |
| `IsUpToDate` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>A flag indicating whether a specific forecasting item reflects current information. For example, if users are making adjustments that are in process, the item isn't up to date. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the forecast owner. |
| `OwnerOnlyAmount` | **Type**<br>double<br>**Properties**<br>Filter, Sort, Nillable<br>**Description**<br>The sum of a person's revenue opportunities, without adjustments. |

| Field Name | Details |
| --- | --- |
| `OwnerOnlyQuantity` | **Type**<br>double<br>**Properties**<br>Filter, Sort, Nillable<br>**Description**<br>The sum of a person's quantity opportunities, without adjustments. This field is available in API version 28.0 and later. |
| `ParentForecastingItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the ForecastingItem that the current item rolls up to. |
| `PeriodId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Period ID for the forecast. |
| `ProductFamily` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The product family of the forecast item. This field is available in API version 29.0 and later. Read only. |
| `QuantityWithoutAdjustments` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of a person's owned quantity opportunities and also his or her subordinates' opportunities, without adjustments. Subordinates include everyone reporting up to a person in the forecast hierarchy. This field is available in API version 28.0 and later. |
