| `QuantityWithoutManagerAdjustment` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The forecast number as seen by the forecast owner. This number is the sum of the owner's quantity opportunities and subordinates' opportunities, including adjustments made on the subordinates' forecasts. It doesn't include adjustments made by forecast managers above the owner in the forecast hierarchy. This field is available in API version 28 and later. |
| `QuantityWithoutOwnerAdjustment` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The forecast quantity as seen by the forecast owner without the owner's adjustment. This number is the sum of the subordinate's opportunities, including adjustments made by their manager or by the subordinate themselves, plus the rollup of the owner's own opportunities. *It doesn't include adjustments made by the forecast owner.* This field is available in API version 38.0 and later. |
| `SubordinateOverrides` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The total number of adjustments made to a forecast down the hierarchical chain. For example, User A has a forecast without adjustments. If User A adjusts User B's forecast, User A's `SubordinateOverrides` value is 1. Then if User B adjusts User C's forecast, User A's `SubordinateOverrides` value is 2. If User A removes his adjustment from User B's forecast, User A's `SubordinateOverrides` value is 1.<br>This field is available in API version 38.0 and later. |
| `Territory2Id` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the territory to forecast on. Available in API version 43.0 and later. |

## Usage

Use this object to obtain individual forecast amounts, either with or without adjustments, based on a user's perspective and forecast role. The ForecastingItem object is visible to all users, but only forecast managers and users above them in the forecast hierarchy can read or write ForecastingAdjustment records.

Note: Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the ForecastingType object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

# ForecastingOwnerAdjustment

This object represents an individual forecast user's adjustment of their *own* forecast, including territory forecasts they own, via a ForecastingItem. Available in API versions 33.0 and later. This object is different from the ForecastingAdjustment object, which represents managers' adjustments of *subordinates'* and child territories' forecasts.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

## Fields

| Field Name | Details |
|---|---|
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The currency code of the adjustment. If omitted, the default is the importing user's personal currency. |

| Field Name | Details |
| --- | --- |
| ForecastCategoryName | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The category within the sales cycle that an opportunity is assigned to based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted, and Closed. You can add a Most Likely category and can customize forecast category names in single category rollups. The forecast categories display information for that specific category; for example, Best Case only reflects amounts in the Best Case category. |
| ForecastOwnerId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the forecast owner. |
| ForecastingGroupItemId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>If a forecast group is assigned to the forecast type, the ID of the group value that the owner adjustment belongs to. This field is a relationship field. Available in API version 60.0 and later.<br>**Relationship Name**<br>ForecastingGroupItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ForecastingGroupItem |
| ForecastingItemCategory | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>This field indicates which type of forecast rollup the owner adjustment belongs to. Depending on whether your organization uses individual forecast category |

| Field Name | Details |
| --- | --- |
| | rollups or cumulative forecast rollups, you have these possible values for the `ForecastingItemCategory` field.<br>***Individual forecast category rollups:***<br>• PipelineOnly - Rollup from Pipeline opportunities only.<br>• BestCaseOnly - Rollup from Best Case opportunities only. Adjustable.<br>• MostLikelyOnly - Rollup from Most Likely opportunities only. Adjustable.<br>• CommitOnly - Rollup from Commit opportunities only. Adjustable.<br>***Cumulative forecast rollups:***<br>• OpenPipeline - Rollup from Pipeline + Best Case + Most Likely + Commit opportunities.<br>• BestCaseForecast - Rollup from Best Case + Most Likely + Commit + Closed opportunities. Adjustable.<br>• MostLikelyForecast - Rollup from Most Likely + Commit + Closed opportunities. Adjustable.<br>• CommitForecast - Rollup from Commit + Closed opportunities. Adjustable.<br>***Either cumulative or individual forecast category rollups:***<br>• ClosedOnly - Rollup from Closed opportunities only.<br>The `ForecastingItemCategory` field differs from the `ForecastCategoryName` field.<br>• The `ForecastCategoryName` field represents the forecast category of the *underlying opportunities* rolling up to forecast amounts. In organizations using cumulative forecast rollups, the `ForecastCategoryName` field can be null because the cumulative forecast amounts include opportunities from multiple forecast categories.<br>• The new `ForecastingItemCategory` field represents the *type of rollup* a forecast amount or adjustment is from. In organizations using individual forecast category columns, it contains the individual forecast rollup categories. In organizations using cumulative forecast rollups, it contains the cumulative rollup categories.<br>When inserting owner adjustments, the values you insert for `ForecastCategoryName` and `ForecastingItemCategory` must be compatible with each other. In organizations using cumulative forecast rollups, the `ForecastCategoryName` is nillable. These pairs are the valid pairs.<br>**Individual forecast category rollups:**<br>• `ForecastCategoryName`: BestCase, `ForecastingItemCategory`: BestCaseOnly<br>• `ForecastCategoryName`: Commit, `ForecastingItemCategory`: CommitOnly |

| Field Name | Details |
| --- | --- |
| | **Cumulative forecast category rollups:**<br>• `ForecastCategoryName`:null, `ForecastingItemCategory`: BestCaseForecast<br>• `ForecastCategoryName`:null, `ForecastingItemCategory`: CommitForecast |
| `ForecastingItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the related ForecastingItem. |
| `ForecastingTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related ForecastingType. |
| `IsAmount` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `true`, then the adjustment is made in a revenue amount. If `false`, then `IsQuantity` must be `true`. |

| `OwnerAdjustedAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The revenue amount of an individual forecast item, after an adjustment. |
| `OwnerAdjustedQuantity` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The quantity amount of an individual forecast item, after an adjustment. |
| `OwnerAdjustmentNote` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A text note providing information about the adjustment. The maximum length is 255 characters. This field does not appear in reports. |
| `PeriodId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Period ID for the adjustment. Read only. |
| `ProductFamily` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The Product Family for the adjustment. Read only. |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The start of the adjustment, expressed as month and year. The date can include any day in a given month. Stored using the first date of the month. |

| Field Name | Details |
| --- | --- |
| `Territory2Id` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the territory to forecast on. Available in API version 43.0 and later. |

## Usage

Use this object to obtain a user's adjustment details for a specified ForecastingItem in their own forecast.

Note: Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the ForecastingType object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

**ForecastingOwnerAdjustmentChangeEvent (API version 62.0)**
Change events are available for the object.

# ForecastingQuota

This object represents an individual user's or territory's quota for a specified time period. The Managed Quotas user permission is required for creating, updating, or deleting quotas. (Users can only edit their subordinates' or child territories' quotas, not their own.) The View All Forecasts permission is required to view any user's forecast, regardless of the forecast hierarchy. Available in API versions 25.0 and later. Forecast managers can view the forecasts of subordinates and territories below them in the forecast hierarchy.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `CurrencyIsoCode` | **Type**<br>picklist |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The currency code of the quota. If omitted, the default is the importing user's personal currency. |
| `ForecastingGroupItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>If a forecast group is assigned to the forecast type, the ID of the group value that the quota belongs to. This field is a relationship field. Available in API version 60.0 and later.<br>**Relationship Name**<br>ForecastingGroupItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ForecastingGroupItem |
| `ForecastingTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the related ForecastingType. |
| `IsAmount` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `true`, then the adjustment is made in a revenue amount. If `false`, then `IsQuantity` must be `true`. This field is available in API version 28.0 and later. |
| `IsQuantity` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>If `true`, then the adjustment is made in a quantity amount. If `false`, then `IsAmount` must be `true`. This field is available in API version 28.0 and later. |
| `PeriodId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Period ID for the quota. Read only. |
| `ProductFamily` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The product family for the quota. This field is available in API version 29.0 and later. |
| `QuotaAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The revenue quota amount for an individual user or territory and for a specific period. |
| `QuotaOwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID that identifies the quota owner. |
| `QuotaQuantity` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The quantity quota amount for an individual user and for a specific period. This field is available in API version 28.0 and later. |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The start of the quota, expressed as month and year. The date can include any day in a given month. Stored using the first date of the month. |
| `Territory2Id` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the territory to forecast on. Available in API version 43.0 and later. |

## Usage

Use this object to get an individual user's or territory's quota for a specified time period.

Note: Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the ForecastingType object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

# ForecastingShare

Represents forecasts shared between a forecast manager and a user. Available in API version 44.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

## Fields

| Field Name | Details |
|---|---|
| `AccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Whether the user you're sharing your forecasts with can view and adjust the forecasts or view only. This field is new since the pilot.<br>Picklist values:<br>• `ViewAndEdit`<br>• `ViewOnly` |
| `SharedForecastManagerRoleId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of either:<br>• The role of the manager whose forecasts you want to share.<br>• The territory whose forecasts you want to share. |
| `RoleType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of hierarchy associated with the forecast share.<br>• `R` - Role-based<br>• `T` - Territory-based<br>• `Y` - Territory2-based |

| Field Name | Details |
| --- | --- |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the user with whom the forecast is shared. |

## Usage

Use this object to let any stakeholder at your company view and adjust forecast managers' forecasts.

# ForecastingSourceDefinition

Represents the object, measure, date type, and hierarchy that a forecast uses to project sales. This object is available in API version 52.0 and later.

Note: The information in this topic applies only to forecast types created in Summer '21 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `CategoryField` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Name of the forecast category that is associated with the forecast type.<br>Possible values are:<br>• `Opportunity.ForecastCategoryName` |
| `DateField` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Field that is used for the forecast type's date type. For example, the CloseDate field on Opportunity is used for opportunity close date-based forecast types.<br>Possible values are:<br>• `Opportunity.CloseDate`<br>• `OpportunityLineItem.ServiceDate`<br>• `OpportunityLineItemSchedule.ScheduleDate` |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The developer name of the forecasting source definition.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `FamilyField` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Use this field to group forecasts by product family. Possible values are:<br>• `Product2.Family` |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Language of the forecasting source definition. For example, English. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. Controlling label for this forecasting source definition. |
| `MeasureField` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Field that is used for the forecast type's measure. For example, the Amount field on Opportunity is associated with revenue-based forecast types.<br>Possible values are*:<br>• `Opportunity.Amount`<br>• `Opportunity.`***`Custom`***<br>• `Opportunity.TotalOpportunityQuantity`<br>• `OpportunityLineItem.`***`Custom`***<br>• `OpportunityLineItem.Quantity`<br>• `OpportunityLineItem.TotalPrice`<br>• `OpportunityLineItemSchedule.`***`Custom`***<br>• `OpportunityLineItemSchedule.Quantity`<br>• `OpportunityLineItemSchedule.Revenue`<br>• `OpportunitySplit.`***`Custom`***<br>• `OpportunitySplit.SplitAmount`<br>*Where ***`Custom`*** represents the name of the custom field that a forecast type's measure is based on. Example: Use `Megawatts__c` to forecast energy consumption. |
| `SourceObject` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Object associated with this forecasting source definition.<br>Possible values are:<br>• `Opportunity`<br>• `OpportunityLineItem`<br>• `OpportunityLineItemSchedule`<br>• `OpportunitySplit`<br>• `Product2` |
| `Territory2Field` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>For a territory-based forecast type, indicates the field that is used for territory information. |

| Field | Details |
| --- | --- |
| | Possible values are:<br>• `Opportunity.Territory2Id`<br>For user role-based forecast types, this value is `null`. |
| `UserField` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Specifies who owns the forecast.<br>Possible values are:<br>• `Opportunity.OwnerId`<br>• `OpportunitySplit.SplitOwnerId` |

# Usage

Use ForecastingSourceDefinition to define a forecast type's structure. A forecasting source definition is joined via `ForecastingTypeSource` to `ForecastingType`.

In this example, a user role-based forecast type called Custom Amount Forecast is based on the Amount and Close Date fields on opportunities.

```
ForecastingType type = new  sforce.SObject("ForecastingType");
type.DeveloperName = "Custom_Amount_Forecast";
type.MasterLabel = "Custom Amount Forecast";
type.IsAmount = true;
type.IsQuantity = false;
type.RoleType = "R";
type.DateType = "OpportunityCloseDate";
String typeId = insert(type);

ForecastingSourceDefinition sourceDefinition = new
sforce.SObject("ForecastingSourceDefinition")
sourceDefinition.DeveloperName = "Custom Amount Source";
sourceDefinition.MasterLabel = "Custom_Amount_Source";
sourceDefinition.SourceObject = "Opportunity";
sourceDefinition.MeasureField = "Opportunity.Amount";
sourceDefinition.DateField = "Opportunity.CloseDate";
sourceDefinition.UserField = "Opportunity.OwnerId";
sourceDefinition.CategoryField = "Opportunity.ForecastCategoryName";
String sourceDefinitionId = insert(sourceDefinition);

ForecastingTypeSource typeSource = new sforce.SObject("ForecastingTypeSource");
typeSource.MasterLabel = "Custom Amount Type Source";
typeSource.DeveloperName = "Custom_Amount_Type_Source";
typeSource.ForecastingTypeId = typeId;
typeSource.ForecastingSourceDefinitionId = sourceDefinitionId;
```

```
typeSource.SourceGroup = 1;
insert(typeSource);
```

# ForecastingSrcRecJudgment

Represents forecast managers' judgment of whether they consider an opportunity-related deal to be certain to close. This object is available in API version 59.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The currency code of the judgment. If omitted, the default is USD. |
| `JudgmentOwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the forecast manager.<br>This field is a relationship field.<br>**Relationship Name**<br>JudgmentOwner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `JudgmentValue` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Whether the deal is likely to close (`IN`) or not (`OUT`). |
| `ReferenceObjectId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the opportunity-related object.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ReferenceObject<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Opportunity |
| `Territory2Id` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the territory that the judgment is on.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ReferenceObject<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Territory2 |

# ForecastingSubmission

Represents a submitted forecast. This object is available in API version 62.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Available for forecast types that aren't grouped by product family forecast.

## Fields

| Field | Details |
| --- | --- |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The currency code of the forecast submission. If omitted, the default is USD. |
| `ForecastOwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the forecast owner.<br>This field is a relationship field.<br>**Relationship Name**<br>ForecastOwner<br>**Refers To**<br>User |
| `ForecastingGroupItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Reserved for future use. Forecast submissions aren't supported in forecast types with groups.<br>**Relationship Name**<br>ForecastingGroupItem<br>**Refers To**<br>ForecastingGroupItem |
| `ForecastingTypeId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the forecast type.<br>This field is a relationship field.<br>**Relationship Name**<br>ForecastingType<br>**Refers To**<br>ForecastingType |
| `IsLatest` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates if the forecast submission is the most recent submission.<br>The default value is `false`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>For internal use only. ID of this record. |
| `Note` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The note attached to the submitted forecast. |
| `PeriodId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the period to which the submission applies.<br>This field is a relationship field.<br>**Relationship Name**<br>Period<br>**Refers To**<br>Period |

| Field | Details |
| --- | --- |
| `PeriodStartDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Indicates the start date of the forecast period. |
| `ProductFamily` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Must be set to `none`. Forecast submissions aren't supported in forecast types grouped by product families. |
| `SubmissionDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort<br>**Description**<br>The date and time that the forecast submission was made. Calculated internally. |
| `Territory2Id` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the territory to forecast on.<br>This field is a relationship field.<br>**Relationship Name**<br>Territory2<br>**Refers To**<br>Territory2 |

## Usage

ForecastingSubmission is a detail object that contains the submitted item category values. Each record represents the values for a single item category. ForecastingSubmission is always used as a detail object for the submission, and inserted only as part of a transaction that includes all detail objects.

# ForecastingSubmissionItem

Represents the values for each forecast category in a submitted forecast. This object is available in API version 62.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `Amount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>For forecasting types that use Amount as the measure, the amount for the forecast category. Amounts must be provided in the corporate currency. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The currency code of the forecast submission. If omitted, the default is USD. |
| `ForecastingItemCategory` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The category the forecast belongs to.<br>**For individual forecast category rollups, the possible values are:**<br>• `PipelineOnly`—Rollup from Pipeline opportunities only.<br>• `BestCaseOnly`—Rollup from Best Case opportunities only.<br>• `MostLikelyOnly`—Rollup from Most Likely opportunities only.<br>• `CommitOnly` —Rollup from Commit opportunities only.<br>**For cumulative forecast rollups, the possible values are:**<br>• `OpenPipeline`—Rollup from Pipeline, Best Case, Most Likely, and Commit opportunities. |

| Field | Details |
| --- | --- |
| | • `BestCaseForecast` —Rollup from Best Case, Most Likely, Commit, and Closed opportunities.<br>• `MostLikelyForecast`—Rollup from Most Likely, Commit, and Closed opportunities.<br>• `CommitForecast` —Rollup from Commit and Closed opportunities.<br>**For either cumulative or individual forecast category rollups, the possible values are:**<br>• `ClosedOnly`—Rollup from Closed opportunities only. |
| `ForecastingSubmissionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the forecast submission.<br>This field is a relationship field.<br>**Relationship Name**<br>ForecastingSubmission<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>ForecastingSubmission (the master object) |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>For internal use only. The ID of this record. |
| `Quantity` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>For forecasting types that use Quantity as the measure, the quantity for the forecast category. Quantities must be provided in the corporate currency. |

# ForecastingType

Used to identify the forecast type associated with `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingQuota`, `ForecastingFact`, and `ForecastingItem` objects. Available in API version 30.0 and greater.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `CanDisplayQuotas` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a forecast type can show quota information. The default value is `false`. Available in API version 38.0 and later. |
| `DateType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The date type that forecast amounts are based on. These values are available for forecast types that were available before Summer '21.<br>• `OpportunityCloseDate`: Base forecasts on opportunity close dates.<br>• `ProductDate`: Base forecasts on opportunity product line item dates, if available.<br>• `ScheduleDate`: Base forecasts on opportunity product schedule dates, if available.<br>These values are available in API version 52.0 and later in Performance Edition and in Unlimited Edition with the Sales Cloud. |

| Field Name | Details |
| --- | --- |
| | • `OLIMeasureCloseDateOnly`: Base forecasts on opportunity close dates.<br>• `ProductDateOnly`: Base forecasts on opportunity product line item dates, if available.<br>• `ScheduleDateOnly`: Base forecasts on opportunity product schedule dates, if available.<br>These values to create forecasts on custom date fields are available in API version 57.0 and later in Performance, Professional, Enterprise, and Unlimited Edition with the Sales Cloud.<br>• `OLIMeasureOppCustomDateOnly`: Base forecasts on custom opportunity dates, if available.<br>• `OpportunityCustomDate`: Base forecasts on custom opportunity dates.<br>The custom date field used must be on the opportunity object and based on the date type. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The name of the forecasting type. The `DeveloperName` is called `name` in the Metadata API and Forecasting Type in custom reports. |
| `ForecastingGroupID` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Indicates whether the forecasting type has a group assignment, and if so, the name of the group. This field is a relationship field. Available in API version 60.0 and later.<br>**Relationship Name**<br>ForecastingGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ForecastingGroup |
| `HasAdjustments` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether forecast managers can adjust forecasts of their immediate subordinates and child territories. The default value is `false`. Available in API version 60.0 and later. |
| `HasOwnerAdjustments` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether all forecast users can adjust their own forecasts, including the territory forecasts that they own. The default value is `false`. Available in API version 60.0 and later. |
| `HasProductFamily` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Group<br>**Description**<br>Indicates whether a forecasts view includes product families. The default value is `false`. Available in API version 40.0 and later. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the forecasting type is enabled. The default value is `false`. |
| `IsAmount` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the forecasting type is based on the revenue measure. The default value is `false`. |
| `IsPlatformType` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates a legacy forecast type that wasn't available before Summer '21. The default value is `false`. Available in API version 52.0 and later. |
| `IsQuantity` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the forecasting type is based on the quantity measure. The default value is `false`. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the forecasting type. |
| `LastActivatedDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The date when a forecast type was activated. Read only. Available in API version 53.0 and later. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Controlling label for this forecasting type value. This display value is the internal label that doesn't get translated. |
| `OpportunitySplitTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the forecasting type has a split type, and if so, the name of the split type. This field is a relationship field. Available in API version 41.0 and later.<br>**Relationship Name**<br>OpportunitySplitType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OpportunitySplitType |
| `OpptyLineItemSplitTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Indicates whether the forecasting type has a product split type, and if so, the name of the product split type. This field is a relationship field. Available in API version 58.0 and later.<br>**Relationship Name**<br>OpptyLineItemSplitType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OpptyLineItemSplitType |
| `RoleType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Indicates whether the role type has a forecasting type, and if so, which forecasting type. Available in API version 41.0 and later.<br>Possible values are:<br>• `R`—User role-based forecasting type<br>• `T`—Territory1-based forecasting type; not used<br>• `Y`—Territory2-based forecasting type |
| `Territory2ModelId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the forecasting type has a Territory2 model, and if so, the name of the Territory2 model. Available in API version 41.0 and later. |

# ForecastingTypeSource

Maps a forecasting source definition to a forecast type. This object is available in API version 52.0 and later.

Note: The information in this topic applies only to forecast types created in Summer '21 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The developer name of the forecasting type source.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `ForecastingSourceDefinitionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the forecasting source definition. This field is a relationship field.<br>**Relationship Name**<br>ForecastingSourceDefinition<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>ForecastingSourceDefinition |
| `ForecastingTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the forecast type. Can be linked only to forecast types created in Summer '21 and later. This field is a relationship field.<br>**Relationship Name**<br>ForecastingType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ForecastingType |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Language of the forecasting type source. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. Controlling label for this forecasting type source. |
| `ParentSourceDefinitionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>For forecast types not based on the opportunity object and not based on a custom measure, this value represents the parent ForecastingSourceDefinition of the linked ForecastingSourceDefinition. This field is a relationship field.<br>• Opportunity Product is the parent of Opportunity.<br>• Opportunity Split is the parent of Opportunity. |

| Field | Details |
| --- | --- |
| | • Line Item Schedule is the parent of Opportunity Product.<br>**Relationship Name**<br>ParentSourceDefinition<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ForecastingSourceDefinition |
| `RelationField` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Represents the field linking the source objects of the parent ForecastingSourceDefinition to the child ForecastingSourceDefinition.<br>Possible values are:<br>• `OpportunityLineItem.OpportunityId`<br>• `OpportunityLineItem.Product2Id`<br>• `OpportunityLineItemSchedule.OpportunityLineItemId`<br>• `OpportunitySplit.OpportunityId` |
| `SourceGroup` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. Represents a grouping of forecasting source definitions. |

## Usage

Use this object to define a forecast type's structure. This junction object links `ForecastingSourceDefinition` to `ForecastingType`.

For an example, see ForecastingSourceDefinition.

# ForecastingUserPreference

Represents the forecasting selections that a user has made, such as display options, date range, forecasting type, and currency.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `update()`, `upsert()`

## Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `ExternalId` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A unique system-generated numerical identifier for the user. |
| `ForecastingDisplayedTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Group, Sort, Update<br>**Description**<br>An identifier for the forecasting type that's displayed. |
| `ForecastingPeriodDuration` | **Type**<br>int<br>**Properties**<br>Create, Group, Nillable, Sort, Update<br>**Description**<br>How long the forecasting period lasts. |
| `ForecastingPeriodType` | **Type**<br>picklist<br>**Properties**<br>Create, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The forecasting period's type. Valid values include: Month, Quarter, Week, or Year |
| `ForecastingStartPeriod` | **Type**<br>int |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Group, Nillable, Sort, Update<br>**Description**<br>The date when the forecasting period begins. |
| `ForecastingViewCurrency` | **Type**<br>string<br>**Properties**<br>Create, Group, Nillable, Sort, Update<br>**Description**<br>The currency shown on the forecasts page. |
| `IsForecastingHideZeroRows` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Group, Sort, Update<br>**Description**<br>Whether the forecasts page shows zero-value rows. |
| `IsForecastingShowQuantity` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Group, Sort, Update<br>**Description**<br>Whether the forecasts page shows forecast quantity. |
| `IsHideForecastingGuidedTour` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Group, Sort, Update<br>**Description**<br>Whether the forecasts page shows the guided tour. |
| `IsHideForecastingQuotaColumn` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Group, Sort, Update<br>**Description**<br>Whether the forecasts page shows a quota column. |

| Field Name | Details |
| --- | --- |
| `IsShowForecastingChangeSignals` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Group, Sort, Update<br>**Description**<br>Whether the forecasts page shows changes in the last 7 days. |
| `IsShowForecastingQuotaAttainment` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Group, Sort, Update<br>**Description**<br>Whether the forecasts page shows quota attainment information. |

# FormulaFunction

Represents a function used when building a formula, including examples and uses. This object is available in API version 47.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

| Field | Details |
| --- | --- |
| `CategoryId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the FormulaFunctionCategory.<br>This is a relationship field.<br>**Relationship Name**<br>Category<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FormulaFunctionCategory |

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Description of the formula function. |
| `DurableId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Unique identifier for the field. Always retrieve this value before using it, as the value isn't guaranteed to stay the same from one release to the next. To simplify queries, use this field. |
| `ExampleString` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Describes the function and what arguments you can use with it. |
| `IsAllowedInEntityContext` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether you can use the formula function on an Entity (`true`) or not (`false`). For example, you cannot use the PRIORVALUE function in a custom Account formula field. The default value is `false`. This field is removed in API version 48.0 and later. Use the FormulaFunctionAllowedType on page 2771 object instead. |
| `IsAllowedInFlowContext` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the formula function is allowed in a Flow (`true`) or not (`false`). The default value is `false`. This field is removed in API version 48.0 and later. Use the FormulaFunctionAllowedType on page 2771 object instead. |

| Field | Details |
| --- | --- |
| IsAllowedInVisualforceContext | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the formula function is allowed in Visualforce (`true`) or not (`false`). The default value is `false`. This field is removed in API version 48.0 and later. Use the FormulaFunctionAllowedType on page 2771 object instead. |
| Label | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The formula function label that appears in the user interface. |
| Name | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the formula function. |

## Usage

Query FormulaFunction to search for available formula functions, such as `AND()`, `ISBLANK()`, `MAX()`, `MIN()`, and others.

# FormulaFunctionAllowedType

Represents the functions that are supported in the given formula context. This object is available in API version 48.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

| Field | Details |
| --- | --- |
| DurableId | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Unique identifier for the field. Always retrieve this value before using it, as the value isn't guaranteed to stay the same from one release to the next. To simplify queries, use this field. |
| `FunctionId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Unique identifier for the supported function.<br>This is a relationship field.<br>**Relationship Name**<br>Function<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FormulaFunction |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The name of the formula type in which the function is supported.<br>Possible values are:<br>• `FLOW`<br>• `VALIDATION`<br>• `VISUALFORCE` |

# FormulaFunctionCategory

Represents the category to which a formula belongs when building a formula. This object is available in API version 47.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

| Field | Details |
|---|---|
| `DurableId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Unique identifier for the field. Always retrieve this value before using it, as the value isn't guaranteed to stay the same from one release to the next. To simplify queries, use this field. |
| `Label` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Label of the FormulaFunctionCategory that appears in the user interface. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of the FormulaFunctionCategory. |

## Usage

Query FormulaFunctionCategory to search for categories of available formula functions, such as `Math`, `Logical`, `Date and Time`, and others.

# FrcstCustmCatgRampRateSrc

Represents the total contract value used for custom bulk adjustments.  This object is available in API version 63.0 and later.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

# Fields

| Field | Details |
|---|---|
| `BaseValueFrcstSrcDefinitionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The DMO that contains the field in which the total contract value exists. This field is a relationship field.<br>**Relationship Name**<br>BaseValueFrcstSrcDefinition<br>**Refers To**<br>ForecastingSourceDefinition |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. The name:<br>• must be 40 characters or fewer<br>• must begin with a letter<br>• can contain only underscores and alphanumeric characters<br>• can't include spaces<br>• can't end with an underscore<br>• can't contain 2 consecutive underscores<br>In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. |
| `ForecastingCustomCategoryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the forecasting custom category.<br>This field is a relationship field.<br>**Relationship Name**<br>ForecastingCustomCategory |

| Field | Details |
|---|---|
| | **Refers To**<br>ForecastingCustomCategory |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The combined language and locale ISO code, which controls the language of the FrcstCustmCatgRampRateSrc. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Label for this FrcstCustmCatgRampRateSrc value. This display value is the internal label that doesn't get translated. |

# FrcstCustmzAdjustment

Represents an individual forecast manager's adjustment of a subordinate's consumption forecast. Available in API version 63.0 and later. This object is different from the ForecastingAdjustment object, which represents managers' adjustments of subordinates' pipeline forecasts.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `AdjustedAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The revenue amount of an individual forecast item, after an adjustment. |

| Field | Details |
| --- | --- |
| AdjustedQuantity | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The quantity amount of an individual forecast item, after an adjustment. |
| AdjustmentNote | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A text note providing information about the adjustment. The maximum length is 255 characters.<br>This field doesn't appear in reports. |
| ForecastingCustomCategoryId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the forecasting custom category.<br>This field is a relationship field.<br>**Relationship Name**<br>ForecastingCustomCategory<br>**Refers To**<br>ForecastingCustomCategory |
| ForecastingTypeId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related forecasting type.<br>This field is a relationship field.<br>**Relationship Name**<br>ForecastingType<br>**Refers To**<br>ForecastingType |

| Field | Details |
| --- | --- |
| `IsAmount` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `true`, then the adjustment is made in a revenue amount. If `false`, IsQuantity must be set to `true`.<br>The default value is `false`. |
| `IsQuantity` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `true`, the adjustment is made in a quantity amount. If `false`, IsAmount must be set to `true`.<br>The default value is `false`. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the forecast owner.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |
| `PeriodId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Period ID for the adjustment.<br>This field is a relationship field.<br>**Relationship Name**<br>Period<br>**Refers To**<br>Period |

| Field | Details |
| --- | --- |
| `Territory2Id` | **Type**<br>reference<br>**Properties**<br>Reserved for future use.<br>**Description**<br>Reserved for future use. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**FrcstCustmzAdjustmentChangeEvent on page 68**
Change events are available for the object.

**FrcstCustmzAdjustmentFeed on page 55**
Feed tracking is available for the object.

**FrcstCustmzAdjustmentHistory on page 63**
History is available for tracked fields of the object.

**FrcstCustmzAdjustmentOwnerSharingRule on page 65**
Sharing rules are available for the object.

**FrcstCustmzAdjustmentShare on page 67**
Sharing is available for the object.

# FrcstCustmzOwnerAdjustment

Represents an individual forecast user's adjustment of their own consumption forecast. Available in API version 63.0 and later. This object is different from the ForecastingOwnerAdjustment object, which represents users' adjustments of their pipeline forecasts.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `AdjustedAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The revenue amount of an individual forecast item, after an adjustment. |
| `AdjustedQuantity` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The quantity amount of an individual forecast item, after an adjustment. |
| `AdjustmentNote` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A text note providing information about the adjustment. The maximum length is 255 characters.<br>This field doesn't appear in reports. |
| `CustomDimension` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the additional dimension of the forecasting adjustment. For example, account ID, use case ID.<br>Any data imported from an external source must be exactly 15 characters. |
| `ForecastingCustomCategoryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the forecasting custom category.<br>This field is a relationship field.<br>**Relationship Name**<br>ForecastingCustomCategory<br>**Refers To**<br>ForecastingCustomCategory |

| Field | Details |
| --- | --- |
| `ForecastingTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related forecasting type.<br>This field is a relationship field.<br>**Relationship Name**<br>ForecastingType<br>**Refers To**<br>ForecastingType |
| `IsAmount` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `true`, then the adjustment is made in a revenue amount. If `false`, IsQuantity must be set to `true`.<br>The default value is `false`. |
| `IsQuantity` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `true`, the adjustment is made in a quantity amount. If `false`, IsAmount must be set to `true`.<br>The default value is `false`. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the forecast owner.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |

| Field | Details |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**FrcstCustmzOwnerAdjustmentChangeEvent on page 68**
Change events are available for the object.

**FrcstCustmzOwnerAdjustmentFeed on page 55**
Feed tracking is available for the object.

**FrcstCustmzOwnerAdjustmentHistory on page 63**
History is available for tracked fields of the object.

**FrcstCustmzOwnerAdjustmentOwnerSharingRule on page 65**
Sharing rules are available for the object.

**FrcstCustmzOwnerAdjustmentShare on page 67**
Sharing is available for the object.

# FulfillmentOrder

Represents a group of products, fees, and delivery charges on a single order that share the same fulfillment location, delivery method, and recipient. The FulfillmentOrderLineItems belonging to a FulfillmentOrder are associated with OrderItemSummary objects belonging to a single OrderSummary. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs.

## Fields

| Field | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Account or Person Account associated with the FulfillmentOrder. It represents the shopper in the storefront.<br>This field is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `ActiveDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Date when the FulfillmentOrder becomes active.<br>This field is available in API version 61.0 and later. |
| `BillToContactId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Contact associated with the FulfillmentOrder. It represents the shopper in the storefront when not using person accounts. |

| Field | Details |
| --- | --- |
| | This field is available in API version 49.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>BillToContact<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `ClosedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Date the FulfillmentOrder closed. Automatically entered.<br>This field is available in API version 61.0 and later. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for orgs with the multicurrency feature enabled. ISO code for the currency of the OrderSummary associated with the FulfillmentOrder.<br>Possible values are:<br>• `DKK`—Danish Krone<br>• `EUR`—Euro<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar<br>The default value is `USD`.<br>This field is available in API version 49.0 and later. |
| `DeliveryDate` | **Type**<br>datetime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time when the FulfillmentOrder was delivered.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| DeliveryMethodId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the DeliveryMethod used for this FulfillmentOrder.<br>This field is a relationship field.<br>**Relationship Name**<br>DeliveryMethod<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderDeliveryMethod |
| FulfilledFromLocationId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the Location handling this FulfillmentOrder.<br>This field is a relationship field.<br>**Relationship Name**<br>FulfilledFromLocation<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Location |
| FulfilledToAddress | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>Address of the recipient. |
| FulfilledToCity | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Recipient address city. |

| Field | Details |
| --- | --- |
| `FulfilledToCountry` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Recipient address country. |
| `FulfilledToEmailAddress` | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Email address of the recipient. |
| `FulfilledTo GeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Accuracy of the geocode for the recipient address.<br>Possible values are:<br>• `Address`<br>• `Block`<br>• `City`<br>• `County`<br>• `ExtendedZip`<br>• `NearAddress`<br>• `Neighborhood`<br>• `State`<br>• `Street`<br>• `Unknown`<br>• `Zip` |
| `FulfilledToLatitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with FulfilledToLongitude to specify the precise geolocation of the recipient address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. |

| Field | Details |
| --- | --- |
| FulfilledToLongitude | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with FulfilledToLatitude to specify the precise geolocation of the recipient address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. |
| FulfilledToName | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Name on the recipient address. |
| FulfilledToPhone | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Phone number of the recipient. |
| FulfilledToPostalCode | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Recipient address postal code. |
| FulfilledToState | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Recipient address state. |
| FulfilledToStreet | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Recipient address street. |
| `FulfillmentOrderNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>ID of the FulfillmentOrder. |
| `GrandTotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total, including adjustments and tax, of the products, fees, and delivery charges on the FulfillmentOrder. This amount includes all FulfillmentOrderLineItems associated with the FulfillmentOrder. This amount is equal to TotalAmount + TotalTaxAmount. |
| `InvoiceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the Invoice associated with the FulfillmentOrder.<br>This field is a relationship field.<br>**Relationship Name**<br>Invoice<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Invoice |
| `IsReship` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the FulfillmentOrder is for a reshipment. The default value is false.<br>This field is available in API version 53.0 and later. |

| Field | Details |
| --- | --- |
| IsSuspended | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the FulfillmentOrder is suspended. The default value is false. |
| ItemCount | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Sum of the quantities of the FulfillmentOrderLineItems included in the FulfillmentOrder. |
| LastReferencedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp for when the current user last viewed a record related to this record. |
| LastViewedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed. |
| OrderId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the original Order that generated the FulfillmentOrder.<br>This field is a relationship field.<br>**Relationship Name**<br>Order<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Order |
| `OrderSummaryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the OrderSummary associated with the FulfillmentOrder.<br>This field is a relationship field.<br>**Relationship Name**<br>OrderSummary<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderSummary |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the User who currently owns this FulfillmentOrder. Default value is the User logged in to the API to perform the create.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `ProcessingTimeInMinutes` | **Type**<br>long<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>How many minutes it took to process the FulfillmentOrder, from the start of processing to completion. |

| Field | Details |
| --- | --- |
| `StartFulfillmentDate` | **Type**<br>datetime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time when the fulfillment process was started for the FulfillmentOrder. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Status of the FulfillmentOrder. Each status corresponds to one status category, shown here in parentheses. You can customize the status picklist to represent your business processes, but the status category picklist is fixed because processing is based on those values. If you customize the status picklist, include at least one status value for each status category.<br>Default values are:<br>• `Allocated` (Activated)<br>• `Assigned` (Fulfilling)<br>• `Cancelled` (Cancelled)<br>• `Draft` (Draft)<br>• `Fulfilled` (Closed)<br>• `Pick Complete` (Fulfilling) This value is available in API v56.0 and later.<br>• `Pickpack` (Fulfilling)<br>• `Printed` (Fulfilling) This value is available in API v56.0 and later.<br>• `Rejected` (Rejected) This value is available in API v56.0 and later. |
| `StatusCategory` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Status category of the FulfillmentOrder. Processing of the FulfillmentOrder depends on this value. Each status category corresponds to one or more statuses.<br>Possible values are:<br>• `ACTIVATED`—Activated<br>• `CANCELLED`—Cancelled<br>• `CLOSED`—Closed<br>• `DRAFT`—Draft<br>• `FULFILLING`—Fulfilling |

| Field | Details |
| --- | --- |
| | • `REJECTED`—Rejected This value is available in API v56.0 and later. |
| `TaxLocaleType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The system used to handle tax on the original Order associated with the FulfillmentOrder. Gross usually applies to taxes like value-added tax (VAT), and Net usually applies to taxes like sales tax.<br>Possible values are:<br>• `Gross` (displays most prices and taxes as combined values)<br>• `Net` (displays most prices and taxes as separate values)<br>This field is available in API version 49.0 and later. |
| `TotalAdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount of the price adjustments applied to the products on the FulfillmentOrder. This value only includes adjustments to FulfillmentOrderLineItems of type code Product, not adjustments to delivery charges or fees. |
| `TotalAdjustment AmtWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount of the price adjustments applied to the products on the Fulfillment Order, inclusive of tax. This value only includes adjustments to FulfillmentOrderLineItems of type code Product. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount.<br>This field is available in API version 49.0 and later. |
| `TotalAdjustmentTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalAdjustmentAmount. |

| Field | Details |
| --- | --- |
| `TotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Adjusted total, not including tax, of the FulfillmentOrderLineItems, including products, fees, and delivery charges, on the Fulfillment Order. |
| `TotalDelivery AdjustAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount of the price adjustments applied to the delivery charges on the Fulfillment Order. This value only includes adjustments to FulfillmentOrderLineItems of type Delivery Charge. |
| `TotalDeliveryAdjust AmtWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount of the price adjustments applied to the delivery charges on the Fulfillment Order, inclusive of tax. This value only includes adjustments to FulfillmentOrderLineItems of type Delivery Charge. This amount is equal to TotalDeliveryAdjustAmount + TotalDeliveryAdjustTaxAmount.<br>This field is available in API version 49.0 and later. |
| `TotalDelivery AdjustTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalDeliveryAdjustAmount. |
| `TotalDeliveryAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total of the delivery charges on the FulfillmentOrder. This value only includes FulfillmentOrderLineItems of type Delivery Charge. |

| Field | Details |
| --- | --- |
| `TotalDeliveryAmtWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount of the delivery charges on the FulfillmentOrder, inclusive of tax. This value only includes FulfillmentOrderLineItems of type Delivery Charge. This amount is equal to TotalDeliveryAmount + TotalDeliveryTaxAmount.<br>This field is available in API version 49.0 and later. |
| `TotalDeliveryTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalDeliveryAmount. |
| `TotalFeeAdjustAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount of the price adjustments applied to the fees on the FulfillmentOrder. This value only includes adjustments to FulfillmentOrderLineItems of type Fee.<br>This field is available in API version 56.0 and later. |
| `TotalFeeAdjustAmtWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount of the price adjustments applied to the fees on the FulfillmentOrder, inclusive of tax. This value only includes adjustments to FulfillmentOrderLineItems of type Fee. This amount is equal to TotalFeeAdjustAmount + TotalFeeAdjustTaxAmount.<br>This field is available in API version 56.0 and later. |
| `TotalFeeAdjustTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Tax on the TotalFeeAdjustAmount.<br>This field is available in API version 56.0 and later. |
| `TotalFeeAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount of the fees on the FulfillmentOrder, excluding adjustments and tax. This value only includes FulfillmentOrderLineItems of type Fee.<br>This field is available in API version 56.0 and later. |
| `TotalFeeAmtWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total price of the fees on the FulfillmentOrder, inclusive of tax. This value only includes FulfillmentOrderLineItems of type Fee. This amount is equal to TotalFeeAmount + TotalFeeTaxAmount.<br>This field is available in API version 56.0 and later. |
| `TotalFeeTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalFeeAmount.<br>This field is available in API version 56.0 and later. |
| `TotalProductAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total price of the products on the FulfillmentOrder, excluding order adjustments, delivery charges, and fees. This value only includes FulfillmentOrderLineItems of type code Product. |
| `TotalProductAmtWithTax` | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total price of the products on the FulfillmentOrder, inclusive of tax. This value only includes FulfillmentOrderLineItems of type code Product. This amount is equal to TotalProductAmount + TotalProductTaxAmount.<br>This field is available in API version 49.0 and later. |
| `TotalProductTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalProductAmount. |
| `TotalTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalAmount. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Type of the FulfillmentOrder. Each type corresponds to one type category, shown here in parentheses. You can customize the type picklist to represent your business processes, but the type category picklist is fixed because processing is based on those values. If you customize the type picklist, include at least one type value for each type category.<br>Default values are:<br>• `Download` (Digital)<br>• `Email` (Digital)<br>• `In Store Pickup` (Physical)<br>• `Retail Store` (Physical)<br>• `Supplier` (Drop Ship)<br>• `Warehouse` (Physical) |
| `TypeCategory` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Type category of the FulfillmentOrder. Processing of the FulfillmentOrder depends on this value. Each type category corresponds to one or more types.<br>Possible values are:<br>• `DIGITAL`—Digital<br>• `DROPSHIP`—Drop Ship<br>• `PHYSICAL`—Physical |

# FulfillmentOrderItemTax

Represents the tax on a FulfillmentOrderLineItem or FulfillmentOrderItemAdjustment. Corresponds to an OrderItemTaxLineItemSummary. This object is available in API version 48.0 and later.

This object is used for calculations and doesn't have a default record page.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs.

# Fields

| Field | Details |
|---|---|
| `Amount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort<br>**Description**<br>Amount of tax represented by the FulfillmentOrderItemTax. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>ISO code for the currency of the FulfillmentOrderLineItem to which the tax applies. The default value is USD.<br>Possible values are:<br>• `DKK`—Danish Krone<br>• `EUR`—Euro<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar<br>This field is available in API version 49.0 and later. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Description of the FulfillmentOrderItemTax. |
| `FulfillmentOrderId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the associated FulfillmentOrder. |
| `FulfillmentOrder ItemAdjustId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>If this object represents tax on an adjustment, this value is the ID of the FulfillmentOrderItemAdjustment to which the tax applies. If this value is null, the adjustment applies to a FulfillmentOrderLineItem. |
| `FulfillmentOrderItemTaxNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>ID of the FulfillmentOrderItemTax. |
| `FulfillmentOrderLineItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>If this object represents tax on a FulfillmentOrderLineItem, this value is the ID of that FulfillmentOrderLineItem. If this object represents tax on an adjustment, this value is the ID of the FulfillmentOrderLineItem to which the adjustment applies. |
| `OrderItemTaxLineItemSummaryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the OrderItemTaxLineItemSummary associated with the OrderItemSummary that corresponds to the FulfillmentOrderLineItem to which the tax applies. |
| `Rate` | **Type**<br>percent<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Tax rate used to calculate the Amount. |
| `TaxEffectiveDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Date on which the Amount was calculated. Important due to tax rate changes over time. |

| Field | Details |
| --- | --- |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Indicates whether the Amount is actual or estimated.<br>Possible values are:<br>• `Actual`<br>• `Estimated` |

**FulFillmentOrderItemTaxChangeEvent (API version 62.0)**
Change events are available for the object.

ISO code for the currency of the FulfillmentOrder associated with the FulfillmentOrderLineItem.<br>Possible values are:<br>• `DKK`—Danish Krone<br>• `EUR`—Euro<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar<br>The default value is `USD`.<br>This field is available in API version 49.0 and later. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the FulfillmentOrderLineItem. |
| `EndDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>End date of the FulfillmentOrderLineItem. |
| `FulfillmentOrderId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the FulfillmentOrder associated with the FulfillmentOrderLineItem.<br>This field is a relationship field.<br>**Relationship Name**<br>FulfillmentOrder<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FulfillmentOrder |

| Field | Details |
| --- | --- |
| `FulfillmentOrder LineItemNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>ID of the FulfillmentOrderLineItem. |
| `GrossUnitPrice` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>Unit price, including tax, of the FulfillmentOrderLineItem. This value is equal to TotalPrice + TotalTaxAmount.<br>This field is available in API version 49.0 and later. |
| `IsReship` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the FulfillmentOrderLineItem belongs to a reshipment. The default value is false.<br>This field is available in API version 53.0 and later. |
| `MainFulfillmentOrderLineItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the original FulfillmentOrderLineItem.<br>This field is a relationship field.<br>This field is available in API version 63.0 and later.<br>**Relationship Name**<br>FulfillmentOrderLineItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FulfillmentOrderLineItem |

| Field | Details |
| --- | --- |
| `OrderItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the original OrderItem for the OrderItemSummary associated with the FulfillmentOrderLineItem.<br>This field is a relationship field.<br>**Relationship Name**<br>OrderItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderItem |
| `OrderItemSummaryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the OrderItemSummary associated with the FulfillmentOrderLineItem.<br>This field is a relationship field.<br>**Relationship Name**<br>OrderItemSummary<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderItemSummary |
| `OriginalQuantity` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort<br>**Description**<br>Original quantity of the FulfillmentOrderLineItem. |
| `Product2Id` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the product represented by the FulfillmentOrderLineItem.<br>This field is a relationship field.<br>**Relationship Name**<br>Product2<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Product2 |
| `Quantity` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Current quantity of the FulfillmentOrderLineItem. Equal to the original quantity minus any canceled quantity. |
| `QuantityUnitOfMeasure` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Unit of measure of the quantity, for example: unit, gallon, ton, or case. |
| `RejectedQuantity` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used by the Distributed Order Management package and Store Fulfillment app to store the quantity that has been rejected by a fulfillment location.<br>This field is available in API version 57.0 and later. |
| `RejectReason` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If the FulfillmentOrderLineItem was rejected by a fulfillment location, the reason for the rejection. |

| Field | Details |
| --- | --- |
| | Default values are:<br>• `Damaged`<br>• `Just Sold`<br>• `Other`<br>• `Out of Packing Supplies`<br>• `Out of Stock`<br>This field is available in API version 56.0 and later. |
| `ReshipReason` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If the FulfillmentOrderLineItem belongs to a reshipment, the reason for the reshipment.<br>Default values are:<br>• `Damaged`<br>• `Lost`<br>• `Unknown`<br>• `Wrong Item`<br>This field is available in API version 53.0 and later. |
| `ServiceDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>Service or start date of the FulfillmentOrderLineItem. |
| `TotalAdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total of any price adjustments applied to the FulfillmentOrderLineItem. |
| `TotalAdjustment AmountWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Total amount of the price adjustments applied to the FulfillmentOrderLineItem, inclusive of tax. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount.<br>This field is available in API version 49.0 and later. |
| `TotalAdjustmentTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalAdjustmentAmount. |
| `TotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total, including adjustments and tax, of the FulfillmentOrderLineItem. |
| `TotalLineAmount` | **Type**<br>currency<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort<br>**Description**<br>Total, not including adjustments or tax, of the FulfillmentOrderLineItem. |
| `TotalLineAmountWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total price of the FulfillmentOrderLineItem, inclusive of tax. This amount is equal to TotalLineAmount + TotalLineTaxAmount.<br>This field is available in API version 49.0 and later. |
| `TotalLineTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalLineAmount. |

| Field | Details |
| --- | --- |
| `TotalPrice` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total, including adjustments but not tax, of the FulfillmentOrderLineItem. Equal to UnitPrice times Quantity. |
| `TotalTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalPrice. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Type of the FulfillmentOrderLineItem. Matches the type of the associated OrderItemSummary. Delivery Charge indicates that the FulfillmentOrderLineItem represents a delivery charge. Fee indicates that it represents another type of fee, such as a return fee. Order Product indicates that it represents any other type of product, service, or charge. Each type corresponds to one type code, shown here in parentheses.<br>Possible values are:<br>• `Delivery Charge` (Charge)<br>• `Fee` (Charge) This value is available in API v56.0 and later.<br>• `Order Product` (Product) |
| `TypeCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Type code of the FulfillmentOrderLineItem. Matches the type code of the associated OrderItemSummary. Processing depends on this value. Charge indicates that the FulfillmentOrderLineItem represents a charge or fee. Product indicates that it represents any other type of product, service, or charge. A type code can be associated with one or more types.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `Charge`<br>• `Product` |
| `UnitPrice` | **Type**<br>currency<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort<br>**Description**<br>Unit price of the FulfillmentOrderLineItem. |

**FulFillmentOrderChangeEvent**
Change events are available for the object.

# FunctionConnection

Represents a connection between an org and Salesforce Functions. This object is available in API version 52.0 and later.

In API version 53.0, the name of this object was changed from SfFunctionsConnection to FunctionConnection.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `Error` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The error string, if any, for the connection between the org and Salesforce Functions. |

| Field | Details |
| --- | --- |
| `FunctionsAccountLoginOrg` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The Salesforce Functions account login org. |
| `FunctionsAccountName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The Salesforce Functions account name. |
| `FunctionsAccountUuid` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>The unique Salesforce Functions account UUID. This is a generated ID that is not in Salesforce object ID format. |
| `Sequence` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, Sort<br>**Description**<br>Sequence number for the record. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The status of the connection between the org and Salesforce Functions.<br>Possible values are:<br>• `Attempted`<br>• `None`<br>• `TrustedBiDirection`<br>• `TrustedUniDirection` |

| Field | Details |
| --- | --- |
| | The default value is 'None'. `TrustedBiDirection` indicates the connection is fully established. |

## Usage

FunctionConnection is not intended for direct use and should be treated as a read-only object that represents the current connection information between your org and Salesforce Functions. To create and manage connections between your org and Salesforce Functions use the steps and commands described in the Salesforce Functions developer documentation.

FunctionConnection is not supported in Trialforce templates or org snapshots.

# FunctionInvocationRequest

Represents invocation information for a Salesforce Function. This object is available in API version 51.0 and later.

When a Salesforce Function is invoked using the Apex `functions.Function` invoke methods, a FunctionInvocationRequest record is created that contains information on the status and results of the invocation.

## Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `undelete()`, `update()`

## Fields

| Field | Details |
| --- | --- |
| `CallbackStatus` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The status of the callback for asynchronous invocations. This field is new in API version 52.0.<br>Possible values are:<br>• `Completed` - Not used for the Salesforce Functions beta.<br>• `Enqueued` - The Function has completed (either successfully or unsuccessfully), and the callback has been enqueued for asynchronous execution in the Salesforce org.<br>• `Failed` - Not used for the Salesforce Functions beta.<br>• `PendingResponse` - The Function has not yet completed, so the callback has not been called yet.<br>The default value is 'PendingResponse'. |

| Field | Details |
| --- | --- |
| `ExecutionTime` | **Type**<br>long<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The execution time of the Function in milliseconds. |
| `ExtendedResponse` | **Type**<br>textarea<br>**Properties**<br>Nillable, Update<br>**Description**<br>JSON object with additional information about the result of the Function execution. |
| `FunctionName` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Name of the Function that was invoked. This name is case-sensitive and uses the format "`project name-function name`" |
| `InvokingNamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Prefix of the namespace that invokes the function. A namespace can invoke the global function using an installed package via Apex. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. This object is available in API version 53.0 and later. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the `namespacePrefix__componentName` notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. |

| Field | Details |
| --- | --- |
| | In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>The owner of the FunctionInvocationRequest.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `ResponseBody` | **Type**<br>base64<br>**Properties**<br>Nillable, Update<br>**Description**<br>Response body of the invoked Function. |
| `ResponseContentType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Content type of the response body of the invoked Function. For example, the content type could be `application/json`, `text/csv`, or various other values depending on what the Function returned. |
| `ResponseLength` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Length of the response body. |
| `ResponseName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Name of response, not currently used. |
| `ResponseUncompressedLength` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Uncompressed length of the Function response, if the response content was compressed. |
| `StackTrace` | **Type**<br>textarea<br>**Properties**<br>Nillable, Update<br>**Description**<br>If there was an error invoking the function, this field contains the Function stack trace. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Status of the invoked Function. Functions that are invoked asynchronously can be in a queued `InProgress` state before they are invoked.<br>Possible values are:<br>• `Dispatched` - Not used for the Salesforce Functions beta.<br>• `Error` - The Function failed to execute due to either an error starting the Function, or an error while the Function was running.<br>• `FunctionInProgress` - The Function invocation has been sent to the Salesforce Functions compute environment, and is running.<br>• `InProgress` - The Function invocation request has been enqueued.<br>• `New` - The Function invocation request has been created, but not enqueued yet.<br>• `Success` - The Function has completed execution. For status on whether the callback has been called, see the CallbackStatus field. |

| Field | Details |
| --- | --- |
| | The default value is 'New'. |

## Usage

Treat FunctionInvocationRequest records as read-only records used to get information about a specific Function invocation. To invoke Functions, use the Apex `functions.Function` class invoke methods.

FunctionInvocationRequest is not supported in Trialforce templates or org snapshots.

# FunctionReference

Represents a deployed Salesforce Function associated with an org. This object is available in API version 52.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `Access` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The label for whether managed components can access across namespaces.<br>Possible values are:<br>• `Global`—The managed components can access across namespaces.<br>• `Public`—The managed components can access within the same namespace.<br>The default value is `Public`. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The description of the Function. |
| `FunctionName` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The developer name of the Function. This name is case sensitive and uses the format "`project name-function name`". This field is unique within your organization. |
| `ImageReference` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Stores details about an image associated with a function. This is internal only, used by packaging only, and should not be editable or set by the customer. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language code for the Function, such as "en_US". |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The master label for the Function. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. This object is available in API version 53.0 and later. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the `namespacePrefix__componentName` notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This |

| Field | Details |
| --- | --- |
| | field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |

## Usage

Treat FunctionReference records as read-only records used to get information about a specific Function associated with your org. To invoke Functions, use the Apex `functions.Function` class invoke methods. To deploy and associate Functions with your org, use Salesforce CLI commands associated with Functions, as described in the Salesforce Functions developer documentation.

FunctionReference is not supported in Trialforce templates or org snapshots.

# GenAIConversationSummary

Represents a generated summary of a voice or video call. This object is available in API version 60.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access this object, Einstein Conversation Insights and Einstein for Sales must be enabled in your org.

## Fields

| Field | Details |
| --- | --- |
| `ConversationRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The unique ID of the related voice or video call record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ConversationRecord<br>**Relationship Type**<br>Master-detail |

| Field | Details |
| --- | --- |
| | **Refers To**<br>VideoCall, VoiceCall (the master object) |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.<br>Possible values are:<br>• `MXN`—Mexican Peso<br>• `USD`—U.S. Dollar<br>The default value is `USD`. |
| `ErrorMessage` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>An error message when there is a problem with sharing the conversation summary. |
| `Source` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Whether the summary shown is content generated by Einstein or subsequently edited by a user.<br>Possible values are:<br>• `EINSTEIN_GPT`—Einstein<br>• `USER_EDITED`—User Edited |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The status of the summary.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `ERROR`—Error<br>• `GENERATING`—Generating<br>• `SUCCESS`—Success |
| `Summary` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The summary text content. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**GenAIConversationSummaryChangeEvent on page 68**
Change events are available for the object.

**GenAIConversationSummaryFeed on page 55**
Feed tracking is available for the object.

**GenAIConversationSummaryHistory on page 63**
History is available for tracked fields of the object.

**GenAIConversationSummaryOwnerSharingRule on page 65**
Sharing rules are available for the object.

**GenAIConversationSummaryShare on page 67**
Sharing is available for the object.

# GenAiFunctionDefinition

Represents an agent action. This object is available in API version 60.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, Agents must be enabled in your org.

# Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Update<br>**Description**<br>A description explaining the general purpose and domain of the action. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name for this object. |
| `InvocationTarget` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Target invocation used by invocation operations. |
| `InvocationTargetType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Invocable action types used by invocation operations.<br>Possible values are:<br>• `apex`<br>• `flow`<br>• `generatePromptResponse` |
| `IsConfirmationRequired` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether confirmation is required for this action.<br>The default value is `false`. |

| Field | Details |
| --- | --- |
| `IsLocal` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>This field is a calculated field and is set to `true` if this action is an edited version of a standard action.<br>The default value is `false`. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the GenAiFunctionDefinition. The value for this field is the language value of the org. |
| `LocalDeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The unique name for this action within a topic. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The master label for the generative AI action. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace of the GenAiFunctionDefinition. |
| `ParentId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the object that owns the action.<br>This field is a relationship field.<br>**Relationship Name**<br>Parent<br>**Refers To**<br>GenAiPlannerFunctionDef |
| `PlannerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The agent planner service for this action.<br>This field is a relationship field.<br>**Relationship Name**<br>Planner<br>**Refers To**<br>GenAiPlannerDefinition |
| `PluginId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The agent topic for this agent action.<br>This field is a relationship field.<br>**Relationship Name**<br>Plugin<br>**Refers To**<br>GenAiPluginDefinition |
| `Source` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The optional source standard or custom action from which this action's configuration, including description, input, and output, is copied. If there's no value, the action is used only within the parent topic. |

# GenAiPlannerDefinition

Represents an agent planner service that uses a large language model (LLM) and a reasoning strategy to decompose a given task into smaller subtasks, identify the most suitable actions for each subtask, and invoke them. This object is available in API version 60.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, Agents must be enabled in your org.

## Fields

| Field | Details |
| --- | --- |
| `Capabilities` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A set of tags associated with the agent planner service definition. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>A description explaining the general purpose and domain of the agent planner service definition. |
| `DeveloperName` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name for this object. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the GenAiPlannerDefinition. The value for this field is the language value of the org. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The master label of the agent planner service definition. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace of the GenAiPlannerDefinition. |
| `PlannerType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A particular approach to problem solving that is given as prompt instructions to a large language model (LLM).<br>Possible values are:<br>• `AiCopilot__ReAct`—Uses a reactive planning strategy to solve problems with the LLM. This strategy consists of prompting the LLM to generate the next step in response to an event and the current context. It differs from a sequential planner in that it doesn't plan more than one step ahead of time.<br>• `AiCopilot__SequentialPlannerIntentClassifier`—Uses an intent classifier prompt and a sequential planner prompt. With each text input, the planner asks the LLM to generate a step-by-step plan to finish the goal. It plans first, then executes. |

# GenAiPlannerFunctionDef

Represents a relationship between the agent planner service and agent actions. This object is available in API version 60.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, Agents must be enabled in your org.

## Fields

| Field | Details |
| --- | --- |
| `PlannerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>This field is a relationship field.<br>**Relationship Name**<br>Planner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>GenAiPlannerDefinition |
| `Plugin` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A set of actions that contextualize the agent planner service. |

# GenAiPluginDefinition

Represents an agent topic, which is a category of actions related to a particular job to be done by AI agents. This object is available in API version 62.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, Agents must be enabled in your org.

## Fields

| Field | Details |
| --- | --- |
| `CanEscalate` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this topic is eligible for escalation to a rep.<br>The default value is `false`. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Update<br>**Description**<br>The description of the topic. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Represents the API name of the topic. Can contain only underscores and alphanumeric characters and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. |
| `IsLocal` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>This field is a calculated field and is set to `true` if this topic is an edited version of a standard topic.<br>The default value is `false`. |

| Field | Details |
| --- | --- |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the topic. |
| `LocalDeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The unique name for this topic within an agent. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The master label for the topic. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of these values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `ParentId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the object that owns the topic.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Parent<br>**Refers To**<br>GenAiPlannerDefinition, GenAiPlannerFunctionDef |
| `PlannerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The agent planner service for this topic.<br>This field is a relationship field.<br>**Relationship Name**<br>Planner<br>**Refers To**<br>GenAiPlannerDefinition |
| `PluginType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Possible values are:<br>• `APICustomTopic`<br>• `Topic` |
| `Scope` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A specific job description for a topic. |
| `Source` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The optional source standard or custom topic from which this topic's configuration, including description, instructions, and utterances, is copied. If there's no value, the topic is used only within this agent version. |

# GeoCountry

Represents a country. This object is available in API version 56.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The GeoCountry object is available if B2B Commerce or D2C Commerce is enabled.

## Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of this record. |
| `IsoCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort<br>**Description**<br>Two-letter ISO code of the country as defined in the org's State-Country picklist. This field is unique within your organization |
| `LastReferencedDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed data in this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, it's possible the user accessed data in this record or list view but didn't view it directly. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort, Update<br>**Description**<br>The name of the country that corresponds with the ISO code. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The owner of the GeoCountry record. By default, the asset owner is the user who created the record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**GeoCountryOwnerSharingRule on page 65**
Sharing rules are available for the object.

**GeoCountryShare on page 67**
Sharing is available for the object.

SEE ALSO:

GeoState

TaxGeoConfig

# GeolocationBasedAction

Represents a geolocation-based action, which is an action that's triggered when a user enters, exits, or is within the area of the associated object. Available in API version 61.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service must be enabled.

## Fields

| Field | Details |
|---|---|
| `ActionData` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The details of the selected action type. |
| `ActionType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of action.<br>Possible values are:<br>• `PlatformAlert` |

| Field | Details |
| --- | --- |
| | • `QuickAction`<br>• `ViewRecord` |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The description of the action. |
| `InitialTimeInvoked` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Captures the first time the mobile worker invoked this action. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record. |
| `LastTimeInvoked` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Captures the last time the mobile worker invoked this action. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, and `LastReferenceDate` isn't null, the user accessed this record or list view indirectly. |
| `Name` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the action. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the owner of this object.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `Radius` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The distance in meters from the location of the associated object that triggers the action. |
| `ReferenceRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the record that the action is associated with.<br>This field is a relationship field.<br>**Relationship Name**<br>ReferenceRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ServiceAppointment |

| Field | Details |
| --- | --- |
| `TriggerType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The event that triggered this action.<br>Possible values are:<br>• `GeoFenceEnter`—Enter<br>• `GeoFenceExit`—Exit |

# GeoState

Represents a state. This object is available in API version 57.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The GeoState object is available if B2B Commerce or D2C Commerce is enabled.

## Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of this record. |
| `GeoCountryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the GeoCountry associated with this GeoState. |

| Field | Details |
| --- | --- |
| | This field is a relationship field.<br>**Relationship Name**<br>GeoCountry<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>GeoCountry |
| `IsoCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Two-letter ISO code of the state as defined in the org's State-Country picklist. This field is unique within your organization |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed data in this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, it's possible the user accessed data in this record or list view but didn't view it directly. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort, Update<br>**Description**<br>The name of the state that corresponds with the ISO code. |

GeoCountry

# GtwyProvPaymentMethodType

The gateway provider payment method type allows integrators and payment providers to choose an active payment to receive an order's payment data rather than allowing the Salesforce Order Management platform to select a default payment method. This object is available in API version 50.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `Comments` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Users can provide additional details about the gateway provider payment method type record. Supports a maximum of 1000 characters. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, Salesforce generates one for each record, which slows performance. |
| `GtwyProviderPaymentMethodType` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

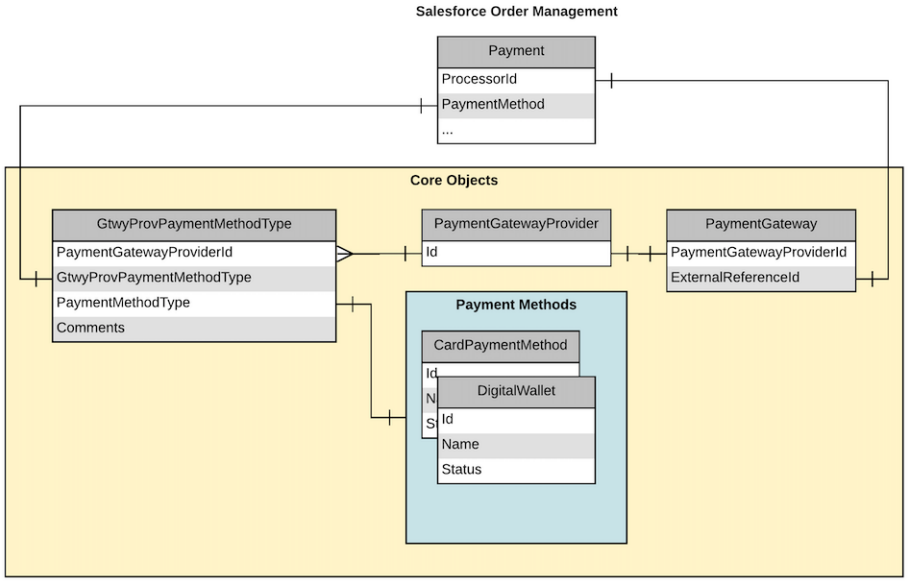
| Field | Details |
| --- | --- |
| | **Description**<br>Links the Salesforce payment method to the payment method used in the Salesforce Order Management storefront. Your payment gateway integration uses this field when finding a payment method to link to a payment.<br>The value of `GtwyProviderPaymentMethodType` must match the payment method value sent to the order's Payment Instrument in Salesforce Order Management.<br>Listed below are several examples of payment method values that Salesforce could receive from Salesforce Order Management.<br>• `CREDIT_CARD`<br>• `BASIC_CREDIT`<br>• `CreditCard`<br>• `GooglePay`<br>• `ApplePay` |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Language of the payment gateway integration. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view `(LastReferencedDate)` but not viewed it. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. The gateway provider payment method type name that appears in the user interface. |
| `NamespacePrefix` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Namespace of the payment gateway integration classes. |
| `PaymentGatewayProviderId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Specifies the payment gateway provider that Salesforce Order Management should use when processing payments. One payment gateway provider can be related to multiple payment method types.<br>This is a relationship field.<br>**Relationship Name**<br>PaymentGatewayProvider<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentGatewayProvider |
| `PaymentMethodType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies the type of payment method used on an order in Salesforce Order Management.<br>Possible values are:<br>• `AlternativePaymentMethod`<br>• `CardPaymentMethod`<br>• `DigitalWallet` |
| `RecordTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the record type entity related to the gateway provider payment method type.<br>This is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>RecordType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>RecordType |

## Usage

The Salesforce Order Management payment record must have a `ProcessorId` field with the same value as the payment gateway's `ExternalReferenceId` field. The gateway provider payment method type record must have a `PaymentMethodType` field that looks up to the payment method that you want to associate to your payment. Finally, the payment gateway and gateway provider payment method type must have matching `PaymentGatewayProviderId` fields. When you've established these relationships, the payment record can infer your payment method from the gateway provider payment method type record.



# Goal

The Goal object represents the components of a goal such as its name, description, and status.

Note: The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
| --- | --- |
| `CompletionDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The completion date of the goal. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The description of the goal. The maximum length is 65,535 characters. |
| `DueDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date the goal is due. |
| `ImageUrl` | **Type**<br>url<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The URL for the goal image. The image must be stored in Documents and set as externally available. Applicable only to Goal objects of `Type`: Goal. |
| `IsKeyCompanyGoal` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the goal is a key company goal. |

| Field Name | Details |
| --- | --- |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp that indicates when a user last viewed a record that is related to this goal. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp that indicates when a user last viewed this goal. If this value is null, this record might have been only referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The name of the goal. The maximum length is 255 characters. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the user who owns the goal. |
| `Progress` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The progress of the goal measured as a percentage. |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The start date of the goal. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The status of the goal.<br>Possible values:<br>• Draft<br>• Published<br>• Completed<br>• Canceled<br>• Not Completed |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**GoalFeed**
Feed tracking is available for the object.

**GoalHistory**
History is available for tracked fields of the object.

**GoalOwnerSharingRule**
Sharing rules are available for the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

**GoalShare**
Sharing is available for the object.

# GoalLink

Represents the relationship between two goals. This is a many-to-many relationship, meaning that each goal can link to many other goals.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, Sort<br>**Description**<br>The auto-generated name of the goal link. |
| `ParentGoalId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the parent goal. |
| `SubgoalId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the subgoal. |

# GoogleDoc

Represents a link to a Google Document. This object is available in API version 14.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available in **All** Editions except **Database.com** for Google Apps Premier Edition accounts. See the Salesforce online help for more information.

## Fields

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The name of the Google document. |
| `Owner` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Update<br>**Description**<br>The ID of the user who currently owns this Google Document. Default value is the user logged in to the API to perform the create. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter<br>**Description**<br>Required. ID of the attachment's parent object. The following objects are supported as parents of Google documents: Account, Asset, Campaign, Case, Contact, Contract, Custom Object Behavior, Lead, Opportunity, Product2, and Solution. |
| `Url` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The URL of the Google document. |

# Group

A set of User records.

Groups are sets of users. They can contain individual users, other groups, the users in a particular role or territory, or the users in a particular role or territory plus all the users below that role or territory in the hierarchy.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `search()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Authenticated internal and external users can access this object.

## Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The description of the group. This field is available in API version 62.0 and later. |
| `DefaultDivision` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>This record's default division. Only applicable if divisions are enabled. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. This name is unique by group type and corresponds to **Group Name** in the user interface.<br>This field is available in API version 24.0 and later.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.<br>Only your Salesforce org's internal users can access this field. |

| Field | Details |
| --- | --- |
| `DoesIncludeBosses` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether records shared with users in this group are also shared with users higher in the role hierarchy (`true`) or not (`false`). This field is only available for public groups. This field corresponds to the Grant Access Using Hierarchies checkbox in Setup. This field is available in API version 18.0 and later. |
| `DoesSendEmailToMembers` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the email is sent (`true`) or not sent (`false`) to the group members. The email is sent to queue members as well. |
| `Email` | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Email address for a group of type Case. Applies only for a case queue. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. Name of the group. Corresponds to **Label** on the user interface. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the user who owns the group.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Organization, User |
| `QueueRoutingConfigId` | **Type**<br>reference<br>**Properties**<br>Create, Delete, Query, Retrieve, Update<br>**Description**<br>The ID of the queue routing configuration associated with the queue. |
| `RelatedId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Represents the ID of the associated groups. For groups of type "Role," the ID of the associated UserRole. The `RelatedId` field is polymorphic.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Related<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User, UserRole |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Required. Type of the group. One of the following values:<br>• `AllCustomerPortal`—Public group that includes all Customer Portal or Customer Community Plus users. This type is only available when a Customer Portal or a Customer Site is enabled for your org.<br>• `ChannelProgramGroup`—Public group for partners in a channel program.<br>• `CollaborationGroup`—Chatter group.<br>• `Manager`—Public group that includes a user's direct and indirect managers. This group is read-only. |

| Field | Details |
| --- | --- |
| | • `ManagerAndSubordinatesInternal`—Public group that includes a user and the user's direct and indirect reports. This group is read-only.<br>• `Organization`—Public group that includes all the User records in the organization. This group is read-only.<br>• `Participant`—Compliant Data Sharing group that includes internal users who have the Use Compliant Data Sharing permission. A group can contain other participant groups only, or a group can contain both internal users with the Use Compliant Data Sharing permission and other participant groups. This value is only available when Compliant Data Sharing is enabled for your org.<br>• `PRMOrganization`—Public group that includes all the partners in an organization that has the partner site or portal feature enabled.<br>• `Queue`—Public group that includes all the User records that are members of a queue.<br>• `Regular`—Standard public group. When you `create()` a group, its type must be `Regular`, unless a partner site or portal is enabled for the organization, in which case the type can be `Regular` or `PRMOrganization`.<br>• `Role`—Public group that includes all the User records in a particular UserRole.<br>• `RoleAndSubordinates`—Public group that includes all the User records in a particular UserRole and all the User records in any subordinate UserRole. Only available when digital experiences is enabled for your org and Experience Cloud site users are created with external account roles other than a shared person account role.<br>• `RoleAndSubordinatesInternal`—Public group that includes all the User records in an internal UserRole, excluding customer and partner roles, and all the User records in any subordinate internal UserRole.<br>• `SharingRecordCollGroup`—Public group that has access to a SharingRecordCollection.<br>• `Territory`—Public group that includes all the User records in an organization that has the territory feature enabled.<br>• `TerritoryAndSubordinates`—Public group that includes all the User records in a particular UserRole and all the User records in any subordinateUserRole in an organization that has the territory feature enabled.<br>Only `Personal`, `Regular`, and `Queue` can be used when creating a group. The other values are reserved. |

## Usage

Unlike users, this object can be deleted.

Only public groups are accessible via the API. Personal groups are not available.

In API version 34.0 and later, you can query a group using `Related.Name` to retrieve the group's name. `Related.Name` is supported for public groups, user roles, territories, manager groups, and user names.

In API version 13.0 and later, if you delete a public group, it is deleted even if it has been used in sharing, consistent with the behavior for UserRole. In versions before 13.0, such sharing prevents the record from being deleted.

- GroupMember
- Overview of Salesforce Objects and Fields

# GroupMember

Represents a User or Group that is a member of a public group.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `GroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the Group.<br>This is a relationship field.<br>**Relationship Name**<br>Group<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the User or Group that is a direct member of the group.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>UserOrGroup |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

## Usage

If your group contains more than 10,000 members, for improved performance, you can adjust group membership using the GroupMember API object instead of the group's detail page in Setup. You can also adjust membership using the public group's access summary or user access policies in Setup.

A record exists for every User or Group who is a direct member of a public group whose `Type` field is set to Regular. User records that are indirect members of Regular public groups aren't listed as group members. A User can be an indirect member of a group if he or she is in a UserRole above the direct group member in the hierarchy, or if he or she is a member of a group that is included as a subgroup in that group.

If you attempt to create a record that matches an existing record, the system simply returns the existing record.

Overview of Salesforce Objects and Fields

# GroupMembershipEventLog

Group Membership events capture details about changes to public group and queue membership, such as when members are added to or removed from the public group or queue. This object is available in API version 64.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `ClientIp` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>IP address of the client employing salesforce.com services. |
| `CpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Amount of cpu cycles used by the request |
| `GroupIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the group whose membership changed. |
| `GroupType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of group being updated. |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. |
| `MemberIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the member added to or removed from the group. Public groups can contain individual users, other groups, or users in a specified role or territory. Queues can contain individual users, roles, public groups, territories, connections, or partner users. |

| Field | Details |
| --- | --- |
| `OperationType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of operation that occurred, such as a group member being added or removed from a group. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. |
| `RunTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of time that the request took in milliseconds. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The URI of the page that's receiving the request. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API. |

# GuestBuyerProfile

Represents a store's guest buyer profile, which allows unauthenticated buyers to browse the store. This object is available in API version 51.0 and later.

## Supported Calls

`describeLayout()`,`describeSObjects()`,`getDeleted()`,`getUpdated()`,`query()`,`retrieve()`,`search()`

## Fields

| Field | Details |
| --- | --- |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Currency displayed to the guest buyer when they're viewing the store.<br>Possible values are:<br>• `USD`—U.S. Dollar |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Detailed description of the profile. Includes information like which store the profile is used in. |

| Field | Details |
| --- | --- |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The last date and time when one or more of the fields were modified |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The last date and time when one or more of the fields were viewed |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the guest buyer profile. Including a reference to the store helps with later identification. |

# HashtagDefinition

HashtagDefinition represents hashtag (#) topics in public Chatter posts and comments. Public posts and comments include those on profiles and in public groups, but not those on records or in private groups. This object is available in API version 26.0 and later.

**Important:** Starting in Spring '16, API access to HashtagDefinition is disabled across all API versions. Any integrations relying on API queries to this object stop working. You can continue to use hashtags in posts and comments, and the hashtags continue to create corresponding topics. We recommend that you redirect all API queries and reports using the HashtagDefinition object to use the Topic object instead. For more information, see Retiring the Legacy HashtagDefinition Object—FAQs.

## Supported Calls

`delete(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()`

# Fields

| Field Name | Details |
| --- | --- |
| `HashtagCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of times a hashtag topic is used. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The string of characters following the hashtag (#) in a hashtag topic. |
| `NameNorm` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The string of characters following the hashtag (#) in a hashtag topic, normalized to remove capitalization and punctuation. |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Identifier of the community to which the HashtagDefinition belongs. This field is available only if digital experiences is enabled in your org. |

# Usage

Use this object to identify public hashtag topics and see how often they're used.

Topic

# HealthCareDiagnosis

Represents information related to industry-standard healthcare diagnosis codes. Before the Spring '21 release, the Healthcare Procedure and Healthcare Diagnosis objects stored codes specifically related to procedures and diagnoses. These codes were used for prior-authorization requests and approval processes. Since the Spring'21 release, Health Cloud uses the Code Set and Code Set Bundle objects for this purpose instead.

Example: The Code Set and Code Set Bundle objects improve on the old objects by adding support for terminology system information. This added support comes in the form of the Source System and Version fields.

Note: Objects, flows, and apps that previously used Healthcare Diagnosis and Healthcare Procedure have been or will be extended to support the use of Code Set and Code Set Bundle. Healthcare Diagnosis and Healthcare Procedure are to be gradually phased out with future releases.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
|---|---|
| `Category` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates the category for this diagnosis such as newborn, pediatric, maternity, or adult. |
| `Code` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Industry-standard diagnosis code. |
| `CodeDescription` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the diagnosis code. |

| Field Name | Details |
| --- | --- |
| `CodeType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Type of diagnosis code represented in the record such as ICD-9 or ICD-10. |
| `EffectiveDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Start date for the code. |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>End date for the code. |
| `Gender` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates whether this diagnosis is for males, females, or all genders. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the diagnosis code is available for use. |
| `IsComplicationOrComorbidity` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether this diagnosis is used to represent a complication or comorbidity. |
| `IsHospitalAcquiredCondition` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this diagnosis represents a condition acquired while in the hospital. |
| `IsMajorComplicationOrComorbidity` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this diagnosis is used to represent a major complication or comorbidity. |
| `IsPresentOnAdmissionExempt` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether diagnosis code is exempt from the diagnosis present on admission requirement. |
| `IsPrimaryDiagnosis` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether diagnosis code can be used as primary diagnosis only, or can be used in any diagnosis sequence. |
| `IsUnacceptablePrincipalDxIpAdmit` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether diagnosis code is an unacceptable principal diagnosis for inpatient admission per Medicare Code Edits. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the code that displays in search and lookup fields. Salesforce recommends using the code along with the description to populate this field. For example, use <Code>: <Description> or <Code>-<Description> such as (E08.37X9 - Diabetes mellitus due to underlying condition). |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who owns this record.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner |

| Field Name | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**HealthCareDiagnosisChangeEvent (API version 60.0)**
Change events are available for the object.

**HealthCareDiagnosisHistory**
History is available for tracked fields of the object.

**HealthCareDiagnosisOwnerSharingRule**
Sharing rules are available for the object.

**HealthCareDiagnosisShare**
Sharing is available for the object.

# HealthCareProcedure

Represents information related to industry-standard healthcare procedure codes. Before the Spring '21 release, the Healthcare Procedure and Healthcare Diagnosis objects stored codes specifically related to procedures and diagnoses. These codes were used for prior-authorization requests and approval processes. Since the Spring'21 release, Health Cloud uses the Code Set and Code Set Bundle objects for this purpose instead.

Example: The Code Set and Code Set Bundle objects improve on the old objects by adding support for terminology system information. This added support comes in the form of the Source System and Version fields.

Note: Objects, flows, and apps that previously used Healthcare Diagnosis and Healthcare Procedure have been or will be extended to support the use of Code Set and Code Set Bundle. Healthcare Diagnosis and Healthcare Procedure are to be gradually phased out with future releases.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
| --- | --- |
| `Category` | **Type**<br>picklist |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Category of the procedure code such as anesthesia, surgery, radiology, and so on. |
| `Code` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Industry standard procedure code such as CPT or HCPCS. |
| `CodeDescription` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the procedure code. |
| `CodeShortDescription` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Short description of the procedure code. |
| `CodeType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Type of procedure code represented in the record such as CPT or HCPCS. |
| `EffectiveDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Start date for the code. |

| Field Name | Details |
| --- | --- |
| EndDate | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>End date for the code. |
| IsActive | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the diagnosis code is available for use. |
| LastReferencedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| LastViewedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed. |
| Name | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the code that displays in search and lookup fields. Salesforce recommends using the code along with the description to populate this field. For example, use <Code>: <Description> or <Code>-<Description> such as 95115: Allergy injection. |

| Field Name | Details |
| --- | --- |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who owns this record.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**HealthCareProcedureChangeEvent (API version 60.0)**
Change events are available for the object.

**HealthCareProcedureHistory**
History is available for tracked fields of the object.

**HealthCareProcedureOwnerSharingRule**
Sharing rules are available for the object.

**HealthCareProcedureShare**
Sharing is available for the object.

# Holiday

Represents a period of time during which your customer support team is unavailable. Business hours and escalation rules associated with business hours are suspended during any holidays with which they are affiliated.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Customer Portal users can't access this object.

All users, even those without the "View Setup and Configuration" user permission, can view holidays via the API.

# Fields

| Field | Details |
| --- | --- |
| `ActivityDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If the Holiday `IsAllDay` flag is set to `true` (indicating that it is an all-day holiday), then the holiday due date information is contained in the `ActivityDate` field. This field is a date field with a timestamp that is always set to midnight in the Coordinated Universal Time (UTC) time zone. The timestamp is not relevant, and you should not attempt to alter it to account for any time zone differences. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Text description of the holiday. |
| `EndTimeInMinutes` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The end time of the holiday in minutes. |
| `IsAllDay` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the duration of the holiday is all day (`true`) or not (`false`). |
| `IsRecurrence` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the holiday is scheduled to repeat itself (`true`) or only occurs once (`false`). This is a read only field on update, but not on create. If this field value is `true`, then any recurrence fields associated with the given recurrence type must be populated. |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the holiday. |
| `NextOccurrenceDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable<br>**Description**<br>The next date of the holiday. Applies to recurring holidays only. Available in API version 58.0 and later. To access this field, you must have Field Service enabled and the Field Service Standard permission.<br>This field isn't sortable. To compare this date to other dates, you must parse the string into a date value to compare it to other dates. |
| `RecurrenceDayOfMonth` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The day of the month on which the holiday repeats. |
| `RecurrenceDayOfWeekMask` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The day or days of the week on which the holiday repeats. This field contains a bitmask. For each day of the week, the values are as follows:<br>• Sunday = `1`<br>• Monday = `2`<br>• Tuesday = `4`<br>• Wednesday = `8`<br>• Thursday = `16`<br>• Friday = `32`<br>• Saturday = `64` |

| Field | Details |
| --- | --- |
| | Multiple days are represented as the sum of their numerical values. For example, Tuesday and Thursday = 4 + 16 = 20. |
| `RecurrenceEndDateOnly` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The last date on which the holiday repeats. For multiday recurring events, this is the day on which the last occurrence starts. |
| `RecurrenceInstance` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The frequency of the recurring holiday. For example, `2nd` or `3rd`. |
| `RecurrenceInterval` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The interval between recurring holidays. |
| `RecurrenceMonthOfYear` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The month of the year on which the event repeats. |
| `RecurrenceStartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date when the recurring holiday begins. Must be a date and time before `RecurrenceEndDateOnly`. |
| `RecurrenceType` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates how often the holiday repeats. For example, daily, weekly, or every Nth month (where "Nth" is defined in `RecurrenceInstance`). |
| `StartTimeInMinutes` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The start time of the holiday in minutes. |

## Usage

Use this object to view and update holidays, which specify dates and times at which associated business hours and escalation rules are suspended.

# IconDefinition

Represents the icon-related metadata for a custom tab. This object is available in API version 43.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

| Field Name | Details |
| --- | --- |
| `ContentType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The tab icon's content type, for example, "image/png." |
| `DurableId` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A unique virtual Salesforce ID for the icon. |
| `Height` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The tab icon's height in pixels. If the icon content type is an SVG type, height and width values are not used. |
| `TabDefinitionId` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The `TabDefinition` ID.<br>This is a relationship field.<br>**Relationship Name**<br>TabDefinition<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>TabDefinition |
| `Theme` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The icon's theme. |
| `Url` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The fully qualified URL for this icon. |

| Field Name | Details |
| --- | --- |
| `Width` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The tab icon's width in pixels. If the icon content type is an SVG type, height and width values are not used. |

# Idea

Represents an idea on which users are allowed to comment and vote, for example, a suggestion for an enhancement to an existing product or process. This object is available in API version 12 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Note: For other standard objects, the `describeLayout()` call returns the `recordTypeMappings` section that contains the layout ID and picklist values for each record type. However, the `recordTypeMappings` section and the fields it includes are not available for the Idea object.

When performing a SOSL search on Idea objects, IdeaComment objects are also searched.

## Fields

| Field | Details |
| --- | --- |
| `AttachmentBody` | **Type**<br>base64<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>File data for the attachment. This field is available in API version 28.0 and later. |
| `AttachmentContentType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Type of the attachment. This field is available in API version 28.0 and later. |

| Field | Details |
| --- | --- |
| `AttachmentLength` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Size of the attachment in bytes. This field is available in API version 28.0 and later. |
| `AttachmentName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Name of the attachment. This field is available in API version 28.0 and later. |
| `Body` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Description of the Idea. |
| `Categories` | **Type**<br>multipicklist<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>Customizable multi-select picklist used to organize Ideas into logical groupings.<br>Note: This field is only available if your organization has the `Categories` field enabled. This field is enabled by default in organizations created after API version 14 was released. If the `Categories` field is enabled, API versions 13 and earlier do not have access to either the `Categories` or `Category` fields. |
| `Category` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>Customizable picklist of values used to organize Ideas into logical groupings.<br>Note: This field is not available if your organization has the multi-select `Categories` field enabled. |

| Field | Details |
| --- | --- |
| `CommunityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The zone ID associated with the idea. Once you create an idea, you can't change the zone ID associated with that idea.<br>Note: API version 12 does not support zone ID. If you create an idea in version 12, your idea is automatically posted to the oldest zone that you have permission to access.<br>This is a relationship field.<br>**Relationship Name**<br>Community<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Community |
| `CreatorFullPhotoUrl` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL of the user's profile photo. This field is available in API version 28.0 and later. |
| `CreatorName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of the user who posted the idea or commented on the idea.<br>This field is available in API version 28.0 and later. |
| `CreatorSmallPhotoUrl` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL of the user's thumbnail photo. This field is available in API version 28.0 and later. |

| Field | Details |
| --- | --- |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. |
| `IdeaThemeID` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Identifies the idea theme associated with the idea. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `IsHtml` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Read-only. If this value is `true`, your organization has the Ideas HTML editor enabled, and the Idea `Body` may contain HTML. If this value is `false`, the HTML editor is disabled and the Idea `Body` only contains regular text. |
| `IsMerged` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Read only. Indicates whether the idea has been merged with a parent idea (`true`) or not (`false`). You can't vote for or add comments to a merged idea.<br>Note: In API version 27, `IsMerged` replaces `IsLocked`. Existing formula fields that use `IsLocked` must be edited to use `IsMerged`. |

| Field | Details |
| --- | --- |
| `LastCommentDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time the last comment (child IdeaComment object) was added. |
| `LastCommentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Read only. The ID of the last comment (child IdeaComment object).<br>This is a relationship field.<br>**Relationship Name**<br>LastComment<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>IdeaComment |
| `LastReferencedDate` | **Type**<br>date<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>date<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed. |
| `NumComments` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of comments (child IdeaComment objects) that users have submitted for the given idea. |
| `ParentIdeaId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID associated with this idea's parent idea. When multiple ideas are merged together, one idea becomes the parent (master) of the other ideas. The `ParentIdeaId` is automatically set when you merge ideas.<br>This is a relationship field.<br>**Relationship Name**<br>ParentIdea<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Idea |
| `RecordTypeId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the record type assigned to this object.<br>This is a relationship field.<br>**Relationship Name**<br>RecordType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>RecordType |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Customizable picklist of values used to specify the status of an idea. |

| Field | Details |
| --- | --- |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The descriptive title of the idea. |
| `VoteScore` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The internal score of the Idea, used to sort Ideas on the Popular tab in the application user interface. The internal algorithm that determines the score gives older votes less weight than newer votes, simulating exponential decay. The score itself does not display in the application user interface.<br>Note: Unlike other fields of type double, you can't use a SOQL aggregate function with this field. |
| `VoteTotal` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>An Idea's total number of points. Each vote a user makes is worth ten points, therefore the value of this field is ten times the number of votes an idea has received.<br>Note: Unlike other fields of type double, you can't use a SOQL aggregate function with this field. |

Note: If you are importing Idea data and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself..

## Usage

Use this object to track ideas, which are written suggestions on which users can vote and comment.

SEE ALSO:

- IdeaComment
- Vote

# IdeaComment

Represents a comment that a user has submitted in response to an idea.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Note: When performing a SOSL search on IdeaComment objects, Idea objects are also searched.

## Fields

| Field | Field Type |
|---|---|
| `CommentBody` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Body of the submitted comment. |
| `CommunityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The zone ID associated with the idea. Once you create an idea, you can't change the zone ID associated with that idea.<br>Note: API version 12 does not support zone ID. If you create an idea in version 12, your idea is automatically posted to the oldest zone that you have permission to access. |
| `CreatorFullPhotoUrl` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL of the user's profile photo. This field is available in API version 28.0 and later. |
| `CreatorName` | **Type**<br>string |

| Field | Field Type |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of the user who posted the idea or commented on the idea. This field is available in API version 28.0 and later. |
| `CreatorSmallPhotoUrl` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL of the user's thumbnail photo. This field is available in API version 28.0 and later. |
| `IdeaId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the idea on which this comment was made.<br>This is a relationship field.<br>**Relationship Name**<br>Idea<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Idea |
| `IsHtml` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Read-only. If this value is `true`, your organization has the Ideas HTML editor enabled, and the `CommentBody` field may contain HTML. If this value is `false`, the HTML editor is disabled and the `CommentBody` field only contains regular text. |
| `UpVotes` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Field Type |
| --- | --- |
| | **Description**<br>Total number of up votes for the question. |

Note: If you import these records, and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself.

## Usage

Use this object to track comments on ideas, which are users' text responses to ideas.

SEE ALSO:

- Idea
- Vote

# IdeaReputation

Represents a collection of statistics and scores derived from a user's activity within an Ideas zone or internal organization. This object is available in API version 28.0 and later.

## Supported Calls

`query()`, `retrieve()`,

## Fields

| Field | Details |
| --- | --- |
| `CommentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of comments a user has created in a zone or the internal organization. This number excludes comments the user creates on his or her own idea. |
| `CommentsReceivedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of comments a user has received in a zone or the internal organization. |
| `ContextId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Namepointing, Nillable, Sort<br>**Description**<br>The ID of the zone or internal organization. |
| `DownVotesGivenCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of down votes a user has given in a zone or the internal organization. |
| `DownVotesReceivedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of down votes a user has received in a zone or the internal organization. |
| `IdeaCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of ideas a user has created in a zone or the internal organization. |
| `ReputationLevel` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The reputation level that a user has achieved based on their score in a zone or within an organization. |
| `Score` | **Type**<br>double |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total score of a user's activity within a zone or within an organization. |
| `UpVotesGivenCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of up votes a user has given in a zone or the internal organization. This number doesn't include the default vote the system applies when the user creates the idea. |
| `UpVotesReceivedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of up votes a user has received in a zone or the internal organization. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The user ID associated with the reputation. |

## Usage

Use to query a user's reputation within a zone.

# IdeaReputationLevel

Represents a reputation level within an Ideas zone or internal organization and is used by the system to calculate reputation. You can create up to 25 levels per zone or internal organization. This object is available in API version 28.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
| --- | --- |
| `ContextId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Namepointing, Sort, Update<br>**Description**<br>The ID of the zone or internal organization. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Name of the reputation level. The name must be unique within the zone or internal organization. Maximum size is 50 characters. |
| `Threshold` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Minimum number of points for this level. The threshold must be unique within the zone or internal organization and must be greater than or equal to zero. |

## Usage

Use to create or edit reputation levels for an Ideas zone or internal organization.

# IdeaTheme

Represents an invitation to zone members to submit ideas that are focused on a specific topic. This object is available in API version 26 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`,

# Fields

| Field Name | Details |
| --- | --- |
| `Categories` | **Type**<br>multipicklist<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>Customizable multi-select picklist used to organize ideas and idea themes into logical groupings. |
| `CommunityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort,<br>**Description**<br>The zone ID associated with the idea theme. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Description of the idea theme. |
| `EndDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Date marking the end of the idea theme. |
| `LastReferencedDate` | **Type**<br>date |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `StartDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Date that the idea theme begins. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Customizable picklist of values used to specify the status of the idea theme. |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Namefield, Sort, Update<br>**Description**<br>Title of the idea theme. |

## Usage

Use the object to track ideas that are submitted to an idea theme.

# IdpEventLog

Represents the Identity Provider Event Log. This log records both problems and successes with inbound SAML or OpenID Connect authentication requests from another app provider. It also records outbound SAML responses when Salesforce is acting as an identity provider. This object is available in API version 39.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

# Fields

| Field | Details |
|---|---|
| `AppId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the app provider seeking authentication. |
| `AuthSessionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the authentication session. |
| `ErrorCode` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The error code for the authentication issue.<br>Possible values are:<br>• `AppAccessDenied`—Error: App access denied<br>• `AppBlocked`—Error: App blocked<br>• `ClientUnapproved`—Error: Invalid grant<br>• `CodeExpired`—Error: Expired authorization code<br>• `ForceAuthNLogout`—User logged out due to forced authentication request<br>• `InternalError`—Error: Internal Error<br>• `InvalidAuthnRequest`—Error: Unable to parse AuthnRequest from service provider<br>• `InvalidClientCredentials`—Error: Invalid client credentials<br>• `InvalidCode`—Error: Invalid authorization code<br>• `InvalidDeviceId`—Error: Invalid device ID<br>• `InvalidIdpEndpoint`—Error: Invalid Identity Provider Endpoint URL<br>• `InvalidIssuer`—Error: Invalid Issuer<br>• `InvalidScope`—Error: Invalid scope(s)<br>• `InvalidSessionLevel`—Error: Invalid session level<br>• `InvalidSettings`—Error: IdP certificate is invalid or does not exist<br>• `InvalidSignature`—Error: Invalid Signature |

| Field | Details |
| --- | --- |
| | • `InvalidSp`—Error: Misconfigured or invalid service provider<br>• `InvalidSpokeSp`—Error: Invalid spoke SP settings<br>• `InvalidUserCredentials`—Error: Invalid user credentials<br>• `NoAccess`—Error: User does not have access to this service provider<br>• `NoCustomAttrValue`—Error: User does not have a value for the subject custom attribute<br>• `NoCustomField`—Error: Custom field not found<br>• `NoSpokeId`—Error: No Spoke ID found<br>• `NoSubdomain`—Error: No My Domain deployed in the org<br>• `NoUserFedId`—Error: User does not have a Federation Identifier selected<br>• `OauthError`—OAuth Error<br>• `Success`<br>• `UnableToResolve`—Error: Unable to resolve request into a Service Provider<br>• `UnknownError`—Unknown Error |
| `IdentityUsed` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The identity (username) of the user being authenticated. |
| `InitiatedBy` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The code describing how the authentication request was initiated.<br>Possible values are:<br>• `IdP`—IdP-Initiated SAML<br>• `OauthAuthorize`—OAuth Authorization<br>• `OauthTokenExchange`—OAuth Token Exchange<br>• `SP`—SP-Initiated SAML |
| `OptionsHasLogoutUrl` | **Type**<br>boolean<br>**Properties**<br>Filter |

| Field | Details |
| --- | --- |
| | **Description**<br>Whether a logout URL has been assigned to the app. This URL is where users are redirected when they log out. |
| `SamlEntityUrl` | **Type**<br>string<br>**Properties**<br>Filter, Sort<br>**Description**<br>The authentication URL of the SAML provider. |
| `SsoType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of SSO. Options are:<br>• 0–SAML<br>• 1–OpenID Connect |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time on which the event occurred. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user seeking authentication. |

# IframeWhiteListUrl

Represents a list of trusted external domains that you allow to frame your Embedded Service, Surveys, and Visualforce pages. This object is available in API version 45.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
| --- | --- |
| `Context` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of content in the iframe.<br>Valid values are:<br>• `Surveys`<br>• `VisualforcePages`<br>• `DisclosureAndComplianceHubConnector` |
| `Url` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The unique domain that is allowed to frame your Visualforce pages, surveys, or Disclosure and Compliance Hub Connector. Accepts these formats: example.com, *example.com, and https://example.com. |

## Usage

To use this object for framing Visualforce pages, on Session Settings in Setup, select **Enable clickjack protection for customer Visualforce pages** either **with headers disabled** or **with standard headers**. These options both allow framing of Visualforce pages on trusted external domains and provide clickjack protection.

Alternatively, you can customize session settings via the SecuritySettings Metadata API type. To use the IframeWhiteListUrl object, set either the `enableClickjackNonsetupUser` or `enableClickjackNonsetupUserHeaderless` field to `true`. For more information, see SecuritySettings in the Metadata API Developer Guide.

# Image

Represents the details of an image. This object is available in API version 47.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `AlternateText` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Accessibility text to explain the image in words. |
| `CapturedAngle` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Angle at which the image was captured. |
| `ContentDocumentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Unique identifier of the content document where image is stored.<br>This is a relationship field.<br>**Relationship Name**<br>ContentDocument<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentDocument |
| `ImageClass` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The image category. |

| Field | Details |
| --- | --- |
| | Possible values are:<br>• FOOD<br>• LOGOS<br>• OBJECTS<br>• SCENES |
| ImageClassObjectType | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of image. Used in Einstein Object Detection to identify whether the image is used to detect objects or build a model.<br>Possible values are:<br>• DETECTION—Actual Image<br>• FEEDBACK<br>• TRAINING |
| ImageViewType | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Orientation of the image. |
| IsActive | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if an image is active. The default value is False. An active image can be used for building or updating a model in Einstein Object Detection. |
| LastReferencedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date on which the image was last referenced. |

| Field | Details |
| --- | --- |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date on which the image was last viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort, Update<br>**Description**<br>Name of the record. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Unique identifier of the record owner.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Title of the image. |
| `Url` | **Type**<br>url<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Public URL of the image file. |

# Incident

An Incident is any unplanned business interruption that has wide-sweeping impacts and requires an urgent fix. This object contains the details of the incident, documenting the history of the incident from registration to closure. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `Category` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The type of incident. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A description of the incident. This field can store up to 32 KB of data, but only the first 255 characters appear in reports. |
| `DetectedDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time (in UTC) when the incident was first detected. |
| `EndDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time (in UTC) when the incident ended. |

| Field | Details |
| --- | --- |
| `Impact` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The incident's impact.<br>Possible values are:<br>• `High`<br>• `Low`<br>• `Medium`<br>The default value is 'High'. |
| `IncidentNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The unique, system-generated number for the incident. |
| `IsMajorIncident` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the incident is business-critical. If set to `true`, the incident is widespread and business-critical. The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time (in UTC) when the current user last accessed this record, a list view, or another related record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The date and time (in UTC) when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>A polymorphic relationship field that represents the user or group assigned to resolve the incident.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `ParentIncidentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The unique ID of an incident above one or more related incidents in an incident hierarchy.<br>This is a relationship field.<br>**Relationship Name**<br>ParentIncident<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Incident |
| `Priority` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The impact and urgency of the incident.<br>Possible values are:<br>• `Critical` |

| Field | Details |
| --- | --- |
| | • `High`<br>• `Low`<br>• `Moderate`<br>The default value is 'Critical'. |
| `PriorityOverrideReason` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The reason why a priority should be changed or edited. |
| `ReportedMethod` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates how the incident was reported to customer service. |
| `ResolutionDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time (in UTC) when the incident was resolved. |
| `ResolutionSummary` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A description of possible steps to resolve the incident. |
| `ResolvedById` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The unique ID of the user who resolved the incident.<br>This is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>ResolvedBy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `StartDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time (in UTC) when the incident began. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Any custom or granular stages a customer may want to track.<br>Possible values are:<br>• `Completed`<br>• `In Progress`<br>• `New`<br>• `Open`<br>• `Problem Created`<br>• `Resolved`<br>The default value is 'New'. |
| `StatusCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The incident's status.<br>Possible values are:<br>• `Completed`<br>• `InProgress`<br>• `New`<br>• `Open` |

| Field | Details |
| --- | --- |
| | • `ProblemCreated`<br>• `Resolved`<br>The default value is 'New'. |
| `SubCategory` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The type of incident. One level deeper than Category. Administrators set field values. |
| `Subject` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>A brief description of the incident. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The type of incident, for example, question or problem. Administrators set field values. |
| `Urgency` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>A measure of how long the resolution can be delayed until an incident, problem, or change has a significant business impact.<br>Possible values are:<br>• `High`<br>• `Low`<br>• `Medium`<br>The default value is 'High'. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**IncidentChangeEvent on page 68**
Change events are available for the object.

**IncidentFeed on page 55**
Feed tracking is available for the object.

**IncidentHistory on page 63**
History is available for tracked fields of the object.

**IncidentOwnerSharingRule on page 65**
Sharing rules are available for the object.

**IncidentShare on page 67**
Sharing is available for the object.

# IncidentRelatedItem

Represents a junction object that relates an Incident to an Asset or Product. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `AssetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The Asset ID that's linked to the Incident.<br>This field is a relationship field.<br>**Relationship Name**<br>Asset<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Asset |

| Field | Details |
| --- | --- |
| `Comment` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A description of the incident as it relates to the item. |
| `ImpactLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The related item's impact on the incident.<br>Possible values are:<br>• `High`<br>• `Low`<br>• `Medium`<br>The default value is `High`. |
| `ImpactType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The effect of the related item on business operations.<br>Possible values are:<br>• `Business-Blocking`<br>• `Not Business-Blocking`<br>• `Partially Business-Blocking`<br>The default value is `Business-Blocking`. |
| `IncidentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The Incident ID that's linked to the Asset.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Incident<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Incident |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The auto-generated ID of the incident-related item. |
| `Product2Id` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The product (Product2) ID that's linked to the Incident..<br>This field is a relationship field.<br>**Relationship Name**<br>Product2<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Product2 |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**IncidentRelatedItemChangeEvent on page 68**
Change events are available for the object.

**IncidentRelatedItemFeed on page 55**
Feed tracking is available for the object.

**IncidentRelatedItemHistory on page 63**
History is available for tracked fields of the object.

# Individual

Represents a customer's data privacy and protection preferences. Data privacy records based on the Individual object store your customers' preferences. Data privacy records are associated with related leads, contacts, person accounts, and users. This object is available in API version 42.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `merge()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

- This object is available if Data Protection and Privacy is enabled.

## Fields

| Field Name | Details |
|---|---|
| `BirthDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The customer's birthdate. |
| `CanStorePiiElsewhere` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indication that you can store the customer's personally identifiable information (PII) outside of their legislation area. For example, you could store an EU citizen's PII data in the US. |
| `ChildrenCount` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of children the customer has. |
| `ConsumerCreditScore` | **Type**<br>int |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The person's credit score (for example, 740). |
| `ConsumerCreditScoreProviderName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the company that provided the credit score. |
| `ConvictionsCount` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of convictions for the customer. |
| `DeathDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The customer’s death date. |
| `FirstName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The customer’s first name. Maximum size is 40 characters. |
| `HasOptedOutGeoTracking` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Preference to not track geolocation on mobile devices. |
| `HasOptedOutProcessing` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Preference to not process personal data, which can include collecting, storing, and sharing personal data. |
| `HasOptedOutProfiling` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Preference to not process data for predicting personal attributes, such as interests, behavior, and location. |
| `HasOptedOutSolicit` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Preference to not solicit products and services. |
| `HasOptedOutTracking` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Preference to not track customer web activity and whether the customer opens email sent through Salesforce. |
| `IndividualsAge` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates whether the customer is considered to be a minor. |
| `InfluencerRating` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>A measure of the person's influence, irrespective of how we do business with them. |
| `IsHomeOwner` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the customer owns a home. |
| `LastName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The customer's last name. Maximum size is 80 characters. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. |
| `MasterRecordId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If this object was deleted as the result of a merge, this field contains the ID of the record that was kept. If this object was deleted for any other reason, or hasn't been deleted, the value is `null`.<br>This is a relationship field.<br>**Relationship Name**<br>MasterRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Individual |

| Field Name | Details |
| --- | --- |
| `MilitaryService` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates whether the customer has served in the military. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Concatenation of `FirstName` and `LastName`. Maximum size is 203 characters, including whitespaces. |
| `Occupation` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The customer's occupation. Maximum size is 150 characters. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner of the account associated with this customer.<br>This is a relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `Salutation` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The title for addressing the customer, such as Dr. or Mrs. |
| `SendIndividualData` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Preference to export personal data for delivery to the customer. |
| `ShouldForget` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Preference to delete records and personal data related to this customer. |
| `Website` | **Type**<br>url<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The URL for the customer's website. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**IndividualChangeEvent (API version 47.0)**
Change events are available for the object.

**IndividualHistory**
History is available for tracked fields of the object.

**IndividualShare**
Sharing is available for the object.

# IndividualApplicationItem

Captures individual application input data that is used during run-time. This object is available in API version 58.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available only with the EAndU Cloud Program Access permission set.

## Fields

| Field | Details |
|---|---|
| `IndividualApplicationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The Individual Application parent object associated with the Individual Application Item.<br>This field is a relationship field.<br>**Relationship Name**<br>IndividualApplication<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>IndividualApplication |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the object related to the Individual Application. |
| `RelatedItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The related object associated with the Individual Application Item.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>RelatedItem |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Benefit, ProgramProduct |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Specifies the approval status of the Individual Application.<br>Possible values are:<br>• `Approved`<br>• `Declined`<br>• `In Progress`<br>• `Pending` |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**IndividualApplicationItemChangeEvent**
Change events are available for the object.

**IndividualApplicationItemFeed**
Feed tracking is available for the object.

**IndividualApplicationItemHistory**
History is available for tracked fields of the object.

**IndividualApplicationItemOwnerSharingRule**
Sharing rules are available for the object.

**IndividualApplicationItemShare**
Sharing is available for the object.

# IndividualHistory

Represents the history of changes to values in the fields of a data privacy record, based on the Individual object. This object is available in versions 42.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

## Special Access Rules

- This object is available if Data Protection and Privacy is enabled.
- The Individual object isn't available to Customer Community, Partner Community, and Customer Portal users.

## Fields

| Field Name | Details |
|---|---|
| `DataType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Data type of the field that was changed. |
| `Field` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The name of the changed field. |
| `IndividualId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the data privacy record. Label is **Individual ID**.<br>This is a relationship field.<br>**Relationship Name**<br>Individual<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Individual |
| `NewValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The updated value of the changed field. |
| `OldValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The previous value of the changed field. |

## Usage

Use this object to identify changes to data privacy records.

This object respects field-level security on the parent object.

# IndividualShare

Represents a list of access levels to a data privacy record along with an explanation of the access level. For example, if you have access to a record because you own it, the `IndividualAccessLevel` is `All` and `RowCause` is Owner. This object is available in API version 42.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

- This object is available if Data Protection and Privacy is enabled.
- The Individual object isn't available to Customer Community, Partner Community, and Customer Portal users.

# Fields

| Field Name | Details |
| --- | --- |
| `IndividualAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Level of access that the user or group has to the data privacy record. The possible values include:<br>• `Read`<br>• `Edit`<br>• `All` (Except for create or update.)<br>Set this field to an access level that's higher than your default access level for individuals. |
| `IndividualId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the Individual associated with this sharing entry. This field isn't available for updates.<br>This is a relationship field.<br>**Relationship Name**<br>Individual<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Individual |
| `RowCause` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited. Valid values include:<br>• `Manual`—The User or Group has access because a user with "All" access manually shared the data privacy record with them. |

| Field Name | Details |
| --- | --- |
| | • `Owner`—The User is the owner of the data privacy record.<br>• `Rule`—The User or Group has access to the data privacy record via an Individual sharing rule.<br>• `LpuImplicit`—The User has access to records owned by high-volume Experience Cloud site users via a share group. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the User or Group that has been given access to the data privacy record. This field isn't available for updates.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>UserOrGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

## Usage

This object lets you determine which users and groups can view or edit Individual records owned by other users.

# InsufficientAccessEventLog

Insufficient Access event logs contain details about errors relating to insufficient record access This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

# Fields

| Field | Details |
| --- | --- |
| `AccessError` | **Type**<br>String<br>**Description**<br>The type of insufficient access error that the user received. Valid values are:<br>• `DATA_NOT_AVAILABLE`—The record is no longer accessible. For example, a record was deleted and moved to the Recycle Bin.<br>• `INVALID_TYPE`—The record type doesn't exist.<br>• `NO_ACCESS`—The user doesn't have the required access level to complete the attempted action on the record.<br>**Example**<br>`NO_ACCESS` |
| `ActualLoggedInUserIdentifier` | **Type**<br>Id<br>**Description**<br>The ID of the user who initiated the action that caused the insufficient access error. For example, a user attempts to transfer ownership of a record to a teammate, but the operation fails because the teammate doesn't have the required access.<br>**Example**<br>`005XXXXXXXXXXX` |
| `ErrorDescription` | **Type**<br>String<br>**Description**<br>Description of the insufficient access error that the user received.<br>**Example**<br>User 005XXXXXXXXXXX doesn't have full access for the record 001XXXXXXXXXXX. |
| `ObjectType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The object for which the user received the insufficient access error. |
| `RecordIdentifier` | **Type**<br>String<br>**Description**<br>The ID of the record that the user doesn't have access to. |

| Field | Details |
| --- | --- |
| | **Example**<br>001XXXXXXXXXXX |
| RequestIdentifier | **Type**<br>String<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events.<br>**Example**<br>3nWgxWbDKWWDIk0FKfF5DV |
| RequestedAccessLevel | **Type**<br>String<br>**Description**<br>The access level required by the user's attempted action on the record. Valid values are:<br>• DELETE<br>• FULL<br>• READ<br>• TRANSFER<br>• WRITE<br>**Example**<br>FULL |
| Timestamp | **Type**<br>dateTime<br>**Description**<br>The access time of Salesforce services in GMT.<br>**Example**<br>20130715233322.670 |
| UserIdentifier | **Type**<br>Id<br>**Description**<br>The ID of the user for whom the insufficient access error occurred, either when the user couldn't access a record, the user couldn't complete an operation, or the user was the intended recipient of a record transfer that failed because the user didn't have the required access.<br>**Example**<br>005XXXXXXXXXXX |

# InternalOrganizationUnit

Represents an organization that an Employee belongs to. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access this object, you have either a Workplace Command Center permission set license and the Provides access to Workplace Command Center features system permission, or the Employee Management and Employee User add-on licenses. This object is also available with the Referral Marketing license.

## Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A description of the organization the Employee is working in. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. |

| Field | Details |
| --- | --- |
| `OrganizationCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. The code of the organization the Employee is working in. |
| `OrganizationName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the organization the Employee is working in. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who currently owns this record. Default value is the user logged in to the API to perform the create operation. |
| `ParentOrganizationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A reference to the parent organization. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies whether the record is for an internal or an external organization. This field is available in API version 60.0 and later.<br>Possible values are:<br>• `EXTERNAL_BUSINESS_UNIT`<br>• `INTERNAL_ORGANIZATION` |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**InternalOrganizationUnitHistory (API version 49.0)**
History is available for tracked fields of the object.

**InternalOrganizationUnitOwnerSharingRule**
Sharing rules are available for the object.

**InternalOrganizationUnitShare (API version 49.0)**
Sharing is available for the object.

# InventoryItemReservation

Used to store inventory item reservation information for a specific product and location. This object is available in API version 60.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available only if a B2B Commerce, D2C Commerce, B2C Commerce or Salesforce Order Management license is enabled.

## Fields

| Field | Details |
|---|---|
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for orgs with the multicurrency feature enabled. ISO code for the currency of the inventory items.<br>Possible values are:<br>• `EUR`—Euro<br>• `USD`—U.S. Dollar<br>The default value is `USD`. |

| Field | Details |
| --- | --- |
| ErrorCode | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The error code if the reservation isn't successful. |
| ErrorMessage | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>If an error occurred, this field contains the error message. |
| InventoryItemReservationName | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Name of the inventory item reservation (autogenerated, for example: PIR-0033). |
| InventoryReservationId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the inventory reservation.<br>This field is a relationship field.<br>**Relationship Name**<br>InventoryReservation<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>InventoryReservation |
| ItemReservationSourceId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the entity associated with the inventory item reservation. |

| Field | Details |
| --- | --- |
| | This field is a relationship field.<br>**Relationship Name**<br>ItemReservationSource<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CartItem |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `ProductId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the product on the inventory item reservation. This field is unique within your organization.<br>This field is a relationship field.<br>**Relationship Name**<br>Product<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Product2 |
| `Quantity` | **Type**<br>double |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Number of products on the inventory item reservation. |
| `ReservedAtLocationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The location or location group where the inventory item reservation originated.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ReservedAtLocation<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Location, LocationGroup |
| `StockKeepingUnit` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The stock keeping unit (SKU) of the reserved item. |

# InventoryReservation

Stores information about the status of cart inventory reservations in B2B and D2C Commerce. This object is available in API version 60.0 and later.

This object only applies to cart inventory reservation APIs in B2B and D2C Commerce. It isn't related to inventory reservation Connect APIs used with Omnichannel Inventory and Order Management.

If your org is using Omnichannel Inventory as its inventory system, the inventory reservation record related to the cart also represents a reservation in Omnichannel Inventory. If the org uses a different inventory system, the inventory reservation record related to the cart represents a reservation in that inventory system.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available only if a B2B Commerce, D2C Commerce, B2C Commerce, or Salesforce Order Management license is enabled.

## Fields

| Field | Details |
|---|---|
| `ErrorCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The error code if the reservation isn't successful. |
| `ErrorMessage` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>If an error occurred, this field contains the error message. |
| `InventoryReservationName` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Name of the inventory reservation (autogenerated, for example: PIR-0033). |
| `IsAsyncOperationInProgress` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if there's an async operation in progress that could affect the reservation.<br>The default value is `false`. |
| `IsSuccess` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the most recent inventory system operation was successful. |

| Field | Details |
| --- | --- |
| | The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user could have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The user who owns the inventory reservation.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `ReservationDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The timestamp when the inventory reservation was created. |
| `ReservationDurationInSeconds` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The total duration of the inventory reservation in seconds. |
| `ReservationIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort, Update<br>**Description**<br>The unique identifier (text value) for the reservation. |
| `ReservationSourceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the entity associated with the inventory reservation.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ReservationSource<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Export_FOI__c, WebCart |

## Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**InventoryReservationOwnerSharingRule on page 65**
Sharing rules are available for the object.

**InventoryReservationShare on page 67**
Sharing is available for the object.

# InvocableActionEventLog

Invocable Action events capture the calls to Salesforce Invocable Actions.This is particularly useful to monitor actions invoked during Agentforce flows. This object is available in API version 64.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
|---|---|
| `ActionName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of the action. |
| `ActionType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>InvocableActionType being referenced. |
| `ActionVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The invocable action version. |
| `ApiCaller` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Identifier of the API caller. This is only populated when the action is invoked from a REST API call |
| `BotIdentifier` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the bot. |
| `BotSessionIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The bot session ID. |
| `Duration` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Time (in nanos) taken to process this set of requests. |
| `FlowProcessType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The process type of the calling flow. |
| `FlowVersionIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the version of the calling flow. |
| `PlannerIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the agent planner. |
| `RequestCount` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of invoked requests. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the user employing salesforce.com services, whether through the user interface or API. |

# Invoice

Represents a financial document describing the total amount a buyer must pay for goods or services provided. This object is available in API version 48.0 and later.

Users can edit non-posted invoices. Posted invoices can't be deleted. After an invoice is posted, users can make payments against it to reduce its balance.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

## Special Access Rules

This object is available with Salesforce Order Management or D2C Commerce license, and Billing (Revenue Cloud). A few fields require Commerce Subscriptions to be enabled. These fields are available only in Lightning Experience.

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
|---|---|
| `Balance` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The outstanding balance for this invoice. Equal to the invoice's total amount with tax, ignoring payments and adjustments. |
| `BillToContactId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Inherited from the account's Bill to Account.<br>This field is a relationship field.<br>**Relationship Name**<br>BillToContact<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `BillingAccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>The customer account for this invoice.<br>This field is a relationship field.<br>**Relationship Name**<br>BillingAccount |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The three-letter ISO 4217 currency code associated with the invoice.<br>The default value is `USD`.<br>This field is available in API version 55.0 and later. |
| `DaysInvoiceOpen` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number of days since the invoice was created before it was paid.<br>This field is a calculated field.<br>This field is available in API version 55.0 and later. |
| `DaysInvoiceOverdue` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number of days since the date when payment was due.<br>This field is a calculated field.<br>This field is available in API version 55.0 and later. |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Users can add more information about this invoice. Maximum of 1,000 characters. |

| Field | Details |
| --- | --- |
| DocumentNumber | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The system-generated number that is used to organize financial documents. The number can be sequential or random. |
| DueDate | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>The customer must pay the invoice by the due date. Unpaid invoices past the due date can be sent to collections. |
| FullSettlementDate | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Date when the invoice is paid in full.<br>This field is available in API version 55.0 and later. |
| InvoiceBatchRunId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Id of the invoice batch run that generated this invoice.<br>This field is a relationship field.<br>This field is available in API version 55.0 and later.<br>**Relationship Name**<br>InvoiceBatchRun<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>InvoiceBatchRun |
| InvoiceDate | **Type**<br>date |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>The date that the invoice was posted. Used with payment terms to determine the invoice's `DueDate`. For example, an invoice with an `InvoiceDate` of 04/01 and Net 30 payment terms has a `DueDate` of 05/01. |
| `InvoiceNumber` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>System-created unique ID for this invoice. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view.<br>This field is available in API version 55.0 and later. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. If this value is null, it's possible the user accessed this record or list view (`LastReferencedDate`) but didn't view it.<br>This field is available in API version 55.0 and later. |
| `NetCreditsApplied` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Represents the net credits applied to an invoice. Calculated by subtracting the sum of all unapplied lines from the sum of all applied lines.<br>This field is a calculated field. This field is available in API version 55.0 and later. |

| Field | Details |
| --- | --- |
| NetPaymentsApplied | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Represents net payments applied to an invoice. Calculated by subtracting the sum of unapplied payments from the sum of payments applied to the invoice.<br>This field is a calculated field. This field is available in API version 55.0 and later. |
| OwnerId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>The user who owns an invoice record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| PaymentExclusionReason | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The reason for skipping creation of payment schedules and payment schedule items for the invoice. This field is only available if Commerce Subscriptions is enabled for your org. Available in API version 63.0 and later. |
| PaymentTermId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the payment term used on this invoice.<br>This field is a relationship field. This field is available in API version 55.0 and later.<br>**Relationship Name**<br>PaymentTerm |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentTerm |
| `PostedDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The date the invoice was posted.<br>This field is available in API version 60.0 and later. |
| `ReferenceEntityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the order or order summary that created this invoice.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ReferenceEntity<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Order, OrderSummary |
| `SettlementStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The state of the invoice's payment.<br>Possible values are:<br>• `Not Applicable`<br>• `Not Settled`<br>• `Partially Settled`<br>• `Settled`<br>This field is available when Subscription Management is enabled.<br>This field is available in API version 55.0 and later. |

| Field | Details |
| --- | --- |
| `ShouldExcludePayment` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Required. Indicates whether to skip creating payment schedules and payment schedule items for the invoice (`true`) or not (`false`). The default value is `false`. This field is only available if Commerce Subscriptions is enabled for your org. Available in API Version 63.0 and later. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The state of the invoice.<br>Possible values are:<br>• `Canceled`— Indicates that the invoice was generated and later canceled.<br>• `Draft`— Indicates that the invoice is a draft. Available in API version 60.0 and later.<br>• `Draft In Progress`— Indicates that the draft invoice is in progress. Available in API version 60.0 and later.<br>• `Error`— Indicates that an error occurred when processing the invoice.<br>• `Pending`— Indicates that the invoice is being processed.<br>• `Posted`— Indicates that the invoice has been generated and sent to the customer.<br>• `Posting In Progress`—Indicates that the invoice posting is in progress. Available in API version 60.0 and later.<br>• `Void In Progress`— Indicates that the invoice is pending a status change.<br>• `Voided`— The invoice's status after the API successfully voids the invoice. |
| `TaxLocaleType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The system used to handle tax on the original Order associated with the Invoice. Gross usually applies to taxes like value-added tax (VAT), and Net usually applies to taxes like sales tax. This field is available when Order Management or B2B Commerce is enabled.<br>Possible values are:<br>• Gross: Displays most prices and taxes as combined values<br>• Net: Displays most prices and taxes as separate values |

| Field | Details |
| --- | --- |
| | This field is available in API version 56.0 and later. |
| `TotalAdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of the invoice's adjustment line amounts. |
| `TotalAdjustmentAmountWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of the amount fields on the invoice's adjustment-type invoice lines, including tax.<br>This field is available in API version 55.0 and later. |
| `TotalAdjustmentTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total amount of tax applied to the invoice line's adjustment lines.<br>This field is available in API version 55.0 and later. |
| `TotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum `TotalAmount` values on the invoice's lines.<br>This field is a calculated field. |
| `TotalAmountWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of `TotalAmountWithTax` values on the invoice's lines. |

| Field | Details |
| --- | --- |
| `TotalChargeAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of the invoice's charges.<br>This field is a calculated field. |
| `TotalChargeAmountWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of the amount fields on the invoice's charge-type invoice lines, including tax.<br>This field is available in API version 55.0 and later. |
| `TotalChargeTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total amount of tax applied to the invoice's charge lines.<br>This field is available in API version 55.0 and later. |
| `TotalConvertedNegAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of all negative invoice lines that were converted to a credit memo. For example, if one negative invoice line was for -$10 and one was for -$15, the total amount that's converted to a credit memo is -$25.<br>This field is a calculated field.<br>This field is available when Subscription Management is enabled.<br>This field is available in API version 56.0 and later. |
| `TotalTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The sum of `TaxAmount` values on the invoice lines.<br>This field is a calculated field. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**InvoiceFeed on page 55**
Feed tracking is available for the object.

**InvoiceHistory on page 63**
History is available for tracked fields of the object.

**InvoiceOwnerSharingRule on page 65**
Sharing rules are available for the object.

**InvoiceShare on page 67**
Sharing is available for the object.

# InvoiceAddressGroup

Stores the buyer's address information. This object is available in API version 50.0 and later.

## Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`

## Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
| --- | --- |
| `Address` | **Type**<br>address<br>**Properties**<br>Filter, Nillable |

| Field | Details |
| --- | --- |
| | **Description**<br>Buyer's address. Compound field that summarizes the invoice address group's address component fields. |
| `City` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The buyer's city. |
| `Country` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The buyer's country. |
| `GeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The accuracy rating for the geocode of the address group. The accuracy rating contains information about the location of a latitude and longitude. |
| `InvoiceAddressGroupNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>An auto-generated number, such as DOC-000001. |
| `InvoiceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the invoice associated with the address group.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Invoice<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Invoice |
| `Latitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The buyer's latitude. |
| `Longitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The buyer's longitude. |
| `PostalCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The buyer's postal code or ZIP code. |
| `State` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The buyer's state. |
| `Street` | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The buyer's street. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**InvoiceAddressGroupHistory on page 63**
History is available for tracked fields of the object.

# InvoiceBatchRun

Represents a batch processing job in Subscription Management or Billing (Revenue Cloud). During an invoice batch run, all billing schedules that meet the specified criteria are processed, resulting in the generation of invoices. This object is available in API version 55.0 and later.

An invoice batch run, controlled by a scheduler, tells the system to start the run at a scheduled date and time. The scheduler also includes matching criteria, which are used to evaluate the billing schedules. Billing schedules that meet the specified criteria are included for processing in the invoice batch run.

When an invoice batch run is started, Subscription Management or Billing (Revenue Cloud):

- Evaluates the billing schedule to see if it meets the criteria for inclusion in the batch invoice run.
- Generates an invoice record with a pending state.
- Makes calls to an external tax provider.
- Adds the tax to the invoice.
- Summarizes information about the billing schedules that were included in the invoice batch run and displays this information in the Invoice Batch Run record.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

## Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
|---|---|
| `BillingBatchSchedulerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the related billing batch scheduler. |

| Field | Details |
| --- | --- |
| | This field is a relationship field.<br>**Relationship Name**<br>BillingBatchScheduler<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BillingBatchScheduler |
| `Comments` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>Optional user-defined information about the scheduler. |
| `CompletionTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp when the invoice batch run finished processing. |
| `InvoiceBatchRunNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>System-generated sequential number. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the invoice batch run was last modified. Its UI label is Last Modified Date. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The timestamp when the invoice batch run was last viewed. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>System-generated field. The ID of the user who created the BillingBatchScheduler record. Its UI label is Owner.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `RecoveryStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates the state of the invoice batch run recovery process. This field is available in API version 56.0 and later.<br>Possible values are:<br>• `CompletelyRecovered`—All billing schedules included in the recovery run were reset to *`Ready for Invoicing`*. These billing schedules are included in the next scheduled invoice batch run.<br>• `PartiallyRecovered`—Some, but not all, billing schedules that were part of the recovery run were reset to *`Ready for Invoicing`*. The billing schedules that were recovered are included in the next scheduled invoice batch run. The billing schedules that weren't successfully recovered must be manually reset to *`Ready for Invoicing`* so they can be processed.<br>• `RecoveryFailed`—The recovery job was unsuccessful. This value is available in API version 57.0 and later.<br>• `RecoveryStarted`—The recovery job is in process. |
| `StartTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Timestamp when the invoice batch run started processing. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The state of the invoice batch run.<br>Possible values are:<br>• `Canceled`—This value is available in API version 57.0 and later.<br>• `Completed`<br>• `Failed`<br>• `Started`<br>• `Stopped`—This value is available in API version 57.0 and later.<br>The default value is `Started`. |
| `TotalBillSchedRecovered` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of billing schedules that were part of the recovery run that were reset to *`Ready for Invoicing`*. These billing schedules are included in the next scheduled invoice batch run.<br>This field is available in API version 57.0 and later. |
| `TotalBillSchedUnrecovered` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of billing schedules that were part of the recovery run that weren't reset to *`Ready for Invoicing`*. These billing schedules that weren't successfully recovered must be manually reset to *`Ready for Invoicing`* so they can be processed.<br>This field is available in API version 57.0 and later. |
| `TotalBillingSchedulesFailed` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The total number of billing schedules that weren't successfully processed. When a billing schedule isn't successfully processed, then the system doesn't generate an invoice for it. For details about errors, check the Revenue Transaction Error Log. This field is available in API version 56.0 and later. |
| `TotalBsSuccessfullyProcessed` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of billing schedules for which the system was able to generate and process invoices. This field is available in API version 56.0 and later. |
| `TotalDraftInvoiceAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of the invoice amounts for invoices in `Draft` status.<br>This field is available when Billing (Revenue Cloud) is enabled.<br>This field is available in API version 62.0 and later. |
| `TotalDraftInvoices` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of invoices in `Draft` status generated in the batch run.<br>This field is available when Billing (Revenue Cloud) is enabled.<br>This field is available in API version 62.0 and later. |
| `TotalFilteredBillingSchedules` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of billing schedules that met the invoice run scheduler's matching criteria. The matching criteria specify which billing schedules are included in the invoice batch run. Its field label is Total Matching Billing Schedules. This field is available in API version 56.0 and later. |

| Field | Details |
| --- | --- |
| `TotalInvSuccessfullyProcessed` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of invoices that were successfully processed.<br>When Billing (Revenue Cloud) is enabled, the field's value is either the same as `TotalPostedInvoices` or `TotalDraftInvoices` based on the Invoice Status selected when the Invoice Scheduler is set up.<br>This field is available in API version 56.0 and later. |
| `TotalInvoicedAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total amount of income including taxes represented by the successfully processed invoices. This field is available in API version 56.0 and later. |
| `TotalInvoicesCanceled` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of invoices that weren't processed. To find out what went wrong, check the Revenue Transaction Error Log. Fix the errors, then run the invoice batch run recovery process.<br>This field is available in API version 57.0 and later. |
| `TotalInvoicesFailed` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of invoices that weren’t processed successfully. To find out what went wrong, check the Revenue Transaction Error Log. Then fix the errors and run the invoice batch run recovery process. This field is available in API version 56.0 and later. |
| `TotalInvoicesGenerated` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The total number of invoices that were generated from the billing schedules processed by the invoice batch run. This field is available in API version 56.0 and later. |
| `TotalPostedInvoices` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of invoices in `Posted` status generated during the batch run.<br>This field is available when Billing (Revenue Cloud) is enabled.<br>This field is available in API version 62.0 and later. |
| `TotBillSchdUpdtDurDrftToPost` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total billing schedules updated during the draft to posted run.<br>This field is available when Billing (Revenue Cloud) is enabled.<br>This field is available in API version 62.0 and later. |

# Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**InvoiceBatchRunChangeEvent on page 68**
Change events are available for the object.

**InvoiceBatchRunFeed on page 55**
Feed tracking is available for the object.

**InvoiceBatchRunHistory on page 63**
History is available for tracked fields of the object.

**InvoiceBatchRunOwnerSharingRule on page 65**
Sharing rules are available for the object.

**InvoiceBatchRunShare on page 67**
Sharing is available for the object.

# InvoiceBatchRunCriteria

Represents a batch processing job and its required criteria in Subscription Management. During an invoice batch run, all billing schedules that meet the specified criteria are processed, resulting in the generation of invoices. This object is available in API version 55.0 and later.

A scheduled invoice batch run tells the system to start the run at a scheduled date and time by using certain criteria. The scheduler includes the matching criteria, which are used to evaluate the billing schedules. Billing schedules that meet the specified criteria are included for processing in the invoice batch run.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
|---|---|
| `Comments` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Optional user-defined information about the batch run criteria. |
| `CriteriaExpression` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The formula that specifies criteria for filtering the billing schedules. For example, we can filter billing schedules by currency code. |
| `CriteriaMatchType` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of matching criteria required for the batch. |

| Field | Details |
| --- | --- |
| | Valid value is `MatchAll`.<br>The default value is `MatchAll`. |
| `ExpectedInvoiceStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of invoice a batch run generates.<br>Valid values are:<br>• `Draft`<br>• `Posted`<br>This field is available in API version 60.0 and later. |
| `InvoiceBatchRunCriteriaNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>System-generated sequential number. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>System-generated field. The ID of the user who created the BillingBatchScheduler record. Its UI label is `Owner`.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

# InvoiceBatchRunRecovery

Provides information about an invoice batch run recovery procedure. This object is available in API version 57.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

## Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
|---|---|
| `Comments` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>Optional user-defined information about the scheduler. |
| `CompletionTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the invoice batch run recovery procedure was completed. |
| `InvoiceBatchRunId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique identifier of the invoice batch run related to this recovery run.<br>This field is a relationship field.<br>**Relationship Name**<br>InvoiceBatchRun<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>InvoiceBatchRun |

| Field | Details |
| --- | --- |
| `InvoiceBatchRunRecoveryNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The unique identifier of the invoice batch run recovery process. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user indirectly accessed this record (`LastReferencedDate`), but did not view it. |
| `StartTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort<br>**Description**<br>The timestamp when the invoice batch run recovery started. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The final state of the invoice batch run recovery process.<br>Possible values are:<br>• `Completed`—The recovery run successfully reset all billing schedules to *`Ready for Invoicing`*. |

| Field | Details |
| --- | --- |
| | • `CompletedWithErrors`—Some, but not all, billing schedules included in the recovery run were reset to *`Ready for Invoicing`*. The billing schedules that were recovered are included in the next scheduled invoice batch run. The billing schedules that weren't successfully recovered must be manually reset to *`Ready for Invoicing`* so they can be processed.<br>• `Failed`—The recovery run was unable to complete the reset process.<br>• `Started`—Indicates that the recovery run reset process began, is ongoing, and has not yet produced a result.<br>The default value is `Started`. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**InvoiceBatchRunRecoveryChangeEvent on page 68**
Change events are available for the object.

**InvoiceBatchRunRecoveryFeed on page 55**
Feed tracking is available for the object.

**InvoiceBatchRunRecoveryHistory on page 63**
History is available for tracked fields of the object.

**InvoiceBatchRunRecoveryOwnerSharingRule on page 65**
Sharing rules are available for the object.

**InvoiceBatchRunRecoveryShare on page 67**
Sharing is available for the object.

# InvoiceDocument

Tracks and displays the status of documents generated for invoices. Invoice documents are available in the related lists of invoice entity records. This object is available in API version 61.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

## Special Access Rules

This object is available with Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

# Fields

| Field | Details |
| --- | --- |
| `ContentDocumentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the generated PDF document.<br>This field is a relationship field.<br>**Relationship Name**<br>ContentDocument<br>**Refers To**<br>ContentDocument |
| `DateGenerated` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The date on which the PDF is generated. |
| `DocumentGenerationProcessId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the entity that contains the information used to create the PDF invoice.<br>This field is a relationship field.<br>**Relationship Name**<br>DocumentGenerationProcess<br>**Refers To**<br>DocumentGenerationProcess |
| `DocumentNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The ID of the generated document. |

| Field | Details |
| --- | --- |
| `ErrorMessage` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Errors that occur during PDF generation. |
| `InvoiceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the invoice entity to which the invoice document is attached.<br>This field is a relationship field.<br>**Relationship Name**<br>Invoice<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>Invoice (the master object) |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The status of the PDF generation process.<br>Possible values are:<br>• `Blocked`<br>• `Cancelled`<br>• `Failure`<br>• `Pending`<br>• `Success` |

# InvoiceLine

Represents the amount that a buyer must pay for a product, service, or fee. Invoice lines are created based on the amount of an order line. This object is available in API version 48.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

## Special Access Rules

This object is available with Order Management, Subscription Management, and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
|---|---|
| `AdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Sum of adjustments made to the invoice line. |
| `AdjustmentAmountWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Sum of adjustment amounts, including associated taxes related to the invoice line. |
| `AdjustmentTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Sum of tax adjustments to the invoice line.<br>This field is available in API version 55.0 and later. |
| `Balance` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The outstanding balance for an invoice line. This is equal to the invoice's total amount with tax after deducting the payments made. |

| Field | Details |
| --- | --- |
| `BillingAddressId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Lookup field to an InvoiceAddressGroup containing the billing address for the invoice line. Assign one InvoiceAddressGroup to the invoiceLine's BillingAddressID, and another InvoiceAddressGroup to the invoiceLine's ShippingAddressId.<br>This field is a relationship field. This field is available in API version 55.0 and later.<br>**Relationship Name**<br>BillingAddress<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>InvoiceAddressGroup |
| `BillingScheduleGroupId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>This field is a relationship field.<br>**Relationship Name**<br>BillingScheduleGroup<br>**Refers To**<br>BillingScheduleGroup |
| `BillingScheduleId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the billing schedule for the invoice line.<br>This field is a relationship field. This field is available in API version 55.0 and later.<br>**Relationship Name**<br>BillingSchedule<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BillingSchedule |

| Field | Details |
| --- | --- |
| ChargeAmount | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>Sum of charges made to the invoice line. |
| ChargeAmountWithTax | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Amount on a charge invoice line, including tax.<br>This field is available in API version 55.0 and later. |
| ChargeTaxAmount | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax to be applied on a charge invoice line.<br>This field is available in API version 55.0 and later. |
| ConvertedNegAmount | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount from an invoice line that is converted to credit.<br>This field is available in API version 56.0 and later. |
| Description | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the invoice line. |
| GroupReferenceEntityItemId | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Grouping field for adjustment line items.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>GroupReferenceEntityItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderItem, OrderItemAdjustmentLineItem |
| `HasMultipleItems` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this field merges items from the same billing period.<br>The default value is `false`. |
| `InvoiceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The invoice that contains this invoice line.<br>This field is a relationship field.<br>**Relationship Name**<br>Invoice<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Invoice |
| `InvoiceLineEndDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>For invoice lines made from a time-based service, the end date of the billing for the service. |

| Field | Details |
| --- | --- |
| `InvoiceLineStartDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>For invoice lines made from a time-based service, the first date of the billing for the service. |
| `InvoiceStatus` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>State of the invoice line. Inherited from the invoice's status. |
| `LegalEntityAccountingPeriodId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>This field is a relationship field.<br>**Relationship Name**<br>LegalEntityAccountingPeriod<br>**Refers To**<br>LegalEntyAccountingPeriod |
| `LegalEntityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>This field is a relationship field.<br>**Relationship Name**<br>LegalEntity<br>**Refers To**<br>LegalEntity |
| `LineAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The amount of the invoice line.<br>This field is a calculated field. This field is available in API version 55.0 and later. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the invoice line. |
| `NetCreditsApplied` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total credit memo line amount applied to the invoice line. This amount is calculated by subtracting the unapplied credit memo line amount from the applied credit memo line amount.<br>This field is a calculated field. |
| `NetPaymentsApplied` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total payment applied to the invoice line. This amount is calculated by subtracting the unapplied payment amount from the applied payment amount.<br>This field is a calculated field. |
| `Product2Id` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The product that was charged or ordered to create the invoice line.<br>This field is a relationship field.<br>**Relationship Name**<br>Product2<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Product2 |
| `Quantity` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>Number of units of the order product that created the invoice line. |
| `ReferenceEntityItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The order item or adjustment item that created the invoice line.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ReferenceEntityItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderItem, OrderItemAdjustmentLineItem |
| `ReferenceEntityItemType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of transaction that created the invoice line.<br>Possible values are:<br>• `DeliveryCharge`—Charge<br>• `Fee`—Charge. This value is available in API version 56.0 and later.<br>• `OrderProduct`—Product |
| `ReferenceEntityItemTypeCode` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of object that created the invoice line. |

| Field | Details |
| --- | --- |
| | Possible values are:<br>• `Charge`<br>• `Product` |
| `RelatedLineId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The original invoice line that was adjusted or taxed.<br>This field is a relationship field.<br>**Relationship Name**<br>RelatedLine<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>InvoiceLine |
| `ShippingAddressId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the shipping address associated with the invoice line.<br>This field is a relationship field. This field is available in API version 55.0 and later.<br>**Relationship Name**<br>ShippingAddress<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>InvoiceAddressGroup |
| `TaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>Total tax for the invoice line. |
| `TaxCode` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The code used to calculate tax rate for the invoice line. |
| `TaxDocumentNumber` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Represents the latest record in the external tax engine in which this invoice line item is included.<br>This field is available in API version 55.0 and later. |
| `TaxEffectiveDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date used to calculate the invoice line's `TaxAmount`. |
| `TaxName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>User-defined name for the applied tax. |
| `TaxRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>Percentage value used for calculating tax. |
| `TaxTransactionNumber` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Represents the transaction in the external tax engine in which the taxes for the line were calculated for the invoice line.<br>This field is available in API version 55.0 and later. |
| `TaxTreatmentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The tax treatment used on this invoice line.<br>This field is a relationship field. This field is available in API version 55.0 and later.<br>**Relationship Name**<br>TaxTreatment<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>TaxTreatment |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Shows the type of transaction for the invoice line.<br>Possible values are:<br>• `Adjustment`<br>• `Charge`<br>• `Tax` |
| `UnitPrice` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>Price for one unit of the item on the invoice line. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**InvoiceLineFeed on page 55**
Feed tracking is available for the object.

**InvoiceLineHistory on page 63**
History is available for tracked fields of the object.

**InvoiceLineOwnerSharingRule on page 65**
Sharing rules are available for the object.

**InvoiceLineShare on page 67**
Sharing is available for the object.

# JobProfile

Represents a job profile used for shift scheduling. This object is available in API versions 47.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service or Workforce Engagement must be enabled.

## Fields

| Field | Details |
|---|---|
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the current user last viewed a related record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the current user last viewed this record. |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the job profile. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner of the job profile. |

## Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

**JobProfileFeed**
Feed tracking is available for the object.

**JobProfileHistory**
History is available for tracked fields of the object.

**JobProfileOwnerSharingRule**
Sharing rules are available for the object.

**JobProfileShare**
Sharing is available for the object.

# JobProfileQueueGroup

JobProfileQueueGroup defines the mapping between Queue and JobProfile and configurations for capacity plans in Workforce Engagement. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Org must have the Workforce Engagement, Workforce Engagement Configuration, and Omni org preferences enabled. User must have the Workforce Engagement Analyst or Planner user permission set.

# Fields

| Field | Details |
| --- | --- |
| `AnswerTime` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The answer time (in seconds) for a specific group. |
| `CapacityPerJobProfile` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The max number of work units that an agent can handle for a specific job profile. |
| `GroupCapacity` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The distributed number of work units among groups to which a specific job profile is associated. |
| `GroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Identifies the group or queue record.<br>This is a relationship field.<br>**Relationship Name**<br>Group<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group |
| `JobProfileId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Identifies the job profile record.<br>This is a relationship field.<br>**Relationship Name**<br>JobProfile<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>JobProfile |
| `JobProfileShrinkage` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The shrinkage for a specific job profile. |
| `Priority` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The priority of a group per job profile. |
| `ServiceLevelAgreementPerc` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The expected SLA percentage for a specific group. |
| `WorkType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A type of group, indicating whether a queue is synchronous or asynchronous.<br>Possible values are:<br>• `A`—Async |

| Field | Details |
| --- | --- |
| | • S—Sync<br>The default value is 'S'. |

# Knowledge__Feed

Represents the feed for a knowledge article. This object is available in API version 39.0 and later.

For additional information about feeds, see FeedItem on page 2510.

Note: By default, the prefix for this object name is `Knowledge` and that is the value shown in this reference. However, this prefix can be modified by changing the **Object Name** for the Knowledge__kav object in Object Manager.

## Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Lightning Knowledge must be enabled in your org.

## Fields

| Field | Details |
| --- | --- |
| `BestCommentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the comment marked as best answer on a question post. |
| `Body` | **Type**<br>textarea<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The body of the feed item. Required when `Type` is `TextPost` or `AdvancedTextPost`. Optional when `Type` is `ContentPost` or `LinkPost`.<br>Although a value for `Body` is not required for the `ContentPost` type, an attachment is required. If an attachment isn't present, the type changes to `TextPost` or `AdvancedTextPost`, depending on the API version. `TextPost` and `AdvancedTextPost` do require a value for `Body`. |

| Field | Details |
| --- | --- |
| | Tip: See the `IsRichText` field for a list of HTML tags supported in the body of rich text posts. |
| `CommentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of comments associated with this feed item.<br>Tip: In a feed that supports pre-moderation, `CommentCount` isn't updated until a comment is published. For example, say that you comment on a post that already has one published comment and your comment triggers moderation. Now there are two comments on the post, but the count says there's only one. In a moderated feed, comments aren't counted until approved by an admin or someone with Can Approve Feed Post and Comment or Modify All Data.<br>Feed moderation has implications on how you retrieve feed comments. In a moderated feed, rather than retrieving comments by looping through `CommentCount`, go through pagination until the end of comments is returned. |
| `InsertedById` | **Type**<br>reference<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the `InsertedBy` value is set to the ID of the context user. |
| `IsRichText` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the feed item `Body` contains rich text. If you post a rich text feed comment using SOAP API, set `IsRichText` to `true` and escape HTML entities from the body. Otherwise, the post is rendered as plain text.<br>Rich text supports the following HTML tags:<br>• `<p>`<br>Tip: Though the `<br>` tag isn't supported, you can use `<p> </p>` to create lines.<br>• `<a>` |

| Field | Details |
| --- | --- |
| | • <b><br>• <code><br>• <i><br>• <u><br>• <s><br>• <ul><br>• <ol><br>• <li><br>• <img><br>The <img> tag is accessible only through the API and must reference files in Salesforce similar to this example: <img src="sfdc://069B0000000omjh"></img><br>Note: In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation. |
| LikeCount | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of likes associated with this feed item. |
| LinkUrl | **Type**<br>url<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The URL of a LinkPost. |
| ParentId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the Knowledge article to which the feed item is related. |
| RelatedRecordId | **Type**<br>reference<br>**Properties**<br>Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the ContentVersion record associated with a `ContentPost`. For WDC thanks posts, it's the ID of the WorkThanks object associated with a `RypplePost`. This field is typically null for all posts except `ContentPost` and `RypplePost`.<br>For example, set this field to an existing ContentVersion ID and post it to a feed with `Type` set to `ContentPost`. |
| `Title` | **Type**<br>string<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>The title of the feed item. When the `Type` is `LinkPost`, the `LinkUrl` is the URL and this field is the link name. The `Title` field can be updated on posts of `Type` `QuestionPost`. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of feed item. Except for `ContentPost`, `LinkPost`, and `TextPost`, don't create feed items of other types directly from the API.<br>• `ActivityEvent`—indirectly generated event when a user or the API adds a Task associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a Task or Event associated with a case record (excluding email and call logging).<br>For a recurring Task with CaseFeed disabled, one event is generated for the series only. For a recurring Task with CaseFeed enabled, events are generated for the series and each occurrence.<br>• `AdvancedTextPost`—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post.<br>• `AnnouncementPost`—Not used.<br>• `ApprovalPost`—generated when a user submits an approval.<br>• `BasicTemplateFeedItem`—Not used.<br>• `CanvasPost`—a post made by a canvas app posted on a feed.<br>• `CollaborationGroupCreated`—generated when a user creates a public group.<br>• `CollaborationGroupUnarchived`—Not used.<br>• `ContentPost`—a post with an attached file.<br>• `CreatedRecordEvent`—generated when a user creates a record from the publisher. |

| Field | Details |
| --- | --- |
| | • `DashboardComponentAlert`—generated when a dashboard metric or gauge exceeds a user-defined threshold.<br>• `DashboardComponentSnapshot`—created when a user posts a dashboard snapshot on a feed.<br>• `LinkPost`—a post with an attached URL.<br>• `PollPost`—a poll posted on a feed.<br>• `ProfileSkillPost`—generated when a skill is added to a user's Chatter profile.<br>• `QuestionPost`—generated when a user posts a question.<br>• `ReplyPost`—generated when Chatter Answers posts a reply.<br>• `RypplePost`—generated when a user creates a Thanks badge in WDC.<br>• `TextPost`—a direct text entry on a feed.<br>• `TrackedChange`—a change or group of changes to a tracked field.<br>• `UserStatus`—automatically generated when a user adds a post. Deprecated.<br>The following values appear in the `Type` picklist for all feed objects but apply only to CaseFeed:<br>• `AttachArticleEvent`—generated event when a user attaches an article to a case.<br>• `CallLogPost`—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event.<br>• `CaseCommentPost`—generated event when a user adds a case comment for a case object.<br>• `ChangeStatusPost`—generated event when a user changes the status of a case.<br>• `ChatTranscriptPost`—generated event when Chat transcript is saved to a case.<br>• `EmailMessageEvent`—generated event when an email related to a case object is sent or received.<br>• `FacebookPost`—generated when a Facebook post is created from a case. Deprecated.<br>• `MilestoneEvent`—generated when a case milestone is completed or reaches violation status.<br>• `SocialPost`—generated when a social post is created from a case.<br>Note: If you set `Type` to `ContentPost`, also specify `ContentData` and `ContentFileName`. |

# Knowledge__ka

Provides access to the concrete object that represents a Knowledge article, the parent object for article versions. This object is available in API version 39.0 and later.

Note: By default, the prefix for this object name is `Knowledge` and that is the value shown in this reference. However, this prefix can be modified by changing the **Object Name** for the Knowledge__kav object in Object Manager.

This object is derived from KnowledgeArticle on page 2985.

## Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `undelete()`

## Special Access Rules

Lightning Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the `Knowledge User` feature license.

## Fields

| Field | Details |
|---|---|
| `ArchivedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who archived the article. |
| `ArchivedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the article was archived. |
| `ArticleNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The unique number automatically assigned to the article when it's created. You can't change the format or value for this field. |
| `CaseAssociationCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of cases attached to the article. |
| `FirstPublishedDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the article was first published. |
| `LastPublishedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the article was last published. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `MasterLanguage` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The article's original language. Only accessible if your knowledge base supports multiple languages. |
| `MigratedToFromArticle` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID for the corresponding pre- or post-migration article. Contains values only in orgs that migrate from Knowledge in Salesforce Classic to Lightning Knowledge. This field is available in API version 45.0 and later. |
| `TotalViewCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Total number of views for this article. This field is available in API version 39.0 and later. |

# Knowledge__kav

Provides access to the concrete object that represents a Knowledge article version. This object is available in API version 39.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Note: By default, the prefix for this object name is `Knowledge` and that is the value shown in this reference. However, this prefix can be modified by changing the **Object Name** for the Knowledge__kav object in Object Manager.

This object is derived from KnowledgeArticleVersion on page 2997.

## Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

This object doesn't retrieve `<ActionOverrides>`.

## Special Access Rules

Lightning Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the `Knowledge User` feature license.

## Fields

| Field | Details |
| --- | --- |
| `ArchivedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the user who archived the article. |
| `ArchivedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date the article version was archived. |
| `ArticleArchivedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who archived the article. |
| `ArticleArchivedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date the article was archived. |
| `ArticleCaseAttachCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of cases where this article is attached. |
| `ArticleCreatedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who created the article. |
| `ArticleCreatedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The date the article was created. |
| `ArticleMasterLanguage` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The article's original language. Only accessible if your knowledge base supports multiple languages. |
| `ArticleNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, Sort<br>**Description**<br>The unique number automatically assigned to the article when it's created. You can't change the format or value for this field. |
| `ArticleTotalViewCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Total number of views for the article. |
| `AssignedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who assigned the article. |
| `AssignedToId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user assigned to the article. |
| `AssignmentDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date the article was assigned to a user. |
| `AssignmentDueDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The due date when an article is assigned. |
| `AssignmentNote` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Notes to the assignee from the user who assigned the article. |
| `ExternalRef` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the item being referenced on the external system. For example, the ID of a document on a Google Drive or a page on Confluence. |
| `ExternalSourceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Reference to the external Knowledge data source object. |
| `ExternalUrl` | **Type**<br>url<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The URL of the knowledge content referenced in an external system. For example, the ID of a document in Google Drive or a page in Confluence. |

| Field | Details |
| --- | --- |
| `FirstPublishedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the article was first published. |
| `IsExternalData` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the data is external to the customer's knowledge base (`true`) or not (`false`). |
| `IsLatestVersion` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the article is the most current version. (`true`) or not (`false`). This field can be `true` on the online or published version, a draft version in the primary language, a draft version in a translation, and the latest archived version. However, you can't filter by (PublishState='Online') and (IsLatestVersion=false) because the online version is also the latest version. This field is available in API version 24.0 and later. |
| `IsMasterLanguage` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the article has one or more translations associated with it (`true`) or not (`false`). |
| `IsOutOfDate` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the source article has been updated since this translated version was created (`true`) or not (`false`). |

| Field | Details |
| --- | --- |
| `IsVisibleInApp` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Required. Indicates whether the article is visible in the Articles tab (`true`) or not (`false`). |
| `IsVisibleInCsp` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Required. Indicates whether the article is visible in the Customer Portal (`true`) or not (`false`). |
| `IsVisibleInPkb` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Required. Indicates whether the article is visible in the public knowledge base (`true`) or not (`false`). |
| `IsVisibleInPrm` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Required. Indicates whether the article is visible in the partner portal (`true`) or not (`false`). |
| `KnowledgeArticleId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the article independent from its version. The value for this field is retrieved from the `Id` field of the KnowledgeArticle object. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The language that the article is written in, such as `French` or `Chinese (Traditional)`.<br>Querying or searching articles in SOSL require that you specify the `Language` field in the WHERE clause. The language must be the same for all article types.<br>Before API version 47.0, you must include the `Language` field to filter queries on Knowledge article versions. In API version 47.0 and later, you can filter queries on Knowledge article versions with or without `Language` depending on what you are querying. |
| `LastPublishedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the article was last published. |
| `MasterVersionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the source article, if the article is the translation of a source article. Only accessible if your knowledge base supports multiple languages. |
| `MigratedToFromArticleVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID for the corresponding pre- or post-migration article version. Contains values only in orgs that migrate from Classic to Lightning Knowledge. Available in API version 43.0 and later. |
| `NextReviewDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the article must next be reviewed for accuracy. Available in API version 58.0 and later. |

| Field | Details |
| --- | --- |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the article's owner. |
| `PublishStatus` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The publication status for the article:<br>• `Draft`: any draft articles.<br>• `Online`: articles published in Salesforce Knowledge.<br>• `Archived`: archived articles.<br>A user must have the "Manage Articles" permission enabled to use `Online`.<br>Article queries and searches in SOQL or SOSL require that you specify either the `PublishStatus` or the `Id` field in the WHERE clause. You can search for only one publication status per article type in a single SOSL query. When searching for articles with a `PublishStatus` of `Archived`, also check that `IsLatestVersion` equals `false` in your WHERE clause. |
| `RecordTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates the API Name that describes the type of article. Use the record type to determine the article structure and other settings for different types of content. |
| `SourceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the source from which the article was created (Case or Reply). This field is only accessible from the API and isn't visible in the Salesforce UI. |
| `Summary` | **Type**<br>textarea |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Summary of the article. Maximum size is 1000 characters. |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. Article's title. Maximum size is 255 characters. |
| `TranslationCompletedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date and time when the article was last translated. Only accessible if your knowledge base supports multiple languages. |
| `TranslationExportedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date and time when the article was last exported for translation. Only accessible if your knowledge base supports multiple languages. |
| `TranslationImportedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date and time when the article was last imported for translation. Only accessible if your knowledge base supports multiple languages. |
| `UrlName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Required. Represents the article's URL. Can contain alphanumeric characters and hyphens but can't begin or end with a hyphen. Use a unique value regardless of context. (For example, a unique value allows you to get expected results when running an Apex test with `SeeAllData` set to `false`.) `UrlName` is case-sensitive and its maximum size is 255 characters. |
| `ValidationStatus` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group<br>**Description**<br>Shows whether the content of the article has been validated. Possible values are `Validated` and `Not Validated`. The default value is `Not Validated`. This field is available in API version 24.0 or later. |
| `VersionNumber` | **Type**<br>int<br>**Properties**<br>Group, Sort<br>**Description**<br>The number assigned to a version of an article. This field is available in API version 24.0 and later. |

# Knowledge__DataCategorySelection

Represents a data category that classifies an article. This object is available in API version 39.0 and later.

Note: By default, the prefix for this object name is `Knowledge` and that is the value shown in this reference. However, this prefix can be modified by changing the **Object Name** for the Knowledge__kav object in Object Manager.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Lightning Knowledge must be enabled in your org.

## Fields

| Field | Details |
| --- | --- |
| `DataCategoryGroupName` | **Type**<br>datacategorygroupreference<br>**Properties**<br>Create<br>**Description**<br>Unique name of the data category group which has categories associated with the article. |
| `DataCategoryName` | **Type**<br>datacategorygroupreference<br>**Properties**<br>Create<br>**Description**<br>Unique name of the data category associated with the article. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the article associated with the data category selection. |

## Usage

Every article in Salesforce Knowledge can be categorized. A data category selection represents a category that has been selected to classify an article. You can use this object to query and manage article categorization in your organization. Client applications can create a categorization for an article with a Draft status. They can also delete and query article categorizations.

Note: When using this object to classify an article, you can't select both a category (for example USA) and one of its descendants (California) or ascendant categories (North America). In this case, only the first category is selected.

# KnowledgeableUser

Represents a user identified as knowledgeable about a specific topic, and ranks them relative to other knowledgeable users. This object is available in API version 31.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
|---|---|
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Experience Cloud site the topic exists in. This field is available only if digigal experiences is enabled for your org. |
| `RawRank` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Rank of this user's knowledge on the topic relative to other users. |
| `TopicId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Unique ID for the topic in Salesforce. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Unique ID for the user in Salesforce. |

# KnowledgeArticle

Provides read-only access to an article and the ability to delete the primary article. This object is available in API version 19.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Unlike KnowledgeArticleVersion, the ID of a KnowledgeArticle record is identical irrespective of the article's version (status).

Knowledge__ka on page 2971 is derived from this object.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the `Knowledge User` feature license.

## Fields

| Field Name | Details |
| --- | --- |
| `ArchivedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who archived the article. |
| `ArchivedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the article was archived. |
| `ArticleNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The unique number automatically assigned to the article when it's created. You can't change the format or value for this field. |
| `CaseAssociationCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of cases attached to the article. |
| `FirstPublishedDate` | **Type**<br>dateTime |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the article was first published. |
| `IsGeneratedByLlm` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>True if the first version of an article was created with an LLM. This object is available in API version 59.0 and later. |
| `LastPublishedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the article was last published. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user has not viewed this record or list view, though they might have accessed it (`LastReferencedDate`) |
| `MasterLanguage` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The article's original language. Only accessible if your knowledge base supports multiple languages. |
| `MigratedToFromArticle` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID for the corresponding pre- or post-migration article. Contains values only in orgs that migrate from Knowledge in Salesforce Classic to Lightning Knowledge. This field is available in API version 45.0 and later. |
| `TotalViewCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Total number of views for this article. This field is available in API version 39.0 and later. |

## Usage

Use this object to query or retrieve articles. KnowledgeArticle can be used in a SOQL clause, but doesn't provide access to the fields from the article. Provides read-only access to an article and the ability to delete the primary article.

## Usage for SOQL with KnowledgeArticle

To expose the `migrated_to_from_id` column on KnowledgeArticle and KnowledgeArticleVersion to the sObject API: expose `MigratedToFromArticle` in KnowledgeArticle.

For SOQL:

- To filter by `MigratedToFromArticle`, remove any other filters.
- When filtering by `MigratedToFromArticle`, use the '=' or 'IN' operator.
- When filtering by `MigratedToFromArticle`, the value can't be null or empty.

KnowledgeArticleVersion

# KnowledgeArticleEventLog

Knowledge Article View event logs contain user activity with your knowledge base. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
|---|---|
| `ArticleIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The id of the article. For example: `00Dxx0000001gEb`. |
| `ArticleStatus` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The status of the article.<br>Possible values are:<br>• `D`—Draft<br>• `O`—Online<br>• `A`—Archived |
| `ArticleVersion` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The article version number. For example: `2`. |
| `ArticleVersionIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The 15-character ID of the article version. For example: `ka0R00000005rt6`. |
| `Context` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Context of the request. |
| `IsLargeLanguageModel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Whether the article was written with an LLM. |
| `IsLastVersion` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>True if it is the last version of the article.<br>The default value is `false`. |
| `Language` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ISO code of the language. For example: `en_US/` |
| `ObjectType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The object requested. For example: `Knowledge__kav`. |
| `RequestIdentifier` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestIdentifier`. For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `SessionIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Session ID of the request. For example: `gV7pCSW2vGaaJNFi3GSpuPIjNbKVbSxRvx34LJsIvuc=`. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |
| `UserType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>User type of the request.<br>Possible values are:<br>• `A`—App<br>• `C`—Customer Portal<br>• `P`—Partner Portal |

| Field | Details |
| --- | --- |
| | • G—Guest |

# KnowledgeArticleFeedback

Represents information about feedback from users on Knowledge articles and details about assignment of feedback to the article owner or team to take action. This object is available in API version 64.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `delete()`, `update()`

Note: A KnowledgeArticleFeedback record is created only when a user submits feedback.

## Special Access Rules

Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the `Knowledge User` feature license. Knowledge Article Feedback Org Preference should also be enabled.

## Fields

| Field Name | Details |
| --- | --- |
| `AssignedToId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The user ID of the feedback assignee, who reviews and takes action on the feedback.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>AssignedTo<br>**Refers To**<br>Group, User |
| `FeedbackResponseId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The unique ID of the feedback response associated with the feedback record.<br>This field is a relationship field.<br>**Relationship Name**<br>FeedbackResponse<br>**Refers To**<br>SurveyResponse |
| `FeedbackSource` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The source of feedback. Possible values are:<br>• `Internal`<br>• `Community` |
| `FeedbackSubmitterId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the user who submitted feedback.<br>This field is a relationship field.<br>**Relationship Name**<br>FeedbackSubmitter<br>**Refers To**<br>User |
| `IsLiked` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>The answer to the Article Liked question in the feedback form.<br>The default value is false |
| `KnowledgeArticle` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the article associated with the feedback response. |
| `KnowledgeArticleUrl` | **Type**<br>url<br>**Properties**<br>Filter, Sort<br>**Description**<br>The URL of the article version associated with the feedback response. |
| `KnowledgeArticleVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The version of the article associated with the feedback response. |
| `KnowledgeArticleVersionTitle` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The title of the article version associated with the feedback response. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the feedback record was last accessed or referenced. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the feedback record was last viewed. |
| `LinkedArticleEntityId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Internal entity that links a Knowledge article version and survey invitation.<br>This field is a relationship field.<br>**Relationship Name**<br>LinkedArticleEntity<br>**Refers To**<br>LinkedArticle |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>A unique name automatically assigned to the Knowledge article feedback when it's created. You can't change the format or value of this field. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>The user ID of the article feedback owner.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |
| `ReviewActionTaken` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Sort, Nillable, Update<br>**Description**<br>The review action taken to address the feedback. You can configure the possible values for this picklist field. |
| `ReviewComment` | **Type**<br>textArea |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>The review comment provided by the feedback assignee. This is optional. The maximum length is 1,212 characters. |
| `ReviewCompletionDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>The date when the review was completed. |
| `ReviewDueDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>The due date for completing the feedback review. |
| `ReviewStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Sort, Nillable, Update<br>**Description**<br>The review status of the feedback. You can configure the possible values for this picklist field. |

## Usage

Use this object to query, retrieve, or search for article feedback based on your access level to the articles. You can filter feedback records by Knowledge article, article version, or other criteria.

## SOQL Samples

The SOQL clause queries KnowledgeArticleFeedback records which aren't reviewed.

```
SELECT FeedbackResponseId, IsLiked, KnowledgeArticleVersion
FROM KnowledgeArticleFeedback
WHERE ReviewCompletionDate = NULL
```

The SOQL clause queries KnowledgeArticleFeedback records for a specific article version.

```
SELECT FeedbackResponseId, IsLiked, KnowledgeArticleVersion, AssignedToId, ReviewStatus
FROM KnowledgeArticleFeedback
WHERE KnowledgeArticleVersion = 'ka0SG00000KSjjRYAT'
```

# KnowledgeArticleVersion

Provides a global view of standard article fields across all types of articles depending on their version. This object is available in API version 18.0 and later.

**Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Use this object to:

- Query or search generically across multiple types of articles.
- Filter on a specific version.
- Update standard fields in draft versions.

When you query on the archived article, the results include both the article and the article's archived versions.

Knowledge__kav on page 2974 is derived from this object.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`

**Note:**

- You can only update draft versions.
- You can't update draft translations with the `knowledgeManagement` REST API.
- For Lightning Knowledge, to create, update, or delete a Knowledge article version, use the call on Knowledge__kav. For example, to delete, use `Knowledge__kav.delete()`.
- For Knowledge in Salesforce Classic, to create, update, or delete a Knowledge article version, use the call on *`ArticleType`*`__kav`, where *`ArticleType`* is the name of the article's type. For example, to delete, use `ArticleType__kav.delete()`.

## Special Access Rules

Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the `Knowledge User` feature license.

## Fields

| Field Name | Details |
| --- | --- |
| `ArchivedById` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who archived the article. |
| `ArchivedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date the article version was archived. |
| `ArticleArchivedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who archived the article. |
| `ArticleArchivedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date the article was archived. |
| `ArticleCaseAttachCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of cases where this article is attached. |
| `ArticleCreatedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who created the article. |
| `ArticleCreatedDate` | **Type**<br>dateTime |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date the article was created. |
| `ArticleMasterLanguage` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The article's original language. Only accessible if your knowledge base supports multiple languages. |
| `ArticleNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, Sort<br>**Description**<br>The unique number automatically assigned to the article when it's created. You can't change the format or value for this field. |
| `ArticleTotalViewCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Total number of views for the article. |
| `ArticleType` | **Type**<br>string<br>**Properties**<br>Defaulted on createFilter<br>**Description**<br>Indicates the API Name of the article type. The `ArticleType` is assigned to the article when it's created. You can't change the value of this field. This field is available in orgs using Knowledge in Salesforce Classic in API version 26.0 and later. |
| `AssignedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The ID of the user who assigned the article. |
| `AssignedToId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user assigned to the article. |
| `AssignmentDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date the article was assigned to a user. |
| `AssignmentDueDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The due date when an article is assigned. |
| `AssignmentNote` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Notes to the assignee from the user who assigned the article. |
| `FirstPublishedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the article was first published. |
| `IsLatestVersion` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the article is the most current version. (`true`) or not (`false`). This field can be `true` on the online or published version, a draft version in the primary language, a draft version in a translation, and the latest archived version. However, you can't filter by (PublishState='Online') and (IsLatestVersion=false) because the online version is also the latest version. This field is available in API version 24.0 and later. |
| `IsMasterLanguage` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the article has one or more translations associated with it (`true`) or not (`false`). Only accessible if your knowledge base supports multiple languages. |
| `IsOutOfDate` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the source article has been updated since this translated version was created (`true`) or not (`false`). Only accessible if your knowledge base supports multiple languages. |
| `IsVisibleInApp` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Required. Indicates whether the article is visible in the Articles tab (`true`) or not (`false`). |
| `IsVisibleInCsp` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Required. Indicates whether the article is visible in the Customer Portal (`true`) or not (`false`). |
| `IsVisibleInPkb` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Required. Indicates whether the article is visible in the public knowledge base (`true`) or not (`false`). |
| `IsVisibleInPrm` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Required. Indicates whether the article is visible in the partner portal (`true`) or not (`false`). |
| `KnowledgeArticleId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the article independent from its version. The value for this field is retrieved from the `Id` field of the KnowledgeArticle object. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language that the article is written in, such as `French` or `Chinese (Traditional)`.<br>Querying or searching articles in SOSL require that you specify the `Language` field in the WHERE clause. The language must be the same for all article types.<br>Before API version 47.0, you must include the `Language` field to filter queries on Knowledge article versions. In API version 47.0 and later, you can filter queries on Knowledge article versions with or without `Language` depending on what you are querying. |
| `LargeLanguageModel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Shows the LLM used to create an article version. This object is available in API version 59.0 and later. |
| `LastPublishedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the article was last published. |
| `MasterVersionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the source article, if the article is the translation of a source article. Only accessible if your knowledge base supports multiple languages. |
| `MigratedToFromArticleVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID for the corresponding pre- or post-migration article version. Contains values only in orgs that migrate from Classic to Lightning Knowledge. Available in API version 43.0 and later. |
| `NextReviewDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the article must next be reviewed for accuracy. Available in API version 58.0 and later. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the article's owner. |

| Field Name | Details |
| --- | --- |
| `PublishStatus` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The publication status for the article:<br>• `Draft`: any draft articles.<br>• `Online`: articles published in Salesforce Knowledge.<br>• `Archived`: archived articles.<br>A user must have the "Manage Articles" permission enabled to use `Online`.<br>Article queries and searches in SOQL or SOSL require that you specify either the `PublishStatus` or the `Id` field in the WHERE clause. You can search for only one publication status per article type in a single SOSL query. When searching for articles with a `PublishStatus` of `Archived`, also check that `IsLatestVersion` equals `false` in your WHERE clause. |
| `SourceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the source from which the article was created (Case or Reply). |
| `Summary` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Summary of the article. Maximum size is 1000 characters. |
| `Title` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Required. Article's title. Maximum size is 255 characters. |
| `TranslationCompletedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Date and time when the article was last translated. Only accessible if your knowledge base supports multiple languages. |
| `TranslationExportedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date and time when the article was last exported for translation. Only accessible if your knowledge base supports multiple languages. |
| `TranslationImportedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date and time when the article was last imported for translation. Only accessible if your knowledge base supports multiple languages. |
| `UrlName` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Required. Represents the article's URL. Can contain alphanumeric characters and hyphens but can't begin or end with a hyphen. This value must be unique regardless of context. (For example, a unique value allows you to get expected results when running an Apex test with `SeeAllData` set to `false`.) `UrlName` is case-sensitive and its maximum size is 255 characters. |
| `ValidationStatus` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group<br>**Description**<br>Shows whether the content of the article has been validated. Possible values are `Validated` and `Not Validated`. The default value is `Not Validated`. This field is available in API version 24.0 or later. |
| `VersionNumber` | **Type**<br>int |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Group, Sort<br>**Description**<br>The number assigned to a version of an article. This field is available in API version 24.0 and later. |

## Usage

Use this object to query, retrieve, or search for articles across all types of articles depending on their version. You can update draft primary articles. Also, you can delete articles that aren't drafts. Client applications can use KnowledgeArticleVersion with `describeDataCategoryGroups()` and `describeDataCategoryGroupStructures()` to return the category groups and the category structure associated with Salesforce Knowledge.

To access an article independent of its version, use the KnowledgeArticle object.

In Lightning Knowledge, the type of article is determined by the `RecordType` field on the concrete derived object (for example, Knowledge__kav on page 2974). For Knowledge in Salesforce Classic, the type of article is determined by the `ArticleType` field and the concrete derived object uses the prefix of the article type name (for example, FAQ__kav for the FAQ article type).

## SOQL Samples

The following SOQL clause uses KnowledgeArticleVersion to query all published articles from all articles complying with the classification specified in the WITH DATA CATEGORY clause:

```
SELECT Title, Summary
FROM KnowledgeArticleVersion
WHERE PublishStatus='Online'
AND Language = 'en_US'
WITH DATA CATEGORY Geography__c ABOVE_OR_BELOW europe__c AND Product__c BELOW All__c
```

The following SOQL clause for Lightning Knowledge uses the `Offer` record type to limit the query to all draft articles:

```
SELECT Id, Title
FROM Knowledge__kav
WHERE PublishStatus='Draft'
AND Language = 'en_US'
AND RecordTypeId = '<specify RecordTypeId for Offer here>'
WITH DATA CATEGORY Geography__c AT (france__c,usa__c) AND Product__c ABOVE dsl__c
```

The following SOQL clause for Salesforce Classic uses the `Offer` article type to limit the query to all draft articles:

```
SELECT Id, Title
FROM Offer__kav
WHERE PublishStatus='Draft'
AND Language = 'en_US'
WITH DATA CATEGORY Geography__c AT (france__c,usa__c) AND Product__c ABOVE dsl__c
```

The following SOQL clause uses KnowledgeArticleVersion to query the IDs of all archived versions of a particular article:

```
SELECT Id
FROM KnowledgeArticleVersion
```

```
WHERE PublishStatus='Archived'
AND IsLatestVersion=false
AND KnowledgeArticleId='kA1D00000001PQ6KAM'
```

## SOQL and SOSL with KnowledgeArticleVersion

- Filter on a single value of `PublishStatus` for best results. To find all versions of each article, omit the `PublishStatus` filter, but do filter on one or more master key IDs. To retrieve all archived versions for a given article, specify a SOQL filter where `IsLatestVersion` is `false`.
- In API version 46.0 and earlier, queries without a filter on `PublishStatus` return published articles by default. In API version 47.0 and later, draft, published, and archived articles are returned when Lightning Knowledge is enabled.
- To support security, only users with the "View Draft Articles" permission see articles whose `PublishStatus` value is `Draft`. Similarly, only users with the "View Archived Articles" permission see articles whose `PublishStatus` value is `Archived`
- Archived article versions are stored in the ***`Knowledge`***`__kav` object. To query archived article versions, specify the article `Id` and set `IsLatestVersion='0'`.
- You can't use binding variables in Apex SOQL statements with KnowledgeArticleVersion objects. For example, the following SOQL statement causes a compilation error.

  ```
  final String PUBLISH_STATUS_ONLINE = 'Online';
  List<Knowledge__kav> articles = [
  SELECT Id FROM Knowledge__kav
  WHERE PublishStatus = :PUBLISH_STATUS_ONLINE
  ];
  ```

  Instead, use dynamic SOQL as follows. See Dynamic SOQL in *Apex Developer Guide*.

  ```
  final String PUBLISH_STATUS_ONLINE = 'Online';
  final String q = 'SELECT Id, PublishStatus FROM Knowledge__kav
  WHERE PublishStatus = :PUBLISH_STATUS_ONLINE';
  List<Knowledge__kav> articles = Database.query(q);
  ```

## Other Usage for SOQL and SOSL with KnowledgeArticleVersion

To expose the *migrated_to_from_id* on **KnowledgeArticle** and **KnowledgeArticleVersion** to the sObject API: expose **MigratedToFromArticleVersion** in **KnowledgeArticleVersion**.

- For SOQL:
  - To filter by **MigratedToFromArticleVersion**, remove any other filters.
  - When filtering by **MigratedToFromArticleVersion**, use the '=' or 'IN' operator.
  - When filtering by **MigratedToFromArticleVersion**, the value can't be null or empty.
- SOSL doesn't support **MigratedToFromArticleVersion**.

## Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

**KnowledgeArticleVersionHistory**
History is available for tracked fields of the object.

SEE ALSO:

KnowledgeArticle
KnowledgeArticleViewStat
KnowledgeArticleVoteStat

# KnowledgeArticleVersionHistory

Enables read-only access to the full history of an article. This object is available in API version 25.0 and later.

Knowledge__VersionHistory is derived from this object. To access this derived object, turn on field history tracking for Knowledge objects.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

## Special Access Rules

Knowledge must be enabled in your org. This object respects field, entity, and record-level security. You must have at least "Read" permission on the article type or the field to access its history. For data category security, Salesforce determines access based on the categorization of the online version of an article. If there's no online version, then security is applied based on the archived version, followed by the security of the draft version.

## Fields

| Field Name | Details |
| --- | --- |
| `DataType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of data that is tracked in the history table. This field is available in API version 50.0 and later. |
| `EventType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The type of event that is tracked in the history table. |
| `FieldName` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Name of the tracked field. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language that the article is written in, such as `French` or `Chinese (Traditional)`. Querying or searching articles in SOSL requires that you specify the `Language` field in the WHERE clause. The language must be the same for all article types. |
| `NewValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The new value of the field that was changed. |
| `OldValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The most recent value of the field before it was changed. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the article. |

| Field Name | Details |
| --- | --- |
| `ParentSobjectType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of object that contains the field. |
| `VersionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID assigned to a version of the article.<br>This is a polymorphic relationship field. |
| `VersionNumber` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number assigned to a version of an article. This field is available in API version 24.0 and later. |

## Usage

Use this object to query events in the history of an article. For example, you can retrieve the number of edits a particular user has made to an article, how many times the article has been published, and so on.

# KnowledgeArticleViewStat

Provides certain statistics related to the number of views for the specified article across all article types. The view count statistics are for published and archived articles only. View counts for draft articles aren't tracked. This object is read-only and available in API version 20.0 and later.

Knowledge__ViewStat is derived from this object.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Knowledge must be enabled in your org. Users must have access to the published and archived versions of an article to retrieve its views. For more information on published and archived article versions, see the `PublishStatus` field in KnowledgeArticleVersion.

## Fields

| Field Name | Details |
| --- | --- |
| `Channel` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The channel where the article is viewed:<br>• `AllChannels` for article views across all channels.<br>• `App` for the internal Salesforce Knowledge application.<br>• `Pkb` for article views in the public knowledge base.<br>• `Csp` for Customer Portal.<br>• `Prm` for article view in partner portal. |
| `NormalizedScore` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Article's weighted views in the selected channel. The article with most views has a score of 100. Other article views are then calculated relative to this highest view score. For example, if the best read article has 2000 views and another has 1000. The first one gets a score of 100 while the second gets 50. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the viewed article. This corresponds to a KnowledgeArticle record. |
| `ViewCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The number of unique views a published or archived article has received in the selected channel. An article with a high number of views may not always have a high normalized score. The normalized score for an article is calculated based on views over time, with more recent views earning a higher score. This field is available in API version 27.0 and later. |

## Usage

Use this object to query or retrieve certain statistics for article views.

Alternatively, client applications can use the article type `API Name` followed by `__ViewStat` to query or retrieve most viewed articles from a specific article type.

## SOQL Samples

The following SOQL clause uses KnowledgeArticleViewStat to query all the article views in Salesforce Knowledge and return the related articles:

```
SELECT Id, NormalizedScore, Parent.Id
        FROM KnowledgeArticleViewStat where Channel = 'App'
        ORDER BY NormalizedScore
```

Use the following clause to restrict your query to Offer articles for the `Offer` article type:

```
SELECT Id, NormalizedScore, Parent.Id
        FROM Offer__ViewStat where Channel = 'App'
        ORDER BY NormalizedScore
```

SEE ALSO:

- KnowledgeArticle
- KnowledgeArticleVersion
- KnowledgeArticleVoteStat

# KnowledgeArticleVoteStat

Provides the weighted rating for the specified article on a scale of 1 to 5 across all article types. This object is read-only and available in API version 20.0 and later.

Knowledge__VoteStat is derived from this object.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Knowledge must be enabled in your org. Users must have access to the published version of an article to retrieve its votes. For more information on published article version, see the `PublishStatus` field in KnowledgeArticleVersion

## Fields

| Field Name | Details |
|---|---|
| `Channel` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The channel where the article is rated:<br>• `AllChannels` for article views across all channels.<br>• `App` for the internal Salesforce Knowledge application.<br>• `Pkb` for article views in public knowledge base.<br>• `Csp` for Customer Portal.<br>• `Prm` for article view in partner portal. |
| `NormalizedScore` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Article's weighted score on a scale of 1 to 5. A higher score means more votes. Articles without recent votes trend towards an average rating of three stars. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The rated article. This corresponds to a KnowledgeArticle record. |

## Usage

Use this object to query or retrieve the rating for an article.

Alternatively, client applications can use the article type `API Name` followed by `__VoteStat` to query or retrieve the rating for an article for a specific article type.

## SOQL Samples

See KnowledgeArticleViewStat.

# LandingPage

Represents an Account Engagement landing page. A landing page is a web page that a visitor reaches after clicking a link or advertisement. Landing pages can be created in Account Engagement and synced to Salesforce or created on the Landing Page object in Account Engagement Lightning App. This object is available in API version 42.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access this object, your org must use Account Engagement and users need the CRM User or Sales User permission set. To create, update, or delete a builder landing page, the Use Account Engagement Content Experience permission set is required.

## Fields

| Field Name | Details |
|---|---|
| `CampaignId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related campaign. |
| `ContentLastSaved` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The date and time of the last time someone changed and saved the landing page Name, Campaign, Content, IsHideFromSearchEngineIndex, or Vanity URL fields. This field is available in API version 53.0 and later. |
| `ContentLastSavedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user who last changed and saved the Content body. This is a relationship field. This field is available in API version 53.0 and later.<br>**Relationship Name**<br>ContentLastSaved<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `FallbackUrl` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The URL used to redirect viewers after the landing page is unpublished. This field is available in API version 54.0 and later. |
| `FooterCode` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>`<Script>`, `<style>`, and `<link>` code added before the landing page's closing body tag. This field is available in API version 54.0 and later. |
| `FormErrorRate` | **Type**<br>percent<br>**Properties**<br>Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The percentage of errors made on the landing page form. Calculated as total errors divided by total views. |
| `FormSubmissionRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of form submissions based on the total number of landing page views. |
| `HeaderCode` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>`<Script>`, `<style>`, and `<link>` code added to the head tag of the landing page. This field is available in API version 54.0 and later. |
| `IsHideFromSearchEngineIndex` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the landing page is hidden from search engine indexing. The default value is `false`. This field is available in API version 53.0 and later. |
| `LastPublished` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time of the last time someone published the landing page. This field is available in API version 53.0 and later. |
| `LastPublishedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The user who last published the landing page. This is a relationship field. This field is available in API version 53.0 and later.<br>**Relationship Name**<br>LastPublished<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the current user last viewed this record. If this value is null, this record might only have been referenced (see `LastReferencedDate`) and not viewed. This field is available in API version 53.0 and later. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The name of the landing page. |
| `PublicLink` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The URL where the landing page is available. This field is available in API version 53.0 and later. |
| `Source` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates where the landing page was created. The default value is `Salesforce`. This field is available in API version 53.0 and later. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates the state of the landing page: `Draft`, `Published`, or `Published (Changes Pending)`. The default value is `Draft`. This field is available in API version 53.0 and later. |
| `TotalFormErrors` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of times a visitor or prospect enters an invalid email address or leaves a required field blank on a landing page form. |
| `TotalFormSubmissions` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The number of times a form on the landing page has been submitted. |
| `TotalTrackedLinkClicks` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The number of times prospects clicked a link on the landing page's thank you page. |
| `TotalViews` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of times visitors and prospects viewed your landing page. This total includes multiple views from the same person. |
| `UniqueFormErrors` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The number of individual visitors and prospects who made an error on the form. This metric doesn't include multiple errors from the same person. |
| `UniqueFormSubmissions` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The number of individual visitors who submitted a form on the landing page. This metric doesn't include multiple submissions from the same person. |
| `UniqueTrackedLinkClicks` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The number of times a prospect clicked a link on the landing page's thank you page. This metric doesn't include multiple clicks of the same link. |
| `UniqueViews` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The number of individual visitors and prospects who viewed your landing page. This metric doesn't include multiple views from the same person. |
| `VanityUrl` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The custom path that's appended to tracker domains to create a vanity URL. This field doesn't support scheme or domain values. This field is available in API version 53.0 and later. |

## Associated Objects

This object has the following associated objects. Unless otherwise noted, they're available in the same API version as this object.

**LandingPageChangeEvent (API version 44.0)**
Change events are available for the object.

**LandingPageFeed**
Feed tracking is available for the object.

# Lead

Represents a prospect or lead.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `merge()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `ActionCadenceAssigneeId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the sales rep designated to work the lead through their assigned cadence. This field is available in API version 48.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set. |
| `ActionCadenceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the lead's assigned cadence. This field is available in API version 48.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set. |
| `ActionCadenceState` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The state of the current action cadence tracker. This field is available in API version 50.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set.<br>Possible values are:<br>• `Complete`<br>• `Error`<br>• `Initializing`<br>• `Paused`<br>• `Processing`<br>• `Running` |
| `ActiveTrackerCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of cadences that are actively running on this lead. This field is available in API version 57.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set. |

| Field | Details |
| --- | --- |
| `ActivityMetricId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>When Einstein Activity Capture with Activity Metrics is enabled, the ID of the related activity metric.<br>This field is a relationship field.<br>This field is available in API version 41.0 and later.<br>**Relationship Name**<br>ActivityMetric<br>**Refers To**<br>ActivityMetric |
| `ActivityMetricRollupId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>When Einstein Activity Capture with Activity Metrics is enabled, the ID of the related activity metric rollup.<br>This field is a relationship field.<br>This field is available in API version 41.0 and later.<br>**Relationship Name**<br>ActivityMetricRollup<br>**Refers To**<br>ActivityMetricRollup |
| `Address` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The compound form of the address. Read-only. For details on compound address fields, see Address Compound Fields. |
| `AnnualRevenue` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Annual revenue for the lead's company. |
| `City` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>City for the lead's address. |
| `CleanStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the record's clean status compared with Data.com. .<br>Several values for `CleanStatus` appear with different labels on the lead record.<br>Values include:<br>• `Acknowledged - Reviewed`<br>• `Different`<br>• `Inactive`<br>• `Matched - In Sync`<br>• `NotFound - Not Found`<br>• `Pending - Not Compared`<br>• `SelectMatch - Select Match Skipped` |
| `Company` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required. The lead's company.<br>If person account record types have been enabled, and if the value of `Company` is null, the lead converts to a person account. |
| `CompanyDunsNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The Data Universal Numbering System (D-U-N-S) number, which is a unique, nine-digit number assigned to every business location in the Dun & Bradstreet database that has a unique, separate, and distinct operation. Industries and companies use D-U-N-S numbers as a global standard for business identification and tracking. Maximum size is 9 characters.<br>This field is only available to organizations that use Data.com Prospector or Data.com Clean. |
| `ConvertedAccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Object reference ID that points to the account into which the lead converted.<br>This is a relationship field.<br>**Relationship Name**<br>ConvertedAccount<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `ConvertedContactId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Object reference ID that points to the contact into which the lead converted.<br>This is a relationship field.<br>**Relationship Name**<br>ConvertedContact<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `ConvertedDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Date on which this lead was converted. |

| Field | Details |
| --- | --- |
| `ConvertedOpportunityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Object reference ID that points to the opportunity into which the lead has been converted.<br>This is a relationship field.<br>**Relationship Name**<br>ConvertedOpportunity<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Opportunity |
| `ConnectionReceivedId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the PartnerNetworkConnection that shared this record with your org. This field is available when Salesforce to Salesforce is enabled. |
| `ConnectionSentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the PartnerNetworkConnection that this record is shared with. This field is available Salesforce to Salesforce is enabled. In API version 16.0 and later, this value is `null`. Use PartnerNetworkRecordConnection object to forward records to connections. |
| `Country` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The lead's country. |
| `CountryCode` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ISO country code for the lead's address. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. |
| `DandBCompanyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Reference ID to a Dun & Bradstreet® company record, associated with an account added from Data.com.<br>**Relationship Name**<br>DandbCompany<br>**Refers To**<br>DandbCompany |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The lead's description. |
| `Division` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as North America, Healthcare, or Consulting. Available only when the Division permission is enabled. |

| Field | Details |
| --- | --- |
| `Email` | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort, Update<br>**Description**<br>The lead's email address. |
| `EmailBouncedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>If bounce management is activated and an email sent to the lead bounced, the date and time of the bounce. Email bounce functionality isn't triggered by record updates, including updates to this field. |
| `EmailBouncedReason` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>If bounce management is activated and an email sent to the lead bounced, the reason for the bounce. Email bounce functionality isn't triggered by record updates, including updates to this field. |
| `ExportStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Restricted picklist, Sort<br>**Description**<br>Derived field for the record map for Partner Connect. The export status of this opportunity to the partner's connected org. To see this field, enable Partner Connect and add the Export Vendor Records to an Authorized Partner Org user permission to the cosell export user. See Set Up Partner Connect as a Vendor in *Salesforce Help*. Available in API version 62.0 and later. |
| `Fax` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The lead's fax number. |

| Field | Details |
| --- | --- |
| `FirstCallDateTime` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time of the first call placed to the lead. This field is available in API version 48.0 when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set. |
| `FirstEmailDateTime` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time of the first email sent to the lead. This field is available in API version 48.0 when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set. |
| `FirstName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The lead's first name up to 40 characters. |
| `GeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Accuracy level of the geocode for the address. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `GenderIdentity` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The lead's internal experience of their gender, which may or may not correspond to their designated sex at birth. |

| Field | Details |
| --- | --- |
| `HasOptedOutOfEmail` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Update<br>**Description**<br>Indicates whether the lead doesn't want to receive email from Salesforce (`true`) or does (`false`). Label is **Email Opt Out**. |
| `HasOptedOutOfFax` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the lead doesn't want to receive faxes from Salesforce (`true`) or does (`false`). Label is **FaxOpt Out**. |
| `IndividualId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the data privacy record associated with this lead. This field is available if you enabled Data Protection and Privacy in Setup.<br>**Relationship Name**<br>Individual<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Individual |
| `Industry` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Industry in which the lead works. |
| `IsConverted` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the lead has been converted (`true`) or not (`false`). Label is **Converted**. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `IsPriorityRecord` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Group<br>**Description**<br>Shows whether the user has marked the lead as important (*`True`*) or not (*`False`*). The default value is `false`. Available in API version 59.0 and later. |
| `IsUnreadByOwner` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If true, lead has been assigned, but not yet viewed. See Unread Leads for more information. Label is **Unread By Owner**. |
| `Jigsaw` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>References the ID of a contact in Data.com. If a lead has a value in this field, it means that a contact was imported as a lead from Data.com. If the contact (converted to a lead) wasn't imported from Data.com, the field value is null. Maximum size is 20 characters. Available in API version 22.0 and later. Label is **Data.com Key**.<br>Important: The `Jigsaw` field is exposed in the API to support troubleshooting for import errors and reimporting of corrected data. Don't modify the value in the `Jigsaw` field. |
| `JigsawContactId` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the contact in reference to `Jigsaw`.<br>Important: The `Jigsaw` field is exposed in the API to support troubleshooting for import errors and reimporting of corrected data. Don't modify the value in the `Jigsaw` field. |
| `LastActivityDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Value is the most recent of either:<br>• Due date of the most recent event logged against the record.<br>• Due date of the most recently closed task associated with the record. |
| `LastName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. Last name of the lead up to 80 characters. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record. |
| `LastViewedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |

| Field | Details |
| --- | --- |
| `Latitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `Longitude` to specify the precise geolocation of an address. Acceptable values are numbers between –90 and 90 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations |
| `LeadSource` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The origin or source of the lead. |
| `Longitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `Latitude` to specify the precise geolocation of an address. Acceptable values are numbers between –180 and 180 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `MasterRecordId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If this record was deleted as the result of a merge, this field contains the ID of the record that was kept. If this record was deleted for any other reason, or hasn't been deleted, the value is `null`.<br>When using Apex triggers to determine which record was deleted in a merge event, this field's value is the ID of the record that remains in `Trigger.old`. In `Trigger.new`, the value is `null`.<br>This is a relationship field.<br>**Relationship Name**<br>MasterRecord<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Lead |
| `MiddleName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The lead's middle name. Maximum size is 40 characters. |
| `MobilePhone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The lead's mobile phone number. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Concatenation of `FirstName`, `MiddleName`, `LastName`, and `Suffix` up to 203 characters, including whitespaces. |
| `NumberOfEmployees` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Number of employees at the lead's company. Label is **Employees**. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the lead's owner.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PartnerAccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the partner account for the partner user that owns this lead. Available if Partner Relationship Management is enabled or if digital experiences is enabled and you have partner portal licenses.<br>In API version 16.0 and later, the `Partner Account` field is set to the appropriate account for the partner user that owns the lead. If the owner of the lead isn't a partner user, this field has no value. |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The lead's phone number. |
| `PhotoUrl` | **Type**<br>url<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Path to be combined with the URL of a Salesforce instance (*Example:* https://*`yourInstance`*.salesforce.com/) to generate a URL to request the social network profile image associated with the lead. Generated URL returns an HTTP redirect (code 302) to the social network profile image for the lead. |
| `PostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Postal code for the address of the lead. Label is **Zip/Postal Code**. |

| Field | Details |
| --- | --- |
| `Pronouns` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The lead's personal pronouns, reflecting their gender identity. Others can use these pronouns to refer to the lead in the third person. The entry is selected from a picklist of available values, which the administrator sets. Maximum 40 characters.<br>Possible values are:<br>• `He/Him`<br>• `He/They`<br>• `Not Listed`<br>• `She/Her`<br>• `She/They`<br>• `They/Them` |
| `Rating` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Rating of the lead. |
| `RecordTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>ID of the record type assigned to this object. |
| `Salutation` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Salutation for the lead. |
| `ScheduledResumeDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The date and time when the action cadence tracker is going to resume after it's paused or on a wait step. This field is available in API version 54.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set. |
| `ScoreIntelligenceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the intelligent field record that contains lead score. |
| `State` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>State for the address of the lead. |
| `StateCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ISO state code for the lead's address. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Status code for this converted lead. Status codes are defined in `Status` and represented in the API by the LeadStatus object. |
| `Street` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Street number and name for the address of the lead. |

| Field | Details |
| --- | --- |
| `Suffix` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The lead's name suffix. Maximum size is 40 characters. |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Title for the lead, such as CFO or CEO. The maximum size is 128 characters. When converting a lead to a person account, the conversion fails if the lead Title field contains more than 80 characters. |
| `Website` | **Type**<br>url<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Website for the lead. |

Note: When importing lead data, users need the Set Audit Fields upon Record Creation permission to assign values to audit fields such as `CreatedDate`. Audit fields are automatically updated during API operations unless you set these fields yourself.

## Converted Leads

Leads have a special state to indicate that they've been converted into an account, a contact, and an opportunity. Your client application can convert leads via the `convertLead()` call. Users can also convert leads in Salesforce. After a lead has been converted, it's read only. However, you can query converted lead records. Only users with the View and Edit Converted Leads permission can update converted lead records.

Leads have several fields that indicate their converted status. These special fields are set when converting the lead in the user interface.

- `ConvertedAccountId`
- `ConvertedContactId`
- `ConvertedDate`
- `ConvertedOpportunityId`
- `IsConverted`
- `Status`

## Unread Leads

Leads have a special state to indicate that they haven't been viewed or edited by the lead owner. In Salesforce, it's helpful for users to know which leads have been assigned to them but that they haven't touched yet. `IsUnreadByOwner` is `true` if the lead owner hasn't yet viewed or edited the lead, and `false` if the lead owner has viewed or edited the lead at least one time.

## Lead Status Picklist

Each `Status` value corresponds to either a converted or unconverted status in the lead status picklist, as defined in the user interface. To obtain the lead status values in the picklist, a client application can query LeadStatus.

You can't convert a lead via the API by changing `Status` to one of the converted lead status values. When you convert qualified leads into an account, contact, and opportunity, you can select one of the converted status types for the lead. Leads with a converted status type are no longer available in the Leads tab, although you can include them in reports.

## Usage

If lead data is imported and you need to set the value for an audit field, such as `CreatedDate`, contact Salesforce Support. Audit fields are automatically updated during API operations unless you request to set these fields yourself.

To update a lead or to convert one with `convertLead()`, log in to your client application with the Edit permission on leads.

When you create, update, or upsert a lead, your client application can have the lead assigned to multiple user records based on assignment rules that have been configured in Salesforce.

To use this feature, your client application needs to set either of these options (but not both) in the AssignmentRuleHeader used in create or update:

| Field | Field Type | Details |
|---|---|---|
| `assignmentRuleId` | reference | ID of the assignment rule to use. Can be an inactive assignment rule. If unspecified and `useDefaultRule` is `true`, then the default assignment rule is used.<br>To find the ID for a given assignment rule, query the AssignmentRule object (specifying `RuleType="leadAssignment"`), iterate through the returned AssignmentRule records, find the one you want to use, retrieve its ID, and then specify its ID in this field in the AssignmentRuleHeader. |
| `useDefaultRule` | boolean | Specifies whether to use the default rule for rule-based assignment (`true`) or not (`false`). Default rules are assigned in the user interface. |

## Java Sample

The following Java sample shows how to automatically assign a newly created lead.

```
package wsc;

import com.sforce.soap.enterprise.Connector;
import com.sforce.soap.enterprise.EnterpriseConnection;
import com.sforce.ws.ConnectionException;
import com.sforce.ws.ConnectorConfig;
import com.sforce.soap.enterprise.sobject.Lead;
```

```
import com.sforce.soap.enterprise.QueryResult;
import com.sforce.soap.enterprise.SaveResult;
import com.sforce.soap.enterprise.sobject.SObject;

public class LeadAssignment {

    static final String USERNAME = "REPLACE USER NAME";
    static final String PASSWORD = "REPLACE PASSWORD";
    static EnterpriseConnection connection;

    static LeadAssignment _leadAssignment;

    // Main
    public static void main(String[] args)
    {
        // Establish connection and login
        ConnectorConfig config = new ConnectorConfig();
        config.setUsername(USERNAME);
        config.setPassword(PASSWORD);
        try {
            connection = Connector.newConnection(config);
            System.out.println("Logged in, endpoint: " + config.getAuthEndpoint());
        } catch (ConnectionException e1) {
            e1.printStackTrace();
        }

        // Create lead
        _leadAssignment = new LeadAssignment();
        try {
            _leadAssignment.CreateLead();
        } catch (Exception e) {
            e.printStackTrace();
        }

        // Logout
        try {
            connection.logout();
            System.out.println("Logged out");
        } catch (ConnectionException ce) {
            ce.printStackTrace();
        }
    }

    public void CreateLead() throws ConnectionException
    {
        // Create a new Lead and assign various properties
        Lead lead = new Lead();

        lead.setFirstName("Joe");
        lead.setLastName("Smith");
        lead.setCompany("ABC Corporation");
        lead.setLeadSource("API");
        // The lead assignment rule will assign any new leads that
        // have "API" as the LeadSource to a particular user
```

```
        // In this sample we will look for a particular rule and if found
        // use the id for the lead assignment. If it is not found we will
        // instruct the call to use the current default rule. You can't use
        // both of these values together.
        QueryResult qr = connection.query("SELECT Id FROM AssignmentRule WHERE Name = " +

                              "'Mass Mail Campaign' AND SobjectType = 'Lead'");
        if (qr.getSize() == 0) {
            connection.setAssignmentRuleHeader(null, true);
        } else {
            connection.setAssignmentRuleHeader(qr.getRecords()[0].getId(), false);
        }

        // Every operation that results in a new or updated lead will
        // use the specified rule until the header is removed from the
        // connection.
        SaveResult[] sr = connection.create(new SObject[] {lead});
        for (int i=0;i<sr.length;i++) {
            if (sr[i].isSuccess()) {
                System.out.println("Successfully created lead with id of: " +
                                   sr[i].getId() + ".");
            } else {
                System.out.println("Error creating lead: " +
                                   sr[i].getErrors()[0].getMessage());
            }
        }

        // This call effectively removes the header, the next lead will
        // be assigned to the default lead owner.
        connection.clearAssignmentRuleHeader();
    }
}
```

## C# Sample

The following C# sample shows how to automatically assign a newly created lead.

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;
using System.ServiceModel;
using LeadSample.sforce;

namespace LeadSample
{
    class LeadAssignment
    {
        private static SoapClient client;
        private static SoapClient apiClient;
        private static SessionHeader header;
        private static LoginResult loginResult;
```

```
        private static readonly string Username = "REPLACE USERNAME";
        private static readonly string Password = "REPLACE PASSWORD AND SECURITY TOKEN";

        // Create the proxy binding and login
        private LeadAssignment()
        {
            client = new SoapClient();

            try
            {
                loginResult = client.login(null, Username, Password);
            }
            catch (Exception e)
            {
                Console.WriteLine("Unexpected login error: " + e.Message);
                Console.WriteLine(e.StackTrace);
                return;
            }
            // Access API endpoint and create new client
            header = new SessionHeader();
            header.sessionId = loginResult.sessionId;
            apiClient = new SoapClient("Soap", loginResult.serverUrl);
        }

        [STAThread]
        static void Main(string[] args)
        {
            LeadAssignment leadAssignment = new LeadAssignment();
            try
            {
                leadAssignment.CreateLead();
            }
            catch (Exception e)
            {
                Console.WriteLine(e.Message);
                Console.WriteLine(e.StackTrace);
                Console.WriteLine(e.InnerException);
            }
            // logout
            client.logout(header);
        }

        public void CreateLead()
        {
            // Create a new Lead and assign various properties
            Lead lead = new Lead();

            lead.FirstName = "John";
            lead.LastName = "Brown";
            lead.Company = "ABC Corporation";
            lead.LeadSource = "Advertisement";
            // Setting the lead source for a pre-existing lead assignment rule. This
            // rule was created outside of this sample and will assign any new leads
            // that have "Advertisement" as the LeadSource to a particular user.
```

```
// Create the assignment rule header and add it to the proxy binding
AssignmentRuleHeader arh = new AssignmentRuleHeader();

// In this sample we will look for a particular rule and if found
// use the id for the lead assignment. If it is not found we will
// instruct the call to use the current default rule. Both these
// values can't be used together.
QueryResult qr = null;
string query = "SELECT Id FROM AssignmentRule WHERE Name = " +
    "'Mass Mail Campaign' AND SobjectType = 'Lead'";
try
{
    LimitInfo[] limitArray = apiClient.query(
        header, // sessionheader
        null,   // queryoptions
        null,   // mruheader
        null,   // packageversionheader
        query,  // SOQL query
        out qr);
}
catch (Exception e)
{
    Console.WriteLine("Unexpected query error: " + e.Message);
    Console.WriteLine(e.StackTrace);
}
if (qr.size == 0)
{
    arh.useDefaultRule = true;
}
else
{
    arh.assignmentRuleId = qr.records[0].Id;
}

// Create the lead using our Assignment Rule header
LimitInfo[] li;
SaveResult[] sr;
apiClient.create(
    header, // sessionheader
    arh,    // assignmentruleheader
    null,   // mruheader

    null,   // emailheader
    new sObject[] { lead },
    out li,
    out sr);
```

```
            foreach (SaveResult s in sr)
            {
                if (s.success)
                {
                    Console.WriteLine("Successfully created Lead with ID: {0}", s.id);
                }
                else
                {
                    Console.WriteLine("Error creating Lead: {0}", s.errors[0].message);
                }
            }
        }
    }
}
```

## Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**LeadChangeEvent (API version 44.0)**
Change events are available for the object.

**LeadFeed (API version 18.0)**
Feed tracking is available for the object.

**LeadHistory**
History is available for tracked fields of the object.

**LeadOwnerSharingRule**
Sharing rules are available for the object.

**LeadShare**
Sharing is available for the object.

# LeadCleanInfo

Stores the metadata Data.com Clean uses to determine a lead record's clean status. Helps you automate the cleaning or related processing of lead records.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see Data.com Prospector and Clean Retirement.

Lead Clean Info provides a snapshot of the data in your Salesforce lead record and its matched Data.com record at the time the Salesforce record was cleaned.

Lead Clean Info includes a number of bit vector fields, whose component fields each correspond to individual object fields and provide related data or status information about those fields. For example, the bit vector field `IsDifferent` has an `IsDifferentTitle` field. If the `IsDifferentTitle` field's value is `False`, that means the `Title` field value is *the same* on the Salesforce lead record and its matched Data.com record.

LeadCleanInfo bit vector fields include:

- `CleanedBy` indicates who (a user) or what (a Clean job) cleaned the lead record.
- `IsDifferent` indicates whether or not a field on the lead record has a value that differs from the corresponding field on the matched Data.com record.
- `IsFlaggedWrong` indicates whether or not a field on the lead record has a value that is flagged as wrong to Data.com.
- `IsReviewed` indicates whether or not a field on the lead record is in a `Reviewed` state, which means that the value was reviewed but not accepted..

Their individual bits are defined here

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

## Fields

| Field Name | Details |
|---|---|
| `Address` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The compound form of the address. Read-only. See Address Compound Fields for details on compound address fields. |
| `AnnualRevenue` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Estimated annual revenue of the lead. |
| `City` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Details for the billing address of the lead. |
| `CleanedByJob` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the lead record was cleaned by a Data.com Clean job (`true`) or not (`false`). |
| `CleanedByUser` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the lead record was cleaned by a Salesforce user (`true`) or not (`false`). |
| `CompanyDunsNumber` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The Data Universal Numbering System (D-U-N-S) number is a unique, nine-digit number assigned to every business location in the Dun & Bradstreet database that has a unique, separate, and distinct operation. D-U-N-S numbers are used by industries and organizations around the world as a global standard for business identification and tracking. |
| `CompanyName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the company. |
| `ContactStatusDataDotCom` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The status of the contact associated with the lead per Data.com. Values are: `Contact is Active per Data.com`, `Phone is Wrong per Data.com` , `Email is Wrong per Data.com`, `Phone and Email are Wrong per Data.com`, `Contact Not at Company per Data.com`, `Contact is Inactive per Data.com`, `Company this contact belongs to is out of business per Data.com`, `Company this contact belongs to never existed per Data.com` or `Email address is invalid per Data.com`. |
| `Country` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the billing address of the lead. |
| `DandBCompanyDunsNumber` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The D-U-N-S Number on the D&B Company record (if any) that is linked to the lead. |
| `DataDotComCompanyId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID Data.com maintains for the company associated with the lead. |
| `DataDotComId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID Data.com maintains for the contact associated with the lead. |
| `Email` | **Type**<br>email |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The lead's email address. |
| `FirstName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The lead's first name. |
| `Industry` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The industry the lead belongs to. |
| `IsDifferentAnnualRevenue` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the lead's `AnnualRevenue` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentCity` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the lead's `City` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentCompanyDunsNumber` | **Type**<br>boolean<br>**Properties**<br>Filter |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the lead's `Company D-U-N-S Number` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentCompanyName` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the lead's `Company Name` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentCountry` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the lead's `Country` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentCountryCode` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `Country Code` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentDandBCompanyDunsNumber` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the lead's `D&B Company D-U-N-S Number` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentEmail` | **Type**<br>boolean<br>**Properties**<br>Filter |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the lead's `Email` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentFirstName` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the lead's `First Name` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentIndustry` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the lead's `Industry` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentLastName` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the lead's `Last Name` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentNumberOfEmployees` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the lead's `No. of Employees` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentPhone` | **Type**<br>boolean<br>**Properties**<br>Filter |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the lead's `Phone` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentPostalCode` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the lead's `Postal Code` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentState` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the lead's `State` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentStateCode` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `State Code` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentStreet` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the lead's `Street` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentTitle` | **Type**<br>boolean<br>**Properties**<br>Filter |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the lead's `Title` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsFlaggedWrongAddress` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the lead's `Address` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongAnnualRevenue` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the lead's `Annual Revenue` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongCompanyDunsNumber` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the lead's `Company D-U-N-S Number` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongCompanyName` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the lead's `Company Name` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongEmail` | **Type**<br>boolean<br>**Properties**<br>Filter, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the lead's `Email` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongIndustry` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the lead's `Industry` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongName` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the lead's `Name` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongNumberOfEmployees` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the lead's `No. of Employees` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongPhone` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the lead's `Phone` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongTitle` | **Type**<br>boolean<br>**Properties**<br>Filter, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the lead's `Title` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsInactive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the lead has been reported to Data.com as *`Inactive`* (`true`) or not (`false`). |
| `IsReviewedAddress` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the lead's `Address` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedAnnualRevenue` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the lead's `Annual Revenue` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedCompanyDunsNumber` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the lead's `Company D-U-N-S Number` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedCompanyName` | **Type**<br>boolean<br>**Properties**<br>Filter, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the lead's `Company Name` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedDandBCompanyDunsNumber` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the lead's `D&B Company D-U-N-S Number` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedEmail` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the lead's `Email` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedIndustry` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the lead's `Industry` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedName` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the lead's `Name` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedNumberOfEmployees` | **Type**<br>boolean<br>**Properties**<br>Filter, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the lead's `No. of Employees` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedPhone` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the lead's `Phone` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedTitle` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the lead's `Title` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `LastMatchedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort<br>**Description**<br>The date the lead record was last matched and linked to a Data.com record. |
| `LastName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The lead's last name. |
| `LastStatusChangedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of who or what last changed the record's `Clean Status` field value: a Salesforce user or a Clean job. |

| Field Name | Details |
| --- | --- |
| `LastStatusChangedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date on which the record's `Clean Status` field value was last changed. |
| `Latitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Used with `Longitude` to specify the precise geolocation of a billing address. Data not currently provided. |
| `LeadId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique, system-generated ID assigned when the lead record was created. |
| `Longitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Used with `Latitude` to specify the precise geolocation of a billing address. Data not currently provided. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>Field label is **Lead Clean Info Name**. The name of the lead. Maximum size is 255 characters. |
| `NumberOfEmployees` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The number of employees working at the lead. |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The phone number for the lead. |
| `PostalCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the billing address of the lead. |
| `State` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the billing address of the lead. |
| `Street` | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the billing address of the lead. |
| `Title` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The lead's title. |

## Usage

Developers can create triggers that read the Lead Clean Info fields to help automate the cleaning or related processing of lead records.

# LeadDailyMetric

Represents the daily engagement metrics for a lead. This object is available in API version 52.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Inbox must be enabled.

## Fields

| Field | Details |
|---|---|
| `AllCallsCallBackLater` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the day for this lead with the call result Call Back Later. |
| `AllCallsLeftVoicemail` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the day for this lead with the call result Left Voicemail. |
| `AllCallsMeaningfulConnect` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the day for this lead with the call result Meaningful Connect. |
| `AllCallsNotInterested` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the day for this lead with the call result Not Interested. |

| Field | Details |
| --- | --- |
| `AllCallsUncategorized` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the day for this lead with no call result specified. |
| `AllCallsUnqualified` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the day for this lead with the call result Unqualified. |
| `AllEmailsBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total of hard and soft bounced emails for this lead in the day.<br>This is a calculated field. |
| `AllEmailsDeliveredCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of successfully delivered emails for this lead in the day.<br>This is a calculated field. |
| `AllEmailsDeliveredRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of tracked emails sent that were successfully delivered to this lead. This field is a calculated field.<br>Available in API version 54.0 and later. |
| `AllEmailsHardBouncedCount` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of hard bounced emails for this lead in the day. |
| `AllEmailsOutOfOfficeCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails that triggered an out of office reply for this lead in the day. |
| `AllEmailsSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this lead in the day.<br>This is a calculated field. |
| `AllEmailsSoftBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails soft bounced for this lead in the day. |
| `AllEmailsTrackedSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this lead with engagement tracking enabled in the day. |
| `AllEmailsUntrackedSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this lead without engagement tracking enabled in the day. |

| Field | Details |
| --- | --- |
| `AllTotalCallsCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of calls to this lead with all call results in the day.<br>This is a calculated field. |
| `DailyCutOffTimeStamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort<br>**Description**<br>The time of day when each 24-hour metrics period starts and ends. |
| `Date` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The date on which the engagement occurred. |
| `DateInt` | **Type**<br>int<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The date on which the engagement occurred, in yyyymmdd format. |
| `HardBounceTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this lead with hard bounce tracking.<br>Available in API version 54.0 and later. |
| `InboundEngagementsCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of inbound engagements for this lead in the day. This field is a calculated field. The value is the sum of `UniqueEmailsOpenedCount`, `UniqueEmailsRepliedCount`, and `UniqueEmailsLinkClickedCount`.<br>Available in API version 58.0 and later. |
| `LeadId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the related lead.<br>This is a relationship field.<br>**Relationship Name**<br>Lead<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Lead |
| `LinkClickTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this lead with link click tracking.<br>Available in API version 54.0 and later. |
| `OpenTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this lead with open tracking.<br>Available in API version 54.0 and later. |
| `OutOfOfficeTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of emails sent to this lead with out-of-office tracking.<br>Available in API version 54.0 and later. |
| `OutboundEngagementsCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of outbound engagements for this lead in the day. This field is a calculated field. The value is the sum of `AllTotalCallsCount` and `AllEmailsDeliveredCount`.<br>Available in API version 58.0 and later. |
| `ReplyTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this lead with reply tracking.<br>Available in API version 54.0 and later. |
| `SoftBounceTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this lead with soft bounce tracking.<br>Available in API version 54.0 and later. |
| `TrackableSendHardBounceRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this lead with hard bounce tracking that hard bounced. This field is a calculated field.<br>Available in API version 54.0 and later. |
| `TrackableSendLinkClickRate` | **Type**<br>percent |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this lead with link tracking that had link clicks. This field is a calculated field.<br>Available in API version 54.0 and later. |
| `TrackableSendOpenRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this lead with open tracking that were opened by the recipient. This field is a calculated field.<br>Available in API version 54.0 and later. |
| `TrackableSendOutOfOfficeRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this lead with out-of-office tracking that received out-of-office replies. This field is a calculated field.<br>Available in API version 54.0 and later. |
| `TrackableSendReplyRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this lead with reply tracking that received replies. This field is a calculated field.<br>Available in API version 54.0 and later. |
| `TrackableSendSoftBounceRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this lead with soft bounce tracking that soft bounced. This field is a calculated field. |

| Field | Details |
| --- | --- |
| | Available in API version 54.0 and later. |
| `UniqueEmailsLinkClickedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of individual emails in which the lead clicked a link in the day. |
| `UniqueEmailsOpenedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of individual emails opened by the lead in the day. |
| `UniqueEmailsRepliedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of individual emails replied to by the lead in the day. |

# LeadMonthlyMetric

Represents the monthly engagement metrics for a lead. This object is available in API version 52.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Inbox must be enabled.

## Fields

| Field | Details |
| --- | --- |
| `AllCallsCallBackLater` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the month for this lead with the call result Call Back Later. |
| `AllCallsLeftVoicemail` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the month for this lead with the call result Left Voicemail. |
| `AllCallsMeaningfulConnect` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the month for this lead with the call result Meaningful Connect. |
| `AllCallsNotInterested` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the month for this lead with the call result Not Interested. |
| `AllCallsUncategorized` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the month for this lead with no call result specified. |
| `AllCallsUnqualified` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the month for this lead with the call result Unqualified. |
| `AllEmailsBouncedCount` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total of hard and soft bounced emails for this lead in the month.<br>This is a calculated field. |
| `AllEmailsDeliveredCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of successfully delivered emails for this lead in the month.<br>This is a calculated field. |
| `AllEmailsDeliveredRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of tracked emails sent that were successfully delivered to this lead. This field is a calculated field.<br>This is a calculated field.<br>Available in API version 54.0 and later. |
| `AllEmailsHardBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of hard bounced emails for this lead in the month. |
| `AllEmailsOutOfOfficeCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails that triggered an out of office reply for this lead in the month. |
| `AllEmailsSentCount` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this lead in the month.<br>This is a calculated field. |
| `AllEmailsSoftBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails soft bounced for this lead in the month. |
| `AllEmailsTrackedSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this lead with engagement tracking enabled in the month. |
| `AllEmailsUntrackedSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this lead without engagement tracking enabled in the month. |
| `AllTotalCallsCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of calls to this lead with all call results in the month.<br>This is a calculated field. |
| `HardBounceTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this lead with hard bounce tracking. |

| Field | Details |
| --- | --- |
| | Available in API version 54.0 and later. |
| `LeadId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the related lead.<br>This is a relationship field.<br>**Relationship Name**<br>Lead<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Lead |
| `LinkClickTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this lead with link click tracking.<br>Available in API version 54.0 and later. |
| `Month` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The month in which the engagement occurred. |
| `MonthInt` | **Type**<br>int<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The month in which the engagement occurred, in yyyymm format. |
| `OpenTrackableSends` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this lead with open tracking.<br>Available in API version 54.0 and later. |
| `OutOfOfficeTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this lead with out-of-office tracking.<br>Available in API version 54.0 and later. |
| `ReplyTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this lead with reply tracking.<br>Available in API version 54.0 and later. |
| `SoftBounceTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent to this lead with soft bounce tracking.<br>Available in API version 54.0 and later. |
| `TrackableSendHardBounceRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this lead with hard bounce tracking that hard bounced. This field is a calculated field.<br>Available in API version 54.0 and later. |
| `TrackableSendLinkClickRate` | **Type**<br>percent |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this lead with link tracking that had link clicks. This field is a calculated field.<br>Available in API version 54.0 and later. |
| `TrackableSendOpenRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this lead with open tracking that were opened by the recipient. This field is a calculated field.<br>Available in API version 54.0 and later. |
| `TrackableSendOutOfOfficeRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this lead with out-of-office tracking that received out-of-office replies. This field is a calculated field.<br>Available in API version 54.0 and later. |
| `TrackableSendReplyRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this lead with reply tracking that received replies. This field is a calculated field.<br>Available in API version 54.0 and later. |
| `TrackableSendSoftBounceRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to this lead with soft bounce tracking that soft bounced. This field is a calculated field. |

| Field | Details |
| --- | --- |
| | Available in API version 54.0 and later. |
| `UniqueEmailsLinkClickedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of individual emails in which the lead clicked a link in the month. |
| `UniqueEmailsOpenedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of individual emails opened by the lead in the month. |
| `UniqueEmailsRepliedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of individual emails replied to by the lead in the month. |

# LeadOwnerSharingRule

Represents the rules for sharing a lead with users other than the owner.

Note: To enable access to this object, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The SharingRules Metadata API type is enabled for all orgs.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Rule Name** in the user interface.<br>This field is available in API version 24.0 and later.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record. |
| `GroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID representing the source group. Leads owned by users in the source group trigger the rule to give access. |
| `LeadAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A value that represents the type of sharing being allowed. The possible values are:<br>• `Read`<br>• `Edit` |
| `Name` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to **Label** on the user interface. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID representing the target user or group. The target user or group is being given access. |

## Usage

Use these objects to manage the sharing rules for leads. General sharing and Territory-related sharing use this object.

SEE ALSO:

- Lead
- LeadShare
- LeadStatus
- *Metadata API Developer Guide*: SharingRules

# LeadShare

Represents a sharing entry on a Lead.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only users with access to the Lead object can access this object.

# Fields

The properties available for some fields depend on the default org-wide sharing settings. The properties listed are true for the default settings of such fields.

| Field | Details |
| --- | --- |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `LeadAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Level of access that the User or Group has to the Lead. The possible values are:<br>• `Read`<br>• `Edit`<br>• `All` This value is not valid when creating or updating these records.<br>This field must be set to an access level that is higher than the organization's default access level for leads. |
| `LeadId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the Lead associated with this sharing entry. This field can't be updated.<br>This is a relationship field.<br>**Relationship Name**<br>Lead<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Lead |
| `RowCause` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited.<br>Values include:<br>• `Manual`—The User or Group has access because a user with "All" access manually shared the Lead with them.<br>• `Owner`—The User is the owner of the Lead.<br>• `Rule`—The User or Group has access via a Lead sharing rule.<br>• `GuestRule`—The User or Group has access via a Lead guest user sharing rule.<br>• `LpuImplicit`—The User has access to records owned by high-volume Experience Cloud site users via a share group.<br>• `ARImplicit`—The User, who belongs to a partner or customer account, has access to the Lead via an account relationship data sharing rule. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the User or Group that has been given access to the Lead. This field can't be updated.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>UserOrGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

## Usage

This object allows you to determine which users and groups can view or edit leads owned by other users.

If you attempt to create a record that matches an existing record, the existing record is returned.

SEE ALSO:

- AccountShare
- Case
- CaseShare
- OpportunityShare

# LeadStatus

Represents the status of a Lead record, such as Open, Qualified, or Converted.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `ApiName` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Uniquely identifies a picklist value so it can be retrieved without using an id or primary label. |
| `IsConverted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this lead status value represents a converted lead (`true`) or not (`false`). Multiple lead status values can represent a converted lead. |
| `IsDefault` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether this is the default lead status value (`true`) or not (`false`) in the picklist. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Label for this lead status value. This display value is the internal label that does not get translated. |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number used to sort this value in the lead status picklist. These numbers are not guaranteed to be sequential, as some previous lead status values might have been deleted. |

## Usage

This object represents a value in the lead status picklist (see Lead on page 3020). The lead status picklist provides additional information about the status of a Lead on page 3020, such as whether a given status value represents a converted Lead on page 3020. Query this object to retrieve the set of values in the lead status picklist, and then use that information while processing Lead on page 3020 objects to determine more information about a given lead. For example, the application could test whether a given lead is converted based on its Status value and the value of the `IsConverted` property in the associated LeadStatus record.

- LeadOwnerSharingRule
- LeadShare

# LeadTag

Associates a word or short phrase with a Lead.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

# Fields

| Field Name | Details |
| --- | --- |
| `ItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter<br>**Description**<br>ID of the tagged item. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter<br>**Description**<br>Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically. |
| `TagDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter<br>**Description**<br>ID of the parent TagDefinition object that owns the tag. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Restricted picklist<br>**Description**<br>Defines the visibility of a tag.<br>Valid values:<br>• `Public`—The tag can be viewed and manipulated by all users in an organization.<br>• `Personal`—The tag can be viewed or manipulated only by a user with a matching `OwnerId`. |

# Usage

LeadTag stores the relationship between its parent TagDefinition and the Lead being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

# LearningContent

Represents a Trailhead or enablement site (myTrailhead) module assigned to a user in Workforce Engagement or Learning Paths. This object also represents a Trailhead module or video in an Enablement program exercise. This object is available in API version 54.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

- The org must have a Workforce Engagement license.
- The user must have at least one Workforce Engagement permission set assigned to them: Workforce Engagement Admin, Workforce Engagement Analyst, Workforce Engagement Planner, Workforce Engagement Agent.
- For an enablement site (myTrailhead) module, the org must have a Sales Enablement license.
- For a Trailhead module or video in an Enablement program, the org must have an Enablement license.

## Fields

| Field | Details |
|---|---|
| `ApiName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable<br>**Description**<br>The module's human-readable API name, such as `pure-aloe-sales-strategies`. |
| `AvailablePointCount` | **Type**<br>int<br>**Properties**<br>Group, Nillable<br>**Description**<br>The maximum points that a user can earn on their profile by completing the module. This value is the sum of points that the content creator assigns to the module's units. |
| `ContainsAssessmentType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist |

| Field | Details |
| --- | --- |
| | **Description**<br>Specifies the type of assessment that the content's units include.<br>Possible values are:<br>• `MultipleChoiceQuiz`—All the content's units have multiple-choice quizzes.<br>• `HandsOnChallenge`—At least one unit has a hands-on challenge. |
| `ContentType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist<br>**Description**<br>The type of content assigned to the user.<br>Possible values are:<br>• `All`—The content is any supported type.<br>• `Module`—The content is a Trailhead or enablement site (myTrailhead) module.<br>• `VideoLesson`—The content is a video that's specified in the Enablement workspace in Digital Experiences and is used in an Enablement program. |
| `ContentUrl` | **Type**<br>url<br>**Properties**<br>Group, Nillable<br>**Description**<br>The absolute URL to the content, such as `https://purealoe.my.trailhead.com/en/content/sales-team-enablement/modules/pure-aloe-sales-strategies` |
| `Description` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The module's description. |
| `DurationCount` | **Type**<br>int<br>**Properties**<br>Group, Nillable<br>**Description**<br>The total time, in minutes, for a learner to complete all units in the module. This value is the sum of the estimated times that the content creator assigns to the module's units. |

| Field | Details |
| --- | --- |
| `ExternalId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The GUID that Trailhead uses to reference the module. |
| `ImageUrl` | **Type**<br>url<br>**Properties**<br>Group, Nillable<br>**Description**<br>The absolute URL to the module's badge art image file. |
| `IsPublic` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group<br>**Description**<br>Indicates whether the content is public Trailhead content (`true`) or private enablement site (myTrailhead) content (`false`).<br>The default value is `false`. |
| `Title` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The module's title. |

PersonTraining

# LearningItem

Represents an item that requires users to take action, including a Learning Paths entry, an Enablement program, or an exercise with linked content in an Enablement program. For Learning Paths, users are assigned a learning item to complete. For Enablement programs and exercises, users are assigned a program or can self-enroll in shared programs. This object is available in API version 58.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a supported Partner Relationship Management (PRM) add-on license.

## Fields

| Field | Details |
|---|---|
| `CustomLearningItemTypeId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of a learning item type record if this learning item represents a custom exercise type in an Enablement program. This field is required when the `Type` field's value is `CustomContent`.<br>This field is a relationship field.<br>Available in API version 62.0 and later.<br>**Relationship Name**<br>CustomLearningItemType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>LearningItemType |
| `EnablementProgramId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of an Enablement program that contains the outcome, milestone, or exercise.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>EnablementProgram<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EnablementProgram |
| `LearningContentId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the record that represents a Trailhead module or video in a sales program exercise. This field is a relationship field.<br>**Relationship Name**<br>LearniningContent<br>**Refers To**<br>LearningContent |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the owner of the program. This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `StandardCustomContentMetadata` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>Reserved for future use. |
| `StandardCustomLearningItemType` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Reserved for future use. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of learning item. Possible values are:<br>• `CustomContent`—Custom exercise content in an Enablement program, such as a screen flow, content from external repositories, or other custom content sources. Available in API version 62.0 and later.<br>• `EnablementProgram`<br>• `LearningContent`—Trailhead module<br>• `LearningLesson`—Lesson exercise in an Enablement program<br>• `LearningLink`—Audio Recording, Document, Scheduled Event, or Other exercise in an Enablement program<br>• `LearningPractice`—Feedback Request exercise in an Enablement program<br>• `StandardCustomContent`—Standard Custom exercise content in an Enablement program. Reserved for future use. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**LearningItemOwnerSharingRule on page 65 (API version 60.0)**
Sharing rules are available for the object.

**LearningItemShare on page 67 (API version 60.0)**
Sharing is available for the object.

# LearningItemAssignment

Represents the assignment of a Learning Paths entry to users or groups or the enrollment of an Enablement program for a specific user. This object is available in API version 58.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a supported Partner Relationship Management (PRM) add-on license.

## Fields

| Field | Details |
|---|---|
| `AssigneeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the user or group assigned to the learning item. This field is a relationship field.<br>**Relationship Name**<br>Assignee<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `AssignmentStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The status of assigning an Enablement program to a user. Possible values are:<br>• `Failed`<br>• `InProgress`<br>• `Succeeded` |
| `DueDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The date that the assignment is due for the user or group. |
| `EnrollmentType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of enrollment for a user in an Enablement program. Possible values are:<br>• `Assigned`<br>• `SelfEnrolled` |
| `IsOverdue` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the assigned learning item is overdue (`true`) or not (`false`). The default value is `false`.<br>This field is a calculated field. |
| `LearningItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the learning item. This field is a relationship field.<br>**Relationship Name**<br>LearningItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>LearningItem |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>ID of the user who assigned the learning item. This field is a polymorphic relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `ProgressId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of record that represents a user's progress towards completing an assigned learning item, such as a Learning Paths entry or sales program. This field is a relationship field.<br>**Relationship Name**<br>Progress<br>**Refers To**<br>LearningItemProgress |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The date that the learning item was assigned to the user or group. |

## Usage

You can assign a learning item to a user programmatically by querying the program and user, and then inserting a record into LearningItemAssignment.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**LearningItemAssignmentOwnerSharingRule on page 65 (API version 60.0)**
Sharing rules are available for the object.

**LearningItemAssignmentShare on page 67 (API version 60.0)**
Sharing is available for the object.

# LearningItemProgress

Represents the progress that a user has made towards completing an assigned learning item, such as a Learning Paths entry or Enablement program. This object is available in API version 60.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a supported Partner Relationship Management (PRM) add-on license.

## Fields

| Field | Details |
|---|---|
| `CompletedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the user completed the learning item. |
| `CompletedOnDay` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number of days that the user took to complete the learning item. |
| `CompletedPercent` | **Type**<br>percent<br>**Properties**<br>Filter, Sort<br>**Description**<br>Percentage of the learning item that's complete. |

| Field | Details |
| --- | --- |
| `DaysInProgress` | **Type**<br>int<br>**Properties**<br>Nillable<br>**Description**<br>Number of days that have elapsed since the learning item was assigned. |
| `LearningItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the learning item. This field is a relationship field.<br>**Relationship Name**<br>LearningItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>LearningItem |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the owner of the learning item. This field is a relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `ProgressStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Status of the learning item assignment. Possible values are:<br>• `Behind`<br>• `Completed` |

| Field | Details |
| --- | --- |
| | • `CompletedLate`<br>• `CompletedOnTime`<br>• `InProgress`<br>• `NoLongerTracking`<br>• `NotStarted`<br>• `OnTrack`<br>• `Overdue`<br>For details, see Completion Statuses in Enablement Analytics. |
| `StartDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when a user starts a Trailhead exercise in a sales program. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**LearningItemProgressChangeEvent on page 68**
Change events are available for the object.

**LearningItemProgressOwnerSharingRule on page 65**
Sharing rules are available for the object.

**LearningItemProgressShare on page 67**
Sharing is available for the object.

# LearningItemSubmission

Represents a link to a resource, such as a video recording, that a user submits as part of a Feedback Request exercise in an Enablement program. For peer and manager feedback, this resource can be a recording of a user's sales patch. For Einstein Coach feedback, this resource can be a video call, and Einstein generates feedback from the call's transcription. This object is available in API version 59.0 and later, but Einstein Coach is available only in API version 61.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

A learning item submission record is created when users take an Enablement program that includes a Feedback Request exercise for peer and manager feedback.

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- To access exercises that use Einstein Coach, the Use Einstein Coach permission is required. This permission is enabled by default as part of the Access Einstein Coach permission set, which comes with the Enablement add-on license.

## Fields

| Field | Details |
|---|---|
| `CallId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the video call that a user submits for Einstein Coach feedback. Einstein generates feedback for the user based on the call's transcription. This field is a polymorphic relationship field.<br>Available in API version 61.0 and later.<br>**Relationship Name**<br>Call<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>VideoCall |
| `LearningItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the LearningItem record for the Feedback Request exercise, where the `Type` of the learning item is `LearningPractice`. This field is a relationship field.<br>**Relationship Name**<br>LearningItem<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>LearningItem |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the owner of the learning item submission. This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `Url` | **Type**<br>url<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>URL of the content that a user submits for peer and manager feedback. For example, a link to a video recording of a sales rep's practice pitch. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**LearningItemSubmissionOwnerSharingRule on page 65**
Sharing rules are available for the object.

**LearningItemSubmissionShare on page 67**
Sharing is available for the object.

# LearningItemType

Represents a custom exercise type that an Enablement user takes in an Enablement program in the Guidance Center. A custom exercise type also requires a corresponding LearningItem record for the Guidance Center and corresponding EnblProgramTaskDefinition and EnblProgramTaskSubCategory records for when admins create a program in Program Builder. This object is available in API version 62.0 and later.

## Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.

Important: Custom exercises aren't compatible with Partner Enablement programs.

## Fields

| Field | Details |
|---|---|
| `ApexEvaluationHandlerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the Apex class that specifies how progress and completion of the custom exercise is assessed when users take the program in the Guidance Center.<br>This field is a relationship field.<br>**Relationship Name**<br>ApexEvaluationHandler<br>**Refers To**<br>ApexClass |
| `ApexSerializerDeserializerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the Apex class that specifies how data related to the custom exercise type is retrieved and deployed with change sets or managed packages.<br>This field is a relationship field.<br>**Relationship Name**<br>ApexSerializerDeserializer<br>**Refers To**<br>ApexClass |

| Field | Details |
| --- | --- |
| `CustomField` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The programmatic name of a custom lookup field on the LearningItem object that references the custom object used with this custom exercise. Add values to this picklist when you implement a custom exercise type.<br>For example, if a custom exercise type shows a screen flow, maybe the custom object's name is `ScreenFlow_Object__c` and the custom field on LearningItem is named `ScreenFlow_Field__c`. For details, see Implement Custom Exercise Types for Enablement Programs in the *Sales Programs and Partner Tracks with Enablement Developer Guide*.<br>This field is unique within your organization. |
| `CustomObject` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The programmatic name of the custom object used with this custom exercise. Add values to this picklist when you implement a custom exercise type.<br>For example, if a custom exercise type shows a Quip document, maybe the custom object's name is `ScreenFlow_Object__c`. For details, see Implement Custom Exercise Types for Enablement Programs in the *Sales Programs and Partner Tracks with Enablement Developer Guide*.<br>This field is unique within your organization. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. The name:<br>• must be 40 characters or fewer<br>• must begin with a letter<br>• can contain only underscores and alphanumeric characters<br>• can't include spaces<br>• can't end with an underscore<br>• can't contain 2 consecutive underscores |

| Field | Details |
| --- | --- |
| | In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. |
| `Icon` | **Type**<br>textarea<br>**Properties**<br>Create, Update<br>**Description**<br>The icon to use for the custom exercise type in the Guidance Center.<br>Use the format ***`iconType:iconName`***, where the values correspond to icon categories and names from the Salesforce Lightning Design System.<br>• ***`iconType`*** is the type of icon, such as `standard` or `doctype`.<br>• ***`iconName`*** is the icon name, such as `flow` or `slide`.<br>For example, to use the Standard type Flow icon, this value is `standard:flow`. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Reserved for future use. Don't edit this field. |
| `LightningComponentName` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The name, including the namespace, of the Lightning Web Component (LWC) used to show the custom exercise's content when a user opens the exercise in the Guidance Center. For example, if the LWC for a screen flow custom exercise is named `screenFlowViewer`, this value is `c:screenFlowViewer`.<br>This field can only be accessed from Metadata API and its value is derived from the `lightningComponentDefinition` field on the LearningItemType metadata type. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Label for this LearningItemType value. This display value is the internal label that doesn't get translated. |

| Field | Details |
| --- | --- |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that aren't Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |

# LearningPractice

Represents a Feedback Request exercise in an Enablement program. Users can submit a sample of their work and request feedback from their peers and managers. Or, users can submit a video call and Einstein Coach generates feedback from the call's transcription. This object is available in API version 59.0 and later, but Einstein Coach feedback is available only in API version 61.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- To access exercises that use Einstein Coach, the Use Einstein Coach permission is required. This permission is enabled by default as part of the Access Einstein Coach permission set, which comes with the Enablement add-on license.

# Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Sort<br>**Description**<br>Instructions to the user to provide context for completing the Feedback Request exercise. For example, `Record yourself giving a sales pitch and request feedback from your peers.` |
| `InviteeQuantity` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The number of peers or managers that the user is required to invite for giving feedback when `Type` is `PeerFeedback`. Each peer or manager receives an invitation to the assessment survey associated with the Feedback Request exercise.<br>When `Type` is `AIFeedback`, this value is always `1`. |
| `LearningItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the LearningItem record for the Feedback Request exercise. The value must be unique. This field is a relationship field.<br>**Relationship Name**<br>LearningItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>LearningItem |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The title of the Feedback Request exercise. For example, `Practice Your Sales Pitch`. |

| Field | Details |
| --- | --- |
| `PromptTemplate` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The prompt template to use with this exercise when `Type` is `AIFeedback`.<br>Available in API version 61.0 and later. |
| `SurveyId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the assessment survey that's sent to peers and managers when `Type` is `PeerFeedback`. This field is a relationship field.<br>**Relationship Name**<br>Survey<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Survey |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of feedback used with this exercise. Possible values are:<br>• `AIFeedback`—Users submit a video call, and Einstein Coach generates feedback from the call's transcription. With this type, `PromptTemplate` is required. Available in API version 61.0 and later.<br>• `PeerFeedback`—Users submit a URL to a sample of their work, and select peers and managers to review their work. Selected peers and managers complete an assessment survey. With this type, `SurveyId` is required. Available in API version 61.0 and later.<br>• `Survey`—Users complete a survey as part of their enrolled employee enablement program. Available in API version 64.0 and later. |

# LegalEntity

Represents the way an organization is structured. An organization can be a single legal entity or it can comprise more than one legal entity. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available with the Salesforce Billing managed package and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
|---|---|
| `CompanyName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the company that this legal entity represents. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The description of the legal entity. |
| `LastReferencedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>datetime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `LegalEntityAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The address of the company that this legal entity represents. This field is a compound field of type Address and combines these fields: LegalEntityCity, LegalEntityCountry, LegalEntityGeocodeAccuracy, LegalEntityLatitude, LegalEntityLongitude, LegalEntityPostalCode, LegalEntityState, and LegalEntityStreet. For more information, see Address Compound Fields. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the legal entity. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the record owner. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The status of the legal entity.<br>Possible values are:<br>• `Active`<br>• `Inactive` |

## Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

**LegalEntityFeed**
Feed tracking is available for the object.

**LegalEntityHistory**
History is available for tracked fields of the object.

**LegalEntityOwnerSharingRule**
Sharing rules are available for the object.

**LegalEntityShare**
Sharing is available for the object.

# LicenseDefinitionCustomPermission (Developer Preview)

Represents a licensed custom permission that controls access to a license's features when included in a custom permission set license definition. This object is available in API version 54.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access LicenseDefinitionCustomPermission, you must have the Partner Licensing Platform developer preview enabled. To participate in this developer preview, submit a participation request via the Partner Licensing Platform Developer Preview Partner Community group.

Note: The Partner Licensing Platform is available as a developer preview. The Partner Licensing Platform isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. All commands, parameters, and other features are subject to change or deprecation at any time, with or without notice. Don't implement functionality developed with these commands or tools in your production package.

## Fields

| Field | Details |
|---|---|
| `LicenseDefinitionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the custom permission set license definition that contains the licensed custom permission.<br>This is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>LicenseDefinition<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PermissionSetLicenseDefinition |
| `LicensedCustomPermissionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the licensed custom permission that you're including in the permission set license definition. On the CustomPermission object, the `isLicensed` field must equal true.<br>This is a relationship field.<br>**Relationship Name**<br>LicensedCustomPermission<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CustomPermission |

## Usage

For more information, see the Partner Licensing Platform Developer Guide (Developer Preview).

# LightningErrorEventLog

Lightning Error events represent errors that occurred during user interactions with Lightning Experience and the Salesforce mobile app. This object is available in API version 64.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

# Fields

| Field | Details |
| --- | --- |
| `AppName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the application that the user accessed. |
| `BrowserName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the browser that the user accessed.<br>**Example**<br>`Chrome`, `Safari` |
| `BrowserVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The version of the browser that the user accessed in `major.minor version` format. Some browsers don't provide a minor version. |
| `ClientGeolocation` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The geolocation of the client in the form of `<Country>/<State\|Province>`.<br>**Example**<br>`United States/California` |
| `ClientIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API client ID. |

| Field | Details |
| --- | --- |
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". |
| `ComponentName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The internal name of the standard component that generated the error. The Salesforce developer assigned the name when the standard component was created. |
| `ConnectionType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of connection. |
| `DeviceIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique identifier used to identify a device when tracking events. `DEVICE_ID` is a generated value that's created when the mobile app is initially run after installation. |
| `DeviceModel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the device model.<br>**Example**<br>`iPad`, `iPhone` |
| `DevicePlatform` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of application experience in `name:experience:form` format. |
| `DeviceSessionIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique identifier of the user's session based on page load time. If the user reloads a page, it starts a new session. |
| `ErrorMessage` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The error message generated. |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring. |
| `MobileSdkAppType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The mobile application type. |
| `MobileSdkVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Mobile SDK version number. |

| Field | Details |
| --- | --- |
| `OperatingSystemName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The operating system name.<br>**Example**<br>`Android`, `iOS`, `OSX`, `Windows` |
| `OperatingSystemVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The operating system version. |
| `PageAppName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The internal name of the application that the user accessed from the App Launcher. |
| `PageContext` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Context of the page where the event occurred. |
| `PageObjectIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Unique entity ID of event. |
| `PageObjectType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The entity type of event |
| `PageStartTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Time when page was initially loaded |
| `PageUrl` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. |
| `PreviousPageUrl` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The relative URL of the previous Lightning Experience or Salesforce mobile app page that the user opened |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`. |
| `SdkAppVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The mobile SDK application version number. |

| Field | Details |
| --- | --- |
| SessionKey | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When a user logs out and logs in again, a new session is started. |
| StackTrace | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The stack trace contains the location in the code where the error occurred along with the calling frames that led to the error. |
| Timestamp | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Example**<br>`20130715233322.670` |
| UiEventIdentifier | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Lightning event type. |
| UiEventSequenceNumber | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sequence number of current event since start of session. |
| UiEventSource | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Examples**<br>Here are some examples of error flags returned in this field.<br>• `AuraError`<br>• `Error`<br>• `InvalidStateError`<br>• `RangeError`<br>• `ReferenceError`<br>• `SecurityError`<br>• `SyntaxError`<br>• `TypeError`<br>• `unknown` |
| `UiEventTimestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The time at which this event occurred, measured in milliseconds. |
| `UiEventType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of error event. |
| `UserAgent` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The numeric code for the type of client used to make the request (for example, browser, application, or API) as a string. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user accessing Salesforce services through the UI or API. |

| Field | Details |
| --- | --- |
| `UserType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The category of user license of the user accessing Salesforce services through the UI or API. |

# LightningExperienceTheme

Represents information for a theme in Lightning Experience. This object is available in API Version 42.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `DefaultBrandingSetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the default branding set.<br>This is a relationship field.<br>**Relationship Name**<br>DefaultBrandingSet<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BrandingSet |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The description of the theme. Limit: 1,000 characters. |

| Field | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the theme in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The label corresponds to the theme name in the user interface. Limit: 70 characters.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Required. Language of the label. Possible values are:<br>• `da` (Danish)<br>• `de` (German)<br>• `en_US` (English)<br>• `es` (Spanish)<br>• `es_MX` (Spanish - Mexico)<br>• `fi` (Finnish)<br>• `fr` (French)<br>• `it` (Italian)<br>• `ja` (Japanese)<br>• `ko` (Korean)<br>• `nl_NL` (Dutch)<br>• `no` (Norwegian)<br>• `pt_BR` (Portuguese (Brazil))<br>• `ru` (Russian)<br>• `sv` (Swedish)<br>• `th` (Thai)<br>• `zh_CN` (Chinese - Simplified)<br>• `zh_TW` (Chinese - Traditional) |

| Field | Details |
| --- | --- |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The name of the theme. Specify up to 70 characters. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `ShouldOverrideLoadingImage` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether a custom image overrides the Salesforce loading image (`true`) or not (`false`). |

# LightningLoggerEventLog

Lightning Logger Event Log provides information from observed Lightning component logs. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
|---|---|
| `AppName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the application the user accessed. |
| `BrowserName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the browser the user accessed. |
| `BrowserVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's browser version in major.minor format. Some browsers don't provide a minor version. |
| `ClientGeolocation` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The geolocation of the client in the form of <Country>/<State\|Province>. |
| `ClientIdentifier` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API client ID. |
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`. |
| `ConnectionType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of connection.Possible values are:<br>• CDMA1x<br>• CDMA<br>• EDGE<br>• EVDO0<br>• EVDOA<br>• EVDOB<br>• GPRS<br>• HRPD<br>• HSDPA<br>• HSUPA<br>• LTE<br>• WIFI |
| `DeviceModel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the device model. For example: iPad, iPhone. |
| `DevicePlatform` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of application experience in name:experience:form format. Possible values are:<br>Name<br>• APP_BUILDER<br>• CUSTOM<br>• S1<br>• SFX<br>Experience<br>• BROWSER<br>• HYBRID<br>Form<br>• DESKTOP<br>• PHONE<br>• TABLET |
| `DeviceSessionIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique identifier of the user's session is based on page load time. When the user reloads a page, a new session starts. For example: 321a1ddfaf924803a075f1e69fc87bc06f53ccd0 |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`. |
| `Message` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The message is passed to the `lightning/logger log()` method. The message can be a JSON object or a string. |
| `MobileSdkAppType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The mobile SDK application type. Possible Values:<br>• HYBRID<br>• HYBRIDLOCAL<br>• HYBRIDREMOTE<br>• NATIVE<br>• REACTNATIVE |
| `MobileSdkVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The mobile SDK application version number. For example, 5.0. |
| `OperatingSystemName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The operating system name, derived from the `User Agent`. For example:<br>• Android<br>• iOS<br>• OSX<br>• Windows |
| `OperatingSystemVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The operating system version, derived from the `User Agent`. |

| Field | Details |
| --- | --- |
| `PageContext` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the component hosting the main content of the page. For example: clients:cardsContainer. |
| `PageObjectIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique entity identifier of the event. For example: 00130000001l3zJAAAZ. |
| `PageObjectType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The object type of the event. For example: task, contacts. |
| `PageUrl` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with `PageUrl`. For example: /sObject/0064100000JXITSAA5/view. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestIdentifier.` For example: 3nWgxWbDKWWDIk0FKfF5DV. |
| `SdkAppVersion` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The app version used in this request. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `UiRootActivityIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID for the root activity, if any, when this message was logged. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |
| `UserType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Type of user employing Salesforce services, whether through the UI or API. |

# LightningOnboardingConfig

Represents the feedback provided when users switch from Lightning Experience to Salesforce Classic. Admins can customize the question, how frequently the form appears, and where the feedback is stored in Chatter from the Adoption Assistance page in Lightning Experience Setup. Available in API version 47.0 and later.

**Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

See Switch to Salesforce Classic Feedback Form in Salesforce Help for more details.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `CollaborationGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the Chatter Group where the user feedback is posted.<br>This is a relationship field.<br>**Relationship Name**<br>CollaborationGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CollaborationGroup |
| `CustomQuestion` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Text of the custom question added by the admin. Maximum of 1,000 characters. |

| Field | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `FeedbackFormDaysFrequency` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of days between showing the feedback form when a user switches. A value of `0` indicates that the form is shown for every switch. Maximum of 30. |
| `IsCustom` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if a feedback form includes a custom question `yes` or not `no`. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the language used in the org where the feedback form was created. |
| `MasterLabel` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The label for the prompt. Maximum of 80 characters. |
| `PromptDelayTime` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates the amount of time in seconds to delay between instances of all prompts, both org- and Salesforce-created. Minimum of 0 hours and 0 minutes. Maximum of 99 hours and 59 minutes. |
| `SendFeedbackToSalesforce` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if the user feedback can be shared with Salesforce. If `yes`, share the feedback with Salesforce. If `no`, the feedback is only shared in the Chatter Group chosen when customizing the form. The default value is `false`. |

# LightningPageViewEventLog

Lightning Page View event logs represent information about the page on which the event occurred in Lightning Experience and the Salesforce mobile app. A Lightning Page View event log tracks the page a user visited, how long the user spent on the page, and the load time for the page. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

# Fields

| Field | Details |
| --- | --- |
| `AppName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the application that the user accessed. |
| `BrowserName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the browser that the user accessed. For example: Chrome, IE, Safari, Gecko. |
| `BrowserVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The version of the browser that the user accessed in `major.minor version` format. Some browsers don't provide a minor version. |
| `ClientGeolocation` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The geolocation of the client in the form of <Country>/<State\|Province>. For example: `United States/California`. |
| `ClientIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API client ID. |
| `ClientIp` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>IP address of the client employing salesforce.com services. |
| `ConnectionType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of connection.<br>Possible values are:<br>• `CDMA1x`<br>• `CDMA`<br>• `EDGE`<br>• `EVDO0`<br>• `EVDOA`<br>• `EVDOB`<br>• `GPRS`<br>• `HRPD`<br>• `HSDPA`<br>• `HSUPA`<br>• `LTE`<br>• `WIFI` |
| `DeviceIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique identifier used to identify a device when tracking events. `DeviceIdentifier` is a generated value that's created when the mobile app is initially run after installation. |
| `DeviceModel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the device model. For example: `iPad`, `iPhone`. |

| Field | Details |
| --- | --- |
| DevicePlatform | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of application experience in `name:experience:form` format. Possible values are:<br>Name<br>• `APP_BUILDER`<br>• `CUSTOM`<br>• `S1`<br>• `SFX`<br>Experience<br>• `BROWSER`<br>• `HYBRID`<br>Form<br>• `DESKTOP`<br>• `PHONE`<br>• `TABLET` |
| DeviceSessionIdentifier | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started. For example: `321a1ddfaf924803a075f1e69fc87bc06f53ccd0`. |
| DoesEffectivePageTimeDeviate | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>When a deviation is detected, `DoesEffectivePageTimeDeviate` records `true`. The default value is `false`. |
| Duration | **Type**<br>double |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The duration in milliseconds since the page start time.<br>This field is being deprecated. Use `EffectivePageTime` instead. |
| `EffectivePageTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates how many milliseconds it took for the page to load before a user could interact with the page's functionality. Multiple factors can affect effective page time, such as network speed, hardware performance, or page complexity. If an effective page time greater than 60 seconds is detected, the value of this field is set to `null` or `0`. |
| `EffectivePageTimeErrorType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the origin of an error. This field is populated when EFFECTIVE_PAGE_TIME_DEVIATION_REASON contains the PAGE_HAS_ERROR value. |
| `EffectivePageTimeReason` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The reason for deviation in page loading time.<br>Examples of possible values include:<br>• `PageInDom`- The page was loaded from a cache<br>• `PageHasError`- An undefined page loading error occurred. |
| `GrandparentUiElement` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The grandparent scope of the page element where the event occurred. |

| Field | Details |
| --- | --- |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`. |
| `MobileSdkAppType` | **Type**<br>string<br>**Description**<br>The mobile SDK application type.<br>**Possible Values**<br>• `HYBRID`<br>• `HYBRIDLOCAL`<br>• `HYBRIDREMOTE`<br>• `NATIVE`<br>• `REACTNATIVE` |
| `MobileSdkVersion` | **Type**<br>String<br>**Description**<br>The mobile SDK application version number.<br>**Example**<br>5.0 |
| `OperatingSystemName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The operating system name, derived from `UserAgent`. For example: `Android`, `iOS`, `OSX`, `Windows`. |
| `OperatingSystemVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The operating system version, derived from `UserAgent`. |

| Field | Details |
| --- | --- |
| `PageAppName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The internal name of the application that the user accessed from the App Launcher. For example: `LightningSales`. |
| `PageContext` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the component hosting the main content of the page. For example: `clients:cardsContainer`. |
| `PageObjectIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique entity identifier of the event. For example: `0013000000I3zJAAAZ`. |
| `PageObjectType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The object type of the event. For example: `task`, `contacts`. |
| `PageStartTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The time when the page was initially loaded, measured in milliseconds. For example: `1471564788642`. |
| `PageUrl` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with `PageUrl`. For example: `/sObject/0064100000JXITSAA5/view`. |
| `ParentUiElement` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The parent scope of the page element where the event occurred. |
| `PreviousPageAppName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The internal name of the previous application that the user accessed from the App Launcher. For example: `LightningSales`. |
| `PreviousPageContext` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The context of the previous page where the event occurred. For example: `clients:cardsContainer`. |
| `PreviousPageObjectIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique previous page object identifier of the event. |
| `PreviousPageObjectType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The previous page object type of the event. For example: `task`, `contacts`. |

| Field | Details |
| --- | --- |
| `PreviousPageUrl` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The relative URL of the previous Lightning Experience or Salesforce mobile app page that the user opened. For example: `/sObject/006410000`. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestIdentifier`. For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `SdkAppVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The SDK application version number. For example: `5.0`. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When the user logs out and logs in again, a new session is started. For example: `cdd09305cb6babf34059e27f70e47f1b11dec868`. |
| `TargetUiElement` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The target page element where the event occurred. For example: `label bBody truncate`, `tabitem-link`. |

| Field | Details |
| --- | --- |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `UiEventSequenceNumber` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>An auto-incremented sequence number of the current event since the session started. |
| `UiEventTimestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>An auto-incremented sequence number of the current event since the session started. |
| `UserAgent` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The numeric code for the type of client used to make the request (for example, the browser, application, or API) as a string. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user accessing Salesforce services through the UI or API. For example: `00530000009M943`. |
| `UserType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The category of user license of the user accessing Salesforce services through the UI or API.<br>Possible values are:<br>• A: Automated Process<br>• b: High Volume Portal<br>• C: Customer Portal User<br>• D: External Who<br>• F: Self Service<br>• G: Guest<br>• L: Package License Manager<br>• N: Salesforce to Salesforce<br>• n: CSN Only<br>• O: Power Custom<br>• o: Custom<br>• P: Partner<br>• p: Customer Portal Manager<br>• S: Standard<br>• X: Salesforce Administrator |

# LightningPrfmEventLog

Lightning Performance events track trends in Lightning Experience and Salesforce mobile app performance. This object is available in API version 65.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| AppName | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the application that the user accessed. |
| `BrowserName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the browser that the user accessed.<br>**Example**<br>`Chrome`, `Safari` |
| `BrowserVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The version of the browser that the user accessed in `major.minor version` format. Some browsers don't provide a minor version. |
| `ClientGeolocation` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The geolocation of the client in the form of `<Country>/<State\|Province>`.<br>**Example**<br>`United States/California` |
| `ClientIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API client ID. |
| `ClientIp` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `ConnectionType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of connection.<br>**Possible Values**<br>• `CDMA1x`<br>• `CDMA`<br>• `EDGE`<br>• `EVDO0`<br>• `EVDOA`<br>• `EVDOB`<br>• `GPRS`<br>• `HRPD`<br>• `HSDPA`<br>• `HSUPA`<br>• `LTE`<br>• `WIFI` |
| `DeviceIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique identifier used to identify a device when tracking events. `DEVICE_ID` is a generated value that's created when the mobile app is initially run after installation. |
| `DeviceModel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of the device model.<br>**Example**<br>`iPad`, `iPhone` |
| `DevicePlatform` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of application experience in `name:experience:form` format.<br>**Possible Values**<br>• `name`: `APP_BUILDER`, `CUSTOM`, `S1`, `SFX`<br>• `experience`: `BROWSER`, `HYBRID`<br>• `form`: `DESKTOP`, `PHONE`, `TABLET` |
| `DeviceSessionIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started.<br>**Example**<br>`321a1ddfaf924803a075f1e69fc87bc06f53ccd0` |
| `Duration` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The duration in milliseconds since the page start time. |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring. |

| Field | Details |
| --- | --- |
| | **Example**<br>`GeJCsym5eyvtEK2I` |
| `MobileSdkAppType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The mobile SDK application type.<br>**Possible Values**<br>• `HYBRID`<br>• `HYBRIDLOCAL`<br>• `HYBRIDREMOTE`<br>• `NATIVE`<br>• `REACTNATIVE` |
| `MobileSdkVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The mobile SDK application version number. |
| `OperatingSystemName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The operating system name, derived from `USER_AGENT`. |
| `OperatingSystemVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The operating system version, derived from `USER_AGENT`. |
| `PageStartTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The time when the page was initially loaded, measured in milliseconds. |
| `PageUrl` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. |
| `PreviousPageUrl` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The relative URL of the previous Lightning Experience or Salesforce mobile app page that the user opened. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. |
| `SdkAppVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Mobile SDK application version. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The hash of the session ID to allow tracking of all events in a session. |

| Field | Details |
| --- | --- |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. |
| `UiEventIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Id of the Lightning event type. |
| `UiEventSource` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The source of the performance event. |
| `UiEventTimestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp of when event occurred. |
| `UiEventType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of performance event. |
| `UserAgent` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The client user agent string. |

| Field | Details |
| --- | --- |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `UserType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The category of user license of the user accessing Salesforce services through the UI or API. |

# LightningToggleMetrics

Represents users who switched from Lightning Experience back to Salesforce Classic. This object is available in API version 43.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Not available in sandbox orgs.

## Fields

| Field Name | Details |
| --- | --- |
| `Action` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>User switched from Lightning Experience to Salesforce Classic or from Salesforce Classic to Lightning Experience. |

| Field Name | Details |
| --- | --- |
| `MetricsDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Date user switched. |
| `RecordCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number of user switches. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>UserId of user who switched.<br>This is a relationship field.<br>**Relationship Name**<br>User<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

# LightningUsageByAppTypeMetrics

Represents number of users on Lightning Experience and Salesforce Mobile. This object is available in API version 43.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Not available in sandbox orgs.

## Fields

| Field Name | Details |
|---|---|
| `AppExperience` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>User's app (Lightning Experience or Salesforce Mobile). |
| `MetricsDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Date user accessed Lightning Experience or Salesforce Mobile. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>UserId for user accessing Lightning Experience or Salesforce Mobile.<br>This is a relationship field.<br>**Relationship Name**<br>User<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

# LightningUsageByBrowserMetrics

Represents Lightning Experience usage grouped by user's browser. This object is available in API version 43.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Not available in sandbox orgs.

## Fields

| Field Name | Details |
| --- | --- |
| `Browser` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Browser used to access Lightning Experience. |
| `MetricsDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Date user accessed Lightning Experience. |
| `PageName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Page user viewed in Lightning Experience. |
| `TotalCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Total number of pages accessed in Lightning Experience. |

# LightningUsageByPageMetrics

Represents standard pages users viewed most frequently in Lightning Experience. This object is available in API version 43.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Not available in sandbox orgs.

## Fields

| Field Name | Details |
| --- | --- |
| `MetricsDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Date user viewed page in Lightning Experience. |
| `PageName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of page user viewed. |
| `TotalCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Total number of pages viewed. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>UserId of user who viewed page.<br>This is a relationship field.<br>**Relationship Name**<br>User<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

# LightningUsageByFlexiPageMetrics

Represents custom pages users viewed most frequently in Lightning Experience. This object is available in API version 43.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Not available in sandbox orgs.

## Fields

| Field Name | Details |
|---|---|
| `FlexiPageNameOrId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name or Id of custom page user viewed in Lightning Experience. |
| `FlexiPageType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Custom page type. |
| `MetricsDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Date user viewed page in Lightning Experience. |
| `TotalCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Total number of custom pages viewed. |

# LightningExitByPageMetrics

Represents frequency metrics about the standard pages within which users switched from Lightning Experience to Salesforce Classic. This object is available in API version 44.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Not available in sandbox orgs.

## Fields

| Field Name | Details |
|---|---|
| `MetricsDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The date that the data was recorded. |
| `PageName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the page from which the user switched from Lightning Experience to Salesforce Classic. |
| `RecordCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of records per user and page. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>UserId of the user who views page.<br>This is a relationship field.<br>**Relationship Name**<br>User<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

# LinkedArticle

Represents a knowledge article that is attached to a work order, work order line item, or work type. This object is available in API version 37.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Knowledge must be enabled in your org. Field Service must be enabled. Only users that have access to the Knowledge article and the parent record linked to it can access this object.

In Knowledge in Salesforce Classic, only Field Service objects such as Work Order, Work Type, and Work Order Line Item are supported for linked articles. In Lightning Knowledge, other social objects such as Chat, Messaging, Voice Call, and Social Post are supported for linked articles.

To call `update()` to attach or detach articles, enable the Read user permission on the Knowledge object and the Edit user permission on the object whose article you update. Available in API version 58.0 and later.

## Fields

| Field Name | Details |
| --- | --- |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. |
| `KnowledgeArticleId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the Knowledge article attached to the record. The label in the user interface is Knowledge Article ID. |
| `KnowledgeArticleVersionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The version of the Knowledge article attached to the record. This field lists the title of the attached version and links to the version. The label in the user interface is Article Version.<br>When you attach an article to a work order, that version of the article stays associated with the work order, even if later versions are published. If needed, you can detach and reattach an article to a work order to link the latest version. |
| `LinkedEntityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the record that the Knowledge article is attached to. The label in the user interface is Linked Record ID. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The title of the article. The label in the user interface is Article Title. |
| `RecordTypeId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the article's record type, if used. This field is only available for Lightning Knowledge. |
| `Type` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>(Read only) The type of record that the Knowledge article is attached to. For example, work order. The label in the user interface is Linked Object Type. |

## Usage

Admins can customize linked articles' page layouts, fields, validation rules, and more from the Linked Articles page in Setup.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**LinkedArticleChangeEvent (API version 62.0)**
Change events are available for the object.

**LinkedArticleFeed**
Feed tracking is available for the object.

**LinkedArticleHistory**
History is available for tracked fields of the object.

# LinkedArticleFeed

Represents the comment feed on a linked article. This object is available in API version 39.0 and later.

For additional information about feeds, see FeedItem on page 2510.

## Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Knowledge must be enabled in your org.

# Fields

| Field | Details |
|---|---|
| `BestCommentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the comment marked as best answer on a question post. |
| `Body` | **Type**<br>textarea<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The body of the feed item. Required when `Type` is `TextPost` or `AdvancedTextPost`. Optional when `Type` is `ContentPost` or `LinkPost`.<br>Although a value for `Body` is not required for the `ContentPost` type, an attachment is required. If an attachment isn't present, the type changes to `TextPost` or `AdvancedTextPost`, depending on the API version. `TextPost` and `AdvancedTextPost` do require a value for `Body`.<br>Tip: See the `IsRichText` field for a list of HTML tags supported in the body of rich text posts. |
| `CommentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of comments associated with this feed item. |
| `InsertedById` | **Type**<br>reference<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the `InsertedBy` value is set to the ID of the context user. |
| `IsRichText` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the feed item `Body` contains rich text. If you post a rich text feed comment using SOAP API, set `IsRichText` to `true` and escape HTML entities from the body. Otherwise, the post is rendered as plain text.<br>Rich text supports the following HTML tags:<br>• `<p>`<br>Tip: Though the `<br>` tag isn't supported, you can use `<p> </p>` to create lines.<br>• `<a>`<br>• `<b>`<br>• `<code>`<br>• `<i>`<br>• `<u>`<br>• `<s>`<br>• `<ul>`<br>• `<ol>`<br>• `<li>`<br>• `<img>`<br>The `<img>` tag is accessible only through the API and must reference files in Salesforce similar to this example: `<img src="sfdc://069B0000000omjh"></img>`<br>Note: In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation. |
| `LikeCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of likes associated with this feed item. |
| `LinkUrl` | **Type**<br>url<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The URL of a `LinkPost`. |

| Field | Details |
| --- | --- |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the object type to which the feed item is related. For example, set this field to a `UserId` to post to someone's profile feed, or an `AccountId` to post to a specific account. |
| `RelatedRecordId` | **Type**<br>reference<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>ID of the ContentVersion record associated with a `ContentPost`. For WDC thanks posts, it's the ID of the WorkThanks object associated with a `RypplePost`. This field is typically null for all posts except `ContentPost` and `RypplePost`.<br>For example, set this field to an existing ContentVersion ID and post it to a feed with `Type` set to `ContentPost`. |
| `Title` | **Type**<br>string<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>The title of the feed item. When the `Type` is `LinkPost`, the `LinkUrl` is the URL and this field is the link name. The `Title` field can be updated on posts of `Type` `QuestionPost`. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of feed item. Except for `ContentPost`, `LinkPost`, and `TextPost`, don't create feed items of other types directly from the API.<br>• `ActivityEvent`—indirectly generated event when a user or the API adds a Task associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a Task or Event associated with a case record (excluding email and call logging).<br>For a recurring Task with CaseFeed disabled, one event is generated for the series only. For a recurring Task with CaseFeed enabled, events are generated for the series and each occurrence. |

| Field | Details |
| --- | --- |
| | • `AdvancedTextPost`—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post.<br>• `AnnouncementPost`—Not used.<br>• `ApprovalPost`—generated when a user submits an approval.<br>• `BasicTemplateFeedItem`—Not used.<br>• `CanvasPost`—a post made by a canvas app posted on a feed.<br>• `CollaborationGroupCreated`—generated when a user creates a public group.<br>• `CollaborationGroupUnarchived`—Not used.<br>• `ContentPost`—a post with an attached file.<br>• `CreatedRecordEvent`—generated when a user creates a record from the publisher.<br>• `DashboardComponentAlert`—generated when a dashboard metric or gauge exceeds a user-defined threshold.<br>• `DashboardComponentSnapshot`—created when a user posts a dashboard snapshot on a feed.<br>• `LinkPost`—a post with an attached URL.<br>• `PollPost`—a poll posted on a feed.<br>• `ProfileSkillPost`—generated when a skill is added to a user's Chatter profile.<br>• `QuestionPost`—generated when a user posts a question.<br>• `ReplyPost`—generated when Chatter Answers posts a reply.<br>• `RypplePost`—generated when a user creates a Thanks badge in WDC.<br>• `TextPost`—a direct text entry on a feed.<br>• `TrackedChange`—a change or group of changes to a tracked field.<br>• `UserStatus`—automatically generated when a user adds a post. Deprecated.<br>The following values appear in the `Type` picklist for all feed objects but apply only to CaseFeed:<br>• `AttachArticleEvent`—generated event when a user attaches an article to a case.<br>• `CallLogPost`—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event.<br>• `CaseCommentPost`—generated event when a user adds a case comment for a case object.<br>• `ChangeStatusPost`—generated event when a user changes the status of a case.<br>• `ChatTranscriptPost`—generated event when Chat transcript is saved to a case.<br>• `EmailMessageEvent`—generated event when an email related to a case object is sent or received.<br>• `FacebookPost`—generated when a Facebook post is created from a case. Deprecated.<br>• `MilestoneEvent`—generated when a case milestone is completed or reaches violation status.<br>• `SocialPost`—generated when a social post is created from a case. |

| Field | Details |
| --- | --- |
| | Note: If you set `Type` to `ContentPost`, also specify `ContentData` and `ContentFileName`. |

# LinkedArticleHistory

Represents the history of changes made to tracked fields on a linked article. This object is available in API version 37.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

## Special Access Rules

Knowledge must be enabled in your org.

## Fields

| Field Name | Details |
| --- | --- |
| `DataType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Data type of the field that was changed. |
| `Field` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The name of the field that was changed. |
| `LinkedArticleId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The ID of the tracked linked article. The history is displayed on the detail page for this record. |
| `NewValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The new value of the field that was changed. |
| `OldValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The value of the field before it was changed. |

# ListEmail

Represents a list email sent from Salesforce, or sent from Account Engagement and synced to Salesforce. When the list email is sent, the recipients are generated by combining recipients in ListEmailIndividualRecipients and ListEmailRecipientSource. Duplicate and other invalid recipients are removed. The result is the recipients sent any given list email. ListEmail has a one-to-many relationship with ListEmailRecipientSource and ListEmailIndividualRecipient. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `ActionCadenceStepId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the action cadence step that generated a list email record. Used for automated emails in Sales Engagement. |

| Field | Details |
| --- | --- |
| | Users must have the Sales Engagement Cadence Creator or Sales Engagement User permission enabled.<br>This field is available in API version 54.0 and later.<br>**Relationship Name**<br>ActionCadenceStep<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ActionCadenceStep |
| `CampaignId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the related campaign.<br>This field is available in API version 42.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>Campaign<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Campaign |
| `ClickThroughRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of visitors who click links contained in emails delivered (sent minus bounces) to them. Multiple clicks for a same link are counted.<br>This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set. |
| `ClickToOpenRatio` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of unique clicks divided by unique HTML opens.<br>This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set. |
| `DeliveryRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of the emails that were delivered compared to the number that bounced (soft and hard). Note: this data includes emails that were delivered to the recipient's spam folder.<br>This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set. |
| `EmailContentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the email content record associated with the list email.<br>This field is available in API version 50.0 or later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set. |
| `FromAddress` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Read-only except when the list email is in a draft state. Validated against user's addresses. |
| `FromName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Read-only except when the list email is in a draft state. Validated against user's addresses. This field is null for emails sent from Account Engagement. |

| Field | Details |
| --- | --- |
| `HasAttachment` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Read-only. Defaulted on create and update. Value is `true` if the list email has an attachment. This field is null for emails sent from Account Engagement. |
| `HtmlBody` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The body of the list email. This field is null for emails sent from Account Engagement.<br>List emails can contain up to 32,000 characters for the body. These limits include visible characters and other characters in the email, including markup. |
| `IsTracked` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates if email tracking was on when the list email was sent. This field is blank for emails sent from Account Engagement and synced to Salesforce. This field is null for emails sent from Account Engagement. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp that indicates when the current user last viewed a record that is related to this list email. This field is null for emails sent from Account Engagement. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed. This field is null for emails sent from Account Engagement. |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Read-only except when the list email is in a draft state. |
| `OpenRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of unique HTML opens compared to the total number of emails delivered (sent minus bounces).<br>This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set. |
| `OptOutRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of users that have opted out compared to the total number of emails sent.<br>This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>References Group and User. This field is null for emails sent from Account Engagement.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

| Field | Details |
| --- | --- |
| `ProgramName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable<br>**Description**<br>The name of an Engagement Studio program where an automated email originates. Reserved for future use.<br>This field is available in API version 46.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set. |
| `ScheduledDate` | **Type**<br>dateTime<br>**Properties**<br>CreateFilter, Nillable, Sort, Update<br>**Description**<br>Read-only. If null and `Status` is set to Scheduled` defaults to created time. |
| `SentVia` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates whether the email was sent from Salesforce or Account Engagement. The allowed values are `Salesforce` or `Pardot` or `MessagingService`.<br>This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set. |
| `SpamComplaintRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of spam complaints compared to the total number of emails sent.<br>This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Read-only except when the list email is in a draft state.<br>Changing the status to Scheduled causes the list email to be sent.<br>Valid values:<br>• `Draft`<br>• `Scheduled`<br>• `Sent`<br>• `Limit Error`<br>• `Canceled`<br>• `Running` |
| `Subject` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>Read-only except when the list email is in a draft state. This field is null for emails sent from Account Engagement.<br>List emails can contain up to 3,000 characters for the subject. These limits include visible characters and other characters in the email, including markup. |
| `TextBody` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Read-only except when the list email is in a draft state. This field is null for emails sent from Account Engagement. |
| `TotalDelivered` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of emails minus hard and soft bounces. Note: this data includes emails that were delivered to the recipient's spam folder.<br>This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set. |

| Field | Details |
| --- | --- |
| `TotalHardBounced` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of emails that permanently bounced back to the sender because the address is invalid. A hard bounce can occur because the domain name doesn't exist or because the recipient is unknown.<br>This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set. |
| `TotalOpens` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of times a prospect's email client loaded the images in the HTML version of the email. We also record an open if the prospect clicks a link within the HTML or text email without downloading images. A click indicates that they viewed the message. Some email clients (Outlook, Apple Mail, Thunderbird) don't display images by default. Account Engagement counts an open each time the images load.<br>This field is available in API version 41.0 and later. To access this field. users need the Sales Engagement User permission set or your org must use Account Engagement and users need the CRM User or Sales User permission set. |
| `TotalOutOfOffice` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of replies received with an out-of-office message.<br>This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the Salesforce Engage permission set. |
| `TotalReplies` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of replies received. |

| Field | Details |
| --- | --- |
| | This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the Salesforce Engage permission set. |
| `TotalSent` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>Read-only. The total number of list emails sent, including bounced, opted-out, and invalid To: addresses. |
| `TotalSoftBounced` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of times a recipient's mail server acknowledged the email, but returned it to the sender. Sometimes it is because the recipient's mailbox is full or the mail server is temporarily unavailable. A soft bounce message can sometimes be deliverable at another time. After 5 soft bounces, Account Engagement opts the prospect out of emails.<br>This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set. |
| `TotalSpamComplaints` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of prospects that reported the email as spam.<br>This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set. |
| `TotalTrackedLinkClicks` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The number of times prospects clicked a link in the email.<br>This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set. |

| Field | Details |
| --- | --- |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist<br>**Description**<br>The type of email sent: list email or automated email. Reserved for future use.<br>This field is available in API version 46.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set. |
| `UniqueClickThroughRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of visitors who clicked a link contained in an email.<br>This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set. |
| `UniqueOpens` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The number of prospects who loaded the images in the HTML version of the email. The Unique Opens category counts each recipient one time only, even if the prospect loaded images several times.<br>This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set. |
| `UniqueOptOuts` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>Unique opt-outs represent the total number of prospects that have clicked the link to unsubscribe or opted out of all emails in the Email Preference Center. These prospects are removed from future email sends.<br>This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set. |

| Field | Details |
| --- | --- |
| UniqueReplies | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of unique replies.<br>This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the Salesforce Engage permission set. |
| UniqueTrackedLinkClicks | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The number of times a prospect clicked a link in the email. This metric doesn't include multiple clicks of the same link.<br>This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set. |

## Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AccountChangeEvent (API version 44.0)**
Change events are available for the object.

**ListEmailOwnerSharingRule**
Sharing rules are available for the object.

**ListEmailShare**
Sharing is available for the object.

# ListEmailIndividualRecipient

For a list email in Salesforce, represents a recipient. Each record represents a link from a list email to exactly one recipient for that list email. Recipients can be contacts, leads, or campaign members. Has a one-to-many relationship with ListEmail. This object is available in API version 44.0 and later.

The visibility and accessibility of this object is inherited from the related list email.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `ActionCadenceStepTrackerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Understand which action cadence step tracker the list email individual recipient is related to. Used for automated emails in Sales Engagement.<br>Users must have the Sales Engagement Cadence Creator or Sales Engagement User permission enabled.<br>This field is available in API version 54.0 and later.<br>**Relationship Name**<br>ActionCadenceStepTracker<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ActionCadenceStepTracker |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Possible values are:<br>• `EUR` (Euro)<br>• `INR` (Indian Rupee)<br>• `USD` (US Dollars) |
| `ListEmailId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The related list email record. Required on record creation; read-only otherwise. |

| Field | Details |
| --- | --- |
| | This is a relationship field.<br>**Relationship Name**<br>ListEmail<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ListEmail |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The auto-generated name of the list email recipient source. |
| `RecipientId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>the contact, lead, person account, or campaign member ID of the individual list email recipient.<br>This is a relationship field.<br>**Relationship Name**<br>Recipient<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CampaignMember, Contact, Lead |

## Usage

# ListEmailMonthlyMetric

Represents the monthly engagement metrics for a single list email. This object is available in API version 49.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Sales Engagement must be enabled.

## Fields

| Field | Details |
| --- | --- |
| `AllEmailsBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total hard and soft bounces that were triggered for this list email in the month.<br>This field is a calculated field. |
| `AllEmailsDeliveredCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients who successfully received this list email in the month.<br>This field is a calculated field. |
| `AllEmailsHardBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total hard bounces that were triggered for this list email in the month. |
| `AllEmailsLinkClickedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of link clicks by the recipients of this list email in the month. |
| `AllEmailsOpenedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of recipients who opened this list email in the month. |
| `AllEmailsOutOfOfficeCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of out-of-office replies that were triggered for this list email in the month. |
| `AllEmailsRepliedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of replies to this list email in the month. |
| `AllEmailsSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients to whom this list email was sent in the month. |
| `AllEmailsSoftBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total soft bounces that were triggered for this list email in the month. |
| `HardBounceTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients who were sent this list email with hard bounce tracking in the month. Available in API version 53.0 and later. |
| `LinkClickTrackableSends` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients who were sent this list email with link click tracking in the month. Available in API version 53.0 and later. |
| `ListEmailId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the related list email.<br>This field is a relationship field.<br>**Relationship Name**<br>ListEmail<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ListEmail |
| `Month` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The month in which the engagement occurred. |
| `MonthInt` | **Type**<br>int<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The month in which the engagement occurred, in yyyymm format. |
| `OpenTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients who were sent this list email with open tracking in the month. Available in API version 53.0 and later. |

| Field | Details |
| --- | --- |
| `OutOfOfficeTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients who were sent this list email with out-of-office tracking in the month. Available in API version 53.0 and later. |
| `ReplyTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients who were sent this list email with reply tracking in the month. Available in API version 53.0 and later. |
| `SoftBounceTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients who were sent this list email with soft bounce tracking in the month. Available in API version 53.0 and later. |
| `TrackableSendHardBounceRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of recipients for whom this list email, sent with hard bounce tracking, resulted in a hard bounce in the month. Available in API version 54.0 and later.<br>This field is a calculated field. |
| `TrackableSendLinkClickRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of recipients who clicked on a link in this list email that was sent with link click tracking in the month. Available in API version 53.0 and later.<br>This field is a calculated field. |

| Field | Details |
| --- | --- |
| TrackableSendOpenRate | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of recipients who opened this list email that was sent with open tracking in the month. Available in API version 53.0 and later.<br>This field is a calculated field. |
| TrackableSendOutOfOfficeRate | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of recipients for whom the list email, sent with out-of-office tracking, resulted in an out-of-office reply in the month. Available in API version 54.0 and later.<br>This field is a calculated field. |
| TrackableSendReplyRate | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of recipients for whom this list email, sent with reply tracking, resulted in a reply in the month. Available in API version 53.0 and later.<br>This field is a calculated field. |
| TrackableSendSoftBounceRate | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of recipients for whom this list email, sent with soft bounce tracking, resulted in a soft bounce in the month. Available in API version 54.0 and later.<br>This field is a calculated field. |
| UniqueEmailsLinkClickedCount | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of unique recipients who clicked a link in this list email in the month. |
| `UniqueEmailsOpenedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of unique recipients who opened this list email in the month. |
| `UniqueEmailsRepliedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of unique recipients who replied to this list email in the month. |

# ListEmailRecipientSource

For a list email in Salesforce, represents the dynamically defined sources of recipient email addresses. Each record represents a link to a single list view or campaign that is examined when the list email is sent. Has a one-to-many relationship with ListEmail. This object is available in API version 41.0 and later.

The visibility and accessibility of this object is inherited from the related list email.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `getDeleted()`, `getUpdated()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `ListEmailId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The related list email record. Required on record creation; read-only otherwise.<br>This is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>ListEmail<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ListEmail |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The auto-generated name of the list email recipient source. |
| `SourceListId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The id of a list view to send the list email to. Read-only except when list email is in draft state.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>SourceList<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Campaign, ListView, Topic |
| `SourceType` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Required. Read-only except when list email is in draft state.<br>Valid values:<br>• Include |

# ListView

Represents a list view. A list view shows a set of records for an object, based on specific criteria. This object is available in API version 32.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`

## Fields

| Name | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The fully qualified developer name of the list view. |
| `IsSoqlCompatible` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Whether the list view can be used with SOQL.. |
| `LastModifiedById` | **Type**<br>User<br>**Properties**<br>Filter, Sort<br>**Description**<br>The ID of the user who last modified the list view. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the list view was last referenced, with a precision of one second. |
| `LastViewedDate` | **Type**<br>dateTime |

| Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the list view was last viewed, with a precision of one second. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The name of the list view. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace of the list view. |
| `SobjectType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The API name of the sObject for the list view. |

## Usage

Use this object to retrieve the metadata for a pipeline inspection view.

# ListViewChart

Represents a graphical chart that's displayed on Salesforce for Android, iOS, and mobile web list views. The chart aggregates data that is filtered based on the list view that's currently displayed. This object is available in API version 33.0 and later and is accessible by portal users.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

# Fields

| Name | Description |
| --- | --- |
| `AggregateField` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Query, Restricted picklist, Retrieve, Sort, Update<br>**Description**<br>The field that's used for calculating data on each group. `AggregateField` can't be the same as `GroupingField`. |
| `AggregateType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Query, Restricted picklist, Retrieve, Sort, Update<br>**Description**<br>The type of calculations to run on each group. The supported `AggregateType` values are `Count`, `Sum`, and `Avg`. |
| `ChartType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Query, Restricted picklist,Retrieve, Sort, Update<br>**Description**<br>The type of chart to create. The supported chart types are horizontal bar chart, vertical bar chart, and donut chart. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Query, Retrieve, Sort, Update<br>**Description**<br>The fully qualified developer name of the chart.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `GroupingField` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Query, Restricted picklist, Retrieve, Sort, Update |

| Name | Description |
| --- | --- |
| | **Description**<br>The field that's used to divide the data into collections. The field must be supported by SOQL `GROUP BY` functionality. `GroupingField` can't be the same as `AggregateField`. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the `MasterLabel`. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Query, Retrieve, Sort, Update<br>**Description**<br>The label for the chart. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Query, Retrieve, Sort, Update<br>**Description**<br>The ID of the user who owns the chart.<br>This is a relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `SobjectType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Query, Restricted picklist, Retrieve, Sort<br>**Description**<br>The API name of the sObject for the chart. |

# ListViewChartInstance

Retrieves metadata for all standard and custom charts for a given entity in context of a given list view. This object is available in API versions 34.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

| Field Name | Details |
|---|---|
| `AggregateField` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The field that's used for calculating data on each group. `AggregateField` can't be the same as `GroupingField`. |
| `AggregateType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of calculations to run on each group. The supported `AggregateType` values are `Count`, `Sum`, and `Avg`. |
| `ChartType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of chart to create. The supported chart types are horizontal bar chart, vertical bar chart, and donut chart. |
| `DataQuery` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The SOQL query that can be executed to fetch the data for drawing a chart. |

| Field Name | Details |
| --- | --- |
| `DataQueryWithoutUserFilters` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The SOQL query that can be executed to fetch the data for drawing a chart, without user filters.<br>Available in API v43.0 and later. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>API name of the chart. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record. |
| `ExternalId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Reserved for future use. |
| `GroupingField` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The field that's used to divide the data into collections. The field has to be supported by SOQL `GROUP BY` functionality. `GroupingField` can't be the same as `AggregateField`. |
| `IsDeletable` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates if the chart can be deleted. |
| `IsEditable` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates if the chart can be edited. Standard charts are not editable. |
| `IsLastViewed` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates if a chart is the last viewed by a user. |
| `Label` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The display name of the chart. |
| `ListViewChartId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the chart created by a user. For standard charts, this is null.<br>This is a relationship field.<br>**Relationship Name**<br>ListViewChart<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ListViewChart |

| Field Name | Details |
| --- | --- |
| `ListViewContextId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the list view in context of which the chart is generated. Required to query `ListViewChartInstance`.<br>This is a relationship field.<br>**Relationship Name**<br>ListViewContext<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ListView |
| `SourceEntity` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>API name of the entity to which the chart is related. Required to query `ListViewChartInstance`. |

# Usage

**Example 1. Retrieve all custom and standard charts for Account entity for All Accounts list view**

```
SELECT AggregateField, AggregateType, ChartType, DataQuery, DeveloperName, ExternalId,
 GroupingField, Id, IsDeletable, IsEditable, IsLastViewed, Label, ListViewChartId,
ListViewContextId, SourceEntity FROM ListViewChartInstance WHERE SourceEntity='Account'
 and ListViewContextId='00BR0000000U8Hr'
```

**Example 2. Retrieve metadata for a specific custom chart by ID for Account entity and All Accounts list view**

```
SELECT AggregateField, AggregateType, ChartType, DataQuery, DeveloperName, ExternalId,
 GroupingField, Id, IsDeletable, IsEditable, IsLastViewed, Label, ListViewChartId,
ListViewContextId, SourceEntity FROM ListViewChartInstance WHERE SourceEntity='Account'
 and ListViewContextID='00BR0000000U8Hr' and ListViewChartId='0DdR00000004CBxKAM'
```

**Example 3. Retrieve metadata for a specific standard chart by its developer name for Account entity and All Accounts list view**

```
SELECT AggregateField, AggregateType, ChartType, DataQuery, DeveloperName, ExternalId,
 GroupingField, Id, IsDeletable, IsEditable, IsLastViewed, Label, ListViewChartId,
ListViewContextId, SourceEntity FROM ListViewChartInstance WHERE SourceEntity='Account'
 and ListViewContextID='00BR0000000U8Hr' and DeveloperName='AccountsByIndustry'
```

# LiveAgentSession

This object is automatically created for each Chat session and stores information about the session. This object is available in API versions 28.0 and later.

Note: Standard fields for the LiveAgentSession object can only be modified if your administrator has given you editing permissions for these records.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`

## Fields

| Field Name | Details |
|---|---|
| `AgentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the agent associated with the session. |
| `ChatReqAssigned` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of chat requests that were assigned to an agent during a session. |
| `ChatReqDeclined` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of chat requests that were declined by an agent during a session. |
| `ChatReqEngaged` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of chats in which an agent was engaged during a session. |

| Field Name | Details |
| --- | --- |
| `ChatReqTimedOut` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of chat requests that timed out in an agent's queue during a session. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time that the session record was last referenced. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time that the session record was last viewed. |
| `LoginTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The date and time an agent logged in during the session. |
| `LogoutTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The date and time an agent logged out during a session. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookupSort<br>**Description**<br>The name of the session. |

| Field Name | Details |
| --- | --- |
| NumFlagLoweredAgent | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of assistance flags lowered by the agent. |
| NumFlagLoweredSupervisor | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of assistance flags lowered by the supervisor. |
| NumFlagRaised | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of assistance flags raised by the agent. |
| OwnerId | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the owner of the session record. |
| TimeAtCapacity | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The amount of time an agent spent with the maximum number of chats in his or her queue. |
| TimeIdle | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The amount of time an agent spent idle during the session. |
| `TimeInAwayStatus` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The amount of time an agent spent with a status of "Away" during a session. |
| `TimeInChats` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The amount of time an agent spent engaged in chats during a session. |
| `TimeInOnlineStatus` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The amount of time an agent spent with a status of "Online" during a session. |

## Usage

Use this object to query and manage chat session records.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**LiveAgentSessionHistory**
History is available for tracked fields of the object.

**LiveAgentSessionOwnerSharingRule**
Sharing rules are available for the object.

**LiveAgentSessionShare**
Sharing is available for the object.

# LiveAgentSessionHistory

This object is automatically created for each Chat session and stores information about changes made to the session. This object is available in API versions 28.0 and later.

Note: Standard fields for the LiveAgentSession object can only be modified if your administrator has given you editing permissions for these records.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

## Fields

| Field Name | Details |
|---|---|
| `DataType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Data type of the field that was changed. |
| `Field` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The name of the field that was changed in a session record. |
| `LiveAgentSessionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the session record that was changed. |
| `NewValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The new value of the field that was changed. |

| Field Name | Details |
| --- | --- |
| `OldValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The original value of the field that was changed. |

## Usage

Use this object to identify changes to chat session records.

# LiveAgentSessionShare

This object is automatically created for each Chat session and stores information about the session. This object is available in API versions 28.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Note: Standard fields for the LiveAgentSession object can only be modified if your administrator has given you editing permissions for these records.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

| Field Name | Details |
| --- | --- |
| `AccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Level of access that the User or Group has to the LiveAgentSession. The possible values are:<br>• `Read`<br>• `Edit`<br>• `All` (This value is not valid for `create()` or `update()` calls.)<br>This value must be set to an access level that is higher than the organization's default access level for chat transcripts. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the parent object, if any. |
| `RowCause` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited.<br>Values can include:<br>• `Manual`—The User or Group has access because a user with "All" access manually shared the LiveAgentSession with them.<br>• `Owner`—The User is the owner of the LiveAgentSession or is in a role above the LiveAgentSession owner in the role hierarchy. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the user or group that has been given access to the LiveAgentSession. |

## Usage

This object lets you determine which users and groups can view and edit LiveAgentSession records owned by other users.

If you attempt to create a new record that matches an existing record, the `create()` call updates any modified fields and returns the existing record.

# LiveChatBlockingRule

Represents a rule for blocking chat visitors' IP addresses from starting new chats with agents. This object is available in API version 34.0 and later.

## Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

## Special Access Rules

To create a new rule, you must be logged in with the "Customize Application" permission or as a system administrator.

## Fields

| Field Name | Details |
|---|---|
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Nillable<br>**Description**<br>The description of the blocking rule—for example, the reason why the given IP address or range of addresses is being banned from starting new chats. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record. |

| Field Name | Details |
| --- | --- |
| | Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `FromIpAddress` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The IP address of the user that you want to block, or the beginning of the range of IP addresses you want to block. If you want to block a range of IP addresses, indicate the end of the range in the `ToIpAddress` field. If you don't indicate an IP address in the `ToIpAddress` field, the only IP address that will be blocked is the IP address in the `FromIpAddress` field. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The language of the blocking rule. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Label for the blocking rule. |
| `ToIpAddress` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>(Optional) The end of the range of IP addresses that you want to block. The range begins with and includes the IP address in the `FromIpAddress` field, and it ends with and includes the IP address in the `ToIpAddress` field. |

## Usage

Use this object to query and manage rules for blocking customers from starting new chats with agents.

# LiveChatObjectAccessConfig

Represents the action you can perform on a specified object by the Chat API. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, enable Chat. To see the list of objects you can find or create in the UI using this API, enable the "Turns on findOrCreate in chat API" permission. You can find this permission in the Chat Settings page of the Setup UI.

## Fields

| Field | Details |
|---|---|
| `AccessType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The API action you can perform on the object specified in `SobjectType`.<br>Possible values are:<br>• `Create`<br>• `Find` |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the associated LiveChatObjectAccessDefinition record.<br>This is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>LiveChatObjectAccessDefinition |
| `SobjectType` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The object that the action specified by `AccessType` applies to.<br>Possible values are all standard and custom objects. Custom objects are available as picklist values in API version 55.0 and later. |

SEE ALSO:

LiveChatObjectAccessDefinition

# LiveChatObjectAccessDefinition

Represents the parent record for one or more LiveChatObjectAccessConfig objects. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, enable Chat. To see the list of objects you can find or create in the UI using this API, enable the "Turns on findOrCreate in chat API" permission. You can find this permission in the Chat Settings page of the Setup UI.

## Fields

| Field | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. The name:<br>• must be 40 characters or fewer<br>• must begin with a letter<br>• can contain only underscores and alphanumeric characters<br>• can't include spaces<br>• can't end with an underscore<br>• can't contain 2 consecutive underscores |

| Field | Details |
| --- | --- |
| | In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The combined language and locale ISO code, which controls the language for labels displayed in an application.<br>Possible values are:<br>• `da`—Danish<br>• `de`—German<br>• `en_US`—English<br>• `es`—Spanish<br>• `es_MX`—Spanish (Mexico)<br>• `fi`—Finnish<br>• `fr`—French<br>• `it`—Italian<br>• `ja`—Japanese<br>• `ko`—Korean<br>• `nl_NL`—Dutch<br>• `no`—Norwegian<br>• `pt_BR`—Portuguese (Brazil)<br>• `ru`—Russian<br>• `sv`—Swedish<br>• `th`—Thai<br>• `zh_CN`—Chinese (Simplified)<br>• `zh_TW`—Chinese (Traditional) |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The label for this object's record. This display value is the internal label that doesn't get translated. |

# LiveChatButton

Represents a button that allows visitors to request chats with Chat users. This object is available in API version 24.0 and later.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
|---|---|
| `Animation` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of animation used when an automated chat invitation appears on-screen. For automated chat invitations only. Available in API version 29.0 and later.<br>Possible values are:<br>• `Appear`<br>• `Custom`<br>• `Fade`<br>• `Slide` |
| `AutoGreeting` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The text that is automatically sent from an agent to a visitor when a chat session starts.<br>Note: A greeting message in the `AutoGreeting` field of the LiveChatButton object overrides individual users' greeting messages in the `AutoGreeting` field in the LiveChatUserConfig object. |
| `ChasitorIdleTimeout` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The amount of time a customer has to respond to an agent message before the chat times out. |

| Field Name | Details |
| --- | --- |
| `ChasitorIdleTimeoutWarning` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The amount of time a customer has to respond to an agent message before a warning appears and a timer begins a countdown. This value must be shorter than the `ChasitorIdleTimeout` value. We recommend at least 30 seconds shorter. |
| `ChatPageId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The record ID of the custom VisualForce page that contains the custom chat window code.<br>This field is a relationship field.<br>**Relationship Name**<br>ChatPage<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApexPage |
| `CustomAgentName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The custom name of the agent associated with the button. Available in API version 29.0 and later.<br>Note: A custom agent name in the `CustomAgentName` field of the LiveChatButton object overrides individual users' custom agent name in the `CustomAgentName` field in the LiveChatUserConfig object. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. |
| `HasQueue` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether or not to allow queing incoming chat requests until an agent is available.<br>The default value is `false`. |
| `InviteEndPosition` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The position on screen where an automated chat invitation's animation ends.<br>Note: You don't need to select an end position for your automated chat invitation if you use a custom animation.<br>For automated chat invitations only. Available in API version 29.0 and later.<br>Possible values are:<br>• `Bottom`<br>• `BottomLeft`<br>• `BottomRight`<br>• `Center`<br>• `Left`<br>• `Right`<br>• `Top`<br>• `TopLeft` |

| Field Name | Details |
| --- | --- |
| | • `TopRight` |
| `InviteImageId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The record ID of the static image resource displayed on your automated chat invitation. For automated chat invitations only. Available in API version 29.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>InviteImage<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>StaticResource |
| `InviteStartPosition` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort , Update<br>**Description**<br>The position on screen where an automated chat invitation's animation begins.<br>Note: You don't need to select a start position for your automated chat invitation if you use a custom animation.<br>For automated chat invitations only. Available in API version 29.0 and later.<br>Possible values are:<br>• `Bottom`<br>• `BottomLeft`<br>• `BottomLeftBottom`<br>• `BottomLeftLeft`<br>• `BottomRight`<br>• `BottomRightBottom`<br>• `BottomRightRight`<br>• `Left`<br>• `Top`<br>• `Right`<br>• `TopLeft`<br>• `TopLeftLeft` |

| Field Name | Details |
| --- | --- |
| | • `TopLeftTop`<br>• `TopRight`—Top Right<br>• `TopRightRight`<br>• `TopRightTop` |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>For automated chat invitations, specifies whether an automated chat invitation is active or not.<br>The default value is `false`. |
| `IsRoutingFlowEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Specifies whether routing flow is enabled or not.<br>The default value is `false`. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the chat.<br>Possible values are:<br>• `da`—Danish<br>• `de`—German<br>• `en_US`—English<br>• `es`—Spanish<br>• `es_MX`—Spanish (Mexico)<br>• `fi`—Finnish<br>• `fr`—French<br>• `it`—Italian<br>• `ja`—Japanese<br>• `ko`—Korean<br>• `nl_NL`—Dutch |

| Field Name | Details |
| --- | --- |
| | • no—Norwegian<br>• pt_BR—Portuguese (Brazil)<br>• ru—Russian<br>• sv—Swedish<br>• th—Thai<br>• zh_CN—Chinese (Simplified)<br>• zh_TW—Chinese (Traditional) |
| MasterLabel | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Label for the chat button. |
| NumberOfReroutingAttempts | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Specifies the number of times a chat request can be rerouted to available agents if all agents reject the chat request. |
| OfflineImageId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The record ID of the static image resource that is displayed when the button is offline (inactive).<br>This field is a relationship field.<br>**Relationship Name**<br>OfflineImage<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>StaticResource |
| OnlineImageId | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The record ID of the static image resource that is displayed when the button is online (active).<br>This field is a relationship field.<br>**Relationship Name**<br>OnlineImage<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>StaticResource |
| `OptionsHasChasitorIdleTimeout` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Specifies whether Customer Time-Out is enabled. |
| `OptionsHasInviteAfterAccept` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Specifies whether an automated chat invitation can be sent to a customer after that customer has accepted a prior automated chat invitation (`true`) or not (`false`). For automated chat invitations only. Available in API version 29.0 and later. |
| `OptionsHasInviteAfterReject` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Specifies whether an automated chat invitation can be sent to a customer after that customer has rejected a prior automated chat invitation (`true`) or not (`false`). For automated chat invitations only. Available in API version 29.0 and later. |
| `OptionsHasRerouteDeclinedRequest` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Update<br>**Description**<br>Specifies whether a chat request that has been rejected by all available agents should be rerouted to available agents again (`true`) or not (`false`). |
| `OptionsIsAutoAccept` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Specifies whether a chat request should be automatically accepted by the agent it's assigned to (`true`) or not `false`). For chat buttons and automated chat invitations with `RoutingType` set to `Most Available` or `Least Active`. Available in API version 30.0 and later. |
| `OptionsIsInviteAutoRemove` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Specifies whether an automated chat invitation should be automatically removed from the screen after a certain amount of time (`true`) or not (`false`). For automated chat invitations only. Available in API version 29.0 and later. |
| `OverallQueueLength` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The maximum number of chat requests allowed to queue. |
| `PerAgentQueueLength` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The maximum number of chat requests allowed to queue for each agent with the required skill. |
| `PostchatPageId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The record ID of the custom VisualForce page displayed when the chat ends.<br>This field is a relationship field.<br>**Relationship Name**<br>PostchatPage<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApexPage |
| `PostchatUrl` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The URL the user is directed to after the chat ends. |
| `PrechatFormPageId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The record ID of the custom VisualForce page displayed before the chat begins.<br>This field is a relationship field.<br>**Relationship Name**<br>PrechatFormPage<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApexPage |
| `PrechatFormUrl` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The URL the user is directed to before the chat begins. |

| Field Name | Details |
| --- | --- |
| `PushTimeout` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of seconds an agent has to answer a chat request before it's routed to the next available agent. |
| `QueueId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The record ID of the queue used for this chat button.<br>This field is a relationship field.<br>**Relationship Name**<br>Queue<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group |
| `RoutingConfigurationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The record ID of the routing configuration used for this chat button.<br>This field is a relationship field.<br>**Relationship Name**<br>RoutingConfiguration<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>QueueRoutingConfig |
| `RoutingType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>How chat requests are routed to agents. The values are:<br>• `Choice`—Incoming chat requests are added to the queue in Live Agent in the Salesforce console and are available to any agent with the required skill.<br>• `Least Active`—Incoming chats are routed to the agent with the required skill who has the fewest active chats.<br>• `Most Available`—Incoming chats are routed to the agent with the required skill and the greatest difference between chat capacity and active chat sessions. For example, if Agent A and Agent B each have a chat capacity of five, and Agent A has three active chat sessions while Agent B has one, incoming chats will be routed to Agent B.<br>• `Omni`—Incoming chats are routed using Omni-Channel queues. |
| `SiteId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The record ID of the site used for loading static resources and custom VisualForce pages.<br>This field is a relationship field.<br>**Relationship Name**<br>Site<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Site |
| `SkillId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The record ID of the skill used to route incoming chat requests. To associate multiple skills with a chat button, reference one skill in the `SkillId` field and use LiveChatButtonSkill junction objects for the remaining skills.<br>This field is a relationship field.<br>**Relationship Name**<br>Skill<br>**Relationship Type**<br>Lookup |

| Field Name | Details |
| --- | --- |
| | **Refers To**<br>Skill |
| `TimeToRemoveInvite` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of seconds an automated invitation stays on-screen before it is automatically removed. For automated chat invitations only. Available in API version 29.0 and later. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of element to display to customers.<br>Possible values are:<br>• `Invite`—Automated invitation<br>• `Standard`—Chat button |
| `WindowLanguage` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language used for standard chat windows. Custom chat windows use the language of the user's browser.<br>Possible values are:<br>• `da`—Danish<br>• `de`—German<br>• `en_US`—English<br>• `es`—Spanish<br>• `es_MX`—Spanish (Mexico)<br>• `fi`—Finnish<br>• `fr`—French<br>• `it`—Italian<br>• `ja`—Japanese<br>• `ko`—Korean |

| Field Name | Details |
| --- | --- |
| | • nl_NL—Dutch<br>• no—Norwegian<br>• pt_BR—Portuguese (Brazil)<br>• ru—Russian<br>• sv—Swedish<br>• th—Thai<br>• zh_CN—Chinese (Simplified)<br>• zh_TW—Chinese (Traditional) |

## Usage

Use this object to query and manage chat buttons and automated chat invitations.

# LiveChatButtonDeployment

Associates an automated chat invitation with a specific deployment. This object is available in API versions 28.0 and later.

## Supported Calls

`create()`, `delete()` `query()`, `update()`, `retrieve()`

## Fields

| Field Name | Details |
| --- | --- |
| `ButtonId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the automated invitation associated with the deployment. |
| `DeploymentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the deployment that will feature the automated invitation. |

## Usage

Use this object to associate automated chat invitations with specific deployments.

# LiveChatButtonSkill

Represents all the skills available to a LiveChatButton except the one currently assigned. To retrieve the skill currently assigned, query LiveChatButton. This object is available in API version 25.0 and later.

## Supported Calls

`create()`, `delete()`, `update()`, `query()`

## Fields

| Field Name | Details |
|---|---|
| `ButtonID` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The record ID of the button. |
| `SkillID` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The record ID of the skill. |

## Usage

Use this object to assign a specific skill to a specific button for multi-skill routing. For example:

```
String myButtonId = "button_Id";
String myButtonDevName = "button_DeveloperName";
List<String> skillIds = new List<String>();

//Get one skill ID from button
for(LiveChatButton lcb : [SELECT SkillId FROM LiveChatButton WHERE DeveloperName =:
myButtonDevName]) {
    skillIds.add(lcb.SkillId);
}
//Get remaining skills from LiveChatButtonSkill join object
```

```
for(LiveChatButtonSkill lcbs : [SELECT SkillID FROM LiveChatButtonSkill WHERE ButtonId =:
myButtonId]) {
    skillIds.add(lcbs.SkillId);
}
//Retrieve all skills into a single list
List<Skill> skills = [SELECT Id, DeveloperName FROM Skill WHERE Id IN :SkillIds];
```

# LiveChatDeployment

Represents the general settings for deploying Live Agent on a website. This object is available in API version 24.0 and later.

## Supported Calls

`create()`, `query()`, `update()`, `retrieve()`

## Fields

| Field Name | Details |
|---|---|
| `BrandingId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The record ID of the static image resource that's displayed in the chat window. |
| `ConnectionTimeoutDuration` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the amount of time before the chat times out, in seconds. |
| `ConnectionWarningDuration` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the amount of time before a time-out warning is displayed to the agent, in seconds. |
| `DeveloperName` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Domains` | **Type**<br>textarea<br>**Properties**<br>Create, Filter (unavailable in API version 25.0 and later), Nillable, Sort (unavailable in API version 25.0 and later)<br>**Description**<br>A comma-separated list of domains the deployment is allowlisted for. Leave this blank to allow the deployment to be used on any domain. |
| `HasTranscriptSave` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Determines whether visitors can download and save transcripts from the chat window. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The language of the deployment. |

| Field Name | Details |
| --- | --- |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The name of the deployment |
| `MobileBrandingId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The record ID of the static image resource displayed in the mobile version of the chat window. |
| `OptionsHasPrechatApi` | **Type**<br>boolean<br>**Properties**<br>Create, Filter<br>**Description**<br>Determines whether developers can access the Pre-Chat API. |
| `SiteId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The record ID of the site used for loading static resources. |
| `WindowTitle` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The text displayed in the title bar of the browser window used to launch the chat window. |

## Usage

Use this object to query and manage live chat deployments.

# LiveChatSensitiveDataRule

Represents a rule for masking or deleting data of a specified pattern. Written as a regular expression (regex). This object is available in API version 35.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `update()`, `retrieve()`

## Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

## Fields

| Field Name | Details |
|---|---|
| `ActionType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The action to take on the text (remove or replace) when the sensitive data rule is triggered. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The description of the sensitive data rule—for example, "Block social security numbers." |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the |

| Field Name | Details |
| --- | --- |
| | object's name in a managed package and the changes are reflected in a subscriber's organization.<br><br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.<br><br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `EnforceOn` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Determines the roles on which the rule is enforced. The value is determined using bitwise OR operation. There are seven possible values:<br>1. Rule enforced on Agent<br>2. Rule enforced on Visitor<br>3. Rule enforced on Agent and Visitor<br>4. Rule enforced on Supervisor<br>5. Rule enforced on Agent and Supervisor<br>6. Rule enforced on Visitor and Supervisor<br>7. Rule enforced on Agent, Visitor, and Supervisor |
| `IsEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Specifies whether a sensitive data rule is active (`true`) or not (`false`). Default value (if none is provided) is `false`. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the sensitive data rule. |
| `MasterLabel` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Label for the sensitive data rule. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `Pattern` | **Type**<br>textarea<br>**Properties**<br>Create, Update<br>**Description**<br>The pattern of text blocked by the rule. Written as a JavaScript regular expression (regex). |
| `Priority` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates the priority level of a Chat. |
| `Replacement` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The string of characters that replaces the blocked text (if `ActionType` *`Replace`* is selected). |

## Usage

Use this object to mask or delete data of specified patterns, such as credit card, social security, phone and account numbers, or even profanity.

# LiveChatTranscript

This object is automatically created for each Live Agent chat session and stores information about the session. This object is available in API version 24.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
| --- | --- |
| `Abandoned` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The amount of time in seconds an incoming chat request remained unanswered by an agent before the chat was disconnected by the customer. |
| `AccountId` | **Type**<br>ID<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the account associated with the chat transcript. |

| Field Name | Details |
| --- | --- |
| `AverageResponseTimeOperator` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The agent's average response time (in seconds) to chat messages from the visitor. |
| `AverageResponseTimeVisitor` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The visitor's average response time (in seconds) to chat messages from the agent. |
| `Body` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The contents of the chat. |
| `Browser` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The browser the visitor used for the chat. |
| `BrowserLanguage` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The language of the visitor's browser. |
| `CaseID` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the case associated with the chat transcript. |

| Field Name | Details |
| --- | --- |
| `ChatDuration` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total duration of the chat in seconds. |
| `ChatKey` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>The session ID of the chat before it is persisted. `ChatKey` can be used with advanced integrations in the Salesforce console. This field is available in API version 25.0 and later. |
| `ContactID` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the contact associated with the chat transcript. |
| `EndedBy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The way the chat was ended: by the operator, the visitor, or the system. |
| `EndTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The time the chat ended. |
| `IpAddress` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The auto-populated visitor's IP address. Do not edit. Create a custom field if you need an IP address field for your use case. |
| `IsChatbotSession` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Whether the visitor is chatting with a chatbot (`true`) or not (`false`). |
| `LastReferencedDate` | **Type**<br>date<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>date<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed. |
| `LeadID` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the lead associated with the chat transcript. |
| `LiveChatButtonID` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the LiveChatButton the chat session originated from. |

| Field Name | Details |
| --- | --- |
| `LiveChatDeploymentID` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the LiveChatDeployment the chat session originated from. |
| `LiveChatVisitorID` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the visitor associated with the chat transcript. |
| `Location` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The auto-populated best-guess approximation of the visitor's location. Do not edit. |
| `MaxResponseTimeOperator` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The maximum time in seconds it took an agent to respond to a chat visitor's message. |
| `MaxResponseTimeVisitor` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The maximum time in seconds it took a customer to respond to an agent's message. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The name of the transcript. |
| `OperatorMessageCount` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of messages sent by one or more agents during the chat. |
| `OwnerID` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the operator who participated in the chat last; for missed chats, this is a system user. |
| `Platform` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The visitor's operating system platform. |
| `ReferrerUri` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The auto-populated URI where the chat request originated. Do not edit. |
| `RequestTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The time the visitor requested the chat. |
| `ScreenResolution` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The visitor's screen resolution. |
| `SkillId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The auto-populated record ID of the primary Skill associated with the LiveChatButton the chat session originated from. Do not edit. To associate multiple skills with a LiveChatTranscript, use LiveChatTranscriptSkill junction objects. |
| `StartTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The time the chat started. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The final status of the chat: completed, missed, or blocked. |
| `SupervisorTranscriptBody` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The text body of the supervisor's chat transcript. |
| `UserAgent` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The visitor's user agent string. |

| Field Name | Details |
| --- | --- |
| `VisitorMessageCount` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of messages sent by the visitor during the chat. |
| `VisitorNetwork` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The network or service provider the chat visitor used for the chat. |
| `WaitTime` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total amount of time in seconds a chat request was waiting to be accepted by an agent. |

## Usage

Use this object to query and manage live chat transcripts.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**LiveChatTranscriptChangeEvent (API version 44.0)**
Change events are available for the object.

**LiveChatTranscriptFeed (API version 47.0)**
Feed tracking is available for the object.

**LiveChatTranscriptHistory**
History is available for tracked fields of the object.

**LiveChatTranscriptOwnerSharingRule (API version 29.0)**
Sharing rules are available for the object.

**LiveChatTranscriptShare**
Sharing is available for the object.

# LiveChatTranscriptEvent

Captures specific events that occur over the lifetime of a chat. This object is available in API version 24.0 and later.

## Supported Calls

`create()`, `delete()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
|---|---|
| `AgentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the agent associated with the event. |
| `Detail` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Details associated with the event. |
| `LastReferencedDate` | **Type**<br>date<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>date<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |

| Field Name | Details |
| --- | --- |
| `LiveChatTranscriptId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the live chat transcript associated with the event. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the event. |
| `Time` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort<br>**Description**<br>The time at which the event happened. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The kind of event that occurred.<br>• `Accept`—Accepted<br>• `AgentBlocked`—Blocked by Agent<br>• `AlertCriticalWaitChat`—Critical Wait Alert Time Reached<br>• `CancelBlocked`—Cancel (Blocked)<br>• `CancelNoAgent`—Cancel (No Agent)<br>• `CancelNoQueue`—Cancel (No Queue)<br>• `CancelVisitor`—Canceled by Visitor<br>• `ChasitorIdleTimeout`—Visitor Idle Time-Out<br>• `ChasitorIdleTimeoutWarningCleared`—Visitor Idle Time-Out Warning Cleared<br>• `ChasitorIdleTimeoutWarningTriggered`—Visitor Idle Time-Out Warning Appeared<br>• `ChatRequest`—Chat Requested |

| Field Name | Details |
| --- | --- |
| | • `ChatResumedAfterTransfer`—Chat resumed<br>• `ChatbotEndChat`—Chatbot end chat<br>• `ChatbotEndedChatByAction`—Conversation ended by automated action<br>• `ChatbotEstablished`—Accepted by Chatbot<br>• `ChatbotNotEstablished`—Chatbot Request Failed<br>• `ChoiceRoute`—Routed (Choice)<br>• `ClearCriticalWaitChat`—Critical Wait Alert Cleared<br>• `ConferenceRequest`—Chat Conference Requested<br>• `ConferenceRequestCanceled`—Chat Conference Canceled<br>• `ConferenceRequestDeclined`—Chat Conference Declined<br>• `ConnectionTimeout`—Visitor connection timed out. Available in API version 38.0 and later.<br>• `ConnectionWarning`—Warning that visitor hasn't been connected for some time and that the connection times out soon. Available in API version 38.0 and later.<br>• `DeclineManual`—Decline (Manual)<br>• `DeclineTimeout`—Decline (Timeout)<br>• `EndAgent`—Ended by Agent<br>• `EndVisitor`—Ended by Visitor<br>• `Enqueue`—Queued<br>• `FileCanceledAgent`—File Transfer Canceled by Agent<br>• `FileCanceledChasitor`—File Transfer Canceled by Visitor<br>• `FileTransferFailure`—File Transfer Failure<br>• `FileTransferRequested`—File Transfer Requested by Agent<br>• `FileTransferSuccess`—File Transfer Success<br>• `FileTransferToChasitor`—File Transfer Initiated by Agent<br>• `FlagLoweredAgent`—Flag Lowered by Agent<br>• `FlagLoweredSupervisor`—Flag Lowered by Supervisor<br>• `FlagRaised`—Flag Raised<br>• `LeaveAgent`—Agent Left<br>• `LeaveVisitor`—Visitor Left<br>• `OperatorJoinedConference`—Agent Joined Conference<br>• `OperatorLeftConference`—Agent Left Conference<br>• `Other`<br>• `PushAssignment`—Routed (Push)<br>• `SensitiveDataAgent`—Sensitive data blocked (Agent)<br>• `SensitiveDataSupervisor`—Sensitive data blocked (Supervisor)<br>• `SensitiveDataVisitor`—Sensitive data blocked (Visitor) |

| Field Name | Details |
| --- | --- |
| | • `Transfer`—Transfer Accepted<br>• `TransferCancelled`—Transfer Request Canceled<br>• `TransferDeclined`—Transfer Request Declined<br>• `TransferRequest`—Transfer Requested<br>• `TransferToBotFailed`—Transfer to bot failed<br>• `TransferToButtonFailed`—Transfer to button failed<br>• `TransferToQueueFailed`—Transfer to queue failed<br>• `TransferredToBot`—Transferred to bot<br>• `TransferredToButton`—Transferred to button<br>• `TransferredToQueue`—Transferred to queue<br>• `TransferredToSbrSkill`—Transferred to skill<br>• `TransferredToSbrSkillFailed`—Transfer to skill failed<br>• `Unassigned` |

## Usage

Use this object to query and manage live chat transcript events.

Note: LiveChatTranscriptEvent records are inserted after the chat is closed and the LiveTranscript record updated). However, the trigger on the LiveChatTranscriptEvent sObject fires separately on each LiveChatTranscriptEvent record within the same transaction.

All the LiveChatTranscriptEvent records are inserted in a single transaction but one by one. For example, the trigger is executed for each individual record.

```
trigger LCTE on LiveChatTranscriptEvent (before insert) {
     // Trigger.New will have only 1 record at a time and trigger will execute for
individual record
     for(LiveChatTranscriptEvent l : Trigger.New)
     system.debug(l.Type + '>>' +l.Detail);
     }
```

To avoid hitting any governors and limits, design your functionality considering this behavior. You can execute the logic by filtering the records based on the `Type` field of LiveChatTranscriptEvent.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**LiveChatTranscriptChangeEvent (API version 62.0)**

Change events are available for the object.

# LiveChatTranscriptShare

Represents a sharing entry on a LiveChatTranscript object. This object is available in API version 24.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

## Supported Calls

`create()`, `delete()`, `query()`, `retrieve()update()`, `upsert()`

## Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

| Field Name | Details |
|---|---|
| `AccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Level of access that the User or Group has to the LiveChatTranscript. The possible values are:<br>• `Read`<br>• `Edit`<br>• `All` (This value is not valid for `create()` or `update()` calls.)<br>This value must be set to an access level that is higher than the organization's default access level for live chat transcripts. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the parent object, if any |
| `RowCause` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited.<br>Values can include:<br>• `Manual`—The User or Group has access because a user with "All" access manually shared the LiveChatTranscript with them.<br>• `Owner`—The User is the owner of the LiveChatTranscript or is in a role above the LiveChatTranscript owner in the role hierarchy. |
| `UserOrGroupID` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the User or Group that has been given access to the LiveChatTranscript. |

## Usage

This object lets you determine which users and groups can view and edit LiveChatTranscript records owned by other users.

If you attempt to create a new record that matches an existing record, the `create()` call updates any modified fields and returns the existing record.

# LiveChatTranscriptSkill

Represents a join between LiveChatTranscript and Skill. This object is available in API version 25.0 and later.

## Supported Calls

`create()`, `delete()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`

## Fields

| Field Name | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The name of the transcript. |
| `SkillId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The record ID of the skill. |
| `TranscriptId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The record ID of the transcript. |

## Usage

Use this object to assign a specific skill to a specific transcript for multi-skill routing.

# LiveChatUserConfig

Represents a setting that controls the console settings for Chat users. This object is available in API version 24.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

## Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `AutoGreeting` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The text that is automatically sent from an agent to a visitor when a chat session starts. |
| `Capacity` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Limits the amount of active chat sessions an agent can engage in. |
| `CriticalWaitTime` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The amount of time before a chat flashes to alert an agent to answer it. |
| `CustomAgentName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The custom name of the agent associated with the Live Agent configuration. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record. |

| Field Name | Details |
| --- | --- |
| | Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `HasLogoutSound` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Determines whether a sound plays when an agent logs out of the console. |
| `HasNotifications` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Determines whether desktop notifications are enabled for the configuration. Available in API version 25.0 and later. |
| `HasRequestSound` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Determines whether a sound plays when a chat request comes in. |
| `HasSneakPeek` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Determines whether an agent sees a real-time preview of the messages typed by a visitor. |
| `HasTransferConferenceGreeting` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether to enable sending an autogreeting when you transfer to another agent or invite an agent to a conference chat.<br>The default value is `false`. Available in API version 53.0 and later. |

| Field Name | Details |
| --- | --- |
| `IsAutoAwayOnDecline` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Determines whether agents' status is automatically changed to Away when they decline a chat request. Available in API version 26.0 and later. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The language of the configuration. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The name of the configuration. |
| `OptionsHasAgentFileTransfer` | **Type**<br>boolean<br>**Properties**<br>Create, Filter<br>**Description**<br>Determines whether agents can initiate a file transfer from a chat customer. Available in API version 31.0 and later. |
| `OptionsHasAgentSneakPeek` | **Type**<br>boolean<br>**Properties**<br>Create, Filter<br>**Description**<br>Determines whether Sneak Peek is enabled for agents. Available in API version 29.0 and later. |
| `OptionsHasAssistanceFlag` | **Type**<br>boolean<br>**Properties**<br>Create, Filter |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Determines whether assistance flags are enabled for agents. Available in API version 29.0 and later. |
| `OptionsHasChatConferencing` | **Type**<br>boolean<br>**Properties**<br>Create, Filter<br>**Description**<br>Determines whether agents can invite other agents into a customer chat. Available in API version 34.0 and later. |
| `OptionsHasChatMonitoring` | **Type**<br>boolean<br>**Properties**<br>Create, Filter<br>**Description**<br>Determines whether supervisors can view agents' ongoing chats. Available in API version 29.0 and later. |
| `OptionsHasChatTransferToAgent` | **Type**<br>boolean<br>**Properties**<br>Create, Filter<br>**Description**<br>Specifies whether an agent can transfer a chat directly to another agent. Available in API version 36.0 and later. |
| `OptionsHasChatTransferToButton` | **Type**<br>boolean<br>**Properties**<br>Create, Filter<br>**Description**<br>Specifies whether an agent can transfer a chat to an agent assigned to a particular chat button. Available in API version 36.0 and later. |
| `OptionsHasChatTransferToSkill` | **Type**<br>boolean<br>**Properties**<br>Create, Filter |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Specifies whether an agent can transfer a chat to agents assigned to a particular skill. Available in API version 36.0 and later. |
| `OptionsHasTransferConferenceGreeting` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Specifies whether an agent can transfer a chat to an autogreeting or conference greeting. Available in API version 53.0 and later. |
| `OptionsHasVisitorBlocking` | **Type**<br>boolean<br>**Properties**<br>Create, Filter<br>**Description**<br>Determines whether an agent can block IP addresses of troublesome visitors. Available in API version 34.0 and later. |
| `OptionsHasWhisperMessage` | **Type**<br>boolean<br>**Properties**<br>Create, Filter<br>**Description**<br>Determines whether supervisors can send private messages to agents within an agent's chat with a customer. Available in API version 29.0 and later. |
| `OptionsIsAutoAwayOnPushTimeout` | **Type**<br>boolean<br>**Properties**<br>Create, Filter<br>**Description**<br>Determines whether an agent's status automatically changes to Away if the agent doesn't respond to a chat request within the specified push time-out limit. Available in API version 34.0 and later. |
| `SupervisorDefaultAgentStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The default agent status by which to filter agents in the Agent Status list in the supervisor panel. |
| `SupervisorDefaultButtonId` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The default button ID by which to filter agents in the Agent Status list in the supervisor panel. |
| `SupervisorDefaultSkillId` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The default skill ID by which to filter agents in the Agent Status list in the supervisor panel. |

## Usage

Use this object to query and manage agent configurations in Chat.

# LiveChatUserConfigProfile

Represents a join between LiveChatUserConfig and Profile. This object is available in API version 24.0 and later.

## Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`

## Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `LiveChatUserConfigId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The record ID of the agent configuration |
| `ProfileId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The record ID of the profile |

## Usage

Use this object to assign specific agent configurations to specific user profiles.

# LiveChatUserConfigUser

Represents a join between Live Chat User Config and User. This object is available in API version 24.0 and later.

## Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`

## Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `LiveChatUserConfigId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The record ID of the agent configuration |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The record ID of the user |

## Usage

Use this object to assign specific agent configurations to specific users.

# LiveChatVisitor

Represents a website visitor who has started or tried to start a chat session. This object is available in API version 24.0 and later.

## Supported Calls

`create()`, `delete()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
| --- | --- |
| `LastReferencedDate` | **Type**<br>date<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>date<br>**Properties**<br>Filter, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, Sort<br>**Description**<br>The name of the visitor |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The session key used to uniquely identify the visitor. |

## Usage

Use this object to query and manage live chat visitors.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**LiveChatVisitorChangeEvent (API version 62.0)**
Change events are available for the object.

# Location

Represents a warehouse, service vehicle, work site, or other element of the region where your team performs field service work. In API version 49.0 and later, you can associate activities with specific locations. Activities, such as the tasks and events related to a location, appear in the activities timeline when you view the location detail page. Also in API version 49.0 and later, Work.com users can view Employees as a related list on Location records. In API version 51.0 and later, this object is available for Omnichannel Inventory and represents physical locations where inventory is available for fulfilling orders.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

At least one of these features must be enabled:

- Commerce Store
- Contact Tracing for Employees
- Employee Experience
- Field Service
- Fulfillment Orders
- Health Cloud
- Industries Insurance
- Industries Visit
- Locations
- Omnichannel Inventory
- Public Sector
- Retail Execution
- Work.com

## Fields

| Field Name | Details |
| --- | --- |
| `AssignedFoCount` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of fulfillment orders assigned to the location. Confirming held fulfillment order capacity increments this value. To reset the location's capacity, set this value to 0.<br>This field is available when Order Management is installed and configured. By default, it's hidden by field-level security.<br>This field is available in API version 55.0 and later. |
| `CloseDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Date the location closed or went out of service. |
| `ConstructionEndDate` | **Type**<br>date |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Date construction ended at the location. |
| `ConstructionStartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Date construction began at the location. |
| `DefaultPickupTime` | **Type**<br>time<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Default pickup time at the location.<br>This field is available when Order Management is installed and configured. By default, it's hidden by field-level security.<br>This field is available in API version 61.0 and later. |
| `DefaultProcessingTime` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Default processing time at the location.<br>This field is available when Order Management is installed and configured. By default, it's hidden by field-level security.<br>This field is available in API version 61.0 and later. |
| `DefaultProcessingTimeUnit` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Default processing time unit at the location. Possible values are:<br>• `Hours`<br>• `Days`<br>• `Weeks` |

| Field Name | Details |
| --- | --- |
| | This field is available when Order Management is installed and configured. By default, it's hidden by field-level security.<br>This field is available in API version 61.0 and later. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of the location. |
| `DrivingDirections` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Directions to the location. |
| `EarliestPickupTimeOffset` | **Type**<br>integer<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The earliest pickup time for BOPIS. This value is measured in minutes after the start of business hours. |
| `ExternalReference` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Identifier of a location. |
| `FoCapacity` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The maximum number of fulfillment orders that can be assigned to the location per time period. If this value is null, then this location's capacity isn't limited.<br>This field is available when Order Management is installed and configured. By default, it's hidden by field-level security. |

| Field Name | Details |
| --- | --- |
| | This field is available in API version 55.0 and later. |
| `FulfillingBusinessHours` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Fulfilling business hours at the location.<br>This field is available when Order Management is installed and configured. By default, it's hidden by field-level security.<br>This field is available in API version 61.0 and later. |
| `FoCapacity` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The maximum number of fulfillment orders that can be assigned to the location per time period. If this value is null, then this location's capacity isn't limited.<br>This field is available when Order Management is installed and configured. By default, it's hidden by field-level security.<br>This field is available in API version 55.0 and later. |
| `IsEligibleForPickup` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Indicates whether the location supports BOPIS |
| `IsInventoryLocation` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the location stores parts.<br>Note: This field must be selected if you want to associate the location with product items. |
| `IsMobile` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the location moves. For example, a truck or tool box. |
| `LastReferencedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the location was last modified. Its label in the user interface is `Last Modified Date`. |
| `LastViewedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date the location was last viewed. |
| `LatestPickupTimeOffset` | **Type**<br>integer<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The latest pickup time for BOPIS. This value is measured in minutes before the end of business hours. |
| `Latitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The latitude of the location. |
| `Location` | **Type**<br>location<br>**Properties**<br>Nillable<br>**Description**<br>The geographic location. |

| Field Name | Details |
| --- | --- |
| `LocationLevel` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The location's position in a location hierarchy. If the location has no parent or child locations, its level is 1. Locations that belong to a hierarchy have a level of 1 for the root location, 2 for the child locations of the root location, 3 for their children, and so forth. |
| `LocationType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Picklist of location types. It has no default values, so you must populate it before creating any location records. |
| `LogoId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A ContentAsset representing a logo for the location.<br>This field is available in API version 50.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>Logo<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentAsset |
| `Longitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The longitude of the location. |

| Field Name | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the location. For example, Service Van #4. |
| `OpenDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Date the location opened or came into service. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The location's owner or driver.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `ParentLocationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The location's parent location. For example, if vans are stored at a warehouse when not in service, the warehouse is the parent location.<br>This is a relationship field.<br>**Relationship Name**<br>ParentLocation<br>**Relationship Type**<br>Lookup |

| Field Name | Details |
| --- | --- |
| | **Refers To**<br>Location |
| PickupProcessingTime | **Type**<br>integer<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>**The processing time required for BOPIS orders at this location.** |
| PossessionDate | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date the location was purchased. |
| Priority | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The priority of the location when routing orders. No default values are included. Add values to the picklist and reference them in your custom routing logic.<br>This field is available when Order Management is installed and configured. By default, it's hidden by field-level security.<br>This field is available in API version 55.0 and later. |
| RemodelEndDate | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Date when remodel construction ended at the location. |
| RemodelStartDate | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Date when remodel construction started at the location. |

| Field Name | Details |
| --- | --- |
| `RootLocationId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>(Read Only) The top-level location in the location's hierarchy.<br>This is a relationship field.<br>**Relationship Name**<br>RootLocation<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Location |
| `ShouldSyncWithOci` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the location should sync its data with Omnichannel Inventory. The default value is `false`.<br>This field is available in API version 51.0 and later. |
| `ShouldTrackFoCapacity` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the location should track its fulfillment order capacity. The default value is `false`.<br>This field is available when Order Management is installed and configured. By default, it's hidden by field-level security.<br>This field is available in API version 55.0 and later. |
| `TimeZone` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Picklist of available time zones. |

| Field Name | Details |
| --- | --- |
| `VisitorAddressId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Lookup to an account's or client's address.<br>This is a relationship field.<br>**Relationship Name**<br>VisitorAddress<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Address |

## Usage

Before creating any location records, add at least one value to the Location Type picklist. LocationType is a required field.

To track your inventory in Salesforce, create product items, which represent the stock of a particular product a particular location. For example, create a product item that represents the 500 bolts you have in stock at your Warehouse A location. Each product item must be associated with a location.

To get a more granular picture of your field service operation, associate locations with service territories. For example, if a warehouse is located in a particular service territory, add it as a service territory location.

Important: "Location" in Salesforce can also refer to the geolocation compound field found on many standard objects. When referencing the Location object in your Apex code, always use `Schema.Location` instead of `Location` to prevent confusion with the standard Location compound field. If referencing both the Location object and the Location field in the same snippet, you can differentiate between the two by using `System.Location` for the field and `Schema.Location` for the object.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**LocationChangeEvent (API version 48.0)**
Change events are available for the object.

**LocationFeed**
Feed tracking is available for the object.

**LocationHistory**
History is available for tracked fields of the object.

**LocationOwnerSharingRule**
Sharing rules are available for the object.

**LocationShare**
Sharing is available for the object.

LocationGroup

LocationGroupAssignment

*B2B Commerce and D2C Commerce Developer Guide*: Inventory Data Model

# LocationGroup

Represents a group of Omnichannel Inventory locations, providing an aggregate view of inventory availability across those locations. Omnichannel Inventory can create an inventory reservation for an order at the location group level, then assign the reservation to one or more locations in the group as needed. This object is available in API version 51.0 and later.

You can define location groups according to the logic of your business needs. For example, a location group can represent the warehouses in a geographic region, or it can include the fulfillment centers associated with a particular online storefront.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Omnichannel Inventory orgs.

## Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Description of the location group. |
| `ExternalReference` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Used when OCI is integrated with B2C Commerce to associate the location group with an inventory list in B2C Commerce. This value must match the inventory list ID in B2C Commerce. |

| Field | Details |
| --- | --- |
| IsEnabled | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the location group is in use. If set to *false*, then inventory functions ignore this location group and its data isn't synchronized with OCI. The default value is *true*. |
| LastReferencedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| LastViewedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed. |
| LocationGroupName | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the location group. |
| OwnerId | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who currently owns this location group. Default value is the API user that created the record. |
| ShouldSyncWithOci | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Specifies whether to synchronize inventory data for this location group with Omnichannel Inventory. The default value is `true`. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**LocationGroupChangeEvent (API version 62.0)**
Change events are available for the object.

**LocationGroupFeed**
Feed tracking is available for the object.

**LocationGroupHistory**
History is available for tracked fields of the object.

**LocationGroupOwnerSharingRule**
Sharing rules are available for the object.

**LocationGroupShare**
Sharing is available for the object.

Location

LocationGroupAssignment

*B2B Commerce and D2C Commerce Developer Guide*: Inventory Data Model

# LocationGroupAssignment

Represents the assignment of a location to a location group. This object is available in API version 51.0 and later.

You can assign a location to multiple location groups, which associates it with one location group assignment for each location group that it's assigned to. Each location group assignment represents the relationship between one location and one location group, so a location or location group can be associated with multiple location group assignments.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Omnichannel Inventory orgs.

# Fields

| Field | Details |
| --- | --- |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed. |
| `LocationExternalReference` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The external reference of the associated location. |
| `LocationGroupAssignment` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the location group assignment. |
| `LocationGroupExternalReference` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The external reference of the associated location group. |
| `LocationGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>(Master-Detail) The associated location group. |
| `LocationGroupName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The location group name of the associated location group. |
| `LocationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>(Master-Detail) The associated location. |
| `LocationName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the associated location. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**LocationGroupAssignmentChangeEvent (API version 62.0)**
Change events are available for the object.

Location
LocationGroup

# LocationShippingCarrierMethod

The available shipping carrier services associated with a location or location group. Allows the assignment of different shipping methods to a specific location and enables flexibility and customization in the shipping process. This object is available in API version 61.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The LocationShippingCarrierMethod object is available only if the B2B Commerce or D2C Commerce license is enabled.

## Fields

| Field | Details |
|---|---|
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the record was last modified. Its label in the user interface is `Last Modified Date`. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date the record was last viewed. |
| `LocationSourceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The location source ID.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>LocationSource<br>**Refers To**<br>Location, LocationGroup |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Name of the shipping carrier service associated with the location or location group. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the user who currently owns this LocationShippingCarrierMethod object. Default value is the user logged in to the API to perform the create.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |
| `ShippingCarrierMethodId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Shipping carrier method ID.<br>This is a relationship field.<br>**Relationship Name**<br>ShippingCarrierMethod<br>**Refers To**<br>Location, ShippingCarrierMethod |

# LocationTrustMeasure

Represents the COVID safety protocols that your business follows. For example, enforcement of masks, social distancing, cleanliness, and capacity limits. This object is available in API version 50.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

# Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>A brief description of the safety protocol. For example, "Employees and customers are required to wear a mask in the store." |
| `IconUrl` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A public image URL to display for the LocationTrustMeasure object. |
| `IsVisibleInPublic` | **Type**<br>boolean<br>**Properties**<br>Create, defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If true, displays the LocationTrustMeasure object on your site. If false, hides the LocationTrustMeasure object on your site. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date on which the record was last viewed. |
| `LocationExternalReference` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>An ID assigned to the LocationTrustMeasure objects for a particular location. |
| `LocationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique ID for the location associated with the LocationTrustMeasure. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>An auto-assigned name for the LocationTrustMeasure. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner for this record. |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The order in which to display LocationTrustMeasure objects on your site. |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The name of the safety protocol. For example, Enforcement of Masks. |

# LocWaitlistMsgTemplate

Represents a junction object connecting LocationWaitlist to MessagingTemplate. This object is available in API version 50.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date on which the record was last viewed. |
| `LocationWaitlistId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Reference to the LocationWaitlist record. |
| `MessagingTemplateId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Reference to the MessagingTemplate record. |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of this record. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner for this record. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The status of the queue.<br>Possible values are:<br>• `approaching`—In Progress<br>• `confirmation`—Confirmed<br>• `inactive`—Inactive<br>• `ready`—Ready<br>• `removed`—Removed |

# LocationWaitlist

Represents a queue created for a specific location. Multiple queues can be created for a single location. For example, you can have a queue for each sales agent or a standard queue and a queue for vulnerable groups. The specific party of people in a queue is represented by LocationWaitlistedParty. This object is available in API version 50.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

# Fields

| Field | Details |
| --- | --- |
| `BusinessHoursId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A reference to the BusinessHours record that contains the hours the business is open. |
| `ClosedDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The time a queue is closed. |
| `CumulativeGuestCount` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The total number of guests allowed. |
| `CumulativeGuestGroupCount` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The total number of groups allowed. |
| `CurrentGuestCount` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The current number of guests. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>A brief description of this record. |
| `GuestCapacity` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The total capacity of guests. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date on which the record was last viewed. |
| `MaxPartySize` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The maximum size of a group. |
| `MessagingChannelId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The messaging channel ID. |
| `Name` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the group. |
| `OpenDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The time a queue is open. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner for this record. |
| `PartyReminderDelayMinutes` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of minutes between when a party is notified and when they receive a reminder. |
| `PlaceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The location ID for this record. |
| `ResourceCapacity` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The capacity for this resource. |
| `ResourceOccupancyCount` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The occupancy count for this resource. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The status of the queue.<br>Possible values are:<br>• `closed`<br>• `open`<br>• `paused` |

# LocationWaitlistedParty

Represents a specific party of people waiting in a queue. This object is available in API version 50.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of this queue. |
| `EntryDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The date and time a party is added to the queue. |
| `EstimatedWaitHours` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The estimated hours of wait time for a party. |
| `EstimatedWaitMinutes` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The estimated minutes of wait time for a party. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date on which the record was last viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the group. |
| `OwnerId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner for this record. |
| `PartySize` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The size of the queued party. |
| `PartyStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The state of a party in the queue.<br>Possible values are:<br>• `canceled`<br>• `entered`<br>• `exited`<br>• `ready`<br>• `waiting` |
| `SignUpDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time when a party signed up for the queue. |
| `WaitlistId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID for the queue. |

# LoginAsEventLog

LoginAsEventLog contains details about when a user logs in as another user in your org. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
|---|---|
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`. |
| `CpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DelegatedUserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Unique ID that identifies the user who's logging in as, or impersonating, another user. For example: `00530000009M943`. |

| Field | Details |
| --- | --- |
| `DelegatedUserName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The username of the user who's logging in as, or impersonating, another user. |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestIdentifier`. For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `RunTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of time that the request took in milliseconds. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The impersonated user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For Login Event Type, this field is usually null because the event is captured before a session is created. For example: `d7DEq/ANa7nNZZVD`. |

| Field | Details |
| --- | --- |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URI of the page that's receiving the request. For example: `/home/home.jsp`. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Unique ID that identifies the user who is being logged in as, or impersonated, by another user. For example: `005000000000123`. |

# LoginEvent

The documentation has moved to LoginEvent in the *Platform Events Developer Guide*.

# LoginEventLog

Login event logs contain details about your Salesforce org's user login history. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

# Fields

| Field | Details |
| --- | --- |
| `ApiType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of API request.<br>Possible values are:<br>• `D`—Apex Class<br>• `E`—SOAP Enterprise<br>• `I`—SOAP Cross Instance<br>• `M`—SOAP Metadata<br>• `O`—Old SOAP<br>• `P`—SOAP Partner<br>• `S`—SOAP Apex<br>• `T`—SOAP Tooling<br>• `X`—XmlRPC<br>• `f`—Feed<br>• `l`—Live Agent<br>• `p`—SOAP ClientSync |
| `ApiVersion` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The version of the API that's being used. For example: `36.0`. |
| `AuthenticatedMethodReference` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The authentication method used by a third-party identification provider for an OpenID Connect single sign-on protocol. |
| `BrowserType` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The identifier string returned by the browser used at login.<br>Example values are:<br>• `Go-http-client/1.1`<br>• `Mozilla/5.0 (Macintosh; Intel Mac OS X 10.12; rv%3A50.0) Gecko/20100101 Firefox/50.0`<br>• `Mozilla/5.0 (Macintosh; Intel Mac OS X 10_11_6) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/51.0.2704.84 Safari/537.36` |
| `CipherSuite` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The TLS cipher suite used for the login. Values are OpenSSL-style cipher suite names, with hyphen delimiters. For more information, see OpenSSL Cryptography and SSL/TLS Toolkit. |
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`. |
| `CpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DatabaseTotalTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DatabaseTotalTime`. Compare this field to `CpuTime` to determine whether performance issues are occurring in the database layer or in your own code. |
| `ForwardedForIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Reserved for future use. |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`. |
| `LoginStatus` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The status of the login attempt. For successful logins, the value is LOGIN_NO_ERROR. All other values indicate errors or authentication issues. For details, see Login Event Type — LOGIN_STATUS Values on page 2274. |
| `LoginSubType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of login flow used. Possible values are:<br>• uiup—UI Username-Password<br>• oauthpassword—OAuth Username-Password<br>• oauthtoken—OAuth User-Agent<br>• oauthhybridtoken—OAuth User-Agent for Hybrid Apps<br>• oauthtokenidtoken—OAuth User-Agent with ID Token |

| Field | Details |
| --- | --- |
| | • oauthclientcredential—OAuth Client Credential<br>• oauthcode—OAuth Web Server<br>• oauthhybridauthcode—OAuth Web Server for Hybrid Apps |
| `LoginType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of login used to access the session. Possible values are:<br>• 7—AppExchange<br>• A—Application<br>• s—Certificate-based login<br>• k—Chatter Communities External User<br>• n—Chatter Communities External User Third Party SSO<br>• r—Employee Login to Community<br>• z—Lightning Login<br>• l—Networks Portal API Only<br>• 6—Remote Access Client<br>• i—Remote Access 2.0<br>• I—Other Apex API<br>• R—Partner Product<br>• w—Passwordless Login<br>• 3—Customer Service Portal<br>• q—Partner Portal Third-Party SSO<br>• 9—Partner Portal<br>• 5—SAML Idp Initiated SSO<br>• m—SAML Chatter Communities External User SSO<br>• b—SAML Customer Service Portal SSO<br>• c—SAML Partner Portal SSO<br>• h—SAML Site SSO<br>• 8—SAML Sfdc Initiated SSO<br>• E—SelfService<br>• j—Third Party SSO |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestIdentifier`. For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `RequestStatus` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The status of the request for a page view or user interface action.<br>Possible values are:<br>• `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.<br>• `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.<br>• `U`—Undefined<br>• `A`—Authorization Error<br>• `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.<br>• `N`—Not Found. 404 error. |
| `RunTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of time that the request took in milliseconds. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For Login Event Type, this field is usually null because the event is captured before a session is created. For example: `d7DEq/ANa7nNZZVD`. |
| `SourceIp` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The source IP of the login request. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `TransportLayerSecurityProtocol` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The TLS protocol used for the login.<br>Possible values are:<br>• `1.0`<br>• `1.1`<br>• `1.2` |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URI of the page that's receiving the request. For example: `/home/home.jsp`. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |
| `UserName` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The username that's used for login. |
| `UserType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The category of user license.<br>Possible values are:<br>• `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.<br>• `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.<br>• `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.<br>• `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.<br>• `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.<br>• `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.<br>• `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.<br>• `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org. |
| `Username` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The username that's used for login. |

# LoginGeo

Represents the geographic location of the user's IP address for a login event. Due to the nature of geolocation technology, the accuracy of geolocation fields (for example, country, city, postal code) may vary. This object is available in API version 34.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Only users with Manage Users permissions can access this object.

## Fields

| Field | Details |
|---|---|
| `City` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The city where the user's IP address is physically located. This value is not localized. |
| `Country` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The country where the user's IP address is physically located. This value is not localized. |
| `CountryIso` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ISO 3166 code for the country where the user's IP address is physically located. For more information, see Country Codes - ISO 3166 |
| `Latitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
|---|---|
| | **Description**<br>The latitude where the user's IP address is physically located. |
| `LoginTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort<br>**Description**<br>Time of the login attempt, in GMT time zone. |
| `Longitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The longitude where the user's IP address is physically located. |
| `PostalCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The postal code where the user's IP address is physically located. This value is not localized. |
| `Subdivision` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the subdivision where the user's IP address is physically located. In the U.S., this value is usually the state name (for example, Pennsylvania). This value is not localized. |

# Usage

The API allows you to do many powerful queries. A few examples are:

| Sample Query | Query String |
|---|---|
| Query showing the country for a login event, where `Id=LoginGeoId` from AuthSession | `SELECT Country FROM LoginGeo WHERE Id = '0LE###############'` |
| Query showing the city and postal code for a login event, where `Id=LoginGeoId` from LoginHistory | `SELECT City, PostalCode FROM LoginGeo WHERE Id = '0SO###############'` |

# LoginHistory

Represents the login history for all successful and failed login attempts for organizations and enabled portals. This object is available in API version 21.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

## Special Access Rules

With one exception, only users with Manage Users or Monitor Login History permissions can access this object. The exception is that, in API version 37.0 and later, all users can retrieve their own login history records.

## Fields

| Field | Details |
|---|---|
| `ApiType` | **Type**<br>string<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>Indicates the API type, for example `Soap Enterprise`. Label is **API Type**. |
| `ApiVersion` | **Type**<br>string<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>Displays the API version used by the client. Label is **API Version**. |
| `Application` | **Type**<br>string<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>The application used to access the organization. Label is **Application**. |
| `AuthMethodReference` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The authentication method used by a third-party identification provider for an OpenID Connect single sign-on protocol. This field is available in API version 51.0 and later. Label is **Authentication Method Reference**. |
| `AuthenticationServiceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 18-character ID for an authentication service for a login event. For example, you can use this field to identify the SAML or authentication provider configuration with which the user logged in. This field is available in API version 34.0 and later. Label is **Authentication Service Id**.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>AuthenticationService<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AuthProvider, SamlSsoConfig |
| `Browser` | **Type**<br>string<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>The current browser version. Label is **Browser**. |
| `CipherSuite` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The TLS cipher suite used for the login. Values are OpenSSL-style cipher suite names, with hyphen delimiters. For more information, see OpenSSL Cryptography and SSL/TLS Toolkit. This field is available in API version 37.0 and later. |
| `ClientVersion` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Group, Nillable, Sort<br>**Description**<br>Version of the API client. Label is **Client Version**. |
| `CountryIso` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ISO 3166 code for the country where the user's IP address is physically located. For more information, see Country Codes - ISO 3166. This field is available in API version 37.0 and later. |
| `ForwardedForIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The value in the `X-Forwarded-For` header of HTTP requests sent by the client. For logins that use one or more HTTP proxies, the `X-Forwarded-For` header is sometimes used to store the origin IP and all proxy IPs.<br>The `ForwardedForIp` field stores whatever value the client sends, which might not be an IP address. The maximum length is 256 characters. Longer values are truncated. The `ForwardedForIp` field isn't populated for logins completed via OAuth flows or single sign-on (SSO).<br>Available in API version 61.0 and later. |
| `LoginGeoId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 18-character ID for the record of the geographic location of the user for a successful or unsuccessful login event. The accuracy of geolocation fields like country, city, or postal code can vary because of the nature of the technology.<br>The Manage Users permission is required for accessing this field. This field is available in API version 34.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>LoginGeo<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>LoginGeo |
| `LoginSubType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of login flow used.<br>• `InternalSalesforceAuthentication–Internal Salesforce Authentication`<br>This subtype is for internal use only.<br>• `OauthClientCredentials–OAuth Client Credentials`<br>• `OauthHybridRefreshToken––OAuth Refresh Token for Hybrid Apps`<br>• `OauthHybridTokenExchange––OAuth Token Exchange for Hybrid Apps`<br>• `OauthHybridUserAgent–OAuth User-Agent for Hybrid Apps`<br>• `OauthHybridWebServer–OAuth Web Server for Hybrid Apps`<br>• `OauthOtpLogin––OAuth OTP Login`<br>• `OauthRefreshToken––OAuth Refresh Token`<br>• `OauthTokenExchange––OAuth Token Exchange`<br>• `OauthUserAgent–OAuth User-Agent`<br>• `OauthUserAgentIdToken–OAuth User-Agent with ID Token`<br>• `OauthUsernamePassword–OAuth Username-Password`<br>• `OauthWebServer–OAuth Web Server`<br>• `SoapApiLogin–SOAP API`<br>This subtype is for internal use only.<br>• `SoapApiLoginMobile–SOAP API (Mobile)`<br>This subtype is for internal use only.<br>• `SoapApiLoginNetworksPortal–SOAP API (Networks Portal)`<br>This subtype is for internal use only.<br>• `SoapApiLoginPortal–SOAP API (Portal)`<br>This subtype is for internal use only.<br>• `SoapApiLoginSelfService–SOAP API (Self-Service)`<br>This subtype is for internal use only.<br>• `UiPasswordReset–UI Password Reset` |

| Field | Details |
| --- | --- |
| | • `UsernamePasswordUiLogin–UI Username-Password`<br>Label is **Login Subtype**. |
| `LoginTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort<br>**Description**<br>Time zone is based on GMT. Label is **Login Time**. |
| `LoginType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of login used to access the session.<br>• `AppExchange–AppExchange`<br>• `Application–Application`<br>• `Certificate–Certificate-based login`<br>• `ChatterCommunityPortalUnPwd–Chatter Communities External User`<br>• `ChatterCommunityThirdPartySso–Chatter Communities External User Third Party SSO`<br>• `CrossTenantLogin–Cross Tenant Login`—For internal use only.<br>• `EmployeeLoginToCommunity–Employee Login to Community`<br>• `HelpAndTraining–Help And Training`<br>• `IeOfflineClient–Offline Client`<br>• `LightningLogin–Lightning Login`<br>• `NetworksPortalApiOnly–Networks Portal API Only`<br>• `Oauth, Remote Access Client–Remote Access Client`<br>• `Oauth2, Remote Access 2.0–Remote Access 2.0`<br>• `OtherApi–Other Apex API`<br>• `Partner–Partner Product`<br>• `PasswordlessLogin–Passwordless Login`<br>• `Portal–Customer Service Portal`<br>• `PortalThirdPartySso–Customer Service Portal Third-Party SSO`<br>• `PrmPortalThirdPartySso–Partner Portal Third-Party SSO`<br>• `PrmPortal–Partner Portal`<br>• `Saml–SAML Idp Initiated SSO` |

| Field | Details |
| --- | --- |
| | • `SamlChatterNetworks–SAML Chatter Communities External User SSO`<br>• `SamlCspPortal–SAML Customer Service Portal SSO`<br>• `SamlPrmPortal–SAML Partner Portal SSO`<br>• `SamlSite–SAML Site SSO`<br>• `Saml2–SAML Sfdc Initiated SSO`<br>• `SelfService–SelfService`<br>• `ThirdPartySso–Third Party SSO`<br>Label is **Login Type**. |
| `LoginUrl` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL from which the login request is coming. Label is **Login URL**. |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the Experience Cloud site that the user is logging in to. This field is available in API version 31.0 and later, if Salesforce Experience Cloud sites are enabled for your org. |
| `OptionsIsGet` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>The HTTP method used for the session login is a GET request. |
| `OptionsIsPost` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>The HTTP method used for the session login is a POST request. |
| `Platform` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Group, Nillable, Sort<br>**Description**<br>Operating system on the login machine. Label is **Platform**. |
| `SourceIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the incoming client request that first reaches Salesforce during a login. For example, `126.7.4.2`.<br>For clients that redirect through one or more HTTP proxies, this field stores the IP address of the first proxy to reach Salesforce. To better identify the origin IP for these cases, check the `ForwardedForIp` field instead.<br>The `SourceIp` field doesn't support the `LIKE` comparison operator. |
| `Status` | **Type**<br>string<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>Displays the status of the attempted login. Status is either success or a reason for failure. Label is **Status**. |
| `TlsProtocol` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The TLS protocol used for the login. Possible values are:<br>• `TLS 1.0`<br>• `TLS 1.1`<br>• `TLS 1.2`<br>• `TLS 1.3`<br>• `Unknown`<br>This field is available in API version 37.0 and later. |
| `UserId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the user logging in. Label is **User ID**. |

## Usage

Not all fields are filterable. You can only filter on the following fields:

- `AuthenticationServiceId`
- `CipherSuite`
- `CountryIso`
- `Id`
- `LoginTime`
- `LoginType`
- `LoginUrl`
- `NetworkId`
- `OptionsIsGet`
- `OptionsIsPost`
- `TlsProtocol`
- `UserId`

The API allows you to do many powerful queries. A few examples are:

| Sample Query | Query String |
| --- | --- |
| Simple query showing UserId & LoginTime for each user | `SELECT UserId, LoginTime from LoginHistory;` |
| Query showing logins only after a specified date and time | `SELECT UserId, LoginTime from LoginHistory WHERE LoginTime > 2010-09-20T22:16:30.000Z;` |
| Query showing logins for a specific time interval | `SELECT UserId, LoginTime from LoginHistory WHERE LoginTime > 2010-09-20T22:16:30.000Z AND LoginTime < 2010-09-21T22:16:30.000Z;` |
| Query showing the authentication service for a SAML login event, where `Id=AuthenticationServiceId` from LoginHistory | `SELECT DeveloperName, Issuer, Version FROM SamlSsoConfig WHERE Id = '0LE###############'` |
| Query showing the authentication service for an authentication provider login event, where `Id=AuthenticationServiceId` from LoginHistory | `SELECT Type, DeveloperName FROM AuthProvider WHERE Id = '0SO###############'` |

# LoginIp

Represents a validated IP address. This object is available in version 28.0 and later.

## Supported Calls

`describeSObjects()`, `delete()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `ChallengeMethod` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The challenge method used to confirm the user's identity. Possible values include the following.<br>• `Email`<br>• `SMS`<br>• `TOTP_CHOICE`: The user chooses multi-factor authentication.<br>• `TOTP_ONLY`: The user is required to use multi-factor authentication. |
| `ChallengeSentDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time that the user was authenticated. |
| `IsAuthenticated` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `true`, the user has already been authenticated. |
| `SourceIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The IP address the user logged in from. |
| `UsersId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the user associated with this item.<br>This is a relationship field.<br>**Relationship Name**<br>Users<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

## Usage

At every login, the IP address of the login request is checked against the validated IP addresses using LoginIp. A match means the login IP address is a known IP address. If there's no match, the address is unknown, and the user is asked to confirm their identity.

# LogoutEventLog

Contains details of user sessions ending or being revoked. This object is available in API version 65.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `ApiType` | **Type**<br>Contains details of user sessions ending or being revoked. |

| Field | Details |
| --- | --- |
| | string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of API request.<br>Possible values are:<br>• `D`—Apex Class<br>• `E`—SOAP Enterprise<br>• `M`—SOAP Metadata<br>• `P`—SOAP Partner<br>• `S`—SOAP Apex<br>• `T`—SOAP Tooling<br>• `f`—Feed<br>• `l`—Live Agent<br>• `p`—SOAP ClientSync |
| `ApiVersion` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The version of the API that's being used.<br>For example: `36.0`. |
| `AppType` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The application type that was in use upon logging out.<br>**Example Values**<br>• `1000`: Application<br>• `1007`: SFDC Application<br>• `1014`: Chat<br>• `2501`: CTI<br>• `2514`: OAuth<br>• `3475`: SFDC Partner Portal |

| Field | Details |
| --- | --- |
| `BrowserType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The identifier string returned by the browser used at login.<br>Example values are:<br>• `Go-http-client/1.1`<br>• `Mozilla/5.0 (Macintosh; Intel Mac OS X 10.12; rv%3A50.0) Gecko/20100101 Firefox/50.0`<br>• `Mozilla/5.0 (Macintosh; Intel Mac OS X 10_11_6) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/51.0.2704.84 Safari/537.36` |
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `ClientVersion` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The version of the client that was in use upon logging out. |
| `IsUserInitiatedLogout` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>The value is 1 if the user intentionally logged out of the organization by clicking the Logout button. If the user's session timed out due to inactivity or another implicit logout action, the value is 0. |
| `LoginKey` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| `PlatformType` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The code for the client platform. If a timeout caused the logout, this field is null.<br>**Example Values**<br>• `1000`: Windows<br>• `1008`: Windows 2003<br>• `1013`: Windows 8.1<br>• `1015`: Windows 10<br>• `2003`: Macintosh/Apple OSX<br>• `4000`: Linux<br>• `5005`: Android<br>• `5006`: iPhone<br>• `5007`: iPad<br>• `5200`: Android 10.0 |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. |
| `ResolutionType` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The screen resolution of the client. If a timeout caused the logout, this field is null. |

| Field | Details |
| --- | --- |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. |
| `SessionLevel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The security level of the session that was used when logging out. |
| `SessionType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The session type that was used when logging out.<br>**Possible Values**<br>• `A`: API<br>• `I`: APIOnlyUser<br>• `N`: ChatterNetworks<br>• `Z`: ChatterNetworksAPIOnly<br>• `C`: Content<br>• `P`: OauthApprovalUI<br>• `O`: Oauth2<br>• `T`: SiteStudio<br>• `R`: SitePreview<br>• `S`: SubstituteUser<br>• `B`: TempContentExchange<br>• `G`: TempOauthAccessTokenFrontdoor<br>• `Y`: TempVisualforceExchange<br>• `F`: TempUIFrontdoor<br>• `U`: UI<br>• `E`: UserSite<br>• `V`: Visualforce |

| Field | Details |
| --- | --- |
| | • `W`: WDC_API |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`.<br>When a customer logs out by using the **Logout** button, the `TIMESTAMP` field records the actual logout time. However, when a customer is logged out automatically, Salesforce detects the event by using a process that runs every 15 minutes. `TIMESTAMP` values can reflect a logout time up to 15 minutes later than the actual automatic logout time. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943` |
| `UserType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The category of user license of the user accessing Salesforce services through the UI or API. |

# LogoutEventStream

The documentation has moved to LogoutEventStream in the *Platform Events Developer Guide*.

# LookedUpFromActivity

This read-only object is displayed as a related list on an activity record (an event or a task); the list contains records that have custom lookup relationships from the activity to another object. This object is not queryable.

## Supported Calls

`describeSObjects()`

## Fields

| Field Name | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the ID of the related account, which is determined as follows:<br>• The account associated with the `WhatId`, if it exists; or<br>• The account associated with the `WhoId`, if it exists; otherwise<br>• `null`<br>For information on IDs, see Field Types<br>This is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `ActivityDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates one of the following:<br>• The due date of a task<br>• The date of an event if `IsAllDayEvent` is set to `true`<br>This field has a time stamp that is always set to midnight in the Universal Time Coordinated (UTC) time zone. The time stamp doesn't represent the time of the activity; don't attempt to alter it to accommodate time zone differences. Label is `Date`. |
| `ActivityDateTime` | **Type**<br>dateTime<br>**Properties**<br>Aggregate, Filter, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Contains the event's due date if the `IsAllDayEvent` flag is set to `false`. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. Label is **Due Date Time**.<br>The value for this field and `StartDateTime` must match, or one of them must be `null`. |
| `ActivitySubtype` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Provides standard subtypes to facilitate creating and searching for specific activity subtypes. This field isn't updateable.<br>Possible values are:<br>• Task<br>• Email<br>• Call<br>• Event<br>• LinkedIn —Available in API version 56.0 and later.<br>• List Email |
| `ActivityType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Represents one of the following values: `Call`, `Email`, `Meeting`, or `Other`. Label is `Type`. These are default values, and can be changed.<br>`ActivityType` is the union of `TaskType` and `EventType`. If the same activity appears in both dynamic picklists, duplicate activities appear.<br>`TaskType` and `EventType` can each have a `Call` type. Internally, they are distinct from each other. |
| `CallDisposition` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Represents the result of a given call; for example, "we'll call back," or "call unsuccessful." Limit is 255 characters. |
| `CallDurationInSeconds` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Duration of the call in seconds. |
| `CallObject` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of a call center. Limit is 255 characters. |
| `CallType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of call being answered: Inbound, Internal, or Outbound. |
| `CompletedDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time the task was saved with a Closed status.<br>• For insert, if the task is saved with a Closed status the field is set. If the task is saved with an Open status the field is set to NULL.<br>• For update, if the task is saved with a new Closed status, the field is reset.<br>If the task is saved with a new non-closed status, the field is reset to NULL.<br>If the task is saved with the same closed status (that is, unchanged) there is no change to the field.<br>Note: The status is a dynamic enum. If the Closed mapping is changed it won't cause an update of existing tasks. Only new insert/update operations are affected. |

| Field Name | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>Contains a description of the event or task. Limit is 32 KB. |
| `DurationInMinutes` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the duration of the event or task. |
| `EndDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates the end date and time of the event or task. Available in versions 27.0 and later. This field is optional, depending on the following:<br>• If `IsAllDayEvent` is true, you can supply a value for either `DurationInMinutes` or `EndDateTime`. Supplying values in both fields is allowed if the values add up to the same amount of time. If both fields are `null`, the duration defaults to one day.<br>• If `IsAllDayEvent` is false, a value must be supplied for either `DurationInMinutes` or `EndDateTime`. Supplying values in both fields is allowed if the values add up to the same amount of time. |
| `IsAllDayEvent` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If the value of this field is set to `true`, then the activity is an event spanning a full day, and the `ActivityDate` defines the date of the event. If the value of this field is set to `false`, then the activity may be an event spanning less than a full day, or it may be a task. The default value of this field is `false`. Label is `All-Day Event`. |
| `IsClosed` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a task is closed (`true`) or not closed (`false`). The default value of this field is `false`. This field is set indirectly by setting `Status` on the task—each picklist value has a corresponding `IsClosed` value. Label is `Closed`. |
| `IsHighPriority` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates a high-priority task. The default value of this field is `false`. This field is derived from the `Priority` field. |
| `IsReminderSet` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a reminder is set for an activity (`true`) or not (`false`). The default value of this field is `false`. |
| `IsTask` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If the value of this field is set to `true`, then the activity is a task; if the value is set to `false`, then the activity is an event. The default value of this field is `false`. Label is `Task`. |
| `IsVisibleInSelfService` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If the value of this field is set to `true`, then the activity can be viewed in the self-service portal. The default value of this field is `false`. Label is `Visible in Self-Service`. |

| Field Name | Details |
| --- | --- |
| `Location` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If the activity is an event, then this field represents the location of the event. If the activity is a task, then the value is `null`. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the ID of the user or group who owns the activity.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Calendar, Group, User |
| `Priority` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the priority of a task, such as high, normal, or low. The default value of this field is `Normal`. |
| `ReminderDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Represents the time at which a reminder is scheduled to fire if `IsReminderSet` is set to `true`. If `IsReminderSet` is set to `false`, then either the user has deselected the reminder checkbox in the user interface or the reminder has already fired at the time indicated by the value. |
| `StartDateTime` | **Type**<br>dateTime |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates the start date and time of the event. Available in versions 13.0 and later.<br>The `StartDateTime` field contains the event start date.<br>However, if the event's `IsAllDayEvent` flag is set to `true` (indicating an all-day event), then the time stamp in the `StartDateTime` field is always set to midnight in the Coordinated Universal Time (UTC) time zone. Don't attempt to alter the time stamp to account for any time zone differences.<br>If the event's `IsAllDayEvent` flag is set to `false`, then you must translate the time portion of the time stamp in the `StartDateTime` field to or from a local time zone for the user or the application, as appropriate, and the translation must be in the Coordinated Universal Time (UTC) time zone.<br>If this field has a value, then `ActivityDate` and `ActivityDateTime` either must be `null` or must match the value of this field. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the current status of a task. The default value of this field is `Not Started`. Each predefined status field sets a value for `IsClosed`.<br>Possible values are:<br>• Completed<br>• Deferred<br>• In Progress<br>• Not Started<br>• Waiting on someone else |
| `Subject` | **Type**<br>combobox<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Contains the subject of the task or event. |
| `WhatId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The `WhatId` represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. `WhatId`s are polymorphic. Polymorphic means a `WhatId` is equivalent to the ID of a related object. The label is `Related To ID`.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>What<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CommSubscriptionConsent, ContactEncounter, ContactEncounterParticipant, ContactRequest, Contract, CoverageBenefit, CoverageBenefitItem, CreditMemo, DelegatedAccount, DocumentChecklistItem, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, ListEmail, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PartyConsent, PersonLifeEvent, PlanBenefit, PlanBenefitItem, ProcessException, Product2, ProductItem, ProductRequest, ProductRequestLineItem, ProductTransfer, PurchaserPlan, ReceivedDocument, ResourceAbsence, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, Shift, Shipment, ShipmentItem, Solution, Visit, VisitedParty, VolunteerProject, WorkOrder, WorkOrderLineItem |
| `WhoId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The WhoId represents a human such as a lead or a contact. WhoIds are polymorphic. Polymorphic means a WhoId is equivalent to a contact's ID or a lead's ID. The label is `Name ID`.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Who<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact, Lead |

## Usage

**Query activities related to an object**

1. Optionally, issue a describe call against the object whose activities you wish to query, to get a suggestion of the correct SOQL to use.
2. Issue a SOQL relationship query with a main clause that references the object, and an inner clause that references the activity custom lookup relationship; for example:

```
SELECT id, name,
(SELECT id, subject from sponsoredact__r)
FROM Contact
```

In this example *`sponsoredact__r`* is a user defined relationship list.

The user interface enforces sharing rules, filtering out related-list items that a user doesn't have permission to see.

The following restrictions on users who don't have "View All Data" permission help prevent performance issues:

- In the main clause of the relationship query, you can reference only one record. For example, you can't filter on all records where the account name starts with 'A'; instead, you must reference a single account record.
- In the inner clause of the query, you can't use `WHERE`.
- In the inner clause of the query, you must specify a limit of 500 or fewer on the number of rows that are returned in the list.
- You must sort on `ActivityDate` in descending order and `LastModifiedDate` in descending order; you can display nulls last. For example: `ORDER BY ActivityDate DESC NULLS LAST, LastModifiedDate DESC`.

# Macro

Represents a macro, which is a set of instructions that tells the system to perform one or more tasks. This object is available in API version 32.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Description of what this macro does. |
| `FolderId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Returns the ID of the folder that contains the macro. Available in API version 44.0 and later. |
| `FolderName` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Name of the folder that contains the macro. Available in API version 44.0 and later. |
| `IsAlohaSupported` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Specifies whether the macro is supported in Salesforce Classic. |
| `IsLightningSupported` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Specifies whether the macro is supported in Lightning Experience. |

| Field | Details |
| --- | --- |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time that the macro record was last referenced. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time that the macro record was last viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the macro. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the owner of the session record. |
| `StartingContext` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The object the macro performs actions on. In Salesforce Classic, macros are supported on objects with both feed-based layouts and quick actions. In Lightning Experience, macros are supported on standard and custom objects that allow quick actions and have a customizable page layout. |

## Usage

A macro definition consists of a Macro object and several associated MacroInstruction objects.

First, create a Macro object. Then, create MacroInstructions that specify objects, operations, conditions, and targets for the macro.

A macro contains an ordered list of macro instructions whose index field, `sortOrder`, is 0-based. If there's an incorrect sequence of macro instructions, the macro doesn't execute.

If you update a macro definition or add or remove instructions from a macro, make sure that the `sortOrder` field that defines the execution order is correct. To delete an entire macro definition, invoke the delete operation on the Macro object.

The table describes the supported macro instruction targets and how they relate to each other.

Note: Strings indicated by `<brackets>` are variables. The variable description describes the required type. For example, `Tab.<EntityApiName>` requires the entity name. If your custom entity name is `MyCustomObject`, your target API is `Tab.MyCustomObject__c`.

If a macro instruction listed in the table supports an implicit operation, you can use that operation as a direct child instruction without explicitly specifying a target. The hyphens used in the table illustrate the hierarchical relationship between targets. A target isn't available if its parent isn't.

**Table 1: Macro Instruction Target Grammar and Hierarchy**

| Target API Name | Supported Operations |
|---|---|
| `Tab.<EntityApiName>` | SELECT, CLOSE (implicit) |
| `- QuickAction.<EntityApiName>.<QuickActionName>` | SELECT, SUBMIT (implicit) |
| `- - Field.<QATargetEntityApiName>.<FieldApiName>` | SET |
| `- - Field.<QATargetEntityApiName>.<MultilineTextFieldApiName>.cursor` | INSERT |
| `- - Field.<QATargetEntityApiName>.<SinglelineTextFieldApiName>.end` | INSERT |
| `- QuickAction.Case.Email` | SELECT, SUBMIT (implicit) |
| `- - Field.EmailMessage.<FieldApiName>` | SET |
| `- - Field.EmailMessage.<MultilineTextFieldApiName>.cursor` | INSERT |
| `- - Field.EmailMessage.<SinglelineTextFieldApiName>.end` | INSERT |
| `- - Field.EmailTemplate` | SET |
| `- SidebarCmp.Knowledge` | SELECT |
| `- - SearchAction.KnowledgeArticle` | SELECT |
| `- - - Field.SearchString` | SET, INSERT |
| `- - - Command.Search` | SUBMIT |
| `- - SearchResult.KnowledgeArticle.MostRecentItem` | SELECT |
| `- - - Command.AttachToRecord` | SUBMIT |
| `- - - Command.InsertToEmail` | SUBMIT |
| `- - - Command.AttachToEmailAsPDF` | SUBMIT |

Example: This example describes a macro that opens a quick action, sets some fields in the quick action, and submits the quick action.

```
0. SELECT Tab.Case
1.   SELECT QuickAction.Case.Email
2.     SET Field.EmailMessage.Subject
3.     SET Field.EmailMessage.ToAddress
4.     INSERT Field.EmailMessage.HtmlBody.cursor
5.     SUBMIT
```

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**MacroChangeEvent (API version 48.0)**
Change events are available for the object.

**MacroHistory**
History is available for tracked fields of the object.

**MacroOwnerSharingRule**
Sharing rules are available for the object.

**MacroShare**
Sharing is available for the object.

# MacroInstruction

Represents an instruction in a macro. An instruction can specify the object that the macro interacts with, the context or publisher that the macro works within, the operation or action that the macro performs, and the target of the macro's actions.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
|---|---|
| `MacroId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the macro that contains this instruction. |

| Field Name | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, Sort<br>**Description**<br>Name of the instruction. |
| `Operation` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The action that the macro instruction performs. Valid values are:<br>• Select<br>• Set<br>• Insert<br>• Submit<br>• Close<br>To create macro instructions that execute conditionally, these values are available in API version 46.0 and later.<br>• IF<br>• ELSEIF<br>• ELSE<br>• ENDIF |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Order of this instruction in the macro. |
| `Target` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The object that's the target of the operation. For example, the target for the active case tab (Tab.Case) or a quick action, like the Send Email action on the case object (QuickAction.Case.SendEmail). |

| Field Name | Details |
| --- | --- |
| | In Lightning Experience, macros are supported on standard and custom objects that allow quick actions and have a customizable page layout.<br><br>In Salesforce Classic, macros are supported on objects with feed-based layouts and quick actions.<br><br>You can specify relative dates and times for the following targets.<br><br>• DateTime<br>• Date<br>• Time<br>• DueDate<br>• Birthday |
| `Value` | **Type**<br>string<br><br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br><br>**Description**<br>Value of a field. If the operation is Select, then the value is null, because the operation selects the object on which the macro performs an action. An instruction can contain both a `Value` field and a `ValueRecord` field, but only one of these fields can have a value. The other field value must be null.<br><br>To create relative dates and times, specify a valid Salesforce formula, prefaced by `MacroFormula`. For example, the following formula creates a date that is 1 day from now:<br><br>`MacroFormula:NOW() + 1`<br><br>You can't edit custom relative formulas in the Macro Builder. |
| `ValueRecord` | **Type**<br>string<br><br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br><br>**Description**<br>ID of the value or record. The `ValueRecord` can be either a value or a record, but not both. An instruction can contain both a `Value` field and a `ValueRecord` field, but only one of these fields can have a value. The other field value must be null. |

## Usage

MacroInstructions can specify objects, operations, conditions, and targets. For example, a macro containing these instructions performs a quick action that sends an email.

```
      Select Email QuickAction
      Set Subject…
      Set To…
      Set Body…
      Submit
```

You can create conditional macros using `IF`, `ELSEIF`, `ELSE`, and `ENDIF` as operations. In a conditional statement, the ExpressionFilter and ExpressionFilterCriteria objects are used to control which instructions execute. The ExpressionFilter object lets you define a logical expression with one or more conditions. It uses a child object, ExpressionFilterCriteria, to represent each condition that is evaluated.

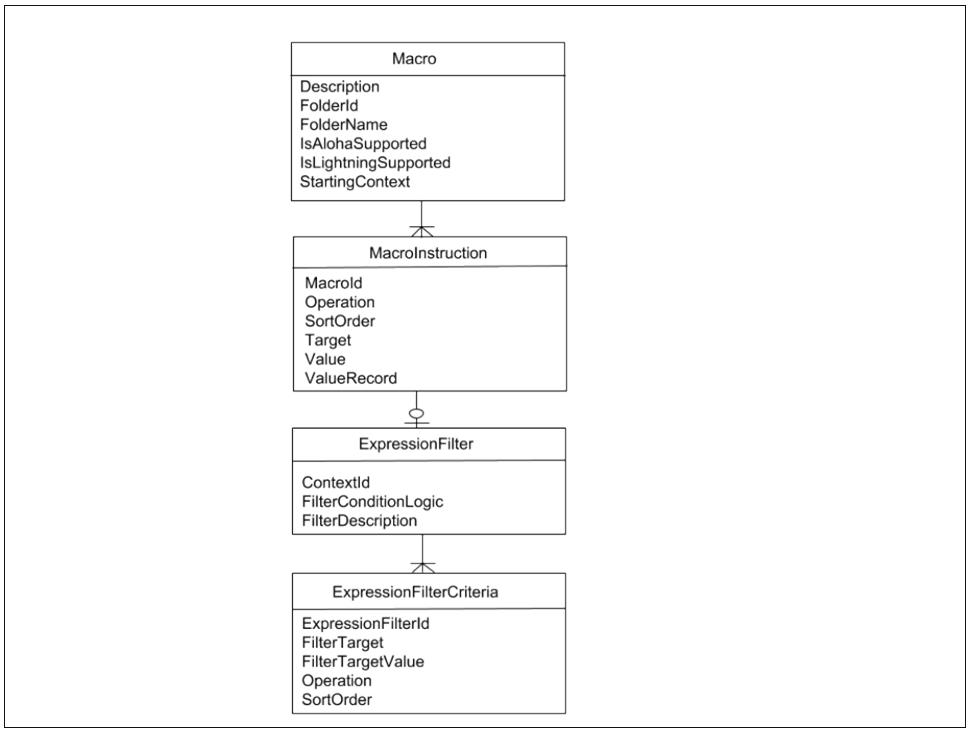
For example, consider the following conditional statement and macro instructions.

```
IF (Case.Status EQUALS New) AND (Case.Origin EQUALS Phone)
      Select Email QuickAction
      Set Subject…
      Set To…
      Set Body…
      Submit
ELSE
      Select Update Case Detail
      Update Case Description…
      Submit
ENDIF
```

The ExpressionFilter object includes a `FilterConditionLogic` field containing `1 AND 2`, where 1 and 2 are ExpressionFilterCriteria objects. The SortOrder field in the ExpressionFilterCriteria object maps condition 1 to `Case.Status EQUALS New`, and condition 2 to `Case.Origin EQUALS Phone`. If the conditional statement evaluates to true, then the instructions in the `IF` block are executed; otherwise, the instructions in the `ELSE` block are executed.

Any number of macro instructions can be present inside an `IF`, `ELSEIF`, or `ELSE` block. In addition, conditions can be nested.

## Data Model



## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**MacroInstructionChangeEvent (API version 48.0)**

Change events are available for the object.

# MacroUsage

Represents macro usage on a record, including which macro was used, who used it, and how they used it. This object is available in API version 47.0 and later.

## Supported Calls

describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()

delete() is supported in API version 55.0 and later.

## Special Access Rules

This object is always read-only. Only users with "Modify All Data" permission can delete MacroUsage records.

# Fields

| Field | Details |
| --- | --- |
| `AppContext` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Context in which the macro was run. Possible values are:<br>• `Aloha`—Salesforce Classic<br>• `Lightning`—Lightning Experience<br>• `Unknown` |
| `ConditionCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number of conditional instructions contained in the macro at execution. |
| `ContextRecord` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the record on which the macro was run. |
| `DurationInMs` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The execution time, in milliseconds, for the macro. |
| `ExecutedInstructionCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of macro instructions that ran successfully. If the macro completed successfully, this value is the same as `InstructionCount`. |

| Field | Details |
| --- | --- |
| `ExecutionEndTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The time at which macro execution completed. |
| `ExecutionState` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The end state of macro execution. Possible values are<br>• `SUCCESS`<br>• `FAILURE`<br>• `CANCELED` |
| `FailureReason` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>If `ExecutionState` is failure, this field stores the reason for the failure. Possible values are:<br>• `ACCESS`<br>• `GENERIC`<br>• `TIMEOUT`<br>• `UNSUPPORTED` |
| `FolderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the folder containing the macro at the time it was used. |
| `InstructionCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of instructions in the macro at the start of execution. |
| `IsFromBulk` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If true, the macro was run as a bulk macro. When a bulk macro is run on multiple records, usage is recorded per record. |
| `MacroID` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the macro. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Name of the macro. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the group or user that owns the macro. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the user that ran the macro. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**MacroUsageOwnerSharingRule**
Sharing rules are available for the object.

**MacroUsageShare**
Sharing is available for the object.

# MailmergeTemplate

Represents a mail merge template (a Microsoft Word document) used for performing mail merges for your organization.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

- All users can view this object, but you need the "Customize Application" permission to modify it.
- Customer Portal users can't access this object.

## Fields

| Field | Details |
|---|---|
| `Body` | **Type**<br>base64<br>**Properties**<br>Create<br>**Description**<br>Required. Microsoft Word document to use as a mail merge template. Due to limitations with Microsoft Word mail merge templates, your client application can specify the Body field when creating these records, but not when updating them. Limit: 5 MB. |
| `BodyLength` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Length of the Microsoft Word document. |

| Field | Details |
| --- | --- |
| `Category` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of document template. Possible values are:<br>• `Document`<br>• `Envelope`<br>• `Label`<br>The default value is `Document`. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter,Group, Nillable, Sort, Update<br>**Description**<br>Required. Text description of this mail merge template. Limit: 255 characters. |
| `Filename` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. File name of the Microsoft Word document that was uploaded as a mail merge template. Limit: 255 characters in length. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `LastUsedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date and time when this MailmergeTemplate was last used. |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. Name of this mail merge template. |
| `SecurityOptionsAttachmentHasFlash` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Required. True if Flash Injection was detected in the attachment. |
| `SecurityOptionsAttachmentHasXSSThreat` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Required. True if a cross site scripting threat was detected in the attachment. |
| `SecurityOptionsAttachmentScannedforFlash` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Required. True if the attachment has been scanned for Flash Injection. |
| `SecurityOptionsAttachmentScannedForXSS` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Required. True if the attachment has been scanned for a cross site scripting threat. |

## Usage

Use this object to manage mail merge templates for your organization.

Overview of Salesforce Objects and Fields

# MaintenanceAsset

Represents an asset covered by a maintenance plan in field service. Assets can be associated with multiple maintenance plans.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service must be enabled.

## Fields

| Field Name | Details |
|---|---|
| `AssetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The asset associated with the maintenance asset. |
| `ContractLineItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Contract line item associated with the maintenance asset. This field can only list a contract line item that is associated with the asset, and whose parent service contract is associated with the parent maintenance plan. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The date when the maintenance asset was last modified. Its label in the user interface is Last Modified Date. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the product request was last viewed. |
| `MaintenanceAssetNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, Sort<br>**Description**<br>An auto-assigned number that identifies the maintenance asset. |
| `MaintenancePlanId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Maintenance plan associated with the maintenance asset. |
| `NextSuggestedMaintenanceDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The suggested date of service for the maintenance asset's first work order (not the date the work order is created). This corresponds to the work order's `SuggestedMaintenanceDate`. If left blank when the maintenance asset is created, this field inherits its initial value from the related maintenance plan.<br>This field auto-updates after each batch is generated. Its label in the user interface is Date of the first work order in the next batch. |
| `WorkTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Work type associated with the maintenance asset. Work orders generated from the maintenance plan inherit its work type's duration, required skills and products, and linked articles. Maintenance assets covered by the plan use the same work type, though you can update them to use a different one. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**MaintenanceAssetChangeEvent (API version 48.0)**
Change events are available for the object.

**MaintenanceAssetFeed**
Feed tracking is available for the object.

**MaintenanceAssetHistory**
History is available for tracked fields of the object.

# MaintenancePlan

Represents a preventive maintenance schedule for one or more assets in field service.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service must be enabled.

## Fields

| Field Name | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The associated account, which typically represents the customer receiving the maintenance service. |

| Field Name | Details |
| --- | --- |
| `ContactId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The associated contact. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A brief description of the plan. |
| `DoesAutoGenerateWorkOrders` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Turns on auto-generation of work order batches for a maintenance plan and prohibits the manual generation of work orders via the Generate Work Orders action. If this option is selected, a new batch of work orders is generated for the maintenance plan on the `NextSuggestedMaintenanceDate` listed on each maintenance asset, or on the maintenance plan if no assets are included. If a `GenerationHorizon` is specified, the date of generation is that many days earlier. |
| `DoesGenerateUponCompletion` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If both this option and `DoesAutoGenerateWorkOrders` are set to true, a new batch of work orders isn't generated until the last work order generated from the maintenance plan is completed. A work order is considered completed when its status falls into one of the following status categories: Cannot Complete, Canceled, Completed, or Closed.<br>If a maintenance plan covers multiple assets, work orders are generated per asset. If a maintenance asset's final work order is completed late, its work order generation is delayed, which may cause a staggered generation schedule between maintenance assets. |

| Field Name | Details |
| --- | --- |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The last day the maintenance plan is valid. |
| `Frequency` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>(Optional) Amount of time between work orders. The unit is specified in the `FrequencyType` field. |
| `FrequencyType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>(Optional) The unit of frequency:<br>• Days<br>• Weeks<br>• Months<br>• Years<br>For example, to perform monthly maintenance visits you need a work order for each visit, so enter 1 as the `Frequency` and select Months. |
| `GenerationHorizon` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Moves up the timing of batch generation if `DoesAutoGenerateWorkOrders` is set to true. A generation horizon of 5 means the new batch of work orders is generated 5 days before the maintenance asset's (or maintenance plan's, if there are no assets) `NextSuggestedMaintenanceDate`. The generation horizon must be a whole number. |
| `GenerationTimeframe` | **Type**<br>int |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>(Required) How far in advance work orders are generated in each batch. The unit is specified in the `GenerationTimeframeType` field. |
| `GenerationTimeframeType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>(Required) The generation timeframe unit:<br>• Days<br>• Weeks<br>• Months<br>• Years<br>For example, if you need work orders for six months, enter 6 and select Months. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last interacted with this record, directly or indirectly. Some sample scenarios are: |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it. |
| `LocationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Where the service takes place. |

| Field Name | Details |
| --- | --- |
| `MaintenancePlanNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, Sort<br>**Description**<br>(Read Only) An auto-assigned number that identifies the maintenance plan. |
| `MaintenancePlanTitle` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A name for the maintenance plan. |
| `MaintenanceWindowEndDays` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Days after the suggested service date on the work order that its service appointment can be scheduled. |
| `MaintenanceWindowStartDays` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Days before the suggested service date on the work order that its service appointment can be scheduled.<br>The maintenance window start and end fields affect the Earliest Start Permitted and Due Date fields on the maintenance plan's work orders' service appointments. For example, if you enter 3 for both the maintenance window start and end, the Earliest Start Permitted and the Due Date will be 3 days before and 3 days after, respectively, the Suggested Maintenance Date on each work order. If the maintenance window fields are left blank, the service appointment date fields list their work order's suggested maintenance date. |
| `NextSuggestedMaintenanceDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The suggested date of service for the first work order (not the date the work order is created). This corresponds to the work order's `SuggestedMaintenanceDate`. You can use this field to enforce a delay before the first maintenance visit (for example, if monthly maintenance should begin one year after the purchase date). Its label in the user interface is Date of the first work order in the next batch.<br>For example, if you want the first maintenance visit to take place on May 1, enter May 1. When you generate work orders, the earliest work order will list a suggested maintenance date of May 1, and the dates on the later work orders will be based on the `GenerationTimeframe` and `Frequency`.<br>Important: Maintenance assets also list a `NextSuggestedMaintenanceDate`, which is initially inherited from the maintenance plan. If the plan has maintenance assets, this date auto-updates on the maintenance assets after each batch is generated, but doesn't update on the maintenance plan itself because batch timing is calculated at the maintenance asset level. If the plan doesn't have maintenance assets, this date auto-updates on the maintenance plan after each batch is generated. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The owner of the maintenance plan. |
| `ServiceContractId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The service contract associated with the maintenance plan. The service contract can't be updated if any child maintenance asset is associated with a contract line item from the service contract. |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The first day the maintenance plan is valid. |

| Field Name | Details |
| --- | --- |
| SvcApptGenerationMethod | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The service appointment generation method.<br>• One service appointment per work order<br>• One service appointment per work order line item<br>If your existing maintenance plans have work orders or work order line items associated with them, you can't change their generation methods. To change pre-existing maintenance plan generation methods, either delete the work orders and regenerate them or delete the maintenance plan and recreate it with the needed generation methods.<br>If Work Order Generation Method is set to One work order per asset, you can't set a Service Appointment Generation Method.<br>If Work Order Generation Method is set to One work order line item per asset, you must select a Service Appointment Generation Method. |
| WorkOrderGenerationMethod | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The work order generation method.<br>• One work order per asset<br>• One work order line item per asset<br>If your existing maintenance plans have work orders or work order line items associated with them, you can't change their generation methods. To change pre-existing maintenance plan generation methods, either delete the work orders and regenerate them or delete the maintenance plan and recreate it with the needed generation methods.<br>If Work Order Generation Method is left as None, the generation is defaulted to one work order per asset.<br>When One work order line item per asset is set, and all maintenance assets have the same Next Suggested Maintenance Date on the maintenance plan, they are grouped in one work order. However, if maintenance assets have different Next Suggested Maintenance Dates, multiple work orders are created for each date.<br>If Work Order Generation Method is set to One work order per asset, you can't set a Service Appointment Generation Method. |

| Field Name | Details |
| --- | --- |
| `WorkOrderGenerationStatus` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>(Read Only) Indicates the status of work order generation:<br>• NotStarted—the default value, work order generation has not started<br>• InProgress—work order generation is underway<br>• Completed—work order generation is complete<br>• Unsuccessful—it was not possible to generate work orders<br>You can generate only one batch at a time. |
| `WorkTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The associated work type. Work orders generated from the maintenance plan inherit its work type's duration, required skills and products, and linked articles. Maintenance assets covered by the plan use the same work type, though you can update them to use a different one. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**MaintenancePlanChangeEvent (API version 48.0)**
Change events are available for the object.

**MaintenancePlanFeed**
Feed tracking is available for the object.

**MaintenancePlanHistory**
History is available for tracked fields of the object.

**MaintenancePlanOwnerSharingRule**
Sharing rules are available for the object.

**MaintenancePlanShare**
Sharing is available for the object.

# MaintenanceWorkRule

Represents the recurrence pattern for a maintenance record. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `DoesFloatingWorkOrder` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates that the maintenance plan uses the floating work order adjustment. The default is false. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the line item was last modified. Its label in the user interface is `Last Modified Date`. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the line item was last viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Name of this maintenance work rule. |
| `NextSuggestedMaintenanceDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The next date on which this rule will generate maintenance items. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The assigned owner of the maintenance work rule. |
| `ParentMaintenancePlanId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The maintenance plan associated with the maintenance work rule. |
| `ParentMaintenanceRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The maintenance record this work rule applies to. |
| `RecordsetFilterCriteriaId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the recordset filter criteria associated with this maintenance work rule. Available in API version 52.0 and later. |
| `RecurrencePattern` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The RRULE that defines the pattern of recurrence for this work order rule. |
| `SortOrder` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The sort order that applies to this work order rule. |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The title of this work order rule. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of maintenance work rule. Available values are:<br>• `Criteria-based`<br>• `Calendar-based` (default)<br>Available in API version 52.0 and later. |
| `WorkTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the work type that this work order rule generates. |

# Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**MaintenanceWorkRuleChangeEvent**
Change events are available for the object.

**MaintenanceWorkRuleFeed**
Feed tracking is available for the object.

**MaintenanceWorkRuleHistory**
History is available for tracked fields of the object.

**MaintenanceWorkRuleOwnerSharingRule**
Sharing rules are available for the object.

**MaintenanceWorkRuleShare**
Sharing is available for the object.

# ManagedContent

Represents managed content in a Salesforce CMS workspace for use in an Experience Cloud site or a channel. The ManagedContent object represents the complete instance of a managed content record. It provides a consistent identifier for the managed content so that variants of the content item can be created over time. This object is available in API version 56.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

`ManagedContent` is available when the Digital Experiences app is enabled.

## Fields

| Field | Details |
|---|---|
| `ApiName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique API name of the Salesforce CMS content. Name requirements:<br>• must be 80 characters or fewer<br>• must begin with a letter<br>• can contain only underscores and alphanumeric characters<br>• can't include spaces<br>• can't end with an underscore<br>• can't contain two consecutive underscores<br>This field is available in API version 62.0 and later. |
| `AuthoredManagedContentSpaceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The Salesforce CMS workspace ID where the content resides.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>AuthoredManagedContentSpace<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ManagedContentSpace |
| `ContentKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>Unique identifier of the content. |
| `ContentTypeFullyQualifiedName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The fully qualified name of the content type of this CMS content. In an enhanced CMS workspace, the `ContentTypeFullyQualifiedName` for each standard content type is:<br>• News: `sfdc_cms__news`<br>• Image: `sfdc_cms__image`<br>• Document: `sfdc_cms__document`<br>In a CMS workspace, the `ContentTypeFullyQualifiedName` for each standard content type is:<br>• News: `news`<br>• Image: `cms_image`<br>• Document: `cms_document`<br>In both CMS workspaces and enhanced CMS workspaces, the `ContentTypeFullyQualifiedName` for a custom content type is the same as the developer name of the custom content type.<br>This field is available in API version 62.0 and later. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of the Salesforce CMS content. When you view this content in a CMS workspace, `Name` is the title of the latest content version. In an enhanced CMS workspace, `Name` is the title of the content in the workspace's default language.<br>This field is available in API version 58.0 and later. |
| `PrimaryLanguage` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The default language of the Salesforce CMS workspace where the content resides. |

## Usage

When you create or add content in a Salesforce CMS workspace, the content is uniquely identified by the Salesforce CMS workspace, a content key, and a default language. `ManagedContent` can be queried through the public sObject API. Use this object to create and retrieve information for a specific managed content.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ManagedContentChangeEvent on page 68 (API version 62.0)**
Change events are available for the object.

# ManagedContentChannel

Represents the details of a CMS channel. CMS channels correspond to managed content publishing endpoints. They deliver published content from your Salesforce CMS workspaces to an audience. This object is available in API version 55.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

`ManagedContentChannel` is available when the Digital Experiences app is enabled.

# Fields

| Field | Details |
| --- | --- |
| `CacheControlMaxAge` | **Type**<br>long<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The amount of time, in seconds, it takes for a requested CMS content resource in the CMS channel to expire before a new request for the resource must be made. |
| `Domain` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The domain for a public channel. Only public channels can have an assigned domain.<br>Possible value is:<br>• mydomain.cdn.salesforce-experience.com<br>Note: The `mydomain` value is specific to the domain of the channel. |
| `DomainHostName` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The hostname of the domain assigned to the CMS channel. Only public channels can have an assigned domain. |
| `MediaCacheControlMaxAge` | **Type**<br>long<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The amount of time, in seconds, it takes for a requested CMS image or document content resource in the CMS channel to expire before a new request for the resource must be made. This field is available in API version 57.0 and later. |
| `Name` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Name of the CMS channel. |
| `OptionsIsCacheControlPublic` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>When `true`, the CMS channel connection type is public. When `false`, the cache control is private. The default value is `false`. |
| `OptionsIsDomainLocked` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>When `true`, the domain set to the channel can't be changed. Only public channels can have this field set to `true`. If the channel type is `COMMUNITY`, the default value is `true`. For all other channel types, the default value is `false`. |
| `OptionsIsSearchable` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>When `true`, users can search for all published CMS content types within the channel. The default value is `false`. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The connection type of the CMS channel. The connection type determines which audience can access the CMS content delivered in the channel.<br>Possible values are:<br>• `COMMUNITY`: User access is controlled by the settings of the Experience Cloud site.<br>• `CloudToCloud`: Connects Salesforce CMS to the B2C Commerce Page Designer.<br>• `ConnectedApp`: User access to the channel is controlled by the connected application associated with the channel. |

| Field | Details |
| --- | --- |
| | • `PublicUnauthenticated`: No user authentication required, content can be cached on public CDNs.<br>• `Record`: User access to the content is controlled by the user access to the associated record. Content is only accessible to users with access to the record.<br>• `UserPermission`: This value is reserved for future use. |

## Usage

`ManagedContentChannel` can be queried through the public sObject API. Use this object to retrieve information for a specific CMS channel.

# ManagedContentInfo

Allows the creation of relationship to Product using ProductMedia. This object is available in API version 49.0 to 57.0. In API version 58.0 and later, use the ManagedContent object.

## Supported Calls

`describeSObjects()`

## Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access a web store.

## Usage

The CMS content import process returns a ManageContentInfo ID for each piece of content. The ManagedContentInfo entity has a 1:1 relationship with ProductMedia. To create this relationship, ProductMedia must be associated with a Product entity, for example, Product > ProductMedia > ManagedContentInfo. Use the ID to associate content uploaded through the API with the ProductMedia entity

# ManagedContentSpace

Represents the complete instance of a Salesforce CMS workspace that stores managed content. Users and groups with designated permissions can access and manage the content in a CMS workspace. This object is available in API version 56.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

ManagedContentSpace is available when the Digital Experiences app is enabled.

# Fields

| Field | Details |
| --- | --- |
| ApiName | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique API name of an enhanced Salesforce CMS workspace. Name requirements:<br>• must be 40 characters or fewer<br>• must begin with a letter<br>• can contain only underscores and alphanumeric characters<br>• can't include spaces<br>• can’t end with an underscore<br>• can’t contain two consecutive underscores |
| `DefaultLanguage` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Default language for the Salesforce CMS workspace.<br>Possible values are:<br>• `da`—Danish<br>• `de`—German<br>• `en_US`—English<br>• `es`—Spanish<br>• `es_MX`—Spanish (Mexico)<br>• `fi`—Finnish<br>• `fr`—French<br>• `it`—Italian<br>• `ja`—Japanese<br>• `ko`—Korean<br>• `nl_NL`—Dutch<br>• `no`—Norwegian<br>• `pt_BR`—Portuguese (Brazil)<br>• `ru`—Russian<br>• `sv`—Swedish<br>• `th`—Thai<br>• `zh_CN`—Chinese (Simplified) |

| Field | Details |
| --- | --- |
| | • `zh_TW`—Chinese (Traditional) |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Description of the Salesforce CMS workspace. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Name of the Salesforce CMS workspace. |

# ManagedContentVariant

Represents a variant of a managed content item. This object is available in API version 56.0 and later.

Managed content variants are associated with a `ManagedContent` object. The managed content and variants are counted as one content record in your Salesforce org.

For example, say you have a managed content item of content type News and a default language of English. When you translate the News content into other languages such as Spanish, Japanese, and French, a managed content variant for each language is created.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

## Special Access Rules

`ManagedContentVariant` is available when the Digital Experiences app is enabled.

## Fields

| Field | Details |
|---|---|
| `ContentTypeFullyQualifiedName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The fully qualified name of the content type of this CMS content. In an enhanced CMS workspace, the `ContentTypeFullyQualifiedName` for each standard content type is:<br>• News: `sfdc_cms__news`<br>• Image: `sfdc_cms__image`<br>• Document: `sfdc_cms__document`<br>The `ContentTypeFullyQualifiedName` for a custom content type is the same as the developer name of the custom content type.<br>This field is available in API version 62.0 and later. |
| `IsPublished` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the managed content variant is published to a channel.<br>The default value is `false`.<br>This field is calculated. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Language of the variant. |

| Field | Details |
| --- | --- |
| `ManagedContentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Globally unique identifier for the managed content item.<br>This field is a relationship field.<br>**Relationship Name**<br>ManagedContent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ManagedContent |
| `ManagedContentKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Globally unique identifier for managed content that associates with the managed content variant. |
| `ManagedContentVariantStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Publication status of the managed content.<br>Possible values are:<br>• `Draft`<br>• `Published`<br>• `Revised` |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Name of the managed content variant. |

| Field | Details |
| --- | --- |
| `UrlName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL name of the managed content variant. |
| `VariantType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Type of variant.<br>Possible value is:<br>• `Content` |

## Usage

Managed content variants are associated with a `ManagedContent` object. The managed content and managed content variants are counted as one content record in your Salesforce org.

`ManagedContentVariant` can be queried through the public sObject API. Use this object to retrieve information for a specific content in a certain language and format of a managed content.

# MarketingForm

Represents an Account Engagement marketing form that has been synched to Salesforce. Use forms on your website and landing pages to collect information about visitors and turn anonymous visitors into identified prospects. This object is available in API version 42.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

## Special Access Rules

To access this object, your org must use Account Engagement and users need the CRM User or Sales User permission set.

# Fields

| Field Name | Details |
| --- | --- |
| `CampaignId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related campaign. |
| `ErrorRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of views that led to an error. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp that indicates when the current user last viewed a record that is related to this form. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the current user last viewed this record. If this value is null, this record might only have been referenced (see `LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The name of the marketing form. |

| Field Name | Details |
| --- | --- |
| SubmissionRate | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of the views that led to a form submission. |
| TotalErrors | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of times a form error prevented a submission. |
| TotalSubmissions | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of times the form was successfully submitted. |
| TotalTrackedLinkClicks | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of link clicks from your thank you page. |
| TotalViews | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of times your form has been viewed. Includes multiple views from the same visitor. |
| Type | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Specifies the type of marketing form record, either a form or form handler. |
| `UniqueErrors` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The number of errors generated by separate visitors. |
| `UniqueSubmissions` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of unique submissions. Removes multiple submissions from the same prospect. |
| `UniqueTrackedLinkClicks` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of unique link clicks from your thank you page. Removes multiple clicks from the same prospect. |
| `UniqueViews` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The number of form views by separate visitors. |

# Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**MarketingFormEvent (API version 44.0)**
Change events are available for the object.

**MarketingFormFeed**
Feed tracking is available for the object.

# MarketingLink

Represents an Account Engagement marketing link record, either a custom redirect or a file, that has been synced to Salesforce. This object is available in API version 42.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

## Special Access Rules

To access this object, your org must use Account Engagement and users need the CRM User or Sales User permission set.

## Fields

| Field Name | Details |
|---|---|
| `CampaignId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related campaign. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp that indicates when the current user last viewed a record that is related to this marketing link. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the current user last viewed this record. If this value is null, this record might only have been referenced (see `LastReferencedDate`) and not viewed. |

| Field Name | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The name of the marketing link. |
| `TargetUrl` | **Type**<br>url<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The target URL of the marketing link. |
| `TotalTrackedLinkClicks` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The total number of clicks for the redirect. Includes clicks from visitors and identified prospects. When a person clicks the link multiple times, each click is counted in this number. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Specifies the type of marketing link record, either a custom redirect or file. |
| `UniqueTrackedLinkClicks` | **Type**<br>int<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The number of unique clicks for the redirect. Includes clicks from visitors and identified prospects. Only the first click is counted in this number. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**MarketingFormEvent (API version 44.0)**
Change events are available for the object.

**MarketingLinkFeed**
Feed tracking is available for the object.

# MatchingRule

Represents a matching rule that is used to identify duplicate records. This object is available in API version 33.0 and later.

A matching rule compares field values to determine whether a record is similar enough to existing records to be considered a duplicate. For example, a matching rule can specify that if the `Email` and `Phone` values of two records match exactly, the records are possible duplicates. Your organization uses matching rules with duplicate rules to define what happens when duplicates are identified.

If the rule is for a Person Account, `SobjectSubType` is automatically set to `PersonAccount`.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

## Fields

| Field Name | Details |
|---|---|
| `BooleanFilter` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Specifies filter logic conditions. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The description of the matching rule. |

| Field Name | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The developer name for the matching rule.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language selected for your organization. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The name of the matching rule. |
| `MatchEngine` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The match engine used by the matching rule. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix for matching rules for your organization. |
| `RuleStatus` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Required. The activation status of the matching rule. Values are:<br>• *Inactive*<br>• *Deactivating*<br>• *DeactivationFailed*<br>• *Active*<br>• *Activating*<br>• *ActivationFailed*<br>Important: The only valid values you can declare when deploying a package are *Active* and *Inactive*. |
| SobjectSubtype | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Read-only. Indicates if the matching rule is defined for the Person subtype of Account. Valid values are:<br>• PersonAccount<br>• None<br>If the rule is for a Person Account, SobjectSubType is automatically set to PersonAccount. |
| SobjectType | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The object for the matching rule. |

## Usage

Use the Salesforce API to retrieve and view details about MatchingRule and MatchingRuleItem. Use the Salesforce Metadata API to create, update, or delete these objects.

SEE ALSO:

- MatchingRuleItem
- DuplicateRule
- MatchingRule in the Salesforce Metadata API Developer's Guide

# MatchingRuleItem

Represents criteria used by a matching rule to identify duplicate records. This object is available in API version 33.0 and later.

A matching rule item determines which field the matching rule uses to identify a duplicate record. It also determines the method used to compare value that two records have for the field. For example, a matching rule item might specify that the `Email` field values of two records must match exactly in order for the records to be considered duplicates.

When a matching rule has multiple matching rule items, it means that multiple fields must match in order for the records to be identified as dupcliates.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

## Fields

| Field Name | Details |
|---|---|
| `BlankValueBehavior` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Specifies how blank fields affect whether the fields being compared are considered matches. Valid values are:<br>• *`MatchBlanks`*<br>• *`NullNotAllowed`* (default) |
| `Field` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates which field to compare when determining if a record is similar enough to an existing record to be considered a match. |
| `MatchingMethod` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Defines how the fields are compared. Choose between the exact matching method and various fuzzy matching methods. Valid values are:<br>• *Exact*<br>• *FirstName*<br>• *LastName*<br>• *CompanyName*<br>• *Phone*<br>• *City*<br>• *Street*<br>• *Zip*<br>• *Title*<br>For details on each matching method, see "Matching Methods Used with Matching Rules" in the Salesforce Help. |
| `MatchingRuleId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID for the matching rule.<br>This is a relationship field.<br>**Relationship Name**<br>MatchingRule<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MatchingRule |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The order of the matching rule items for a matching rule. |

## Usage

Use the Salesforce SOAP API to retrieve and view details about MatchingRule and MatchingRuleItem. Use the Salesforce Metadata API to create, update, or delete these objects.

SEE ALSO:

- MatchingRule
- DuplicateRule
- MatchingRule in the Salesforce Metadata API Developer's Guide

# MerchAccPaymentMethodSet

Defines an ordered list of payment methods that are available to a merchant's cudstomer during checkout. You can configure multiple payment method sets, each designated for a specific locale, payment region, or sale channel. This object is available in API version 58.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license with the Payments permission enabled for your org. Salesforce Payments entities are available only in Lightning Experience.

## Fields

| Field | Details |
|---|---|
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for organizations with the multicurrency feature enabled. The ISO code for any currency allowed by the organization. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort, Update<br>**Description**<br>Unique name for the object given by the Payments admin. |

| Field | Details |
| --- | --- |
| `MerchantAccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Foreign key to the MerchantAccount.<br>This field is a relationship field.<br>**Relationship Name**<br>MerchantAccount<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MerchantAccount |
| `PaymentMethodSetNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Auto-assigned ID for the `MerchAccPaymentMethodSet`. |
| `PaymentMethodSummary` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Summary field that is automatically populated with comma-separated values from MerchAccPaymentMethodType.<br>This field is a calculated field. |

# MerchAccPaymentMethodType

Refers to a payment method that is in a payment method set, which is defined by the `MerchAccPaymentMethodSet` object. This object is available in API version 58.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license with the Payments permission enabled for your org. Salesforce Payments entities are available only in Lightning Experience.

## Fields

| Field | Details |
|---|---|
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only when the multicurrency feature is enabled. Contains the ISO code for any currency used by the org. |
| `PaymentInstrumentType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of instrument the payer can pay with.<br>Possible values are:<br>• `us_bank_account - ACH_Debit`<br>• `affirm - Affirm`<br>• `afterpay - Afterpay`<br>• `afterpay_clearpay - Afterpay/Clearpay`<br>• `amazon_pay - Amazon Pay`<br>• `applepay - Apple Pay`<br>• `au_becs_debit - BECS_Debit`<br>• `bacs_debit - BACS_Debit`<br>• `bancontact - Bancontact`<br>• `card - Credit Cards`<br>• `cashapp - Cash App`<br>• `clearpay - Clearpay`<br>• `eps - EPS`<br>• `googlepay - Google Pay`<br>• `ideal - iDEAL`<br>• `klarna - Klarna`<br>• `link - Link`<br>• `paypal - PayPal` |

| Field | Details |
| --- | --- |
| | • `sepa_debit - SEPA Debit`<br>• `venmo - Venmo`<br>• `wechat_pay - WeChat Pay` |
| `PaymentMethodSetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the MerchAccPaymentMethodSet.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentMethodSet<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MerchAccPaymentMethodSet |
| `PaymentMethodSetTypeNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Auto-assigned ID for the MerchAccPaymentMethodSet. |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Sort order for the MechAccPaymentMethodType within the MerchAccPaymentMethodSetExperience. |

# Associated Objects

This object has these associated object. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**MerchAccPaymentMethodTypeHistory on page 63**
History is available for tracked fields of the object.

# MerchantAccount

A type of bank account that lets a merchant accept payments from a variety of payment methods, including credit or debit cards, or digital wallets. A Salesforce Payments merchant account is linked to an underlying payment gateway to process payments This object is available in API version 56.0 and later.

## Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license and Payments must be enabled for your org. Salesforce Payments objects are available only in Lightning Experience.

## Fields

| Field | Details |
|---|---|
| `AccountDescription` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Information about the merchant account. |
| `CountryIsoCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Country where the legal entity representing the account is. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Contains the ISO code for any currency allowed by the organization. Available only for organizations with multi-currency enabled. |
| `LastReferencedDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user can have accessed this record or list view but not viewed it. |
| `Mode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The operational mode of the merchant account. This field determines the account's ability to accept payments. For production, the account must be in Live mode.<br>Possible values are:<br>• `Connected`– Merchant account is active but it can't accept payments. This option is only valid in production orgs.<br>• `Live`– Merchant account is active and can accept payments. This option is only valid in production orgs.<br>• `Test` –Merchant account is active but not able to accept payments. This option is only valid in sandbox orgs, and the account can accept only test transactions. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the merchant account. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Name of the individual or group assigned to the merchant account. |

| Field | Details |
| --- | --- |
| | This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PaymentStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Merchant account is active and can accept payments.<br>Possible values are:<br>• `Disabled`<br>• `Enabled`<br>The default value is `Disabled`. |
| `PayoutStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Money can be moved from the payment provider account to the designated merchant account.<br>Possible values are:<br>• `Disabled`<br>• `Enabled`<br>The default value is `Disabled`. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the state of the merchant account.<br>Possible values are:<br>• `Active` - The merchant account can accept payments. |

| Field | Details |
| --- | --- |
| | • `Complete` - `PaymentStatus` and `DepositStatus` are enabled and all the required information is provided.<br>• `Enabled` - `PaymentStatus` and `PayoutStatus` are enabled, but the payment provider requires more information later. If the merchant doesn't provide the information, then the account becomes restricted. The time limit that the merchant has to provide the information is longer than the `RestrictedSoon` state.<br>• `Pending` - The merchant account exists but it can't accept payments. This option maintains backward compatibility for accounts that were created with API version 55.0 and earlier.<br>• `Rejected` - The account is rejected and an explanation is provided.<br>• `Restricted` - `PaymentStatus`, `PayoutStatus`, or both are disabled, so the merchant account's operation is limited.<br>• `Restricted Soon` - `PaymentStatus` and `PayoutStatus` are enabled, but the payment provider requires more information. If the merchant doesn't provide the information in a specific time period, then the account becomes restricted. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**MerchantAccountChangeEvent (API version 62.0)**
Change events are available for the object.

**MerchantAccountFeed**
Feed tracking is available for the object.

**MerchantAccountHistory**
History is available for tracked fields of the object.

**MerchantAccountOwnerSharingRule**
Sharing rules are available for the object.

**MerchantAccountShare**
Sharing is available for the object.

# MerchantAccountEvent

Represents a merchant account platform event. Subscribe to these events so you can listen and respond to them when they're published. For example, create a Salesforce Flow that is triggered when one of these events is published. This object is available in API version 59.0 and later.

For more information about platform events, see the Platform Events Developer Guide.

## Supported Calls

`describeSObjects()`

## Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license and Payments must be enabled for your org. Salesforce Payments objects are available only in Lightning Experience.

## Fields

| Field | Details |
|---|---|
| `ChangeType` | **Type**<br>picklist<br>**Properties**<br>Restricted picklist<br>**Description**<br>Type of merchant account event, which triggers an event notification. You can write code to listen to operate conditionally on the value of this field. For example, you can ignore a create change but get notified of updates.<br>Possible values are:<br>• `Create`–Merchant account is created.<br>• `Disable`–The account is deactivated. For example, the payment provider or the merchant disables an account due to fraudulent activity.<br>• `PaymentEnable`–The account is active and ready to receive payments.<br>• `PayoutEnable`–The account is ready to receive payouts.<br>• `Update`–Merchant account property change occurs. |
| `MerchantAccountId` | **Type**<br>reference<br>**Properties**<br>Nillable<br>**Description**<br>Identifies the merchant account for which the event occurs.<br>This field is a relationship field.<br>**Relationship Name**<br>MerchantAccount<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MerchantAccount |

# MessagingChannel

Represents a communication channel that an end user can use to send a message to an agent. A communication channel can be an SMS number, a Facebook page, or another supported messaging channel. This object is available in API version 40.0 and later.

## Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
|---|---|
| `BusinessHoursId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The operating hours for your business, when agents are available. Available only in orgs that use Einstein Bots.<br>This is a relationship field.<br>**Relationship Name**<br>BusinessHours<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BusinessHours |
| `ChannelAddressIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A UUID that identifies a deployed messaging channel. This identifier is unique across orgs, so a channel with the same MessagingPlatformKey in a sandbox and production will have a different ChannelAddressIdentifier for each. Available in API version 59.0 and later. |
| `ChannelDefinitionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The associated conversation channel definition, which is used only in Bring Your Own Channel for Messaging and Bring Your Own Channel for CCaaS. Available in API version 58.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>ChannelDefinition<br>**Refers To**<br>ConversationChannelDefinition |
| `ConsentType` | **Type**<br>picklist<br>**Properties**<br>Create, defaultedOnCreate, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of consent, or opt-in, that is required to message users on this channel. This field is available in API version 48.0 and later. Possible values are:<br>• `DoubleOptIn`<br>• `ExplicitOptIn`<br>• `ImplicitOptIn` (default value)<br>The property `defaultedOnCreate` has been removed in API version 51.0 and later. Now the consent type is defaulted to `ImplicitOptIn` when the consent type isn't set on create only for channels that support consents. |
| `ConversationEndResponse` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Automated response to the customer when the agent ends the conversation. (Optional) |
| `CriticalWaitTime` | **Description**<br>Reserved for future use. This field has been deprecated as of API version 52.0. |
| `Description` | **Description**<br>Reserved for future use. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The developer name for the messaging channel. This value is a concatenation of the messaging platform key and the message type. |
| `DoubleOptInPrompt` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Automated response to the end user to prompt them to doubly opt in to receiving messages. Available in API version 48.0 and later. |
| `EngagedResponse` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Automated response to the customer when the conversation is accepted by the agent. (Optional) |
| `InitialResponse` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>First automated response to the customer for a new conversation. (Optional) |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether a channel is active and can receive messages. |
| `IsAuthenticated` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether a user is authenticated to a voice assistant. The org permission Live Message Voice is required to access and update this field. Available in API version 44.0 and later. |

| Field Name | Details |
| --- | --- |
| `IsoCountryCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Two-letter ISO 3166-1 alpha-2 code for the country that the phone number is associated with. For example, the code for United States is `US`. Available in API version 44.0 and later. |
| `IsRequireDoubleOptIn` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether double opt-in is required (`true`) or not (`false`) for this Messaging channel. Available in API version 48.0 and later. |
| `IsRestrictedToBusinessHours` | **Description**<br>Reserved for future use. |
| `IsUserMatchByExternalIdOnly` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether to restrict matching on customer by external ID only (and not use the full name). This field has been deprecated as of API version 52.0. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Reserved for future use. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Unique name for the `MessagingChannel`. |

| Field Name | Details |
| --- | --- |
| `MessageType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Type of message. Possible values are:<br>• `AppleBusinessChat`—Represents Apple Messages for Business.<br>• `Custom`—Represents Bring Your Own Channel for Messaging or Bring Your Own Channel for CCaaS. Available in API version 58.0 and later.<br>• `EmbeddedMessaging`—Represents Messaging for In-App and Web. Available in API version 50.0 and later.<br>• `Facebook`<br>• `Phone`<br>• `PSTNVoice` (for Agentforce Voice channels that use PSTN)<br>• `Text`<br>• `Voice`<br>• `WhatsApp` |
| `MessagingPlatformKey` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Unique key for a channel that the end user can message or call based on the MessageType.<br>• In PSTNVoice, SMS, WhatsApp, and LINE channels, the platform key is the phone number associated with this channel.<br>• In Facebook Messenger channels, the platform key is the Facebook page ID associated with this channel.<br>• In Apple Messages for Business channels, the platform key is the Apple Messages identifier.<br>• In Messaging for In-App and Web, the platform key is identical to the Channel Address Identifier. |
| `OfflineAgentsResponse` | **Description**<br>Reserved for future use. |
| `OptInPrompt` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Automated response to the end user to prompt them to explicitly opt in to receiving messages. Available in API version 49.0 and earlier. |
| `OptInResponse` | **Type**<br>textarea<br>**Properties**<br>Create, Defaulted on create, Nillable, Update<br>**Description**<br>Automated response to the end user when they opt in to messaging. Available in API versions 48.0 and 49.0. Use the `OptInConfirmation` field of the MsgChannelLanguageKeyword on page 3444 object instead. |
| `OptionsIdentifyEndUserLanguage` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Auto-populates the Language field for this channel's messaging users if their locale is known. Supported for Messaging for In-App and Web and Apple Messages for Business only. |
| `OptOutResponse` | **Type**<br>textarea<br>**Properties**<br>Create, Defaulted on create, Nillable, Update<br>**Description**<br>Automated response to the end user when they opt out of messaging. Available in API version 48.0 only. Use the `OptOutConfirmation` field of the MsgChannelLanguageKeyword object instead. |
| `OutsideBusinessHoursResponse` | **Description**<br>Reserved for future use. |
| `PlatformType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates whether the channel is `Standard` or `Enhanced`. |

| Field Name | Details |
| --- | --- |
| | When a standard SMS or Facebook Messenger channel is upgraded, the PlatformType changes from `Standard` to `Enhanced`. When a standard WhatsApp channel is upgraded, the original channel's PlatformType remains `Standard` and a new channel is created with a PlatformType of `Enhanced`.<br>Messaging for In-App and Web channels have a PlatformType of `Enhanced`. |
| `RoutingConfigurationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Specifies which Omni-Channel routing configuration to use. This field is required when `RoutingType` is `OmniSkills`. To learn more, see Create Routing Configurations. |
| `RoutingType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Type used to support Omni-Channel's different routing methods.<br>• `OmniQueue` (queue-based routing)<br>• `OmniSkills` (skills-based routing)<br>When this value isn't set, `OmniQueue` is used. |
| `SessionHandler` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The queue or Omni-Channel flow that the channel's messaging sessions are routed to. Available in API version 51.0 and later. |
| `TargetQueueId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Queue in which incoming conversations are placed while waiting for an agent to accept.<br>This is a relationship field. |

| Field Name | Details |
| --- | --- |
| | **Relationship Name**<br>TargetQueue<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group |
| `TargetUserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Messaging User or agent for the conversation. Available in API version 50.0 and earlier. |

## Usage

While third-party messaging channels can be created via Apex, we recommend creating channels via the Messaging Settings page in Setup. Channels created via Apex may not work and can't be deleted.

In enhanced WhatsApp, Facebook Messenger, Apple Messages for Business, and LINE channels, the flow of a channel's messaging traffic is controlled by an associated MessagingChannelUsage record. The MessagingChannelUsage determines whether the channel is active or deactivated.

# MessagingChannelSkill

Junction object that represents an association between MessagingChannel and Skill. This object is available in API version 45.0 and later.

For example, when we want to use Omni-Channel skills-based routing in Live message, this object maintains the mapping between the messaging channel and the skill.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
| --- | --- |
| `MessagingChannelId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>ID of the MessagingChannel on page 3358.<br>This is a relationship field.<br>**Relationship Name**<br>MessagingChannel<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MessagingChannel |
| `SkillId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the Skill on page 4988.<br>This is a relationship field.<br>**Relationship Name**<br>Skill<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Skill |

# MessagingChannelUsage

Represents the status of an enhanced Messaging channel or of an application in a Unified Messaging channel. This object is available in API version 60.0 and later.

A MessagingChannel can be associated with up to three MessagingChannelUsage records, each with a unique DeploymentType. The role of a MessagingChannelUsage record differs slightly depending on whether it's used in an enhanced Messaging channel or a Unified Messaging channel.

- In enhanced WhatsApp, Facebook Messenger, Apple Messages for Business, and LINE channels, each channel has one associated MessagingChannelUsage record with a `DeploymentType` of `Conversation`. The MessagingChannelUsage record determines the channel's flow of messaging traffic. When you activate such a channel in Setup, its MessagingChannelUsage record updates to use a `DeploymentStatus` of `Active`, and messaging traffic can flow to and from Salesforce. Similarly, deactivating the channel in Setup causes its MessagingChannelUsage record to update to a `DeploymentStatus` of `Disabled`, and stops the flow of messaging traffic.
- In Unified Messaging channels, the MessagingChannelUsage record represents the status of a connected Service Cloud or Marketing Cloud application. For example, if a WhatsApp Unified Messaging channel is connected to both Service Cloud and Marketing Cloud, the MessagingChannel record has two associated MessagingChannelUsage records with a `DeploymentType` of `Conversation`

and `MJ`, respectively. These MessagingChannelUsage records are created when a user selects the Marketing or Service application during Unified Messaging setup.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `ConsentType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The level of customer consent required for your business to message a customer on this channel. Customers can opt out at any time.<br>Possible values are:<br>• `Implicit Opt-In`: By sending an initial message to your business, the customer agrees to receive messages.<br>• `Explicit Opt-In`: The customer uses keywords to actively opt into receiving messages.<br>• `Double Opt-In`: The customer uses keywords to opt in twice to receiving messages. |
| `DeploymentStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The status of the connected channel or application. If the DeploymentStatus is `Active`, messages can be sent or received (if permitted).<br>Possible values are:<br>• `New`—Admin selected the Marketing or Service application in Unified Messaging Setup, or created a new enhanced WhatsApp, Facebook Messenger, Apple Messages for Business, or LINE channel on the Messaging Settings page in Setup.<br>• `Provisioning`—Admin clicked **Connect** on an application in Unified Messaging Setup, or **Activate** on an enhanced Messaging channel.<br>• `Active`—Provisioning was successful and the channel can be used to message with customers via the connected application or channel.<br>• `Error`—Provisioning or deprovisioning wasn't successful. The admin can retry.<br>• `Deprovisioning`—Admin clicked **Disconnect** on an application in Unified Messaging Setup, or **Deactivate** on an enhanced Messaging channel. |

| Field | Details |
| --- | --- |
| | • `Disabled`—Deprovisioning was successful and the channel or application can no longer be used to messages with customers. |
| `DeploymentType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Indicates whether the record is related to Service Cloud or Marketing Cloud.<br>Possible values are:<br>• `Conversation`—Relating to Service Cloud.<br>• `MessagingEngagement`—Relating to Marketing Cloud.<br>• `MJ`—Relating to Marketing Cloud. J stands for Journey Builder. |
| `DisabledTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The time the MessagingChannelUsage record entered the Disabled state after an admin clicked **Disconnect** or **Deactivate** on the application or channel.<br>When the record is disabled, all inbound and outbound messages aren't sent via the connected application. Any sessions with a status other than Ended or Error are automatically ended within 48 hours unless the MessagingChannelUsage record is reenabled. |
| `ErrorReason` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>If an error occurs during connection, activation, disconnection, or deactivation of a MessagingChannelUsage record, the ErrorReason provides more information about what went wrong. For example, if an associated Service Cloud application for a Unified Messaging channel is missing a fallback queue or consent keywords, the connection attempt fails with an ErrorReason of `ProvisioningError`.<br>Possible values are:<br>• `DeprovisioningError`<br>• `InternalError`<br>• `InvalidSelection`<br>• `ProvisioningError` |

| Field | Details |
| --- | --- |
| `MessagingChannelId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The enhanced Messaging channel or Unified Messaging channel that the MessagingChannelUsage record is associated with. A MessagingChannel can be associated with up to three MessagingChannelUsage records.<br>This field is a relationship field.<br>**Relationship Name**<br>MessagingChannel<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MessagingChannel |
| `RoutingOverride` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Applicable only to MessagingChannelUsage records with a deployment type of MJ (Marketing Cloud). RoutingOverride indicates how messages are delivered in a unified channel where both the Service and Marketing applications are connected.<br>Possible values are:<br>• `MJKeywordsOnly`—If a messaging user sends a marketing keyword that is defined in Journey Builder, Journey Builder handles the message delivery and response. If a messaging user sends a non-keyword message, Omni-Channel handles the message delivery and response.<br>• `NonSessionMessages`—If a messaging user is engaged in an active Service Cloud messaging session, Service Cloud handles message delivery and response. If the user isn't engaged in an active session, Journey Builder handles message delivery and response.<br>Regardless of the RoutingOverride value, outbound messages are always handled by Service Cloud if the messaging user is engaged in an active Service Cloud messaging session. A session is considered active if its status isn't Ended or Error. |

# MessagingConfiguration

Represents the details for a Messaging configuration. This object is available in API version 47.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The API name for this Messaging configuration.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language of this Messaging configuration. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The label for the Messaging configuration. |
| `MessagingServiceUrl` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URL for the Messaging service. |
| `ProvisioningServiceUrl` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The URL for the provisioning service. |

# MessagingDeliveryError

Represents a log of triggered outbound failures to verify when a triggered outbound has failed. This object is available in API version 44.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `CreatedById` | **Type**<br>reference<br>**Properties**<br>Defaulted on createFilter, Group, Sort<br>**Description**<br>ID of the user who created the error. |
| `CreatedDate` | **Type**<br>dateTime<br>**Properties**<br>Defaulted on create, Filter, Sort<br>**Description**<br>Date the error was created. |
| `DestinationPhoneNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The recipient of the phone call. |
| `FailureReason` | **Type**<br>textarea |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Nillable, Update<br>**Description**<br>The provided reason for why the message failed. |
| `FlowEntity` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The entity that triggered the flow to send the message. |
| `FullMessage` | **Type**<br>textarea<br>**Description**<br>Plain error text. |
| `Id` | **Type**<br>id<br>**Properties**<br>Defaulted on create, Filter, Group, idLookup, Sort<br>**Description**<br>Identifier of the error. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the error has been deleted. |
| `LastModifiedById` | **Type**<br>reference<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>The ID of the user who last modified the error log. |
| `LastModifiedDate` | **Type**<br>dateTime<br>**Properties**<br>Defaulted on create, Filter, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Date when the Messaging error log was last modified. |
| `MessagingChannelId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the MessagingChannel on page 3358.<br>This is a relationship field.<br>**Relationship Name**<br>MessagingChannel<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MessagingChannel |
| `MessagingEndUserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Identifier for the Messaging user.<br>This is a relationship field.<br>**Relationship Name**<br>MessagingEndUser<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MessagingEndUser |
| `MessagingTemplateId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the Messaging template used.<br>This is a relationship field.<br>**Relationship Name**<br>MessagingTemplate |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>MessagingTemplate |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Namefield, Sort<br>**Description**<br>Name of the error. Maximum length is 80 characters. |
| `SystemModstamp` | **Type**<br>dateTime<br>**Properties**<br>Defaulted on create, Filter, Sort<br>**Description**<br>System modification time for the Messaging delivery error log. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The kind of event that occurred. Possible values include:<br>• `Error` (Default)<br>• `Warning` |

# MessagingEndUser

Represents a single address—such as a phone number or Facebook page—communicating with a single Messaging channel. This object is available in API version 40.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

# Fields

| Field | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the Account associated with this Messaging end user. Available in API version 43.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `ContactId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the associated Contact. Available in API version 43.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>Contact<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `HasInitialResponseSent` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether an initial response has been sent to the Messaging end user (`true`) or not (`false`). |
| `IsFullyOptedIn` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Sort<br>**Description**<br>Indicates whether the Messaging end user has opted in to receiving messages (`true`) or not (`false`). This field compares the related messaging channel's consent requirement to the user's consent status; if the user's status meets the channel's required consent level, `IsFullyOptedIn` is set to `true`. Available in API version 48.0 and later. |
| `IsOptedOut` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the Messaging end user has opted out of receiving messages. Available in API version 48.0 and earlier. Use `MessagingConsentStatus` and `IsFullyOptedIn` instead. |
| `IsoCountryCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ISO country code associated with the Messaging end user. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. |
| `LeadId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the associated lead. Available in API version 57.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>Lead<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Lead |
| `Locale` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Reserved for future use. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The preferred language of the messaging user who participated in the messaging session. SUpported for Messaging for In-App and Web and Apple Messages for Business only. |
| `MessageType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Type of message. Possible values are:<br>• `AppleBusinessChat`—Represents Apple Messages for Business.<br>• `Custom`—Represents Bring Your Own Channel. Available in API version 58.0 and later.<br>• `EmbeddedMessaging`—Represents Messaging for In-App and Web. Available in API version 50.0 and later.<br>• `Facebook`<br>• `Phone`<br>• `Text`<br>• `Voice` |

| Field | Details |
| --- | --- |
| | • `WhatsApp` |
| `MessagingChannelId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the Messaging channel associated with the Messaging end user.<br>This is a relationship field.<br>**Relationship Name**<br>MessagingChannel<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MessagingChannel |
| `MessagingConsentStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The consent status of the messaging user. This field is available in API version 48.0 and later. Possible values are:<br>• `DoublyOptedIn`<br>• `ExplicitlyOptedIn`<br>• `ImplicitlyOptedIn`<br>• `OptedOut` |
| `MessagingPlatformKey` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The phone number, Facebook page ID, or unique key associated with this Messaging end user. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of the Messaging end user. Because this field is editable, we don't recommend referencing it in automation. Instead, use the Messaging Platform Key. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the owner associated with this Messaging end user.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `ProfilePictureUrl` | **Type**<br>url<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The URL of the Messaging end user's profile picture. |

## Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

**MessagingEndUserChangeEvent (API version 62.0)**
Change events are available for the object.

**MessagingEndUserHistory**
History is available for tracked fields of the object.

**MessagingEndUserOwnerSharingRule**
Sharing rules are available for the object.

**MessagingEndUserShare**
Sharing is available for the object.

# MessagingLink

Represents the link between a Messaging Channel and where it's shared. This object is available in API version 47.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `EntityType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Possible values are:<br>• `Account`<br>• `Case`<br>• `Contact`<br>• `CustomEntityDefinition`—Custom Object Definition<br>• `Lead`<br>• `Opportunity` |
| `MessagingChannelId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The channel being shared. This is a relationship field.<br>**Relationship Name**<br>MessagingChannel<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MessagingChannel |
| `RecordTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>This is a relationship field.<br>**Relationship Name**<br>RecordType |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>RecordType |
| `ShouldAttemptAutoLink` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>No longer in use. Indicated that an incoming messaging session was auto-linked to a Salesforce contact or account based on information such as a phone number. |
| `ShouldPromptCreate` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>No longer in use. Indicated that a contact or account was created for the messaging user if none existed. |

# MessagingSession

Represents a session on a Messaging channel. This object is available in API version 47.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `AcceptTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The time when an agent accepts an incoming Messaging session. |

| Field | Details |
| --- | --- |
| `AgentMessageCount` | **Type**<br>int<br>**Properties**<br>Nillable<br>**Description**<br>The number of messages sent by the agent during the session. |
| `AgentType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of agent that is assigned to the Messaging session. Possible values are:<br>• `Agent`<br>• `Bot`<br>• `BotToAgent`—Bot & Agent<br>• `System`—Used for triggered outbound messages |
| `CaseId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the case associated with this Messaging session. |
| `ChannelEndUserFormula` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>A concatenation of the Messaging channel and Messaging user. |
| `ChannelKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique identifier for the associated Messaging channel. |

| Field | Details |
| --- | --- |
| `ChannelLocale` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The locale of the associated Messaging channel. |
| `ChannelName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the associated Messaging channel. |
| `ChannelType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of the associated Messaging channel. Possible values are:<br>• `Alexa`<br>• `AppleBusinessChat`—Represents Apple Messages for Business.<br>• `EmbeddedMessaging`—Available in API version 55.0 and later.<br>• `Facebook`<br>• `GoogleHome`<br>• `Line`<br>• `Omega`<br>• `Phone`<br>• `Text`<br>• `Voice`<br>• `WeChat`<br>• `WebChat`<br>• `WhatsApp` |
| `ConversationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related conversation. Available in API version 55.0 and later. |

| Field | Details |
| --- | --- |
| | This field is a relationship field.<br>**Relationship Name**<br>Conversation<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Conversation |
| `EndedByType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Who or what ended the enhanced messaging session. Possible values are:<br>• `Agent`<br>• `Bot`<br>• `EndUser`<br>• `System`:<br>– The session is inactive for a while, so the session ends.<br>– An automation ends the session.<br>– The session ended because of an error. |
| `EndTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The time when the Messaging session ended. |
| `EndUserAccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the end user's account record.<br>This is a relationship field.<br>**Relationship Name**<br>EndUserAccount<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Account |
| EndUserContactId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the end user's contact record.<br>This is a relationship field.<br>**Relationship Name**<br>EndUserContact<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| EndUserLanguage | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The preferred language of the messaging user who participated in the messaging session. |
| EndUserMessageCount | **Type**<br>int<br>**Properties**<br>Nillable<br>**Description**<br>The number of messages sent by the Messaging end user. |
| LastReferencedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| LastViewedDate | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. |
| `LeadId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the Lead associated with this Messaging session. |
| `MessagingChannelId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the Messaging channel associated with this Messaging session.<br>This is a relationship field.<br>**Relationship Name**<br>MessagingChannel<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MessagingChannel |
| `MessagingEndUserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the Messaging end user associated with this Messaging session.<br>This is a relationship field.<br>**Relationship Name**<br>MessagingEndUser<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MessagingEndUser |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of this Messaging session. |
| `OpportunityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the opportunity record associated with this Messaging session. |
| `Origin` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The origin of this Messaging session. Possible values are:<br>• `AgentInitiated`<br>• `ConversationClose`—Messaging user deleted the conversation in Apple Messages<br>• `ConversationControlLost`—Third-party bot resumes control from Salesforce bot or agent<br>• `Help`<br>• `InboundInitiated`<br>• `OptIn`—Opt In Status Change<br>• `OptOut`—Opt Out Status Change<br>• `TriggeredOutbound`<br>Messaging sessions can't be created using Apex code. They can be created only through customer initiation or by using Process Builder, flows, or the Start Conversation action. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner associated with this Messaging session.<br>This is a polymorphic relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PreviewDetails` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The preview shown to an agent for this Messaging session. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The identifier for the Messaging session. |
| `StartTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The time when the Messaging session started. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The status of the Messaging session. Possible values are:<br>• `New` (standard channels only)<br>• `Active`<br>• `Consent` (enhanced channels only)<br>• `Waiting`<br>• `Paused` (enhanced channels only)<br>• `Inactive` (enhanced channels only)<br>• `Ended` |

| Field | Details |
| --- | --- |
| | • `Error` (enhanced channels only)<br>To learn more about these statuses, see Lifecycle of a Messaging Session in Salesforce Help. |
| `TargetUserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the target user associated with this Messaging session.<br>This is a relationship field.<br>**Relationship Name**<br>TargetUser<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

## Usage

To monitor messaging session activity, report on the MessagingSession and MessagingSessionMetrics on page 3390 objects. MessagingSessionMetrics captures metrics about a messaging session, such as agent and end user response time. See Report on Messaging Activity in Service Cloud.

## Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

**MessagingSessionChangeEvent (API version 62.0)**
Change events are available for the object.

**MessagingSessionFeed**
Feed tracking is available for the object.

**MessagingSessionHistory**
History is available for tracked fields of the object.

**MessagingSessionOwnerSharingRule**
Sharing rules are available for the object.

**MessagingSessionShare**
Sharing is available for the object.

# MessagingSessionMetrics

Represents a metric gathered about a specific enhanced messaging session, such as average agent response time. This object is available starting in October 2024 in API version 62.0 and later.

To reference this object in reports, create a custom report type with Messaging Session as the primary object and Messaging Session Metrics as the secondary object.

Be sure to include the `MessagingSessionMetricType` field in your custom report. These records are available only for Messaging sessions created after October 1, 2024.

## Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Multiple MessagingSessionMetrics records are generated when a session ends in an enhanced Messaging channel or Messaging for In-App and Web channel. These records aren't generated for standard messaging sessions.

## Fields

| Field | Details |
| --- | --- |
| `MessagingSessionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the related messaging session.<br>This field is a relationship field.<br>**Relationship Name**<br>MessagingSession<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>MessagingSession (the master object) |
| `MessagingSessionMetricType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The metric that this record captures.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `AgentMessageCount`—The number of messages sent by the agent in the session.<br>• `AverageAgentResponseTime`—The average number of seconds between an end user's message and the agent's response in the session.<br>• `AverageEndUserResponseTime`—The average number of seconds between an agent or bot's message and the end user's response in the session.<br>• `EndUserMessageCount`—The number of messages sent by the end user in the session.<br>• `MaxAgentResponseTime`—The longest span of time (in seconds) between an end user's message and the agent's response in the session.<br>• `MaxEndUserResponseTime`— The longest span of time (in seconds) between an agent or bot's message and the end user's response in the session.<br>For each closed messaging session in enhanced Messaging channels and Messaging for In-App and Web, one MessagingSessionMetrics record is generated per MessagingSessionMetricType value. This means that six MessagingSessionMetrics records are generated per session. |
| `MessagingSessionMetricValue` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The value of the measured metric. For example, if the MessagingSessionMetricType is `EndUserMessageCount`, a MessagingSessionMetricValue of `12` means that the end user sent 12 messages during the messaging session. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>An autogenerated number identifying the MessagingSessionMetrics record. |

# MessagingTemplate

Represents a Messaging template used to send pre-formatted messages. This object is available in API version 47.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

# Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The description of the Messaging template. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The API name for the Messaging template.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the Messaging template. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The label of the Messaging template. |
| `Message` | **Type**<br>textarea<br>**Properties**<br>Create, Update<br>**Description**<br>The body text of the Messaging template. |

# MetadataApiOpEventLog

MetadataApiOpEventLog stores details of Metadata API retrieval and deployment requests. This object is available in API version 62.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
|---|---|
| `ClientIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API client ID. |
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `LoginKey` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| `OperationType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The operation that's being performed.<br>**Possible Values**<br>• `meta_deploy`<br>• `meta_list`<br>• `meta_retrieve`<br>• `meta_synchronous_create`<br>• `meta_synchronous_read`<br>• `meta_synchronous_upsert` |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Globally unique id for a given request.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `RunTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of time that the request took in milliseconds. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: `d7DEq/ANa7nNZZVD`. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 18-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943YAS` |

# MetadataPackage

Represents a package that has been developed in the org you're logged in to. Applies to unlocked, unmanaged, first-generation, and second-generation managed packages.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

# Fields

| Field Name | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The name of the package. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>For first-generation and second-generation managed packages, and unlocked packages with namespaces, this field is the namespace prefix assigned to the package. For unmanaged packages, or no-namespace unlocked packages, this field is blank. |
| `PackageCategory` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of package. Valid values are:<br>• `Application` (internal use only)<br>• `Module` (internal use only)<br>• `Package`—Represents either an unmanaged package or a first-generation managed package.<br>• `Package2`—Represents either an unlocked package or a second-generation managed package.<br>The default value is Package.<br>This field is available in API version 49.0 and later. |

# Usage

Here are examples of the types of API queries you can perform.

| Query | String |
| --- | --- |
| Show all managed and unmanaged packages in the org | `SELECT Name, NamespacePrefix FROM MetadataPackage` |
| Show only managed packages in the org | `SELECT Name, NamespacePrefix FROM MetadataPackage WHERE NamespacePrefix <> ''` |

# MetadataPackageVersion

Represents a package version (managed or unmanaged) that has been uploaded from the org you're logged in to.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
| --- | --- |
| `BuildNumber` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The build number of the version. For example, if you upload two beta versions, they have build numbers 1 and 2. Then, when you upload a non-beta version, the build number is 3. When you upload a new version, the build number resets to 1. |
| `IsDeprecated` | **Type**<br>boolean<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Indicates whether the package version is deprecated. Available in API version 46.0 and later. |
| `MajorVersion` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The first number in a package version number. A version number either has an `x.y` format or an `x.y.z` format. The `x` represents the major version, `y` the minor version, and `z` the patch version. |
| `MetadataPackageId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 18-character package ID starting with `033`. |
| `MinorVersion` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The second number in a package version number. A version number either has an `x.y` format or an `x.y.z` format. The `x` represents the major version, `y` the minor version, and `z` the patch version. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The name of the package version. |
| `PatchVersion` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The third number in a package version number, if present. A version number either has an `x.y` format or an `x.y.z` format. The `x` represents the major version, `y` the minor version, and `z` the patch version. |
| `ReleaseState` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>If the package version is a beta version, the value is `Beta`. Otherwise, the value is `Released`. |

# Usage

Here are examples of the types of API queries you can perform.

| Query | String |
| --- | --- |
| Get all package versions for the package that has a `MetadataPackageID` of 033D00000001xQlIAI | `SELECT Id, Name, ReleaseState, MajorVersion, MinorVersion, PatchVersion FROM MetadataPackageVersion WHERE MetadataPackageId = '033D00000001xQlIAI'` |
| Get the package version for the package with a specific `MetadataPackageID` and a major version greater than 1 | `SELECT Id FROM MetadataPackageVersion WHERE MetadataPackageId ='033D00000001xQlIAI' AND MajorVersion > 1` |
| Get released package versions for the package with a specific `MetadataPackageID` | `SELECT Id FROM MetadataPackageVersion WHERE MetadataPackageId = '033D00000001xQlIAI' AND ReleaseState = 'Released'` |

### Java Code Sample

Suppose you want to push version 3.4.6 of your package to all orgs. Let's write some code to identify the orgs eligible for the upgrade. This example demonstrates how to generate the list of subscriber orgs eligible to be upgraded to version 3.4.6 of a package.

This code sample uses the Web Services Connector (WSC).

```
// Finds all Active subscriber orgs that have the package installed
String PACKAGE_SUBSCRIBER_ORG_KEY_QUERY = "Select OrgKey from PackageSubscribers where
OrgStatus = 'Active' and InstalledStatus = 'I'";

// Finds all MetadataPackageVersions lower than the version given, including the list
// of subscribers for each version
String METADATA_PACKAGE_VERSION_QUERY = "Select Id, Name, ReleaseState, (%s) from"
 + " MetadataPackageVersion where MetadataPackageId = '%s' AND ReleaseState = 'Released'"

 + " AND (MajorVersion < 3 OR (MajorVersion = 3 and MinorVersion < 4)"
 + " OR (MajorVersion = 3 and MinorVersion = 4 and PatchVersion < 6))";

// conn is an EnterpriseConnection instance initialized with a ConnectionConfig object
// representing a connection to the developer org of the package
QueryResult results = conn.query(String.format(METADATA_PACKAGE_VERSION_QUERY,
PACKAGE_SUBSCRIBER_ORG_KEY_QUERY));

// This list will hold all of the PackageSubscriber objects that are eligible for upgrade
// to the given version
```

```
List<PackageSubscriber> subscribers = new ArrayList<>();
for (SObject mpvso : results.getRecords()) {

  // Cast the sObject to a MetadataPackageVersion
  MetadataPackageVersion mpv = (MetadataPackageVersion) mpvso;

  // Add subscribers to our list
  if (mpv.getPackageSubscribers() != null) {
   for (SObject psso : mpv.getPackageSubscribers().getRecords()) {
    subscribers.add((PackageSubscriber) psso);
   }
 }
}
```

**Next Step**

Create a push request using PackagePushRequest.

# Metric

The Metric object represents the components of a goal metric such as its name, metric type, and current value.

Note: The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
|---|---|
| `CompletionDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The completion date of the metric. |
| `CurrentValue` | **Type**<br>double<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort, Update<br>**Description**<br>The current value of the metric. |

| Field Name | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The description of the metric. The maximum length is 65,535 characters. |
| `DueDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The due date of the metric. |
| `GoalId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the goal the metric is related to. |
| `InitialValue` | **Type**<br>double<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort, Update<br>**Description**<br>The initial value of the metric. |
| `IsCompletionMetric` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Read only. If `true`, the metric measures whether or not the metric is finished. If `false`, the metric measures how much is finished compared to a targeted value. |
| `LastComment` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>A comment that provides more context about the metric, such as its status or progress. The maximum length is 255 characters. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp that indicates when a user last viewed a record that is related to this metric. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp that indicates when a user last viewed this metric. If this value is null, this record might have been only referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The name of the metric. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the user who owns the metric. |
| `Progress` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Read only. The overall progress of the metric. |

| Field Name | Details |
| --- | --- |
| `RecordTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the related record type. |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The start date of the metric. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The status of the metric. Possible values include:<br>• Not Started<br>• On Track<br>• Behind<br>• Critical<br>• Completed<br>• Postponed<br>• Canceled<br>• Not Completed |
| `TargetValue` | **Type**<br>double<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort, Update<br>**Description**<br>The target value of the metric. |
| `Weight` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The weight of the metric. The sum of the weights should equal 100%. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**MetricFeed**
Feed tracking is available for the object.

**MetricHistory**
History is available for tracked fields of the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

**MetricOwnerSharingRule**
Sharing rules are available for the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

**MetricShare**
Sharing is available for the object.

# MetricDataLink

The link between the metric and the data source, such as a report.

Note: The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
| --- | --- |
| `DatasourceFieldName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The field name of the data source, such as a report summary field. |

| Field Name | Details |
| --- | --- |
| `DataSourceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the data source. |
| `LastSynchronizationTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The last time the data was synchronized. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, Sort<br>**Description**<br>The name given to the data link record. |
| `TargetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the metric that the data is linked to. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**MetricDataLinkHistory**

History is available for tracked fields of the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see Phased WDC (legacy Work.com) Feature Retirement.

# MigratedEmail

For internal use only.

# MilestoneType

Represents a milestone (required step in a customer support process). This object is available in API version 18.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only Salesforce admins, users with access to the Case, Entitlement, or Work Order objects, and users with the View Setup and Configuration permission can access this object.

## Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>A description of the milestone. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, idLookup, Update<br>**Description**<br>The name of the milestone. |
| `RecurrenceType` | **Type**<br>picklist<br>**Properties**<br>Create,Update<br>**Description**<br>The type of recurrence for the milestone. |

## Usage

Use this object to query and manage the milestone type for CaseMilestone records.

SEE ALSO:

- CaseMilestone
- SlaProcess

# MktJourneyDcsnSetup

Represents a collection of Marketing Cloud Engagement journeys that you can interact with by using Salesforce Flow in Marketing Cloud. This object is available in API version 65.0 and later.

You can use interaction data from a Marketing Cloud Engagement journey to trigger a Flow, or to configure decision activities in a Flow.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `BusinessUnitId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The unique Marketing Cloud business unit ID to use with the collection of journeys. This ID is configured in Marketing Cloud, and is different from the Member ID (MID) or Enterprise ID (EID) of your Marketing Cloud Engagement account.<br>This field is a relationship field.<br>**Relationship Name**<br>BusinessUnit<br>**Refers To**<br>BusinessUnit |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A description of the collection of journeys. |

| Field | Details |
| --- | --- |
| `EnterpriseIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The Enterprise ID (EID) of your parent Marketing Cloud Engagement account. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>A name for the collection of journeys. |

# MLField

Represents a single field in a data definition. This object is available in API version 50.0 and later.

## Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `Entity` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The object that contains the field. |
| `Field` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The name of the field. |

# MlIntentUtteranceSuggestion

Represents a customer input, used for training purposes in the feedback loop process of a conversation. Admins can add these inputs to the intent training model. This object is available in API version 51.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `ConfigId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |
| `IntentSuggestion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The recommended intent. |
| `ReviewStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted Picklist, Sort<br>**Description**<br>Possible values are: Ignore, New |
| `Utterance` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The text input from the end user. |
| `UtteranceCount` | **Type**<br>integer<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>A count of the Utterance field. |

# MLPredictionDefinition

Represents a prediction definition that specifies details about the prediction. This object is available in API version 50.0 and later.

## Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `ApplicationId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of the parent AI Application. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The language of the prediction. Possible values are:<br>• `da`—Danish<br>• `de`—German<br>• `en_US`—English<br>• `es`—Spanish<br>• `es_MX`—Spanish (Mexico)<br>• `fi`—Finnish<br>• `fr`—French<br>• `it`—Italian<br>• `ja`—Japanese<br>• `ko`—Korean<br>• `nl_NL`—Dutch<br>• `no`—Norwegian<br>• `pt_BR`—Portuguese (Brazil)<br>• `ru`—Russian<br>• `sv`—Swedish<br>• `th`—Thai<br>• `zh_CN`—Chinese (Simplified)<br>• `zh_TW`—Chinese (Traditional) |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Label that identifies the prediction throughout the Salesforce user interface. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Specifies the namespace of the prediction, if installed with a managed package. |
| `PredictionField` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Field that the prediction is based on. |
| `PushbackField` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Field that the prediction writes scores to. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The status of the prediction. Possible values are:<br>• `Disabled`<br>• `Draft`<br>• `Enabled` |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of model that returns the prediction values. Possible values are:<br>• `BinaryClassification`<br>• `DeepLearningIntentClassification`<br>• `DeepLearningNameEntityRecognition`<br>• `GlobalDeepLearningIntentClassification`<br>• `GlobalDeepLearningNameEntityRecognition`<br>• `LanguageDetection`<br>• `MulticlassClassification`<br>• `Regression`<br>• `ScoringSpecificOutcome` |

# MLModel

Represents an AI model that can be used in Einstein Prediction Builder, Einstein Recommendation Builder, and other Einstein features. This object is available in API version 53.0 and later.

This object contains information that represents many types of AI models. Some fields contain information for only a specific type of model.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Available with Einstein Prediction Builder and Einstein Recommendation Builder.

## Fields

| Field | Details |
|---|---|
| `ApprovalStatus` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates whether the model is approved, pending approval, or rejected.<br>Possible values are:<br>• `Approved`<br>• `Pending`<br>• `Rejected`<br>The default value is `Pending`. |
| `Dataset` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the dataset used to create the model. |
| `ModelType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates the type of model.<br>Possible values are:<br>• `BinaryClassification`<br>• `DecisionTree`<br>• `DeepLearningIntent`<br>• `DeepLearningNER`<br>• `GeneralizedLinearModels`<br>• `GlobalDeepLearningIntent`<br>• `GlobalDeepLearningNER`<br>• `GlobalLanguageDetection`<br>• `GradientBoostedTrees`<br>• `LinearRegression`<br>• `LinearSupportVectorClassifiers`<br>• `LogisticRegression`<br>• `MulticlassClassification`<br>• `NaiveBayes`<br>• `NeuralNet`<br>• `PopularityCount`<br>• `RandomForest`<br>• `Regression`<br>• `XGBoost` |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The automatically generated ID that uniquely identifies the model. |
| `PredictionDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related prediction definition.<br>This field is a relationship field.<br>**Relationship Name**<br>PredictionDefinition |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>MLPredictionDefinition |
| `RecommendationDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related recommendation definition.<br>This field is a relationship field.<br>**Relationship Name**<br>RecommendationDefinition<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MLRecommendationDefinition |
| `ScoringStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Indicates whether scoring is enabled or disabled.<br>Possible values are:<br>• `Disabled`<br>• `Enabled` |
| `TrainingEndTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates the date and time when the training ended. |
| `TrainingStartTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates the date and time when the training started. |

# MLModelFactor

Represents a field value that has a positive or negative effect on the model's score. This object is available in API version 53.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Available with Einstein Prediction Builder and Einstein Recommendation Builder.

## Fields

| Field | Details |
| --- | --- |
| `Correlation` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Shows the strength of association between the variable and the outcome. The higher the correlation, the greater the association. |
| `FactorType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of factor.<br>Possible values are:<br>• `ModelFactlet`—The field value strongly influences the outcome because the model determined that this field is always important. For example, the model can decide that the field `Industry` is always important to the outcome, regardless of its value.<br>• `ModelFactor`—The field value is important to the outcome because the field's value is significant. For example, the model can decide that the `Annual Revenue` field value is important to the outcome because the value is above $1,000,000 or below $50,000. |

| Field | Details |
| --- | --- |
| `Importance` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Shows how much the variable influences the outcome. The higher the value, the greater the impact. |
| `ModelId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the related model.<br>This field is a relationship field.<br>**Relationship Name**<br>Model<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MLModel |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The automatically generated ID that uniquely identifies the model. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of model factor.<br>Possible values are:<br>• `And`<br>• `Basic`<br>• `Or` |

| Field | Details |
| --- | --- |
| `Weight` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates how significant the field value is to the outcome or score. Model factlets tend to have higher weights than model factors. |

# MLModelFactorComponent

Represents information about the related MLModelFactor. For example, this object can represent a field value or a field range such as "Title = CEO" or "Annual Revenue >10000000". This object is available in API version 53.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Available with Einstein Prediction Builder and Einstein Recommendation Builder.

## Fields

| Field | Details |
| --- | --- |
| `FactorLabelKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Maps the model factor component to a label that can be displayed to the user. |
| `FeatureType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>`FeatureType` and `FeatureValue` indicate a feature that doesn't have a corresponding field. For example, to indicate the feature "Percent = 97%", the `FeatureType` is `Percent` and the `FeatureValue` is `97`.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `Binary`<br>• `Combobox`<br>• `Currency`<br>• `Date`<br>• `DateTime`<br>• `Email`<br>• `ID`<br>• `Integral`<br>• `MultiPicklist`<br>• `Percent`<br>• `Phone`<br>• `Picklist`<br>• `Real`<br>• `Text`<br>• `TextArea`<br>• `URL` |
| `FeatureValue` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The feature's value. See `FeatureType`. |
| `LeftHandDerivedField` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If the model factor component is an equation, this field represents the name of the field on the left side of the equation. For example, if the model factor component is `Title = CEO`, this value is `Title`. |
| `ModelFactorId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the related MLModelFactor.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>ModelFactor<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MLModelFactor |
| `ModelId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related MLModel.<br>This field is a relationship field.<br>**Relationship Name**<br>Model<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MLModel |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The automatically generated ID that uniquely identifies the model. |
| `Operator` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>If the model factor component is an equation, this field represents the operator. For example, if the model factor component is `Title = CEO`, the operator is `Equals`.<br>Possible values are:<br>• `Contains`<br>• `EndsWith`<br>• `Equals`<br>• `GreaterThan` |

| Field | Details |
| --- | --- |
| | • `IsNotNull`<br>• `IsNull`<br>• `LessThan`<br>• `NotEquals`<br>• `StartsWith` |
| `RightHandDerivedField` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If the model factor component is an equation, this field represents the name of the field on the right side of the equation. |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If the model factor has multiple model factor components, this field indicates the order in which this model factor component appears. |
| `Value` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If the model factor component specifies a value, this field represents the value. For example, if the model factor component is `Title = CEO`, this field is `CEO`. |

# MLModelMetric

Represents a metric or statistic about the related model, such as accuracy, precision, or RSquared. Use a model's metrics to learn about its performance and to compare it with other models. This object is available in API version 53.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Available with Einstein Prediction Builder and Einstein Recommendation Builder.

## Fields

| Field | Details |
| --- | --- |
| `BasicMetricValue` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The value of a basic metric. A basic metric is a single number. For metrics that comprise a set of graph points, see `ComplexMetricValue` . |
| `ComplexMetricValue` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The X and Y values for a complex metric. A complex metric is a coordinate on a graph. For example, in classification models, you can use a line on a graph to create classification categories. |
| `DataSetType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of dataset.<br>Possible values are:<br>• `Baseline`<br>• `HoldOut`<br>• `Live`<br>• `Model`<br>• `Training` |
| `EndTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The date and time when the model training finished. |
| `GraphType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of graph.<br>Possible values are:<br>• `ConfidencePlot`<br>• `ConfusionMatrixPerThreshold`<br>• `DiscountedCumulativeGainsGraph`<br>• `HitRateGraph`<br>• `KBasedRankingGraph`<br>• `LiftPlot`<br>• `MeanReciprocalRankGraph`<br>• `MultiClassConfusionMatrixPerThreshold`<br>• `MultiClassMisclassifications`<br>• `NormalizedDiscountedCumulativeGainsGraph`<br>• `PrecisionGraph`<br>• `RecallGraph`<br>• `RegressionErrorBands` |
| `MetricType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of metric.<br>Possible values are:<br>• `Accuracy`<br>• `AveragePrecision`<br>• `BalancedAccuracy`<br>• `DiscountedCumulativeGainAtK`<br>• `ExpectedTopAbsoluteRank`<br>• `ExpectedTopPercentileRank`<br>• `F1Score`<br>• `FMeasure` |

| Field | Details |
| --- | --- |
| | • HitRateAtK<br>• LiftBucket<br>• MeanAbsoluteError<br>• MeanAbsoluteRank<br>• MeanAveragePrecisionAtK<br>• MeanPercentileRank<br>• MeanReciprocalRank<br>• MeanReciprocalRankAtK<br>• MeanTopReciprocalRank<br>• NormalizedDiscountedCumulativeGainsAtK<br>• Precision<br>• PrecisionAtK<br>• RSquared<br>• Recall<br>• RecallAtK<br>• RootMeanSquaredError<br>• auPR<br>• auROC |
| ModelId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the related MLModel.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Model<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MLModel |
| Name | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>An automatically generated ID that uniquely identifies the metric. |

| Field | Details |
| --- | --- |
| `RowCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of rows. |
| `Span` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The time span for the metric. Possible values are:<br>• `Day`<br>• `Hour`<br>• `Month`<br>• `SinceLastAction`<br>• `Week` |
| `StartTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the model training started. |

# MLRecommendationDefinition

For internal use only.

# MobileDeviceAppRegistration

Represents the details provided in a mobile device registration event from an app that uses the Engagement Mobile SDK. This object is available in API version 65.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

# Fields

| Field | Details |
| --- | --- |
| `DatetimeInDevice` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time of the registration event, based on values provided by the device. |
| `DeviceModel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The model of the device that's being registered, such as `iPhone 17` or `Google Pixel`. |
| `DevicePlatform` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The operating system of the mobile device, such as `iPhone OS` or `Android`. |
| `DeviceSystemToken` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A unique token that represents the mobile device. The push notification service (such as Apple Push Notification service or Firebase Cloud Messaging) uses this token to deliver messages to the device. |
| `DeviceSystemTokenHash` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A hash of the device token. |
| `DeviceTimezone` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The time zone that the device is located in when the registration event occurs. |
| `DeviceVersion` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The version or model number of the device. |
| `Deviceid` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A unique identifier for the mobile device. |
| `Eventid` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A unique identifier for the registration event. |
| `IsBackgroundRefreshEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the device gives permission for the app to receive updates while it's in the background.<br>The default value is `false`. |
| `IsBluetoothEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether Bluetooth is enabled on the device. |

| Field | Details |
| --- | --- |
| | The default value is `false`. |
| `IsDst` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the device's locale observes daylight saving time (DST).<br>The default value is `false`. |
| `IsLocationEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the device has location services enabled for the app.<br>The default value is `false`. |
| `IsPushEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the device has push notifications enabled for the app.<br>The default value is `false`. |
| `Locale` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The locale string for the device, such as `en_US` or `ja_JP`. |
| `MobileAppName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the mobile app, as configured in Setup. |

| Field | Details |
| --- | --- |
| `MobileAppVersion` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The version number of the mobile app that generated the registration event. |
| `MobileAppid` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A unique ID that represents the mobile app. |
| `PartyIdentificationName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the party identifier for identity resolution rules. |
| `PartyIdentificationNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID used for identity resolution comparisons. |
| `PartyIdentificationType` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A string that provides additional information about the type of party identifier used, such as `Driver License` or `SSN`. |
| `RegistrationDatetime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The date and time when the registration event occurred. |
| `Registrationid` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A unique ID for the registration event. |
| `SdkVersion` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The version of the Mobile Engagement SDK that the app uses. |

# MobileSecurityAssignment

Represents the assignment of mobile security policies to a profile. The policies apply to the Salesforce mobile app with Enhanced Mobile App Security enabled. This object is available in API version 54.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Accessing this object requires the Enhanced Mobile App Security add-on subscriptions and the Enforce Enhanced Mobile App Security user permission.

## Fields

| Field | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. The name:<br>• must be 40 characters or fewer<br>• must begin with a letter<br>• can contain only underscores and alphanumeric characters<br>• can't include spaces<br>• can't end with an underscore<br>• can't contain 2 consecutive underscores<br>In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The combined language and locale ISO code, which controls the language of the MobileSecurityAssignment. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Label for this MobileSecurityAssignment value. This display value is the internal label that doesn't get translated. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation.<br>The namespace prefix can have one of the following values. |

| Field | Details |
| --- | --- |
| | • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `ProfileId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The profile ID that the mobile security policies are assigned to.<br>This field is a relationship field.<br>**Relationship Name**<br>Profile<br>**Refers To**<br>Profile |

# MobileSecurityPolicy

Enables mobile security policies on the Salesforce mobile app with Enhanced Mobile Security. This object is available in API version 50.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Accessing this object requires the Enhanced Mobile App Security add-on subscriptions and the Enforce Enhanced Mobile App Security user permission.

# Fields

| Field | Details |
|---|---|
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `EffectiveDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date a mobile security policy is enforced. |
| `IsEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>A value indicating whether a mobile security policy is enabled.<br>The default value is 'false'. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The two-to five-character code that represents the language and locale ISO. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The label of the mobile security policy. |

| Field | Details |
| --- | --- |
| `MobilePlatform` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The mobile operating system.<br>Possible values are:<br>• `Android`<br>• `iOS` |
| `MobileSecurityAssignmentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates the ID of the mobile security assignment.<br>This is a relationship field.<br>**Relationship Name**<br>MobileSecurityAssignment<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MobileSecurityAssignment |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. |

| Field | Details |
| --- | --- |
| | • In orgs that aren't Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `RuleValue` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Value of the mobile security policy rule. |
| `RuleValueType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of mobile security policy rule.<br>Possible values are:<br>• `Boolean`<br>• `Text`<br>• `TextList` |
| `SeverityLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The severity level of a mobile security policy.<br>Possible values are:<br>• `Critical`<br>• `Error`<br>• `Info`<br>• `Warn` |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of mobile security policy. |

| Field | Details |
| --- | --- |
| | Possible values are:<br>• `AllowedDeviceList`—Allowed Device List<br>• `Block3dTouch`—Block 3D Touch<br>• `BlockCalendar`—Block Calendar<br>• `BlockCamera`—Block Camera<br>• `BlockContacts`—Block Contacts<br>• `BlockCustomKeyboard`—Block Custom Keyboard<br>• `BlockFileBackup`—Block File Backup<br>• `BlockMicrophone`—Block Microphone<br>• `BlockOsSharing`—Block OS Share Actions<br>• `BlockedDeviceList`—Blocked Device List<br>• `BrowserUriScheme`—Mobile Browser URI Scheme<br>• `CheckBiometric`—Check Biometric Login Data<br>• `DevicePasscode`—Require Device Passcode<br>• `DisableUrlCaching`—Disable URL Caching<br>• `JailbrokenDevice`—Block Jailbroken Device<br>• `LogCertPin`—Log Certificate Pinning<br>• `LogEmail`—Log Email<br>• `LogPhonecall`—Log Phone Call<br>• `LogPolicyResult`—Log Security Policy Evaluation Result<br>• `LogScreenshot`—Log Screenshot<br>• `LogTextmessage`—Log SMS<br>• `LogoutAfterRestart`—Log Out User After Device Restart<br>• `LogoutOnBiometricChange`—Log Out User After Changing Biometric Login Data<br>• `MalwareDetection`—Malware Detection<br>• `ManInMiddle`—Block Man In The Middle Attack<br>• `MaxOffline`—Maximum Days Offline Without Policy Refresh<br>• `MaximumAppVersion`—Maximum Application Version<br>• `MaximumOsVersion`—Maximum OS Version<br>• `MinimumAppVersion`—Minimum Application Version<br>• `MinimumOsVersion`—Minimum OS Version<br>• `MinimumSecurityPatchVersion`—Minimum Security Patch Version<br>• `PhonecallUriScheme`—Phone Call Application Handler<br>• `Screenshot`—Block Screenshot |

# MobileSecurityUserMetric

Represents the metrics for users who have Enhanced Mobile Security policies enforced. This object is available in API version 51.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Accessing this object requires the Enhanced Mobile App Security add-on subscriptions and the Enforce Enhanced Mobile App Security user permission.

## Fields

| Field | Details |
|---|---|
| `MetricsDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The date the metrics were collected. |
| `UserCount` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The number of users who have mobile security policies enforced. |

## Usage

A user with the Manage Enhanced Mobile App Security permission can run this SOQL query.

```
SELECT MetricsDate, UserCount
FROM MobileSecurityUserMetric
ORDER BY MetricsDate DESC
```

# MobileSettingsAssignment

Represents the assignment of a particular field service mobile settings configuration to a user profile. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()` —available in API version 51.0 and later, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Field Service must be enabled.

## Fields

| Field Name | Details |
|---|---|
| `FieldServiceMobileSettingsId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of a set of field service mobile settings. |
| `ProfileId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the profile to associate with the set of field service mobile settings. |

# MobSecurityCertPinConfig

Configuration of mobile security certificate pinning on the Salesforce mobile app with Enhanced Mobile Security. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Accessing this object requires the Enhanced Mobile App Security add-on subscriptions and the Enforce Enhanced Mobile App Security user permission.

# Fields

| Field | Details |
| --- | --- |
| `CertificateHash` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique identifier for the certificate. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. |
| `DomainName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the domain. |
| `IsEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The default value is False. |
| `IsSubdomainIncluded` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The default value is False. |
| `Language` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The two-to five-character code that represents the language and locale ISO. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The master label of the mobile security pin. |
| `MobilePlatform` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The mobile operating system.<br>Possible values are:<br>• `Android`<br>• `iOS` |
| `MobileSecurityAssignmentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates the ID of the mobile security assignment.<br>This is a relationship field.<br>**Relationship Name**<br>MobileSecurityAssignment<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MobileSecurityAssignment |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can |

| Field | Details |
| --- | --- |
| | refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that aren't Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `SeverityLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The severity level of a mobile security policy.<br>Possible values are:<br>• `Critical`<br>• `Error`<br>• `Info`<br>• `Warn` |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of pin<br>Possible values are:<br>• `AuthServer`—Authentication Server<br>• `Resource`—Resource |

# MobSecurityCertPinEvent

The event of mobile security certificate pinning on the Salesforce mobile app with Enhanced Mobile Security. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `describeSObjects()`

## Special Access Rules

Accessing this object requires the Enhanced Mobile App Security add-on subscriptions and the Enforce Enhanced Mobile App Security user permission.

## Fields

| Field | Details |
|---|---|
| `AppPackageIdentifier` | **Type**<br>string<br>**Properties**<br>Create<br>**Description**<br>The unique identifier for the certificate. |
| `AppVersion` | **Type**<br>string<br>**Properties**<br>Create<br>**Description**<br>The version of the app. |
| `CertPinResults` | **Type**<br>json<br>**Properties**<br>Create<br>**Description**<br>The results of certificate pinning. |
| `DeviceIdentifier` | **Type**<br>string<br>**Properties**<br>Create<br>**Description**<br>The hardware IDs or IDs to uniquely identify a mobile device. |
| `DeviceModel` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create<br>**Description**<br>The model of the mobile device. |
| `EventDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Nillable<br>**Description**<br>The date of the certificate pinning event. |
| `EventDescription` | **Type**<br>string<br>**Properties**<br>Create, Nillable<br>**Description**<br>The description of the certificate pinning event. |
| `EventIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Nillable<br>**Description**<br>The ID of the certificate pinning event. |
| `EventUuid` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The universally unique identifier of the event. |
| `OsName` | **Type**<br>string<br>**Properties**<br>Create<br>**Description**<br>The name of the operating system. |
| `OsVersion` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create<br>**Description**<br>The version of the operating system. |
| `ReplayId` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The position of the event in the event stream. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Create<br>**Description**<br>This is polymorphic relationship field.<br>**Relationship Name**<br>User<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `WebkitVersion` | **Type**<br>string<br>**Properties**<br>Create, Nillable<br>**Description**<br>The version of the web browser engine developed by Apple. |

# MsgChannelLanguageKeyword

Represents the consent configuration for a Messaging channel. This object is available in API version 48.0 and later.

## Supported Calls

`describeSObjects()`, `delete()`, `query()`, `retrieve()`, `search()`

# Fields

| Field | Details |
| --- | --- |
| `CustomKeywords` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The keywords a Messaging end user can send to receive the Custom Response. |
| `CustomResponse` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The automated response sent when a Messaging end user sends a Custom Keyword. |
| `DoubleOptInKeywords` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The keywords a Messaging end user can send to doubly opt in to receiving messages. |
| `HelpKeywords` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The keywords a Messaging end user can send to request help during a Messaging session. |
| `HelpResponse` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The automated response sent when a Messaging end user requests help. |
| `MasterLanguage` | **Type**<br>textarea |

| Field | Details |
| --- | --- |
| | **Properties**<br>**Description**<br>The language used for this consent configuration. |
| `MessagingChannelId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the associated Messaging channel.<br>This is a relationship field.<br>**Relationship Name**<br>MessagingChannel<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MessagingChannel |
| `MessagingChannelUsageId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the associated Messaging channel usage record, which is in turn associated with a messaging channel.<br>This is a relationship field.<br>**Relationship Name**<br>MessagingChannelUsage<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MessagingChannelUsage |
| `OptInConfirmation` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The automated response sent when a Messaging end user opts in to receiving messages. |

| Field | Details |
| --- | --- |
| `OptInKeywords` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The keywords a Messaging end user can send to explicitly opt in to receiving messages. |
| `OptOutConfirmation` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The automated response sent when a Messaging end user opts out of receiving messages. |
| `OptOutKeywords` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The keywords a Messaging end user can send to opt out of receiving messages. |

# MsgChannelUsageExternalOrg

Represents the Enterprise ID (EID) and Business Unit (MID) for Marketing Cloud connections in a Unified Messaging channel. This object is available in API version 60.0 and later.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `ExternalOrgIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The Enterprise ID (EID) of a Marketing Cloud connection. |

| Field | Details |
| --- | --- |
| `ExternalSubOrgIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The Business Unit (MID) of a Marketing Cloud connection. |
| `MessagingChannelUsageId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The associated MessagingChannelUsage record, which must have a DeploymentType of `MJ` (referring to Marketing Cloud Journey Builder).<br>This field is a relationship field.<br>**Relationship Name**<br>MessagingChannelUsage<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MessagingChannelUsage |

## Usage

MsgChannelUsageExternalOrg records apply only to MessagingChannelUsage records related to Marketing Cloud.

Only one MsgChannelUsageExternalOrg record can exist for each MessagingChannelUsage record with a DeploymentType of `MJ`. MsgChannelUsageExternalOrg records are created when an admin enters the EID and MID for a Marketing Cloud application in Unified Messaging Setup and then clicks **Connect**.

The data saved in a MsgChannelUsageExternalOrg record is used for making a connection to Marketing Cloud. If an admin disconnects a Marketing Cloud application in Unified Messaging Setup, the saved EID and MID are used during deprovisioning.

# MyDomainDiscoverableLogin

Represents configuration settings when the My Domain login page type is Discovery. Login Discovery provides an identity-first login experience, where the login page contains the identifier field only. Based on the identifier entered, a handler determines how to authenticate the user. This object is available in API version 45.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

# Fields

| Field Name | Details |
| --- | --- |
| `ApexHandlerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the Apex handler that contains the Discovery authentication logic.<br>This is a relationship field.<br>**Relationship Name**<br>ApexHandler<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApexClass |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `ExecuteApexHandlerAsId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the user who is executing the handler. Requires Manage User permission.<br>This is a relationship field.<br>**Relationship Name**<br>ExecuteApexHandlerAs |

| Field Name | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the `MasterLabel`.<br>Possible values are:<br>• `da` (Danish)<br>• `de` (German)<br>• `en_US` (English)<br>• `es` (Spanish)<br>• `es_MX` (Spanish - Mexican)<br>• `fi` (Finnish)<br>• `fr` (French)<br>• `it` (Italian)<br>• `ja` (Japanese)<br>• `ko` (Korean)<br>• `nl_NL` (Dutch)<br>• `no` (Norwegian)<br>• `pt_BR` (Portuguese - Brazilian)<br>• `ru` (Russian)<br>• `sv` (Swedish)<br>• `th` (Thai)<br>• `zh_CN` (Chinese - Simplified)<br>• `zh_TW` (Chinese - Traditional) |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The name of the action link group template. |
| `UsernameLabel` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Login prompt on login page when the My Domain login page type is Discovery. It supports localization with custom labels. |

## Usage

Use this object to access the My Domain Login Discovery Page, which is a login page type that prompts users to identity themselves with an email address, phone number, or custom identifier. My Domain Login Discovery performs an interview-based login process, where users are first prompted to provide identity and then authenticated. For example, users receive a verification code that they enter to complete the login process.

# MutingPermissionSet

Represents a set of disabled permissions and is used in conjunction with PermissionSetGroup. This object is available in API version 46.0 and later.

Use a muting permission set with a permission set group to mute certain permissions. For instance, you have a subscriber org using a managed package that contains a permission set group. To use the existing permission set group, the subscriber org can disable specific permissions with a muting permission set. Or, perhaps you have a permission set group that contains several permission sets managed by different departments. Use a muting permission set to disable specific permissions based on your organization's needs.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Manage Session Permission Set Activations
- Assign Permission Sets

## Fields

| Field Name | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance can slow while Salesforce generates one for each record.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the muting permission set.<br>Possible values are:<br>• `da` (Danish)<br>• `de` (German)<br>• `en_US` (English)<br>• `es` (Spanish)<br>• `es_MX` (Spanish - Mexican)<br>• `fi` (Finnish)<br>• `fr` (French)<br>• `it` (Italian)<br>• `ja` (Japanese)<br>• `ko` (Korean)<br>• `nl_NL` (Dutch)<br>• `no` (Norwegian)<br>• `pt_BR` (Portuguese - Brazilian)<br>• `ru` (Russian)<br>• `sv` (Swedish)<br>• `th` (Thai)<br>• `zh_CN` (Chinese - Simplified)<br>• `zh_TW` (Chinese - Traditional) |

| Field Name | Details |
| --- | --- |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The muting permission set label for the aggregated, disabled permissions. |
| `Permissions`*`PermissionName`* | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>One field for each permission. If `true`, the permission is disabled in the related permission set group. The number of fields varies depending on the permissions for the organization and license type.<br>To get a list of available permissions, use `describeSObjects()`. |

## Usage

Use MutingPermissionSet to disable specified permissions within a permission set group.

# Name

Non-queryable object that provides information about foreign key traversals when the foreign key has more than one parent.

This object is used to retrieve information from related records where the related record can be from more than one object type (a polymorphic foreign key). For example, the owner of a case can be either a user or a group (queue). This object allows retrieval of the owner name, whether the owner is a user or a group (queue). You can use a describe call to access the information about parents for an object, or you can use the `who`, `what`, or `owner` fields (depending on the object) in SOQL queries. This object can't be directly accessed.

## Supported Calls

`describeSObjects()`

## Fields

| Field | Details |
| --- | --- |
| `Alias` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user alias. This field contains a value only if the related record is a user. |
| `Email` | **Type**<br>email<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The email address of the user or group (queue). |
| `FirstName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The first name of the user, contact, or lead. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the related record is an active user (`true`) or not (`false`). This field contains a value only if the related record is a user. |
| `LastName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The last name of the user, contact, or lead. |
| `LastReferencedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last interacted with this record, directly or indirectly. Some sample scenarios are: |

| Field | Details |
| --- | --- |
| `LastViewedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it. |
| `MiddleName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The middle name of the user contact, or lead. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the parent of the object queried. If the parent is a user, contact, or lead, the value is a concatenation of the `FirstName`, `MiddleName`, `LastName`, and `Suffix` fields of the related record. |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The phone number of the user. This field contains a value only if the related record is a user. |
| `Profile` | **Type**<br>reference<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The Profile of the user. Only populated if the related record is a user. |
| `ProfileId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the user's Profile. Only populated if the related record is a user.<br>This field is a relationship field.<br>**Relationship Name**<br>Profile<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Profile |
| `Suffix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name suffix of the user, contact, or lead. |
| `Title` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The title of the user, for example CFO or CEO. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>A list of the types of sObject that can be an owner of this object. You can use this field to filter on a type of owner, for example, return only the leads owned by a user. |
| `Username` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Contains the name that a user enters to log into the API or the user interface. The value for this field is in the form of an email address, and is only populated if the related record is a user. |
| `UserRole` | **Type**<br>picklist<br>**Properties**<br>Filter, Nillable<br>**Description**<br>Name of the `Role` played by the user. Only populated for user rows. |
| `UserRoleId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user role associated with this object.<br>This field is a relationship field.<br>**Relationship Name**<br>UserRole<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>UserRole |

## Usage

To query on relationships where the parent can be more than one type of object, use `who`, `what`, or `owner` relationship fields.

Overview of Salesforce Objects and Fields

# NamedCredential

Represents a named credential, which specifies the URL of a callout endpoint and its required authentication parameters in one definition. A named credential can be specified as an endpoint to simplify the setup of authenticated callouts. This object is available in API version 33.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Note: All credentials stored within this entity are encrypted under a framework that is consistent with other encryption frameworks on the platform. Salesforce encrypts your credentials by auto-creating org-specific keys. Credentials encrypted using the previous encryption scheme have been migrated to the new framework.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Spring '20 and later, only users with the View Setup and Configuration permission can access this object.

## Fields

| Field Name | Details |
|---|---|
| `AuthProviderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Salesforce ID of the authentication provider, which defines the service that provides the login process and approves access to the external system.<br>Only users with the "Customize Application" and "Manage AuthProviders" permissions can view this field.<br>This field is a relationship field.<br>This field is only valid for legacy named credentials.<br>This field was first available in API version 39.0, this field is deprecated in API version 56.0.<br>**Relationship Name**<br>AuthProvider<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AuthProvider |
| `AuthTokenEndpointUrl` | **Type**<br>textarea<br>**Properties**<br>Nillable |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The URL where SON Web Tokens (JWTs) are exchanged for access tokens.<br>This field is only valid for legacy named credentials.<br>This field was first available in API version 46.0, this field is deprecated in API version 56.0. |
| `CalloutOptionsAllowMergeFieldsInBody` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>For Apex callouts, indicates whether the code can use merge fields to populate HTTP request bodies with org data.<br>This field is available in API version 35.0 and later. |
| `CalloutOptionsAllowMergeFieldsInHeader` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>For Apex callouts, indicates whether the code can use merge fields to populate HTTP headers with org data.<br>This field is available in API version 35.0 and later. |
| `CalloutOptionsGenerateAuthorizationHeader` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether Salesforce automatically generates a standard authorization header for each callout to the named credential–defined endpoint.<br>This field is available in API version 35.0 and later. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Endpoint` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The root URL of the endpoint.<br>This field is only valid for legacy named credentials.<br>This field is deprecated in API version 56.0. |
| `JwtAudience` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>External service or other allowed recipients for the JSON Web Token. Written as JSON, with a quoted string for a single audience and an array of quoted strings for multiple audiences. Single audience example: `"aud1"`. Multiple audiences example: `["aud1", "aud2", "aud3"]`.<br>This field is only valid for legacy named credentials.<br>This field was first available in API version 46.0, this field is deprecated in API version 56.0. |
| `JwtFormulaSubject` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Formula string calculating the JSON Web Token's subject. API names and constant strings, in single quotes, can be included. Allows a dynamic Subject unique per user requesting the token. For example, `'User='+$User.Id`. Use this field when `PrincipalType` is set to `PerUser`. Corresponds to Per User Subject in the user interface.<br>This field is only valid for legacy named credentials.<br>This field was first available in API version 46.0, this field is deprecated in API version 56.0. |
| `JwtIssuer` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Specify who issued the JSON Web Token using a case-sensitive string.<br>This field is only valid for legacy named credentials.<br>This field was first available in API version 46.0, this field is deprecated in API version 56.0. |
| `JwtTextSubject` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Static text, without quotes, that specifies the JSON Web Token subject. Use this field when `PrincipalType` is set to `NamedUser`. Corresponds to Named Principal Subject in the user interface.<br>This field is only valid for legacy named credentials.<br>This field was first available in API version 46.0, this field is deprecated in API version 56.0. |
| `JwtValidityPeriodSeconds` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of seconds that the JSON Web Token is valid.<br>This field is only valid for legacy named credentials. |

| Field Name | Details |
| --- | --- |
| | This field was first available in API version 46.0, this field is deprecated in API version 56.0. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language of the `MasterLabel`. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The label for the named credential. This display value is the internal label that doesn't get translated. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation. |
| `PrincipalType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Tracks users who are accessing the external system. `Anonymous` implies that a user identity isn't specified for external system access. `Named Principal` uses one user identity for all users to access the external system.<br>This field is only valid for legacy named credentials.<br>This field is deprecated in API version 56.0. |

## Usage

Use the NamedCredential object to query named credentials in your organization.

Note: Some named credential fields rely on per-user authentication to connect with an external system. If an admin edits one of these fields, then the previously authenticated credentials can get invalidated, requiring individual users to reauthenticate.

# NamedCredentialEventLog

The Named Credential event type captures information about Apex callouts that use named credentials as their endpoints. Use this event type to audit the installed managed packages that use named credentials. If you don't recognize the package namespace in the named credential event log file, then you can investigate whether a security breach has occurred. This object is available in API version 65.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
|---|---|
| `CallerPackageNamespace` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If an Apex callout using a Named Credential endpoint is initiated from a package, then this field contains the package's namespace. If the callout isn't initiated from a package, then this field is empty. |

| Field | Details |
| --- | --- |
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". |
| `CpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. |
| `NamedCredentialName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the named credential that's the endpoint of the Apex callout. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. |
| `RunTime` | **Type**<br>double |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of time that the request took in milliseconds.. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URI of the page that's receiving the request. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API. |

# NamespaceRegistry

Represents a namespace that you can link to scratch orgs that were created from your org's Dev Hub. You use the namespace when developing, packaging, and releasing an app. You can't create this object with the API. Use the **Link Namespace** action in the Dev Hub graphical interface to insert a `NamespaceRegistry` record. This object is available in API version 41.0 and later.

## Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

## Fields

| Field Name | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, Sort<br>**Description**<br>The name of this namespace registry entry. |
| `NamespaceOrg` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The org ID of the Developer Edition org where you've registered the namespace you want to link. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The namespace prefix that you want to link to the scratch org. |

## Associated Objects

This object has these associated objects. Unless noted, they're available in the same API version as this object.

**NamespaceRegistryFeed**
Feed tracking is available for the object.

**NamespaceRegistryHistory**
History is available for tracked fields of the object.

ScratchOrgInfo

# NavigationLinkSet

Represents the navigation menu in an Experience Cloud site. A navigation menu consists of items that users can click to go to other parts of the site. This object is available in API version 35.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

`create()`, `delete()`, `update()`, and `upsert()` are available in API version 45.0 and later.

## Special Access Rules

Navigation menus are available only in Experience Cloud sites created using Experience Builder templates. To use navigation menus in LWR templates, you must build a custom navigation menu component.

## Fields

| Field Name | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>Create and Update are available in API version 45.0 and later.<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>Create, Defaulted on create, Nillable, and Update are available in API version 45.0 and later.<br>**Description**<br>Language for the navigation menu. Valid values are:<br>• Chinese (Simplified): `zh_CN`<br>• Chinese (Traditional): `zh_TW` |

| Field Name | Details |
| --- | --- |
| | • Danish: `da`<br>• Dutch: `nl_NL`<br>• English: `en_US`<br>• Finnish: `fi`<br>• French: `fr`<br>• German: `de`<br>• Italian: `it`<br>• Japanese: `ja`<br>• Korean: `ko`<br>• Norwegian: `no`<br>• Portuguese (Brazil): `pt_BR`<br>• Russian: `ru`<br>• Spanish: `es`<br>• Spanish (Mexico): `es_MX` Spanish (Mexico) defaults to Spanish for customer-defined translations.<br>• Swedish: `sv`<br>• Thai: `th` The Salesforce user interface is fully translated to Thai, but Help is in English. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>Create and Update are available in API version 45.0 and later.<br>**Description**<br>Label for the navigation menu. |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>Create is available in API version 45.0 and later. Update is available in API versions 45.0 to 47.0.<br>**Description**<br>ID of the Experience Cloud site. |

# NavigationMenuItem

Represents a single menu item in a NavigationLinkSet. Use this object to create, delete, or update menu items in your Experience Cloud site's navigation menu. This object is available in API version 35.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Navigation menus are available only in Experience Cloud sites created using Experience Builder templates. To use navigation menus in LWR templates, you must build a custom navigation menu component.

## Fields

| Field Name | Details |
|---|---|
| `AccessRestriction` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Determines if the menu item is available to guest users who aren't required to log in to the Experience Cloud site. |
| `DefaultListViewId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If the value of the `Type` field is SalesforceObject, the value is the ID of the default list view for the object. |
| `DraftRowID` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the draft navigation menu item. The ID is unique within your organization. |
| `Label` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The text that appears in the navigation menu for this item. |
| `NavigationLinkSetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The navigation menu that this item is included in. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The parent navigation menu. |
| `Position` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The location of the menu item in the navigation menu. |
| `Status` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Represents if the navigation menu item is published or not. The values can only be DRAFT, LIVE, or null. In API versions 42 and earlier, if the Status field is not set, the field defaults to LIVE. When queried and Status is not part of the query filter, only the NavigationMenuItem objects with a status of LIVE return. In API versions 43 and later, if the Status field is not set, the field defaults to DRAFT. When queried and Status is not part of the query filter, all NavigationMenuItem objects return regardless of status. |
| `Target` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>If `Type` is ExternalLink or InternalLink, the target is the URL that the link points to. For ExternalLink, your entry looks like this: *`https://salesforce.com`*. For InternalLink, use a relative URL, such as */`contactsupport`*. |
| `TargetPrefs` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>If `Type` is ExternalLink, determines whether a navigation menu item opens in the same tab. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of navigation menu item. The available values are:<br>• SalesforceObject—Available objects include accounts, cases, contacts, and custom objects.<br>• ExternalLink—Links to a URL outside of your Experience Cloud site. For example, *`https://salesforce.com`*.<br>• Event—An event, such as logging in, logging out, or switching accounts. Event is internal only and can't be used in custom components.<br>• GlobalAction—Enables users to create object records, but the new record has no relationship with other records.<br>• InternalLink—Links to a relative URL inside your Experience Cloud site. For example, */`contactsupport`*.<br>• NavigationalTopic—A dropdown list with links to the navigational topics in your Experience Cloud site.<br>• SystemLink—A system link, such as a link to Experience Builder, Workspaces, or Salesforce setup. |

## Usage

You can add up to 20 navigation menu items. You can translate navigation menu items using the Translation Workbench.

# NavigationMenuItemLocalization

Represents the translated value of a navigation menu item in an Experience Cloud site. This object is available in API version 36.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Navigation menus are available only in Experience Cloud sites created using Experience Builder templates. To use navigation menus in LWR templates, you must build a custom navigation menu component.

## Fields

| Field Name | Details |
| --- | --- |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language of the translated navigation menu item. The picklist contains the following supported languages:<br>• Chinese (Simplified): `zh_CN`<br>• Chinese (Traditional): `zh_TW`<br>• Danish: `da`<br>• Dutch: `nl_NL`<br>• English: `en_US`<br>• Finnish: `fi`<br>• French: `fr`<br>• German: `de`<br>• Italian: `it`<br>• Japanese: `ja`<br>• Korean: `ko`<br>• Norwegian: `no`<br>• Portuguese (Brazil): `pt_BR`<br>• Russian: `ru`<br>• Spanish: `es` |

| Field Name | Details |
| --- | --- |
| | • Spanish (Mexico): `es_MX` Spanish (Mexico) defaults to Spanish for customer-defined translations.<br>• Swedish: `sv`<br>• Thai: `th` The Salesforce user interface is fully translated to Thai, but Help is in English. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the navigation menu item that this translated value applies to. |
| `Value` | **Type**<br>string<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The translated text for the navigation menu item. Label is **Translation Text**. |

# Network

Represents an Experience Cloud site. Salesforce Experience Cloud lets you create branded spaces for your employees, customers, and partners. You can customize and create experiences, whether they're communities, sites, or portals, to meet your business needs, then transition seamlessly between them. Experience Cloud sites let you share information, records, and files with coworkers and stakeholders all in one place. This object is available in API version 26.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

## Special Access Rules

This object is available only when your org has digital experiences enabled.

## Fields

| Field Name | Details |
|---|---|
| `AllowedExtensions` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>Specifies the types of files allowed in your site. This list of file types lets you control what members upload and also prevents spammers from polluting your site with inappropriate files. Available in API version 36.0 and later.<br>Separate file types with a comma (for example: *`jpg,docx,txt`*). You can enter lowercase and uppercase letters. You can enter up to 1,000 characters. To allow all file types, leave this field empty. |
| `CaseCommentEmailTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the email template used when submitting a comment on a case. This field is available in API version 28.0 and later. |
| `ChangePasswordEmailTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>ID of the email template used when notifying users that their password has been reset. |
| `ChgEmailVerNewEmailTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the email template used when notifying users that their email address has been changed. This email is sent to the user's new email address. |
| `ChgEmailVerOldEmailTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the email template used when notifying users that their email address has been changed. This email is sent to the user's old email address. |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the site. |
| `DeviceActEmailTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the email template used when users log in from an unrecognized browser, app, or IP address. The email contains a one-time password that users enter to verify their identity.<br>This field is available in API version 53.0 and later. |
| `EmailFooterLogoId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>ID of the Document object that displays as an image in the footer of Chatter emails. |
| `EmailFooterText` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>Text that displays in the footer of Chatter emails. |
| `EmailSenderAddress` | **Type**<br>email<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Read only. Email address from which emails are sent.<br>Note: To change the `EmailSenderAddress` value, you must first specify `NewSenderAddress`, which triggers the sending of an address change verification email. After you complete the address verification process, `EmailSenderAddress` changes to the specified `NewSenderAddress`. |
| `EmailSenderName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>Name from which emails are sent. |
| `enableImageOptimizationCDN` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>The setting that optimizes cached images for guest users on all devices when a site uses Salesforce's CDN for Digital Experiences.<br>This field is available in API version 56.0 and later. |
| `FirstActivationDate` | **Type**<br>date |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The date the site was first activated.<br>This field is available in API version 34.0 and later. If the site was activated or inactive before the release of API version 34.0, this field returns the date that the site was first created. |
| `ForgotPasswordEmailTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>ID of the email template used when users forget their password. |
| `HeadlessForgotPasswordTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the email template to use with the Headless Forgot Password Flow.<br>This field is available in API version 57.0 and later. |
| `HeadlessRegistrationTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the email template to use for identity verification during the Headless Registration Flow.<br>This field is available in API version 59.0 and later. |
| `LockoutEmailTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the email template used when users try to reset their password after locking themselves out because of too many login attempts.<br>This field is available in API version 43.0 and later. |

| Field Name | Details |
| --- | --- |
| `MaxFileSizeKb` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Specifies the maximum file size (in KBs) that members can upload in your site. Available in API version 36.0 and later.<br>Enter a number between 3072 KB and your org's maximum file size. To use the default limit of 2 GB, leave this field empty. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the site. |
| `NewSenderAddress` | **Type**<br>email<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Email address that has been entered as the new value for `EmailSenderAddress` but hasn't been verified yet. After a user has requested to change the sender email address and has successfully responded to the verification email, the `NewSenderAddress` value overwrites the value in `EmailSenderAddress`. This value becomes the email address from which emails are sent.<br>Note:<br>• If verification is pending for a new email address and you set `NewSenderAddress` to null, the verification request is canceled.<br>• `NewSenderAddress` is automatically set to null after `EmailSenderAddress` has been set to the new verified address.<br>• If verification is pending for a new email address, and you specify a different new address for this field, only the latest value is retained and used for verification. |
| `OptionsActionOverrideEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Override the action that occurs when users click a default button, like New or Edit, with a Lightning component. For example, show a custom window instead of the one that Salesforce provides. Assign action overrides in the Object Manager. In the UI, this setting is available in the Administration Workspace, under **Administration** > **Preferences** under Experience Management<br>This field is available in API version 49.0 and later. |
| `OptionsAllowInternalUserLogin` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Specifies whether internal users can log in with their internal credentials on the site login page.<br>This field is available in API version 37.0 and later. |
| `OptionsAllowMembersToFlag` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Determines whether users can flag posts, comments, or files as inappropriate.<br>This field is available in API version 29.0 and later. The ability to flag files is available in version 30.0 and later. |
| `OptionsApexCDNCachingEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Determines whether public data from @wire calls to Apex methods is cached only for guest users. This setting applies only to sites using Salesforce's CDN for Digital Experiences.<br>This field is available in API version 55.0 and later. |
| `OptionsDirectMessagesEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Controls the availability of direct messages in an Experience Builder site. |

| Field Name | Details |
| --- | --- |
| | This field is available in API version 39.0 and later. |
| `OptionsEmbeddedLoginEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Determines whether the Embedded Login feature is enabled in a site. When `true`, Embedded Login is turned on.<br>This field is available in API version 61.0 and later. |
| `OptionsEnableTalkingAboutStats` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Determines whether site users see how many people are discussing a topic. The number of people discussing the topic appears as the user types the topic and the system gives topic suggestions.<br>This field is available in API version 41.0 and later. |
| `OptionsEnableTopicAssignmentRules` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When true, displays knowledgeable people in key areas, for example, on Topic Detail pages. |
| `OptionsExpFriendlyUrlsAsDefault` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When true, URL slugs are on by default for<br>• Product and Category pages of LWR Commerce stores (available in API version 58.0 and later)<br>• Custom object pages on enhanced LWR sites (available in API version 60.0 and later)<br>• Account and contact pages on enhanced LWR sites (available in API version 61.0 and later) |

| Field Name | Details |
| --- | --- |
| OptionsExperienceBundleBasedSnaOverrideEnabled | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When true, the Service Not Available Page is an auto-generated Experience Builder-based page. When false, the Service Not Available page uses a static resource page that is set in **Workspaces** > **Administration** > **Pages**. The default value is true. Available in API version 52.0 and later. |
| OptionsGatherCustomerSentimentData | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When true, collects data about user likes, upvotes, and downvotes. |
| OptionsGuestChatterEnabled | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Specifies whether guest users can access public Chatter groups in the site without logging in. |
| OptionsGuestFileAccessEnabled | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When true, lets guest users view asset files and CMS content that's available to the site. Guest users can access shared asset files and published CMS content that's made for external use, even if it isn't used. Shared asset files include images that are associated with topics, recognition badges, branding, and account branding. This preference is automatically enabled if public access is enabled at the page or site level in Experience Builder. |
| OptionsGuestMemberVisibility | **Type**<br>boolean<br>**Properties**<br>Filter, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>When true, lets guest users see who else is part of the site, including non-guest users. In the UI, this setting appears in the Administration Workspace under **Administration** > **Preferences** .<br>Available in API version 47.0 and later. |
| `OptionsHeadlessFrgtPswEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When `true`, Headless Forgot Password Flow is enabled.<br>This field is available in API version 57.0 and later. |
| `OptionsImageOptimizationCDNEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When `true`, cached images are optimized to suit any device that guest users use to access your site. This feature is available only for sites that use Salesforce's CDN for Digital Experiences. In the UI, this setting appears in the Administration Workspace under **Administration** > **Preferences**.<br>Available in API version 56.0 and later. |
| `OptionsInvitationsEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Determines whether users can invite others to the site. |
| `OptionsKnowledgeableEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Determines whether users can see knowledgeable people for topics and endorse people for topics. |
| `OptionsLWRExperienceConnectedAppEnabled` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Update<br>**Description**<br>When true, enhances the performance and scalability of Connect API calls made from Lightning web components in an enhanced LWR site. This field is available in API version 58.0 and later.<br>Note: This feature is a Beta Service. Customer may opt to try such Beta Service in its sole discretion. Any use of the Beta Service is subject to the applicable Beta Services Terms provided at Agreements and Terms. |
| `OptionsMemberVisibility` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Controls user visibility on a per-site basis. If true, the See other members of this site preference is enabled for the selected site. This field is available in API version 45.0 and later. |
| `OptionsMobileImageOptimizationEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>If true, file asset images are optimized for mobile display. This field is available in API version 45.0 and later. |
| `OptionsNetworkSentimentAnalysis` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>If true, enables sentiment analysis in a site. In the UI, this setting is available in the Administration Workspace, under **Administration** > **Preferences**. This field is available in API version 40.0 and later. |
| `OptionsNicknameDisplayEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Determines whether user nicknames display instead of their first and last names in most places in the site.<br>A few restrictions to keep in mind about nickname display:<br>• Records and user lookups on records show full names. Keep in mind, though, that you can control record and user visibility with sharing rules.<br>• Mobile notifications in the Salesforce mobile app show full names. You can turn off mobile notifications in the app to avoid this display.<br>• Searches by first, last, and full names aren't restricted and return matches, but the search results display only nicknames. Global search auto-complete recommendations show any first, last, and full names that the user has searched by or accessed via a record or another location. The recent items list also shows first, last, and full under the same conditions. |
| `OptionsPrivateMessagesEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Determines whether users can send and receive Chatter messages in the site. |
| `OptionsProfileBasedLayoutsForKnowledgeSearchEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When true, provides a grid layout for Knowledge search results. With grid layout in place, you can edit search profile layouts on the Knowledge object to show and hide different search result fields for different profiles. When you enable the standard grid layout, search-term highlighting isn't available. This field is available in API version 51.0 and later. |
| `OptionsRecognitionBadgingEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Determines whether Recognition Badges is enabled for the site. |
| `OptionsReputationEnabled` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Update<br>**Description**<br>Determines if reputation is calculated and displayed for members. This field is available in API version 31.0 and later. |
| OptionsReputationRecordConversationsDisabled | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Disables the feed on reputation records. |
| OptionsSelfRegistrationEnabled | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Determines whether customers and partners can self-register to join the site. Customers and partners are users with External Identity, Community, Customer Portal, or partner portal licenses. If `true`, displays a **Not a member?** link on the login page that points to the default self-registration page. This field is available in API version 28.0 and later. |
| OptionsSendWelcomeEmail | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Determines whether a welcome email is sent when a new user is added to the site. |
| OptionsShowAllNetworkSettings | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Determines whether settings in Experience Management that were hidden based on how you set up your site are visible or remain hidden.<br>This field is available in API version 33.0 and later. |

| Field Name | Details |
| --- | --- |
| `OptionsSiteAsContainerEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Determines whether the site is an Experience Builder site (`true`) or a Salesforce Tabs + Visualforce site (`false`).<br>This field is available in API version 29.0 and later. |
| `OptionsThreadedDiscussionsEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether threaded discussions are enabled for the site. Available in API version 44.0 and later. |
| `OptionsTopicFilteringForKnowledgeSearchEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Determines whether topic filtering is enabled for Knowledge search.<br>This field is available in API version 55.0 and later. |
| `OptionsTopicSuggestionsEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Enables topic suggestions when users write posts.<br>This field is available in API version 41.0 and later. |
| `OptionsUpDownVoteEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Determines whether up and down voting is enabled for the site.<br>This field is available in API version 41.0 and later. |

| Field Name | Details |
| --- | --- |
| `PwdlessRegEmailTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the email template for the welcome email that users receive when they sign up with passwordless registration. This field is available in API version 61.0 and later. |
| `SelfRegMicroBatchSubErrorEmailTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the profile assigned to users who self-register using micro-batchng. Only applies if self-registration using micro-batching is enabled for the site.<br>This field is available in API version 54.0 and later. |
| `SelfRegProfileId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the profile assigned to users who self-register. Only applies if self-registration is enabled for the site.<br>This field is available in API version 29.0 and later. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Status of the site. Available values are:<br>• `Live`—The site is online and members can access it. Label is `Published`.<br>• `DownForMaintenance`—The site was previously published, but was taken offline. Members with the Create and Set Up Experiences permission can still access the setup for offline sites regardless of profile or membership. Members aren't able to access offline sites, but they still appear in the user interface dropdown menu as `SiteName (Offline)`. Label is `Offline`. |

| Field Name | Details |
| --- | --- |
| | • `UnderConstruction`—The site hasn't yet been published. When a user's profile is associated with the site, and they've Create and Set Up Experiences permission, they can access sites in this status.<br>After a site is published, it can never be in this status again. Label is `Preview`. |
| `UrlPathPrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The UrlPathPrefix is a unique string at the end of the URL for the site. For example, in the site URL *`MyDomainName`*`.my.site.com/customers`, `customers` is the `UrlPathPrefix`. |
| `VerificationEmailTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the email template used when users must verify their identity, for example, when they log in without a password.<br>This field is available in API version 44.0 and later. |
| `WelcomeEmailTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>ID of the email template used when sending welcome emails to new members. |

## Usage

Use this object to find, view, and update sites in your org. If you're assigned the Modify All Data, View All Data, or Create and Set Up Experiences permission, you can view all sites in the org. Users without these permissions see only the Preview or Published sites that they're members of. If you're assigned the Create and Set Up Experiences permission, you can customize site settings.

WebStoreNetwork

# NetworkActivityAudit

Represents an audit trail of moderation actions in Experience Cloud sites. This object is available in API version 30.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available only when your org has digital experiences enabled.

## Fields

| Field Name | Details |
|---|---|
| `Action` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The moderation action a member performed on a post, comment, or file in an Experience Cloud site.<br>Values are:<br>• Flagged as Inappropriate—A member flagged a post, comment, or file as inappropriate.<br>• Flagged as Spam - A member flagged a post, comment, or file as spam.<br>• Unflagged—A member removed the flag from a post, comment, or file.<br>• RemovedFlags—A moderator removed all flags from a post, comment, or file.<br>• DeletedFlaggedItem—A moderator deleted a flagged post, comment, message, or file.<br>• DeletedPendingReviewItem—A moderator deleted a post or comment with pending status.<br>• ModerationRuleFlag—A moderation rule flagged member-generated content.<br>• ModerationRuleBlock—A moderation rule blocked member-generated content.<br>• ModerationRuleReplace—A moderation rule replaced member-generated content.<br>• ModerationRuleReview—A moderation rule sent member-generated content to be reviewed and approved by a moderator. |

| Field Name | Details |
| --- | --- |
| | • ModerationRuleFreeze—A moderation rule froze a member because they created content too frequently within a specific time frame.<br>• ModerationRuleNotify—A moderation rule notified moderators because a member created content too frequently within a specific time frame. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Notes entered by the user.<br>If the entity being tracked is a file, records the version number of the file when it was flagged. |
| `EntityCreatedById` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the user that created the entity being tracked. |
| `EntityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the entity that is being tracked. The following entities are tracked: ChatterMessage, ContentDocument, ContentVersion, FeedComment, and FeedItem. |
| `EntityType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The key prefix of the entity being tracked. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The ID of the item being tracked. |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the Experience Cloud site where the moderation action was performed. |
| `ParentEntityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the parent of the entity on which an action was performed. |
| `ParentEntityType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The key prefix of the parent of the entity being audited. |

## Usage

Use this object to view an audit trail of moderation activity for your Experience Cloud sites. You must have the Modify All Data permission to access this object.

Users with Moderate Experiences Feeds, Moderate Experiences Files, or View All Data can view the audit trail using reports in the Salesforce user interface.

# NetworkAffinity

Represents a junction object that associates a user profile with a Network object, that is, with an Experience Cloud site. Use NetworkAffinity to assign a default Experience Cloud site to a user profile. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To work with the NetworkAffinity object, you must have View Setup or Customize Application permission.

## Fields

| Field Name | Details |
| --- | --- |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the default Experience Cloud site associated with a user profile. |
| `ProfileId` | **Type**<br>reference<br>**Properties**<br>CreateFilter, Group, Sort, Update<br>**Description**<br>ID of the user profile the default Experience Cloud site is assigned to. |

## Usage

The default Experience Cloud site allows you to stamp site-agnostic email notifications to all users with that profile with the selected site's branding. The default Experience Cloud site also becomes the target destination for email notification links. Site-agnostic email notifications include notifications about records, such as cases, accounts, and opportunities.

The `NetworkId` field is not updatable through the Apex, REST API, or SOAP API. If you want to change the value for `NetworkId`, you must delete the record and create one with the right value.

# NetworkAuthApiSettings

Represents the settings that control enablement, access, and security for the Headless Registration Flow, Headless Forgot Password Flow, Headless Passwordless Login Flow, and their associated APIs. This object is available in API version 58.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Headless identity features are set up via Experience Cloud sites. You must have an Experience Cloud site to access Headless Identity APIs and store users, even if users never interact with the site directly.

# Fields

| Field | Details |
| --- | --- |
| CustomOtpDeliveryHandlerId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>This field is a relationship field.<br>The ID of a custom one-time password (OTP) delivery handler that implements the `Auth.CustomOneTimePasswordDeliveryHandler` interface. |
| DoesForgotPasswordRequireAuth | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether authentication is required to access Headless Forgot Password API when a password reset is requested. If `true`, an access token issued to an internal integration user in your initial POST request to the `/services/auth/headless/forgot_password` endpoint is required. The access token must include the `forgot_password` scope.<br>The default value is `false`. |
| DoesPasswordLoginRequireAuth | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether reCAPTCHA is required for headless username-password login that uses the OAuth 2.0 for First-Party Applications draft protocol. |
| DoesPwdlessLoginRequireAuth | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether authentication is required to access Headless Passwordless Login API when user information is submitted to Salesforce. If `true`, an access token issued to an internal integration user is required in your initial POST request to the `/services/auth/headless/init/passwordless/login` endpoint. The access token must include the `pwdless_login_api` scope.<br>The default value is `false`. This field is available in API version 59.0 and later. |

| Field | Details |
| --- | --- |
| DoesRegistrationRequireAuth | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether authentication is required to access Headless Registration API when user registration information is submitted to Salesforce. If `true`, an access token issued to an internal integration user in your initial POST request to the `/services/auth/headless/init/registration` endpoint is required. The access token must include the `user_registration_api` scope.<br>The default value is `false`. |
| HeadlessDiscoveryExecutionUserId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>This field is a relationship field.<br>The ID of an integration user account to run a headless user discovery Apex handler.<br>**Relationship Name**<br>HeadlessDiscoveryExecutionUser<br>**Refers To**<br>User |
| HeadlessDiscoveryHandlerId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>This field is a relationship field.<br>The ID of an Apex class that implements the `Auth.HeadlessUserDiscoveryHandler` interface.<br>**Relationship Name**<br>HeadlessDiscoveryHandler<br>**Refers To**<br>ApexClass |
| isFirstPartyAppsAllowed | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Determines whether the Experience Cloud site can use headless identity flows that use the OAuth 2.0 for First-Party Applications draft protocol. |
| `IsForgotPwdAllowed` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether the Headless Forgot Password Flow is enabled.<br>The default value is `false`. |
| `IsForgotPwdEmailTemplateAllowlistingEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Descriptions**<br>Determines whether email template allowlisting is enabled for the Headless Registration Flow, Headless Passwordless Login Flow, and Headless Forgot Password Flow. If `true`, the initial request to the headless API must include an `emailtemplate` parameter that contains only allowlisted email templates.<br>The default value is `false`. |
| `IsHeadlessUserRegistrationAllowed` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether the Headless Registration Flow is enabled.<br>The default value is `false`. |
| `IsPwdlessLoginAllowed` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether the Headless Passwordless Login Flow is enabled (`true`) or not (`false`).<br>The flow is disabled by default. This field is available in API version 59.0 and later. |

| Field | Details |
| --- | --- |
| IsRecaptchaRequiredForgotPwd | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether a reCAPTCHA token is required to access Headless Forgot Password API when a password reset is requested. If `true`, a reCAPTCHA token is required in your initial POST request to the `/services/auth/headless/forgot_password` endpoint.<br>The default value is `false`. |
| IsRecaptchaRequiredPwdlessLogin | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether a reCAPTCHA token is required to access Headless Passwordless Login API when user information is submitted to Salesforce. If `true`, a reCAPTCHA token is required in your initial POST request to the `/services/auth/headless/init/passwordless/login` endpoint.<br>By default, a reCAPTCHA token isn't required (`false`). This field is available in API version 59.0 and later. |
| IsRecaptchaRequiredRgstr | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether a reCAPTCHA token is required to access Headless Registration API when user registration information is submitted to Salesforce. If `true`, a reCAPTCHA token is required in your initial POST request to the `/services/auth/headless/init/registration` endpoint.<br>The default value is `false`. |
| IsUniversalClientRgstrAllowed | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether self-registration and passwordless login via Universal Registration API are enabled.<br>The default value is `false`. |

| Field | Details |
| --- | --- |
| IsUserDisambiguationAllowedForgotPwd | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether the Headless Forgot Password Flow uses the headless user discovery Apex handler that's specified in the `HeadlessDiscoveryHandlerId` field. The handler enables users to reset their password with an identifier other than their username, such as an email address, phone number, or order number.<br>The default value is `false`. |
| IsUserDisambiguationAllowedUsernamePwd | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether headless login flows use the headless user discovery Apex handler that's specified in the `HeadlessDiscoveryHandlerId` field. The handler enables users to log in with an identifier other than their username, such as an email address, phone number, or order number. This field applies to the Authorization Code and Credentials Flow and the OAuth 2.0 for First-Party Applications login flow.<br>The default value is `false`. |
| MaxPasswordResetAttempts | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The maximum number of password reset attempts you allow for the Headless Forgot Password Flow before the user must request a new one-time password (OTP). |
| NetworkId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of your Experience Cloud site. This ID is unique within your org.<br>This field is a relationship field.<br>**Relationship Name**<br>Network<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Network |
| `RecaptchaScoreThreshold` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The lowest reCAPTCHA score that is accepted before rejecting a request to access Headless Identity APIs. This value must be between 0.5 and 1. Scores closer to 0.5 are more likely to be bots, while scores closer to 1 are more likely to be valid users.<br>You must set a score threshold if `DoesForgotPasswordRequireAuth` or `DoesRegistrationRequireAuth` fields are set to `true`. reCAPTCHA settings apply to both the Headless Registration Flow and the Headless Forgot Password Flow.<br>Google issues a reCAPTCHA score only for reCAPTCHA v3 implementations. If you implement reCAPTCHA v2, this field doesn't apply. |
| `RecaptchaSecretKey` | **Type**<br>encryptedstring<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The reCAPTCHA secret key from your API key pair. You get the API key pair from Google when you set up reCAPTCHA. The secret key helps your app securely communicate with Google.<br>You must enter a secret key if `DoesForgotPasswordRequireAuth` or `DoesRegistrationRequireAuth` are set to `true`. reCAPTCHA settings apply to both the Headless Registration Flow and the Headless Forgot Password Flow. |
| `RegistrationExecutionUserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the user who runs your headless registration Apex handler.<br>This field is a relationship field.<br>**Relationship Name**<br>RegistrationExecutionUser<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

| Field | Details |
| --- | --- |
| RegistrationHandlerId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of your headless registration Apex handler.<br>This field is a relationship field.<br>**Relationship Name**<br>RegistrationHandler<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApexClass |
| RegistrationUserDefaultProfileId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the default profile that gets assigned to new users when they register.<br>This field is a relationship field.<br>**Relationship Name**<br>RegistrationUserDefaultProfile<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Profile |

# NetworkDataCategory

Represents data categories in Lightning Web Runtime (LWR) Experience Cloud Sites. This object is available in API version 59.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

This object is available only when your org has Digital Experiences and Knowledge or Service Catalog enabled.

# Fields

| Field | Details |
| --- | --- |
| `DataCategoryGroupName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of the data category group that contains one or more data categories. |
| `DataCategoryName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of the data category. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>Description of the data category. |
| `ImageId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Image associated with the data category.<br>This field is a relationship field.<br>**Relationship Name**<br>Image<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ManagedContent |
| `Label` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of the data category shown in the UI. |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the associated Experience site.<br>This field is a relationship field.<br>**Relationship Name**<br>Network<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Network |

# NetworkDiscoverableLogin

Represents the Login Discoverable page from where customers and partners log in to an Experience Cloud site. Customers and partners are users with an External Identity license or any communities license for Experience Cloud. This object is available in API version 44.0 and later.

## Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
| --- | --- |
| `ApexHandlerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the Apex handler created by the Login Discovery page type. |
| `ExecuteApexHandlerAsId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who is executing the handler. |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>Unique<br>**Description**<br>The ID of `NetworkId` is unique within your org. |
| `UsernameLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Log in prompt on login page when the login page type is Login Discovery. |

## Usage

Use this object to access the Login Discovery Page, which is a login page type that prompts users to identify themselves with an email address, phone number, or custom identifier. DiscoverableLogin performs an interview-based login process, where users are first prompted to provide identity and then authenticated. For example, users receive a verification code that they enter to complete the login process.

Note: The NetworkDiscoverableLogin object is created when **Login Discovery Page** is selected as the login page type on the Login & Registration (L&R) page. If you later switch to another login page type, such as a Visualforce Page or Experience Builder Page, the object isn't deleted. The object persistence means you can't delete the Apex class associated with the NetworkDiscoverableLogin object. To delete the Apex class, return to the L&R page and change the login page type back to **Login Discovery page**. Select another Apex class, and then you can delete the first one.

# NetworkEmailTmplAllowlist

Represents an allowlist for the one-time password (OTP) email templates that are sent to end users during the Headless Registration Flow, the Headless Passwordless Login Flow, and the Headless Forgot Password Flow. This object is available in API version 60.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `EmailTemplateId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The IDs of the allowlisted email templates that can be sent to users during the headless authorization flows for registration, passwordless login, and forgot password. You can list multiple template IDs. When your app sends its initial request to Headless Registration API or Headless Passwordless Login API, the `emailtemplate` parameter can include only an email template ID from the allowlist. For Headless Forgot Password API, it works the same way, but only if email template allowlisting is enabled.<br>This field is a relationship field.<br>**Relationship Name**<br>EmailTemplate<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EmailTemplate |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the Experience Cloud site for which the allowlist is being configured.<br>This field is a relationship field.<br>**Relationship Name**<br>Network<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Network |

# NetworkFeedResponseMetric

Represents an object that stores the date and time values of question posts. It captures information for question creation, answer creation, and when an answer is marked as best answer This object is available in API version 51.0 and later.

## Supported Calls

`describeSObjects()`,`getDeleted()`,`getUpdated()`,`query()`,`retrieve()`

## Special Access Rules

The NetworkFeedResponseMetric object is available only if both NetworksEnabled and ChatterEnabled org preferences are enabled.

## Fields

| Field | Details |
|---|---|
| `BestCommentDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Represents the date and time a user created an answer that was later marked as best answer. |
| `BestCommentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Represents the comment that was marked as the best answer. |
| `FeedItemCreatedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Represents the user who created the feed item. |
| `FeedItemDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort<br>**Description**<br>Represents the date and time when the feed Item was created. |
| `FeedItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Represents the unique ID of the question post. |
| `FirstCommentDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Represents the date and time when the first comment was created. |
| `FirstCommentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Represent the first comment on a feed Item. |
| `MarkedAsBestCommentDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Represents the date and time the user marked the answer as best answer. |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Represents where the feed item was created. |
| `ParentRecordId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Represents the parent record. Parent records can include records like user, account, or group. |

# NetworkMember

Represents a member of an Experience Cloud site. Members can be either users in your company or external users with portal profiles. This object is available in API version 26.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

## Special Access Rules

This object is available only when your org has digital experiences enabled.

## Fields

| Field Name | Details |
|---|---|
| `DefaultGroupNotificationFrequency` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Required. The default frequency for sending the member's group email notifications when the member joins groups in the Experience Cloud site. The valid values are:<br>• `P`—Email on every post<br>• `D`—Daily digests<br>• `W`—Weekly digests<br>• `N`—Never<br>The default value is `W`. In sites, the `Email on every post` option is disabled once more than 10,000 members choose this setting for the group. All members who had this option selected are automatically switched to `Daily digests`. However, this field is not currently enabled. These values are reserved for future use. |
| `DigestFrequency` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Required. The frequency for sending the member's personal email digest for the Experience Cloud site. The valid values are:<br>• `D`—Daily |

| Field Name | Details |
| --- | --- |
| | • `W`—Weekly<br>• `N`—Never<br>The default value is `D`. However, daily and weekly personal digests aren't currently available in sites. These values are reserved for future use. |
| `LastChatterActivityDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The last time the member posted or commented in the Experience Cloud site. |
| `MemberId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of a person who is a member of an Experience Cloud site. |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the Experience Cloud site that the member is part of. |
| `PreferencesDisableAllFeedsEmail` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When `false`, the member can automatically receive email for updates in the Experience Cloud site, based on the types of feed emails and digests the member has enabled. |
| `PreferencesDisableBestAnswerEmail` | **Type**<br>boolean<br>**Properties**<br>Filter, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>When `false`, the member automatically receives email when someone selects their answer to a post as best. Available in API 46.0 and later. |
| `PreferencesDisableBookmarkEmail` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When `false`, the member automatically receives email every time someone comments on a feed item after the member has bookmarked it. |
| `PreferencesDisableChangeCommentEmail` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When `false`, the member automatically receives email every time someone comments on a change the member has made, such as an update to their profile. |
| `PreferencesDisableDirectMessageEmail` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When `false`, the member automatically receives email every time someone sends them a direct message in the Experience Cloud site. |
| `PreferencesDisableEndorsementEmail` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When `false`, the member automatically receives email every time someone endorses them for a topic. |
| `PreferencesDisableFollowersEmail` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Update<br>**Description**<br>When `false`, the member automatically receives email every time someone in the Experience Cloud site starts following the member. |
| `PreferencesDisableItemFlaggedEmail` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When `false`, the user automatically receives email every time a member flags a post or comment. This setting only applies for community moderators (with the Moderate Experiences Feeds permission) and group owners or managers.<br>This field is available in API version 29.0 and later. |
| `PreferencesDisableLaterCommentEmail` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When `false`, the member automatically receives email every time someone comments on a feed item after the member has commented on the feed item. |
| `PreferencesDisableLikeEmail` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When `false`, the member automatically receives email every time someone comments on a feed item after the member has liked the feed item. |
| `PreferencesDisableMarketingCloudEmail` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When `false`, the member automatically receives marketing emails sent by Journey Builder. Available in API version 41.0 and later. |

| Field Name | Details |
| --- | --- |
| `PreferencesDisableMentionsPostEmail` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When `false`, the member automatically receives email every time the member is mentioned in posts. |
| `PreferencesDisableMessageEmail` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When `false`, the member automatically receives email every time the member is sent a Chatter message. |
| `PreferencesDisableProfilePostEmail` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When `false`, the member automatically receives email every time someone posts to the member's profile. |
| `PreferencesDisableSharePostEmail` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When `false`, the member automatically receives email every time the member's post is shared. |
| `PreferencesDisCommentAfterLikeEmail` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When `false`, the member automatically receives email every time someone comments on a post the member has liked. |
| `PreferencesDisMentionsCommentEmail` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Update<br>**Description**<br>When `false`, the member automatically receives email every time the member is mentioned in comments. |
| `PreferencesDisProfPostCommentEmail` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>When `false`, the member automatically receives email every time someone comments on posts on the member's profile. |
| `ReputationPoints` | **Type**<br>double<br>**Properties**<br>Filter, Sort, Update<br>**Description**<br>The number of reputation points the user has accumulated by performing actions in the Experience Cloud site. |

## Usage

Use this object to query members of a certain Experience Cloud site and to update their email notification settings. If you have Modify All Data, View All Data, or Create and Set Up Experiences, you can view all members of any Experience Cloud site, regardless of your own membership. If you have Modify All Data or Create and Set Up Experiences, you can also update any member's email settings. Users without these permissions can update their own email settings and can see members of the Experience Cloud sites that they're also members of.

Tip: You can directly update reputation points for a member via the Salesforce API. You can also use Apex triggers to send custom notifications based on changes to reputation points.

# NetworkMemberGroup

Represents a group of members in an Experience Cloud site. Members can be either users in your internal org or external users assigned portal profiles. An administrator adds members to an Experience Cloud site by adding a profile or a permission set, and any user with the profile or permission set becomes a member of the site. This object is available in API version 26.0 and later.

Note: If a Chatter customer (from a customer group) is assigned a permission set that is also associated with an Experience Cloud site, the Chatter customer won't be added to the site.

Prior to API version 27.0, this object was called NetworkProfile.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

Note: The `upsert()` call is not supported for this object.

## Special Access Rules

This object is available only when your org has digital experiences enabled.

## Fields

| Field Name | Details |
|---|---|
| `AssignmentStatus` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The status of a profile or permission set within an Experience Cloud site. Values are:<br>• `Add Calculated`—The number of users that need to be added are calculated and the add operation is in progress.<br>• `Added`—Users with this profile or permission set are members.<br>• `Failed Add`—Users with this profile or permission set were not successfully made members.<br>• `Failed Remove`—Users with this profile or permission set were not successfully removed from membership.<br>• `Remove Calculated`—The number of users that need to be removed are calculated and the remove operation is in progress.<br>• `Waiting for Add`—The profile or permission set was added to the Experience Cloud site, but the async process hasn't completed yet. After the process is complete, the status is updated to `Added`.<br>• `Waiting for Remove`—Use this status to remove all the members belonging to a profile or permission set and remove a profile or permission set from an Experience Cloud site. |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the Experience Cloud site that this group of members is associated with. |

| Field Name | Details |
| --- | --- |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the profile or permission set associated with the Experience Cloud site. |

## Usage

Use this object to view the profiles or permission sets associated with a particular Experience Cloud site. Profiles and permission sets are added and removed asynchronously, so you can also check the status of a profile or permission set that was updated in a site.

If you have Modify All Data, View All Data, or Create and Set Up Experiences, you can view all profiles or permission sets for any Experience Cloud site in the org, regardless of your membership. If you have Modify All Data or Create and Set Up Experiences, you can also add profiles or permission sets. Users without these permissions can only find profiles and permission sets for Experience Cloud sites that they're members of.

## Sample Code

```
// Create a new NetworkMemberGroup with a profile as the ParentId
NetworkMemberGroup nmgInsert = new NetworkMemberGroup();
nmgInsert.setNetworkId('{enter your network ID : ODB...}');
nmgInsert.setParentId('enter the profile or permission set ID : 00e... or 0PS...');
SaveResult[] results = connection.create(new SObject[] { nmgInsert });

// Update an existing NetworkMemberGroup to be removed from the Network
NetworkMemberGroup nmgUpdate = new NetworkMemberGroup();
nmgUpdate.setId('enter your NetworkMemberGroup ID : 0DL...');
nmgUpdate.setAssignmentStatus('WaitingForRemove');
SaveResult[] results = connection.update(new SObject[] { nmgUpdate });
```

# NetworkModeration

Represents a flag on an item in a community. This object is available in API version 30.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

This object is available only when your org has digital experiences enabled.

# Fields

| Field Name | Details |
|---|---|
| `EntityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the post, comment, or file that was flagged. |
| `ModerationType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>Determines the type of flag applied to an item. Values are:<br>• FlagAsInappropriate<br>• FlagAsSpam |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the community in which the item was flagged. |
| `Visibility` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Nillable, Sort<br>**Description**<br>Determines visibility of a flagged item. Values are:<br>• SelfAndModerators—The user who flagged the item and any moderators can see the flagged item. This is the default value.<br>• ModeratorsOnly—Only moderators can see the flagged item. If ModeratorsOnly is selected, only moderators can set flags using the API. |

# Usage

Use this object to view the items flagged for moderation within a community. Additionally, users with “Moderate Feeds” and “Modify All Data” can remove flags.

Flags on items are created either when a member manually flags an item in a community (if flagging is enabled for that community), or when a trigger automatically flags an item because the item met the trigger criteria.

# NetworkPageOverride

Represents information about custom pages used to override the default pages in Experience Cloud sites. You can create Experience Builder or Visualforce pages and override the default pages in a site. Using custom pages allows you to create a more personalized experience for your users. This object is available in API version 34.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

- Only users with the Create and Setup Experiences permission can update this object.
- You can't override the Change Password Page with a page created using Experience Builder. You can only override it with a Visualforce page.

## Fields

| Field Name | Details |
|---|---|
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the Experience Cloud site where a custom page is used to override a default page. |
| `OverrideSetting` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of the page used to override a default page in the Experience Cloud site. `OverrideSetting` can take the following values:<br>• `Standard`—The standard page that comes by default with the site.<br>• `Configurable`—The page created when the Configurable Self-Reg registration page type or the Login Discovery login page type is selected.<br>• `Designer`—A custom page created using Experience Builder.<br>• `Visualforce`—A custom page created using Visualforce. |

| Field Name | Details |
| --- | --- |
| `OverrideType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The name of the default page in the Experience Cloud site that you want to override with a custom page.`OverrideType` can take the following values:<br>• `LoginRequired`<br>• `ChangePassword`<br>• `ForgotPassword`<br>• `SelfReg`<br>• `Home` |

# NetworkSelfRegistration

Represents the account that self-registering Experience Cloud users are associated with by default. Self-registering users in an Experience Cloud site are required to be associated with an account, which the admin must specify while setting up self-registration for the site. If an account isn't specified, Salesforce creates person accounts (when enabled) for self-registering users. This object is available in API version 34.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the account that self-registering users in the Experience Cloud site are associated with. |
| `ApexHandlerId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the Apex handler created by Configurable Self-Reg registration page type. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the org.<br>The default value is `USD`. |
| `ExecuteApexHandlerAsId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the user who is executing the configurable self-registration handler. |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of `NetworkId` is unique within your org.<br>You can use only one account per Experience Cloud site to assign self-registering users. |
| `OptionsDisableStandardRgstrComponent` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Determines whether you can use standard Aura and Lightning Web Runtime (LWR) components for self-registration. If this field is `true`, self-registration flows that use these components don't work.<br>For more control over self-registration, set this field to `true` if you're not using the standard self-registration component. |

| Field Name | Details |
| --- | --- |
| `OptionsIncludePassword` | **Type**<br>Boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Option on Configurable Self-Reg registration page. If true, the Include Password field is selected. |
| `OptionsShowEmail` | **Type**<br>Boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Option on Configurable Self-Reg registration page. If true, the Email field appears on the self-registration form. |
| `OptionsShowFirstName` | **Type**<br>Boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Option on the Configurable Self-Reg registration page. If true, the First Name field appears on the self-registration form. |
| `OptionsShowLastName` | **Type**<br>Boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Option on the Configurable Self-Reg registration page. If true, the Last Name field appears on the self-registration form. |
| `OptionsShowMobilePhone` | **Type**<br>Boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Option on the Configurable Self-Reg registration page. If true, the Mobile field appears on the self-registration form. |

| Field Name | Details |
| --- | --- |
| `OptionsShowNickname` | **Type**<br>Boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Option on the Configurable Self-Reg registration page. If true, the Nickname field appears on the self-registration form. |
| `OptionsShowUsername` | **Type**<br>Boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Option on the Configurable Self-Reg registration page. If true, the Username field appears on the self-registration form. |
| `PermissionSetGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the permission set group used for the self registration. This field is a relationship field.<br>**Relationship Name**<br>PermissionSetGroup<br>**Refers To**<br>PermissionSetGroup |
| `VerificationMethod` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of verification method that a user must supply when registering, which can be:<br>• `SyncEmail`—User must supply an email address to verify identity.<br>• `SMS`—User must supply a phone number to verify identity. |

# NetworkUserHistoryRecent

Represents an Experience Cloud site user's history of accessed records. This object is available in API version 42.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`,`query()`, `undelete()`

## Special Access Rules

Only users with the Modify All Data permission can view and delete these data.

## Fields

| Field | Details |
|---|---|
| `AccessTimestamp` | **Type**<br>datetime<br>**Properties**<br>Create, Filter, Sort<br>**Description**<br>The time at which the record was accessed. |
| `ActionType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the action type taken by the user. The possible values are:<br>• Read<br>• Write |
| `DomainName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The domain used to access the record. |
| `FeedCommentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Feed comment accessed by the user. |
| `FeedItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group,Sort, Update<br>**Description**<br>Feed item accessed by the user. |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the Experience Cloud site used to access the record or comment. |
| `NetworkUserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>User's Experience Cloud site user ID to access the record or comment. |
| `RecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The record that was accessed. |
| `RecordKeyPrefix` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Record's ID key prefix. |
| `Url` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The URL from which the user accessed the record. |
| `UserType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of user who accessed this record. The possible values include:<br>• Standard<br>• Partner<br>• Customer Portal Manager<br>• Customer Portal User<br>• Guest<br>• High Volume Portal<br>• CSN Only<br>• Self Service |

## Usage

Use the NetworkUserHistoryRecent object to delete comments, posts, or record access by Experience Cloud site users who would like all such activity to be removed.

# Note

Represents a note, which is text associated with a custom object or a standard object, such as a Contact, Contract, or Opportunity.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `Body` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Body of the note. Limited to 32 KB. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `IsPrivate` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If `true`, only the note owner or a user with the "Modify All Data" permission can view the note or query it via the API. Note that if a user who does not have the "Modify All Data" permission sets this field to `true` on a note that they do not own, then they can no longer query, delete, or update the note. Label is **Private**. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the user who owns the note.<br>This is a relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the object associated with the note. |

| Field | Details |
| --- | --- |
| | This is a polymorphic relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareMetricTarget, CareObservationComponent, CarePgmProvHealthcareProvider, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareTaxonomy, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, Contact, Contract, CreditMemo, DelegatedAccount, EngagementChannelType, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, Lead, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PersonEducation, PersonLifeEvent, Product2, ProductRequest, ProductRequestLineItem, PurchaserPlan, ReceivedDocument, ServiceAppointment, ServiceResource, Shift, SocialPost, Visit, VisitedParty, Visitor, VolunteerProject, WorkOrder, WorkOrderLineItem |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Title of the note. |

# Usage

Use this object to manage notes for an object.

SEE ALSO:

Overview of Salesforce Objects and Fields

# NoteAndAttachment

This read-only object contains all notes and attachments associated with an object.

## Supported Calls

`describeSObjects()`

## Fields

| Field | Details |
|---|---|
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `IsNote` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the object contains a note (`true`) or an attachment (`false`). |
| `IsPrivate` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `true`, only the note owner or a user with the "Modify All Data" permission can view the note or query it via the API. Note that if a regular user who does not have "Modify All Data" permission sets this field to `true` on a note that they do not own, then they can no longer query, delete, or update that note. Label is **Private**. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the user who owns the note and attachment. |

| Field | Details |
| --- | --- |
| | This is a relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the parent object.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareMetricTarget, CareObservationComponent, CarePgmProvHealthcareProvider, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareTaxonomy, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, Contact, Contract, CreditMemo, DelegatedAccount, EngagementChannelType, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, Lead, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PersonEducation, PersonLifeEvent, Product2, ProductRequest, ProductRequestLineItem, PurchaserPlan, ReceivedDocument, ServiceAppointment, ServiceResource, Shift, SocialPost, Visit, VisitedParty, Visitor, VolunteerProject, WorkOrder, WorkOrderLineItem |
| `Title` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Group, Sort<br>**Description**<br>Title of the note. |

## Usage

Use this object to list all notes and attachments for an object.

To retrieve notes and attachments, issue a describe call on an object, which returns a query result for each activity since the record was created. You can't directly query this object.

SEE ALSO:

- Note
- Attachment

# NoteTag

Associates a word or short phrase with a Note.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
| --- | --- |
| `ItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter<br>**Description**<br>ID of the tagged item. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically. |
| `TagDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter<br>**Description**<br>ID of the parent TagDefinition object that owns the tag. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Restricted picklist<br>**Description**<br>Defines the visibility of a tag.<br>Valid values:<br>• `Public`—The tag can be viewed and manipulated by all users in an organization.<br>• `Personal`—The tag can be viewed or manipulated only by a user with a matching `OwnerId`. |

## Usage

NoteTag stores the relationship between its parent TagDefinition and the Note being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

# OauthCustomScope

Represents a permission defining the protected data that a connected app can access from an external entity when Salesforce is the OAuth authorization provider.

An OAuth custom scope tells an external entity about a connected app's permissions to access protected data. The OAuth custom scope that you create in your Salesforce org corresponds to the same custom scope defined in your external entity, and assigned to the resource.

For example, you define an Order Status custom scope in your external entity that allows access to customer order status data in your order system's API. In Salesforce, you create an OAuth custom scope that you also name Order Status. You assign this custom scope to the connected app requesting access to the order status API. When the external entity receives the connected app's request to access a customer's order status, it validates the connected app's access token and Order Status scope. With a successful validation, the app can access the customer order status information in the order system's API.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

You must have the "Manage Connected Apps" permission to access this object.

## Fields

| Field Name | Details |
|---|---|
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The description of the permission provided to the connected app by the scope. The custom scope's description must be unique, can only include alphanumeric characters, and can be up to 60 characters long.<br>You can enter a custom label in place of a description. An advantage of using a custom label is that you can maintain reusable text in a single location and translate the text into multiple languages. See Custom Labels.<br>Note: The description formatting requirements that apply to custom scopes also apply to custom labels. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Use when referring to the OAuth custom scope from a program. This label must be unique, and can include only alphanumeric characters and underscores. |
| `IsPublic` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the object is included in the connected app's OpenID Connect discovery endpoint. For more information, see OpenID Connect Discovery Endpoint. |

| Field Name | Details |
| --- | --- |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the default language defined for the developing org. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The master label for the custom scope record. This label must be unique, and can include only alphanumeric characters and underscores. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix for an OAuth custom scope that's been installed as part of a second-generation managed package. If the custom scope isn't packaged, this value is empty. This field is available in API version 61.0 and later. |

# OauthCustomScopeApp

Represents the name of the connected app to which the custom scope is assigned. This object is available in API version 49.0 and later.

## Supported Calls

`create(),delete(),describeSObjects(),query(),retrieve(),update(),upsert()`

## Fields

| Field | Details |
| --- | --- |
| `OauthCustomScopeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of the connected app to which the custom scope is assigned. If the connected app is part of a package, include the package's namespace prefix with the connected app's name. Use the following format: ***<namespace_prefix>__<connected_app>***. Use two underscores (_) between the namespace prefix and connected app's name.<br>This is a relationship field.<br>**Relationship Name**<br>OauthCustomScope<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OauthCustomScope |

# OauthToken

Represents an OAuth access token for connected app authentication. Use this object to create a user interface for token management. This object is available in API version 32.0 and later.

A connected app integrates an application with Salesforce using APIs. Connected apps use standard SAML and OAuth protocols to authenticate, provide single sign-on, and provide tokens for use with Salesforce APIs. In addition to standard OAuth capabilities, connected apps allow Salesforce admins to set various security policies and have explicit control over who can use the corresponding apps. Each time that a user grants access to an application, the application obtains a new access token.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

Users with the Customize Application permission see all tokens for all users in the org. Otherwise, you see only your own tokens.

If you try to use Apex DML operations and then query this object in the same call, you get an `UncommittedWork` error with this description.

```
A callout was unsuccessful because of pending uncommitted work related to a process, flow,
 or Apex operation.
Commit or roll back the work, and then try again.
```

To avoid this error, execute DML operations and queries in separate, asynchronous calls.

# Fields

| Field Name | Details |
| --- | --- |
| `AccessToken` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The refresh token for authorization. |
| `AppMenuItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID for the App Picker menu item that's associated with this OAuth token.<br>This is a relationship field.<br>**Relationship Name**<br>AppMenuItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AppMenuItem |
| `AppName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The label for the connected app that's associated with this OAuth token. |
| `DeleteToken` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A token that can be used at the revoke OAuth token endpoint to remove this token. |

| Field Name | Details |
| --- | --- |
| `Id` | **Type**<br>ID<br>**Properties**<br>Defaulted on create, Filter, Group, idLookup, Sort<br>**Description**<br>Reserved for future use. Currently, the value is always `null`. |
| `LastUsedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The most recent date when the OAuth token was used. |
| `RequestToken` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The authorization code that was used to request the corresponding AccessToken. With this authorization code, you can revoke the corresponding AccessToken by passing the DeleteToken. |
| `UseCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>How often the token has been used. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The owner of the token.<br>This is a relationship field.<br>**Relationship Name**<br>User |

| Field Name | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>User |

## Usage

To delete an AccessToken, send a request to the revoke OAuth token endpoint with the DeleteToken as the parameter. For example, the URL `https://MyDomainName.my.salesforce.com/services/oauth2/revoke?token=(the Delete Token)` causes the deletion of the token.

In API version 34.0 and later, this object was enhanced to help manage high instance counts. A `query()` call returns up to 500 rows. A `queryMore()` call returns 500 more, up to 2500 total. No more records are returned after 2500. To make sure that you don't miss any records, issue a `COUNT()` query in a SELECT clause for OauthToken. This query gives you the total number of records. If there are more than 2500 records, use these options to manage your results.

- Divide queries by filtering on fields like `UserId` to return subsets of less than 2500 records.
- Use `OFFSET` to get batches of 2500 records. Start with an `OFFSET` of 0 and then increment by 2500. If you use this option, we recommend that you also use `LIMIT` to limit each query to 2500.

  For example, use an initial query with this structure.

  ```
  SELECT <desired fields> FROM OauthToken LIMIT 2500 OFFSET 0
  ```

  Then, run another query with an offset of 2500.

  ```
  SELECT <desired fields> FROM OauthToken LIMIT 2500 OFFSET 2500
  ```

  Continue to increase the offset by 2500 until you have results for all records.

# OauthTokenExchangeHandler

Represents a token exchange handler. The token exchange handler also consists of an Apex class. During the OAuth 2.0 token exchange flow, the token exchange handler is used to validate tokens from an external identity provider and to map users to Salesforce. This object is available in API version 60.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

# Special Access Rules

# Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>A description for your token exchange handler. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The API name for the handler. |
| `IsContactCreationAllowed` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>For internal use only. |
| `IsEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the handler is enabled for the token exchange flow.<br>The default value is `false`. |
| `IsUserCreationAllowed` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the handler can set up new users. During the token exchange flow, the Apex handler maps users from the identity provider to Salesforce. If the `IsUserCreationAllowed` field is `true`, the `canCreateUser` boolean in the |

| Field | Details |
| --- | --- |
| | `getUserForTokenSubject` method is `true`, and the user doesn't exist in Salesforce, the handler sets up a new User object, which Salesforce automatically inserts to finish creating the user.<br>The default value is `false`. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the language used in the org where the token exchange handler was created.<br>Possible values are:<br>• `da`—Danish<br>• `de`—German<br>• `en_US`—English<br>• `es`—Spanish<br>• `es_MX`—Spanish (Mexico)<br>• `fi`—Finnish<br>• `fr`—French<br>• `it`—Italian<br>• `ja`—Japanese<br>• `ko`—Korean<br>• `nl_NL`—Dutch<br>• `no`—Norwegian<br>• `pt_BR`—Portuguese (Brazil)<br>• `ru`—Russian<br>• `sv`—Swedish<br>• `th`—Thai<br>• `zh_CN`—Chinese (Simplified)<br>• `zh_TW`—Chinese (Traditional) |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The label of the token exchange handler record. |
| `NamespacePrefix` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the `namespacePrefix__componentName` notation. The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `SupportedTokenTypesAccessToken` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Indicates whether the handler supports opaque access tokens from the identity provider. |
| `SupportedTokenTypesIdToken` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Indicates whether the handler supports OpenID Connect ID tokens from the identity provider. |
| `SupportedTokenTypesJwt` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Indicates whether the handler supports tokens from the identity provider that are in JWT format, such as JWT-based access tokens. |
| `SupportedTokenTypesRefreshToken` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the handler supports OAuth 2.0 refresh tokens from the identity provider. |
| `SupportedTokenTypesSaml2` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Indicates whether the handler supports SAML 2.0 assertions from the identity provider. |
| `TokenHandlerApexId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The Apex class associated with the token exchange handler. The class contains methods to validate the token and map users to Salesforce. It must extend the `Oauth2TokenExchangeHandler` Apex class.<br>This field is a relationship field.<br>**Relationship Name**<br>TokenHandlerApex<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApexClass |

# OauthTokenExchHandlerApp

Represents the enablement settings for a specific Salesforce connected app or external client app that's enabled for the token exchange handler. A handler can be enabled for multiple apps. This object is available in API version 60.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

# Special Access Rules

# Fields

| Field | Details |
| --- | --- |
| `ApexExecutionUserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who runs the Apex token exchange handler. We recommend that you use an integration user.<br>This field is a relationship field.<br>**Relationship Name**<br>ApexExecutionUser<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `ConnectedApplicationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The connected app that's being used to integrate with Salesforce.<br>This field is a relationship field.<br>**Relationship Name**<br>ConnectedApplication<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ConnectedApplication |
| `IsDefault` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the token exchange handler is the default handler for this app. During the token exchange flow, in the token request, you can optionally include a `token_handler` |

| Field | Details |
| --- | --- |
| | parameter with the name of a specific handler's Apex class. If you don't include this parameter, Salesforce defaults to the default handler.<br>The default value is `false`. |
| `OauthTokenExchangeHandlerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The `OauthTokenExchangeHandler` with which these enablement settings are associated.<br>This field is a relationship field.<br>**Relationship Name**<br>OauthTokenExchangeHandler<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OauthTokenExchangeHandler |

# ObjectDataImport

Represents the data import status of one or more object records. This object is available in API version 57.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `EndDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time (in UTC) when the data import finished. |
| `FileName` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Optional. If the data import was from a comma-delimited file (CSV), the name of the file. The maximum length is 120 characters. |
| `ObjectDataImportNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>An auto-generated number identifying the data import. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the user who owns the data import status record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PrimaryObject` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The name of the primary object being imported. For example, Lead. This value is usually provided programmatically. The maximum length is 120 characters. |
| `Result` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The JSON response of the data object import result, including error messages. |

| Field | Details |
| --- | --- |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The processing status of the data object import.<br>Possible values are:<br>• `Completed`<br>• `In Progress` |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of data import, such as from a comma-delimited file or through a connector.<br>Possible values are:<br>• `CSV Async`<br>• `CSV Sync`<br>• `External Record Import`—A record imported or updated by Partner Connect between a partner and vendor system. To see this field, enable Partner Connect. See Set Up Partner Connect as a Partner in *Salesforce Help*. Available in API version 62.0 and later.<br>• `One time Connector` |

## Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ObjectDataImportChangeEvent**
Sharing rules are available for the object.

**ObjectDataImportOwnerSharingRule** **on page 65**
Sharing rules are available for the object.

**ObjectDataImportShare** **on page 67**
Sharing is available for the object.

# ObjectDataImportReference

Represents the relationships to the associated reference objects showing the source from which the data is imported. This object is available in API version 57.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

ObjectDataImportReference is read only and can only be queried.

## Fields

| Field | Details |
|---|---|
| `ObjectDataImportId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Foreign key to the ObjectDataImport object.<br>This field is a relationship field.<br>**Relationship Name**<br>ObjectDataImport<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ObjectDataImport |
| `ObjectDataImportReferenceNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Foreign key to the reference object. For example, AsyncApiJob or DatasetImportRequest. |

# ObjectMetadataTag

Represents a meta tag for a store page. Meta tags in HTML documents provide structured data used by search engines for ranking and to show content in search results. This object is available in API version 60.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available only if the B2B Commerce or D2C Commerce license is enabled.

## Fields

| Field | Details |
| --- | --- |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Possible values are:<br>• `USD`—U.S. Dollar<br>The default value is `USD`. |
| `Language` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The language of the page meta tag. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the page meta tag. |
| `RecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the product or product category with which this record is associated.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Record<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Product2, ProductCategory<br>Availability in API versions:<br>• Product2 is available in API versions 60.0 and later<br>• ProductCategory is available in API versions 63.0 and later |
| `TagType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of the page meta tag.<br>Possible values are:<br>• `Description`—Meta Description<br>• `Title`—Title Tag |
| `Value` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The value of the page meta tag. This value populates the HTML tag. For example, a meta tag with a `Type` of `Title` and a `Value` of `GoBrew Espresso` renders the HTML `<title>GoBrew Espresso</title>` for the page. |

# ObjectPermissions

Represents the enabled object permissions for the parent PermissionSet. This object is available in API version 24.0 and later.

To grant a user access to an object, associate an ObjectPermissions record with a PermissionSet that's assigned to a user. ObjectPermissions records are only supported in PermissionSet, not in Profile.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The `Id` of this object's parent PermissionSet.<br>This is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PermissionSet |
| `PermissionsCreate` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>If `true`, users assigned to the parent PermissionSet can create records for this object. Requires `PermissionsRead` for the same object to be `true`. |
| `PermissionsDelete` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>If `true`, users assigned to the parent PermissionSet can delete records for this object. Requires `PermissionsRead` and `PermissionsEdit` for the same object to be `true`. |
| `PermissionsEdit` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>If `true`, users assigned to the parent PermissionSet can edit records for this object. Requires `PermissionsRead` for the same object to be `true`. |

| Field Name | Details |
| --- | --- |
| `PermissionsModifyAllRecords` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>If `true`, users assigned to the parent PermissionSet can edit all records for this object, regardless of sharing settings. Requires `PermissionsRead`, `PermissionsDelete`, `PermissionsEdit`, and `PermissionsViewAllRecords` for the same object to be `true`. |
| `PermissionsRead` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>If `true`, users assigned to the parent PermissionSet can view records for this object. |
| `PermissionsViewAllFields` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>If `true`, users assigned to the parent PermissionSet can view all fields and field data for this object. Available in API version 63.0 and later. |
| `PermissionsViewAllRecords` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>If `true`, users assigned to the parent PermissionSet can view all records for this object, regardless of sharing settings. Requires `PermissionsRead` for the same object to be `true`. |
| `SobjectType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The object's API name. For example, `Merchandise__c`. |

## Permission Dependencies

Some user permissions have dependencies on object permissions. For example, if a permission set has the "Transfer Leads" permission, it also has "Read" and "Create" on the leads object.

You can query from ObjectPermissions up to the parent PermissionSet object. For example:

```
SELECT Parent.Name, Parent.PermissionsTransferAnyLead, PermissionsRead, PermissionsCreate
FROM ObjectPermissions
WHERE SobjectType = 'Lead'
```

## Determining Object Access with "Modify All Data"

When using SOQL to query object permissions, be aware that some object permissions are enabled because a user permission requires them.

The exception to this rule is when "Modify All Data" is enabled. While it enables all object permissions, it doesn't physically store any object permission records in the database. As a result, unlike object permissions that are required by a user permission—such as "View All Data" or "Import Leads"—the query still returns permission sets with "Modify All Data," but the object permission record will contain an invalid ID that begins with "000". This ID indicates that the object has full access due to "Modify All Data" and the object permission record can't be updated or deleted. To remove full access from these objects, disable "Modify All Data" and then delete the resulting object permission record. This ensures that when using SOQL to find all the objects that have full access, it returns all objects that have this access regardless of whether it's due to "Modify All Data" or because an administrator set full access.

For example, the following will return all permission sets that have "Read" on the Merchandise__c object, regardless of whether it's explicitly defined on the object or implicitly defined through "Modify All Data."

```
SELECT Id, Parent.label, SobjectType, PermissionsRead,
   Parent.PermissionsModifyAllData, ParentId
FROM ObjectPermissions
WHERE PermissionsRead = true and SobjectType = 'Merchandise__c'
```

## Nesting Object Permissions

You can nest ObjectPermissions in a PermissionSet query. For example, the following returns any permission sets where "Transfer Leads" is true. Additionally, the result set will include the "Read" object permission on leads. This is done by nesting the SOQL with an object permission query using the relationship name for object permissions: `ObjectPerms`.

```
SELECT Id,Name,PermissionsTransferAnyLead,
(SELECT Id, PermissionsRead from ObjectPerms where SobjectType='Lead')
FROM PermissionSet
WHERE PermissionsTransferAnyLead = true
```

As a result, it's possible to traverse the relationship between the PermissionSet and any child-related objects (in this case, ObjectPermissions). You can do this from the PermissionSet object by using the child relationship (`ObjectPerms`, `FieldPerms`, and so on) or from the child object by referencing the PermissionSet with `Parent.`***`permission_set_attribute`***.

It's important to consider when to use a conditional `WHERE` statement to restrict the result set. To query based on an attribute on the permission set object, nest the SOQL with the child relationship. However, to query based on an attribute on the child object, you must reference the permission set parent attribute in your query.

The following two queries return the same columns with different results, based on whether you use the child relationship or parent notation.

```
SELECT Id, Name, PermissionsModifyAllData,
(SELECT Id, SobjectType, PermissionsRead from Objectperms)
FROM PermissionSet
WHERE PermissionsModifyAllData=true
```

versus:

```
SELECT Id, SObjectType, PermissionsRead, Parent.Id, Parent.Name,
Parent.PermissionsModifyAllData
FROM ObjectPermissions
WHERE SObjectType='Merchandise__c'
```

PermissionSet

FieldPermissions

# ObjectRelatedUrl

Represents a URL slug for a Product or Category page on a B2B Commerce or D2C Commerce LWR site, or a custom object, account, or contact page on an enhanced LWR Experience Cloud site. This object is available in API version 57.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Your org must have B2B Commerce or D2C Commerce license enabled for commerce use cases. ObjectRelatedUrl is available for Product2 and ProductCategory records in Commerce, and on custom object, account and contact record pages in enhanced LWR sites.

## Fields

| Field | Details |
|---|---|
| `LanguageCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The combined language and locale ISO code, which controls the language of the object-related URL. The maximum length is 8 characters. |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the object-related URL. This field isn't editable. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The ID of the parent record that the `UrlName` refers to. `ParentId` can point only to Product2, ProductCategory, and custom object, account, and contact record pages.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Product2, ProductCategory, account, contact, and custom objects<br>Availability in API versions:<br>• Product2 and ProductCategory in LWR Commerce stores (available in API version 58.0 and later)<br>• Custom object pages on enhanced LWR sites (available in API version 60.0 and later)<br>• Account and contact pages on enhanced LWR sites (available in API version 61.0 and later) |
| `Scope` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. Helps ensure uniqueness of the UrlName field across all records with the same Scope and LanguageCode values. The maximum length is 18 characters. |
| `UniqueIndex` | **Type**<br>string<br>**Properties**<br>Filter, idLookup, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Ensures uniqueness for each record within your org and creates an index for lookup. This field isn't editable.<br>This field is a calculated field. |
| `UrlName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The URL slug for the record. |

Note: When creating a query, for example, `SELECT UrlName From ObjectRelatedUrl WHERE Scope='01t'`, the `WHERE` condition must use `Id`, `UniqueIndex`, `Scope`, or `ParentId`.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ObjectRelatedUrlChangeEvent on page 68 (API version 62.0)**
Change events are available for the object.

# ObjectTerritory2AssignmentRule

Represents a territory assignment rule that's associated with an object, such as Account. ObjectTerritory2AssignmentRuleItem can be created or deleted if the BooleanFilter field on its corresponding ObjectTerritory2AssignmentRule is `null`. Available if Sales Territories has been enabled.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Standard users can access this object. If a territory model is in `Active` state, any standard user can view that model, including its territories, assignment rules, assigned records, and assigned users. Users cannot view territory models in other states (such as `Planning` or `Archived`).

# Fields

| Field Name | Details |
| --- | --- |
| `BooleanFilter` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Represents advanced filter conditions that were specified for the rule in the online application. For example, "(1 AND 2) OR 3." |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The field label in the user interface is `Unique Name`.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the rule is active (true) or inactive (false). Via the API, active rules run automatically when object records are created and edited. The exception is when the value of the IsExcludedFromRealign field on an object record is `true`, which prevents record assignment rules from evaluating that record. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The language of the label in the user interface. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The user interface label for the territory type. |
| `ObjectType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The object that the rule is defined for. For API version 31, Account only. |
| `Territory2ModelId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the territory model. |

# ObjectTerritory2AssignmentRuleItem

A single row of selection criteria for an ObjectTerritory2AssignmentRule object. ObjectTerritory2AssignmentRuleItem can only be created or deleted if the `BooleanFilter` field on its corresponding ObjectTerritory2AssignmentRule object is a `null` value. Available if Sales Territories has been enabled.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Standard users can access this object. If a territory model is in `Active` state, any standard user can view that model, including its territories and assignment rules. For territories in an active model, any standard user can view assigned records and assigned users subject to your Salesforce sharing settings. Users cannot view territory models in other states (such as `Planning` or `Archived`).

# Fields

| Field Name | Details |
|---|---|
| `Field` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The standard or custom object field that the rule item will operate on. |
| `Operation` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The criterion to apply for the rule item. For example: *`equals`*, *`notContain`*, or *`startsWith`*. |
| `RuleId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the associated ObjectTerritory2AssignmentRule. |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The order in which this row is evaluated in relation to other ObjectTerritoryAssignmentRuleItem objects for the given ObjectTerritoryAssignmentRule. This field is required for assignment rule items, which are used in the Boolean conditions in assignment rule formulas. |
| `Value` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The field value or values to evaluate. For example: if the field is `Billing ZIP/Postal Code`, a value might be `94105`. |

# ObjectTerritory2Association

Represents an association (by assignment) between a territory and an object record such as an account or a lead.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Available after enabling Sales Territories.

Standard and partner users can access this object. If a territory model is in `Active` state, any standard or partner user can view that model, including its territories and assignment rules. For territories in an active model, any standard or partner user can view assigned records and assigned users subject to your sharing settings.

If you delete associations, you can query them for up to 12 hours. Keep in mind that deleted associations bypass the recycle bin.

## Fields

| Field Name | Details |
|---|---|
| `AssociationCause` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The means by which the record was associated with the territory. User interface field label is `Method`.<br>Possible values are:<br>• `Territory2AssignmentRule`—Territory assignment rule association<br>• `Territory2Manual`—Manual association |
| `ObjectId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the object assigned to the territory. |

| Object | Availability |
|---|---|
| Account | API version 30.0 and later |
| Lead | API version 55.0 and later |

| Field Name | Details |
| --- | --- |
| | This is a polymorphic relationship field.<br>**Relationship Name**<br>Object<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account<br>Lead |
| `SobjectType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of the object.<br>Possible values are:<br>• `Account`<br>• `Lead` |
| `Territory2Id` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the territory that the record is assigned to.<br>This is a relationship field.<br>**Relationship Name**<br>Territory2<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Territory2 |

# ObjectUserTerritory2View

Represents a user and object, such as an account or lead, assigned to a territory. This object is available in API version 58.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

To see this object, enable Sales Territories.

## Fields

| Field | Details |
| --- | --- |
| `ObjectId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Required field for querying ObjectUserTerritory2View.<br>ID of the object that the territory user is assigned to.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Object<br>**Refers To**<br>Account, Lead |
| `RoleInTerritory2` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Role of the user assigned to the territory. |
| `Territory2Id` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the territory to which the object and user are assigned.<br>This field is a relationship field.<br>**Relationship Name**<br>Territory2<br>**Refers To**<br>Territory2 |

| Field | Details |
| --- | --- |
| UserId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the user assigned to the territory.<br>This field is a relationship field.<br>**Relationship Name**<br>User<br>**Refers To**<br>User |

# OmniComponentErrorLog

For internal use only.

This object and associated records are only for internal use. Don't perform any create, edit, or delete operations on this object. Modifying or deleting this object's records may result in errors with your implementation.

# OmniDataPack

For internal use only.

This object and associated records are only for internal use. Don't perform any create, edit, or delete operations on this object. Modifying or deleting this object's records may result in errors with your implementation.

# OmniDataTransform

For internal use only.

This object and associated records are only for internal use. Don't perform any create, edit, or delete operations on this object. Modifying or deleting this object's records may result in errors with your implementation.

# OmniDataTransformItem

For internal use only.

This object and associated records are only for internal use. Don't perform any create, edit, or delete operations on this object. Modifying or deleting this object's records may result in errors with your implementation.

# OmniESignature

For internal use only.

This object and associated records are only for internal use. Don't perform any create, edit, or delete operations on this object. Modifying or deleting this object's records may result in errors with your implementation.

# OmniExtTrackingDef

Represents a connection between an OmniTrackingGroup in OmniAnalytics and a third-party Analytics system such as Google Analytics. This object is available in API version 60.0 and later.

Note: This object is part of OmniStudio Standard, not OmniStudio for Vlocity.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Using OmniAnalytics requires having an OmniStudio license and enabling OmniAnalytics in Setup.

## Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A description of the OmniExtTrackingDef. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the OmniExtTrackingDef in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. Limit: 80 characters. |

| Field | Details |
| --- | --- |
| | Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Specifies whether the OmniExtTrackingDef is active.<br>The default value is `true`. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language for the OmniExtTrackingDef. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique master label of the OmniExtTrackingDef. This internal label doesn't get translated. |
| `OmniExtTrackingDefKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>A UUID generated internally by Salesforce to uniquely identify an OmniExtTrackingDef record across all orgs. |
| `TrackingFrameworkInformation` | **Type**<br>textarea<br>**Properties**<br>Create, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>JSON data containing information about an external service, such as the API call and input parameter names. |
| `TrackingServiceProvider` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The third-party Analytics system to which user interaction data is sent.<br>Possible values are:<br>• `Google`<br>The default value is `Google`. |

# OmniExtTrackingEventDef

Represents a format for FlexCard or OmniScript user interaction data that a third-party Analytics system such as Google Analytics can accept. This object is available in API version 60.0 and later.

Note: This object is part of OmniStudio Standard, not OmniStudio for Vlocity.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Using OmniAnalytics requires having an OmniStudio license and enabling OmniAnalytics in Setup.

## Fields

| Field | Details |
| --- | --- |
| `ComponentType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The type of component for which user interactions are tracked.<br>Possible values are:<br>• `Flexcard`<br>• `Omniscript` |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A description of the OmniExtTrackingEventDef. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the OmniExtTrackingEventDef in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. Limit: 80 characters.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `InclusionRule` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A true-or-false condition that determines whether an event is sent to the third-party Analytics system. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The language for the OmniExtTrackingEventDef. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique master label of the OmniExtTrackingEventDef. This internal label doesn't get translated. |
| `OmniExtTrackingDef` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the related OmniExtTrackingDef object.<br>This field is a relationship field.<br>**Relationship Name**<br>OmniExtTrackingDef<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OmniExtTrackingDef |
| `OmniExtTrackingEventDefKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>A UUID generated internally by Salesforce to uniquely identify an OmniExtTrackingEventDef record across all orgs. |
| `PayloadTemplate` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The payload template structure with placeholders for runtime data. This is used at runtime to generate the actual payload to be sent to the external Analytics service. |

# OmniInteractionConfig

For internal use only.

This object and associated records are only for internal use. Don't perform any create, edit, or delete operations on this object. Modifying or deleting this object's records may result in errors with your implementation.

# OmniInteractionAccessConfig

For internal use only.

This object and associated records are only for internal use. Don't perform any create, edit, or delete operations on this object. Modifying or deleting this object's records may result in errors with your implementation.

# OmniProcess

For internal use only.

This object and associated records are only for internal use. Don't perform any create, edit, or delete operations on this object. Modifying or deleting this object's records may result in errors with your implementation.

# OmniProcessCompilation

For internal use only.

This object and associated records are only for internal use. Don't perform any create, edit, or delete operations on this object. Modifying or deleting this object's records may result in errors with your implementation.

# OmniProcessElement

For internal use only.

This object and associated records are only for internal use. Don't perform any create, edit, or delete operations on this object. Modifying or deleting this object's records may result in errors with your implementation.

# OmniProcessTransientData

For internal use only.

This object and associated records are only for internal use. Don't perform any create, edit, or delete operations on this object. Modifying or deleting this object's records may result in errors with your implementation.

# OmniScriptSavedSession

For internal use only.

This object and associated records are only for internal use. Don't perform any create, edit, or delete operations on this object. Modifying or deleting this object's records may result in errors with your implementation.

# OmniSupervisorConfig

Represents the Omni-Channel supervisor configuration for an assigned group of supervisors. This object is available in API version 41.0 and later.

**Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()` `update()`, `upsert()`

## Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

## Fields

| Field | Details |
|---|---|
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>**Note:** When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record. |
| `IsTimelineHidden` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If set to `true`, hides the agent timeline from the supervisors assigned to this supervisor configuration. The default value is `false`.<br>This field is available in API version 53.0 and later. |

| Field | Details |
| --- | --- |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The language of this supervisor configuration. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>A unique label name for this supervisor configuration. The name must begin with a letter. The name can contain alphanumeric characters and underscores. The name can't contain spaces, two consecutive underscores, or end with an underscore. The name appears as Omni Supervisor Configuration Name in the UI. |
| `SkillVisibility` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Determines which work items based on skills are visible to the supervisors assigned to this supervisor configuration. Possible values are:<br>• `AllSkills` — Show work items with all skill requirements selected in this supervisor configuration.<br>• `AnySkill` — Show work items with at least one skill requirement selected in this supervisor configuration.<br>This field is available in API version 53.0 and later. |

# OmniSupervisorConfigAction

Represents the actions available to the supervisors of an Omni-Channel supervisor configuration. This object is available in API version 56.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, Omni-Channel must be enabled.

Only authenticated internal and external users can access this object.

## Fields

| Field | Details |
|---|---|
| `DisplayOrder` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The order in which the action is displayed. |
| `OmniSupervisorActionType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>An action that a supervisor can perform.<br>Possible values are:<br>• `AgentDetails.CustomAction`<br>• `AllAgents.AWSDashboard`—All Agents - View Amazon Real-Time Metrics<br>• `AllAgents.AssignLearning`<br>• `AllAgents.ChangeQueues`<br>• `AllAgents.ChangeSkills`<br>• `AllAgents.CustomAction`<br>• `AssignedWork.AWSDashboard`—Assigned Work - View Amazon Real-Time Metrics<br>• `AssignedWork.CustomAction`<br>• `AssignedWorkDetails.CustomAction`<br>• `QueueDetails.CustomAction`<br>• `QueuesBacklog.AWSDashboard`—Queues Backlog - View Amazon Real-Time Metrics<br>• `QueuesBacklog.CustomAction`<br>• `QueuesBacklog.ManageQueues`—Queues Backlog - Assign Agents to Queues<br>• `SkillDetails.CustomAction`<br>• `SkillsBacklog.AWSDashboard`—Skills Backlog - View Amazon Real-Time Metrics<br>• `SkillsBacklog.CustomAction` |

| Field | Details |
| --- | --- |
| `OmniSupervisorConfigId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>A unique identifier for the Omni-Channel supervisor configuration.<br>This field is a relationship field.<br>**Relationship Name**<br>OmniSupervisorConfig<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OmniSupervisorConfig |

# OmniSupervisorConfigGroup

Represents the group of agents who are visible to the supervisors of an Omni-Channel supervisor configuration. The group, if visible, appears in the Agents tab of Omni Supervisor. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

## Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

## Fields

| Field | Details |
| --- | --- |
| `GroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>A unique identifier for the group of agents that's made visible to the supervisors who are assigned to the Omni-Channel supervisor configuration.<br>This is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Group<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group |
| `OmniSupervisorConfigId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>A unique identifier for the Omni-Channel supervisor configuration.<br>This is a relationship field.<br>**Relationship Name**<br>OmniSupervisorConfig<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OmniSupervisorConfig |

# OmniSupervisorConfigProfile

Represents the supervisor profiles to which an Omni-Channel supervisor configuration applies. User-level configurations override profile-level configurations. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

## Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

## Fields

| Field | Details |
|---|---|
| `OmniSupervisorConfigId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>A unique identifier for the Omni-Channel supervisor configuration.<br>This is a relationship field.<br>**Relationship Name**<br>OmniSupervisorConfig<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OmniSupervisorConfig |
| `ProfileId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>A unique identifier for the profile that's associated with this Omni-Channel supervisor configuration. A profile can be associated with only one Omni-Channel supervisor configuration. This field is unique within your org.<br>This is a relationship field.<br>**Relationship Name**<br>Profile<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Profile |

# OmniSupervisorConfigQueue

Represents the queues that are visible to the supervisors of an Omni-Channel supervisor configuration. The queue, if visible, appears in the Queues Backlog and Assigned Work tabs of Omni Supervisor. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, Omni-Channel must be enabled.

Only authenticated internal and external users can access this object.

## Fields

| Field | Details |
| --- | --- |
| `OmniSupervisorConfigId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>om<br>A unique identifier for the Omni-Channel supervisor configuration.<br>This is a relationship field.<br>**Relationship Name**<br>OmniSupervisorConfig<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OmniSupervisorConfig |
| `QueueId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>A unique identifier for the queue that's made visible to the supervisors who are assigned to the Omni-Channel supervisor configuration.<br>This is a relationship field.<br>**Relationship Name**<br>Queue<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group |

# OmniSupervisorConfigSkill

Represents the skills that are visible to the supervisors of an Omni-Channel supervisor configuration. These skills, if visible, appear in the Skills Backlog tab of Omni Supervisor. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, Omni-Channel must be enabled.

Only authenticated internal and external users can access this object.

## Fields

| Field | Details |
|---|---|
| `OmniSupervisorConfigId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>A unique identifier for the Omni-Channel supervisor configuration.<br>This is a relationship field.<br>**Relationship Name**<br>OmniSupervisorConfig<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OmniSupervisorConfig |
| `SkillId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>A unique identifier for the skill that's made visible to the supervisors who are assigned to the Omni-Channel supervisor configuration.<br>This is a relationship field.<br>**Relationship Name**<br>Skill |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Skill |

# OmniSupervisorConfigTab

Represents the visible tabs specified in an Omni Supervisor configuration. This object is available in API version 60.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, Omni-Channel must be enabled.

Only authenticated internal and external users can access this object.

## Fields

| Field | Details |
| --- | --- |
| `DisplayOrder` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The order in which tabs are displayed in Omni Supervisor. |
| `OmniSupervisorConfigId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>A unique identifier for the Omni-Channel supervisor configuration.<br>This is a relationship field.<br>**Relationship Name**<br>OmniSupervisorConfig<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>OmniSupervisorConfig |
| `OmniSupervisorTabType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Tabs shown on the Omni Supervisor page. Possible values are:<br>• `Agents` — the Agents tab<br>• `AssignedWork` — the Assigned Work tab<br>• `FlexiPageType` — A custom tab created using Lightning App Builder, with the `OmniSupervisorPageType` value of the `FlexiPage Type` field<br>• `QueuesBacklog` — the Queues Backlog tab<br>• `SkillsBacklog` — the Skills Backlog tab<br>• `Wallboard` — the Wallboard tab |

# OmniSupervisorConfigUser

Represents the users to which an Omni-Channel supervisor configuration applies. User-level configurations override profile-level configurations. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

## Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

## Fields

| Field | Details |
| --- | --- |
| `OmniSupervisorConfigId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>A unique identifier for the Omni-Channel supervisor configuration.<br>This is a relationship field.<br>**Relationship Name**<br>OmniSupervisorConfig<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OmniSupervisorConfig |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>A unique identifier for the user associated with this Omni-Channel supervisor configuration. A user can be associated with only one Omni-Channel supervisor configuration. This field is unique within your org.<br>This is a relationship field.<br>**Relationship Name**<br>User<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

# OmniTrackingComponentDef

Represents a FlexCard or OmniScript that is a member of an OmniTrackingGroup, which tracks user interactions in OmniAnalytics. This object is available in API version 60.0 and later.

Note: This object is part of OmniStudio Standard, not OmniStudio for Vlocity.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Using OmniAnalytics requires having an OmniStudio license and enabling OmniAnalytics in Setup.

## Fields

| Field | Details |
| --- | --- |
| `ComponentType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of component for which user interactions are tracked.<br>Possible values are:<br>• `Flexcard`<br>• `Omniscript` |
| `ComponentVersion` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The version of the FlexCard or OmniScript. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the OmniTrackingComponentDef in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. Limit: 80 characters.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Language` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language for the OmniTrackingComponentDef. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique master label of the OmniTrackingComponentDef. This internal label doesn't get translated. |
| `OmniTrackingComponentDefKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>A UUID generated internally by Salesforce to uniquely identify an OmniTrackingComponentDef record across all orgs. |
| `OmniTrackingGroup` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the related OmniTrackingGroup object.<br>This field is a relationship field.<br>**Relationship Name**<br>OmniTrackingGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OmniTrackingGroup |

# OmniTrackingGroup

Represents a group of FlexCard and OmniScript components that have their user interactions tracked together in OmniAnalytics. This object is available in API version 60.0 and later.

Note: This object is part of OmniStudio Standard, not OmniStudio for Vlocity.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Using OmniAnalytics requires having an OmniStudio license and enabling OmniAnalytics in Setup.

## Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A description of the OmniTrackingGroup. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the OmniTrackingGroup in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. Limit: 80 characters.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date when the OmniTrackingGroup became inactive. |

| Field | Details |
| --- | --- |
| `GroupType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Specifies whether this OmniTrackingGroup sends tracking data to a third-party Analytics system such as Google Analytics.<br>Possible values are:<br>• `External`—A third-party Analytics system is used.<br>• `Internal`—No third-party Analytics system is used. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Specifies whether the OmniTrackingGroup is active.<br>The default value is `false`. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language for the OmniTrackingGroup. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique master label of the OmniTrackingGroup. This internal label doesn't get translated. |
| `MaxAgeInDays` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The maximum number of days the group and its analytics data is active beyond which the data is deleted. |

| Field | Details |
| --- | --- |
| `OmniExtTrackingDef` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the related OmniExtTrackingDef object. Required if `GroupType` is set to `External`.<br>This field is a relationship field.<br>**Relationship Name**<br>OmniExtTrackingDef<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OmniExtTrackingDef |
| `OmniTrackingGroupKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>A UUID generated internally by Salesforce to uniquely identify an OmniTrackingGroup record across all orgs. |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date when the OmniTrackingGroup became active. |

# OmniUiCard

For internal use only.

This object and associated records are only for internal use. Don't perform any create, edit, or delete operations on this object. Modifying or deleting this object's records may result in errors with your implementation.

# OpenActivity

This read-only object is displayed in a related list of open activities—future events and open tasks—related to an object. It includes activities for all contacts related to the object. OpenActivity fields for phone calls are only available if your organization uses Salesforce CRM Call Center.

## Supported Calls

`describeSObjects()`

## Fields

| Field | Details |
|---|---|
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the ID of the related account, which is determined as follows:<br>• The account associated with the `WhatId`, if it exists; or<br>• The account associated with the `WhoId`, if it exists; otherwise<br>• `null`<br>For information on IDs, see ID Field Type.<br>This is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `ActivityDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates one of the following:<br>• The due date of a task<br>• The date of an event if `IsAllDayEvent` is set to `true` |

| Field | Details |
| --- | --- |
| | This field has a time stamp that is always set to midnight in the Universal Time Coordinated (UTC) time zone. The time stamp doesn't represent the time of the activity; don't attempt to alter it to accommodate time zone differences. Label is `Date`. |
| `ActivityDateTime` | **Type**<br>dateTime<br>**Properties**<br>Aggregate, Filter, Nillable, Sort<br>**Description**<br>Contains the event's due date if the `IsAllDayEvent` flag is set to `false`. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. Label is **Due Date Time**.<br>The value for this field and `StartDateTime` must match, or one of them must be `null`. |
| `ActivitySubtype` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Provides standard subtypes to facilitate creating and searching for specific activity subtypes. This field isn't updateable.<br>Possible values are:<br>• Task<br>• Email<br>• Call<br>• Event<br>• LinkedIn —Available in API version 56.0 and later.<br>• List Email |
| `ActivityType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Represents one of the following values: `Call`, `Email`, `Meeting`, or `Other`. Label is `Type`. These are default values, and can be changed.<br>`ActivityType` is the union of `TaskType` and `EventType`. If the same activity appears in both dynamic picklists, duplicate activities appear.<br>`TaskType` and `EventType` can each have a `Call` type. Internally, they are distinct from each other. |

| Field | Details |
| --- | --- |
| `AlternateDetailId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of a record the activity is related to which contains more details about the activity. For example, an activity can be related to an EmailMessage record.<br>This is a relationship field.<br>**Relationship Name**<br>AlternateDetail<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EmailMessage |
| `CallDisposition` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Represents the result of a given call, for example, “we'll call back,” or “call unsuccessful.” Limit is 255 characters. |
| `CallDurationInSeconds` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Duration of the call in seconds. |
| `CallObject` | **Type**<br>string<br>**Properties**<br>Filter, Group,Nillable, Sort<br>**Description**<br>Name of a call center. Limit is 255 characters. |
| `CallType` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of call being answered: Inbound, Internal, or Outbound. |
| `CompletedDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time the task was saved with a Closed status. This value is always null. |
| `ConnectionReceivedId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the ID of the PartnerNetworkConnection that shared this record with your organization. This field is available only if your organization has enabled Salesforce to Salesforce and only in API versions 28.0 and later. |
| `ConnectionSentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the ID of the PartnerNetworkConnection that your organization shared this record with. This field is available only if your organization has enabled Salesforce to Salesforce, and only in API versions 28.0 and later. The value is always `null`. You can use the PartnerNetworkRecordConnection object to forward records to connections. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>Contains a description of the event or task. Limit is 32 KB. |
| `DurationInMinutes` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates the duration of the event or task. |
| `EndDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates the end date and time of the event or task. Available in versions 27.0 and later. This field is optional, depending on the following:<br>• If `IsAllDayEvent` is true, you can supply a value for either `DurationInMinutes` or `EndDateTime`. Supplying values in both fields is allowed if the values add up to the same amount of time. If both fields are `null`, the duration defaults to one day.<br>• If `IsAllDayEvent` is false, a value must be supplied for either `DurationInMinutes` or `EndDateTime`. Supplying values in both fields is allowed if the values add up to the same amount of time. |
| `IsAllDayEvent` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If the value of this field is set to `true`, then the activity is an event spanning a full day, and the `ActivityDate` defines the date of the event. If the value of this field is set to `false`, then the activity may be an event spanning less than a full day, or it may be a task. The default value of this field is `false`. Label is `All-Day Event`. |
| `IsClosed` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a task is closed (`true`) or not closed (`false`). The default value of this field is `false`. This field is set indirectly by setting `Status` on the task—each picklist value has a corresponding `IsClosed` value. Label is `Closed`. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the activity has been moved to the Recycle Bin (`true`) or not (`false`). Label is `Deleted`. |
| `IsHighPriority` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates a high-priority task. The default value of this field is `false`. This field is derived from the `Priority` field. |
| `IsReminderSet` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a reminder is set for an activity (`true`) or not (`false`). The default value of this field is `false`. |
| `IsTask` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If the value of this field is set to `true`, then the activity is a task; if the value is set to `false`, then the activity is an event. The default value of this field is `false`. Label is `Task`. |
| `IsVisibleInSelfService` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If the value of this field is set to `true`, then the activity can be viewed in the self-service portal. The default value of this field is `false`. Label is `Visible in Self-Service`. |
| `Location` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>If the activity is an event, then this field represents the location of the event. If the activity is a task, then the value is `null`. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the ID of the user or group who owns the activity.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Calendar, Group, User |
| `PrimaryAccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Contains the `AccountId` value from the activity record. Available in API versions 30.0 and later to organizations that use Shared Activities. |
| `PrimaryWhoId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Contains the `WhoId` value from the activity record. Available in API versions 30.0 and later to organizations that have enabled Shared Activities. |
| `Priority` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the priority of a task, such as high, normal, or low. The default value of this field is `Normal`. |

| Field | Details |
| --- | --- |
| `ReminderDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Represents the time at which a reminder is scheduled to fire if `IsReminderSet` is set to `true`. If `IsReminderSet` is set to `false`, then either the user has deselected the reminder checkbox in the user interface or the reminder has already fired at the time indicated by the value. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the current status of a task. The default value of this field is `Not Started`. Each predefined status field sets a value for `IsClosed`. To obtain picklist values, query the TaskStatus object.<br>Possible values are:<br>• Completed<br>• Deferred<br>• In Progress<br>• Not Started<br>• Waiting on someone else |
| `Subject` | **Type**<br>combobox<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Contains the subject of the task or event. |
| `WhatId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The `WhatId` represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. `WhatId`s are polymorphic. Polymorphic means a `WhatId` is equivalent to the ID of a related object. The label is `Related To ID`.<br>This is a polymorphic relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>What<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CommSubscriptionConsent, ContactEncounter, ContactEncounterParticipant, ContactRequest, Contract, CoverageBenefit, CoverageBenefitItem, CreditMemo, DelegatedAccount, DocumentChecklistItem, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, ListEmail, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PartyConsent, PersonLifeEvent, PlanBenefit, PlanBenefitItem, ProcessException, Product2, ProductItem, ProductRequest, ProductRequestLineItem, ProductTransfer, PurchaserPlan, ReceivedDocument, ResourceAbsence, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, Shift, Shipment, ShipmentItem, Solution, Visit, VisitedParty, VolunteerProject, WorkOrder, WorkOrderLineItem |
| `WhoId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The WhoId represents a human such as a lead or a contact. WhoIds are polymorphic. Polymorphic means a WhoId is equivalent to a contact's ID or a lead's ID. The label is `Name ID`.<br>If Shared Activities is enabled, the value of this field is the ID of the related lead or primary contact. If you add, update, or remove the WhoId field, you might encounter problems with triggers, workflows, and data validation rules that are associated with the record. The label is `Name ID`.<br>This is a polymorphic relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Who<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact, Lead |

# Usage

**Query activities that are related to an object**

1. Optionally, issue a describe call against the object whose activities you want to query, to get a suggestion of the correct SOQL query to use.
2. Issue a SOQL relationship query with a main clause that references the object and an inner clause that references the activity history. For example:

```
SELECT
   (SELECT ActivityDate, Description
    FROM OpenActivities)
FROM Account
WHERE Name Like 'XYZ%'
```

The user interface enforces sharing rules, filtering out related-list items that a user doesn't have permission to see.

The following constraints on users who don't have the "View All Data" permission help prevent performance issues.

- In the main clause of the relationship query, you can reference only one record. For example, you can't filter on all records where the account name starts with "A." Instead, you must reference a single account record.

```
SELECT
   (SELECT ActivityDate, Description
    FROM OpenActivities
    ORDER BY ActivityDate ASC NULLS LAST, LastModifiedDate DESC
    LIMIT 500)
FROM Account
WHERE Name = 'Acme'
LIMIT 1
```

- In the inner clause of the query, you can't use `WHERE`.
- In the inner clause of the query, you must specify a limit of 500 or fewer on the number of rows that are returned in the list.
- In the inner clause of the query, you must sort on `ActivityDate` in ascending order and `LastModifiedDate` in descending order. You can optionally display nulls last. For example: `ORDER BY ActivityDate ASC NULLS LAST, LastModifiedDate DESC`.

SEE ALSO:

Task

# OperatingHours

Represents the hours in which a service territory, service resource, or account is available for work. OperatingHours is used by Field Service, Salesforce Scheduler, Salesforce Meetings, Sales Engagement, and Workforce Engagement. This object is available in API version 38.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The description of the operating hours. Add any details that aren't included in the name. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the operating hours record was last modified. Its label in the user interface is `Last Modified Date`. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the operating hours record was last viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The name of the operating hours. For example, *Summer Hours*, *Winter Hours*, or *Peak Season Hours*. |
| OwnerId | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner of the operating hours record.<br>This field is available in API version 59.0.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| TimeZone | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The time zone that the operating hours fall within. |

## Usage

By default, only System Administrators can view, create, and assign operating hours.

Service territory members—which are service resources who can work in the territory—automatically use their service territory's operating hours. If a resource needs different operating hours than their territory, create separate operating hours for them from the Operating Hours tab. Then, select the desired hours in the `Operating Hours` lookup field on the service territory member detail page.

To view a service resource's operating hours for a particular territory, navigate to their Service Territories related list and click the Member Number for the territory. You reach the service territory member detail page, which lists the member's operating hours and dates during which they belong to the territory.

## Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

**OperatingHoursChangeEvent (API version 54.0)**
Change events are available for the object.

**OperatingHoursHistory (API version 62.0)**

History is available for tracked fields of the object.

# OperatingHoursHistory

Represents the history of changes made to tracked fields on an operating hours record. This object is available in API version 38.0 and later.

## Supported Calls

`getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

## Special Access Rules

Field Service must be enabled in your organization, and field tracking for operating hours fields must be configured.

## Fields

| Field Name | Details |
|---|---|
| `DataType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Data type of the field that was changed. |
| `Field` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The name of the field that was changed. |
| `NewValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The new value of the field that was changed. |

| Field Name | Details |
| --- | --- |
| `OldValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The value of the field before it was changed. |
| `TimeSlotId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the operating hours record being tracked. The history is displayed on the detail page for this record. |

# OperatingHoursHoliday

Represents the day or hours for which a service territory and service resources exclusive to the service territory are unavailable in Salesforce Scheduler. This object is available in API version 54.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

Salesforce Scheduler must be enabled.

## Fields

| Field | Details |
| --- | --- |
| `DateAndTime` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>(Read-Only) The date or time for the holiday. |

| Field | Details |
| --- | --- |
| HolidayId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the holiday that's related to the operating hours indicated in the OperatingHoursId field.<br>This is a relationship field.<br>**Relationship Name**<br>Holiday<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Holiday |
| LastReferencedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time that the current user last viewed a record related to this object. |
| LastViewedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this object. |
| OperatingHoursHolidayNumber | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>(Read-Only) An auto-generated number identifying the operating hours holiday. |
| OperatingHoursId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the operating hours that's related to the holiday indicated in the HolidayId field.<br>This is a relationship field.<br>**Relationship Name**<br>OperatingHours<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OperatingHours |

# Opportunity

Represents an opportunity, which is a sale or pending deal.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Field Type |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the account associated with this opportunity.<br>This is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `ActivityMetricId` | **Type**<br>reference |

| Field | Field Type |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>When Einstein Activity Capture with Activity Metrics is enabled, the ID of the related activity metric.<br>This field is a relationship field.<br>**Relationship Name**<br>ActivityMetric<br>**Refers To**<br>ActivityMetric |
| `ActivityMetricRollupId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>When Einstein Activity Capture with Activity Metrics is enabled, the ID of the related activity metric rollup.<br>This field is a relationship field.<br>**Relationship Name**<br>ActivityMetricRollup<br>**Refers To**<br>ActivityMetricRollup |
| `AgeInDays` | **Type**<br>int<br>**Properties**<br>Aggregate, Filter, Group, Nillable, Sort<br>**Description**<br>The number of days since the opportunity was created, calculated by the current date minus the `created_date` field. This field is available in API version 52.0 and later if you enabled Pipeline Inspection. |
| `Amount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Estimated total sale amount. For opportunities with products, the amount is the sum of the related products. Any attempt to update this field, if the record has products, will be ignored. The update call will not be rejected, and other fields will be updated as specified, but the Amount will be unchanged. |

| Field | Field Type |
| --- | --- |
| CampaignId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of a related Campaign. This field is defined only for those organizations that have the campaign feature Campaigns enabled. The User must have read access rights to the cross-referenced Campaign object in order to create or update that campaign into this field on the opportunity.<br>This is a relationship field.<br>**Relationship Name**<br>Campaign<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Campaign |
| CloseDate | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. Date when the opportunity is expected to close. |
| ConnectionReceivedId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce. |
| ConnectionSentId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections. |

| Field | Field Type |
| --- | --- |
| `ContactId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the contact associated with this opportunity, set as the primary contact. Read-only field that is derived from the opportunity contact role, which is created at the same time the opportunity is created. This field can only be populated when it's created, and can't be updated. To update the value in this field, change the `IsPrimary` flag on the OpportunityContactRole associated with this opportunity. Available in API version 46.0 and later. |
| `ContractId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the contract that's associated with this opportunity.<br>This is a relationship field.<br>**Relationship Name**<br>Contract<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contract |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.<br>If the organization has multicurrency and a Pricebook2 is specified on the opportunity (that is, the `Pricebook2Id` field is not blank), then the currency value of this field must match the currency of the PricebookEntry records that are associated with any opportunity line items it has. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update |

| Field | Field Type |
| --- | --- |
| | **Description**<br>Text description of the opportunity. Limit: 32,000 characters. |
| `ExpectedRevenue` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Read-only field that is equal to the product of the opportunity `Amount` field and the `Probability`. You can't directly set this field, but you can indirectly set it by setting the `Amount` or `Probability` fields. |
| `ExportStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Restricted picklist, Sort<br>**Description**<br>Derived field for the record map for Partner Connect. The export status of this opportunity to the partner's connected org. To see this field, enable Partner Connect and add the Export Vendor Records to an Authorized Partner Org user permission to the cosell export user. See Set Up Partner Connect as a Vendor in *Salesforce Help*. Available in API version 62.0 and later. |
| `Fiscal` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If fiscal years are not enabled, the name of the fiscal quarter or period in which the opportunity `CloseDate` falls. Use YYYY Q format, for example, '2006 1' for first quarter of 2006. |
| `FiscalQuarter` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Represents the fiscal quarter. Valid values are 1, 2, 3, or 4. |
| `FiscalYear` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Field Type |
| --- | --- |
| | **Description**<br>Represents the fiscal year, for example, 2006. |
| `ForecastCategory` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Restricted picklist field. It is implied, but not directly controlled, by the `StageName` field. You can override this field to a different value than is implied by the `StageName` value. The values of this field are fixed enumerated values. The field labels are localized to the language of the user performing the operation, if localized versions of those labels are available for that language in the user interface.<br>In API version 12.0 and later, the value of this field is automatically set based on the value of the `ForecastCategoryName` and can't be updated any other way. The field properties Create, Defaulted on create, Nillable, and Update are not available in version 12.0.<br>Possible values are:<br>• `BestCase`<br>• `Closed`<br>• `Forecast`<br>• `MostLikely`<br>• `Omitted`<br>• `Pipeline` |
| `ForecastCategoryName` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The name of the forecast category. It is implied, but not directly controlled, by the `StageName` field. You can override this field to a different value than is implied by the `StageName` value. Available in API version 12.0 and later.<br>Possible values are:<br>• `Best Case`<br>• `Closed`<br>• `Commit`<br>• `Most Likely`<br>• `Omitted`<br>• `Pipeline` |

| Field | Field Type |
| --- | --- |
| `HasOpenActivity` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Group,<br>**Description**<br>Indicates whether an opportunity has an open event or task (`true`) or not (`false`). Available in API version 35.0 and later. |
| `HasOpportunityLineItem` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Read-only field that indicates whether the opportunity has associated line items. A value of `true` means that Opportunity line items have been created for the opportunity. An opportunity can have opportunity line items only if the opportunity has a price book. The opportunity line items must correspond to PricebookEntry objects that are listed in the opportunity Pricebook2. However, you can insert opportunity line items on an opportunity that does not have an associated Pricebook2. For the first opportunity line item that you insert on an opportunity without a Pricebook2, the API automatically sets the `Pricebook2Id` field, if the opportunity line item corresponds to a PricebookEntry in an active Pricebook2 that has a `CurrencyIsoCode` field that matches the `CurrencyIsoCode` field of the opportunity. If the Pricebook2 is not active or the `CurrencyIsoCode` fields do not match, then the API returns an error. You can't update the `Pricebook2Id` or `PricebookId` fields if opportunity line items exist on the Opportunity. You must delete the line items before attempting to update the `PricebookId` field. |
| `HasOverdueTask` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Group,<br>**Description**<br>Indicates whether an opportunity has an overdue task (`true`) or not (`false`). Available in API version 35.0 and later. |
| `IqScore` | **Type**<br>int<br>**Properties**<br>Aggregate, Filter, Group, Nillable, Sort |

| Field | Field Type |
| --- | --- |
| | **Description**<br>The likelihood, measured on a scale of 1 to 99, that an opportunity will be won. Einstein Opportunity Scoring must be enabled. Available in API version 41.0 and later. Label is **Opportunity Score**. |
| `IsClosed` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Directly controlled by `StageName`. You can query and filter on this field, but you can't directly set it in a create, upsert, or update request. It can only be set via `StageName`. Label is **Closed**. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `IsExcludedFromTerritory2Filter` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Used for Filter-Based Opportunity Territory Assignment (Pilot in Spring '15 / API version 33). Indicates whether the opportunity is excluded (*`True`*) or included (*`False`*) each time the APEX filter is executed. |
| `IsPriorityRecord` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Group<br>**Description**<br>Shows whether the user has marked the opportunity as important (*`True`*) or not (*`False`*). The default value is `false`. Available in API version 53.0 and later. |
| `IsPrivate` | **Type**<br>boolean |

| Field | Field Type |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If *true*, only the opportunity owner, users above that role in the hierarchy, and admins can view the opportunity or query it via the API. When you mark opportunities as private, opportunity teams, opportunity splits, and sharing are removed. Label is **Private**. The default value is *False*. |
| IsSplit | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Read-only field that indicates whether credit for the opportunity is split between opportunity team members. Label is IsSplit. This field is available in versions 14.0 and later for organizations that enabled Opportunity Splits during the pilot period.<br>This field should not be used. However, it's documented for the benefit of pilot customers who find references to IsSplit in code. |
| IsWon | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Directly controlled by StageName. You can query and filter on this field, but you can't directly set the value. It can only be set via StageName. Label is **Won**. |
| LastActivityDate | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Value is one of the following, whichever is the most recent:<br>• Due date of the most recent event logged against the record.<br>• Due date of the most recently closed task associated with the record. |
| LastActivityInDays | **Type**<br>int<br>**Properties**<br>Aggregate, Filter, Group, Nillable, Sort |

| Field | Field Type |
| --- | --- |
| | **Description**<br>The number of days since the last completed event or task for the record, calculated by the current date minus the `last_activity` field. If the `last_activity` field is null, this field is null. This field is available in API version 52.0 and later if you enabled Pipeline Inspection. |
| `LastAmountChangedHistoryId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the OpportunityHistory record that contains information about when the opportunity Amount field was last updated in Winter '21 or later. Information includes the date and time of the change and the user who made the change. Available in API version 50.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>LastAmountChangedHistory<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OpportunityHistory |
| `LastCloseDateChangedHistoryId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the OpportunityHistory record that contains information about when the opportunity Close Date field was last updated in Winter '21 or later. Information includes the date and time of the change and the user who made the change. Available in API version 50.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>LastCloseDateChangedHistory<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OpportunityHistory |
| `LastReferencedDate` | **Type**<br>datetime |

| Field | Field Type |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastStageChangeDate` | **Type**<br>datetime<br>**Properties**<br>Aggregate, Filter, Nillable, Sort<br>**Description**<br>The date of the last change made to the `Stage` field on this opportunity record. This field is available in API version 52.0 and later. |
| `LastStageChangeInDays` | **Type**<br>int<br>**Properties**<br>Aggregate, Filter, Group, Nillable, Sort<br>**Description**<br>The number of days since the last change was made to the `Stage` field on the opportunity record, calculated by the current date minus the `last_stage_change_date` field. If the `last_stage_change_date` is null, then this field contains the value for `AgeInDays`. This field is available in API version 52.0 and later if you enabled Pipeline Inspection. |
| `LastViewedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `LeadSource` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Source of this opportunity, such as Advertisement or Trade Show. |

| Field | Field Type |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. A name for this opportunity. Limit: 120 characters. |
| `NextStep` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of next task in closing opportunity. Limit: 255 characters. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the User who has been assigned to work this opportunity.<br>If you update this field, the previous owner's access becomes Read Only or the access specified in your organization-wide default for opportunities, whichever is greater.<br>If you have set up opportunity teams in your organization, updating this field has different consequences depending on your version of the API:<br>• For API version 12.0 and later, sharing records are kept, as they are for all objects. (All previous opportunity team members are kept on the opportunity team.)<br>• For API version before 12.0, sharing records are deleted. (All previous opportunity team members are removed from the opportunity team.)<br>• For API version 16.0 and later, users must have the Transfer Record permission in order to update (transfer) account ownership using this field.<br>This is a relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `PartnerAccountId` | **Type**<br>reference |

| Field | Field Type |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the partner account for the partner user that owns this opportunity. Available if Partner Relationship Management is enabled or if digital experiences is enabled and you have partner portal licenses.<br>If you are uploading opportunities using API version 15.0 or earlier, and one of the opportunities in the batch has a partner user as the owner, the `Partner Account` field on all opportunities in the batch is set to that partner user's account regardless of whether the partner user is the owner. In version 16.0, the `Partner Account` field is set to the appropriate account for the partner user that owns the opportunity. If the owner of the opportunity is not a partner user, this field remains empty. |
| `Pricebook2Id` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of a related Pricebook2 object. The `Pricebook2Id` field indicates which Pricebook2 applies to this opportunity. The `Pricebook2Id` field is defined only for those organizations that have products enabled as a feature. You can specify values for only one field (`Pricebook2Id` or `PricebookId`)—not both fields. For this reason, both fields are declared nillable.<br>This is a relationship field.<br>**Relationship Name**<br>Pricebook2<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Pricebook2 |
| `PricebookId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Update<br>**Description**<br>Unavailable as of version 3.0. As of version 8.0, the Pricebook object is no longer available. Use the `Pricebook2Id` field instead, specifying the ID of the Pricebook2 record. |
| `Probability` | **Type**<br>percent |

| Field | Field Type |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort, Update<br>**Description**<br>Percentage of estimated confidence in closing the opportunity. It is implied, but not directly controlled, by the `StageName` field. You can override this field to a different value than what is implied by the `StageName`.<br>If you're changing the `Probability` field through the API using a partner WSDL call, or an Apex `before` trigger, and the value may have several decimal places, we recommend rounding the value to a whole number. For example, the following Apex in a `before` trigger uses the `round` method to change the field value: `o.probability = o.probability.round();` |
| `PushCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of times an opportunity's close date has been pushed out by one calendar month. For example, moving a close date from April to May counts as one push, but moving from April 1 to April 30 doesn't count. The total is not decreased when the close date is moved in. Available in API version 53.0 and later. |
| `RecordTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>ID of the record type assigned to this object. |
| `StageName` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. Current stage of this record. The `StageName` field controls several other fields on an opportunity. Each of the fields can be directly set or implied by changing the `StageName` field. In addition, the `StageName` field is a picklist, so it has additional members in the returned describeSObjectResult to indicate how it affects the other fields. To obtain the stage name values in the picklist, query the OpportunityStage object. If the `StageName` is updated, then the `ForecastCategoryName`, `IsClosed`, `IsWon`, and `Probability` are automatically updated based on the stage-category mapping. |

| Field | Field Type |
| --- | --- |
| `SyncedQuoteID` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>Read only in an Apex trigger. The ID of the Quote that syncs with the opportunity. Setting this field lets you start and stop syncing between the opportunity and a quote. The ID has to be for a quote that is a child of the opportunity. |
| `Territory2Id` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the territory that is assigned to the opportunity. Available only if Enterprise Territory Management has been enabled for your organization. Users who have full access to an opportunity's account can assign any territory from the active model to the opportunity. Users who do *not* can assign only a territory that is also assigned to the opportunity's account. The same restriction applies to territory assignments made via Apex in system mode. |
| `TotalOpportunityQuantity` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Number of items included in this opportunity. Used in quantity-based forecasting. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Type of opportunity. For example, Existing Business or New Business. Label is **Opportunity Type**. |

Note: When importing opportunity data, users need the Set Audit Fields upon Record Creation permission to assign values to audit fields such as `CreatedDate`. Audit fields are automatically updated during API operations unless you set these fields yourself.

## Usage

Use the Opportunity object to manage information about a sale or pending deal. You can also sync this object with a child Quote. To update an Opportunity, your client application needs Edit permission on opportunities. You can create, update, delete, and query Attachment records associated with an opportunity via the API. To split credit for an opportunity among multiple opportunity team members, use the OpportunitySplit object.

Client applications can also create or update opportunity objects by converting a Lead with `convertLead()`.

Note: On opportunities and opportunity products, the workflow rules, validation rules, and Apex triggers fire when an update to a child opportunity product or schedule causes an update to the parent record. This means your custom application logic is enforced when there are updates to the parent record, ensuring higher data quality and compliance with your organization's business policies.

## Sample Code—Java

This code starts the sync between an object and a child quote.

```
public void startQuoteSync() {
         Opportunity opp = new Opportunity();
         opp.setId(new ID("006D000000CpOSy"));
         opp.setSyncedQuoteId(new ID("0Q0D000000002OZ"));
   // Invoke the update call and save the results
   try {
      SaveResult[] saveResults = binding.update(new SObject[] {opp});
      // check results and do more processing after the update call ...
   }
   catch (Exception ex) {
      System.out.println("An unexpected error has occurred." + ex.getMessage());
      return;
 }
}
```

This code stops the sync between an object and a child quote.

```
public void stopQuoteSync() {
         Opportunity opp = new Opportunity();
         opp.setId(new ID("006D000000CpOSy"));
         opp.setFieldsToNull(new String[]  {"SyncedQuoteId"} );
   // Invoke the update call and save the results
   try {
      SaveResult[] saveResults = binding.update(new SObject[] {opp});
      // check results and do more processing after the update call ...
   }
   catch (Exception ex) {
      System.out.println("An unexpected error has occurred." + ex.getMessage());
      return;
 }
}
```

## Associated Objects

This object has these associated objects. Unless noted, they are available in the same API version as this object.

**OpportunityChangeEvent (API version 44.0)**
Change events are available for the object.

**OpportunityFeed (API version 18.0)**
Feed tracking is available for the object.

**OpportunityHistory**
History is available for tracked fields of the object.

**OpportunityOwnerSharingRule**
Sharing rules are available for the object.

**OpportunityShare**
Sharing is available for the object.

## Additional Considerations

If you are using `before` triggers to set `Stage` and `Forecast Category` for an opportunity record, the behavior is as follows:

- If you set `Stage` and `Forecast Category`, the opportunity record contains those exact values.
- If you set `Stage` but not `Forecast Category`, the `Forecast Category` value on the opportunity record defaults to the one associated with trigger `Stage`.
- If you reset `Stage` to a value specified in an API call or incoming from the user interface, the `Forecast Category` value should also come from the API call or user interface. If no value for `Forecast Category` is specified and the incoming `Stage` is different than the trigger `Stage`, the `Forecast Category` defaults to the one associated with trigger `Stage`. If the trigger `Stage` and incoming `Stage` are the same, the `Forecast Category` is not defaulted.

If you are cloning an opportunity with products, the following events occur in order:

Note: If errors occur on an opportunity product, you must return to the opportunity and fix the errors before cloning.

If any opportunity products contain unique custom fields, you must null them out before cloning the opportunity.

- The parent opportunity is saved according to the order of execution.
- The opportunity products are saved according to the order of execution.

# OpportunityCompetitor

Represents a competitor on an Opportunity.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `CompetitorName` | **Type**<br>combobox<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Name of the competitor. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `OpportunityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the associated Opportunity.<br>This is a relationship field.<br>**Relationship Name**<br>Opportunity<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Opportunity |
| `Strengths` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Description of the competitor's strengths. Limit: 1,000 characters. |
| `Weaknesses` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Description of the competitor's weaknesses. Limit: 1,000 characters. |

## Usage

Use this object to manage competitors on an Opportunity, associating multiple competitors on a opportunity and specifying the strengths and weaknesses of each competitor.

SEE ALSO:

Opportunity

# OpportunityContactRole

Represents the role that a Contact plays on an Opportunity.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `ContactId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of an associated Contact. The API applies user access rights to the associated Opportunity for this object, but not to the associated Contact. The API may return rows from a query on this object that include this field's values for contacts to which the user does not have sufficient access rights. It may also return values for this field for contacts that have been |

| Field | Details |
| --- | --- |
| | deleted. In either case, the client must perform a query on the contact table for this field's value to determine whether the Contact is accessible to the user and has not been deleted.<br>This is a relationship field.<br>**Relationship Name**<br>Contact<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the org. This field is available in API version 47.0. |
| `Division` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the record has been moved to the Recycle Bin (`true`) or not (`false`). The `IsDeleted` flag is usable only when the parent record is deleted to the recycle bin, and not when the `OpportunityContactRole` record is deleted directly. Label is **Deleted**. |
| `IsPrimary` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the associated Contact plays the primary role on the Opportunity (`true`) or not (`false`). Each Opportunity has only one primary contact. Label is **Primary**. |
| `OpportunityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of an associated Opportunity. This field is non-nullable, and it cannot be updated. You must provide a value for this field when creating new records. You can't change it after it has been created.<br>This is a relationship field.<br>**Relationship Name**<br>Opportunity<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Opportunity |
| `Role` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Name of the role played by the associated Contact on the Opportunity, such as Business User or Decision Maker. |

## Usage

Use the Opportunity Contact Role object to manage information about contacts and roles related to opportunities. Records of this type appear in the user interface in the Opportunity Contact Role related list and on the Opportunity detail page.

Although allowed, we do not recommend that you create multiple relationships between the same Opportunity and a Contact.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**OpportunityContactRoleChangeEvent (API version 45.0)**
Change events are available for the object.

SEE ALSO:
Overview of Salesforce Objects and Fields

# OpportunityContactRoleSuggestionInsight

Represents a suggestion for a new opportunity contact role. Available in API versions 45.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getDeleted()`, `query()`, `retrieve()`

## Special Access Rules

To add or decline opportunity contact role suggestions, users need a Sales Cloud Einstein license, edit access on opportunities, and read or edit access on contacts. As of the Spring '20 release, Pardot and Sales Engagement users no longer have access to this object.

## Fields

| Field Name | Details |
|---|---|
| `ContactId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the related contact record. |
| `CreatedRecordId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the created opportunity contact role record. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. |
| `Division` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The division of the suggested opportunity contact role. |
| `LastOperationUserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who last performed a related operation. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last interacted with this record, directly or indirectly. Some sample scenarios are: |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it. |
| `OpportunityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the related opportunity. |

| Field Name | Details |
| --- | --- |
| `RationaleLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The reason why this is a suggested opportunity contact role. |
| `Role` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The role of the suggested opportunity contact role. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The status of the suggested contact. Possible values include:<br>• New<br>• Pending<br>• Added<br>• Declined |

## Usage

This object is read-only and isn't supported in workflows, triggers, or process builder.

# OpportunityFieldHistory

Represents the history of changes to the values in the fields of an opportunity. This object is available in versions 13.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

# Fields

| Field | Details |
| --- | --- |
| `DataType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Data type of the field that was changed. |
| `Field` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The name of the field that was changed. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `OpportunityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the Opportunity. Label is **Opportunity ID**.<br>This is a relationship field.<br>**Relationship Name**<br>Opportunity<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Opportunity |
| `NewValue` | **Type**<br>anyType |

| Field | Details |
| --- | --- |
| | **Properties**<br>Nillable, Sort<br>**Description**<br>The new value of the field that was changed. |
| `OldValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The latest value of the field before it was changed. |

## Usage

Use this object to identify changes to any fields on an Opportunity. The OpportunityHistory object represents the history of a change to the `Amount`, `Probability`, `Stage`, or `Close Date` fields of an Opportunity.

This object respects field level security on the parent object.

SEE ALSO:

Opportunity

# OpportunityHistory

Represents the stage history of an opportunity.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `Amount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Estimated total sale amount. |

| Field | Details |
| --- | --- |
| `CloseDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Date when the opportunity is expected to close. |
| `ExpectedRevenue` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Calculated revenue based on the `Amount` and `Probability` fields. |
| `ForecastCategory` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Category that determines the column in which an opportunity is totaled in a forecast. Label is **To ForecastCategory**.<br>• `BestCase`<br>• `Closed`<br>• `Forecast`<br>• `MostLikely`<br>• `Omitted`<br>• `Pipeline` |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `OpportunityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the associated Opportunity.<br>This is a relationship field.<br>**Relationship Name**<br>Opportunity<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Opportunity |
| `PrevAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The value in the opportunity's Amount field before the update of the opportunity.<br>Note: In OpportunityHistory records created before Winter '21, the value is null.<br>Available in API version 50.0 and later. |
| `PrevCloseDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The value in the opportunity's Close Date field before the update of the opportunity.<br>Note: In OpportunityHistory records created before Winter '21, the value is null.<br>Available in API version 50.0 and later. |
| `Probability` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Percentage of estimated confidence in closing the opportunity. |
| `StageName` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Name of the current stage of the opportunity (for example, Prospect or Proposal). |

## Usage

This object represents the history of a change to the `Amount`, `Probability`, `Stage`, or `Close Date` fields of an Opportunity. The OpportunityFieldHistory object represents the history of a change to any of the fields of an Opportunity. To obtain information about how a particular opportunity is progressing, query the OpportunityHistory records associated with a given Opportunity. Please note that if an opportunity's `Amount`, `Probability`, `Stage`, or `Close Date` fields have not changed, nothing will be returned in the OpportunityHistory objects. In this case, query the OpportunityFieldHistory records associated with a given Opportunity to get more information about changes to the opportunity.

This object is read-only. The system generates a new record whenever a user or client application changes the value of any of the above fields; the then-current values of all of these major fields are saved in the newly-generated object.

This object respects field-level security on the parent object.

Note: The record is automatically deleted if its parent Opportunity is deleted.

SEE ALSO:

Opportunity

# OpportunityInsight

Represents an individual insight (deal prediction, follow-up reminder, or key moment) related to an opportunity record.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `query()`, `retrieve()`

## Special Access Rules

To see an insight related to a specific opportunity, users need a Sales Cloud Einstein license and access to the opportunity record. As of the Spring '20 release, Pardot and Sales Engagement users no longer have access to this object.

## Fields

| Field Name | Details |
| --- | --- |
| `ActualHeardWithinDays` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The number of days it has been since a prospect has responded for insights of type `Prospect has not responded` and `No communication`. |
| `CloseDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The close date of the related opportunity for insights of type `Opportunity is overdue` and `Opportunity is unlikely to close in time`. |
| `CompetitorName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field has been deprecated as of API version 45.0. |
| `ContactName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field is not in use as of API version 46.0. |
| `ContactTitle` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field is not in use as of API version 46.0. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. |

| Field Name | Details |
| --- | --- |
| `Division` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The division of the related record. |
| `ExpectedHeardWithinDays` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The expected number of days it takes to hear back from a prospect for insights of type `Prospect has not responded` and `No communication`. |
| `LastHeard` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the related prospect was last heard from for insights of type `Prospect has not responded`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last interacted with this record, directly or indirectly. Some sample scenarios are: |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it. |
| `OpportunityId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the related opportunity record. |
| `Rationale` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable<br>**Description**<br>The explanation for an insight, providing more background information and details that are specific to the org. |
| `Reason` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The reason why a specific insight type is appearing. Relevant to the following insights:<br>• Opportunity is unlikely to close in time<br>• Opportunity slowing<br>• Opportunity boosting<br>• Time-consuming opportunity |
| `TaskDue` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date that a task associated with the related opportunity record is due. |
| `Title` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable<br>**Description**<br>The title of the insight. |
| `TrendType` | **Type**<br>picklist |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The trend type of the insight. Possible values include:<br>• Negative<br>• Positive<br>• Informational |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of insight. Possible values include:<br>• Opportunity is unlikely to close in time<br>• Prospect has not responded<br>• Opportunity slowing<br>• Opportunity boosting<br>• Time-consuming opportunity<br>• No communication<br>• Re-engaged opportunity<br>• Opportunity has an overdue task<br>• Opportunity is overdue<br>• Opportunity has no open activity<br>• Unusual opportunity amount |

## Usage

This object is read-only and isn't supported in workflows, triggers, or process builder.

# OpportunityLineItem

Represents an opportunity line item, which is a member of the list of Product2 products associated with an Opportunity.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

The user must have the "Edit" permission on Opportunity records to create or update opportunity line items on an opportunity.

## Fields

| Field | Details |
|---|---|
| `CanUseQuantitySchedule` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the opportunity product can have a quantity schedule (`true`) or not (`false`). This field is read-only. |
| `CanUseRevenueSchedule` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the opportunity product can have a revenue schedule (`true`) or not (`false`). This field is read-only. |
| `ConnectionReceivedId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce. |
| `ConnectionSentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections. |
| `CurrencyIsoCode` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.<br>If the organization has multicurrency enabled, and a Pricebook2 isn'tspecified on the parent opportunity (that is, the `Pricebook2Id` field is blank on the opportunity referenced by this object's `OpportunityId`), then the value of this field must match the currency of the `CurrencyIsoCode` field on the PricebookEntry records that are associated with this object. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Text description of the opportunity line item. Limit: 255 characters. |
| `Discount` | **Type**<br>percent<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Discount for the product as a percentage.<br>When updating these records:<br>• If you specify `Discount` without specifying `TotalPrice`, the `TotalPrice` is adjusted to accommodate the new `Discount` value, and the `UnitPrice` is held constant.<br>• If you specify both `Discount` and `Quantity`, you must also specify either `TotalPrice` or `UnitPrice` so the system knows which one to automatically adjust. |
| `HasQuantitySchedule` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Read-only. Indicates whether a quantity schedule has been created for this object (`true`) or not (`false`). |
| `HasRevenueSchedule` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a revenue schedule has been created for this object (`true`) or not (`false`).<br>If this object has a revenue schedule, the `Quantity` and `TotalPrice` fields can't be updated. In addition, the `Quantity` field can't be updated if this object has a quantity schedule. Update requests aren't rejected but the updated values are ignored. |
| `HasSchedule` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If either `HasQuantitySchedule` or `HasRevenueSchedule` is `true`, this field is also `true`. |
| `LastReferencedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. Available in API version 50.0 and later. |
| `LastViewedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. Available in API version 50.0 and later. |
| `ListPrice` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Corresponds to the `UnitPrice` on the PricebookEntry that is associated with this line item, which can be in the standard price book or a custom price book. A client application |

| Field | Details |
| --- | --- |
| | can use this information to show whether the unit price (or sales price) of the line item differs from the price book entry list price. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The opportunity line item name (known as "Opportunity Product" in the user interface). This read-only field is available in API version 30.0 and later. |
| `OpportunityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the associated Opportunity.<br>This is a relationship field.<br>**Relationship Name**<br>Opportunity<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Opportunity |
| `PricebookEntryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Required. ID of the associated PricebookEntry. Exists only for those organizations that have Products enabled as a feature. In API versions 1.0 and 2.0, you can specify values for either this field or `ProductId`, but not both. For this reason, both fields are declared nillable. In API version 3.0 and later, you must specify values for this field instead of `ProductId`.<br>This is a relationship field.<br>**Relationship Name**<br>PricebookEntry<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PricebookEntry |

| Field | Details |
| --- | --- |
| `ProductId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Nillable<br>**Description**<br>ID of the related Product record. This field is unavailable as of version 3.0 and is only provided for backward compatibility. The Product object is unavailable beginning with version 8.0. Use the `PricebookEntryId` field instead, specifying the ID of the PricebookEntry record.<br>This is a relationship field.<br>**Relationship Name**<br>Product2<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Product2 |
| `Product2Id` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related Product2 record. This is a read-only field available in API version 30.0 and later.<br>Use the `PricebookEntryId` field instead, specifying the ID of the PricebookEntry record. |
| `ProductCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This read-only field is available in API version 30.0 and later. It references the value in the ProductCode field of the related Product2 record. |
| `Quantity` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Read-only if this record has a quantity schedule, a revenue schedule, or both a quantity and a revenue schedule.<br>When updating these records: |

| Field | Details |
| --- | --- |
| | • If you specify `Quantity` without specifying the `UnitPrice`, the `UnitPrice` value is adjusted to accommodate the new `Quantity` value, and the `TotalPrice` is held constant.<br>• If you specify both `Discount` and Quantity, you must also specify either `TotalPrice` or `UnitPrice` so the system can determine which one to automatically adjust. |
| `RecalculateTotalPrice` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Changes behavior of OpportunityLineItem calculations when a line item has child schedule rows for the `Quantity` value. When enabled, if the rollup quantity changes, then the quantity rollup value is multiplied against the sales price to change the total price. Product2 flag must be set to true. |
| `ServiceDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Date when the product revenue will be recognized and the product quantity will be shipped.<br>• Opportunity Close Date—`ServiceDate` is ignored.<br>• Product Date—`ServiceDate` is used if not `null`.<br>• Schedule Date—`ServiceDate` is used if not `null` and there are no revenue schedules present for this line item, that is, there are no OpportunityLineItemSchedule records with a field `Type` value of Revenue that are children of this record. |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Number indicating the sort order selected by the user. Client applications can use this to match the sort order in Salesforce. |
| `Subtotal` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Difference between standard and discounted pricing. Converted currency amounts when the opportunity's currency is different from the user's currency. |
| `TotalPrice` | **Type**<br>currency<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort, Update<br>**Description**<br>This field is available only for backward compatibility. It represents the total price of the OpportunityLineItem.<br>If you don't specify `UnitPrice`, this field is required. If you specify `Discount` and `Quantity`, this field or `UnitPrice` is required. When updating these records, you can change either this value or the `UnitPrice`, but not both at the same time.<br>This field is nillable, but you can't set both `TotalPrice` and `UnitPrice` to null in the same update request. To insert the `TotalPrice` via the API (given only a unit price and the quantity), calculate this field as the unit price multiplied by the quantity. This field is read-only if the opportunity line item has a revenue schedule. If the opportunity line item doesn't have a schedule or only has a quantity schedule, this field can be updated. |
| `UnitPrice` | **Type**<br>currency<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort, Update<br>**Description**<br>The unit price for the opportunity line item. In the Salesforce user interface, this field's value is calculated by dividing the total price of the opportunity line item by the quantity listed for that line item. Label is **Sales Price**.<br>This field or `TotalPrice` is required. You can't specify both.<br>If you specify `Discount` and `Quantity`, this field or `TotalPrice` is required. |

# Usage

An Opportunity can have associated OpportunityLineItem records only if the Opportunity has a Pricebook2. An OpportunityLineItem must correspond to a Product2 that is listed in the opportunity's Pricebook2. For information about inserting OpportunityLineItem for an opportunity that doesn't have an associated Pricebook2 or any existing line items, see Effects on Opportunities.

This object is defined only for orgs with products enabled as a feature. If the products feature isn't enabled, this object doesn't appear in the `describeGlobal()` call, and you can't use `describeSObjects()` or query the OpportunityLineItem object.

For a visual diagram of the relationships between OpportunityLineItem and other objects, see the Product & Price Book diagram.

Note:

- If the multicurrency option is enabled, the `CurrencyIsoCode` field is present. It can't be modified, and is always set to the value of the `CurrencyIsoCode` of the parent Opportunity.
- If customizable product schedules are enabled, you can use custom fields in default schedules and customize their layout. But if you've applied validation rules or Apex triggers, they're bypassed when they're first inserted.

## Effects on Opportunities

Opportunities with associated OpportunityLineItem records are affected in the following ways:

- Creating an OpportunityLineItem increments the Opportunity `Amount` value by the `TotalPrice` of the OpportunityLineItem. Additionally, inserting an OpportunityLineItem increments the `ExpectedRevenue` on the opportunity by the `TotalPrice` times the opportunity `Probability`.
- The Opportunity `Amount` becomes a read-only field when the opportunity has line items. The API ignores any attempt to update this field on an opportunity with line items. Update requests aren't rejected, but the updated value is ignored.
- You can't update the `PricebookId` field or the `CurrencyIsoCode` field on the opportunity if line items exist. The API rejects any attempt to update these fields on an opportunity with line items.
- When you create or update an OpportunityLineItem, the API verifies that the line item corresponds to a PricebookEntry in the Pricebook2 associated with the opportunity.
  - If the opportunity has an associated active or inactive Pricebook2, the OpportunityLineItem is created or updated.
  - If the opportunity doesn't have an associated Pricebook2, but the OpportunityLineItem corresponds to a PricebookEntry in an active Pricebook2 where the PricebookEntry has a `CurrencyIsoCode` value that matches the `CurrencyIsoCode` value of the opportunity, the API automatically sets this PriceBook2 on the opportunity.
  - If the opportunity doesn't have an associated Pricebook2, but the line item corresponds to a PricebookEntry in a Pricebook2 that isn't active or that has a `CurrencyIsoCode` value that does not match the `CurrencyIsoCode` value of the opportunity, an error is returned.
- The Opportunity `HasOpportunityLineItem` field is set to `true` when an OpportunityLineItem is inserted for that Opportunity.
- When OpportunityLineItem records are directly deleted, they aren't sent to the recycle bin and can't be undeleted. The `getDeleted()` call shows deleted OpportunityLineItem records until they're purged, which is usually within the same day or the next day.
- In Lightning, the `ListPrice`, `Name`, and `ProductCode` fields aren't populated before insert because their values are computed after the OpportunityLineItem.Product2Id value is saved. To access a value from these fields, use an After Insert trigger.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**OpportunityLineItemChangeEvent (API version 60.0)**
Change events are available for the object.

SEE ALSO:

OpportunityLineItemSchedule

# OpportunityLineItemSchedule

Represents information about the quantity, revenue distribution, and delivery dates for a particular `OpportunityLineItem`.

In API version 38.0 and later, when an OpportunityLineItem record is created for a product with a previously established schedule, an OpportunityLineItemSchedule record is also created.

In API version 46.0 and later, this object supports custom fields, validation rules, and Apex triggers. Deleting a schedule now also invokes delete triggers. If customizable product schedules are enabled, you can use custom fields in default schedules and customize their layout. But if you've applied validation rules or Apex triggers, they're bypassed when they're first inserted.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Restricted picklist, Update<br>**Description**<br>Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. This field is available in version 10.0 and later. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Text description of the opportunity line item schedule. Limit: 80 characters. Label is **Comments**. |
| `OpportunityLineItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter<br>**Description**<br>Required. ID of the associated `OpportunityLineItem`. |
| `Quantity` | **Type**<br>double |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Required. The total number of units to be scheduled in a quantity schedule. |
| `Revenue` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The revenue that should be recognized, or the quantity that should be shipped, or both - depending upon the value of `Type`. |
| `ScheduleDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The date the associated `OpportunityLineItem` is to be scheduled for an event: delivery, shipping, or any other date you wish to track. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of the schedule. Required when inserting an OpportunityLineItemSchedule. Valid values include `Quantity`, `Revenue`, or `Both`. |

## Allowed Type Field Values

The allowed `Type` values for an `OpportunityLineItemSchedule` depend on the product-level schedule preferences and whether the line item has any existing schedules. The following criteria must be met:

- The Product2 on which the `OpportunityLineItem` is based must have the appropriate `CanUseRevenueSchedule` or `CanUseQuantitySchedule` fields (or both) set to `true`.
- When you create a schedule for a line item that does not have any existing schedules, you can specify any valid value.
- If you create a schedule for a line item that already has existing schedules, the new schedule must be consistent with the existing schedules. The following matrix outlines the allowable values:

| Value of HasRevenueSchedule on line item | Value of HasQuantitySchedule on line item | Allowable Type Values |
|---|---|---|
| false | false | `Revenue`, `Quantity`, both |
| false | true | `Quantity` |
| true | false | `Revenue` |
| true | true | both |

## Allowed Quantity and Revenue Field Values

The allowable `Quantity` and `Revenue` field values depend on the value of the `Type` field:

| Type Value | Allowable Quantity Value | Allowable Revenue Value |
|---|---|---|
| `Revenue` | Null | Non-null |
| `Quantity` | Non-null | Null |
| both | Non-null | Non-null |

The `Quantity` and `Revenue` fields have the following restrictions when this object is updated:

- For a schedule of `Type` `Quantity`, you can't update a null `Revenue` value to non-null. Likewise for a schedule of `Type` `Revenue`, you can't update a null `Quantity` value to non-null.
- You can't null out the `Quantity` field for a schedule of `Type` `Quantity`. Likewise you can't null out the `Revenue` field for a schedule of `Type` `Revenue`.
- You can't null out either the `Revenue` or `Quantity` fields for a schedule of type `Both`.

## Usage

`OpportunityLineItemSchedule` supports two types of schedules:

- `Quantity` schedules
- `Revenue` schedules

The user must have edit access rights on the Opportunity in order to create or update line item schedules on that opportunity.

## Products and Schedules Must Be Enabled

The `OpportunityLineItemSchedule` object is defined only for those organizations that have the products and schedules features enabled. If the organization does not have the products and schedules features, the `OpportunityLineItemSchedule` object is not returned in a describe, and you can't describe or query `OpportunityLineItemSchedule` records.

## Effects on Opportunities and Opportunity Line Items

`OpportunityLineItemSchedule` records affect opportunities and opportunity line items in the following ways:

- Inserting an `OpportunityLineItemSchedule` of `Type` "Revenue" or "Quantity" increments the `TotalPrice` field on the `OpportunityLineItem` by the `OpportunityLineItemSchedule` `Revenue` amount. Inserting an `OpportunityLineItemSchedule` of `Type` `Quantity` or `Both` increments the `Quantity` field on the `OpportunityLineItem` by the `OpportunityLineItemSchedule` `Quantity` amount.
- Creating an OpportunityLineItemSchedule record affects the original opportunity:
  1. The Opportunity `Amount` is incremented the by `OpportunityLineItemSchedule` revenue amount
  2. The Opportunity `ExpectedRevenue` is incremented by the line item schedule amount multiplied by the Opportunity `Probability`
- Deleting an `OpportunityLineItemSchedule` has a similar effect on the related `OpportunityLineItem`and Opportunity. Deleting an `OpportunityLineItemSchedule` decrements the `OpportunityLineItem` `TotalPrice` by the deleted `OpportunityLineItemSchedule` `Quantity` or `Revenue` amount. The Opportunity `Amount` is also decremented by the `OpportunityLineItemSchedule` `Quantity` or `Revenue` amount, and the Opportunity `ExpectedRevenue` is reduced by `OpportunityLineItemSchedule` `Quantity` or `Revenue` amount multiplied by the Opportunity `Probability`.

## Deleting an Opportunity Line Item Schedule

Deleting the last remaining schedule will set the corresponding `HasQuantitySchedule` or `HasRevenueSchedule` flags (or both) to `false` on the parent line item.

OpportunityLineItem

Product2

# OpportunityLineItemSplit

Represents information about an opportunity product split, including percentages, amounts, and owner. This object is available in API version 58.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Before creating OpportunityLineItemSplit records, enable Team Selling, set up opportunity splits, and enable product splits on at least one opportunity split type in Setup.

# Fields

| Field | Details |
| --- | --- |
| `ArchivedTerritoryName` | **Type**<br>String<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the associated territory that's on an archived territory model. If the OpportunityLineItemSplit isn't associated with a territory on an archived territory model, the field value is null. This field is available in API version 62.0 and later. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.<br>If the organization has multicurrency enabled, and a Pricebook2 is specified on the opportunity (that is, the Pricebook2Id field isn't blank on the opportunity referenced by this object's OpportunityId), then the value of this field must match the currency of the CurrencyIsoCode field on the PricebookEntry records that are associated with this object.<br>Possible values are:<br>• `BRL`—Brazilian Real<br>• `CAD`—Canadian Dollar<br>• `EUR`—Euro<br>• `USD`—U.S. Dollar<br>The default value is `USD`. |
| `OpportunityLineItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the associated parent OpportunityLineItem. This field is a relationship field.<br>**Relationship Name**<br>OpportunityLineItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OpportunityLineItem |

| Field | Details |
| --- | --- |
| `Split` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Read-only. Automatically generated number identifying the split within the opportunity. |
| `SplitAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount or value of the split. |
| `SplitNote` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Optional text about the split. |
| `SplitOwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the user who is the owner of the split. This field is a relationship field.<br>**Relationship Name**<br>SplitOwner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `SplitPercentage` | **Type**<br>percent<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The percentage of the OpportunityLineItem's value that the split represents. |

| Field | Details |
| --- | --- |
| SplitTypeId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the associated OpptyLineItemSplitType. This field is a relationship field.<br>**Relationship Name**<br>SplitType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OpptyLineItemSplitType |
| Territory2Id | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the associated territory. This field is a relationship field, and is available in API version 62.0 and later.<br>**Relationship Name**<br>Territory2<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Territory2 |

# Usage

Use the OpportunityLineItemSplit object to manage opportunity product splits for an opportunity.

# Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**OpportunityLineItemSplitHistory on page 63 (API version 59.0)**
History is available for tracked fields of the object.

# OpportunityOwnerSharingRule

Represents a rule for sharing an opportunity with users other than the owner.

Note: To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The SharingRules Metadata API type is enabled for all orgs.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Rule Name** in the user interface.<br>This field is available in API version 24.0 and later.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record. |
| `GroupId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID representing the source group. Opportunities owned by users in the source group trigger the rule to give access. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to **Label** on the user interface. |
| `OpportunityAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A value that represents the type of sharing being allowed. The possible values are:<br>• `Read`<br>• `Edit` |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID representing the target user or group. The target user or group is being given access. |

## Usage

Use this object to manage the sharing rules for opportunities. General sharing and Territory-related sharing use this object.

Case

*Metadata API Developer Guide*: SharingRules

# OpportunityPartner

This object represents a partner relationship between an Account and an Opportunity. An OpportunityPartner record is created automatically when a Partner record is created for a partner relationship between an account and an opportunity.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

| Field | Details |
|---|---|
| `AccountToId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the partner Account in the partner relationship.<br>This is a relationship field.<br>**Relationship Name**<br>AccountTo<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `IsPrimary` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the account is the opportunity's primary partner (`true`) or not (`false`). Label is **Primary**. |
| `OpportunityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the Opportunity that is in the partner relationship.<br>This is a relationship field.<br>**Relationship Name**<br>Opportunity<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Opportunity |
| `ReversePartnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the reciprocal OpportunityPartner record in a partner relationship. |
| `Role` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The UserRole that the Account has on the Opportunity. For example, `Reseller` or `Manufacturer`. |

## Creating an Account-Opportunity Partner Relationship

When you create a partner relationship between an account and an opportunity (when you create a Partner record and specify the `OpportunityId` field), the API automatically creates two OpportunityPartner records, one for the forward relationship and one for the reverse.

- The value of the Partner field `AccountToId` maps to the value of the OpportunityPartner field `AccountToId`.
- The values of the `OpportunityId`, `Role`, and `IsPrimary` fields in both the Partner and OpportunityParnter records are the same.
- If you set the `IsPrimary` value to 1 (`true`) upon insert of a new OpportunityPartner, the `IsPrimary` value is automatically set to 0 (`false`) for any existing primary partners for that opportunity.

This mapping allows the API to manage the records and their relationships efficiently.

Partner

AccountPartner

# OpportunityRelatedDeleteLog

Represents an audit log of the deletion of opportunity-related child records, such as opportunity team members, product splits, or opportunity splits. This object is available in API version 59.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Available only when the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization.<br>When multicurrency is enabled, and a Pricebook2 is specified on the parent opportunity (that is, the `Pricebook2Id` field isn't blank on the opportunity record referenced by this object's `OpportunityId`), then the value must match the currency of the `CurrencyIsoCode` field on the PricebookEntry records that are associated with this object.<br>Possible values are:<br>• `AED`—UAE Dirham<br>• `CAD`—Canadian Dollar<br>• `INR`—Indian Rupee<br>• `USD`—U.S. Dollar<br>The default value is `USD`. |
| `DataType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Data type of the field that was deleted.<br>Possible values are:<br>• `Double`<br>• `DynamicEnum`<br>• `EntityId` |

| Field | Details |
| --- | --- |
| | • `StaticEnum`<br>• `Text` |
| `DeleteLog` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort |
| `FieldName` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The name of the field that was deleted.<br>Possible values are:<br>• `OpportunityLineItemSplit.SplitOwnerId`<br>• `OpportunityLineItemSplit.SplitPercentage`<br>• `OpportunityLineItemSplit.SplitTypeId`<br>• `OpportunitySplit.SplitOwnerId`<br>• `OpportunitySplit.SplitPercentage`<br>• `OpportunitySplit.SplitTypeId`<br>• `OpportunityTeamMember.TeamMemberRole`<br>• `OpportunityTeamMember.UserId`<br>• `Product2.Name` |
| `OpportunityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Required. ID of the associated opportunity.<br>This field is a relationship field.<br>**Relationship Name**<br>Opportunity<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Opportunity |

| Field | Details |
| --- | --- |
| `Parent` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the record that was deleted. Records with the same Parent text indicate that the value shown in the Value field came from the same record that was previously deleted. Refer to the FieldName field to see which field is being tracked. |
| `SobjectType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The object that's being recorded for this row of data. Possible values are:<br>• `OpportunityLineItemSplit`<br>• `OpportunitySplit`<br>• `OpportunityTeamMember` |
| `Value` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The value of the field that was deleted. |

# OpportunityShare

Represents a sharing entry on an Opportunity.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

## Supported Calls

`describeSObjects()`, `create()`, `delete()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only users with access to the Opportunity object can access this object.

## Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

| Field | Details |
|---|---|
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `OpportunityAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Level of access that the user or group has to the opportunity. The possible values are:<br>• `Read`<br>• `Edit`<br>• `All`—This value is not valid when creating, updating, or deleting records.<br>This field must be set to an access level that's higher than the org's default access level for opportunities. |
| `OpportunityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the opportunity associated with this sharing entry. This field can't be updated.<br>This is a relationship field.<br>**Relationship Name**<br>Opportunity<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Opportunity |

| Field | Details |
| --- | --- |
| `RowCause` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited.<br>Valid values include:<br>• `Owner`—The User is the owner of the opportunity.<br>• `Manual`—The User or Group has access because a user with "All" access manually shared the opportunity with the user or group.<br>• `Rule`—The User or Group has access via an opportunity sharing rule.<br>• `GuestRule`—The User or Group has access via an opportunity guest user sharing rule.<br>• `ImplicitChild`—The User or Group has access to the opportunity on the account associated with this opportunity. After faster account sharing recalculation is enabled, sharing entries with this value aren't returned in queries. Instead of storing implicit child shares, record access is determined dynamically.<br>• `LpuImplicit`—The User has access to records owned by high-volume Experience Cloud site users via a share group.<br>• `ARImplicit`—The User, who belongs to a partner or customer account, has access to the opportunity via an account relationship data sharing rule.<br>• `Sales Team`—The User has access to the opportunity because the user is on the opportunity sales team for the opportunity. The OpportunityTeamMember object sets the access level. See OpportunityTeamMember for more information.<br>• `Territory`—The forecast manager has access because they are assigned to a territory above the territory that is assigned the opportunity. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the user or group that has been given access to the opportunity. This field can't be updated.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>UserOrGroup<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Group, User |

## Usage

This object allows you to determine which users and groups can view or edit opportunities owned by other users.

Note: After faster account sharing recalculation is enabled for your org, we no longer store implicit share records between accounts and their child opportunity records. Sharing entries that have a value of `ImplicitChild` in the `RowCause` field aren't returned when you query this object. Instead, the system dynamically determines whether users can access child opportunity records when they try to access them. This change speeds up ownership and sharing recalculation for accounts.

For more information, see the Faster Account Sharing Recalculation knowledge article.

If you attempt to create a record that matches an existing record, any modified fields are updated, the system returns the existing record.

If an opportunity is shared in multiple ways with a user, you don't always see multiple sharing records. If a user has access to an opportunity for one or more of the following RowCause values, the records in the OpportunityShare object are compressed into one record with the highest level of access.

- `Manual`
- `Owner`

Overview of Salesforce Objects and Fields

# OpportunitySplit

OpportunitySplit credits one or more opportunity team members with a portion of the opportunity amount. This object is available in API version 16.0 and later for pilot customers, and version 28.0 and later for others.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `ArchivedTerritoryName` | **Type**<br>String<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of the associated territory that's on an archived territory model. If the OpportunityLineItemSplit isn't associated with a territory on an archived territory model, the field value is null. This field is available in API version 62.0 and later. |
| `HasOpportunityLineItemSplit` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Read-only. Indicates whether the opportunity split has a split on the opportunity line item level (`true`) or not (`false`).<br>The default value is `false`. This field is available in API version 58.0 and later. |
| `OpportunityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the opportunity for which the split is being created.<br>This field is a relationship field.<br>**Relationship Name**<br>Opportunity<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Opportunity |
| `Split` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Read-only. Automatically generated number identifying the split within the opportunity. |
| `SplitAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Monetary amount of the split.<br>Label is `Split Amount`. |
| `SplitNote` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Enter any notes or comments about the split. The character limit is 255.<br>Label is `Split Note`. |
| `SplitOwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The opportunity owner.<br>This field is a relationship field.<br>**Relationship Name**<br>SplitOwner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `SplitPercentage` | **Type**<br>percent<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Split percentage that this team member receives. If the split type is validated to a 100% total, this number can range from 0 to 100. If the total isn't validated, this number can range from 0 to 1,000.<br>Label is `Split (%)`. |
| `SplitTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Auto-generated, numeric ID for the split type defined by the OpportunitySplitType object. This field is available in API version 28 and later.<br>If this field is blank, the system automatically specifies the default split type for the opportunity amount, which is validated to 100%.<br>This field is a relationship field.<br>**Relationship Name**<br>SplitType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OpportunitySplitType |
| `Territory2Id` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the associated territory. This field is a relationship field, and is available in API version 62.0 and later.<br>**Relationship Name**<br>Territory2<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Territory2 |

## Usage

Use the OpportunitySplit object to manage splits for an opportunity.

If you change the opportunity owner using the API, the old owner remains on the opportunity team with either Read-only access, or the level of access specified in your organization-wide defaults.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**OpportunitySplitChangeEvent (API version 48.0)**
Change events are available for the object.

**OpportunitySplitHistory on page 63 (API version 59.0)**
History is available for tracked fields of the object.

# OpportunitySplitType

OpportunitySplitType provides unique labels and behavior for each split type. This object is available in API version 28.0 and later.

There are two default split types: revenue splits, which must total 100%, and overlay splits, which can total any percentage.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

## Fields

| Field Name | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Describes the purpose of the split type, providing context to future developers. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The unique name of the object in the API. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Enables or disables the split type. |
| `IsTotalValidated` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `true`, the split must total 100%. If `false`, the split can total any percentage. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates language of split labels in the user interface. |
| `ManageableState` | **Type**<br>ManageableState enumerated list<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates the manageable state of the specified component that is contained in a package:<br>• `beta`<br>• `deleted`<br>• `deprecated`<br>• `deprecatedEditable`<br>• `installed`<br>• `installedEditable`<br>• `released`<br>• `unmanaged`<br>This field is available in API version 38.0 and later. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The user-interface label for the split type. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.<br>This field can't be accessed unless the logged-in user has the Customize Application permission. |
| `SplitEntity` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The containing record type, such as an opportunity. Available in API version 30 and later. |
| `SplitField` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Indicates which currency field of the opportunity object is split. Available in API version 30 and later. |
| `SplitDataStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable,Restricted picklist, Sort,Update<br>**Description**<br>Indicates the status of the split type. Available in API version 30 and later. |

# OpportunityStage

Represents the stage of an Opportunity in the sales pipeline, such as New Lead, Negotiating, Pending, Closed, and so on.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `ApiName` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Uniquely identifies a picklist value so it can be retrieved without using an id or master label. |
| `DefaultProbability` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort,<br>**Description**<br>The default percentage estimate of the confidence in closing a specific opportunity for this opportunity stage value. Label is **Probability (%)**. |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Description of this opportunity stage value. Limit: 255 characters. |
| `ForecastCategory` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The default forecast category for this opportunity stage value. The forecast category automatically determines how opportunities are tracked and totaled in a forecast.<br>Possible values are:<br>• `BestCase` |

| Field | Details |
| --- | --- |
| | • `Closed`<br>• `Forecast`<br>• `MostLikely`<br>• `Omitted`<br>• `Pipeline` |
| `ForecastCategoryName` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Available in API version 12.0 and later. The default forecast category value for this opportunity stage value.<br>Possible values are:<br>• `Best Case`<br>• `Closed`<br>• `Commit`<br>• `Most Likely`<br>• `Omitted`<br>• `Pipeline` |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this opportunity stage value is active (`true`) or not (`false`). Inactive opportunity stage values are not available in the picklist and are retained for historical purposes only. |
| `IsClosed` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this opportunity stage value represents a closed opportunity (`true`) or not (`false`). Multiple opportunity stage values can represent a closed opportunity. Label is **Closed**. |
| `IsWon` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this opportunity stage value represents a won opportunity (`true`) or not (`false`). Multiple opportunity stage values can represent a won opportunity. Label is **Won**. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Master label for this opportunity stage value. This display value is the internal label that does not get translated. Limit: 255 characters. |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number used to sort this value in the opportunity stage picklist. These numbers are not guaranteed to be sequential, as some previous opportunity stage values might have been deleted. |

## Usage

This object represents a value in the opportunity stage picklist, which provides additional information about the stage of an Opportunity, such as its probability or forecast category. Query this object to retrieve the set of values in the opportunity stage picklist, and then use that information while processing Opportunity records to determine more information about a given opportunity. For example, the application could test whether a given opportunity is won or not based on its `StageName` value and the value of the `IsWon` property in the associated OpportunityStage object.

This object is read-only via the API.

Overview of Salesforce Objects and Fields

# OpportunityTag

Associates a word or short phrase with an Opportunity.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
| --- | --- |
| `ItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter<br>**Description**<br>ID of the tagged item. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter<br>**Description**<br>Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically. |
| `TagDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter<br>**Description**<br>ID of the parent TagDefinition object that owns the tag. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Restricted picklist<br>**Description**<br>Defines the visibility of a tag.<br>Valid values:<br>• `Public`—The tag can be viewed and manipulated by all users in an organization.<br>• `Personal`—The tag can be viewed or manipulated only by a user with a matching `OwnerId`. |

## Usage

OpportunityTag stores the relationship between its parent TagDefinition and the Opportunity being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

# OpportunityTeamMember

Represents a User on the opportunity team of an Opportunity.

See also UserTeamMember, which represents a User who is on the default Opportunity team of another user.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.<br>Note: An OpportunityTeamMember that is deleted isn't moved to the Recycle Bin and can't be undeleted, unless the record was cascade-deleted when deleting a related Opportunity. For directly deleted OpportunityTeamMember records, don't use the `isDeleted` field to detect deleted records in SOQL queries. Instead, use `getDeleted()`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The team member name. This read-only field is available in API version 30.0 and later. |
| `OpportunityAccessLevel` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Restricted picklist<br>**Description**<br>Opportunity access level for this team member. Valid values:<br>• `Read`<br>• `Edit`<br>• `All`<br>This field is supported in triggers, but not in workflows or validation rules. It's editable in API version 36.0 and later. |
| `OpportunityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter<br>**Description**<br>Required. ID of the Opportunity associated with this opportunity team. This field can't be updated. |
| `PhotoURL` | **Type**<br>URL<br>**Properties**<br>Filter, Nillable, Sort, Group<br>**Description**<br>Read only. Retrieves the users Chatter photo URL. This field is available in API version 32.0 and later. |
| `TeamMemberRole` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>Role that the team member has on the opportunity. The org's admin sets the valid values in the Opportunity Team Roles picklist. Label is **Team Role**. |
| `Title` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort, Group<br>**Description**<br>Read only. Retrieves the user's title. This field is available in API version 36.0 and later. |

| Field | Details |
| --- | --- |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter<br>**Description**<br>Required. ID of the User who is a member of the opportunity team. This field can't be updated. |

## Usage

If you create a record for this object and the `OpportunityId` and `UserId` combination matches an existing record, the system updates any modified fields and returns the existing record.

In the user interface, users can set up an opportunity team for the opportunities they own. The opportunity team includes other users that are working on the opportunity with them. This object is available only in organizations that have enabled team selling.

Note: The behavior for changing ownership of opportunities is different using the user interface when the previous owner is on an opportunity team. For example, when you change the owner of an opportunity using the API, the previous owner's access becomes Read Only or the access specified in your organization-wide default for opportunities, whichever is greater. However, performing this same action in the user interface allows you to select the access level for the previous owner when the previous owner is on an opportunity team.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**OpportunityTeamMemberHistory on page 63 (API version 59.0)**
History is available for tracked fields of the object.

SEE ALSO:

UserTeamMember

# OpptyLineItemSplitType

Represents an opportunity product split type. This object is available in API version 58.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

# Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Text description of the opportunity line item split type. Limit: 80 characters. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The developer (API) name of the opportunity line item split type. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the opportunity line item split type is active (`true`) or not (`false`). The value of this field is inherited from the `IsActive` field of the parent OpportunitySplitType record. |
| `IsTotalValidated` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the OpportunityLineItemSplit records associated with the OpportunityLineItem must have SplitPercent values that aggregate to 100% (`true`) or not (`false`). The value of this field is inherited from the `IsTotalValidated` field of the parent OpportunitySplitType record. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language of the opportunity line item split type. |

| Field | Details |
| --- | --- |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The opportunity line item split type label. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. |
| `OpportunitySplitTypeId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the parent OpportunitySplitType. Every OpptyLineItemSplitType must have a parent OpportunitySplitType. This field is a relationship field.<br>**Relationship Name**<br>OpportunitySplitType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OpportunitySplitType |
| `SplitDataStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The state of the asynchronous job to delete OpportunityLineItemSplit records when the associated OpptyLineItemSplitType record is deleted. Possible values are:<br>• `DeletionFailed`–The job failed the last time it ran.<br>• `Ready`–The job hasn't run or isn't running. OpportunityLineItemSplit records associated with the OpptyLineItemSplitType can be interacted with.<br>• `ToBeDeleted`–The job is running. |

| Field | Details |
| --- | --- |
| `SplitEntity` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Name or ID of the entity that contains the field being split. In API version 58.0, this value is always OpportunityLineItem. |
| `SplitField` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Name or ID of the field on OpportunityLineItem that is being split. If it's a standard field, then the value is the API name of the field. If it's a custom field, the value is the custom field definition ID. |

## Usage

When an OpportunitySplitType has product splits enabled in Setup, then an OpptyLineItemSplitType record is created. For example, if there is an OpportunitySplitType record with a SplitField of `Amount` and product splits is enabled in Setup, then there is an OpptyLineItemSplitType record with a SplitField of `TotalPrice` (since the TotalPrice field rolls up to Amount).

# Order

Represents an order associated with a contract or an account.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Required. ID of the Account associated with this order. Can only be updated when the order's `StatusCode` value is *`Draft`*.<br>This is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `ActivatedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the User who activated this order.<br>This is a relationship field.<br>**Relationship Name**<br>ActivatedBy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `ActivatedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>Date and time when the order was activated. |
| `BillingAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description** |
| `BillingCity` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>City for the billing address for this order. Maximum size is 40 characters. |
| `BillingCountry` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Country for the billing address for this order. Maximum size is 80 characters. |
| `BillingCountryCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ISO country code for the billing address for this order. |
| `BillingEmailAddress` | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Email address for this order's billing address.<br>To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License.<br>This field is available in API v48.0 and later. |
| `BillingGeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Accuracy level of the geocode of the address. |
| `BillingLatitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Used with `BillingLongitude` to specify the precise geolocation of a billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. |
| `BillingLongitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `BillingLatitude` to specify the precise geolocation of a billing address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. |
| `BillingPhoneNumber` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Phone number for this order's billing address.<br>To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License.<br>This field is available in API v48.0 and later. |
| `BillingPostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Postal code for the billing address for this order. Maximum size is 20 characters. |
| `BillingState` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>State for the billing address for this order. Maximum size is 80 characters. |
| `BillingStateCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>ISO state code for the order's billing address. |
| `BillingStreet` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Street address for the billing address. |
| `BillToContactId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the contact that the order is billed to. |
| `CompanyAuthorizedById` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the user who authorized the account associated with the order.<br>This is a relationship field.<br>**Relationship Name**<br>CompanyAuthorizedBy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `CompanyAuthorizedDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date on which your organization authorized the order. |
| `ContractId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the contract associated with this order. Can only be updated when the order's `StatusCode` value is *`Draft`*.<br>This is a relationship field.<br>**Relationship Name**<br>Contract<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contract |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Three-letter ISO 4217 currency code. |
| `CustomerAuthorizedById` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the contact who authorized the order.<br>This is a relationship field.<br>**Relationship Name**<br>CustomerAuthorizedBy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `CustomerAuthorizedDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Date on which the contact authorized the order. |

| Field Name | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Description of the order. |
| `EffectiveDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Date at which the order becomes effective. Label is **Order Start Date**. |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Date at which the order ends. Label is **Order End Date**. |
| `GrandTotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Sum of `TotalAmount` and `TotalTaxAmount`.<br>To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License.<br>This field is available in API v48.0 and later. |
| `IsReductionOrder` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Read-only. Determines whether an order is a reduction order. Label is **Reduction Order**. |
| `LastReferencedDate` | **Type**<br>dateTime |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last interacted with this record, directly or indirectly. Some sample scenarios are: |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Name for this order. |
| `OpportunityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID for the opportunity that's associated with this order. |
| `OrderedDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time that the order was placed.<br>To access Commerce Orders fields, your org must have a Salesforce Order Management license or a B2B Commerce License.<br>This field is available in API v48.0 and later. |
| `OrderManagementReferenceIdentifier` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>This field is used by Order Management to store the external reference Identifier for B2C Commerce orders. On creation, the B2C Integration sets this value to *B2C realm ID* + "_" + *B2C instance ID* + "@" + *B2C Commerce catalog/domain ID* + "@" + *B2C Commerce order number*. Otherwise, it isn't set.<br>When you create an OrderSummary, if you don't specify an ExternalReferenceIdentifier value, it's set to this value. If this value is null, then the system generates a value for ExternalReferenceIdentifier. This value isn't required to be unique in an organization, but the OrderSummary ExternalReferenceIdentifier is.<br>This field is available in API version 56.0 and later. |
| `OrderNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Order number assigned to this order (not the unique, system-generated ID assigned during creation). Maximum size is 30 characters. |
| `OrderReferenceNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Order reference number assigned to this order. Maximum size is 80 characters. |
| `OriginalOrderId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>Optional. ID of the original order that a reduction order is reducing, if the reduction order is reducing a single order. Label is **Original Order**.<br>Editable only if `isReductionOrder` is *true*. If the reduction order is reducing more than one order, leave blank.<br>This is a relationship field.<br>**Relationship Name**<br>OriginalOrder |

| Field Name | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Order |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Required. ID of the User or queue that owns this order.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PaymentTermId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related payment term. This field is available in API version 55.0 and later. This field is available if Subscription Management is enabled in your org.<br>This is a relationship field.<br>**Relationship Name**<br>PaymentTerm<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentTerm |
| `PoDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Date of the purchase order. |

| Field Name | Details |
| --- | --- |
| `PoNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Number identifying the purchase order. Maximum is 80. |
| `Pricebook2Id` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required. ID of the price book associated with this order.<br>This is a relationship field.<br>**Relationship Name**<br>Pricebook2<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Pricebook2 |
| `QuoteId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the quote that's associated with this order.<br>If you set `QuoteId` to null, `QuoteLineItemId` on all of the order's child order products is set to null. |
| `RecordTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the record type assigned to this order. |
| `RelatedOrderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |

| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If you want to show more information about your order, you can add custom values to the `Type` picklist. By default, the `Type` field doesn't perform any actions or show any values. |

## Usage

The `Status` field specifies the current state of an order. Status strings represent its current state (*`Draft`* or *`Activated`*).

When a client application creates an order, the `Status Code` must be *`Draft`* and the `Status` must be any value that corresponds to a `Status Code` of *`Draft`*. The application can then activate an order by updating it and setting the value in its `Status` field to an *`Activated`* state; however, the `Status` field is the only field you can update when activating the order.

After an order is activated, your client application can change the `Status` back to the *`Draft`* state—but only if the order doesn't have any child reduction order products. Your client application can delete orders when the `Status` is *`Draft`* but not when its `Status` is *`Activated`*.

Client applications can use the API to create, update, delete, and query any Attachment associated with an order.

## Orders Without Price Books

If your organization manages products and Price books in an external platform, you can use Salesforce API to create orders and order items without values for their Price book and Price book entry fields. This feature is available only for Salesforce orgs with the B2B Commerce, B2B Commerce Starter, B2B Commerce Growth, or B2B Commerce Plus packages. Admins enable orders without Price books by going to Salesforce Order Settings and selecting the Optional Price Book setting.

In a standard order, Salesforce prompts the sales rep to select a Price book when they add the first order product to the order. The sales rep can then add order products that have price book entries in the selected price book. In an order without a Price book, Salesforce hides the order's Add Products button and Edit Products button so that sales reps must manage their products and price books using their external system.

You can create orders without Price books only by creating an order with Salesforce API and leaving the `Pricebook2Id` field null. Orders without Price books follow several different guidelines compared to standard orders.

- Orders without price books don't support reduction orders or change orders.
- Order products without price book entries require list prices.
- Orders without price books support only order items without price book entries. Orders with price books support only order items with price book entries.
- Important: Orders without Price books are supported with B2B licenses only. Salesforce Order Management requires price books for orders and price book entries for order products.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**OrderChangeEvent (API version 44.0)**
Change events are available for the object.

**OrderFeed (API version 29.0)**
Feed tracking is available for the object.

**OrderHistory**
History is available for tracked fields of the object.

**OrderOwnerSharingRule**
Sharing rules are available for the object.

# OrderAction

Indicates the type of order, such as a new sale or a cancellation. This object is available in API version 55.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

This object is available if Subscription Management is enabled in your org.

## Fields

| Field | Details |
|---|---|
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name given to the order action. |
| `OffsetOrderItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the previous order item that is being modified by the business action. For example, the order that is being canceled.<br>This is a relationship field.<br>**Relationship Name**<br>OffsetOrderItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderItem |
| `OrderId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The order containing the order item that implements the business action.<br>This is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Order<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Order |
| `SourceAssetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The asset that is changed as a result of the business action. For example, the asset that is being canceled.<br>This is a relationship field.<br>**Relationship Name**<br>SourceAsset<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Asset |
| `Subtype` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The subtype of the action on the order line item.<br>Valid values are:<br>• `FieldAmendment`<br>• `Rollback`<br>• `StartDateAdjustment`<br>• `TransferFrom`<br>• `TransferTo`<br>This field is available with Revenue Cloud in API version 64.0 and later. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The business action that created the order product.<br>Valid values are:<br>• `Add`<br>• `Amend`<br>• `Cancel`<br>• `No Change`<br>• `Renew`<br>• `Transfer`—Available with Revenue Cloud in API version 65.0 and later. |

# OrderAdjustmentGroup

Group containing a set of adjustments applied to an order. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

## Fields

| Field | Details |
| --- | --- |
| `AdjustmentBasisReferenceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>References the specific coupon applied.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>AdjustmentBasisReference<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Coupon<br>This field is available in API version 54.0 and later.<br>This field can only refer to Coupon when B2B Commerce is enabled. |
| `AdjustmentCauseId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>References the specific promotions applied.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>AdjustmentCause<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PriceAdjustmentTier, Promotion<br>This field is available in API version 52.0 and later.<br>This field can only refer to Promotion when B2B Commerce is enabled. |
| `AdjustmentSource` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the origin of the adjustment.<br>Possible values are:<br>• `Discretionary`—The adjustment originates from a decision made by an individual, for example, a manager's discount granted to a client.<br>• `Promotion`—The adjustment originates from a promotion, for example, a holiday sale discount.<br>• `Rule`—Reserved for future use.<br>• `System`—The adjustment originates from the system, for example, a volume discount after the amount of items reaches a specific number.<br>This field is available in API version 57.0 and later. |
| `AdjustmentType` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the type of mathematical adjustment to be applied to the order.<br>Possible values are:<br>• `AdjustmentAmount`—The adjustment is a numerical amount, for example, a cash discount of 20.<br>• `AdjustmentPercentage`—The adjustment is a percentage amount, for example, a 10% discount.<br>• `OverrideAmount`—The adjustment is a manual price override.<br>This field is available in API version 57.0 and later. |
| `AdjustmentValue` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The specified `AdjustmentType`'s amount to be applied to the order.<br>For example, when the `AdjustmentType` value is `AdjustmentAmount`, the `AdjustmentValue` is expected to equal the value of the `TotalAmount` field.<br>When the `AdjustmentType` value is `AdjustmentPercentage`, the `AdjustmentValue` represents the percentage number, and the `TotalAmount` field's value will show the calculated adjustment amount.<br>This field is available in API version 57.0 and later. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The currency used for the checkout session. Default value is `USD`.<br>Possible values are:<br>• `USD`—U.S. Dollar |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>User-entered information about the order adjustment group. |

| Field | Details |
| --- | --- |
| `GrandTotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of all total amounts of all adjustments in this group, including tax. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The user-defined name of the order adjustment group. |
| `OrderId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The unique identifier of the order related to the adjustments in this order adjustment group.<br>This field is a relationship field.<br>**Relationship Name**<br>Order<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Order |
| `Priority` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>A numeric value that represents the order of precedence of the order adjustment group.<br>It can also represent the order of precedence when applying the `AdjustmentType` values. For example, an order can have two adjustments: a $100 discount and a 10% discount. This field will tell the pricing engine which adjustment needs to be applied first.<br>This field is available in API version 57.0 and later. |
| `RelatedAdjustmentGroupId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique identifier of the original order's adjustment group. This field is a useful reference in change order scenarios.<br>This field is a relationship field.<br>**Relationship Name**<br>RelatedAdjustmentGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderAdjustmentGroup |
| `TotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total of all order adjustments in this order adjustment group, excluding tax. |
| `TotalTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total tax for all order adjustments in this order adjustment group. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Indicates how the adjustment was applied to the order.<br>Possible values are:<br>• `Header`: — The adjustment was applied to the order's balance, and then distributed among the order products in the adjustment group.<br>• `SplitLine`— The adjustment was applied to order product balances for the order products in the adjustment group. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**OrderAdjustmentGroupChangeEvent on page 68**
Change events are available for the object.

**OrderAdjustmentGroupFeed on page 55**
Feed tracking is available for the object.

**OrderAdjustmentGroupHistory on page 63**
History is available for tracked fields of the object.

**OrderAdjustmentGroupOwnerSharingRule on page 65**
Sharing rules are available for the object.

**OrderAdjustmentGroupShare on page 67**
Sharing is available for the object.

# OrderAdjustmentGroupSummary

Represents the current properties and state of a group of related price adjustments. Associated with a set of OrderItemAdjustmentLineSummaries that apply to OrderItemSummaries belonging to one OrderSummary. Corresponds to one or more order adjustment group objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

An OrderAdjustmentGroupSummary can represent an adjustment to an entire order as a group of adjustments to each of its products. For example, representing "10% off the order" as a set of 10% off adjustments to each product on the order. It can also represent an adjustment that applies to a subset of the products on an order. For example, representing "buy one, get one 50% off" as a 25% off adjustment to each of two products.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

## Fields

OrderAdjustmentGroup

OrderItemAdjustmentLineSummary

# OrderChangeLog

Represents a log record of all change requests made to an order post activation. A log record is always one-to-one to change an order request. This object is available in API version 48.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Commerce Cloud standard objects in the inventory data model require at least one of the following licenses: B2B Commerce, D2C Commerce.

## Fields

| Field | Details |
|---|---|
| `ChangeLineId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the main change line created as a result of the change request. For example, if you change an order item, the `ChangeLineId` would be the change OrderItem ID, or if you change a shipping address, the `ChangeLineId` would be the change OrderDeliveryGroup ID.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ChangeLine<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderAdjustmentGroup, OrderDeliveryGroup, OrderItem, OrderItemAdjustmentLineItem, OrderItemTaxLineItem |
| `ChangeLineType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The method used to implement the change.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `Delta`<br>• `New` |
| `ChangeOrderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the change order.<br>This field is a relationship field.<br>**Relationship Name**<br>ChangeOrder<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Order |
| `ChangeRequest` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The unique ID of the request of which this change is a part. |
| `ChangeSummary` | **Type**<br>textarea<br>**Properties**<br>**Description**<br>A human-readable summary of the change details.<br>Here's an example of a change summary:<br>`Reduced quantity by -3.`<br>`Change adjustment by $15.`<br>`Added an adjustment of $20.`<br>`Changed tax by $-0.11, effective 1/1/2020.`<br>`Added a tax of $1.5, effective 1/1/2020.` |
| `ChangeType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The type of the change request.<br>Possible values are:<br>• `NewAdjustmentGroups`—Add a new header level adjustment.<br>• `NewLineAdjustments`—Add a new line level adjustment.<br>• `NewOrderItems`—Add a new order item.<br>• `QuantityChange`—Add or remove quantity from an original order item. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The ISO code for any currency allowed by the organization.<br>Possible value is:<br>• `USD`—U.S. Dollar<br>The default value is `USD`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name for the order change log. |
| `RelatedLineId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the main line that is changed as a result of this change.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>RelatedLine<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderAdjustmentGroup, OrderDeliveryGroup, OrderItem, OrderItemAdjustmentLineItem, OrderItemTaxLineItem |

| Field | Details |
| --- | --- |
| `RelatedOrderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the order that is changed.<br>This field is a relationship field.<br>**Relationship Name**<br>RelatedOrder<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>Order (the master object) |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The order status of the change order.<br>Possible values are:<br>• `Activated`<br>• `Draft` |

## Usage

Order change log entries are automatically created each time an order is modified.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**OrderChangeLogFeed on page 55**
Feed tracking is available for the object.

**OrderChangeLogHistory on page 63**
History is available for tracked fields of the object.

# OrderChgReasonCategMap

The mapping between an order change reason and a service flow category. This object is available in API version 65.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `Category` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The service flow that reasons are being categorized by.<br>Possible values are:<br>• `Cancel`<br>• `CancelAll`<br>• `CancelFee`<br>• `Discount`<br>• `Exchange`<br>• `RMA`<br>• `Return`<br>• `ReturnFee` |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The currency code of the order.<br>Possible values are:<br>• `EUR`—Euro<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar<br>The default value is `USD`. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The description of the mapping. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Whether the category mapping is active.<br>The default value is `false`. |
| `IsAvailableForExternalUser` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Whether the mapping can be accessed and used by external users.<br>The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description** |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description** |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the mapping. |
| `OwnerId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The owner of the mapping.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |
| `Reason` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The order change reason that's being categorized.<br>Possible values are:<br>• `Damaged`<br>• `DoorLocked`<br>• `IncorrectPrice`<br>• `Rejected`<br>• `WrongItem`<br>The default value is `Damaged`. |

# OrderDeliveryGroup

A group of order items that share a delivery method and address. The delivery method and address are used during the fulfillment process, such as shipping as a gift, downloading, picking up in store, or shipping to a standard address This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

# Fields

| Field | Details |
| --- | --- |
| `DeliverToAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The delivery group's order items are delivered to this address. Created based on the values of the other `DeliverTo` fields. |
| `DeliverToCity` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>City address value. Sent to `DeliverToAddress`. |
| `DeliverToCompanyName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description** |
| `DeliverToCountry` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Country address value. Sent to `DeliverToAddress` |
| `DeliverToFullFirstName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description** |
| `DeliverToFullLastName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description** |

| Field | Details |
| --- | --- |
| `DeliverToFullName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description** |
| `DeliverToFullSalutation` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Possible values are:<br>• `Dr.`<br>• `Mr.`<br>• `Mrs.`<br>• `Ms.`<br>• `Prof.` |
| `DeliverToGeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Geocode accuracy address value. Sent to `DeliverToAddress`. |
| `DeliverToLatitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Latitude address value. Sent to `DeliverToAddress`. |
| `DeliverToLongitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Longitude address value. Sent to `DeliverToAddress`. |

| Field | Details |
| --- | --- |
| `DeliverToName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Group, Sort, Update<br>**Description**<br>Name of the delivery recipient. Sent to `DeliverToAddress`. |
| `DeliverToPostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Postal Code address value. Sent to `DeliverToAddress`. |
| `DeliverToState` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>State address value. Sent to `DeliverToAddress`. |
| `DeliverToStreet` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Street address value. Sent to `DeliverToAddress`. |
| `DeliveryInstructions` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Text field for users to add other delivery instructions. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>User-defined description for this delivery group. |

| Field | Details |
| --- | --- |
| DesiredDeliveryDate | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The buyer's target delivery date for the order items included in the delivery group. |
| EmailAddress | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The buyer's email address. |
| GiftMessage | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>An optional gift message that the buyer can define if they're sending the order items as a gift to another recipient. Applies to all order items in the delivery group. |
| GrandTotalAmount | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of the group's total delivery amount and total tax amount. |
| IsGift | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>All items in the delivery group are gifts. |
| OrderDeliveryGroupNumber | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Unique number used for referencing this order delivery group. |
| `OrderDeliveryMethodId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the order delivery method related to this order delivery group. |
| `OrderId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the parent order for this order delivery group. An order can have multiple order delivery groups. |
| `PhoneNumber` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Phone number of the buyer. |
| `PromisedDeliveryDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Merchant-defined date that the items in this group will be delivered to the customer. Usually defined based on an estimated date from the shipping provider. |
| `RelatedDeliveryGroupId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The original delivery group. Used for reference in change order scenarios. |
| `TotalAdjustmentAmount` | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of all adjustments (of type Delivery Charge) made to order items in the order delivery group. |
| `TotalAdjustmentAmtWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of all adjustments (of type Delivery Charge) made to order items in the order delivery group, including tax.<br>This is a gross tax field.<br>To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.<br>This field is available in API v49.0 and later. |
| `TotalAdjustmentTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of all adjustments (of type Delivery Charge) made to tax lines for order items in the order delivery group. |
| `TotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of all Total Amount fields (of type Delivery Charge) on order items within this delivery group. On an order item, the total amount equals the quantity multiplied by the unit price, including adjustments and tax. |
| `TotalLineAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of order items (of the type Delivery Charge). On an order item, the total line amount equals the quantity multiplied by the unit price, before adjustments or tax. |

| Field | Details |
| --- | --- |
| `TotalLineAmtWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of all `TotalLineAmtWithTax` fields (of type Delivery Charge) on order items within this delivery group. On an order item, the total line amount with tax equals the quantity multiplied by the unit price, plus tax, before adjustments.<br>This is a gross tax field.<br>To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.<br>This field is available in API v49.0 and later. |
| `TotalLineTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of all Total Line Tax Amount fields (of type Delivery Charge) on order items within this delivery group. On an order item, the total line tax amount equals the total tax for that line. |
| `TotalTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of all Total Tax Amount fields (of type Delivery Charge) on order items within this order delivery group. |

# OrderDeliveryGroupSummary

Represents the current properties and state of a group of OrderItemSummaries, belonging to one OrderSummary, to be fulfilled using the same delivery method and delivered to the same address. A single shipment can include them all, but that isn't guaranteed. Corresponds to one or more order delivery group objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

## Fields

| Field | Details |
|---|---|
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>ISO code for the currency of the OrderSummary associated with the OrderDeliveryGroupSummary. The default value is USD.<br>Possible values are:<br>• `DKK`—Danish Krone<br>• `EUR`—Euro<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar<br>This field is available in API version 49.0 and later. |
| `DeliverToAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>Address of the recipient. Users with the Edit Delivery Information user permission can modify this field.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `DeliverToCity` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Recipient address city. |
| `DeliverToCompanyName` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description** |
| `DeliverToCountry` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Recipient address country. |
| `DeliverToFullFirstName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description** |
| `DeliverToFullLastName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description** |
| `DeliverToFullName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description** |
| `DeliverToFullSalutation` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Possible values are:<br>• `Dr.`<br>• `Mr.`<br>• `Mrs.`<br>• `Ms.`<br>• `Prof.` |

| Field | Details |
| --- | --- |
| `DeliverTo GeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Accuracy of the geocode for the recipient address.<br>Possible values are:<br>• `Address`<br>• `Block`<br>• `City`<br>• `County`<br>• `ExtendedZip`<br>• `NearAddress`<br>• `Neighborhood`<br>• `State`<br>• `Street`<br>• `Unknown`<br>• `Zip` |
| `DeliverToLatitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with FulfilledToLongitude to specify the precise geolocation of the recipient address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. |
| `DeliverToLongitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with FulfilledToLatitude to specify the precise geolocation of the recipient address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. |
| `DeliverToName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Name on the recipient address. Users with the Edit Delivery Information user permission can modify this field.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `DeliverToPostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Recipient address postal code. |
| `DeliverToState` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Recipient address state. |
| `DeliverToStreet` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Recipient address street. |
| `DeliveryInstructions` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Special instructions for the delivery. Users with the Edit Delivery Information user permission can modify this field.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `Description` | **Type**<br>textarea |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Nillable, Update<br>**Description**<br>Description of the OrderDeliveryGroupSummary.<br>This field can be edited. |
| `DesiredDeliveryDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Desired date for delivery. This field is informational, available for customizations. Users with the Edit Delivery Information user permission can modify this field.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `EmailAddress` | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Email address of the recipient. Users with the Edit Delivery Information user permission can modify this field.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `GiftMessage` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Gift message to include. Users with the Edit Delivery Information user permission can modify this field.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `GrandTotalAmount` | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total, including adjustments and tax, of the delivery charges associated with the OrderDeliveryGroupSummary. This value only includes OrderItemSummaries of type code Charge. |
| `IsGift` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the OrderDeliveryGroupSummary represents a gift. Users with the Edit Delivery Information user permission can modify this field.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `OrderDeliveryGroup SummaryNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>ID of the OrderDeliveryGroupSummary. |
| `OrderDeliveryMethodId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the order delivery method specified for the OrderDeliveryGroupSummary. Users with the Edit Delivery Information user permission can modify this field.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `OrderSummaryId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the OrderSummary associated with the OrderDeliveryGroupSummary. |

| Field | Details |
| --- | --- |
| `OriginalOrderDeliveryGroupId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the original order delivery group associated with this summary object. Nillable=true only if the associated order summary is unmanaged. For managed order summaries, nillable=false. |
| `PhoneNumber` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Phone number of the recipient. Users with the Edit Delivery Information user permission can modify this field.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `PromisedDeliveryDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Promised date for delivery. This field is informational, available for customizations. Users with the Edit Delivery Information user permission can modify this field.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `TotalAdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total price adjustments applied to delivery charges associated with the OrderDeliveryGroupSummary. This value only includes adjustments to OrderItemSummaries of type code Charge. |
| `TotalAdjustmentAmtWithTax` | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount of the price adjustments applied to the delivery charges associated with the OrderDeliveryGroupSummary, inclusive of tax. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount.<br>This field is available in API version 49.0 and later. |
| `TotalAdjustment TaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalAdjustmentAmount. |
| `TotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total, including adjustments but not tax, of the delivery charges associated with the OrderDeliveryGroupSummary. This value only includes adjustments to OrderItemSummaries of type code Charge. |
| `TotalLineAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total, not including adjustments or tax, of the delivery charges associated with the OrderDeliveryGroupSummary. |
| `TotalLineAmtWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total of the delivery charges associated with the OrderDeliveryGroupSummary, inclusive of tax. This amount is equal to TotalLineAmount + TotalLineTaxAmount.<br>This field is available in API version 49.0 and later. |

| Field | Details |
| --- | --- |
| `TotalLineTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalLineAmount. |
| `TotalTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalAmount. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**OrderDeliveryGroupSummaryChangeEvent (API version 62.0)**
Change events are available for the object.

SEE ALSO:

OrderDeliveryGroup

OrderItemSummary

# OrderDeliveryMethod

Shows the customizations and options that a buyer selected for their delivery method. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

# Fields

| Field | Details |
| --- | --- |
| `Carrier` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The carrier that the buyer chose for their delivery method. Developers must add values to this field. |
| `ClassOfService` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The carrier class of service that the buyer chose for their delivery method. Developers must add values to this field. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Description of the delivery method. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Assign new delivery groups to active delivery methods. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. Default name of this record. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The user who owns an order delivery method record. |
| `ProductId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Optional. This product represents a delivery charge order product for a delivery using this delivery method. For example, you could create a product that represents an overnight express charge and assign it to an overnight express delivery method. |
| `ReferenceNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Reference number for an external delivery method. |
| `ShippingCarrierMethod` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Optional. A specific shipping service provided by a shipping carrier, such as Ground, 2Day, and NextDay. Depends on the range of transit times available for each carrier. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**OrderDeliveryMethodChangeEvent (API version 62.0)**
Change events are available for the object.

# OrderHistory

Represents historical information about changes that have been made to the standard fields of the associated order, or to any custom fields with history tracking enabled.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

## Fields

| Field Name | Details |
| --- | --- |
| `DataType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Data type of the field that was changed. |
| `Field` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Name of the order field that was modified, or a special value to indicate some other modification to the order. |

| Field Name | Details |
| --- | --- |
| `NewValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>New value of the modified order field. Maximum of 255 characters. |
| `OldValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>Previous value of the modified order field. Maximum of 255 characters. |
| `OrderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the order associated with this record.<br>This is a relationship field.<br>**Relationship Name**<br>Order<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Order |

# Usage

Order history entries are automatically created each time an order is modified.

Two rows are added to this record when foreign key fields change. One row contains the foreign key object names that display in the online application. For example, `Jane Doe` is recorded as the name of a Contact. The other row contains the actual foreign key ID that is only returned to and visible from the API.

This object respects field-level security on the parent object.

SEE ALSO:

Order

# OrderItem

Represents an order product that your organization sells.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

The user must have Edit permission on Order records to create or update order products on an order. The user must have Edit permission on Order records to delete an order product.

## Fields

| Field Name | Details |
| --- | --- |
| `AdjustedLineAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Line amount following line adjustments, excluding tax.<br>To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.<br>This field is available in API v48.0 and later. |
| `AdjustedLineAmtWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Line amount following line adjustments, including tax.<br>This field is a gross tax field.<br>To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.<br>This field is available in API v49.0 and later. |
| `AvailableQuantity` | **Type**<br>double |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Amount of an order product that is available to be reduced. Value must be greater than or equal to 0. An order product is reducible only if `AvailableQuantity` is greater than 0.<br>Value is always 0 if the order product's parent order is a reduction order. |
| `BillingFrequency2` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The time period that indicates how often the order item is billed.<br>This field is available in API version 55.0 and later. This field is available with Subscription Management.<br>Possible values are:<br>• `Annual`<br>• `Monthly` |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for the currency of the original Order associated with the OrderItem.<br>Possible values are:<br>• `DKK`—Danish Krone<br>• `EUR`—Euro<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar<br>The default value is `USD`.<br>This field is available in API version 49.0 and later. |
| `DeliveryEstimationReference` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Unique reference ID for the delivery estimation. |
| `DeliveryEstimationTimeZone` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Timezone in which the estimated delivery times are based. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Text description of this object. For Commerce stores, during checkout, this field is populated with the value of a product name. The product name is copied from the `CartItem.Name` field of a cart item that corresponds to the `OrderItem`. |
| `EarliestEstimatedDeliveryDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Earliest date when the item is estimated to be delivered. |
| `EarliestEstimatedDeliveryTime` | **Type**<br>timeOnly<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Earliest time of the day when the item is estimated to be delivered. |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Optional. Last day the order product is available. |
| `EndDateTime` | **Type**<br>datetime |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The end date and time of the order item, which is derived from the End Date and End Time fields in the time zone specified in the Start and End Time Zone field. If the time zone isn't specified, the default is Coordinated Universal Time (UTC).<br>Label is **End Date Time**.<br>This field is available in Revenue Cloud in API version 65.0 and later. |
| `EndTime` | **Type**<br>timeOnly<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The end time of the order item.<br>Label is **End Time**.<br>This field is available in Revenue Cloud in API version 65.0 and later. |
| `GrossUnitPrice` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Unit price including tax.<br>This field is a VAT field that includes tax. Salesforce populates it on order creation only when `Order.TaxLocaleType` has a value of Gross. |
| `LastEstimatedDeliveryDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Latest date when the item is estimated to be delivered. |
| LastEstimatedDeliveryTime | **Type**<br>timeOnly<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Latest time of the day when the item is estimated to be delivered. |

| Field Name | Details |
| --- | --- |
| `LineNumber` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Used to organize lines on the order.<br>To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.<br>This field is available in API v48.0 and later. |
| `ListPrice` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>List price for the order product. Value is inherited from the associated `PriceBookEntry` upon order product creation. |
| `ListPriceTotal` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The `ListPrice` times the `Quantity`. This field is a calculated field.<br>This field is available in API version 55.0 and later. This field is available with Subscription Management. |
| `NetUnitPrice` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The unit price after all price adjustments are applied.<br>This field is available in API version 55.0 and later. This field is available with Subscription Management. |
| `OrderActionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The ID of the related order action. The order action indicates the type of order; for example, a new sale or a cancellation.<br>This field is available in API version 55.0 and later. This field is available with Subscription Management.<br>This field is a relationship field.<br>**Relationship Name**<br>OrderAction<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderAction |
| `OrderDeliveryGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The delivery group for the order product.<br>To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.<br>This field is available in API v48.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>OrderDeliveryGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderDeliveryGroup |
| `OrderId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the order that this order product is a child of.<br>This field is a relationship field.<br>**Relationship Name**<br>Order |

| Field Name | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Order |
| `OrderItemNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Automatically generated number that identifies the order product. |
| `OriginalOrderItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Required if `isReductionOrder` on the parent order is *`true`*.<br>ID of the original order product being reduced.<br>This field is a relationship field.<br>**Relationship Name**<br>OriginalOrderItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderItem |
| `PeriodBoundary` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The period boundary helps determine the start and end date of the billing periods.<br>This field is available in API version 55.0 and later. This field is available with Subscription Management.<br>Possible values are:<br>• `AlignToCalendar`—the period starts on the first day of the term unit; for example, the first day of the month.<br>• `Anniversary`—The start date determines the boundary. For example, if a monthly subscription starts on September 13, the subscription starts on the 13th day of each month. |

| Field Name | Details |
| --- | --- |
| | • `DayOfPeriod`—the period starts on the day indicated by `PeriodBoundaryDay`.<br>• `LastDayOfPeriod`—the period starts on the last day of the pricing term unit; for example, the last day of the month. |
| `PeriodBoundaryDay` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required when `PeriodBoundary` is `DayOfPeriod`. Indicates day of the week or month that marks the period boundary. Must be an integer from 1 through 31.<br>This field is available in API version 55.0 and later. This field is available with Subscription Management. |
| `PeriodBoundaryStartMonth` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Nillable, Sort, Update<br>**Description**<br>Field is populated based on input in the StartDate, PeriodBoundary, and PeriodBoundaryDay when BillingFrequency2 is Annual or by manual user entry. Possible values are:<br>• `1-January`<br>• `2-February`<br>• `3-March`<br>• `4-April`<br>• `5-May`<br>• `6-June`<br>• `7-July`<br>• `8-August`<br>• `9-September`<br>• `10-October`<br>• `11-November`<br>• `12-December` |
| `PricebookEntryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Required. ID of the associated PricebookEntry. This field must be specified when creating OrderItem records. It can't be changed in an update.<br>If they have a B2B Commerce, B2B Commerce Starter, B2B Commerce Growth, or B2B Commerce Plus license, Salesforce users can create orders without price books and order items without price book entries.<br>This field is a relationship field.<br>**Relationship Name**<br>PricebookEntry<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PricebookEntry |
| `PriceRevisionPolicyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The price uplift policy associated with this order item.<br>This field is a relationship field.<br>**Relationship Name**<br>PriceRevisionPolicy<br>**Refers To**<br>PriceRevisionPolicy<br>Label is **Price Revision Policy**.<br>This field is available in Revenue Cloud in API version 65.0 and later. |
| `PricingTermCount` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A calculated field indicating the number of pricing terms in the subscription.<br>This field is available in API version 55.0 and later. This field is available with Subscription Management. |
| `PricingTransactionType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates the type of pricing transaction. For example, a new sale, a cancellation, an amendment, or a renewal.<br>Possible values:<br>• `AmendmentAtLastNegotiatedPrice`—Calculate the price of the amended order item using the same price book and price adjustments as the new sale item. For example, an order item that is amended using a pricing transaction type of AmendmentAtLastNegotiatedPrice is priced using the same price book information and price adjustments as the new sale item. The amended order item has the same price as the new sale order item.<br>• `AmendmentStartingFromListPrice`—Calculate the price of the amended order item using current price book information, disregarding any pricing information or adjustments that were applied to the new sale item. Typically, an amended order item has a different price than the new sale transaction item.<br>• `Cancellation`—Calculate the price of the canceled transaction. For example, let's say that a 1-year subscription was purchased on January 1, then canceled on July 31. The price of the canceled products and services from August 1 through Dec 31 is calculated.<br>• `NewSale`—The price of a new transaction is calculated.<br>• `RenewalAtLastNegotiatedPrice`—Calculate the price of the order item using the same price book and price adjustments as the new sale item. For example, an order item that is renewed using a pricing transaction type of `RenewalAtLastNegotiatedPrice` is priced using the same price book information and price adjustments as the new sale item. The renewal order item has the same price as the new sale order item.<br>• `RenewalAtListPrice`—Calculate the price of the order item using current price book information, disregarding any pricing information or adjustments that were applied to the new sale item. Typically, a renewal order item has a different price than the new sale order item.<br>This field is available in API version 55.0 and later. This field is available with Subscription Management. |
| `ProFormaBillingPeriodAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The initial amount for the billing period. The final amount for the billing period can include subsequent amendments, discounts, or charges.<br>This field is available in API version 55.0 and later. This field is available with Subscription Management. |

| Field Name | Details |
| --- | --- |
| `Product2Id` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Product2 associated with this OrderItem.<br>This field is a relationship field.<br>**Relationship Name**<br>Product2<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Product2 |
| `ProductSellingModelId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related product selling model. The product selling model defines one method by which a product can be sold; for example, as a one-time sale, an evergreen subscription, or a termed subscription.<br>This field is available in API version 55.0 and later. This field is available with Subscription Management.<br>This field is a relationship field.<br>**Relationship Name**<br>ProductSellingModel<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ProductSellingModel |
| `ProrationPolicyId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related proration policy. The proration policy defines how the price is calculated for each subscription period; for example, whether partial periods are allowed, and how remainder amounts are handled. |

| Field Name | Details |
| --- | --- |
| | This field is available in API version 55.0 and later. This field is available with Subscription Management.<br>This field is a relationship field.<br>**Relationship Name**<br>ProrationPolicy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ProrationPolicy |
| `Quantity` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Required. Number of units of this order product. |
| `QuoteLineItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. ID of the associated quote line item.<br>If this field is specified, the quote line item's QuoteId must match the QuoteId for the order product's parent order. |
| `ReferencePrice` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The original or reference price of the order product.<br>This field is available in API version 63.0 and later. |
| `RelatedOrderItemID` | **Type**<br>reference<br>**Properties**<br>Filter, Sort, Group<br>**Description**<br>Required for change orders, shows the original order product. |

| Field Name | Details |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Unit price for the order product. |

## Usage

An order can have associated order product records only if the order has a price book associated with it. An order product must correspond to a product that is listed in the order's price book.

Orders with associated OrderItem records are affected. When OrderItem records are directly deleted, they aren't sent to the recycle bin and can't be undeleted. The `getDeleted()` call shows deleted OrderItem records until they're purged, which is usually within the same day or the next day.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**OrderItemChangeEvent (API version 44.0)**
Change events are available for the object.

**OrderItemFeed (API version 29.0)**
Feed tracking is available for the object.

**OrderItemHistory**
History is available for tracked fields of the object.

SEE ALSO:

Order

OrderItemSummary

# OrderItemAdjustmentLineItem

An adjustment that has been made to an order item. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

# Fields

| Field | Details |
| --- | --- |
| `AdjustmentAmountScope` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Used with `AdjustmentValue` to determine the amount of the adjustment.<br>Possible values are:<br>• `Total`—The adjustment scope is the total price.<br>• `Unit`—The adjustment scope is the unit price.<br>• `UnproratedTotal`—The adjustment scope is the unprorated total price. |
| `AdjustmentBasisReferenceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>References the specific coupon applied.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>AdjustmentBasisReference<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Coupon<br>This field is available in API version 54.0 and later. |
| `AdjustmentCauseId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>References the specific promotions applied.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>AdjustmentCause<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Promotion<br>This field is available in API version 52.0 and later. |
| `AdjustmentSource` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the origin of the adjustment.<br>Possible values are:<br>• `Discretionary`—The adjustment originates from a decision made by an individual, for example, a manager's discount granted to a client.<br>• `Promotion`—The adjustment originates from a promotion, for example, a holiday sale discount.<br>• `Rule`—Reserved for future use.<br>• `System`—The adjustment originates from the system, for example, a volume discount after the amount of items reaches a specific number.<br>This field is available in API version 57.0 and later. |
| `AdjustmentType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the type of mathematical adjustment to be applied to the order.<br>Possible values are:<br>• `AdjustmentAmount`—The adjustment is a numerical amount, for example, a cash discount of 20.<br>• `AdjustmentPercentage`—The adjustment is a percentage amount, for example, a 10% discount.<br>• `OverrideAmount`—The adjustment is a manual price override.<br>This field is available in API version 57.0 and later. |
| `AdjustmentValue` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The specified `AdjustmentType`'s amount to be applied to the order item. |

| Field | Details |
| --- | --- |
| | For example, when the `AdjustmentType` value is `AdjustmentAmount`, the `AdjustmentValue` is expected to equal the value of the `Amount` field.<br>When the `AdjustmentType` value is `AdjustmentPercentage`, the `AdjustmentValue` represents the percentage number, and the `Amount` field's value will show the calculated adjustment amount.<br>This field is available in API version 57.0 and later. |
| `Amount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The net total value of the adjustment line. The value is rounded to the nearest possible amount associated with the currency of the order item. |
| `AppliedPromotionDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time on which the promotion was applied to the asset. |
| `CouponCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the coupon code that was applied. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. Default value is `USD`.<br>Possible values are:<br>• `USD`—U.S. Dollar |
| `Description` | **Type**<br>textarea |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Nillable, Update<br>**Description**<br>Users can add a custom description to the record to provide additional detail. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the adjustment line. |
| `OrderAdjustmentGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The order adjustment group that contains the order item adjustment line item. |
| `OrderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The parent order of the order item related to the adjustment line. |
| `OrderItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The order item that the adjustment line applies to. |
| `Priority` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>A numeric value that represents the order of precedence of the order adjustment group. |

| Field | Details |
| --- | --- |
| | It can also represent the order of precedence when applying the `AdjustmentType` values. For example, an order can have two adjustments: a $100 discount and a 10% discount. This field will tell the pricing engine which adjustment needs to be applied first.<br>This field is available in API version 57.0 and later. |
| `RelatedAdjustmentLineItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The original order item adjustment line. Useful for reference in change order scenarios. |
| `TotalAmtWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Equals the order item's price plus `TotalTaxAmount` for the order item adjustment line item.<br>This is a gross tax field.<br>To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.<br>This field is available in API v49.0 and later. |
| `TotalTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total amount of tax applied to the adjustment line. |

# OrderItemAdjustmentLineSummary

Represents the current properties and state of price adjustments on an OrderItemSummary. Corresponds to one or more order item adjustment line item objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

## Fields

| Field | Details |
|---|---|
| `AdjustmentBasisReferenceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>References the specific coupon applied.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>AdjustmentBasisReference<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Coupon<br>This field is available in API version 54.0 and later. |
| `AdjustmentCauseId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>References the specific promotions applied.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>AdjustmentCause<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Promotion<br>This field is available in API version 52.0 and later. |
| `Amount` | **Type**<br>currency<br>**Properties**<br>Filter, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Amount, not including tax, of the OrderItemAdjustmentLineSummary.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>ISO code for the currency of the OrderItemSummary to which the adjustment applies. The default value is USD.<br>Possible values are:<br>• `DKK`—Danish Krone<br>• `EUR`—Euro<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar<br>This field is available in API version 49.0 and later. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Description of the OrderItemAdjustmentLineSummary.<br>This field can be edited. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the OrderItemAdjustmentLineSummary. |
| `OrderAdjustmentGroupSummaryId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>If this object belongs to an OrderAdjustmentGroupSummary, this value is the ID of that OrderAdjustmentGroupSummary. |
| `OrderItemSummaryId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the OrderItemSummary to which the OrderItemAdjustmentLineSummary applies. |
| `OrderSummaryId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the OrderSummary associated with the OrderItemSummary to which this OrderItemAdjustmentLineSummary applies. |
| `OriginalOrderItem AdjustmentLineItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the original OrderItemAdjustmentLine associated with this summary object. Nillable=true only if the associated order summary is unmanaged. For managed order summaries, nillable=false. |
| `Priority` | **Type**<br>integer<br>**Properties**<br>Create, Nillable<br>**Description**<br>Numerical rank used to apply promotions in the correct order.<br>This field is available in API version 52.0 and later. |
| `TotalAmtWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Total amount of the adjustment, inclusive of tax. This amount is equal to Amount + TotalTaxAmount.<br>This field is available in API version 49.0 and later. |
| `TotalTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the Amount. |

| `ServiceAddrValidationDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time when the address was validated. |
| `Service Account` | **Type**<br>entityid<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Reference to the Account Entity where the product is used, serviced, or installed. |
| `ServiceAddrValidationMsg` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The message sent after the validation of the address. |
| `ServiceAddrValidationResult` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies the status of the address validation.<br>Possible values are:<br>• `Fail`<br>• `Partial Success`<br>• `Success`<br>The default value is `Success`. |
| `ServiceAddress` | **Type**<br>address<br>**Properties**<br>Filter<br>**Description**<br>The address where the recipient receives the order. |
| `ServiceCity` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The city where the recipient receives the order. |
| `ServiceCountry` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The country where the recipient receives the order. |
| `ServiceGeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Specifies the accuracy level of the geocoded address coordinates.<br>Possible values are:<br>• `Address`<br>• `Block`<br>• `City`<br>• `County`<br>• `ExtendedZip`—Extended Zip<br>• `NearAddress`—Near Address<br>• `Neighborhood`<br>• `State`<br>• `Street`<br>• `Unknown`<br>• `Zip` |
| `ServiceLatitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The latitude of the location where the recipient receives the order. |
| `ServiceLongitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The longitude of the location where the recipient receives the order. |
| `ServicePostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The postal code of the address. |
| `ServiceState` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The state where the recipient receives the order. |
| `ServiceStreet` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The street where the recipient receives the order |
| `ServiceabilityCheckDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time when the serviceability check was done. |
| `ServiceabilityData` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The information about serviciability, such as broadband connection, download, and upload speeds available at the address. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**OrderItemRecipientChangeEvent**
Change events are available for the object.

**OrderItemRecipientFeed**
Feed tracking is available for the object.

**OrderItemRecipientHistory**
History is available for tracked fields of the object.

**OrderItemRecipientOwnerSharingRule**
Sharing rules are available for the object.

**OrderItemRecipientShare**
Sharing is available for the object.

# OrderItemRelationship

Describes a relationship between order products. This object is available in API version 58.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

This object is available when Subscription Management is enabled.

## Fields

| Field | Details |
|---|---|
| `AssociatedOrderItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The unique identifier of the associated order product.<br>This field is a relationship field. In a bundle relationship, this order product is the bundle component.<br>**Relationship Name**<br>AssociatedOrderItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderItem |
| `AssociatedOrderItemInventory` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>A static enum that describes the associated order item inventory in the OrderItemSummaryRelationship.<br>Possible values are:<br>• IncludedInMainInventory—The child product's inventory is included in the main inventory. |

| Field | Details |
| --- | --- |
| | • NotIncludedInMainInventory—The child product's inventory isn't included in the main inventory.<br>**Relationship Name**<br>AssociatedOrderItemInventory |
| `AssociatedOrderItemPricing` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates how the associated order product is priced relative to the main order product. The value is informative; the system doesn't check whether the associated order product is included in the bundle price.<br>Possible values are:<br>• `IncludedInBundlePrice`—The associated order product's cost is $0 because it's included in the bundle's price.<br>• `NotIncludedInBundlePrice`—The associated order product has a cost because it's not included in the bundle's price. |
| `AssociatedOrderItemRole` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Describes the position of the associated order product in the relationship.<br>Possible values are:<br>• `BundleComponent`—The associated order product is part of a bundle.<br>• `SetComponent`—The associated order product is part of a set. |
| `AssociatedQuantScaleMethod` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>How the quantity of the associated order product scales, relative to the main order product. The value is informative; the system doesn't check whether the scaled quantities are correct.<br>Possible values are:<br>• `Constant`— The associated order's product quantity remains the same in relation to the main order product's quantity. For example, the main order product has a quantity of one and the associated order product has a quantity of one. |

| Field | Details |
| --- | --- |
| | • `Proportional`— The associated order's product quantity increases or decreases based on the main order product's quantity. For example, the main order product has a quantity of one and the associated order product has a quantity of two. In other words, there are two associated order products for every one main order product.<br>The default value is `Proportional`. |
| `MainOrderItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The main order product's unique identifier.<br>This field is a relationship field. In a bundle relationship, this order product is the bundle parent.<br>**Relationship Name**<br>MainOrderItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderItem |
| `MainOrderItemRole` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates the role of the main order product in the relationship.<br>Possible values are:<br>• `Bundle`— The main order product is the bundle parent.<br>• `Set`— The main order product is the set parent.<br>Subscription Management doesn't support the `Set` value. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the order product relationship. |
| `OrderId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique identifier of the related order.<br>This field is a relationship field.<br>**Relationship Name**<br>Order<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Order |
| `ProductRelationshipTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The unique identifier of the record that describes the relationship between the main and associated order products.<br>This field is a relationship field.<br>**Relationship Name**<br>ProductRelationshipType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ProductRelationshipType |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**OrderItemRelationshipChangeEvent**
Change events are available for the object.

**OrderItemRelationshipFeed**
Feed tracking is available for the object.

**OrderItemRelationshipHistory**
History is available for tracked fields of the object.

**OrderItemRelationshipOwnerSharingRule**
Sharing rules are available for the object.

**OrderItemRelationshipShare**
Sharing is available for the object.

# OrderItemSummary

Represents the current properties and state of a product or charge on an OrderSummary. Corresponds to one or more order item objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

## Fields

| Field | Details |
|---|---|
| `AdjustedLineAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total, including line adjustments but not order-lever adjustments or tax, of the OrderItemSummary. This is a calculated field. |
| `AdjustedLineAmtWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total price of the OrderItemSummary, inclusive of adjustments and tax. This amount is equal to AdjustedLineAmount + TotalAdjustedLineTaxAmount.<br>This is a calculated field. This field is available in API version 49.0 and later. |
| `AssetId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the associated asset. This field is available in API version 60.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>Asset<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Asset |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Available only for orgs with the multicurrency feature enabled. ISO code for the currency of the OrderSummary associated with the OrderItemSummary.<br>Possible values are:<br>• `DKK`—Danish Krone<br>• `EUR`—Euro<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar<br>The default value is `USD`.<br>This field is available in API version 49.0 and later. |
| `DeliveryEstimationReference` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Unique reference ID for the delivery estimation. |
| `DeliveryEstimationTimeZone` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Timezone in which the estimated delivery times are based. |

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the OrderItemSummary.<br>This field can be edited. |
| `EarliestEstimatedDeliveryDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Earliest date when the item is estimated to be delivered. |
| `EarliestEstimatedDeliveryTime` | **Type**<br>timeOnly<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Earliest time of the day when the item is estimated to be delivered. |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>End date of the OrderItemSummary.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `GrossUnitPrice` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Unit price, including tax, of the OrderItemSummary. This value is equal to UnitPrice + the amount of tax on the UnitPrice. |

| Field | Details |
| --- | --- |
| | If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.<br>This field is available in API version 49.0 and later. |
| `LastEstimatedDeliveryDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Latest date when the item is estimated to be delivered. |
| `LastEstimatedDeliveryTime` | **Type**<br>timeOnly<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Latest time of the day when the item is estimated to be delivered. |
| `LineNumber` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The order line number assigned to this OrderItemSummary. For example, if this object is the third in the displayed list of OrderItemSummaries belonging to the OrderSummary, this value is 3.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `ListPrice` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>List price of the product represented by this OrderItemSummary.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |

| Field | Details |
| --- | --- |
| MainOrderItemSummaryId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The primary order item summary ID of this order item summary.<br>This field is a relationship field.<br>**Relationship Name**<br>MainOrderItemSummary<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>OrderItemSummary (the master object) |
| Name | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the OrderItemSummary. |
| OrderDeliveryGroupSummaryId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the OrderDeliveryGroupSummary to which this object belongs.<br>This field is a relationship field.<br>**Relationship Name**<br>OrderDeliveryGroupSummary<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderDeliveryGroupSummary |
| OrderManagementBillingType | **Type**<br>enum<br>**Properties**<br>Filter, Restricted Picklist, Sort<br>**Description**<br>The type of entitlement, either PPO or GMV, that is used to track Order Summary usage. |

| Field | Details |
| --- | --- |
| `OrderSummaryId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the OrderSummary to which this object belongs.<br>This field is a relationship field.<br>**Relationship Name**<br>OrderSummary<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderSummary |
| `OriginalOrderItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the original order item associated with this summary object. Nillable=true only if the associated order summary is unmanaged. For managed order summaries, nillable=false.<br>This field is a relationship field.<br>**Relationship Name**<br>OriginalOrderItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderItem |
| `PricebookEntryId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the pricebook entry associated with this OrderItemSummary.<br>This field is available in API version 54.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>PricebookEntry |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>PricebookEntry |
| `Product2Id` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the product represented by this OrderItemSummary.<br>This field is a relationship field.<br>**Relationship Name**<br>Product2<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Product2 |
| `ProductCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Product code of the product represented by this OrderItemSummary. |
| `Quantity` | **Type**<br>double<br>**Properties**<br>Filter, Sort<br>**Description**<br>Current total quantity of products represented by this order item summary. Equal to QuantityOrdered minus (QuantityCanceled and QuantityReturned).<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `QuantityAllocated` | **Type**<br>double<br>**Properties**<br>Filter, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Allocated quantity on this order item summary. This quantity is associated with one or more FulfillmentOrderLineItems.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `QuantityAvailableToCancel` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Quantity that can still be canceled on this OrderItemSummary. Equal to QuantityOrdered minus (QuantityCanceled and QuantityAllocated). This value duplicates QuantityAvailableToFulfill. This is a calculated field. |
| `QuantityAvailableToFulfill` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Quantity available to be fulfilled on this OrderItemSummary. Equal to QuantityOrdered minus (QuantityCanceled and QuantityAllocated). This value duplicates QuantityAvailableToCancel. This is a calculated field. |
| `QuantityAvailableToReship` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Quantity available to be reshipped on this OrderItemSummary. Equal to QuantityFulfilled minus (QuantityReshipped and QuantityReturnInitiated).<br>This field is available in API version 53.0 and later. This is a calculated field. |
| `QuantityAvailableToReturn` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Quantity available to be returned on this OrderItemSummary. Equal to QuantityFulfilled minus QuantityReturnInitiated. This is a calculated field. |

| Field | Details |
| --- | --- |
| `QuantityCanceled` | **Type**<br>double<br>**Properties**<br>Filter, Sort<br>**Description**<br>Canceled quantity on this OrderItemSummary.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `QuantityFulfilled` | **Type**<br>double<br>**Properties**<br>Filter, Sort<br>**Description**<br>Fulfilled quantity on this OrderItemSummary. This quantity can no longer be canceled.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `QuantityNetOrdered` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Quantity available to be allocated on this OrderItemSummary. Equal to QuantityOrdered minus QuantityCanceled. |
| `QuantityOrdered` | **Type**<br>double<br>**Properties**<br>Filter, Sort<br>**Description**<br>Ordered quantity on this OrderItemSummary. It includes the originally ordered quantity plus any quantity added to the order later.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `QuantityReshipped` | **Type**<br>double |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Reshipped quantity on this OrderItemSummary.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.<br>This field is available in API version 53.0 and later. |
| `QuantityReturned` | **Type**<br>double<br>**Properties**<br>Filter, Sort<br>**Description**<br>Returned quantity on this OrderItemSummary.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `QuantityReturnInitiated` | **Type**<br>double<br>**Properties**<br>Filter, Sort<br>**Description**<br>Quantity returned or pending return on this OrderItemSummary.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `QuantityShipped` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Quantity shipped on this OrderItemSummary.<br>This field is available in API version 52.0 and later. |
| `ReferencePrice` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The original or reference price of the order product.<br>This field is available in API version 63.0 and later. |
| `ReservedAtLocationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Reserved for future use. |
| `ServiceDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Service or start date of the OrderItemSummary.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Status of the OrderItemSummary. The default value is ORDERED. When a quantity value changes, each status formula is evaluated in order. If a formula is true, no more evaluations are performed for that change.<br>Possible values and their formulas, in the order of evaluation, are:<br>• `RETURNINITIATED`—Return Initiated — (Quantity > 0) & (QuantityReturnInitiated = QuantityFulfilled) & (QuantityReturned < QuantityReturnInitiated)<br>• `RESHIPPED`—Reshipped — (QuantityReshipped = QuantityFullfilled) & (QuantityFullfilled > 0) & (QuantityReturnInitiated = 0) & (QuantityFulfilled = QuantityOrdered)<br>• `RETURNED`—Returned — (Quantity = 0) & (QuantityReturned > 0)<br>• `CANCELED`—Canceled — (Quantity = 0) & (QuantityCancelled > 0) & (QuantityReturned = 0)<br>• `FULFILLED`—Fulfilled — (Quantity > 0) & ((QuantityOrdered - QuantityCancelled) <= QuantityFulfilled) |

| Field | Details |
| --- | --- |
| | • PARTIALLYFULFILLED—Partially Fulfilled — (QuantityFulfilled > 0) & (QuantityFulfilled < (QuantityOrdered - QuantityCancelled))<br>• ALLOCATED—Allocated — (Quantity > 0) & (Quantity <= QuantityAllocated)<br>• PARTIALLYALLOCATED—Partially Allocated — (QuantityAllocated > 0) & (QuantityAllocated < Quantity)<br>• ORDERED—Ordered — None of the other formulas apply<br>• PAID—Paid — N/A |
| StockKeepingUnit | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The stock keeping unit (SKU) of the Product2 associated with the OrderItemSummary.<br>This field is available in API version 49.0 and later. |
| TaxTreatmentId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the related tax treatment.<br>This field is available in API version 63.0 and later. This field is available with Subscription Management.<br>This field is a relationship field.<br>**Relationship Name**<br>TaxTreatment<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>TaxTreatment |
| TotalAdjusted LineTaxAmount | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the AdjustedLineAmount. This is a calculated field. |
| TotalAdjustmentAmount | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total of all price adjustments applied to this OrderItemSummary. This is a calculated field. |
| `TotalAdjustment AmtWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount of all price adjustments applied to this OrderItemSummary, inclusive of tax. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount.<br>This field is available in API version 49.0 and later. This is a calculated field. |
| `TotalAdjustmentDistAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total of all order-level price adjustments applied to this OrderItemSummary. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header. This is a calculated field. |
| `TotalAdjustmentDist AmtWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount of the order-level price adjustments applied to this OrderItemSummary, inclusive of tax. This amount is equal to TotalAdjustmentDistAmount + TotalAdjustmentDistTaxAmount.<br>This field is available in API version 49.0 and later. This is a calculated field. |
| `TotalAdjustmentDist TaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalAdjustmentDistAmount. This is a calculated field. |
| `TotalAdjustmentTaxAmount` | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalAdjustmentAmount. This is a calculated field. |
| `TotalAmtWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total price of the OrderItemSummary, inclusive of tax. This amount is equal to TotalPrice + TotalTaxAmount.<br>This field is available in API version 49.0 and later. This is a calculated field. |
| `TotalLineAdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total of all non-order-level price adjustments applied to this OrderItemSummary. This value includes OrderItemAdjustmentLineSummaries that don't belong to an OrderAdjustmentGroupSummary, or that belong to an OrderAdjustmentGroupSummary of type SplitLine. This is a calculated field. |
| `TotalLineAdjustment AmtWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total of all non-order-level price adjustments applied to this OrderItemSummary, inclusive of tax. This amount is equal to TotalLineAdjustmentAmount + TotalLineAdjustmentTaxAmount.<br>This field is available in API version 49.0 and later. This is a calculated field. |
| `TotalLineAdjustment TaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalLineAdjustmentAmount. This is a calculated field. |

| Field | Details |
| --- | --- |
| `TotalLineAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total, not including adjustments or tax, of the OrderItemSummary.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `TotalLineAmountWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total unadjusted amount of the OrderItemSummary, inclusive of tax. This amount is equal to TotalLineAmount + TotalLineTaxAmount.<br>This field is available in API version 49.0 and later. This is a calculated field. |
| `TotalLineTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalLineAmount. This is a calculated field. |
| `TotalPrice` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total, including line and order-level adjustments but not tax, of the OrderItemSummary. This is a calculated field. |
| `TotalTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalPrice. This is a calculated field. |

| Field | Details |
| --- | --- |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Type of the OrderItemSummary. Delivery Charge indicates that the OrderItemSummary represents a delivery charge. Fee indicates that it represents another type of fee, such as a return fee. Order Product indicates that it represents any other type of product, service, or charge. Each type corresponds to one type code, shown here in parentheses.<br>Possible values are:<br>• `Delivery Charge (Charge)`<br>• `Fee (Charge)` This value is available in API v56.0 and later.<br>• `Order Product (Product)`<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `TypeCode` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Type code of the OrderItemSummary. Charge indicates that the OrderItemSummary represents a charge or fee. Product indicates that it represents any other type of product, service, or charge. A type code can be associated with one or more types.<br>Possible values are:<br>• `Charge`<br>• `Product`<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `UnitPrice` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Unit price of the product represented by the OrderItemSummary.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**OrderItemSummaryChangeEvent (API version 62.0)**
Change events are available for the object.

# OrderItemSummaryChange

Represents a change to an OrderItemSummary, usually a reduction in quantity due to a cancel or return. Corresponds to a change order item. This object is available in API version 48.0 and later.

This object is used for calculations and doesn't have a default record page.

## Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs.

## Fields

| Field | Details |
|---|---|
| `ChangeOrderItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the associated change order item. |
| `ChangeType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Type of change represented by the OrderItemSummaryChange.<br>Possible values are:<br>• `Add` (available in API version 54.0 and later)<br>• `Cancel`<br>• `DeliveryChargeAdjustment`<br>• `ProductAdjustment`<br>• `Return` |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>ISO code for the currency of the OrderSummary associated with the OrderItemSummaryChange. The default value is USD.<br>Possible values are:<br>• `DKK`—Danish Krone<br>• `EUR`—Euro<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar<br>This field is available in API version 49.0 and later. |
| `IsPreFulfillment` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the change occurs before the OrderItemSummary has been fulfilled. |
| `OrderItemSummaryChangeNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>ID of the OrderItemSummaryChange. |
| `OrderItemSummaryId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the OrderItemSummary to which the change applies. |

OrderItemSummary

# OrderItemSummaryRelationship

Junction object used to track how an original order summary (created before any exchanges have occurred) relates to other order summary objects in a chain of exchange orders. This object is available in API version 60.0 and later. An exchange order is an OrderSummary object whose SourceProcess property is set to Exchange. An original order summary can have an exchange order, which in turn can have yet another exchange order, and so on. The OrderSummaryRelationship object maintains this relationship between OrderSummary objects.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `AssociatedOrderItemInventory` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Controls whether the inventory of the associated order item is included in the inventory of the main order item.<br>Possible values are:<br>• `IncludedInMainInventory`—Included in Main Inventory<br>• `NotIncludedInMainInventory`—Not Included in Main Inventory |
| `AssociatedOrderItemSumPricing` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>An enum that describes how the related order item summary is priced relative to the primary order item summary.<br>Possible values are:<br>• `IncludedInBundlePrice`—Included in Bundle Price<br>• `NotIncludedInBundlePrice`—Not Included in Bundle Price |
| `AssociatedOrderItemSummaryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The related order item summary of this order item summary relationship. For bundle relationships, this denotes the ID of the child order item summary.<br>This field is a relationship field.<br>**Relationship Name**<br>AssociatedOrderItemSummary<br>**Refers To**<br>OrderItemSummary |
| `AssociatedOrderItemSummaryRole` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The role of the associated order item summary of this relationship.<br>Possible values are:<br>• `AddOnComponent`—Addon Component<br>• `BundleComponent`—Bundle Component<br>• `ClassificationComponent`—Product Classification Component<br>• `SetComponent`—Set Component |
| `AssociatedQuanScaleMethod` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>An enum that describes how to scale the quantity of the associated order item summary relative to the main order item summary.<br>Possible values are:<br>• `Constant`<br>• `Proportional`<br>The default value is `Proportional`. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The ISO code for the currency of the OrderSummary.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `USD`—U.S. Dollar<br>The default value is `USD`. |

| --- | --- |
| | **Refers To**<br>ProductRelationshipType |

# OrderItemTaxLineItem

The tax amount that has been applied to an order item. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

## Fields

| Field | Details |
| --- | --- |
| `Amount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The total amount of the tax line. The value is rounded to the nearest possible amount associated with the currency of the order item. |
| `CalculationReferenceNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Reference number provided by the tax provider, such as Stripe, in the tax calculation API response.<br>This field is available in API version 62.0. |
| `Description` | **Type**<br>textarea |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Nillable, Update<br>**Description**<br>Users can add a custom description to the record to provide additional detail. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the tax line. |
| `OrderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the parent order for the order item related to the tax line |
| `OrderItemAdjustmentLineItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The order item adjustment line item that the tax line applies to. |
| `OrderItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The order item that the tax line applies to. |
| `Rate` | **Type**<br>percent<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The percentage value of the tax. Null if the tax is a flat amount. |
| `ReferenceNumber` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Reference number provided by the tax provider (like Stripe) for each line item in the tax calculation API call. Use this unique ID to revert taxes during cancellation or return of an order.<br>This field is available in API version 62.0. |
| `RelatedTaxLineItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The original order item tax line. Useful for reference in change order scenarios. |
| `TaxEffectiveDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The date used to calculate the effective tax rate. This field may require an update to accommodate different buyer time zones. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Shows whether the amount on the tax line is an estimate or the final calculated amount. Doesn't set a value by default. Users can define automation to set and change the value as needed.<br>Possible values are:<br>• `Actual`<br>• `Estimated` |

# OrderItemTaxLineItemSummary

Represents the current tax on an OrderItemSummary or OrderItemAdjustmentLineSummary. Corresponds to one or more order item tax line items, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

## Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

## Fields

| Field | Details |
|---|---|
| `Amount` | **Type**<br>currency<br>**Properties**<br>Filter, Sort<br>**Description**<br>Amount of tax represented by the OrderItemTaxLineItemSummary.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `CalculationReferenceNumber` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Reference number provided by the tax provider, such as Stripe, in the tax calculation API response. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>ISO code for the currency of the OrderSummary associated with the OrderItemTaxLineItemSummary. The default value is USD.<br>Possible values are:<br>• `DKK`—Danish Krone<br>• `EUR`—Euro<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar |

| Field | Details |
| --- | --- |
| | This field is available in API version 49.0 and later. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Nillable, Update<br>**Description**<br>Description of the OrderItemTaxLineItemSummary.<br>This field can be edited. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the OrderItemTaxLineItemSummary. |
| `OrderItemAdjustmentLineSummaryId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If this object represents tax on an adjustment, this value is the ID of the OrderItemAdjustmentLineSummary to which the tax applies. If this value is null, the adjustment applies to an OrderItemSummary. |
| `OrderItemSummaryId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>If this object represents tax on an OrderItemSummary, this value is the ID of that OrderItemSummary. If this object represents tax on an adjustment, this value is the ID of the OrderItemSummary to which the adjustment applies. |
| `OrderSummaryId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the OrderSummary that the associated OrderItemSummary or OrderItemAdjustmentLineSummary belongs to. |

| Field | Details |
| --- | --- |
| `OriginalOrderItemTaxLineItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the original order item tax line item associated with this summary object. Nillable=true only if the associated order summary is unmanaged. For managed order summaries, nillable=false. |
| `Rate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax rate used to calculate the Amount.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `ReferenceNumber` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>**Reference number provided by the tax provider (like Stripe) for each line item in the tax calculation API call. Use this unique ID to revert taxes during cancellation or return of an order.** |
| `TaxEffectiveDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Date on which the Amount was calculated. Important due to tax rate changes over time.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `TransactionReferenceNumber` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>**Reference number provided by the tax provider, such as Stripe, in the tax transaction commit API request.** |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Indicates whether the Amount is actual or estimated.<br>Possible values are:<br>• `Actual`<br>• `Estimated`<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**OrderItemTaxLineItemSummaryChangeEvent (API version 62.0)**
Change events are available for the object.

OrderItemTaxLineItem

# OrderItemType

Shows whether the order product is a product line or charge line. This object is available in API version 48.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

# Fields

| Field | Details |
| --- | --- |
| `ApiName` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Uniquely identifies a picklist value so it can be retrieved without using an id or primary label. |
| `IsDefault` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this is the default order item type status value `(true)` or not `(false)` in the picklist. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Master label for this order item type status value. This display value is the internal label that doesn't get translated. |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number used to sort this value in the order item status picklist. These numbers aren't guaranteed to be sequential, as some previous contract status values might have been deleted. |
| `TypeCode` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Code indicating the type of order item.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `Charge`—API Name DeliveryCharge.<br>• `Product`—For API Name Product. |

# OrderOwnerSharingRule

Represents a rule which determines order sharing access for the order's owners.

Note: To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The SharingRules Metadata API type is enabled for all orgs.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

| Field | Details |
| --- | --- |
| `CreatedById` | **Type**<br>reference<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>ID of the creator of the order owner sharing rule. |
| `CreatedDate` | **Type**<br>dateTime<br>**Properties**<br>Defaulted on create, Filter, Sort<br>**Description**<br>Date when the order owner sharing rule was created. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Description of the order owner sharing rule. Maximum length is 1,000 characters. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Name of the developer of the order owner sharing rule. |
| `GroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the group whose orders are shared. |
| `Id` | **Type**<br>ID<br>**Properties**<br>Defaulted on create, Filter, Group, idLookup, Sort<br>**Description**<br>ID of the order owner sharing rule. |
| `LastModifiedById` | **Type**<br>reference<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>ID of the user who last modified the order owner sharing rule. |
| `LastModifiedDate` | **Type**<br>dateTime<br>**Properties**<br>Defaulted on create, Filter, Sort<br>**Description**<br>Date when the order owner sharing rule was last modified. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Namefield, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Name of the order owner sharing rule. Maximum length is 80 characters. |
| `OrderAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Access level for the order owner sharing rule. |
| `SystemModstamp` | **Type**<br>dateTime<br>**Properties**<br>Defaulted on create, Filter, Sort<br>**Description**<br>System modification time for the order owner sharing rule. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the user or group with whom order access is shared. |

## Usage

Use this object to manage the sharing rules for orders. For example, the following code creates an order owner sharing rule between two public groups, which can also contain portal users.

```
OrderOwnerSharingRule rule = new OrderOwnerSharingRule();
rule.setName("RuleName"); // Set the sharing rule name
rule.setDeveloperName("RuleDeveloperName"); // Set the sharing rule developer name
rule.setGroupId("00Gx00000000000"); // Set the group of users to share records from
rule.setUserOrGroupId("00Gx00000000001"); // Set the group of users to share records to
rule.setOrderAccessLevel("Edit");
connection.create(rule);
```

# OrderPaymentSummary

Represents the current properties and state of payments using a single payment method that are applied to one OrderSummary. This object is available in API version 48.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Unlike most summary objects, an OrderPaymentSummary isn't related to a similarly named order payment object. Instead, it combines values from multiple payment objects that use the same payment method and apply to the same OrderSummary.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce or D2C Commerce license is enabled.

## Fields

| Field | Details |
|---|---|
| `AuthorizationAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Amount of the OrderPaymentSummary that has been authorized. |
| `AuthorizationReversalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Amount of the AuthorizationAmount that has been reversed. |
| `AvailableToCaptureAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Amount of the OrderPaymentSummary that's available to be captured. Equal to AuthorizationAmount minus (CapturedAmount and PendingCaptureAmount and |

| Field | Details |

# OrderPaymentSummaryReference

OrderPaymentSummaryReference is a junction object that allows an order payment summary to be shared with another order summary. This object is available in API version 60.0 and later.

An order summary can share an order payment summary with any of its child order summaries (exchange order summaries). Each child can share the order payment summary with its children, and so on. Conceptually, the original order summary and its children form a tree structure, with the original order summary as the root node. If a new order payment summary is created for an exchange order summary anywhere in the tree, the new order payment summary can only be shared with that exchange order summary's children (and their descendents), if any.

The purpose of the OrderPaymentSummaryReference object is to establish how order summaries share order payment summaries. This is only possible if the relationship between the two order summaries has already been established. A corresponding OrderSummaryRelationship record must already exist that relates a parent order summary (`MainOrderSummary`) with its child (`AssociateOrderSummary`). The record's `AssociatedRelationshipType` field must be set to Exchange.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce or D2C Commerce license is enabled.

## Fields

| Field | Details |
| --- | --- |
| `AuthorizationAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Amount of the OrderPaymentSummary that has been authorized. |
| `CapturedAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Amount of the OrderPaymentSummary that has been captured. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for the currency of the OrderSummary associated with the OrderPaymentSummary. Order Management APIs and actions that create an OrderPaymentSummary for an OrderSummary set this value. The default value is USD.<br>Possible values are:<br>• `EUR`—Euro<br>• `USD`—U.S. Dollar<br>The default value is `USD`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp when the current user last viewed a record related to this record.<br>This field is available in API version 49.0 and later. |

| Field | Details |
| --- | --- |
| LastViewedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp when the current user last viewed this record. A null value can mean that this record was only referenced (LastReferencedDate) and not viewed.<br>This field is available in API version 49.0 and later. |
| Method | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the OrderPaymentSummary. |
| OrderPaymentSummaryId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the OrderPaymentSummary shared with the OrderSummary (exchange order).<br>This field is a relationship field.<br>**Relationship Name**<br>OrderPaymentSummary<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderPaymentSummary |
| OrderSummaryId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the OrderSummary (exchange order) that the OrderPaymentSummary is shared with.<br>This field is a relationship field.<br>**Relationship Name**<br>OrderSummary<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>OrderSummary |
| `RefundedAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Amount of the OrderPaymentSummary that was refunded. |
| `ReservedBalanceAmount` | **Type**<br>currency<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort, Update<br>**Description**<br>Reserved balance amount for the exchange order for the order payment summary relationship. |
| `ReservedBalanceTotalAmount` | **Type**<br>currency<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort, Update<br>**Description**<br>Summary of all the ReservedBalanceAmount for all the order payment summary references. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Type of reference between the OrderSummary and the OrderPaymentSummary.<br>Possible values are:<br>• `Shared` |

# OrderShare

Represents a sharing entry on an Order. This object is available in API version 48.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `OrderAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Level of access that the user or group has to the order.<br>Possible values are:<br>• `All`—Owner. This value isn't valid when creating, updating, or deleting records.<br>• `Edit`—Read/Write<br>• `Read`—Read Only |
| `OrderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the order associated with this sharing entry. This field can't be updated.<br>This is a relationship field.<br>**Relationship Name**<br>Order<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Order |
| `RowCause` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the user or group that has been given access to the order. This field can't be updated.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>UserOrGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

## Usage

This object allows you to determine which users and groups can view or edit orders owned by other users.

If you attempt to create a record that matches an existing record, any modified fields are updated, the system returns the existing record.

# OrderStatus

Represents the status of the order entity. This object is available in API version 48.0 and later.

## Supported Calls

`describeSObjects()`,`query()`,`retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `ApiName` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Uniquely identifies a picklist value so it can be retrieved without using an id or primary label. |
| `IsDefault` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this is the default order status value `(true)` or not `(false)` in the picklist. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Master label for this order status value. This display value is the internal label that doesn't get translated. |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number used to sort this value in the order status picklist. These numbers aren't guaranteed to be sequential, as some previous contract status values might have been deleted. |
| `StatusCode` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Status of the order.<br>Possible values are:<br>• `Activated`<br>• `Draft`<br>• `Superseded-This value is applicable only to Revenue Cloud Advanced users and is available in API version 64.0 and later.` |

## Usage

This object represents a value in the order status picklist. The order status picklist provides additional information about the status of an Order, such as its current state (`Draft`, `Activated`, or *`Superseded`*). You can query these records to retrieve the set of values in the order status picklist, and then use that information while processing Order objects to determine more information about a given order. For example, the application could test whether a given order is activated based on its Status value and the value of the StatusCode property in the associated OrderStatus object.

# OrderSummary

Represents the current properties and state of an order. Corresponds to one or more order objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

For performance and data integrity reasons, CRUD operations on OrderSummary records don't fire Apex triggers.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

## Fields

| Field | Details |
|---|---|
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the account or person account associated with the OrderSummary. It represents the shopper in the storefront.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.<br>This field is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |

| Field | Details |
| --- | --- |
| `ActiveProcessExceptionCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Total number of active process exceptions on the OrderSummary.<br>This field is available in API version 50.0 and later. |
| `BillingAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>Billing address associated with the OrderSummary.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `BillingCity` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Billing address city. |
| `BillingCountry` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Billing address country. |
| `BillingCountryCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The ISO country code for the billing address. The default value is `US`. |
| `BillingEmailAddress` | **Type**<br>email |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Email address on the billing address. |
| `BillingGeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The accuracy of the geocode for the billing address.<br>Possible values are:<br>• `Address`<br>• `Block`<br>• `City`<br>• `County`<br>• `ExtendedZip`<br>• `NearAddress`<br>• `Neighborhood`<br>• `State`<br>• `Street`<br>• `Unknown`<br>• `Zip` |
| `BillingLatitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with BillingLongitude to specify the precise geolocation of the billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. |
| `BillingLongitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with BillingLatitude to specify the precise geolocation of the billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. |

| Field | Details |
| --- | --- |
| BillingPhoneNumber | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Phone number of the billing address. |
| BillingPostalCode | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Billing address postal code. |
| BillingState | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Billing address state. |
| BillingStateCode | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The ISO state or province code for the billing address. |
| BillingStreet | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Billing address street. |
| BillToContactId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the Contact associated with the OrderSummary. It represents the shopper in the storefront when not using person accounts.<br>If the `OrderLifeCycleType` field is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.<br>This field is available in API version 49.0 and later.<br>**Relationship Name**<br>BillToContact<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `BusinessModel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The business model of the OrderSummary.<br>Possible values are:<br>• `B2B`<br>• `B2C`<br>This field is available in API version 53.0 and later. |
| `ChangeOrderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Reserved for future use. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only with the multicurrency feature enabled. Contains the ISO code for the currency of the original Order associated with the OrderSummary.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `DKK`—Danish Krone<br>• `EUR`—Euro<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar<br>The default value is `USD`.<br>This field is available in API version 49.0 and later. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Description of the OrderSummary.<br>This field can be edited. |
| `EffectiveDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Date at which the order becomes effective. Label is **Order Start Date**.<br>This field is available in API version 64.0 and later. |
| `ExternalReference Identifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort, Update<br>**Description**<br>Used internally to prevent duplicate records. This value is case-sensitive.<br>In API version 56.0 and later, for orders ingested from B2C Commerce, this value is set to *`B2C realm ID`* + "_" + *`B2C instance ID`* + "@" + *`B2C Commerce catalog/domain ID`* + "@" + *`B2C Commerce order number`*.<br>In API version 55.0, the standard B2C Commerce integration set this value to "SFDC" + "@" + *`nanotime`* + "@" + *`UUID`* and High Scale Orders set it to the value used in later versions.<br>This field is available in API version 54.0 and later. |
| `GrandTotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Total amount, including adjustments and tax, of the OrderSummary. |
| `IsSuspended` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the OrderSummary is suspended. The default value is false.<br>This field is available in API version 50.0 and later. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `OperationInProgress` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Current operation.<br>Possible values are:<br>• `Cancellation`<br>• `None` |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed. |
| `OrderedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Date of the original order associated with this OrderSummary.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `OrderLifeCycleType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Specifies whether the OrderSummary is managed by Salesforce Order Management (MANAGED) or by an external system (UNMANAGED). An unmanaged OrderSummary is stored in Salesforce for reference purposes.<br>• Some Order Management APIs reject input records that are associated with unmanaged OrderSummaries.<br>• Order Management does not update financial bucket fields on some records that are associated with unmanaged OrderSummaries.<br>• A user with the EditUnmanagedOrderSummaries or B2BCommerceIntegrator permission can edit certain fields on objects related to unmanaged OrderSummaries that are normally only accessible via APIs.<br>Possible values are:<br>• `MANAGED`—Managed<br>• `UNMANAGED`—Unmanaged<br>This field is available in API version 49.0 and later. |
| `OrderNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the OrderSummary. |
| `OrderProductLineCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Total number of unique products ordered on this Order Summary.<br>This field is available in API version 52.0 and later. |

| Field | Details |
| --- | --- |
| `OriginalOrderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the original order associated with this OrderSummary. Label is **Original Order**.<br>This field is a relationship field.<br>**Relationship Name**<br>OriginalOrder<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Order |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who currently owns this OrderSummary. Default value is the ID of the user who created the record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PoDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Purchase order date associated with this OrderSummary.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.<br>This field is available in API version 52.0 and later. |

| Field | Details |
| --- | --- |
| `PoNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Purchase order number associated with this OrderSummary.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |
| `Pricebook2Id` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the pricebook associated with this OrderSummary.<br>This field is available in API version 54.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>Pricebook2<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Pricebook2 |
| `RoutingAttempts` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of attempts that have been made to route the order summary to inventory locations.<br>This field is available in API version 51.0 and later. |
| `SalesChannelId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the SalesChannel associated with this OrderSummary. |

| Field | Details |
| --- | --- |
| | If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.<br>This field is a relationship field.<br>**Relationship Name**<br>SalesChannel<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>SalesChannel |
| `SalesStoreId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the RetailStore or WebStore associated with this OrderSummary.<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.<br>This field is a relationship field.<br>**Relationship Name**<br>SalesStore<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>WebStore |
| `SourceProcess` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Describes the order process that created the OrderSummary.<br>Possible values are:<br>• `Exchange` The OrderSummary was created by an Exchange process<br>• `OrderOnBehalf` The OrderSummary was created by an Order on Behalf Of process<br>• `Standard` The OrderSummary was not created by an Order on Behalf Of or Exchange process<br>This field is available in API version 57.0 and later. |

| Field | Details |
| --- | --- |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Status of the order summary. Unlike the Status and Status Category fields on the order and FulfillmentOrder objects, this field is optional.<br>We recommend that you use the same values in this picklist that you use in the Status picklist for the order object. |
| `SourceOrderSummaryId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the source order summary that's associated with this OrderSummary.<br>This field is populated when the SourceProcess of this OrderSummary is an exchange process.<br>**Relationship Name**<br>SourceOrderSummary<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderSummary |
| `TaxLocaleType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The system used to handle tax on the original Order associated with the OrderSummary. Gross usually applies to taxes like value-added tax (VAT), and Net usually applies to taxes like sales tax. Automatic taxes use currency to determine if the tax is added on top of the price (excluded) or included in the price.<br>Possible values are:<br>• `Gross` (displays most prices and taxes as combined values)<br>• `Net` (displays most prices and taxes as separate values)<br>• `Automatic` (displays most prices and taxes as combined or separate, based on the currency)<br>If the `OrderLifeCycleType` field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. |

| Field | Details |
| --- | --- |
| | This field is available in API version 49.0 and later. |
| `TotalAdjDelivery AmtWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount of all OrderItemSummaries of type Delivery Charge belonging to this OrderSummary, inclusive of item-level adjustments and tax. This amount is equal to TotalAdjustedDeliveryAmount + TotalAdjustedDeliveryTaxAmount.<br>This field is available in API version 49.0 and later. |
| `TotalAdjDistAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total of distributed adjustments applied to OrderItemSummaries belonging to this OrderSummary. This amount is equal to TotalProductAdjDistAmount plus TotalDeliveryAdjDistAmount. |
| `TotalAdjDist AmountWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total of distributed adjustments applied to OrderItemSummaries belonging to this OrderSummary, inclusive of tax. This amount is equal to TotalAdjDistAmount plus TotalAdjDistTaxAmount.<br>This field is available in API version 49.0 and later. |
| `TotalAdjDistTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalAdjDistAmount. |
| `TotalAdjFeeAmtWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Total amount of all OrderItemSummaries of type Fee belonging to this OrderSummary, inclusive of item-level adjustments and tax. This amount is equal to TotalAdjustedFeeAmount plus TotalAdjustedFeeTaxAmount.<br>This field is available in API version 56.0 and later. |
| `TotalAdjProduct AmtWithTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount of all OrderItemSummaries of type code Product belonging to this OrderSummary, inclusive of item-level adjustments and tax. This amount is equal to TotalAdjustedProductAmount plus TotalAdjustedProductTaxAmount.<br>This field is available in API version 49.0 and later. |
| `TotalAdjusted DeliveryAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total, including item-level adjustments but not order-level adjustments or tax, of all OrderItemSummaries of type Delivery Charge belonging to this OrderSummary. |
| `TotalAdjusted DeliveryTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalAdjustedDeliveryAmount. |
| `TotalAdjustedFeeAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total, including item-level adjustments but not order-level adjustments or tax, of all OrderItemSummaries of type Fee belonging to this OrderSummary.<br>This field is available in API version 56.0 and later. |
| `TotalAdjusted FeeTaxAmount` | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalAdjustedFeeAmount.<br>This field is available in API version 56.0 and later. |
| `TotalAdjustedProduct Amount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total, including item-level adjustments but not order-level adjustments or tax, of all OrderItemSummaries of type code Product belonging to this OrderSummary. |
| `TotalAdjustedProduct TaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the TotalAdjustedProductAmount. |
| `TotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total, including adjustments but not tax, of all OrderItemSummaries belonging to this OrderSummary. Equal to TotalAdjustedProductAmount plus TotalAdjustedFeeAmount plus TotalAdjustedDeliveryAmount. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**OrderSummaryChangeEvent (API version 62.0)**
Change events are available for the object.

**OrderSummaryFeed**
Feed tracking is available for the object.

**OrderSummaryOwnerSharingRule**
Sharing rules are available for the object.

**OrderSummaryShare**
Sharing is available for the object.

# OrderSummaryAdditionalInfo

Stores information related to OrderSummary including context around the order, such as inventory reservation details, order origination, and other values that Einstein uses to perform order analysis. Only reservation details can be stored in this object. This object is available in API version 58.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

## Fields

| Field | Details |
|---|---|
| `AdjustmentsVersion` | **Type**<br>text<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Represents the adjustment algorithm that was used to create adjustments for this order |

| Field | Details |
| --- | --- |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>ISO code for the currency of the OrderSummary associated with the OrderSummaryAdditionalInfo.<br>Possible values are:<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar<br>The default value is `USD`. |
| `InventoryReservationExtRef` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Holds an external reference identifier for tracking the inventory reservation. |
| `InventoryReservationIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Inventory reservation identifier for the order, if available. Since this value can come from external systems, the value type has no lookup or enforcement. |
| `InventoryReservationMessage` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Holds any details or other relevant information that can further explain the status of the reservation. |
| `InventoryReservationState` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The status of the reservation, if available. |

| Field | Details |
| --- | --- |
| | Possible values are:<br>• DEFERRED<br>• NOT_APPLICABLE<br>• PERMANENT<br>• TEMPORARY |
| Name | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the OrderSummaryAdditionalInfo record. |
| OrderId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Unique ID of the order associated with this record.<br>This field is a relationship field.<br>**Relationship Name**<br>Order<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Order |
| OrderSummaryId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Unique ID of the associated OrderSummary to which the specific OrderSummaryAdditionalInfo applies.<br>This field is a relationship field.<br>**Relationship Name**<br>OrderSummary<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderSummary |

| Field | Details |
| --- | --- |
| OwnerId | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who currently owns this record. Default value is the ID of the user who created the record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

OrderSummary

# OrderSummaryRelationship

Junction object used to track how an original order summary (created before any exchanges have occurred) relates to other order summary objects in a chain of exchange orders. This object is available in API version 60.0 and later.

An exchange order is an OrderSummary object whose `SourceProcess` property is set to Exchange. An original order summary can have an exchange order, which in turn can have yet another exchange order, and so on. The OrderSummaryRelationship object maintains this relationship between OrderSummary objects.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce or D2C Commerce license is enabled.

## Fields

| Field | Details |
|---|---|
| `AssociatedOrderSummaryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the associated OrderSummary.<br>This field is a relationship field.<br>**Relationship Name**<br>AssociatedOrderSummary<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderSummary |
| `AssociatedOrderSummaryStatus` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>Status of the associated OrderSummary.<br>Possible values are:<br>• `Activated`<br>• `Approved`<br>• `Canceled`<br>• `Created`<br>• `Fulfilled`<br>• `Returned`<br>• `Waiting to Fulfill`<br>The default value is `Created`. |

| Field | Details |
| --- | --- |
| `AssociatedRelationshipType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Relationship type of the associated OrderSummary.<br>Possible values are:<br>• `Exchange` |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.<br>Possible values are:<br>• `EUR`—Euro<br>• `USD`—U.S. Dollar<br>The default value is `USD`. |
| `MainAttachedToId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of an Order (Change Order) or a ReturnOrder that belongs to the parent OrderSummary (whose ID is stored in the `MainOrderSummaryId` field).<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>MainAttachedTo<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Order, ReturnOrder |
| `MainOrderSummaryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the associated OrderSummary's parent.<br>This field is a relationship field.<br>**Relationship Name**<br>MainOrderSummary<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderSummary |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Name of the OrderSummaryRelationship. |
| `RootOrderSummaryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the original OrderSummary that existed before any exchange orders were created.<br>This field is a relationship field.<br>**Relationship Name**<br>RootOrderSummary<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderSummary |

# OrderSummaryRoutingSchedule

Represents an attempt to route an order summary to one or more inventory locations for fulfillment. You can use it to schedule future attempts and to record completed attempts. This object is available in API version 51.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

## Fields

| Field | Details |
| --- | --- |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the order summary routing schedule. |
| `OrderSummaryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>(Master-Detail) The order summary associated with the routing schedule. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the User who currently owns this order summary routing schedule. Default value is the User logged in to the API to perform the create. |

| Field | Details |
| --- | --- |
| `Reason` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Reason for the routing attempt. You can customize this list.<br>The list has one default value:<br>• `Unknown` |
| `ScheduleStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Identifies whether this routing attempt has already run or is scheduled to run.<br>Possible values are:<br>• ABANDONED<br>• COMPLETED<br>• SCHEDULED |
| `ScheduledDatetime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Identifies when this routing attempt was run or is scheduled to run. If the `ScheduleStatus` is ABANDONED or COMPLETED, then you can't modify this value. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**OrderSummaryRoutingScheduleOwnerSharingRule**
Sharing rules are available for the object.

**OrderSummaryRoutingScheduleShare**
Sharing is available for the object.

SEE ALSO:

OrderSummary

# Organization

Represents key configuration information for an organization.

Executing a SOQL SELECT query returns the value of fields in this object, but no value is visible for some of the fields.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

| Field | Details |
|---|---|
| `Address` (beta) | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The compound form of the address. Read-only. See Address Compound Fields for details on compound address fields. |
| `AllowsSelfServiceLogin` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Update<br>**Description**<br>Indicates whether the organization allows Self-Service login (`true`) or not (`false`). |
| `City` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Name of the city for the organization's address. |
| `ComplianceBccEmail` | **Type**<br>email |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Email address for compliance blind carbon copies. Limit: 80 characters. |
| `Country` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of the country for the organization's address. Limit: 80 characters. |
| `CountryCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ISO country code for the organization’s address. Enable state and country/territory picklists to use this field. For more information, see Enable and Disable State and Country/Territory Picklists in Salesforce Help. |
| `DailyWebToCaseCount` | **Type**<br>int<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The number of web form submissions that have been converted to cases for the day. |
| `DailyWebToCaseLimit` | **Type**<br>int<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The maximum number of web form submissions that can be converted to cases per day. |
| `DailyWebToLeadCount` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable<br>**Description**<br>The number of web form submission that have been converted to leads for the day |
| `DailyWebToLeadLimit` | **Type**<br>int<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The maximum number of web form submissions that can be converted to leads per day. |
| `DefaultAccountAccess` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>In API version 10.0 and later, represents the default access level for accounts, contracts, and assets. The possible values are:<br>• `None`<br>• `Read`<br>• `Edit`<br>• `ControlledByLeadOrContact`<br>• `ControlledByCampaign`<br>In versions before 10.0, `DefaultAccountAndContactAccess` represented this value. |
| `DefaultAccountAndContactAccess` | **Type**<br>picklist<br>**Properties**<br>Filter, Nillable, Restricted picklist<br>**Description**<br>Default access level for accounts, contacts, contracts, and assets. This field is supported for backward compatibility only and is not available in API version 10.0 or later. In version 10.0 and later, use either `DefaultAccountAccess` or `DefaultContactAccess`. |

| Field | Details |
| --- | --- |
| `DefaultCalendarAccess` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Default access level for calendars. The possible values are listed, followed by the user interface labels in parentheses:<br>• `HideDetails` (Hide Details)<br>• `HideDetailsInsert` (Hide Details and Add Events)<br>• `ShowDetails` (Show Details)<br>• `ShowDetailsInsert` (Show Details and Add Events)<br>• `AllowEdits` (Full Access) |
| `DefaultCampaignAccess` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Default access level for campaigns. The possible values are:<br>• `None`<br>• `Read`<br>• `Edit`<br>• `All` |
| `DefaultCaseAccess` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Default access level for cases. The possible values are:<br>• `None`<br>• `Read`<br>• `Edit`<br>• `ReadEditTransfer` |
| `DefaultContactAccess` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Default access level for contacts. The possible values are:<br>• `None`<br>• `Read`<br>• `Edit`<br>• `ControlledByParent`<br>In versions before 10.0, `DefaultAccountAndContactAccess` represented this value.<br>When `DefaultContactAccess` is set to "Controlled by Parent," you can't update the `ContactAccessLevel` field. |
| `DefaultLeadAccess` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Default access level for leads. The possible values are:<br>• `NoneRead`<br>• `Edit`<br>• `ReadEditTransfer` |
| `DefaultLocaleSidKey` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Default locale SID key. For more information on picklist options, see Supported Number, Name, and Address Formats (ICU) in Salesforce help. |
| `DefaultOpportunityAccess` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Default access level for opportunities. The possible values are:<br>• `None`<br>• `Read`<br>• `Edit` |

| Field | Details |
| --- | --- |
| | • `ControlledByLeadOrContact`<br>• `ControlledByCampaign` |
| `DefaultPricebookAccess` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Default access level for price books. The possible values are listed, followed by the user interface labels in parentheses:<br>• `None` (No access)<br>• `Read` (Read only)<br>• `ReadSelect` (Use) |
| `DefaultTerritoryCaseAccess` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Default access level for cases associated with accounts in territories. The possible values are:<br>• `None`<br>• `Read`<br>• `Edit`<br>• `ControlledByLeadOrContact`<br>• `ControlledByCampaign` |
| `DefaultTerritoryContactAccess` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Default access level for contacts associated with accounts in territories. The possible values are:<br>• `NoneRead`<br>• `Edit`<br>• `ControlledByLeadOrContact`<br>• `ControlledByCampaign`<br>When `DefaultContactAccess` is set to "Controlled by Parent" you can't update this field. |

| Field | Details |
| --- | --- |
| `DefaultTerritoryOppAccess` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Default access level for opportunities in territories.<br>Valid values:<br>• `NoneRead`<br>• `Edit`<br>• `ControlledByLeadOrContact`<br>• `ControlledByCampaign` |
| `Division` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the division for this organization. This field is not related to the Division object. |
| `Fax` | **Type**<br>phone<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Fax number. Limit: 40 characters. |
| `FiscalYearStartMonth` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number that corresponds to the month that this organization's fiscal year starts. |
| `HomepageHtml` | **Type**<br>textarea<br>**Properties**<br>Nillable, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The Home tab custom links and company message for this organization. |
| `InstanceName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Read-only. The name of the instance. Available in API version 31.0 or later. |
| `IsSandbox` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Read-only. Indicates whether the current organization is a sandbox (`true`) or production (`false`) instance. Available in API version 31.0 or later. |
| `LanguageLocaleKey` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The same as `Language`, the two-to-five character code which represents the language and locale ISO code. This controls the language for labels displayed in an application. |
| `LastWebToCaseDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The last date that a web form submission was converted to a case. |
| `LastWebToLeadDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable |

| Field | Details |
| --- | --- |
| | **Description**<br>The last date that a web form submission was converted to a lead. |
| `Latitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>Used with `Longitude` to specify the precise geolocation of an address. Acceptable values are numbers between –90 and 90 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `Longitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>Used with `Latitude` to specify the precise geolocation of an address. Acceptable values are numbers between –180 and 180 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `MaxActionsPerRule` | **Type**<br>int<br>**Properties**<br>Filter, Nillable<br>**Description**<br>Maximum number of actions per workflow, assignment, escalation, and auto-response rules. This field is unavailable in version 15.0 and later. |
| `MaxRulesPerEntity` | **Type**<br>int<br>**Properties**<br>Filter, Nillable<br>**Description**<br>Maximum number of rules per object, inclusive of workflow, assignment, escalation, and auto-response rules. This field is unavailable in version 15.0 and later. |
| `MonthlyPageViewsEntitlement` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of page views allowed for the current calendar month for the sites in your organization. To access this field, Salesforce Sites must be enabled for your organization. This field is generally available in API versions 18.0 and later. |
| `MonthlyPageViewsUsed` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of page views used in the current calendar month for the sites in your organization. To access this field, Salesforce Sites must be enabled for your organization. This field is generally available in API versions 18.0 and later. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the organization. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. |

| Field | Details |
| --- | --- |
| | • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `OrganizationType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Edition of the organization, for example Enterprise Edition or Unlimited Edition. |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Phone number for the organization. |
| `PostalCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Postal code for the address of the organization. Limit: 20 characters. |
| `PreferencesEventScheduler` | **Type**<br>boolean<br>**Properties**<br>Update<br>**Description**<br>Indicates whether opportunities require products (`true`) or not (`false`). |
| `PreferencesRequireOpportunityProducts` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether opportunities require products (`true`) or not (`false`). |

| Field | Details |
| --- | --- |
| `PreferencesS1BrowserEnabled` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the Salesforce mobile web is enabled for all users in your organization (`true`) or is disabled for all users (`false`).<br>This field is available in API version 29.0 or later. |
| `PreferencesTerminateOldestSession` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the oldest login session is automatically closed when a policy specifying the maximum number of sessions is triggered.<br>This field is available in API version 35.0 — 49.0. As of API version 50.0, this field is removed. |
| `PreferencesTransactionSecurityPolicy` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the Transaction Security feature has been enabled.<br>This field is available in API version 35.0 — 49.0. As of API version 50.0, this field is removed. |
| `PrimaryContact` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Name of the primary contact for the organization. Limit: 80 characters. |
| `ReceivesAdminInfoEmails` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the organization receives administrator emails (`true`) or not (`false`). |
| `ReceivesInfoEmails` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the organization receives informational email from Salesforce (`true`) or not (`false`). |
| `SelfServiceCasePlural` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The plural version of the term used to represent the Case object in the Self-Service portal. |
| `SelfServiceCaseSingle` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The singular version of the term used to represent the Case object in the Self-Service portal. |
| `SelfServiceCaseSubmitRecordTypeId` | **Type**<br>reference<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The ID of the record type associated with a case submitted via the Self-Service portal. |
| `SelfServicDefaultCaseOrigin` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The default origin of a case submitted via the Self-Service portal. |

| Field | Details |
| --- | --- |
| `SelfServiceEmailSenderAddress` | **Type**<br>email<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The Self-Service email address from which new Self-Service user and password email messages are sent, such as `support@acme.com`. |
| `SelfServiceEmailSenderName` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The name associated with the email address in the `SelfServiceEmailSenderAddress` field, such as `Acme Customer Support`. |
| `SelfServiceEmailUserOnCaseCreationTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The ID of the email template used when email is sent to a Self-Service user when he or she creates a case. |
| `SelfServiceEnabledForResponseRules` | **Type**<br>boolean<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>Indicates whether the Self-Service portal is enabled for auto-response rules (`true`) or not (`false`). |
| `SelfServiceFeatureConfig` | **Type**<br>int<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>An integer representing the active Self-Service feature configuration for this organization. |

| Field | Details |
| --- | --- |
| `SelfServiceLogoutUrl` | **Type**<br>url<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The Web page that displays when a Self-Service user logs out of the Self-Service portal. |
| `SelfServiceMaxNumSuggestions` | **Type**<br>int<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The maximum number of suggested solutions allowed for a Self-Service case. |
| `SelfServiceNewCommentCheckedByDefault` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Update<br>**Description**<br>If `true`, When a customer notification is automatically sent when a new comment is added to a case. |
| `SelfServiceNewCommentTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The ID of the email template used to send a notification to Self-Service users when a public comment is added to one of their cases. |
| `SelfServiceNewPassTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The ID of the email template used when new passwords are generated for Self-Service users. |

| Field | Details |
| --- | --- |
| `SelfServiceNewUserTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The ID of the email template used when new Self-Service users are enabled. |
| `SelfServicePageHeight` | **Type**<br>int<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The maximum height in pixels of Self-Service pages. |
| `SelfServicePageWidth` | **Type**<br>int<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The maximum width in pixels of Self-Service pages. |
| `SelfServiceSelfClosedCaseStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The default status for cases closed by Self-Service users. |
| `SelfServiceSolutionCategoryAvailable` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Update<br>**Description**<br>Indicates whether solution categories are available in the Self-Service portal (`true`) or not (`false`). |
| `SelfServiceSolutionCategoryStartNodeId` | **Type**<br>reference<br>**Properties**<br>Filter, Nillable, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the top-level category in the Self-Service portal. |
| `SelfServiceSolutionPlural` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The plural version of the term used to represent the Solution object in the Self-Service portal. |
| `SelfServiceSolutionSingle` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The singular version of the term used to represent the Solution object in the Self-Service portal. |
| `SelfServiceStyleSheetUrl` | **Type**<br>url<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The public URL of your organization's Self-Service portal stylesheet. |
| `SelfServiceWelcomePageConfig` | **Type**<br>int<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>Integer that represents the welcome page configuration for the Self-Service portal. |
| `SelfServiceWelcomeText` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The custom welcome message displayed at the top of the Self-Service home page when Self-Service users log in. Limit: 32,000 characters. |

| Field | Details |
| --- | --- |
| SignupCountryIsoCode | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ISO country code specified by the user for a sign-up request. |
| State | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>State of the address of the organization. Limit: 80 characters. |
| StateCode | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ISO state code for the organization’s address. |
| Street | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Street address for the organization. Limit: 255 characters. |
| TrialExpirationDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date that this organization's trial license expires. |
| TimeZoneSidKey | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Identifies the default time zone of the organization. |

| Field | Details |
| --- | --- |
| `UiSkin` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The user interface theme selected for the organization. |
| `UsesStartDateAsFiscalYearName` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the calendar year when the fiscal year begins is referred to as the year of the company's fiscal year (`true`) or not (`false`). For example, if the fiscal year begins in February 2006, a `true` value means the fiscal year is FY2006, and a `false` value means the fiscal year is FY2007. |
| `UsesWebToCase` | **Type**<br>boolean<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>Indicates whether this organization can use Web-to-Case (`true`) or not (`false`). |
| `UsesWebToLead` | **Type**<br>boolean<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>Indicates whether this organization can use Web-to-Lead (`true`) or not (`false`). |
| `WebToCaseAssignedEmailTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The ID of the email template used when a new case is assigned to a user via Web-to-Case. |

| Field | Details |
| --- | --- |
| `WebToCaseCreatedEmailTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The ID of the email template used when a new case is created via Web-to-Case. |
| `WebToCaseDefaultCreatorId` | **Type**<br>reference<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The ID of the user specified as the default creator of cases created via Web-to-Case. |
| `WebToCaseDefaultOrigin` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The default value for the **Case Origin** field on cases submitted via Web-to-Case. Limit: 40 characters. |

## Usage

Query this object to obtain information about an organization's settings. Only one organization object exists per organization.

Overview of Salesforce Objects and Fields

# OrgDeleteRequest

Represents a request to delete a developer edition (DE) org. This object is available in API version 42.0 and later. It is available only in Developer and Database.com editions.

## Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

# Fields

| Field Name | Details |
|---|---|
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The auto-generated ID of this OrgDeleteRequest object. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>The ID of the user who initiated the org delete request. |
| `RequestType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Specifies whether you want to deactivate or reactivate the org. When you deactivate an org, you have 30 days to change your mind and reactivate it. After 30 days, the org is locked, and you must contact Salesforce Customer Support to reactivate it. After 60 days, the org is permanently deleted from Salesforce servers.<br>Valid values:<br>• `Deactivate`<br>• `Reactivate` |

# Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**OrgDeleteRequestOwnerSharingRule**
Sharing rules are available for the object.

**OrgDeleteRequestShare**
Sharing is available for the object.

# OrgEmailAddressSecurity

Defines the assignment of a user profile to an org-wide email address. This object is available in API version 58.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Only authenticated users with the View Setup and Configuration permission can access this object.

## Fields

| Field | Details |
|---|---|
| `OrgWideEmailAddressId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of an organization-wide email address.<br>This field is a relationship field.<br>**Relationship Name**<br>OrgWideEmailAddress<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrgWideEmailAddress |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The profile ID that's allowed to use an organization-wide email address.<br>This field is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Profile |

## Usage

You can use this object with OrgWideEmailAddress and Profile objects to retrieve user profiles that have access to a specific org-wide email address. To find specific users, use the `ProfileId` field on the User object.

You can also retrieve the org-wide email addresses that a specific user can access. Note that any users assigned to those org-wide email addresses via permission set aren't returned.

# OrgMetric

Represents a feature or metric that Salesforce Optimizer evaluates. This object is available in API version 47.0 and later.

## Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in orgs where Salesforce Optimizer is enabled. Requires the Modify All Data and Customize Application user permissions.

## Fields

| Field | Details |
| --- | --- |
| `Category` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The category of the feature evaluated.<br>Possible values are:<br>• `Custom Code`<br>• `Custom Layouts`<br>• `Fields`<br>• `Improve Org Security`<br>• `Improve User Experience` |

| Field | Details |
| --- | --- |
| | • `Increase User Adoption`<br>• `Object Limits`<br>• `Org Limits`<br>• `Reports And Dashboards`<br>• `Usage`<br>• `User Management`<br>• `Workflow`<br>The default value is `Org Limits`. |
| `FeatureType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The feature evaluated. For a full list, see Features Evaluated in Salesforce Optimizer.<br>The default value is `Unassigned Page Layouts`. |
| `LatestOrgMetricScanSummaryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The feature's `OrgMetricScanSummaryID` from the most recent Optimizer evaluation.<br>This field is a relationship field.<br>**Relationship Name**<br>LatestOrgMetricScanSummary<br>**Refers To**<br>OrgMetricScanSummary on page 3870 |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>A unique number that identifies the feature. |

# OrgMetricScanResult

Represents data or an item associated with a feature's results in a Salesforce Optimizer evaluation. For example, for the Custom Field Limit feature, an OrgMetricScanResult object represents an object flagged for approaching the custom field limit. This object is available in API version 47.0 and later.

## Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `upsert()`

## Special Access Rules

This object is only available in orgs where Salesforce Optimizer is enabled. Requires the Modify All Data and Customize Application user permissions.

## Fields

| Field | Details |
|---|---|
| `Date` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The date associated with an item in a feature's Optimizer evaluation.<br>**Example**<br>For the Unsupported Browsers feature, `Date` indicates the date that the user last logged in with an unsupported browser. |
| `Flags` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The flags associated with an item in a feature's Optimizer evaluation.<br>**Example**<br>For the API Versions feature, `Flags` indicates the API version of an object that Optimizer evaluates as outdated. |
| `ItemStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The recommended action for an item in a feature's Optimizer evaluation.<br>Possible values are:<br>• `Action Required`<br>• `Immediate Action Required`<br>• `No Action Required`<br>• `Not Currently Enabled`<br>• `Review Required`<br>• `Unable to Analyze`<br>The default value is `No Action Required`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort<br>**Description**<br>The name of the item in a feature's Optimizer evaluation, such as an object name.<br>**Example**<br>For the Unassigned Roles feature, `Name` refers to the name of the unassigned role. |
| `Object` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The object ID associated with the item in a feature's Optimizer evaluation.<br>For the Release Update feature only, `Object` indicates the release that the update is scheduled for.<br>**Example**<br>For the Unused Reports feature, `Object` refers to the ID of the unused report. |
| `OrgMetricScanSummaryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The feature's OrgMetricScanSummary ID from the most recent Optimizer run.<br>This field is a relationship field.<br>**Relationship Name**<br>OrgMetricScanSummary |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Master-detail<br>**Refers To**<br>OrgMetricScanSummary on page 3870 (the master object) |
| `Profile` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The profile ID associated with the item in a feature's Optimizer evaluation. |
| `Quantity` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>A quantity associated with the item in a feature's Optimizer evaluation.<br>**Example**<br>For the Custom Field Limits feature, `Quantity` indicates the total number of fields on an object that approaches the custom field limit. |
| `Type` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The type of item or data in a feature's Optimizer evaluation.<br>**Example**<br>For the Unsupported Browsers feature, `Type` indicates the unsupported browser and platform used. |
| `Url` | **Type**<br>url<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The URL associated with the item in a feature's Optimizer evaluation.<br>**Example**<br>For the Unassigned Page Layouts feature, the `URL` represents a link to the unassigned layout. |

| Field | Details |
| --- | --- |
| `User` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The user ID or username associated with the item in a feature's Optimizer evaluation. For the Release Update feature only, `User` indicates the name of the release update that requires review.<br>**Example**<br>For the User Logins feature, `User` indicates the username of a user who hasn't recently logged in. |

# OrgMetricScanSummary

Represents the results summary for a specific feature in a Salesforce Optimizer evaluation. This object is available in API version 47.0 and later.

## Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `upsert()`

## Special Access Rules

This object is only available in orgs where Salesforce Optimizer is enabled. Requires the Modify All Data and Customize Application user permissions.

## Fields

| Field | Details |
| --- | --- |
| `ErrorMessage` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The message returned if an error occurred during the most recent Optimizer evaluation. |

| Field | Details |
| --- | --- |
| `FeatureLimit` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The numerical limit of a feature.<br>**Example**<br>For the Custom Field Limits feature, `FeatureLimit` is `500` for Developer Edition orgs. |
| `ImplementationEffort` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The estimated time needed to complete the recommended actions for the feature.<br>Possible values are:<br>• `1 - 2 hours`<br>• `30 - 60 minutes`<br>• `< 30 minutes`<br>• `> 2 hours`<br>The default value is `30 minutes`. |
| `ItemCount` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The number of issues found for the feature. Corresponds to the number of `OrgMetricScanResult` objects generated for the feature in an Optimizer evaluation. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>A number that identifies the feature's results summary. |
| `OrgMetricId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The OrgMetric ID that represents the feature analyzed in the Optimizer evaluation.<br>This field is a relationship field.<br>**Relationship Name**<br>OrgMetric<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>OrgMetric on page 3865 (the master object) |
| `PercentUsage` | **Type**<br>percent<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>A percentage associated with a feature.<br>**Example**<br>For the Incomplete Chatter Profiles feature, the `PercentUsage` value is `100` if 100% of users have complete Chatter profiles. |
| `ScanDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The time that the report for the Optimizer evaluation was generated. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>The recommended action for the feature.<br>Possible values are:<br>• `Action Required`<br>• `Immediate Action Required`<br>• `No Action Required`<br>• `Not Currently Enabled`<br>• `Review Required`<br>• `Unable to Analyze` |

| Field | Details |
| --- | --- |
| | The default value is `No Action Required`. |
| `Unit` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The unit of measurement used in the feature's results summary.<br>**Example**<br>For the Data Storage feature, the `Unit` is `MB`. |

# OrgSnapshot

Represents a snapshot of a scratch org. Snapshots capture the state of a scratch org so that you can use it to quickly spin up new scratch orgs using its configuration. This object is available in API version 61.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

A snapshot must belong to the Dev Hub org that you're using to create the scratch org. You must enable the scratch org snapshot feature in your Dev Hub org using Setup.

## Fields

| Field | Details |
| --- | --- |
| `Content` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Reserved for future use. |

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>A free-form text field (maximum 255 characters) for you to enter a description of this scratch org snapshot. |
| `Error` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Reserved for future use. |
| `ExpirationDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Date when the scratch org snapshot expires. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, and `LastReferenceDate` isn't null, the user accessed this record or list view indirectly. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the user who owns the scratch org snapshot.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `Provider` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>For internal use only. |
| `ProviderSnapshot` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>For internal use only. |
| `ProviderSnapshotVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>For internal use only. |
| `SnapshotName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the scratch org snapshot. This field value is unique within your org. |
| `SourceOrg` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The org ID of the scratch org that the snapshot was created from. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Status of the snapshot.<br>Possible values are:<br>• `Active`—The snapshot is created and can be used to create scratch orgs.<br>• `Error`—The snapshot couldn't be created.<br>• `Expired`—The snapshot has expired.<br>• `In Progress`—The snapshot is in the process of being created.<br>• `New`—The snapshot creation request has been received.<br>The default value is `New`. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**OrgSnapshotFeed on page 55**
Feed tracking is available for the object.

**OrgSnapshotHistory on page 63**
History is available for tracked fields of the object.

**OrgSnapshotShare on page 67**
Sharing is available for the object.

# OrgWideEmailAddress

Represents an organization-wide email address for user profiles.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Only authenticated users with the View Setup and Configuration permission can access this object.

## Fields

| Field | Details |
|---|---|
| `Address` | **Type**<br>email<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>An email alias that can be used by users of your org. |
| `DisplayName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The name used to identify the sender of the email. |
| `IsAllowAllProfiles` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If `true`, any user profile in your organization can use this object. If `false`, only specified user profiles can use this object when sending email. If you do not have the appropriate user profile, you can't use this object.<br>The default value is `false.`. |
| `IsVerified` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the email address has been verified by its owner.<br>The default value is false.<br>This field is available in API version 58.0 and later.<br>**Purpose**<br>Picklist<br>Possible values are DefaultNoreply, UserSelection, UserSelectionAndDefaultNoReply |

| Field | Details |
| --- | --- |
| `Purpose` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Indicates how an email address can be used. `UserSelection` allows users with the correct profile to select the address as the From address for an email.<br>Possible values are `DefaultNoreply`, `UserSelection`, `UserSelectionAndDefaultNoReply`. |

## Usage

This object represents an email alias to use as the From address for an email, which can be selected by users with a user profile. You can pass in the OrgWideEmailAddress ID when calling `sendEmail()` for a SingleEmailMessage.

# OSAsyncChgCompletedEvent

An event that allows the processing of the credit memo, invoices, and other entities after a bulk action has successfully completed. The event provides all of the values that would exist on the synchronous APIs. This object is available in API version 63.0 and later.

## Supported Calls

`create()`, `describeSObjects()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs.

## Fields

| Field | Details |
| --- | --- |
| `ActionType` | **Type**<br>string<br>**Properties**<br>Create, Nillable<br>**Description**<br>The type of the action that gets applied to Order Summary<br>Possible values are:<br>• CANCEL_ALL |

| Field | Details |
| --- | --- |
| | • RETURN_ALL |
| `AsyncOperationLogId` | **Type**<br>reference<br>**Properties**<br>Create, Nillable<br>**Description**<br>The ID of the AsyncOperationLog.<br>This field is a relationship field.<br>**Relationship Name**<br>AsyncOperationLog<br>**Refers To**<br>AsyncOperationLog |
| `CurrencyIsoCode` | **Type**<br>string<br>**Properties**<br>Create, Nillable<br>**Description**<br>The ISO code for the currency of the OrderSummary that's associated with the FulfillmentOrder. This field is available only for orgs with multicurrencies enabled.<br>Possible values are:<br>• `CNY`—Chinese Yuan<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar<br>The default value is `USD`. |
| `EventUuid` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>Uniquely identifies an event message. The ID used to match the events that are returned in the callback result with the events in the publish call. |
| `FeeChangeOrderId` | **Type**<br>reference<br>**Properties**<br>Create, Nillable<br>**Description**<br>The change order for the fee ID. This order usually used for invoices. |

| Field | Details |
| --- | --- |
| | This field is a relationship field.<br>**Relationship Name**<br>FeeChangeOrder<br>**Refers To**<br>Order |
| GrandTotalAmount | **Type**<br>double<br>**Properties**<br>Create, Nillable<br>**Description**<br>The new order summary's grand total.<br>This amount is equal to TotalAmount + TotalTaxAmount. |
| InFulfillmentChangeOrderId | **Type**<br>reference<br>**Properties**<br>Create, Nillable<br>**Description**<br>The change order for any items during fulfillment.<br>This field is a relationship field.<br>**Relationship Name**<br>InFulfillmentChangeOrder<br>**Refers To**<br>Order |
| OrderSummaryId | **Type**<br>reference<br>**Properties**<br>Create, Nillable<br>**Description**<br>The foreign key for the master Order Summary entity.<br>This field is a relationship field.<br>**Relationship Name**<br>OrderSummary<br>**Refers To**<br>OrderSummary |
| PostFulfillmentChangeOrderId | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Nillable<br>**Description**<br>The change order for any items post-fulfillment. This ID is used for credit memos refunds<br>This field is a relationship field.<br>**Relationship Name**<br>PostFulfillmentChangeOrder<br>**Refers To**<br>Order |
| `PreFulfillmentChangeOrderId` | **Type**<br>reference<br>**Properties**<br>Create, Nillable<br>**Description**<br>The change order for any items that haven't been fulfilled.<br>This field is a relationship field.<br>**Relationship Name**<br>PreFulfillmentChangeOrder<br>**Refers To**<br>Order |
| `TotalAdjDistAmount` | **Type**<br>double<br>**Properties**<br>Create, Nillable<br>**Description**<br>The total distributed adjustment amount without taxes. |
| `TotalAdjDistTaxAmount` | **Type**<br>double<br>**Properties**<br>Create, Nillable<br>**Description**<br>The total distributed adjustment taxes. |
| `TotalAdjustedDeliveryAmount` | **Type**<br>double<br>**Properties**<br>Create, Nillable |

| Field | Details |
| --- | --- |
| | **Description**<br>The total delivery adjusted amount without taxes. |
| TotalAdjustedDeliveryTaxAmount | **Type**<br>double<br>**Properties**<br>Create, Nillable<br>**Description**<br>The total delivery adjusted tax amount . |
| TotalAdjustedProductAmount | **Type**<br>double<br>**Properties**<br>Create, Nillable<br>**Description**<br>The total adjusted product amount without tax. |
| TotalAdjustedProductTaxAmount | **Type**<br>double<br>**Properties**<br>Create, Nillable<br>**Description**<br>The total adjusted product tax amount.<br>This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount. |
| TotalAmount | **Type**<br>double<br>**Properties**<br>Create, Nillable<br>**Description**<br>The total amount, not including taxes. |
| TotalExcessFundsAmount | **Type**<br>double<br>**Properties**<br>Create, Nillable<br>**Description**<br>The amount used to determine if a refund is needed pre-fulfillment. |
| TotalFeeAmount | **Type**<br>double |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Nillable<br>**Description**<br>Total fee amount, not including taxes. |
| `TotalFeeTaxAmount` | **Type**<br>double<br>**Properties**<br>Create, Nillable<br>**Description**<br>The total fee tax amount. |
| `TotalRefundableAmount` | **Type**<br>double<br>**Properties**<br>Create, Nillable<br>**Description**<br>The amount that can be refunded to the client. |
| `TotalRequiredFundsAmount` | **Type**<br>double<br>**Properties**<br>Create, Nillable<br>**Description**<br>The total amount of required funds. |
| `TotalTaxAmount` | **Type**<br>double<br>**Properties**<br>Create, Nillable<br>**Description**<br>The combined total of all taxes. |

# OutOfOffice

Represents a user-set value on a profile that shows when the user intends to be out of the office. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `query()`, `undelete()`, `upsert()`, `update()`

## Special Access Rules

In Lightning Experience, lets users set a message next to their name in Chatter to show when they plan to be out of the office. The message appears in Lightning Experience, Salesforce Classic, and mobile views. Messages expire automatically after their end date. You can control whether out-of-office functionality is available to your users. Set it up in the Out of Office section in **Setup** > **Chatter Settings**.

Only internal users can set an out-of-office message.

## Fields

| Field Name | Details |
|---|---|
| `EndDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The date of the last day a person is out of the office. After the message expires, it goes away automatically. |
| `IsEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create<br>**Description**<br>Indicates whether an out-of-office message can be displayed for a user. The default value is `true`. |
| `Message` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The message portion of the out-of-office message. This text, along with start and end dates, is appended to the user's name in the Salesforce user interface. The maximum length of this string is 40 characters. |
| `StartDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The date of the first day a person is out of the office. |

| Field Name | Details |
| --- | --- |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the user associated with the out-of-office message. |

## Usage

- Maximum message length is 60 characters.
- Users can set only their own out-of-office message. An admin can set an out-of-office message for any user.
- The out-of-office message can be set only for internal users.

# OutgoingEmail

For internal use only.

# OutgoingEmailRelation

For internal use only.

# OwnedContentDocument

Represents a file owned by a user. This object is available in version 30.0 and later.

## Supported Calls

`describeSObjects()`

## Fields

| Field Name | Details |
| --- | --- |
| `ContentDocumentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the document. |

| Field Name | Details |
| --- | --- |
| | This is a relationship field.<br>**Relationship Name**<br>ContentDocument<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentDocument |
| `ContentSize` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Size of the document in bytes. |
| `ContentUrl` | **Type**<br>url<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL for links and Google Docs. This field is set only for links and Google Docs, and is one of the fields that determine the `FileType`.<br>This field is available in API version 31.0 and later. |
| `ExternalDataSourceName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of the external data source in which the document is stored. This field is set only for external documents that are connected to Salesforce.<br>This field is available in API version 32.0 and later. |
| `ExternalDataSourceType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Type of external data source in which the document is stored. This field is set only for external documents that are connected to Salesforce.<br>This field is available in API version 35.0 and later. |

| Field Name | Details |
| --- | --- |
| `FileExtension` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>File extension of the document.<br>This field is available in API version 31.0 and later. |
| `FileType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Type of document, determined by the file extension. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the owner of the document.<br>This is a relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `Title` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Title of the document. |

# OwnerChangeOptionInfo

Represents default and optional actions that can be performed when a record's owner is changed. Available in API version 35.0 and later, but to query for change owner metadata, use the OwnerChangeOptionInfo object in Tooling API instead. For more information, see OwnerChangeOptionInfo in the Tooling API.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Use `EntityId` or `DurableId` when querying this object.

# PackageInstallEventLog

PackageInstallEventLog stores details about package installation in the organization. This object is available in API version 62.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
|---|---|
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".<br>For example: `96.43.144.26`. |
| `CpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |

| Field | Details |
| --- | --- |
| `ErrorType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A general categorization of any error that's encountered. |
| `IsManaged` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>True if the operation is performed on a managed package.<br>The default value is `false`. |
| `IsPush` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>True if the package was installed as a result of a push upgrade.<br>The default value is `false`. |
| `IsReleased` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>True if the operation is performed on a released package.<br>The default value is `false`. |
| `IsSuccessful` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>True if the package was successfully installed.<br>The default value is `false`. |
| `LoginKey` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.<br>For example: `GeJCsym5eyvtEK2I`. |
| `OperationType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of package operation.<br>**Possible Values**<br>• INSTALL<br>• UPGRADE<br>• EXPORT<br>• UNINSTALL<br>• VALIDATE_PACKAGE<br>• INIT_EXPORT_PKG_CONTROLLER |
| `PackageName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the package that's being installed. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.<br>For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `RunTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The amount of time that the request took in milliseconds. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.<br>For example: `d7DEq/ANa7nNZZVD`. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT.<br>For example: `20130715233322.670`. |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URI of the page that's receiving the request.<br>For example: `/home/home.jsp`. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 18-character ID of the user who's using Salesforce services through the UI or the API.<br>For example: `00530000009M943YAS` |

# PackageLicense

Represents a license for an installed managed package. This object is available in API version 31.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `AllowedLicenses` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of users allowed to use the package. |
| `ExpirationDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the package license expires. |
| `IsAvailableForIntegrations` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Reserved for future use. |
| `IsProvisioned` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Reserved for internal use. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The namespace prefix associated with the package. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The status of the license. Possible values are: `Active`, `Expired`, `Free`, and `Trial`. |
| `UsedLicenses` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of users who have a license to the package. |

# Usage

Use this object to determine the number of licenses allowed and in use for a managed package installed in your organization.

The following example demonstrates the use of the API to manage licenses for a package. The example defines an Apex class that does the following.

- Retrieves the PackageLicense record for the specified package (identified by its namespace prefix).
- Defines a function that returns a list of all users with the specified profile.
- Creates a UserPackageLicense record for each user with that profile, which has the effect of assigning a license for the package to all users with that profile.
- Returns an error message if the number of users exceeds the number of available licenses.

```
public class AssignPackageLicense {

    static String PACKAGE_NAMESPACE_PREFIX = 'acme_101';
    static String PROFILE_ID = '00exx000000jz1SAAQ';
    public static String exceptionText {get; set;}

    public AssignPackageLicense() {
         exceptionText = 'Initialized';
    }

   static List<User> getUsersWithProfile(){
      String userQuery = 'SELECT Id FROM User WHERE ProfileId = :PROFILE_ID';
      List<User> matchingUsers = new List<User>();
      matchingUsers = [SELECT Id FROM User WHERE ProfileId = :PROFILE_ID];
      return matchingUsers;
    }
```

```
    public static void assignLicenseByProfile() {
        //find the PackageLicense Id
        PackageLicense pl = [SELECT Id, NamespacePrefix, AllowedLicenses, UsedLicenses,
              ExpirationDate,Status FROM PackageLicense WHERE
              NamespacePrefix = :PACKAGE_NAMESPACE_PREFIX];
        System.assert(pl != null, 'PackageLicense cannot be null.');
        List<User> usersToAssignLicenses = getUsersWithProfile();
        List<UserPackageLicense> firstUPLs = new List<UserPackageLicense>();

        //create a new UserPackageLicense record for each user with the specified profile

        for (Integer i = 0; i< usersToAssignLicenses.size(); i++){
              UserPackageLicense upl = new UserPackageLicense();
              upl.PackageLicenseId = pl.Id;
              upl.UserId = usersToAssignLicenses[i].Id;
              firstUPLs.add(upl);
        }

        try {
          //bulk insert
          insert(firstUPLs);
          } catch(DmlException e) {
             for (Integer i = 0; i < e.getNumDml(); i++) {
             // process exception here
               System.debug(e.getDmlMessage(i));
               String status = e.getDmlStatusCode(i);
               System.debug(status + ' ' + e.getDmlMessage(i));
               if(status.equals('LICENSE_LIMIT_EXCEEDED')){
                exceptionText = 'You tried to assign more licenses than available. '
                +' You tried to create '+ firstUPLs.size()+' licenses but only have '
                + (pl.AllowedLicenses - pl.UsedLicenses) + ' licenses free.';
                System.debug(exceptionText);
               }
             }
         }
    }
}
```

# PackagePushError

Represents an error encountered during a push request. The number of PackagePushError records created depends on the number of push jobs in the request that result in an error.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

To initiate a push upgrade for a first-generation managed package, the Upload AppExchange Packages user permission is required.

To initiate a push upgrade for an unlocked or second-generation managed package, the Create and Update Second-Generation Packages user permission is required.

The push upgrade feature is only available to first- and second-generation managed packages that have passed AppExchange security review. To enable push upgrades for your managed package, log a support case in the Salesforce Partner Community.

For unlocked packages, push upgrades are enabled by default.

## Fields

| Field Name | Details |
|---|---|
| `ErrorDetails` | **Type**<br>string<br>**Properties**<br>Nillable, Sort<br>**Description**<br>Explanation of the error. |
| `ErrorMessage` | **Type**<br>string<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The error code that appears in the API. |
| `ErrorSeverity` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Valid values are:<br>• Error<br>• Warning |
| `ErrorTitle` | **Type**<br>string<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The error message title that appears in the API. |
| `ErrorType` | **Type**<br>picklist |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Valid values are:<br>• ApexTestFailure<br>• DeployError<br>• FeatureMissing<br>• IneligibleUpgrade<br>• LimitExceeded<br>• LockingFailure<br>• PACError<br>• UnclassifiedError |
| `PackagePushJobId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Required. The parent push job record ID. |

## Usage

Suppose that your push upgrade request wasn't successful due to some of its jobs failing. Let's write some code to find out what those errors were.

This code sample uses the Web Services Connector (WSC).

```
// Retrieves all PackagePushError objects associated with the PackagePushJob with the given
// ID
final String PACKAGE_PUSH_ERROR_QUERY = "Select ErrorMessage, ErrorDetails, ErrorTitle,"

+ " ErrorSeverity, ErrorType from PackagePushError where PackagePushJobId = '%s'";

// job is a PackagePushJob instance
QueryResult queryResult = conn.query(String.format(PACKAGE_PUSH_ERROR_QUERY, job.getId()));

StringBuilder errorMessages = new StringBuilder();
errorMessages.append("Errors for PackagePushJob [").append(job.getId()).append("]:")
 .append("\n");

// There can be multiple PackagePushErrors for a given PackagePushJob
for(SObject r : queryResult.getRecords()) {
 PackagePushError e = (PackagePushError) r;
 errorMessages.append("Title: ").append(e.getErrorTitle()).append("\n");
 errorMessages.append("Severity: ").append(e.getErrorSeverity()).append("\n");
```

```
 errorMessages.append("Type: ").append(e.getErrorType()).append("\n");
 errorMessages.append("Message: ").append(e.getErrorMessage()).append("\n");
 errorMessages.append("Details: ").append(e.getErrorDetails()).append("\n");
 errorMessages.append("\n");
}

String errors errorMessages.toString();
```

# PackagePushJob

Represents an individual push job for upgrading a package in an org from one version to another version. There can be multiple push jobs created for one push request. For example, if you want to upgrade five orgs as part of one push, you have one PackagePushRequest record and five PackagePushJob records.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To initiate a push upgrade for a first-generation managed package, the Upload AppExchange Packages user permission is required.

To initiate a push upgrade for an unlocked or second-generation managed package, the Create and Update Second-Generation Packages user permission is required.

The push upgrade feature is only available to first- and second-generation managed packages that have passed AppExchange security review. To enable push upgrades for your managed package, log a support case in the Salesforce Partner Community.

For unlocked packages, push upgrades are enabled by default.

## Fields

| Field Name | Details |
| --- | --- |
| `DurationSeconds` | **Type**<br>int<br>**Properties**<br>Group, Nillable<br>**Description**<br>The length of time in seconds, that the push upgrade took to complete. This field is new in API version 51.0. |
| `EndTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Nillable, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The date and time (UTC) at which the push upgrade ended, in ISO 8601 format. This field is new in API version 51.0. |
| `PackagePushRequestId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required. The ID of the parent push request record that must have been created. |
| `StartTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The date and time (UTC) at which the push upgrade started, in ISO 8601 format. This field is new in API version 51.0. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The status of the job. Valid values are:<br>• Canceled<br>• Created (default)<br>• Failed<br>• In Progress<br>• Pending<br>• Succeeded<br>Don't specify this value when you create the push job. The default value of `Created` is used. |
| `SubscriberOrganizationKey` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required. The organization key of the org where the package is upgraded. This references `orgKey` in PackageSubscriber. |

# Usage

Suppose that you want to push version 3.4.6 of your package to all orgs. You've already identified the orgs eligible for the upgrade by using MetadataPackageVersion and created the push request using PackagePushRequest. Now let's write some code to create a push job for each eligible org.

This code sample uses the Web Services Connector (WSC).

```
PackageSubscriber[] subscribers = new PackageSubscriber[];

// ... populate eligible and desired subscribers

// Create the PackagePushJob array
PackagePushJob[] jobs = new PackagePushJob[subscribers.length];

for (int i = 0; i < subscribers.length; i++) {
 // create a job for each subscriber...
 PackagePushJob job = new PackagePushJob();
 // ... associate it to the PackagePushRequest ppr...
 job.setPackagePushRequestId(ppr.getId());
 // ... and add the orgKey
 job.setSubscriberOrganizationKey(subscribers[i].getOrgKey());
 jobs[i] = job;
}

// Save the jobs
SaveResult[] saveResults = conn.create(jobs);

// Add the newly generated id's to the PackagePushJob objects
for (int i = 0; i < saveResults.length; i++) {
 if (saveResults[i].isSuccess()) {
  jobs[i].setId(saveResults[i].getId());
 }
}
```

Or, if you're using REST API, submit a POST request to the PackagePushJob sObject endpoint, as in the following example. SOAP API is also supported. This example returns the push job ID (starting with 0DX) that is required to query the status of the job.

```
POST
/services/data/v38.0/sobjects/packagepushjob/
{
   "PackagePushRequestId" : "0DV...",
   "SubscriberOrganizationKey" : "00DR00..."
}
```

### Checking the Status of a Push Job

To check the job status, simply query the `Status` field. For example:

```
SELECT Id, Status FROM PackagePushJob WHERE PackagePushRequestId ='0DV...'
```

Here's an example in Java.

```
// Finds the status of the PackagePushJob with the given id
String PACKAGE_PUSH_JOB_STATUS_QUERY = "Select status from PackagePushJob where Id = '%s'";

// job is a PackagePushJob instance
```

```
QueryResult queryResult = conn.query(String.format(PACKAGE_PUSH_JOB_STATUS_QUERY,
job.getId()));

// extract the status from the QueryResult
String status = ((PackagePushJob) queryResult.getRecords()[0]).getStatus();

// optionally, update the PackagePushJob instance with the latest status
job.setStatus(status);
```

You can also continuously poll the job status until the job is done. The following Java example polls the status every 10 seconds.

```
// The set of states that indicate a PackagePushJob has completed
final Set<String> TERMINAL_STATES = new HashSet<>();
TERMINAL_STATES.add("Succeeded");
TERMINAL_STATES.add("Failed");
TERMINAL_STATES.add("Canceled");

String status = queryJobStatus(job); // this method returns the status as retrieved in the
 previous code sample

// If the status is not one of the completed statuses...
while(!TERMINAL_STATES.contains(status)) {
 Thread.sleep(10 * 1000); // ... wait 10 seconds and try again
 status = queryJobStatus(job);
}
```

# PackagePushRequest

Represents the push request for upgrading a package in one or many orgs from one version to another version.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To initiate a push upgrade for a first-generation managed package, the Upload AppExchange Packages user permission is required.

To initiate a push upgrade for an unlocked or second-generation managed package, the Create and Update Second-Generation Packages user permission is required.

The push upgrade feature is only available to first- and second-generation managed packages that have passed AppExchange security review, and unlocked packages. To enable push upgrades for your managed package, log a support case in the Salesforce Partner Community.

For unlocked packages, push upgrades are enabled by default.

# Fields

| Field Name | Details |
| --- | --- |
| `DurationSeconds` | **Type**<br>int<br>**Properties**<br>Group, Nillable<br>**Description**<br>The length of time in seconds, that the push upgrade took to complete. This field is new in API version 51.0. |
| `EndTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The date and time (UTC) at which the push upgrade ended, in ISO 8601 format. This field is new in API version 51.0. |
| `PackageVersionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required. The non-beta, non-deprecated package version that the package is being upgraded to. |
| `ScheduledStartTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time (UTC) at which the push request is processed, in ISO 8601 format. Set this value to the earliest time that you want Salesforce to attempt to start the push. As a best practice, schedule pushes at off-peak hours like 1:00 AM Saturday. If you don't specify a value, the push starts when the package push request's Status is set to `Pending`.<br>Note: Scheduled push upgrades begin as soon as resources are available on the Salesforce instance, which is either at or after the start time you specify. In certain scenarios, the push upgrade could start a few hours after the scheduled start time. |

| Field Name | Details |
| --- | --- |
| `StartTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The date and time (UTC) at which the push upgrade actually started, in ISO 8601 format. This field is new in API version 51.0. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The status of the push. Valid values are:<br>• Canceled<br>• Created (default)<br>• Failed<br>• In Progress<br>• Pending<br>• Succeeded<br>Don't specify this value when you create the push request. The default value of Created is used. Later, change the status to Pending to schedule the push upgrade. |

# Usage

Suppose that you want to push version 3.4.6 of your package to all orgs. You've already identified the orgs eligible for the upgrade by using MetadataPackageVersion. Now let's write some code to create a push request, which holds a push job for each eligible org.

This code sample uses the Web Services Connector (WSC).

```
// Create a new PackagePushRequest for the versionId to upgrade to
// (for example, versionId is the "04t..." id of version
// 3.4.6 of the package
PackagePushRequest ppr = new PackagePushRequest();
ppr.setPackageVersionId(versionId);

// Optionally, set the start time of the PackagePushRequest to schedule it to begin
// automatically; scheduledStartTime is a java.util.Calendar instance
ppr.setScheduledStartTime(scheduledStartTime);

// Save the PackagePushRequest
SaveResult[] saveResults = conn.create(new SObject[] { ppr });
if (saveResults[0].isSuccess()) {
 // Add the newly generated Id to the object
 ppr.setId(saveResults[0].getId());
```

```
} else {
 for (Error error : saveResults[0].getErrors()) {
  System.out.println(error.getMessage());
 }
}
```

Or, if you're using REST API, submit a POST request to the PackagePushRequest sObject endpoint, as in the following example. SOAP API is also supported.

This example returns the push request ID (starting with 0DV) that's required to create push jobs.

```
POST
/services/data/v38.0/sobjects/packagepushrequest/
{
   "PackageVersionId" : "04t...",
   "ScheduledStartTime" : "2016-08-24T21:00:00"
}
```

As your next step, create a push job for each eligible subscriber you want to upgrade using PackagePushJob.

### Scheduling the Push Upgrade

To signal that the push upgrade is ready to be processed, change the status of the push request to Pending. If you didn't set a `ScheduledStartTime`, the push upgrade starts immediately after you change the status.

See the following Java example.

```
// ppr is the PackagePushRequest instance
ppr.setStatus("Pending");
conn.update(new SObject[] { ppr });
```

If you're using REST API, submit a PATCH request to the PackagePushRequest sObject endpoint, as in the following example. SOAP API is also supported.

```
PATCH
/services/data/v38.0/sobjects/packagepushrequest/0DV...
{
   "Status" : "Pending"
}
```

### Checking the Status of a Push Request

The PackagePushRequest status is `Succeeded` if all its associated jobs are successful; it's `Failed` if at least one job failed.

```
// Finds the status of the PackagePushRequest for a given Id
final String PACKAGE_PUSH_REQUEST_STATUS_QUERY = "Select status from PackagePushRequest"
+
 " where Id = '%s'";

// ppr is a PackagePushRequest instance
QueryResult queryResult = conn.query(String.format(PACKAGE_PUSH_REQUEST_STATUS_QUERY,
 ppr.getId()));

// extract the status from the QueryResult
String status = ((PackagePushRequest) queryResult.getRecords()[0]).getStatus();

// optionally, update the PackagePushRequest instance with the latest status
ppr.setStatus(status);
```

You can also check the status of a job by querying the PackagePushJob's `Status` field.

**Aborting a Push Request**

You can abort a package push request by changing its status to Canceled.

For example, if you're using the REST API, submit a PATCH request to the PackagePushRequest sObject endpoint.

```
PATCH
/services/data/v38.0/sobjects/packagepushrequest/0DV...
{
   "Status" : "Canceled"
}
```

The following example is for Java.

```
// ppr is the PackagePushRequest instance
ppr.setStatus("Canceled");
```

You can abort a package push request only if its status is Created or Pending. If the abort succeeds, all associated push jobs are also canceled. If you try to abort when the current PackagePushRequest status is Canceled, Succeeded, Failed, or In Progress, the abort doesn't occur, and an error message is returned.

# PackageSubscriber

Represents an installation of a package in an org. This object contains installation information for managed or unlocked packages developed in the org you're logged in to.

One record is created per installation. For example, if 5 orgs installed 2 packages, 10 records are created.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

To initiate a push upgrade for a first-generation managed package, the Upload AppExchange Packages user permission is required.

To initiate a push upgrade for an unlocked or second-generation managed package, the Create and Update Second-Generation Packages user permission is required.

The push upgrade feature is only available to first- and second-generation managed packages that have passed AppExchange security review. To enable push upgrades for your managed package, log a support case in the Salesforce Partner Community.

For unlocked packages, push upgrades are enabled by default.

## Fields

| Field Name | Details |
| --- | --- |
| `InstalledStatus` | **Type**<br>picklist |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>If the package is installed in the org, the value is `i`. |
| `InstanceName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The instance that hosts the subscriber org. |
| `MetadataPackageId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The package ID. Package Ids have a prefix of `033`. This field is available in API version 49.0 and later. |
| `MetadataPackageVersionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 18-character package version ID starting with `04t`. |
| `OrgKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID that represents the Salesforce org. |
| `OrgName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the org where the package is installed. |

| Field Name | Details |
| --- | --- |
| `OrgStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Valid values are:<br>• `Active`<br>• `Demo`<br>• `Free`<br>• `Inactive`<br>• `Trial`<br>Orgs with an `OrgStatus` of `Inactive` can't receive push upgrades. |
| `OrgType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Valid values are:<br>• `Production`<br>• `Sandbox` |
| `ParentOrg` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The production org from which a sandbox was created. |

## Usage

Here are examples of the types of API queries you can perform.

| Query | String |
| --- | --- |
| Get all package subscriber orgs with a specific package ID | `SELECT Id, OrgKey, OrgStatus, OrgName, OrgType FROM PackageSubscriber WHERE MetadataPackageVersionId = '04t...'` |

| Query | String |
| --- | --- |
| Get all package subscriber orgs that have an installed package created by the org you're logged in to | `SELECT Id, OrgKey, OrgStatus, OrgName, OrgType FROM PackageSubscriber WHERE InstalledStatus = 'i'` |

### Filter PackageSubscriber Objects by Instance

If you have packages with many subscribers, querying PackageSubscriber objects can take a while. To improve query performance, add filters to your PackageSubscriber queries, such as an `InstanceName` filter. `InstanceName` is a field that represents the instance that the subscriber org is hosted on.

1. Get the org's package and the latest released version of the package.

```
/**
* Get the MetadataPackage object corresponding to this org's managed package
*/
public MetadataPackage getMetadataPackage() throws ConnectionException {
 // retrieve the managed package, which won't have an empty namespace
 QueryResult result = conn.query("select id from  MetadataPackage where namespaceprefix
 <> ''");

 return (MetadataPackage) result.getRecords()[0];
}

/**
* Get the latest MetadataPackageVersion object of the given MetadataPackage
*/
public MetadataPackageVersion getLatestMetadataPackageVersion(MetadataPackage
metadataPackage)
throws ConnectionException {
 // get the latest released version of the given package
 String query = "Select id, ReleaseState, MajorVersion, MinorVersion, PatchVersion,
MetadataPackageId"
  + " From MetadataPackageVersion"
  + " Where MetadataPackageId = '%s' and ReleaseState = 'Released'"
  + " Order by majorversion desc, minorversion desc, patchversion desc";

 QueryResult result = conn.query(String.format(query, metadataPackage.getId()));

 return (MetadataPackageVersion) result.getRecords()[0];
}
```

2. Get eligible subscribers. The following query strings and methods are modified to allow querying for PackageSubscribers filtered by an instance.

```
static final String PACKAGE_SUBSCRIBER_ORG_KEY_QUERY = "Select OrgKey from
PackageSubscribers where OrgStatus = 'Active'"
 + " and InstalledStatus = 'I'"
 + " and InstanceName = '%s'"; // placeholder for instance values

static final String METADATA_PACKAGE_VERSION_QUERY = "Select Id, Name, ReleaseState,
(%s) from MetadataPackageVersion"
 + " where MetadataPackageId = '%s' AND ReleaseState = 'Released'"
```

```
 + " AND (MajorVersion < %s OR (MajorVersion = %s and MinorVersion < %s)"
 + " OR (MajorVersion = %s and MinorVersion = %s and PatchVersion < %s))";

/**
* Get all PackageSubscribers on the given instance that are eligible to upgrade to the
 given
* MetadataPackageVersion
*/
public PackageSubscriber[] getEligibleSubscriberIds(MetadataPackageVersion version,
String instanceName) throws ConnectionException {
 String allPackageId = version.getMetadataPackageId();
 Integer major = version.getMajorVersion();
 Integer minor = version.getMinorVersion();
 Integer patch = version.getPatchVersion();

 return getEligibleSubscriberIds(major, minor, patch, allPackageId, instanceName);
}
```

```
public PackageSubscriber[] getEligibleSubscriberIds(Integer major, Integer minor, Integer
 patch, String packageId, String instanceName) throws ConnectionException {
 String subscriberQuery = String.format(PACKAGE_SUBSCRIBER_ORG_KEY_QUERY, instanceName);
QueryResult results = conn.query(String.format(METADATA_PACKAGE_VERSION_QUERY,
subscriberQuery, packageId, major, major, minor, major, minor, patch));

 return Arrays.stream(results.getRecords()).map(MetadataPackageVersion.class::cast)
  .filter(mpv -> mpv.getPackageSubscribers() != null)
  .flatMap(mpv -> Arrays.stream(mpv.getPackageSubscribers().getRecords()))
  .map(PackageSubscriber.class::cast)
  .toArray(PackageSubscriber[]::new);
}
```

3. Put it all together. The following code sample shows how to use the previous methods to modify the workflow to perform package pushes by instance.

```
String[] instances = { "NA4" }; // Here we list the instances we would like to push to
MetadataPackage metadataPackage = api.getMetadataPackage();
MetadataPackageVersion version = api.getLatestMetadataPackageVersion(metadataPackage);

// do pushes by instance to avoid API timeouts retrieving PackageSubscribers
for (String instanceName : instances) {
PackageSubscriber[] eligibleSubscribers = api.getEligibleSubscriberIds(version,
instanceName);

// ... proceed with creating PushRequests and PushJobs as before
```

# Participant

Represents a participant in a ConversationParticipant. An existing or new Participant is referenced each time a new ConversationParticipant is created. This object is available in API version 57.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `ParticipantAppType` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The type of app used by the participant, such as messaging, chatbot, live_message, agent. |
| `ParticipantRole` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The role of this participant in the conversation, such as System, Agent, Chatbot, EndUser, Supervisor, or Router. |
| `ParticipantSubject` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The subject of this participant in the conversation. |

# Partner

Represents a partner relationship between two Account records or between an Opportunity record and an Account record.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Customer Portal users can't access this object.

# Fields

| Field | Details |
| --- | --- |
| `AccountFromId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Required if `OpportunityId` is null. ID of the main account in a partner relationship between two accounts. Specifying this field when creating a Partner record creates two AccountPartner records, one for each direction of the relationship. If you specify the `OpportunityId` field, you can't specify this field as well.<br>This is a relationship field.<br>**Relationship Name**<br>AccountFrom<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `AccountToId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the Partner Account related to either an opportunity or an account. You must specify this field when creating an Opportunity Partner or an Account Partner record.<br>This is a relationship field.<br>**Relationship Name**<br>AccountTo<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `IsPrimary` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Valid for Opportunity Partners only. |

| Field | Details |
| --- | --- |
| | Indicates that the account is the primary partner for the opportunity. Only one account can be marked as primary for an opportunity. If you set this field to 1 (`true`) upon insert of a new opportunity partner, this field is automatically set to 0 (`false`) for any other primary partners for that opportunity.<br>Label is **Primary**. |
| `OpportunityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Required if `AccountFromId` is null. ID of the opportunity in a partner relationship between an account and an opportunity. Specifying this field when creating a record creates an OpportunityPartner record. If you specify the `AccountFromId` field, you can't also specify this field.<br>This is a relationship field.<br>**Relationship Name**<br>Opportunity<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Opportunity |
| `ReversePartnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the reciprocal Parnter record in a partner relationship. |
| `Role` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>UserRole that the account has toward the related opportunity or account, such as consultant or distributor. |

## Roles

In the Salesforce user interface, system administrators can set up the valid role values and their corresponding reverse role values in the PartnerRole object. Each account in the relationship is assigned a `Role` (such as `Consultant` or `Distributor`) designating that account's role toward the related account or opportunity.

## Creating an Account-Opportunity Partner Relationship

When you create a partner relationship between an account and an opportunity (when you create a Partner record and specify the `OpportunityId` field), the API automatically creates two OpportunityPartner records, one for the forward relationship and one for the reverse.

- The value of the Partner field `AccountToId` maps to the value of the OpportunityPartner field `AccountToId`.
- The values of the `OpportunityId`, `Role`, and `IsPrimary` fields in both the Partner and OpportunityParnter records are the same.
- If you set the `IsPrimary` value to 1 (`true`) upon insert of a new OpportunityPartner, the `IsPrimary` value is automatically set to 0 (`false`) for any existing primary partners for that opportunity.

This mapping allows the API to manage the records and their relationships efficiently.

## Creating an Account-Account Partner Relationship

When you create a partner relationship between two accounts (when you create a Partner record and specify the `AccountFromId`), the API automatically creates two AccountPartner records, one for the forward relationship and one for the reverse. For example, if you create a Partner relationship with "Acme, Inc." as the `AccountFromId` and "Acme Consulting" as the `AccountToId`, the API automatically creates two AccountPartner records:

- The forward relationship AccountPartner with "Acme, Inc." as the `AccountFromId` and "Acme Consulting" as the `AccountToId`.
- The reverse relationship AccountPartner with "Acme Consulting" as the `AccountFromId` and "Acme, Inc." as the `AccountToId`.
- The value of the `Role` field in the reverse relationship AccountPartner is set to the PartnerRole record `ReverseRole` value associated with the value of the `Role` field in the forward relationship AccountPartner.

This mapping allows the API to manage the records and their relationships efficiently.

PartnerRole

# PartnerFundAllocation

Represents allocated funds from a partner marketing budget for channel partners. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

# Fields

| Field Name | Details |
| --- | --- |
| `Amount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Total amount of the allocation. |
| `BudgetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the partner marketing budget. |
| `ChannelPartnerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the channel partner.<br>Note: The ChannelPartnerId field isn't supported for formula fields, custom buttons, or custom links for the PartnerFundAllocation object. This limitation also applies to the PartnerMarketingBudget and PartnerFundRequest objects. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the allocation. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last interacted with this record, directly or indirectly. Some sample scenarios are: |

| Field Name | Details |
| --- | --- |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the owner of the allocation. |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The title of the allocation. |
| `TotalApprovedFcs` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount of approved fund claims. |
| `TotalApprovedFrs` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount of approved fund requests. |
| `TotalReimbursedFcs` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Total amount of reimbursed fund claims. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**PartnerFundAllocationFeed**
Feed tracking is available for the object.

**PartnerFundAllocationHistory**
History is available for tracked fields of the object.

**PartnerFundAllocationOwnerSharingRule**
Sharing rules are available for the object.

**PartnerFundAllocationShare**
Sharing is available for the object.

# PartnerFundClaim

Represents a claim of funds from the partner marketing budget by a channel partner. This object is available in API version 41.0 and later.

## Supported Calls

`create()` `delete()` `describeLayout()` `describeSObjects()` `getDeleted()` `getUpdated()` `query()` `retrieve()` `search()` `update()`, `upsert()`

## Fields

| Field Name | Details |
| --- | --- |
| `AllocationId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the partner fund allocation. |
| `Amount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Amount of the claim. |
| `BudgetId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the partner marketing budget. |
| `ChannelPartnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the channel partner. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the fund claim. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last interacted with this record, directly or indirectly. Some sample scenarios are: |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it. |

| Field Name | Details |
| --- | --- |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the owner of the fund claim. |
| `RequestId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the partner fund request. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable Restricted picklist, Sort, Update<br>**Description**<br>Status of the fund claim. Values are:<br>• `Draft`<br>• `Approved`<br>• `Rejected`<br>• `Paid` |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Title of the fund claim. |

# Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**PartnerFundClaimFeed**
Feed tracking is available for the object.

**PartnerFundClaimHistory**
History is available for tracked fields of the object.

**PartnerFundClaimOwnerSharingRule**
Sharing rules are available for the object.

**PartnerFundClaimShare**
Sharing is available for the object.

# PartnerFundRequest

Represents a request for funds from the partner marketing budget by a channel partner. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()` `describeLayout()` `describeSObjects()`
`getDeleted()` `getUpdated()` `query()` `retrieve()` `search()` `update()`, `upsert()`

## Fields

| Field Name | Details |
|---|---|
| `Activity` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Activity that is covered by the funds, for example, a trade show or seminar. |
| `AllocationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the partner fund allocation. |
| `Amount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Approved amount of request. |
| `BudgetId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the partner marketing budget. |
| `ChannelPartnerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the channel partner.<br>Note: The ChannelPartnerId field isn't supported for formula fields, custom buttons, or custom links for the PartnerFundRequest object. This limitation also applies to the PartnerFundAllocation and PartnerMarketingBudget objects. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the fund request. |
| `DesiredOutcome` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Desired outcome if requested funds are used. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last interacted with this record, directly or indirectly. Some sample scenarios are: |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the owner of the fund request. |
| `RequestedAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Amount of the fund request. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Nillable, Group, Restricted picklist, Sort, Update<br>**Description**<br>Status of the fund request. Values are:<br>• `Draft`<br>• `Approved`<br>• `Rejected` |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Title of the fund request. |
| `TotalApprovedFcs` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Total amount of approved fund claims. |
| `TotalReimbursedFcs` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount of reimbursed fund claims. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**PartnerFundRequestFeed**
Feed tracking is available for the object.

**PartnerFundRequestHistory**
History is available for tracked fields of the object.

**PartnerFundRequestOwnerSharingRule**
Sharing rules are available for the object.

**PartnerFundRequestShare**
Sharing is available for the object.

# PartnerMarketingBudget

Represents a budget that provides funds to channel partners for selling and marketing products and services. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
| --- | --- |
| `Amount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Total amount of the budget. |
| `ChannelPartnerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the channel partner. This field is available in API version 45.0 and later.<br>Note: The ChannelPartnerId field isn't supported for formula fields, custom buttons, or custom links for the PartnerMarketingBudget object. This limitation also applies to the PartnerFundAllocation and PartnerFundRequest objects. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the budget. |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Date when the budget is no longer available. |
| `IsIgnoreValidation` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>When enabled, ignores restrictions related to the child objects connected to the budget. Note that individual totals for allocation amounts, request amounts, and claims amounts cannot exceed the total of their parent budget. Field is default off (false) on create. Once enabled (true), this field cannot be disabled. This field is available in API version 44.0 and later. |
| `LastReferencedDate` | **Type**<br>dateTime |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last interacted with this record, directly or indirectly. Some sample scenarios are: |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the owner of the budget. |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Date when the budget becomes available. |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Title of the budget. |
| `TotalAllocatedAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total funds allocated to channel partners or as a fund pool. |

| Field Name | Details |
| --- | --- |
| `TotalApprovedFcs` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount of approved fund claims. |
| `TotalApprovedFrs` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount of approved fund requests. |
| `TotalReimbursedFcs` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount of reimbursed fund claims. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Type of budget. Values are:<br>• `Co-Operated Budget`—Funds accrue based on a percentage of partner sales. The funds are available based on previous activity.<br>• `Marketing Funds`—Funds are issued to partners in advance of sales. The funds are awarded based on predicted or expected behavior. |

# Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**PartnerMarketingBudgetFeed**
Feed tracking is available for the object.

**PartnerMarketingBudgetHistory**
History is available for tracked fields of the object.

**PartnerMarketingBudgetOwnerSharingRule**
Sharing rules are available for the object.

**PartnerMarketingBudgetShare**
Sharing is available for the object.

# PartnerNetworkConnection

Represents a Salesforce to Salesforce connection between Salesforce organizations.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Winter '21 and later, only authenticated internal and external users can access this object.

## Fields

| Field | Details |
|---|---|
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Account associated with this connection. |
| `ConnectionName` | **Type**<br>string<br>**Properties**<br>Filter, idLookup, Sort<br>**Description**<br>A descriptive name for the connection. Limit: 295 characters. |
| `ConnectionStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The status of the Salesforce to Salesforce connection. The picklist includes the following values:<br>• `Sent`<br>• `Received`<br>• `Pending` |

| Field | Details |
| --- | --- |
| | • `Accepted`<br>• `Rejected`<br>• `Inactive`<br>• `Disconnecting`<br>• `ConnectionSuspended`<br>• `SubscribeInProgress`<br>• `UsersInitialSync`<br>• `BulkSyncMetadata` |
| `ConnectionType` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of Salesforce to Salesforce connection. The picklist includes the following values:<br>• `Standard`<br>• `Replication`<br>This field is available in API version 30.0 and later. |
| `ContactId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Contact associated with this connection. |
| `IsSyncAuditFields` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Specifies whether audit fields are synced between the primary and secondary organization in a replication connection. This field is available in API version 32.0 and later, and is only accessible in Salesforce organizations where Organization Sync is enabled. |
| `IsSyncMetadata` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Specifies whether supported types of metadata are synced from the primary to the secondary organization in a replication connection. This field is available in API version 33.0 and later, and is only accessible in Salesforce organizations where Organization Sync is enabled. |
| `IsSyncUsers` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Specifies whether users with standard Salesforce user licenses are synced between the primary and secondary organization in a replication connection. This field is available in API version 35.0 and later, and is only accessible in Salesforce organizations where Organization Sync is enabled. |
| `PrimaryContactId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the User associated with this connection. |
| `ReplicationRole` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The role of this Salesforce organization in the replication connection. The picklist includes the following values:<br>• `Primary`<br>• `Secondary`<br>This field is available in API version 30.0 and later, and is only accessible in Salesforce organizations where Organization Sync is enabled. |
| `ResponseDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time that the connection was accepted or rejected. |

## Usage

Represents Salesforce to Salesforce standard and replication connections. This object is referenced by all objects that have been shared with other organizations, enabling you to determine which connections shared a record with you. If the organization does not have Salesforce to Salesforce enabled, the PartnerNetworkConnection object is not available, and you can't access it via the API.

SEE ALSO:

PartnerNetworkRecordConnection

# PartnerNetworkRecordConnection

Represents a record shared between Salesforce organizations using Salesforce to Salesforce.

## Supported Calls

`create()`, `query()`

## Special Access Rules

As of Winter '21 and later, only authenticated internal and external users can access this object.

## Fields

| Field | Details |
|---|---|
| `ConnectionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Required. ID of the connection a record is shared with. |
| `EndDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date that sharing of the record was stopped. |
| `LocalRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Required. ID of the shared record. |
| `ParentRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the parent record of the shared record. |
| `PartnerRecordId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the shared record in the connection's organization. |
| `RelatedRecords` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>A comma-separated list of API names for child records to be shared with a parent record. |
| `SendClosedTasks` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Forwards closed tasks related to the shared record. |
| `SendEmails` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Sends an email notifying the connection's representative that you have forwarded the record to them. Only new recipients of a record will receive a notification email. |
| `SendOpenTasks` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Forwards open tasks related to the shared record. |
| `StartDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date that the shared record was accepted. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The status of the shared record. One of the following values:<br>• `Active (received)`<br>• `Active (sent)`<br>• `Connected`<br>• `Inactive`<br>• `Inactive (converted)`<br>• `Inactive (deleted)`<br>• `Pending (sent)` |

## Usage

When you create a PartnerNetworkRecordConnection, you forward a record to a connection.

Note: Attempting to forward a record from an object to which the connection is not subscribed results in an `Invalid Partner Network Status` error.

When you delete a PartnerNetworkRecordConnection, you stop sharing a record with a connection.

- To share a record, use the following fields: `LocalRecordID` and `ConnectionId`
- To share a child of a parent record, use the following fields: `LocalRecordID`, `ConnectionId`, and `ParentRecordID`
- To share a child of a parent record and its child records, use the following fields: `LocalRecordID`, `ConnectionId`, `ParentRecordID`, and `RelatedRecords`

If the organization does not have Salesforce to Salesforce enabled, the PartnerNetworkRecordConnection object is not available, and you can't access it using the API.

SEE ALSO:

PartnerNetworkConnection

# PartnerNetworkSyncLog

Represents the Org Sync Log tab in Salesforce, where Salesforce administrators can track the replication of record inserts and updates being performed in Organization Sync. The Connection Detail page for the replication connection also displays the Org Sync Log's twenty most recent entries, and provides a link to the log.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

## Special Access Rules

The Org Sync Log tab can only be added in organizations where Organization Sync has been enabled. To add the tab to the Salesforce user interface, users must also have the "Manage Connections" user permission.

## Fields

| Field Name | Details |
| --- | --- |
| `ConnectionEvent` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The action being replicated to the partner organization, such as a record insertion. |
| `ConnectionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the Salesforce to Salesforce replication connection in which the replication event succeeded or failed. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Nillable |

| Field Name | Details |
| --- | --- |
| | **Description**<br>A description of the replication event. |
| `EntityType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of record being inserted or updated. |
| `Error` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The code used to describe the replication failure or success. |
| `LocalRecord` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The record being inserted or updated. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>An item is added to the Organization Sync Log if it failed to be replicated to the linked organization. This picklist includes the following values:<br>• `Failed`: The replication continued to fail after multiple retries, and won't be retried further.<br>• `Resolved`: The replication succeeded after retrying.<br>• `Retrying`: Salesforce is retrying the replication.<br>This field is available in API version 35.0 and later. |

# PartnerRole

Represents a role for an account Partner, such as consultant, supplier, and so on.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

| Field | Details |
| --- | --- |
| `ApiName` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Uniquely identifies a picklist value so it can be retrieved without using an id or master label. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Master label for this partner role value. This display value is the internal label that does not get translated. Limit: 255 characters. |
| `ReverseRole` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of the reverse role that corresponds to this partner role. For example, if the role is “subcontractor,” then the reverse role might be “general contractor.” In the user interface, assigning a partner role to an account creates a reverse partner relationship so that both accounts list the other as a partner. |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number used to sort this value in the partner role picklist. These numbers are not guaranteed to be sequential, as some previous partner role values might have been deleted. |

## Usage

This object represents a value in the partner role picklist. In the user interface, the partner role picklist provides additional information about the role of a Partner, such as their corresponding reverse role. Query this object to retrieve the set of values in the partner role picklist, and then use that information while processing PartnerRole records to determine more information about a given partner role. For example, the application could determine the reverse role of a given Partner `Role` value and the value of the `ReverseRole` property in the associated PartnerRole object.

Overview of Salesforce Objects and Fields

# PartyConsent

Represents consent preferences for an individual. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `Action` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The action that the Individual is consenting to.<br>Possible values are:<br>• `CrossDevice`<br>• `DataCollection`<br>• `Reidentification`<br>• `Segment`<br>• `ShareData`<br>• `Target` |
| `CaptureContactPointType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Required. Indicates how you captured consent.<br>Possible values are:<br>• `Email`<br>• `MailingAddress`<br>• `Phone`<br>• `Social`<br>• `Web` |
| `CaptureDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Required. Date when consent was captured. |
| `CaptureSource` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required. Indicates how you captured consent. For example, a website or online form. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the party consent record. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the account owner associated with this customer.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PartyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. Represents the record based on the Individual object you want to associate consent with.<br>This is a relationship field.<br>**Relationship Name**<br>Party<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Individual |
| `PrivacyConsentStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Required. Identifies whether the individual associated with this record agrees to this form of contact. |

| Field | Details |
| --- | --- |
| | Possible values are:<br>• `NotSeen`<br>• `OptIn`<br>• `OptInPending`—Available in API version 58.0 and later.<br>• `OptOut`<br>• `OptOutPending`—Available in API version 58.0 and later.<br>• `Seen` |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**PartyConsentChangeEvent**
Change events are available for the object.

**PartyConsentFeed**
Feed tracking is available for the object.

**PartyConsentHistory**
History is available for tracked fields of the object.

**PartyConsentOwnerSharingRule**
Sharing rules are available for the object.

**PartyConsentShare**
Sharing is available for the object.

# Payment

Represents a single event when a shopper makes a payment. For credit cards, this event is a payment capture or payment sale, but it doesn't appear on the shopper's credit card statement. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Note: You can edit or delete a payment only in draft state, which you specify with the **Status** field.

## Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

# Fields

| Field | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The account of the customer who made the payment.<br>This field is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `Amount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The amount to be debited or captured. |
| `Balance` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total amount – the net applied amount. |
| `CancellationDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date that the payment was voided. |
| `CancellationEffectiveDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The date when the cancellation of this payment takes effect. |
| `CancellationGatewayDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The gateway provides this date following a successful cancellation request. |
| `CancellationGatewayRefNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>System-provided unique transaction ID from the payment gateway. |
| `CancellationGatewayResultCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Gateway-specific result code. Must be mapped to a Salesforce-specific result code. |
| `CancellationSfResultCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A Salesforce result code that can be mapped to one or more gateway result codes. We recommend that the payment gateway adapter layer maps gateway-specific codes to the Salesforce result code. |
| `ClientContext` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>Contains caller context for payment APIs. Useful for re-establishing context during an asynchronous payment transaction. |

| Field | Details |
| --- | --- |
| Comments | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Users can provide additional details about the payment record. Supports a maximum of 1000 characters. |
| CurrencyIsoCode | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Three-letter ISO 4217 currency code associated with the payment group record. |
| Date | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date when this payment record was created. |
| EffectiveDate | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date that this payment takes effect. |
| Email | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Email address of the user who initiated the payment. |
| GatewayDate | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The gateway provides this date for reference following a successful gateway communication. |
| `GatewayRefDetails` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Additional data that can't be stored in other fields on the payment record. You can use this field for transactions following the initial transaction that creates the payment record. You can use any data that isn't normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML. |
| `GatewayRefNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Unique transaction ID created by the payment gateway. |
| `GatewayResultCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Gateway-specific result code that must map to a Salesforce-specific result code. One Salesforce result code can map to multiple gateway result codes. |
| `GatewayResultCodeDescription` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the gateway's result code. |
| `ImpactAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Shows the payment's financial impact against the customer's accounts receivable. If the payment is valid, this value is the negative of the payment amount. If the payment is voided, this value is 0. |
| `IpAddress` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The IP address of the user who initiated the payment. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record is possibly referenced (LastReferencedDate) but not viewed. |
| `MacAddress` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The MAC address of the person who initiated the payment. |
| `NetApplied` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total payment amount that has been applied, including adjustments. |

| Field | Details |
| --- | --- |
| NetPaymentCreditApplied | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total payment amount that has been credited. This amount is equal to TotalPaymentCreditApplied - TotalPaymentCreditUnapplied. This field is a calculated field.<br>This field is available in API version 65.0 and later. |
| NetRefundApplied | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total refund amount that has been applied to the payment, including adjustments. |
| OrderPaymentSummaryId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Order payment summaries show the balances of each authorization, capture, and refund made against an order. |
| PaymentAuthorizationId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The authorization record for this payment. If there's a delayed capture (when the capture occurs after the authorization), all captures must be made against a previously successful authorization transaction.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentAuthorization<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentAuthorization |

| Field | Details |
| --- | --- |
| PaymentGatewayId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the payment gateway that processed the payment. If there's a delayed payment, the field is populated from the authorization record.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentGateway<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentGateway |
| PaymentGroupId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Payment groups organize all the payment transactions that have been made against a record such as an account or contract. If there's a delayed payment, the field is populated from the authorization record.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentGroup |
| PaymentIntentGuid | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>Unique ID of the payment sent to Stripe or PayPal. Links the Payments Merchant Account record with the payment at the payment provider. |
| PaymentIntentID | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the payment intent record.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentIntent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentIntent |
| `PaymentMethodId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The payment method that the customer used to provide this payment information.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentMethod<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentMethod |
| `PaymentNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>System-created unique ID for this payment record. |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Phone number of the customer who initiated the payment. |

| Field | Details |
| --- | --- |
| `ProcessingMode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Defines whether the payment has been made outside of the payment platform.<br>Possible values are:<br>• `External`: Transactions happened outside of the Salesforce payments platform.<br>• `Salesforce`: Salesforce made and recorded an external call to the payment gateway. |
| `SfResultCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code.<br>Possible values are:<br>• `Decline`: The gateway call failed, but if the problem is fixed and the transaction is retried, it can work. For example, the customer had insufficient funds or briefly lost their connection.<br>• `Indeterminate`: The gateway didn't respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway.<br>• `PermanentFail`: The gateway call failed. If tried again, it still doesn't work. Gateway calls fail permanently for one of two reasons:<br>– Hard Decline: The customer's payment account has been closed or terminated.<br>– Fraud: The gateway recognized the payment or payment method as known fraud.<br>• `RequiresReview`: The customer bank requires more information before completing the payment.<br>• `Success`: The gateway call succeeded.<br>• `SystemError`: Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes.<br>• `ValidationError`: Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Defines the state of this payment.<br>Possible values are:<br>• `Canceled`: This payment has been unapplied from its target and can no longer be allocated.<br>• `Draft`: The payment can be edited before posting it and allocating it to a target. The payment can also be deleted.<br>• `Processed`: This payment has been finalized and can be allocated against a target.<br>Users can manually change the Status field's values as follows:<br>• Draft to Processed<br>• Processed to Canceled<br>• Draft to Canceled |
| `TotalApplied` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total amount of this payment's balance that has been applied against an invoice. |
| `TotalPaymentCreditApplied` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total amount of all credit types that have been applied against this payment. This field is a calculated field.<br>This field is available in API version 65.0 and later. |
| `TotalPaymentCreditUnapplied` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total amount of all credit types that haven't been applied against this payment. This field is a calculated field.<br>This field is available in API version 65.0 and later. |
| `TotalRefundApplied` | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total amount of a refund that has been applied against this payment. |
| `TotalRefundUnapplied` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total amount of a previously applied refund that has since been unapplied from this payment. |
| `TotalUnapplied` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total amount of this payment that was previously applied and then unapplied. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Defines how the customer used this payment.<br>Possible values are:<br>• `Capture`<br>• `Sale` |

OrderPaymentSummary

# PaymentAuthAdjustment

Shows information about an adjustment made to an authorized transaction. This object is available in API version 51.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Note: You can only delete a payment in draft state, which you specify in the **Status** field.

## Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

## Fields

| Field | Details |
|---|---|
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The account for the payment authorization adjustment. Inherited from the payment authorization.<br>This is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `Amount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Amount of adjustment applied to the parent payment authorization. |
| `Comments` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Users can add comments to provide additional details about a record. Maximum of 1000 characters. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Three-letter ISO 4217 currency code associated with the payment authorization adjustment record. |
| `Date` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date that the adjustment occurred. |
| `EffectiveDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date that the adjustment takes effect on the authorization. |
| `Email` | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Email address of the parent payment authorization owner. |
| `GatewayDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time that the reversal transaction occurred in the payment gateway. |
| `GatewayRefDetails` | **Type**<br>textarea |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Additional data that can't be stored in other fields on the payment record. You can use this field for transactions following the initial transaction that creates the payment record. You can use any data that isn't normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML. |
| `GatewayRefNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Unique transaction ID created by the payment gateway. |
| `GatewayResultCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Gateway-specific result code. Must be mapped to a Salesforce-specific result code |
| `GatewayResultCodeDescription` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the gateway's result code. This field is useful for providing more information around why the gateway returned a certain result code. |
| `IpAddress` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The IP address of the user who initiated the payment adjustment. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced `(LastReferencedDate)` and not viewed. |
| `MacAddress` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The MAC address of the person who initiated the payment. |
| `PaymentAuthAdjustmentNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>System-provided unique ID for a payment authorization adjustment record. |
| `PaymentAuthorizationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the payment authorization on which the adjustment occurred.<br>This is a relationship field.<br>**Relationship Name**<br>PaymentAuthorization<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentAuthorization |
| `PaymentIntentId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the payment intent record.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentIntent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentIntent |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Phone number of the customer who initiated the authorization adjustment. |
| `ProcessingMode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Defines whether the payment has been made outside of the payment platform.<br>Possible values are:<br>• `External`—Transactions happened outside of the Salesforce payments platform.<br>• `Salesforce`—Salesforce made and recorded an external call to the payment gateway. |
| `SfResultCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code.<br>Possible values are:<br>• `Decline`—The gateway call failed, but it might work if the transaction is attempted again. For example, the customer had insufficient funds or briefly lost their connection. |

| Field | Details |
| --- | --- |
| | • `Indeterminate`—The gateway didn't respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway.<br>• `PermanentFail`—The gateway call failed and won't work even if tried again. Gateway calls fail permanently for one of two reasons:<br>  – Hard Decline: The customer's payment account has been closed or terminated.<br>  – Fraud: The gateway recognized the payment or payment method as known fraud.<br>• `RequiresReview`—The customer bank requires more information before completing the payment.<br>• `Success`—The gateway call succeeded.<br>• `SystemError`—Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes.<br>• `ValidationError`—Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Defines the state of the payment authorization reversal.<br>Possible values are:<br>• `Canceled`—The payment authorization reversal has been canceled. The parent authorization has returned to its pre-reversal balance.<br>• `Draft`: The payment authorization reversal can be edited before applying it against the parent authorization.<br>• `Pending`: The payment authorization reversal is pending. This value is available in API version 61.0 and later.<br>• `Processed`—The payment authorization reversal has been finalized.<br>Users can manually change the Status field's values as follows:<br>• Draft to Processed<br>• Processed to Canceled<br>• Draft to Canceled |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Defines how the customer used the reversal. |

| Field | Details |
| --- | --- |
| | Possible value is:<br>• `Reversal` |

# PaymentAuthorization

Represents a single payment authorization event where users can capture or reverse a payment against a reserve of funds. This object is available in API version 48.0 and later.

A common type of payment authorization occurs when a user sees a pending transaction against their credit card account.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Note: You can only delete a payment in draft state, which you specify in the **Status** field.

## Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

## Fields

| Field | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Customer account.<br>This is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `Amount` | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The amount authorized for the payment event. |
| `Balance` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Authorized amount – total processed captured amount – total processed authorization reversal amount. Balance can be positive or negative. |
| `Comments` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Users can enter comments to provide additional details about the authorization. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Three-letter ISO 4217 currency code associated with the payment authorization record. |
| `Date` | **Type**<br>dateTime<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort, Update<br>**Description**<br>By default, the day the authorization record was created. Users can also enter a different date. Editable only when the payment authorization's status is Draft. |
| `EffectiveDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date on which the authorization takes effect. Editable only when the payment authorization's status is Draft. |

| Field | Details |
| --- | --- |
| `Email` | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Email address of the person who initiated the payment. |
| `ExpirationDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Authorizations can't be captured after their expiration dates. |
| `GatewayAuthCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Authorization approval code from the payment gateway. |
| `GatewayDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time that of the gateway communication that leads to the successful payment authorization. |
| `GatewayRefDetails` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Additional data that can't be stored in other fields on the payment record. You can use this field for transactions following the initial transaction that creates the payment record. You can use any data that isn't normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML. |
| `GatewayRefNumber` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Unique transaction ID from the payment gateway. |
| `GatewayResultCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Gateway-specific result code. Must be mapped to a Salesforce-specific result code. |
| `GatewayResultCodeDescription` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the gateway's result code. This field is useful for providing more information around why the gateway returned a certain result code. |
| `IpAddress` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The IP address of the user who initiated the payment authorization. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced `(LastReferencedDate)` and not viewed. |

| Field | Details |
| --- | --- |
| MacAddress | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The MAC address of the person who initiated the payment. |
| OrderPaymentSummaryId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Order payment summaries show the balances of each authorization, capture, and refund made against an order. |
| PaymentAuthorizationNumber | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>System-provided unique ID for a payment authorization record. |
| PaymentGatewayId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The Salesforce payment gateway record that created this authorization. This gateway will be used for subsequent captures.<br>This is a relationship field.<br>**Relationship Name**<br>PaymentGateway<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentGateway |
| PaymentGroupId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Payment groups organize all the payment transactions that have been made against a record such as an account or contract. Populated from the authorization record if there is delayed payment.<br>This is a relationship field.<br>**Relationship Name**<br>PaymentGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentGroup |
| `PaymentIntentGuid` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>Unique ID of the payment sent to Stripe or PayPal. Links the Payments Merchant Account record with the payment at the payment provider. |
| `PaymentMethodId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The customer payment method provided during this authorization.<br>This is a relationship field.<br>**Relationship Name**<br>PaymentMethod<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentMethod |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Phone number of the person who initiated the payment. |

| Field | Details |
| --- | --- |
| `ProcessingMode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Defines whether the payment has been made outside of the payment platform.<br>Possible values are:<br>• `External`—Transactions happened outside of the Salesforce payments platform.<br>• `Salesforce`—Salesforce made and recorded an external call to the payment gateway. |
| `SfResultCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code.<br>Possible values are:<br>• `Decline`—The gateway call failed, but it may still work if the transaction is attempted again. For example, the customer had insufficient funds or briefly lost their connection.<br>• `Indeterminate`—The gateway didn't respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway.<br>• `PermanentFail`—The gateway call failed and won't work even if tried again. Gateway calls fail permanently for one of two reasons:<br>– Hard Decline: The customer's payment account has been closed or terminated.<br>– Fraud: The gateway recognized the payment or payment method as known fraud.<br>• `RequiresReview`—The customer bank requires more information before completing the payment.<br>• `Success`—The gateway call succeeded.<br>• `SystemError`—Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes.<br>• `ValidationError`—Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Defines the state of this payment.<br>Possible values are:<br>• `Canceled`—This payment has been unapplied from its target and can to longer be allocated.<br>• `Draft`—The payment can be edited before posting it and allocating it to a target.<br>• `Failed`—Authorization for the payment failed.<br>• `Pending`—<br>• `Processed`—This payment has been finalized and can be allocated against a target.<br>Users can manually change the Status field's values as follows:<br>• Draft to Processed<br>• Processed to Canceled<br>• Draft to Canceled |
| `TotalAuthReversalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of all processed authorization reversals against the payment authorization.<br>This is a calculated field. |
| `TotalPaymentCaptureAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of all authorization captures related to this payment authorization. |

OrderPaymentSummary

# PaymentCredit

Tracks the amount of money returned to the customer. The return can be a store credit, a gift card, or another type of credit. It's linked to the original payment record and includes the total credit amount issued. This object is available in API version 65.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce or D2C Commerce license is enabled. Users require the PaymentCredit and PaymentPlatform permission sets.

## Fields

| Field | Details |
|---|---|
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The account of the customer who made the payment.<br>This field is a relationship field.<br>This is a required field.<br>**Relationship Name**<br>Account<br>**Refers To**<br>Account |
| `Amount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort<br>**Description**<br>The amount to be credited.<br>This is a required field. |
| `Balance` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Balance of payment credits (`NetApplied - TotalCredit TransactionAmount - TotalCredit PendingTransactionAmount`). |

| Field | Details |
| --- | --- |
| `Comments` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Provide additional details about the payment credit transaction. |
| `CreditMemoId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the credit memo associated with the payment credit.<br>This field is a relationship field.<br>**Relationship Name**<br>CreditMemo<br>**Refers To**<br>CreditMemo |
| `CreditType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Credit types available.<br>This is a dynamic picklist that the user can define. Possible values are:<br>• `Credit`<br>• `Gift Card`<br>• `Gift Certificate` |
| `CreditTypeCategory` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>A static enum showing the credit category type.<br>Possible value is:<br>• `Credit` |

| Field | Details |
| --- | --- |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Contains the ISO code for any currency allowed by the organization.<br>Possible values are:<br>• `EUR`—Euro<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar<br>The default value is `USD`. |
| `EffectiveDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Effective date of the payment credit. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `NetApplied` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total of all credit amounts apllied for this payment credit (`TotalCreditApplied - TotalCreditUnapplied`). |

| Field | Details |
| --- | --- |
| `OrderPaymentSummaryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the order payment summary.<br>This field is a relationship field.<br>**Relationship Name**<br>OrderPaymentSummary<br>**Refers To**<br>OrderPaymentSummary |
| `PaymentCreditNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>ID of the payment credit record. This field is automatically generated.<br>Example: `PC-{000000000}`. |
| `PaymentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the payment associated with the payment credit.<br>This field is a relationship field.<br>**Relationship Name**<br>Payment<br>**Refers To**<br>Payment |
| `ReturnOrderId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the return order associated with the payment credit.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>ReturnOrder<br>**Refers To**<br>ReturnOrder |
| `TotalApplied` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Sum of all applied amounts from the payment credit line payment. |
| `TotalCreditPendingTxnAmt` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Sum of pending payment credits. |
| `TotalCreditTxnAmt` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Sum of processed payment credits. |
| `TotalUnapplied` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Sum of all the unapplied amounts from the payment credit line payment. |

# PaymentCreditLinePayment

A payment credit line payment. This object is available in API version 65.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce or D2C Commerce license is enabled. Users require the PaymentCredit and PaymentPlatform permission sets.

## Fields

| Field | Details |
|---|---|
| `Amount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort<br>**Description**<br>Amount to apply to or unapply from the payment to the credit.<br>This is a required field. |
| `AppliedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date payment was applied. Can be the current date or a provided date. |
| `AssociatedAccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the customer account.<br>This field is a relationship field.<br>**Relationship Name**<br>AssociatedAccount<br>**Refers To**<br>Account |
| `AssociatedLineId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the associated line.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>AssociatedLine<br>**Refers To**<br>PaymentCreditLinePayment |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Contains the ISO code for any currency allowed by the organization.<br>Possible values are:<br>• `EUR`—Euro<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar<br>The default value is `USD`. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description regarding the payment credit. |
| `HasBeenUnapplied` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the refund line record with type `Applied` has been unapplied. Not applicable for a refund line record with type `Unapplied`.<br>This is a required field. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp for when the current user last viewed a record related to this record. |

| Field | Details |
| --- | --- |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `PaymentCreditId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the payment credit.<br>This field is a relationship field.<br>This is a required field.<br>**Relationship Name**<br>PaymentCredit<br>**Refers To**<br>PaymentCredit |
| `PaymentCreditLine PaymentNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Number of the payment credit line payment. This field is automatically generated.<br>Example: `PCLP-{000000000}`. |
| `PaymentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the applied payment credit.<br>This field is a relationship field.<br>**Relationship Name**<br>Payment<br>**Relationship Type**<br>Master-detail |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Payment (the master object) |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Payment credit type. This is a required field.<br>Possible values are:<br>• `Applied`<br>• `Unapplied` |
| `UnappliedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date payment was unapplied. Can be the current date or a provided date. |

# PaymentCreditTransaction

A payment credit transaction. This object is available in API version 65.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce or D2C Commerce license is enabled. Users require the PaymentCredit and PaymentPlatform permission sets.

## Fields

| Field | Details |
| --- | --- |
| `Amount` | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Sort<br>**Description**<br>Amount of the payment credit transaction.<br>This is a required field. |
| `AssociatedAccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the customer account.<br>This field is a relationship field.<br>**Relationship Name**<br>AssociatedAccount<br>**Refers To**<br>Account |
| `ClientContext` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>Additional information about the payment credit transaction. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Contains the ISO code for any currency allowed by the organization.<br>Possible values are:<br>• `EUR`—Euro<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar<br>The default value is `USD`. |
| `ExternalReference` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Reference ID used to track the payment credit transaction. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `PaymentCreditId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the payment credit.<br>This field is a relationship field.<br>This is a required field.<br>**Relationship Name**<br>PaymentCredit<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>PaymentCredit (the master object) |
| `PaymentCreditTransactionNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Number of the payment credit transaction. This field is automatically generated. |

| Field | Details |
| --- | --- |
| | Example: `PCT-{000000000}`. |
| `ProcessingMode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Credit transaction processing mode.<br>Possible values are:<br>• `External`<br>• `Salesforce`<br>This is a required field. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A static enum showing the status of the credit transaction.<br>Possible values are:<br>• `Canceled`<br>• `Draft`<br>• `Failed`<br>• `Pending`<br>• `Processed` |
| `TransactionMessage` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Message describing the transaction. |

# PaymentGateway

Platform object that represents the connection to an external payment gateway. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

## Fields

| Field | Details |
|---|---|
| `Comments` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Admin-provided details about a record. Maximum of 1000 characters. |
| `DefaultTapToPayLocation` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Stores the locationId of the location record created at Stripe. The Field Service app uses the location to process where tap-to-pay transactions are made. |
| `ExternalReference` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort, Update<br>**Description**<br>Identifier of an external payment gateway. This field is unique within your organization. |
| `GatewayMode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The operational mode of the payment gateway. This field determines the payment gateway's ability to accept payments. For production orgs, the gateway must be in Live mode.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `Connected`– Payment gateway is active but it can't accept payments. This option is only valid in production orgs.<br>• `Live`– Payment gateway is active and can accept payments. This option is only valid in production orgs.<br>• `Test` –Payment gateway is active but not able to accept payments. This option is only valid in sandbox orgs, and the account can accept only test transactions. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible this record is only referenced (LastReferencedDate) but not viewed. |
| `MerchantAccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the merchant account used by the payment gateway. This merchant account links to a merchant account at a payment processor.<br>This field is a relationship field.<br>**Relationship Name**<br>MerchantAccount<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MerchantAccount |
| `MerchantCredentialId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the merchant credential setup entity to reference merchant information.<br>This field is a relationship field.<br>**Relationship Name**<br>MerchantCredential<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>NamedCredential |
| `PaymentGatewayName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Admin-defined name for the payment gateway. |
| `PaymentProcessor` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Name of payment gateway provider.<br>Possible values are:<br>• `Paypal`<br>• `Stripe` |
| `PaymentStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The payment gateway is active and can accept payments.<br>Possible values are:<br>• `Enabled`<br>• `Disabled`<br>The default value is Disabled. |
| `PayoutStatus` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Money can be moved from the payment provider account to the merchant bank account linked to it.<br>Possible values are:<br>• `Enabled`<br>• `Disabled`<br>The default value is Disabled. |
| `PaymentGatewayProviderId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the payment gateway that handles transactions between the merchant account and the payment processor.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentGatewayProvider<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentGatewayProvider |
| `ProviderAccount` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Account ID assigned by the payment provider that identifies the linked Salesforce Payments account. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Defines whether Salesforce Payments can use this payment gateway for calls to the external payment gateway. Inactive payment gateways can't be used.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `Active` - the merchant account can accept payments.<br>• `Complete` – `PaymentStatus` and `DepositStatus` are enabled and the account provided all the required information.<br>• `Enabled` – `PaymentStatus` and `PayoutStatus` are enabled, but the payment provider can require more information later. If the merchant doesn't provide the information then the account can become restricted. The time limit that the merchant has to provide the information is longer than the RestrictedSoon state.<br>• `Pending`–The merchant account exists but it can't accept payments. This option maintains backward compatibility for accounts that were created with API version 55.0 and earlier. Pending is no longer in use for API version 57.0 and higher.<br>• `Rejected` – The payment provider has rejected the merchant account with an explanation.<br>• `Restricted` – merchant account functionality is limited. This state is only applicable if `PaymentStatus`, `PayoutStatus`, or both are disabled.<br>• `RestrictedSoon` – `PaymentStatus` and `PayoutStatus` are enabled, but the payment provider requires more information. If the merchant doesn't provide the information in a specific time period, then the merchant account becomes restricted. |

# PaymentGatewayLog

Stores information exchanged between the Salesforce payments platform and external payment gateways. Gateway logs can also record payloads from external payment entities. This object is available in API version 48.0 and later.

Deleting or archiving a payment gateway log doesn't impact financial data on other payment entities.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

## Fields

| Field | Details |
| --- | --- |
| `CurrencyIsoCode` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. |
| `GatewayAuthCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Authorization approval code from the gateway. |
| `GatewayAVSCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Code sent by gateways that use an address verification system. |
| `GatewayDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time that of the gateway communication that leads to the creation of this gateway log. |
| `GatewayMessage` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Information or error messages sent from the gateway. |
| `GatewayRefNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Unique transaction ID created by the payment gateway. |

| Field | Details |
| --- | --- |
| GatewayResultCode | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Gateway-specific result code. Must be mapped to a Salesforce-specific result code. |
| GatewayResultCodeDescription | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the gateway's result code. This field is useful for providing more information around why the gateway returned a certain result code. |
| InteractionStatus | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Describes the result of communication between the payments platform and a payment gateway.<br>Possible values are:<br>• Failed<br>• Initiated<br>• NoOp<br>• Success<br>• Timeout |
| InteractionType | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Describes the type of interaction with the gateway. This field is required for logs created in Salesforce.<br>Possible values are:<br>• Authorization<br>• AuthorizationReversal<br>• Avs |

| Field | Details |
| --- | --- |
| | • `Capture`<br>• `CheckGiftCardBalance`<br>• `PostAuth`<br>• `ReferencedRefund`<br>• `Sale`<br>• `Tokenize`<br>• `Void` |
| `IsNotification` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>For asynchronous transactions, shows whether the gateway log belongs to the notification (`yes`) or the initial transaction (`no`).<br>Possible values are:<br>• `No`<br>• `Yes` |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. |
| `OrderPaymentSummaryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Order payment summaries show the balances of each authorization, capture, and refund made against an order. |

| Field | Details |
| --- | --- |
| PaymentGatewayId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The Payments Platform payment gateway record used for communication with the external payment gateway.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentGateway<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentGateway |
| PaymentGatewayLogNumber | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>System-generated unique ID for this payment gateway log record. |
| ReferencedEntityId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Foreign key with DomainSet of PaymentAuth and Payment.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ReferencedEntity<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CardPaymentMethod, Payment, PaymentAuthAdjustment, PaymentAuthorization, Refund |
| Request | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Raw payload. No sensitive attributes are stored. |
| `Response` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Raw payload. |
| `SfRefNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If an IdempotencyKey was passed in the API request, its value is stored here in text format. |
| `SfResultCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code.<br>Possible values are:<br>• `Decline`: The gateway call failed. If the transaction is attempted again, it can still work. For example, the customer has insufficient funds or briefly lost their connection.<br>• `Indeterminate`: The gateway didn't respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway.<br>• `PermanentFail`: The gateway call failed and can't work. Gateway calls fail permanently for one of two reasons:<br>– Hard Decline: The customer's payment account has been closed or terminated.<br>– Fraud: The gateway recognized the payment or payment method as known fraud.<br>• `RequiresReview`: The customer bank requires more information before completing the payment.<br>• `Success`: The gateway call succeeded.<br>• `SystemError`: Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes. |

| Field | Details |
| --- | --- |
| | • `ValidationError`: Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV. |

# PaymentGatewayProvider

Setup entity for payment gateways. Defines the connection to a payment gateway Apex adapter. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

## Fields

| Field | Details |
| --- | --- |
| `ApexAdapterId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of an APEX adapter class. The adapter interacts with your payment gateway to complete transactions. This field is unique within your organization.<br>This field is a relationship field.<br>**Relationship Name**<br>ApexAdapter<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApexClass |
| `Comments` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Additional details about a record. Maximum of 1000 characters. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>(Optional) An internal name you assign the adapter. For reference only.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `IdempotencySupported` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>If the same payment request is made in rapid succession, this field defines whether the Payments platform charges the customer or merchant's card multiple times for the same transaction. This situation can occur when a user clicks a Pay button twice, or the gateway's server goes down after fulfilling a payment request and the client immediately tries making another payment. If this field has a value of Yes, the Payments platform ignores identical payment requests made immediately after an original request.<br>Different payment gateways have varying levels of idempotency support. When configuring a new payment gateway integration, plan accordingly.<br>Possible values are:<br>• `No`<br>• `Yes` |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Customer language used for the payment gateway. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>User-friendly name of the payment gateway provider. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Namespace for the payment gateway platform. |

# PaymentGroup

Top-level object that groups all payment transactions that are processed for an order or invoice. PaymentGroup is a standalone object, so it isn't required for users to execute payment transactions (authorizations, captures, refunds, and sales). This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated. Commerce Payments entities are available only in Lightning Experience.

## Fields

| Field | Details |
| --- | --- |
| `PaymentGroupNumber` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>System-defined unique ID for the payment group. |
| `SourceObjectId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The order or invoice related to all the payment transactions in the payment group.<br>This is a relationship field.<br>**Relationship Name**<br>SourceObject<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Order |

# PaymentInitiationSource

Represents the originating source of a payment. This information helps other Salesforce products integrate with Salesforce Payments. This object is available in API version 63.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

## Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license with the Payments permission enabled for your org. Salesforce Payments entities are available only in Lightning Experience.

## Fields

| Field | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The account record that initiated this payment.<br>This field is a relationship field.<br>**Relationship Name**<br>Account<br>**Refers To**<br>Account |
| `Application` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Salesforce application initiating the payment.<br>Possible values are:<br>• `Collections`<br>• `Commerce`<br>• `Custom`<br>• `FieldService`<br>• `OrderManagement`<br>• `Payments`<br>• `Revenue`<br>• `Sales`<br>• `Scheduler`<br>• `Service` |
| `Channel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The origin of the submitted payment. For example, D2C, virtual terminal, or merchant MOTO (mail order or phone order). |
| `CollectionPlanId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The collection plan record that submitted payment. This field is available only for merchant-initiated payment collections. For example, a merchant collects an outstanding balance using a Pay Now payment link or over the phone.<br>This field is a relationship field.<br>**Relationship Name**<br>CollectionPlan<br>**Refers To**<br>CollectionPlan |
| `ContactId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The contact record of the contact that made the payment.<br>This field is a relationship field.<br>**Relationship Name**<br>Contact<br>**Refers To**<br>Contact |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for organizations with the multicurrency feature enabled. This field contains the ISO code for any currency allowed by the organization.<br>Possible values are:<br>• `AUD`—Australian Dollar<br>• `EUR`—Euro<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar<br>The default value is `USD`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (`LastReferencedDate`), but not viewed it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the payment initiation source record. For example, d9e01178-b6878-2f4b-a14d-b0132b7ret67 |
| `OpportunityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The opportunity record that made the payment.<br>This field is a relationship field.<br>**Relationship Name**<br>Opportunity<br>**Refers To**<br>Opportunity |
| `OrderSummaryId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The order summary record that initiated the payment. This field is available with Salesforce Order Management and Commerce applications.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>OrderSummary<br>**Refers To**<br>OrderSummary |
| `PaymentScheduleItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The payment schedule item record that initiated the payment. This field is available only with the Scheduler application.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentScheduleItem<br>**Refers To**<br>PaymentSchedleItem |
| `Process` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Component within the application that's initiating the payment. Maximum length of the string is 255 characters. For example, managed or custom checkout, product description page (PDP). |
| `QuoteId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The quote record that initiated the payment.<br>This field is a relationship field.<br>**Relationship Name**<br>Quote<br>**Refers To**<br>Quote |
| `ServiceAppointmentId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The service appointment record that initiated the payment. This field is available only with the Field Service application.<br>This field is a relationship field.<br>**Relationship Name**<br>ServiceAppointment<br>**Refers To**<br>Appointment |
| `SiteId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The site record that initiated the payment. This field is for applications that don't have a web store, but created a digital experience site to accept payments<br>This field is a relationship field.<br>**Relationship Name**<br>Site<br>**Refers To**<br>Site |
| `WebCartId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The web cart record that submitted the payment.<br>This field is a relationship field.<br>**Relationship Name**<br>WebCart<br>**Refers To**<br>WebCart |
| `WebStoreId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The web store record that initiated the payment. For example, a B2B, D2C, or Pay Now store.<br>This field is a relationship field.<br>**Relationship Name**<br>WebStore<br>**Refers To**<br>WebStore |
| `WorkOrderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The work order record that submitted the payment. This field is available only for the Field Service application.<br>This field is a relationship field.<br>**Relationship Name**<br>WorkOrder<br>**Refers To**<br>WorkOrder |
| `WorkOrderLineItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The work order line item record that made the payment. This field is only available with the Field Service application.<br>This field is a relationship field.<br>**Relationship Name**<br>WorkOrderLineItem<br>**Refers To**<br>WorkOrderLineItem |

# PaymentIntent

Represents data temporarily stored during a transaction's lifecycle that can identify the buyer, the merchant, and the amount the buyer is sending to the merchant. Data such as timestamp and amount returned can also be stored in PaymentIntent. This object is available in API version 58.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

## Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license with the Payments permission enabled for your org. Salesforce Payments entities are available only in Lightning Experience.

## Fields

| Field | Details |
|---|---|
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The account record of the buyer.<br>This field is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `AmountCapturable` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Payment amount that a merchant can collect after the fulfillment of an order. |
| `AmountRefundable` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of the payment that the merchant can refund. |
| `AuthorizationReversalAmount` | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Amount canceled before completing the transfer of funds from buyer to merchant. |
| `AuthorizedAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Amount authorized by the payer's bank. |
| `BillingAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The billing address of the account holder. This field is the compound form of the billing address. Read-only. For details on compound address fields, see Address Compound Fields. |
| `BillingCity` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details for the billing address. The maximum size is 40 characters. |
| `BillingCountry` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details for the billing address. The maximum size is 80 characters. |
| `BillingCountryCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ISO country code for the billing address. |

| Field | Details |
| --- | --- |
| `BillingGeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Accuracy level of the geocode for the billing address. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `BillingLatitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `BillingLongitude` to specify the precise geolocation of a billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `BillingLongitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `BillingLatitude` to specify the precise geolocation of a billing address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields. |
| `BillingPostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details for the billing address. Maximum size is 20 characters. |
| `BillingState` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details for the billing address. Maximum size is 80 characters. |
| `BillingStreet` | **Type**<br>textarea |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details for the billing address. |
| `CapturedAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount that a merchant secured from a buyer. |
| `ContextData` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>Additional metadata or information about a payment, such as the source of the payment, user data, or any other relevant information that can help in processing or tracking the payment. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>ISO code for any currency allowed by the organization. Available only for orgs with the multicurrency feature enabled.<br>Possible values are:<br>• `Euro`<br>• `USD`<br>The default is USD. |
| `DisputeEvidenceDueDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date by which the merchant must submit information related to the dispute. |

| Field | Details |
| --- | --- |
| `DisputeFee` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount that the credit card company charges the merchant for each disputed payment. The fee is also known as a chargeback fee. |
| `DisputeStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The state of the disputed transaction.<br>Possible values are:<br>• `Closed`—The dispute inquiry is closed.<br>• `Created`—The payment gateway opens a payment dispute.<br>• `Lost`—The bank ruled in the account owner's favor and refunded the charge. The refund is permanent and the dispute fee isn't returned.<br>• `Won`—The bank ruled in the merchant's favor. The issuing bank returns the debited chargeback amount to the payment gateway, who passes this amount back to the merchant. |
| `DisputedAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount the customer is challenging. |
| `EntryMode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates how the payment information was provided.<br>Possible values are:<br>• `Flow`—Salesforce flow that initiated the payment.<br>• `Merchant`—The credit card isn't available so the merchant entered the payment information via the phone or an email.<br>• `Payer_Online`—The payer entered their payment information online. |

| Field | Details |
| --- | --- |
| | • `Place_Order_V2`—The payment was initiated from the Place Order V2 Orchestration.<br>• `TapToPay`—The card was available and the payer tapped that card or device on the payment terminal. |
| `Guid` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>Unique ID of the payment sent to Stripe or PayPal. This ID links the Payments Merchant Account record with the payment at the payment provider. |
| `IncurrenceStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Status of an orphaned payment. An orphaned payment occurs when a payment transaction is complete, but the workflow is disrupted, and the payment isn't recorded in the consuming flow. An unexpected error can cause an orphaned payment. For example, a payment is accepted at checkout, but the order doesn't get placed because of a network issue.<br>Possible values are:<br>• `Canceled`—The workflow was disrupted and the payment was canceled or refunded.<br>• `Claimed`—The payment was recorded and the workflow was completed.<br>• `Pending`—The consuming workflow hasn't recorded the payment yet.<br>If there isn't a value for this field, it means that the consumer doesn't rely on it to track orphaned payments. |
| `IntentAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total amount that a merchant expects to receive from a buyer. |
| `IsCaptureComplete` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Verification whether the funds for a given payment are paid. |

| Field | Details |
| --- | --- |
| | The default value is `false`. |
| `IsEvidenceSubmitted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Status of the requested information that the merchant provides to the bank about the dispute.<br>The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced but not viewed. |
| `MerchantAccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Required field. The merchant account record associated with a payment intent record.<br>This field is a relationship field.<br>**Relationship Name**<br>MerchantAccount<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MerchantAccount |
| `PaymentGatewayId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The payment gateway record that processed the payment.<br>**Relationship Name**<br>PaymentGateway<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentGateway |
| `PaymentGroupId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Payment groups organize all the payment transactions that have been made against a record such as an account or contract.<br>This is a relationship field.<br>This field is available in API version 65.0 and later.<br>**Relationship Name**<br>PaymentGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentGroup |
| `PaymentInitiationSourceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The payment initiation source record associated with the payment. The record identifies the originating application and object of the payment..lo<br>**Relationship Name**<br>PaymentInitiationSource<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentInitiaionSource |

| Field | Details |
| --- | --- |
| `PaymentIntentNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Autogenerated number assigned to the payment record, for example `PI-000000001`. |
| `PaymentLinkGmvDate` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Date the payment is captured from a payment link transaction. The total amount paid is expressed as the Gross Merchandise Value (GMV). |
| `PaymentLinkId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The payment link record.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentLink<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentLink |
| `PaymentMethodDetails` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Additional information about the payment method type such as the four last digits of a card number. |
| `PaymentMethodId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The payment method record, indicating a card payment method, digital wallet, or alternative payment method.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>PaymentMethod<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentMethod |
| `PaymentMethodSubType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A payment method that exists as a subtype of a payment method type. For example, Visa, Mastercard, and American Express exist as subtypes of payment method types such as Apple Pay and Google Pay. |
| `PaymentMethodType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Payment method used for the transaction. |
| `ProviderReference` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A payment record at the payment gateway that identifies the payment provider. |
| `RefundedAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total or partial amount refunded to the buyer due to product return, merchant's lack of inventory, or shipping and delivering problems. |

| Field | Details |
| --- | --- |
| `ShippingAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>Delivery address for the purchase. The compound form of the shipping address. Read-only. See Address Compound Fields for details on compound address fields. |
| `ShippingCity` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details of the shipping address. City maximum size is 40 characters. |
| `ShippingCountry` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details of the shipping address. Country maximum size is 80 characters. |
| `ShippingCountryCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ISO country code for the shipping address. |
| `ShippingGeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Accuracy level of the geocode for the shipping address. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `ShippingLatitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Used with `ShippingLongitude` to specify the precise geolocation of a shipping address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `ShippingLongitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `ShippingLatitude` to specify the precise geolocation of an address. | `ShippingPostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details of the shipping address. The maximum size of the postal code is 20 characters. |
| `ShippingState` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details of the shipping address. State maximum size is 80 characters. |
| `ShippingStreet` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details of the shipping address. Maximum of 255 characters. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Status of the payment record.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `Authorized`<br>• `Canceled`<br>• `Created`<br>• `Expired`<br>• `Failed`<br>• `PartiallyCaptured`<br>• `PartiallyRefunded`<br>• `Pending`<br>• `Refunded`<br>• `Succeeded` |
| `SubmittedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The submitted by record, which identifies who processes the payment on the customer's behalf. The customer provides the authorization to submit the payment over the phone or through the mail.<br>This field is a relationship field.<br>**Relationship Name**<br>SubmittedBy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

# PaymentIntentEvent

Represents a payment intent platform event. Subscribe to these events so you can listen and respond to them when they're published. For example, create a Salesforce Flow that is triggered when one of these events is published. This object is available in API version 59.0 and later.

For more information about platform events, see the Platform Events Developer Guide.

## Supported Calls

`describeSObjects()`

## Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license and Payments must be enabled for your org. Salesforce Payments objects are available only in Lightning Experience.

## Fields

| Field | Details |
|---|---|
| `ChangeType` | **Type**<br>picklist<br>**Properties**<br>Restricted picklist<br>**Description**<br>Type of payment intent event that triggers an event notification. You can write code to operate conditionally on the value of this field. For example, you can ignore an authorization but get notified of captures.<br>Possible values are:<br>• `Authorize`–Payment is authorized.<br>• `AuthorizeFailure`–There's an error preventing the payment authorization<br>• `Capture`–Payment is captured.<br>• `CaptureFailure`– An error prevented the payment capture.<br>• `Refund`–Payment is refunded.<br>• `RefundFailure`–An error prevented the payment refund. |
| `PaymentInitiationSourceApplication` | **Type**<br>picklist<br>**Properties**<br>Nillable, Restricted picklist<br>**Description**<br>Salesforce application initiating the payment. This field is available in API version 63.0 and later.<br>Possible values are:<br>• `Collections`<br>• `Commerce`<br>• `Custom`<br>• `FieldService`<br>• `OrderManagement`<br>• `Payments`<br>• `Revenue`<br>• `Sales`<br>• `Scheduler` |

| Field | Details |
| --- | --- |
| | • `Service` |
| `PaymentInitiationSourceChannel` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>Identifies the channel in the Payment Initiation Source record for which the event occurs. This field is available in API version 63.0 and later. |
| `PaymentInitiationSource` | **Type**<br>reference<br>**Properties**<br>Nillable<br>**Description**<br>Identifies the Payment Initiation Source record for which the event occurs. This field is available in API version 63.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentInitiationSource<br>**Refers To**<br>PaymentInitiationSource |
| `PaymentInitiationSourceProcess` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>Identifies the process in the Payment Initiation Source record for which the event occurs. |
| `PaymentIntentGuid` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>Identifies the GUID in the Payment Initiation Source record for which the event occurs. This field is available in API version 63.0 and later. |
| `PaymentIntent` | **Type**<br>reference<br>**Properties**<br>Nillable |

| Field | Details |
| --- | --- |
| | **Description**<br>Identifies the PaymentIntent record for which the event occurs. This field is available in API version 63.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentIntent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentIntent |
| `PaymentLink` | **Type**<br>reference<br>**Properties**<br>Nillable<br>**Description**<br>Identifies the payment link record for which the event occurs. This field is available in API version 63.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentLink<br>**Refers To**<br>PaymentLink |

# PaymentLineInvoice

Represents a payment allocated to or unallocated from an invoice. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated. Commerce Payments entities are available only in Lightning Experience.

# Fields

| Field | Details |
| --- | --- |
| `Amount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort<br>**Description**<br>Total amount applied or unapplied by this payment line. |
| `AppliedDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The date that this line was applied to an invoice or payment. If this field is null, it inherits the value of the payment line invoice's Date field. |
| `AssociatedAccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The account for this payment line's target invoice.<br>This is a relationship field.<br>**Relationship Name**<br>AssociatedAccount<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `AssociatedPaymentLineId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The paymentLine that was unapplied. Populated only when PaymentLineInvoice's Type field has a value of Unapplied.<br>This is a relationship field.<br>**Relationship Name**<br>AssociatedPaymentLine |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentLineInvoice |
| `Comments` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Users can add comments to provide additional details about a record. Maximum of 1000 characters. |
| `Date` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The date and time that this payment line was created. |
| `EffectiveDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>Defines the date and time when the payment line application or unapplication becomes effective. |
| `EffectiveImpactAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Shows how this payment invoice line impacts a customer's accounts receivable. This value is positive when PaymentLineInvoice's Type field is Applied, and negative when PaymentLineInvoice's Type is Unapplied. If there's an unapplied line related to this record, EffectiveImpactAmount has a value of 0.<br>Note: EffectiveImpactAmount evaluates only the applied and unapplied line pair. Therefore, the effective impact amount could be different for different lines within the same payment. |

| Field | Details |
| --- | --- |
| `HasBeenUnapplied` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Defines whether this payment line has been unapplied from the target invoice. Has a value of NA when PaymentInvoiceLine's Type field has a value of Unapplied. Can be No or Yes if Type has a value of Applied.<br>Possible values are:<br>• `NA`<br>• `No`<br>• `Yes` |
| `ImpactAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Shows the payment's financial impact against the customer's accounts receivable. If PaymentLineInvoice has a Type of Applied, the ImpactAmount is the negative equivalent of the line's Amount field. Otherwise, ImpactAmount equals Amount. |
| `InvoiceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Target invoice for this payment line.<br>This is a relationship field.<br>**Relationship Name**<br>Invoice<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Invoice |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, and `LastReferenceDate` is not null, the user accessed this record or list view indirectly. |
| `PaymentBalance` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total balance of this line's parent payment record following the application or unapplication of this payment line. |
| `PaymentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Parent payment for this payment line.<br>This is a relationship field.<br>**Relationship Name**<br>Payment<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Payment |
| `PaymentLineInvoiceNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>System-defined unique ID for this payment line. |

| Field | Details |
| --- | --- |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Defines whether this payment line has been applied or unapplied to the target invoice.<br>Possible values are:<br>• `Applied`<br>• `Unapplied` |
| `UnappliedDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The date that this payment line was unapplied from the target invoice. Populated only when the Type field equals Unapplied. Inherits the value of the Date field. |

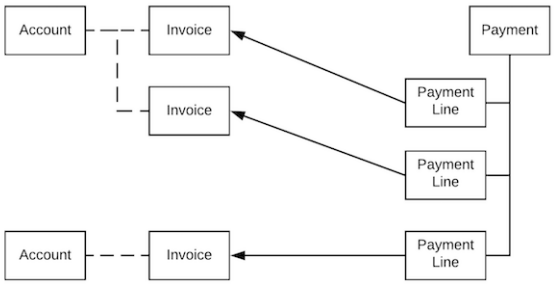
# Usage

Use a payment line to apply all or part of a payment's balance to an invoice. The PaymentLineInvoice object represents the balance taken from the payment and applied toward the invoice. You can apply a payment's balance when you create the payment record or afterward. The payment line must have the same currency as the parent payment.

A payment line has an amount, which represents the total amount taken from the payment, and balance, which represents the remaining amount after the payment line has been applied to an invoice. A payment's amount can't be less than the sum of all of its payment line amounts.

One payment can have multiple payment lines. A payment line must be related to only payment.

You can create multiple payment lines on a payment apply each line to different invoices on the same account, or to invoices on different accounts.



Here's one way you could use Salesforce API to apply a payment to an invoice using a payment line.

# PaymentLink

A link that a merchant can share with customers to collect payments for products and services. The payment link, which you can embed into a Salesforce app or send directly to a customer, directs the customer to a Pay Now payment page. The page can show a total amount owed or an itemized list or products, shipping and tax charges, and a total amount owed. The customer enters their contact and payment details, and submits their payment. The amounts are shown in the store's currency. This object is available in API version 58.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license with the Payments permission enabled for your org. Salesforce Payments entities are available only in Lightning Experience.

## Fields

| Field | Details |
|---|---|
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Payer account.<br>This field is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `Amount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Amount the payer owes. |
| `CartId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the cart record.<br>**Relationship Name**<br>Cart<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Webcart |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>3-digit ISO code for the payment currency that is shown on the Pay Now page. Possible values are:<br>• EUR – Euro<br>• GBP – British Pound<br>• USD – US Dollar<br>The default value is `USD`. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Text on the Pay Now payment page that's visible to your customers. This text can communicate any information you want. |
| `Expiry Time` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time that the payment link expires. The time is based on the user's time zone, not the org's time zone. |
| `LastReferencedDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record can be referenced and not viewed directly. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who owns this record.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PaymentInitiationSource` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The origin of the payment, based on the information in the Payment Link record. |
| `PaymentLinkNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Auto-generated number that identifies the payment link. |

| Field | Details |
| --- | --- |
| PaymentMethodSetId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Reference to the PaymentMethodSet object, which determines what payment methods are shown to the payer.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentMethodSet<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MerchAccPaymentMethodSet |
| PaymentUrl | **Type**<br>url<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Unique URL of the Pay Now page. This URL IS auto-generated, and not editable. |
| QrCodeImageId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Reference to the QR code image included in the payment link record.<br>This field is a relationship field.<br>**Relationship Name**<br>QrCodeImage<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentVersion |
| Status | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the payment link is active and can be used.<br>Possible values are:<br>• `Active`<br>• `Disabled`<br>The default value is `Active`. |
| `TaxAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Amount of the tax for the purchase. This amount is shown on the Pay Now page. |
| `Title` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Title of the Pay Now page, indicating what is being paid. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Indicates the type of payment link created, which the merchant can share with the customer to receive payment. The payment link also determines which Pay Now page is generated and what's included on that page.<br>Possible values are:<br>• `CheckoutWithOrder` (only for orgs with Payments and Commerce)—includes the amount owed based on the products you select, lists the products purchased, and calculates tax using the billing address and selected shipping options. After a customer makes a payment, this link type creates an order record.<br>• `PredefinedAmount`—shows only an amount due for products purchased. The merchant enters the amount due when creating the payment link.<br>• `WithProducts`—Deprecated. New payment links can't be created with this link type.<br>The default value is `PredefinedAmount`. |
| `UsageType` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Determines whether the payment link is used one time or multiple times before the configured expiration date and time.<br>Possible values are:<br>• `MultiUse`<br>• `SingleUse`<br>The default value is `MultiUse`. |

## Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**PaymentLinkOwnerSharingRule on page 65**
Sharing rules are available for the object.

**PaymentLinkShare on page 67**
Sharing is available for the object.

# PaymentLinkEvent

Represents a payment link platform event. Subscribe to these events so you can listen and respond to them when they're published. For example, create a Salesforce Flow that is triggered when one of these events is published. This object is available in API version 59.0 and later.

For more information about platform events, see the Platform Events Developer Guide.

## Supported Calls

`describeSObjects()`

## Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license and Payments must be enabled for your org. Salesforce Payments objects are available only in Lightning Experience.

## Fields

| Field | Details |
| --- | --- |
| `ChangeType` | **Type**<br>picklist<br>**Properties**<br>Restricted picklist<br>**Description**<br>Type of payment link event, which triggers and event notification.<br>Possible values are:<br>• `Create`–Payment link created.<br>• `Delete`–Payment link deleted.<br>• `Update`–Payment link property changed. |
| `PaymentLinkId` | **Type**<br>reference<br>**Properties**<br>Nillable<br>**Description**<br>Type of payment link event. You can write code to operate conditionally on the value of this field. For example, you can ignore a create change but get notified of updates.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentLink<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentLink |

# PaymentMethod

Represents the method that a buyer uses to compensate the seller of a good or service. Common payment methods include cash, checks, credit or debit cards, money orders, bank transfers, and online payment services. This object is available in API version 48.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

## Fields

| Field | Details |
|---|---|
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The account entity linked to this payment method.<br>This field is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `Comments` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>Users can add comments to provide additional details about a record. Maximum of 1000 characters. |
| `CompanyName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Company name for this payment method. Part of the payment method's address. |
| `ImplementorType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Shows the type of payment method. |
| `IsAutoPayEnabled` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the payment method can be used for recurring payments (True) or not (False). The default value is False.<br>This field is available in API v55.0 and later. For orgs that upgraded from v54.0, you must add this field to the Payment Method page layout in the UI. It isn't automatically added. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>A unique number assigned to the payment method. Numbers start at 1000 and are read only, but administrators can change the format. |
| `NickName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>User-defined nickname for this payment method. |
| `PaymentMethodAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>Full address related to the alternative payment method. For more information about address fields, see Address Compound Fields. |
| `PaymentMethodCity` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Payment method address details. |

| Field | Details |
| --- | --- |
| `PaymentMethodCountry` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Payment method address details. |
| `PaymentMethodDetails` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Optional information about the payment method type. This field is available in API version 57.0 and later. |
| `PaymentMethodGeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Accuracy level of the geocode for the payment method address. An accuracy level contains information about the location of a latitude and longitude. For more information about geolocation fields, see Geolocation Compound Field.<br>Possible values are:<br>• `Address`<br>• `Block`<br>• `City`<br>• `County`<br>• `ExtendedZip`<br>• `NearAddress`<br>• `Neighborhood`<br>• `State`<br>• `Street`<br>• `Unknown`<br>• `Zip` |
| `PaymentMethodLatitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Latitude of the payment method address. Used with the PaymentMethodLongitude to specify the precise geolocation of the address. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `PaymentMethodLongitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Longitude of the payment method address. Used with the PaymentMethodLatitude to specify the precise geolocation of the address. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `PaymentMethodPostalCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Part of the address for this payment method. |
| `PaymentMethodState` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Payment method address details. |
| `PaymentMethodStreet` | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Payment method address details. |
| `PaymentMethodSubType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>More information about the payment method. For example, if the PaymentMethodType is Visa, this field can be a digital wallet. This field is available in API version 57.0 and later. |

| Field | Details |
| --- | --- |
| `PaymentMethodType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The payment method used for the transaction, such as Visa, Mastercard, EPS, SepaDebit, UnionPay, and Klarna. Method types can also be direct debit payments like ACH, Becs, and BACS. This field is available in API version 57.0 and later. |
| `SavedPaymentMethodId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the saved payment method record.<br>**Relationship Name**<br>SavedPaymentMethod<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>SavedPaymentMethod |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The state of the payment method.<br>Possible values are:<br>• `Active`—The Payments platform can use the payment method to make payments.<br>• `Canceled`—The Payments platform can no longer use the payment method to make payments.<br>• `InActive`—The Payments platform currently can't use the payment method to make payments. Admins can change this value to Active when needed. |

# PymtSchdDistributionMethod

Indicates how the total payment is divided into partial payments. This object is available in API version 56.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>User-entered description of the payment schedule distribution method. |
| `DistributionCount` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The number of payment schedule items for the payment schedule. The payment schedule items are used to distribute the payment schedule's total payment into partial payments.<br>Possible values are:<br>• `1`—Full distribution. Currently, each payment schedule must have exactly one payment schedule item. |
| `DistributionMethodType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Distribution method time interval.<br>Possible values are:<br>• `FullDistribution`—The full amount on the payment schedule is distributed to a single payment schedule item. |

| Field | Details |
| --- | --- |
| | • `LumpSum`—The specified payment amount on the payment schedule is distributed to a single payment schedule item.<br>Available in API version 65.0 and later with Financial Services and Automotive Cloud.<br>• `Monthly`—The specified payment amount on the payment schedule is distributed evenly across multiple monthly payments.<br>Available in API version 65.0 and later with Financial Services and Automotive Cloud.<br>• `Quarterly`—The specified payment amount on the payment schedule is distributed evenly across multiple quarterly payments.<br>Available in API version 65.0 and later with Financial Services and Automotive Cloud.<br>• `Weekly`—The specified payment amount on the payment schedule is distributed evenly across multiple weekly payments.<br>Available in API version 65.0 and later with Financial Services and Automotive Cloud. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>User-entered name for the payment schedule distribution method. |
| `OwnerId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the owner of this object.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

# PaymentScheduleTreatmentDtl

Contains configuration information for the payment schedule treatment detail. This object is available in API version 56.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
| --- | --- |
| `DateOffset` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>A number equal to or less than 0. The date offset is subtracted from the processing date reference to determine the processing date.<br>For example, suppose that the invoice due date is 01/17/2022 and offset is -7. In this case, the payment schedule item is processed by the jobs that run on or before 01/10/2022. |

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The user-entered description of the payment schedule treatment detail. |
| `InstallmentPaymentType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Indicates how the payment amount is divided into multiple payments.<br>Possible values are:<br>• `Percentage` |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `PaymentMethodSelectionType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Indicates how the payment method is specified.<br>Possible values are:<br>• `Manual`—the payment method is entered by a user |

| Field | Details |
| --- | --- |
| | • `MostRecentAutopay`—the payment method is the most recent automatic payment method used |
| `PaymentRunMatchingValue` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Possible values are:<br>• `AMER`<br>• `APAC`<br>• `EMEA` |
| `PaymentScheduleTreatmentDetailNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>System-generated unique identifier for this payment schedule treatment detail. |
| `PaymentScheduleTreatmentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the related payment schedule treatment.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentScheduleTreatment<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentScheduleTreatment |
| `Percentage` | **Type**<br>percent<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Indicates the percentage of the source amount that is used to create the payment schedule. |

| Field | Details |
| --- | --- |
| ProcessingDateReference | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the source of the reference date.<br>Possible values are:<br>• InvoiceDueDate—use the invoice's due date as the date reference<br>• UserInputDate—User Input Date<br>Available in API version 65.0 and later with Financial Services and Automotive Cloud. |
| PymtSchdDistributionMethodId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The distribution method that contains the information on how to create the payment schedule items.<br>This field is a relationship field.<br>**Relationship Name**<br>PymtSchdDistributionMethod<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PymtSchdDistributionMethod |

# PaymentTerm

Defines your company's method and expectations for receiving payment. This object is available in API version 55.0 and later.

Timely payment helps your company maintain cash flow. Payment terms are used to determine the payment due date on invoices. Use with the PaymentTermItem object.

## Supported Calls

create(), delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(), search(), undelete(), update(), upsert()

## Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>User-defined field that describes the payment term. For example, use *`Net 30`* to describe a payment term where the payment is due within 30 days of the billing date. |
| `IsDefault` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this payment term is the default term for your org. A default payment term must be defined in your org.<br>The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the payment term. For example, *`Net 30`* or *`Cash on delivery (COD)`*.<br>This name appears on the invoice. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Indicates whether the payment term is available for use on invoices.<br>Possible values are:<br>• `Active`—The payment term is available for use and can be applied to an order. Only active payment terms can be applied to transactions or orders.<br>• `Draft`—The payment term exists but isn't activated yet.<br>• `Inactive`—The payment term exists but can't be applied to new transactions or orders.<br>The default value is `Draft`. |

## Usage

A payment term is applied to an order or transaction, and is passed on to the billing schedule that's used to generate the invoice. The due date on the invoice is derived from the payment.

For example, a Net 30 payment term means that the customer has 30 days to pay from the invoice date. Suppose that an invoice with a Net 30 payment term is generated on January 1. The invoice date is January 1, and the due date is January 31 (1 + 30 days = 31).

# PaymentTermItem

Defines the attributes of a payment term that your company uses. The PaymentTermItem is used to determine the due date on invoices. This object is available in API version 55.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>User-defined field that describes the details of the payment term item. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>An auto-generated sequential number, such as PTI-000001. |
| `PaymentTermId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the payment term that this payment term item is associated with.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentTerm<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentTerm |
| `PaymentTimeframe` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the time period when the payment is expected.<br>Possible values are:<br>• `Standard`—Indicates that payment is expected by the date specified in the payment term. If payment isn't received by the due date, the payment becomes overdue.<br>The default value is `Standard`. |
| `Period` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Specifies the number of units in the payment period. Used with the `PeriodUnit` field.<br>For example, to define a payment term of Net 30, enter *`30`* as the `Period` and select *`Days`* as the `PeriodUnit`. |
| `PeriodUnit` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies the unit of time for the payment period. Used with the `Period` field.<br>For example, to define a payment term of Net 30, enter *`30`* as the `Period` and select *`Days`* as the `PeriodUnit`.<br>Possible values are:<br>• `Days` |

| Field | Details |
| --- | --- |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Specifies how the payment term and invoice due date are derived.<br>Possible values are:<br>• `Period-Based`—Tells the system to use the `Period` and `PeriodUnit` fields to calculate the invoice due date.<br>The default value is `Period-Based`. |

# PaymentSchedule

The payment schedule represents a collection of payments that a customer wants to collect at different times for a certain record. A schedule contains one or more payment schedule items, where each item represents one payment to be processed. Each of a schedule's items can have different payment configuration fields, such as payment methods, payment dates, and payment accounts. When a payment scheduler launches a payment run, the run evaluates active payment schedule items, and picks them up for payment processing if they align with the scheduler's payment criteria. This object is available in API version 55.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
| --- | --- |
| `AvailableRequestedAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The payment schedule's remaining amount available for the creation of payment schedule items. Equals `TotalRequestedAmount-TotalLineRequestedAmount`. |
| `Comments` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Optional user-defined comments. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Three-letter ISO 4217 currency code associated with the payment group record. |
| `DefaultPaymentAccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>When a payment run creates payments from a payment schedule item, it sets the payment's account to the item's `PaymentAccountId`. Upon payment schedule item creation, the item's `PaymentAccountId` inherits the schedule's `DefaultPaymentAccountId`. However, you can override the `PaymentAccountId` with a different account as needed. If you do, future payments made from the item use the new account.<br>This is a relationship field.<br>**Relationship Name**<br>DefaultPaymentAccount<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `DefaultPaymentMethodId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>When a payment run creates payments from a payment schedule ID, it sets the payment's account to the item's `PaymentMethodId`. Upon payment schedule item creation, the item's `PaymentMethoId` inherits the schedule's `DefaultPaymentMethodId`. However, you can override the `PaymentMethodId` with a different account as needed. If you do, future payments made from the item will use the new account.<br>**Relationship Name**<br>DefaultPaymentMethod<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CardPaymentMethod, DigitalWallet |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The user who created the payment schedule.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

| Field | Details |
| --- | --- |
| PaymentScheduleNumber | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>System-generated reference number for the payment schedule. |
| PaymentScheduleTreatmentDtlId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The payment schedule treatment detail associated with the payment schedule record.<br>This field is a relationship field.<br>Available in API version 65.0 and later with Financial Services and Automotive Cloud.<br>**Relationship Name**<br>PaymentScheduleTreatmentDtl<br>**Refers To**<br>PaymentScheduleTreatmentDtl |
| PaymentSource | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Specifies the name of the funding source that is used to fulfill a payment commitment.<br>Available in API version 63.0 and later with Financial Services and Automotive Cloud. |
| ReferenceEntityId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The object that receives payments as a result of payment schedule items processed from the payment schedule.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>ReferenceEntity<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>API version 55.0 and later:<br>• `Contract`<br>• `Order`<br>• `Invoice`<br>API version 62.0 and later with Financial Services and Automotive Cloud:<br>CollectionPlan |
| `RemainingAmountToBeProcessed` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total pending amount of payment schedule items that haven't yet been processed for payment. Equals `TotalLineRequestedAmount – TotalProcessedAmount`. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The status of the payment schedule.<br>Possible values are:<br>• `Accepted`: The payment schedule is approved and is ready for payment run evaluation.<br>Available in API version 65.0 and later with Financial Services and Automotive Cloud.<br>• `Approval Pending`: The payment schedule needs approval.<br>Available in API version 65.0 and later with Financial Services and Automotive Cloud.<br>• `Canceled`: Payment runs can't evaluate payment schedules or use them to create payments.<br>• `Completed`: All of the payment schedule's payment schedule items have been processed for payments.<br>• `Draft`: The payment schedule can be edited and configured. Payment runs don't evaluate draft payment schedules.<br>• `On Hold`: The payment schedule can't be considered for payment runs due to missing information, the need for additional review, or other unresolved external factors.<br>Available in API version 65.0 and later with Financial Services and Automotive Cloud.<br>• `Open`: The payment schedule is available for payment run evaluation.<br>• `Rejected`: The payment schedule isn't approved and can't be considered for payment run evaluation. |

| Field | Details |
| --- | --- |
| | Available in API version 65.0 and later with Financial Services and Automotive Cloud. |
| `TotalAppliedAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of all payment schedule items that have been applied to payments.<br>This is a calculated field. |
| `TotalCanceledAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of all `RequestedAmount` values on payment schedule items with a status of Canceled. |
| `TotalPaymentsReceived` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The cumulative sum of payments received for all payment schedule items linked to a payment schedule.<br>This field is a calculated field.<br>Available in API version 63.0 and later with Financial Services and Automotive Cloud. |
| `TotalPaymentScheduleItemAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort\<br>**Description**<br>The total amount allocated from the payment schedule to its payment schedule items. Equals the sum of each payment schedule item's `RequestedAmount` – the sum of each payment schedule item's `Canceled Amount`. |
| `TotalProcessedAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The sum of `ProcessedAmount` values on payment schedule items with a status of Processed. |
| `TotalRequestedAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The total amount available for a payment schedule to distribute to its payment schedule items. The sum of payment schedule items can't be greater than the `TotalLineRequestedAmount` of the parent payment schedule. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of payment for which the payment schedule is created.<br>Available in API version 65.0 and later with Financial Services and Automotive Cloud.<br>Possible values are:<br>• `PaymentPlan`—Payment Plan<br>• `PromiseToPay`—Promise to Pay |
| `UsageType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies the usage type for the record.<br>Possible value is:<br>• `CollectionPlan`<br>Available in API version 62.0 and later with Financial Services and Automotive Cloud. |

# PaymentScheduleItem

A payment schedule contains one or more payment schedule items, where each item represents one payment to be processed. Each of a schedule's items can have different payment configuration fields, such as payment methods, payment dates, and payment accounts. When a payment scheduler launches a payment run, the run evaluates active payment schedule items, and picks them up for payment processing if they align with the scheduler's payment criteria. This object is available in API version 55.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
|---|---|
| `Comments` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Optional user-defined comments. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Three-letter ISO 4217 currency code associated with the payment schedule item record. |
| `LastPaymentGatewayLogId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The most recent payment gateway log created following a payment gateway request to make a payment based on the payment schedule item.<br>This is a relationship field.<br>**Relationship Name**<br>LastPaymentGatewayLog<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentGatewayLog |

| Field | Details |
| --- | --- |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. |
| `PaymentAccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The account assigned to payments made from the payment schedule item. When a payment schedule item is created, its `PaymentAccountId` inherits the payment schedule's `DefaultPaymentAccountId`. However, you can provide a new `PaymentAccountId` at any time. If you change the `PaymentAccountId`, only payments made after the change use the new account.<br>This is a relationship field.<br>**Relationship Name**<br>PaymentAccount<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `PaymentBatchRunId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The payment batch run that evaluated the payment schedule item for payment processing.<br>This is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>PaymentBatchRun<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentBatchRun |
| `PaymentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The payment that a payment run created for the payment schedule item after picking up the parent payment schedule. This field is unique within your organization<br>This is a relationship field.<br>**Relationship Name**<br>Payment<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Payment |
| `PaymentMethodId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The payment method assigned to payments created from the payment schedule item. When a payment schedule item is created, its `PaymentMethodId` inherits the payment schedule's `DefaultPaymentMethodId`. However, you can provide a new `PaymentMethodId` at any time. If you change the `PaymentMethodId`, only payments made after the change use the new account.<br>**Relationship Name**<br>PaymentMethod<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CardPaymentMethod, DigitalWallet |
| `PaymentProcessingMessage` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Shows information about whether the payment creation process has completed. |
| `PaymentsReceived` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The payment received from the borrower for the payment schedule item. |
| `PaymentRunMatchingValue` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The value used to match a payment schedule item to a payment run based on the payment run's matching criteria. |
| `PaymentScheduleId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The parent payment schedule for the payment schedule item.<br>This is a relationship field.<br>**Relationship Name**<br>PaymentSchedule<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentSchedule |
| `PaymentScheduleItemNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>User-defined reference number for the payment schedule item. |

| Field | Details |
| --- | --- |
| `PaymentSource` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The feature that caused a payment to be created from the payment schedule item.<br>Possible values are:<br>• `PaymentRun` |
| `PaymentsReceived` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The payment received from the borrower for the payment schedule item.<br>Available in API version 63.0 and later with Financial Services and Automotive Cloud. |
| `ProcessedAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of the payment schedule item that has been processed for payment and converted to a payment record. |
| `RequestedAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The initial amount of the payment schedule item upon creation. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The status of the payment schedule item.<br>Possible values are:<br>• `Applied`: The payment schedule item has been successfully applied. |

| Field | Details |
| --- | --- |
| | • `Apply Failed`: The payment run encountered an error when attempting to process the payment schedule item for payment. For more information, review the payment run's revenue transaction error log.<br>• `Approval Pending`The payment schedule item is waiting for approval before it can be processed by payment runs.<br>Available in API version 65.0 and later with Financial Services and Automotive Cloud.<br>• `Canceled`: The payment schedule item can't be picked up by payment runs for processing. When a user or process changes the item's status to Canceled, the item's `CanceledAmount` becomes `RequestedAmount – ProcessedAmount`.<br>• `Deferred Payment`The payment schedule item has been postponed and will be processed at a later date.<br>Available in API version 65.0 and later with Financial Services and Automotive Cloud.<br>• `Payment Waived Off`The payment schedule item has been canceled, and the payment will not be processed.<br>Available in API version 65.0 and later with Financial Services and Automotive Cloud. |
| `TargetPaymentProcessingDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The date after picking up a payment schedule item that the payment run makes a payment request to the payment gateway. |
| `UsageType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies the usage type for the record.<br>Possible value is:<br>• `CollectionPlan`<br>Available in API version 62.0 and later with Financial Services and Automotive Cloud. |

# PaymentSchedulePolicy

Contains configuration information for the payment schedule policy. This object is available in API version 56.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available with Subscription Management and the PaymentScheduleAutomation permission, and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
|---|---|
| `DefaultTreatmentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The default payment schedule treatment.<br>This field is a relationship field.<br>**Relationship Name**<br>DefaultTreatment<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentScheduleTreatment |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>User-entered description of the payment schedule policy. |
| `IsOrgDefault` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>`true` if the payment schedule policy is the default policy for the org, otherwise `false`. An org can have a maximum of one default payment policy. |

| Field | Details |
| --- | --- |
| | The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The user-entered name of the payment policy. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the creator of this object.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `Status` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The payment schedule policy's status.<br>Possible values are:<br>• `Active`<br>• `Canceled`<br>• `Draft`<br>• `Inactive` |
| `TreatmentSelection` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the payment schedule treatment.<br>Possible values are:<br>• `Default`—use the payment schedule treatment indicated by `DefaultTreatmentId`. |

# PaymentScheduleTreatment

Contains configuration information for the payment schedule. This object is available in API version 56.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

# Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The user-entered description of the payment schedule treatment. |
| `IsApprovalRequired` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this payment schedule treatment requires approval or not.<br>Available in API version 65.0 and later with Financial Services and Automotive Cloud.<br>The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The user-entered name of the payment schedule treatment. |

| Field | Details |
| --- | --- |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the owner of this object.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PaymentPlanTag` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A list of key annotations or insights about the payment plan, such as requires approval or recommended, to help guide the user in selecting the most suitable payment plan.<br>Available in API version 65.0 and later with Financial Services and Automotive Cloud. |
| `PaymentSchedulePolicyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the related payment schedule policy.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentSchedulePolicy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentSchedulePolicy |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The payment schedule treatment's status.<br>Possible values are:<br>• `Active`<br>• `Canceled`<br>• `Draft`<br>• `Inactive` |
| `TriggerSource` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the action that caused the payment schedule treatment to be created.<br>Possible values are:<br>• `InvoicePosted`—an invoice is posted<br>• `UserAction`—User Action<br>Available in API version 65.0 and later with Financial Services and Automotive Cloud. |

# PendingOrderSummary

Object representing a B2C Commerce order ingested via High Scale Orders before an OrderSummary is created for it. Optimized for online transaction processing (OLTP). This object is available in API version 55.0 and later.

## Supported Calls

`describeLayout()`, `query()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs where the High Scale Orders feature is enabled.

## Fields

| Field | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the account or person account associated with the PendingOrderSummary. It represents the shopper in the storefront.<br>This field is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `BillToContactId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Contact associated with the PendingOrderSummary. It represents the shopper in the storefront when not using person accounts.<br>This field is a relationship field.<br>**Relationship Name**<br>BillToContact<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `BillingEmailAddress` | **Type**<br>email<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Email address on the billing address. |
| `BillingPhoneNumber` | **Type**<br>phone<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Phone number of the billing address. |

| Field | Details |
| --- | --- |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for the currency of the original Order associated with the PendingOrderSummary.<br>Possible values are:<br>• `DKK`—Danish Krone<br>• `EUR`—Euro<br>• `GBP`—British Pound<br>• `USD`—U.S. Dollar<br>The default value is `USD`. |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Description of the PendingOrderSummary. |
| `ExternalId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field is used internally.<br>This field isn't synced with ZOS, so you can't use it in a query or insert operation. |
| `ExternalReferenceIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Used internally to prevent duplicate records. This value is case-sensitive. On creation, this value is set to *`B2C realm ID`* + "_" + *`B2C instance ID`* + "@" + *`B2C Commerce catalog/domain ID`* + "@" + *`B2C Commerce order number`*.<br>When the OrderSummary is created, this value is copied to its ExternalReferenceIdentifier field. If you ingest orders from multiple sources, you can maintain uniqueness by including a prefix based on the source. |

| Field | Details |
| --- | --- |
| `GrandTotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Sort<br>**Description**<br>Total amount, including adjustments and tax, of the PendingOrderSummary. |
| `OrderNumber` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Name of the PendingOrderSummary. |
| `OrderedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort<br>**Description**<br>Date of the original order associated with this PendingOrderSummary. |
| `Payload` | **Type**<br>textarea<br>**Properties**<br>**Description**<br>The order data payload. |
| `PayloadType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The datatype of the Payload.<br>Possible values are:<br>• `JSON_GZIP`<br>• `JSON_RAW` |
| ProcessingInstructions | **Type**<br>textarea<br>**Properties**<br>Nillable |

| Field | Details |
| --- | --- |
| | **Description**<br>Instructions about how the HSOI service should create the order summary. Options include using the default without customizations or using a custom flow.<br>Also includes instructions about how the HSOI service should dedupe account and contact information using platform duplication and matching rules or by using simple email methods. |
| `SalesChannelId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the SalesChannel associated with this PendingOrderSummary. The SalesChannel Name matches the B2C Commerce catalog/domain ID.<br>This field is a relationship field.<br>**Relationship Name**<br>SalesChannel<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>SalesChannel |
| `SalesStoreId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the RetailStore or WebStore associated with this PendingOrderSummary.<br>This field is a relationship field.<br>**Relationship Name**<br>SalesStore<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>WebStore |
| `ShopperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The first name and last name of the shopper that placed the original order. |

# Usage

If you need to view or service an ingested B2C Commerce order before the automated High Scale Orders process has created an OrderSummary for it, you can manually trigger creation of the OrderSummary. In Salesforce, open the PendingOrderSummaries list, find the record, and click **Import**.

PendingOrderSummary only supports certain methods and queries. It doesn't support Apex triggers.

Supported Apex Methods:

- `Database.query(queryString)`
- `Database.query(queryString, accessLevel)`

Supported SOAP API Methods:

- `create()`
- `delete()`
- `describeLayout()`
- `query()`
- `queryMore()`

Supported REST API Methods:

- `/services/data/vXX.X/sobjects/sObject/ GET`
- `/services/data/vXX.X/sobjects/sObject/id/ GET`
- `/services/data/vXX.X/sobjects/sObject/id/ DELETE`
- `/services/data/vXX.X/sobjects/sObject/id/ POST`
- `/services/data/vXX.X/sobjects/sObject/describe/compactLayouts/ GET`
- `/services/data/vXX.X/sobjects/sObject/quickActions/ GET`

Supported Queries:

**convertCurrency() function**
Example: `SELECT Id, convertCurrency(AnnualRevenue) FROM Account`

**Child-to-Parent subquery**
Example: `SELECT ExternalReferenceIdentifier, Account.Name FROM PendingOrderSummary WHERE ExternalReferenceIdentifier = 'a'`

**Limit clause**
Example: `SELECT ExternalReferenceIdentifier FROM PendingOrderSummary WHERE ExternalReferenceIdentifier = 'a' LIMIT 1`

**Filter by index**
Example: `SELECT ExternalReferenceIdentifier FROM PendingOrderSummary WHERE ExternalReferenceIdentifier = 'a'`

**Filter by secondary index**
Example: `SELECT ExternalReferenceIdentifier FROM PendingOrderSummary WHERE AccountId = 'xxx'`

**ORDER BY clause**
When using ORDER BY, you don't need to specify a direction. However, if you sort ASC, you can't use NULLS LAST. If you sort DESC, you can only use NULLS LAST.

Example: `SELECT ExternalReferenceIdentifier FROM PendingOrderSummary ORDER BY ExternalReferenceIdentifier`

Example: `SELECT ExternalReferenceIdentifier FROM PendingOrderSummary ORDER BY ExternalReferenceIdentifier ASC NULLS FIRST`

Example: `SELECT ExternalReferenceIdentifier FROM PendingOrderSummary ORDER BY ExternalReferenceIdentifier DESC NULLS LAST`

**Equality filter**

Range filters aren't supported.

Example: `SELECT ExternalReferenceIdentifier FROM PendingOrderSummary WHERE ExternalReferenceIdentifier = 'realm_tenant@storesite@0000001'`

Invalid example: `SELECT ExternalReferenceIdentifier FROM PendingOrderSummary WHERE ExternalReferenceIdentifier < 'a'`

# PendingServiceRouting

Represents the routing details of a work item that's waiting to be routed or assigned. This object is available in API version 40.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access this object, Omni-Channel must be enabled.

## Fields

| Field | Details |
|---|---|
| `BotId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the Enhanced Einstein Bot or AI agent that performed the work. This is a relationship field. This field is available in API version 52.0 and later.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Bot<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BotDefinition |
| `BotType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates the type of bot. Valid values are:<br>• Bot. Refers to an Einstein bot.<br>• ExternalCopilot. Refers to an AI agent with whom your customers can interact.<br>The default value is Bot. This field is available in API version 63.0 and later. |
| `CapacityPercentage` | **Type**<br>percent<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Indicates the amount of work that this work item represents as a percentage. Valid values are from 0 to 100.<br>Voice calls must have a capacity percentage of *100*. If an agent receives a voice call, the agent won't receive new work items until the call ends, because at that point the agent's capacity will have reached 100%. |
| `CapacityWeight` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Indicates the amount of work that this work item represents as a whole number. Voice calls must use the entire capacity weight. |
| `CustomRequestedDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Retains the datetime of this work item's initial request, so work items are rerouted using the datetime of the initial work request. When left blank, work items are rerouted using the datetime when they're rerouted. |
| `DropAdditionalSkillsTimeout` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Time to wait before a skill marked as additional is dropped from Omni-Channel routing. The case is then routed to the best-matched agent even if they don't have all the skills.<br>If CustomRequestedDateTime is set in the PendingServiceRouting object, DropAdditionalSkillsTimeout uses CustomRequestedDateTime as the start time. If CustomRequestedDateTime + DropAdditionalSkillsTimeout has already passed, Omni-Channel immediately drops the additional skills after the pending service request is created. |
| `ExternalBotId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the third-party bot that handles the work item. This is a relationship field. This field is available in API version 64.0 and later.<br>**Relationship Name**<br>ExternalBot<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ExternalConversationBotDef |
| `GroupId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Omni-Channel queue. |
| `IsInterruptible` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether a work item consumes interruptible or primary capacity. The default value is false. Available in version 57.0 and later when the Interruptible Capacity feature is enabled. |
| `IsOwnerChangeInitiated` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a work item owner change triggered the direct assignment of this work item to the agent. The default value is `false`. |
| `IsPreferredUserRequired` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this work item stays with the preferred user even when the user isn't available. The default value is `false`. This field is available in API version 50.0 and later.<br>When a specific agent is required, don't set `PushTimeout`. These options aren't supported in this case. |
| `IsPushAttempted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a push has been attempted. `true` if this work item was pushed to an agent at least one time and `false` otherwise. |
| `IsPushed` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this work item is pushed to an agent. |
| `IsReadyForRouting` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether this work item is ready to be routed to an agent. If `true`, you can't edit this PendingServiceRouting record. |
| `IsStatusChangeInitiated` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a work item status change triggered the direct assignment of this work item to the agent. The default value is `false`. This field is available in API version 50.0 and later. |
| `IsTransfer` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this work item routing is a transfer request. |
| `LastDeclinedAgentSession` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Chat session ID of the agent who last declined this work item. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Name of the PendingServiceRouting record. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the owner of this PendingServiceRouting record. |

| Field | Details |
| --- | --- |
| PausedCapacityPercentage | **Type**<br>percent<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The percentage of capacity that's consumed when this work item is paused. The paused capacity feature is available with status-based capacity and Enhanced Omni-Channel only. This field is available in API version 62.0 and later. |
| PausedCapacityWeight | **Type**<br>double<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort, Update<br>**Description**<br>The amount of capacity that's consumed when this work item is paused. The paused capacity feature is available with status-based capacity and Enhanced Omni-Channel only. This field is available in API version 62.0 and later. |
| PreferredUserId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the preferred user to handle the work item. |
| PushTimeout | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The time limit set for an agent to respond to an item before it's rerouted and the agent's status is changed accordingly. The time limit is measured in seconds. This field is available in API version 36.0 and later.<br>Effective API version 57.0, for inbound Voice calls, this field represents the time limit set for an agent to respond to a call before it's declined. The value must be from 0 through 20. The value is capped at 20, so any number greater than that is treated as 20 seconds. Latency on the part of the telephony provider can result in agents having less than 20 seconds to answer a call before it's rerouted. When an agent attempts to answer a call within 20 seconds and finds that the call was rerouted, the agent's status remains unchanged. This scenario applies to these telephony models.<br>• Service Cloud Voice with Amazon Connect<br>• Service Cloud Voice with Partner Telephony from Amazon Connect |

| Field | Details |
| --- | --- |
| | When `IsPreferredUserRequired` is set to true, don't set this option. When a specific agent is required, this option isn't supported. |
| `QueueId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Omni-Channel queue. Due to API changes, `QueueId` is no longer recommended. Use `GroupId` instead. |
| `RoutingModel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Type of routing model.<br>Possible values are:<br>• `ExternalRouting`<br>• `LeastActive`<br>• `MostAvailable` |
| `RoutingPriority` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Order in which work items are routed to agents. This field is considered with skills-based routing only. Queue-based routing sets a work item's priority from the routing configuration. |
| `RoutingType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates whether the work item is routed by queue or by skills-based routing.<br>Possible values are:<br>• `QueueBased`<br>• `SkillsBased` |

| Field | Details |
| --- | --- |
| SecondaryRoutingPriority | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates the secondary routing priority. |
| Serial | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Serial number of the PendingServiceRouting record. The serial number is automatically incremented each time the PendingServiceRouting record is modified. |
| ServiceChannelId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the service channel. |
| TransferRequesterId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The user ID of the rep who reassigned the work using the Reassign action. This field is populated in reassigned AgentWork records only, not the original AgentWork record. This is a relationship field. This field is available in API version 63.0 and later.<br>**Relationship Name**<br>TransferRequester<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| WorkItemId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the work item.<br>**Refers To**<br>Custom objects and these standard objects: Account, Activity, Case, Claim, ClaimCoverage, ClaimRecovery, Contact, ContactRequest, CustomEntityData, Incident, Lead, LiveChatTranscript, MessagingSession, Opportunity, Orchestration Work Items, Order, Order, PaymentRequest, PersonTraining, Referral, SocialPost, SwarmMember, and VoiceCall. WorkOrder is available in version 58.0 and later. |

## Usage

When you use the PendingServiceRouting object for queue-based routing, the object doesn't invoke triggers before or after insert, or any action (trigger, workflow rule, validation) that could interfere with the creation of the record.

## Associated Objects

This object has these associated objects. Unless noted, they're available in the same API version as this object.

**PendingServiceRoutingChangeEvent (API version 62.0)**
Change events are available for the object.

**PendingServiceRoutingOwnerSharingRule**
Sharing rules are available for the object.

**PendingServiceRoutingShare**
Sharing is available for the object.

## Limits

You can view the number of Pending Service Routing records that are currently in use in your org, as well as the current hourly use rate. From Setup, enter *Omni-Channel* in the Quick Find box and select **Limits**. The Limits page also displays the current Pending Service Routing record usage percentage and the Pending Service Routing record limits for your org.

# PendingServiceRoutingInteractionInfo

Represents PendingServiceRouting interaction information that's used when work is routed to an agent. For a screen pop, it specifies which records to open when work is routed to an agent from a specific channel. PendingServiceRoutingInteractionInfo is read-only. This object is available in API version 53.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

To access this object, Omni-Channel must be enabled. To view this object, you must have the "Manage Flow" user permission.

## Fields

| Field | Details |
|---|---|
| `IsFocused` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this record shows on the agent's screen when multiple records open at the same time. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the PendingServiceRoutingInteractionInfo. |
| `PendingServiceRoutingId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the PendingServiceRouting on page 4062 from which the AgentWork on page 464 is created.<br>This is a relationship field.<br>**Relationship Name**<br>PendingServiceRouting<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PendingServiceRouting |
| `PrimaryRecordId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the object that's routed to the agent through Omni-Channel.<br>**Relationship Name**<br>PrimaryRecord<br>**Relationship Type**<br>Lookup |
| `TargetFlowName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API name and namespace prefix, if any, of the screen flow to open when work is routed to the agent. This field and the `TargetFlowId` field can't be populated at the same time. Available in API version 57.0 and later. |
| `TargetObjectId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The record to open when work is routed to the agent. This field is required in API version 56.0 and earlier. In API version 57.0 and later, this field is optional and can't be populated at the same time as the `TargetFlowName` field.<br>**Relationship Name**<br>TargetObject<br>**Relationship Type**<br>Lookup |

# Period

Represents a fiscal period defined in FiscalYearSettings.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

As of Spring '20 and later, only Chatter Free users and standard users can access this object.

# Fields

| Field | Details |
| --- | --- |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The last date of the fiscal period. |
| `FiscalYearSettingsId` | **Type**<br>reference<br>**Properties**<br>Filter, Nillable, Group, Sort<br>**Description**<br>The parent record for this period.<br>This is a relationship field.<br>**Relationship Name**<br>FiscalYearSettings<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FiscalYearSettings |
| `FullyQualifiedLabel` | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>Represents the period's complete name in the UI. For example, "September FY 2016". |
| `IsForecastPeriod` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the period is associated with Salesforce Forecasting (`true`) or not (`false`). |
| `Number` | **Type**<br>int<br>**Properties**<br>Filter, Nillable, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>If the labeling scheme of your fiscal year's quarters or months is numbered, this field indicates the relative number of the row. |
| `PeriodLabel` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If the months in your fiscal year use custom names, then this field contains the appropriate name for rows of type Month. |
| `QuarterLabel` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>If the quarters in your fiscal year use custom names, then this field contains the appropriate name for rows of type Quarter. |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The first date of the fiscal period. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates whether the period is of type Month, Quarter, Week, or Year. Label is the field value. |

# Usage

In API version 36.0 and earlier, querying the Period object yields no results. In API version 37.0 and later, a query returns period records.

FiscalYearSettings

# PermissionSet

Represents a set of permissions that's used to grant more access to one or more users without changing their profile or reassigning profiles. This object is available in API version 22.0 and later.

PermissionSet has a read-only child relationship with PermissionSetGroup. PermissionSet contains the aggregated permissions for the group.

You can use permission sets to grant access, but not to deny access.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Manage Session Permission Set Activations
- Assign Permission Sets
- Manage Profiles and Permission Sets

To view the following settings, assignments, and permissions for standard and custom objects in a specified permission set, the View Setup and Configuration permission is required.

- Client settings
- Field permissions
- Layout assignments
- Object permissions
- Permission dependencies
- Permission set tab settings
- Permission set group components
- Record types

## Fields

| Field Name | Details |
| --- | --- |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Group, Sort, Update<br>**Description**<br>A description of the permission set. Limit: 255 characters. |

| Field Name | Details |
| --- | --- |
| `HasActivationRequired` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the permission set requires an associated active session (`true`) or not (`false`). |
| `IsCustom` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `true`, the permission set is custom (created by an admin); if `false`, the permission set is standard and related to a specific permission set license. |
| `IsOwnedByProfile` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `true`, the permission set is owned by a profile. Available in API version 25.0 and later. |
| `Label` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The permission set label, which corresponds to **Label** in the user interface. Limit: 80 characters. |
| `LicenseId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of either the related PermissionSetLicense or UserLicense associated with this permission set. Available in API version 38.0 and later. Use this field instead of `UserLicenseId`, which is deprecated and only available up to API Version 37.0.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>License |

| Field Name | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>PermissionSetLicense, UserLicense |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. Corresponds to **API Name** in the user interface. Limit: 80 characters. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix for a permission set that's been installed as part of a managed package. If the permission set isn't packaged or is part of an unmanaged package, this value is empty. Available in API version 23.0 and later. |
| `Permissions`*`PermissionName`* | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>One field for each permission. If `true`, users assigned to this permission set have the named permission. The number of fields varies depending on the permissions for the organization and license type.<br>Tip: To get a list of available permissions in the SOAP API, use `describeSObjects()`. |
| `PermissionSetGroupId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>If the permission set is owned by a permission set group, this field returns the ID of the permission set group. If the permission set isn't owned by a permission set group, this field returns a null value. Available in API version 45.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>PermissionSetGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PermissionSetGroup |
| `ProfileId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If the permission set is owned by a profile, this field returns the ID of the Profile. If the permission set isn't owned by a profile, this field returns a null value. Available in API version 25.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>Profile<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Profile |
| `Type` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Available in API version 46.0 and later. |
| `UserLicenseId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>ID of the UserLicense associated with this permission set. This field is nillable in API version 26.0 and later and available up to API version 37.0 In API version 38.0 and later, use `LicenseId`. |

# Usage

Use the PermissionSet object to query existing permission sets.

For example, to search for all permission sets that contain the "Modify All Data" permission:

```
SELECT Name, PermissionsModifyAllData
FROM PermissionSet
WHERE PermissionsModifyAllData=true
```

When combined with the PermissionSetAssignment object, you can create a nested query that returns all users assigned to a particular permission like "Modify All Data":

```
SELECT Name, (SELECT AssigneeId FROM Assignments)
FROM PermissionSet
WHERE PermissionsModifyAllData=true
```

If the permission set isn't assigned to a user, you can also create or delete a permission set.

# User Licenses

The user license controls the permissions that are available in a permission set.

Every permission set can be associated with a user license or permission set license. If you plan to assign a permission set to multiple users with different user and permission set licenses, leave `LicenseId` empty. If only users with one type of license use this permission set, set the `LicenseId` to that single user or permission set license. If you want a permission set associated with a permission set license, then set `LicenseId` to the permission set license. To get the `LicenseId`, run this query:

```
SELECT Id, Name
FROM UserLicense
```

Alternatively, to query a user or profile for the `LicenseId`.

```
SELECT Id, Profile.UserLicenseId
FROM User
```

# Child Objects

When using the API, think of each permission set or related set of access controls as an empty container that you fill with permission records.

In the API, a permission set can contain user, object, and field permissions, and setup entity access settings for other settings, such as Apex classes.

- ObjectPermissions and FieldPermissions objects are available in API version 24.0 and later.
- The SetupEntityAccess object is available in API version 25.0 and later.

- The PermissionSetGroupComponent object is available in API version 45 and later.

Only user permissions are managed in the PermissionSet API object; all other permission types are managed in child API objects.

In these child objects, access is stored in a record, while the absence of a record indicates no access. To return a record in a SOQL query, a minimum permission or setting is required for each child object.

Because permissions are stored in related objects, it's important to understand what questions to ask when using SOQL. For example, let's say you want to know which permission sets have "Delete" on an object. You also want to know which ones include permissions that allow approval of a return merchandise authorization (where the approval checkbox is controlled with field permissions). Asking the right questions when using SOQL with permission sets ensures that you get the information you need, such as whether to migrate permissions or assign a permission set to a user.

For example, the following returns all permission sets where the "Read" permission is enabled for the Merchandise__c object.

```
SELECT SobjectType, ParentId, PermissionsRead
FROM ObjectPermissions
WHERE PermissionsRead = True AND SobjectType = 'Merchandise__c'
```

You can query for all permission sets that have "Read" on an object. However, you can't query for permission sets that have no access on an object, because no records exist for that object. For example, the following returns no records because the object must have at least "Read" to return any records.

```
SELECT SobjectType, ParentId, PermissionsRead
FROM ObjectPermissions
WHERE PermissionsRead = False AND SobjectType = 'Merchandise__c'
```

If you have at least the "Read" permission on an object, you can create a conditional query on other permissions in the same object. For example, the following returns any records where the object has at least the "Read" permission but not the "Edit" permission.

```
SELECT ParentId, PermissionsRead, PermissionsEdit
FROM ObjectPermissions
WHERE PermissionsEdit = False AND SobjectType = 'Merchandise__c'
```

To set an object or field permission to no access, delete the record that contains the permission. For example, to disable all object permissions in the Merchandise__c object for a particular permission set, first query to retrieve the ID of the object permission record.

```
SELECT Id
FROM ObjectPermissions
WHERE SobjectType = 'Merchandise__c'
```

Then delete the IDs returned from the query.

Note: If you try to update the object or field permissions by setting all permissions to false, the permission record is automatically deleted. Any subsequent queries for the record ID won't return results and you must add a new permission record to grant access.

## View a Permission Set with Nested Queries

You can build on the PermissionSet object using child relationships that show all of the permissions in a single permission set. For example, the following returns all permission sets and displays the "Transfer Leads" permission, as well as any "Read" permissions on any objects and fields.

```
SELECT Label, PermissionsTransferAnyLead,
(SELECT SobjectType, PermissionsRead FROM ObjectPerms),
(SELECT SobjectType, Field, PermissionsRead FROM FieldPerms)
FROM PermissionSet
```

## Associated Profiles

In API version 25.0 and later, every profile is associated with a permission set that stores the profile's user, object, and field permissions, as well as setup entity access settings. You can query permission sets that are owned by profiles but not modify them.

The following example returns all permission sets, including those owned by a profile.

```
SELECT Id, Label, ProfileId, Profile.Name
FROM PermissionSet
```

The following returns all permission sets except those permissions owned by profiles.

```
SELECT Id, Label, ProfileId, Profile.Name, IsOwnedByProfile
FROM PermissionSet
WHERE IsOwnedByProfile = FALSE
```

Because permission sets have child objects in the API, you can query their values on permission sets owned by a profile. For example, the following returns all enabled object permission records for profiles only.

```
SELECT Id,ParentId, PermissionsRead, SobjectType, Parent.ProfileId
FROM ObjectPermissions
WHERE Parent.IsOwnedByProfile = TRUE
```

Once you have the IDs for permission sets that are owned and not owned by profiles, use the PermissionSetAssignment object to see if users can access objects or fields via their profile permissions or their permission sets. For example, the following SOQL query returns all users who have the "Read" permission on the Merchandise__c object. It also specifies whether the permission is granted through a profile or permission set.

```
SELECT Assignee.Name, PermissionSet.Id, PermissionSet.isOwnedByProfile
FROM PermissionSetAssignment
WHERE PermissionSetId
IN (SELECT ParentId
FROM ObjectPermissions
WHERE SObjectType = 'Merchandise__c' AND PermissionsRead = true)
```

**Note:** For permission sets that are owned by profiles, don't use Name and Label values that are returned in a query. Name and Label values from queries can change.

SEE ALSO:

- ObjectPermissions
- FieldPermissions
- SetupEntityAccess
- PermissionSetAssignment
- Profile

# PermissionSetAssignment

Represents a user's assignment to a permission set or permission set group. This object is available in API version 22.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

## Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Assign Permission Sets
- Manage User

## Fields

| Field Name | Details |
|---|---|
| `AssigneeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the user that is assigned the permission set indicated in `PermissionSetId` or the permission set group indicated in `PermissionSetGroupId`.<br>This is a relationship field.<br>**Relationship Name**<br>Assignee<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `ExpirationDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date that the assignment of the permission set or permission set group expires for the specified user. This field is available in API version 52.0 and later. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the assignment is active (`true`) or not (`false`). Defaults to `false`. This field is available in API version 52.0 and later. |
| `IsRevoked` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the assignment was revoked (`true`) or not (`false`). Defaults to `false`. This field is available only if user access policies are enabled. This field is available in API version 57.0 and later. |
| `LastCreatedByChangeId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user access change record related to this permission set or permission set group assignment. This field is available only if user access policies are enabled. This field is available in API version 57.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>LastCreatedByChange<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>UserAccessChange |
| `LastDeletedByChangeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the user access change record related to this permission set or permission set group assignment being revoked. This field is available only if user access policies are enabled. This field is available in API version 57.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>LastCreatedByChange<br>**Relationship Type**<br>Lookup |

| Field Name | Details |
| --- | --- |
| | **Refers To**<br>UserAccessChange |
| `PermissionSetGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the permission set group assigned to the user specified in `AssigneeId`. This field is available in API version 45.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>PermissionSetGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PermissionSetGroup |
| `PermissionSetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the permission set assigned to the user specified in `AssigneeId`.<br>This is a relationship field.<br>**Relationship Name**<br>PermissionSet<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PermissionSet |

# Usage

**Finding Permission Set Assignments**

Use the PermissionSetAssignment object to query permission set assignments to find out which permission sets are assigned to which users. Because each user can be assigned to many permission sets and each permission set can be assigned to many users, each PermissionSetAssignment ID represents the association of a single user and single permission set.

For example, to search for all permission sets assigned to a particular user:

```
SELECT Id, PermissionSetId
FROM PermissionSetAssignment
WHERE AssigneeId = '005600000017cKt'
```

To search for all users assigned to a particular permission set:

```
SELECT Id, AssigneeId
FROM PermissionSetAssignment
WHERE PermissionSetId = '0PS30000000000e'
```

You can also create a new permission set assignment, or use delete to remove a permission set that's assigned to a user. To update an assignment, delete an existing assignment and insert a new one.

**User Licenses**

When assigning a permission set, if the PermissionSet has a `UserLicenseId`, its `UserLicenseId` and the Profile `UserLicenseId` must match. To determine a user's license assignment, query the user's profile and then query the profile's license.

For example, to find a user's profile ID:

```
SELECT Id, ProfileId
FROM User
WHERE Id = '005D0000001GMAT'
```

To find a permission set's `UserLicenseId`:

```
SELECT Id, LicenseId
FROM PermissionSet
WHERE Id = '0PS30000000000e'
```

If the IDs match, the assignment succeeds.

To find all the permission sets with no license that are assigned to any user:

```
SELECT Id, Assignee.Name, PermissionSet.Name
FROM PermissionSetAssignment
WHERE PermissionSet.LicenseId = null
```

**Revoked Assignments from User Access Policies**

After you revoke a permission set or permission set group assignment via a user access policy, the `IsRevoked` field is updated to `true`. The PermissionSetAssignment record isn't deleted. If the permission set or permission set group is assigned to the user again, the `IsRevoked` field is then updated to `false`.

To find permission set or permission set group assignments that were revoked:

```
SELECT Id, ExpirationDate, Assignee.Name, PermissionSet.Name
FROM PermissionSetAssignment
WHERE IsRevoked=true ALL ROWS
```

SEE ALSO:

PermissionSet

# PermissionSetGroup

Represents a group of permission sets and the permissions within them. Use permission set groups to organize permissions based on job functions or tasks. Then, you can package the groups as needed. This object is available in API version 45.0 and later.

## Supported Calls

`create()`, `delete()`, `describeObject()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, to view this object, users must have one of these permissions:

- View Setup and Configuration
- Manage Session Permission Set Activations
- Assign Permission Sets

To edit this object, users must have the Manage Profiles and Permission Sets permission.

## Fields

| Field Name | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The Permission Set Group description. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The permission set group name used in the API. |
| `HasActivationRequired` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the permission set group requires an associated active session (`true`) or not (`false`). The default value is `false`. This field is available in API version 53.0 and later. |

| Field Name | Details |
| --- | --- |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The Permission Set Group language.<br>Possible values are:<br>• `da` (Danish)<br>• `de` (German)<br>• `en_US` (English)<br>• `es` (Spanish)<br>• `es_MX` (Spanish - Mexican)<br>• `fi` (Finnish)<br>• `fr` (French)<br>• `it` (Italian)<br>• `ja` (Japanese)<br>• `ko` (Korean)<br>• `nl_NL` (Dutch)<br>• `no` (Norwegian)<br>• `pt_BR` (Portuguese - Brazilian)<br>• `ru` (Russian)<br>• `sv` (Swedish)<br>• `th` (Thai)<br>• `zh_CN` (Chinese - Simplified)<br>• `zh_TW` (Chinese - Traditional) |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The permission set group label for the aggregated permissions. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The permission set group namespace prefix. |

| Field Name | Details |
| --- | --- |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Indicates permission set group recalculation status.<br>• `Updated`. The group is current.<br>• `Outdated`. The group requires recalculation.<br>• `Updating`. The group is in recalculation mode.<br>• `Failed`. The group recalculation failed. |

## Usage

Use the PermissionSetGroup object to query existing permission set groups and to find which aggregated permissions are included in the group.

For example, to search for all object permissions in a permission set group named StandardAccountingUsers:

```
SELECT SObjectType
FROM ObjectPermissions
WHERE Parent.PermissionSetGroup.DeveloperName = 'StandardAccountingUsers'
```

To create a permission set group using REST API, you can submit a POST request.

```
POST
/services/data/v45.0/tooling/sobjects/PermissionSetGroup/

{
    "DeveloperName":"Sales", "MasterLabel": "sales_label"
}
```

# PermissionSetGroupComponent

A junction object that relates the PermissionSetGroup and PermissionSet objects via their respective IDs; enables permission set group recalculation to determine the aggregated permissions for the group. This object is available in API version 45.0 and later.

PermissionSetGroupComponent is a child object of PermissionSet and PermissionSetGroup.

## Supported Calls

`create()`, `delete()`, `describeSObject()`, `query()`, `retrieve()`

## Special Access Rules

As of Spring '20 and later, only users with the "View Setup and Configuration" permission can access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `PermissionSetGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The unique permission set group ID.<br>This is a relationship field.<br>**Relationship Name**<br>PermissionSetGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PermissionSetGroup |
| `PermissionSetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The unique permission set ID of a permission set in a permission set group.<br>This is a relationship field.<br>**Relationship Name**<br>PermissionSet<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PermissionSet |

## Usage

Use the PermissionSetGroupComponent object to add members to or delete members from a permission set group, or to query for group members.

# PermissionSetLicense

Represents a license that's used to enable one or more users to receive a specified permission without changing their profile or reassigning profiles. You can use permission set licenses to grant access, but not to deny access. This object is available in API version 29.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

## Fields

| Field Name | Details |
|---|---|
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `ExpirationDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The date at which the permission set license expires. |
| `IsAvailableForIntegrations` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the permission set license is enabled for integrations (`true`) or not (`false`). When this field is set to `true`, Salesforce integration features can access data. The default value is `false`. This field is read-only in the API and can be edited only in Setup. |

| Field Name | Details |
| --- | --- |
| | If integrations are required for feature functionality and the license isn't enabled for integrations, you receive an error when setting up the session-based permission set or executing the feature. Only enable integrations if necessary for the feature. |
| `IsSupplementLicense` (Developer Preview) | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a custom permission set license is a supplement license (`true`) or a foundation license (`false`). The default value is `false`.<br>This field is only available if the Partner Licensing Platform developer preview is enabled. This field is available in API version 55.0 and later.<br>Note: The Partner Licensing Platform is available as a developer preview. The Partner Licensing Platform isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. All commands, parameters, and other features are subject to change or deprecation at any time, with or without notice. Don't implement functionality developed with these commands or tools in your production package. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language of the permission set license. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The label of the permission set license. Label is **Permission Set License Label**. |
| `MaximumPermissions`*`PermissionName`* | **Type**<br>boolean<br>**Properties**<br>Filter |

| Field Name | Details |
| --- | --- |
| | **Description**<br>One field for each permission. For example, `MaximumPermissionsIdentityConnect` corresponds to the "Use Identity Connect" permission.<br>If *`true`*, this PermissionSetLicense grants the specified permission. The number of fields varies depending on the permissions available for the organization. |
| `PermissionSetLicenseKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>A string that uniquely identifies a particular permission set license. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The status of a permission set license. If `Active`, the permission set license is available. If `Disabled`, the permission set license has expired. |
| `TotalLicenses` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The total number of this permission set license that are available to your organization. |
| `UsedLicenses` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of this permission set license that are currently assigned to users. |

## Usage

Users with the "View Setup and Configuration" permission can use the PermissionSetLicense object to view the set of currently defined permission set licenses in your organization.

Use the PermissionSetLicense object to query existing permission licenses.

For example, to return a list of all active permission set licenses:

```
SELECT MasterLabel
FROM PermissionSetLicense
WHERE Status = 'Active'
```

When combined with the PermissionSetLicenseAssign object, you can create a nested query that returns all users assigned to a particular permission set license like "Identity Connect":

```
SELECT MasterLabel, (SELECT AssigneeId FROM PermissionSetLicenseAssign)
FROM PermissionSetLicense
WHERE MaximumPermissionsIdentityConnect=true
```

SEE ALSO:

PermissionSetLicenseAssign

# PermissionSetLicenseAssign

Represents the association between a User and a PermissionSetLicense. This object is available in API version 29.0 and later.

Note: The relationship name for PermissionSetLicenseAssign is `PermissionSetLicenseAssignments`.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Assign Permission Sets

## Fields

| Field Name | Details |
|---|---|
| `AssigneeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the User to assign the permission set license specified in `PermissionSetLicenseId`.<br>This is a relationship field. |

| Field Name | Details |
| --- | --- |
| | **Relationship Name**<br>Assignee<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `IsRevoked` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Reserved for internal use. This field is available in API version 58.0 and later. |
| `LastCreatedByChangeId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the user access change record related to this permission set license assignment. This field is available only if user access policies are enabled. This field is available in API version 58.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>LastCreatedByChange<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>UserAccessChange |
| `LastDeletedByChangeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the user access change record related to this permission set license assignment being revoked. This field is available only if user access policies are enabled. This field is available in API version 58.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>LastCreatedByChange |

| Field Name | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>UserAccessChange |
| PermissionSetLicenseId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the permission set license the user is assigned to.<br>This is a relationship field.<br>**Relationship Name**<br>PermissionSetLicense<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PermissionSetLicense |

## Usage

Use the PermissionSetLicenseAssign object for querying permission set license assignments to find out which permission set licenses are assigned to which users. Because each user can be assigned to many permission set licenses, each PermissionSetLicenseAssign ID represents the association of a single user and single permission set license.

For example, to search for all of the permission sets assigned to a particular user:

```
SELECT Id, PermissionSetLicenseId
FROM PermissionSetLicenseAssign
WHERE AssigneeId = '005D0000001RFek'
```

To search for all users assigned to a particular permission set license:

```
SELECT AssigneeId
FROM PermissionSetLicenseAssign
WHERE PermissionSetLicenseId = '0PLD000000003mwOAA'
```

You can also create a new permission set license assignment, or use delete to remove a permission set license that's been assigned to a user. To update an assignment, delete an existing assignment and insert a new one.

PermissionSetLicense

# PermissionSetLicenseDefinition (Developer Preview)

Represents the definition of a custom permission set license, which entitles specified features in a package. This object is available in API version 54.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access PermissionSetLicenseDefinition, you must have the Partner Licensing Platform developer preview enabled. To participate in this developer preview, submit a participation request via the Partner Licensing Platform Developer Preview Partner Community group.

Note: The Partner Licensing Platform is available as a developer preview. The Partner Licensing Platform isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. All commands, parameters, and other features are subject to change or deprecation at any time, with or without notice. Don't implement functionality developed with these commands or tools in your production package.

## Fields

| Field | Details |
|---|---|
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `IsSupplementLicense` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the custom permission set license is a supplement license (`true`) or a foundation license (`false`). The default value is `false`. This field is available in API version 55.0 and later. |

| Field | Details |
| --- | --- |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The two- to five-character code that represents the language and locale ISO. This code controls the language for labels displayed in an application. |
| `LicenseExpirationPolicy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The license expiration policy of the custom permission set license.<br>Possible values are:<br>• `BlockNamespaceAccess`—Package access is blocked for existing users when all custom permission set licenses expire. This is the default value.<br>• `AllowNamespaceAccess`—Package access isn't blocked for existing users when all custom permission set licenses expire.<br>This field is available in API version 55.0 and later. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Label for this PermissionSetLicenseDefinition value. This display value is the internal label that does not get translated. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. |

| Field | Details |
| --- | --- |
| | In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `UserLicenseRestrictions` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The user license categories that can be assigned the custom permission set license. If no user license categories are specified, all users can be assigned the license. Possible values include:<br>• `${communities}`<br>• `${communitiesLogin}`<br>• `${customerCommunities}`<br>• `${customerCommunitiesLogin}`<br>• `${internal}`<br>• `${partnerCommunity}`<br>• `${partnerCommunityLogin}`<br>• `${platform}`<br>For more information, see User License Restriction Categories (Developer Preview). This field is available in API version 55.0 and later. |

## Usage

After the PermissionSetLicenseDefinition is created, it must be referenced in LicenseDefinitonCustomPermission.

For more information, see the Partner Licensing Platform Developer Guide (Developer Preview).

# PermissionSetTabSetting

Represents a permission set tab setting. Requires the View Setup permission. Use this object to query all tab settings of the permission set. This object is available in API version 45.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Spring '20 and later, only users with "View Setup and Configuration" permission can access this object.

## Fields

| Field Name | Details |
|---|---|
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The tab name. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The permission set Id.<br>This is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PermissionSet |
| `Visibility` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Indicates whether the tab is visible by default. Possible values are:<br>• `DefaultOff`<br>• `DefaultOn` |

## Usage

Use the PermissionSetTabSetting object to find tab setting visibility settings, parent permission sets, and so forth.

For example, to find the visibility setting of a tab named "standard-Lead," do something like the following.

```
SELECT Visibility
FROM PermissionSetTabSetting
WHERE Name = 'standard-Lead'
```

# PersonAccountOwnerPowerUser

Represents a user who can own more than 50,000 customer or partner portal accounts. Person account owner power users can own a large number of either customer or partner users. Their role can't be changed and they must be at the root of the role hierarchy. Person account owner power user objects can't be created if deferred sharing is turned on for your org. Person account owner power user objects can be created while deferred sharing is turned off for an org. Deferred sharing can be turned back on after person account owner power user objects have been created. This object is available in API version 57.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Create a PersonAccountOwnerPowerUser object. Enter the user ID of the power user and the type of users that they can own, `Customer Portal` or `Partner`.

Note: Only users at the highest level of a hierarchy can be added to the PersonAccountOwnerPowerUser object.

## Fields

| Field | Details |
|---|---|
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language that the user's account is set to. The user is specified using the `UserId` field.<br>See Salesforce Help for a full list of languages. |

| Field | Details |
| --- | --- |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The label entered when the person account owner power user is created. |
| `PortalType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of portal user account that the person account owner power user can own.<br>A possible value is:<br>• `CustomerPortal`—Customer Portal |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The unique ID associated with the person account owner power user.<br>This field is a relationship field.<br>**Relationship Name**<br>User<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

# PersonalOrgInfo

Represents the information for a Tableau Next personal org. This object is available in API version 64.0 and later.

## Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

To access this object, you must have Tableau Next enabled in your org and a Tableau Next permission set.

## Fields

| Field | Details |
| --- | --- |
| `DeletedBy` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user ID that deleted the personal org. |
| `DeletedDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The date the personal org was deleted. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable<br>**Description**<br>The description for the personal org. |
| `Details` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The details for the personal org. |
| `ErrorCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The error code for the personal org. |

| Field | Details |
| --- | --- |
| `IsPersonalOrgDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the personal org is deleted (`true`) or not (`false`).<br>The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date the personal org was last referenced. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date the personal org was last viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The API name of the personal org. |
| `OrgName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The name of the personal org. |
| `PersonalOrg` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the personal org. |
| `PrimaryOrgUser` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The email for the primary user of the personal org. |
| `PrimaryOrgUserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The user ID for the primary user of the personal org. |
| `SignupCountry` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The country of the personal org signup. |
| `SignupEmail` | **Type**<br>email<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The user email used for personal org signup. |
| `SignupInstance` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The Salesforce org instance used for personal org signup. |
| `SignupLanguage` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The language used for personal org setup.<br>Possible values are:<br>• `da`—Danish<br>• `de`—German<br>• `en_US`—English<br>• `es`—Spanish<br>• `es_MX`—Spanish (Mexico)<br>• `fi`—Finnish<br>• `fr`—French<br>• `it`—Italian<br>• `ja`—Japanese<br>• `ko`—Korean<br>• `nl_NL`—Dutch<br>• `no`—Norwegian<br>• `pt_BR`—Portuguese (Brazil)<br>• `ru`—Russian<br>• `sv`—Swedish<br>• `th`—Thai<br>• `zh_CN`—Chinese (Simplified)<br>• `zh_TW`—Chinese (Traditional) |
| `SignupUsername` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The user name used for personal org signup. |
| `SourceType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The source of the personal org.<br>Possible values are:<br>• `TableauEinstein`—Tableau Next |

| Field | Details |
| --- | --- |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The status of the personal org.<br>Possible values are:<br>• `Active`<br>• `Creating`<br>• `Deleted`<br>• `Error`<br>• `New`<br>The default value is `New`. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**PersonalOrgInfoFeed on page 55**
Feed tracking is available for the object.

**PersonalOrgInfoHistory on page 63**
History is available for tracked fields of the object.

# PersonalizationTargetInfo

Represents a target for an audience. This object is available in API version 47.0 and later.

## Supported Calls

`describeSObjects()`,`query()`,`retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `ContainerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the Experience Cloud site or org that contains the target. |
| `DraftRowId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the draft PersonalizationTargetInfo. |
| `GroupName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Group name of the target. Groups bundle related targets.You can have up to 2,000 groups and 500 targets per group. |
| `PublishStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Publish status of the target.<br>Possible values are:<br>• `Draft`<br>• `Live` |
| `TargetType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of the target.<br>Possible values are:<br>• `ExperienceVariation`<br>• `NavigationLinkSet`<br>• `Topic`<br>• `CollaborationGroup`<br>• `KnowledgeArticle` |

| Field | Details |
| --- | --- |
| | • `ContentDocument`<br>• `ManagedContent`<br>• `Report`<br>• `Dashboard`<br>• Custom objects<br>You can have up to 2,500 `ExperienceVariation` targets and 25,000 record targets. |
| `TargetValue` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Value of the target. For ExperienceVariation, this is the developer name of the Experience Variation or the record ID for the object. |

# PermissionUpdateEventLog

Permission update events represent changes to object, field, and user permissions and setup entity access that occur in profiles and permission sets. The event type also tracks if you clone profiles or change whether session activation is required in permission sets or permission set groups. This object is available in API version 65.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `Context` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The context for what is happening for this update. |

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A description of the update that occurred in the profile, permission set, or permission set group. |
| `FeatureIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the feature, such as a profile, permission set, or permission set group, that was updated. |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. |
| `PermissionType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of permission, such as user, object, or field, or setup entity access, such as tab settings or Apex class access, that was updated. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. |
| `SessionKey` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. |
| `UpdateType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>For object permissions, user permissions, and setup entity access, the type of update that occurred. For example, a permission was updated or deleted. For other changes in profiles, permission sets, or permission set groups, this information is tracked in the DESCRIPTION field. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who made the permission update. |

# PersonTraining

Represents an assignment of a learning module in Workforce Engagement. This object is available in API version 54.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The org requires a Workforce Engagement license and an Enablement Sites (myTrailhead) license. The user requires at least one Workforce Engagement permission set assigned to them: Workforce Engagement Admin, Workforce Engagement Analyst, Workforce Engagement Planner, or Workforce Engagement Agent.

Workforce Engagement Management uses this object to route training to agents. To assign modules to agents, users with the Learning Manager profile require Read, Create, and View All Records access to this object. To receive routed modules, users with the Learner profile require Read access to this object.

## Fields

| Field | Details |
|---|---|
| `AssigneeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A valid user ID for the user who's assigned the training. `AssigneeId` can't be empty if the `Status` field is Assigned. We recommend that you set `AssigneeId` to the value in `OwnerId`.<br>This is a relationship field.<br>**Relationship Name**<br>Assignee<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the learning module. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The user who owns the person training.<br>This is a polymorphic relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The status of the training.<br>Possible values are:<br>• `A`—Assigned; when the `Status` is assigned, the `AssigneeId` field can't be empty.<br>• `C`—Completed<br>• `I`—In Progress<br>• `N`—New<br>• `P`—Paused<br>The default value is 'N'. |
| `TrainingId` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the learning module.<br>This is a relationship field.<br>**Relationship Name**<br>Training<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>LearningContent |
| `TrainingType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The type of training.<br>Possible values are:<br>• `T`—Trailhead |

## Usage

In version 54.0 and later releases, Workforce Engagement uses this object instead of the AgentTraining object to route learning modules to agents. If you set up agent engagement in your org in an earlier release, we rename AgentTraining records as PersonTraining records.

# PicklistValueInfo

Represents the active picklist values for a given picklist field. This object is available in API version 40.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

| Field | Details |
| --- | --- |
| `DurableId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Unique identifier for the field. |
| `EntityParticleId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Represents the picklist field to which this value is related.<br>**Relationship Name**<br>EntityParticle<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>EntityParticle |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the picklist value is active or not. |
| `IsDefaultValue` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this value is the default for the picklist field. Only one value can be the default value. |
| `Label` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The label for the picklist value. |
| `ValidFor` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A set of bits where each bit indicates a controlling value for which this picklist value is valid. |
| `Value` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API name of the picklist value. |

# PickTicket

A PickTicket represents quantities of one or more products to be picked for fulfillment at a location. It can include products belonging to one or more fulfillment orders. This object is available in API version 57.0 and later.

A PickTicket is associated with one or more PickTicketAssignments and one or more PickTicketProducts. Each PickTicketAssignment represents the relationship between the PickTicket and a FulfillmentOrder. Each PickTicketProduct represents the quantity of a product to be picked as part of the PickTicket. If multiple FulfillmentOrders associated with the PickTicket include the same product, one PickTicketProduct can represent the total quantity of that product to be picked for all of those FulfillmentOrders.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available with an Order Management Growth license.

## Fields

| Field | Details |
|---|---|
| `AssignedToId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The user assigned to pick the items associated with the PickTicket.<br>This field is a relationship field.<br>**Relationship Name**<br>AssignedTo<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed data in this record, a record related to this record, or a list view. |

| Field | Details |
| --- | --- |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, it's possible the user accessed data in this record or list view but didn't view it directly. |
| `LocationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The location fulfilling the items to be picked.<br>This field is a relationship field.<br>**Relationship Name**<br>Location<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Location |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The owner of the PickTicket record. By default, the asset owner is the user who created the record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PickTicketNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Name of the PickTicket. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Printed, Sort, Update<br>**Description**<br>Status of the PickTicket. Each status corresponds to one status category, shown here in parentheses. You can customize the status picklist to represent your business processes, but the status category picklist is fixed because processing is based on those values. If you customize the status picklist, include at least one status value for each status category.<br>Default values are:<br>• `Assigned` (Active)<br>• `Canceled` (Canceled)<br>• `Completed` (Completed)<br>• `Created` (Active)<br>• `Draft` (Draft)<br>• `Picked` (Active)<br>• `Picking` (Active) |
| `StatusCategory` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Status category of the PickTicket. Processing of the PickTicket depends on this value. Each status category corresponds to one or more status values.<br>Possible values are:<br>• `ACTIVE`<br>• `CANCELED`<br>• `COMPLETED`<br>• `DRAFT`<br>The default value is `DRAFT`. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**PickTicketFeed on page 55**
Feed tracking is available for the object.

**PickTicketShare on page 67**
Sharing is available for the object.

PickTicketAssignment

PickTicketProduct

# PickTicketAssignment

Represents the association of a FulfillmentOrder with a PickTicket. A PickTicket has one PickTicketAssignment for each FulfillmentOrder containing products to be picked as part of that PickTicket. This object is available in API version 57.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available with an Order Management Growth license.

## Fields

| Field | Details |
|---|---|
| `AttachedToId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the FulfillmentOrder to associate with a PickTicket.<br>This field is a relationship field.<br>**Relationship Name**<br>AttachedTo<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FulfillmentOrder |
| `PickTicketAssignmentNumber` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Name of the PickTicketAssignment. |
| `PickTicketId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the PickTicket to associate with a FulfillmentOrder.<br>This field is a relationship field.<br>**Relationship Name**<br>PickTicket<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PickTicket |

# PickTicketProduct

Represents a quantity of a product to be picked as part of a PickTicket. It can include quantities for multiple FulfillmentOrders. This object is available in API version 57.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available with an Order Management Growth license.

# Fields

| Field | Details |
|---|---|
| `PickTicketId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the PickTicket associated with the PickTicketProduct.<br>This field is a relationship field.<br>**Relationship Name**<br>PickTicket<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PickTicket |
| `PickTicketProductNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Name of the PickTicketProduct. |
| `PickedQuantity` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Quantity of the PickTicketProduct that has been picked. |
| `Product2Id` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the product associated with the PickTicketProduct.<br>This field is a relationship field.<br>**Relationship Name**<br>Product2<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Product2 |
| `ProductCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Product code of the product associated with the PickTicketProduct. |
| `Quantity` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Total quantity that's requested to be picked of the associated product. |
| `RejectReason` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The reason why some or all of the requested quantity isn't being picked.<br>Possible values are:<br>• `Defected`<br>• `Other`<br>• `Out of stock` |
| `RejectedQuantity` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The requested quantity that hasn't been picked. When the status category of the associated PickTicket is set to `Completed`, this value is automatically calculated as `Quantity - PickedQuantity`. |
| `StockKeepingUnit` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The stock keeping unit (SKU) of the associated product. |

# PipelineInspectionListView

Represents a pipeline view, an intelligence view, or a saved filter. A pipeline view shows a set of opportunity records, based on specific criteria. An intelligence view shows a set of account, lead, or contact records, based on specific criteria. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, enable the Pipeline Inspection user permission and the Pipeline Inspection setting. To create and modify list views, users must have the Create and Customize List Views permission. To create and modify public list views, users must have the Manage Public List Views permission.

## Fields

| Field | Details |
| --- | --- |
| `ChangePeriodLiteralType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The date literal associated with the pipeline changes metrics group, used for filtering by a custom time period.<br>Possible values are:<br>• CUSTOM_DATE<br>• FOUR_WEEKS_AGO<br>• ONE_MONTH_AGO<br>• ONE_WEEK_AGO<br>• START_OF_THE_PERIOD<br>• THIS_MONTH<br>• THIS_WEEK<br>• THREE_MONTHS_AGO<br>• THREE_WEEKS_AGO<br>• TWO_MONTHS_AGO<br>• TWO_WEEKS_AGO |
| ChangePeriodStartDate | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The start date used when filtering by a custom time period for pipeline changes metrics and forecast category metrics groups. |
| DateLiteralType | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The date literal associated with the pipeline and intelligence views, used for filtering by the close date, created date, or activity date.<br>Possible values are: |

| | Accounts | Contacts & Leads | Opportunities |
| --- | --- | --- | --- |
| ALL_TIME | ✓ | ✓ ** | ✓ ** |
| CUSTOM_DATE | ✓ | ✓ | ✓ |
| DATE_NONE * | ✓ | | |
| LAST_180_DAYS * | ✓ | | |

| Field | Details |
|---|---|

| | Accounts | Contacts & Leads | Opportunities |
|---|---|---|---|
| LAST_365_DAYS * | ✔ | | |
| LAST_90_DAYS * | ✔ | | |
| LAST_MONTH | | ✔ | |
| NEXT_FISCAL_QUARTER | | | ✔ |
| NEXT_MONTH | | | ✔ |
| NEXT_WEEK | | | ✔ |
| THIS_FISCAL_QUARTER | | ✔ | ✔ |
| THIS_MONTH | | ✔ | ✔ |
| THIS_WEEK | | ✔ | ✔ |

* Available in API version 60.0 and later.

** Available on the "My Important" list views.

`EndDate`

**Type**
date

**Properties**
Create, Filter, Group, Nillable, Sort, Update

**Description**
The end date used when filtering by a custom time period for close dates.

`IsSystemManaged`

**Type**
boolean

**Properties**
Defaulted on create, Filter, Group, Sort

**Description**
Indicates whether the system is managing changes to visibility and deletion of a pipeline view (`true`) or not (`false`).

The default value is `false`.

`ListViewId`

**Type**
reference

**Properties**
Create, Filter, Group, Sort

**Description**
The ID of the associated ListView record. This field is unique within your organization.

| Field | Details |
| --- | --- |
| | This is a relationship field.<br>**Relationship Name**<br>ListView<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ListView |
| `MarketSegments` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The customer segments selected in the Prospecting Center view.<br>This field is available in API version 61.0 and later. |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The start date used when filtering by a custom time period for close dates. |
| `SummaryField` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The opportunity field specified in a pipeline view to summarize pipeline inspection metrics.<br>Possible values are standard field names or custom field IDs for custom currency and number fields.<br>• `Amount`<br>• `ExpectedRevenue`<br>• `TotalOpportunityQuantity`<br>• ***`custom_field_ID`***<br>This field is available in API version 56.0 and later. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the user whose records you want to see by default in the list view. This field is a relationship field.<br>This field is available in API version 58.0 and later.<br>**Relationship Name**<br>User<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `ViewType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The corresponding API name for the pipeline or intelligence view type.<br>Possible values are:<br>• `MY_ACCOUNTS`–Available in API version 60.0 and later.<br>• `MY_CONTACTS`<br>• `MY_IMPORTANT_ACCOUNTS`–Available in API version 60.0 and later.<br>• `MY_IMPORTANT_CONTACTS`<br>• `MY_IMPORTANT_LEADS`<br>• `MY_IMPORTANT_OPPORTUNITIES`<br>• `MY_LEADS`<br>• `MY_PIPELINE`<br>• `MY_PROSPECTING_CENTER_ACCOUNTS-Available in API version 61.0 and later.` |

## Usage

Use this object to retrieve the metadata for a pipeline inspection view.

# PipelineInspectionSumField

Use this object to learn which field from the opportunity object is used to aggregate Pipeline Inspection metrics on a pipeline view. This object is available in API version 56.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To use PipelineInspectionSumField, enable Pipeline Inspection. Users with a Pipeline Inspection user permission, the Customize Application permission or the Modify All Data permission can access this object. To create and modify records, users must have either the Customize Application permission or the Modify All Data permission.

## Fields

| Field | Details |
|---|---|
| `SobjectType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The object that stores the summary fields.<br>Possible values are:<br>• `Opportunity` |
| `SummaryField` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The field used to summarize Pipeline Inspection metrics. Possible values are standard field names or custom field IDs for custom currency and number fields.<br>• `Amount`<br>• `ExpectedRevenue`<br>• `TotalOpportunityQuantity`<br>• custom_field_ID |

# PipelineInspMetricConfig

Represents the configuration of a forecast category metric that appears in the Pipeline Inspection view. This object is available in API version 55.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Read only. The unique name of a Pipeline Inspection metric configuration in the API. |
| `IsCumulative` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Read only. Whether the metric is cumulative. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Read only. The language of the Pipeline Inspection metric. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Customized label of the Pipeline Inspection metric. Limit: 50 characters. |
| `Metric` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The Pipeline Inspection metric.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `BestCase`<br>• `ClosedLost`<br>• `ClosedWon`<br>• `Commit`<br>• `MostLikely`<br>• `OpenPipeline`<br>• `TotalPipeline` |

# PipelineInspMetricConfigLocalization

Represents the translated label of a Pipeline Inspection metric. This object is available in API version 55.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language of the Pipeline Inspection metric. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix of the Pipeline Inspection metric language. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the related Pipeline Inspection metric.<br>This field is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PipelineInspMetricConfig |
| `Value` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The value of the Pipeline Inspection metric. |

# PlatformAction

PlatformAction is a virtual read-only object. It enables you to query for actions displayed in the UI, given a user, a context, device format, and a record ID. Examples include standard and custom buttons, quick actions, and productivity actions.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

| Field | Details |
| --- | --- |
| `ActionListContext` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Required. The list context this action applies to. Valid values are:<br>• `Assistant`<br>• `BannerPhoto`<br>• `Chatter` |

| Field | Details |
| --- | --- |
| | • `Dockable`<br>• `FeedElement`<br>• `Flexipage`<br>• `Global`<br>• `ListView`<br>• `ListViewDefinition`<br>• `ListViewRecord`<br>• `Lookup`<br>• `MruList`<br>• `MruRow`<br>• `ObjectHomeChart`<br>• `Photo`<br>• `Record`<br>• `RecordEdit`<br>• `RelatedList`<br>• `RelatedListRecord` |
| `ActionTarget` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The URL to invoke or describe the action when the action is invoked. If the action is a standard button overridden by a Visualforce page, the ActionTarget returns the URL of the Visualforce page, such as `/apex/pagename`.<br>This field is available in API version 35.0 and later. |
| `ActionTargetType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of the target when this action is triggered. Valid values are:<br>• `Describe`—applies to actions with a user interface, such as quick actions<br>• `Invoke`—applies to actions with no user interface, such as action links or invocable actions<br>• `Visualforce`—applies to standard buttons overridden by a Visualforce page |
| `ActionTargetUrl` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL to invoke or describe the action when the action is invoked. This field is deprecated in API version 35.0 and later. Use `ActionTarget` instead. |
| `Category` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Applies only to action links. Denotes whether the action link shows up in the feed item list of actions or the overflow list of actions. Valid values are:<br>• `Primary`<br>• `Overflow` |
| `ConfirmationMessage` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Applies only to action links. The message to display before the action is invoked. Field is null if no confirmation is required before invoking the action. |
| `DeviceFormat` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Specifies which action icon the PlatformAction query returns. If this field isn't specified, it defaults to Phone. Valid values are:<br>• `Aloha`<br>• `Desktop`<br>• `Phone`<br>• `Tablet` |
| `ExternalId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The unique ID for the PlatformAction. If the action doesn't have an ID, its API name is used. |
| `GroupId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a group of action links. |
| `IconContentType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The content type—such as .jpg, .gif, or .png—of the icon for this action. Applies to both custom and standard icons assigned to actions. |
| `IconHeight` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The height of the icon for this action. Applies only to standard icons. |
| `IconUrl` | **Type**<br>url<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URL of the icon for this action. |
| `IconWidth` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The width of the icon for this action. Applies only to standard icons. |
| `InvocationStatus` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The status of the action within the feed item. Applies to action links only. Valid values are:<br>• `Failed`<br>• `New`<br>• `Pending`<br>• `Successful` |
| `InvokedByUserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who most recently invoked this action within the current feed item. Applies to action links only.<br>This is a relationship field.<br>**Relationship Name**<br>InvokedByUser<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `IsGroupDefault` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Denotes whether this action is the default in an action link group. False for other action types. Applies to action links only. |
| `IsMassAction` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the action can be performed on multiple records.<br>This field is available in API version 38.0 and later. |

| Field | Details |
| --- | --- |
| `Label` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The label to display for this action. |
| `PrimaryColor` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The primary color of the icon for this action. |
| `RelatedListRecordId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Represents the ID of a record in an object's related list.<br>This field is available in API version 38.0 and later. |
| `RelatedSourceEntity` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>When the `ActionListContext` is RelatedList or RelatedListRecord, this field represents the API name of the related list to which the action belongs. |
| `Section` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The section of the user interface the action resides in. Applicable only to Lightning Experience. Valid values are:<br>• ActivityComposer<br>• CollaborateComposer<br>• NotesComposer<br>• Page |

| Field | Details |
| --- | --- |
| | • SingleActionLinks<br>This field is available in API version 35.0 and later. |
| `SourceEntity` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Required. The object or record with which this action is associated. |
| `Subtype` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The subtype of the action. For quick actions, the subtype is `QuickActionType`. For custom buttons, the subtype is `WebLinkTypeEnum`. For action links, subtypes are `Api`, `ApiAsync`, `Download`, and `Ui`. Standard buttons and productivity actions have no subtype. |
| `TargetObject` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of object record the action creates, such as a contact or opportunity.<br>This field is available in API version 41.0 and later. |
| `TargetUrl` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The URL that a custom button or link points to.<br>This field is available in API version 41.0 and later. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The type of the action. Valid values are:<br>• `ActionLink`—An indicator on a feed element that targets an API, a web page, or a file, represented by a button in the Salesforce Chatter feed UI.<br>• `CustomButton`—When clicked, opens a URL or a Visualforce page in a window or executes JavaScript.<br>• `InvocableAction`<br>• `ProductivityAction`—Productivity actions are predefined and attached to a limited set of objects. Productivity actions include Send Email, Call, Map, View Website, and Read News. Except for the Call action, you can't edit productivity actions.<br>• `QuickAction`—A global or object-specific action.<br>• `StandardButton`—A predefined Salesforce button such as New, Edit, and Delete. |

# Usage

PlatformAction can be described using describeSObject().

You can directly query for PlatformAction. For example, this query returns all fields for actions associated with each of the records of the listed objects:

```
SELECT ExternalId, ActionTargetType, ActionTargetUrl, ApiName, Category,
      ConfirmationMessage, ExternalId, GroupId, UiTheme, IconUrl, IconContentType,
      IconHeight, IconWidth, PrimaryColor, InvocationStatus, InvokedByUserId,
      IsGroupDefault, Label, LastModifiedDate, Subtype, SourceEntity, Type
FROM PlatformAction
WHERE SourceEntity IN ('001xx000003DGsH', '001xx000003DHBq', 'Task') AND
      ActionListContext = 'Record';
```

Note: To query PlatformAction, provide the `ActionListContext` and `SourceEntity`. If you query for `ActionListContext` with a value of `RelatedList`, and don't specify a `RelatedSourceEntity`, the query returns the API name of the related list. In API v43.0 and before, `SourceEntity = 'Object API Name'` and `ActionListContext = 'ListView'` is an invalid combination to fetch quick actions in a SOQL query. Use `SourceEntity = 'Object ID'` and `ActionListContext = 'ListView'` instead.

This query uses multiple `ActionListContext` values in its `WHERE` clause to return all actions in the Lightning Experience user interface (`DeviceFormat = 'Desktop'`) for the specified object:

```
SELECT ActionListContext, Label, Type, Subtype, Section, SourceEntity,
     RelatedSourceEntity, ActionTarget, ActionTargetType, ApiName, Category,
     ConfirmationMessage, DeviceFormat, ExternalId, GroupId, IconContentType,
     IconHeight, IconUrl, IconWidth, Id, InvocationStatus, InvokedByUserId,
     IsGroupDefault, LastModifiedDate, PrimaryColor
FROM PlatformAction
WHERE ActionListContext IN ('Record','Chatter','RelatedList') AND
      SourceEntity = '001xx000003DlvX' AND
      DeviceFormat = 'Desktop'
```

# PlatformEventUsageMetric

Contains usage data for event publishing and delivery to CometD and Pub/Sub API clients, `empApi` Lightning components, and event relays. If Enhanced Usage Metrics isn't enabled, usage data is available for the last 24 hours, ending at the last hour, and for historical daily usage. In API 58.0 and later, you can enable Enhanced Usage Metrics to get usage data by event name and client for granular time intervals. PlatformEventUsageMetric contains separate usage metrics for platform events and change data capture events. This object is available in API version 50.0 and later.

## Supported Calls

`describeSObjects(),query()`

## Fields

| Field | Details |
|---|---|
| `Client` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field is available only when Enhanced Usage Metrics is enabled. The ID of the client. The `Client` field is populated with one of the following values.<br>The `Client` field can be one of these values.<br>• For a Streaming API (CometD) client and the empApi Lightning component, the client value is the ID of the CometD session.<br>• For a Pub/Sub API client, the client value is `PUB_SUB_API`.<br>• For an event relay, the client value is `EVENT_RELAY`.<br>• For the publish usage of Change Data Capture events, the client value is `SYSTEM`.<br>• For publish usages using REST API, the client value is `REST_API`.<br>• For publish usages using Flow, the client value is `FLOW`.<br>• For publish usages using SOAP API, the client value is `SOAP_API`.<br>• For publish usages using Bulk API, the client value is `BULK_API`.<br>• For Apex, the publish usage client value is `APEX` and the delivery usage client value is the Apex Trigger ID starting with 01q. |
| `EndDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The end date and time in UTC used for querying usage metrics. The date granularity is hourly. |

| Field | Details |
| --- | --- |
| | To get usage data for the last 24 hours, the end date is the current date in UTC. The time is the current time in UTC rounded down to the previous hour. For example, 11:23 is 11:00 and the date format is: 2020-08-04T11:00:00.000Z<br>To get historical data, the end date in UTC is the end of the date range with hours specified as 0. For example: 2020-08-04T00:00:00.000Z. To query a date range, you can use the < or <= operators.<br>For the date format to use, see Date Formats and Date Literals in the *SOQL and SOSL Reference*. |
| `EventName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field is available only when Enhanced Usage Metrics is enabled. The API name of a custom platform event or a change event.<br>• Custom platform event with the label My Event: `My_Event__e`<br>• Change event example: `AccountChangeEvent`<br>When you query usage metrics for `EventName`, specify the `UsageType` field in the `SELECT` or `WHERE` clause. |
| `EventType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>This field is available when Enhanced Usage Metrics is enabled. The type of event you would like to query usage metrics for, such as a change event or a custom platform event.<br>Possible values are:<br>• `CHANGE_EVENT`—A Change Data Capture event.<br>• `CUSTOM_PLATFORM_EVENT`—A platform event that an admin defined in your Salesforce org.<br>When you query usage metrics for `EventType`, specify the `UsageType` field in the `SELECT` or `WHERE` clause. |
| `ExternalId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field is not in use. |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The name of the metric to get usage for.<br>Possible values are:<br>• `CHANGE_EVENTS_DELIVERED`—Number of change data capture events delivered to CometD and Pub/Sub API clients, `empApi` Lightning components, and event relays<br>• `CHANGE_EVENTS_PUBLISHED`—Number of change data capture events published<br>• `PLATFORM_EVENTS_DELIVERED`—Number of platform events delivered to CometD and Pub/Sub API clients, `empApi` Lightning components, and event relays<br>• `PLATFORM_EVENTS_PUBLISHED`—Number of platform events published |
| `StartDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The start date and time in UTC used for querying usage metrics. The date granularity is hourly.<br>To get usage data for the last 24 hours, the start date is the previous day in UTC. The time is the current time in UTC rounded down to the previous hour. For example, 11:23 is 11:00 and the date format is: 2020-08-03T11:00:00.000Z<br>To get historical data, the start date is the start of the date range with hours specified as 0. For example: 2020-08-03T00:00:00.000Z. To specify a date range, you can use the > or >= operators.<br>If Enhanced Usage Metrics is enabled, keep in mind these tips.<br>• Make sure the time span between `StartDate` and `EndDate` is valid for the `TimeSegment` value chosen.<br>• The maximum date range that you can specify between `StartDate` and `EndDate` is 60 days.<br>For the date format to use, see Date Formats and Date Literals in the *SOQL and SOSL Reference*. |
| `TimeSegment` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>This field is available when Enhanced Usage Metrics is enabled. The time interval used for aggregating usage data returned in the query results. Valid `TimeSegment` values depend on the time range specified with `StartDate` and `EndDate`. |

| Field | Details |
|---|---|
| | Possible values are:<br><br>`Daily` — Usage data is aggregated for each day within the specified time range. Valid only if the time range specified with `StartDate` and `EndDate` in the query is at least 24 hours.<br><br>`Hourly` — Usage data is aggregated for each hour within the specified time range. Valid only if the time range specified with `StartDate` and `EndDate` in the query is between one hour and 24 hours.<br><br>`FifteenMinutes` — Usage data is aggregated for each 15-minute period within the specified time range. Valid only if the time range specified with `StartDate` and `EndDate` in the query is between 15 minutes and one hour. |
| `UsageType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>This field is available when Enhanced Usage Metrics is enabled. The type of event usage metrics to query for, such as event publishing or event delivery. Use this field with the `EventName` or `EventType` fields.<br>Possible values are:<br>• `PUBLISH`—Usage metrics for published events.<br>• `DELIVERY`—Usage metrics for events that were delivered to subscribers. |
| `Value` | **Type**<br>long<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The usage value for the specified metric and date range. |

# Usage

For more information, see Monitor Platform Event Publishing and Delivery Usage in the *Platform Events Developer Guide*.

# PlatformStatusAlertEvent

The documentation has moved to PlatformStatusAlertEvent in the *Platform Events Developer Guide*.

# PortalDelegablePermissionSet

PortalDelegablePermissionSet is a base platform object used to store permission sets that can be assigned by a delegated portal/external user admin (DPUA) to portal users. This object is available in API version 47.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The unique string used to identify the record.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language used in the org. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The unique string to identify the record. |
| `PermissionSetId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique ID of the permission set the DPUA profile can assign to other portal users. |
| `ProfileId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the DPUA profile. |

# PresenceConfigDeclineReason

Represents the settings for a decline reason that a presence user provides when declining work. This object is available in API version 37.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `update()`, `query()`, `retrieve()`

## Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

## Fields

| Field | Details |
| --- | --- |
| `PresenceDeclineReasonId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the PresenceDeclineReason record. |
| `PresenceUserConfigId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the PresenceUserConfig record where the decline reasons are added. |

# PresenceDeclineReason

Represents an Omni-Channel decline reason that agents can select when declining work requests. This object is available in API version 37.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `update()`, `query()`, `retrieve()`

## Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

## Fields

| Field | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance slows down while Salesforce generates one for each record. |

| Field | Details |
| --- | --- |
| | Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The language of the PresenceDeclineReason. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The label for the PresenceDeclineReason. |

# PresenceUserConfig

Represents a configuration that determines a presence user's settings. This object is available in API version 32.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `update()`, `query()`, `retrieve()`

## Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

## Fields

| Field | Details |
| --- | --- |
| `AcwExtensionDuration` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The maximum length of time, measured in seconds, an agent can spend on After Conversation Work (ACW) each time they extend the timer. You must set this field if `HasAcwExtensionEnabled` is set to `true`. Specify a value from 10 through 3600.<br>This field is available in API version 56.0 and later. |
| `AfterConvoWorkMaxTime` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The maximum length of time, measured in seconds, an agent has to complete After Conversation Work (ACW). You must set this field if `HasAfterConvoWorkTimer` is set to `true`. Specify a value from 10 through 3600.<br>This field is available in API version 56.0 and later. |
| `Capacity` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The maximum number of work units an agent can be assigned at one time. |
| `CustomSoundId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Relationship Name**<br>`CustomSound`<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>`StaticResource`<br>**Description**<br>The ID of the static resource for the custom sound selected to play for the `PresenceUserConfig` object. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.<br>Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `HasAcwExtensionEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If set to `true`, agents can extend their After Conversation Work (ACW) time. Available only if `HasAfterConvoWorkTimer` is set to `true`. If set to `true`, you must also set the `AcwExtensionDuration` and `MaxExtensions` fields. The default value is `true`.<br>This field is available in API version 56.0 and later. |
| `HasAfterConvoWorkTimer` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If set to `true`, After Conversation Work (ACW) time can be configured for the channel. If set to `true`, you must also set the `AfterConvoWorkMaxTime` field. The default value is `false`.<br>This field is available in API version 56.0 and later. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The language of the presence configuration. |
| `MasterLabel` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The label of the presence configuration. |
| `MaxExtensions` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The maximum number of times an agent can extend their After Work Conversation (ACW) time. Specify a value from 1 through 10. You must set this field if `HasAcwExtensionEnabled` is set to `true`.<br>This field is available in API version 56.0 and later. |
| `OptionsAllowAnyDestinationQueueForTransferEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Indicates that a rep can transfer a message from an enhanced Messaging channel to any queue (`true`) or only the selected queues (`false`).<br>This field is available in API version 61.0 and later. |
| `OptionsAllowAnyDestinationFlowForTransferEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Indicates that a rep can transfer a message from an enhanced Messaging channel to any flow (`true`) or only the selected flows (`false`).<br>This field is available in API version 61.0 and later. |
| `OptionsAllowAnyDestinationProfileForTransferEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Indicates that a rep can transfer a message from an enhanced Messaging channel to any profile (`true`) or only the selected profiles (`false`). |

| Field | Details |
| --- | --- |
| | This field is available in API version 61.0 and later. |
| `OptionsIsAutoAcceptEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Filter<br>**Description**<br>Indicates whether work items that are routed to agents are automatically accepted (`true`) or not (`false`). Available only if `OptionsIsDeclineEnabled` is set to `false`. |
| `OptionsIsDeclineEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Filter<br>**Description**<br>Indicates whether agents can decline work items that are routed to them (`true`) or not (`false`). Available only if `OptionsIsAutoAcceptEnabled` is set to `false`. |
| `OptionsIsDeclineReasonEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Filter<br>**Description**<br>Indicates whether agents can select a reason for declining work requests (`true`) or not (`false`). This can be selected only if decline reasons are enabled. |
| `OptionsIsDisconnectSoundEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Filter<br>**Description**<br>Indicates whether a sound is played when agents are disconnected from Omni-Channel (`true`) or not (`false`). |
| `OptionsIsRequestSoundEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Filter<br>**Description**<br>Indicates whether a sound plays with incoming work requests (`true`) or not (`false`). Set to `true` by default. |

| Field | Details |
| --- | --- |
| PresenceStatusOnDeclineId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the presence status that's automatically assigned to the agent when the agent declines a work item. Available only if `OptionsIsDeclineEnabled` is set to `true`. |
| PresenceStatusOnPushTimeoutId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the presence status that's automatically assigned to the agent when the agent doesn't respond to a work item before push timeout occurs. Available in API version 36.0 and later. |
| SoundLength | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The length of time that a sound plays when new work is assigned to an agent. |

# PresenceUserConfigProfile

Represents a configuration that determines the settings that are assigned to presence users who are assigned to a specific profile. User-level configurations override profile-level configurations. This object is available in API version 32.0 and later.

## Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

## Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

## Fields

| Field | Details |
|---|---|
| `PresenceUserConfigId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>If an individual user is also assigned a presence configuration through the PresenceUserConfigProfile, this configuration will override that. |
| `ProfileId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the profile that's associated with this presence configuration. A profile can be associated with only one presence configuration. |

# PresenceUserConfigUser

Represents a configuration that determines the settings that are assigned to a presence user. These user-level configurations override profile-level configurations. This object is available in API version 32.0 and later.

## Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

## Special Access Rules

To access this object, Omni-Channel must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

## Fields

| Field | Details |
|---|---|
| `PresenceUserConfigId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the presence configuration. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the user who's associated with this presence configuration. A user can be associated with only one presence configuration. |

# PriceAdjustmentGroupShape

Defines the business logic for a top-level price adjustment, for example, a discount applied to an entire order. This object is available in API version 57.0 and later.

## Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()` `query()`, `retrieve()`

## Special Access Rules

This object is available with Subscription Management, B2B Commerce, or B2C Commerce.

## Fields

| Field | Details |
| --- | --- |
| `AdjustmentSource` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates the source of the adjustment. This field is available with B2B Commerce.<br>Possible values are:<br>• `Discretionary`—The adjustment is entered manually, for example, by a sales rep.<br>• `Promotion`—The adjustment is part of a promotion.<br>• `Rule`—Reserved for future use.<br>• `System`—The adjustment is configured by the system data, for example, as part of a pricing rule or discount schedule. |

| Field | Details |
| --- | --- |
| `AdjustmentType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates whether the adjustment is a percentage, an amount, or an override.<br>Possible values are:<br>• `AdjustmentAmount`—Reserved for future use. The adjustment value is a numerical amount.<br>• `AdjustmentPercentage`— The adjustment value is a percentage.<br>• `OverrideAmount`— The override value is a numerical amount. |
| `AdjustmentValue` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The value of the adjustment. To indicate a discount, use a negative number. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable<br>**Description**<br>User-entered description of the price adjustment group. Available in API versions 57.0. |
| `PriceAdjustmentCauseId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the record that is the source of the adjustment. For example, if the price adjustment is due to a promotion, this field contains the ID of the promotion record. If the price adjustment is due to a price adjustment tier, this field contains the ID of the price adjustment tier record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>PriceAdjustmentCause<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>PriceAdjustmentTier |
| `PriceAdjustmentGroupShapeName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort<br>**Description**<br>Name of the price adjustment group shape. |
| `Priority` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>A positive integer indicating the order in which this price adjustment group is applied, relative to other price adjustment groups. A `Priority` of `1` indicates this price adjustment group is applied first.<br>Price adjustments with a null priority are applied after price adjustments with a specified priority. If two or more price adjustments have a null priority, percentage adjustments are applied **before** amount adjustments. Applying a percentage adjustment before an amount adjustment results in a larger total adjustment.<br>Note: The value of `Priority` must be unique among price adjustment groups in the same sales transaction. |
| `SalesTransactionShapeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the sales transaction that the price adjustment group belongs to.<br>This field is a relationship field.<br>**Relationship Name**<br>SalesTransactionShape<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>SalesTransactionShape |
| `TotalAmount` | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The total amount of adjustments of all related price adjustment items, inclusive of quantity, prorated for the duration of the subscription. This field is a calculated field equal to the sum of the `TotalAmount` fields in the related price adjustment items. |

# PriceAdjustmentItemShape

Defines the business logic for an item-level price adjustment, for example, a discount on an order item. This object is available in API version 57.0 and later.

## Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

This object is available with Subscription Management, B2B Commerce, or B2C Commerce.

## Fields

| Field | Details |
| --- | --- |
| `AdjustmentAmountScope` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Used with `AdjustmentValue` to determine the amount of the adjustment.<br>Possible values are:<br>• `Total`—The adjustment applies to the line item's total and isn't multiplied by the quantity.<br>For example, let's say a sales transaction item quantity is `10` and the `TotalLineAmount` is `1000`. If the price adjustment item has an `AdjustmentValue` of `-10`, an `AdjustmentType` of `AdjustmentAmount`, and an `AdjustmentAmountScope` of `Total`, the $10 discount is applied to the total line amount. The `TotalAmount` of the price adjustment item is $1000 + (-$10) = $990.<br>• `Unit`—The adjustment is multiplied by the line item's quantity. |

| Field | Details |
| --- | --- |
| | For example, let's say a sales transaction item quantity is `5` and the `TotalLineAmount` is `1000`. If the price adjustment item has an `AdjustmentValue` of `-10`, an `AdjustmentType` of `AdjustmentAmount`, and an `AdjustmentAmountScope` of `Unit`, the $10 discount is applied to each line amount. The TotalAmount of the price adjustment item is $1000 + (-$10 x 5) = $950.<br>• `UnproratedTotal`—No adjustment is applied to the line items. |
| `AdjustmentSource` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates the source of the adjustment.<br>Possible values are:<br>• `Discretionary`— The adjustment is entered manually; for example, by a sales rep.<br>• `Promotion`— The adjustment is a promotion.<br>• `Rule`— Reserved for future use.<br>• `System`— The adjustment is determined by the pricing configuration for the product; for example, as part of a discount schedule. |
| `AdjustmentType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates whether the adjustment is a percentage, an amount, or an override.<br>Possible values are:<br>• `AdjustmentAmount`—The adjustment value is a numerical amount.<br>• `AdjustmentPercentage`— The adjustment value is a percentage.<br>• `OverrideAmount`— The override value is a numerical amount. |
| `AdjustmentValue` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The value of the adjustment. Used together with `AdjustmentAmountScope` to determine the amount of the adjustment. |
| `Description` | **Type**<br>textarea |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Nillable<br>**Description**<br>The user-entered description of the price adjustment item. Available in API version 57.0. |
| `PriceAdjustmentCauseId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the record that caused the adjustment. For example, if the price adjustment is due to a promotion, this field contains the ID of the Promotion record. If the price adjustment is due to a price adjustment tier, this field contains the ID of the `PriceAdjustmentTier` record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>PriceAdjustmentCause<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PriceAdjustmentTier |
| `PriceAdjustmentGroupShapeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>A reference to the object interface or object that summarizes the values from multiple price adjustment items. If the related entity is an object, the object must implement the `PriceAdjustmentGroupShape` object.<br>This field is a relationship field.<br>**Relationship Name**<br>PriceAdjustmentGroupShape<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PriceAdjustmentGroupShape |
| `PriceAdjustmentItemShapeName` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, idLookup, Sort<br>**Description**<br>The name of the price adjustment item shape. |
| `Priority` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>A positive integer indicating the order in which this price adjustment item is applied, relative to other price adjustment items. A `Priority` of `1` indicates this price adjustment item is applied first.<br>Price adjustments with a null priority are applied after price adjustments with a specified priority. If two or more price adjustments have a null priority, percentage adjustments are applied **before** amount adjustments. Applying a percentage adjustment before an amount adjustment results in a larger total adjustment.<br>Note: The value of `Priority` must be unique among price adjustment items related to the same price adjustment group. For example, you can't have two price adjustment items with a priority of `1`.<br>For example, let's say that two price adjustment items apply to the same item to be priced. The first price adjustment, Spring_Promotion, defines a 10% discount and has `Priority` of `1`. The second price adjustment, Early_Renewal_Discount, defines a $2,000 discount and has a `Priority` of `2`. In this case, the Spring_Promotion price adjustment is applied before the Early_Renewal_Discount price adjustment. |
| `SalesTransactionItemShapeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the sales transaction shape item that the price adjustment item applies to.<br>This field is a relationship field.<br>**Relationship Name**<br>SalesTransactionItemShape<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>SalesTransactionItemShape |
| `TotalAmount` | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The total amount of the adjustment that applies to the item to be priced, inclusive of quantity, prorated for the duration of the subscription.<br>For example, let's say the price adjustment item has an `AdjustmentAmountScope` of `Unit`, an `AdjustmentType` of `AdjustmentAmount`, and an `AdjustmentValue` of `-10`. This configuration indicates a $10 per-unit discount. If the subscription is priced for 12 months and the pricing term is `1`, the `PricingTermCount` on the sales transaction item is 12. If the quantity is 5, the value of `TotalAmount` is 5 x 12 x -10 = -600 |

# PriceAdjustmentSchedule

Represents a series of discounts offered depending on your product's configuration, quantity, and when they're purchased in combination with other products. This object is available in API version 47.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available when the B2B Commerce license is enabled or when Subscription Management is enabled.

## Fields

| Field | Details |
| --- | --- |
| `AdjustmentMethod` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The method for applying tiered pricing. Possible values are:<br>• `Range`—All items receive the discount of the highest tier the quantity falls in.<br>• `Slab`—Items receive the discount defined for the tier they fall in.<br>The default value is `Range`. Term-based discounts can't be of type `Slab`. This field is available in API version 51.0 and later.<br>The `Slab` method functions in the same way as the `Range` method. |

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Text description of the price adjustment schedule. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the price adjustment schedule is active (`true`) or not (`false`). You can change this field's value as often as necessary. Label is **Active**. The default value is `False`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates whether the price adjustment schedule has been archived (`true`) or not (`false`). This field is read-only. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. The name of the price adjustment schedule. This field is read-only. Label is **Price Adjustment Schedule Name**. |
| `OwnerId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The Salesforce ID of the sales representative who owns the price adjustment schedule. |
| `ScheduleType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Indicates how the price adjustment is determined. This field is available when Subscription Management is enabled. This field is available in API version 55.0 and later.<br>Possible values are:<br>• `Attribute`—The characteristics or properties of a product determine the price adjustment.<br>• `Bundle`—The price adjustment that is determined when you want to sell a group of products or services as a unit.<br>• `Custom`—The price adjustment that can be customized for the user's needs.<br>• `Term`—The length of the subscription determines the price adjustment. Available in API version 58.0 and later.<br>• `Volume`—The quantity purchased determines the price adjustment.<br>The default value is `Volume`. |

# Usage

When you create a PriceAdjustmentSchedule, you associate PriceAdjustmentTiers with it. A PriceAdjustmentSchedule is inactive until at least one PriceAdjustmentTier is added to it. A PriceAdjustmentSchedule comprises all related PriceAdjustmentTiers, with a maximum limit of 25 PriceAdjustmentTiers for Subscription Management.

To use PriceAdjustmentSchedule, associate it with a PriceBookEntry.

- You can associate a PriceBookEntry with up to five PriceAdjustmentSchedules, but only one PriceAdjustmentSchedule can be associated with a PriceBookEntry.
- When you activate or deactivate a PriceAdjustmentSchedule, its PriceBookEntry association is also activated or deactivated.
- An adjustment to a PriceBookEntry is applied only if the associated PriceAdjustmentSchedule is active.
- After a PriceAdjustmentSchedule is associated with a PriceBookEntry, if multicurrency is enabled, the currencyIsoCode field can't be modified.
- When you associate a PriceAdjustmentSchedule with a PricebookEntry, a junction object PricebookEntryAdjustment is created.

You can modify the PriceAdjustmentTier object, and the `ScheduleType` and `AdjustmentMethod` fields, only when a PriceAdjustmentSchedule is inactive.

## Code Sample

```
public void priceAdjustmentScheduleSample()
                {try
                  /* This code snippet will do the following:
   *
   * 1. Create a new Price Adjustment Schedule
   * 2. Create and attach a Price Adjustment Tier to the Schedule
   * 3. Activate the Schedule
   * 4. Create a new PricebookEntry Adjustment. This will associate the Schedule to a
Pricebook Entry. */

  //Create a Price Adjustment Schedule
  PriceAdjustmentSchedule pas = new PriceAdjustmentSchedule();
  pas.Name = 'Sample PAS';
  pas.Description = 'Sample Price Adjustment Schedule';
  pas.AdjustmentMethod = 'Range';
  insert pas;

  //Attach a valid Price Adjustment Tier
  PriceAdjustmentTier pat = new PriceAdjustmentTier();
  pat.PriceAdjustmentScheduleId = pas.Id;
  pat.LowerBound = 1.0;
  pat.UpperBound = 100.0;
  pat.TierType = 'AdjustmentPercentage';
  pat.TierValue = 5.0;
  insert pat;

  //Activate the Schedule
  pas.IsActive = true;
  upsert pas;

  //Create a new PricebookEntry Adjustment
  PricebookEntryAdjustment pbea = new PricebookEntryAdjustment();
  pbea.PricebookEntryId = '01uRM0000007Hb5YAE';
  pbea.PriceAdjustmentScheduleId = pas.Id;
  insert pbea;

 } catch (ConnectionException ce) {
  ce.printStackTrace();
 }
}
```

PriceAdjustmentTier

PricebookEntryAdjustment

# PriceAdjustmentTier

Represents a discount tier in a price adjustment schedule. This object is available in API version 47.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available only if the B2B Commerce license is enabled.

## Fields

| Field | Details |
|---|---|
| `LowerBound` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The minimum quantity the discount can be applied to. It must be a positive integer and less than or equal to the upper bound of the tier. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>For internal use only. |
| `PriceAdjustmentScheduleId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the price adjustment schedule that the discount is applied to. |
| `TierType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The unit of the discount. Possible values are:<br>• `AdjustmentAmount`—An amount discounted from an item's list price. Label is Amount. |

| Field | Details |
| --- | --- |
| | • `AdjustmentPercentage`—A percentage discounted from an item's list price. Label is Percentage.<br>• `AdjustmentOverride`—An override of an item's list price. Label is Override. |
| `TierValue` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The value of the discount. |
| `UpperBound` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The maximum quantity the discount can be applied to. The quantity must be a positive integer. Not inclusive. Set this value one digit higher than the quantity you want the tier to include. For example, if a tier's upper bound is 99, set the value of `UpperBound` to 100. For the last tier, the value is optional. |

## Usage

To use PriceAdjustmentTiers, associate them with a PriceAdjustmentSchedule.

Tiers can't overlap, and no gaps are allowed between tiers.

SEE ALSO:

PriceAdjustmentSchedule

# Pricebook2

Represents a price book that contains the list of products that your org sells.

Note: Price books are represented by Pricebook2 objects. As of API version 8.0, the Pricebook object is no longer available. Requests containing Pricebook are refused, and responses don't contain the Pricebook object.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

# Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Text description of the price book. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the price book is active (`true`) or not (`false`). Inactive price books are hidden in many areas in the user interface. You can change this field's value as often as necessary. Label is **Active**. |
| `IsArchived` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the price book has been archived (true) or not (false). This field is read only. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the price book has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `IsStandard` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the price book is the standard price book for the org (`true`) or not (`false`). Every org has one standard price book—all other price books are custom price books. |

| Field | Details |
| --- | --- |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. Name of this object. This field is read-only for the standard price book. Label is **Price Book Name**. |
| `ValidFrom` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time when a Commerce price book is initially valid. If this field is `null`, the price book is valid immediately when active. Available in API version 48.0 and later. |
| `ValidTo` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time when a Commerce price book is valid to. If this field is `null`, the price book is valid until it's deactivated. Available in API version 48.0 and later. |

## Usage

A price book is a list of products that your org sells.

- Each org has one standard price book that defines the standard or generic list price for each product or service that it sells.
- An org can have multiple custom price books to use for specialized purposes, such as for discounts, different channels or markets, or select accounts or opportunities. While your client application can create, delete, and update custom price books, your client application can only update the standard price book.
- For some orgs, the standard price book is the only price needed. If you set up other price books, you can reference the standard price book when setting up list prices in custom price books.

Use this object to query standard and custom price books that have been configured for your org. A common use of this object is to allow your client application to obtain valid Pricebook2 object IDs for use when configuring PricebookEntry records via the API.

Your client application can perform the following tasks on PricebookEntry objects:

- Query
- Create for the standard price book or custom price books.
- Update
- Delete
- Change the `IsActive` field when creating or updating records

## PriceBook2, Product2, and PricebookEntry Relationships

In the API:

- Price books are represented by Pricebook2 records (as of version 8.0, the Pricebook object is no longer available).
- Products are represented by Product2 records (as of version 8.0, the Product object is no longer available).
- Each price book contains zero or more entries (represented by PricebookEntry records) that specify the products that are associated with the price book. A price book entry defines the price for which you sell a product at a particular currency.

These objects are defined only for those orgs that have products enabled as a feature. If the org doesn't have the products feature enabled, the Pricebook2 object doesn't appear in the `describeGlobal()` call, and you can't access it via the API.

If you delete a Pricebook2 while a line item references PricebookEntry in the price book, the line item is unaffected, but the Pricebook2 is archived and unavailable from the API.

For a visual diagram of the relationships between Pricebook2 and other objects, see Product and Schedule Objects.

## Price Book Setup

The process of setting up a price book via the API usually means:

1. Load product data into Product2 records (creating one Product2 record for each product that you want to add).
2. For each Product2 record, create a PricebookEntry that links the Product2 record to the standard Pricebook2. Define a standard price for a product at a given currency (if you have multicurrency enabled) before defining a price for that product in the same currency in a custom price book.
3. Create a Pricebook2 record to represent a custom price book.
4. For each Pricebook2 record, creating a PricebookEntry for every Product2 that you want to add, specifying unique properties for each PricebookEntry (such as the `UnitPrice` and `CurrencyIsoCode`) as needed.

## Code Sample—Java

```
public void pricebookSample() {
  try {
    //Create a custom pricebook
    Pricebook2 pb = new Pricebook2();
    pb.setName("Custom Pricebok");
    pb.setIsActive(true);
    SaveResult[] saveResults = connection.create(new SObject[]{pb});
    pb.setId(saveResults[0].getId());

    // Create a new product
    Product2 product = new Product2();
    product.setIsActive(true);
    product.setName("Product");
    saveResults = connection.create(new SObject[]{product});
    product.setId(saveResults[0].getId());

    // Add product to standard pricebook
    QueryResult result = connection.query(
        "select Id from Pricebook2 where isStandard=true"
    );
    SObject[] records = result.getRecords();
    String stdPbId = records[0].getId();

    // Create a pricebook entry for standard pricebook
    PricebookEntry pbe = new PricebookEntry();
    pbe.setPricebook2Id(stdPbId);
    pbe.setProduct2Id(product.getId());
    pbe.setIsActive(true);
    pbe.setUnitPrice(100.0);
    saveResults = connection.create(new SObject[]{pbe});

    // Create a pricebook entry for custom pricebook
    pbe = new PricebookEntry();
    pbe.setPricebook2Id(pb.getId());
    pbe.setProduct2Id(product.getId());
    pbe.setIsActive(true);
    pbe.setUnitPrice(100.0);
    saveResults = connection.create(new SObject[]{pbe});
  } catch (ConnectionException ce) {
    ce.printStackTrace();
  }
}
```

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**Pricebook2ChangeEvent (API version 48.0)**

Change events are available for the object.

**Pricebook2History**
History is available for tracked fields of the object.

# Pricebook2History

Represents historical information about changes that have been made to the standard fields of the associated Pricebook2, or to any custom fields with history tracking enabled. This object is available in API version 65.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

## Special Access Rules

This object is always read-only.

## Fields

| Field | Details |
|---|---|
| `Pricebook2Id` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the Pricebook2 associated with this record.<br>This is a relationship field.<br>**Relationship Name**<br>Pricebook2<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Pricebook2 |
| `DataType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Data type of the field that was changed. |

| Field | Details |
| --- | --- |
| `Field` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Name of the price book field that was modified, or a special value to indicate some other modification to the price book. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). This is a standard system field. Label is **Deleted**. |
| `NewValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>New value of the modified price book field. Maximum of 255 characters. |
| `OldValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>Previous value of the modified price book field. Maximum of 255 characters. |

# Usage

Price book history entries are indirectly created each time a price book is modified.

Two rows are added to this record when foreign key fields change. One row contains the foreign key object names that display in the online application. For example, `Jane Doe` is recorded as the name of a Contact. The other row contains the actual foreign key ID that is only returned to and visible from the API.

This object respects field level security on the parent object.

SEE ALSO:

Pricebook2

# PricebookEntry

Represents a product entry (an association between a Pricebook2 and Product2) in a price book.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Note: Salesforce Object Search Language (SOSL) allows you to search records across standard and custom objects. When filtering records in the PriceBookEntry object using SOSL, you can only sort by fields related to Product2.

| Field | Details |
|---|---|
| `ActivePriceAdjustmentQuantity` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The count of active price adjustment schedules associated with the price book entry. This field is available in API version 49.0 and later. This field is available with a B2B or D2C Commerce license. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this price book entry is active (`true`) or not (`false`). Although you can never delete PricebookEntry records, your client application can set this flag to `false`. Inactive PricebookEntry records are hidden in many areas in the user interface. You can change this flag on a PricebookEntry record as often as necessary. |
| `IsArchived` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the PricebookEntry has been archived (true) or not (false). This field is set to `true` when the Product2 record it's associated with is archived, or when the Pricebook2 record is archived. This field is read only. Available in API version 45.0 and later. Label is **Archived**. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of this PricebookEntry record. This read-only field references the value in the Name field of the Product2 record. Label is **Product Name**. |
| `Pricebook2Id` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the Pricebook2 record with which this record is associated. This field must be specified when creating Pricebook2 records. It can't be changed in an update.<br>This field is a relationship field.<br>**Relationship Name**<br>Pricebook2<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Pricebook2 |
| `Product2Id` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the Product2 record with which this record is associated. This field must be specified when creating Product2 records. It can't be changed in an update.<br>This is a relationship field.<br>**Relationship Name**<br>Product2 |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Product2 |
| `ProductCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Product code for this record. This read-only field references the value in the **ProductCode** field of the associated Product2 record. |
| `ProductSellingModelId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the related product selling model. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled.<br>**Relationship Name**<br>ProductSellingModel<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ProductSellingModel |
| `UnitPrice` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Required. Unit price for this price book entry. You can specify a value only if `UseStandardPrice` is set to `false`. Label is **List Price**. |
| `UseStandardPrice` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this price book entry uses the standard price defined in the standard Pricebook2 record (`true`) or not (`false`). If set to `true`, then the `UnitPrice` field is |

| Field | Details |
| --- | --- |
| | read-only, and the value is the same as the `UnitPrice` value in the corresponding PricebookEntry in the standard price book (that is, the PricebookEntry record whose `Pricebook2Id` refers to the standard price book and whose `Product2Id` and `CurrencyIsoCode` are the same as this record). For PricebookEntry records associated with the standard Pricebook2 record, this field must be set to `true`. |

## Usage

Use this object to define the association between your organization's products (Product2) and your organization's standard price book or to custom price books ( Pricebook2). Create one PricebookEntry record for each standard or custom price and currency combination for a product in a Pricebook2.

When creating these records, you must specify the IDs of the associated Pricebook2 record and Product2 record. Once these records are created, your client application can't update these IDs.

This object is defined only for those organizations that have products enabled as a feature. If the organization doesn't have the products feature enabled, then the PricebookEntry object doesn't appear in the describeGlobal call, and you can't access it.

If you delete a PriceBookEntry that is referenced by a line item, the line item is unaffected, but the PriceBookEntry is archived and unavailable from the API. Deleted PriceBookEntry records can't be recovered.

You must load the standard price for a product before you're permitted to load its custom prices.

## Associated Objects

This object has the following associated objects. Unless otherwise noted, they're available in the same API version as this object.

**PricebookEntryChangeEvent(API version 57.0)**
Change events are available for the object.

**PricebookEntryHistory**
History is available for tracked fields of the object.

Overview of Salesforce Objects and Fields

# PricebookEntryAdjustment

Read-only junction object created when you associate a price adjustment schedule with a price book entry. This object is available in API version 47.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available only if the B2B Commerce license is enabled.

## Fields

| Field | Details |
|---|---|
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>For internal use only. |
| `PriceAdjustmentScheduleId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the price book entry adjustment. |
| `PricebookEntryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the price book entry that this price book entry adjustment is associated with. |

SEE ALSO:

PriceAdjustmentSchedule

# PriceProtectionExecution

Represents an instance of running the price protection process, capturing execution time, status, and the effective date of price changes. This object is available in API version 63.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

# Fields

| Field | Details |
| --- | --- |
| `ExecutionJobId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Data processing engine instance responsible for creating price protection records.<br>This field is a relationship field.<br>**Relationship Name**<br>ExecutionJob<br>**Refers To**<br>BatchCalcJobDefinition |
| `ExecutionReferenceNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort, Update<br>**Description**<br>Unique reference number generated by the Data Processing Engine for this execution. This can be used to associate related line items to the same execution. |
| `LastExecutionTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Date and time when the price protection execution was last performed by the Data Processing Engine. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the record was last referenced. This is used internally to optimize performance and user experience. |
| `LastViewedDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date and timestamp when the record was last viewed in the Salesforce UI. Helps track user engagement. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Auto-generated name for the price protection execution record. Used as the primary identifier within the system. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Identifier for the user or group that owns this record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |
| `PriceChangeEffectiveDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Date when the new price goes into effect as part of the price protection execution. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Represents the current lifecycle status of the price protection execution process.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `Completed`<br>• `New`<br>• `Processing` |

# PriceProtectExecLineItem

Represents a line item created as part of a Price Protection Execution. This object is available in API version 63.0 and later.

A PriceProtectExecLineItem record is automatically generated by the Data Processing Engine when eligible product transactions are processed for price protection. It links to execution records, products, and pricing terms, and stores per-unit pricing, eligibility, and calculation details.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>References the partner account related to the transaction being evaluated for price protection.<br>This field is a relationship field.<br>**Relationship Name**<br>Account<br>**Refers To**<br>Account |
| `CalculatedAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Total protected amount calculated based on the applicable price difference and quantity. |

| Field | Details |
| --- | --- |
| `CalculationReferenceRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>References the rebate or pricing rule used to compute the claim.<br>This field is a relationship field.<br>**Relationship Name**<br>CalculationReferenceRecord<br>**Refers To**<br>ProgramRebateType |
| `ClaimReferenceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Links to the related rebate claim, if one has been generated.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ClaimReference<br>**Refers To**<br>RebateClaim |
| `HasWarnings` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if the execution line item has associated warnings.<br>The default value is `false`. |
| `InTransitQuantity` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Quantity of the product in transit. |
| `IsEligible` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the record qualifies for price protection.<br>The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the record was last referenced by a user or system. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date and timestamp when the record was last opened in the UI. |
| `LocationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>References the inventory or sales location relevant to the line item.<br>This field is a relationship field.<br>**Relationship Name**<br>Location<br>**Refers To**<br>Location |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Auto-generated identifier for the line item record. |
| `NewSalePricePerUnit` | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The new sale price per unit after the price change. |
| `NewSalePriceType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Type of sale price applied post-adjustment (e.g., List Price, Net Price). |
| `PriceDifference` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Difference between the old and new sale price per unit.<br>This field is a calculated field. |
| `PriceProtectionExecutionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Links to the parent Price Protection Execution record.<br>This field is a relationship field.<br>**Relationship Name**<br>PriceProtectionExecution<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>PriceProtectionExecution (the master object) |
| `PriceProtectionTermId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>References the Price Protection Term used for evaluating eligibility and calculations.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>PriceProtectionTerm<br>**Refers To**<br>PriceProtectionTerm |
| `ProductId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>References the product involved in the price protection claim.<br>This field is a relationship field.<br>**Relationship Name**<br>Product<br>**Refers To**<br>Product2 |
| `RemainingQuantity` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Quantity of product still eligible for claim after partial adjustments. |
| `SalePricePerUnit` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Original sale price per unit before the price adjustment. |
| `SalePriceType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Type of sale price recorded during the original transaction. |
| `Status` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Current processing state of the line item.<br>Possible values are:<br>• `Complete`<br>• `Error`<br>• `New`<br>• `ReadyForClaim`—Ready For Claim<br>• `ReadyForPricing`—Ready For Pricing<br>• `ReadyForSimulation`—Ready For Simulation |
| `StatusReason` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Additional explanation or message associated with the current status. |
| `TransactionDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Date when the original sale or transaction occurred. |
| `TransactionReferenceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Reference to the transaction record from which this line item originates.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>TransactionReference<br>**Refers To**<br>PartnerUnsoldInventory |
| `WarningMessage` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Descriptive warning associated with this line item, if applicable. |

# PriceProtectionTerm

Represents a configuration record that defines the rules, types, and eligible conditions for price protection. This object is available in API version 63.0 and later.

A PriceProtectionTerm record is referenced during claims processing to calculate supported price and quantity adjustments based on predefined terms.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `CalculationReferenceRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Rebate type that's applicable for the claim amount calculation. This field is a relationship field.<br>**Relationship Name**<br>CalculationReferenceRecord<br>**Refers To**<br>ProgramRebateType |
| `IsPayable` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the inventory is eligible for payment or refund after a price protection adjustment. |

| Field | Details |
| --- | --- |
| | The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the record was last referenced by the current user. Useful for activity tracking. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date and the timestamp when the record was last viewed by the user. Helps in understanding record engagement. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Unique name for the Price Protection Term. This is typically used as a primary identifier for UI display or business logic. |
| `NewSalePriceType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Defines the type of new sale price applicable after a price protection scenario. This helps classify how the adjusted sale price can be handled. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Identifier for the user or group who owns the record.<br>This field is a polymorphic relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |
| `PriceProtectionType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Defines the type of price protection applied.<br>Possible values are:<br>• `PriceProtection`—Price Protection<br>• `ReversePriceProtection`—Reverse Price Protection<br>The default value is `PriceProtection`. |
| `SalePriceType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Specifies the type of sale price before price protection is applied. This helps calculate the protection delta during claim processing. |
| `SupportedPricePercent` | **Type**<br>percent<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort, Update<br>**Description**<br>Indicates the percentage of the price that is supported for price protection. Helps calculate eligible claim amounts. |
| `SupportedQuantityPercent` | **Type**<br>percent<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort, Update<br>**Description**<br>Indicates the percentage of quantity that is eligible for price protection. Used to determine prorated reimbursement. |

# PrivacyHold

Represents a Privacy Hold that indicates that a record should be preserved from masking or deletion by Data Management policies in Privacy Center. This object is available in API version 59.0 and later.

Use Privacy Hold with Data Management policies in Privacy Center. Add a condition to your policy to exclude records with an active Privacy Hold status from masking or deletion actions.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available for users with the Privacy Center license and the Manage Privacy Hold user permission.

## Fields

| Field | Details |
|---|---|
| `EndDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date the Privacy Hold ends. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if Privacy Hold is active on the record.<br>The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |

| Field | Details |
| --- | --- |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the Privacy Hold. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner of the account associated with this customer.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PrivacyHoldReasonId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the associated Privacy Hold Reason.<br>This field is a relationship field.<br>**Relationship Name**<br>PrivacyHoldReason<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>PrivacyHoldReason |
| `ReferenceRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the record marked for the Privacy Hold.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ReferenceRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Contact, Individual, Lead, User |
| `ReferenceRecordType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of object the record with the Privacy Hold is associated with.<br>Possible values are:<br>• `Account`<br>• `Contact`<br>• `Individual`<br>• `Lead`<br>• `User` |
| `RegisteredDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date the Privacy Hold was added to the record. |

# PrivacyHoldReason

Represents the business or legal purpose for why a record has a Privacy Hold. This object is available in API version 59.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available for users with the Privacy Center license and the Manage Privacy Hold user permission.

## Fields

| Field | Details |
|---|---|
| `Detail` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The details of the Privacy Hold Reason, such as the business or legal purpose for the hold. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of the Privacy Hold Reason. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner of the account associated with this customer.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

# PrivacyJobSession

Represents the status of past, ongoing, and scheduled policy jobs in Privacy Center. This object is available in API version 59.0 and later.

This object is Read-only.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

This object is available for users with the Privacy Center license and the Manage Privacy Center Policies user permission.

## Fields

| Field | Details |
| --- | --- |
| `CreationDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time the policy job was created. |

| Field | Details |
| --- | --- |
| `CurrentObject` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the object that the policy job is currently processing. |
| `EndTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time the policy job finished executing. |
| `FailureLog` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The description of why the policy job failed to execute. |
| `JobStartType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>How the policy job session was started.<br>Possible values are:<br>• `manual`<br>• `scheduled` |
| `JobStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Represents the status of the policy job session.<br>Possible values are:<br>• `cancelled`<br>• `completed` |

| Field | Details |
| --- | --- |
| | • `failures`<br>• `inactive`<br>• `running`<br>• `running_next`<br>• `scheduled`<br>• `suspended` |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Represents the job session record. This is a serialized, automatically generated number field. |
| `OptionsProcessingFailed` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates that the policy job session failed to process the records with the deletion or masking rules in the policy. |
| `OptionsTraversalComplete` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates that the policy job session was completed without errors. |
| `OptionsTraversalFailed` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates that the policy job session was completed with errors. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the owner of the account associated with this customer.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PolicyDescription` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The description of the policy the job session is associated with. |
| `PolicyName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the policy the job session is associated with. |
| `PolicyType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of policy the job session is associated with.<br>Possible values are:<br>• `datamanagement`—Data Management.<br>• `datamask`—This policy type is reserved for future use.<br>• `rtbf`— Right to Be Forgotten. |
| `PrivacyPolicyDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the policy the job session is executing for. |

| Field | Details |
| --- | --- |
| | This field is a relationship field.<br>**Relationship Name**<br>PrivacyPolicyDefinition<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PrivacyPolicyDefinition |
| `PrivacyRtbfRequestId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the Right to Be Forgotten request the policy job is executing for.<br>This field is a relationship field.<br>**Relationship Name**<br>PrivacyRtbfRequest<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PrivacyRTBFRequest |

A snapshot of the policy is taken to maintain consistent metadata for the policy the job is for, in case changes are made to the policy while the job is executing. |
| `StartTime` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time the policy job session started executing. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**PrivacyJobSessionOwnerSharingRule on page 65**
Sharing rules are available for the object.

**PrivacyJobSessionShare on page 67**
Sharing is available for the object.

# PrivacyObjectSession

Represents the status of each object being processed in past, ongoing, and scheduled policy jobs in Privacy Center. This object is available in API version 59.0 and later.

See the status of each object as a policy executes. For example, if a Data Management policy includes an Account object and a Contact object, then a PrivacyObjectSession record is created for each object.

Each object in a policy has five potential queues to enter. The first queue captures and stores records targeted by the policy filters. If the first queue run fails to capture every record, then the object goes through three retry attempts to capture the remaining records. The fifth queue stores the record IDs of any records that weren't captured in any of the four attempts.

This object is Read-only.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

This object is available for users with the Privacy Center license and the Manage Privacy Center Policies user permission.

## Fields

| Field | Details |
| --- | --- |
| `CurrentEntity` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of the object in the policy. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Represents the job session record. This is a serialized, automatically generated number field. |
| `ObjectFailureLog` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>This field is reserved for later use. |
| `ObjectStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The policy execution status for the object.<br>Possible values are:<br>• `processing_completed`<br>• `processing_failed`<br>• `processing_ongoing`<br>• `processing_pending`<br>• `traversal_completed`<br>• `traversal_failed`<br>• `traversal_ongoing` |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the owner of the account associated with the customer that the policy was executed for.<br>This field is a polymorphic relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PolicyNode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the object in the serialized policy. This field associates the object session in the policy execution with the coordinating object in the Privacy Center policy. |
| `Position` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Represents a record's position in the batch queue for the object being processed. |
| `PrivacyJobSessionObjectId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the policy job session.<br>This field is a relationship field.<br>**Relationship Name**<br>PrivacyJobSessionObject<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PrivacyJobSession |
| `ProcessType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The type of action being executed on the object in the policy.<br>Possible values are:<br>• `delete`<br>• `mask`<br>• `retry_delete`<br>• `retry_mask` |
| `ProcessedFailures` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of records the policy execution failed to process. |
| `ProcessedSuccesses` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of records the policy execution successfully processed. |
| `ProcessedTotal` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of records processed in the policy job. |
| `Processor` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the deletion, masking, or traversal processor executing the policy job. |
| `Queue` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>This field is reserved for later use. |
| `QueueLength` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of records in the queue to be processed by the policy job. |
| `RecordsAffected` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of records processed by the policy job. |
| `Retry` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The queue number of the retry session after a failed policy execution attempt. Each attempt to retry the policy execution is put into a retry queue. |
| `TraversalEndTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The end time of the record-capturing phase for the object session. |
| `TraversalStartTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The start time of the record-capturing phase for the object session. |
| `UniqueConstraint` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>For internal use only. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**PrivacyObjectSessionOwnerSharingRule on page 65**
Sharing rules are available for the object.

**PrivacyObjectSessionShare on page 67**
Sharing is available for the object.

# PrivacyRequest

See details and monitor the status of Data Subject Access Requests made in Privacy Center. This object is available in API version 54.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is for Privacy Center customers with the ReadAllData or PrivacyDataAccess permissions.

## Fields

| Field | Details |
| --- | --- |
| `CompletedDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time when the request was completed. |
| `LastReferencedDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the Privacy Request. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner of the account associated with this customer.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `RelatedRecord` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The Data Subject Access Request (DSAR) or Right to Be Forgotten request (RTBF) record related to the request. |

| Field | Details |
| --- | --- |
| `StartedDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time when the request was started. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Represents the status of the request.<br>Possible values are:<br>• `Approved`<br>• `Cancelled`<br>• `Completed`<br>• `Created`<br>• `In Progress`<br>• `Rejected` |
| `TargetRecord` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The record that is listed in the request. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Represents the type of request that was made.<br>Possible values are:<br>• `DSAR`<br>• `GlobalOptOut`<br>• `RTBF` |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**PrivacyRequestFeed on page 55**
Feed tracking is available for the object.

**PrivacyRequestHistory on page 63**
History is available for tracked fields of the object.

**PrivacyRequestOwnerSharingRule on page 65**
Sharing rules are available for the object.

**PrivacyRequestShare on page 67**
Sharing is available for the object.

# PrivacyRTBFRequest

Represents a Right to Be Forgotten Request made in Privacy Center. This object is available in API version 59.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available for users with the Privacy Center license and the Manage Privacy Center Policies user permission.

## Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The description of the customer's Right to Be Forgotten request. |
| `JobRecord` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The record ID that is processed by the Right to Be Forgotten request. |

| Field | Details |
| --- | --- |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the Right to Be Forgotten request. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner of the account associated with this customer.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PolicyNameId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of the Right to Be Forgotten policy applied to this request.<br>This field is a relationship field.<br>**Relationship Name**<br>PolicyName<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PrivacyPolicyDefinition |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Represents the status of the request.<br>Possible values are:<br>• `Cancelled`<br>• `Complete`<br>• `Error`<br>• `Pending`<br>• `Scheduled` |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**PrivacyRTBFRequestHistory on page 63**
History is available for tracked fields of the object.

**PrivacyRTBFRequestOwnerSharingRule on page 65**
Sharing rules are available for the object.

**PrivacyRTBFRequestShare on page 67**
Sharing is available for the object.

# PrivacySessionRecordFailure

Represents error messages encountered during policy job executions in Privacy Center. This object is available in API version 59.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

This object is available for users with the Privacy Center license and the Manage Privacy Center Policies user permission.

## Fields

| Field | Details |
|---|---|
| `ErrorMessage` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The description of the error encountered during the policy job execution. |
| `ErrorType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of error encountered during the policy job execution. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Represents the job session record. This is a serialized, automatically generated number field. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the owner of the account associated with the customer that the policy was executed for.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PrivacyObjectSessionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the object in the policy job session.<br>This field is a relationship field.<br>**Relationship Name**<br>PrivacyObjectSession<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PrivacyObjectSession |
| `RecordIdNumber` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the record that failed to be processed by the policy job. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**PrivacySessionRecordFailureOwnerSharingRule on page 65**
Sharing rules are available for the object.

**PrivacySessionRecordFailureShare on page 67**
Sharing is available for the object.

# Problem

Problems represent the root cause data of one or more incidents. This object contains all the details of a problem, documenting the history of the problem from detection to closure. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `Category` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The type of problem. Administrators set field values. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A description of the problem. This field can store up to 32 KB of data, but only the first 255 characters appear in reports. |
| `Impact` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The problem's impact.<br>Possible values are:<br>• `High`<br>• `Low`<br>• `Medium`<br>The default value is 'High'. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time (in UTC) when the current user last accessed this record, a record related to this record, or a list view. |

| Field | Details |
| --- | --- |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time (in UTC) when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view. (`LastReferencedDate`) but not viewed it. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>This is a polymorphic relationship field that represents the user or group assigned to resolve the problem.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `ParentProblemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of a problem above one or more related problems in a problem hierarchy.<br>This is a relationship field.<br>**Relationship Name**<br>ParentProblem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Problem |
| `Priority` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The impact and urgency of the problem.<br>Possible values are:<br>• `Critical`<br>• `High`<br>• `Low`<br>• `Moderate`<br>The default value is 'Critical'. |
| `PriorityOverrideReason` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The reason why the priority should be changed or edited. |
| `ProblemNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The unique, system-generated problem number. |
| `ResolutionDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time (in UTC) when the problem was resolved. |
| `ResolutionSummary` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A description of the steps needed to resolve the incident. |
| `ResolvedById` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the user who resolved the problem.<br>This is a relationship field.<br>**Relationship Name**<br>ResolvedBy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `RootCauseSummary` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A description of the problem resolution or root cause. This field can store up to 32 KB of data, but only the first 255 characters display in reports. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Any custom or granular stages customers wants to track. This will be a dependent picklist.<br>Possible values are:<br>• `Closed`<br>• `Fix in Progress`<br>• `Known Error`<br>• `New`<br>• `Open`<br>• `Pending Change`<br>• `Resolved`<br>• `Root Cause Analysis`<br>• `Work In Progress`<br>The default value is 'New'. |
| `StatusCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The status of the problem.<br>Possible values are:<br>• `Closed`<br>• `FixInProgress`<br>• `KnownError`<br>• `New`<br>• `Open`<br>• `PendingChange`<br>• `Resolved`<br>• `RootCauseAnalysis`<br>• `WorkInProgress`<br>The default value is 'New'. |
| `SubCategory` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The type of problem. One level deeper than Category. Administrators set field values. |
| `Subject` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>A brief description of the problem. |
| `Urgency` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>A measure of how long a resolution can be delayed until an incident, problem, or change has a significant business impact.<br>Possible values are:<br>• `High`<br>• `Low`<br>• `Medium`<br>The default value is 'High'. |

# ProblemIncident

Represents a junction object that relates a Problem to an Incident. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `IssueId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>A polymorphic relationship field that represents a related Problem or Incident.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Issue<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Incident, Problem |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The auto-generated ID of the incident that's related to the problem. |
| `RelatedEntityType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The object type of the related entity.<br>Possible values are:<br>• `Incident` |

| Field | Details |
| --- | --- |
| | • `Problem` |
| `RelatedIssueId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>A polymorphic relationship field that represents a related Problem or Incident.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>RelatedIssue<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Incident, Problem |
| `RelationshipType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Shows how the Problem and Incident records relate to each other.<br>Possible values are:<br>• `Caused By`<br>• `Similar`<br>The default value is `Caused By`. |

# Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ProblemIncidentChangeEvent on page 68**
Change events are available for the object.

**ProblemIncidentFeed on page 55**
Feed tracking is available for the object.

**ProblemIncidentHistory on page 63**
History is available for tracked fields of the object.

# ProblemRelatedItem

Represents a junction object that relates a Problem to an Asset. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `AssetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The Asset ID that's linked to the Problem.<br>This field is a relationship field.<br>**Relationship Name**<br>Asset<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Asset |
| `Comment` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A description of the problem as it relates to the item. |
| `ImpactLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The related item's impact on the problem.<br>Possible values are:<br>• `High` |

| Field | Details |
| --- | --- |
| | • `Low`<br>• `Medium`<br>The default value is `High`. |
| `ImpactType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The effect of the problem-related item on business operations.<br>Possible values are:<br>• `Business-Blocking`<br>• `Not Business-Blocking`<br>• `Partially Business-Blocking`<br>The default value is `Business-Blocking`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The auto-generated ID of the problem-related item. |
| `ProblemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The Problem ID that's related to the Asset.<br>This field is a relationship field.<br>**Relationship Name**<br>Problem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Problem |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ProblemRelatedItemChangeEvent on page 68**
Change events are available for the object.

**ProblemRelatedItemFeed on page 55**
Feed tracking is available for the object.

**ProblemRelatedItemHistory on page 63**
History is available for tracked fields of the object.

# ProcessDefinition

Represents the definition of a single approval process.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`

Portal and communities users with the Customer Community Plus and Partner Community licenses can access this object. All users in org with approvals enabled have read access to ProcessDefinition.

## Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>A description of this process, with a maximum of 3,000 characters. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique process name, used internally. |
| `LockType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The type of lock applied to the record being approved. When a record is in the approval process, it's always locked, and only an administrator can edit it. However, the currently assigned approver can also be allowed to edit the record.<br>• Total<br>• Admin<br>• Owner<br>• Workitem<br>• Node<br>• none |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The external name of the process; the name seen by users. |
| `State` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The current state of this process.<br>• Active<br>• Inactive<br>• Obsolete |
| `TableEnumOrId` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Specifies the object associated with the approval process, such as Account or Contact. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of this process. |

| Field | Details |
| --- | --- |
| | • Approval Process—Used to control the action taken for a record.<br>• State-based Process—Used internally to track various control processes, such as for developing Salesforce Knowledge articles. |

## Usage

Use this object to read the description of an approval process. The definition is read-only.

# ProcessException

Represents a business exception, such as a processing failure on an order summary. A separate process is required to resolve the failure that caused the process exception before processing can continue. This object is available in API version 50.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `AttachedToId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the object associated with the ProcessException.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>AttachedTo<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AsyncOpSyndicationFeedFile, AsyncOperationTracker<br>CreditMemo, FulfillmentOrder, Invoice, Order, OrderItem, OrderItemSummary, OrderPaymentSummary, OrderSummary, Payment, PaymentAuthorization, Refund, ReturnOrder |
| `CaseId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the case associated with the ProcessException.<br>This field is a relationship field.<br>**Relationship Name**<br>Case<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Case |
| `Category` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ProcessingException type. You can customize the category picklist to represent your business processes.<br>Possible values are:<br>• `Fulfillment`<br>• `Invoicing`<br>• `Order Activation`<br>• `Order Approval`<br>• `Order To Asset`<br>• `Order Item Summary To Asset`<br>• `Order To Billing Schedule`<br>• `Payment`<br>The default value is `Order Activation`. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for the currency of the OrderSummary associated with the ProcessException.<br>Possible values are:<br>• `DKK`—Danish Krone<br>• `EUR`—Euro |

| Field | Details |
| --- | --- |
| | • GBP—British Pound<br>• USD—U.S. Dollar<br>The default value is USD. |
| Description | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Detailed description of the ProcessException. |
| ExternalReference | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of external entities associated with the ProcessException. |
| FlowOrchestrationInstRelaObj | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The flow orchestration instance related object associated with this record.<br>This field is a relationship field.<br>**Relationship Name**<br>FlowOrchInstRelaObj<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>FlowOrchestrationInstRelaObj |
| GroupById | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID used in the entity to group exceptions, such as the Async Operation Tracker.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>GroupBy |

| Field | Details |
| --- | --- |
| | **Refers To**<br>AsyncOperationTracker |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed. |
| `Message` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Short description of the ProcessException |
| `OrderSummaryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the OrderSummary associated with the ProcessException. The ProcessException component is displayed on this OrderSummary.<br>This field is a relationship field.<br>**Relationship Name**<br>OrderSummary<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderSummary |

| Field | Details |
| --- | --- |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the User who currently owns this ProcessException. Default value is the User who created the record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `Priority` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Resolution priority for the ProcessException. You can customize the priority picklist to represent your business processes.<br>Possible values are:<br>• `High`<br>• `Low`<br>The default value is `Low`. |
| `ProcessExceptionNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The unique name of the ProcessException, formatted as PE-(00000000). |
| `Severity` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Severity of the ProcessException. Each severity value corresponds to one severity category. You can customize the severity picklist to represent your business processes. If you customize the severity picklist, include at least one severity value for each severity category.<br>Possible values are:<br>• `High`<br>• `Low`<br>The default value is `High`. |
| `SeverityCategory` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Severity category of the ProcessException. Each severity category corresponds to one or more severity values. The severity category is used to show the severity icon in the ProcessException list view.<br>Possible values are:<br>• `HIGH`<br>• `LOW`<br>• `MEDIUM` |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Status of the ProcessException. Each status corresponds to one status category, shown here in parentheses. You can customize the status picklist to represent your business processes. If you customize the status picklist, include at least one status value for each status category.<br>Possible values are:<br>• `Ignored` (Inactive)<br>• `New` (Active)<br>• `Paused` (Inactive)<br>• `Resolved` (Resolved)<br>• `Triaged` (Active)<br>• `Voided` (Inactive)<br>The default value is `New`. |

| Field | Details |
| --- | --- |
| `StatusCategory` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Status category of the ProcessException. Each status category corresponds to one or more statuses.<br>Possible values are:<br>• `ACTIVE`<br>• `INACTIVE`<br>• `RESOLVED` |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ProcessExceptionChangeEvent (API version 62.0)**
Change events are available for the object.

**ProcessExceptionOwnerSharingRule**
Sharing rules are available for the object.

**ProcessExceptionOwnerSharingRule**
Sharing rules are available for the object.

# ProcessFlowMigration

Represents a process's migrated criteria and the resulting migrated flow. This object is available in API version 58.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Lanaguage of the `MasterLabel`.<br>Possible values are:<br>• `af`—Afrikaans<br>• `am`—Amharic<br>• `ar`—Arabic<br>• `ar_AE`—Arabic (United Arab Emirates)<br>• `ar_BH`—Arabic (Bahrain)<br>• `ar_DZ`—Arabic (Algeria)<br>• `ar_EG`—Arabic (Egypt)<br>• `ar_IQ`—Arabic (Iraq)<br>• `ar_JO`—Arabic (Jordan)<br>• `ar_KW`—Arabic (Kuwait)<br>• `ar_LB`—Arabic (Lebanon)<br>• `ar_LY`—Arabic (Libya)<br>• `ar_MA`—Arabic (Morocco)<br>• `ar_OM`—Arabic (Oman)<br>• `ar_QA`—Arabic (Qatar)<br>• `ar_SA`—Arabic (Saudi Arabia)<br>• `ar_SD`—Arabic (Sudan)<br>• `ar_SY`—Arabic (Syria)<br>• `ar_TN`—Arabic (Tunisia)<br>• `ar_YE`—Arabic (Yemen)<br>• `bg`—Bulgarian<br>• `bn`—Bengali<br>• `bs`—Bosnian<br>• `ca`—Catalan<br>• `cs`—Czech<br>• `cy`—Welsh<br>• `da`—Danish |

# ProcessInstance

Represents an instance of a single, end-to-end approval process. Use this and the node, step, and workitem process instance objects to create approval history reports.

Note: Exceptions apply to approval history data retrieved with this object and are available only via SOAP API. For each approval process instance that was pending when Summer '14 became available for your organization, some field values are never populated or are populated only after the rollout. Other fields are populated only after the approval process instance is next acted upon—such as when a user approves, rejects, or reassigns an approval request—after the Summer '14 rollout.

For approval process instances that were completed before the Summer '14 rollout, all Process Instance fields are automatically populated, with one exception: `CompletedDate` is never populated for approval process instances that were completed before January 1, 2013. For approval process instances that were pending during the Summer '14 rollout, all ProcessInstance fields are automatically populated, with two exceptions: `CompletedDate` and `LastActorId` are populated only after the approval process instance is complete.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| CompletedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The completion date and time of the approval process. The `ElapsedTimeDay`, `ElapsedTimeHours`, and `ElapsedTimeMinutes` field values are calculated using `CompletedDate`. |
| ElapsedTimeInDays | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
