# CONTENTS

**Chapter 1:** Overview of Salesforce Objects and Fields . . . . . 1

Release Notes . . . . . 2
Primitive Data Types . . . . . 2
Field Types . . . . . 4
API Field Properties . . . . . 11
Required Fields . . . . . 11
System Fields . . . . . 12
Frequently Occurring Fields . . . . . 13
Compound Fields . . . . . 15
    Address Compound Fields . . . . . 15
    Geolocation Compound Field . . . . . 18
    Compound Field Considerations and Limitations . . . . . 19
Custom Objects . . . . . 21
Custom Fields . . . . . 24
AppExchange Object Prefixes and the API . . . . . 25
Relationships Among Standard Objects and Fields . . . . . 25
Factors that Affect Data Access . . . . . 27
Field and Type Differences in Salesforce Apps and APIs . . . . . 29
External Objects . . . . . 29
Big Objects . . . . . 31
    Define and Deploy Custom Big Objects . . . . . 32
Object Interfaces . . . . . 39

**REFERENCE** . . . . . 40

**Chapter 2:** Salesforce Object Behavior . . . . . 40

Object Groups . . . . . 43
    Salesforce Common Objects . . . . . 43
    Salesforce Cloud Objects . . . . . 44
    Salesforce High-Scale Objects . . . . . 44
    Salesforce External Data Objects . . . . . 50
Salesforce Object Types . . . . . 51
Object Cheatsheet . . . . . 52

**Chapter 3:** Associated Objects (Feed, History, OwnerSharingRule, Share, and ChangeEvent Objects) . . . . . 55

StandardObjectNameFeed . . . . . 55
StandardObjectNameHistory . . . . . 63
StandardObjectNameOwnerSharingRule . . . . . 65

StandardObjectNameShare . . . 67
StandardObjectNameChangeEvent . . . 68

**Chapter 4:** Custom Objects . . . 78

FSL__Time_Dependency__c . . . 78
Custom Metadata Type__mdt . . . 80
Custom Object__c . . . 83
Custom Object__Feed . . . 87

**Chapter 5:** Object Interfaces . . . 95

PriceAdjustmentGroup . . . 96
PriceAdjustmentItem . . . 98
SalesTransaction . . . 103
SalesTransactionItem . . . 104

**Chapter 6:** Standard Objects . . . 115

**Chapter 7:** Data Model . . . . . 5935

**INDEX** . . . . . 5936

# CHAPTER 1 Overview of Salesforce Objects and Fields

In this chapter ...

- Salesforce Objects Release Notes
- Primitive Data Types
- Field Types
- API Field Properties
- Required Fields
- System Fields
- Frequently Occurring Fields
- Compound Fields
- Custom Objects
- Custom Fields
- AppExchange Object Prefixes and the API
- Relationships Among Standard Objects and Fields
- Factors that Affect Data Access
- Field and Type Differences in Salesforce Apps and APIs
- External Objects
- Big Objects
- Object Interfaces

Salesforce objects and fields are analogous to database tables and the table columns. Objects and fields structure data. For example, the central object in the Salesforce data model represents accounts—companies and organizations involved with your business, such as customers, partners, and competitors.

The term "record" describes a particular occurrence of an object (such as a specific account like "IBM" or "United Airlines" that is represented by an Account object). A record is analogous to a row in a database table.

Objects already created for you by Salesforce are called standard objects. Objects that you create in your organization with the user interface or with the Metadata API are called custom objects. Objects you create that map to data stored outside your organization are called external objects.

While this document describes all of the objects available in the API, your applications work with only the objects that you are authorized to access. Programmatic access to objects is determined by the objects defined in your organization, your organization configuration, your user permissions and access settings (which are configured by your organization's Salesforce admin), your data sharing model, and other factors related specifically to the object.

Most of the objects accessible through the API are read-write objects. However, there are a few objects that are read-only. This fact is noted in the description for the object.

For details about the data types and size restrictions for each object's fields, see the *Salesforce Field Reference Guide*.

# Salesforce Objects Release Notes

Use the Salesforce Release Notes to learn about the most recent updates and changes to Salesforce Objects.

For information on updates to Salesforce Objects with broad availability, see New and Changed Objects in the Salesforce Release Notes.

For changes to objects with limited availability, see the release notes for each product area. Browse all of the most recent Salesforce Release Notes.

# Primitive Data Types

The API uses the following primitive data types:

| Value | Details |
|---|---|
| base64 | Base 64-encoded binary data. Fields of this type are used for storing binary files in Attachment records, Document records, and Scontrol records. In these objects, the `Body` or `Binary` field contains the (base64 encoded) data, while the `BodyLength` field defines the length of the data in the `Body` or `Binary` field. In the Document object, you can specify a URL to the document instead of storing the document directly in the record. |
| boolean | Boolean fields have one of these values: `true` (or 1), or `false` (or 0). |
| byte | A set of bits. |
| date | Date data. Fields of this type contain date values, such as `ActivityDate` in the Event object. Unlike dateTime fields, date fields contain no time value—the time portion of a date field is not relevant and is always set to midnight in the Coordinated Universal Time (UTC) time zone.<br>If you specify a date value in a query, you can filter on date fields only. |
| dateTime | Date/time values (timestamps). Fields of this type handle date/time values (timestamps), such as `ActivityDateTime` in the Event object or the `CreatedDate`, `LastModifiedDate`, or `SystemModstamp` in many objects. Regular dateTime fields are full timestamps with a precision of one second. They are always transferred in the Coordinated Universal Time (UTC) time zone. In your client application, you might need to translate the timestamp to or from a local time zone.<br>If you specify a dateTime value in a query, you can filter on dateTime fields only.<br>Development tools differ in the way that they handle time data. Some development tools report the local time, while others report only the Coordinated Universal Time (UTC) time zone. To determine how your development tool handles time values, refer to its documentation.<br>Note: The Event object has a `DurationInMinutes` field that specifies the number of minutes for an event. Even though this is a temporal value, it is an integer type—not a dateTime type. |
| double | Double values. Fields of this type can contain fractional portions (digits to the right of the decimal place), such as `ConversionRate` in CurrencyType. In the API, all non-integer values (such as Currency Field Type and Percent Field Type) contain values of type double. Some restrictions may be applied to double values:<br>• `scale`: Maximum number of digits to the right of the decimal place.<br>• `precision`: Total number of digits, including those to the left and the right of the decimal place |

| Value | Details |
| --- | --- |
| | The maximum number of digits to the left of the decimal place is equal to `precision` minus `scale`. In the Salesforce user interface, precision is defined differently—it is the maximum number of digits allowed to the left of the decimal place.<br><br>Values can be stored in scientific notation if the number is large enough (or, for negative numbers, small enough), as indicated by the W3C XML Schema Part 2: Datatypes Second Edition specification.<br><br>Warning: When the user sets the precision in custom fields in the Salesforce application, it displays the precision set by the user, even if the user enters a more precise value than defined for those fields. However, when you set the precision in custom fields using the API, no rounding occurs when the user retrieves the number field. |
| int | Fields of this type contain numbers with no fractional portion (digits to the right of a decimal place), such as the `NumberOfEmployees` in an Account. For integer fields, `digits` specifies the maximum number of digits that an int can have. |
| long | Large integers. They are similar to the int type but can hold a wider range of numbers. The smallest possible value for long is -9223372036854775808 and the largest possible value is 9223372036854775807. For long fields, `digits` specifies the maximum number of digits that the number can have. |
| string | Character strings. Fields that are of data type `string` contain text and some have length restrictions depending on the data being stored. For example, in the Contact object, the `FirstName` field is 40 characters, the `LastName` field is 80 characters, the `MailingStreet` is 255 characters.<br><br>Note: For fields that contain strings, behavior is different beginning with API version 15.0. In API versions previous to 15.0, if you specify a value for a field, and that value is too large, the value is truncated. For API version 15.0 and later, if a value is specified that is too large, the operation fails and the fault code `STRING_TOO_LONG` is returned. AllowFieldTruncationHeader allows you to specify that the previous behavior, truncation, be used instead of the new behavior in API versions 15.0 and later. This header has no effect in versions 14.0 and earlier. The affected fields are: anyType, email, encryptedstring, multipicklist, phone, picklist, string, and textarea. |
| time | Time values. Fields of this type handle time values, such as `FridayEndTime` in the BusinessHours object, with a precision of one millisecond.<br><br>Development tools differ in the way that they handle time data. Some development tools report the local time, while others report only the Coordinated Universal Time (UTC) time zone. To determine how your development tool handles time values, refer to its documentation. |

These data types are used in the SOAP messages that are exchanged between your client application and the API. When writing your client application, follow the data typing rules defined for your programming language and development environment. Your development tool handles the mapping of typed data in your programming language with these SOAP data types.

The primitive data types are:

- specified in the World Wide Web Consortium's publication *XML Schema Part 2: Data Types* at the following URL: `http://www.w3.org/TR/xmlschema-2/`.
- enumerated in the `SOAPType` field of the Field type, which is described in the `fields` property of the DescribeSObjectResult.

Primitive types are used as a standardized way to define, send, receive, and interpret basic data types in the SOAP messages exchanged between client applications and the API. In addition, primitive data types are interpreted in a Salesforce-specific way, which is useful for display formatting and for numeric conversion (adding values of different currencies).

For example, Salesforce chooses to interpret a double value passed via SOAP as a `double` in a number of possible ways, depending on the field definition. If the field type for that data is currency, Salesforce handles the display of the data by prepending it with a currency symbol and inserting a decimal for precision. Similarly, if the field type is percent, Salesforce handles the display of the data by appending a percent sign (%). Regardless of the field type, however, the value is sent in the SOAP message as a double.

The API uses data types called field types that are defined in the WSDLs. For more information, see Field Types.

# Field Types

In addition to the primitive data types, the API defines the following data types for fields.

**Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

**Note:** For fields that contain strings, behavior is different beginning with API version 15.0. In API versions previous to 15.0, if you specify a value for a field, and that value is too large, the value is truncated. For API version 15.0 and later, if a value is specified that is too large, the operation fails and the fault code `STRING_TOO_LONG` is returned. AllowFieldTruncationHeader allows you to specify that the previous behavior, truncation, be used instead of the new behavior in API versions 15.0 and later. This header has no effect in versions 14.0 and earlier. The affected fields are: anyType, email, encryptedstring, multipicklist, phone, picklist, string, and textarea.

| Field Type | What the Field Contains |
|---|---|
| address | A compound data type that contains address field data. See Address Compound Fields. |
| anyType | Polymorphic data type that returns string, picklist, reference, Boolean, currency, int, double, percent, ID, date, datetime, url, or email data depending on the kind of field involved. See AnyType Field Type. |
| calculated | Fields that are defined by a formula. See Calculated Field Type. |
| combobox | A combobox, which includes a set of enumerated values and allows the user to specify a value not in the list. See ComboBox Field Type. |
| currency | Currency values. See Currency Field Type. |
| DataCategoryGroupReference | Reference to a data category group or a category unique name. See DataCategoryGroupReference Field Type. |
| email | Email addresses. See Email Field Type. |
| encryptedstring | Encrypted text fields contain any combination of letters, numbers, or symbols that are stored in encrypted form. You can set a maximum length of up to 175 characters. Available in API versions 11.0 and later. |
| floatarray | Reserved for future use. |
| ID | Primary key field for the object. See ID Field Type.<br>**Note:** Most Web services tools, including .NET and WSC, map the ID simple type defined in the API WSDL (Enterprise or Partner) to a string. However, other tools generate a specific ID |

| Field Type | What the Field Contains |
|---|---|
| | class to represent the ID simple type. Consult your Web services toolkit documentation for more information. |
| JunctionIdList | A string array of referenced ID values that represent the many-to-many relationship of an underlying junction entity. Query and manipulate the string array to query and manipulate the underlying junction entities in a single API call. See JunctionIdList Field Type.<br>Warning: Adding a `JunctionIdList` field name to the `fieldsToNull` property deletes all related junction records. This action can't be undone. |
| location | A compound data type that contains latitude and longitude values for geolocation fields. See Geolocation Compound Field. |
| masterrecord | When records are merged, the ID of the record that is saved (the other records are deleted). |
| multipicklist | Multi-select picklists, which include a set of enumerated values from which multiple values can be selected. See Multi-Select Picklist Field Type. |
| percent | Percentage values. See Percent Field Type. |
| phone | Phone numbers. Values can include alphabetic characters. Client applications are responsible for phone number formatting. See Phone Field Type. |
| picklist | Picklists, which include a set of enumerated values from which one value can be selected. See Picklist Field Type. |
| reference | Cross-references to a different object. Analogous to a foreign key field in SQL. See Reference Field Type. |
| textarea | String that's displayed as a multiline text field. See Textarea Field Type. |
| textarray | Reserved for future use. |
| url | URL values. Client applications commonly display URLs as hyperlinks. See URL Field Type. |

These field types extend primitive data types. Many of these field types follow common data typing conventions that are made explicit in their metadata. However, certain field types have unique characteristics that you must understand before using them in your client application.

These field types apply to both standard and custom fields. They're enumerated in the `type` field of the Field Types type, which is described in the `fields` property of the DescribeSObjectResult.

Note: Some numeric fields have precision and scale limits. In addition, certain text fields have length restrictions. These restrictions are enforced when you `create()` or `update()` objects. However, the API can return data that doesn't meet these restrictions.

## AnyType Field Type

The `anyType` field type is dynamic and returns `string`, `date`, `number`, or `boolean` data depending on the kind of field involved. For example, the element in a SOAP message has an `xsi:type="xsd:string"` attribute if the field is of type `string`. This field type is used in history objects for the `NewValue` and `OldValue` fields. It's also a valid field type for `fieldType` and `soapType`.

Note: Most SOAP toolkits automatically deserialize this element into the correct native type.

## Calculated Field Type

Calculated fields are read-only fields in the API. These fields are defined by a formula, which is an algorithm that derives its value from other fields, expressions, or values. You can filter on these fields in SOQL, but you don't replicate these fields. The length of text calculated fields is 3,900 characters or less—anything longer is truncated.

Calculated fields are called formula fields in the Salesforce user interface.

## ComboBox Field Type

A combobox is a picklist that also allows users to type a value that isn't already specified in the list. A combobox is defined as a string value.

## Currency Field Type

Currency fields contain currency values, such as the `ExpectedRevenue` field in a Campaign, and are defined as type double.

For orgs that have the multicurrency option enabled, the `CurrencyIsoCode` field is defined for any object that can have currency fields. The `CurrencyIsoCode` field and currency fields are linked in a special way. On any specific record, the `CurrencyIsoCode` field defines the currency of that record. Therefore, the values of all currency fields on that record are expressed in that currency.

For most cases, clients don't need to consider the linking of the `CurrencyIsoCode` field and the currency fields on an object. However, consider these points.

- The `CurrencyIsoCode` field exists only for those orgs that have enabled multicurrency support.
- When you display the currency values in a user interface, it's recommended that you prepend each currency value with its `CurrencyIsoCode` value and a space separator.
- The `CurrencyIsoCode` field is a restricted picklist field. The set of allowable values, defined in the CurrencyType object, can vary from org to org. Attempting to set it to a value that isn't defined for an org causes the operation to be rejected.
- If you update the `CurrencyIsoCode` field on an object, it implicitly converts all currency values on that object to the new currency code. The field uses the conversion rates that are defined for that org in the Salesforce user interface. If you specify currency values in that same `update()` call, the new currency values you specify are interpreted in the new `CurrencyIsoCode` field value, without conversion.
- The picklist values in a `CurrencyIsoCode` field don't exactly match the labels displayed in Salesforce.

To perform currency conversions, client applications can look up the `CurrencyIsoCode` in the CurrencyType object.

## DataCategoryGroupReference Field Type

A data category group has categories that classify articles in Salesforce Knowledge and questions in the Answers feature. Every article and question object has two fields of type DataCategoryGroupReference which contain the category group and category unique name. You can use the `describeDataCategoryGroups()` and `describeDataCategoryGroupStructures()` calls to retrieve the category groups and categories related to these objects.

## Email Field Type

Email fields contain email addresses. Client applications are responsible for specifying valid and properly formatted email addresses in `create()` and `update()` calls.

## ID Field Type

With rare exceptions, all objects in the API have a field of type ID. The field is named `Id` and contains a unique identifier for each record in the object. It's analogous to a primary key in relational databases. When you `create()` a new record, the Web service generates an ID value for the record, ensuring that it's unique within your org's data. You can't use the `update()` call on ID fields. Because the ID value stays constant over the lifetime of the record, you can refer to the record by its ID value in subsequent API calls. Also, the ID value contains a three-character code that identifies the object type, which client applications can retrieve via the `describeSObjects()` call.

In addition, certain objects, including custom objects, have one or more fields of type `reference` that contain the ID value for a related record. These fields have names that end in the suffix "Id", for example, `OwnerId` in the account object. `OwnerId` contains the ID of the user who owns that object. Unlike the field named `Id`, `reference` fields are analogous to foreign keys and can be changed via the `update()` call. For more information, see Reference Field Type.

Some API calls, such as `retrieve()` and `delete()`, accept an array of IDs as parameters—each array element uniquely identifies the row to retrieve or delete. Similarly, the `update()` call accepts an array of sObject records—each sObject contains an `Id` field that uniquely identifies the sObject.

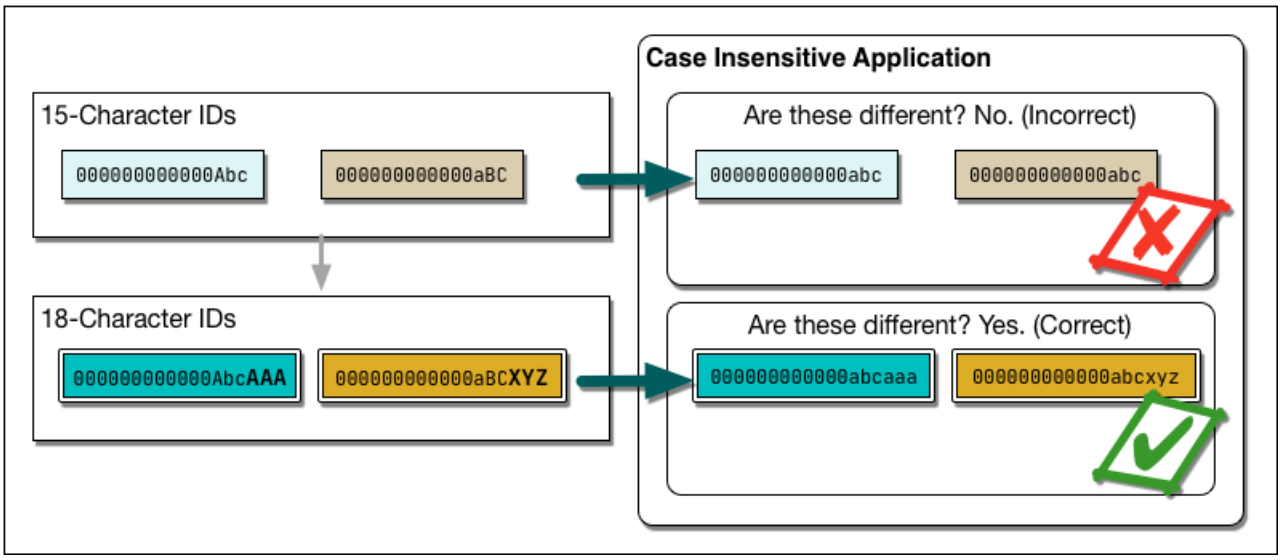
Note: Most Web services tools, including .NET and WSC, map the ID simple type defined in the API WSDL (Enterprise or Partner) to a string. However, other tools generate a specific ID class to represent the ID simple type. Consult your web services toolkit documentation for more information.

**15-Character and 18-Character IDs, and Case Sensitivity**

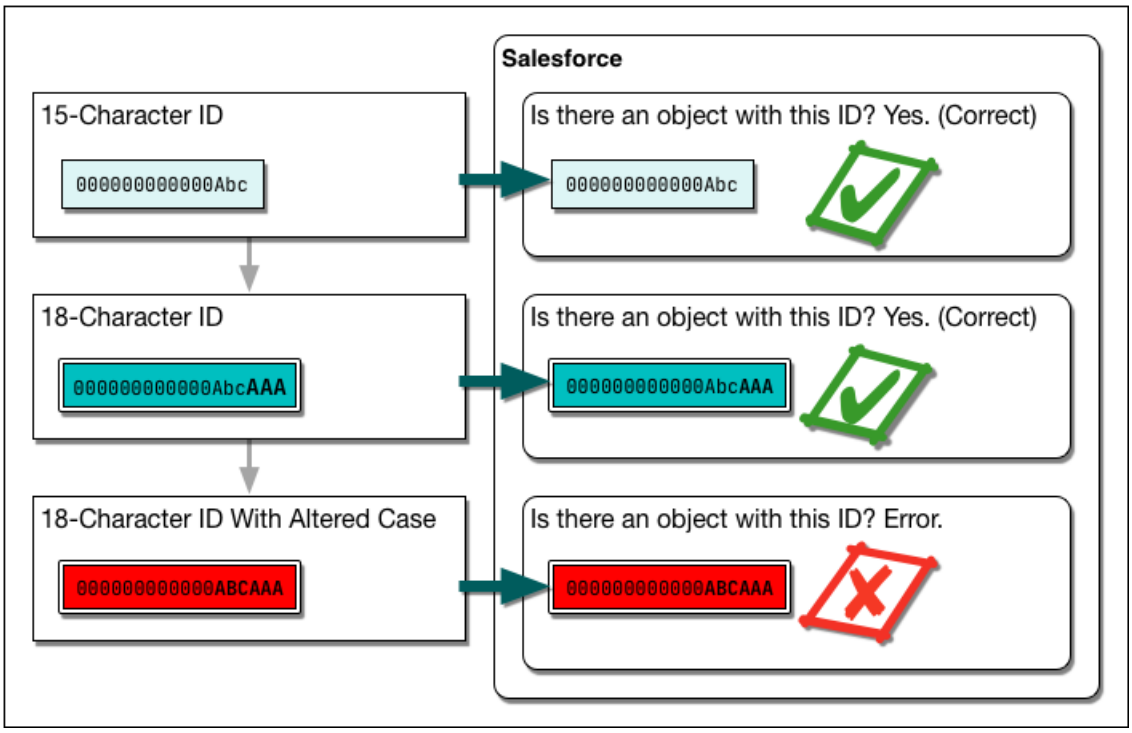
Salesforce IDs are often represented by 15-character, base-62, strings. Each of the 15 characters can be a numeric digit (0-9), a lowercase letter (a-z), or an uppercase letter (A-Z). These 15-character IDs are *case-sensitive*. To Salesforce, `000000000000Abc` isn't the same as `000000000000aBC`.

Don't use 15-character IDs in case-insensitive applications like Microsoft Access™. These applications incorrectly consider `000000000000Abc` to be the same as `000000000000aBC`.

To avoid these issues, all API calls return an 18-character ID that's *case-safe*, meaning that it's compared correctly by case-insensitive applications. The extra 3 characters at the end of the ID encode the case of the preceding 15 characters. Use 18-character IDs in all API calls when creating, editing, or deleting data.



Note: 18-character IDs are *case-safe*, but not *case-insensitive*. In other words, if you manually change the case of an 18-character ID, Salesforce detects that the three extra characters don't match the case of the preceding characters and returns an error.



To convert the 18-character ID to a 15-character version, you may truncate the last three characters. However, Salesforce recommends that you use the 18-character ID.

## JunctionIdList Field Type

Starting in API version 34.0, the `JunctionIdList` field type lets you directly manipulate the many-to-many relationship of an entity. You no longer need to manipulate underlying junction entity records. `JunctionIdList` fields can be queried and updated like any

other field on the entity. Queries or updates to `JunctionIdList` fields act as queries or updates to the underlying junction entity records. Fields of type `JunctionIdList` appear in the WSDL as an unbounded array of type ID.

Query `JunctionIdList` fields like any other field. For example, this SOQL query includes `TaskWhoIds`, which is a `JunctionIdList` field.

```
SELECT Id, Subject, TaskWhoIds
FROM Task
WHERE LastModifiedDate > LAST_WEEK
```

The total number of records allowed in a single SOQL query can't exceed 500 when one of the fields being queried on is a `JunctionIdList` type. If the number of IDs in the query exceeds 500, the query fails and returns the `MALFORMED_QUERY` exception.

The restriction is (total number of entity records) * (total number of records in the entity's `JunctionIdList` field) must equal less than 500. For example, you query on the EventWhoIds `JunctionIdList` field for a list of events. There are 101 events and for each event, there are 5 records in the EventWhoIds `JunctionIdList`. Therefore, the SOQL query would be querying for 505 records in total, which is over the 500 limit, and you get an exception.

To avoid exceeding the limit, reformulate the query so it includes fewer than 500 junction IDs or query a parent/child relationship instead of junction IDs.

All `JunctionIdLists` are read-only in Apex. Attempting to set a new value on an existing object results in an exception.

## Multi-Select Picklist Field Type

Multi-select picklist fields contain a list of one or more items from which a user can choose multiple items. One of the items can be configured as the default item. Selections are maintained as a string containing a series of attributes delimited by semicolons. For example, a query can return the values of a multivalue picklist as "first value; second value; third value". For information on querying multi-select picklists, see Query Multi-Select Picklists in the Salesforce SOQL and SOSL Reference Guide.

## Percent Field Type

Percent fields contain percent values. Percent fields are defined as type double.

## Phone Field Type

Phone fields contain phone numbers, which can include alphabetic characters. Client applications are responsible for phone number formatting.

## Picklist Field Type

Picklist fields contain a list of one or more items from which a user chooses a single item. They display as dropdown lists in the Salesforce user interface. One of the items can be configured as the default item.

In the Field object associated with the DescribeSObjectResult, the `restrictedPicklist` field defines whether the field is a restricted picklist or not. The API doesn't enforce the list of values for advisory (unrestricted) picklist fields on `create()` or `update()`. When inserting an unrestricted picklist field that doesn't have a PicklistEntry, the system creates an "inactive" picklist value. This value can be promoted to an "active" picklist value by adding the picklist value in the Salesforce user interface.

When creating new, inactive picklists, the API checks to see if there's a match. This check is case-insensitive.

In the Field object associated with the DescribeSObjectResult, the `picklistValues` field contains an array of items (PicklistEntry objects). Each PicklistEntry defines the item's label, value, and whether it's the default item in the picklist (a picklist has no more than one default value).

Enumerated fields support localization of the labels to the language of the user. For example, for the `Industry` field on an Account, the value "Agriculture" can be translated to various languages. The enumerated field values are fixed and don't change with a user's language. However, each value may have a specified "label" field that provides the localized label for that value. Always use the value when inserting or updating a field. The `query()` call always returns the value, not the label. Use the corresponding label for a value in the describeSObjectResult when displaying the value to the user in any user interface.

The API supports the retrieval of the certain picklists in the following objects: CaseStatus, ContractStatus, LeadStatus, OpportunityStage, PartnerRole, SolutionStatus, TaskPriority, and TaskStatus. Each object represents a value in the respective picklist. These picklist entries always specify some other piece of information, such as whether the status is converted. Your client application can invoke the `query()` call on any of these objects (such as CaseStatus) to retrieve the set of values in the picklist. The application can then use that information while processing other objects (such as Case objects) to find more information about those objects (such as a given case). These objects are read-only via the API. To modify items in picklists, you must use the Salesforce user interface.

## Reference Field Type

A reference field contains an `Id` value that points to a unique record (usually the parent record) on another object. A reference field is analogous to the concept of a foreign key in relational databases. The name of a reference field ends, by convention, with the letters `Id` (such as `CaseId` or `OpportunityId`). For example, in the OpportunityCompetitor object, the `OpportunityId` field is a reference field that points to the Opportunity object. It contains an ID value that uniquely identifies an Opportunity record.

Sometimes, an object can refer to another object of its same type. For example, an Account can have a parent link that points to another Account.

The Event and Task objects both have `WhoId` and `WhatId` cross-reference ID fields. Each of these cross-reference fields can point to one of several other objects. The `WhoId` field can point to a Contact or Lead, and the `WhatId` field can point to an Account, Opportunity, Campaign, or Case. In addition, if the `WhoId` field refers to a Lead, then the `WhatId` field must be empty.

You can describe and query each cross-referenced object. When you query a cross-reference ID field, it returns an object ID of the appropriate type. You can then query that ID to get additional information about the object, using the ID in the `id` field for that query.

The cross-reference ID field value is either:

- a valid record in your organization, or
- an empty value, which indicates an empty reference

The cross-reference ID field value, if non-`null`, is guaranteed to be an object in your org. However, it isn't guaranteed that you can query that object. Users with the "View All Data" permission can always query that object. Other users can be restricted from viewing or editing the referenced object.

When specifying a value for a cross-reference ID field in a `create()` or `update()` call, the value must be a valid value of type ID, and the user must have appropriate access to that object. The exact requirements vary from field to field.

## Textarea Field Type

Textarea fields contain text that can be longer than 4,000 bytes. Unlike string fields, textarea fields can't be specified in the WHERE clause of a queryString of a `query()` call. To filter records on this field, you must do so while processing records in the QueryResult. For fields with this restriction, its `filterable` field in the Field type (described in the `fields` property of the DescribeSObjectResult) is `false`.

## URL Field Type

URL fields contain URLs. Client applications are responsible for specifying valid and properly formatted URLs in `create()` and `update()` calls.

# API Field Properties

Fields on objects represent the details of each object and are analogous to columns in a database table. Each field on each object has one or more of the following properties:

| Property | Description |
|---|---|
| Aggregatable | Can be used by one of the SOQL aggregate functions. |
| Autonumber | The API creates an autonumber. |
| Create | Value for the field can be specified during create using the API. |
| Defaulted on create | If no other value is specified when created, a default value is supplied. |
| Delete | Value for the field can be deleted using the API. |
| Filter | Can be used as filter criteria in a SOQL query FROM or WHERE clause. |
| Group | Can be included in the GROUP BY clause of a SOQL query (`true`) or not (`false`). Available in API version 18.0 and later. |
| idLookup | Can be used to specify a record in an upsert call. The `Id` field of each object has this property and some `Name` fields. There are exceptions, so check for the property in any object you wish to upsert. |
| Namepointing | Indicates whether the field's value is the Name of the parent of this object (`true`) or not (`false`). Used for objects whose parents can be more than one type of object. For example, a task can have an account or a contact as a parent. |
| Nillable | The field can contain a null value. |
| Query | The field can be queried with SOQL using the API. |
| Restricted picklist | A picklist whose values are restricted to those values defined by a Salesforce admin. Users can't load unapproved values through the API. |
| Retrieve | Value of the field can be retrieved using the API. |
| Sort | Indicates whether a query can sort on this field (`true`) or not (`false`). |
| Update | Can be updated using the API. |

# Required Fields

Required fields must have a non-`null` value. This rule affects the create and update calls:

- In a create call, the system automatically populates the data for certain required fields (such as system fields and the object ID fields). Similarly, if a required field has a default value (its `defaultedOnCreate attribute` is set to `true`, then the system implicitly assigns a value for this field when the object is created, even if a value for this field is not explicitly passed in on the create

call. For all other required fields, such as ID fields that are analogous to foreign keys in SQL, a client application must explicitly assign a value when the object is created (it cannot be `null`).

- In updates, a required field cannot be set to `null`, and many required fields can't be changed.

Any field not specified as required in the object description is optional, that is, it can be `null` when updated or created.

Some required fields for some objects require special handling.

# System Fields

System fields are read-only fields found on most objects. These fields are automatically updated during API operations. For example, the `ID` field is automatically generated during a create operation and the `LastModifiedDate` is automatically updated when a user modifies a record.

| Field | Field Type | Description |
|---|---|---|
| `Id` | ID | Globally unique string that identifies a record. For information on IDs, see ID Field Type. Because this field exists in every object, it is not listed in the field table for each object. `Id` fields have Defaulted on create and Filter access. |
| `IsDeleted` | boolean | Indicates whether the record has been moved to the Recycle Bin (`true`) or not (`false`). |
| `LastReferencedDate` | dateTime | Date and time when the current user last viewed or modified this record, a record related to this record, or a list view. If this value is `null`, the current user has never viewed or modified a record related to this object.<br>This field doesn't exist on records for a custom object unless a custom object tab is created for that object. See Use LastReferencedDate and LastViewedDate fields in a SOQL query. |
| `LastViewedDate` | dateTime | Date and time when the current user last viewed or modified this record. If this value is `null`, the current user has never viewed or modified this record.<br>This field doesn't exist on records for a custom object unless a custom object tab is created for that object. See Use LastReferencedDate and LastViewedDate fields in a SOQL query. |
| | | **Audit Fields** |
| `CreatedById` | reference | ID of the User who created this record. `CreatedById` fields have Defaulted on create and Filter access. |
| `CreatedDate` | dateTime | Date and time when this record was created. `CreatedDate` fields have Defaulted on create and Filter access. |
| `LastModifiedById` | reference | ID of the User who last updated this record. `LastModifiedById` fields have Defaulted on create and Filter access. |
| `LastModifiedDate` | dateTime | Date and time when a user last modified this record. `LastModifiedDate` fields have Defaulted on create and Filter access. |
| `SystemModstamp` | dateTime | Date and time when a user or automated process (such as a trigger) last modified this record. In this context, "trigger" refers to Salesforce code that runs to implement |

| Field | Field Type | Description |
|---|---|---|
| | | standard functionality, and not an Apex trigger. `SystemModstamp` fields have Defaulted on create and Filter access.<br><br>Note: In general, `SystemModstamp` shows the date and time when a user or automated process last modified the record. However, in certain cases, `SystemModstamp` doesn't capture every field change. For example, if object A retrieves values from object B, then the changes to field values in records on object B are reflected in the `SystemModstamp` field for records on object B, but not on object A. |

Note: Audit Fields with the dateTime field type have a certain range of valid dates. Unlike other dateTime fields, the earliest valid date is 1970-01-01T00:00:00Z GMT, or just after midnight on January 1, 1970. The latest valid date is 4000-12-31T00:00:00Z GMT, or just after midnight on December 31, 4000. These values are offset by your time zone. For example, in the Pacific time zone, the earliest valid date is 1969-12-31T16:00:00, or 4:00 PM on December 31, 1969.

If you import data into Salesforce and want to retain the audit field values of the source system, you can set the values for audit fields on the following objects: Account, ArticleVersion, Attachment, CampaignMember, Case, CaseComment, Contact, ContentVersion, Contract, Event, Idea, IdeaComment, Lead, Opportunity, Question, Task, Vote, and custom objects. The only audit field you cannot set a value for is `systemModstamp`.

1. From Setup, enter *`User Interface`* in the `Quick Find` box, then select **User Interface** under Customize.
2. Under Setup, select **Enable "Set Audit Fields upon Record Creation" and "Update Records with Inactive Owners" User Permissions**.
3. In the permission set or profile that you want to set audit fields with, enable the permission **Set Audit Fields upon Record Creation**.
4. Using the API, create a record and set its audit fields.

Not all standard objects have all audit fields. Check the Enterprise WSDL to verify which audit fields are available for a given object.

## Parent Reference Fields

If an object has a relationship to a parent object, two fields are added.

- *`Parent_Name`* contains the object name of the parent. For example, Case has a `Contact` field that contains a reference to the contact parent of the case.
- *`Parent_NameId`* contains the ID of the parent. For example, Case has a `ContactId` field that refers to the contact parent of the case. This field is used in SOQL relationship queries such as the following:

```
SELECT Case.ContactId, Case.Contact.Name FROM Case
```

Even if the object can parent itself, these fields occur. For example, the Campaign object has a `CampaignName` and `CampaignId` field for referencing the parent Campaign.

# Frequently Occurring Fields

In addition to system fields, these fields are found on many objects.

- `OwnerId`

- `RecordTypeId`
- `CurrencyIsoCode`

## `OwnerId`

Objects have an `ownerId` field that is a reference to the user who owns that object. Ownership is an important concept that affects the security model and has other implications throughout the system. Any user can query the owner field for any record they can access. However, setting the `ownerId` field has the following limitations:

- For most users and most objects, this field can't be set directly upon insert. It is implicitly set to the current user when inserting an object.
- When creating or updating a Case or Lead, a client application (that is logged in with sufficient permissions to transfer a record) can set this field to any valid User in the organization or to any valid queue of the appropriate type in the organization.
- Updating this field via the API changes only the owner of that record. The change of ownership does not cascade to associated records as it does when you transfer record ownership in the Salesforce user interface.
- Updating this field on an account deletes the existing sharing information and reapplies the organization-wide sharing defaults and sharing rules.
- To update the `ownerId` field, the user must have the "Transfer Record" permission and Read access to the new owner.

In API version 12.0 and later, if your organization has set up opportunity teams, `OwnerId` fields behave the same for Account and Opportunity objects as for other objects. That is, if you update the `OwnerId` field in either object, any AccountShare or OpportunityShare records with `RowCause` set to Sales Team are kept. In API version 11.0 and earlier, the sharing records are deleted.

## `RecordTypeId`

Record types are used to offer different business processes and subsets of picklist values to different User records based on their Profile settings. (In addition, person accounts use record types to manage a number of additional elements.

Record types are configured in the user interface or by creating, editing, or deleting the RecordType object in the API. Retrieve the list of valid record type IDs (String) for an object by querying the RecordType object.

The `RecordTypeId` field in an object contains the ID of the RecordType record that is associated with a standard or custom object. You can create or update this field.

Note: You can't create or update the `RecordTypeId` field on the CampaignMember records. Set the CampaignMember record type using the `CampaignMemberRecordTypeId` field on Campaign.

When specified in a create or update call, the record type ID (String) must refer to a valid record type for that object.

Note: The `RecordTypeId` field is in your organization's WSDL only if at least one record type is configured for your organization in the Salesforce user interface.

## `CurrencyIsoCode`

For organizations that have multicurrency enabled, the `CurrencyIsoCode` field contains the string representation of the currency ISO code associated with currency values in the object. Note that the User object also has a `DefaultCurrencyIsoCode` field, which is the default currency for that user. For example, a user in France could have a `DefaultCurrencyIsoCode` set to Euros, and that would be their default currency in the application. However, the User object could have currency custom fields stored in a different currency, that correspond to the organization currency at the time the user record is created.

# Compound Fields

Compound fields group together multiple elements of primitive data types, such as numbers or strings, to represent complex data types, such as a location or an address. Compound fields are an abstraction that can simplify application code that handles the values, leading to more concise, understandable code.

Address compound fields are available in the SOAP and REST APIs in API version 30.0 and later. Geolocation fields are available in the SOAP and REST APIs in API version 26.0 and later, with some limitations on SOAP for API versions below 30.0.

Compound fields are accessible as a single, structured field, or as individual component fields. The values contained within the compound field and the values in individual fields both map to the same underlying data stored in Salesforce; they always have identical values. Code that references individual component fields is unaffected by the new compound fields.

Compound fields are read-only. Changes are performed by writing to the individual component fields. This maintains a single, consistent method for performing updates, and avoids the possibility of conflicts. For example, if both the `BillingAddress` compound field and `BillingCity` individual component field were updated in the same API call, it would be unclear which value should be saved.

Compound fields are available only through the SOAP and REST APIs. Compound fields are described in both the Enterprise and Partner WSDLs. Update your WSDL to at least API 30.0 to access the new compound data types.

Address Compound Fields

Standard addresses—addresses built into standard objects in Salesforce—are accessible in the SOAP API and REST API as an `Address`, a structured compound data type, as well as individual address elements. If you enabled Custom Address Fields, you can also add custom fields that mimic the standard address field behavior.

Geolocation Compound Field

Geolocation fields are accessible in the SOAP and REST APIs as a `Location`—a structured compound data type—or as individual latitude and longitude elements.

Compound Field Considerations and Limitations

Address and geolocation compound fields are convenient and result in more concise, clear code. Here are some things to consider when using them in your apps.

## Address Compound Fields

Standard addresses—addresses built into standard objects in Salesforce—are accessible in the SOAP API and REST API as an `Address`, a structured compound data type, as well as individual address elements. If you enabled Custom Address Fields, you can also add custom fields that mimic the standard address field behavior.

The `Address` type extends the `Location` type, the data type used for compound geolocation fields. Using API 30.0 and later, standard addresses are available in the SOAP and REST APIs as a compound field of type `Address`, a structured data type that combines these fields.

| Field | Type | Description |
|---|---|---|
| `Accuracy` | picklist | Accuracy level of the geocode for the address. For example, this field is known as `MailingGeocodeAccuracy` on Contact. |
| `City` | string | The city component of the address. For example, this field is known as `MailingCity` on Contact. |
| `Country` | string | The country component of the address. For example, this field is known as `MailingCountry` on Contact. |

| Field | Type | Description |
|---|---|---|
| `CountryCode` | picklist | The ISO country code for the address. For example, this field is known as `MailingCountryCode` on Contact.<br>For Standard Address Fields, `CountryCode` is only available when state and country/territory picklists are enabled in your organization.<br>For Custom Address Fields, `CountryCode` is always available, whether or not state and country/territory picklists are enabled in your organization. |
| `Latitude` | double | Used with `Longitude` to specify the precise geolocation of the address. For example, this field is known as `MailingLatitude` on Contact. |
| `Longitude` | double | Used with `Latitude` to specify the precise geolocation of the address. For example, this field is known as `MailingLongitude` on Contact. |
| `PostalCode` | string | The postal code for the address. For example, this field is known as `MailingPostalCode` on Contact. |
| `State` | string | The state component of the address. For example, this field is known as `MailingState` on Contact. |
| `StateCode` | picklist | The ISO state code for the address. For example, this field is known as `MailingStateCode` on Contact.<br>`StateCode` is available only when state and country/territory picklists are enabled in your organization. |
| `Street` | textarea | The street component of the address. For example, this field is known as `MailingStreet` on Contact. |

Address fields are provided on many standard objects, such as Account, Contact, Quote, and User. Some objects provide fields for multiple addresses. For example, Account provides four different addresses. In this case, address field names are prefixed with the type of address, for example, `BillingAddress` and `ShippingAddress`.

Note: Standard address compound fields are read-only, and are only accessible using the SOAP and REST APIs. To learn about the limitations of compound fields, see Compound Field Considerations and Limitations on page 19.

When an address is geocoded, its latitude and longitude fields are populated with coordinates. A related geolocation field is also populated. Typically, geocoding service providers geocode addresses, and rate the accuracy of the geocodes.

The accuracy subfield `GeocodeAccuracy` stores the accuracy data for a geocoded location. External geolocation apps can get the accuracy level of a geocoded address via the API. When you retrieve an address via the API, any accuracy data is included. You can also retrieve the accuracy information by itself, if needed.

Like its parent, the compound `Address` field, the `GeocodeAccuracy` field is only available for standard address fields on standard objects.

## Custom Address Fields

If you enabled Custom Address Fields, the Address field type is available in Object Manager when you add a custom field. Custom address fields mimic the behavior or standard address fields with some limitations.

For more information, see the *Custom Address Fields Developer Guide*.

## Retrieving Compound Address Fields

Using compound fields can simplify code that works with addresses, especially for SOQL queries. SOQL `SELECT` clauses can reference addresses directly, instead of all of the individual component fields.

```
SELECT Name, BillingAddress
FROM Account
```

To write a SOQL query that's compatible with API versions earlier than 30.0, as well as API 30.0 and later, use the individual fields:

```
SELECT Name, BillingStreet, BillingCity, BillingState, BillingPostalCode,
       BillingCountry, BillingLatitude, BillingLongitude
FROM Account
```

Compound address field values are returned as a structured data type, `Address`. Code that works with compound address fields must reference the individual components of the returned value. See the code sample below.

### Example: **Retrieve a Standard Address Compound Field with the SOAP API**

This Java method uses the Salesforce SOAP API to retrieve and display the Mailing Address for a list of contacts.

```
// Modified version of code in the SOAP API QuickStart
private void querySample() {
    String soqlQuery = "SELECT FirstName, LastName, MailingAddress FROM Contact";
    try {
        QueryResult qr = connection.query(soqlQuery);
        boolean done = false;

        if (qr.getSize() > 0) {
            System.out.println("\nLogged-in user can see "
              + qr.getRecords().length + " contact records.");

            while (!done) {
                System.out.println("");
                SObject[] records = qr.getRecords();
                for (int i = 0; i < records.length; ++i) {
                    Contact con = (Contact) records[i];
                    String fName = con.getFirstName();
                    String lName = con.getLastName();

                    // Access the compound address field MailingAddress
                    Address addr = (Address) con.getMailingAddress();
                    String streetAddr = "";
                    if (null != addr) streetAddr = addr.getStreet();

                    if (fName == null) {
                        System.out.println("Contact " + (i + 1) + ": " + lName +
                            " -- " + streetAddr);
                    } else {
                        System.out.println("Contact " + (i + 1) + ": " + fName +
                            " " + lName +
                            " -- " + streetAddr);
                    }
                }

                if (qr.isDone()) {
```

```
                    done = true;
                } else {
                    qr = connection.queryMore(qr.getQueryLocator());
                }
            }
        } else {
            System.out.println("No records found.");
        }
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

## Using Compound Address Fields as Locations

Compound address fields include latitude and longitude fields. Address fields can be used as locations in SOQL `WHERE` and `ORDER BY` clauses. For example, here's a SOQL query that uses the `GEOLOCATION` function to retrieve the 10 accounts closest to San Francisco.

```
SELECT Id, Name, BillingAddress
FROM Account
WHERE DISTANCE(BillingAddress, GEOLOCATION(37.775,-122.418), 'mi') < 20
ORDER BY DISTANCE(BillingAddress, GEOLOCATION(37.775,-122.418), 'mi')
LIMIT 10
```

Note: In Developer, Professional, Enterprise, Unlimited, and Performance editions, Salesforce can automatically add or update geolocation fields for Account, Contact, Lead, and WorkOrder records. To use this feature, your administrator must enable the geo data integration rule for each object. For all other objects and editions, set values for latitude and longitude by using SOQL, SOAP or REST API, or a geocoding service. You can then use address fields as locatable values. To find geocoding services, search AppExchange.

# Geolocation Compound Field

Geolocation fields are accessible in the SOAP and REST APIs as a `Location`—a structured compound data type—or as individual latitude and longitude elements.

In API versions 26.0 and later, geolocation fields are available in the SOAP and REST APIs as a compound field of type `Location`. This structured data type contains the following fields.

- `latitude`
- `longitude`

Note: SOAP calls that use API versions earlier than 30.0 return geolocation compound values as strings. See "Returned Geolocation Data Types" later in this topic.

Geolocation fields are provided on many standard objects, such as Account, Contact, Quote, and User, as part of their address field or fields. Geolocation fields can also be added as custom fields to standard or custom objects.

Note:

- A geolocation compound field is read-only, although its `latitude` and `longitude` subfields are editable. You can only access compound fields using the SOAP or REST API. For more information about working with compound fields and their subfields, see Compound Field Considerations and Limitations on page 19.

- Although geolocation fields appear as a single field in the user interface, custom geolocation fields count as *three* custom fields towards your organization's limits: one for latitude, one for longitude, and one for internal use.

## Retrieving Compound Geolocation Fields

Using compound fields can simplify code that works with geolocations, especially for SOQL queries. SOQL `SELECT` clauses can reference geolocations directly, instead of the individual component fields.

```
SELECT location__c
FROM Warehouse__c
```

To write code that's compatible with API versions earlier than 26.0 and with API versions 26.0 and later, use the individual latitude and longitude fields.

```
SELECT location__latitude__s, location__longitude__s
FROM Warehouse__c
```

## Returned Geolocation Data Types

A compound geolocation field value is returned as the structured data type `Location`. Code that works with compound geolocation fields must reference the individual components of the returned value. See the sample code in Address Compound Fields on page 17.

In API versions earlier than 30.0, SOAP calls return compound geolocation field values as strings, instead of as a structured data type, for backward compatibility. If you plan to display your latitude and longitude values or pass them to a service that expects strings, use the values that are returned. If you plan to use the values in mathematical calculations or pass them to a map service that expects numbers, cast the results to numbers.

The string value format is:

```
API location: [latitudeValue longitudeValue]
```

An example of a regular expression to parse out the latitude and longitude values is:

```
API location: \[([-+]?\d{1,2}([.]\d+)?) ([-+]?\d{1,3}([.]\d+)?)]
```

The first capture is the latitude, and the third is the longitude.

# Compound Field Considerations and Limitations

Address and geolocation compound fields are convenient and result in more concise, clear code. Here are some things to consider when using them in your apps.

Both address and geolocation compound fields have the following limitations.

- Compound fields are read-only. To update field values, modify the individual field components.
- Compound fields are accessible only through SOAP API, REST API, and Apex. The compound versions of fields aren't accessible anywhere in the Salesforce user interface.
- Although compound fields can be queried with the `Location` and `Address` Apex classes, they're editable only as components of the actual field. Read and set geolocation field components by appending "__latitude__s" or "__longitude__s" to the field name, instead of the usual "__c." For example:

  ```
  Double theLatitude = myObject__c.aLocation__latitude__s;
  myObject__c.aLocation__longitude__s = theLongitude;
  ```

You can't access or set the compound value.

- You can't use compound fields in Visualforce—for example, in an `<apex:outputField>`. To access or update field values, use the individual field components.
- If you select compound fields for export in the Data Loader, they cause error messages. To export values, use individual field components.
- Custom geolocation and location fields on standard addresses aren't supported with email templates.
- You can't use compound fields in lookup filters, except to filter distances that are within or not within given ranges. You can use distance lookup filters only in the Metadata API.
- The only formula functions that you can use with compound fields are `ISBLANK`, `ISCHANGED`, and `ISNULL`. You can't use `BLANKVALUE`, `CASE`, `NULLVALUE`, `PRIORVALUE`, or the equality and comparison operators with compound fields. The equality and comparison operators include `=` and `==` (equal), `<>` and `!=` (not equal), `<` (less than), `>` (greater than), `<=` (less than or equal), `>=` (greater than or equal), `&&` (AND), and `||` (OR).

Address compound fields have the following limitations.

- Compound address fields are available only for address fields that exist as part of the standard objects included in Salesforce.
- To add custom address fields on standard and custom objects, enable Custom Address Fields. For more information see the Custom Address Fields Developer Guide.
- In Developer, Professional, Enterprise, Unlimited, and Performance editions, Salesforce can automatically add or update geolocation fields for Account, Contact, Lead, and WorkOrder records. To use this feature, your administrator must enable the geo data integration rule for each object. For all other objects and editions, set values for latitude and longitude by using Salesforce CLI, SOAP or REST API, or a geocoding service. You can then use address fields as locatable values. To find geocoding services, search AppExchange.
- The accuracy subfield of address fields is populated only when an address is geocoded. Typically, geocoding service providers provide accuracy data for an address's latitude and longitude coordinates.
- Address fields can't be used in `WHERE` statements in SOQL. Address fields aren't filterable, but the `isFilterable()` method of the `DescribeFieldResult` Apex class erroneously returns `true` for address fields.

Geolocation compound fields have the following limitations.

- Geolocation fields aren't supported in custom settings.
- Geolocation fields aren't available in dashboards or Schema Builder.
- Geolocation fields are available in Visual Workflow and in formula-based workflow and approvals, but they can't be used in filter-based workflow updates and approvals.
- `DISTANCE` formulas are supported in:
  - Entry criteria for workflow rules and approval processes
  - Field update actions in workflow rules and approval processes
  - Custom validation rules
  - Lookup filters (in the Metadata API only)
- Geolocation fields and latitude and longitude on standard addresses aren't supported in Salesforce to Salesforce.
- In Developer, Professional, Enterprise, Unlimited, and Performance editions, Salesforce can automatically add or update geolocation fields for Account, Contact, Lead, and WorkOrder records. To use this feature, your administrator must enable the geo data integration rule for each object. For all other objects and editions, set values for latitude and longitude by using SOQL, SOAP or REST API, or a geocoding service. You can then use address fields as locatable values. To find geocoding services, search AppExchange.
- Geolocation fields are supported in SOQL with the following limitations.
  - `DISTANCE` and `GEOLOCATION` are supported in `WHERE` and `ORDER BY` clauses in SOQL, but not in `GROUP BY`. `DISTANCE` is supported in `SELECT` clauses.

- `DISTANCE` supports only the logical operators > and <, returning values within (<) or beyond (>) a specified radius.
- When using the `GEOLOCATION` function in SOQL queries, the geolocation field must precede the latitude and longitude coordinates. For example, `DISTANCE(warehouse_location__c, GEOLOCATION(37.775,-122.418), 'km')` works but `DISTANCE(GEOLOCATION(37.775,-122.418), warehouse_location__c, 'km')` doesn't work.
- Apex bind variables aren't supported for the units parameter in the `DISTANCE` function. This query doesn't work.

```
String units = 'mi';
List<Account> accountList =
    [SELECT ID, Name, BillingLatitude, BillingLongitude
     FROM Account
     WHERE DISTANCE(My_Location_Field__c, GEOLOCATION(10,10), :units) < 10];
```

For more information and examples, see the SOQL and SOSL Reference.

# Custom Objects

In the user interface, you can extend your org's data by defining custom objects. Custom objects are custom database tables that allow you to store information unique to your organization. For custom objects, the `custom` flag—a Boolean field in the describe results—is `true`.

**Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Client applications with sufficient permissions can invoke API calls on existing custom objects. You can create custom objects with the user interface, or by using the metadata WSDL with a client application or using the Salesforce Extensions for Visual Studio Code. For more information about using the metadata WSDL to create custom objects, see the *Lightning Platform Metadata API Developer's Guide*. For more information about Visual Studio Code, see *Salesforce Extensions for Visual Studio Code*.

Use the following topics to understand how the API interacts with custom objects and fields:

- Naming Conventions for Custom Objects
- Relationships Among Custom Objects
- Audit Fields for Custom Objects
- Sharing and Custom Objects
- Tags and Custom Objects
- Standard Fields for Custom Objects
- Required Fields in Custom Objects
- Managed Packages and API Names

## Naming Conventions for Custom Objects

Your Salesforce admin defines an associated name field for each custom object during setup. Custom objects must have unique names within your org.

In the API, the names of custom objects include a suffix of two underscores followed by a lowercase "c". For example, a custom object labeled "Issue" in the Salesforce user interface is `Issue__c` in that organization's WSDL.

Relationships change the naming convention. See Relationships Among Custom Objects for more information.

For a custom object record to appear in the Salesforce user interface, its name field must be populated. If you use the API to create a custom object record that doesn't have a name, the record's ID is used as its name.

## Relationships Among Custom Objects

Custom objects behave and relate to other objects just like standard objects do, as described in Relationships Among Objects. For example, cascading deletes are supported in custom objects in a master-detail relationship.

Custom objects can also have many-to-many relationships with other custom objects or standard objects. A many-to-many relationship allows each record of one object to be linked to multiple records from another object and vice versa. For more information, see Relationships Among Objects.

Custom objects require special treatment so that they can participate in Relationship Queries. For the relationship field name of a custom object, `__r` is appended to the name to create the ID. Also, `__c` is appended to the name to create the parent object pointer. For example, if the relationship field name is MyRel, the name of the ID becomes `MyRelId__r`, the parent object pointer becomes `MyRel__c`, and the relationship name is `MyRel__r`. For more information, see Understanding Relationship Names, Custom Objects, and Custom Fields in the *Salesforce SOQL and SOSL Reference Guide*.

This table summarizes whether a standard object can be:

- The master in a master-detail relationship with a custom object. Master-detail relationships involve cascading deletes and sharing rules that the parent controls.
- The lookup in a lookup relationship on a custom object. In other words, whether a custom object can have a lookup to the standard object.
- Extended with custom fields.

| Standard Object | Master-Detail | Lookup | Custom Fields |
|---|---|---|---|
| Account | Yes | Yes | Yes |
| Campaign | Yes | Yes | Yes |
| Case | Yes | Yes | Yes |
| Contact | Yes | Yes | Yes |
| Contract | Yes | Yes | Yes |
| Event | No | No | Yes |
| Lead | No | No | Yes |
| Opportunity | Yes | Yes | Yes |
| Product2 | No | Yes | Yes |
| Solution | Yes | Yes | Yes |
| Task | No | No | Yes |
| User | No | Yes | Yes |

## Audit Fields for Custom Objects

Custom objects can have the same audit fields as standard objects. When you create a custom object, the four audit fields, `CreatedById`, `CreatedDate`, `LastModifiedById`, and `LastModifiedDate`, are created and populated for the object. These fields are read only. If you import data into Salesforce custom objects and want to retain the audit field values from the source system, you can set the values when you create the custom objects. The only audit field you can't set a value for is `SystemModstamp`. Your organization must be API enabled, and you must have the "Modify All Data" permission.

1. From Setup, enter *`User Interface`* in the `Quick Find` box, then select **User Interface** under Customize.
2. Under Setup, select **Enable "Set Audit Fields upon Record Creation" and "Update Records with Inactive Owners" User Permissions**.
3. In the permission set or profile that you want to set audit fields with, enable the permission **Set Audit Fields upon Record Creation**.
4. Using the API, create a record and set its audit fields.

Note these restrictions:

- `CreatedDate` can't be greater than the `LastModifiedDate`.
- You can't set any date field to be greater than the current time.

For more information about audit fields, see System Fields.

## Sharing and Custom Objects

A sharing rule object is created for each custom object that doesn't have a master-detail relationship to another object. They're similar to standard object sharing rules, for example AccountOwnerSharingRule. If the user creating the custom object has the "Manage Sharing" permission, a sharing rule object is automatically created for it.

Apex sharing reasons can be retrieved describing the custom object's sharing object, and examining the information in the `rowCause` field. The name of a sharing object for each custom object is of the form: *`MyObjectName`*__Share, similar to AccountShare and other standard object sharing objects.

## Tags and Custom Objects

When a custom object is created, a Tag object related to it's also created. These object names are of the form: *`MyObjectName`*__Tag, similar to AccountTag and other standard object tag objects.

## Standard Fields for Custom Objects

When a custom object is created, Salesforce assigns some standard fields to the object or entity. For details, see Custom Objects.

## Required Fields in Custom Objects

In the user interface, you can mark a custom field as required, and this rule is also enforced in the API. Each custom field has a `nillable` attribute, with a data type boolean. The default value is `false`. If set to `true`, each request supplies a value (or leaves the current value) to this field. Otherwise, the request fails. When the value is set to `true`, the next time the field is edited or created, the validation applies. If no value is supplied or default value specified, the request fails.

To edit the `nillable` attribute, you must log in as a user with the "Customize Application" permission.

If you change a custom object field to be required in an existing client application or integration, be sure that a value is supplied for that field. For example, if the custom picklist field `Education Level` on the contact object is required, supply a default value for that

custom field. If a required field doesn't have a specified or default value, an error with the status code `REQUIRED_FIELD_MISSING` is returned.

## Managed Packages and API Names

If you have an unmanaged package and a managed package version becomes available, the API names of custom fields, custom objects, and Scontrol objects in the package change. A namespace prefix is added to each component to make it unique: *`name`*`__c` becomes *`prefix`*`__`*`name`*`__c`. To move from an unmanaged package to a managed package version of the same application, export your data, uninstall the old package, and install the new package. Then review the name changes and import your data with the relevant mapping. For details, see the *ISVforce Guide*.

Custom Objects

# Custom Fields

Salesforce administrators can define custom fields for standard or custom objects in their organization using the user interface. During creation, the `custom` flag—a Boolean field in the Field object—is set to true. Client applications cannot define custom fields via the API. Usually, client applications do not need to know whether a field is a standard field or a custom field.

Note that all numeric custom fields are handled as type double.

## Objects That Support Custom Fields

To identify the standard objects that support custom fields, see the table in Relationships Among Custom Objects.

## Naming Conventions for Custom Fields

Custom objects have an associated name field that is defined by your Salesforce administrator. Custom fields must have unique names within the same object.

In the API, the names of custom fields are identified by a suffix of two underscores immediately followed by a lowercase "c" character. For example, a custom object labeled "Issue" in the user interface is seen as `Issue__c` in that organization's WSDL. Similarly, a custom field labeled "Hire Date" in the user interface is seen as `Hire_Date__c` in that organization's WSDL.

Relationships change the naming convention, see Relationships Among Custom Objects for more information.

## External ID Attribute on Custom Fields

In the user interface, you can identify one custom field on an object as being an external ID field. The field type must be a text, number, or email field. An external ID contains record IDs from a system outside of Salesforce. You can match against this field during import or integration, or when upserting records.

## Uniqueness for Custom Fields

In the user interface, you can specify that a custom field on a custom object contain unique values across all the records of that custom object type. The uniqueness can be either case sensitive or case insensitive. In the API, you can find out if a field is unique by issuing a describe call against the custom object and inspecting two attribute values:

- If the `unique` field is set to `true`, the custom field values must be unique across all records of that custom object type in the organization. A value of `false` means the field can have the same value in different records of that custom object type.
- If the `caseSensitive` field is set to `true`, the uniqueness (if enabled) is case sensitive. For example "ABC" and "abc" are considered two unique values. If the value is `false`, then "ABC" and "abc" are considered the same value.

These values cannot be set or modified using API calls. If a custom field on a custom object has `unique` set to `true`, and you try to insert a duplicate value, a `DUPLICATE_VALUE` exception code is returned.

## Default Values in Custom Fields

You can set a default value on a custom field using a formula field:

- The user logged in for API activity must be have the "Customize Application" permission.
- The field must have a data type of currency, date, datetime, int, double, percent, string, textarea, email, phone, or url. You cannot use composite fields like Address, Person, Names, nor Fiscal Periods. Note that you can set a checkbox as checked or unchecked by default using the user interface, but you cannot set it using a formula field.
- Default formulas run on fields, and the results are saved, even if the fields are hidden by field-level security.
- Default values are not used for lead conversion, importing, or merging records.

## Managed Packages and API Names

If you have an unmanaged package and a managed package version becomes available, the API names of custom fields, custom objects, and Scontrol objects in the package change. A namespace prefix is added to each component to make it unique: *`name`*`__c` becomes *`prefix`*`__`*`name`*`__c`. To move from an unmanaged package to a managed package version of the same application, export your data, uninstall the old package, and install the new package. Then review the name changes and import your data with the relevant mapping.

# AppExchange Object Prefixes and the API

If you have an unmanaged package and a managed package version becomes available, the API names of custom fields, custom objects, and Scontrol objects in the package change. A namespace prefix is added to each component to make it unique: *`name`*`__c` becomes *`prefix`*`__`*`name`*`__c`. To move from an unmanaged package to a managed package version of the same application, export your data, uninstall the old package, and install the new package. Then review the name changes and import your data with the relevant mapping. For details, see the *ISVforce Guide*.

# Relationships Among Standard Objects and Fields

**Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

*Relationships* associate objects with other objects. For example, a relationship can link a custom object to standard object in a related list, such as linking a custom object called Issues to cases to track product defects associated with customer cases. To view the parent and child relationships among standard objects, see the ERD diagrams in Data Model.

**Note:**

- You can use parent-child relationships in SOQL queries. For more information, see Relationship Queries in the Salesforce SOQL and SOSL Reference Guide.

- Only lookup, external lookup, and indirect lookup relationships are available for external objects. No other relationship types are supported. See Salesforce Help: External Object Relationships.

You can define different types of relationships by creating custom relationship fields on an object. The differences between relationship types include how they handle data deletion, record ownership, security, and required fields in page layouts:

- **Master-Detail (1:n)** — A parent-child relationship where the master object controls certain behaviors of the detail object.
  - When a record of the master object is deleted, its related detail records are also deleted.
  - The `Owner` field on the detail object isn't available and is automatically set to the owner of its associated master record. Custom objects on the detail side of a master-detail relationship can't have sharing rules, manual sharing, or queues, because these elements require the `Owner` field.
  - The detail record inherits the sharing and security settings of its master record.
  - The master-detail relationship field is required on the page layout of the detail record.
  - By default, records can't be reparented in master-detail relationships. But administrators can allow child records in master-detail relationships on custom objects to be reparented to different parent records by selecting the `Allow reparenting` option in the master-detail relationship definition.

  You can define master-detail relationships between custom objects or between a custom object and a standard object. But the standard object can't be on the detail side of a relationship with a custom object. And you can't create a master-detail relationship where these standard objects are the primary object.

  - BusinessHours
  - Idea
  - Lead
  - OrderItem
  - PriceBook2
  - Product2
  - QuoteLineItem
  - User

  When you define a master-detail relationship, the custom object that you're working on is the detail side. Its data can appear as a custom related list on page layouts for the other object.

- **Many-to-many** — You can use master-detail relationships to model *many-to-many* relationships between any two objects. A many-to-many relationship allows each record of one object to be linked to multiple records from another object and vice versa. For example, you create a custom object called Issue that relates to the standard Case object. In this example, an issue could be related to multiple cases and a case could also be related to multiple issues. To create a many-to-many relationship, simply create a custom junction object with two master-detail relationship fields, each linking to the objects that you want to relate.

  Custom objects with two master-detail relationships are supported in API version 11.0 and later.

  Starting in API version 34.0, the `JunctionIdList` field type lets you manipulate the many-to-many relationship of an entity directly. You no longer manipulate underlying junction entity records. `JunctionIdList` fields can be queried and updated like any other field on the entity. Queries or updates to `JunctionIdList` fields act as queries or updates to the underlying junction entity records. Fields of type `JunctionIdList` appear in the WSDL as an unbounded array of type ID. `JunctionIdList` is implemented in the `Task` and `Event` objects. All `JunctionIdLists` are read-only in Apex. Attempting to set a new value on an existing object will result in an exception.

- **Lookup (1:n)** — This type of relationship links two objects, but has no effect on deletion or security. Unlike master-detail fields, lookup fields aren't automatically required. When you define a lookup relationship, data from one object can appear as a custom related list on page layouts for the other object.

To create relationships, use the user interface or Salesforce Metadata API.

# Factors that Affect Data Access

Some factors affect access to your organization's data.

When using the API, the following factors affect access to your organization's data:

**Access**

Your organization must be enabled for API access.

Objects may not be available until you contact Salesforce and request access. For example, Territory2 is visible only if Enterprise Territory Management has been enabled in the application. Such requirements are in the "Usage" section for each object.

Sometimes a feature must be used once before objects related to it can be accessed with the API. For example, the `recordTypeIds` is available only after at least one record type has been created for your organization in the user interface.

To investigate data access issues, you can start by inspecting the WSDL:

- **Enterprise WSDL**: The generated enterprise WSDL file contains all of the objects that are available to your organization. By using the API, a client application can access objects that are defined in your enterprise WSDL file.
- **Partner WSDL**: When using the generated partner WSDL file, a client application can access objects that are returned in the `describeGlobal()` call.

**Object-Level and Field-Level Security**

The API respects object-level and field-level security configured in the user interface. You can access objects and fields only if the logged-in user's permissions and access settings allow such access. For example, fields that are not visible to a given user are not returned in a `query()` or `describeSObjects()` call. Similarly, read-only fields can't be updated.

**User Permissions**

A user attempting to access the API must have the permission "API Enabled" selected. It's selected by default.

Your client application logs in as a user called a *logged-in* user. The logged-in user's permissions grant or deny access to specific objects and fields in your organization:

- **Read**—Users can only view objects of this type.
- **Create**—Users can read and create objects of this type.
- **Edit**—Users can read and update objects of this type.
- **Delete**—Users can read, edit, and delete objects of this type.

User permissions do not affect field-level security. If field-level security specifies that a field is hidden, users with "Read" on that object can view only those fields that are not hidden on the record. In addition, users with "Read" on an object can view only those records that sharing settings allow. The one exception is the "Edit Read Only Fields" permission, which gives users the ability to edit fields marked as read only via field-level security.

**Sharing**

For most API calls, data that is outside of the logged-in user's sharing model is not returned. Users are granted the most permissive access that is available to them, either through organization-wide defaults or manual record sharing, just as in the application.

**User Permissions that Override Sharing**

- **View All Records**—Users can view all records associated with this object regardless of sharing settings.
- **View All Data**—Users can view all records regardless of sharing settings. This permission is a user permission, not an object-level permission like View All Records.
- **Modify All Records**—Users can read, edit, delete, transfer, and approve all records associated with this object, regardless of sharing settings.

- **Modify All Data**—Users can read, edit, delete, transfer, and approve all records regardless of sharing settings. This permission is a user permission, not an object-level permission like Modify All Records.

To protect the security of your data, give the logged-in user only the permissions needed to successfully execute all the calls made by the application. For large integration applications, "Modify All Data" may speed up call response times. If you are loading a large number of records, use Bulk API 2.0 instead.

**Related Objects**

Some objects depend on other objects for permission. For example, AccountTeamMember follows sharing on the associated permission-assigned object such as the Account record. Similarly, a Partner depends on the permissions in the associated .

Ownership changes to a record do not automatically cascade to related records. For example, if ownership changes for a given Account, ownership does not then automatically change for any Contract associated with that Account—each ownership change must be made separately and explicitly by the client application.

**Object Properties**

To create an object with the `create()` call, the object's `createable` attribute must be set to `true`. To determine what operations are allowed on a given object, your client application can invoke the `describeSObjects()` call on the object and inspect the properties in the DescribeSObjectResult.

Note: `replicatable` allows`getUpdated()` and `getDeleted()` calls.

**Page Layouts and Record Types**

Requirements defined in the Salesforce user interface for page layouts and record types are not enforced by the API:

- Page layouts can specify whether a given field is required, but the API does not enforce such layout-specific field restrictions or validations in `create()` and `update()` calls. It's up to the client application to enforce any such constraints, if applicable.
- Record types can control which picklist values can be chosen in a given record and which page layouts users with different profiles can see. However, such rules that are configured and enforced in the user interface are not enforced in the API. For example, the API does not validate whether the value in a picklist field is allowed per any record type restrictions associated with the profile of the logged-in user. Similarly, the API does not prevent a client application from adding data to a particular field simply because that field does not appear in a layout associated with the profile of the logged-in user.

**Referential Integrity**

To ensure referential integrity, the API forces or prevents certain behaviors:

- ID values in reference fields are validated in `create()` and `update()` calls.
- If a client application deletes a record, then its children are automatically deleted as part of the call if the `cascadeDelete` property on ChildRelationship for that child has a value of `true`. For example, if a client application deletes an Opportunity, then any associated OpportunityLineItem records are also deleted. However, if an OpportunityLineItem is not deletable or is currently being used, then deletion of the parent Opportunity fails. For example, if a client application deletes an Invoice_Statement, then any associated Line_Item records are also deleted. However, if a Line_Item is not deletable or is currently being used, then deletion of the parent Invoice_Statement fails. Use DescribeSObjectResult to view the ChildRelationship value if you want to be sure what will be deleted.

  There are certain exceptions that prevent the execution of a `cascadeDelete`. For example, you can't delete an account if it has associated cases, if it has related opportunities that are owned by other users, or if associated contacts are enabled for the Customer Portal. In addition, if you attempt to delete an account that has closed/won opportunities owned by you or has active contracts, then the delete request for that record will fail.

# Field and Type Differences in Salesforce Apps and APIs

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Generally, API data types and field types in the user interface have the same names. For example, a date field is represented by a date data type in the API. However, some field types are represented differently depending on whether you inspect an object via the API or the user interface. This table contains the mapping for field types and data types that are different.

| API Data Type | Corresponding Field Types in the User Interface |
|---|---|
| ID | Lookup relationship, master-detail relationship |
| string | Auto number, email, phone, picklist, multi-select picklist, text, text area, long text area, rich text area, data category group reference, and URL. Different maximum lengths are specified in the WSDL for text, text area, and long text area. |
| boolean | Checkbox |
| double | Currency, formula, number, percent, and roll-up summary |
| Varies by type | When formula fields are created in the user interface, a type must be specified. This type corresponds to the API data type of the same name: currency, date, date/time, number, percent, or text. |

All other fields that you can create in the user interface fall into one of these categories.

- The field isn't available in both the user interface and the API. For example, the BusinessHours object has fields of API data type time, but you can't create a custom field of this type.
- Field types are the same as their corresponding API data type. For example, if you create a date field in the user interface, that field is the date data type in the API.

Additionally, the user interface allows you to change the labels on some fields and tabs. Although you can't relabel fields or tabs using the API, you can retrieve the current values. To do so, issue a `describeSObjects()` call and inspect the label field of the returned DescribeSObjectResult.

For more information about API data types, see Primitive Data Types and Field Types.

# External Objects

External objects are supported in API version 32.0 and later. External objects are similar to custom objects, but external object record data is stored outside your Salesforce organization. For example, perhaps you have data that's stored on premises in an enterprise resource planning (ERP) system. Instead of copying the data into your org, you can use external objects to access the data in real time via web service callouts.

External objects are available with Salesforce Connect and Files Connect. Each external object is associated with an external data source definition in your Salesforce organization.

An external data source specifies how to access an external system. Salesforce Connect uses external data sources to access data that's stored outside your Salesforce organization. Files Connect uses external data sources to access third-party content systems. External data sources have associated external objects, which your users and the Lightning Platform use to interact with the external data and content.

By accessing record data on demand, external objects always reflect the current state of the external data. You don't have to manage a copy of that data in Salesforce, so you're not wasting storage and resources keeping data in sync.

External objects are best used when you have a large amount of data that you can't or don't want to store in your Salesforce organization, and you need to use only a small amount of data at any one time.

See Define External Objects in Salesforce Help for how to create and modify external objects.

## Naming Conventions for External Objects

Object names must be unique across all standard, custom, and external objects in the org.

In the API, the names of external objects are identified by a suffix of two underscores immediately followed by a lowercase "x" character. For example, an external object named "ExtraLogInfo" in the Salesforce user interface is seen as `ExtraLogInfo__x` in that organization's WSDL.

We recommend that you make object labels unique across all standard, custom, and external objects in the org.

## External Object Relationships

External objects support standard lookup relationships, which use the 18-character Salesforce record IDs to associate related records with each other. However, data that's stored outside your Salesforce org often doesn't contain those record IDs. Therefore, two special types of lookup relationships are available for external objects: external lookups and indirect lookups. See External Object Relationships in Salesforce Help for details.

## Feature Support for External Objects

Most of the Salesforce features that support custom objects also support external objects. However, there are exceptions, and some features have special limitations and considerations for external objects. See the following topics in the Salesforce Help.

- External Objects in Salesforce Connect
- Salesforce Platform Features Supported by Salesforce Connect

## Salesforce Connect Adapters

Salesforce Connect uses a protocol-specific adapter to connect to an external system and access its data. This table describes the available adapters.

| Salesforce Connect Adapter | Description | When to Use |
|---|---|---|
| Cross-org | Uses the Lightning Platform REST API to access data that's stored in other Salesforce orgs. | To seamlessly connect data between your Salesforce orgs. For example, provide your service representatives a unified view of customer transactions by integrating data from different Salesforce orgs. |
| OData 2.0<br>OData 4.0 | Uses Open Data Protocol to access data that's stored outside Salesforce. The external data must be exposed via OData producers. | To integrate external data sources into your org that support the ODATA protocol and publish an OData provider. For example, give your account executives a unified data view by pulling data from legacy systems such as SAP, Microsoft, and Oracle in real time. |

| Salesforce Connect Adapter | Description | When to Use |
|---|---|---|
| Custom adapter created via Apex | You use the Apex Connector Framework to develop your own custom adapter when the other available adapters aren't suitable for your needs.<br>A custom adapter can obtain data from anywhere. For example, some data can be retrieved from anywhere in the Internet via callouts, while other data can be manipulated or even generated programmatically. | To develop your own adapter with the Apex Connector Framework when the other available adapters aren't suitable for your needs. For example, when you want to retrieve data via callouts from a REST API. |

## Files Connect Adapters

Several Files Connect adapters are also available:

- Google Drive
- Box
- SharePoint Online
- OneDrive for Business

For more information about Salesforce Connect, see Salesforce Connect in the Salesforce Help.

For details on using the Apex Connector Framework, see "Salesforce Connect" and "DataSource Namespace" in the Apex Code Developer's Guide.

# Big Objects

A big object stores and manages massive amounts of data on the Salesforce platform. You can archive data from other objects or bring massive datasets from outside systems into a big object to get a full view of your customers. Clients and external systems use a standard set of APIs to access big object data. A big object provides consistent performance, whether you have 1 million records, 100 million, or even 1 billion. This scale gives a big object its power and defines its features.

There are two types of big objects.

- Standard big objects—Objects defined by Salesforce and included in Salesforce products. `FieldHistoryArchive` is a standard big object that stores data as part of the Field Audit Trail product. Standard big objects are always available and can't be customized.
- Custom big objects—New objects that you create to store information unique to your org. Custom big objects extend the functionality that Lightning Platform provides. For example, if you're building an app to track product inventory, create a custom big object called `HistoricalInventoryLevels` to track historical inventory levels for analysis and future optimizations. This implementation guide is for configuring and deploying custom big objects.

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions for up to 1 million records

## Custom Big Object Use Cases

- 360° view of the customer—Extend your Salesforce data model to include detailed information from loyalty programs, feeds, clicks, billing and provisioning information, and more.

- Auditing and tracking—Track and maintain a long-term view of Salesforce or product usage for analysis or compliance purposes.
- Historical archive—Maintain access to historical data for analysis or compliance purposes while optimizing the performance of your core CRM or Lightning Platform applications.

## Differences Between Big Objects and Other Objects

Because a big object can store data on an unlimited scale, it has different characteristics than other objects, like sObjects. Big objects are also stored in a different part of the Lightning Platform.

| Big Objects | sObjects |
|---|---|
| Horizontally scalable distributed database | Relational database |
| Non-transactional database | Transactional database |
| Hundreds of millions or even billions of records | Millions of records |

These big object behaviors ensure a consistent and scalable experience.

- Big objects support only object and field permissions, not regular or standard sharing rules.
- Features like triggers, flows, processes, and the Salesforce mobile app aren't supported on big objects.
- When you insert an identical big object record with the same representation multiple times, only a single record is created so that writes can be idempotent. This behavior is different from an sObject, which creates a record for each request to create an object.

## API Support for Big Objects

It's easy to integrate custom big objects with your live Salesforce data. You can process big objects with SOQL, Bulk, Chatter and SOAP APIs.

Note: These APIs are the only APIs supported for big objects. The REST API, for example, isn't supported.

Define and Deploy Custom Big Objects

You can define custom big objects with Metadata API or in Setup. After you define and deploy a big object, you can view it or add fields in Setup. After you've deployed a big object, you can't edit or delete the index. To change the index, start over with a new big object. To define a big object in Setup, see Salesforce Help.

## Define and Deploy Custom Big Objects

You can define custom big objects with Metadata API or in Setup. After you define and deploy a big object, you can view it or add fields in Setup. After you've deployed a big object, you can't edit or delete the index. To change the index, start over with a new big object. To define a big object in Setup, see Salesforce Help.

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions for up to 1 million records.

### Define a Custom Big Object

Define a custom big object through Metadata API by creating XML files that contain its definition, fields, and index.

- `object` files—Create a file for each object to define the custom big object, its fields, and its index.
- `permissionset/profile` files—Create a permission set or profile file to specify permissions for each field. These files aren't required, but they're required to grant access to users. By default, access to a custom big object is restricted.
- `package` file—Create a file for Metadata API to specify the contents of the metadata you want to migrate.

  Note: The package file is unrelated to the packaging feature for Salesforce. This file isn't an unlocked, unmanaged, or managed package. It's simply a file used by Metadata API.

Note: While custom big objects use the CustomObject metadata type, some parameters are unique to big objects and others aren't applicable. The specific metadata parameters that apply to big objects are outlined in this document.

## Naming Conventions for Custom Big Objects

Object names must be unique across all standard objects, custom objects, external objects, and big objects in the org. In the API, the names of custom big objects have a suffix of two underscores immediately followed by a lowercase "b" (__b). For example, a big object named "HistoricalInventoryLevels" is seen as HistoricalInventoryLevels__b in that organization's WSDL. We recommend that you make object labels unique across all objects in the org - standard, custom, external and big objects.

## CustomObject Metadata

| Field Name | Field Type | Description |
|---|---|---|
| `deploymentStatus` | DeploymentStatus (enumeration of type string) | Custom big object's deployment status (`Deployed` for all big objects) |
| `fields` | CustomField[] | Definition of a field in the big object |
| `fullName` | string | Unique API name of the big object |
| `indexes` | Index[] | Definition of the index |
| `label` | string | Big object's name as displayed in the UI |
| `pluralLabel` | string | Field plural name as displayed in the UI |

## CustomField Metadata

| Field Name | Field Type | Description |
|---|---|---|
| `fullName` | string | Unique API name of a field. |
| `label` | string | Field name as displayed in the UI. |
| `length` | int | Length of a field in characters (Text and LongTextArea fields only). The total number of characters across all text fields in an index can't exceed 100. To increase this value, contact Salesforce Customer Support.<br>Note: Email fields are 80 characters. Phone fields are 40 characters. Keep these lengths in mind when designing your index because they count toward the 100 character limit. |

| Field Name | Field Type | Description |
|---|---|---|
| `pluralLabel` | string | Field plural name as displayed in the UI. |
| `precision` | int | Number of digits for a number value. For example, the number 256.99 has a precision of 5 (number fields only). |
| `referenceTo` | string | Related object type for a lookup field (lookup fields only). |
| `relationshipName` | string | Name of a relationship as displayed in the UI (lookup fields only). |
| `required` | boolean | Specifies whether the field is required. All fields that are part of the index must be marked as required. |
| `scale` | int | Number of digits to the right of the decimal point for a number value. For example, the number 256.99 has a scale of 2 (number fields only). |
| `type` | FieldType | Field type. Supports DateTime, Email, Lookup, Number, Phone, Text, LongTextArea, and URL.<br>Note: You can't include LongTextArea and URL fields in the index. |

Note: Uniqueness isn't supported for custom fields.

## Index Metadata

Represents an index defined within a custom big object. Use this metadata type to define the composite primary key (index) for a custom big object.

| Field Name | Field Type | Description |
|---|---|---|
| `fields` | IndexField[] | The definition of the fields in the index. |
| `label` | string | Required. This name is used to refer to the big object in the user interface. Available in API version 41.0 and later. |

## IndexField Metadata

Defines which fields make up the index, their order, and sort direction. The order in which the fields are defined determines the order fields are listed in the index.

Note: The total number of characters across all text fields in an index can't exceed 100. To increase this value, contact Salesforce Customer Support.

| Field Name | Field Type | Description |
|---|---|---|
| `name` | string | Required. The API name for the field that's part of the index. This value must match the `fullName` value for the corresponding field in the fields section and be marked as required.<br><br>**Warning:** When querying a big object record via SOQL and passing the results as arguments to the delete API, if any index field name has a leading or trailing white space, you can't delete the big object record. |
| `sortDirection` | string | Required. The sort direction of the field in the index. Valid values are `ASC` for ascending order and `DESC` for descending order. |

### Example: **Create Metadata Files for Deployment**

The following XML excerpts create metadata files that you can deploy. Each Customer Interaction object represents customer data from a single session in an online video game. The `Account__c`, `Game_Platform__c`, and `Play_Date__c` fields define the index, and a lookup field relates the Customer Interactions to the Account object.

**Customer_Interaction__b.object**

```
<?xml version="1.0" encoding="UTF-8"?>
<CustomObject xmlns="http://soap.sforce.com/2006/04/metadata">
    <deploymentStatus>Deployed</deploymentStatus>

    <fields>
        <fullName>In_Game_Purchase__c</fullName>
        <label>In-Game Purchase</label>
        <length>16</length>
        <required>false</required>

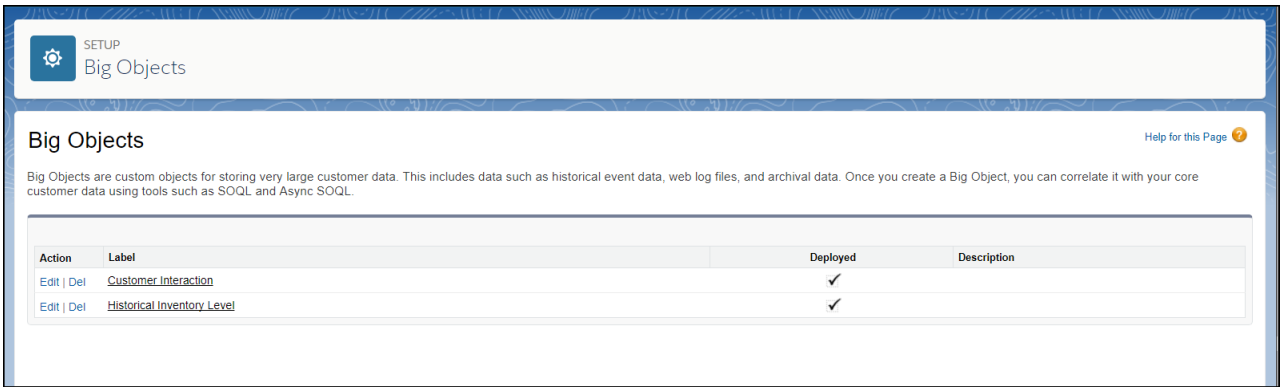
## Deploy Custom Big Objects Using Metadata API

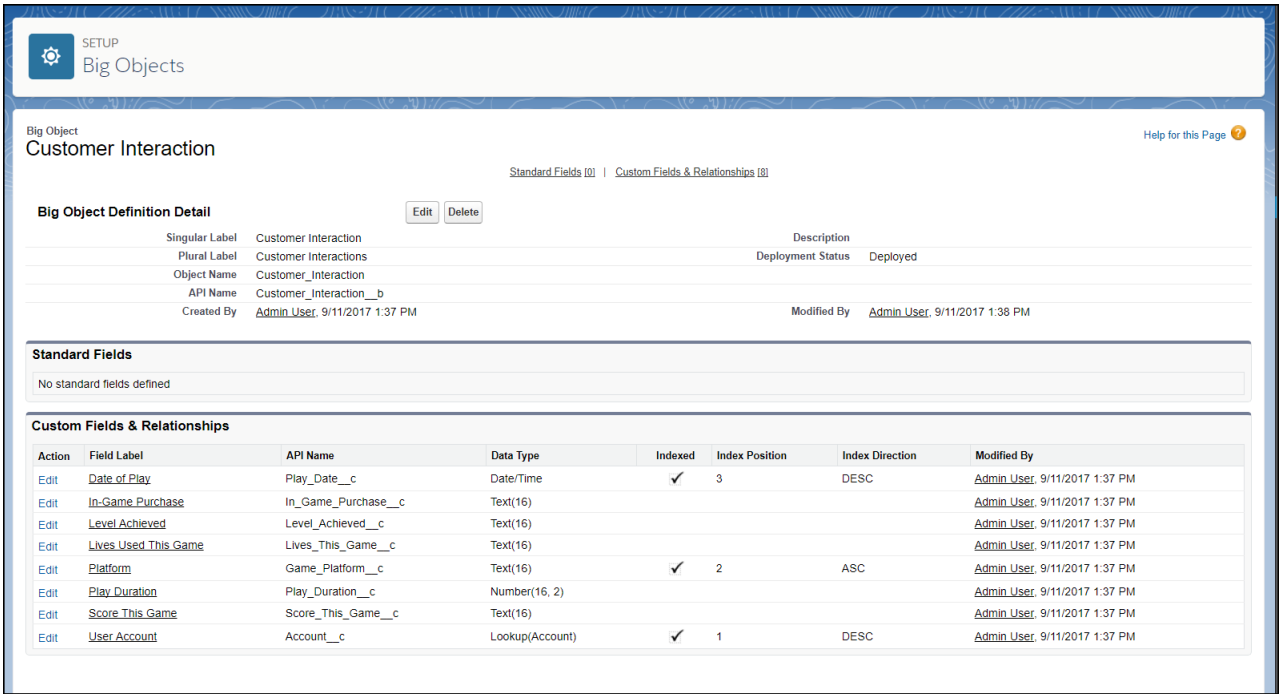
Use Metadata API and the Ant Migration Tool to deploy. When building files to deploy a custom big object, make sure the `object` file is in a folder called `objects` and the `permissionset` file is in a folder called `permissionsets`. Put the `package.xml` file in the root directory and not in a subfolder.

## View a Custom Big Object in Setup

After you've deployed your custom big object, you can view it by logging in to your organization and, from Setup, entering *`Big Objects`* in the `Quick Find` box, then selecting **Big Objects**.



To see its fields and relationships, click the name of a big object.



# Object Interfaces

An object interface defines the business logic that an object implements. The object that implements the interface, called the **implementor**, stores the data and implements the business logic.

An API that accepts a parameter with an object interface data type can accept any implementor of the object interface. For example, `/calculate-price` accepts the SalesTransaction object interface. You can use any implementor of SalesTransaction, such as an Order object, in the `/calculate-price` request.

# CHAPTER 2 Salesforce Object Behavior

In this chapter ...

- Object Groups
- Salesforce Object Types
- Object Cheatsheet

Learn how objects are related and how to choose the right Salesforce object for your data and transactions. Objects are categorized by data flow, storage, and transaction type, with some requiring specific licenses or managed packages.

Prefer listening to reading? Check out our AI-generated podcast on object behavior.

Watch a video

Just as you pick different tools from your toolbox for different jobs, pick an object type based on the type of data you have and the kind of transactions you expect.

The type of object that you need is determined by the data you want to store in it and how you expect to interact with it.

Determine the properties of the data that you want to store:

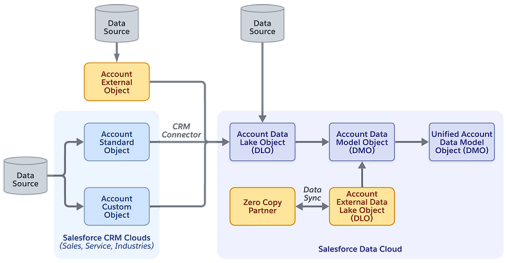
- Structure—hierarchical, tabular, or unstructured
- Volume—high-scale or average
- Size - maximum size of data to store
- Storage—short-term or long-term storage

Determine how you want to interact with the data:

- Transaction—ACID, OLAP, OLTP
- Operation—Create, Read, Update, Delete
- Latency—How often you must process or update the data for it to be useful

## Objects by Data Flow

Data flows into Salesforce from a variety of data sources. With the addition of Data Cloud, data also flows between objects that contain the same data but are of different types. For example, let's say that the data for an account is entered into a Sales org and then ingested into Data Cloud via the CRM connector. Any object that contains data for your org, including standard, custom, or external objects, can use the CRM connector to ingest data into Data Cloud. Other systems also connect to Data Cloud and store account data or metadata inside Data Cloud in their own schemas as Data Lake Objects (DLOs). The different schemas for objects containing account data are mapped to a single Account data model object (DMO) schema and then harmonized into an Account unified data model object.

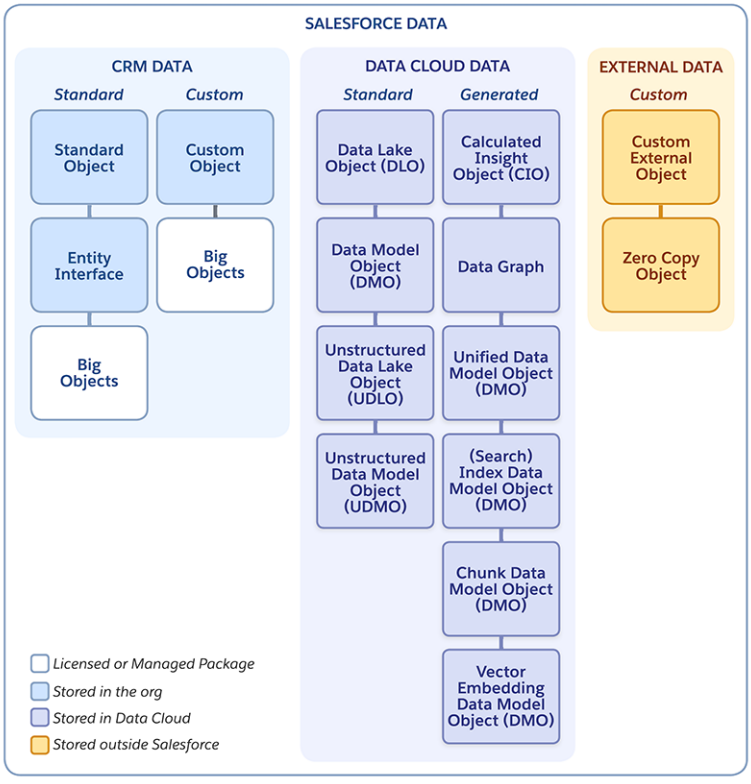


# Objects by Data Domain

CRM objects are stored on every org as long as you have a license for the feature that uses them. These objects include standard objects, custom objects, and entity interfaces. Big Objects are available only via licenses or managed packages and are stored differently, but are accessible to any org. Data Cloud objects are stored in Data Cloud and are packaged in data kits. Additional data can be represented in your org, but stored in third-party systems using custom external objects. You can also store data in systems that participate in our zero copy program and query them like native Data Cloud objects.

Data Cloud objects are stored in Data Cloud.

External data is stored outside Salesforce.



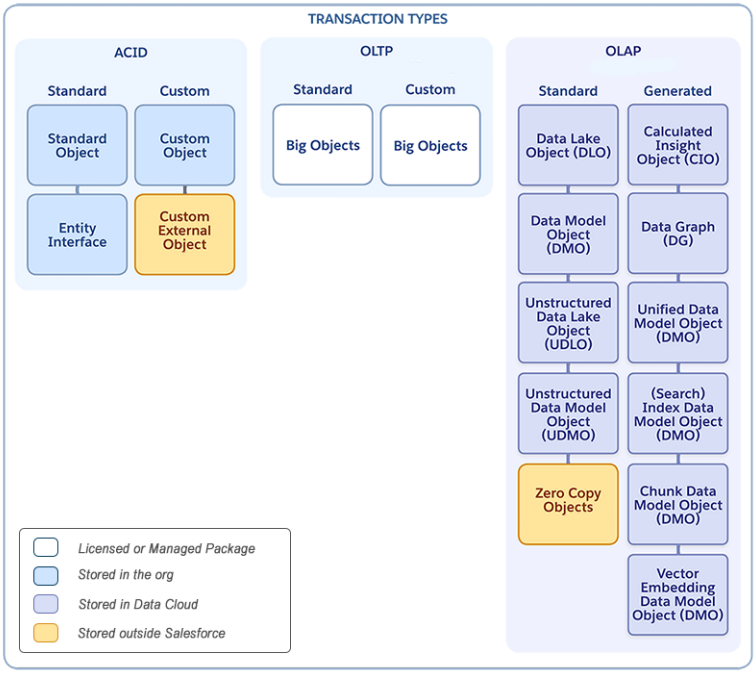
# Objects by Transaction Type

For data stored outside Salesforce, the transaction type can't be guaranteed. However, the objects are grouped according to how most data of each type is stored and integrated with Salesforce.

ACID transactions are supported for standard objects, custom objects, entity interfaces, and custom external objects.

OLTP transactions are supported for standard and custom Big Objects.

OLAP transactions are supported for Data Cloud objects.



# Object Groups

Objects can be grouped in any number of ways. Object groups are based on where data is stored, how it's used, and which licenses are required to access it.

- Salesforce Common Objects—available for any org
- Salesforce Cloud Objects—available for specific clouds or features
- High-Scale Objects—available when purchased for specific clouds
- External Data—stored outside Salesforce

Salesforce Common Objects

Common objects are available in any standard org for any cloud. They don't require any special licensing.

Salesforce Cloud Objects

Cloud objects are used only by a specific cloud. These objects sometimes have different limitations, APIs, or querying behavior than standard common objects.

Salesforce High-Scale Objects

Use high-scale objects when you have a large number of transactions, large objects, or you must store data over a long period. These objects sometimes have different limitations, APIs, or querying behavior than Salesforce common objects do.

Salesforce External Data Objects

You can store data outside Salesforce and still access in your org or Data Cloud.

## Salesforce Common Objects

Common objects are available in any standard org for any cloud. They don't require any special licensing.

Optimized for: ACID transactions

Object types: Original, Base, and Setup.

Database storage: Relational and transactional database that scales to millions of records

Reference information: *Object Reference for the Salesforce Platform*

Documentation: Documented in Salesforce Help by product

### Original Platform Objects

Original platform objects are sometimes called *hero* or *legacy* objects. They're the oldest of the Salesforce objects.

Objects: Account, Contact, Lead, Opportunity

Customizable: Yes

Cloud: Common. These objects are available in any cloud that uses an org.

Packaging: Every form of packaging except data kits. See the Metadata Coverage Report.

Object Examples: Account, Contact, Lead, Opportunity

Documentation: Apex Developer Guide, Salesforce DX Developer Guide

Reference:Object Reference for the Salesforce Platform

## Base Platform Objects

Base platform objects (BPOs) are the objects common to most Salesforce orgs that contain data.

Object Examples: SocialPersona

Customizable: Yes

Cloud: Common. These objects are available on any cloud that uses an org.

Packaging: Every form of packaging except data kits.

## Setup Platform Objects

Setup platform objects (SPOs) are the objects common to most Salesforce orgs that contain setup configuration information. Data about the platform is created using org Setup is stored in Setup platform objects.

Object Examples: CompactLayout, CustomField

Customizable: Yes

Cloud: Common. These objects are available on any cloud that uses an org.

Packaging: The packaging available depends on the cloud, product, and feature that the objects are associated with.

## Custom Objects

You can create custom objects and define the schema for the object.

Transaction type: ACID

Object type(s): All custom objects are user defined, so they don't have subtypes.

Object suffix: __c

Customizable: N/A

Cloud: Common

Packaging: Depends on the object.

Object Examples: N/A

Documentation: Manage Custom Objects in Salesforce Help.

Reference: N/A

# Salesforce Cloud Objects

Cloud objects are used only by a specific cloud. These objects sometimes have different limitations, APIs, or querying behavior than standard common objects.

Some Salesforce objects require special licensing or purchase. If an object is included in the *Object Reference for the Salesforce Platform*, the special-access section of the page about the object indicates licensing or purchasing requirements. In most cases, these objects are documented in implementation guides for their cloud, not in the *Object Reference*.

# Salesforce High-Scale Objects

Use high-scale objects when you have a large number of transactions, large objects, or you must store data over a long period. These objects sometimes have different limitations, APIs, or querying behavior than Salesforce common objects do.

## Big Objects

Usage: Auditing, tracking, feeds, and historical archives.

Transaction Type: OLTP transactions

Database Storage: Horizontally scalable distributed databases that are non-transactional and scale to hundreds of millions or even billions of records. Big objects can contain data that's larger than the data that Data Cloud or standard objects support.

Object Type: BO

Object Suffix: __b

Customizable: Yes

Cloud: Any cloud that provides an org. However, Big Objects requires an additional license.

Packaging: Use the `deploy()` and `retrieve()` calls to deploy and retrieve a .zip file. Standard AppExchange packaging isn't available.

Object Examples: FieldHistoryArchive

Documentation: Big Objects Implementation Guide

Reference: Object Reference for the Salesforce Platform

## High-Scale Order Objects

Optimized for: OLTP transactions

Objects: PendingOrderSummary

Documentation: Order Management Implementation Guide

Reference: Object Reference for the Salesforce Platform

## Data Cloud Objects

Optimized for: OLAP transactions

Object types: DLO, DMO, CIO, DG

Documentation: Data Object Concepts and Schema in Data Cloud

Salesforce Data Cloud Objects
Data Cloud objects are high-scale objects that are used to store large amounts of data over time.

## Salesforce Data Cloud Objects

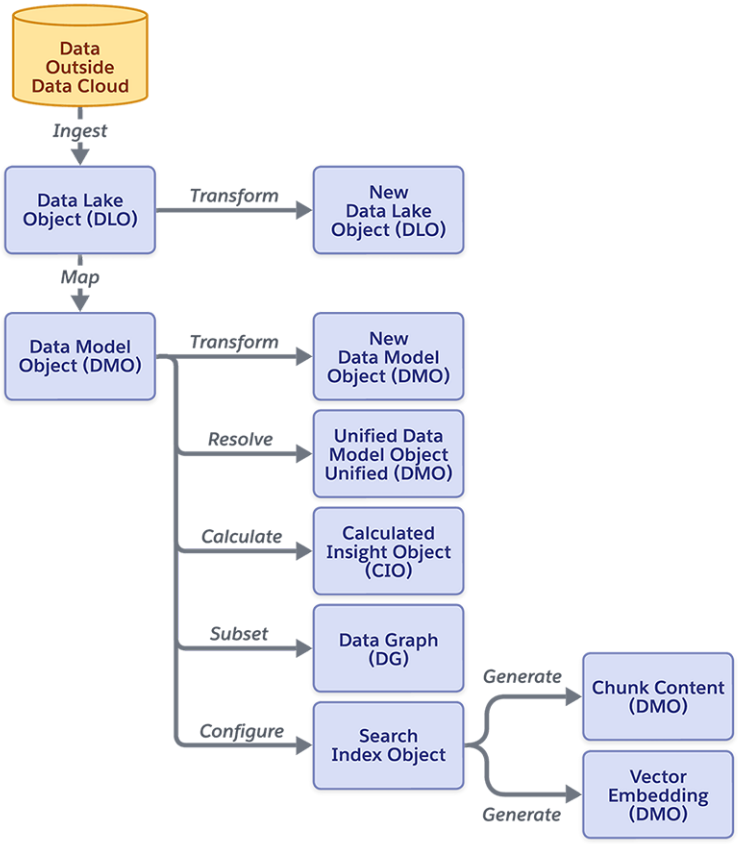
Data Cloud objects are high-scale objects that are used to store large amounts of data over time.

Optimized for: OLAP transactions

Object Type(s): DLO, DMO, CIO, DG

Documentation: Data Object Concepts and Schema in Data Cloud in Salesforce Help

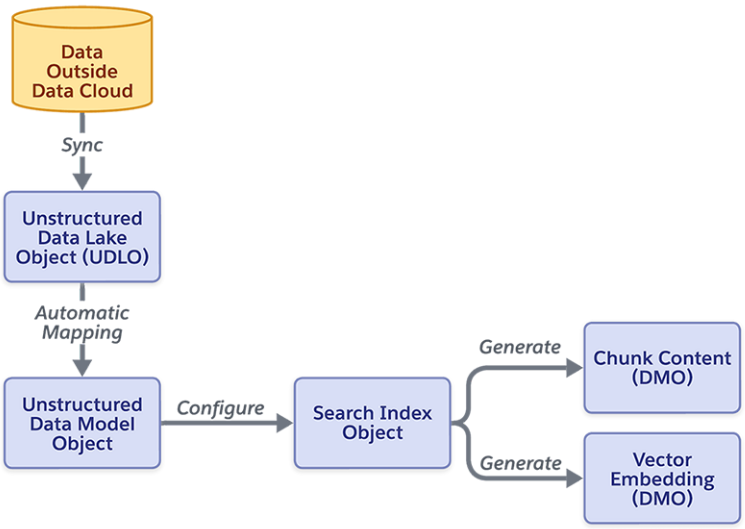
## DMO Object Creation



Data Cloud objects are created from ingested data and from various operations on that data. Here's how it works.

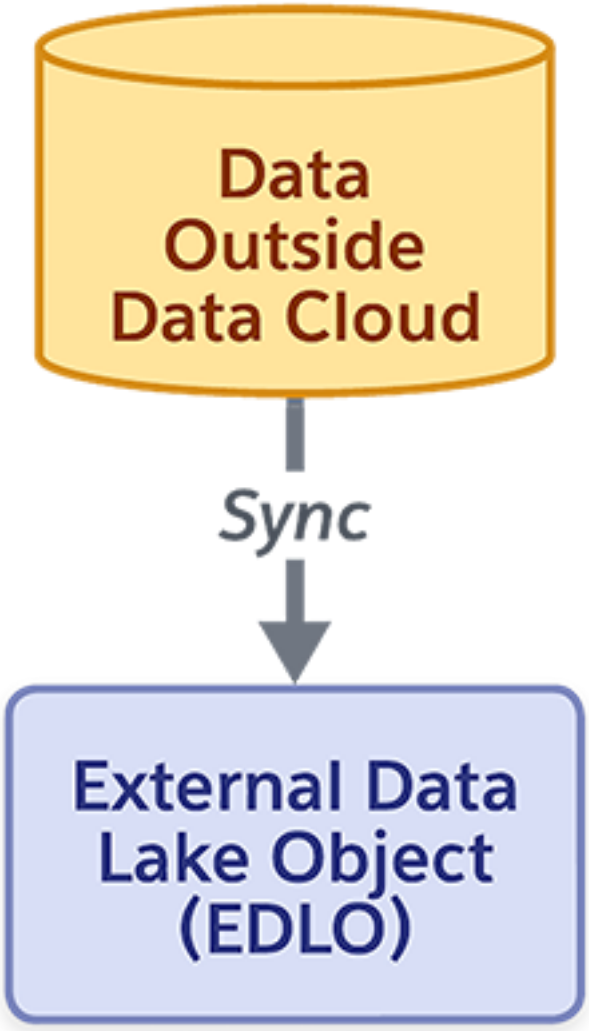
1. Data ingested into Data Cloud is stored in data lake objects (DLOs) in the native schema of the system it was created in. Formula fields are also supported for DLOs.
2. Data lake objects are mapped to the schema for data model objects (DMOs), which is the C360 Data Model. data model objects don't store data, only the references to data stored in data lake objects.
3. Data lake objects and data model objects can be transformed into new DLOs and DMOs by using the Data Cloud data prep and transform feature.
4. Data model objects undergo identity resolution to match and resolve data across different records in the same type of DMO and combine the best data from different DMOs in a unified DMO. The unified DMO is often used to create other types of objects, such as data graphs and calculated insights, so it's usually created before other object types. However, it's an optional step.
5. Data in DMOs can be aggregated or calculated to create calculated insight objects (CIOS).
6. A subset of DMO data can also be used as a data graph for faster processing in near real-time transactions with high-scale data.
7. You configure search index objects for DMOs by using the Data Cloud app. These objects aren't DMOs, but they're used to generate DMOs.
8. Search index objects automatically generate chunk-content DMOs and vector-embedding DMOs.

## UDMO Object Creation



1. Unstructured data ingested into Data Cloud is stored in unstructured data lake objects (UDLOs).
2. Unstructured data lake objects are automatically mapped to the C360 Data Model schema for unstructured data model objects (UDMOs).
3. Configure a search index object on UDMOs and DMOs, so it can be used for Retrieval Augmented Generation (RAG) with Gen AI applications.
4. You can generate chunk content DMOs and vector embedding DMOs from (search) index DMOs.

### Zero Copy Object Creation



Some external data sources are deeply integrated with Data Cloud, so that you can create a connection that doesn't require data syncing or ingestion. When you share an external data source with Data Cloud, external objects are defined. You configure additional metadata about these objects so you can use the objects with Salesforce features and APIs. For example, you can configure label names that are used in apps and reports.

## Calculated Insight Objects (CIO)

Usage: These objects contain data aggregated or calculated from DMO objects.

Customizable: Yes. There are no standard CIOs.

Cloud: Data Cloud.

Packaging: Data kits

Documentation: Calculated Insights in Salesforce Help

Reference: N/A

## Data Lake Objects (DLO)

Usage: Data lake objects are used to store data ingested into Data Cloud.

Object suffix: __dlo.

Customizable: Yes

Cloud: Data Cloud

Packaging: DLOs can be packaged via data kits. Data streams to ingest DLOs can also be packaged.

Documentation: Data Object Concepts and Schema in Data Cloudin Salesforce Help

Reference: DLO objects can be ingested from any external source and retain the schema from the data stream. Consult the reference documentation for the system you're ingesting the DLO from.

In addition to standard data lake objects, there are also unstructured and external data lake objects.

## Data Model Objects (DMO)

Usage: data model objects use the C360 Data Model to provide a common representation of data. Data stored in data lake objects is mapped to data model objects. data model objects don't store data, but they contain information on where data is stored in DLO objects. Data Cloud APIs and features use DMO objects to access data that's stored in data lake objects.

Object suffix: __dlm.

Note: All API Names for DMO object fields have a __c suffix for both standard and custom fields.

Customizable: Yes

Cloud: Data Cloud.

Packaging: Data kits (recommended). Unmanaged packages and managed packages support data kit packaging only from the default data space. However, you can deploy data kits in any data space. It's also possible to import DMOs in unmanaged packages or through comma separated value (CSV) files.

Documentation: Data Object Concepts and Schema in Data Cloud in Salesforce Help

Reference: data model objects don't have a single reference. Most Salesforce DMOs mirror existing Salesforce base platform objects and original platform objects . A few of these use slightly different data types. Some Salesforce DMOs are referenced in the Standard Data Model Objects (DMOs) section of the *Data Cloud Reference Guide*. However, additional DMO objects are available for specific features or clouds. DMOs are also documented as a part of data kit or bundle mappings.

In addition to data model objects, there are also unified data model objects and unstructured data model objects (UDMO)

## Data Graphs (DG)

Usage: You can create a precalculated, materialized view of your data to improve query speed with high-scale data. A data graph contains a JSON blob that combines data structures from multiple DMOs and is used for real-time operations in apps.

Customizable: Yes. All data graphs are customizable. There are no standard data graphs.

Cloud: Data Cloud.

Packaging: Data kits. Data graphs can be added to data kits, but they aren't packageable directly.

Documentation: Data Graphs in Salesforce Help

Reference: N/A

### Unified Objects

Usage: You can create a precalculated, materialized view of your data to improve query speed with high-scale data. A data graph contains a JSON blob that combines data structures from multiple DMOs and is used for real-time operations in apps.

Customizable: Yes. All data graphs are customized. There are no standard data graphs.

Cloud: Data Cloud.

Packaging: Data kits. Data graphs can be added to data kits, but they aren't packageable directly.

Documentation: Data Graphs in Salesforce Help

Reference: N/A

### Unstructured Data Lake Objects (UDLO)

Usage: Unstructured data lake objects (UDLOs) reference unstructured data in Data Cloud. A UDLO is created manually. Unstructured data is ingested from a blob store.

Object suffix: __dlo.

Customizable: Yes

Cloud: Data Cloud

Packaging: Not packageable. UDLOs aren't packaged. However, connections to ingest UDLOs can be packaged.

Documentation: Unstructured Data Lake Objects in Salesforce Help

Reference: In addition to standard data lake objects, there are also unstructured data lake objects (UDLO) and external data lake objects.

### Unstructured Data Model Objects (UDMO)

Usage: Unstructured data model objects represent data created from unstructured data sources.

Object suffix: __dlm.

**Note:** All API names for DMO object fields have a `__c` suffix for both standard and custom fields.

Customizable: Yes

Cloud: Data Cloud.

Packaging: Data kits (recommended). It's also possible to import DMOs in unmanaged packages or through CSV files.

Documentation: Data Object Concepts and Schema in Data Cloud in Salesforce Help

Reference: N/A

## Salesforce External Data Objects

You can store data outside Salesforce and still access in your org or Data Cloud.

### External Objects

External objects are similar to custom objects, but external object record data is stored outside your org. You can access data in external objects by using OData and other adaptors.

## Zero Copy Objects

In some cases, Salesforce is deeply integrated into data stored in other products, such as Snowflake or AWS. In this case, the data is stored outside Salesforce, but it's accessible through Data Cloud.

# Salesforce Object Types

In the Salesforce Platform, an object type used to refer to whether an object was standard or custom. A standard object has a schema determined by Salesforce. A custom object has a schema determined or created by you. However, as the platform has continued to evolve, there are now many more types of objects.

The objects in the table are grouped by how objects are identified and accessed in Salesforce. These include objects that are visible via your org or an API, even if they are used for internal purposes.

| Suffix | Object Type | Object Group |
|---|---|---|
| __b | Big object | High Scale |
| __c | Custom object | Common |
| __ChangeEvent | Custom Object Change Event | Common |
| __chn | PlatformEventChannel | Common |
| __cio | Calculated insight object | High Scale |
| __dg | Data graph | High Scale |
| __DataCategorySelection | Knowledge__DataCategorySelection | Common |
| __dlm | Data Model Object (DMOs used for queries have this extension) | High Scale |
| __dlo | Data Lake Object | High Scale |
| __dmo | Data Model Object | High Scale |
| __dso | Data source object | High Scale |
| __e | Platform event | Common |
| __Feed | Knowledge article feed or custom object feed | Common |
| __hd | Historical data | Common |
| __History | Field History Tracking for custom objects | Common |
| _hst | A historical field for a custom report type. | Common |
| __ka | Knowledge article | Common |
| __kav | Knowledge article version | Common |
| __latitude__s | Geolocation custom field with latitude coordinates | Common |
| __longitude__s | Geolocation custom field with longitude coordinates | Common |
| __mdt | Custom metadata type | Common |
| __pc | Custom person account field | Common |

| | | |
|---|---|---|
| __pr | Person account relationship field | Common |
| __r | Custom relationship field as used in a SOQL query to traverse the relationship | Common |
| __Share | Custom object sharing object | Common |
| __Tag | Salesforce tags | Common |
| __ViewStat | KnowledgeArticleViewStat | Common |
| __VoteStat | KnowledgeArticleVoteStat | Common |
| __x | External object | Common |
| __xo | Salesforce-to-Salesforce (S2S) spoke/proxy object | Common |
| ChangeEvent | Standard object change event | Common |
| Feed | Standard object feed | Common |

## Identifying an Object Type

You can identify an object type by its developer API name. The developer API name is a unique identifier with a standard suffix that indicates the type. You can see platform objects in the Object Manager, along with their suffix. Object Manager shows the object type.

Many different types of Data Cloud objects share the same suffix. To determine the type of a Data Cloud object, view it in Data Cloud Data Explorer and filter by the object type.

## Accessing an Object

Access to an object type is determined by the products and features you're licensed for and relevant user in object permissions. In some cases, you need permissions in multiple clouds to access objects for a feature. For example, you need permission from Data Cloud and your Sales Cloud org to access Data Cloud objects for Data Cloud-powered features in Sales Cloud. The security model for an org is different from the security model of Data Cloud, because objects are stored differently.

# Object Cheatsheet

At a glance, see how objects compare to each other.

## Object Groups

- Common Objects: Used to store data available in any standard org for any cloud. Optimized for ACID transactions. Relational and transactional database that scales to millions of records.
- High-scale objects: Used for large numbers of transactions and data storage over time
- External Objects: Used to represent data stored outside Salesforce

# Object Types

| Object Type | Group | Description | Customizable | Cloud | Packaging | Documentation | Reference |
|---|---|---|---|---|---|---|---|
| Base Platform Objects | common objects | Used for data common to most orgs | Yes | Common | Every form of packaging except data kits | DX and Developer Tools | Object Reference for the Platform |
| Big Objects | high-scale objects | Used for large transactions and data storage over time | Yes | Any cloud that provides an org | Deploy/retrieve with .zip files; no standard AppExchange packaging | Big Objects Implementation Guide | Object Reference for the Platform |
| Calculated Insight Objects (CIO) | high-scale objects | Contains data aggregated or calculated from DMOs | Yes | Data Cloud | Data kits | Calculated Insights in Help | N/A |
| Custom Objects | common objects | User-defined objects | N/A | Common | Depends on the object | Create a Custom Object in Help | N/A |
| Data Graphs (DG) | high-scale objects | Create a materialized view of data to improve query speed | Yes | Data Cloud | Data kits | Create a Data Graph in Help | N/A |
| Data Lake Objects (DLO) | high-scale objects | Store data ingested into Data Cloud | Yes | Data Cloud | DLOs and data streams can be packaged via data kits | Data Objects in Data Cloud in Help | Consult the reference documentation for the system storing the data |
| Data Model Objects (DMO) | high-scale objects | Provide a common representation of data by using C360 data model | Yes | Data Cloud | Data kits (recommended) | Data Objects in Data Cloud in Help | Data Cloud Reference Guide |
| External Objects | External Objects | Represent data stored outside Salesforce | N/A | N/A | N/A | N/A | N/A |
| High Scale Order Objects | high-scale objects | Optimized for OLTP transactions | N/A | N/A | N/A | Order Management Implementation Guides in Help | Object Reference for the Platform |

| Object Type | Group | Description | Customizable | Cloud | Packaging | Documentation | Reference |
|---|---|---|---|---|---|---|---|
| Setup Platform Objects | common objects | Common objects containing setup configuration information created using Setup | Yes | Common | Depends on the cloud, product, and feature | DX and Developer Tools | Object Reference for the Platform |
| Unified Objects | high-scale objects | Created as a golden record of data through identity resolution | Yes | Data Cloud | Packageable through data kits | Unify Source Profiles in Help | N/A |
| Unstructured Data Lake Objects (UDLO) | high-scale objects | References unstructured data in Data Cloud and is created manually | Yes | Data Cloud | No, but connections can be packaged | Unstructured Data Lake Objects in Help | N/A |
| Unstructured Data Model Objects (UDMO) | high-scale objects | Represents data from unstructured data sources | Yes | Data Cloud | Data kits (recommended) | Data Objects in Data Cloud in Help | N/A |
| Zero Copy Objects | External objects | Deep integration with external data sources, so no data syncing required | N/A | N/A | N/A | N/A | N/A |

# CHAPTER 3 Associated Objects (Feed, History, OwnerSharingRule, Share, and ChangeEvent Objects)

This section provides a list of objects associated to standard objects and their standard fields.

Some fields may not be listed for some objects. To see the system fields for each object, see System Fields.

To verify the complete list of fields for an object, use a describe call from the API or inspect with an appropriate tool. For example, inspect the WSDL or use a schema viewer.

StandardObjectNameFeed

*StandardObjectName*Feed is the model for all feed objects associated with standard objects. These objects represent the posts and feed-tracked changes of a standard object.

StandardObjectNameHistory

*StandardObjectName*History is the model for all history objects associated with standard objects. These objects represent the history of changes to the values in the fields of a standard object.

StandardObjectNameOwnerSharingRule

*StandardObjectName*OwnerSharingRule is the model for all owner sharing rule objects associated with standard objects. These objects represent a rule for sharing a standard object with users other than the owner.

StandardObjectNameShare

*StandardObjectName*Share is the model for all share objects associated with standard objects. These objects represent a sharing entry on the standard object.

StandardObjectNameChangeEvent

A ChangeEvent object is available for each object that supports Change Data Capture. You can subscribe to a stream of change events using Change Data Capture to receive data tied to record changes in Salesforce. Changes include record creation, updates to an existing record, deletion of a record, and undeletion of a record. A change event isn't a Salesforce object—it doesn't support CRUD operations or queries. It's included in the object reference so you can discover which Salesforce objects support change events.

## *StandardObjectName*Feed

*StandardObjectName*Feed is the model for all feed objects associated with standard objects. These objects represent the posts and feed-tracked changes of a standard object.

The object name is variable and uses *StandardObjectName*Feed syntax. For example, AccountFeed represents the posts and feed-tracked changes on an account record. We list the available associated feed objects at the end of this topic. For specific version information, see the documentation for the standard object.

## Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

In the internal org, users can delete all feed items they created. This rule varies in Experience Cloud sites where threaded discussions and delete-blocking are enabled. Site members can delete all feed items they created, provided the feed items don't have content nested under them—like a comment, answer, or reply. Where the feed item has nested content, only feed moderators and users with the Modify All Data permission can delete threads.

To delete feed items they didn't create, users must have one of these permissions:

- Modify All Data
- Modify All Records on the parent object, like Account for AccountFeed
- Moderate Chatter

  Note: Users with the Moderate Chatter permission can delete only the feed items and comments they can see.

  Only users with this permission can delete items in unlisted groups.

For more special access rules, if any, see the documentation for the standard object. For example, for AccountFeed, see the special access rules for Account.

## Fields

| Field | Details |
|---|---|
| `BestCommentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the comment marked as best answer on a question post. This field is available in API version 44.0 and later. |
| `Body` | **Type**<br>textarea<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The body of the post. Required when `Type` is `TextPost`. Optional when `Type` is `ContentPost` or `LinkPost`. |
| `CommentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of comments associated with this feed item.<br>Tip: In a feed that supports pre-moderation, `CommentCount` isn't updated until a comment is published. For example, say that you comment on a post that already has one published comment and your comment triggers moderation. Now there are two comments on the post, but the count says there's only one. In a moderated feed, comments aren't counted until approved by an admin or someone with Can Approve Feed Post and Comment or Modify All Data.<br>Feed moderation has implications on how you retrieve feed comments. In a moderated feed, rather than retrieving comments by looping through `CommentCount`, go through pagination until the end of comments is returned. |
| `ConnectionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>When a PartnerNetworkConnection modifies a record that is tracked, the `CreatedBy` field contains the ID of the system administrator. The `ConnectionId` contains the ID of the PartnerNetworkConnection. Available if Salesforce to Salesforce is enabled for your organization. |
| `ContentData` | **Type**<br>base64<br>**Properties**<br>Nillable<br>**Description**<br>Available in API version 36.0 and earlier only. Required if `Type` is `ContentPost`. Encoded file data in any format, and can't be 0 bytes. Setting this field automatically sets `Type` to `ContentPost`. Only visible when `Type` is set to `ContentPost`. |
| `ContentDescription` | **Type**<br>textarea<br>**Properties**<br>Nillable, Sort<br>**Description**<br>Available in API version 36.0 and earlier only. The description of the file specified in `ContentData`. Only visible when `Type` is set to `ContentPost`. |
| `ContentFileName` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Group, Nillable, Sort<br>**Description**<br>Available in API version 36.0 and earlier only. This field is required if `Type` is `ContentPost`.The name of the file uploaded to the feed. Setting `ContentFileName` automatically sets `Type` to `ContentPost`. Only visible when `Type` is set to `ContentPost`. |
| `ContentSize` | **Type**<br>int<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>Available in API version 36.0 and earlier. The size of the file (in bytes) uploaded to the feed. This field is read-only and is automatically determined during insert. Only visible when `Type` is set to `ContentPost`. |
| `ContentType` | **Type**<br>string<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>Available in API version 36.0 and earlier. The MIME type of the file uploaded to the feed. This field is read-only and is automatically determined during insert. Only visible when `Type` is set to `ContentPost`. |
| `FeedPostId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field was removed in API version 22.0, and is available in earlier versions for backward compatibility only.<br>ID of the associated FeedPost. A FeedPost represents the following types of changes in a feed item: changes to tracked fields, text posts, link posts, and content posts. |
| `InsertedById` | **Type**<br>reference<br>**Properties**<br>Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the `InsertedBy` value is set to the ID of the context user. |
| `IsRichText` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the feed item `Body` contains rich text. If you post a rich text feed comment using SOAP API, set `IsRichText` to `true` and escape HTML entities from the body. Otherwise, the post is rendered as plain text.<br>Rich text supports the following HTML tags:<br>• `<p>`<br>Tip: Though the `<br>` tag isn't supported, you can use `<p> </p>` to create lines.<br>• `<a>`<br>• `<b>`<br>• `<code>`<br>• `<i>`<br>• `<u>`<br>• `<s>`<br>• `<ul>`<br>• `<ol>`<br>• `<li>`<br>• `<img>`<br>The `<img>` tag is accessible only through the API and must reference files in Salesforce similar to this example: `<img src="sfdc://069B0000000omjh"></img>`<br>Note: In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation. |
| `LikeCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of likes associated with this feed item. |

| Field | Details |
| --- | --- |
| `LinkUrl` | **Type**<br>url<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The URL of a `LinkPost`. |
| `NetworkScope` | **Type**<br>picklist<br>**Properties**<br>Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Specifies whether this feed item is available in the default Experience Cloud site, a specific Experience Cloud site, or all sites. This field is available in API version 26.0 and later, if digital experiences is enabled for your org.<br>`NetworkScope` can have the following values:<br>• `NetworkId`—The ID of the Experience Cloud site in which the FeedItem is available. If left empty, the feed item is only available in the default Experience Cloud site.<br>• `AllNetworks`—The feed item is available in all Experience Cloud sites.<br>Note the following exceptions for `NetworkScope`:<br>• Only feed items with a Group or User parent can set a `NetworkId` or a null value for `NetworkScope`.<br>• For feed items with a record parent, users can set `NetworkScope` only to `AllNetworks`.<br>• You can't filter a feed item on the `NetworkScope` field. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the record that is tracked in the feed. The detail page for the record displays the feed. |
| `RelatedRecordId` | **Type**<br>reference<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>ID of the ContentVersion record associated with a `ContentPost`. This field is null for all posts except `ContentPost`. |

| Field | Details |
| --- | --- |
| `Title` | **Type**<br>string<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>The title of the feed item. When the `Type` is `LinkPost`, the `LinkUrl` is the URL and this field is the link name. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of feed item:<br>• `ActivityEvent`—indirectly generated event when a user or the API adds a Task associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a Task or Event associated with a case record (excluding email and call logging).<br>For a recurring Task with CaseFeed disabled, one event is generated for the series only. For a recurring Task with CaseFeed enabled, events are generated for the series and each occurrence.<br>• `AdvancedTextPost`—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post.<br>• `AnnouncementPost`—Not used.<br>• `ApprovalPost`—generated when a user submits an approval.<br>• `BasicTemplateFeedItem`—Not used.<br>• `CanvasPost`—a post made by a canvas app posted on a feed.<br>• `CollaborationGroupCreated`—generated when a user creates a public group.<br>• `CollaborationGroupUnarchived`—Not used.<br>• `ContentPost`—a post with an attached file.<br>• `CreatedRecordEvent`—generated when a user creates a record from the publisher.<br>• `DashboardComponentAlert`—generated when a dashboard metric or gauge exceeds a user-defined threshold.<br>• `DashboardComponentSnapshot`—created when a user posts a dashboard snapshot on a feed.<br>• `LinkPost`—a post with an attached URL.<br>• `PollPost`—a poll posted on a feed.<br>• `ProfileSkillPost`—generated when a skill is added to a user's Chatter profile.<br>• `QuestionPost`—generated when a user posts a question.<br>• `ReplyPost`—generated when Chatter Answers posts a reply. |

| Field | Details |
| --- | --- |
| | • `RypplePost`—generated when a user creates a Thanks badge in WDC.<br>• `TextPost`—a direct text entry on a feed.<br>• `TrackedChange`—a change or group of changes to a tracked field.<br>• `UserStatus`—automatically generated when a user adds a post. Deprecated.<br>The following values appear in the `Type` picklist for all feed objects but apply only to CaseFeed:<br>• `CaseCommentPost`—generated event when a user adds a case comment for a case object<br>• `EmailMessageEvent`—generated event when an email related to a case object is sent or received<br>• `CallLogPost`—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event.<br>• `ChangeStatusPost`—generated event when a user changes the status of a case<br>• `AttachArticleEvent`—generated event when a user attaches an article to a case<br>Note: If you set `Type` to `ContentPost`, also specify `ContentData` and `ContentFileName`. |
| `Visibility` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Specifies whether this feed item is available to all users or internal users only. This field is available in API version 26.0 and later, if digitial experiences is enabled for your organization.<br>`Visibility` can have the following values:<br>• `AllUsers`—The feed item is available to all users who have permission to see the feed item.<br>• `InternalUsers`—The feed item is available to internal users only.<br>Note the following exceptions for `Visibility`:<br>• For record posts, `Visibility` is set to `InternalUsers` for all internal users by default.<br>• External users can set `Visibility` only to `AllUsers`.<br>• On user and group posts, only internal users can set `Visibility` to `InternalUsers`. |

## Usage

A feed for an object is automatically created when a user enables feed tracking for the object. Use feeds to track changes to records. For example, `AccountFeed` tracks changes to an account record. Use feed objects to retrieve the content of feed fields, such as type of feed or feed ID.

- `NewsFeed` and `UserProfileFeed` are available in API version 18.0 through API version 26.0. In API version 27.0 and later, `NewsFeed` and `UserProfileFeed` are no longer available in SOAP API. Use Connect REST API to access `NewsFeed` and `UserProfileFeed`.

  Use the `NewsFeed` object to query and retrieve lead feed items associated with a converted lead record.

- For `NewsFeed` and `UserProfileFeed`, users who don't have the View All Data permission have the following limitations when querying records: Must specify a `LIMIT` clause and the limit must be less than or equal to 1000. Can include a `WHERE` clause that references object fields, but can't include references to fields in related objects. For example, you can filter by `CreatedDate` or `ParentId`, but not by `Parent.Name`. Can include an `ORDER BY` clause that references object fields, but can't include references to fields in related objects. For example, `ORDER BY CreatedDate` or `ParentId`, but not by `Parent.Name`. To query for the most recent feed items, `ORDER BY CreatedDate DESC, Id DESC`.

  Note the following SOQL restrictions. No SOQL limit if logged-in user has View All Data permission. If not, specify a `LIMIT` clause of 1,000 records or fewer. SOQL `ORDER BY` on fields using relationships isn't available. Use `ORDER BY` on fields on the root object in the SOQL query.

- The name *`Article Type`*`__`Feed is variable, where *Article Type* is the object name for the article type associated with the article. For example, `Offer__Feed` represents a feed on an article of type *Offer*.
- Field Service must be enabled in your organization for `ServiceAppointmentFeed`, `ServiceCrewFeed`, `ServiceMemberFeed`, `ServiceResourceCapacityFeed`, `ServiceResourceFeed`, `ServiceResourceSkillFeed`, `ServiceTerritoryFeed`, `ServiceTerritoryMemberFeed`, and `SkillRequirementFeed`.
- For `WorkOrderFeed`, Work Orders or Field Service must be enabled in your organization.
- On `UserFeed`, if you use the `FeedComment` object to comment on a user record, the user can delete the comment. For example, if John Smith adds a comment to the feed on Sasha Jones' user record, Sasha can delete the comment.

## *`StandardObjectName`*History

*`StandardObjectName`*History is the model for all history objects associated with standard objects. These objects represent the history of changes to the values in the fields of a standard object.

The object name is variable and uses *`StandardObjectName`*History syntax. For example, AccountHistory represents the history of changes to the values of an account record's fields. We list the available associated history objects at the end of this topic. For specific version information, see the documentation for the standard object.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

## Special Access Rules

For specific special access rules, if any, see the documentation for the standard object. For example, for AccountHistory, see the special access rules for Account.

## Fields

| Field Name | Details |
| --- | --- |
| *StandardObjectName*Id | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the standard object. |
| DataType | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Data type of the field that was changed. |
| Field | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Name of the field that was changed. |
| NewValue | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>New value of the field that was changed. |
| OldValue | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>Old value of the field that was changed. |

# *StandardObjectName*OwnerSharingRule

*StandardObjectName*OwnerSharingRule is the model for all owner sharing rule objects associated with standard objects. These objects represent a rule for sharing a standard object with users other than the owner.

The object name is variable and uses *StandardObjectName*OwnerSharingRule syntax. For example, ChannelProgramOwnerSharingRule is a rule for sharing a channel program with users other than the channel program owner. The available associated owner sharing rule objects are listed at the end of this topic. For specific version information, see the standard object documentation.

Note: To enable access to this object, contact Salesforce customer support. But we recommend that you use Metadata API to programmatically update owner sharing rules instead because it triggers automatic sharing rule recalculation. The SharingRules Metadata API type is enabled for all orgs.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

For specific special access rules, if any, see the documentation for the standard object. For example, for ChannelProgramOwnerSharingRule, see the special access rules for ChannelProgram.

## Fields

| Field Name | Details |
|---|---|
| `AccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Determines the level of access users have to records. Values are:<br>• `Read` (read only)<br>• `Edit` (read/write) |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Description of the sharing rule. Maximum length is 1,000 characters. |

| Field Name | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package, and the changes are reflected in a subscriber's organization.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance can slow while Salesforce generates one for each record. |
| `GroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the source group. Records that are owned by users in the source group trigger the rule to give access. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Label of the sharing rule as it appears in the UI. Maximum length is 80 characters. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the user or group that you're granting access to. |

# *StandardObjectName*Share

*StandardObjectName*Share is the model for all share objects associated with standard objects. These objects represent a sharing entry on the standard object.

The object name is variable and uses *StandardObjectName*Share syntax. For example, AccountBrandShare is a sharing entry on an account brand. For specific version information, see the standard object documentation.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

For specific special access rules, if any, see the documentation for the standard object. For example, for AccountBrandShare, see the special access rules for AccountBrand.

## Fields

| Field Name | Details |
|---|---|
| `AccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The level of access allowed. Values are:<br>• `All` (owner)<br>• `Edit` (read/write)<br>• `Read` (read only) |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the parent record. |

| Field Name | Details |
| --- | --- |
| `RowCause` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Reason that the sharing entry exists. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the user or group that has been given access to the object. |

# *StandardObjectName*ChangeEvent

A ChangeEvent object is available for each object that supports Change Data Capture. You can subscribe to a stream of change events using Change Data Capture to receive data tied to record changes in Salesforce. Changes include record creation, updates to an existing record, deletion of a record, and undeletion of a record. A change event isn't a Salesforce object—it doesn't support CRUD operations or queries. It's included in the object reference so you can discover which Salesforce objects support change events.

## Supported Calls

`describeSObjects()`

## Special Access Rules

- All objects may not be available in your org. Some objects require specific feature settings and permissions to be enabled.
- For more special access rules, if any, see the documentation for the standard object. For example, for AccountChangeEvent, see the special access rules for Account.

## Change Event Support

Change events are available for all custom objects and a subset of standard objects. Change events that correspond to custom settings are partially supported. They aren't supported in Apex triggers but are supported in other types of subscribers. For more information about standard object support, see the Objects That Support Change Events section below.

## Change Event Name

The name of a change event is based on the name of the corresponding object for which it captures the changes.

**Standard Object Change Event Name**

```
<Standard_Object_Name>ChangeEvent
```

Example: `AccountChangeEvent`

**Custom Object Change Event Name**

```
<Custom_Object_Name>__ChangeEvent
```

Example: `MyCustomObject__ChangeEvent`

# Change Event Fields

The fields that a change event can include correspond to the fields on the associated parent Salesforce object, with a few exceptions. For example, AccountChangeEvent fields correspond to the fields on Account.

The fields that a change event doesn't include are:

- The `IsDeleted` system field.
- The `SystemModStamp` system field.
- Any field whose value isn't on the record and is derived from another record or from a formula, except roll-up summary fields, which are included. Examples are formula fields. Examples of fields with derived values include `LastActivityDate` and `PhotoUrl`.

Each change event also contains header fields. The header fields are included inside the `ChangeEventHeader` field. They contain information about the event, such as whether the change was an update or delete and the name of the object, like Account.

In addition to the event payload, the event schema ID is included in the `schema` field. Also included is the event-specific field, `replayId`, which is used for retrieving past events.

# Event Message Example

This example is an event message in JSON format for a new account record creation.

```
{
  "schema": "IeRuaY6cbI_HsV8Rv1Mc5g",
  "payload": {
    "ChangeEventHeader": {
      "entityName": "Account",
      "recordIds": [
        "<record_ID>"
      ],
      "changeType": "CREATE",
      "changeOrigin": "com/salesforce/api/soap/51.0;client=SfdcInternalAPI/",
      "transactionKey": "0002343d-9d90-e395-ed20-cf416ba652ad",
      "sequenceNumber": 1,
      "commitTimestamp": 1612912679000,
      "commitNumber": 10716283339728,
      "commitUser": "<User_ID>"
    },
    "Name": "Acme",
    "Description": "Everyone is talking about the cloud. But what does it mean?",
    "OwnerId": "<Owner_ID>",
    "CreatedDate": "2021-02-09T23:17:59Z",
    "CreatedById": "<User_ID>",
```

```
    "LastModifiedDate": "2021-02-09T23:17:59Z",
    "LastModifiedById": "<User_ID>"
  },
  "event": {
    "replayId": 6
  }
}
```

## API Version and Schema

When you subscribe to change events, the subscription uses the latest API version and the event messages received reflect the latest field definitions. For more information, see API Version and Event Schema in the *Change Data Capture Developer Guide*.

## Usage

For more information about Change Data Capture, see Change Data Capture Developer Guide.

## Objects That Support Change Events

These objects have associated ChangeEvent objects.

- Account (including Person Account)
- AccountCleanInfo
- AccountContactRelation
- AccountContactRole
- ActionCadence
- ActionCadenceStep
- ActionCadenceStepTracker
- ActionCadenceTracker
- AdOrderLineAdTarget
- AdProductTargetCategory
- AdQuoteLineAdTarget
- AdTargetCategory
- AdTargetCategorySegment
- AgentWork
- AgentWorkSkill
- AppExtension
- Asset
- AssetWarranty
- AssetRelationship
- AssignedResource
- AssociatedLocation
- AuthorizationForm
- AuthorizationFormConsent

- AuthorizationFormDataUse
- AuthorizationFormText
- Automotive Cloud. Some objects are supported. See StandardObjectNameChangeEvent in the *Automotive Cloud Developer Guide*.
- BriefcaseAssignment
- BriefcaseDefinition
- BroadcastTopicNetwork
- BusinessBrand
- CalendarView
- CallTemplate
- Campaign
- CampaignMember
- CampaignMemberStatus
- CartDeliveryGroup
- CartItem

# CHAPTER 4 Custom Objects

This section provides details on custom objects, entities that support custom objects, and their standard fields.

When you create or enable features for a custom object, Salesforce creates entities to support your custom object. For example, when you enable sharing rules for a custom object, Salesforce creates a *MyObjectName*__Share object.

To verify the complete list of fields for an object or entity, you can use a describe call from the API, or inspect with an appropriate tool, for example, inspecting the WSDL or using a schema viewer.

FSL__Time_Dependency__c

Represents a dependency between two service appointments. This object is used to define scheduling relationships between two appointments. It allows you to determine the order and timing in which dependent appointments should be scheduled.

Custom Metadata Type__mdt

Represents a custom metadata record. This object is available in API version 34.0 and later.

Custom Object__c

Represents a custom object.

Custom Object__Feed

Represents the feed, specifically posts and feed-tracked changes, on a custom object.

## FSL__Time_Dependency__c

Represents a dependency between two service appointments. This object is used to define scheduling relationships between two appointments. It allows you to determine the order and timing in which dependent appointments should be scheduled.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

### Special Access Rules

This object is available in orgs that have the Field Service managed package installed. Records of this object are subject to standard sharing and security settings.

# Fields

| Field | Details |
| --- | --- |
| `FSL__Dependency__c` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The type of the dependency.<br>Possible values are:<br>• `Immediately Follow`<br>• `Same Start`<br>• `Start After Finish`<br>• `Start After Finish And Same Day`<br>The default value is `Same Start`. |
| `FSL__Root_Service_Appointment__c` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The service appointment that's the root appointment of the entire dependency chain. The root appointment is the same service appointment for all the dependencies in the chain. This field is automatically populated by the system when creating a dependency. When creating a dependency via API, the API user must have permissions for this field. We recommend leaving this field empty when a dependency is created and avoiding any custom modifications.<br>This field is a relationship field.<br>**Relationship Name**<br>FSL__Root_Service_Appointment__r<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ServiceAppointment |
| `FSL__Same_Resource__c` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>An indication of whether the two service appointments that share a dependency should be assigned to the same service resource. |

| Field | Details |
| --- | --- |
| | The default value is `false`. |
| `FSL__Service_Appointment_1__c` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The first service appointment on which the second service appointment is dependent.<br>This field is a relationship field.<br>**Relationship Name**<br>FSL__Service_Appointment_1__r<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>ServiceAppointment (the master object) |
| `FSL__Service_Appointment_2__c` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The second service appointment that's dependent on the first service appointment.<br>This field is a relationship field.<br>**Relationship Name**<br>FSL__Service_Appointment_2__r<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ServiceAppointment |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>An auto-generated unique identifier for the appointment dependency record. |

## *Custom Metadata Type*__mdt

Represents a custom metadata record. This object is available in API version 34.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

The object name is a variable with the syntax *Custom Metadata Type*__mdt, where *Custom Metadata Type* is the `Object Name` for the custom metadata type associated with the custom metadata record. For example, `PicklistUsage__mdt` represents a custom metadata record based on the `PicklistUsage` custom metadata type.

## Supported Calls

`describeSObjects()`, `describeLayout()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| *Custom Field*__c | **Type**<br>Any Type<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A custom field on the record. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. |
| `isProtected` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>When a custom metadata type's records are released in a managed package, access to them is limited in specific ways.<br>• Code that's in the same managed package as custom metadata records can read the records.<br>• Code that's in the same managed package as custom metadata types can read the records that belong to that type. |

| Field | Details |
| --- | --- |
| | • Code that's in a managed package that doesn't contain either the type or the protected record can't read the protected records.<br>• Code that the subscriber creates and code that's in an unmanaged package can't read the protected records.<br>• The developer can modify protected records only with a package upgrade. The subscriber can't read or modify protected records. The developer name of a protected record can't be changed after release.<br>Records that are hidden by these access rules are also unavailable to REST, SOAP, SOQL, and Setup. |
| `Label` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The custom metadata record label. This label value is always the same as the `MasterLabel` value. |
| `Language` | **Type**<br>string<br>**Properties**<br>Filter, Group, restrictedPicklist, Sort<br>**Description**<br>The language of the custom metadata record. This value is always the default language of the developing organization. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The primary label for the custom metadata record. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation. |

| Field | Details |
| --- | --- |
| `QualifiedApiName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A concatenation of the namespace prefix and developer name. The format is *`NamespacePrefix__DeveloperName`*. |
| `SystemModStamp` | **Type**<br>dateTime<br>**Properties**<br>Defaulted on create, Filter, Sort<br>**Description**<br>Date and time when a user or automated process such as a trigger last modified this record. In this context, trigger refers to Salesforce code that runs to implement standard functionality, and not an Apex trigger. This field is available In API version 56.0 and later. |

SEE ALSO:

- System Fields
- Field Types
- API Field Properties

## *Custom Object__*C

Represents a custom object.

The custom object name is a variable with the syntax `Custom Object__c`, where `Custom Object` is the object's Name associated with the record, followed by two underscores and `c`. For example, a custom object labeled "Issue" in the Salesforce user interface is `Issue__c` in that organization's WSDL.

System fields and properties behave the same on custom objects as they do on standard objects, unless otherwise noted in the following details.

# Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

# Fields

| Field | Details |
| --- | --- |
| `ConnectionReceivedId` | **Type**<br>reference<br>**Properties**<br>Filter, Nillable<br>**Description**<br>ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce. |
| `ConnectionSentId` | **Type**<br>reference<br>**Properties**<br>Filter, Nillable<br>**Description**<br>ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections. |
| `CreatedById` | **Type**<br>reference<br>**Properties**<br>Aggregatable, Defaulted on create, Filter, Group, Sort<br>**Description**<br>ID of the User who created this record. |
| `CreatedDate` | **Type**<br>dateTime<br>**Properties**<br>Aggregatable, Defaulted on create, Filter, Sort<br>**Description**<br>Date and time when this record was created. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on createFilter, Group, Restricted picklist, Sort<br>**Description**<br>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. |

| Field | Details |
| --- | --- |
| `Id` | **Type**<br>Id<br>**Properties**<br>Aggregatable, Defaulted on create, Filter, Group, idLookup, Sort<br>**Description**<br>Globally unique string that identifies a record. For information on IDs, see ID Field Type. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the record has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `LastActivityDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Value is one of the following, whichever is the most recent:<br>• Due date of the most recent event logged against the object.<br>• Due date of the most recently closed task associated with the object. |
| `LastModifiedDate` | **Type**<br>dateTime<br>**Properties**<br>Aggregatable, Defaulted on create, Filter, Sort<br>**Description**<br>Date and time when a user last modified this record. |
| `LastModifiedById` | **Type**<br>reference<br>**Properties**<br>Aggregatable, Defaulted on create, Filter, Group, Sort<br>**Description**<br>ID of the User who last updated this object. |
| `LastReferencedDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Aggregatable, Filter, Sort, Nillable<br>**Description**<br>Date and time when the current user last viewed or modified this record, a record related to this record, or a list view. If this value is `null`, the current user has never viewed or modified a record related to this object.<br>This field doesn't exist on records for a custom object unless a custom object tab is created for that object. See Use LastReferencedDate and LastViewedDate fields in a SOQL query. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Aggregatable, Filter, Sort, Nillable<br>**Description**<br>Date and time when the current user last viewed or modified this record. If this value is `null`, the current user has never viewed or modified this record.<br>This field doesn't exist on records for a custom object unless a custom object tab is created for that object. See Use LastReferencedDate and LastViewedDate fields in a SOQL query. |
| `Name` | **Type**<br>string<br>**Properties**<br>Aggregatable, Create, Defaulted on create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Label is **Object Name**. Name of the object. Maximum size is 80 characters.<br>When the object is created using an API `update()` call, and the Name field is null, Salesforce sets the value to the record ID. When the object is created using an API `create()` call, Salesforce sets the initial value to the record ID. You can't set the Name field to null. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Aggregatable, Create, Defaulted on create, Filter, Group, Namepointing, Sort, Update<br>**Description**<br>The ID of the user who currently owns this object. Default value is the user logged in to the API to perform the `create()` call. |
| `RecordTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Nillable, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the record type assigned to this object. Create at least one record type before this field appears for custom or standard objects. |
| `SystemModStamp` | **Type**<br>dateTime<br>**Properties**<br>Aggregatable, Defaulted on create, Filter, Sort<br>**Description**<br>Date and time when a user or automated process such as a trigger last modified this record. In this context, trigger refers to Salesforce code that runs to implement standard functionality, and not an Apex trigger. |

- API Field Properties

## *Custom Object*__Feed

Represents the feed, specifically posts and feed-tracked changes, on a custom object.

A custom object feed shows posts and changes to the object's tracked fields. The object name is variable and uses *Custom Object*__Feed syntax, where *Custom Object* is the name of the custom object. For example, `Textile__Feed` represents a feed on the custom object `Textile__c`.

## Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

In the internal org, users can delete all feed items they created. This rule varies in Experience Cloud sites where threaded discussions and delete-blocking are enabled. Site members can delete all feed items they created, provided the feed items don't have content nested under them—like a comment, answer, or reply. Where the feed item has nested content, only feed moderators and users with the Modify All Data permission can delete threads.

To delete feed items they didn't create, users must have one of these permissions:

- Modify All Data
- Modify All Records on the parent object, like Textile__c.
- Moderate Chatter

Note: Users with the Moderate Chatter permission can delete only the feed items and comments they can see.

Only users with this permission can delete items in unlisted groups.

## Fields

| Field | Details |
|---|---|
| `BestCommentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the comment marked as best answer on a question post. This field is available in API version 44.0 and later. |
| `Body` | **Type**<br>textarea<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The body of the post. Required when `Type` is `TextPost`. Optional when `Type` is `ContentPost` or `LinkPost`. |
| `CommentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of comments associated with this feed item.<br>Tip: In a feed that supports pre-moderation, `CommentCount` isn't updated until a comment is published. For example, say that you comment on a post that already has one published comment and your comment triggers moderation. Now there are two comments on the post, but the count says there's only one. In a moderated feed, comments aren't counted until approved by an admin or someone with Can Approve Feed Post and Comment or Modify All Data.<br>Feed moderation has implications on how you retrieve feed comments. In a moderated feed, rather than retrieving comments by looping through `CommentCount`, go through pagination until the end of comments is returned. |
| `ConnectionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>When a PartnerNetworkConnection modifies a record that is tracked, the `CreatedBy` field contains the ID of the system administrator. The `ConnectionId` contains the ID of the PartnerNetworkConnection. Available if Salesforce to Salesforce is enabled for your org. |
| `ContentData` | **Type**<br>base64<br>**Properties**<br>Nillable<br>**Description**<br>Available in API version 36.0 and earlier only. Required if `Type` is `ContentPost`. Encoded file data in any format, and can't be 0 bytes. Setting this field automatically sets `Type` to `ContentPost`. |
| `ContentDescription` | **Type**<br>textarea<br>**Properties**<br>Nillable, Sort<br>**Description**<br>Available in API version 36.0 and earlier only. The description of the file specified in `ContentData`. |
| `ContentFileName` | **Type**<br>string<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>Available in API version 36.0 and earlier only. This field is required if `Type` is `ContentPost`.The name of the file uploaded to the feed. Setting `ContentFileName` automatically sets `Type` to `ContentPost`. |
| `ContentSize` | **Type**<br>int<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>Available in API version 36.0 and earlier only. The size of the file (in bytes) uploaded to the feed. This field is read-only and is automatically determined during insert. |
| `ContentType` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Group, Nillable, Sort<br>**Description**<br>Available in API version 36.0 and earlier only. The MIME type of the file uploaded to the feed. This field is read-only and is automatically determined during insert. |
| `FeedPostId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field was removed in API version 22.0, and is available in earlier versions for backward compatibility only.<br>ID of the associated FeedPost. A FeedPost represents the following types of changes in a feed item: changes to tracked fields, text posts, link posts, and content posts. |
| `InsertedById` | **Type**<br>reference<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the `InsertedBy` value is set to the ID of the context user. |
| `IsRichText` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the feed item `Body` contains rich text. If you post a rich text feed comment using SOAP API, set `IsRichText` to `true` and escape HTML entities from the body. Otherwise, the post is rendered as plain text.<br>Rich text supports the following HTML tags:<br>• `<p>`<br>Tip: Though the `<br>` tag isn't supported, you can use `<p> </p>` to create lines.<br>• `<a>`<br>• `<b>`<br>• `<code>`<br>• `<i>` |

| Field | Details |
| --- | --- |
| | • <u><br>• <s><br>• <ul><br>• <ol><br>• <li><br>• <img><br>The <img> tag is accessible only through the API and must reference files in Salesforce similar to this example: <img src="sfdc://069B0000000omjh"></img><br>Note: In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation. |
| LikeCount | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of likes associated with this feed item. |
| LinkUrl | **Type**<br>url<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The URL of a LinkPost. |
| NetworkScope | **Type**<br>picklist<br>**Properties**<br>Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Specifies whether this feed item is available in the default Experience Cloud site, a specific Experience Cloud site, or all sites. This field is available in API version 26.0 and later, if digital experiences is enabled for your org.<br>NetworkScope can have the following values:<br>• NetworkId—The ID of the Experience Cloud site in which the FeedItem is available. If left empty, the feed item is only available in the default Experience Cloud site.<br>• AllNetworks—The feed item is available in all Experience Cloud sites.<br>Note the following exceptions for NetworkScope: |

| Field | Details |
| --- | --- |
| | • Only feed items with a Group or User parent can set a `NetworkId` or a null value for `NetworkScope`.<br>• For feed items with a record parent, users can set `NetworkScope` only to `AllNetworks`.<br>• You can't filter a feed item on the `NetworkScope` field. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the custom object record that is tracked in the feed. The feed is displayed on the detail page for this record. |
| `RelatedRecordId` | **Type**<br>reference<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>ID of the ContentVersion object associated with a `ContentPost`. This field is null for all posts except `ContentPost`. |
| `Title` | **Type**<br>string<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>The title of the feed item. When the `Type` is `LinkPost`, the `LinkUrl` is the URL and this field is the link name. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of feed item:<br>• `ActivityEvent`—indirectly generated event when a user or the API adds a Task associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a Task or Event associated with a case record (excluding email and call logging). |

| Field | Details |
| --- | --- |
| | For a recurring Task with CaseFeed disabled, one event is generated for the series only. For a recurring Task with CaseFeed enabled, events are generated for the series and each occurrence.<br>• `AdvancedTextPost`—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post.<br>• `AnnouncementPost`—Not used.<br>• `ApprovalPost`—generated when a user submits an approval.<br>• `BasicTemplateFeedItem`—Not used.<br>• `CanvasPost`—a post made by a canvas app posted on a feed.<br>• `CollaborationGroupCreated`—generated when a user creates a public group.<br>• `CollaborationGroupUnarchived`—Not used.<br>• `ContentPost`—a post with an attached file.<br>• `CreatedRecordEvent`—generated when a user creates a record from the publisher.<br>• `DashboardComponentAlert`—generated when a dashboard metric or gauge exceeds a user-defined threshold.<br>• `DashboardComponentSnapshot`—created when a user posts a dashboard snapshot on a feed.<br>• `LinkPost`—a post with an attached URL.<br>• `PollPost`—a poll posted on a feed.<br>• `ProfileSkillPost`—generated when a skill is added to a user's Chatter profile.<br>• `QuestionPost`—generated when a user posts a question.<br>• `ReplyPost`—generated when Chatter Answers posts a reply.<br>• `RypplePost`—generated when a user creates a Thanks badge in WDC.<br>• `TextPost`—a direct text entry on a feed.<br>• `TrackedChange`—a change or group of changes to a tracked field.<br>• `UserStatus`—automatically generated when a user adds a post. Deprecated.<br>The following values appear in the `Type` picklist for all feed objects but apply only to CaseFeed:<br>• `CaseCommentPost`—generated event when a user adds a case comment for a case object<br>• `EmailMessageEvent`—generated event when an email related to a case object is sent or received<br>• `CallLogPost`—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event.<br>• `ChangeStatusPost`—generated event when a user changes the status of a case<br>• `AttachArticleEvent`—generated event when a user attaches an article to a case<br>Note: If you set `Type` to `ContentPost`, also specify `ContentData` and `ContentFileName`. |

| Field | Details |
| --- | --- |
| `Visibility` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Specifies whether this feed item is available to all users or internal users only. This field is available in API version 26.0 and later, if digital experiences is enabled for your org.<br>`Visibility` can have the following values:<br>• `AllUsers`—The feed item is available to all users who have permission to see the feed item.<br>• `InternalUsers`—The feed item is available to internal users only.<br>Note the following exceptions for `Visibility`:<br>• For record posts, `Visibility` is set to `InternalUsers` for all internal users by default.<br>• External users can set `Visibility` only to `AllUsers`.<br>• On user and group posts, only internal users can set `Visibility` to `InternalUsers`. |

## Usage

A feed for a custom object is automatically created when a user enables feed tracking for the custom object. Use feeds to track changes to the custom objects they serve. For example, `Textile__Feed` tracks changes to a `Textile__c` object. Use feed objects to retrieve the content of feed fields, such as type of feed or feed ID.

Note the following SOQL restrictions. No SOQL limit if logged-in user has View All Data permission. If not, specify a `LIMIT` clause of 1,000 records or fewer. SOQL `ORDER BY` on fields using relationships is not available. Use `ORDER BY` on fields on the root object in the SOQL query.

## What About *`StandardObjectName`*Feed Objects?

Similar to custom objects, standard objects can have associated feed objects. For a list of *`StandardObjectName`*Feed objects, see StandardObjectNameFeed.

# CHAPTER 5 Object Interfaces

In this chapter ...

- PriceAdjustmentGroup
- PriceAdjustmentItem
- SalesTransaction
- SalesTransactionItem

This section provides a list of standard object interfaces and their standard fields.

Some fields may not be listed for some object interfaces. To see the system fields for each object interface, see System Fields .

To verify the complete list of fields for an object interface, you can use a describe call from the API.

# PriceAdjustmentGroup

Defines the business logic for a top-level price adjustment, for example, a discount applied to an entire order. This object interface is available in API version 55.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

This object interface is available with Subscription Management or B2B Commerce.

## Fields

| Field | Details |
|---|---|
| `AdjustmentSource` | **Type**<br>picklist<br>**Properties**<br>Filter, Restricted picklist, Sort<br>**Description**<br>Indicates the source of the adjustment. This field is available with B2B Commerce.<br>Possible values are:<br>• `Discretionary`—The adjustment is entered manually, for example, by a sales rep.<br>• `Promotion`—The adjustment is part of a promotion.<br>• `Rule`—Reserved for future use.<br>• `System`—The adjustment is configured by the system data, for example, as part of a pricing rule or discount schedule. |
| `AdjustmentType` | **Type**<br>picklist<br>**Properties**<br>Filter, Restricted picklist, Sort<br>**Description**<br>Indicates whether the adjustment is a percentage, an amount, or an override.<br>Possible values are:<br>• `AdjustmentAmount`—Reserved for future use.<br>• `AdjustmentPercentage`<br>• `OverrideAmount` |

| Field | Details |
| --- | --- |
| `AdjustmentValue` | **Type**<br>double<br>**Properties**<br>Filter, Sort<br>**Description**<br>The value of the adjustment. To indicate a discount, use a negative number. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>User-entered description of the price adjustment group. Available in API versions 55.0 to 57.0. |
| `ImplementorType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The object that is implementing this entity interface, for example, a WebCartAdjustmentGroup object. |
| `PriceAdjustmentCauseId` | **Type**<br>reference<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The ID of the record that is the source of the adjustment. For example, if the price adjustment is due to a promotion, this field contains the ID of the promotion record. If the price adjustment is due to a price adjustment tier, this field contains the ID of the price adjustment tier record.<br>This field is a relationship field.<br>**Relationship Name**<br>PriceAdjustmentCause<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PriceAdjCauseInterface |
| `Priority` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>A positive integer indicating the order in which this price adjustment group is applied, relative to other price adjustment groups. A `Priority` of `1` indicates this price adjustment group is applied first.<br>Price adjustments with a null priority are applied after price adjustments with a specified priority. If two or more price adjustments have a null priority, percentage adjustments are applied **before** amount adjustments. Applying a percentage adjustment before an amount adjustment results in a larger total adjustment.<br>Note: The value of `Priority` must be unique among price adjustment groups in the same sales transaction. |
| `SalesTransactionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the sales transaction that the price adjustment group belongs to.<br>This field is a relationship field.<br>**Relationship Name**<br>SalesTransaction<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>SalesTransaction |
| `TotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Sort<br>**Description**<br>The total amount of adjustments of all related price adjustment items, inclusive of quantity, prorated for the duration of the subscription. This field is a calculated field equal to the sum of the `TotalAmount` fields in the related price adjustment items. |

# PriceAdjustmentItem

Defines the business logic for an item-level price adjustment, for example, a discount on an order item. This object interface is available in API version 55.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

This object interface is available with Subscription Management or B2B Commerce.

## Fields

| Field | Details |
| --- | --- |
| `AdjustmentAmountScope` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Used with `AdjustmentValue` to determine the amount of the adjustment.<br>Possible values are:<br>• `Total`—The adjustment applies to the line item's total and isn't multiplied by the quantity, prorated for the duration of the subscription.<br>For example, let's say a sales transaction item quantity is `10` and the `TotalLineAmount` is `1000`. If the price adjustment item has an `AdjustmentValue` of `-10`, an `AdjustmentType` of `AdjustmentAmount`, and an `AdjustmentAmountScope` of `Total`, the $10 discount is applied to the total line amount. The `TotalAmount` of the price adjustment item is $1000 + (-$10) = $990.<br>• `Unit`—The adjustment is multiplied by the line item's quantity.<br>For example, let's say a sales transaction item quantity is `5` and the `TotalLineAmount` is `1000`. If the price adjustment item has an `AdjustmentValue` of `-10`, an `AdjustmentType` of `AdjustmentAmount`, and an `AdjustmentAmountScope` of `Unit`, the $10 discount is applied to each line amount. The `TotalAmount` of the price adjustment item is $1000 + (-$10 x 5) = $950. |
| `AdjustmentSource` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Indicates the source of the adjustment.<br>Possible values are:<br>• `Discretionary`—The adjustment is entered manually; for example, by a sales rep. |

| Field | Details |
| --- | --- |
| | • `Promotion`—The adjustment is a promotion.<br>• `Rule`—Reserved for future use.<br>• `System`—The adjustment is determined by the pricing configuration for the product; for example, as part of a discount schedule. |
| `AdjustmentType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Indicates whether the adjustment is a percentage, an amount, or an override.<br>Possible values are:<br>• `AdjustmentAmount`<br>• `AdjustmentPercentage`<br>• `OverrideAmount` |
| `AdjustmentValue` | **Type**<br>double<br>**Properties**<br>Filter, Sort<br>**Description**<br>The value of the adjustment. Used together with `AdjustmentAmountScope` to determine the amount of the adjustment. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The user-entered description of the price adjustment item. Available in API version 55.0 to 57.0. |
| `ImplementorType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The object that is implementing this object interface, for example, a CartItemPriceAdjustment object. |

| Field | Details |
| --- | --- |
| `PriceAdjustmentCauseId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the record that caused the adjustment. For example, if the price adjustment is due to a promotion, this field contains the ID of the Promotion record. If the price adjustment is due to a price adjustment tier, this field contains the ID of the PriceAdjustmentTier record.<br>This field is a relationship field.<br>**Relationship Name**<br>PriceAdjustmentCause<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PriceAdjCauseInterface |
| `PriceAdjustmentGroupId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A reference to the object interface or object that summarizes the values from multiple price adjustment items. If the related entity is an object, the object must implement the PriceAdjustmentGroup object interface.<br>**Relationship Name**<br>PriceAdjustmentGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PriceAdjustmentGroup |
| `Priority` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A positive integer indicating the order in which this price adjustment item is applied, relative to other price adjustment items. A `Priority` of `1` indicates this price adjustment item is applied first.<br>Price adjustments with a null priority are applied after price adjustments with a specified priority. If two or more price adjustments have a null priority, percentage adjustments are |

| Field | Details |
| --- | --- |
| | applied **before** amount adjustments. Applying a percentage adjustment before an amount adjustment results in a larger total adjustment.<br><br>Note: The value of `Priority` must be unique among price adjustment items related to the same price adjustment group. For example, you can't have two price adjustment items with a priority of `1`.<br><br>For example, let's say that two price adjustment items apply to the same item to be priced. The first price adjustment, Spring_Promotion, defines a 10% discount and has `Priority` of `1`. The second price adjustment, Early_Renewal_Discount, defines a $2,000 discount and has a `Priority` of `2`. In this case, the Spring_Promotion price adjustment is applied before the Early_Renewal_Discount price adjustment. |
| `SalesTransactionItemId` | **Type**<br>reference<br><br>**Properties**<br>Filter, Group, Nillable, Sort<br><br>**Description**<br>The ID of the sales transaction item that the price adjustment item applies to.<br><br>This field is a relationship field.<br><br>**Relationship Name**<br>SalesTransactionItem<br><br>**Relationship Type**<br>Lookup<br><br>**Refers To**<br>SalesTransactionItem |
| `TotalAmount` | **Type**<br>currency<br><br>**Properties**<br>Filter, Sort<br><br>**Description**<br>The total amount of the adjustment that applies to the item to be priced, inclusive of quantity, prorated for the duration of the subscription.<br><br>For example, let's say the price adjustment item has an `AdjustmentAmountScope` of `Unit`, an `AdjustmentType` of `AdjustmentAmount`, and an `AdjustmentValue` of `-10`. This configuration indicates a $10 per-unit discount. If the subscription is priced for 12 months and the pricing term is `1`, the `PricingTermCount` on the sales transaction item is 12. If the quantity is 5, the value of `TotalAmount` is 5 x 12 x -10 = -600 |

# SalesTransaction

Defines the business logic for a sales transaction, for example, an order or a cart. This object interface is available in API version 55.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

This object interface is available with Subscription Management and B2B Commerce.

## Fields

| Field | Details |
| --- | --- |
| `ImplementorType` | **Type**<br>string<br>**Properties**<br>Default on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The object that is implementing this object interface, for example, an Order object. |
| `TotalAdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of all adjustments applied to the sales transaction, inclusive of quantity, prorated for the duration of the subscription. Includes distributed price adjustment items and price adjustment items applied directly. This is a calculated field equal to the sum of `TotalAdjustmentAmount` on the related sales transaction items. |
| `TotalAdjustmentDistAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of the distributed price adjustment items applied to the related sales transaction items, inclusive of quantity, prorated for the duration of the subscription. Does not include price adjustment items that are applied directly. This is a calculated field equal to the sum of `TotalAdjustmentDistAmount` on the related sales transaction items. |

| Field | Details |
| --- | --- |
| `TotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The final price of the sales transaction, after all adjustments, inclusive of quantity, prorated for the duration of the subscription. This is a calculated field equal to the sum of `TotalPrice` on the related sales transaction items. |
| `TotalListAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of the list price of the related sales transaction items, inclusive of quantity, prorated for the duration of the subscription. This is a calculated field equal to the sum of `ListPriceTotal` on the related sales transaction items. |
| `TotalProductAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total price of all related sales transaction items of type `Product`, before price adjustments, inclusive of quantity, prorated for the duration of the subscription. This is a calculated field equal to the sum of `TotalLineAmount` on the related sales transaction items of type `Product`. |

# SalesTransactionItem

Defines the business logic for a sales transaction item, for example, an item in an order. This object interface is available in API version 55.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

This object interface is available with Subscription Management or B2B Commerce.

# Fields

| Field | Details |
|---|---|
| `BasisTransactionItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the transaction item to use as a reference when pricing this transaction.<br>For example, let's say an order item is renewed. In this case, a renewal order item is created from the new sale order item, and the `BasisTransactionItemId` on the new sale order item is updated to contain the ID of the renewal order item.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>BasisTransactionItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>SalesTransactionItem |
| `BillingFrequency` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The time period that indicates how often the sales transaction item is billed.<br>Possible values are:<br>• `Annual`<br>• `Monthly` |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The last day the sales transaction item is available. For example, the last day that the service purchased in the order item is available. |
| `ImplementorType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The object that is implementing this entity interface, for example, an OrderProduct object. |
| `ListPrice` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The list price for the sales transaction item. This value is inherited from the related price book entry. |
| `ListPriceTotal` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The list price, inclusive of quantity, prorated for the duration of the subscription. This calculated field is equal to `ListPrice` times `Quantity` times `PricingTermCount`. |
| `NetUnitPrice` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The unit price after all adjustments are applied. |
| `ObligatedAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>In a subscription, the amount a subscriber is billed for products used during the subscription period that the subscriber returns before the subscription end date. This field's value is the price for use of the product.<br>This field is available in version 57.0 and later. This field is available when Subscription Management is enabled.<br>Note:<br>• A subscriber must submit a quantity amendment in order to change the subscription's product quantity. A quantity amendment request is only valid until the subscription end date.<br>• A subscriber is eligible for a refund only for the periods when the products weren't used. |

| Field | Details |
| --- | --- |
| | • The subscription's proration policy indicates whether the obligated amount and the refund are prorated for partial periods. |
| `ParentSalesTransactionItem` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The parent transaction of `BasisTransactionItemId`. This field is available in API version 58.0 and later. This field is a polymorphic relationship field.<br>**Relationship Name**<br>ParentSalesTransactionItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>SalesTransactionItem |
| `PeriodBoundary` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The period boundary helps determine the start and end date of the billing periods.<br>Possible values are:<br>• `AlignToCalendar`—The period starts on the first day of the term unit, for example, the first day of the month.<br>• `Anniversary`—The start date determines the boundary. For example, if a monthly subscription starts on September 13, the subscription starts on the 13th day of each month.<br>• `DayOfPeriod`—The period starts on the day indicated by `PeriodBoundaryDay`.<br>• `LastDayOfPeriod`—The period starts on the last day of the pricing term unit; for example, the last day of the month. |
| `PeriodBoundaryDay` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Required when `PeriodBoundary` is `DayOfPeriod`. Indicates day of the week or month that marks the period boundary. Must be an integer from 1 through 31. |

| Field | Details |
| --- | --- |
| `PeriodBoundaryStartMonth` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Nillable, Sort, Update<br>**Description**<br>Field is populated based on input in the StartDate, PeriodBoundary, and PeriodBoundaryDay when BillingFrequency is Annual or by manual user entry. Possible values are:<br>• `1-January`<br>• `2-February`<br>• `3-March`<br>• `4-April`<br>• `5-May`<br>• `6-June`<br>• `7-July`<br>• `8-August`<br>• `9-September`<br>• `10-October`<br>• `11-November`<br>• `12-December` |
| `PricebookEntryId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique identifier of the related price book entry.<br>This field is a relationship field.<br>**Relationship Name**<br>PricebookEntry<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PricebookEntryInterface |
| `PricingTermCount` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>A calculated field indicating the number of pricing terms in the subscription. |

| Field | Details |
| --- | --- |
| `PricingTransactionType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates the type of pricing transaction, for example, a new sale, a cancellation, an amendment, or a renewal.<br>Possible values are:<br>• `AmendmentAtLastNegotiatedPrice`—calculate the price of the amended sales transaction item using the same price book and price adjustments as the new sale item. For example, an order item that is amended using a pricing transaction type of `AmendmentAtLastNegotiatedPrice` is priced using the same price book information and price adjustments as the new sale item. The amended order item has the same price as the new sale order item. This value is available in version 57.0 and later.<br>• `AmendmentStartingFromListPrice`—calculate the price of the amended sales transaction item using current price book information, disregarding any pricing information or adjustments that were applied to the new sale item. Typically, an amended transaction item has a different price than the new sale transaction item. This value is available in version 57.0 and later.<br>• `Cancellation`—calculate the price of the canceled transaction. For example, let's say that a 1-year subscription was purchased on January 1, then canceled on July 31. The price of the canceled products and services from August 1 through Dec 31 is calculated.<br>• `NewSale`—the price of a new transaction is calculated.<br>• `RenewalAtLastNegotiatedPrice`—calculate the price of the renewal transaction item using the same price book and price adjustments as the new sale item. For example, an order item that is renewed using a pricing transaction type of `RenewalAtLastNegotiatedPrice` is priced using the same price book information and price adjustments as the new sale item. The renewal order item has the same price as the new sale order item.<br>• `RenewalAtListPrice`—calculate the price of the renewal transaction item using current price book information, disregarding any pricing information or adjustments that were applied to the new sale item. Typically, a renewal transaction item has a different price than the new sale transaction item. |
| `ProductId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the related product.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Product<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ProductInterface |
| `ProductSellingModelId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related product selling model. The product selling model defines one method by which a product can be sold, for example, as a one-time sale, an evergreen subscription, or a termed subscription.<br>This field is a relationship field.<br>**Relationship Name**<br>ProductSellingModel<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ProductSellingModel |
| `ProrationPolicyId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related proration policy. The proration policy defines how the price is calculated for each subscription period, for example, whether partial periods are allowed, and how remainder amounts are handled.<br>This field is a relationship field.<br>**Relationship Name**<br>ProrationPolicy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ProrationPolicy |
| `Quantity` | **Type**<br>double |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Sort<br>**Description**<br>Required. Number of units in the sales transaction item. |
| `SalesItemType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Required. The type of sale.<br>Possible values are:<br>• `Charge`<br>• `Product` |
| `SalesTransactionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related sales transaction.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>SalesTransaction<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>SalesTransaction |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The start date of the service or charge. |
| `StartingPriceTotal` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The starting unit price, inclusive of quantity, prorated for the duration of the subscription. This calculated field is equal to `StartingUnitPrice` times `Quantity` times `PricingTermCount`. |
| `StartingUnitPrice` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The unit price before any adjustments. |
| `StartingUnitPriceSource` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Required. Indicates whether the starting unit price was inherited, entered manually, or calculated.<br>Possible values are:<br>• `Inherited`—The starting unit price is copied from a previous transaction, for example, from the order item being renewed.<br>• `Manual`—The starting unit price is entered manually, for example, by a sales rep.<br>• `System`—The starting unit price is calculated using pricing information that was configured by an administrator, for example, a pricing tier. |
| `StockKeepingUnit` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The SKU assigned to the related product. |
| `SubscriptionTerm` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of terms in the subscription. You can indicate a subscription's length using either the start and end dates, or by using the start date and the subscription term. |

| Field | Details |
| --- | --- |
| `TotalAdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of the adjustments applied to the sales transaction item, inclusive of quantity, prorated for the duration of the subscription. Includes distributed price adjustment items and price adjustment items applied directly. |
| `TotalAdjustmentDistAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of the distributed price adjustment items applied to the sales transaction item, prorated for the duration of the subscription. Doesn't include price adjustment items that are applied directly.<br>A distributed price adjustment is automatically created to apply a transaction-level adjustment to the transaction items. For example, let's say that you have an order with two order items: one for a file storage service and another for a video streaming service. A 10% volume discount and a 15% manual discount are applied to the entire order. An additional 20% discount is applied to the file storage service. To distribute the order-level discounts, the system creates a 10% price adjustment item and a 15% price adjustment item for each order item.<br>In this example, the file storage service's sales transaction item has the following field values:<br>• `TotalAdjustmentAmount` the sum of **all** item-level adjustments, including the 10% price adjustment item, the 15% price adjustment item, and the 20% price adjustment item.<br>• `TotalAdjustmentDistAmount` the sum of the **distributed** item-level adjustments, including the 10% price adjustment item and the 15% price adjustment item. |
| `TotalLineAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total price of the sales transaction item, before price adjustments, inclusive of quantity, prorated for the duration of the subscription. This calculated field is equal to `TotalPrice` times `Quantity` times `PricingTermCount`. |
| `TotalPrice` | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The price after all adjustments, inclusive of quantity, prorated for the duration of the subscription. This calculated field is equal to `TotalAdjustmentAmount` plus `TotalLineAmount`. |

# CHAPTER 6 Standard Objects

This section provides a list of standard objects and their standard fields. Only a subset of standard objects appear in Object Manager.

Some fields may not be listed for some objects. To see the system fields for each object, see System Fields.

To verify the complete list of fields for an object, use a describe call from the API, or inspect with an appropriate tool. For example, inspecting the WSDL or using a schema viewer.

AbnExperiment

Represents an A/B/n experiment that's used with Marketing Cloud Next content, Experience Cloud websites, and platform automations. This object is available in API version 63.0 and later.

AbnExperimentCohort

Represents the specified audience that's participating in an A/B/n experiment. This object is available in API version 63.0 and later.

AcceptedEventRelation

Represents event participants (invitees or attendees) with the status `Accepted` for a given event.

Account

Represents an individual account, which is an organization or person involved with your business (such as customers, competitors, and partners).

AccountBrand

Represents the brand details of a Partner Account. This object is available in API version 43.0 and later.

AccountContactRelation

Represents a relationship between a contact and one or more accounts.

AccountCleanInfo

Stores the metadata Data.com Clean uses to determine an account record's clean status. AccountCleanInfo helps you automate the cleaning or related processing of account records.

AccountContactRole

Represents the role that a Contact plays on an Account.

AccountInsight

Represents an individual insight (a key business development) related to an account record.

AccountOwnerSharingRule

Represents the rules for sharing an account with a User other than the owner.

AccountPartner

This object represents a partner relationship between two Account records. An AccountPartner record is created automatically when a Partner record is created for a partner relationship between two accounts. An AccountPartner record is also created automatically between an account and an opportunity's account when a Partner record is created between an account and an opportunity.

AccountPlan

Represents customer information with measurable objectives and executable steps to proactively manage and grow customer relationships. This object is available in API version 62.0 and later.

AccountPlanObjective

Represents strategic objectives or initiatives pursued by a relationship team with a customer to enhance customer engagement and satisfaction. This object is available in API version 62.0 and later.

AccountPlanObjectiveMeasure

Represents the performance of target metrics for an objective associated with the account plan. This object is available in API version 62.0 and later.

AccountPlanObjMeasCalcCond

Represents a field and value combination for filtering records to include in the calculation of a sales account plan objective measure's current value. This object is available in API version 63.0 and later.

AccountPlanObjMeasCalcDef

Represents the definition of a target object, rollup field, and logic for calculating the current value of a sales account plan objective measure. This object is available in API version 63.0 and later.

AccountPlanObjMeasCalcDefLocalization

Represents the translated value of the definition of a target object, rollup field, and logic for calculating the current value of a sales account plan objective measure. This object is available in API version 63.0 and later when the Translation Workbench is enabled.

AccountPlanObjMeasRela

Represents a junction between an account plan objective measure and the related objects. This object is available in API version 62.0 and later.

AccountRelationship

Represents a relationship of a given type between two accounts. This object is available in API version 45.0 and later.

AccountRelationshipShareRule

Represents the rule that determines which object records are shared, how they are shared, the account relationship type that shares the records, and the level of access granted to the records. This object is available in API version 45.0 and later.

AccountShare

Represents a sharing entry on an account.

AccountTag

Associates a word or short phrase with an Account.

AccountTeamMember

Represents a User who is a member of an Account team.

AccountTerritoryAssignmentRule

An account assignment rule that assigns accounts to territories based on account fields. Available if Sales Territories has been enabled.

AccountTerritoryAssignmentRuleItem

A row of selection criteria for an AccountTerritoryAssignmentRule object. Available if Sales Territories has been enabled.

AccountTerritorySharingRule

Represents the rules for sharing an Account within a territory.

AccountUserTerritory2View

Represents the view of the Users in Assigned Territories related list in Lightning Experience for Sales Territories. Available in API version 42.0 and later.

ActionCadence

Represents the definition of a cadence. This object is available in API version 45.0 and later.

ActionCadenceRule

Represents the logic that a branch step uses to determine which branch an action cadence tracker follows in an action cadence. Use ActionCadenceRule to learn about a branch step, including its logic and what the next step is. This object is available in API version 48.0 and later.

ActionCadenceRuleCondition

Represents the logic for a branch step. This object is available in API version 48.0 and later.

ActionCadenceStep

Represents a step in a cadence. Use ActionCadenceStep to learn which steps belong to a cadence, and how the steps are connected to each other. This object is available in API version 48.0 and later.

ActionCadenceStepTracker

Represents a step in an active cadence for a specific cadence target. This object is available in API version 48.0 and later.

ActionCadenceStepVariant

Represents an email template or call script variant associated with an action cadence step. Email and call steps can have up to 3 variants associated so sales teams can compare the engagement results. This object is available in API version 53.0 and later.

ActionCadenceTracker

Represents an active cadence target. This object is available in API version 45.0 and later.

ActionCdncStpMonthlyMetric

Represents the monthly engagement metrics for an action cadence step. This object is available in API version 49.0 and later.

ActionLinkGroupTemplate

Action link templates let you reuse action link definitions and package and distribute action links. An action link is a button on a feed element. Clicking on an action link can take a user to another Web page, initiate a file download, or invoke an API call to an external server or Salesforce. Use action links to integrate Salesforce and third-party services into the feed. Every action link belongs to an action link group and action links within the group are mutually exclusive. This object is available in API version 33.0 and later.

ActionLinkTemplate

Action link templates let you reuse action link definitions and package and distribute action links. An action link is a button on a feed element. Clicking an action link can take a user to another Web page, initiate a file download, or invoke an API call to an external server or Salesforce. Use action links to integrate Salesforce and third-party services into the feed. This object is available in API version 33.0 and later.

ActionPlan

Represents the instance of an action plan, a set of tasks created from an action plan template. This object is available in API version 44.0 and later.

ActionPlanItem

Represents the instance of an action plan item.This object is available in API version 44.0 and later.

ActionPlanTemplate

Represents the instance of an action plan template. This object is available in API version 44.0 and later.

ActionPlanTemplateItem

Represents the instance of an item on an action plan template version. This object is available in API version 44.0 and later.

ActionPlanTemplateItemValue

Represents the value associated with an action plan template item. This object is available in API version 44.0 and later.

ActionPlanTemplateVersion

Represents the version of an action plan template. This object is available in API version 44.0 and later.

ActiveFeatureLicenseMetric

Represents the number of active, assigned, and purchased feature licenses in the org. This object is available in API version 52.0 and later.

ActivePermSetLicenseMetric

Represents the number of active, assigned, and purchased permission set licenses in the org. This object is available in API version 52.0 and later.

ActiveProfileMetric

Represents the profile associated with the active, assigned, and purchased user licenses. This object is available in API version 52.0 and later.

ActiveScratchOrg

Represents an active scratch org. This object is available in API version 41.0 and later.

ActivityFieldHistory

Represents a change in a field value for a tracked object or field. This object is a big object. This object is available in API version 55.0 and later.

ActivityHistory

This read-only object is displayed in a related list of closed activities—past events and closed tasks—related to an object. It includes activities for all contacts related to the object. ActivityHistory fields for phone calls are only available if your organization uses Salesforce CRM Call Center.

ActivityMetric

Represents activities that were added to Salesforce automatically by Einstein Activity Capture and manually by users.

ActivityUsrConnectionStatus

Represents the status of the email connections for Einstein Activity Capture users. You can also see whether users accepted the required terms of service to capture emails. This object is available in API version 54.0 and later.

AdditionalNumber

Represents an optional additional number for a call center. This additional number is visible in the call center's phone directory.

Address

Represents a mailing, billing, or home address.

AgentWork

Represents a work assignment that's been routed to an agent. If the work is transferred to another agent, a new AgentWork record is created. This object is available in API version 32.0 and later.

AgentWorkSkill

Represents a skill used to route a work assignment to an agent. AgentWorkSkill is used for reporting and represents the result of a routing decision. This object is available in API version 42.0 and later.

AIApplication

Represents an AI application such as Einstein Prediction Builder. This object is available in API version 50.0 and later.

AIApplicationConfig

Additional prediction information related to an AI application. This object is available in API version 50.0 and later.

AiGenActionItem

Represents business actions suggested by generative AI. AI-generated action items are sent to either agents for automatic execution or human users for review, depending on org preference and if there are any errors in the process. This object is available in API version 64.0 and later.

AiInsightAction

Represents an Einstein prediction insight action. This object is available in API version 47.0 and later.

AiInsightFeedback

Represents an Einstein prediction insight feedback. This object is available in API version 47.0 and later.

AiInsightReason

Represents an Einstein prediction insight reason. This object is available in API version 47.0 and later.

AiInsightValue

Represents an Einstein prediction insight value. This object is available in API version 47.0 and later.

AiJobRun

Represents an execution instance of an AI job. This object tracks the overall status and manages the lifecycle of the job from initiation to completion. This object is available in API version 63.0 and later.

AiJobRunItem

Stores an individual item associated with a parent AiJobRun, including the inputs and resulting response. This object is available in API version 63.0 and later.

AiModelLanguage

An object that stores language related information that is generated for each AI model. This object is available in API version 55.0 and later.

AiRecordInsight

Represents an Einstein prediction insight. This object is available in API version 47.0 and later.

AiResearchPromptResult

Represents the research result generated by Einstein from a prompt template. This object is available in API version 64.0 and later.

AllowedEmailDomain

Represents an allowed email domain for users in your organization. You can define an allowlist to restrict the email domains allowed in a user's `Email` field. This object is available in API version 29.0 and later.

AlternativePaymentMethod

Represents a payment method that isn't cash, a debit card, or a credit card. This object defines methods that aren't defined by the CardPaymentMethod or DigitalWallet objects. Examples of alternative payment methods include CashOnDeliver, Klarna, and Direct Debit. `AlternativePaymentMethod` functions the same as any other type of payment method for processing transactions through a payment gateway. This object is available in API version 51.0 and later.

AnalyticsChangeEventLog

Analytics Change Event Logs represent route or page changes made in the CRM Analytics. This object is available in API version 61.0 and later.

AnalyticsDashboard

Represents a Tableau Next dashboard. This object is available in API version 64.0 and later.

AnalyticsDownloadEventLog

AnalyticsDownloadEventLog represent downloads made from lens and dashboard in the CRM Analytics. This object is available in API version 61.0 and later.

AnalyticsInteractEventLog

Analytics Interact Event Log represents route or page changes made in the CRM Analytic UI. This object is available in API version 61.0 and later.

AnalyticsLicensedAsset

Represents a licensed Analytics asset. In this context, Analytics is CRM Analytics, Sonic, or Mulesoft Data Path. Available in API version 52.0 and later.

AnalyticsPerfEventLog

Analytics Perf Event Log helps track trends in your Analytics performance. This object is available in API version 61.0 and later.

AnalyticsVisualization

Represents a Tableau Next viusalization. This object is available in API version 64.0 and later.

AnalyticsVizField

Represents a Tableau Next viusalization field. This object is available in API version 65.0 and later.

AnalyticsVizViewDef

Represents a Tableau Next viusalization view definition. This object is available in API version 64.0 and later.

AnalyticsWorkspace

Represents a Tableau Next workspace. This object is available in API version 54.0 and later.

AnalyticsWorkspaceAsset

Represents a Tableau Next asset in a workspace. This object is available in API version 54.0 and later.

Announcement

Represents a Chatter group announcement. This object is available in API version 30.0 and later.

ApexCalloutEventLog

Apex Callout event logs contain details about callouts (external requests) during Apex code execution. This object is available in API version 55.0 and later.

ApexClass

Represents an Apex class.

ApexComponent

Represents a definition for a custom component that can be used in a Visualforce page alongside standard components such as `<apex:relatedList>` and `<apex:dataTable>`.

ApexEmailNotification

Stores a Salesforce user ID or external email address to be notified when unhandled Apex exceptions occur. This object is available in API version 35.0 and later.

ApexExecutionEventLog

Apex Execution event logs contain details about Apex classes that are used. This object is available in API version 55.0 and later.

ApexExtlCalloutEventLog

Apex Extl Callout EventLog represent external data callouts via custom adapters for Salesforce Connect. This object is available in API version 61.0 and later.

Apex Limit Event Object

`ApexLimitEvent` represents an Apex execution governor limit. This object is available in API version 36.0 and later.

ApexLog

Represents a debug log containing information about a transaction, including information about Apex, Visualforce, and workflow and validation rules. This object is available in API version 19.0 and later.

ApexPage

Represents a single Visualforce page.

ApexPageInfo

Represents metadata about a single Visualforce page. This object is available in API version 48.0 and later.

ApexRestApiEventLog

Apex REST API event logs capture information about every Apex REST API request. This object is available in API version 55.0 and later.

ApexSoapApiEventLog

Apex SOAP event logs contain details about custom SOAP web service calls. This object is available in API version 55.0 and later.

ApexTestQueueItem

Represents a single Apex class in the Apex job queue. This object is available in API version 23.0 and later.

ApexTestResult

Represents the result of an Apex test method execution. This object is available in API version 23.0 and later.

ApexTestResultLimits

Captures the Apex test limits used for a particular test method execution. An instance of this object is associated with each ApexTestResult record. This object is available in API version 37.0 and later.

ApexTestRunResult

Contains summary information about all the test methods that were run in a particular Apex job. This object is available in API version 37.0 and later.

ApexTestSuite

Represents a suite of Apex classes to include in a test run. A TestSuiteMembership object associates each class with the suite. This object is available in API version 36.0 and later.

ApexTrigger

Represents an Apex trigger.

ApexTriggerEventLog

Apex Trigger event logs contain details about triggers that fire in an organization. This object is available in API version 55.0 and later.

ApexTypeImplementor

Represents Apex classes that directly or indirectly implement an interface. Using a SOQL query, this object gets information about public or global classes and only global classes for installed managed packages. This object is available in API version 54.0 and later.

ApexUnexpectedExcpEventLog

Apex Unexpected Excp Event Log captures information about unexpected exceptions in Apex code execution. This object is available in API version 61.0 and later.

ApiTotalUsageEventLog

API Total Usage Event Log contains details about Platform SOAP API, Platform REST API, and Bulk API requests. This object is available in API version 61.0 and later.

AppAnalyticsQueryRequest

Represents a request for AppExchange App Analytics data.

AppDefinition

Represents the metadata of an app and its navigation items. Metadata is returned only for apps that the current user can access. This object is available in API version 43.0 and later.

AppExtension

Represents a connection between the Field Service mobile app and another app, typically for passing record data to the Salesforce mobile app or other apps. This object is available in API version 41.0 and later.

ApplicationFormTemplate

Represents the fields to capture application metadata as a template which is used in application tracking and processing. This object is available in API version 59.0 and later.

AppMenuItem

Represents the organization's default settings for items in the app menu or App Launcher.

AppointmentAssignmentPolicy

Stores information about resource assignment rules. This object is available in API version 52.0 and later.

AppointmentScheduleAggr

Records the utilization of a service resource, by date, for the Load Balancing appointment assignment policy. This object is available in API version 52.0 and later.

AppointmentScheduleLog

Stores service appointments of each service Resource. This object is used to calculate the utilization of a service resource for the AppointmentScheduleAggr object. This object is available in API version 52.0 and later.

AppointmentSchedulingPolicy

Represents a set of rules for scheduling appointments using Salesforce Scheduler. This object is available in API version 45.0 and later.

AppointmentTopicTimeSlot

Represents a lookup to a work type or a work type group for a time slot This object is available in API version 52.0 and later.

Approval

Represents an approval request for a Contract.

ApprovalSubmission

Represents the instance of an approval request that's submitted for a record of the related object. This object is available in API version 62.0 and later.

ApprovalSubmissionDetail

ApprovalSubmissionDetail contains additional information about operations happening during the approval lifecycle. It will not hold any information that's already captured in the existing ApprovalSubmission and ApprovalWorkItem entities. This object is available in API version 62.0 and later.

ApprovalWorkItem

Contains run-time information about each step in an approval workflow, such as assignees and their decisions regarding the object's approval. Has a master-detail relationship with ApprovalSubmission. This object is available in API version 61.0 and later.

ApprovalWorkItemCondition

Represents a condition for starting and concluding an approval step that's evaluated as part of the smart approval process. This object is available in API version 64.0 and later.

ApprovalWorkItemCriteria

Represents the logic by which a smart approval request is evaluated. This object is available in API version 64.0 and later.

AppTabMember

Represents the list of tabs for each of the available apps. This object is available in API version 43.0 and later.

ApptBundleAggrDurDnscale

Sums the duration of the bundle members, reduced by a predefined percentage. This object is available in API version 54.0 and later.

ApptBundleAggrPolicy

Policy that defines how the property values of the bundle members are aggregated and assigned to the bundle. This object is available in API version 54.0 and later.

ApptBundleConfig

Represents the general parameters that define the behavior of the bundle. This object is available in API version 54.0 and later.

ApptBundlePolicy

Policy that defines how the bundling of service appointments should be handled. This object is available in API version 54.0 and later.

ApptBundlePolicySvcTerr

Represents a link between the BundlePolicy and the ServiceTerritory. This object is available in API version 54.0 and later.

ApptBundlePropagatePolicy

Policy that defines which property values are inherited from the bundle to the bundle members or are assigned as constant values in the bundle members. This object is available in API version 55.0 and later.

ApptBundleRestrictPolicy

Policy that defines the restrictions that are considered while forming a bundle. This object is available in API version 54.0 and later.

ApptBundleSortPolicy

Policy that defines the properties by which the bundle members are sorted within the bundle. Can also be used in the automatic mode for determining the order of the automatic selection of bundle members. This object is available in API version 54.0 and later.

AppUsageAssignment

Provides application context for a record. A record can have different allowed actions or different related objects when it's created for different applications. For example, a Revenue Lifecycle Management order has a related `RevenueLifecycleManagement` AppUsageAssignment, so Salesforce knows it can create assets for that order. Available in API version 50.0 and later.

ArchiveActivity

Represents metadata retrieved for a single Archive process initiated by an action. Retrieved metadata can include status tracking, start and end times, record counts, and monitoring and auditing outcomes. This object is available in API version 65.0 and later.

ArchivePolicyDefinition

Represents a data lifecycle policy that, in each row, defines the scope, frequency, and rules for automated archiving or purging of records from a root entity, such as Contact or Lead. This object is available in API version 65.0 and later.

Article Type__DataCategorySelection

A data category selection represents a data category that classifies an article. This object is available in API version 19.0 and later.

Asset

Represents an item of commercial value, such as a product sold by your company or a competitor, that a customer has purchased.

AssetAction

Represents a change made to a lifecycle-managed asset. The fields can't be edited. This object is available in API version 50.0 and later.

AssetActionSource

Represents an optional way to record what transactions caused changes to lifecycle-managed assets. Use it to trace financial and other information about asset actions. This object supports Salesforce order products and work order line items, and transaction IDs from other systems. The fields can't be edited. This object is available in API version 50.0 and later.

AssetAttribute

Stores asset attributes to track and analyze asset conditions to improve their uptime. This object is available in API version 57.0 and later.

AssetContractRelationship

Represents a relationship between an asset and a contract. This object is available in API version 60.0 and later.

AssetDowntimePeriod

Represents a period during which an asset is not able to perform as expected. Downtime periods include planned activities, such as maintenance, and unplanned events, such as mechanical breakdown. This object is available in API version 49.0 and later.

AssetOwnerSharingRule

Represents the rules for sharing an Asset with users other than the owner. This object is available in API version 33.0 and later.

AssetRateAdjustment

Stores the tier rate adjustments for the asset rate card entries. This object is available in API version 62.0 and later.

AssetRateCardEntry

Stores the negotiated rate card entries that are associated with an asset in Revenue Cloud. This object is available in API version 62.0 and later.

AssetRelationship

Represents a non-hierarchical relationship between assets due to an asset modification; for example, a replacement, upgrade, or other circumstance. In Subscription Management and Revenue Lifecycle Management, this object represents an asset or assets grouped in a bundle or set. This object is available in API version 41.0 and later.

AssetShare

Represents a sharing entry on an Asset. This object is available in API version 33.0 and later.

AssetStatePeriod

Represents a time span when an asset has the same quantity, amount, and monthly recurring revenue (MRR). An asset has as many asset state periods as there are changes to it (asset actions) during its lifecycle. The dashboard and related pages show the current asset state period. The fields can't be edited. This object is available in API version 50.0 and later.

AssetStatePeriodAttribute

Represents a virtual object that holds the key-value pair of the asset attribute in a specified asset state period. This object is a child object of AssetStatePeriod. This object is available in API version 60.0 and later.

AssetTag

Associates a word or short phrase with an Asset.

AssetTokenEvent

The documentation has moved to AssetTokenEvent in the *Platform Events Developer Guide*.

AssetWarranty

Defines the warranty terms applicable to an asset along with any exclusions and extensions. This object is available in API version 50.0 and later.

AssignedResource

Represents a service resource who is assigned to a service appointment in Field Service and Lightning Scheduler. Assigned resources appear in the Assigned Resources related list on service appointments. This object is available in API version 38.0 and later.

AssignmentRule

Represents an assignment rule associated with a Case or Lead.

AssociatedLocation

Represents a link between an account and a location in Field Service. You can associate multiple accounts with one location. For example, a shopping center location may have multiple customer accounts.

AsyncApexJob

Represents an individual Apex sharing recalculation job, a batch Apex job, a method with the `future` annotation, or a job that implements `Queueable` or `Schedulable`. Use this object to query Apex batch jobs in your organization.

AsyncOperationLog

Represents an async operations log containing progress and status information about external synchronizations to the Omnichannel Inventory service. This object is available in API version 51.0 and later.

AsyncOperationTracker

Represents the status of an asynchronous request initiated from the Quote, Order, and CreditMemo entities. This object is available in API version 61.0 and later.

AsyncOpSyndicationFeedFile

Represents the sync status of file-related information shared with external channels such as Facebook and Instagram. This object is available in API version 64.0 and later.

AttachedContentDocument

This read-only object contains all `ContentDocument` objects associated with an object.

AttachedContentNote

This read-only object contains all ContentNote objects associated with an object. This object is available in API version 35.0 and later.

Attachment

Represents a file that a User has uploaded and attached to a parent object.

AttachmentEventLog

Attachment event logs contain information about attachments. This object is available in API version 65.0 and later.

AttribModel

Represents an attribution model used with Personalization, Attribution, and Campaign Influence, including model weights and touch type. This object is available in API version 62.0 and later.

AttribModelStage

Represents a funnel stage that's used in a predefined or custom attribution configuration. Available in API version 62.0 and later.

AttribModelStageMetric

Represents the engagement signal metrics that you select when you configure a funnel stage for an attribution configuration. Available in API version 63.0 and later.

AttributeDefinition

Represents a product, asset, or object attribute, for example, a hardward specification or software detail. This object is available in API version 57.0 and later.

AttributePicklist

Represents a custom picklist for an asset attribute. This object is available in API version 57.0 and later.

AttributePicklistValue

Represents the values of an asset attribute picklist. This object is available in API version 57.0 and later.

AsyncReportRunEventLog

Async Report Run Event Log is used for reporting scheduled requests. This category includes dashboard refreshes, asynchronous reports, schedule reports, and analytics snapshots. This object is available in API version 61.0 and later.

Audience

Represents an audience that is defined by criteria and can be assigned and used for targeting in an Experience Cloud site. This object is available in API version 44.0 and later.

AuraDefinition

Represents an Aura component definition, such as component markup, a client-side controller, or an event. This object is available in API version 32.0 and later.

AuraDefinitionBundle

Represents a Lightning Aura component definition bundle, such as a component or application bundle. A bundle contains a Lightning Aura component definition and all its related resources. This object is available in API version 32.0 and later.

AuraDefinitionBundleInfo

For internal use only.

AuraDefinitionInfo

For internal use only.

AuraRequestEventLog

Aura Request Event Log contains details of requests to Apex methods from Aura and Lightning web components. This object is available in API version 61.0 and later.

AuthConfig

Represents authentication options for My Domain and Experience Cloud site login pages. This object is available in API version 32.0 and later.

AuthConfigProviders

Represents an authentication provider that's configured in an organization. AuthConfigProviders is a child of the AuthConfig object. This object is available in API version 32.0 and later.

AuthorizationForm

Represents the specific version and effective dates of a form that is associated with consent, such as a privacy policy or terms and conditions. This object is available in API version 46.0 and later.

AuthorizationFormConsent

Represents the date and way in which a user consented to an authorization form. This object is available in API version 46.0 and later.

AuthorizationFormDataUse

Represents the data use consented to in an authorization form. This object is available in API version 46.0 and later.

AuthorizationFormText

Represents an authorization form's text and language settings. This object is available in API version 46.0 and later.

AuthProvider

Represents an authentication provider (auth provider). An auth provider lets users log in to your Salesforce org from an external service provider, such as Facebook, Google, or GitHub. This object is available in API version 27.0 and later.

AuthProvParamFwdAllowlist

Represents an allowlisted URL parameter that can be forwarded from authentication provider client configuration URLs to the authorization URL. Use this type to add custom functionality to authentication providers. For example, allowlist a `ui_locales` parameter and use it to send a user's language preference from Salesforce to the third-party provider's login page. This object is available in API version 62..0 and later.

AuthSession

The AuthSession object represents an individual user session in your organization. This object is available in versions 29.0 and later.

AutomatedAction

Represents the configuration of an automated action, such as a workflow rule. This object is available in API version 57.0 and later.

AutomatedActionCondition

Represents the logical operator details for evaluating conditions in an automated action. This object is available in API version 57.0 and later.

AutomatedActionOverride

Represents a modified attribute of a shared automated action. For example, the modified attribute can contain customizations for your business. This object is available in API version 58.0 and later.

AutomatedActionParameter

Represents the values or field references evaluated by the automated action. This object is available in API version 57.0 and later.

AutomatedActionReminder

Represents a reminder to the end user to take an action in the future. This object is available in API version 58.0 and later.

BackgroundOperation

Represents a background operation in an asynchronous job queue. This object is available in API version 35.0 and later.

BackgroundOperationResult

Stores error messages generated when or importing data into big objects using Bulk API. This is a big object, available in API version 37.0 and later.

BatchApexErrorEvent

The documentation has moved to BatchApexErrorEvent in the *Platform Events Developer Guide*.

BillingBatchScheduler

Represents a scheduled processing job that triggers recurring invoice batch runs and payment batch runs in Subscription Management. This object is available in API version 55.0 and later.

BillingPeriodItem

Represents one payment period for a subscription. The billing period item is used to pass billing information to an invoice line item in Subscription Management. This object is available in API version 55.0 and later.

BillingPolicy

Represents a group of billing treatments, which define the rules for how to invoice a customer for an order item. This object is available in API version 55.0 and later.

BillingSchedule

Stores the order item information used in the invoicing process. This object is available in API version 55.0 and later.

BillingScheduleGroup

Represents a consolidated view of all billing schedules related to the order items generated from one asset, including new orders and amendment orders. This object is available in API version 55.0 and later.

BillingTreatment

Defines how Subscription Management bills an order item. The Exclude From Billing field controls whether the order item is invoiced. Child billing treatment items control how much of the order item's balance is invoiced for each invoice across the subscription's lifecycle. Billing treatments are assigned to order items based on the parent billing policy's Billing Treatment Selection field. This object is available in API version 55.0 and later.

BillingTreatmentItem

A billing treatment item defines how the order item's total amount is distributed into billing schedules over the course of the order item's lifecycle. In the Subscription Management pilot, billing treatments must have only one billing treatment item, so that the billing treatment item covers 100% of the order item's total value. This object is available in API version 55.0 and later.

BlockedRedirectEventLog

Blocked Redirect events capture information about blocked redirections from Salesforce to untrusted and malformed URLs. This object is available in API version 65.0 and later.

Bookmark

Represents a link between opportunities that share common information.

BotDefinition

Represents a top level object for Einstein Bots or Agentforce Agents. This object is available in API version 60.0 and later.

BotVersion

Represents a version of a bot or agent defined by a BotDefinition record. This object is available in API version 63.0 and later.

BrandingSet

Represents the definition of a set of branding properties for an Experience Builder site, as defined in the Theme panel in Experience Builder. This object is available in API version 40.0 and later.

BrandTemplate

Letterhead for HTML EmailTemplate.

Brief

Represents a marketing brief. A brief contains information that's used for positioning and grounding a marketing campaign. This object is available in API version 61.0 and later.

BriefcaseAssignment

Represents the assignment of a briefcase definition to selected users and user groups. This object is available in API version 50.0 and later.

BriefcaseDefinition

Represents a briefcase definition. A briefcase makes selected records available for users to view when they're offline in the Salesforce Field Service mobile app for iOS and Android. This object is available in API version 50.0 and later.

BriefcaseRule

Represents a rule that specifies records for a briefcase definition. This object is available in API version 50.0 and later.

BriefcaseRuleFilter

Represents a filter criteria for a briefcase rule. This object is available in API version 50.0 and later.

BroadcastCommAudience

Represents the audience that the broadcast communication is sent to. This object is available in API version 56.0 and later.

BroadcastCommunication

Represents a broadcast communication related to an incident. This object is available in API version 56.0 and later.

BroadcastTopic

Represents a definition of a broadcast topic. A broadcast topic is associated with a list of Experience Cloud network sites for Service Cloud and collaboration rooms for Sales Cloud. The topic is created for a specific user role. Collaboration rooms are linked to Slack channels. This object is available in API version 55.0 and later.

BroadcastTopicGroup

Represents a junction object that relates a group to an alert type broadcast topic. The broadcast sends the alert to this group. This object is available in API version 57.0 and later.

BroadcastTopicNetwork

Represents a link between a broadcast topic and the Experience Cloud network site for Service Cloud. This object is available in API version 56.0 and later.

BrowserPolicyViolation

Represents a violation that occurred within the last seven days related to the Trusted URLs and Trusted URLs for External Redirects allowlists. These violations include blocked resource requests based on your content security policy (CSP) and blocked redirections. This object is available in API version 61.0 and later.

BulkApi2EventLog

Bulk API 2 event logs contain details about Bulk API 2.0 requests. This object is available in API version 61.0 and later.

BulkApiEventLog

Bulk API event logs contain details about Bulk API requests. This object is available in API version 61.0 and later.

BulkApiRequestEventLog

The Bulk API request event captures when Bulk API requests are received to create a job, update a job, create a batch, update a batch, and when a job completes. This object is available in API version 65.0 and later.

BusinessBrand

Represents a unique brand for a business that belongs to a parent entity. This object is available in API version 53.0 and later.

BusinessAlert

Represents information about insight notifications that Einstein Relationship Insights explores, such as news mentions, job updates, and relationships. This object is available in API version 57.0 and later.

BusinessAlertStatus

Represents information about the read status of an insight alert. This object is available in API version 57.0 and later.

BusinessHours

Specifies the business hours of your support organization. Escalation rules are run only during these hours.

Business Process

Represents a business process. Business Processes track separate sales, lead, support, and solution lifecycles by displaying different picklist values according to each user's profile.

BusinessProcessDefinition

Setup object that stores information about stages in a customer lifecycle map. The stages are associated with surveys and questions created using Salesforce Surveys. This object is reserved for internal use, and is available in API version 49.0 and later.

BusinessProcessFeedback

Setup object that stores information about the survey and the question associated with each stage in a customer lifecycle map. Customer lifecycle maps are used to track the scores provided by customers across their lifecycle using Salesforce Surveys. This object is reserved for internal use, and is available in API version 49.0 and later.

BusinessProcessGroup

Setup object that stores information about customer lifecycle maps. Customer lifecycle maps are used to track the scores provided by customers across their lifecycle using Salesforce Surveys. This object is reserved for internal use, and is available in API version 49.0 and later.

BuyerAccount

Represents an account that is enabled as a buyer for Lightning B2B Commerce. This object is available in API version 48.0 and later.

BuyerCriteria

Represents the buyer context qualifier of locale for any buyer groups of type Market This object is available in API version 58.0 and later.

BuyerGroup

Associates group qualifiers (entitlements, price books, promotions, and shipping methods) with buyer members based on buyer account ID or on the localized language and currency of the market browsed in a webstore. This object is available in API version 57.0; amended to support Market in version 58.0 and later.

BuyerGroupBuyerCriteria

Associates a buyer group that is enabled for webstores supporting multiple languages and currencies with BuyerCriteria that define those languages and currencies. This object is available in API version 58.0 and later.

BuyerGroupMember

Represents a member of a buyer group. This object is available in API version 55.0 and later.

BuyerGroupPricebook

Represents a buyer group price book used in Lightning B2B Commerce. This object is available in API version 48.0 and later.

BuyerGroupRelatedObject

Used to associate currencies and supported ship-to countries with a buyer group and its price books, promotions, and entitlements. Supports buyer experience when buyer group members shop in stores enabled for multiple locales. This object is available in API version 58.0 and later.

CalcProcStepRelationship

Defines a parent-child relationship between two Expression Set Steps in an Expression Set Version. The label for this object is Expression Set Step Relationship. This object is available in API version 53.0 and later.

CalculatedInsightRangeBound

Stores the information required to calculate a range-bound data insight. This object is available in API version 59.0 and later.

CalculationMatrix

Matches input values to a table row and returns the row's output values. The label for this object is Decision Matrix. This object is available in API version 53.0 and later.

CalculationMatrixColumn

Defines a column in a Decision Matrix. The label for this object is Decision Matrix Column. This object is available in API version 53.0 and later.

CalculationMatrixRow

Defines a row in a Decision Matrix. The label for this object is Decision Matrix Row. This object is available in API version 53.0 and later.

CalculationMatrixVersion

Defines a version of a Decision Matrix. The label for this object is Decision Matrix Version. This object is available in API version 53.0 and later.

CalculationProcedure

Performs a series of calculations using matrix lookups and user-defined variables and constants. The label for this object is Expression Set. This object is available in API version 53.0 and later.

CalculationProcedureStep

Defines a step in an Expression Set. The label for this object is Expression Set Step. This object is available in API version 53.0 and later.

CalculationProcedureVariable

Defines a variable in an Expression Set. The label for this object is Expression Set Variable. This object is available in API version 53.0 and later.

CalculationProcedureVersion

Defines a version of an Expression Set. The label for this object is Expression Set Version. This object is available in API version 53.0 and later.

Calendar

Represents a calendar. This can be a default user calendar, public calendar, resource calendar, or holiday calendar. This object is available in API version 45.0 and later.

### CalendarView

These calendars can be created and assigned to users other than the creator. Available calendars include object, shared, public, resource, and user list calendars. Object calendars represent a calendar based on a Salesforce object, either standard or custom. This object is available in API version 51.0 and later.

### CallCenter

Represents a call center, which is a logical representation of a single computer-telephony integration (CTI) system instance in an organization.

### CallCenterRoutingMap

Stores a mapping between a user or queue in a Salesforce org to a user or queue in an external system's call center. This object is available in API version 53.0 and later.

### CallCoachingMediaProvider

Represents the media provider for call recordings. This object is available in API version 49.0 and later.

### CallCtrAgentFavTrfrDest

Represents a transfer destination that has been marked (starred) as a favorite in the Omni-Channel softphone by a contact center agent for voice call transfers. This object is available in API version 55.0 and later.

### CallCtrAgentFavTrfrDestShare

Represents a sharing entry on a favorite transfer destination in the Omni-Channel softphone for voice call transfers. This object is available in API version 55.0 and later.

### CallDisposition

Represents a call result value that sales reps select when logging a call. This object is available in API version 47.0 and later.

### CallDispositionCategory

Represents the call outcome of a phone call that is used in reports and branching criteria for cadences. This object is available in API version 47.0 and later.

### CallTemplate

Represents a call script for users to read when making calls.

### Campaign

Represents and tracks a marketing campaign, such as a direct mail promotion, webinar, or trade show.

### CampaignInfluence

Represents the association between a campaign and an opportunity in Customizable Campaign Influence. This object is available in API version 37.0 and later.

### CampaignInfluenceModel

This read-only object represents a campaign influence model in Customizable Campaign Influence. Use campaign influence models to group `CampaignInfluence` records created by a specific set of triggers and workflows that you define. The Primary Campaign Source influence model is the default model. This object is available in API version 37.0 and later.

### CampaignMember

The CampaignMember object represents the relationship between a campaign and either a lead or a contact. If the Accounts as Campaign Members setting is enabled in an org, CampaignMember can also represent the relationship between a campaign and an account.

### CampaignMemberStatus

One or more member status values defined for a campaign.

### CampaignOwnerSharingRule

Represents the rules for sharing a campaign with User records other than the owner or anyone above the owner in the role hierarchy.

CampaignShare

Represents a sharing entry on a Campaign.

CampaignTag

Associates a word or short phrase with a Campaign.

CardPaymentMethod

Represents a credit card or debit card payment method, which implements the PaymentMethod object. This object is available in API version 48.0 and later.

CartCheckoutSession

Represents a checkout session used in Lightning B2B Commerce checkout. This object is available in API version 48.0 and later.

CartDeliveryGroup

Represents shipping information for the delivery of items in an order against a store built with B2B Commerce or D2C Commerce. This object is available in API version 49.0 and later.

CartDeliveryGroupMethod

Represents the selected delivery method for a cart delivery group used in Lightning B2B Commerce checkout. This object is available in API version 49.0 and later.

CartDeliveryGroupMethodAdj

Represents the shipping promotion discount for a shipping method. This object is available in API version 60.0 and later.

CartItem

Represents an item in a `WebCart` that's active in a store built with B2B or D2C Commerce. Cart item can be of type `Product` or `Charge`. This object is available in API version 49.0 and later.

CartItemPriceAdjustment

Price adjustment for a cart item. This object is available in API version 52.0 and later.

CartTax

Represents taxes for a line item in a `WebCart` that's active in a store built with B2B Commerce or D2C Commerce. This object is available in API version 49.0 and later.

CartValidationOutput

Associate errors to cart entities, such as cart line items, delivery groups, and the like, in a store built with B2B Commerce or D2C Commerce. An example error is "Out of stock." Available in API version 49.0 and later.

Case

Represents a case, which is a customer issue or problem.

CaseArticle

Represents the association between a Case and a KnowledgeArticle. This object is available in API version 20.0 and later.

CaseComment

Represents a comment that provides additional information about the associated Case.

CaseContactRole

Represents the role that a given Contact plays on a Case.

CaseHistory

Represents historical information about changes that have been made to the associated Case.

CaseHistory2

Represents historical information about owner and status changes that have been made to the associated Case. This object is available in API version 59.0 and later.

CaseMilestone

Represents a milestone (required step in a customer support process) on a Case. This object is available in API version 18.0 and later.

CaseOwnerSharingRule

Represents the rules for sharing a case with users other than the owner.

CaseParticipant

Represents a junction between a case, and an account or a contact. This object stores the details of the participant associated with a case. This participant could be the applicant, co-applicant, a household, or even a business account. This object is available in API version 54.0 and later.

CaseRelatedIssue

This object acts as a junction between a customer issue (Case) and the Incident or Problem that represents an associated service failure. This object is available in API version 53.0 and later.

CaseShare

Represents a sharing entry on a Case.

CaseSolution

Represents the association between a Case and a Solution.

CaseStatus

Represents the status of a Case, such as New, On Hold, or In Process.

CaseSubjectParticle

Represents the Social Business Rules custom format for the **Case Subject** field on cases created from inbound social posts. This object is available in API version 41.0 and later.

CaseTag

Associates a word or short phrase with a Case

CaseTeamMember

Represents a case team member, who works with a team of other users to help resolve a case.

CaseTeamRole

Represents a case team role. Every case team member has a role on a case, such as "Customer Contact" or "Case Manager."

CaseTeamTemplate

Represents a predefined case team, which is a group of users that helps resolve a case.

CaseTeamTemplateMember

Represents a member on a predefined case team, which is a group of users that helps resolve cases.

CaseTeamTemplateRecord

The CaseTeamTemplateRecord object is a linking object between the Case and CaseTeamTemplate objects. To assign a predefined case team to a case (customer inquiry), create a CaseTeamTemplateRecord record and point the `ParentId` to the case and the `TeamTemplateId` to the predefined case team.

CategoryData

Represents a logical grouping of Solution records.

CategoryNode

Represents a tree of Solution categories.

CategoryNodeLocalization

When the Translation Workbench is enabled for your organization, the CategoryNodeLocalization object provides the translation of the label of a solution category.

ChangeRequest

Represents a decision to implement a formal request for a change (RFC). This object is available in API version 53.0 and later.

ChangeRequestRelatedIssue

Represents a junction object that relates a ChangeRequest to an Incident or Problem due to a service failure. This object is available in API version 53.0 and later.

ChangeRequestRelatedItem

Represents a junction object that relates a ChangeRequest to an Asset. This object is available in API version 53.0 and later.

ChangeSetOperationEventLog

Change Set Operation events contain information from change set migrations. This object is available in API version 65.0 and later.

ChannelObjectLinkingRule

Represents a rule for linking a channel interaction with an object (such as Lead or Contact). This object is available in API version 47.0 and later.

ChannelProgram

Represents a channel program that vendors use to market and sell their products through channel partners. This object is available in API version 41.0 and later.

ChannelProgramLevel

Represents a level, based on member experience, in a channel program. This object is available in API version 41.0 and later.

ChannelProgramMember

Represents a partner who is a member of a channel program. This object is available in API version 41.0 and later.

ChatterActivity

ChatterActivity represents the number of posts and comments made by a user and the number of comments and likes on posts and comments received by the same user. This object is available in API version 23.0 and later.

ChatterAnswersActivity

Represents the reputation of a User in Chatter Answers zones.This object is available in API version 25.0 and later.

ChatterAnswersReputationLevel

Represents a reputation level within a Chatter Answers zone.  This object is available in API version 26.0 and later.

ChatterConversation

Represents a private conversation in Chatter, consisting of messages that conversation members have sent or received. This object is available in API version 23.0 and later.

ChatterConversationMember

Represents a member of a private conversation in Chatter. A member has either sent messages to or received messages from other conversation participants. This object is available in API version 23.0 and later.

ChatterExtension

Represents a Rich Publisher App that's integrated with the Chatter publisher. This object is available in API version 41.0 and later.

ChatterExtensionConfig

Configuration for the Chatter extension for Experience Cloud sites. This object is available in API version 41.0 and later.

ChatterMessage

Represents a message sent as part of a private conversation in Chatter. This object is available in API version 23.0 and later.

ClientBrowser

Represents a cookie added to the browser upon login, and also includes information about the browser application where the cookie was inserted. This object is available in version 28.0 and later.

CollaborationGroup

Represents a Chatter group. This object is available in API version 19.0 and later.

CollaborationGroupMember

Represents a member of a Chatter group. This object is available in API version 19.0 and later.

CollaborationGroupMemberRequest

Represents a request to join a private Chatter group. This object is available in API version 21.0 and later.

CollaborationGroupRecord

Represents the records associated with Chatter groups.

CollaborationInvitation

Represents an invitation to join Chatter, either directly or through a group. This object is available in API version 21.0 and later.

CollaborationRoom

Represents a collaboration room, which links Salesforce to a Slack channel used by applications with specific use cases, such as swarming or reporting. This object is available in API version 55.0 and later.

CollabDocumentMetric

Represents the engagement metrics for a Quip thread (document or spreadsheet) that's linked to a Salesforce record. This object is available in API version 50.0 and later.

CollabDocumentMetricRecord

Represents an association between a CollabDocumentMetric and a Salesforce record.It tracks which Salesforce record, such as an Account or Contact, is linked to a Quip thread for which metrics were gathered using CollabDocumentMetric. CollabDocumentMetricRecord is available in API version 50.0 and later.

CollabTemplateMetric

Represents the engagement metrics for a Quip template.This object is available in API version 50.0 and later.

CollabTemplateMetricRecord

Represents an association between a CollabTemplateMetric and a Salesforce record.It tracks which Salesforce record, such as an Account or Contact, is linked to a Quip template for which metrics were gathered using CollabTemplateMetric. CollabTemplateMetricRecord is available in API version 50.0 and later.

CollabUserEngagementMetric

Represents the user engagement metrics for a Quip thread in a Quip template or document. This object is available in API version 50.0 and later.

CollabUserEngmtRecordLink

Represents an association between a CollabUserEngagementMetric and a Salesforce record. It tracks which Salesforce record, such as an Account or Contact, is associated with the user engagement metric. This object is available in API version 50.0 and later.

ColorDefinition

Represents the color-related metadata for a custom tab. This object is available in API version 43.0 and later.

ContCalloutSummaryEventLog

Continuation Callout Summary events contain information about all of the asynchronous callouts performed during a transaction, their response status codes, execution times, and URL endpoint destinations. This object is available in API version 65.0 and later.

CombinedAttachment

This read-only object contains all notes, attachments, Google Docs, documents uploaded to libraries in Salesforce CRM Content, and files added to Chatter that are associated with a record.

CommerceEntitlementBuyerGroup

Represents the entitlement policy for a buyer group. This object is available in API version 49.0 and later.

CommerceEntitlementPolicy

Represents an entitlement policy, which determines what products and prices a user can see. This object is available in API version 49.0 and later.

CommerceEntitlementPolicyShare

Represents the entitlement rule for sharing products and prices with users other than the owner. This object is available in API version 49.0 and later.

CommerceEntitlementProduct

Represents the entitlement policy for a product. This object is available in API version 49.0 and later.

CommissionSchedule

Represents a commission calculation and rate definition. Calculates commission values for a commissionable event.

CommissionScheduleAssignment

Represents the commission calculation applicable to a specific product or producer for one or multiple commissionable events.

CommSubscription

Represents the subscription options for a specific communication. This object is available in API version 48.0 and later.

CommSubscriptionChannelType

Represents the engagement channel through which you can reach a customer for a communication subscription. This object is available in API version 48.0 and later.

CommSubscriptionConsent

Represents a customer's consent to a communication subscription. This object is available in API version 48.0 and later.

CommSubscriptionTiming

Represents a customer's timing preferences for receiving a communication subscription. This object is available in API version 48.0 and later.

Community (Zone)

Represents a zone that contains Idea or Question objects.

ConcurApexLimitEventLog

Concurrent Apex Limit event logs contain information about long-running concurrent Apex requests in your org that Salesforce terminated after reaching your org's concurrency limit. Requests with an established Apex context that execute for 5 seconds are counted towards your org's limit of concurrent long-running requests. (Asynchronous requests don't count towards the limit.) When the long-running requests exceed the org default limit, additional long-running requests are denied. This object is available in API version 61.0 and later.

ConnectedApplication

Represents a connected app and its details; all fields are read-only.

ConferenceNumber

Holds the telephone number for an external event shown in the Salesforce Today feature in the Salesforce mobile app. This object is available in API version 35.0 and later.

Consumption Rate

Consumption rates describe the billing rate for a range of usage within a consumption schedule. All consumption schedules require at least one consumption rate in order to rate usage on a usage product. This object is available in API version 45.0 and later.

Consumption Schedule

A consumption schedule organizes a set of consumption rates by which usage-based products are quoted and billed. This object is available in API version 45.0 and later.

Contact

Represents a contact, which is a person associated with an account.

ContactCenterChannel

Represents a junction object that relates a Bring Your Own Channel for Contact Center as a Service (CCaaS) messaging channel to a CallCenter object for Bring Your Own Channel for CCaaS. This object also represents the routing details for a voicemail configuration. This object is available in API version 56.0 and later.

ContactCleanInfo

Stores the metadata Data.com Clean uses to determine a contact record's clean status. Helps you automate the cleaning or related processing of contact records. ContactCleanInfo includes a number of bit vector fields.

ContactDailyMetric

Represents the daily engagement metrics for a contact. This object is available in API version 52.0 and later.

ContactMonthlyMetric

Represents the monthly engagement metrics for a contact. This object is available in API version 52.0 and later.

ContactPointAddress

Represents a contact's billing or shipping address, which is associated with an individual or person account. This object is available in API version 49.0 and later.

ContactPointConsent

Represents a customer's consent to be contacted via a specific contact point, such as an email address or phone number. This object is available in API version 48.0 and later.

ContactPointEmail

Represents a contact's email, which is associated with an individual or person account. This object is available in API version 48.0 and later.

ContactPointPhone

Represents a contact's phone number, which is associated with an individual or person account. This object is available in API version 48.0 and later.

ContactPointTypeConsent

Represents consent for a contact point type, such as email or phone. This object is available in API version 45.0 and later.

ContactOwnerSharingRule

Represents the rules for sharing a contact with a User other than the owner.

ContactRequest

Represents a customer's request for support to get back to them about an issue. This object is available in API version 45.0 and later.

ContactRequestShare

Represents a list of access levels to a ContactRequest with an explanation of the access level. This object is available in API version 45.0 and later.

ContactShare

Represents a list of access levels to a Contact along with an explanation of the access level. For example, if you have access to a record because you own it, the `ContactAccessLevel` is `All` and `RowCause` is Owner.

ContactSuggestionInsight

Represents a suggestion for a new contact record. Available in API versions 45.0 and later.

ContactTag

Associates a word or short phrase with a Contact.

ContentAsset

Represents a Salesforce file that has been converted to an asset file in a custom app in Lightning Experience. Use asset files for org setup and configuration. Asset files can be packaged and referenced by other components. This object is available in API version 38.0 and later.

ContentBody

Represents the body of a file in Salesforce CRM Content or Salesforce Files. This object is available in API version 40.0 and later.

ContentDistribution

Represents information about sharing a document externally. This object is available in API version 32.0 and later.

ContentDistributionEventLog

Content Distribution events contain information about content distributions and deliveries to users. This object is available in API version 65.0 and later.

ContentDistributionView

Represents information about views of a shared document. This read-only object is available in API version 32.0 and later.

ContentDocument

Represents a document that has been uploaded to a library in Salesforce CRM Content or Salesforce Files. This object is available in versions 17.0 and later for Salesforce CRM Content. This object is available in API version 21.0 and later for Salesforce Files.

ContentDocumentHistory

Represents the history of a document. This object is available in versions 17.0 and later.

ContentDocumentLink

Represents the link between a Salesforce CRM Content document, Salesforce file, or ContentNote and where it's shared. A file can be shared with other users, groups, records, and Salesforce CRM Content libraries. This object is available in versions 21.0 and later for Salesforce CRM Content documents and Salesforce Files.

ContentDocumentListViewMapping

Represents an association between a ListView and a Quip ContentDocument. Applies to Quip file types only. Maintains the mapping between a list view and Quip document when the list view is exported to a newly created Quip document. This object is available in API version 44.0 and later.

ContentDocumentSubscription

Represents a subscription for a user following or commenting on a file in a library. This object is available in API version 42.0 and later.

ContentDocLinkEventLog

Content Document Link events contain sharing information for content documents. This object is available in API version 65.0 and later.

ContentFolder

Represents a folder in a content library for adding files. This object is available in API version 34.0 and later.

ContentFolderItem

Represents a file (ContentDocument) or folder (ContentFolder) that resides in a ContentFolder in a ContentWorkspace. This object is available in API version 35.0 and later.

ContentFolderLink

Defines the association between a library and its root folder. This object is available in API version 34.0 and later.

ContentFolderMember

Defines the association between a file and a folder. This object is available in API version 34.0 and later.

ContentHubItem

Represents a file or folder in a Files Connect external data source, such as Microsoft SharePoint or OneDrive for Business. This object is available in API version 33.0 and later.

ContentHubRepository

Represents a Files Connect external data source such as Microsoft SharePoint or OneDrive for Business. This object is available in API version 33.0 and later.

ContentNote

Represents a note created with the enhanced note taking tool, released in Winter '16. This object is available in API version 32.0 and later.

ContentNotification

Represents a notification for a file. This object is available in API version 42.0 and later.

ContentTagSubscription

Represents a subscription for a user following a tag on a file. This object is available in API version 42.0 and later.

ContentTaxonomy

Represents a content taxonomy, which is used to classify and organize Salesforce CMS content. To create a hierarchy of terms in a content taxonomy, use this object in addition to the ContentTaxonomyTerm, ContentTaxonomyRelatedTerm, and ContentTaxonomyTermRelatedTerm objects. This object is available in API version 63.0 and later.

ContentTaxonomyRelatedTerm

Represents the relationship between a term and the content taxonomy to which the term belongs. This object is available in API version 63.0 and later.

ContentTaxonomyTerm

Represents a term in a content taxonomy. Terms describe what content is or how it's used, and they're organized in parent-child relationships in the taxonomy hierarchy. This object is available in API version 63.0 and later.

ContentTaxonomyTermRelatedTerm

Represents the relationship between two terms in a content taxonomy. This object is available in API version 63.0 and later.

ContentTaxonomyTermRelationshipType

Represents the type of relationship between two terms in a content taxonomy. This object is available in API version 63.0 and later.

ContentTransferEventLog

ContentTransferEventLog stores information about content transfer events, such as downloads, uploads, and previews. This information includes events performed on files and attachments to records. This object is available in API version 62.0 and later.

ContentUserSubscription

Represents a subscription for a user following another user. This object is available in API version 42.0 and later.

ContentVersion

Represents a specific version of a document in Salesforce CRM Content or Salesforce Files. This object is available in versions 17.0 and later for Salesforce CRM Content documents. This object is available in versions 20.0 and later for Salesforce Files.

ContentVersionComment

Represents a comment on a version of a file. This object is available in API version 42.0 and later.

ContentVersionHistory

Represents the history of a specific version of a document. This object is available in version 17.0 and later.

ContentVersionRating

Represents a rating on a version of a file. This object is available in API version 42.0 and later.

ContentWorkspace

Represents a content library. This object is available in versions 17.0 and later.

ContentWorkspaceDoc

Represents a link between a document and a public library in Salesforce CRM Content. This object is available in versions 17.0 and later.

ContentWorkspaceMember

Represents a member of a content library. This object is available in API version 40.0 and later.

ContentWorkspacePermission

Represents a library permission. This object is available in API version 40.0 and later.

ContentWorkspaceSubscription

Represents a subscription for a user following a library. This object is available in API version 42.0 and later.

ContextParamMap

Represents optional context data for a Conversation or a ConversationParticipant. This object is available in API version 57.0 and later.

Contract

Represents a contract (a business agreement) associated with an Account.

ContractContactRole

Represents the role that a Contact plays on a Contract.

ContractLineItem

Represents a product covered by a service contract (customer support agreement). This object is available in API version 18.0 and later.

ContractLineOutcome

Represents information on a contract line outcome's captured data and other related parameters that are used when capturing data. This object is available in API version 58.0 and later.

ContractLineOutcomeData

Represents the contract line outcome's captured data. It stores the data that was captured between the contract line outcome's start date and end date. This object is available in API version 58.0 and later.

ContractStatus

Represents the status of a Contract, such as Draft, InApproval, Activated, Terminated, or Expired.

ContractTag

Associates a word or short phrase with a Contract.

ConvAnalysisSummary

Represents the information stored for each run or refresh of Sales Signals.  This object is available in API version 63.0 and later.

ConvAnalysisTopic

Represents a topic generated from the Sales Signals refresh or run. For example, a product experiencing issues due to high pricing could be a topic identified through the analysis of multiple calls. This object is available in API version 63.0 and later.

ConvAnalysisTopicEntry

Represents a single entry under the ConvAnalysisTopic object. An entry represents a segment of a video or voice call that is associated with a conversation analysis topic. This object is available in API version 63.0 and later.

Conversation

Represents a conversation between an end user and an agent. Available in API version 49.0 and later.

ConversationApiLog

Logs of an API operation on a specific conversation object done using the Conversation Service API. This object is available in API version 63.0 and later.

ConversationContextEntry

Represents the context of a message or an event in the chat history between an agent and a messaging user. This object is available in API version 47.0 and later.

ConversationChannelDefinition

Represents a configurable definition of a conversation channel that's implemented for Interaction Service for Bring Your Own Channel for Messaging and Bring Your Own Channel for CCaaS messaging channels. This object is available in API version 60.0 and later.

ConversationEntry

Represents a message or event in a voice call or a standard or enhanced messaging session. This object is available in API version 43.0 and later.

ConversationParticipant

Represents an active participant in a conversation. A new ConversationParticipant record is created each time a participant joins a conversation. This object is available in API version 49.0 and later.

ConvIntelligenceSignalRule

Represents a conversation intelligence signal rule. The rule triggers actions based on real-time intelligence signals from your telephony system or keywords mentioned by support reps or customers. The rule contains a set of conditions (subrules) and the filter logic used to evaluate those conditions to determine whether to trigger actions. This object is available in API version 62.0 and later.

ConvIntelligenceSignalSubRule

Represents a condition (subrule) within a conversation intelligence signal rule. This object is available in API version 62.0 and later.

ConvMessageSendRequest

Represents a request to send a template-based messaging component to a series of messaging users in an enhanced messaging channel or Messaging for In-App. This object is available in API version 60.0 and later.

ConversationVendorInfo

This setup object connects the partner vendor system to the Service Cloud feature. For example, for Service Cloud Voice, this object contains information about the partner telephony or Contact Center as a Service (CCaaS) partner system. For Bring Your Own Channel for Messaging this object contains information about the partner messaging system, and for Bring Your Own Channel for CCaaS, this object contains information about the CCaaS partner system. This object is available in API version 52.0 and later.

CorsWhitelistEntry

Represents an entry in the cross-origin resource sharing (CORS) allowlist. Origins included in the allowlist can request REST resources from that Salesforce org.

Coupon

A coupon associated with a promotion. This object is available in API version 54.0 and later.

CouponCodeRedemption

Tracks each coupon code redemption. This object is available in API version 58.0 and later.

CreditMemo

Represents a document that is used to reduce the amount that a buyer owes a seller under the terms of an earlier invoice. This object is available in API version 48.0 and later.

CreditMemoAddressGroup

Stores the buyer's address information, which is used to determine the amount of tax to credit to a buyer when a credit memo is issued. This object is available in API version 55.0 and later.

CreditMemoInvApplication

Represents an amount applied from a credit memo to an invoice. This object is available in API version 48.0 and later.

CreditMemoLine

Represents product, service, adjustment, or tax line items that were included in a credit memo. This object is available in API version 48.0 and later.

Crisis

Represents a major crisis event that affects an Employee in an InternalOrganizationUnit. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts.

CronJobDetail

Contains details about the associated scheduled job, such as the job's name and type. This object is available in API version 29.0 and later.

CronTrigger

Contains schedule information for a scheduled job. CronTrigger is similar to a cron job on UNIX systems. This object is available in API version 17.0 and later.

CryptoProdCatgWalletGroup

Specifies if CryptoWalletGroup is in the allowlist or airdrop for the ProductCategory. A custom object between ProductCategory and CryptoWalletGroup adding the CryptoWalletGroup to allowlist or airdrop. This object is available in API version 58.0 and later.

CspTrustedSite

Represents a trusted URL. For each CspTrustedSite, you can specify Content Security Policy (CSP) directives and permissions policy directives. Each CSP directive allows Lightning components, third-party APIs, and WebSocket connections to access a resource type from the trusted URL. If the Permissions-Policy HTTP header is enabled, each permissions policy directive grants the trusted URL access to a browser feature. In API version 58.0 and earlier, CspTrustedSite included only CSP directives and was referred to as CSP Trusted Sites in Salesforce Setup. Available in API version 39.0 and later.

CspViolationEventLog

CSP violation events capture details about blocked resource requests from Lightning Experience pages based on your content security policy (CSP). This object is available in API version 63.0 and later.

CurrencyType

Represents the currencies used by an organization for which the multicurrency feature is enabled.

CustExpIntlTransfSetup

Stores information for different data sources that are processed for customer insights. This object is available in API version 65.0 and later.

CustomBrand

Represents a custom branding and color scheme. This object is available in API version 28.0 and later.

CustomBrandAsset

Represents a branding element in a custom branding scheme. For example, a color, logo image, header image, or footer text. A CustomBrandAsset can apply to an Experience Cloud site or to an org using the Salesforce mobile app. This object is available in API version 28.0 and later.

CustomFieldDisplayValue

Stores variation details for the product attribute item view. This object is available in API version 63.0 and later.

CustomHelpMenuItem

Represents the items within a section of the Lightning Experience help menu that the admin added to display custom, org-specific help resources. This object is available in API version 44.0 and later.

CustomHelpMenuSection

Represents a section of the Lightning Experience help menu that the admin added to display custom, org-specific help resources. This object is available in API version 44.0 and later.

CustomHttpHeader

Represents a custom HTTP header that provides context information from Salesforce such as region, org details, or the role of the person viewing the external object. This object is available in API version 43.0 and later.

CustomMsgChannel

Represents a custom conversation channel and stores event-driven Messaging settings. Custom conversation channels are implemented for Bring Your Own Channel for Messaging and Bring Your Own Channel for CCaaS Messaging channels. This object is available in API version 63.0 and later.

CustomNotificationType

Stores information about custom notification types. This object is available in API version 47.0 and later.

CustomPermission

Represents a permission created to control access to a custom process or app, such as sending email. This object is available in API version 31.0 and later.

CustomPermissionDependency

Represents the dependency between two custom permissions when one custom permission requires that you enable another custom permission. This object is available in API version 32.0 and later.

Customer

Represents the customer role of an individual with respect to a particular company or organization. This object is available in API version 53.0 and later.

DandBCompany

Represents a Dun & Bradstreet® company record, which is associated with an account added from Data.com. This object is available in API version 25.0 and later.

Dashboard

Represents a dashboard, which shows data from custom reports as visual components. Access is read-only. This object is available in API version 20.0 and later.

DashboardComponent

Represents a dashboard component, which can be a chart, metric, table, or gauge on a dashboard. Access is read-only. This object is available in API version 21.0 and later.

DashboardTag

Associates a word or short phrase with a Dashboard. This object is available in API version 20.0 and later.

DataAssessmentFieldMetric

Represents summary statistics for matched, blank, and differing fields in account records of an org compared to records in Data.com. This object is available in API version 37.0 and later.

DataAssessmentMetric

Represents a summary of statistics for fields matched and unmatched in your account records with Data.com account records. This object is available in API version 37.0 and later.

DataAssessmentValueMetric

Summarizes the number of fields matched for your account records with Data.com account records.This object is available in API version 37.0 and later.

DatabaseSaveEventLog

Database Save events track when records are created,updated, or deleted This object is available in API version 64.0 and later.

DatacloudCompany

Represents the fields for Data.com company records. This object is available in API version 30.0 or later.

DatacloudContact

The fields and properties for Data.com contact records. This object is available in API version 30.0 or later.

DatacloudDandBCompany

Represents a set of read-only fields that are used to return D&B company data from Data.com API calls. This object is available in API version 30.0 or later.

DatacloudOwnedEntity

Represents fields in the DatacloudOwnedEntity object. The DatacloudOwnedEntity object tracks user-purchased records. This object is available in API version 30.0 or later.

DatacloudPurchaseUsage

Represents an object used to identify and track Data.com record purchases. This object is available in API version 30.0 or later.

DataDetectJobObjectSession

Represents an object-specific job session that's created whenever a DataDetect scan policy job session runs on a scan policy object. This object is available in API version 63.0 and later.

DataDetectJobSession

Represents a run of a DataDetect scan policy that's triggered manually. This object is available in API version 63.0 and later.

DataDetectPolicy

Represents a set of parameters that specifies the types of sensitive data to be searched for in a data scan. DataDetect scan policies can also apply filters to a data scan, and select what specific objects and fields are to be scanned. This object is available in API version 60.0 and later.

DataDetectPolicyObject

Represents an object of the DataDetect scan policy to be scanned. This object is available in API version 62.0 and later.

DataDetectScanResult

Represents the results of a DataDetect scan policy data scan. This object is available in API version 63.0 and later.

DataDetectPolicyObjField

Represents an object field of the DataDetect scan policy object to be scanned. This object is available in API version 64.0 and later.

DataDetectPolicySnapshot

Represents the snapshot of a DataDetect scan policy and its components retrieved during a job session. This object is available in API version 64.0 and later.

DataDetPlcyDataSrchExps

Represents data search expressions for scanning DataDetect scan policies based on Java regex. This object is available in API version 64.0 and later.

DataDetPlcyMdatScanCrit

Represents inclusion and exclusion criteria that filter what DataDetect scan policy object fields are to be scanned based on metadata tags. This object is available in API version 64.0 and later.

DataDetPlcySstvDataCatg

Represents the sensitive data categories that the DataDetect scan policy is required to scan. This object is available in API version 64.0 and later.

DataEncryptionKey

The DataEncryptionKey object is part of the Bring Your Own Key (BYOK) feature, which allows users to upload a data encryption key (DEK) using a public key generated by the Salesforce Shield Key Management Service (KMS). Customers create their own DEKs and upload them to Salesforce. Users access this entity via the API to list DEK keys for auditing purposes. They can also programmatically use this object to create the certificate and to upload key material. This object is available in API version 63.0 and later.

DataIntegrationRecordPurchasePermission

Indicates Lightning Data purchase credits that a Salesforce admin has granted to users.

DataKitDeployEvent

Represents a data kit deployment event that notifies subscribers of the status of the data kit component deployment. This object is available in API version 61.0 or later.

DataKitDeploymentLog

Represents the log details of a data kit component deployment. This object is available in API version 61.0 or later.

DatasetExport

Represents a dataset exported from CRM Analytics. When a dataset is exported, the data is converted into a .csv file and the schema is stored in a separate JSON file. These files are stored in two objects: DatasetExport and DatasetExportPart. DatasetExport acts as the header and includes the JSON schema.

DatasetExportPart

Represents a dataset exported from CRM Analytics. When a dataset is exported, the data is converted into a .csv file and the schema is stored in a separate JSON file. These files are stored in two objects: DatasetExport and DatasetExportPart. DatasetExportPart contains parts of the .csv file.

DataMaskCustomValueLibrary

Represents a set of user-inputted values in a custom library in Data Mask. This object is available in API version 64.0 and later.

DataStatistics

For internal use only.

DataUseLegalBasis

Represents the legal basis for contacting a customer, such as billing or contract. This object is available in API version 45.0 and later.

DataUsePurpose

Represents the reason for contacting a prospect or customer, such as for billing, marketing, or surveys. This object is available in API version 45.0 and later.

DataWeaveResource

Represents the DataWeaveScriptResource class that is generated for all DataWeave scripts. This object is available in API version 58.0 and later.

DatedConversionRate

Represents the dated exchange rates used by an organization for which the multicurrency and the effective dated currency features are enabled.

DealIndirectPartner

Represents an indirect partner's involvement in a deal. This object is available in API version 63.0 and later.

DeclinedEventRelation

Represents event participants (invitees or attendees) with the status `Declined` for a given event. This object is available in API versions 29.0 and later.

DelegatedAccount

Represents the external managed account. This object is available in API version 49.0 and later.

DeleteEvent

Represents a record that has been soft deleted. Search on this object was available in API version 48.0, then removed in API version 50.0.

DeliveryEstimationSetup

Shows the configuration options for the commerce delivery service offered through a web store or sales channel. Includes settings such as delivery location group, channel, fulfillment types, and default fulfillment time. This object is available in API version 61.0 and later.

DigitalSignature

Represents a signature captured on a service report in field service.

DigitalWallet

Represents a customer's digital wallet service. Salesforce Payments can use a digital wallet as a payment source when processing payments through a payment gateway. This object is available in API version 48.0 and later.

DirectMessage

Represents a direct message conversation between multiple users in Chatter. This object is available in API version 38.0 and later.

Division

A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.

DivisionLocalization

When the Translation Workbench is enabled for your organization, the DivisionLocalization object provides the translation of the label for a division.

DocAtchDownloadEventLog

Document Attachment Downloads events contain details of document and attachment downloads. This object is available in API version 65.0 and later.

Document

Represents a file that a user has uploaded. Unlike Attachment records, documents are not attached to a parent object.

DocumentAttachmentMap

Maps the relationship between an EmailTemplate and its attachment, which is stored as a Document.

DocumentRecipient

Connects a Service Report to a Digital Signature. This object is available in API version 55.0 and later.

DocumentTag

Associates a word or short phrase with a Document.

Domain

Read-only object that represents a custom Web address assigned to a site in your organization. This object is available in API version 26.0 and later.

DomainSite

Read-only junction object that joins the Site and Domain objects. This object is available in API version 26.0 and later.

DsarPolicy

Represents a Data Subject Access Request (DSAR) policy created in the Privacy Center managed package. DSAR policies anonymize or transfer personal data from your org at your customer's request. This object is available in API version 50.0 and later.

DsarPolicyLog

Represents the history of Data Subject Access Request (DSAR) policy execution requests. This log records the status and results of executed DSAR policies for a customer. This object is available in API version 50.0 and later.

DuplicateJob

Represents an instance of a job that identifies duplicates among existing records in the system.

DuplicateJobDefinition

Setup object defining a job that identifies duplicate record items globally.

DuplicateJobMatchingRule

Represents a MatchingRule to be used with a DuplicateJob sharing the corresponding DuplicateJobMatchingRuleDefinition.

DuplicateJobMatchingRuleDefinition

Setup object specifying a MatchingRule to use with DuplicateJob instances that share a DuplicateJobDefinition.

DuplicateRecordItem

Represents a record that's been identified as a duplicate. DuplicateRecordItems are included in a DuplicateRecordSet, which are processed in duplicate jobs. Use this object to create custom report types for duplicates.

DuplicateRecordSet

Represents a group of records that have been identified as duplicates. Each duplicate record set contains one or more duplicate record items. Use this object to create custom report types and view the results of duplicate jobs.

DuplicateRule

Represents a duplicate rule for detecting duplicate records.

DynamicDataCapture

DynamicDataCapture is a junction object that adds a Form tab to Work Order Overview, and to the related list of a work order, work order line item, or service appointment in the Field Service mobile app.  This object is available in API version 62.0 and later.

ElectronicMediaGroup

Represents the type of media that you can associate with a product or category.This object is available in API version 49.0 and later.

ElectronicMediaUse

Represents the usage of media. This object is available in API version 49.0 and later.

EmailContent

Represents a marketing email asset for use with Account Engagement. This object is available in API version 50.0 and later.

EmailDomainFilter

Represents a filter that determines whether an email relay is restricted to a specific list of domains. This object is available in API version 43.0 and later.

EmailDomainKey

Represents a domain key for an organization's domain, used to authenticate outbound email that Salesforce sends on the organization's behalf. This object is available in API version 28.0 and later.

EmailInsight

Represents an insight generated from an email interaction. EmailInsights acts as a central place to store various types of insights related to email messages. The insights stored include status, type, and time of generation. Only certain types of insights can be created based on a pre-configured list of insight types. This object is available in API version 63.0 and later.

EmailInsightAction

Represents the actions that have been taken, or could be taken, in relation to email insights. It logs different types of actions and associated metadata, helping to track and manage the activities and decisions made based on email insights. This object is available in API version 63.0 and later.

EmailMessage

Represents an email in Salesforce.

EmailMessageMigration

For internal use only.

EmailMessageRelation

Represents the relationship between an email and contacts, leads, and users. This object is available in API version 37.0 and later.

EmailRelay

Represents the configuration for sending an email relay. An email relay routes email sent from Salesforce through your company's email servers. This object is available in API version 43.0 and later.

EmailRoutingAddress

An email address used for Email-to-Case. Email routing addresses store a unique email services address provided by Salesforce and configuration options for emails received by this address.

EmailServicesAddress

An email service address.

EmailServicesFunction

An email service.

EmailStatus

Represents the status of email sent.

EmailTemplate

Represents a template for an email, mass email, list email, or Sales Engagement email. Supported in first-generation managed packages only.

EmailTemplateMonthlyMetric

Represents the monthly engagement metrics for an email template. This object is available in API version 53.0 and later.

EmbeddedServiceDetail

Represents a metadata catalog object that exposes fields from the underlying Embedded Service setup objects defined in each EmbeddedServiceConfig deployment for guest users. Guest users don't have direct access to the Embedded Service setup objects. Available in API version 39.0 and later.

EmbeddedServiceLabel

Represents a customized label in Embedded Chat or embedded Appointment Management.This object is available in API version 44.0 and later.

Employee

Represents an employee within a company or organization. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts.

Employee2

Represents an employee within a company or an organization. This object is available in API version 62.0 and later.

EmployeeCrisisAssessment

Represents a crisis assessment of an Employee. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts.

EmpUserProvisioningProcess

Represents an employee-user provisioning process. This object is available in API version 52.0 and later.

EmpUserProvisionProcessErr

Represents an employee-user provisioning process error. This object is available in API version 52.0 and later.

EnablementMeasureDefinition

Represents an Enablement measure, which specifies the job-related activity that a user performs to complete a milestone or outcome in an Enablement program. A measure identifies a source object and optional related objects, with optional field filters and filter logic, for tracking the activity. This object also represents Enablement measure information in Metadata API. This object is available in API version 56.0 and later.

EnablementProgram

Represents an Enablement program, which includes exercises and measurable milestones to help users such as sales reps achieve specific outcomes related to your company's revenue goals. This object is available in API version 56.0 and later.

EnablementProgramDefinition

Represents Enablement program information in Metadata API. This object is available in API version 61.0 and later.

EnblMeasureObjectDefinition

Represents the criteria for an object that tracks the job-related activity for an Enablement measure in an Enablement program. A separate EnblMeasureObjectDefinition is used for a measure's source object and each optional related object. This object is available in API version 56.0 and later.

EnblPgmTaskMeasureProgress

Represents a user's progress through the object and field requirements that an Enablement measure defines for an outcome or milestone in an Enablement program. This object is available in API version 61.0 and later.

EnblProgramSection

Represents an optional section in an Enablement program. A section can include other program items, such as milestones and exercises. This object is available in API version 60.0 and later.

EnblProgramTaskDefinition

Represents an outcome, a milestone, or an exercise in an Enablement program. A program task is also known as a program item. This object is available in API version 60.0 and later.

EnblProgramTaskMeasure

Represents the connection between an Enablement measure and a specific milestone or outcome in an Enablement program. This object is available in API version 61.0 and later.

EnblProgramTaskProgress

Represents a user's progress towards completing an outcome, a milestone, or an exercise in an Enablement program. This object is available in API version 60.0 and later.

EnblProgramTaskSubCategory

Represents a custom exercise type that an Enablement admin adds to an Enablement program in Program Builder. A custom exercise type also requires a corresponding EnblProgramTaskDefinition record for Program Builder and corresponding LearningItem and LearningItemType records for when users take the exercise in the Guidance Center. This object is available in API version 62.0 and later.

EngagementChannelType

Represents a channel through which a customer can be reached for communication. This object is available in API version 48.0 and later.

EnhancedLetterhead

Represents an enhanced letterhead that can be associated with a Lightning email template that doesn't use the Salesforce Merge Language (SML). This object is available in API version 46.0 and later.

### Entitlement

Represents the customer support an account or contact is eligible to receive. This object is available in API version 18.0 and later. Entitlements may be based on an asset, product, or service contract.

### EntitlementContact

Represents a Contact eligible to receive customer support via an Entitlement. This object is available in API version 18.0 and later.

### EntitlementTemplate

Represents predefined terms of customer support for a product (Product2). This object is available in API version 18.0 and later.

### EntityHistory

Represents historical information about an object's changed field values. This object is only available to users with the "View All Data" permission. This object is unavailable beginning with API version 8.0. Use the object-specific Historyobjects instead.

### EntityMilestone

Represents a required step in a customer support process on a work order. The Salesforce user interface uses the term "object milestone. This object is available in API version 37.0 and later.

### EntitySubscription

Represents a subscription for a user following a record or another user. This object is available in API version 34.0 and later.

### EnvironmentHubMember

Represents a member organization in the Environment Hub. This object is available in API version 29.0 and later.

### Event

Represents an event in the calendar. In the user interface, event and task records are collectively referred to as activities.

### EventLogFile

Represents event log files for event monitoring. The event monitoring product gathers information about your Salesforce org's operational events, which you can use to analyze usage trends and user behavior. This object is available in API version 32.0 and later. The `Interval` and `Sequence` fields are available only in API version 37.0 and later.

### EventRelation

Represents a person (a user, lead, or contact) or a resource (such as a conference room) invited to an event. This object lets you add or remove invitees from an event and use the API to manage invitees' responses to invitations. If Shared Activities is enabled, EventRelation can also represent other objects that are related to an event. EventRelation does not support triggers, workflow, or data validation rules.

### EventBusSubscriber

Represents a trigger, process, or flow that's subscribed to a platform event or a change data capture event. Doesn't include CometD or Pub/Sub API subscribers.

### EventRelayConfig

Represents the configuration of an event relay, which relays platform events and change data capture events from Salesforce to Amazon EventBridge. This object is available in API version 56.0 and later.

### EventRelayFeedback

Represents execution state information about an event relay from Salesforce to Amazon EventBridge for platform events and change data capture events. Query this object to get information such as the event relay status and any error message. This object is available in API version 56.0 and later.

### EventTag

Associates a word or short phrase with an Event.

EventWhoRelation

Represents the relationship between an event and a lead or contacts. This derived object is a filtered version of the EventRelation on page 2421 object; that is, IsParent is `true` and IsWhat is `false`. It doesn't represent relationships to invitees or to accounts, opportunities, or other objects. This object is available in API versions 29.0 and later.

Expense

Represents an expense linked to a work order. Service resource technicians can log expenses, such as tools or travel costs. This object is available in API version 49.0 and later.

ExpenseReport

Represents a report that summarizes expenses. This object is available in API version 50.0 and later.

ExpenseReportEntry

Represents an entry in an expense report. This object is available in API version 50.0 and later.

ExpressionFilter

Represents a logical expression that's used to control the execution of macro instructions. This object is available in API version 46.0 and later.

ExpressionFilterCriteria

Represents a condition in an expression that's used to control the execution of macro instructions. This object is available in API version 46.0 and later.

ExpressionSetConstraintObj

Represents the association between a Product object and the constraint model tags defined in a given constraint model. This object is available in API version 63.0 and later.

ExtDataShare

Represents a data share, which is a collection of Data Cloud objects that can be shared with other Data Cloud orgs or third-party partners. This object is available in API version 56.0 and later.

ExternalAccountHierarchy

Represents the external account hierarchy, which works like a role-based hierarchy. Use ExternalAccountHierarchy to allow partner and customer users to share data with other external accounts in their hierarchy.This object is available in API version 49.0 and later.

ExternalAccountHierarchyHistory

Represents the history of changes to values in the fields of an external account hierarchy. This object is available in API version 50.0 and later.

ExternalClientApplication

For internal use only.

ExternalDataSource

Represents an external data source, which defines connection details for integration with data and content that are stored outside the Salesforce org. This object is available in API version 27.0 and later.

ExternalDataUserAuth

Stores authentication settings for a Salesforce user to access an external system. The external system must be defined in an external data source or a named credential that's configured to use per-user authentication. This object is available in API version 27.0 and later.

ExternalEncryptionRootKey

Represents metadata about root keys stored in third-party key stores that are used to generate and secure keys that encrypt Salesforce data. This object is available in API version 58.0 and later.

ExternalEvent

Holds native iOS or Android calendar event details for the Salesforce Today feature in the Salesforce mobile app. This object is available in API version 35.0 and later.

ExternalEventMapping

Holds native iOS or Android calendar event details for the Salesforce Today feature in the Salesforce mobile app. This object is available in API version 35.0 and later.

ExternalSocialAccount

Represents a managed social media account on a social network such as Facebook or Twitter. This object is available in API version 29.0 and later.

ExtKnowledgeConnector

Represents a connector to a third-party knowledge source for Unified Knowledge. This object is available in API version 60.0 and later.

ExtlClntAppOauthPlcyCnfg

For internal use only.

ExtlClntAppOauthSettings

For internal use only.

ExtlClntAppPlcyCnfg

For internal use only.

ExtlRecShrCnct

Represents authentication data to make outbound calls to and inbound calls from an external system to publish events for Partner Connect. This object is available in API version 62.0 and later.

ExtlRecShrCnctAccnt

Represents an association between an account and an external record share connection for Partner Connect. This object is available in API version 62.0 and later.

ExtlRecShrField

Represents an imported, exported, or updated external record share field for Partner Connect. This object is available in API version 63.0 and later.

ExtlRecShrFieldMap

Represents the external record share field mapping between the sender and receiver for Partner Connect. This object is available in API version 62.0 and later.

ExtlRecShrLead

Represents the Lead record of a vendor org if you're a partner. If you're a vendor for Partner Connect, this object represents a partner org. This object is available in API version 62.0 and later.

ExtlRecShrObject

Represents a shared object for Partner Connect. This object is available in API version 62.0 and later.

ExtlRecShrOpportunity

Represents the opportunity for Partner Connect in the vendor org if you're a partner and the partner org if you're the vendor. This object is available in API version 62.0 and later.

ExtlRecShrPcklstOptn

Represents a picklist option of an external record share picklist field shared between a partner and vendor for Partner Connect. This object is available in API version 62.0 and later.

ExtlRecShrPicklistMap

Represents the external record share picklist field mapping between the partner and vendor system for Partner Connect. This object is available in API version 62.0 and later.

ExtlRecShrRecordMap

Represents the lead or opportunity being mapped between a partner and vendor for Partner Connect. This object is available in API version 62.0 and later.

FeedAttachment

Represents an attachment to a feed item, such as a file attachment or a link. Use FeedAttachment to add various attachments to one feed item. This object is available in API version 36.0 and later.

FeedComment

Represents a comment added to a feed by a user. This object is available in API version 18.0 and later.

FeedItem

FeedItem represents an entry in the feed, such as changes in a record feed, including text posts, link posts, and content posts. This object is available in API version 21.0 and later. This object replaces FeedPost.

FeedLike

Indicates that a user has liked a feed item. This object is available in API version 21.0 and later.

FeedPollChoice

Shows the choices for a poll posted in the feed. This object is available in API version 29.0 and later.

FeedPollVote

Shows how users voted on a poll posted in the feed. This object is available in API version 29.0 and later.

FeedPost

FeedPost represents the following types of changes in a record feed, such as AccountFeed: text posts, link posts, and content posts. This object is available in API version 18.0 through 21.0. FeedPost is no longer available in later versions. Starting with API version 21.0, use FeedItem to represent text posts, link posts, and content posts in feeds.

FeedRevision

Holds the revision history of a specific feed item or comment, including a list of attributes that changed for each revision. This object is available in API version 34.0 and later.

feedSignal

Attach feed signals, like `UpDownVote`, `UserVerified`, and `Verified`, to a feed post or comment. This object is available in API version 41.0 and later.

FeedTrackedChange

Represents an individual field change or set of field changes. A FeedTrackedChange is a child object of a record feed, such as AccountFeed. This object is available in API version 18.0 and later.

FieldHistoryArchive

Represents field history values for all objects that retain field history. `FieldHistoryArchive` is a big object, available only to users with the "Retain Field History" permission. This object is available in API version 29.0 and later.

FieldChangeSnapshot

Use this virtual object to learn which opportunities' close dates changed during the specified time period. This object is available in API version 52.0 and later.

FieldPermissions

Represents the enabled field permissions for the parent PermissionSet. This object is available in API version 24.0 and later.

FieldSecurityClassification

Represents a field's data sensitivity value selected from the SecurityClassification picklist. This object is available in API version 46.0 and later.

FieldServiceMobileSettings

Represents a configuration of settings that control the Field Service iOS and Android mobile app experience. This object is available in API version 38.0 and later.

FieldServiceOrgSettings

Represents the org settings for Field Service, such as Appointment Assistant settings. If Field Service is enabled, the org contains one read-only record of this object. This object is available in API version 51.0 and later.

FileSearchActivity

Represents search activity on a file. This object is available in API version 38.0 and later.

FiscalYearSettings

Settings to define a custom or standard fiscal year for your organization. This object has a parent-child relationship with the Period object.

FldSvcObjChg

Represents a change made to one of a service appointment's tracked fields.  This object is available in API version 63.0 and later.

FldSvcObjChgDtl

Represents the details of a change made to one of a service appointment's tracked fields. This object is available in API version 63.0 and later.

FlexQueueItem

Represents an asynchronous Apex job in the Apex flex queue. Provides information about the job type and flex queue position of the AsyncApexJob. This object is available in API version 36.0 and later.

FlowDefinitionView

Represents the description of a flow definition. This object is available in API version 46.0 and later.

FlowInterview

Represents a flow interview. A *flow interview* is a running instance of a flow. This object is available in API version 32.0 and later.

FlowInterviewLog

Represents the logs of a screen flow interview. An *interview* is an instance of a running or previously run flow.This object is available in API version 49.0 and later.

FlowInterviewLogEntry

Represents the log of a specific element that's executed by a screen flow interview. An *interview* is an instance of a running or previously run flow. This object is available in API version 49.0 and later.

FlowInterviewLogOwnerSharingRule

Represents the rules for sharing a FlowInterviewLog with users other than the owner.This object is available in API version 49.0 and later.

FlowInterviewOwnerSharingRule

Represents the rules for sharing a FlowInterview with users other than the owner. This object is available in API version 33.0 and later.

FlowInterviewShare

Represents a sharing entry on a FlowInterview. This object is available in API version 33.0 and later.

FlowNavMetricEventLog

Flow Navigation Metric event logs contain metric data for flow interviews such as total execution time, number of interviews, and number of errors. This object is available in API version 61.0 and later.

FlowOrchestration

Represents the details of an orchestration definition. This object is available in API version 62.0 and later.

FlowOrchestrationInstance

Represents a run-time instance of an orchestration. This object is available in API version 53.0 and later.

FlowOrchestrationLog

Represents logging data for a FlowOrchestrationInstance. This object is available in API version 54.0 and later.

FlowOrchestrationStageInstance

Represents a run-time instance of a stage in a run-time instance of an orchestration. This read-only object is available in API version 53.0 and later.

FlowOrchestrationStepInstance

Represents a run-time instance of a step in a run-time instance of a stage of a run-time instance of an orchestration. This read-only object is available in API version 53.0 and later.

FlowOrchestrationVersion

Represents the version of an orchestration. This object is available in API version 62.0 and later.

FlowOrchestrationWorkItem

Represents a work item associated with a run-time instance of an interactive step in a run-time instance of an orchestration. This object is available in API version 54.0 and later.

FlowRecord

Represents the details of a flow. This object is available in API version 58.0 and later.

FlowRecordElement

Represents a single element within a flow version. This object is available in API version 58.0 and later.

FlowRecordElementOccurrence

Represents the execution metrics for a single element within a flow version. This object is available in API version 62.0 and later.

FlowRecordRelation

Represents a relationship between a record and a flow interview. When a flow interview is paused, Salesforce uses the $Flow.CurrentRecord global variable in the flow to associate the interview with a record. Available in API version 42.0 and later.

FlowRecordVersion

Represents the version of a flow. This object is available in API version 58.0 and later.

FlowRecordVersionOccurrence

Represents an instance of a recurring flow that runs on a schedule. For example, a flow that runs weekly on Wednesdays creates an occurrence each time it runs. This object is available in API version 60.0 and later.

FlowTestResult

Represents the results for a flow test associated with a flow version. This object is available in API version 55.0 and later.

FlowTestView

Represents the description of a flow test associated with a flow definition. This object is available in API version 55.0 and later.

FlowStageRelation

Represents a relationship between a paused flow interview and its stages. When a flow interview is paused, Salesforce creates a FlowStageRelation record for each stage that's set to the `$Flow.CurrentStage` or `$Flow.ActiveStages` global variable. Available in API version 43.0 and later.

FlowVariableView

Represents a variable within the flow version. This object is available in API version 46.0 and later.

FlowVersionView

Represents the version of a flow definition. This object is available in API version 46.0 and later.

Folder

Represents a repository for a Dashboard, Document, EmailTemplate, Macro, QuickText, or Report. Only one type of item can be contained in a folder.

FolderedContentDocument

Represents the relationship between a parent and child ContentFolderItem in a ContentWorkspace.

ForecastingAdjustment

This object represents an individual forecast manager's adjustment for a subordinate's or child territory's forecast via a ForecastingItem. Available in API versions 26.0 and later. This object is different from the ForecastingOwnerAdjustment object, which represents forecast users' adjustments of their *own* forecasts, including territory forecasts they own.

ForecastingColumnDefinition

Represents a custom calculated column or a custom reference data column in a forecast type. This object is available in API version 56.0 and later.

ForecastingColumnDefinitionLocalization

Represents the translated value of a custom calculated column or custom reference data column label when the Translation Workbench is enabled for your organization. This object is available in API version 56.0 and later.

ForecastingCustomCategory

Represents a custom forecasting category used for forecast rollups. This object is available in API version 62.0 and later.

ForecastingCustomData

Represents forecast data from external sources to display in the forecasts page. For example, risk or last year's revenue. This object is available in API version 58.0 and later.

ForecastingDisplayedFamily

Represents the table in Forecasts Settings where an admin selects the product families that users can forecast on in Lightning Experience. This object is available in API version 40.0 and later.

ForecastingFact

This object is read-only and links a ForecastingItem with its opportunities, such as opportunities that share the same owner or forecast category and have a closing date within the period of the forecasting item. Available in API versions 26 and greater.

ForecastingFilter

Represents the custom filter for including or excluding data from opportunity forecasts. This object is available in API version 54.0 and later.

ForecastingFilterCondition

Represents the custom filter condition logic for including or excluding data from opportunity forecasts. This object is available in API version 54.0 and later.

ForecastingGroup

Represents groups used to roll up forecast totals on the forecasts page. For example, group forecasts by industry or sales type. This object is available in API version 60.0 and later.

ForecastingGroupItem

Represents the value within the picklist that is specified as the forecasting group for a forecast type. For example, if you have a forecasting group that identifies the industry an opportunity is part of, this object represents the value in the the industry picklist that's chosen to be part of the group. This object is available in API version 60.0 and later.

ForecastingItem

This object is read-only used for individual forecast amounts. Users see amounts based on their perspectives and forecast roles. The amounts users see include one of these values when forecasting in revenue: `AmountWithoutAdjustments`, `AmountWithoutManagerAdjustment`, `ForecastAmount`, `OwnerOnlyAmount`. The amounts users see include one of these values when forecasting in quantity: `QuantityWithoutAdjustments`, `QuantityWithoutManagerAdjustment`, `ForecastQuantity`, `OwnerOnlyQuantity`. Available in API version 26.0 and later.

ForecastingOwnerAdjustment

This object represents an individual forecast user's adjustment of their *own* forecast, including territory forecasts they own, via a ForecastingItem. Available in API versions 33.0 and later. This object is different from the ForecastingAdjustment object, which represents managers' adjustments of *subordinates'* and child territories' forecasts.

ForecastingQuota

This object represents an individual user's or territory's quota for a specified time period. The Managed Quotas user permission is required for creating, updating, or deleting quotas. (Users can only edit their subordinates' or child territories' quotas, not their own.) The View All Forecasts permission is required to view any user's forecast, regardless of the forecast hierarchy. Available in API versions 25.0 and later. Forecast managers can view the forecasts of subordinates and territories below them in the forecast hierarchy.

ForecastingShare

Represents forecasts shared between a forecast manager and a user. Available in API version 44.0 and later.

ForecastingSourceDefinition

Represents the object, measure, date type, and hierarchy that a forecast uses to project sales. This object is available in API version 52.0 and later.

ForecastingSrcRecJudgment

Represents forecast managers' judgment of whether they consider an opportunity-related deal to be certain to close. This object is available in API version 59.0 and later.

ForecastingSubmission

Represents a submitted forecast. This object is available in API version 62.0 and later.

ForecastingSubmissionItem

Represents the values for each forecast category in a submitted forecast. This object is available in API version 62.0 and later.

ForecastingType

Used to identify the forecast type associated with `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingQuota`, `ForecastingFact`, and `ForecastingItem` objects. Available in API version 30.0 and greater.

ForecastingTypeSource

Maps a forecasting source definition to a forecast type. This object is available in API version 52.0 and later.

ForecastingUserPreference

Represents the forecasting selections that a user has made, such as display options, date range, forecasting type, and currency.

FormulaFunction

Represents a function used when building a formula, including examples and uses. This object is available in API version 47.0 and later.

FormulaFunctionAllowedType

Represents the functions that are supported in the given formula context. This object is available in API version 48.0 and later.

FormulaFunctionCategory

Represents the category to which a formula belongs when building a formula. This object is available in API version 47.0 and later.

FrcstCustmCatgRampRateSrc

Represents the total contract value used for custom bulk adjustments. This object is available in API version 63.0 and later.

FrcstCustmzAdjustment

Represents an individual forecast manager's adjustment of a subordinate's consumption forecast. Available in API version 63.0 and later. This object is different from the ForecastingAdjustment object, which represents managers' adjustments of subordinates' pipeline forecasts.

FrcstCustmzOwnerAdjustment

Represents an individual forecast user's adjustment of their own consumption forecast. Available in API version 63.0 and later. This object is different from the ForecastingOwnerAdjustment object, which represents users' adjustments of their pipeline forecasts.

FulfillmentOrder

Represents a group of products, fees, and delivery charges on a single order that share the same fulfillment location, delivery method, and recipient. The FulfillmentOrderLineItems belonging to a FulfillmentOrder are associated with OrderItemSummary objects belonging to a single OrderSummary. This object is available in API version 48.0 and later.

FulfillmentOrderItemAdjustment

Represents a price adjustment on a FulfillmentOrderLineItem. Corresponds to an OrderItemAdjustmentLineSummary associated with the corresponding OrderItemSummary. This object is available in API version 48.0 and later.

FulfillmentOrderItemTax

Represents the tax on a FulfillmentOrderLineItem or FulfillmentOrderItemAdjustment. Corresponds to an OrderItemTaxLineItemSummary. This object is available in API version 48.0 and later.

FulfillmentOrderLineItem

Represents a product or delivery charge belonging to a FulfillmentOrder. Corresponds to an OrderItemSummary. This object is available in API version 48.0 and later.

FunctionConnection

Represents a connection between an org and Salesforce Functions. This object is available in API version 52.0 and later.

FunctionInvocationRequest

Represents invocation information for a Salesforce Function. This object is available in API version 51.0 and later.

FunctionReference

Represents a deployed Salesforce Function associated with an org. This object is available in API version 52.0 and later.

GenAIConversationSummary

Represents a generated summary of a voice or video call. This object is available in API version 60.0 and later.

GenAiFunctionDefinition

Represents an agent action. This object is available in API version 60.0 and later.

GenAiPlannerDefinition

Represents an agent planner service that uses a large language model (LLM) and a reasoning strategy to decompose a given task into smaller subtasks, identify the most suitable actions for each subtask, and invoke them. This object is available in API version 60.0 and later.

GenAiPlannerFunctionDef

Represents a relationship between the agent planner service and agent actions. This object is available in API version 60.0 and later.

GenAiPluginDefinition

Represents an agent topic, which is a category of actions related to a particular job to be done by AI agents. This object is available in API version 62.0 and later.

GeoCountry

Represents a country. This object is available in API version 56.0 and later.

GeolocationBasedAction

Represents a geolocation-based action, which is an action that's triggered when a user enters, exits, or is within the area of the associated object. Available in API version 61.0 and later.

GeoState

Represents a state. This object is available in API version 57.0 and later.

GtwyProvPaymentMethodType

The gateway provider payment method type allows integrators and payment providers to choose an active payment to receive an order's payment data rather than allowing the Salesforce Order Management platform to select a default payment method. This object is available in API version 50.0 and later.

Goal

The Goal object represents the components of a goal such as its name, description, and status.

GoalLink

Represents the relationship between two goals. This is a many-to-many relationship, meaning that each goal can link to many other goals.

GoogleDoc

Represents a link to a Google Document. This object is available in API version 14.0 and later.

Group

A set of User records.

GroupMember

Represents a User or Group that is a member of a public group.

GroupMembershipEventLog

Group Membership events capture details about changes to public group and queue membership, such as when members are added to or removed from the public group or queue. This object is available in API version 64.0 and later.

GuestBuyerProfile

Represents a store's guest buyer profile, which allows unauthenticated buyers to browse the store. This object is available in API version 51.0 and later.

HashtagDefinition

HashtagDefinition represents hashtag (#) topics in public Chatter posts and comments. Public posts and comments include those on profiles and in public groups, but not those on records or in private groups. This object is available in API version 26.0 and later.

HealthCareDiagnosis

Represents information related to industry-standard healthcare diagnosis codes. Before the Spring '21 release, the Healthcare Procedure and Healthcare Diagnosis objects stored codes specifically related to procedures and diagnoses. These codes were used for prior-authorization requests and approval processes. Since the Spring'21 release, Health Cloud uses the Code Set and Code Set Bundle objects for this purpose instead.

HealthCareProcedure

Represents information related to industry-standard healthcare procedure codes. Before the Spring '21 release, the Healthcare Procedure and Healthcare Diagnosis objects stored codes specifically related to procedures and diagnoses. These codes were used for prior-authorization requests and approval processes. Since the Spring'21 release, Health Cloud uses the Code Set and Code Set Bundle objects for this purpose instead.

### Holiday

Represents a period of time during which your customer support team is unavailable. Business hours and escalation rules associated with business hours are suspended during any holidays with which they are affiliated.

### IconDefinition

Represents the icon-related metadata for a custom tab. This object is available in API version 43.0 and later.

### Idea

Represents an idea on which users are allowed to comment and vote, for example, a suggestion for an enhancement to an existing product or process. This object is available in API version 12 and later.

### IdeaComment

Represents a comment that a user has submitted in response to an idea.

### IdeaReputation

Represents a collection of statistics and scores derived from a user's activity within an Ideas zone or internal organization. This object is available in API version 28.0 and later.

### IdeaReputationLevel

Represents a reputation level within an Ideas zone or internal organization and is used by the system to calculate reputation. You can create up to 25 levels per zone or internal organization. This object is available in API version 28.0 and later.

### IdeaTheme

Represents an invitation to zone members to submit ideas that are focused on a specific topic. This object is available in API version 26 and later.

### IdpEventLog

Represents the Identity Provider Event Log. This log records both problems and successes with inbound SAML or OpenID Connect authentication requests from another app provider. It also records outbound SAML responses when Salesforce is acting as an identity provider. This object is available in API version 39.0 and later.

### IframeWhiteListUrl

Represents a list of trusted external domains that you allow to frame your Embedded Service, Surveys, and Visualforce pages. This object is available in API version 45.0 and later.

### Image

Represents the details of an image. This object is available in API version 47.0 and later.

### Incident

An Incident is any unplanned business interruption that has wide-sweeping impacts and requires an urgent fix. This object contains the details of the incident, documenting the history of the incident from registration to closure. This object is available in API version 53.0 and later.

### IncidentRelatedItem

Represents a junction object that relates an Incident to an Asset or Product. This object is available in API version 53.0 and later.

### Individual

Represents a customer's data privacy and protection preferences. Data privacy records based on the Individual object store your customers' preferences. Data privacy records are associated with related leads, contacts, person accounts, and users. This object is available in API version 42.0 and later.

### IndividualApplicationItem

Captures individual application input data that is used during run-time. This object is available in API version 58.0 and later.

### IndividualHistory

Represents the history of changes to values in the fields of a data privacy record, based on the Individual object. This object is available in versions 42.0 and later.

### IndividualShare

Represents a list of access levels to a data privacy record along with an explanation of the access level. For example, if you have access to a record because you own it, the `IndividualAccessLevel` is `All` and `RowCause` is Owner. This object is available in API version 42.0 and later.

### InsufficientAccessEventLog

Insufficient Access event logs contain details about errors relating to insufficient record access This object is available in API version 61.0 and later.

### InternalOrganizationUnit

Represents an organization that an Employee belongs to. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts.

### InventoryItemReservation

Used to store inventory item reservation information for a specific product and location. This object is available in API version 60.0 and later.

### InventoryReservation

Stores information about the status of cart inventory reservations in B2B and D2C Commerce. This object is available in API version 60.0 and later.

### InvocableActionEventLog

Invocable Action events capture the calls to Salesforce Invocable Actions.This is particularly useful to monitor actions invoked during Agentforce flows. This object is available in API version 64.0 and later.

### Invoice

Represents a financial document describing the total amount a buyer must pay for goods or services provided. This object is available in API version 48.0 and later.

### InvoiceAddressGroup

Stores the buyer's address information. This object is available in API version 50.0 and later.

### InvoiceBatchRun

Represents a batch processing job in Subscription Management or Billing (Revenue Cloud). During an invoice batch run, all billing schedules that meet the specified criteria are processed, resulting in the generation of invoices. This object is available in API version 55.0 and later.

### InvoiceBatchRunCriteria

Represents a batch processing job and its required criteria in Subscription Management. During an invoice batch run, all billing schedules that meet the specified criteria are processed, resulting in the generation of invoices. This object is available in API version 55.0 and later.

### InvoiceBatchRunRecovery

Provides information about an invoice batch run recovery procedure. This object is available in API version 57.0 and later.

### InvoiceDocument

Tracks and displays the status of documents generated for invoices. Invoice documents are available in the related lists of invoice entity records. This object is available in API version 61.0 and later.

### InvoiceLine

Represents the amount that a buyer must pay for a product, service, or fee. Invoice lines are created based on the amount of an order line. This object is available in API version 48.0 and later.

### JobProfile

Represents a job profile used for shift scheduling. This object is available in API versions 47.0 and later.

JobProfileQueueGroup

JobProfileQueueGroup defines the mapping between Queue and JobProfile and configurations for capacity plans in Workforce Engagement. This object is available in API version 53.0 and later.

Knowledge__Feed

Represents the feed for a knowledge article. This object is available in API version 39.0 and later.

Knowledge__ka

Provides access to the concrete object that represents a Knowledge article, the parent object for article versions. This object is available in API version 39.0 and later.

Knowledge__kav

Provides access to the concrete object that represents a Knowledge article version. This object is available in API version 39.0 and later.

Knowledge__DataCategorySelection

Represents a data category that classifies an article. This object is available in API version 39.0 and later.

KnowledgeableUser

Represents a user identified as knowledgeable about a specific topic, and ranks them relative to other knowledgeable users. This object is available in API version 31.0 and later.

KnowledgeArticle

Provides read-only access to an article and the ability to delete the primary article. This object is available in API version 19.0 and later.

KnowledgeArticleEventLog

Knowledge Article View event logs contain user activity with your knowledge base. This object is available in API version 61.0 and later.

KnowledgeArticleFeedback

Represents information about feedback from users on Knowledge articles and details about assignment of feedback to the article owner or team to take action. This object is available in API version 64.0 and later.

KnowledgeArticleVersion

Provides a global view of standard article fields across all types of articles depending on their version. This object is available in API version 18.0 and later.

KnowledgeArticleVersionHistory

Enables read-only access to the full history of an article. This object is available in API version 25.0 and later.

KnowledgeArticleViewStat

Provides certain statistics related to the number of views for the specified article across all article types. The view count statistics are for published and archived articles only. View counts for draft articles aren't tracked. This object is read-only and available in API version 20.0 and later.

KnowledgeArticleVoteStat

Provides the weighted rating for the specified article on a scale of 1 to 5 across all article types. This object is read-only and available in API version 20.0 and later.

LandingPage

Represents an Account Engagement landing page. A landing page is a web page that a visitor reaches after clicking a link or advertisement. Landing pages can be created in Account Engagement and synced to Salesforce or created on the Landing Page object in Account Engagement Lightning App. This object is available in API version 42.0 and later.

Lead

Represents a prospect or lead.

LeadCleanInfo

Stores the metadata Data.com Clean uses to determine a lead record's clean status. Helps you automate the cleaning or related processing of lead records.

LeadDailyMetric

Represents the daily engagement metrics for a lead. This object is available in API version 52.0 and later.

LeadMonthlyMetric

Represents the monthly engagement metrics for a lead. This object is available in API version 52.0 and later.

LeadOwnerSharingRule

Represents the rules for sharing a lead with users other than the owner.

LeadShare

Represents a sharing entry on a Lead.

LeadStatus

Represents the status of a Lead record, such as Open, Qualified, or Converted.

LeadTag

Associates a word or short phrase with a Lead.

LearningContent

Represents a Trailhead or enablement site (myTrailhead) module assigned to a user in Workforce Engagement or Learning Paths. This object also represents a Trailhead module or video in an Enablement program exercise. This object is available in API version 54.0 and later.

LearningItem

Represents an item that requires users to take action, including a Learning Paths entry, an Enablement program, or an exercise with linked content in an Enablement program. For Learning Paths, users are assigned a learning item to complete. For Enablement programs and exercises, users are assigned a program or can self-enroll in shared programs. This object is available in API version 58.0 and later.

LearningItemAssignment

Represents the assignment of a Learning Paths entry to users or groups or the enrollment of an Enablement program for a specific user. This object is available in API version 58.0 and later.

LearningItemProgress

Represents the progress that a user has made towards completing an assigned learning item, such as a Learning Paths entry or Enablement program. This object is available in API version 60.0 and later.

LearningItemSubmission

Represents a link to a resource, such as a video recording, that a user submits as part of a Feedback Request exercise in an Enablement program. For peer and manager feedback, this resource can be a recording of a user's sales patch. For Einstein Coach feedback, this resource can be a video call, and Einstein generates feedback from the call's transcription. This object is available in API version 59.0 and later, but Einstein Coach is available only in API version 61.0 and later.

LearningItemType

Represents a custom exercise type that an Enablement user takes in an Enablement program in the Guidance Center. A custom exercise type also requires a corresponding LearningItem record for the Guidance Center and corresponding EnblProgramTaskDefinition and EnblProgramTaskSubCategory records for when admins create a program in Program Builder. This object is available in API version 62.0 and later.

LearningPractice

Represents a Feedback Request exercise in an Enablement program. Users can submit a sample of their work and request feedback from their peers and managers. Or, users can submit a video call and Einstein Coach generates feedback from the call's transcription. This object is available in API version 59.0 and later, but Einstein Coach feedback is available only in API version 61.0 and later.

LegalEntity

Represents the way an organization is structured. An organization can be a single legal entity or it can comprise more than one legal entity. This object is available in API version 48.0 and later.

LicenseDefinitionCustomPermission (Developer Preview)

Represents a licensed custom permission that controls access to a license's features when included in a custom permission set license definition. This object is available in API version 54.0 and later.

LightningErrorEventLog

Lightning Error events represent errors that occurred during user interactions with Lightning Experience and the Salesforce mobile app. This object is available in API version 64.0 and later.

LightningExperienceTheme

Represents information for a theme in Lightning Experience. This object is available in API Version 42.0 and later.

LightningLoggerEventLog

Lightning Logger Event Log provides information from observed Lightning component logs. This object is available in API version 61.0 and later.

LightningOnboardingConfig

Represents the feedback provided when users switch from Lightning Experience to Salesforce Classic. Admins can customize the question, how frequently the form appears, and where the feedback is stored in Chatter from the Adoption Assistance page in Lightning Experience Setup. Available in API version 47.0 and later.

LightningPageViewEventLog

Lightning Page View event logs represent information about the page on which the event occurred in Lightning Experience and the Salesforce mobile app. A Lightning Page View event log tracks the page a user visited, how long the user spent on the page, and the load time for the page. This object is available in API version 61.0 and later.

LightningPrfmEventLog

Lightning Performance events track trends in Lightning Experience and Salesforce mobile app performance. This object is available in API version 65.0 and later.

LightningToggleMetrics

Represents users who switched from Lightning Experience back to Salesforce Classic. This object is available in API version 43.0 and later.

LightningUsageByAppTypeMetrics

Represents number of users on Lightning Experience and Salesforce Mobile. This object is available in API version 43.0 and later.

LightningUsageByBrowserMetrics

Represents Lightning Experience usage grouped by user's browser. This object is available in API version 43.0 and later.

LightningUsageByPageMetrics

Represents standard pages users viewed most frequently in Lightning Experience. This object is available in API version 43.0 and later.

LightningUsageByFlexiPageMetrics

Represents custom pages users viewed most frequently in Lightning Experience. This object is available in API version 43.0 and later.

LightningExitByPageMetrics

Represents frequency metrics about the standard pages within which users switched from Lightning Experience to Salesforce Classic. This object is available in API version 44.0 and later.

LinkedArticle

Represents a knowledge article that is attached to a work order, work order line item, or work type. This object is available in API version 37.0 and later.

LinkedArticleFeed

Represents the comment feed on a linked article. This object is available in API version 39.0 and later.

LinkedArticleHistory

Represents the history of changes made to tracked fields on a linked article. This object is available in API version 37.0 and later.

ListEmail

Represents a list email sent from Salesforce, or sent from Account Engagement and synced to Salesforce. When the list email is sent, the recipients are generated by combining recipients in ListEmailIndividualRecipients and ListEmailRecipientSource. Duplicate and other invalid recipients are removed. The result is the recipients sent any given list email. ListEmail has a one-to-many relationship with ListEmailRecipientSource and ListEmailIndividualRecipient. This object is available in API version 41.0 and later.

ListEmailIndividualRecipient

For a list email in Salesforce, represents a recipient. Each record represents a link from a list email to exactly one recipient for that list email. Recipients can be contacts, leads, or campaign members. Has a one-to-many relationship with ListEmail. This object is available in API version 44.0 and later.

ListEmailMonthlyMetric

Represents the monthly engagement metrics for a single list email. This object is available in API version 49.0 and later.

ListEmailRecipientSource

For a list email in Salesforce, represents the dynamically defined sources of recipient email addresses. Each record represents a link to a single list view or campaign that is examined when the list email is sent. Has a one-to-many relationship with ListEmail. This object is available in API version 41.0 and later.

ListView

Represents a list view. A list view shows a set of records for an object, based on specific criteria. This object is available in API version 32.0 and later.

ListViewChart

Represents a graphical chart that's displayed on Salesforce for Android, iOS, and mobile web list views. The chart aggregates data that is filtered based on the list view that's currently displayed. This object is available in API version 33.0 and later and is accessible by portal users.

ListViewChartInstance

Retrieves metadata for all standard and custom charts for a given entity in context of a given list view. This object is available in API versions 34.0 and later.

LiveAgentSession

This object is automatically created for each Chat session and stores information about the session. This object is available in API versions 28.0 and later.

LiveAgentSessionHistory

This object is automatically created for each Chat session and stores information about changes made to the session. This object is available in API versions 28.0 and later.

LiveAgentSessionShare

This object is automatically created for each Chat session and stores information about the session. This object is available in API versions 28.0 and later.

LiveChatBlockingRule

Represents a rule for blocking chat visitors' IP addresses from starting new chats with agents. This object is available in API version 34.0 and later.

LiveChatObjectAccessConfig

Represents the action you can perform on a specified object by the Chat API. This object is available in API version 53.0 and later.

LiveChatObjectAccessDefinition

Represents the parent record for one or more LiveChatObjectAccessConfig objects. This object is available in API version 53.0 and later.

LiveChatButton

Represents a button that allows visitors to request chats with Chat users. This object is available in API version 24.0 and later.

LiveChatButtonDeployment

Associates an automated chat invitation with a specific deployment. This object is available in API versions 28.0 and later.

LiveChatButtonSkill

Represents all the skills available to a LiveChatButton except the one currently assigned. To retrieve the skill currently assigned, query LiveChatButton. This object is available in API version 25.0 and later.

LiveChatDeployment

Represents the general settings for deploying Live Agent on a website. This object is available in API version 24.0 and later.

LiveChatSensitiveDataRule

Represents a rule for masking or deleting data of a specified pattern. Written as a regular expression (regex). This object is available in API version 35.0 and later.

LiveChatTranscript

This object is automatically created for each Live Agent chat session and stores information about the session. This object is available in API version 24.0 and later.

LiveChatTranscriptEvent

Captures specific events that occur over the lifetime of a chat. This object is available in API version 24.0 and later.

LiveChatTranscriptShare

Represents a sharing entry on a LiveChatTranscript object. This object is available in API version 24.0 and later.

LiveChatTranscriptSkill

Represents a join between LiveChatTranscript and Skill. This object is available in API version 25.0 and later.

LiveChatUserConfig

Represents a setting that controls the console settings for Chat users. This object is available in API version 24.0 and later.

LiveChatUserConfigProfile

Represents a join between LiveChatUserConfig and Profile. This object is available in API version 24.0 and later.

LiveChatUserConfigUser

Represents a join between Live Chat User Config and User. This object is available in API version 24.0 and later.

LiveChatVisitor

Represents a website visitor who has started or tried to start a chat session. This object is available in API version 24.0 and later.

Location

Represents a warehouse, service vehicle, work site, or other element of the region where your team performs field service work. In API version 49.0 and later, you can associate activities with specific locations. Activities, such as the tasks and events related to a location, appear in the activities timeline when you view the location detail page. Also in API version 49.0 and later, Work.com users can view Employees as a related list on Location records. In API version 51.0 and later, this object is available for Omnichannel Inventory and represents physical locations where inventory is available for fulfilling orders.

LocationGroup

Represents a group of Omnichannel Inventory locations, providing an aggregate view of inventory availability across those locations. Omnichannel Inventory can create an inventory reservation for an order at the location group level, then assign the reservation to one or more locations in the group as needed. This object is available in API version 51.0 and later.

LocationGroupAssignment

Represents the assignment of a location to a location group. This object is available in API version 51.0 and later.

LocationShippingCarrierMethod

The available shipping carrier services associated with a location or location group. Allows the assignment of different shipping methods to a specific location and enables flexibility and customization in the shipping process. This object is available in API version 61.0 and later.

LocationTrustMeasure

Represents the COVID safety protocols that your business follows. For example, enforcement of masks, social distancing, cleanliness, and capacity limits. This object is available in API version 50.0 and later.

LocWaitlistMsgTemplate

Represents a junction object connecting LocationWaitlist to MessagingTemplate. This object is available in API version 50.0 and later.

LocationWaitlist

Represents a queue created for a specific location. Multiple queues can be created for a single location. For example, you can have a queue for each sales agent or a standard queue and a queue for vulnerable groups. The specific party of people in a queue is represented by LocationWaitlistedParty. This object is available in API version 50.0 and later.

LocationWaitlistedParty

Represents a specific party of people waiting in a queue. This object is available in API version 50.0 and later.

LoginAsEventLog

LoginAsEventLog contains details about when a user logs in as another user in your org. This object is available in API version 61.0 and later.

LoginEvent

The documentation has moved to LoginEvent in the *Platform Events Developer Guide*.

LoginEventLog

Login event logs contain details about your Salesforce org's user login history. This object is available in API version 61.0 and later.

LoginGeo

Represents the geographic location of the user's IP address for a login event. Due to the nature of geolocation technology, the accuracy of geolocation fields (for example, country, city, postal code) may vary. This object is available in API version 34.0 and later.

LoginHistory

Represents the login history for all successful and failed login attempts for organizations and enabled portals. This object is available in API version 21.0 and later.

LoginIp

Represents a validated IP address. This object is available in version 28.0 and later.

LogoutEventLog

Contains details of user sessions ending or being revoked. This object is available in API version 65.0 and later.

LogoutEventStream

The documentation has moved to LogoutEventStream in the *Platform Events Developer Guide*.

LookedUpFromActivity

This read-only object is displayed as a related list on an activity record (an event or a task); the list contains records that have custom lookup relationships from the activity to another object. This object is not queryable.

Macro

Represents a macro, which is a set of instructions that tells the system to perform one or more tasks. This object is available in API version 32.0 and later.

MacroInstruction

Represents an instruction in a macro. An instruction can specify the object that the macro interacts with, the context or publisher that the macro works within, the operation or action that the macro performs, and the target of the macro's actions.

MacroUsage

Represents macro usage on a record, including which macro was used, who used it, and how they used it. This object is available in API version 47.0 and later.

MailmergeTemplate

Represents a mail merge template (a Microsoft Word document) used for performing mail merges for your organization.

MaintenanceAsset

Represents an asset covered by a maintenance plan in field service. Assets can be associated with multiple maintenance plans.

MaintenancePlan

Represents a preventive maintenance schedule for one or more assets in field service.

MaintenanceWorkRule

Represents the recurrence pattern for a maintenance record. This object is available in API version 49.0 and later.

ManagedContent

Represents managed content in a Salesforce CMS workspace for use in an Experience Cloud site or a channel. The ManagedContent object represents the complete instance of a managed content record. It provides a consistent identifier for the managed content so that variants of the content item can be created over time. This object is available in API version 56.0 and later.

ManagedContentChannel

Represents the details of a CMS channel. CMS channels correspond to managed content publishing endpoints. They deliver published content from your Salesforce CMS workspaces to an audience. This object is available in API version 55.0 and later.

ManagedContentInfo

Allows the creation of relationship to Product using ProductMedia. This object is available in API version 49.0 to 57.0. In API version 58.0 and later, use the ManagedContent object.

ManagedContentSpace

Represents the complete instance of a Salesforce CMS workspace that stores managed content. Users and groups with designated permissions can access and manage the content in a CMS workspace. This object is available in API version 56.0 and later.

ManagedContentVariant

Represents a variant of a managed content item. This object is available in API version 56.0 and later.

MarketingForm

Represents an Account Engagement marketing form that has been synched to Salesforce. Use forms on your website and landing pages to collect information about visitors and turn anonymous visitors into identified prospects. This object is available in API version 42.0 and later.

MarketingLink

Represents an Account Engagement marketing link record, either a custom redirect or a file, that has been synced to Salesforce. This object is available in API version 42.0 and later.

MatchingRule

Represents a matching rule that is used to identify duplicate records. This object is available in API version 33.0 and later.

MatchingRuleItem

Represents criteria used by a matching rule to identify duplicate records. This object is available in API version 33.0 and later.

MerchAccPaymentMethodSet

Defines an ordered list of payment methods that are available to a merchant's cudstomer during checkout. You can configure multiple payment method sets, each designated for a specific locale, payment region, or sale channel. This object is available in API version 58.0 and later.

MerchAccPaymentMethodType

Refers to a payment method that is in a payment method set, which is defined by the `MerchAccPaymentMethodSet` object. This object is available in API version 58.0 and later.

MerchantAccount

A type of bank account that lets a merchant accept payments from a variety of payment methods, including credit or debit cards, or digital wallets. A Salesforce Payments merchant account is linked to an underlying payment gateway to process payments This object is available in API version 56.0 and later.

MerchantAccountEvent

Represents a merchant account platform event. Subscribe to these events so you can listen and respond to them when they're published. For example, create a Salesforce Flow that is triggered when one of these events is published. This object is available in API version 59.0 and later.

MessagingChannel

Represents a communication channel that an end user can use to send a message to an agent. A communication channel can be an SMS number, a Facebook page, or another supported messaging channel. This object is available in API version 40.0 and later.

MessagingChannelSkill

Junction object that represents an association between MessagingChannel and Skill. This object is available in API version 45.0 and later.

MessagingChannelUsage

Represents the status of an enhanced Messaging channel or of an application in a Unified Messaging channel. This object is available in API version 60.0 and later.

MessagingConfiguration

Represents the details for a Messaging configuration. This object is available in API version 47.0 and later.

MessagingDeliveryError

Represents a log of triggered outbound failures to verify when a triggered outbound has failed. This object is available in API version 44.0 and later.

MessagingEndUser

Represents a single address—such as a phone number or Facebook page—communicating with a single Messaging channel. This object is available in API version 40.0 and later.

MessagingLink

Represents the link between a Messaging Channel and where it's shared. This object is available in API version 47.0 and later.

MessagingSession

Represents a session on a Messaging channel. This object is available in API version 47.0 and later.

MessagingSessionMetrics

Represents a metric gathered about a specific enhanced messaging session, such as average agent response time. This object is available starting in October 2024 in API version 62.0 and later.

MessagingTemplate

Represents a Messaging template used to send pre-formatted messages. This object is available in API version 47.0 and later.

MetadataApiOpEventLog

MetadataApiOpEventLog stores details of Metadata API retrieval and deployment requests. This object is available in API version 62.0 and later.

MetadataPackage

Represents a package that has been developed in the org you're logged in to. Applies to unlocked, unmanaged, first-generation, and second-generation managed packages.

MetadataPackageVersion

Represents a package version (managed or unmanaged) that has been uploaded from the org you're logged in to.

Metric

The Metric object represents the components of a goal metric such as its name, metric type, and current value.

MetricDataLink

The link between the metric and the data source, such as a report.

MigratedEmail

For internal use only.

MilestoneType

Represents a milestone (required step in a customer support process). This object is available in API version 18.0 and later.

MktJourneyDcsnSetup

Represents a collection of Marketing Cloud Engagement journeys that you can interact with by using Salesforce Flow in Marketing Cloud. This object is available in API version 65.0 and later.

MLField

Represents a single field in a data definition. This object is available in API version 50.0 and later.

MlIntentUtteranceSuggestion

Represents a customer input, used for training purposes in the feedback loop process of a conversation. Admins can add these inputs to the intent training model. This object is available in API version 51.0 and later.

MLPredictionDefinition

Represents a prediction definition that specifies details about the prediction. This object is available in API version 50.0 and later.

MLModel

Represents an AI model that can be used in Einstein Prediction Builder, Einstein Recommendation Builder, and other Einstein features. This object is available in API version 53.0 and later.

MLModelFactor

Represents a field value that has a positive or negative effect on the model's score. This object is available in API version 53.0 and later.

MLModelFactorComponent

Represents information about the related MLModelFactor. For example, this object can represent a field value or a field range such as "Title = CEO" or "Annual Revenue >10000000". This object is available in API version 53.0 and later.

MLModelMetric

Represents a metric or statistic about the related model, such as accuracy, precision, or RSquared. Use a model's metrics to learn about its performance and to compare it with other models. This object is available in API version 53.0 and later.

MLRecommendationDefinition

For internal use only.

MobileDeviceAppRegistration

Represents the details provided in a mobile device registration event from an app that uses the Engagement Mobile SDK. This object is available in API version 65.0 and later.

MobileSecurityAssignment

Represents the assignment of mobile security policies to a profile. The policies apply to the Salesforce mobile app with Enhanced Mobile App Security enabled. This object is available in API version 54.0 and later.

MobileSecurityPolicy

Enables mobile security policies on the Salesforce mobile app with Enhanced Mobile Security. This object is available in API version 50.0 and later.

MobileSecurityUserMetric

Represents the metrics for users who have Enhanced Mobile Security policies enforced. This object is available in API version 51.0 and later.

MobileSettingsAssignment

Represents the assignment of a particular field service mobile settings configuration to a user profile. This object is available in API version 41.0 and later.

MobSecurityCertPinConfig

Configuration of mobile security certificate pinning on the Salesforce mobile app with Enhanced Mobile Security. This object is available in API version 53.0 and later.

MobSecurityCertPinEvent

The event of mobile security certificate pinning on the Salesforce mobile app with Enhanced Mobile Security. This object is available in API version 53.0 and later.

MsgChannelLanguageKeyword

Represents the consent configuration for a Messaging channel. This object is available in API version 48.0 and later.

MsgChannelUsageExternalOrg

Represents the Enterprise ID (EID) and Business Unit (MID) for Marketing Cloud connections in a Unified Messaging channel. This object is available in API version 60.0 and later.

MyDomainDiscoverableLogin

Represents configuration settings when the My Domain login page type is Discovery. Login Discovery provides an identity-first login experience, where the login page contains the identifier field only. Based on the identifier entered, a handler determines how to authenticate the user. This object is available in API version 45.0 and later.

MutingPermissionSet

Represents a set of disabled permissions and is used in conjunction with PermissionSetGroup. This object is available in API version 46.0 and later.

Name

Non-queryable object that provides information about foreign key traversals when the foreign key has more than one parent.

### NamedCredential

Represents a named credential, which specifies the URL of a callout endpoint and its required authentication parameters in one definition. A named credential can be specified as an endpoint to simplify the setup of authenticated callouts. This object is available in API version 33.0 and later.

### NamedCredentialEventLog

The Named Credential event type captures information about Apex callouts that use named credentials as their endpoints. Use this event type to audit the installed managed packages that use named credentials. If you don't recognize the package namespace in the named credential event log file, then you can investigate whether a security breach has occurred. This object is available in API version 65.0 and later.

### NamespaceRegistry

Represents a namespace that you can link to scratch orgs that were created from your org's Dev Hub. You use the namespace when developing, packaging, and releasing an app. You can't create this object with the API. Use the **Link Namespace** action in the Dev Hub graphical interface to insert a `NamespaceRegistry` record. This object is available in API version 41.0 and later.

### NavigationLinkSet

Represents the navigation menu in an Experience Cloud site. A navigation menu consists of items that users can click to go to other parts of the site. This object is available in API version 35.0 and later.

### NavigationMenuItem

Represents a single menu item in a NavigationLinkSet. Use this object to create, delete, or update menu items in your Experience Cloud site's navigation menu. This object is available in API version 35.0 and later.

### NavigationMenuItemLocalization

Represents the translated value of a navigation menu item in an Experience Cloud site. This object is available in API version 36.0 and later.

### Network

Represents an Experience Cloud site. Salesforce Experience Cloud lets you create branded spaces for your employees, customers, and partners. You can customize and create experiences, whether they're communities, sites, or portals, to meet your business needs, then transition seamlessly between them. Experience Cloud sites let you share information, records, and files with coworkers and stakeholders all in one place. This object is available in API version 26.0 and later.

### NetworkActivityAudit

Represents an audit trail of moderation actions in Experience Cloud sites. This object is available in API version 30.0 and later.

### NetworkAffinity

Represents a junction object that associates a user profile with a Network object, that is, with an Experience Cloud site. Use NetworkAffinity to assign a default Experience Cloud site to a user profile. This object is available in API version 41.0 and later.

### NetworkAuthApiSettings

Represents the settings that control enablement, access, and security for the Headless Registration Flow, Headless Forgot Password Flow, Headless Passwordless Login Flow, and their associated APIs. This object is available in API version 58.0 and later.

### NetworkDataCategory

Represents data categories in Lightning Web Runtime (LWR) Experience Cloud Sites. This object is available in API version 59.0 and later.

### NetworkDiscoverableLogin

Represents the Login Discoverable page from where customers and partners log in to an Experience Cloud site. Customers and partners are users with an External Identity license or any communities license for Experience Cloud. This object is available in API version 44.0 and later.

NetworkEmailTmplAllowlist

Represents an allowlist for the one-time password (OTP) email templates that are sent to end users during the Headless Registration Flow, the Headless Passwordless Login Flow, and the Headless Forgot Password Flow. This object is available in API version 60.0 and later.

NetworkFeedResponseMetric

Represents an object that stores the date and time values of question posts. It captures information for question creation, answer creation, and when an answer is marked as best answer This object is available in API version 51.0 and later.

NetworkMember

Represents a member of an Experience Cloud site. Members can be either users in your company or external users with portal profiles. This object is available in API version 26.0 and later.

NetworkMemberGroup

Represents a group of members in an Experience Cloud site. Members can be either users in your internal org or external users assigned portal profiles. An administrator adds members to an Experience Cloud site by adding a profile or a permission set, and any user with the profile or permission set becomes a member of the site. This object is available in API version 26.0 and later.

NetworkModeration

Represents a flag on an item in a community. This object is available in API version 30.0 and later.

NetworkPageOverride

Represents information about custom pages used to override the default pages in Experience Cloud sites. You can create Experience Builder or Visualforce pages and override the default pages in a site. Using custom pages allows you to create a more personalized experience for your users. This object is available in API version 34.0 and later.

NetworkSelfRegistration

Represents the account that self-registering Experience Cloud users are associated with by default. Self-registering users in an Experience Cloud site are required to be associated with an account, which the admin must specify while setting up self-registration for the site. If an account isn't specified, Salesforce creates person accounts (when enabled) for self-registering users. This object is available in API version 34.0 and later.

NetworkUserHistoryRecent

Represents an Experience Cloud site user's history of accessed records. This object is available in API version 42.0 and later.

Note

Represents a note, which is text associated with a custom object or a standard object, such as a Contact, Contract, or Opportunity.

NoteAndAttachment

This read-only object contains all notes and attachments associated with an object.

NoteTag

Associates a word or short phrase with a Note.

OauthCustomScope

Represents a permission defining the protected data that a connected app can access from an external entity when Salesforce is the OAuth authorization provider.

OauthCustomScopeApp

Represents the name of the connected app to which the custom scope is assigned. This object is available in API version 49.0 and later.

OauthToken

Represents an OAuth access token for connected app authentication. Use this object to create a user interface for token management. This object is available in API version 32.0 and later.

OauthTokenExchangeHandler

Represents a token exchange handler. The token exchange handler also consists of an Apex class. During the OAuth 2.0 token exchange flow, the token exchange handler is used to validate tokens from an external identity provider and to map users to Salesforce. This object is available in API version 60.0 and later.

OauthTokenExchHandlerApp

Represents the enablement settings for a specific Salesforce connected app or external client app that's enabled for the token exchange handler. A handler can be enabled for multiple apps. This object is available in API version 60.0 and later.

ObjectDataImport

Represents the data import status of one or more object records. This object is available in API version 57.0 and later.

ObjectDataImportReference

Represents the relationships to the associated reference objects showing the source from which the data is imported. This object is available in API version 57.0 and later.

ObjectMetadataTag

Represents a meta tag for a store page. Meta tags in HTML documents provide structured data used by search engines for ranking and to show content in search results. This object is available in API version 60.0 and later.

ObjectPermissions

Represents the enabled object permissions for the parent PermissionSet. This object is available in API version 24.0 and later.

ObjectRelatedUrl

Represents a URL slug for a Product or Category page on a B2B Commerce or D2C Commerce LWR site, or a custom object, account, or contact page on an enhanced LWR Experience Cloud site. This object is available in API version 57.0 and later.

ObjectTerritory2AssignmentRule

Represents a territory assignment rule that's associated with an object, such as Account. ObjectTerritory2AssignmentRuleItem can be created or deleted if the BooleanFilter field on its corresponding ObjectTerritory2AssignmentRule is `null`. Available if Sales Territories has been enabled.

ObjectTerritory2AssignmentRuleItem

A single row of selection criteria for an ObjectTerritory2AssignmentRule object. ObjectTerritory2AssignmentRuleItem can only be created or deleted if the `BooleanFilter` field on its corresponding ObjectTerritory2AssignmentRule object is a `null` value. Available if Sales Territories has been enabled.

ObjectTerritory2Association

Represents an association (by assignment) between a territory and an object record such as an account or a lead.

ObjectUserTerritory2View

Represents a user and object, such as an account or lead, assigned to a territory. This object is available in API version 58.0 and later.

OmniComponentErrorLog

For internal use only.

OmniDataPack

For internal use only.

OmniDataTransform

For internal use only.

OmniDataTransformItem

For internal use only.

OmniESignature

For internal use only.

OmniExtTrackingDef

Represents a connection between an OmniTrackingGroup in OmniAnalytics and a third-party Analytics system such as Google Analytics. This object is available in API version 60.0 and later.

OmniExtTrackingEventDef

Represents a format for FlexCard or OmniScript user interaction data that a third-party Analytics system such as Google Analytics can accept. This object is available in API version 60.0 and later.

OmniInteractionConfig

For internal use only.

OmniInteractionAccessConfig

For internal use only.

OmniProcess

For internal use only.

OmniProcessCompilation

For internal use only.

OmniProcessElement

For internal use only.

OmniProcessTransientData

For internal use only.

OmniScriptSavedSession

For internal use only.

OmniSupervisorConfig

Represents the Omni-Channel supervisor configuration for an assigned group of supervisors. This object is available in API version 41.0 and later.

OmniSupervisorConfigAction

Represents the actions available to the supervisors of an Omni-Channel supervisor configuration. This object is available in API version 56.0 and later.

OmniSupervisorConfigGroup

Represents the group of agents who are visible to the supervisors of an Omni-Channel supervisor configuration. The group, if visible, appears in the Agents tab of Omni Supervisor. This object is available in API version 41.0 and later.

OmniSupervisorConfigProfile

Represents the supervisor profiles to which an Omni-Channel supervisor configuration applies. User-level configurations override profile-level configurations. This object is available in API version 41.0 and later.

OmniSupervisorConfigQueue

Represents the queues that are visible to the supervisors of an Omni-Channel supervisor configuration. The queue, if visible, appears in the Queues Backlog and Assigned Work tabs of Omni Supervisor. This object is available in API version 53.0 and later.

OmniSupervisorConfigSkill

Represents the skills that are visible to the supervisors of an Omni-Channel supervisor configuration. These skills, if visible, appear in the Skills Backlog tab of Omni Supervisor. This object is available in API version 53.0 and later.

OmniSupervisorConfigTab

Represents the visible tabs specified in an Omni Supervisor configuration. This object is available in API version 60.0 and later.

OmniSupervisorConfigUser

Represents the users to which an Omni-Channel supervisor configuration applies. User-level configurations override profile-level configurations. This object is available in API version 41.0 and later.

OmniTrackingComponentDef

Represents a FlexCard or OmniScript that is a member of an OmniTrackingGroup, which tracks user interactions in OmniAnalytics. This object is available in API version 60.0 and later.

OmniTrackingGroup

Represents a group of FlexCard and OmniScript components that have their user interactions tracked together in OmniAnalytics. This object is available in API version 60.0 and later.

OmniUiCard

For internal use only.

OpenActivity

This read-only object is displayed in a related list of open activities—future events and open tasks—related to an object. It includes activities for all contacts related to the object. OpenActivity fields for phone calls are only available if your organization uses Salesforce CRM Call Center.

OperatingHours

Represents the hours in which a service territory, service resource, or account is available for work. OperatingHours is used by Field Service, Salesforce Scheduler, Salesforce Meetings, Sales Engagement, and Workforce Engagement. This object is available in API version 38.0 and later.

OperatingHoursHistory

Represents the history of changes made to tracked fields on an operating hours record. This object is available in API version 38.0 and later.

OperatingHoursHoliday

Represents the day or hours for which a service territory and service resources exclusive to the service territory are unavailable in Salesforce Scheduler. This object is available in API version 54.0 and later.

Opportunity

Represents an opportunity, which is a sale or pending deal.

OpportunityCompetitor

Represents a competitor on an Opportunity.

OpportunityContactRole

Represents the role that a Contact plays on an Opportunity.

OpportunityContactRoleSuggestionInsight

Represents a suggestion for a new opportunity contact role. Available in API versions 45.0 and later.

OpportunityFieldHistory

Represents the history of changes to the values in the fields of an opportunity. This object is available in versions 13.0 and later.

OpportunityHistory

Represents the stage history of an opportunity.

OpportunityInsight

Represents an individual insight (deal prediction, follow-up reminder, or key moment) related to an opportunity record.

OpportunityLineItem

Represents an opportunity line item, which is a member of the list of Product2 products associated with an Opportunity.

OpportunityLineItemSchedule

Represents information about the quantity, revenue distribution, and delivery dates for a particular `OpportunityLineItem`.

OpportunityLineItemSplit

Represents information about an opportunity product split, including percentages, amounts, and owner. This object is available in API version 58.0 and later.

OpportunityOwnerSharingRule

Represents a rule for sharing an opportunity with users other than the owner.

OpportunityPartner

This object represents a partner relationship between an Account and an Opportunity. An OpportunityPartner record is created automatically when a Partner record is created for a partner relationship between an account and an opportunity.

OpportunityRelatedDeleteLog

Represents an audit log of the deletion of opportunity-related child records, such as opportunity team members, product splits, or opportunity splits. This object is available in API version 59.0 and later.

OpportunityShare

Represents a sharing entry on an Opportunity.

OpportunitySplit

OpportunitySplit credits one or more opportunity team members with a portion of the opportunity amount. This object is available in API version 16.0 and later for pilot customers, and version 28.0 and later for others.

OpportunitySplitType

OpportunitySplitType provides unique labels and behavior for each split type. This object is available in API version 28.0 and later.

OpportunityStage

Represents the stage of an Opportunity in the sales pipeline, such as New Lead, Negotiating, Pending, Closed, and so on.

OpportunityTag

Associates a word or short phrase with an Opportunity.

OpportunityTeamMember

Represents a User on the opportunity team of an Opportunity.

OpptyLineItemSplitType

Represents an opportunity product split type. This object is available in API version 58.0 and later.

Order

Represents an order associated with a contract or an account.

OrderAction

Indicates the type of order, such as a new sale or a cancellation. This object is available in API version 55.0 and later.

OrderAdjustmentGroup

Group containing a set of adjustments applied to an order. This object is available in API version 48.0 and later.

OrderAdjustmentGroupSummary

Represents the current properties and state of a group of related price adjustments. Associated with a set of OrderItemAdjustmentLineSummaries that apply to OrderItemSummaries belonging to one OrderSummary. Corresponds to one or more order adjustment group objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

OrderChangeLog

Represents a log record of all change requests made to an order post activation. A log record is always one-to-one to change an order request. This object is available in API version 48.0 and later.

OrderChgReasonCategMap

The mapping between an order change reason and a service flow category. This object is available in API version 65.0 and later.

OrderDeliveryGroup

A group of order items that share a delivery method and address. The delivery method and address are used during the fulfillment process, such as shipping as a gift, downloading, picking up in store, or shipping to a standard address This object is available in API version 48.0 and later.

OrderDeliveryGroupSummary

Represents the current properties and state of a group of OrderItemSummaries, belonging to one OrderSummary, to be fulfilled using the same delivery method and delivered to the same address. A single shipment can include them all, but that isn't guaranteed. Corresponds to one or more order delivery group objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

OrderDeliveryMethod

Shows the customizations and options that a buyer selected for their delivery method. This object is available in API version 48.0 and later.

OrderHistory

Represents historical information about changes that have been made to the standard fields of the associated order, or to any custom fields with history tracking enabled.

OrderItem

Represents an order product that your organization sells.

OrderItemAdjustmentLineItem

An adjustment that has been made to an order item. This object is available in API version 48.0 and later.

OrderItemAdjustmentLineSummary

Represents the current properties and state of price adjustments on an OrderItemSummary. Corresponds to one or more order item adjustment line item objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

OrderItemGroup

Stores the group information for line items in an order. It also stores the aggregated line field information (subtotal). It contains a parent-child relationship to order. This object is available in API version 62.0 and later.

OrderItemRecipient

Represents a site, employee, or other entity for which services are being ordered. This includes essential details such as the recipient's name, contact information, and the specific site or location where the services will be provided. This object is available in API version 62.0 and later.

OrderItemRelationship

Describes a relationship between order products. This object is available in API version 58.0 and later.

OrderItemSummary

Represents the current properties and state of a product or charge on an OrderSummary. Corresponds to one or more order item objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

OrderItemSummaryChange

Represents a change to an OrderItemSummary, usually a reduction in quantity due to a cancel or return. Corresponds to a change order item. This object is available in API version 48.0 and later.

OrderItemSummaryRelationship

Junction object used to track how an original order summary (created before any exchanges have occurred) relates to other order summary objects in a chain of exchange orders. This object is available in API version 60.0 and later. An exchange order is an OrderSummary object whose SourceProcess property is set to Exchange. An original order summary can have an exchange order, which in turn can have yet another exchange order, and so on. The OrderSummaryRelationship object maintains this relationship between OrderSummary objects.

OrderItemTaxLineItem

The tax amount that has been applied to an order item. This object is available in API version 48.0 and later.

OrderItemTaxLineItemSummary

Represents the current tax on an OrderItemSummary or OrderItemAdjustmentLineSummary. Corresponds to one or more order item tax line items, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

OrderItemType

Shows whether the order product is a product line or charge line. This object is available in API version 48.0 and later.

OrderOwnerSharingRule

Represents a rule which determines order sharing access for the order's owners.

OrderPaymentSummary

Represents the current properties and state of payments using a single payment method that are applied to one OrderSummary. This object is available in API version 48.0 and later.

OrderPaymentSummaryReference

OrderPaymentSummaryReference is a junction object that allows an order payment summary to be shared with another order summary. This object is available in API version 60.0 and later.

OrderShare

Represents a sharing entry on an Order. This object is available in API version 48.0 and later.

OrderStatus

Represents the status of the order entity. This object is available in API version 48.0 and later.

OrderSummary

Represents the current properties and state of an order. Corresponds to one or more order objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

OrderSummaryAdditionalInfo

Stores information related to OrderSummary including context around the order, such as inventory reservation details, order origination, and other values that Einstein uses to perform order analysis. Only reservation details can be stored in this object. This object is available in API version 58.0 and later.

OrderSummaryRelationship

Junction object used to track how an original order summary (created before any exchanges have occurred) relates to other order summary objects in a chain of exchange orders. This object is available in API version 60.0 and later.

OrderSummaryRoutingSchedule

Represents an attempt to route an order summary to one or more inventory locations for fulfillment. You can use it to schedule future attempts and to record completed attempts. This object is available in API version 51.0 and later.

Organization

Represents key configuration information for an organization.

OrgDeleteRequest

Represents a request to delete a developer edition (DE) org. This object is available in API version 42.0 and later. It is available only in Developer and Database.com editions.

OrgEmailAddressSecurity

Defines the assignment of a user profile to an org-wide email address. This object is available in API version 58.0 and later.

OrgMetric

Represents a feature or metric that Salesforce Optimizer evaluates. This object is available in API version 47.0 and later.

OrgMetricScanResult

Represents data or an item associated with a feature's results in a Salesforce Optimizer evaluation. For example, for the Custom Field Limit feature, an OrgMetricScanResult object represents an object flagged for approaching the custom field limit. This object is available in API version 47.0 and later.

OrgMetricScanSummary

Represents the results summary for a specific feature in a Salesforce Optimizer evaluation. This object is available in API version 47.0 and later.

OrgSnapshot

Represents a snapshot of a scratch org. Snapshots capture the state of a scratch org so that you can use it to quickly spin up new scratch orgs using its configuration. This object is available in API version 61.0 and later.

OrgWideEmailAddress

Represents an organization-wide email address for user profiles.

OSAsyncChgCompletedEvent

An event that allows the processing of the credit memo, invoices, and other entities after a bulk action has successfully completed. The event provides all of the values that would exist on the synchronous APIs. This object is available in API version 63.0 and later.

OutOfOffice

Represents a user-set value on a profile that shows when the user intends to be out of the office. This object is available in API version 41.0 and later.

OutgoingEmail

For internal use only.

OutgoingEmailRelation

For internal use only.

OwnedContentDocument

Represents a file owned by a user. This object is available in version 30.0 and later.

OwnerChangeOptionInfo

Represents default and optional actions that can be performed when a record's owner is changed. Available in API version 35.0 and later, but to query for change owner metadata, use the OwnerChangeOptionInfo object in Tooling API instead. For more information, see OwnerChangeOptionInfo in the Tooling API.

PackageInstallEventLog

PackageInstallEventLog stores details about package installation in the organization. This object is available in API version 62.0 and later.

PackageLicense

Represents a license for an installed managed package. This object is available in API version 31.0 and later.

PackagePushError

Represents an error encountered during a push request. The number of PackagePushError records created depends on the number of push jobs in the request that result in an error.

PackagePushJob

Represents an individual push job for upgrading a package in an org from one version to another version. There can be multiple push jobs created for one push request. For example, if you want to upgrade five orgs as part of one push, you have one PackagePushRequest record and five PackagePushJob records.

PackagePushRequest

Represents the push request for upgrading a package in one or many orgs from one version to another version.

PackageSubscriber

Represents an installation of a package in an org. This object contains installation information for managed or unlocked packages developed in the org you're logged in to.

Participant

Represents a participant in a ConversationParticipant. An existing or new Participant is referenced each time a new ConversationParticipant is created. This object is available in API version 57.0 and later.

Partner

Represents a partner relationship between two Account records or between an Opportunity record and an Account record.

PartnerFundAllocation

Represents allocated funds from a partner marketing budget for channel partners. This object is available in API version 41.0 and later.

PartnerFundClaim

Represents a claim of funds from the partner marketing budget by a channel partner. This object is available in API version 41.0 and later.

PartnerFundRequest

Represents a request for funds from the partner marketing budget by a channel partner. This object is available in API version 41.0 and later.

PartnerMarketingBudget

Represents a budget that provides funds to channel partners for selling and marketing products and services. This object is available in API version 41.0 and later.

PartnerNetworkConnection

Represents a Salesforce to Salesforce connection between Salesforce organizations.

PartnerNetworkRecordConnection

Represents a record shared between Salesforce organizations using Salesforce to Salesforce.

PartnerNetworkSyncLog

Represents the Org Sync Log tab in Salesforce, where Salesforce administrators can track the replication of record inserts and updates being performed in Organization Sync. The Connection Detail page for the replication connection also displays the Org Sync Log's twenty most recent entries, and provides a link to the log.

PartnerRole

Represents a role for an account Partner, such as consultant, supplier, and so on.

PartyConsent

Represents consent preferences for an individual. This object is available in API version 48.0 and later.

Payment

Represents a single event when a shopper makes a payment. For credit cards, this event is a payment capture or payment sale, but it doesn't appear on the shopper's credit card statement. This object is available in API version 48.0 and later.

PaymentAuthAdjustment

Shows information about an adjustment made to an authorized transaction. This object is available in API version 51.0 and later.

PaymentAuthorization

Represents a single payment authorization event where users can capture or reverse a payment against a reserve of funds. This object is available in API version 48.0 and later.

PaymentCredit

Tracks the amount of money returned to the customer. The return can be a store credit, a gift card, or another type of credit. It's linked to the original payment record and includes the total credit amount issued. This object is available in API version 65.0 and later.

PaymentCreditLinePayment

A payment credit line payment. This object is available in API version 65.0 and later.

PaymentCreditTransaction

A payment credit transaction. This object is available in API version 65.0 and later.

PaymentGateway

Platform object that represents the connection to an external payment gateway. This object is available in API version 48.0 and later.

PaymentGatewayLog

Stores information exchanged between the Salesforce payments platform and external payment gateways. Gateway logs can also record payloads from external payment entities. This object is available in API version 48.0 and later.

PaymentGatewayProvider

Setup entity for payment gateways. Defines the connection to a payment gateway Apex adapter. This object is available in API version 48.0 and later.

PaymentGroup

Top-level object that groups all payment transactions that are processed for an order or invoice. PaymentGroup is a standalone object, so it isn't required for users to execute payment transactions (authorizations, captures, refunds, and sales). This object is available in API version 48.0 and later.

PaymentInitiationSource

Represents the originating source of a payment. This information helps other Salesforce products integrate with Salesforce Payments. This object is available in API version 63.0 and later.

PaymentIntent

Represents data temporarily stored during a transaction's lifecycle that can identify the buyer, the merchant, and the amount the buyer is sending to the merchant. Data such as timestamp and amount returned can also be stored in PaymentIntent. This object is available in API version 58.0 and later.

PaymentIntentEvent

Represents a payment intent platform event. Subscribe to these events so you can listen and respond to them when they're published. For example, create a Salesforce Flow that is triggered when one of these events is published. This object is available in API version 59.0 and later.

PaymentLineInvoice

Represents a payment allocated to or unallocated from an invoice. This object is available in API version 48.0 and later.

PaymentLink

A link that a merchant can share with customers to collect payments for products and services. The payment link, which you can embed into a Salesforce app or send directly to a customer, directs the customer to a Pay Now payment page. The page can show a total amount owed or an itemized list or products, shipping and tax charges, and a total amount owed. The customer enters their contact and payment details, and submits their payment. The amounts are shown in the store's currency. This object is available in API version 58.0 and later.

PaymentLinkEvent

Represents a payment link platform event. Subscribe to these events so you can listen and respond to them when they're published. For example, create a Salesforce Flow that is triggered when one of these events is published. This object is available in API version 59.0 and later.

PaymentMethod

Represents the method that a buyer uses to compensate the seller of a good or service. Common payment methods include cash, checks, credit or debit cards, money orders, bank transfers, and online payment services. This object is available in API version 48.0 and later.

PymtSchdDistributionMethod

Indicates how the total payment is divided into partial payments. This object is available in API version 56.0 and later.

PaymentScheduleTreatmentDtl

Contains configuration information for the payment schedule treatment detail. This object is available in API version 56.0 and later.

PaymentTerm

Defines your company's method and expectations for receiving payment. This object is available in API version 55.0 and later.

PaymentTermItem

Defines the attributes of a payment term that your company uses. The PaymentTermItem is used to determine the due date on invoices. This object is available in API version 55.0 and later.

PaymentSchedule

The payment schedule represents a collection of payments that a customer wants to collect at different times for a certain record. A schedule contains one or more payment schedule items, where each item represents one payment to be processed. Each of a schedule's items can have different payment configuration fields, such as payment methods, payment dates, and payment accounts. When a payment scheduler launches a payment run, the run evaluates active payment schedule items, and picks them up for payment processing if they align with the scheduler's payment criteria. This object is available in API version 55.0 and later.

PaymentScheduleItem

A payment schedule contains one or more payment schedule items, where each item represents one payment to be processed. Each of a schedule's items can have different payment configuration fields, such as payment methods, payment dates, and payment accounts. When a payment scheduler launches a payment run, the run evaluates active payment schedule items, and picks them up for payment processing if they align with the scheduler's payment criteria. This object is available in API version 55.0 and later.

PaymentSchedulePolicy

Contains configuration information for the payment schedule policy. This object is available in API version 56.0 and later.

PaymentScheduleTreatment

Contains configuration information for the payment schedule. This object is available in API version 56.0 and later.

PendingOrderSummary

Object representing a B2C Commerce order ingested via High Scale Orders before an OrderSummary is created for it. Optimized for online transaction processing (OLTP). This object is available in API version 55.0 and later.

PendingServiceRouting

Represents the routing details of a work item that's waiting to be routed or assigned. This object is available in API version 40.0 and later.

PendingServiceRoutingInteractionInfo

Represents PendingServiceRouting interaction information that's used when work is routed to an agent. For a screen pop, it specifies which records to open when work is routed to an agent from a specific channel. PendingServiceRoutingInteractionInfo is read-only. This object is available in API version 53.0 and later.

Period

Represents a fiscal period defined in FiscalYearSettings.

PermissionSet

Represents a set of permissions that's used to grant more access to one or more users without changing their profile or reassigning profiles. This object is available in API version 22.0 and later.

PermissionSetAssignment

Represents a user's assignment to a permission set or permission set group. This object is available in API version 22.0 and later.

PermissionSetGroup

Represents a group of permission sets and the permissions within them. Use permission set groups to organize permissions based on job functions or tasks. Then, you can package the groups as needed. This object is available in API version 45.0 and later.

PermissionSetGroupComponent

A junction object that relates the PermissionSetGroup and PermissionSet objects via their respective IDs; enables permission set group recalculation to determine the aggregated permissions for the group. This object is available in API version 45.0 and later.

PermissionSetLicense

Represents a license that's used to enable one or more users to receive a specified permission without changing their profile or reassigning profiles. You can use permission set licenses to grant access, but not to deny access. This object is available in API version 29.0 and later.

PermissionSetLicenseAssign

Represents the association between a User and a PermissionSetLicense. This object is available in API version 29.0 and later.

PermissionSetLicenseDefinition (Developer Preview)

Represents the definition of a custom permission set license, which entitles specified features in a package. This object is available in API version 54.0 and later.

PermissionSetTabSetting

Represents a permission set tab setting. Requires the View Setup permission. Use this object to query all tab settings of the permission set. This object is available in API version 45.0 and later.

PersonAccountOwnerPowerUser

Represents a user who can own more than 50,000 customer or partner portal accounts. Person account owner power users can own a large number of either customer or partner users. Their role can't be changed and they must be at the root of the role hierarchy. Person account owner power user objects can't be created if deferred sharing is turned on for your org. Person account owner power user objects can be created while deferred sharing is turned off for an org. Deferred sharing can be turned back on after person account owner power user objects have been created. This object is available in API version 57.0 and later.

PersonalOrgInfo

Represents the information for a Tableau Next personal org. This object is available in API version 64.0 and later.

PersonalizationTargetInfo

Represents a target for an audience. This object is available in API version 47.0 and later.

PermissionUpdateEventLog

Permission update events represent changes to object, field, and user permissions and setup entity access that occur in profiles and permission sets. The event type also tracks if you clone profiles or change whether session activation is required in permission sets or permission set groups. This object is available in API version 65.0 and later.

PersonTraining

Represents an assignment of a learning module in Workforce Engagement. This object is available in API version 54.0 and later.

PicklistValueInfo

Represents the active picklist values for a given picklist field. This object is available in API version 40.0 and later.

PickTicket

A PickTicket represents quantities of one or more products to be picked for fulfillment at a location. It can include products belonging to one or more fulfillment orders. This object is available in API version 57.0 and later.

PickTicketAssignment

Represents the association of a FulfillmentOrder with a PickTicket. A PickTicket has one PickTicketAssignment for each FulfillmentOrder containing products to be picked as part of that PickTicket. This object is available in API version 57.0 and later.

PickTicketProduct

Represents a quantity of a product to be picked as part of a PickTicket. It can include quantities for multiple FulfillmentOrders. This object is available in API version 57.0 and later.

PipelineInspectionListView

Represents a pipeline view, an intelligence view, or a saved filter. A pipeline view shows a set of opportunity records, based on specific criteria. An intelligence view shows a set of account, lead, or contact records, based on specific criteria. This object is available in API version 53.0 and later.

PipelineInspectionSumField

Use this object to learn which field from the opportunity object is used to aggregate Pipeline Inspection metrics on a pipeline view. This object is available in API version 56.0 and later.

PipelineInspMetricConfig

Represents the configuration of a forecast category metric that appears in the Pipeline Inspection view. This object is available in API version 55.0 and later.

PipelineInspMetricConfigLocalization

Represents the translated label of a Pipeline Inspection metric. This object is available in API version 55.0 and later.

PlatformAction

PlatformAction is a virtual read-only object. It enables you to query for actions displayed in the UI, given a user, a context, device format, and a record ID. Examples include standard and custom buttons, quick actions, and productivity actions.

PlatformEventUsageMetric

Contains usage data for event publishing and delivery to CometD and Pub/Sub API clients, `empApi` Lightning components, and event relays. If Enhanced Usage Metrics isn't enabled, usage data is available for the last 24 hours, ending at the last hour, and for historical daily usage. In API 58.0 and later, you can enable Enhanced Usage Metrics to get usage data by event name and client for granular time intervals. PlatformEventUsageMetric contains separate usage metrics for platform events and change data capture events. This object is available in API version 50.0 and later.

PlatformStatusAlertEvent

The documentation has moved to PlatformStatusAlertEvent in the *Platform Events Developer Guide*.

PortalDelegablePermissionSet

PortalDelegablePermissionSet is a base platform object used to store permission sets that can be assigned by a delegated portal/external user admin (DPUA) to portal users. This object is available in API version 47.0 and later.

PresenceConfigDeclineReason

Represents the settings for a decline reason that a presence user provides when declining work. This object is available in API version 37.0 and later.

PresenceDeclineReason

Represents an Omni-Channel decline reason that agents can select when declining work requests. This object is available in API version 37.0 and later.

PresenceUserConfig

Represents a configuration that determines a presence user's settings. This object is available in API version 32.0 and later.

PresenceUserConfigProfile

Represents a configuration that determines the settings that are assigned to presence users who are assigned to a specific profile. User-level configurations override profile-level configurations. This object is available in API version 32.0 and later.

PresenceUserConfigUser

Represents a configuration that determines the settings that are assigned to a presence user. These user-level configurations override profile-level configurations. This object is available in API version 32.0 and later.

PriceAdjustmentGroupShape

Defines the business logic for a top-level price adjustment, for example, a discount applied to an entire order. This object is available in API version 57.0 and later.

PriceAdjustmentItemShape

Defines the business logic for an item-level price adjustment, for example, a discount on an order item. This object is available in API version 57.0 and later.

PriceAdjustmentSchedule

Represents a series of discounts offered depending on your product's configuration, quantity, and when they're purchased in combination with other products. This object is available in API version 47.0 and later.

PriceAdjustmentTier

Represents a discount tier in a price adjustment schedule. This object is available in API version 47.0 and later.

Pricebook2

Represents a price book that contains the list of products that your org sells.

Pricebook2History

Represents historical information about changes that have been made to the standard fields of the associated Pricebook2, or to any custom fields with history tracking enabled. This object is available in API version 65.0 and later.

PricebookEntry

Represents a product entry (an association between a Pricebook2 and Product2) in a price book.

PricebookEntryAdjustment

Read-only junction object created when you associate a price adjustment schedule with a price book entry. This object is available in API version 47.0 and later.

PriceProtectionExecution

Represents an instance of running the price protection process, capturing execution time, status, and the effective date of price changes. This object is available in API version 63.0 and later.

PriceProtectExecLineItem

Represents a line item created as part of a Price Protection Execution. This object is available in API version 63.0 and later.

PriceProtectionTerm

Represents a configuration record that defines the rules, types, and eligible conditions for price protection. This object is available in API version 63.0 and later.

PrivacyHold

Represents a Privacy Hold that indicates that a record should be preserved from masking or deletion by Data Management policies in Privacy Center. This object is available in API version 59.0 and later.

PrivacyHoldReason

Represents the business or legal purpose for why a record has a Privacy Hold. This object is available in API version 59.0 and later.

PrivacyJobSession

Represents the status of past, ongoing, and scheduled policy jobs in Privacy Center. This object is available in API version 59.0 and later.

PrivacyObjectSession

Represents the status of each object being processed in past, ongoing, and scheduled policy jobs in Privacy Center. This object is available in API version 59.0 and later.

PrivacyRequest

See details and monitor the status of Data Subject Access Requests made in Privacy Center. This object is available in API version 54.0 and later.

PrivacyRTBFRequest

Represents a Right to Be Forgotten Request made in Privacy Center. This object is available in API version 59.0 and later.

PrivacySessionRecordFailure

Represents error messages encountered during policy job executions in Privacy Center. This object is available in API version 59.0 and later.

Problem

Problems represent the root cause data of one or more incidents. This object contains all the details of a problem, documenting the history of the problem from detection to closure. This object is available in API version 53.0 and later.

ProblemIncident

Represents a junction object that relates a Problem to an Incident. This object is available in API version 53.0 and later.

ProblemRelatedItem

Represents a junction object that relates a Problem to an Asset. This object is available in API version 53.0 and later.

ProcessDefinition

Represents the definition of a single approval process.

ProcessException

Represents a business exception, such as a processing failure on an order summary. A separate process is required to resolve the failure that caused the process exception before processing can continue. This object is available in API version 50.0 and later.

ProcessFlowMigration

Represents a process's migrated criteria and the resulting migrated flow. This object is available in API version 58.0 and later.

ProcessInstance

Represents an instance of a single, end-to-end approval process. Use this and the node, step, and workitem process instance objects to create approval history reports.

ProcessInstanceHistory

This read-only object shows all steps and pending approval requests associated with an approval process (ProcessInstance).

ProcessInstanceNode

Represents a step in an instance of an approval process. Compare to ProcessNode, which describes the step in a process definition. Use this object to retrieve approval history.

ProcessInstanceStep

Represents one work item in an approval process (ProcessInstance).

ProcessInstanceWorkitem

Represents a user's pending approval request.

ProcessNode

Describes a step in a process definition. Compare to ProcessInstanceNode, which describes a step in a running process. This object is available in API version 31.0 and later.

ProducerCommission

Represents a producer's commission for an insurance policy. The commission can be calculated from the commissionable transactions or can be populated from an external system. This object is available in API version 51.0 and later.

Product2

Represents a product that your company sells.

Product2DataTranslation

Represents the translated values of the data stored within a Product2 record's fields. This object is available in API version 45.0 and later.

ProductAttribute

Represents the attributes that can be associated with a product. This object is available in API version 50.0 and later.

ProductAttributeSet

Represents a group of attributes that can be associated with a product. This object is available in API version 50.0 and later.

ProductAttributeSetItem

Represents a set of attributes that can be associated with a product. This object is available in API version 50.0 and later.

ProductAttributeSetProduct

Represents the product associated with a set of attributes. This object is available in API version 50.0 and later.

ProductCatalog

The container that holds a Product Category hierarchy. This object is available in API version 55.0 and later.

ProductCategory

Represents the category that products are organized in.This object is available in API version 49.0 and later.

ProductCategoryProduct

Holds the relation between product and product category to assign products to a category. This object is available in API version 55.0 and later.

ProductCategoryDataTranslation

Represents the translated values for the data stored within a ProductCategory record's fields. This object is available in API version 46.0 and later.

ProductComponentGroup

Represents the logical grouping of associated products in a bundle and the products' arrangement policy (group cardinality). This object is available in API version 58.0 and later.

ProductConsumed

Represents an item from your inventory that was used to complete a work order or work order line item in field service.

ProductDetectedPriceChange

Represents a detected change in price for a product associated with a partner account. This object is available in API version 63.0 and later.

ProductEntitlementTemplate

Represents predefined terms of customer support (Entitlement) that users can add to products (Product2).

ProductFeaturedProduct

Represents the user-defined collection of featured products that are meant to cross-sell or upsell with your product. This object is available in API version 64.0 and later.

ProductItem

Represents the stock of a particular product at a particular location in field service, such as all bolts stored in your main warehouse.

ProductItemTransaction

Represents an action taken on a product item in field service. Product item transactions are auto-generated records that help you track when a product item is replenished, consumed, or adjusted.

ProductMedia

Represents the rich media, including images and attachments, that can be added to products.This object is available in API version 49.0 and later.

ProgramProduct

Represents a junction between Program and Product2. This will hold Product2 values related to a Program. This object is available in API version 58.0 and later.

ProductQuantityRule

Represents the relationship between a quantity rule and a product. This object assigns quantity rules to a product. This object is available in API version 51.0 and later.

ProductRelatedComponent

Represents a product that is included in a product bundle, a set, or a product and an add-on. This object is available in API version 57.0 and later.

ProductRelationshipType

Defines the relationship between two sales transaction items. For example, defines a relationship between a bundle and a bundle component. This object is available in API version 57.0 and later.

ProductRequest

Represents an order for a part or parts in field service.

ProductRequestLineItem

Represents a request for a part in field service. Product request line items are components of product requests.

ProductRequired

Represents a product that is needed to complete a work order or work order line item in field service.

ProductSellingModel

Defines one method by which a product can be sold; for example, as a one-time sale, an evergreen subscription, or a term-defined subscription. If the product is sold on subscription, this object defines the subscription's term. A product can have multiple product selling models. This object is available in API version 55.0 and later.

ProductSellingModelOption

A junction object between Product Selling Model and Product2. This object is available in API version 55.0 and later.

ProductServiceCampaign

Represents a set of activities to be performed on a product service campaign asset, such as a product recall for safety issues or product defects. This object is available in API version 51.0 and later.

ProductServiceCampaignItem

Represents a product service campaign's asset. This object is available in API version 51.0 and later.

ProductServiceCampaignItemStatus

Represents a status for a product service campaign item in field service. This object is available in API version 51.0 and later.

ProductServiceCampaignStatus

Represents a status for a product service campaign in field service. This object is available in API version 51.0 and later.

ProductTransfer

Represents the transfer of inventory between locations in field service.

ProductWarrantyTerm

Defines the relationship between a product or product family and warranty term. This object is available in API version 50.0 and later.

Profile

Represents a profile, which defines a set of permissions to perform different operations. Operations can include creating a custom profile or querying, adding, updating, or deleting information.

ProfileSkill

Represents a profile skill, which describes a user's professional knowledge. This is a global record for the organization, and users are associated through the ProfileSkillUser object.

ProfileSkillEndorsement

Represents a detail relationship of ProfileSkillUser. An endorsement of a profile skill shows approval and support of another user's publicly declared skill.

ProfileSkillShare

Represents a sharing entry on a ProfileSkill.

ProfileSkillUser

Represents a detail relationship of User. The object connects profile skills with users.

ProgramRebateType

Represents a rebate structure associated with a Rebate Program. This object is available in API version 63.0 and later.

Promotion

Represents a promotion for B2B or D2C stores. This object is available in API version 52.0 and later.

PromotionLineItemRule

Lists compound conditions about a promotion. This object is available in API version 59.0 and later.

PromotionMarketSegment

Represents a market segment within B2B Commerce that promotions can be assigned to. This object is available in API version 52.0 and later.

PromotionQualifier

Represents the product, product category, or order that you want to target with your promotion qualifier in a B2B or D2C store. This object is available in API version 52.0 and later.

PromotionSegment

Represents a promotion segment, which you can assign to different stores or buyer groups, allowing them to access the promotion. This object is available in API version 52.0 and later.

PromotionSegmentBuyerGroup

Represents a promotion segment, associated with a buyer group, and used for B2B Commerce. This object is available in API version 52.0 and later.

PromotionSegmentSalesStore

Represents a promotion segment, associated with a store, and used for B2B Commerce. This object is available in API version 52.0 and later.

PromotionTarget

Represents the product, product category, or order that you want to target with your promotion in a B2B Store or D2C store. This object is available in API version 52.0 and later.

PromotionTier

Represents a tier of a promotion that includes multiple tiers. A promotion can have up to 10 tiers. This object is available in API version 57.0 and later.

Prompt

Represents record details about an in-app guidance prompt or walkthrough. Available in API version 46.0 and later.

PromptAction

Represents how the user interacted with the in-app guidance prompt or walkthrough. Available in API version 46.0 and later.

PromptError

Represents the error or warning associated with the PromptAction. Available in API version 52.0 and later.

PromptActionOwnerSharingRule

Represents a rule which determines `PromptAction` sharing access for the owners. Available in API version 46.0 and later.

PromptActionShare

Represents a sharing entry on a prompt action record. Available in API version 46.0 and later.

PromptLocalization

Represents the translated value of a label for record details about in-app guidance when the Translation Workbench is enabled for your org. Available in API version 48.0 and later.

PromptVersion

Represents an in-app guidance prompt or walkthrough. Available in API version 46.0 and later.

PromptVersionLocalization

Represents the translated value of a label for-app guidance when the Translation Workbench is enabled for your org. Available in API version 48.0 and later.

Prospect

Represents a prospect. A prospect is an individual who has shared contact information, but isn't yet qualified. This object is available in API version 63.0 and later.

ProrationPolicy

Defines how the price of a subscription is divided into time periods and how the price is calculated for each time period. This object is available in API version 55.0 and later.

PublicComplaint

Represents the complaints submitted by public users. This object is available in API version 49.0 and later.

PurchaseQuantityRule

Represents a rule that restricts the quantity of a product that can be purchased. The rule can be an increment, minimum, or maximum rule. This object is available in API version 52.0 and later.

PushTopic

Represents a query that is the basis for notifying Streaming API clients of changes to records in an org. This object is available in API version 21.0 and later.

QueuedExecutionEventLog

Queued Execution events contain details about queued executions—for example, batch Apex. This object is available in API version 65.0 and later.

QueueRoutingConfig

Represents the settings that determine how work items are routed to agents. This object is available in API version 32.0 and later.

Question

Represents a question in a zone that users can view and reply to.

QuestionDataCategorySelection

A data category selection represents a data category that classifies a question.

QuestionReportAbuse

Represents a user-reported abuse on a Question in a Chatter Answers zone. This object is available in API version 24.0 and later.

QuestionSubscription

Represents a subscription for a user following a Question. This object is available in API version 24.0 and later.

QueueSobject

Represents the mapping between a queue Group and the types associated with the queue, including custom objects.

QuickText

This object stores a snippet of text that allows users to send a quick response to a customer. Use quick text to create greetings, answers to common questions, short notes, and more. This object is available in API version 24.0 and later.

QuickTextUsage

Represents the usage of quick text on a record, including which quick text was used, who used it, and how they used it. Quick text is a snippet of text that allows users to send a quick response to a customer. This object is available in API version 47.0 and later.

Quote

Represents a quote, which is a record showing proposed prices for products and services. Available in API version 18.0 and later.

QuoteAction

Indicates the type of sales transaction that's being quoted; for example, a renewal sale. This object is available in API version 59.0 and later.

QuoteAdjustmentGroup

Group containing a set of adjustments applied to a quote. This object is available in API version 58.0 and later.

QuoteDocument

Represents a quote in document format. Available in API version 18.0 and later.

QuoteLineGroup

Stores the group information for line items in a quote. It also stores the aggregated line field information (subtotal). It contains a parent-child relationship to quote. This object is available in API version 61.0 and later.

QuoteLineItem

Represents a quote line item, which is a member of the list of Product2 products associated with a Quote, along with other information about those line items on that quote. Available in API version 18.0 and later.

QuoteLineItemRecipient

Represents a site, employee, or other entity for which services are being quoted. This could include details such as the recipient's name, contact information, associated site or location, and any specific requirements or preferences for the quoted services. This object is available in API version 62.0 and later.

QuoteLinePriceAdjustment

Indicates the calculated price adjustment that is applied to the quote line, for example, a calculated volume discount or the prorated value of a manual discount. Use the quote line price adjustment to inform potential customers about the type, value, and total amount of their discounts. This object is available in API version 56.0 and later.

QuoteLineRelationship

Describes the relationship between quote line items, such as items in a bundle. When you create a QuoteLineRelationship object, it's immutable: it can't be edited or removed. This object is available in API version 58.0 and later.

QuoteItemTaxItem

The tax that is applied to a quote line item. This object is available in API version 55.0 and later.

QuoteLineWorkSource

Represents an association between a quote and work sources, such as assets, quote line items, order products, or work type groups. This object is available in API version 63.0 and later.

QuoteRecipientGroup

Represents a recipient group for which offers or products with the same configuration are being added. This also includes reusing these groups to add or remove recipients. This object is available in API version 64.0 and later.

QuoteRecipientGroupMember

Represents a junction between a quote line item recipient and a quote recipient group. This object is available in API version 64.0 and later.

RecentFieldChange

Use this virtual object to see how an opportunity has changed in the past seven days. Learn the previous value of a field, who made the change, and when the change was made. This object is available in API version 52.0 and later.

RecentlyViewed

Represents records or list views that the current user has recently viewed or referenced (by viewing a related record). List views are available in API version 29.0 and later.

Recommendation

Represents the recommendations surfaced as offers and actions for Einstein Next Best Action. This object is available in API version 45.0 and later.

RecommendationResponse

Represents the user responses to a presented offer or recommendation for Einstein Next Best Action. This object is available in API version 51.0 and later.

RecordAction

Represents a relationship between a record and an action, such as a flow. Create a RecordAction for every action that you want to associate with a particular record. Available in API version 42.0 and later.

RecordActionHistory

Represents the lifecycle of a RecordAction as it goes through different states. Available in API version 44.0 and later.

RecordsetFilterCriteria

Represents a set of filters that can be used to match service appointments or assets based on your criteria fields. For example, you can create recordset filter criteria so that only service appointments that satisfy the filter criteria are matched to the filtered shifts, and likewise only maintenance work rules that satisfy your criteria are matched to assets. This object is available in API version 50.0 and later. Assets and maintenance work rules are available in API version 52.0 and later.

RecordsetFilterCriteriaRule

Represents a rule using fields from the designated source object to create filters on the filtered, or target, object. RecordsetFilterCriteriaRule is associated with the RecordsetFilterCriteria object. This object is available in API version 50.0 and later.

RecordsetFltrCritMonitor

Monitors whether the value of an asset attribute is within the threshold of a recordset filter criteria (RFC). You can monitor one or more RFCs for an Asset. This object is available in API version 57.0 and later.

RecordType

Represents a record type.

RecordTypeLocalization

Represents the translated value of a label for a record type when the Translation Workbench is enabled for your organization.

RecordVisibility (Pilot)

Represents the visibility attributes that determine a record's read access. This object is read only and is available in API version 46.0 and later.

RedirectWhitelistUrl

Represents a trusted URL for external user redirections. Redirections to a different Salesforce org, including its publicly served pages and content, are allowed from your Salesforce org only when the URL is a RedirectWhitelistUrl. For non-Salesforce URLs, a session setting controls whether redirections from pages and components built in Salesforce Classic are restricted to RedirectWhitelistUrl objects. Except for cross-org redirections, you can't restrict redirections that originate from pages and components built with Lightning Experience. This object is available in API version 48.0 and later.

Refund

Represents a refund made against a payment. This object is available in API version 48.0 and later.

RefundLinePayment

A refund line that has been applied to a payment. This object is available in API version 48.0 and later.

RegisteredExternalService

Represents a registered external service used for checkout integrations by data integrators. This object is available in API version 49.0 and later.

RelatedListColumnDefinition

Represents information about a column in a related list. A related list specifies a set of records for a related object, based on specific criteria. This object is available in API version 55.0 and later.

RelatedListDefinition

Represents information about a related list. A related list specifies a set of records for a related object, based on specific criteria. This object is available in API version 55.0 and later.

RemoteKeyCalloutEvent

The documentation has moved to RemoteKeyCalloutEvent in the *Platform Events Developer Guide*.

Reply

Represents a reply that a user has submitted to a question in an answers zone.

ReplyEmailSettings

Represents a reply mail management configuration, which is used to configure emails that are received by an email sending domain. This object is available in API version 62.0 and later.

ReplyReportAbuse

Represents a user-reported abuse on a Reply in a Chatter Answers zone. This object is available in API version 24.0 and later.

ReplyText

A text reply generated by Einstein Reply Recommendations that is based on closed chat transcripts. Admins review replies and publish them to quick text, editing them as needed. Einstein recommends relevant published replies to support agents in the Lightning Service Console, and agents can insert replies into chats or messaging sessions. This object is available in API version 49.0 and later.

Report

Represents a report, a set of data that meets certain criteria, displayed in an organized way. Access is read-only. This object is available in API version 20.0 and later.

ReportEventLog

Report event logs contain information about what happened when a user ran a report. This event type includes all activity that's in the Report Export event type, and additional information. For example, it has user activity for reports exported as both Formatted Report and Details Only output. This object is available in API version 61.0 and later.

ReportExportEventLog

Report Export events contain details about reports that a user exported. For example, this event type captures when a user exports a report as Details Only output. But it doesn't capture reports that users export as Formatted Report or XLSX Detail output. For that data, see the Report event type. This object is available in API version 65.0 and later.

ReportTag

Associates a word or short phrase with a Report. This object is available in API version 20.0 and later.

ReputationLevel

Represents a reputation level defined for an Experience Cloud site. This object is available in API version 32.0 and later.

ReputationLevelLocalization

Represents the translated value of a reputation level. Reputation level localization only applies for reputation levels in Experience Cloud sites. This object is available in API version 35.0 and later.

ReputationPointsRule

Represents the reputation point rules for an Experience Cloud site. Each rule specifies an action that members can earn points from and the points associated with those actions in a particular site. This object is available in API version 32.0 and later.

ResourceAbsence

Represents a time period in which a service resource is unavailable to work in Field Service, Salesforce Scheduler, or Workforce Engagement. This object is available in API version 38.0 and later.

ResourcePreference

Represents an account's preference for a specified service resource on field service work.

RestApiEventLog

REST API event logs contain details about REST-specific requests. This object is available in API version 61.0 and later.

ReturnOrder

Represents the return or repair of inventory or products in Field Service, or the return of order products in Order Management. This object is available in API version 42.0 and later.

ReturnOrderItemAdjustment

Represents a price adjustment on a return order line item. This object is available in API version 50.0 and later.

ReturnOrderItemTax

Represents the tax on a return order line item or return order item adjustment. This object is available in API version 50.0 and later.

ReturnOrderLineItem

Represents a specific product that is returned or repaired as part of a return order in Field service, or a specific order item that is returned as part of a return order in Order Management. This object is available in API version 42.0 and later.

ReturnOrderOwnerSharingRule

Represents the rules for sharing a return order with user records other than the owner or anyone above the owner in the role hierarchy. This object is available in API version 42.0 and later.

RevenueAsyncOperation

Represents the status of an asynchronous process initiated by a REST request in Subscription Management. This object is available in API versions 57.0 to 59.0. Use AsyncOperationTracker instead of RevenueSyncOperation in API version 59.0 and later.

RevenueTransactionErrorLog

Contains information about errors that occurred while processing a request. The error record persists until another error with the same category, primary record, and (optionally) related record occurs. This object is available in API version 55.0 and later.

RuleTerritory2Association

Represents a record-assignment rule and its association to an object, such as Account. Available if Sales Territories has been enabled.

SalesAIScoreCycle

Represents the cycle type and ID used to score records. This object is available in API version 47.0 and later.

SalesAIScoreModelFactor

Represents the factors that Sales Cloud Einstein uses to build a scoring model. Scoring models are used by features, such as Opportunity Scoring, to score individual records. This object is available in API version 47.0 and later.

SalesforceLoginAsEventLog

Salesforce LoginAs Event provides details about the Salesforce User's login into Customer Org as Customer's authorized user. This object is available in API version 65.0 and later.

SalesChannel

Represents the origin of an order. For example, a web storefront, physical store, marketplace, or mobile app. If you integrate Salesforce Order Management with Salesforce B2C Commerce, set up a SalesChannel corresponding to each Site in your B2C Commerce implementation. This object is available in API version 48.0 and later.

SalesforceContract

Read-only virtual object used in the Your Account App.  Represents contract information related to your organization's Salesforce subscription.

SalesforceInvoice

Read-only virtual object used in the Your Account App. Represents information about your organization's invoices with Salesforce.

SalesforcePayment

Read-only virtual object used in the Your Account App. Represents information about payments related to your organization's Salesforce invoice.

SalesforceQuote

Read-only virtual object used in the Your Account App. Represents information about your organization's quotes with Salesforce.

SalesStoreCatalog

Represents the catalog associated with a store. This object is available in API version 49.0 and later.

SalesTransactionItemShape

Defines the business logic for a sales transaction shape item, for example, an item in an order. This object is available in API version 57.0 and later.

SalesTransactionShape

Defines the business logic for a sales transaction; for example, an order, a quote, or a cart. This object is available in API version 57.0 and later.

SalesTrxnItemRelationShape

Describes the relationship between sales transaction shape items; for example, a bundle or set. This object is available in API version 57.0 and later.

SalesTrxnItemRelationship

Describes the relationship between sales transaction items; for example, a bundle or set. This object interface is available in API version 58.0 and later.

SalesWorkQueueSettings

Represents settings used to customize work queue options for third-party scoring. Third-party scoring enables custom number fields on person accounts, contacts, and leads. You must be a Sales Engagement customer to update this object. Previously, you could only use the Einstein Intelligence Score for third-party scoring. Available starting in Version 47.0.

SandboxStatusEventLog

SandboxStatusEventLog stores details about Sandbox copies. This object is available in API version 62.0 and later.

SamlSsoConfig

Represents a SAML Single Sign-On configuration.This object is available in API version 32.0 and later.

SavedPaymentMethod

Represents a payment method saved by an authenticated customer. This object is available in API version 58.0 and later

SavedPaymentMethodEvent

Represents a saved payment method platform event. Subscribe to these events so you can listen and respond to them when they're published. For example, create a Salesforce Flow that is triggered when one of these events is published. This object is available in API version 59.0 and later.

SchedulingAdherenceDetail

Represents the breakdown of daily shift adherence data by agent status. This object is available in API version 54.0 and later.

SchedulingAdherenceSummary

Represents daily shift adherence data for a service resource in a service territory and job profile on a specific date. This object is available in API version 54.0 and later.

SchedulingConstraint

Represents scheduling constraints on each service resource. This object is available in API version 50.0 and later.

SchedulingObjective

Represents business goals that the scheduling tools consider. This object is available in API version 53.0 and later.

SchedulingRule

Represents scheduling rules that are hard constraints in the scheduling logic engine. This object is available in API version 52.0 and later.

SchedulingRuleParameter

Represents scheduling rule parameters associated with a scheduling rule. This object is available in API version 52.0 and later.

Scontrol

A custom s-control, which is custom content that is hosted by the system but executed by the client application.

ScontrolLocalization

The translated value of the field label for an s-control.

Scorecard

Use scorecards to measure partner performance and establish benchmarks for channel programs within Experience Cloud. Display any report summary results that your channel account manager or executive team wants to see. This object is available in API version 40.0 and later.

ScorecardAssociation

Represents a connection between a specific scorecard and the associated account, channel program, or channel program level. This object is available in API version 41.0 and later.

ScorecardMetric

Stores information about a Salesforce report that is run and summarized to get a single value. The stored value is added as a metric to the related Scorecard object. This object is available in API version 40.0 and later.

ScoreIntelligence

For internal use only.

ScratchOrgInfo

Represents a scratch org and its audit log. Use this object to create a scratch org and keep a log of its creation and deletion. This object is available in API version 41.0 and later.

SearchActivity

Represents search activity on a Knowledge article. Also known as KnowledgeSearchActivity. This object is available in API version 38.0 and later.

SearchClickEventLog

Search Click Event Log contains details about the user's interaction with the search results. This object is available in API version 61.0 and later.

SearchEventLog

Search Event Log provides details about the user's search query. This object is available in API version 61.0 and later.

SearchLayout

Represents a search layout defined for an object. This object is available in API version 35.0 and later.

SearchPromotionRule

Represents a promoted search term, which is one or more keywords that you associate with a Salesforce Knowledge article. When a user's search query includes these keywords, the associated article is returned first in search results. This object is available in API version 31.0 and later.

SecurityCustomBaseline

Provides the ability to read, create, and delete user-defined custom security baselines, which define an org's security standards. This object is available in API version 39.0 and later.

SelfServiceUser

Represents a Contact who has been enabled to use your organization's Self-Service portal, where he or she can obtain online support.

Seller

Represents the seller role of an individual with respect to a particular company or organization. This object is available in API version 53.0 and later.

SenderEmailAddress

Represents a From address in a marketing email. This object is available in API version 63.0 and later.

ServiceAppointment

Represents an appointment to complete work for a customer in Field Service, Lightning Scheduler,Intelligent Appointment Management, and Virtual Care.This object is available in API version 38.0 and later.

ServiceAppointmentStatus

Represents a possible status of a service appointment in field service.

ServiceChannel

Represents a channel of work items that are received from your organization—for example, cases, chats, or leads. This object is available in API version 32.0 and later.

ServiceChannelFieldPriority

Represents a secondary routing priority field-value mapping. This object is available in API version 47.0 and later.

ServiceChannelStatus

Represents the status that's associated with a specific service channel. This object is available in API version 32.0 and later.

ServiceChannelStatusField

Represents the values that you use to indicate completed and in-progress work item status for the status field in the Status-Based Capacity routing model.  This object is available in API version 49.0 and later.

ServiceContract

Represents a customer support contract (business agreement). This object is available in API version 18.0 and later.

ServiceContractOwnerSharingRule

Represents the rules for sharing a ServiceContract (customer service agreement) with users other than the owner. This object is available in API version 18.0 and later.

ServiceCrew

Represents a group of service resources who can be assigned to service appointments as a unit.

ServiceCrewMember

Represents a technician service resource that belongs to a service crew.

ServiceCrewOwnerSharingRule

Represents the rules for sharing a service crew with user records other than the owner or anyone above the owner in the role hierarchy.

ServicePresenceStatus

Represents a presence status that can be assigned to a service channel. This object is available in API version 32.0 and later.

ServiceReport

Represents a report that summarizes a work order, work order line item, or service appointment.

ServiceReportLayout

Represents a service report template in field service.

ServiceResource

Represents a service technician or service crew in Field Service and Salesforce Scheduler, or an agent in Workforce Engagement. This object is available in API version 38.0 and later.

ServiceResourceCapacity

Represents the maximum number of scheduled hours or number of service appointments that a capacity-based service resource can complete within a specific time period. This object is available in API version 38.0 and later.

ServiceResourceCapacityHistory

Represents the history of changes made to tracked fields on a service resource capacity record. This object is available in API version 38.0 and later.

ServiceResourceDataTranslation

Represents the translated values of the data stored within a ServiceResource record's fields. This object is available in API version 54.0 and later.

ServiceResourceOwnerSharingRule

Represents the rules for sharing a service resource with user records other than the owner or anyone above the owner in the role hierarchy. This object is available in API version 38.0 and later.

ServiceResourcePreference

Represents the service resource scheduling preferences that are considered as a business objective in the scheduling logic engine. This object is available in API version 52.0 and later.

ServiceResourceSkill

Represents a skill that a service resource possesses in Field Service and Lightning Scheduler. This object is available in API version 38.0 and later.

ServiceSetupProvisioning

Represents a task completed by the Service Setup Assistant. This object is available in API version 52.0 and later.

ServiceTerritory

Represents a geographic or functional region in which work can be performed in Field Service, Salesforce Scheduler, or Workforce Engagement. This object is available in API version 38.0 and later.

ServiceTerritoryDataTranslation

Represents the translated values of the data stored within a ServiceTerritory record's fields. This object is available in API version 54.0 and later.

ServiceTerritoryLocation

Represents a location associated with a particular service territory in field service.

ServiceTerritoryMember

Represents a service resource who can be assigned in a service territory in Field Service, Salesforce Scheduler, or Workforce Engagement. This object is available in API version 38.0 and later.

ServiceTerritoryWorkType

Represents the relationship between a ServiceTerritory object and a WorkType object for Salesforce Scheduler appointments. This object is available in API version 45.0 and later.

SessionPermSetActivation

The SessionPermSetActivation object represents a permission set assignment activated during an individual user session. When a SessionPermSetActivation object is inserted into a permission set, an activation event fires, allowing the permission settings to apply to the user's specific session. This object is available in API versions 37.0 and later.

SetupAssistantStep

For internal use only.

SetupAuditTrail

Represents changes you or other admins made in your org's Setup area for at least the last 180 days. This object is available in API version 15.0 and later.

SetupEntityAccess

Represents the enabled setup entity access settings (such as for Apex classes) for the parent PermissionSet. This object is available in API version 25.0 and later.

ShapeRepresentation

Contains information about the shape of an org. The shape of an org includes licenses and limits information. You can easily create scratch orgs based on a source org's shape. This object is available in API version 50.0 and later.

SharingRecordCollection

Represents a collection of records. This object is available in API version 51.0 and later.

SharingRecordCollectionItem

Represents a single record in a collection of records. This object is available in API version 51.0 and later.

SharingRecordCollectionMember

Represents a user with access to a collection of records. This object is available in API version 51.0 and later.

Shift

Represents a shift for service resource scheduling. Available in API versions 46.0 and later.

ShiftHistory

Represents the history of changes made to tracked fields on a time sheet. Available in API versions 46.0 and later.

ShiftOwnerSharingRule

Represents the rules for sharing a shift with user records other than the owner or anyone above the owner in the role hierarchy. Available in API versions 46.0 and later.

ShiftPattern

Represents a pattern of templates for creating shifts. This object is available in API version 51.0 and later.

ShiftPatternEntry

ShiftPatternEntry links a shift template to a shift pattern. This object is available in API version 51.0 and later.

ShiftSegment

Represents a scheduled activity within a shift. This object is available in API version 55.0 and later.

ShiftSegmentType

Represents a type of activity scheduled within a shift. This object is available in API version 55.0 and later.

ShiftShare

Represents a sharing entry on a field service shift. Available in API versions 46.0 and later.

ShiftStatus

Represents a shift, such as Tentative, Published, or Confirmed. Available in API versions 46.0 and later.

ShiftTemplate

Represents a template for creating shifts. This object is available in API version 51.0 and later.

Shipment

Represents the transport of inventory in field service or a shipment of order items in Order Management.

ShipmentItem

Represents an order item included in a shipment. This object is available in API version 51.0 and later.

ShippingCarrier

Shipping company or carrier responsible for transporting goods or packages. Examples include UPS, FedEx, and USPS. This object is available in API version 61.0 and later.

ShippingCarrierMethod

Shipping service provided by a shipping carrier. Examples include Ground, 2Day, and NextDay. Service depends on the range of transit times available for each carrier. This object is available in API version 61.0 and later.

ShippingConfigurationSet

Shipping configuration for a set of products in a store. This object is available in API version 59.0 and later.

ShippingConfigSetProduct

Represents a product associated with a shipping configuration. This object is available in API version 64.0 and later.

ShippingRateArea

A designated geographical area that's available for shipping. This object is available in API version 59.0 and later.

ShippingRateGroup

Available shipping rates based on shipping destination. This object is available in API version 59.0 and later.

SignupRequest

Represents a request for a new sign-up. SignupRequest isn't supported in sandbox instances and will result in an error. This object is available in API version 27.0 and later.

Site

Represents a public website that is integrated with an org. This object is available in API version 16.0 and later.

SiteDetail

Represents the details of a Salesforce site or Experience Cloud site. Available in API Version 38.0 and later.

SiteDomain

SiteDomain is a read-only object, and a one-to-many replacement for the Site.TopLevelDomain field. This object is available in API version 21.0, and has been deprecated as of API version 26.0. In API version 26.0 and later, use the Domain and DomainSite objects instead.

SiteEventLog

SiteEventLog stores details of Site.com requests. Requests can originate from the browser (UI). This object is available in API version 62.0 and later.

SiteHistory

Represents the history of changes to the values in the fields of a site. This object is generally available in API version 18.0 and later.

SiteIframeWhitelistUrl

Represents a list of external domains that you allow to frame your Salesforce site or Experience Cloud site pages. This object is available in API version 44.0 and later.

SiteRedirectMapping

Represents a site redirect from an external site to an Experience Cloud site. This object is available in API version 52.0 and later.

Skill

Represents a category or group of Chat users or service resources in Field Service or Workforce Engagement. This object is available in API version 24.0 and later.

SkillLevelDefinition

Represents a skill which can be acquired by completing enablement site (myTrailhead) modules. This object is available in API version 51.0 and later.

SkillLevelProgress

Represents training progress for a given user. This object is available in API version 51.0 and later.

SkillProfile

Represents a join between Skill and Profile. This object is available in API version 24.0 and later.

SkillRequirement

Represents a skill that is required to complete a particular task in Field Service, Omni-Channel, Salesforce Scheduler, or Workforce Engagement. Skill requirements can be added to pending service routing objects in Omni-Channel. They can be added to work types, work orders, and work order line items in Field Service and Lightning Scheduler. And they can be added to job profiles in Workforce Engagement. This object is available in API version 38.0 and later. You also can add skill requirements to work items in Omni-Channel skills-based routing using API version 42.0 and later.

SkillUser

Represents a join between Skill and User. This object is available in API version 24.0 and later.

SlaProcess

Represents an entitlement process associated with an Entitlement. This object is available in API version 19.0 and later.

Snippet

Represents a snippet, which is a container for rich text that can be reused across Account Engagement emails and email templates. This object is available in API version 47.0 and later.

SnippetAssignment

Represents a relationship between a snippet and a campaign. Assignments are required to use snippet content in Account Engagement emails and email templates. A snippet can be assigned to more than one campaign. This object is available in API version 47.0 and later.

SoapApiEventLog

SOAP API events contain details about your org's SOAP API request activity. This object is available in API version 61.0 and later.

SocialPersona

Represents a snapshot of a contact's profile on a social network such as Facebook or Twitter. This object is available in API version 22.0 and later.

SocialPost

Represents a snapshot of a post on a social network such as a Facebook or Twitter. This object is available in API version 23.0 and later.

Solution

Represents a detailed description of a customer issue and the resolution of that issue.

SolutionStatus

Represents the status of a Solution, such as Draft, Reviewed, and so on.

SolutionTag

Associates a word or short phrase with a Solution.

SOSDeployment

Represents the general settings for deploying SOS video call capability in a native mobile application. This object is available in API version 34.0 and later.

SOSSession

This object is automatically created for each SOS session and stores information about the session. This object is available in API versions 34.0 and later.

SOSSessionActivity

Captures information about specific events that occur during an SOS video call, such as when an SOS call begins or ends. This object is available in API version 34.0 and later.

StagedEmail

For internal use only.

Stamp

Represents a User Specialty. This object is available in API version 39.0 and later.

StampAssignment

Represents assignment of a User Specialty to a user. This object is available in API version 39.0 and later.

StandardInvocableActionType

Represents a collection of fields to set up granular user permissions for access to a standard invocable action in Flow Builder. This object is available in API version 60.0 and later.

StandardShippingRate

Standard shipping rate for a store. This object is available in API version 59.0 and later.

StaticResource

Represents a static resource that can be used in Visualforce markup.

StoreIntegratedService

Represents an association between an integration and a store. This object is available in API version 49.0 and later.

StreamingChannel

Represents a channel that is the basis for notifying listeners of generic Streaming API events. This object is available in API version 29.0 and later.

Salesforce Surveys Object Model

Learn about how Salesforce Surveys objects relate to one another in Salesforce.

Survey

Represents a survey.

SurveyEmailBranding

Represents the configuration settings for invitation emails sent to survey participants for a particular survey.

SurveyEngagementContext

Represents the context based on which a survey invitation was sent or a survey response was received. This object is available in API version 49.0 and later.

SurveyInvitation

Represents the invitation sent to a participant to complete the survey.

SurveyPage

Represents a page, such as the title page or a question page, in a survey.

SurveyQuestion

Represents a question in a survey.

SurveyQuestionChoice

Represents an answer choice that a participant can select for a survey question.

SurveyQuestionResponse

Represents a participant's answer to a specific question.

SurveyQuestionScore

Represents the aggregate of responses for the following question types: date, multiple choice, picklist, radio, ranking, rating, scoring, slider, and Net Promoter Score® (NPS®).

SurveyResponse

Represents information about a participant's response to a survey, such as the status of the response, the participant's location, and when the survey was completed.

SurveySubject

Represents a relationship between a survey and another object, such as an account or a case.

SurveyVersion

Represents a version of a survey.

SurveyVersionAddlInfo

Represents additional information about a survey version. This information defines the default settings of a survey version. This object is available in API version 49.0 and later.

SvcCatalogCategory

Represents a group of Service Catalog items by functional area. This object is available in API version 58.0 and later.

SvcCatalogCategoryItem

Represents an association between a Service Catalog item and category. Service catalog items can be grouped into categories. This object is available in API version 58.0 and later.

SvcCatalogFilterCriteria

Represents an eligibility rule that determines if a Service Catalog user has access to a catalog item. This object is available in API version 60.0 and later.

SvcCatalogItemDef

Represents a service catalog item that can be requested by a service catalog user. This object is available in API version 53.0 and later.

SvcCatalogRequest

Represents a request made by a user using the Service Catalog. Catalog builders use this object to report on Service Catalog activity. This object is available in API version 53.0 and later.

SvcCatalogReqRelatedItem

Represents an item related to a Service Catalog Request. This object is available in API version 53.0 and later.

Swarm

Represents a team of agents, Salesforce users, or Slack users in a Slack channel or thread dedicated to solving a problem. This problem can be related to a support case, incident, sales opportunity, or change request. This object is available in API version 55.0 and later.

SwarmMember

Represents a Salesforce member, such as an agent, of a swarm. This object is available in API version 55.0 and later.

TabDefinition

Represents a custom tab. Returns only the tabs that the current user has access to. This object is available in API version 43.0 and later.

TagDefinition

Defines the attributes of child Tag objects.

Task

Represents a business activity such as making a phone call or other to-do items. In the user interface, Task and Event records are collectively referred to as activities.

TaskPriority

Represents the importance or urgency of a task, such as High, Normal, or Low.

TaskRelation

Represents the relationship between a task and a lead, contacts, and other objects related to the task. If Shared Activities is enabled, this object doesn't support triggers, workflow, or data validation rules. This object is available in API version 24.0 and later.

TaskStatus

Represents the status of a task, such as Not Started, Completed, or Closed.

TaskTag

Associates a word or short phrase with a task .

TaskWhoRelation

Represents the relationship between a task and a lead or contacts. This object is available in API version 29.0 and later.

TaxEngine

A tax engine represents both an instance of a tax engine provider as well as the merchant credentials for that specific instance. When Subscription Management calculates tax on an order item, it sends a request through Subscription Management Tax Calculation API to an external tax engine. The Salesforce tax engine record contains information passed to the external tax engine, such as This object is available in API version 55.0 and later.

TaxEngineInteractionLog

A record of a communication with an external tax engine following a tax calculation request. This object is available in API version 55.0 and later.

TaxEngineProvider

Represents general information about a service that manages a tax engine, such as the ID of the tax adapter Apex class in Salesforce, and the engine's namespace prefix. Tax engine providers have a one-to-many relationship with tax engines, where the tax engine record represents a specific configuration of a tax engine that can be assigned to multiple order items. This object is available in API version 55.0 and later.

TaxGeoConfig

Represents a tax configuration associated with a GeoCountry. This object is available in API version 57.0 and later.

TaxPolicy

A tax policy contains a group of tax treatments, where each treatment represents parameters to determine how a particular product is taxed for a transaction line item. Tax policies are related to products, which pass the policy on to the resulting order items. When you activate an order, Subscription Management assigns a tax treatment to each order item based on the tax policy's DefaultTaxTreatmentId, then uses the tax treatment to calculate tax. This object is available in API version 55.0 and later.

TaxRate

Represents a tax rate for a tax code and country. This object is available in API version 56.0 and later.

TaxTreatment

A tax treatment contains details about how Salesforce and external engines calculate taxes, and the tax engine to use for tax calculation. The IsTaxable field determines whether tax is calculated for the product in the transaction. The tax code, tax engine, and product code are sent via API to the external tax calculation service. When you invoice an order item that has a tax treatment, the invoice line inherits the tax treatment from the order item's related billing schedule. The invoice line's TaxCode field is populated based on the code that the tax engine used for calculation. This object is available in API version 55.0 and later.

TenantScrAIPrmptInjection

Stores generative AI prompt injection data. This object is available in API version 65.0 and later.

TenantSecret

This object stores an encrypted organization-specific key fragment that's used with the primary secret (KDF seed) to produce org-specific data encryption keys. This object is available in API version 34.0 and later.

TenantSecurityAIGtwyUsage

Stores Einstein generative AI gateway usage data. This object is available in API version 65.0 and later.

TenantSecurityAlertRuleSelectedTenant

Stores information about a Security Center alert rule for tenants. This object is available for Security Center subscribers in API version 55.0 and later.

TenantSecurityApiAnomaly

Stores detected anomalies in how users typically make API calls. Fore more information, see Threat Detection. This object is available to Security Center subscribers in API version 53.0 and later.

TenantSecurityCertificate

Stores metric details related to public key certificate information. The certificate binds the public key to the identity of an entity. This object is available in API version 63.0 and later.

TenantSecurityConnectedApp

Stores the details for a connected app that was added to or removed from a Security Center tenant. This object is available to Security Center subscribers in API version 53.0 and later.

TenantSecurityConfigAgent

Stores metric details related to implemented Agentforce Agents This object is available in API version 65.0 and later.

TenantSecurityCredentialStuffing

Stores when a user successfully logs in to Salesforce during an identified credential stuffing attack. For more information, see Threat Detection. This object is available to Security Center subscribers in API version 53.0 and later.

TenantSecurityCustomMetricSetup

Represents the configuration for a custom metric within Security Center. This object is available in API version 61.0 and later.

TenantSecurityCustomMetricDetail

Stores TenantSecurityCustomMetricStat drill down details. This object is available in API version 62.0 and later.

TenantSecurityCustomMetricStat

Represents custom metric data within Security Center. This object is available in API version 61.0 and later.

TenantSecurityEncryptedField

Represents fields encrypted under your Shield Platform Encryption policy. This object is available in API version 61.0 and later.

TenantSecurityGuestUserAnomaly

Represents metric details for guest user anomaly events detected by Threat Detection. This object is available in API version 60.0 and later.

TenantSecurityEncryptionPolicy

Stores tenant encryption policy status. This object is available in API version 58.0 and later.

TenantSecurityFeature

Stores org features across all tenants in Security Center. This object is available in API version 57.0 and later.

TenantSecurityHealthCheckBaselineTrend

Stores metric details related to Health Check baseline settings. The Health Check detail page in Security Center displays scores and settings for all your tenants in one place. Use this object to get details about which metrics are collected and for which tenants, and changes made to the Health Check baseline. This object is available to Security Center subscribers in API version 54.0 and later.

TenantSecurityHealthCheckDetail

Stores the details of Health Check scores for a connected tenant. The Health Check detail page in Security Center displays scores and settings for all your tenants in one place. Use this object to get settings and risks per tenant on a selected date. This object is available to Security Center subscribers in API version 53.0 and later.

TenantSecurityHealthCheckTrend

Stores the history of Security Health Check scores for a connected tenant within Security Center. Health Check in Security Center displays Health Check scores and the average risk settings for all your tenants in one place. This object belongs to the parent tenant and stores Health Check data pushed from child tenants. This object is available for Security Center subscribers in API version 53.0 and later.

TenantSecurityLicense

Stores license usage information within Security Center. This object is available in API version 59.0 and later.

TenantSecurityLogin

Stores the login details of a single user to a tenant, grouped by date and type. You can query this object to find out how many times the user logged in to a specific tenant using a specific login type (for example, username/password or SSO). This object is available to Security Center subscribers in API version 53.0 and later.

TenantSecurityLoginIpRangeTrend

Stores details of changes related to login IP ranges in Security Center. This object is available in API version 59.0 and later.

TenantSecurityMobilePolicyTrend

Stores metrics related to changes in mobile security policies across all tenants in Security Center. This object is available to Security Center subscribers in API version 54.0 and later.

TenantSecurityMonitorMetric

Stores the daily count and daily count change for a metric within Security Center. This object is available to Security Center subscribers in API version 53.0 and later.

TenantSecurityNotification

Stores information about notifications that were triggered in Security Center as a function of the Alerts feature. For more information, see Create Alerts for Security Changes. This object is available to Security Center subscribers in API version 54.0 and later.

TenantSecurityNotificationRule

Stores an alert configured in the Security Center Alerts feature to notify recipients of changes made to security settings. For more information, see Create Alerts for Security Changes. This object is available to Security Center subscribers in API version 53.0 and later.

TenantSecurityMetricDetailLink

Represents the link between the metric count and metric drill down. This object is available in API version 48.0 and later.

TenantSecurityPackage

Stores details about managed and unmanaged packages that are added, updated, or removed from a tenant in Security Center. Use this object to identify whether new packages are installed, upgraded, or uninstalled from your connected tenants. This object is available to Security Center subscribers in API version 53.0 and later.

TenantSecurityPolicy

Stores security policies created and deployed in Security Center. For more information, see Define and Deploy Security Policies. This object is available to Security Center subscribers in API version 54.0 and later.

TenantSecurityPolicyDeployment

Stores the status of deployments of a Security Center policy on a tenant. For more information, see Define and Deploy Security Policies. This object is available to Security Center subscribers in API version 54.0 and later.

TenantSecurityPolicySelectedTenant

Stores the list of tenants selected for a Security Center policy. For more information, see Define and Deploy Security Policies. This object is available to Security Center subscribers in API version 54.0 and later.

TenantSecurityReportAnomaly

Stores anomalies in how users run or export reports, including unsaved reports, as detected by Threat Detection. For more information, see Threat Detection. This object is available to Security Center subscribers in API version 53.0 and later.

TenantSecuritySessionHijacking

Stores information about session hijacking events as detected by Threat Detection within connected tenants in Security Center. For more information, see Threat Detection. This object is available for Security Center subscribers in API version 53.0 and later.

TenantSecurityTenantInfo

Stores information on changes related to the tenant history. This object is available in API version 56.0 and later.

TenantSecurityTransactionPolicyTrend

Stores changes to the count of Transaction Security Policies for a connected tenant within Security Center. This object is available for Security Center subscribers in API version 55.0 and later.

TenantSecurityTrigTransactionSecurityPol

Stores metric details related to Transaction Security Policy triggering events. This object is available in API version 63.0 and later.

TenantSecurityTrustedIpRangeTrend

Stores details of changes related to trusted IP ranges in Security Center.This object is available for Security Center subscribers in API version 54.0 and later.

TenantSecurityUserActivity

Stores details related to how a user interacts with a tenant. Use this object to determine whether to reevaluate a user's access to your org for security purposes. You can check whether a user has never logged in, hasn't been active for 90 days, has a frozen account, or isn't using multi-factor authentication. This object is available to Security Center subscribers in API version 53.0 and later.

TenantSecurityUserPerm

Stores information on permissions assigned to a user. Use this object to see which tenants a user is assigned to. This object is available to Security Center subscribers in API version 53.0 and later.

TenantUsageEntitlement

Represents a data structure that contains information about the features or functionalities that a Salesforce org has access to. This object is available in API version 28.0 and later.

Territory

Represents a flexible collection of accounts and users where the users have at least read access to the accounts, regardless of who owns the accounts. Available if Sales Territories has been enabled.

TerritoryMgmtObjectConfig

Represents territory management settings and defaults for a particular object. This object is available in API version 56.0 and later.

Territory2

Represents a sales territory. Available if Sales Territories has been enabled.

Territory2AlignmentLog

Represents the start and end status of a territory assignment rule run job. This object is available in API version 54.0 and later.

Territory2Model

Represents a territory model. Available if Sales Territories has been enabled.

Territory2ModelHistory

Represents the history of changes to the values in the fields on a territory model. Available if Sales Territories has been enabled.

Territory2ObjectExclusion

Represents the objects that aren't included in territory assignment rule runs, even when they meet assignment rule criteria. This object is available in API version 54.0 and later.

Territory2ObjSharingConfig

Represents the sharing access level of objects assigned to a particular territory. This object is available in API version 56.0 and later.

Territory2Type

Represents a category for territories (Territory2). Every Territory2 must have a Territory2Type. Available only if Sales Territories has been enabled for your organization.

TerritoryAdminAssignment

Represents designated team members who can administer specific territories and their descendants. This object is available in API version 63.0 and later.

TestSuiteMembership

Associates an Apex class with an ApexTestSuite. This object is available in API version 36.0 and later.

ThirdPartyAccountLink

Represents the list of external users who authenticated using an authentication provider. This object is available in API version 32.0 and later.

ThreatDetectionFeedback

Represents feedback provided by a user about a Threat Detection event that occurred in your org. The feedback specifies whether the event was malicious, suspicious, not a threat, or unknown. Each ThreatDetectionFeedback object is associated with one of these Threat Detection storage events: ApiAnomalyEventStore, CredentialStuffingEventStore, ReportAnomalyEventStore, or SessionHijackingEventStore. This object is available in API version 49.0 and later.

TimeSheet

Represents a schedule of a service resource's time in Field Service or Workforce Engagement. This object is available in API v47.0 and later.

TimeSheetEntry

Represents a span of time that a service resource spends on a field service task. This object is available in API version 47.0 and later.

TimeSlot

Represents a period of time on a specified day of the week during which work can be performed in Field Service, Salesforce Scheduler, or Workforce Engagement. Operating hours consist of one or more time slots. This object is available in API version 38.0 and later.

TimeSlotHistory

Represents the history of changes made to tracked fields on a time slot. This object is available in API version 38.0 and later.

TodayGoal

Sets the quarterly sales goal on the performance chart. This object is available in API version 35.0 and later.

Topic

Represents a topic on a Chatter post or record. This object is available in API version 28.0 and later.

TopicAssignment

Represents the assignment of a topic to a specific feed item, record, or file. This object is available in API version 28.0 and later.

TopicLocalization

Represents the translated version of a topic name. Topic localization applies only to navigational and featured topics in Experience Cloud sites. This object is available in API version 33.0 and later.

TopicUserEvent

Represents an action (such as comment, post, like, or share) made by a user on a topic. This object is available in API version 42.0 and later.

TopInsight

For internal use only.

TransactionSecurityPolicy

Represents a transaction security policy definition.

TransactionSecurityEventLog

Transaction Security event logs contain details about policy execution. Legacy transaction security policy details are supported in API version 38.0 and later. Enhanced transaction security policy details are supported in API version 61.0 and later.

Translation

The Translation object represents the languages enabled for translation in your Salesforce org. This object is available in API version 47.0 and later.

TravelMode

Represents a travel mode used for travel time calculations. The records include information about the type of transportation (such as Car or Walking), whether a vehicle can take toll roads, and whether a vehicle is transporting hazardous materials. This object is available in API version 54.0 and later.

TwoFactorInfo

Stores a user's secret for multi-factor operations. Use this object when customizing multi-factor authentication in your organization. (Note that multi-factor authentication was formerly called two-factor authentication.) This object is available in API version 32.0 and later.

TwoFactorMethodsInfo

Stores information about which identity verification methods a user has registered. This object is available in API version 37.0 and later.

TwoFactorTempCode

Stores information about a user's temporary verification code for confirming their identity when logging in. This object is available in API version 37.0 and later.

UiAgentInteractionEventLog

This log tracks client side interactions and events with the Agentforce panel. It is limited to Salesforce Lightning Experience, Salesforce Mobile, and Conversation Preview within Agentforce Builder. This object is available in API version 65.0 and later.

UiFormulaCriterion

Represents a filter that helps define component visibility on a Lightning page. This object is available in API version 47.0 and later.

UiFormulaRule

Represents a set of one or more filters that define the conditions under which a component displays on a Lightning page. This object is available in API version 47.0 and later.

UiTelemetryNavTmEventLog

UI Telemetry Navigation Timing events capture network performance metrics related to page navigation. The event extends from the UI Telemetry Resource Timing Event on page 2379 and includes requests initiated with either the Fetch API or the XMLHttpRequest API. This object is available in API version 64.0 and later.

UiTelemetryRsrcTmEventLog

UI Telemetry Resource Timing events capture network performance metrics related to loading an application's resources. The event includes requests initiated with either the Fetch API or the XMLHttpRequest API. This object is available in API version 64.0 and later.

UndecidedEventRelation

Represents event participants (invitees or attendees) with the status `Not Responded` for a given event. This object is available in API versions 29.0 and later.

UnifiedActivity

Represents an activity that is automatically captured from Einstein Activity Capture (EAC) or other activity data, such as calls, manually logged tasks, and emails. This object consists of fields common to all types of activity-related objects such as Event, Task, EmailMessage, VoiceCall, VideoCall, and so on. This object is available for reports and dashboards in the Winter '24 release and later.

UnifiedActivityInsight

Represents an insight related to a unified activity. This object is available for reports and dashboards in the Winter '24 release and later.

UnifiedActivityParticipant

Represents a participant in an activity. For example, a participant in a voice call is someone who initiated the call or someone who received the call.This object is available for reports and dashboards in the Winter '24 release and later.

UnifiedActivityRelation

Represents a relationship between an activity and a related record that's a target or topic of the activity. For example, a related record can be an opportunity, account, and so on. This object is available for reports and dashboards in the Winter '24 release and later.

UnifiedActvtyInsightKeyword

Represents a keyword in a communication that triggered the activity insight. This object is available for reports and dashboards in the Winter '24 release and later.

UnifiedEmail

Represents an email that was captured or synced from an EmailMessage or Task record. This object is available for reports and dashboards in the Winter '24 release and later.

UnifiedEmailParticipant

Represents a participant in an email. This object is available for reports and dashboards in the Winter '24 release and later.

UnifiedMeeting

Represents a meeting that was captured or synced from an Event record. This object is available for reports and dashboards in the Winter '24 release and later.

UnifiedMeetingParticipant

Represents a participant in a meeting. This object is available for reports and dashboards in the Winter '24 release and later.

UnifiedTask

Represents a business activity such as a to-do item. This object is available for reports and dashboards in the Winter '24 release and later.

UnifiedTaskParticipant

Represents a participant in a task. This object is available for reports and dashboards in the Winter '24 release and later.

UnifiedVideoCall

Represents a video call that is captured or synced from the VideoCall or Task record. This object is available for reports and dashboards in the Winter '24 release and later.

UnifiedVideoCallParticipant

Represents a participant in a video call. This object is available for reports and dashboards in the Winter '24 release and later.

UnifiedVoiceCall

Represents a voice call that is captured or synced from a VoiceCall or Task record. This object is available for reports and dashboards in the Winter '24 release and later.

UnifiedVoiceCallParticipant

Represents a participant in a voice call. This object is available for reports and dashboards in the Winter '24 release and later.

UnitOfMeasure

Defines the units and systems of units used to express and account for quantities. This object is available in API version 61.0 and later.

UriEventLog

URI events contain details about user interaction with the web browser UI. This object is available in API version 61.0 and later.

UsageImpactFactor

Represents a collection of fields to set up the Usage Impact Factors used across jurisdictions and programs.This object is available in API version 58.0 and later.

UsageImpactGroup

Represents a collection of fields to set up the Usage Impact Groups used across jurisdictions and programs. This object is available in API version 58.0 and later.

UsageImpactGroupFactor

Represents a junction between an Usage Impact Group version and Usage Impact Factor. This object is available in API version 58.0 and later.

UsageImpactGroupPgmMeasure

Represents a junction between the program, product, and Usage Impact Group version. This object is available in API version 58.0 and later.

UsageImpactGroupVersion

Represents a collection of fields to set up the versions of Usage Impact Groups. This object is available in API version 58.0 and later.

User

Represents a user in your organization.

UserAccessChange

Represents a change related to user access. This object is available in API version 57.0 and later.

UserAccessPolicy

Represents a user access policy. This object is available in API version 57.0 and later.

UserAccountTeamMember

Represents a User on the default account team of another User.

UserAppInfo

Stores the last Lightning app logged in to. If the user hasn't logged into Salesforce or if the user lost access to the last accessed app, the UserAppInfo object stores a Null value. This object is available in API version 38.0 and later.

UserAppMenuCustomization

Represents an individual user's settings for items in the app menu or App Launcher. This object is available in API version 35.0 and later.

UserAppMenuItem

Represents the organization-wide settings for items in the app menu or App Launcher that the requesting user has access to in Setup. This object is available in API version 35.0 and later.

UserAuthCertificate

Represents a user authentication certificate in your org. A user certificate is a unique PEM-encoded X.509 digital certificate to authenticate individual users to your org. This object is available in API version 45.0 and later.

UserConfigTransferButton

Represents the association between a Chat configuration and a live chat button. This association allows users associated with a specific configuration to transfer chats to a button queue.

UserConfigTransferSkill

Represents the association between a Chat configuration and a skill. This association allows users associated with a specific configuration to transfer chats to agents who have that skill.

UserCustomBadge

Represents a custom badge for a user. This object is available in API version 38.0 and later.

UserCustomBadgeLocalization

Represents the translated version of a custom badge for a user. This object is available in API version 38.0 and later.

UserDailyMetric

Represents the daily engagement metrics for a user. This object is available in API version 52.0 and later.

UserDailyMetricOwnerSharingRule

Represents the rules for sharing the user daily metric with users other than the owner.

UserDefinedLabel

Represents a label created by a user to help organize, track, and find records. This object is available in API version 61.0 and later.

UserDefinedLabelAssignment

Represents a relationship between a record label and the item the user assigned it to. This object is available in API version 61.0 and later.

UserDevice

Represents information unique to a device. Available in API version 43.0 and later.

UserDeviceApplication

Represents information on applications installed on a device that is accessing Salesforce. Available in API version 43.0 and later.

UserDeviceHistory

Represents tracking information on the UserDevice sObject. This object is available in API version 50.0 and later.

UserEmailCalendarSync

Represents the user assignments of an Einstein Activity Capture configuration. This object is available in API version 49.0 and later.

UserEmailPreferredPerson

Represents a mapping for a user's preferred record for an email address when multiple records match an email field.This object is available in API version 44.0 and later.

UserEmailPreferredPersonShare

Represents a sharing entry on a UserEmailPreferredPerson object. Sharing is not customizable for UserEmailPreferredPerson records.This object is available in API version 44.0 and later.

UserLicense

Represents a user license in your organization. A user license entitles a user to specific functionality and determines the profiles and permission sets available to the user.

UserListView

Represents the customizations a user made to a list view. This object is available in API version 32.0 and later.

UserListViewCriterion

Represents the criterion for a user's customized list view. The criterion consists of the filters or sort order a user added to a list view for the Salesforce Mobile app. This object is available in API version 32.0 and later.

UserLocationAssignment

Represents the assignment between a location and a user. This object is available in API version 57.0 and later.

UserLogin

Represents the settings that affect a user's ability to log into an organization. To access this object, you need the `UserPermissions.ManageUsers` permission. This object is available in API version 29.0 and later.

UserMembershipSharingRule

Represents the rules for sharing user records from a source group to a target group. A user record contains details about a user. Users who are members of the source group can be shared with members of the target group. The source and target groups can be based on roles, portal roles, public groups, or territories. This object is available in API version 26.0 and later.

UserMonthlyMetric

Represents the monthly engagement metrics for a user. This object is available in API version 52.0 and later.

UserMonthlyMetricOwnerSharingRule

Represents the rules for sharing the user monthly metric with users other than the owner.

UserPackageLicense

Represents a license for an installed managed package, assigned to a specific user. This object is available in API version 31.0 and later.

UserPermissionAccess

Represents the permissions accessibility for a current user. Available in API version 41.0 and later.

UserPrioritizedRecord

Represents records that Pipeline Inspection, Account Intelligence, Contact Intelligence, and Lead Intelligence users flag as important for tracking in pipeline and intelligence views and filters. This object is available in API version 53.0 and later.

UserPreference

Represents a functional preference for a specific user in your organization.

UserProfile

Represents a Chatter user profile.

UserProvAccount

Represents information that links a Salesforce user account with an account in a third-party (target) system, such as Google, for users of connected apps with Salesforce user provisioning enabled. This object is available in API version 33.0 and later.

UserProvAccountStaging

Temporarily stores user account information while a user completes the User Provisioning Wizard. This information that is stored in the UserProvAccount object when you click the button to collect and analyze accounts on the target system.

UserProvMockTarget

Represents an entity for testing user data before committing the data to a third-party system for user provisioning.

UserProvisioningConfig

Represents information for a flow to use during a user provisioning request process, such as the attributes for an update. This object is available in API version 34.0 and later.

UserProvisioningLog

Represents messages generated during the process of provisioning users for third-party applications. This object is available in API version 33.0 and later.

UserProvisioningRequest

Represents an individual provisioning request to create, update, or delete a single user account in a third-party service system (or another Salesforce organization). This object is available in API version 33.0 and later.

UserRecordAccess

Represents a user's access to a set of records. This object is read only and is available in API version 24.0 and later. This object doesn't consider whether a user's access is blocked by a restriction rule.

UserRole

Represents a user role in your organization.

UserServicePresence

Represents a presence user's real-time presence status. This object is available in API version 32.0 and later.

UserSetupEntityAccess

Represents the enabled custom permissions of the running user. This object is available in API version 48.0 and later.

UserShare

Represents a sharing entry on a user record. This object is available in API version 26.0 and later.

UserSharedFeature

For internal use only.

UserTeamMember

Represents a single User on the default opportunity team of another User.

UserTerritory

Represents a User who has been assigned to a Territory.

UniqueQueryEventLog

Unique Query events capture specific search queries (SOQL), filter IDs, and report IDs that are processed, along with the underlying database queries (SQL). This object is available in API version 65.0 and later.

UserTerritory2Association

Represents an association (by assignment) between a territory and a user record. Available only if Sales Territories has been enabled.

UserTerritory2AssocLog

Represents a log of when a user is assigned and unassigned from a territory. This object is available in API version 57.0 and later.

UserUIPreference

Represents user preferences for Salesforce components. This object is available in API version 63.0 and later.

UserWorkList

Represents a list of work items in the My List tab for Sales Engagement users.

UserWorkListItem

Represents an individual work item in the My List tab for Sales Engagement users.

VendorCallCenterStatusMap

Stores a mapping between a call center vendor agent status and a Salesforce presence status for an associated call center. This object is available in API version 54.0 and later.

VerificationHistory

Represents the past six months of your org users' attempts to verify their identity. This object is available in API version 36.0 and later.

VisualforceAccessMetrics

Represents summary statistics for Visualforce pages.

VisualforceRequestEventLog

Visualforce Request events contain details of Visualforce requests. Requests can originate from the browser (UI). This object is available in API version 61.0 and later.

VideoCall

Represents a video call.

VideoCallParticipant

Represents a participant in a video call.

VideoCallRecording

Represents a recording from a video call, such as a video recording, a voice recording, or a transcript.

VoiceCall

Represents a call in Service Cloud Voice, Sales Dialer, or other supported voice connectors. For Service Cloud Voice, this can be a phone or Voice over Internet Protocol (VoIP) call. This object is available in API version 40.0 and later.

VoiceCallMetrics

Represents metrics for a VoiceCall lifecycle event, aggregated daily. This object is available in API version 56.0 and later.

VoiceCallList

Represents a prioritized list of numbers to call.

VoiceCallListItem

Represents a single phone number in a prioritized call list.

VoiceCallQualityFeedback

Represents feedback given by a Sales Dialer user about the quality of a VoiceCall .

VoiceCallRecording

Represents a call recording in Service Cloud Voice and Sales Dialer. Call recordings for Service Cloud Voice with Amazon Connect and for Service Cloud Voice with Partner Telephony from Amazon Connect are stored in S3 buckets on your Amazon Web Services (AWS) account and can be accessed via AWS. Call recordings for Sales Dialer are saved as files in Salesforce.

VoiceCoaching

Represents a call that is using call monitoring.

VoiceLocalPresenceNumber

Represents a phone number with the same area code as the person who's being called.

VoiceMailContent

Represents a voicemail message left by a caller to the context user.

VoiceMailGreeting

Represents a custom greeting message that plays upon reaching a user's voicemail. This object is available in API version 41.0 and later.

VoiceMailMessage

Represents a prerecorded voicemail message.

VoiceOrgSetting

Represents the org's customized voice settings. This object is available in API version 46.0 and later.

VoiceUserLine

Represents a user's forwarding phone number.

VoiceUserPreferences

Represents the number the user displays when making outbound calls. This object is available in API version 41.0 and later.

VoiceVendorInfo

Represents information about the Service Cloud Voice or Sales Dialer provider's vendor.

VoiceVendorLine

Represents a user's phone number reserved with the vendor.

Vote

Represents a vote that a user has made on a Knowledge Article, Idea, or Reply.

WarrantyTerm

Represents warranty terms defining the labor, parts, and expenses covered, along with any exchange options, provided to rectify issues with products. This object is available in API version 50.0 and later.

WaveAutoInstallRequest

Provides access to the concrete object that represents a CRM Analytics auto-install request. The auto-install request tracks the progress of CRM Analytics applications created from CRM Analytics templates by the automated process user. This object is available in API version 38.0 and later.

WebCart

Represents an online shopping cart for a store built with B2B Commerce or D2C Commerce, with total amounts for products, shipping and handling, and taxes. This object is available in API version 49.0 and later.

WebCartAdjustmentBasis

Coupons that trigger promotions for the cart. When a customer tries to add a coupon to the cart, the store looks for promotions associated with the coupon. If a promotion results in a price adjustment, a WebCartAdjusmentBasis record is created. This object is available in API version 54.0 and later.

WebCartAdjustmentGroup

Group of price adjustments for a cart. This object is available in API version 52.0 and later.

WebCartHistory

WebCartHistory represents the history of changes to the values in the fields of the `WebCart` object.

WebLink

Represents a custom link to a URL or Scontrol.

WebLinkLocalization

Represents the translated value of the field label for a custom link to a URL or s-control when the Translation Workbench is enabled for your organization.

WebStore

Represents a B2B or D2C store. This object is available in API version 49.0 and later.

WebstoreBuyerGroup

Associates a webstore with a buyer group. Supports dynamically changing locales when buyers shop in orgs that are enabled for multiple languages and currencies. This object is available in API version 58.0 and later.

WebStoreCatalog

Represents the collection of products associated with a store. This object is available in API version 49.0 and later.

WebStoreInventorySource

Used to configure the inventory source for a webstore. This object is available in API version 57.0 and later.

WebStoreMessageContent

Represents the assocation of a managed content message record in CMS to a web store, along with other attributes that specify the application and intent of the message content. This object is available in API version 61.0 and later.

WebStoreNetwork

Represents the relationship between a web store and an experience site. This object is available in API version 49.0 and later.

WebStorePricebook

Represents a store price book used in Lightning B2B Commerce.  This object is available in API version 48.0 and later.

WebStoreSearchProdSettings

Search settings for a WebStore product search. This object is available in API version 47.0 and later.

WebStoreShare

Represents a sharing entry on a B2B or D2C store. This object is available in API version 45.0 and later.

Wishlist

Represents a buyer-created list of `WishlistItem`s in a store that's built with B2B Commerce on Lightning. Available in API version 49.0 and later.

WishlistItem

Represents an item on a `Wishlist` in a store built with B2B Commerce for Lightning. Available in API version 49.0 and later.

WorkAccess

Used to grant or restrict user access to give badge definitions. Each badge definition record must have one WorkAccess record.

WorkAccessShare

Used to control Givers of WorkBadgeDefinition records.

WorkBadge

Represents information about who the badge was given to and which badge was given. A WorkBadge record is created for each recipient of a WorkBadgeDefinition.

WorkBadgeDefinition

Represents the attributes of a badge including the badge name, description, and image. Each WorkBadge record must have a lookup to a WorkBadgeDefinition since badge attributes (like badge name) are derived from the WorkBadgeDefinition object.

WorkCapacityAvailability

Represents the available work capacity for a specific time and service territory. This object is available in API version 59.0 and later.

WorkCapacityLimit

Represents the capacity limit in a specific service territory for a workstream or for the whole service territory in a given period. This object is available in API version 59.0 and later.

WorkCapacityUsage

Represents the capacity usage in a specific service territory for a workstream or for the whole service territory in a given period. This object is available in API version 59.0 and later.

WorkCoaching

Represents a single coaching relationship between two users. One of the users is defined as the coach and the other is defined as a coachee. WorkCoaching is feed-enabled so there is a private feed available to the coach and coachee.

WorkDemographic

Represents the field values used to specify slices in the workload forecasting and capacity planning. This object is available in API version 49.0 and later.

WorkFeedback

Represents the answer to a question that a person was asked via a feedback request. Also used to store offered feedback without linking it to a particular question.

WorkFeedbackQuestion

Represents a free-form text type or multiple choice question within a set of questions.

WorkFeedbackQuestionSet

Represents a set of questions being asked. The question set is used to link all the individual requests where different recipients were asked the same set of questions on the same subject.

WorkFeedbackRequest

Represents a single feedback request on a subject or topic (question) to a single recipient in the feedback application. In the case of offered feedback, WorkFeedbackRequest represents feedback that is offered about a subject. In the performance application, WorkFeedbackRequest represents a request for feedback on a set of questions from a question set, on a subject—for the recipient to complete and submit.

WorkforceCapacity

Represents the time series for actual or forecasted workforce allocation. This object is available in API version 51.0 and later.

WorkforceCapacityUnit

Represents the number of resources allocated or needed for a specific set of work items at a timestamp within a specific duration. This object is available in API version 51.0 and later.

WorkGoal

Represents the components of a goal, such as its description and associated metrics. This object has been deprecated as of API version 35.0. Use the Goal object to query information about WDC goals.

WorkGoalCollaborator

Represents collaborators on a WorkGoal object. This doesn't include WorkGoal followers, which is handled by Chatter Feed Follow functionality. This object has been deprecated as of API version 35.0. Use the Goal object to query information about WDC goals.

WorkGoalCollaboratorHistory

Represents the history of changes to the values in the fields in a WorkGoalCollaborator object. Access is read-only.

WorkGoalHistory

Represents the history of changes to the values in the fields of a WorkGoal. Access is read-only. This object has been deprecated as of API version 35.0. Use the GoalHistory object to query historical information for WDC goals.

WorkGoalLink

Represents the relationship between two goals (many to many relationship). This object has been deprecated as of API version 35.0. Use the GoalLink object to query information about the relationship between two WDC goals.

WorkGoalShare

Represents a sharing entry on a WorkGoal object. This object has been deprecated as of API version 35.0. Use the GoalShare object to query information about sharing for WDC goals.

Workload

Represents the time series for work item volume and average handle time from aggregation and forecasting processes. This object is available in API version 49.0 and later.

WorkloadUnit

Represents the number of work items and average handle time in a specific time interval. This object is available in API version 49.0 and later.

WorkOrder

Represents field service work to be performed for a customer. This object is available in API version 36.0 and later.

WorkOrderHistory

Represents the history of changes made to tracked fields on a work order. This object is available in API version 36.0 and later.

WorkOrderLineItem

Represents a subtask on a work order in field service. This object is available in API version 36.0 and later.

WorkOrderLineItemHistory

Represents the history of changes made to tracked fields on a work order line item. This object is available in API version 36.0 and later.

WorkOrderLineItemStatus

Represents a possible status of a work order line item in field service.

WorkOrderShare

Represents a sharing entry on a work order. This object is available in API version 36.0 and later.

WorkOrderStatus

Represents a possible status of a work order in field service.

WorkPerformanceCycle

Represents feedback that is gathered to assess the performance of a specific set of employees.

WorkPlan

Represents a work plan for a work order or work order line item. This object is available in API version 52.0 and later.

WorkPlanSelectionRule

Represents a rule that selects a work plan for a work order or work order line item. This object is available in API version 52.0 and later.

WorkPlanTemplate

Represents a template for a work plan. This object is available in API version 52.0 and later.

WorkPlanTemplateEntry

Represents an object that associates a work step template with a work plan template. This object is available in API version 52.0 and later.

WorkReward

Used to store reward codes tied to a Reward Fund. Reward Funds must have at least one WorkReward record.

WorkRewardFund

Represents a Reward Fund and describes the Reward Fund attributes.

WorkRewardFundType

Represents the type of WorkRewardFund object.

WorkStep

Represents a work step in a work plan. This object is available in API version 52.0 and later.

WorkStepStatus

Represents a picklist for a status category on a work step. This object is available in API version 52.0 and later.

WorkStepTemplate

Represents a template for a work step. This object is available in API version 52.0 and later.

WorkThanks

Represents the source and message of a thanks post.

WorkType

Represents a type of work to be performed in Field Service and Lightning Scheduler. Work types are templates that can be applied to work order or work order line items. This object is available in API version 38.0 and later.

WorkTypeGroup

Represents a grouping of work types used to categorize types of appointments available in Lightning Scheduler, or to define scheduling limits in Field Service. This object is available in API version 45.0 and later.

WorkTypeGroupMember

Represents the relationship between a work type and the work type group it belongs to. This object is available in API version 45.0 and later.

# AbnExperiment

Represents an A/B/n experiment that's used with Marketing Cloud Next content, Experience Cloud websites, and platform automations. This object is available in API version 63.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `DataSpaceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Unique identifier that refers to the data space where an experiment's resources originate. Required.<br>This field is a relationship field.<br>**Relationship Name**<br>DataSpace<br>**Refers To**<br>DataSpace |
| `Description` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Text description of the experiment. Optional. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>System or user-generated API name for the experiment. Required. |
| `LastAnalyzed` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Time and date of last analysis. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp that indicates the last time an experiment was referenced by another resource. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp that indicates the last time a user viewed the experiment. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Text label that identifies the experiment. Required. |
| `PersonalizationSchemaEnum` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Picklist value that indicates the type of personalization schema, which is related to where a personalization decision is created.<br>Possible values are:<br>• `DecisionDefined`<br>• `ExperienceVariation`<br>• `FlowPath` |
| `PersonalizationSchemaId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Unique identifier that refers to the schema that's related to the experiment.<br>This field is a relationship field.<br>**Relationship Name**<br>PersonalizationSchema<br>**Refers To**<br>PersonalizationSchema |
| `PrimaryMetricId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Unique identifier that refers to engagement signal metrics, which are used to measure an experiment.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>PrimaryMetric<br>**Refers To**<br>EngagementSignalCmpndMetric, EngagementSignalMetric |
| `ProfileDataGraphId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Unique identifier that refers to the profile data graph that's used.<br>This field is a relationship field.<br>**Relationship Name**<br>ProfileDataGraph<br>**Refers To**<br>DataGraph |
| `ScheduleFrequencyInMinutes` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number of minutes that defines when personalized content can be made available. |
| `Source` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates where the experiment was created.<br>Possible values are:<br>• `BlockBuilder`—CMS content editors<br>• `ExperienceBuilder`—Experience Site Builder<br>• `FlowBuilder`<br>• `PersonalizationApp` |
| `SourceRecordId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Unique identifier that refers to the specific record that contains the experiment.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>SourceRecord<br>**Refers To**<br>FlowRecordElement, ManagedContent |

| Field | Details |
| --- | --- |
| `StartedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp that indicates when the experiment began or is scheduled to begin. |
| `State` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Picklist value that indicates the current state of the experiment.<br>Possible values are:<br>• `Archived`<br>• `Created`<br>• `Started`<br>• `Stopped`<br>The default value is `Created`. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Picklist value that indicates the current status of the experiment while an action is being performed.<br>Possible values are:<br>• `Active`<br>• `CreateError`<br>• `DeleteError`<br>• `Deleting`<br>• `EditError`<br>• `Processing`<br>The default value is `Processing`. |
| `StoppedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Timestamp that indicates when the experiment ended or is scheduled to end. |
| `WinnerSelectionMode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Possible values are:<br>• `Automatic`<br>• `Manual`<br>The default value is `Manual`. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AbnExperimentChangeEvent on page 68**
Change events are available for the object.

**AbnExperimentFeed on page 55**
Feed tracking is available for the object.

**AbnExperimentHistory on page 63**
History is available for tracked fields of the object.

**AbnExperimentOwnerSharingRule on page 65**
Sharing rules are available for the object.

**AbnExperimentShare on page 67**
Sharing is available for the object.

# AbnExperimentCohort

Represents the specified audience that's participating in an A/B/n experiment. This object is available in API version 63.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

# Fields

| Field | Details |
| --- | --- |
| `AbnExperimentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Unique identifier that refers to a related experiment.<br>This field is a relationship field.<br>**Relationship Name**<br>AbnExperiment<br>**Relationship Type**<br>Parent-detail<br>**Refers To**<br>AbnExperiment (the parent object) |
| `AllocationWeight` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Percentage of an audience to experience the selected part of the experiment. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Three letter ISO currency codes for supported currencies. Optional.<br>Possible values are:<br>• `USD`—U.S. Dollar |
| `DataSpaceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Unique identifier that refers to the data space where an experiment cohort's resources originate. Required.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>DataSpace<br>**Refers To**<br>DataSpace |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Text description of the experiment. Optional. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>System or user-generated API name for the experiment. Required. |
| `IsControl` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Whether the cohort is used as the control group that performance is checked against.<br>The default value is `false`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Text label that identifies the experiment cohort. Required. |
| `PersonalizerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Unique identifier that refers to the personalizer that's related to the experiment cohort.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Personalizer<br>**Refers To**<br>PersonalizationRecommender |

## Usage

Use this object to describe experiment cohorts or to change allocation weights.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AbnExperimentCohortChangeEvent on page 68**
Change events are available for the object.

**AbnExperimentCohortFeed on page 55**
Feed tracking is available for the object.

**AbnExperimentCohortHistory on page 63**
History is available for tracked fields of the object.

**AbnExperimentCohortOwnerSharingRule on page 65**
Sharing rules are available for the object.

**AbnExperimentCohortShare on page 67**
Sharing is available for the object.

# AcceptedEventRelation

Represents event participants (invitees or attendees) with the status `Accepted` for a given event.

This object is available in API versions 29.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
| --- | --- |
| `EventId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the ID of the event.<br>This is a relationship field.<br>**Relationship Name**<br>Event<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Event |
| `RelationId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the ID of the invitee.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Relation<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Calendar, Contact, Lead, User |
| `RespondedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates the most recent date and time when the invitee accepted an invitation to the event. |
| `Response` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the content of the response field. Label is `Comment`. |

| Field Name | Details |
| --- | --- |
| `Type` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates whether the invitee is a user, lead or contact, or resource. |

## Usage

**Query invitees who have accepted an invitation to an event**

```
SELECT eventId, type, response FROM AcceptedEventRelation WHERE eventid='00UTD000000ZH5LA'
```

DeclinedEventRelation

UndecidedEventRelation

# Account

Represents an individual account, which is an organization or person involved with your business (such as customers, competitors, and partners).

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `merge()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Experience Cloud site or Customer Portal users can access their own accounts and any account shared with them.

## Fields

| Field Name | Details |
| --- | --- |
| `AccountNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Account number assigned to this account (not the unique, system-generated ID assigned during creation). Maximum size is 40 characters. |
| `AccountSource` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The source of the account record. For example, *`Advertisement`* or *`Trade Show`*. The source is selected from a picklist of available values, which are set by an administrator. Each picklist value can have up to 40 characters. |
| `ActivityMetricId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>When Einstein Activity Capture with Activity Metrics is enabled, the ID of the related activity metric.<br>This field is a relationship field.<br>**Relationship Name**<br>ActivityMetric<br>**Refers To**<br>ActivityMetric |
| `ActivityMetricRollupId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>When Einstein Activity Capture with Activity Metrics is enabled, the ID of the related activity metric rollup.<br>This field is a relationship field.<br>**Relationship Name**<br>ActivityMetricRollup<br>**Refers To**<br>ActivityMetricRollup |
| `AnnualRevenue` | **Type**<br>currency |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Estimated annual revenue of the account. |
| `BillingAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The compound form of the billing address. Read-only. For details on compound address fields, see Address Compound Fields. |
| `BillingCity` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details for the billing address of this account. Maximum size is 40 characters. |
| `BillingCountry` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details for the billing address of this account. Maximum size is 80 characters. |
| `BillingCountryCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ISO country code for the account's billing address. |
| `BillingGeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Accuracy level of the geocode for the billing address. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |

| Field Name | Details |
| --- | --- |
| `BillingLatitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `BillingLongitude` to specify the precise geolocation of a billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `BillingLongitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `BillingLatitude` to specify the precise geolocation of a billing address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields. |
| `BillingPostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details for the billing address of this account. Maximum size is 20 characters. |
| `BillingState` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details for the billing address of this account. Maximum size is 80 characters. |
| `BillingStateCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ISO state code for the account's billing address. |
| `BillingStreet` | **Type**<br>textarea |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Street address for the billing address of this account. |
| `ChannelProgramLevelName` | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>Read only. Name of the channel program level the account has enrolled. If this account has enrolled more than one channel program level, the oldest channel program name is displayed. |
| `ChannelProgramName` | **Type**<br>string<br>**Properties**<br>Group, Nillable<br>**Description**<br>Read only. Name of the channel program the account has enrolled. If this account has enrolled more than one channel program, the oldest channel program name is displayed. |
| `CleanStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the record's clean status as compared with Data.com..<br>Possible values are:<br>• `Acknowledged`The label on the account record detail page is `Reviewed`.<br>• `Different`<br>• `Inactive`<br>• `Matched`—The label on the account record detail page is `In Sync`.<br>• `NotFound`<br>• `Pending`The label on the account record detail page is `Not Compared`.<br>• `SelectMatch`<br>• `Skipped` |
| `ConnectionReceivedId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce. |
| `ConnectionSentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Text description of the account. Limited to 32,000 KB. |
| `DunsNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The Data Universal Numbering System (D-U-N-S) number is a unique, nine-digit number assigned to every business location in the Dun & Bradstreet database that has a unique, separate, and distinct operation. D-U-N-S numbers are used by industries and organizations around the world as a global standard for business identification and tracking. Maximum size is 9 characters. This field is available on business accounts, not person accounts.<br>Note: This field is only available to organizations that use Data.com Prospector or Data.com Clean. |
| `Fax` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Fax number for the account. |

| Field Name | Details |
| --- | --- |
| `Industry` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An industry associated with this account. For example, `Biotechnology`. Maximum size is 40 characters. |
| `IsBuyer` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates that the account is enabled as a buyer for Lightning B2B Commerce. The default value is `false`. This field is available in API version 48.0 and later.<br>Note: This field is only available to organizations that have the B2B Commerce license enabled. |
| `IsCustomerPortal` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the account has at least one contact enabled to use the org's Experience Cloud site or Customer Portal (`true`) or not (`false`). This field is available if Customer Portal is enabled OR digital experiences is enabled.<br>If your org is enabled to use Content Security Policy (CSP) features, then this field is visible on the Account object even if those features are later disabled.<br>If you change this field's value from `true` to `false`, you can disable up to 100 Experience Cloud site or Customer Portal users associated with the account and permanently delete all of the account's site roles and groups. You can't restore deleted site roles and groups.<br>Exclude this field when merging accounts.<br>This field can be updated in API version 16.0 and later.<br>Tip: We recommend that you update up to 50 contacts simultaneously when changing the accounts on contacts enabled for an Experience Cloud site. We also recommend that you make this update after business hours. |
| `IsPartner` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the account has at least one contact enabled to use the org's partner portal (`true`) or not (`false`). This field is available if partner relationship management (partner portal) is enabled OR digital experiences is enabled and you have partner portal licenses.<br>If you change this field's value from `true` to `false`, you can disable up to 15 partner portal users associated with the account and permanently delete all of the account's partner portal roles and groups. You can't restore deleted partner portal roles and groups.<br>Disabling a partner portal user in the Salesforce user interface or the API doesn't change this field's value from `true` to `false`.<br>Even if this field's value is `false`, you can enable a contact on an account as a partner portal user via the API.<br>Exclude this field when merging accounts.<br>This field can be updated in API version 16.0 and later.<br>Tip: We recommend that you update up to 50 contacts simultaneously when changing the accounts on contacts enabled for an Experience Cloud site. We also recommend that you make this update after business hours. |
| `IsPersonAccount` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Read only. Label is **Is Person Account**. Indicates whether this account has a record type of Person Account (`true`) or not (`false`). |
| `IsPriorityRecord` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Group<br>**Description**<br>Shows whether the user has marked the account as important (*`True`*) or not (*`False`*). The default value is `false`. Available in API version 60.0 and later. |
| `Jigsaw` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>References the ID of a company in Data.com. If an account has a value in this field, it means that the account was imported from Data.com. If the field value is `null`, the account was not imported from Data.com. Maximum size is 20 characters. Available in API version 22.0 |

| Field Name | Details |
| --- | --- |
| | and later. Label is **Data.com Key**. This field is available on business accounts, not person accounts.<br><br>Important: The `Jigsaw` field is exposed in the API to support troubleshooting for import errors and reimporting of corrected data. Do not modify the value in the `Jigsaw` field. |
| `JigsawCompanyId` | **Type**<br>string<br><br>**Properties**<br>Filter, Group, Nillable, Sort<br><br>**Description**<br>The ID of the company in reference to `Jigsaw`.<br><br>Important: The `Jigsaw` field is exposed in the API to support troubleshooting for import errors and reimporting of corrected data. Don't modify the value in the `Jigsaw` field. |
| `LastActivityDate` | **Type**<br>date<br><br>**Properties**<br>Filter, Group, Nillable, Sort<br><br>**Description**<br>Value is one of the following, whichever is the most recent:<br>• Due date of the most recent event logged against the record.<br>• Due date of the most recently closed task associated with the record. |
| `LastReferencedDate` | **Type**<br>datetime<br><br>**Properties**<br>Filter, Nillable, Sort<br><br>**Description**<br>The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record. |
| `LastViewedDate` | **Type**<br>datetime<br><br>**Properties**<br>Filter, Nillable, Sort<br><br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`), but not viewed it. |

| Field Name | Details |
| --- | --- |
| `MasterRecordId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If this object was deleted as the result of a merge, this field contains the ID of the record that was kept. If this object was deleted for any other reason, or has not been deleted, the value is `null`.<br>This is a relationship field.<br>**Relationship Name**<br>MasterRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `NaicsCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The six-digit North American Industry Classification System (NAICS) code is the standard used by business and government to classify business establishments into industries, according to their economic activity for the purpose of collecting, analyzing, and publishing statistical data related to the U.S. business economy. Maximum size is 8 characters. This field is available on business accounts, not person accounts.<br>Note: This field is only available to organizations that use Data.com Prospector or Data.com Clean. |
| `NaicsDesc` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of an org's line of business, based on its NAICS code. Maximum size is 120 characters. This field is available on business accounts, not person accounts.<br>Note: This field is only available to organizations that use Data.com Prospector or Data.com Clean. |
| `Name` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. Label is **Account Name**. Name of the account. Maximum size is 255 characters. If the account has a record type of Person Account:<br>• This value is the concatenation of the `FirstName`, `MiddleName`, `LastName`, and `Suffix` of the associated person contact.<br>• You can't modify this value. |
| `NumberOfEmployees` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Label is **Employees**. Number of employees working at the company represented by this account. Maximum size is eight digits. |
| `OperatingHoursId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The operating hours associated with the account. Available only if Field Service is enabled.<br>This is a relationship field.<br>**Relationship Name**<br>OperatingHours<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OperatingHours |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who currently owns this account. Default value is the user logged in to the API to perform the create.<br>If you have set up account teams in your org, updating this field has different consequences depending on your version of the API:<br>• For API version 12.0 and later, sharing records are kept, as they are for all objects. |

| Field Name | Details |
| --- | --- |
| | • For API version before 12.0, sharing records are deleted.<br>• For API version 16.0 and later, users must have the "Transfer Record" permission in order to update (transfer) account ownership using this field.<br>This is a relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `Ownership` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Ownership type for the account, for example Private, Public, or Subsidiary. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the parent object, if any.<br>This is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `PersonActionCadenceAssigneeId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the sales rep designated to work the lead through their assigned cadence. This field is available in API version 47.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set. |

| Field Name | Details |
| --- | --- |
| | This field is a polymorphic relationship field.<br>**Relationship Name**<br>PersonActionCadenceAssignee<br>**Refers To**<br>Group, User |
| `PersonActionCadenceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the lead's assigned cadence. This field is available in API version 46.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set.<br>This is a relationship field.<br>**Relationship Name**<br>PersonActionCadence<br>**Refers To**<br>ActionCadence |
| `PersonActionCadenceState` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The state of the current action cadence tracker. This field is available in API version 50.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set.<br>Possible values are:<br>• `Complete`<br>• `Error`<br>• `Initializing`<br>• `Paused`<br>• `Processing`<br>• `Running` |
| `PersonIndividualId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>ID of the data privacy record associated with this person's account. This field is available if you enabled Data Protection and Privacy in Setup.<br>Available in API version 42.0 and later. |
| `PersonScheduledResumeDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the action cadence tracker is going to resume after it's paused or on a wait step. This field is available in API version 54.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set. |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Phone number for this account. Maximum size is 40 characters. |
| `PhotoUrl` | **Type**<br>url<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Path to be combined with the URL of a Salesforce instance (for example, https://*yourInstance*.salesforce.com/) to generate a URL to request the social network profile image associated with the account. Generated URL returns an HTTP redirect (code 302) to the social network profile image for the account.<br>Blank if Social Accounts and Contacts isn't enabled for the org or if Social Accounts and Contacts is disabled for the requesting user. |
| `Rating` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The account's prospect rating, for example Hot, Warm, or Cold. |

| Field Name | Details |
| --- | --- |
| `RecordTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the record type assigned to this object. |
| `Salutation` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Honorific added to the name for use in letters, etc. This field is available on person accounts. |
| `ShippingAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The compound form of the shipping address. Read-only. See Address Compound Fields for details on compound address fields. |
| `ShippingCity` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details of the shipping address for this account. City maximum size is 40 characters |
| `ShippingCountry` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details of the shipping address for this account. Country maximum size is 80 characters. |
| `ShippingCountryCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The ISO country code for the account's shipping address. |
| `ShippingGeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Accuracy level of the geocode for the shipping address. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `ShippingLatitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `ShippingLongitude` to specify the precise geolocation of a shipping address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `ShippingLongitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `ShippingLatitude` to specify the precise geolocation of an address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `ShippingPostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details of the shipping address for this account. Postal code maximum size is 20 characters. |
| `ShippingState` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details of the shipping address for this account. State maximum size is 80 characters. |

| Field Name | Details |
| --- | --- |
| `ShippingStateCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ISO state code for the account's shipping address. |
| `ShippingStreet` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The street address of the shipping address for this account. Maximum of 255 characters. |
| `Sic` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Standard Industrial Classification code of the company's main business categorization, for example, 57340 for Electronics. Maximum of 20 characters. This field is available on business accounts, not person accounts. |
| `SicDesc` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of an org's line of business, based on its SIC code. Maximum length is 80 characters. This field is available on business accounts, not person accounts. |
| `Site` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Name of the account's location, for example `Headquarters` or `London`. Label is **Account Site**. Maximum of 80 characters. |
| `TickerSymbol` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The stock market symbol for this account. Maximum of 20 characters. This field is available on business accounts, not person accounts. |
| `Tradestyle` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A name, different from its legal name, that an org may use for conducting business. Similar to "Doing business as" or "DBA". Maximum length is 255 characters. This field is available on business accounts, not person accounts.<br>Note: This field is only available to organizations that use Data.com Prospector or Data.com Clean. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Type of account, for example, Customer, Competitor, or Partner. |
| `Website` | **Type**<br>url<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The website of this account. Maximum of 255 characters. |
| `YearStarted` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date when an org was legally established. Maximum length is 4 characters. This field is available on business accounts, not person accounts.<br>Note: This field is only available to organizations that use Data.com Prospector or Data.com Clean. |

# IsPersonAccount Fields

These fields are the subset of person account fields that are contained in the child person contact record of each person account. If the `IsPersonAccount` field has the value `false`, the following fields have a null value and can't be modified. If `true`, the fields can be modified.

Person account fields only show when person accounts are enabled. Person accounts are disabled by default.

| Field Name | Details |
| --- | --- |
| `FirstName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>First name of the person for a person account. Maximum size is 40 characters. |
| `LastName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Last name of the person for a person account. Required if the record type is a person account record type. Maximum size is 80 characters. |
| `MiddleName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Middle name of the person for a person account. Maximum size is 40 characters. |
| `PersonAssistantName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The person account's assistant name. Label is **Assistant**. Maximum size is 40 characters. |
| `PersonAssistantPhone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The person account's assistant phone. Label is **Asst. Phone**. Maximum size is 40 characters. |

| Field Name | Details |
| --- | --- |
| `PersonBirthDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The birthday of the contact associated with this person account. Label is **Birthdate**. The year portion of the `PersonBirthDate` field is ignored in filter criteria, including report filters, list view filters, and SOQL queries. For example, the following SOQL query returns person accounts with birthdays later in the year than today:<br>`SELECT FirstName, LastName, PersonBirthDate`<br>`FROM Account`<br>`WHERE Birthdate > TODAY` |
| `PersonContactId` | **Type**<br>reference<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The ID for the contact associated with this person account. Label is **Contact ID**. |
| `PersonDepartment` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The department. Label is **Department**. Maximum size is 80 characters. |
| `PersonEmail` | **Type**<br>email<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>Email address for this person account. Label is **Email**. |
| `PersonEmailBouncedDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>If bounce management is activated and an email sent to the person account bounces, the date and time the bounce occurred. |

| Field Name | Details |
| --- | --- |
| `PersonEmailBouncedReason` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>If bounce management is activated and an email sent to the person account bounces, the reason the bounce occurred |
| `PersonGenderIdentity` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The person's internal experience of their gender, which may or may not correspond to the person's designated sex at birth. Label is **Gender Identity**. |
| `PersonHasOptedOutOfEmail` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>Indicates whether the person account has opted out of email (`true`) or not (`false`). Label is **Email Opt Out**. |
| `PersonHomePhone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The home phone number for this person account. Label is **Home Phone**. |
| `PersonLeadSource` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The person account's lead source. Label is **Lead Source**. |
| `PersonMailingAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The compound form of the person account mailing address. Read-only. For details on compound address fields, see Address Compound Fields. |
| • PersonMailingCity<br>• PersonMailingCountry<br>• PersonMailingPostalCode<br>• PersonMailingState | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>Details about the mailing address for this person account. Labels are **Mailing City**, **Mailing Country**, **Postal Code**, and **State**. Maximum size for city and country is 40 characters. Maximum size for postal code and state is 20 characters. |
| • PersonMailingCountryCode<br>• PersonMailingStateCode | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ISO country or state code for the mailing address of the person account. |
| PersonMailingGeocodeAccuracy | **Type**<br>picklist<br>**Properties**<br>Retrieve, Query, Restricted picklist, Nillable<br>**Description**<br>Accuracy level of the geocode for the person's mailing address. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| PersonMailingLatitude | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with PersonMailingLongitude to specify the precise geolocation of a person account's mailing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| PersonMailingLongitude | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Used with `PersonMailingLatitude` to specify the precise geolocation of a person account's mailing address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations on page 19. |
| `PersonMailingStreet` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The mailing street address for this person account. Label is **Mailing Street**. Maximum size is 255 characters. |
| `PersonMobilePhone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The mobile phone number for this person account. Label is **Mobile**. |
| • `PersonOtherCity`<br>• `PersonOtherCountry`<br>• `PersonOtherPostalCode`<br>• `PersonOtherState` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>Details about the alternate address for this person account. Labels are **Other City**, **Other Country**, **Other Zip/Postal Code**, and **Other State**. |
| • `PersonOtherCountryCode`<br>• `PersonOtherStateCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ISO country or state code for the alternate address of the person account. |
| `PersonOtherLatitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Used with `PersonOtherLongitude` to specify the precise geolocation of a person account's alternate address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `PersonOtherLongitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `PersonOtherLatitude` to specify the precise geolocation of a person account's alternate address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| `PersonOtherPhone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The alternate phone number for this person account. Label is **Other Phone**. |
| `PersonOtherStreet` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The person account's alternate street address. Label is **Other Street**. |
| `PersonPronouns` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The individual's personal pronouns, reflecting their gender identity. Others can use these pronouns to refer to the individual in the third person. The entry is selected from a picklist of available values, which the administrator sets. Maximum 40 characters. Label is **Pronouns**.<br>Possible values are:<br>• `He/Him`<br>• `He/They`<br>• `Not Listed` |

| Field Name | Details |
| --- | --- |
| | • `She/Her`<br>• `She/They`<br>• `They/Them` |
| `PersonReportsToId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort Update<br>**Description**<br>ID of the person account or contact that this person account reports to.<br>This field doesn't appear if `enableReportsToOnPersonAccount` in the AccountSettings metadata type is `false`.<br>Available in API version 62.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>PersonReportsTo<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `PersonTitle` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The person account's title. Label is **Title**. Maximum size is 80 characters. When converting a lead to a person account, the conversion fails if the lead's Title field contains more than 80 characters. |
| `Suffix` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Name suffix of the person for a person account. Maximum size is 40 characters. |

Note: When importing account data, users need the Set Audit Fields upon Record Creation permission to assign values to audit fields such as `CreatedDate`. Audit fields are automatically updated during API operations unless you set these fields yourself.

## Usage

Use this object to query and manage accounts in your org. Client applications can create, update, delete, or query Attachment records associated with an account via the API.

Client applications can also create or update account objects by converting a Lead via the `convertLead()` call.

If the values in the IsPersonAccount Fields are not null, you can't change `IsPersonAccount` to `false` or an error occurs.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AccountChangeEvent (API version 44.0)**
Change events are available for the object.

**AccountFeed (API version 18.0)**
Feed tracking is available for the object.

**AccountHistory (API version 11.0)**
History is available for tracked fields of the object.

**AccountOwnerSharingRule**
Sharing rules are available for the object.

**AccountShare**
Sharing is available for the object.

# AccountBrand

Represents the brand details of a Partner Account. This object is available in API version 43.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()` `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available only if digital experiences is enabled in your org and it has a Partner Community or Customer Community Plus license.

# Fields

| Field | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the Account. This number is unique within your organization. |
| `Address` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The street address. |
| `City` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The city. |
| `CompanyName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the company associated with the account brand. |
| `Country` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The country where the account is physically located. |
| `Email` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Email address associated with the account. |
| `GeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist Sort, Update<br>**Description**<br>Stores data for accurate geocoded location. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Most recent date referenced. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Most recent date viewed. |
| `Latitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used along with `Longitude` to specify the precise geolocation of an address. |
| `LogoId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the logo. |
| `LogoUrl` | **Type**<br>url<br>**Properties**<br>Nillable, |

| Field | Details |
| --- | --- |
| | **Description**<br>URL of the logo. This field is available in API version 44.0 and later. |
| `Longitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `Latitude` to specify the precise geolocation of an address. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Required. Name of the account. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Required. ID of the Owner. |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Phone number. |
| `PostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The postal code where the user's IP address is physically located. |
| `State` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The address state. |
| `Street` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The address street. |
| `Website` | **Type**<br>url<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Website for the Account Brand. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**AccountBrandOwnerSharingRule**

# AccountContactRelation

Represents a relationship between a contact and one or more accounts.

This object is available in API version 37.0. The AccountContactRelation object supports person accounts. That means that a person account can be either a related contact on a business account or a related account on a contact. A person account can also be related to another person account as either a related contact or related account.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

# Fields

| Field Name | Details |
| --- | --- |
| `AccountContactRelationshipCurrency` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the account that is related to the contact. Field can't be modified when updating existing account-contact relationship records. |
| `ContactId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the contact that is related to the account. Field can't be modified when updating existing account-contact relationship records. |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date a relationship between a contact and account ended. Use with the `Start Date` to keep a history of the relationship. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether relationship is active (`true`) or not (`false`). |

| Field Name | Details |
| --- | --- |
| `IsDirect` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the account associated with the contact is the contact's primary account (`true`) or not (`false`). |
| `Roles` | **Type**<br>multipicklist<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The contact's participating role in the account. Values are `Business User`, `Decision Maker`,`Economic Buyer`,`Economic Decision Maker`, `Evaluator`, `Executive Sponsor`, `Influencer`, `Technical Buyer`, and `Other`. |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date a relationship between a contact and account began. Use with the `End Date` to keep a history of the relationship. |

# Usage

Use this object to associate a single contact record to multiple account records so you can easily track the relationships between the people and businesses they work with.

When you insert a non-private contact in your org that associates a contact to multiple accounts, an AccountContactRelation is created and its validation rules, database insertion, and triggers are executed immediately after the contact is saved to the database. When you change a contact's primary account, an AccountContactRelation may be created or edited, and the AccountContactRelation validation rules, database changes, and triggers are executed immediately after the contact is saved to the database. See Order of Execution.

# Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AccountContactRelationChangeEvent on page 68 (API version 59.0)**
Change events are available for the object.

# AccountCleanInfo

Stores the metadata Data.com Clean uses to determine an account record's clean status. AccountCleanInfo helps you automate the cleaning or related processing of account records.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see Data.com Prospector and Clean Retirement.

Account Clean Info provides a snapshot of the data in your Salesforce account record and its matched Data.com record at the time the Salesforce record was cleaned.

Account Clean Info includes a number of bit vector fields, whose component fields each correspond to individual object fields and provide related data or status information about those fields. For example, the bit vector field `IsDifferent` has an `IsDifferentState` field. If the `IsDifferentState` field's value is `False`, that means the `State` field value is *the same* on the Salesforce account record and its matched Data.com record.

AccountCleanInfo bit vector fields include:

- `CleanedBy` indicates who (a user) or what (a Clean job) cleaned the account record.
- `IsDifferent` indicates whether or not a field on the account record has a value that differs from the corresponding field on the matched Data.com record.
- `IsFlaggedWrong` indicates whether or not a field on the account record has a value that is flagged as wrong to Data.com.
- `IsReviewed` indicates whether or not a field on the account record is in a `Reviewed` state, which means that the value was reviewed but not accepted.

Their individual bits are defined here.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

## Fields

| Field Name | Details |
|---|---|
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique, system-generated ID assigned when the account record was created. |
| `AccountSite` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Information about the account's location, such as single location, headquarters, or branch. |
| `Address` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The compound form of the address. Read-only. See Address Compound Fields for details on compound address fields. |
| `AnnualRevenue` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Estimated annual revenue of the account. |
| `City` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the billing address of the account. |
| `CleanedByJob` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account record was cleaned by a Data.com Clean job (`true`) or not (`false`). |
| `CleanedByUser` | **Type**<br>boolean<br>**Properties**<br>Filter |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the account record was cleaned by a Salesforce user (`true`) or not (`false`). |
| `CompanyName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the company. |
| `CompanyStatusDataDotCom` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The status of the company per Data.com. Values are: `Company is In Business per Data.com` or `Company is Out of Business per Data.com.` |
| `Country` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the billing address of the account. |
| `DandBCompanyDunsNumber` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The D-U-N-S Number on the D&B Company record (if any) that is linked to the account. |
| `DataDotComId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID Data.com maintains for the company. |

| Field Name | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>A description of the account. |
| `DunsNumber` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The Data Universal Numbering System (D-U-N-S) number is a unique, nine-digit number assigned to every business location in the Dun & Bradstreet database that has a unique, separate, and distinct operation. D-U-N-S numbers are used by industries and organizations around the world as a global standard for business identification and tracking. |
| `DunsRightMatchConfidence` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The account's DUNSRight confidence code. |
| `DunsRightMatchGrade` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The account's DUNSRight match grade. |
| `Fax` | **Type**<br>phone<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The account's fax number. |
| `Industry` | **Type**<br>picklist |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The industry the account belongs to. |
| `IsDifferentAccountSite` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `AccountSite` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentAnnualRevenue` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `AnnualRevenue` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentCity` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `City` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentCompanyName` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `AccountName` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentCountry` | **Type**<br>boolean<br>**Properties**<br>Filter |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the account's `Country` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentCountryCode` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `Country Code` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentDandBCompanyDunsNumber` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `DandBCompanyID` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentDescription` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `Description` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentDunsNumber` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `DunsNumber` field value is different from the D-U-N-S Number on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentFax` | **Type**<br>boolean<br>**Properties**<br>Filter |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the account's `Fax` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentIndustry` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `Industry` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentNaicsCode` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `NaicsCode` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentNaicsDescription` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `NaicsDescription` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentNumberOfEmployees` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `NumberOf Employees` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentOwnership` | **Type**<br>boolean<br>**Properties**<br>Filter |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the account's `Ownership` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentPhone` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `Phone` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentPostalCode` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `PostalCode` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentSic` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `Sic` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentSicDescription` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `SicDescription` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentState` | **Type**<br>boolean<br>**Properties**<br>Filter |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the account's `State` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentStateCode` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `State Code` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentStreet` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `State` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentTickerSymbol` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `TickerSymbol` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentTradestyle` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `Tradestyle` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentWebsite` | **Type**<br>boolean<br>**Properties**<br>Filter |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the account's `Website` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsDifferentYearStarted` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the account's `YearStarted` field value is different from the corresponding value on its matched Data.com record (`true`) or not (`false`). |
| `IsFlaggedWrongAccountSite` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `AccountSite` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongAddress` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `Address` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongAnnualRevenue` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `AnnualRevenue` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongCompanyName` | **Type**<br>boolean<br>**Properties**<br>Filter, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the account's `CompanyName` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongDescription` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `Description` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongDunsNumber` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `DunsNumber` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongFax` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `Fax` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongIndustry` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `Industry` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongNaicsCode` | **Type**<br>boolean<br>**Properties**<br>Filter, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the account's `NaicsCode` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongNaicsDescription` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `NaicsDescription` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongNumberOfEmployees` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `NumberOfEmployees` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongOwnership` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `Ownership` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongPhone` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `Phone` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongSic` | **Type**<br>boolean<br>**Properties**<br>Filter, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the account's `Sic` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongSicDescription` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `SicDescription` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongTickerSymbol` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `TickerSymbol` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongTradestyle` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `Tradestyle` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongWebsite` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `Website` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsFlaggedWrongYearStarted` | **Type**<br>boolean<br>**Properties**<br>Filter, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the account's `YearStarted` field value is flagged as wrong to Data.com (`true`) or not (`false`). |
| `IsInactive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the account has been reported to Data.com as *`Inactive`* (`true`) or not (`false`). |
| `IsReviewedAccountSite` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `AccountSite` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedAddress` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `Address` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedAnnualRevenue` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `AnnualRevenue` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedCompanyName` | **Type**<br>boolean<br>**Properties**<br>Filter, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the account's `CompanyName` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedDandBCompanyDunsNumber` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `DandBCompanyID` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedDescription` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `Description` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedDunsNumber` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `DunsNumber` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedFax` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `Fax` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedIndustry` | **Type**<br>boolean<br>**Properties**<br>Filter, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the account's `Industry` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedNaicsCode` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `NaicsCode` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedNaicsDescription` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `NaicsDescription` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedNumberOfEmployees` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `NumberOfEmployees` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedOwnership` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `Ownership` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedPhone` | **Type**<br>boolean<br>**Properties**<br>Filter, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the account's `Phone` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedSic` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `Sic` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedSicDescription` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `SicDescription` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedTickerSymbol` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `TickerSymbol` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedTradestyle` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `Tradestyle` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedWebsite` | **Type**<br>boolean<br>**Properties**<br>Filter, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether the account's `Website` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `IsReviewedYearStarted` | **Type**<br>boolean<br>**Properties**<br>Filter, Update<br>**Description**<br>Indicates whether the account's `YearStarted` field value is in a `Reviewed` state (`true`) or not (`false`). |
| `LastMatchedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort<br>**Description**<br>The date the account record was last matched and linked to a Data.com record. |
| `LastStatusChangedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of who or what last changed the record's `Clean Status` field value: a Salesforce user or a Clean job. |
| `LastStatusChangedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date on which the record's `Clean Status` field value was last changed. |
| `Latitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Used with `Longitude` to specify the precise geolocation of a billing address. Data not currently provided. |

| Field Name | Details |
| --- | --- |
| `Longitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Used with `Latitude` to specify the precise geolocation of a billing address. Data not currently provided. |
| `NaicsCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The six-digit North American Industry Classification System (NAICS) code is the standard used by business and government to classify business establishments into industries, according to their economic activity for the purpose of collecting, analyzing, and publishing statistical data related to the U.S. business economy. |
| `NaicsDescription` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A brief description of an organization's line of business, based on its NAICS code. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>Field label is **Account Clean Info Name**. The name of the account. Maximum size is 255 characters. |
| `NumberOfEmployees` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of employees working at the account. |
| `Ownership` | **Type**<br>picklist |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Ownership type for the account, for example Private, Public, or Subsidiary. |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The phone number for the account. |
| `PostalCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the billing address of the account. |
| `Sic` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Standard Industrial Classification code of the company's main business categorization, for example, 57340 for Electronics. |
| `SicDescription` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A brief description of an organization's line of business, based on its SIC code. |
| `State` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the billing address of the account. |

| Field Name | Details |
| --- | --- |
| `Street` | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the billing address of the account. |
| `TickerSymbol` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The stock market symbol for the account. |
| `Tradestyle` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A name, different from its legal name, that an organization can use for conducting business. Similar to “Doing business as” (DBA). |
| `Website` | **Type**<br>url<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The website of the account. |
| `YearStarted` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The year the company was established or the year when current ownership or management assumed control of the company. |

## Usage

Administrators can modify a limited set of AccountCleanInfo fields from the Account Clean Info page.

Developers can create triggers that read the Account Clean Info fields to help automate the cleaning or related processing of account records. For example, you might create a trigger that reads the `Clean Status` field on the Account object. If an account record's `Clean Status` field value is `Different` but the record has no `Billing Street` value, the trigger could update the record's status to `Not Compared`.

Create triggers that read AccountCleanInfo fields to help automate the cleaning or related processing of account records. For example:

- Keep account records' status `InSync` if the only difference from matched records is the `Phone` format (for example, *`(415) 353-8000`* on the account record versus *`415 353 8000`* on the matched Data.com record).

```
trigger AccountPhoneTrigger on Account (before update) {

   for (Account account: Trigger.new) {
       Account oldAccount = Trigger.oldMap.get(account.ID);
       if (account.CleanStatus == 'Different') {
           List <AccountCleanInfo> cleanInfo = [Select Id, IsDifferentPhone,
IsReviewedPhone, Phone from AccountCleanInfo where AccountId = :account.Id];
           if (cleanInfo.size() > 0 && cleanInfo[0].IsDifferentPhone &&
cleanInfo[0].Phone.StartsWith('+')) {
               // if Data.com phone number is marked Different but starts with '+',
ignore this
               // and set the status to "Reviewed"
               AccountCleanInfo cleanInfoToUpdate = new AccountCleanInfo();
               cleanInfoToUpdate.Id = cleanInfo[0].Id;
               cleanInfoToUpdate.IsReviewedPhone = true;
               update cleanInfoToUpdate;
               account.CleanStatus = 'Reviewed';
           }
       }
   }
}
```

- Create a customized set of `Industry` field values for accounts. Use triggers to map values from fields on imported or cleaned records onto a standard set of values.
- Read the `CleanStatus` field value on the Account object. If that value is `Different`, but a Salesforce record has no street address value, update the record's status to `Not Compared`.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AccountCleanInfoChangeEvent (API version 62.0)**
Change events are available for the object.

# AccountContactRole

Represents the role that a Contact plays on an Account.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

| Field | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the Account.<br>This is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `ContactId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. ID of the Contact associated with this account.<br>This is a relationship field.<br>**Relationship Name**<br>Contact<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `IsDeleted` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `IsPrimary` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Specifies whether the Contact plays the primary role on the Account (`true`) or not (`false`). Note that each account has only one primary contact role. Label is **Primary**. Default value is `false`. |
| `Role` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Name of the role played by the Contact on this Account, such as Decision Maker, Approver, Buyer, and so on. Must be unique—there can't be multiple records in which the `AccountId`, `ContactId`, and `Role` values are identical. Different contacts can play the same role on the same account. A contact can play different roles on the same account. |

## Usage

Use this object to define the role that a Contact plays on a given Account within the context of a specific Opportunity.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AccountContactRoleChangeEvent (API version 44.0)**
Change events are available for the object.

# AccountInsight

Represents an individual insight (a key business development) related to an account record.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

To see an insight related to a specific account, users need a Sales Cloud Einstein license and access to the account record. As of the Spring '20 release, Pardot and Sales Engagement users no longer have access to this object.

## Fields

| Field Name | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the related account record. |
| `ActualHeardWithinDays` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Reserved for future use. |
| `CompetitorName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field has been deprecated as of API version 45.0. |
| `ContactName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>This field is not in use as of API version 46.0. |
| `ContactTitle` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field is not in use as of API version 46.0. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. |
| `Division` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The division of the related record. |
| `ExpectedHeardWithinDays` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Reserved for future use. |
| `LastHeard` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Reserved for future use. |
| `LastReferencedDate` | **Type**<br>dateTime |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `NumberOfNewsArticles` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of news articles related to insights of type `M&A activity detected`, `Company is expanding`, and `Leadership changes`. |
| `Rationale` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable<br>**Description**<br>The explanation for an insight, providing more background information and details that are specific to the org. |
| `Title` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable<br>**Description**<br>The title of the insight. |
| `TrendType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The trend type of the insight. Possible values include:<br>• Negative<br>• Positive<br>• Informational |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of insight. Possible values include:<br>• M&A activity detected<br>• Company is expanding<br>• Leadership changes |

## Usage

This object is read-only and isn't supported with workflows, triggers, or process builder.

# AccountOwnerSharingRule

Represents the rules for sharing an account with a User other than the owner.

Note: To programmatically update owner sharing rules, we recommend that you use Metadata API. Contact Salesforce customer support to enable access to this object for your org.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Customer Portal users can't access this object.

# Fields

| Field | Details |
|---|---|
| `AccountAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Update<br>**Description**<br>A value that represents the type of sharing being allowed. The possible values are:<br>• `Read`<br>• `Edit`<br>• `All` (This value isn't valid for creating or updating.) |
| `CaseAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A value that represents the type of access granted to the target Group for all child cases. The possible values are:<br>• `None`<br>• `Read`<br>• `Edit` |
| `ContactAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>A value that represents the type of access granted to the target Group, UserRole, or User for any associated contacts. The possible values are:<br>• `None`<br>• `Read`<br>• `Edit`<br>Note: When `DefaultContactAccess` is set to `Controlled by Parent`, you can't create or update this field. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Rule Name** in the user interface.<br>This field is available in API version 24.0 and later.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. |
| `GroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID representing the source group. An Account owned by a User in the source Group triggers the rule to give access. |
| `OpportunityAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A value that represents the type of access granted to the target Group for any associated Opportunity. The possible values are:<br>• `None`<br>• `Read`<br>• `Edit` |
| `Name` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to **Label** on the user interface. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID representing the User or Group being granted access. |

## Usage

Use this object to manage the sharing rules for accounts. General sharing and territory management-related sharing use this object. For example, the following code creates an account owner sharing rule between two public groups, which can also contain portal users.

```
AccountOwnerSharingRule rule = new AccountOwnerSharingRule();
rule.setName("RuleName"); // Set the sharing rule name
rule.setDeveloperName("RuleDeveloperName"); // Set the sharing rule developer name
rule.setGroupId("00Gx00000000000"); // Set the group of users to share records from
rule.setUserOrGroupId("00Gx00000000001"); // Set the group of users to share records to
rule.setAccountAccessLevel("Edit");
rule.setOpportunityAccessLevel("Read");
rule.setCaseAccessLevel("None");
connection.create(rule);
```

Note: The original territory management feature is now unavailable. For more information, see The Original Territory Management Module Will Be Retired in the Summer '21 Release. The information in this topic applies to the original territory management feature only, and not to Enterprise Territory Management.

# AccountPartner

This object represents a partner relationship between two Account records. An AccountPartner record is created automatically when a Partner record is created for a partner relationship between two accounts. An AccountPartner record is also created automatically between an account and an opportunity's account when a Partner record is created between an account and an opportunity.

Note: This object is completely distinct from and independent of Account records that have been enabled for the partner portal.

## Supported Calls

`create()`, `delete()`, `describeLayout()describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

| Field | Details |
| --- | --- |
| `AccountFromId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the main Account in the partner relationship.<br>This is a relationship field.<br>**Relationship Name**<br>AccountFrom<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `AccountToId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the partner Account in the partner relationship.<br>This is a relationship field.<br>**Relationship Name**<br>AccountTo<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `IsPrimary` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the AccountPartner is the primary partner of an opportunity (`true`). When there are no corresponding Opportunity Partner records, the value is `false`. |
| `OpportunityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the opportunity in a partner relationship.<br>This is a relationship field.<br>**Relationship Name**<br>Opportunity<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Opportunity |
| `ReversePartnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the reciprocal AccountPartner record in a partner relationship. |
| `Role` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The UserRole that the partner Account has on the main Account. For example, `Consultant` or `Distributor`. |

## Creating an Account-Account Partner Relationship

When you create a partner relationship between two accounts (when you create a Partner record and specify the `AccountFromId`), the API automatically creates two AccountPartner records, one for the forward relationship and one for the reverse. For example, if you create a Partner relationship with "Acme, Inc." as the `AccountFromId` and "Acme Consulting" as the `AccountToId`, the API automatically creates two AccountPartner records:

- The forward relationship AccountPartner with "Acme, Inc." as the `AccountFromId` and "Acme Consulting" as the `AccountToId`.
- The reverse relationship AccountPartner with "Acme Consulting" as the `AccountFromId` and "Acme, Inc." as the `AccountToId`.
- The value of the Role field in the reverse relationship AccountPartner is set to the PartnerRole record `ReverseRole` value associated with the value of the `Role` field in the forward relationship AccountPartner.

This mapping allows the API to manage the records and their relationships efficiently.

OpportunityPartner

# AccountPlan

Represents customer information with measurable objectives and executable steps to proactively manage and grow customer relationships. This object is available in API version 62.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

This object is available if sales account plans are turned on.

## Fields

| Field | Details |
|---|---|
| `AccountChallenges` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The key obstacles to the growth of the account. |
| `AccountCmptvWeaknesses` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The shortcomings that hinder the account's ability to outperform competitors in the market. |

| Field | Details |
| --- | --- |
| AccountCompetitiveStrengths | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The abilities of the account to outperform their competitors in the market. |
| AccountCompetitors | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The businesses or companies that offer similar products or services and compete for the same target market as the account. |
| AccountId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The Account record.<br>This field is a relationship field.<br>**Relationship Name**<br>Account<br>**Refers To**<br>Account |
| AccountIndustryTrends | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The shifts in the pattern of the industry that are specific to the account. |
| AccountInternalRiskRating | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The rating that's assigned to assess the risk level of the account. To access this field, you must have an FSC Sales or a Financial Services Cloud Extension license. |

| Field | Details |
| --- | --- |
| AccountPrfmIndicators | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The key performance indicators used by the account to measure the success and effectiveness of a product or service. |
| AccountStrategicPriorities | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The key priorities of the account. |
| AccountVision | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The long-term value statement of the account. |
| CallingStrategy | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>How frequently the relationship team meets with the account. To access this field, you must have an FSC Sales or a Financial Services Cloud Extension license. |
| CallingStrategyNotes | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The outline of the format and organization of account meetings. To access this field, you must have an FSC Sales or a Financial Services Cloud Extension license. |
| EndDate | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The end date of the account plan. |
| `FlexCard` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The Omnistudio FlexCard. To access this field, you must have an FSC Sales or a Financial Services Cloud Extension license. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record indirectly. For example, accessed through a list view or related record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, and `LastReferenceDate` isn't null, the user accessed this record or list view indirectly. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the account plan. |
| `Notes` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The notes or observations for the account plan. |

| Field | Details |
| --- | --- |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The owner of the account plan.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |
| `RelationshipOpportunities` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The list of sales or potential deal opportunities in the relationship with the account. |
| `RelationshipStrengths` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The strengths in the relationship with the account. |
| `RelationshipSummary` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A concise overview of the relationship dynamics with the account. To access this field, you must have an FSC Sales or a Financial Services Cloud Extension license. |
| `RelationshipThreats` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The possible concerns in the relationship with the account. |

| Field | Details |
| --- | --- |
| `RelationshipWeaknesses` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The shortcomings in the relationship with the account. |

| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Specifies the status of the account plan.<br>Possible values are:<br>• `Active`<br>• `Inactive`<br>• `Not Started`<br>The default value is `Not Started`. |

## Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AccountPlanChangeEvent**
Change events are available for the object.

**AccountPlanHistory**
History is available for tracked fields of the object.

**AccountPlanOwnerSharingRule**
Sharing rules are available for the object.

**AccountPlanShare**
Sharing is available for the object.

# AccountPlanObjective

Represents strategic objectives or initiatives pursued by a relationship team with a customer to enhance customer engagement and satisfaction. This object is available in API version 62.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available if sales account plans are turned on.

## Fields

| Field | Details |
| --- | --- |
| `AccountPlanId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The account plan associated with the objective.<br>This field is a relationship field.<br>**Relationship Name**<br>AccountPlan<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>AccountPlan |
| `AccountPlanObjCategoryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The category associated with the account plan objective. To access this field, you must have an FSC Sales or a Financial Services Cloud Extension license.<br>This field is a relationship field.<br>**Relationship Name**<br>AccountPlanObjCategory |

| Field | Details |
| --- | --- |
| | **Refers To**<br>AccountPlanObjectiveCategory |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The description of the account plan objective. |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The end date of the account plan objective. |
| `ExternalStakeholderId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The customer stakeholder contact associated with the account plan objective. The relationship team collaborates with the customer stakeholder to achieve a specific objective. To access this field, you must have an FSC Sales or a Financial Services Cloud Extension license.<br>This field is a relationship field.<br>**Relationship Name**<br>ExternalStakeholder<br>**Refers To**<br>Contact |
| `LastInteractionSumGenDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date when the most recent interaction summary was generated using Einstein Generative AI. To access this field, you must have an FSC Sales or a Financial Services Cloud Extension license. |
| `LastReferencedDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the account plan objective. |
| `ObjectiveInteractionSummary` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The summary of interactions that occur with the account in relation to the account plan objective. To access this field, you must have an FSC Sales or a Financial Services Cloud Extension license. |
| `ObjectiveOwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The owner user associated with the objective.<br>This field is a relationship field.<br>**Relationship Name**<br>ObjectiveOwner<br>**Refers To**<br>User |

| Field | Details |
| --- | --- |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the user who created the record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |
| `Priority` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies the level of importance placed on achieving the objective associated with the account plan. To access this field, you must have an FSC Sales or a Financial Services Cloud Extension license.<br>Possible values are:<br>• `High`<br>• `Low`<br>• `Medium` |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The start date of the account plan objective. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies the status of the account plan objective.<br>Possible values are:<br>• `Closed` |

| Field | Details |
| --- | --- |
| | • `In Progress`<br>• `New` |

## Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AccountPlanObjectiveChangeEvent on page 68**
Change events are available for the object.

**AccountPlanObjectiveHistory on page 63**
History is available for tracked fields of the object.

**AccountPlanObjectiveOwnerSharingRule on page 65**
Sharing rules are available for the object.

**AccountPlanObjectiveShare on page 67**
Sharing is available for the object.

# AccountPlanObjectiveMeasure

Represents the performance of target metrics for an objective associated with the account plan. This object is available in API version 62.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available if sales account plans are turned on.

## Fields

| Field | Details |
| --- | --- |
| AccountPlanObjMeasCalcDefId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The account plan objective calculation definition associated with the measure.<br>This field is a relationship field. Available in API version 63.0 and later. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>AccountPlanObjMeasCalcDef<br>**Refers To**<br>AccountPlanObjMeasCalcDef |
| `AccountPlanObjectiveId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The account plan objective associated with the measure.<br>This field is a relationship field.<br>**Relationship Name**<br>AccountPlanObjective<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>AccountPlanObjective |
| `CurrentCurrencyValue` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The current value in currency for a measure associated with the account plan objective. |
| `CurrentNumberValue` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The current numerical value for a measure associated with the account plan objective. |
| `CurrentPercentValue` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The current value in percentage for a measure associated with the account plan objective. |

| Field | Details |
| --- | --- |
| `CurrentValue` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The current value for a measure associated with the account plan objective. |
| CurrentValueTimestamp | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time that the current value was last updated. This field is available in API version 63.0 and later. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the account plan objective measure. |
| `TargetCurrencyValue` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The target value in currency for a measure associated with the account plan objective. |
| `TargetNumberValue` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The target numerical value for a measure associated with the account plan objective. |
| `TargetPercentValue` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The target value in percentage for a measure associated with the account plan objective. |
| `TargetValue` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The target value for a measure associated with the account plan objective. |
| `ValueType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies the type of value that's measured.<br>Possible values are:<br>• `Currency`<br>• `Number`<br>• `Percent` |

## Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AccountPlanObjectiveMeasureChangeEvent on page 68**
Change events are available for the object.

**AccountPlanObjectiveMeasureHistory on page 63**
History is available for tracked fields of the object.

# AccountPlanObjMeasCalcCond

Represents a field and value combination for filtering records to include in the calculation of a sales account plan objective measure's current value. This object is available in API version 63.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

This object is available if sales account plans are turned on.

## Fields

| Field | Details |
|---|---|
| `AccountPlanObjMeasCalcDefId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The account plan objective measure calculation definition where this criteria is used.<br>This field is a relationship field.<br>**Relationship Name**<br>AccountPlanObjMeasCalcDef<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>AccountPlanObjMeasCalcDef |
| `FieldName` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A field on the calculation definition's `TargetObject` that you want to filter by. Fields on the Campaign, Case, Contact, or Opportunity objects are supported. |

| Field | Details |
| --- | --- |
| `Operation` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The logical operator for matching records with the specified field value.<br>Possible values are:<br>• `Contains`<br>• `Equals`<br>• `GreaterOrEqual`<br>• `GreaterThan`<br>• `LessOrEqual`<br>• `LessThan`<br>• `NotContain`<br>• `NotEqual`<br>• `StartsWith` |
| `Value` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The value to match for the specified field. |

## Usage

Let's say that a calculation definition tracks the currency amount on Closed Won opportunities. The calculation definition's `TargetObject` is `Opportunity`, and the condition further specifies these values.

- `FieldName` is `StageName`.
- `Operation` is `Equals`.
- `Value` is `ClosedWon`.

# AccountPlanObjMeasCalcDef

Represents the definition of a target object, rollup field, and logic for calculating the current value of a sales account plan objective measure. This object is available in API version 63.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

This object is available if sales account plans are turned on.

## Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A summary of the calculation definition that's visible to users when they select the definition for an account plan objective measure. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. The name:<br>• must be 40 characters or fewer<br>• must begin with a letter<br>• can contain only underscores and alphanumeric characters<br>• can't include spaces<br>• can't end with an underscore<br>• can't contain 2 consecutive underscores |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The combined language and locale ISO code, which controls the language of the calculation definition. |
| `MasterLabel` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Label for this calculation definition. This display value is the internal label that doesn't get translated. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of these values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that aren't Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `RollupType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The method for calculating the account plan objective measure's current value from records that match the calculation definition and any optional conditions.<br>Possible values are:<br>• `Count`<br>• `Max`<br>• `Min`<br>• `Sum`<br>In Setup, this field's label is Calculation Type. |
| `Status` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Possible values are:<br>• `Active`<br>• `Draft`<br>• `Inactive`<br>Only active calculation definitions are available for users to select when they specify an account plan objective measure. |
| `TargetField` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The field on `TargetObject` to use for calculating the account plan objective measure's current value. Rollup fields on the Campaign, Case, Contact, or Opportunity object are supported.<br>In Setup, this field's label is Rollup Field. |
| `TargetObject` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The object to use for calculating the account plan objective measure's current value.<br>Possible values are:<br>• `Campaign`<br>• `Case`<br>• `Contact`<br>• `Opportunity` |
| `ValueType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The data type for calculating the account plan objective measure's current value.<br>Possible values are:<br>• `Currency` |

| Field | Details |
| --- | --- |
| | • `Number`<br>• `Percent` |

## Usage

Let's say that a calculation definition tracks the currency amount on opportunities. The calculation definition's `TargetObject` is `Opportunity`, `TargetField` is `Amount`, and `RollupType` is `Sum`.

# AccountPlanObjMeasCalcDefLocalization

Represents the translated value of the definition of a target object, rollup field, and logic for calculating the current value of a sales account plan objective measure. This object is available in API version 63.0 and later when the Translation Workbench is enabled.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()` `getUpdated()` `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

- Your organization must be using Lightning Experience with Sales Cloud in Enterprise, Performance, Unlimited, and Einstein 1 Sales Edition editions.
- Translation Workbench must be enabled for your org.
- Sales account plans must be turned on.
- Users with the Customize Application or Manage Translation permission can create or update AccountPlanObjMeasCalcDef translations.

## Fields

| Field | Details |
| --- | --- |
| Language | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language the AccountPlanObjMeasCalcDef is translated into. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation.<br>The namespace prefix can have one of these values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that aren't Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the related account plan objective measure calculation definition. This field is a relationship field. |
| `Value` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Sort, update<br>**Description**<br>The translated label of the account plan objective measure calculation definition. |

## Usage

Translate the labels of your account plan objective measure calculation definitions for supported languages .

# AccountPlanObjMeasRela

Represents a junction between an account plan objective measure and the related objects. This object is available in API version 62.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `AccountPlanObjectiveMeasureId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The account plan objective measure associated with the record.<br>This field is a relationship field.<br>**Relationship Name**<br>AccountPlanObjectiveMeasure<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>AccountPlanObjectiveMeasure (the master object) |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of the account plan objective measure relation record. |
| `ReferenceRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The record of the object associated with the account plan objective measure.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ReferenceRecord<br>**Refers To**<br>Case, FinancialDeal, Opportunity |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AccountPlanObjMeasRelaChangeEvent** **on page 68**
Change events are available for the object.

**AccountPlanObjMeasRelaHistory** **on page 63**
History is available for tracked fields of the object.

# AccountRelationship

Represents a relationship of a given type between two accounts. This object is available in API version 45.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

In Digital Experience Settings, turn on the Enable Account Relationships org preference, which is off by default.

# Fields

| Field | Details |
| --- | --- |
| `AccountFromID` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort,<br>**Description**<br>ID of the account that gains access to data from `AccountTo`. |
| `AccountToId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the account sharing data with `AccountFrom`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user accessed this record or list view (`LastReferencedDate`) but didn't viewed it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the account relationship. |
| `OwnerId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the user who created the account relationship. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The relationship type. All account relationship sharing rules of that type are to this account relationship.<br>Standard values are:<br>• System Integrator<br>• Agency<br>• Advertiser<br>• Reseller<br>• Distributor<br>• Developer<br>• Broker<br>• Lender<br>• Institution<br>• Contractor<br>• Dealer<br>• Consultant<br>• Client<br>• Vendor<br>• Agent<br>• Retailer<br>• SubContractor<br>• Supplier<br>Picklist items can be updated with your own values. |

# Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

**AccountRelationshipFeed**
Feed tracking is available for the object.

**AccountRelationshipHistory**
History is available for tracked fields of the object.

**AccountRelationshipOwnerSharingRule**
Sharing rules are available for the object.

**AccountRelationshipShare**
Sharing is available for the object.

# AccountRelationshipShareRule

Represents the rule that determines which object records are shared, how they are shared, the account relationship type that shares the records, and the level of access granted to the records. This object is available in API version 45.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`.`describeSObjects()`, `query()`, `retrieve()`, `update()`.`upsert()`

## Fields

| Field | Details |
|---|---|
| `AccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Type of access granted by the share rule. Valid values are:<br>• `Read` (Read Only)<br>• `Edit` (Read/Write) |
| `AccountToCriteriaField` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Criteria that must be met for the data to be shared.<br>Possible values are:<br>• `Account.OwnerId`<br>• `Account.ParentId`<br>• `Campaign.OwnerId`<br>• `Case.AccountId`<br>• `Case.OwnerId`<br>• `Contact.AccountId` |

| Field | Details |
| --- | --- |
| | • Contact.OwnerId<br>• Lead.ConvertedAccountId<br>• Lead.OwnerId<br>• Lead.PartnerAccountId<br>• Opportunity.PartnerAccountId<br>• Order.AccountId<br>• Order.ActivatedById<br>• Order.CompanyAuthorizedById<br>• Order.OwnerId<br>• PartnerFundAllocation.CreatedById<br>• PartnerFundAllocation.ChannelPartnerId<br>• PartnerFundAllocation.OwnerId<br>• PartnerFundClaim.CreatedById<br>• PartnerFundClaim.OwnerId<br>• PartnerFundRequest.ChannelPartnerId<br>• PartnerFundRequest.CreatedById<br>• PartnerFundRequest.OwnerId<br>• PartnerMarketingBudget.CreatedById<br>• PartnerMarketingBudget.ChannelPartnerId<br>• PartnerMarketingBudget.OwnerId |
| Description | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A meaningful explanation of the sharing rule. |
| DeveloperName | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the record in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. This field is automatically generated but you can supply your own value if you create the record using the API. |

| Field | Details |
| --- | --- |
| | Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `EntityType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of data shared by this rule. Values are:<br>• `Account`<br>• `Campaign`<br>• `Case`<br>• `Contact`<br>• `Lead`<br>• `Order`<br>• `PartnerFundAllocation`<br>• `PartnerFundClaim`<br>• `PartnerFundRequest`<br>• `PartnerMarketingBudget` |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create. Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the account relationship share rule. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The label assigned to the sharing rule to identify it. |
| `NamespacePrefix` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `StaticFormulaCriteria` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A way to further filter what data gets shared. This must be a deterministic formula and spanning is not allowed. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Must match the type of an account relationship for data to be shared according to the `AccountToCriteriaField` and the `StaticForumulaCriteria`. |

# AccountShare

Represents a sharing entry on an account.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only users with access to the Account object can access this object. Customer Portal users can't access this object.

## Fields

The properties available for some fields depend on the default org-wide sharing settings. The properties listed are true for the default settings of such fields.

| Field | Details |
|---|---|
| `AccountAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Level of access that the User or Group has to the Account. The possible values are:<br>• `Read`<br>• `Edit`<br>• `All` (This value isn't valid for create or update calls.)<br>This field must be set to an access level that is at least equal to the organization's default Account access level. In addition, either this field, the `OpportunityAccessLevel` field, or the `CaseAccessLevel` field must be set higher than the organization's default access level. |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the Account associated with this sharing entry. This field can't be updated.<br>This is a relationship field.<br>**Relationship Name**<br>Account |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `CaseAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Level of access that the User or Group has to cases associated with the account. The possible values are:<br>• `None`<br>• `Read`<br>• `Edit`<br>This field must be set to an access level that is at least equal to the organization's default `CaseAccessLevel`. This field can't be updated via the API if the `AccountAccessLevel` field is set to `All`. You can't update this field for the associated account owner via the API. You must update the account owner's `CaseAccessLevel` via the Salesforce user interface. |
| `ContactAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Level of access that the User or Group has to contacts associated with the account. The possible values are:<br>• `None`<br>• `Read`<br>• `Edit`<br>This field must be set to an access level that is at least equal to the organization's default `ContactAccessLevel`. This field can't be updated via the API if the `ContactAccessLevel` field is set to "Controlled by Parent." You can't update this field for the associated account owner using the API. You must update the account owner's `ContactAccessLevel` via the Salesforce user interface. |
| `OpportunityAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Level of access that the User or Group has to opportunities associated with the Account. The possible values are:<br>• `None`<br>• `Read`<br>• `Edit`<br>This field must be set to an access level that is at least equal to the organization's default opportunity access level. This field can't be updated via the API if the `AccountAccessLevel` field is set to `All`. You can't use the API to update this field for the associated Account owner. You must update the Account owner's opportunityAccessLevel via the Salesforce user interface. |
| `RowCause` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited.<br>Valid values include:<br>• `Manual`—The User or Group has access because a User with "All" access manually shared the Account with the user or group.<br>• `Owner`—The User is the owner of the Account<br>• `Team`—The User or Group has team access (is an AccountTeamMember).<br>• `Rule`—The User or Group has access via an Account sharing rule.<br>• `GuestRule`—The user or group has access via an Account guest user sharing rule.<br>• `ImplicitParent`—The User or Group has access because they're the owner of or have sharing access to records related to the account, such as opportunities, cases, contacts, contracts, or orders.<br>• `GuestParentImplicit`—The guest user has access because they have access to records related to the Account, such as opportunities, cases, contacts, contracts, or orders.<br>• `LpuParentImplicit`—The User has access because they have access to records related to the Account, which are owned by high-volume Experience Cloud site users and shared via a share group.<br>• `LpuImplicit`—The User has access to records owned by high-volume Experience Cloud site users via a share group.<br>• `PortalImplicit`—The Account is associated with the portal user.<br>• `ARImplicit`—The User, who belongs to a partner or customer account, has access to the Account via an account relationship data sharing rule. |

| Field | Details |
| --- | --- |
| | • `Territory2AssociationManual`—With Sales Territories in API version 44.0 and earlier, the `TerritoryManual` reason code was written to AccountShare records when you manually assigned an account to a territory. In API version 45.0 and later, `Territory2AssociationManual` replaces all instances of `TerritoryManual`, and the `Territory2AssociationManual` reason code is written to AccountShare records when you manually assign an account to a territory.<br>• `Territory`—The territory has access via a territory assignment rule.<br>• `TerritoryManual`—Deprecated starting in API version 45.0 and replaced by the `Territory2AssociationManual` value. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the User or Group that has been given access to the Account. This field can't be updated.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>UserOrGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

# Usage

This object allows you to determine which users and groups can view or edit Account records owned by other users.

If you attempt to create an AccountShare record that matches an existing record, the request updates any modified fields and returns the existing record.

For example, the following code finds all accounts owned by a user and manually shares them to a portal user.

```
QueryResult result = conn.query("SELECT Id FROM Account WHERE OwnerId = '005D0000001LPFB'");
// Create a new AccountShare object
List<AccountShare> shares = new ArrayList<AccountShare>();
for (SObject rec : result.getRecords()) {
     AccountShare share = new AccountShare();
    share.setAccountId(rec.getId());
    //Set the portal user Id to share the accounts with
    share.setUserOrGroupId("003D000000QA8Tl");
    share.setAccountAccessLevel("Edit");
    share.setOpportunityAccessLevel("Read");
    share.setCaseAccessLevel("Edit");
    shares.add(share);
```

```
}
conn.create(shares.toArray(new AccountShare[shares.size()]));
```

This code shares the accounts that the user owns at the time, but not those accounts that are owned later. For these types of shares, use an owner-based sharing rule, such as AccountOwnerSharingRule.

If an account is shared in multiple ways with a user, you don't always see multiple sharing records. If a user has access to an account for one or more of the following RowCause values, the records in the AccountShare object are compressed into one record with the highest level of access.

- `ImplicitParent`
- `Manual`
- `Owner`

OpportunityShare

# AccountTag

Associates a word or short phrase with an Account.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
|---|---|
| `ItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter<br>**Description**<br>ID of the tagged item. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically. |
| `TagDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter<br>**Description**<br>ID of the parent TagDefinition object that owns the tag. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Restricted picklist<br>**Description**<br>Defines the visibility of a tag.<br>Valid values:<br>• `Public`—The tag can be viewed and manipulated by all users in an organization.<br>• `Personal`—The tag can be viewed or manipulated only by a user with a matching `OwnerId`. |

## Usage

AccountTag stores the relationship between its parent TagDefinition and the Account being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

# AccountTeamMember

Represents a User who is a member of an Account team.

See also UserAccountTeamMember, which represents a User who is on the default account team of another user.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

- This object is available only for Enterprise, Unlimited, and Performance Edition users who have enabled the account team functionality.
- Customer Portal users can't access this object.

## Fields

| Field Name | Details |
|---|---|
| `AccountAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Level of access that the User has to the Account. The possible values are:<br>• `Read`<br>• `Edit`<br>• `All`<br>This field must be set to an access level that is at least equal to the organization's default Account access level. In addition, the users's `AccountAccessLevel`, `ContactAccessLevel`, `OpportunityAccessLevel`, or `CaseAccessLevel` field must be set higher than the organization's default access level. |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the Account to which this user is a team member. Must be a valid account ID. |
| `CaseAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Level of access that the User has to cases associated with the account. The possible values are:<br>• `None`<br>• `Read`<br>• `Edit`<br>This field must be set to an access level that is at least equal to the organization's default case access level. In addition, the users's `AccountAccessLevel`, |

| Field Name | Details |
| --- | --- |
| | `ContactAccessLevel`, `OpportunityAccessLevel`, or `CaseAccessLevel` field must be set higher than the organization's default access level. This field is available in API version 37.0 and later. |
| `ContactAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Level of access that the User has to contacts associated with the account. The possible values are:<br>• `None`<br>• `Read`<br>• `Edit`<br>• `Controlled By Parent`<br>This field must be set to an access level that is at least equal to the organization's default contact access level. In addition, the users's `AccountAccessLevel`, `ContactAccessLevel`, `OpportunityAccessLevel`, or `CaseAccessLevel` field must be set higher than the organization's default access level. If the org-wide default for contacts is set to Controlled By Parent, users can't see or edit the Contact Access field. This field is available in API version 37.0 and later. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Filter, Restricted picklist<br>**Description**<br>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the org. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**.<br>Note: An AccountTeamMember record that is deleted is not moved to the Recycle Bin. A deleted AccountTeamMember record can't be undeleted unless the record was cascade-deleted when deleting a related Account. For directly deleted AccountTeamMember records, don't use the isDeleted field to detect deleted records in SOQL queries or `queryAll()` calls. |

| Field Name | Details |
| --- | --- |
| | The `getDeleted()` call also doesn't show deleted account team members unless the record was deleted from an account related list or the Developer Console. |
| `OpportunityAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Level of access that the User has to opportunities associated with the account. The possible values are:<br>• `None`<br>• `Read`<br>• `Edit`<br>This field must be set to an access level that is at least equal to the organization's default opportunity access level. In addition, the users's `AccountAccessLevel`, `ContactAccessLevel`, `OpportunityAccessLevel`, or `CaseAccessLevel` field must be set higher than the organization's default access level. This field is available in API version 37.0 and later. |
| `PhotoURL` | **Type**<br>URL<br>**Properties**<br>Filter, Nillable, Sort, Group<br>**Description**<br>Read only. Retrieves the users Chatter photo URL. This field is available in API version 37.0 and later. |
| `TeamMemberRole` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>Role associated with this team member. One of the valid team member roles defined for your organization. Label is **Team Role**. |
| `Title` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort, Group<br>**Description**<br>Read only. Retrieves the user's title. This field is available in API version 37.0 and later. |

| Field Name | Details |
| --- | --- |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter<br>**Description**<br>Required. ID of the User who is a member of this account team. Must be a valid User ID. |

## Usage

Use this object to manage the team members of a particular Account and to specify team member roles for those users on that account.

If team members are added by a user with group-based access, those members are removed after an account's owner is changed. This applies even if the **Keep account team** option is selected. A Salesforce admin, the account owner, or someone higher in the role hierarchy should add team members to keep team members related to the account.

If you use SOQL statements to query all records in an organization, the ALL ROWS keywords don't query deleted account team member records.

Account

# AccountTerritoryAssignmentRule

An account assignment rule that assigns accounts to territories based on account fields. Available if Sales Territories has been enabled.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Users with the View Setup and Configuration permission can access this object. Users with the Manage Territories permission can edit this object.

## Fields

| Field | Details |
| --- | --- |
| `BooleanFilter` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Advanced filter conditions that were specified for the rule in the online application. For example, "(1 AND 2) OR 3." |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Update<br>**Description**<br>Indicates whether the rule is active (`true`) or inactive (`false`). Via the API, active rules run automatically when new accounts are created and existing accounts are edited. The exception is when the `IsExcludedFromRealign` field on an account is `true`, which prevents account assignment rules from evaluating that account. |
| `IsInherited` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Update<br>**Description**<br>Indicates whether the rule is an inherited rule (`true`) or a local rule (`false`). An inherited rule also acts upon territories below it in the territory hierarchy. A local rule is created at the immediate territory and only impacts the immediate territory. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>A name for the rule. Limit is 80 characters. |
| `TerritoryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>ID of the territory where accounts that satisfy this rule are assigned. |

## Usage

A territory will not have any accounts (with the exception of manually assigned accounts) unless at least one account assignment rule is active for the territory.

SEE ALSO:

- AccountTerritoryAssignmentRuleItem
- Territory
- UserTerritory

# AccountTerritoryAssignmentRuleItem

A row of selection criteria for an AccountTerritoryAssignmentRule object. Available if Sales Territories has been enabled.

AccountTerritoryAssignmentRuleItem can be created or deleted if the `BooleanFilter` field on its corresponding AccountTerritoryAssignmentRule object is a null value.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Users with the View Setup and Configuration permission can access this object. Users with the Manage Territories permission can edit this object.

## Fields

| Field | Details |
|---|---|
| `Field` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The standard or custom account field to use as a criteria. |
| `Operation` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The criteria to apply, such as “equals” or “starts with.” |

| Field | Details |
| --- | --- |
| `RuleID` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>ID of the associated AccountTerritoryAssignmentRule. |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>The order in which this row is evaluated compared to other AccountTerritoryAssignmentRuleItem objects for the given AccountTerritoryAssignmentRule. |
| `Value` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The field value(s) to evaluate, such as `94105` if the Field is `Billing Zip/Postal Code`. |

## Usage

- Both standard and custom account fields can be used as criteria for account assignment rules.
- A territory will not have any accounts (with the exception of manually assigned accounts) unless at least one account assignment rule is active for the territory.

AccountTerritoryAssignmentRule

Territory

UserTerritory

# AccountTerritorySharingRule

Represents the rules for sharing an Account within a territory.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

| Field | Details |
| --- | --- |
| `AccountAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A value that represents the type of sharing being allowed. The possible values are:<br>• `Read`<br>• `Edit`<br>• `All` |
| `CaseAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A value that represents the type of access granted to the target group for all child cases of the account. The possible values are:<br>• `None`<br>• `Read`<br>• `Edit` |
| `ContactAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>A value that represents the type of access granted to the target group for all related contacts on the account. The possible values are:<br>• `None`<br>• `Read` |

| Field | Details |
| --- | --- |
| | • `Edit`<br>Note: This field is read only. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Rule Name** in the user interface.<br>This field is available in API version 24.0 and later.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. |
| `GroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID representing the source group. Accounts owned by users in the source territory trigger the rule to give access. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to **Label** on the user interface. |

| Field | Details |
| --- | --- |
| `OpportunityAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A value that represents the type of access granted to the target group for all opportunities associated with the account. The possible values are:<br>• `None`<br>• `Read`<br>• `Edit` |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID representing the user or group being given access, or, if a territory ID, the users assigned to that territory. |

## Usage

Use this object to manage the sharing rules for a particular object. General sharing and territory-related sharing use this object.

SEE ALSO:

Account

AccountShare

# AccountUserTerritory2View

Represents the view of the Users in Assigned Territories related list in Lightning Experience for Sales Territories. Available in API version 42.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Standard and partner users can access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Unique identifier for the account associated with the Users in Assigned Territories related list. |
| `RoleInTerritory2` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The role of each user in the Users in Assigned Territories related list. |
| `Territory2Id` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Unique identifier for each territory in the Users in Assigned Territories related list. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Unique identifier for each user in the Users in Assigned Territories related list. |

## Usage

Use this object to show the users who are assigned to the territories assigned to an account.

A filter criterion with one `AccountId` is required when you execute a SOQL query on this object.

# ActionCadence

Represents the definition of a cadence. This object is available in API version 45.0 and later.

Use ActionCadence and its related objects to learn about an action cadence, including:

- The current state of the action cadence.
- The steps that the action cadence contains.
- Which leads, contacts, or person accounts are assigned to the action cadence.

The ActionCadence, ActionCadenceStep, ActionCadenceRule, and ActionCadenceRuleCondition objects define an action cadence and the steps that it contains. ActionCadenceTracker and ActionCadenceStepTracker track a prospect's movement through an active action cadence.

By learning when the action cadence objects are created and deleted, you can make the most of the action cadence API.

- An ActionCadence record is created when you use the Sales Engagement app to create a cadence.
- An ActionCadenceStep record is created to represent a step. If the step is a branch step, then corresponding ActionCadenceRule and ActionCadenceRuleCondition records are also created.
- An ActionCadenceTracker record is created when you assign a prospect to an action cadence.
- An ActionCadenceStepTracker record is created each time the prospect moves to a new step.

All of these action cadence records exist until you use the Sales Engagement app to delete an action cadence. If many prospects have been assigned to the action cadence, there can be many associated ActionCadenceTracker and ActionCadenceStepTracker records. In this case, deleting the action cadence can take some time. While the action cadence is being deleted, the value for the State field is `Deleting` on the ActionCadence record.

## Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`,

## Fields

| Field | Details |
|---|---|
| `ActivatedDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The date that the user activated the action cadence. ActionCadence objects are created in a draft state and must be manually activated before they're used. |
| `ActiveTargets` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of active targets that are currently assigned with this cadence. Available in API version 58.0 and later. |

| Field | Details |
| --- | --- |
| Description | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The description of this action cadence. |
| ErrorMessage | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If there was an error when activating the action cadence, this field contains the error message. |
| FolderId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the folder that contains the action cadence. Available in API version 49.0 and later.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Folder<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Folder, Organization, User |
| FolderName | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The name of the folder that contains the action cadence. Available in API version 49.0 and later. |
| IsWaitAllowedBeforeDaisyChain | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Whether the cadence is allowed to have a wait step before a daisy chain step (`true`) or not (`false`).<br>The default value is `false`. |
| `LastEditedDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time this object was last edited. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date this object was last referenced. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date this action cadence was last viewed in the Sales Engagement app. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of this action cadence. Every action cadence in an org must have a unique name. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner of the action cadence (typically the user who created it).<br>Note: To change the owner of an action cadence, the new owner must have read access to action cadences enabled in their user profile. |

| Field | Details |
| --- | --- |
| | This field is a relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `State` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>This entity's state.<br>Possible values are:<br>• `Active`<br>The user finished modifying the action cadence and has activated it. At this point, you can't make any more changes to the steps in the action cadence.<br>• `Deleting`<br>All records associated with this action cadence, including the ActionCadence record and all its related records, are being deleted. While in this state, the ActionCadence can't be attached to a prospect.<br>• `Draft`<br>ActionCadence objects are in the draft state when they're created. In this state, the ActionCadence can't be assigned to any prospect.<br>• `Error`<br>An error occurred while trying to activate the action cadence.<br>• `Inactive`<br>The user deactivated the action cadence. New targets can't be added to the action cadence. Existing targets continue in the action cadence until completion. |
| `SuccessfulCompletions` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of successful dispositions this cadence has upon completion. For example, customer engaged or customer connected. Available in API version 58.0 and later. |

| Field | Details |
| --- | --- |
| `TotalSteps` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of total steps associated with this cadence. This value doesn't include special step types such as root, branch, and daisy chain. Available in API version 58.0 and later. |
| `TotalTargets` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of targets that have been assigned with this cadence. Available in API version 58.0 and later. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Indicates the type of ActionCadence. Available in API version 56.0 and later.<br>Possible values are:<br>• `Standard`<br>Standard cadences can contain multiple steps and are usually built by sales managers in the Cadence Builder.<br>• `Quick`<br>Quick cadences can contain only one step, are built by reps for their personal use, and don't require the Cadence Builder. |

# Usage

Use ActionCadence to learn how many action cadences are currently active:

```
select COUNT() from ActionCadence where State="Active"
```

Retrieve all ActionCadence records that have "West Coast" in their name:

```
SELECT ActionCadenceId FROM ActionCadence WHERE NAME LIKE '[West Coast Cadence]%'
```

Retrieve all ActionCadence records owned by a specific user:

```
SELECT ActionCadenceId  FROM ActionCadence WHERE OwnerId = '<owner id>'
```

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ActionCadenceChangeEvent (API version 48.0)**
Change events are available for the object.

**ActionCadenceOwnerSharingRule on page 65**
Sharing rules are available for the object.

**ActionCadenceShare on page 67**
Sharing is available for the object.

# ActionCadenceRule

Represents the logic that a branch step uses to determine which branch an action cadence tracker follows in an action cadence. Use ActionCadenceRule to learn about a branch step, including its logic and what the next step is. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `ActionCadenceStepId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ActionCadenceStep that this rule is associated with.<br>This field is a relationship field.<br>**Relationship Name**<br>ActionCadenceStep<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>ActionCadenceStep |
| `ConditionLogic` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The logical operator used to evaluate the rule conditions. Possible values are:<br>• `AND`<br>If this rule has several conditions, all of them must be `true` for this step to be `true`. |
| `GlobalEventType` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If the action cadence rule contains a global exit condition, this field contains the type of event that the rule represents.<br>Possible values are:<br>• `EmailReply`<br>• `EmailHardBounce`<br>• `EmailSoftBounce`<br>• `CallMeaningfulConnect`<br>• `CallNotInterested`<br>• `CallUnqualified`<br>• `CallLeftVoicemail`<br>• `CallCallBackLater`<br>This field is available in API version 49.0 and later. |
| `GraphState` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Represents the state of the `ActionCadenceRule` within the step graph, or sequence, of the related action cadence. Available in API version 53.0 and later.<br>Possible values are:<br>• `Included`—This step rule is part of the step graph. |

| Field | Details |
| --- | --- |
| | • `Orphaned`—This step rule was removed from the step graph before the action cadence was activated. Orphaned step rules are deleted upon activation.<br>• `Pending`—This step rule has been created but hasn't been added to the step graph. Pending step rules can be added to the step graph in the future.<br>• `Retired`—This step rule was previously part of an active action cadence step graph and was removed during an edit after activation. Retired step rules can have associated step trackers. |
| `OutcomeNextStepName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The next step in the action cadence if this rule evaluates as `true`. If this rule evaluates as `false`, the next step is `ActionCadenceStep.BranchDefaultStepName`. |
| `ParentRuleName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The value of the `RuleName` field of the previous rule in the action cadence. Must contain a valid rule name value unless this rule is the root rule. `null` if this rule is a root rule.<br>This field is available in API version 49.0 and later. |
| `RuleName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The name given to the rule. Every rule in an action cadence must have a unique name. |
| `RuleType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of step that this rule applies to. Possible values are:<br>• `BranchStep` — The rule evaluates the condition of a branch step. A branch step is an ActionCadenceStep record with the field `type` equal to `Branch`. |

| Field | Details |
| --- | --- |
| | • `RepeatedStep`— The rule evaluates the repeat steps for quick cadence. Available in API version 58.0 and later.<br>• `RootStep`— The rule evaluates a global exit condition.<br>• `SubRootStep`—Available in API version 58.0 and later.<br>This field is available in API version 49.0 and later. |

## Usage

Use ActionCadenceRule to see all the rules associated with a branch step:

```
select RuleName from ActionCadenceRule  where ActionCadenceStep.ActionCadence.Name = "High
 Priority CFO"
```

SEE ALSO:

- ActionCadence
- ActionCadenceRuleCondition
- ActionCadenceStep
- ActionCadenceStepTracker

# ActionCadenceRuleCondition

Represents the logic for a branch step. This object is available in API version 48.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `ActionCadenceRuleId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the ActionCadenceRule that this condition is associated with. |
| `Operator` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The conditional operator for this rule. Possible values are:<br>• `Equal` |
| `Resource` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The field to evaluate. Possible values are:<br>• `CallDispositionCategory`<br>Use by branch steps.<br>• `EmailEngagement`<br>Used by ListenerBranch steps. |
| `RuleConditionName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The name of the rule condition. Every rule condition in a cadence must have a unique name. |
| `Value` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The event that your cadence rule condition listens for to decide when the event is complete.<br>Possible values for emails are:<br>• `EmailOpen`<br>• `EmailLinkClick`<br>Possible values for calls are:<br>• `CallMeaningfulConnect`<br>• `CallUnqualified`<br>• `CallLeftVoicemail`<br>• `CallNotInterested`<br>• `CallCallBackLater` |

## Usage

Use ActionCadenceRuleContion to see all the rule conditions associated with a branch step:

```
select RuleConditionName from ActionCadenceRuleCondition where ActionCadenceStepId= <ID
of a branch step>
```

SEE ALSO:

- ActionCadence
- ActionCadenceRule
- ActionCadenceStep
- ActionCadenceStepTracker

# ActionCadenceStep

Represents a step in a cadence. Use ActionCadenceStep to learn which steps belong to a cadence, and how the steps are connected to each other. This object is available in API version 48.0 and later.

An ActionCadenceStep record is created to represent a step. If the step is a branch step, then corresponding ActionCadenceRule and ActionCadenceRuleCondition records are also created.

Note: An ActionCadenceStep with `IsOrphan` equal to `true` can be part of a cadence but is never executed. To retrieve the steps that can be executed by the cadence, query for ActionCadenceStep records with `IsOrphan` equal to `false`. ActionCadenceStep records with `IsOrphan` equal to `true` are deleted.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `ActionCadenceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the ActionCadence that this step belongs to.<br>This field is a relationship field.<br>**Relationship Name**<br>ActionCadence |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>ActionCadence |
| `AllCallsCallBackLater` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls having the call outcome **Call Back Later**. |
| `AllCallsLeftVoicemail` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls having the call outcome **Left Voicemail**. |
| `AllCallsMeaningfulConnect` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls having the call outcome **Meaningful Connect**. |
| `AllCallsNotInterested` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls having the call outcome **Not Interested**. |
| `AllCallsUncategorized` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls where the call outcome isn't categorized. |
| `AllCallsUnqualified` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls having the call outcome **Unqualified**. |
| `AllEmailsBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails that weren't delivered successfully.<br>This field is a calculated field. |
| `AllEmailsDeliveredCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails delivered.<br>This field is a calculated field. |
| `AllEmailsHardBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails returned for a permanent reason — for example, the email address doesn't exist. This field is available in API version 50.0 and later. |
| `AllEmailsLinkClickedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of links inside an email that the target clicked during this step. Multiple clicks on the same link count towards this total. This field is available in API version 50.0 and later. |
| `AllEmailsOpenedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of emails that the target opened while working on this step. Multiple opens of the same email count towards this total. |
| `AllEmailsOutOfOfficeCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails that were returned because the recipient set an out-of-office responder. Multiple replies count towards this total. This field is available in API version 50.0 and later. |
| `AllEmailsRepliedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails that targets replied to as part of this step. Multiple replies to the same email count towards this total, This field is available in API version 50.0 and later. |
| `AllEmailsSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of sent emails. |
| `AllEmailsSoftBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails that were returned for temporary reasons — for example, the email is too large. This field is available in API version 50.0 and later. |
| `AllEmailsTrackedSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent by this user with engagement tracking enabled. |

| Field | Details |
| --- | --- |
| `AllEmailsUntrackedSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent by this user without engagement tracking. |
| `AllManuallyCompletedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of steps manually completed. |
| `AllOnTimeCompletedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of steps completed on time. |
| `AllOverdueCompletedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of overdue steps that were completed. |
| `AllSkippedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of steps skipped. |
| `AllTotalCallsCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls that the sales rep made during this step. |

| Field | Details |
| --- | --- |
| | This field is a calculated field. |
| `BranchDefaultStepName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the default step. |
| `ChainedCadenceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the ActionCadence for the linked action cadence. Available only if the step type is `DaisyChain` (meaning that another action cadence is connected to this action cadence).<br>This field is a relationship field.<br>**Relationship Name**<br>ChainedCadence<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ActionCadence |
| `GoToStepIntervalInMinutes` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Contains information about when the step should be repeated next, in minutes. Available in API version 58.0 and later. |
| `GoToStepIterationLimit` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Contains the maximum number of repeat (goto) step iterations allowed. Available in API version 58.0 and later. |
| `GoToStepName` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If this step's original next step was removed during an edit after activation, this field specifies the updated next step. |
| `GraphState` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Represents the state of the `ActionCadenceStep` within the step graph, or sequence, of the action cadence.<br>Possible values are:<br>• `Included`—This step is part of the step graph.<br>• `Orphaned`—This step was removed from the step graph before the action cadence was activated. Orphaned steps are deleted upon activation.<br>• `Pending`—This step has been created but hasn't been added to the step graph. Pending steps can be added to the step graph in the future.<br>• `Retired`—This step was previously part of an active action cadence step graph and was removed during an edit after activation. Retired steps can have associated step trackers. |
| `HasVariant` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>This field is valid for email and call step types. If `true`, the step has email or call template variants. The template variants are defined in ActionCadenceStepVariant records. Available in API version 53.0 and later.<br>The default value is `false`. |
| `IsImmediateWakeUp` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether a listener branch is immediate wake up (`true`) or not (`false`).<br>The default value is `false`. |

| Field | Details |
| --- | --- |
| `IsOrphan` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `true`, this step isn't executed by the action cadence and will be deleted. Steps with `IsOrphan` equal to `true` have `ParentStepName` equal to `null`.<br>Note: To retrieve the active steps in an action cadence, include `IsOrphan=false` in your query.<br>The default value is `false`.<br>This field is available in API version 49.0 and later.<br>This field is a calculated field. |
| `IsScheduledDueDateLocked` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether assignees can change the due date (`true`) or not (`false`). Available in API version 58.0 and later.<br>The default value is `false`. |
| `IsScreenFlowActive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the flow is active and can be executed (`true`) or not (`false`).<br>The default value is `false`. |
| `IsStepAutomationActive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If true, the flow referenced in the StepAutmationReference field is active. If false, the flow isn't active. Only active flows can be executed. The default value is`false`. This field is available in API version 56.0 and later. |
| `IsThreaded` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>This field is valid for email steps. Email steps have ActionCadence.StepType equal to `SendAnEmail`. If `true`, the email for this email step is sent as a reply to the email conversation from the previous email step. By sending the email as a reply to a previous email, customers see a "conversation" view of the emails. Only emails from the same action cadence are grouped as conversations.<br>This field can't be true for the first email step in an action cadence, because the first email from an action cadence must start a new conversation with the prospect.<br>The default value is `false`. This field is available in API version 49.0 and later. |
| `ParentStepName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The step name (`ActionCadenceStep.StepName`) of the previous step in the action cadence. Must contain a valid step name value unless this step is the root step. `null` if this step is a parent step. |
| `RootStepId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the root step for this action cadence. Every action cadence has exactly one root step (so that the Salesforce API can find all the steps for this cadence).<br>This field is a relationship field.<br>**Relationship Name**<br>RootStep<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ActionCadenceStep |
| `ScheduledDaysUntilDue` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of days after which this current step is due. Available in API version 58.0 and later. |
| `ScheduledDaysUntilStart` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of days when this step starts after the previous step completes. For delays of greater than one day from `ScheduledStartTimeInMinutes`. Available in API version 58.0 and later. |
| `ScheduledStartDelayInMinutes` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Any hard waits in minutes is captured in this field. Waits greater than 1 day need to set `ScheduledDaysUntilStart`. Available in API version 58.0 and later. |
| `ScheduledStartTimeInMinutes` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The specific time of day when the step starts. The time represents minutes after 00:00. Available in API version 58.0 and later. |
| `ScreenFlowReference` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The `namespace__fullname` of the screen flow. Used to describe flow objects and launch flows client side. |
| `StepAutomationReference` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of the flow that the step uses. Cadence steps can launch a cadence step flow as the step or as a cadence autolaunched flow when a rep completes the step. The format is `namespace__fullName`. This field is available in API version 56.0 and later. |
| `StepComments` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A comment that provides additional information about this step. |
| `StepName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Unique identifier for this step. Generated by Salesforce. |
| `StepTitle` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The title given to the step when it was created. |
| `TemplateId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If a template was added to this step, this field contains the template's ID. For example, if this step is a call step it can contain a template for a call script. Or, if this step is an email step, it can contain a template for an email.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Template<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CallTemplate, EmailTemplate |

| Field | Details |
| --- | --- |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of step. Possible values are:<br>• `AutoSendAnEmail` — Salesforce automatically sends the specified email.<br>• `Branch` — A branch step in the action cadence.<br>• `CreateTask` — Used for custom steps.<br>• `DaisyChain` — A daisy chain step. A daisy chain step connects this action cadence to another action cadence. It must be the last step in the path.<br>• `LinkedInConnection`<br>• `LinkedInMail`<br>• `ListenerBranch` — A branch step for emails.<br>• `MakeACall` — The sales rep must call the prospect at this step.<br>• `PlatformScreenFlow`<br>• `Root` — This step is the root step for the action cadence.<br>• `SendAnEmail` — The sales rep must send the prospect an email at this step.<br>• `Wait` — A wait step tells the sales rep not to do anything at this point in the action cadence. |
| `TypeDetail` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>More detail about the step type. If the step is a cadence step flow, this field contains the flow name. Otherwise, this field contains the same value as the Type field. This field is available in API version 56.0 and later. |
| `UniqueEmailsLinkClickedCount` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of links inside an email that the target clicked during this step. Multiple clicks on the same link aren't counted. This field is available in API version 50.0 and later. |
| `UniqueEmailsOpenedCount` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails that the target opened as part of this step. Multiple openings of the same email aren't counted. This field is available in API version 50.0 and later. |
| `UniqueEmailsRepliedCount` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails that targets replied to as part of this step. Multiple replies to the same email aren't counted. This field is available in API version 50.0 and later. |
| `WaitTimeInSeconds` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required if the step type is `Wait`. The time in seconds for this step to wait. |

## Usage

Use ActionCadenceStep to see what steps your action cadence has:

```
select StepTitle from ActionCadenceStep where ActionCadence.ID= <the id of an action cadence> and IsOrphan=false
```

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ActionCadenceStepChangeEvent (API version 48.0)**
Change events are available for the object.

SEE ALSO:

- ActionCadence
- ActionCadenceRule
- ActionCadenceRuleCondition
- ActionCadenceStepTracker

# ActionCadenceStepTracker

Represents a step in an active cadence for a specific cadence target. This object is available in API version 48.0 and later.

An ActionCadenceStepTracker record is created when a target moves to a new step in a cadence. Use ActionCadenceStepTracker to find information such as the step's current state, the reason it completed, and its type.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `ActionCadenceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the ActionCadence that is related to the ActionCadenceStep.<br>This field is a relationship field.<br>**Relationship Name**<br>ActionCadence<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ActionCadence |
| `ActionCadenceName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the related ActionCadence object. |
| `ActionCadenceStepId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ActionCadenceStepTracker is the runtime version of an ActionCadenceStep. This field contains the ID of the related ActionCadenceStep.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>ActionCadenceStep<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ActionCadenceStep |

| | • BCC_NOT_ALLOWED_IF_BCC_COMPLIANCE_ENABLED<br>• EAC_GLOBAL_DATA_SOURCE_ERROR—EAC data source error<br>• EMAIL_ORG_SETTING_OFF<br>• EXCHANGE_MAX_MAILBOX_SIZE—Max Exchange mailbox size reached<br>• EXCHANGE_SEND_AS_DENIED<br>• FIX_WITH_RECONNECT—Data connection failed<br>• GOOGLE_MAIL_SERVICE_NOT_ENABLED—Gmail service not enabled<br>• INVALID_DRAFT—Invalid email draft<br>• INVALID_TARGET_EMAIL<br>• INVALID_TEMPLATE_ID<br>• INVALID_USER_EMAIL<br>• MAIL_PROVIDER_RATE_LIMIT_REACHED—Email provider rate limit reached<br>• NON_EMAIL_UNKNOWN_ERROR—Unknown error<br>• NO_ATTACHMENT_ACCESS<br>• NO_CONTENT_VERSION_ACCESS<br>• NO_LIST_EMAIL_PERMISSION<br>• NO_TARGET_ACCESS<br>• ORG_WIDE_AUTO_EMAIL_LIMIT_REACHED<br>• ORG_WIDE_DAILY_EMAIL_LIMIT_REACHED<br>• OTHER_REQ_FIELD_MISSING—Other required field missing<br>• PARDOT_MERGE_FIELD_RENDERING_ERROR<br>• POST_SEND_EXCEPTION<br>• RETRIES_MAX_EXCEEDED—Maximum retries exceeded<br>• RETRY_LATER<br>• SCHEDULED_EMAIL_FAILED—Unknown error<br>• SENDER_MAILBOX_NOT_FOUND<br>• TARGET_DO_NOT_CONTACT_ON—Target has Do Not Contact on<br>• TARGET_EMAIL_BOUNCED<br>• TARGET_EMAIL_EMPTY<br>• TEMPLATE_DELETED<br>• TEMPLATE_EMPTY—Email subject or body missing<br>• TEMPLATE_HAS_INVALID_MERGE_FIELD<br>• TEMPLATE_MERGE_FIELD_RENDERING_ERROR<br>• TEMPLATE_NOT_PUBLIC—No access to template<br>• TEMPLATE_TOO_LARGE<br>• UNKNOWN—Email unknown error<br>• USER_HAS_LOST_HVS_ACCESS<br>• USER_IS_INACTIVE |

| Field | Details |
| --- | --- |
| `GoToStepIterationCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of times the action cadence step tracker was created for the same step in a cadence. Available in API version 58.0 and later. |
| `IsActionTaken` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>`true` if the sales rep completed an action during this step, such as making a phone call, otherwise `false`.<br>The default value is `false`.<br>This field is a calculated field. |
| `ScheduledStartDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the step starts. Available in API version 58.0 and later. |
| `SecondsOverdue` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If this step has a due date that has passed, this field contains the number of seconds that has elapsed since the due date. Once a sales rep takes action on the cadence step, the value of this field is the number of seconds elapsed between the due date and the time the action was taken.<br>This field is a calculated field. |
| `State` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The current state of this step. Possible values are:<br>Possible values are:<br>• `Active` — The current step that the sales rep is performing. There can only be one active step for a given target.<br>• `Cancelled` — The sales rep canceled the step. Salesforce doesn't run any canceled steps.<br>• `Completed` — This step is finished. Either the work in the step completed, or the step was skipped.<br>• `Error` — An error occurred while executing this step.<br>• `InProgress` — The sales rep has started the step, but it isn't yet completed.<br>• `Paused` —The sales rep paused the step.<br>• `Queued` — Used for automated email steps. The email step has started but the email is waiting in the queue to be sent.<br>• `Scheduled` — Used for email steps. An email can be scheduled to be sent later. |
| `StepTitle` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the related step. |
| `StepType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of step to execute. Possible values are:<br>• `AutoSendAnEmail`<br>• `Branch`<br>• `CreateTask`<br>• `DaisyChain`<br>• `LinkedInConnection`<br>• `LinkedInMail`<br>• `ListenerBranch`<br>• `MakeACall`<br>• `PlatformScreenFlow`<br>• `Root`<br>• `SendAnEmail` |

| Field | Details |
| --- | --- |
| | • `SubRoot`<br>• `Wait` |
| `TargetId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the prospect that is assigned to this cadence.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Target<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact, Lead |
| `WasEverPaused` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the sales rep had ever paused this step (`true`), or not (`false`). This field is available in API version 50.0 and later. |

## Usage

List all the steps that this prospect has completed in a given cadence:

```
select StepTitle from ActionCadenceStepTracker where TargetID = <target ID>
          and ActionCadenceId=<action cadence id> and StepType="Completed"
```

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ActionCadenceStepTrackerChangeEvent (API version 48.0)**
Change events are available for the object.

ActionCadenceRuleCondition

# ActionCadenceStepVariant

Represents an email template or call script variant associated with an action cadence step. Email and call steps can have up to 3 variants associated so sales teams can compare the engagement results. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Sales Engagement and Allow Email Template and Call Script Variant Testing must be enabled.

## Fields

| Field | Details |
|---|---|
| `ActionCadenceStepId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the related action cadence step.<br>This is a relationship field.<br>**Relationship Name**<br>ActionCadenceStep<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ActionCadenceStep |
| `SplitPercentage` | **Type**<br>percent |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The percentage of emails to send or calls to make using this email template or call script variant. The total for all variants must be 100%. |
| `TemplateId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the associated email template or call script.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Template<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CallTemplate, EmailTemplate |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of the associated action cadence step.<br>Possible values are:<br>• `AutoSendAnEmail`<br>• `Branch`<br>• `CreateTask`<br>• `DaisyChain`<br>• `LinkedInConnection`<br>• `LinkedInMail`<br>• `ListenerBranch`<br>• `MakeACall`<br>• `PlatformScreenFlow`—Available in version 55.0 and later.<br>• `Root`<br>• `SendAnEmail`<br>• `Wait`<br>Only email and call steps can have an associated action cadence step variant. |

## Usage

Use ActionCadenceStepVariant to retrieve the email template or call script for an action cadence step:

```
SELECT SplitPercentage, TemplateId FROM ActionCadenceStepVariant WHERE
ActionCadenceStepId=:[idValue]
```

Use ActionCadenceStepVariant to retrieve the call scripts from all call steps:

```
SELECT SplitPercentage, TemplateId, ActionCadenceStepId FROM ActionCadenceStepVariant WHERE
 Type='MakeACall'
```

# ActionCadenceTracker

Represents an active cadence target. This object is available in API version 45.0 and later.

An ActionCadenceTracker record is created when you add a target to a cadence. Use ActionCadenceTracker to learn about a running cadence target, including its state, current step, assigned prospect, and reason for completion.

## Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `ActionCadenceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related ActionCadence.<br>**Relationship Name**<br>ActionCadence<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ActionCadence |
| `CompletionDisposition` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The target's disposition when it exited the action cadence. This field contains a value if the target's `State` is `Complete`. Sales reps can set this value when removing a target from a cadence. This field is available in API version 51.0 and later. Possible values are:<br>• `Bad Data` — some of the target's data is incorrect or invalid.<br>• `Contact Later` — the target asked to be contacted at a later date.<br>• `Customer Connected` — the sales rep contacted the target.<br>• `Customer Engaged` — the target engaged with an email.<br>• `Disqualified`— a sales rep determined that the target isn't qualified.<br>• `Duplicate` — the target has a duplicate lead, contact, or person account record.<br>• `No Response` — the target didn't reply to any outreach.<br>• `Not Interested` — the target stated a lack of interest.<br>• `Success` — the cadence outreach was successful. |
| `CompletionReason` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The reason that the target completed the cadence. This field contains a value if the target's `State` is `Complete`. Possible values are:<br>• `AutomaticallyExited` — the target completed because a global exit condition occurred. This value is available in API version 49.0 and later.<br>• `AutomaticallyExitedDeletedStep`<br>• `AutomaticallyExitedInvalidParentStep`<br>• `DaisyChained` — the target completed because it's connected to another action cadence.<br>• `LeadConverted` — the target completed because the lead converted.<br>• `ManuallyRemoved` — the target completed because the sales rep removed it from the cadence.<br>• `ManuallyRemovedNoAccess`— reserved for future use.<br>• `NoMoreSteps` — the target completed the action cadence because all the action cadence steps were completed. |
| `CurrentStepId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the current ActionCadenceStepTracker. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>CurrentStep<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ActionCadenceStepTracker |
| `DaisyChainIteration` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of this action cadence in a sequence of linked action cadences followed by this target. This value starts at 1 with the initial action cadence. A target can follow a sequence of up to 10 linked action cadences. Available in API version 53.0 and later. |
| `ErrorMessage` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If an error occurs while this target is being completed, this field contains the error message. |
| `ExitGlobalRuleId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If a global exit condition occurs, a target completes. One example of a global exit condition is an email returned because of an invalid address. If the target completed because a global exit condition occurred, this field contains the ID of the ActionCadenceRule record that evaluated as `true`.<br>This field is available in API version 49.0 and later.<br>**Relationship Name**<br>ExitGlobalRule<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ActionCadenceRule |
| `IsTrackerActive` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the action cadence target is active `(true)` or not `(false)`. The default value is `false`. An action cadence target is active if the state is `Running`, `Paused`, `Processing`, or `Initializing`. Only active targets count against the org limit of 150,000 trackers.<br>This field is available in API version 50.0 and later. |
| `LastCompletedStepId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the last completed ActionCadenceStepTracker.<br>**Relationship Name**<br>LastCompletedStep<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ActionCadenceStepTracker |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the user who is assigned to complete the cadence steps for the target.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `RelatedToAttributionType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Defines when the cadence is related to an opportunity or invoice. Available in API version 51.0 and later.<br>Possible values are:<br>• `Activation`—Attribute the opportunity to the cadence when the opportunity is created.<br>• `Collected`—Attribute the value to the cadence after payment for the invoice is collected.<br>• `Collection Advancement`—Attribute the value to the cadence when the invoice is out for collection.<br>• `Maturation`—Attribute the opportunity to the cadence only when the opportunity stage advances. |
| `RelatedToId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related opportunity if there's one. Available in API version 51.0 and later.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>RelatedTo<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Opportunity, Invoice |
| `ScheduledResumeDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the action cadence tracker is going to resume after it's paused or on a wait step. Available in API version 53.0 and later. |
| `State` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The state of the current action cadence tracker. Possible values are: |

| Field | Details |
| --- | --- |
| | • `Complete`<br>• `Error`<br>• `Initializing`<br>• `Paused`<br>• `Processing`—Salesforce is working on changing the state of this action cadence tracker. We recommend that you filter out steps that have this state from your dashboards.<br>• `Running` |
| `TargetId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the target that is assigned to this action cadence.<br>**Relationship Name**<br>Target<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact, Lead |

## Usage

Use ActionCadenceTracker to see what targets are currently assigned to an active action cadence.

```
select TargetId from ActionCadenceTracker where ActionCadenceId=<Id of the action cadence>
 and State= "Running"
```

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ActionCadenceTrackerChangeEvent (API version 48.0)**
Change events are available for the object.

**ActionCadenceTrackerOwnerSharingRule on page 65**
Sharing rules are available for the object.

**ActionCadenceTrackerShare on page 67**
Sharing is available for the object.

# ActionCdncStpMonthlyMetric

Represents the monthly engagement metrics for an action cadence step. This object is available in API version 49.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Sales Engagement must be enabled.

## Fields

| Field | Details |
|---|---|
| `ActionCadenceStepId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the related action cadence step.<br>This is a relationship field.<br>**Relationship Name**<br>ActionCadenceStep<br>**Relationship Type**<br>This is an overview-detail relationship field, where ActionCadenceStep is the master object.<br>**Refers To**<br>ActionCadenceStep |
| `AllCallsCallBackLater` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the month for this step with the call result Call Back Later. |
| `AllCallsLeftVoicemail` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the month for this step with the call result Left Voicemail. |

| Field | Details |
| --- | --- |
| `AllCallsMeaningfulConnect` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the month for this step with the call result Meaningful Connect. |
| `AllCallsNotInterested` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the month for this step with the call result Not Interested. |
| `AllCallsUncategorized` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the month for this step with no call result specified. |
| `AllCallsUnqualified` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of calls in the month for this step with the call result Unqualified. |
| `AllEmailsBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total of hard and soft bounced emails for this step in the month.<br>This is a calculated field. |
| `AllEmailsDeliveredCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of successfully delivered emails for this step in the month.<br>This is a calculated field. |
| `AllEmailsHardBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of hard bounced emails for this step in the month. |
| `AllEmailsLinkClickedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails containing a link clicked by the recipient for this step in the month. |
| `AllEmailsNotDeliveredCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of sent emails that were bounced for all recipients on the email. Bounced emails aren't marked as delivered. Available in API version 54.0 and later. |
| `AllEmailsOpenedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails opened by the recipient for this step in the month. |
| `AllEmailsOutOfOfficeCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails that triggered an out-of-office reply for this step in the month. |
| `AllEmailsRepliedCount` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails replied to for this step in the month. |
| `AllEmailsSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent for this step in the month.<br>This is a calculated field. |
| `AllEmailsSoftBouncedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails soft bounced for this step in the month. |
| `AllEmailsTrackedSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent with engagement tracking enabled for this step in the month. Available in API version 51.0 and later. |
| `AllEmailsUntrackedSentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent without engagement tracking for this step in the month. Available in API version 51.0 and later. |
| `AllTotalCallsCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The total number of calls with all call results for this step in the month.<br>This is a calculated field. |
| `DeliveredRecipientCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients that were successfully delivered an email. Available in API version 54.0 and later.<br>This field is a calculated field. |
| `DeliveredRecipientRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of unique recipients that received an email you sent. Available in API version 54.0 and later.<br>This field is a calculated field. |
| `HardBounceTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent with hard bounce tracking. Available in API version 54.0 and later. |
| `HasTemplateAssigned` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this step has an associated email template or call script. Available in API version 52.0 and later.<br>The default value is 'false'. |
| `HrdBncTrackableRecipientSends` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients who received an email with hard bounce tracking. Available in API version 54.0 and later. |
| `IsCompoundMetric` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>When true, indicates that this metric represents engagement for a combination of the action cadence step and a single email template. The value is true for all action cadence steps created in Summer '21 and later.<br>When false, indicates that the metric represents engagement for the action cadence step and all email templates used on the step. The value is false for all action cadence steps created in Spring '21 and earlier. The default value is 'false'.<br>Available in API version 52.0 and later. |
| `LinkClickTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent with link click tracking. Available in API version 54.0 and later. |
| `LinkClkTrackableRecipientSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients who received an email with link tracking. Available in API version 54.0 and later. |
| `Month` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The month in which the engagement occurred. |

| Field | Details |
| --- | --- |
| `MonthInt` | **Type**<br>int<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The month in which the engagement occurred, in `yyyymm` format. |
| `OooTrackableRecipientSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients who received an email with out-of-office tracking. Out-of-office tracking requires Inbox. Available in API version 54.0 and later. |
| `OpenTrackableRecipientSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients who received an email with open tracking. Available in API version 54.0 and later. |
| `OpenTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent with open tracking. Available in API version 54.0 and later. |
| `OutOfOfficeTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent with out-of-office tracking. Available in API version 54.0 and later. |
| `RecipientReplies` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of unique recipients who replied to an email. Available in API version 54.0 and later. |
| `RecipientSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of unique email recipients. Available in API version 54.0 and later. |
| `RecipientsHardBounced` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients that hard-bounced an email. Hard bounces can mean that the recipient's email address doesn't exist or is misspelled. Available in API version 54.0 and later. |
| `RecipientsOutOfOffice` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients that responded with an out-of-office reply. Available in API version 54.0 and later. |
| `RecipientsSoftBounced` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients that soft-bounced an email. A soft bounce often indicates a temporary issue with the recipient's email server, such as a full inbox. Available in API version 54.0 and later. |
| `ReplyTrackableRecipientSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of recipients who received an email with reply tracking. Available in API version 54.0 and later. |
| `ReplyTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent with reply tracking. Available in API version 54.0 and later. |
| `SftBncTrackableRecipientSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of recipients who received an email with soft bounce tracking. Available in API version 53.0 and later. |
| `SoftBounceTrackableSends` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of emails sent with soft bounce tracking. Available in API version 54.0 and later. |
| `SomeEmailsDeliveredCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of sent emails that were successfully delivered to at least one of its recipients. Available in API version 54.0 and later.<br>This field is a calculated field. |
| `SomeEmailsDeliveredRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of sent and tracked emails that were successfully delivered to at least one of their recipients. Available in API version 54.0 and later. |

| Field | Details |
| --- | --- |
| | This field is a calculated field. |
| `TemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the email template or call script associated with this step. Available in API version 52.0 and later.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Template<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CallTemplate, EmailTemplate |
| `TrackableRecipientSendHrdBncRt` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to unique recipients with hard bounce tracking that hard bounced. Available in API version 54.0 and later.<br>This field is a calculated field. |
| `TrackableRecipientSendOooRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent with out-of-office tracking that received out-of-office replies from unique recipients. Available in API version 54.0 and later.<br>This field is a calculated field. |
| `TrackableRecipientSendReplyRt` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The percentage of emails sent with reply tracking that received replies from unique recipients. Available in API version 54.0 and later.<br>This field is a calculated field. |
| TrackableRecipientSendSftBncRt | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent to unique recipients with soft bounce tracking that soft-bounced. Available in API version 54.0 and later.<br>This field is a calculated field. |
| TrackableSendHardBounceRate | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent with hard bounce tracking that hard bounced. Available in API version 54.0 and later.<br>This field is a calculated field. |
| TrackableSendLinkClickRate | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent with link tracking that had link clicks. Available in API version 54.0 and later.<br>This field is a calculated field. |
| TrackableSendOpenRate | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent with open tracking that were opened by the recipient. Available in API version 54.0 and later.<br>This field is a calculated field. |

| Field | Details |
| --- | --- |
| `TrackableSendOutOfOfficeRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent with out-of-office tracking that received out-of-office replies. Available in API version 54.0 and later.<br>This field is a calculated field. |
| `TrackableSendReplyRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent with reply tracking that received replies. Available in API version 54.0 and later.<br>This field is a calculated field. |
| `TrackableSendSoftBounceRate` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of emails sent with soft bounce tracking that soft bounced. Available in API version 54.0 and later.<br>This field is a calculated field. |
| `UniqueEmailsLinkClickedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of unique recipients who clicked a link in an email for this step in the month. |
| `UniqueEmailsOpenedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of unique recipients who opened an email for this step in the month. |

| Field | Details |
| --- | --- |
| `UniqueEmailsRepliedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of unique recipients who replied to an email for this step in the month. |

# ActionLinkGroupTemplate

Action link templates let you reuse action link definitions and package and distribute action links. An action link is a button on a feed element. Clicking on an action link can take a user to another Web page, initiate a file download, or invoke an API call to an external server or Salesforce. Use action links to integrate Salesforce and third-party services into the feed. Every action link belongs to an action link group and action links within the group are mutually exclusive. This object is available in API version 33.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Only users with the "Customize Application" permission can modify or delete this object.

## Fields

| Field Name | Details |
| --- | --- |
| `Category` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The location of the action link group within the feed element. Values are:<br>• `Primary`—The action link group is displayed in the body of the feed element.<br>• `Overflow`—The action link group is displayed in the overflow menu of the feed element. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The name of the action link group template to use in code.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `ExecutionsAllowed` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The number of times an action link can be executed. Values are:<br>• `Once`—An action link can be executed only once across all users.<br>• `OncePerUser`—An action link can be executed only once for each user.<br>• `Unlimited`—An action link can be executed an unlimited number of times by each user. If the action link's `actionType` is `Api` or `ApiAsync`, you can't use this value. |
| `HoursUntilExpiration` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of hours from when the action link group is created until it's removed from associated feed elements and can no longer be executed. The maximum value is 8,760. |
| `IsPublished` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If `true`, the action link group template is published. Action link group templates shouldn't be published until at least one ActionLinkTemplate is associated with it. Once set to `true`, this can't be set back to `false`. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the `MasterLabel`. |

| Field Name | Details |
| --- | --- |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The name of the action link group template. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |

## Usage

Define action link templates in Setup and use `ConnectApi` in Apex or Connect REST API to instantiate action links from the templates and to post feed elements with the action links.

If you delete a published action link group template, you delete all related action link information which includes deleting all action links that were instantiated using the template from feed items.

# ActionLinkTemplate

Action link templates let you reuse action link definitions and package and distribute action links. An action link is a button on a feed element. Clicking an action link can take a user to another Web page, initiate a file download, or invoke an API call to an external server or Salesforce. Use action links to integrate Salesforce and third-party services into the feed. This object is available in API version 33.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Only users with the "Customize Application" permission can modify or delete this object.

## Fields

| Field Name | Details |
| --- | --- |
| `ActionLinkGroupTemplateId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the ActionLinkGroupTemplate with which this action link template is associated.<br>This is a relationship field.<br>**Relationship Name**<br>ActionLinkGroupTemplate<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ActionLinkGroupTemplate |
| `ActionUrl` | **Type**<br>textarea<br>**Properties**<br>Create, Update<br>**Description**<br>The action link URL. For example, a `Ui` action link URL is a Web page. A `Download` action link URL is a link to the file to download. `Ui` and `Download` action link URLs are provided to clients. An `Api` or `ApiAsync` action link URL is a REST resource. `Api` and `ApiAsync` action link URLs aren't provided to clients. Links to Salesforce can be relative. All other links must be absolute and start with `https://`.<br>Links to resources hosted on Salesforce servers can be relative, starting with a `/`. All other links must be absolute and start with `https://`. This field can contain context variables and binding variables in the form `{!Bindings.`***`key`***`}`, for example, `https://www.example.com/{!Bindings.itemId}`. Set the binding variable's value when you instantiate the action link group from the template. |

| Field Name | Details |
| --- | --- |
| `Headers` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Template for the HTTP headers sent when corresponding action links are invoked. This field can be used only for `Api` and `ApiAsync` action links. This field can contain context variables and binding variables in the form `{!Bindings.key}`. |
| `IsConfirmationRequired` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If `true`, a confirmation dialog appears before the action is executed. |
| `IsGroupDefault` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If `true`, action links derived from this template are the default or primary action in their action groups. There can be only one default action per action group. |
| `Label` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A custom label to display on the action link button. If none of the `LabelKey` values make sense for an action link, use a custom label. Set the `LabelKey` field to `None` and enter a label name in the `Label` field.<br>Action links have four states: new, pending, success, and failed. These strings are appended to the label for each state:<br>• *Label*<br>• *Label* Pending<br>• *Label* Success<br>• *Label* Failed<br>For example, if the value of `Label` is "Call Home," the values of the four action link states are: Call Home, Call Home Pending, Call Home Success, and Call Home Failed. |

| Field Name | Details |
| --- | --- |
| | If `LabelKey` has any value other than `None`, the `Label` field is empty. |
| `LabelKey` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Key for the set of labels to display for these action link states: new, pending, success, failed. For example, the Approve set contains these labels: Approve, Pending, Approved, Failed. For a complete list of keys and labels, see Action Link Labels in the *Connect REST API Developer Guide*.<br>If none of the label key values make sense for an action link, set this field to `None` and enter a custom label name in the `Label` field. |
| `LinkType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of action link. One of these values:<br>• `Api`—The action link calls a synchronous API at the action URL. Salesforce sets the status to `SuccessfulStatus` or `FailedStatus` based on the HTTP status code returned by your server.<br>• `ApiAsync`—The action link calls an asynchronous API at the action URL. The action remains in a `PendingStatus` state until a third party makes a request to `/connect/action-links/`***`actionLinkId`*** to set the status to `SuccessfulStatus` or `FailedStatus` when the asynchronous operation is complete.<br>• `Download`—The action link downloads a file from the action URL.<br>• `Ui`—The action link takes the user to a web page at the action URL. |
| `Method` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>HTTP method for the action URL. One of these values:<br>• `HttpDelete`—Returns HTTP 204 on success. Response body or output class is empty.<br>• `HttpGet`—Returns HTTP 200 on success.<br>• `HttpHead`—Returns HTTP 200 on success. Response body or output class is empty. |

| Field Name | Details |
| --- | --- |
| | • `HttpPatch`—Returns HTTP 200 on success or HTTP 204 if the response body or output class is empty.<br>• `HttpPost`—Returns HTTP 201 on success or HTTP 204 if the response body or output class is empty. Exceptions are the batch posting resources and methods, which return HTTP 200 on success.<br>• `HttpPut`—Return HTTP 200 on success or HTTP 204 if the response body or output class is empty.<br>`Ui` and `Download` action links must use `HttpGet`. |
| `Position` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>An integer specifying the position of the action link template relative to other action links in the group. 0 is the first position. |
| `RequestBody` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Template for the HTTP request body sent when corresponding action links are invoked. This field can be used only for `Api` and `ApiAsync` action links. This field can contain context variables and binding variables in the form `{!Bindings.key}`. |
| `UserAlias` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If you selected `CustomUser` or `CustomExcludedUser` for `UserVisibility`, this field is the alias for the custom user. Use the alias in a template binding to specify the custom user when an action link group is created using the template. |
| `UserVisibility` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Who can see the action link. This value is set per action link, not per action link group. One of these values:<br>• `Creator`—Only the creator of the action link can see the action link.<br>• `Everyone`—Everyone can see the action link.<br>• `EveryoneButCreator`—Everyone but the creator of the action link can see the action link.<br>• `Manager`—Only the manager of the creator of the action link can see the action link.<br>• `CustomUser`—Only the custom user can see the action link.<br>• `CustomExcludedUser`—Everyone but the custom user can see the action link. |

## Usage

Create action link templates in Setup. Use Apex classes in the `ConnectApi` namespace or Connect REST API to instantiate action links from templates and to post feed elements with the action links.

For information about action links, see Working with Action Links in the *Apex Developer Guide* or the *Connect REST API Developer Guide*.

# ActionPlan

Represents the instance of an action plan, a set of tasks created from an action plan template. This object is available in API version 44.0 and later.

## Supported Calls

`create()` `delete()` `describeLayout()` `describeSObjects()` `getDeleted()` `getUpdated()` `query()` `retrieve()` `undelete()` `update()` `upsert()`

## Fields

| Field Name | Details |
| --- | --- |
| `ActionPlanState` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The status of work being done for the action plan.<br>Possible values are:<br>• `Canceled` |

| Field Name | Details |
| --- | --- |
| | • `Complete`<br>• `In Progress`<br>• `Not Started`<br>The default value is `Not Started`. |
| `ActionPlanTemplateVersionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the version of the action plan template used to create this action plan. At creation, the referenced action plan template must be in the published state. |
| `ActionPlanType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The action plan's type.<br>Possible values are:<br>• `Industries`<br>• `Sales`—This value is available in API version 63.0 and later with the Sales Action Plans add-on license and the Sales Action Plans default permission set.<br>• `Service` |
| `IsLocked` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the action plan is locked or not. |
| `IsUsingHolidayHours` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether task completion dates have been calculated by incrementing the task offset for each non-work day, excluding recurring holidays. |

| Field Name | Details |
| --- | --- |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, NIlable, Sort<br>**Description**<br>The most recent date on which a user referenced this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The most recent date on which a user viewed this record. |
| `MayEdit` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the action plan can be edited or not. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the action plan. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who owns this record. |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Create, Default on create, Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The start date of the action plan. |
| `TargetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the parent object record that relates to this action plan.<br>For API version 63.0 and later, supported parent objects are Account, AccountPlanObjective, Applicant, ApplicationForm, ApplicationFormProduct, Asset, BusinessLicense, BusinessMilestone, Campaign, Case, ChangeRequest, Claim, Contact, Contract, FinancialGoal, Incident, InsurancePolicy, InsurancePolicyCoverage, Lead, Opportunity, PersonLifeEvent, Problem, ResidentialLoanApplication, WorkOrder, and WorkOrderLineItem.<br>For API version 62.0 and later, supported parent objects are ApplicationFormEvaluation and VettingEvaluation.<br>For API version 48.0 and later, supported parent objects are Account, AssetsAndLiabilities, BusinessMilestone, Campaign, Card, Case, Claim, Contact, Contract, Financial Account, Financial Goal, Financial Holding, InsurancePolicy, InsurancePolicyCoverage, Lead, Opportunity, PersonLifeEvent, ResidentialLoanApplication, and Visit as well as custom objects with activities enabled.<br>For API version 47.0 and later, supported parent objects are Account, BusinessMilestone, Campaign, Case, Claim, Contact, Contract, InsurancePolicy, InsurancePolicyCoverage, Lead, Opportunity, PersonLifeEvent, and Visit as well as custom objects with activities enabled.<br>For API version 46.0 and later, supported parent objects are Account, Campaign, Case, Contact, Contract, Lead, and Opportunity as well as custom objects with activities enabled.<br>For API version 45.0 and earlier, the only supported parent object is Account. |

# Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**ActionPlanChangeEvent**
Change events are available for the object.

**ActionPlanFeed**
Feed tracking is available for the object.

**ActionPlanHistory**
History is available for tracked fields of the object.

**ActionPlanOwnerSharingRule**
Sharing rules are available for the object.

**ActionPlanShare**
Sharing is available for the object.

# ActionPlanItem

Represents the instance of an action plan item.This object is available in API version 44.0 and later.

## Supported Calls

`create()` `delete()` `describeLayout()` `describeSObjects()` `getDeleted()` `getUpdated()` `query()` `retrieve()` `undelete()` `update()` `upsert()`

## Fields

| Field Name | Details |
|---|---|
| `ActionPlanId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the action plan that this item belongs to. |
| `ActionPlanTemplateItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the action plan template item this item was created from. |
| `IsLocked` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this action plan item is locked or not. The default value is `false`. |
| `IsRequired` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this action plan item is required or not. |
| `ItemEntityType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of object used with the item. This field is available in API version 61.0 and later.<br>Possible values are:<br>• `AssessmentTask`—Assessment Task<br>• `DocumentChecklistItem`—Document Checklist Item<br>• `Event`-Available only with sales action plans in API version 63.0 and later with the Sales Action Plans add-on license and the Sales Action Plans default permission set.<br>• `GenericVisitTask`—Generic Visit Task<br>• `OtherComponentTask`—Other Component Task<br>• `RecordAction`<br>• `SignatureTask`—Signature Task<br>• `Task` |
| `ItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the record created by this action plan item. This field is a polymorphic relationship field.<br>**Relationship Name**<br>Item<br>**Refers To**<br>DocumentChecklistItem, Event, RecordAction, Task |
| `ItemState` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The action plan item's work state.<br>Possible values are:<br>• `Canceled`<br>• `Completed`<br>• `Deleted`<br>• `In Progress`<br>• `Pending` |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of this action plan item. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**ActionPlanItemChangeEvent**
Change events are available for the object.

**ActionPlanItemFeed**
Feed tracking is available for the object.

**ActionPlanItemHistory**
History is available for tracked fields of the object.

**ActionPlanItemOwnerSharingRule**
Sharing rules are available for the object.

**ActionPlanItemShare**
Sharing is available for the object.

# ActionPlanTemplate

Represents the instance of an action plan template. This object is available in API version 44.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

# Fields

| Field Name | Details |
| --- | --- |
| `ActionPlanType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>This action plan template's type. Possible values are:<br>• `Industries`<br>• `Sales`—This value is available in API version 63.0 and later with the Sales Action Plans add-on license and the Sales Action Plans default permission set.<br>• Service |
| `Category` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies the category that the action plan template belongs to.<br>Available in API version 64.0 and later.<br>Possible values are:<br>• `Onboarding`<br>• `Application` |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The description of this action plan template. |
| `EstimatedCompletionDays` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The estimated number of days to complete the action plan.<br>Available in API version 64.0 and later. |

| Field Name | Details |
| --- | --- |
| `FileBasedTemplatePath` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The path of the file based template using which the action plan template is created.<br>Available in API version 64.0 and later. |
| `IsAdHocItemCreationEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether users can add tasks or other items to generated action plans (`true`) or not (`false`). |
| `IsLocked` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this action plan template is locked or not. The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The most recent date on which a user referenced this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The most recent date on which a user viewed this record. |
| `MayEdit` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this action plan template can be edited or not. The default value is `false`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of this action plan template. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who owns this action plan template. This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |
| `SourceType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies the source type to which the action plan template belongs to.<br>Available in API version 64.0 and later.<br>Possible values are:<br>• `CRM`<br>• `MigratedFromSandbox` |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The status of this action plan template.<br>Possible values are:<br>• `Draft`<br>• `Final—Published`<br>• `Obsolete`<br>• `ReadOnly` |
| `Subcategory` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The subcategory to which the action plan template belongs.<br>Available in API version 64.0 and later.<br>Possible values are:<br>• `Product Onboarding`<br>• `Customer Onboarding` |
| `TargetEntityType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Group, Restricted picklist, Sort<br>**Description**<br>The parent object this action plan template relates to.<br>Possible values are organized by the API version in which they were introduced. Values are available in all versions after introduction unless noted otherwise.<br>API Version 62.0 and later with Financial Services:<br>• `AccountPlanObjective`<br>• `FinancialDeal`<br>• `PartyProfile`<br>API Version 62.0 and later with Public Sector Solutions:<br>• `ApplicationFormEvaluation`<br>• `VettingEvaluation`<br>API version 60.0 and later with Education Cloud<br>• `ProgramEnrollment`<br>API version 58.0 and later with Health Cloud<br>• `CareBarrier` |

| Field Name | Details |

| UniqueName | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name for this action plan template. This field is unique within your organization. |

# Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**ActionPlanTemplateChangeEvent**
Change events are available for the object.

**ActionPlanTemplateFeed**
Feed tracking is available for the object.

**ActionPlanTemplateHistory**
History is available for tracked fields of the object.

**ActionPlanTemplateOwnerSharingRule**
Sharing rules are available for the object.

**ActionPlanTemplateShare**
Sharing is available for the object.

# ActionPlanTemplateItem

Represents the instance of an item on an action plan template version. This object is available in API version 44.0 and later.

## Supported Calls

`create()` `delete()` `describeLayout()` `describeSObjects()` `getDeleted()` `getUpdated()` `query()` `retrieve()` `search()` `undelete()` `update()` `upsert()`

## Fields

| Field Name | Details |
|---|---|
| `ActionPlanTemplateVersionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort,<br>**Description**<br>The version of the action plan template this item is for. |
| `DisplayOrder` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The order in which this item is displayed within the action plan template version. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the task created from this template item is active. The default value is `false`. |
| `IsLocked` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this action plan template item is locked or not. The default value is `false`. |
| `IsRequired` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the task created from this template item is required. The default value is `false`. |
| `ItemEntityType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of action plan template item entity..<br>Possible values are:<br>• `Document Checklist Item`<br>• `Event`—This value is available in API version 63.0.<br>• `RecordAction`<br>• `Task` |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The most recent date on which a user referenced this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The most recent date on which a user viewed this record. |

| Field Name | Details |
| --- | --- |
| `MayEdit` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this action plan template item can be edited or not. The default value is `false`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, idLookup, Update<br>**Description**<br>The unique identifier for this action plan template item record. |
| `UniqueName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name for this action plan template item. This field is unique within your organization. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**ActionPlanTemplateItemChangeEvent**
Change events are available for the object.

**ActionPlanTemplateItemFeed**
Feed tracking is available for the object.

**ActionPlanTemplateItemHistory**
History is available for tracked fields of the object.

**ActionPlanTemplateItemOwnerSharingRule**
Sharing rules are available for the object.

**ActionPlanTemplateItemShare**
Sharing is available for the object.

# ActionPlanTemplateItemValue

Represents the value associated with an action plan template item. This object is available in API version 44.0 and later.

## Supported Calls

create() delete() describeLayout() describeSObjects() getDeleted() getUpdated() query() retrieve() search() undelete() update() upsert()

## Fields

| Field Name | Details |
| --- | --- |
| ActionPlanTemplateItemId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the action plan template item that this value relates to.<br>**Relationship Name**<br>ActionPlanTemplateItem<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>ActionPlanTemplateItem (the master object) |
| IsActive | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the task created from this template item is active. The default value is `false`. |
| IsLocked | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this action plan template item value is locked or not. The default value is `false`. |
| ItemEntityFieldName | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The name of the field on the action plan template item that this value is for. Available fields include:<br>• `AssessmentTask.AssessmentTaskDefinitionId`—Assessment Task Definition ID<br>• `AssessmentTask.AssignedToId`—AssignedTo ID<br>• `AssessmentTask.Description`—Description<br>• `AssessmentTask.EndTime`—End Time<br>• `AssessmentTask.IsRequired`—Required<br>• `AssessmentTask.Name`—Name<br>• `AssessmentTask.OwnerId`—Owner ID<br>• `AssessmentTask.ParentId`—Visit ID<br>• `AssessmentTask.ReferenceRecordId`—ReferenceRecord ID<br>• `AssessmentTask.SequenceNumber`—Sequence<br>• `AssessmentTask.StartTime`—Start Time<br>• `AssessmentTask.Status`—Status<br>• `AssessmentTask.TaskDefinitionId`—TaskDefinition ID<br>• `AssessmentTask.TaskType`—Task Type<br>• `DocumentChecklistItem.Comments`—Comments<br>• `DocumentChecklistItem.DocumentCategoryId`—Document Category ID<br>• `DocumentChecklistItem.DocumentTypeId`—Document Type ID<br>• `DocumentChecklistItem.Instruction`—Instructions<br>• `DocumentChecklistItem.IsAccepted`—Accepted<br>• `DocumentChecklistItem.IsFrozen`—Frozen<br>• `DocumentChecklistItem.IsRequired`—Required<br>• `DocumentChecklistItem.Name`—Name<br>• `DocumentChecklistItem.OwnerId`—Owner ID<br>• `DocumentChecklistItem.ParentRecordId`—Parent Record ID<br>• `DocumentChecklistItem.ReceivedDocumentId`—Received Document ID<br>• `DocumentChecklistItem.Status`—Status<br>• `DocumentChecklistItem.ValidatedById`—User ID<br>• `DocumentChecklistItem.ValidationDateTime`—Validation Date Time<br>• `DocumentChecklistItem.WhoId`—Who ID<br>• `Event.ActivityDate`—Due Date Only<br>• `Event.ActivityDateTime`—Due Date Time |

| Field Name | Details |
| --- | --- |
| | • `Event.Description`—Description<br>• `Event.DurationInMinutes`—Duration<br>• `Event.EndDateTime`—End Date Time<br>• `Event.EventSubtype`—Event Subtype<br>• `Event.IsAllDayEvent`—All-Day Event<br>• `Event.IsPrivate`—Private<br>• `Event.IsRecurrence`—Create Recurring Series of Events<br>• `Event.IsReminderSet`—Reminder Set<br>• `Event.Location`—Location<br>• `Event.OwnerId`—Assigned To ID<br>• `Event.Recurrence2PatternText`—Recurrence Pattern<br>• `Event.RecurrenceDayOfMonth`—Recurrence Day of Month<br>• `Event.RecurrenceDayOfWeekMask`—Recurrence Day of Week Mask<br>• `Event.RecurrenceEndDateOnly`—Recurrence End<br>• `Event.RecurrenceInstance`—Recurrence Instance<br>• `Event.RecurrenceInterval`—Recurrence Interval<br>• `Event.RecurrenceMonthOfYear`—Recurrence Month of Year<br>• `Event.RecurrenceStartDateTime`—Recurrence Start<br>• `Event.RecurrenceTimeZoneSidKey`—Recurrence Time Zone<br>• `Event.RecurrenceType`—Recurrence Type<br>• `Event.ReminderDateTime`—Reminder Date/Time<br>• `Event.ShowAs`—Show Time As<br>• `Event.StartDateTime`—Start Date Time<br>• `Event.Subject`—Subject<br>• `Event.Type`—Type<br>• `Event.WhatId`—Related To ID<br>• `Event.WhoId`—Name ID<br>• `GenericVisitTask.DefinitionReferenceId`—Generic Visit Task ID<br>• `GenericVisitTask.Description`—Description<br>• `GenericVisitTask.EndDateTime`—End Date Time<br>• `GenericVisitTask.IsRequired`—Required<br>• `GenericVisitTask.Name`—Name<br>• `GenericVisitTask.OwnerId`—Owner ID<br>• `GenericVisitTask.Sequence`—Sequence<br>• `GenericVisitTask.StartDateTime`—Start Date Time<br>• `GenericVisitTask.Status`—Status |

| Field Name | Details |
| --- | --- |
| | • GenericVisitTask.VisitId—Visit ID<br>• OtherComponentTask.Description—Description<br>• OtherComponentTask.FullyQualifiedName—Fully Qualified Name<br>• OtherComponentTask.Name—Name<br>• OtherComponentTask.OwnerId—Owner ID<br>• OtherComponentTask.ParentTaskId—Assessment Task ID<br>• OtherComponentTask.ParticipantRoleId—ParticipantRole ID<br>• RecordAction.ActionDefinition—Action Definition<br>• RecordAction.ActionType—Action Type<br>• RecordAction.FlowDefinition—Interaction Definition ID<br>• RecordAction.FlowInterviewId—FlowInterview ID<br>• RecordAction.IsMandatory—Is Mandatory<br>• RecordAction.IsUiRemoveHidden—Hide Remove Action in UI<br>• RecordAction.Order—Order<br>• RecordAction.ParticipantRoleId—ParticipantRole ID<br>• RecordAction.Pinned—Pinned<br>• RecordAction.RecordId—Parent Record ID<br>• RecordAction.Status—Status<br>• SignatureTask.Description—Description<br>• SignatureTask.Name—Name<br>• SignatureTask.ParentTaskId—Assessment Task ID<br>• Task.APT_Custom_Text_1_c__c—APT Custom Text - 1<br>• Task.ActivityDate—Due Date Only<br>• Task.Boolean_Test__c—Boolean Test<br>• Task.CallDisposition—Call Result<br>• Task.CallDurationInSeconds—Call Duration<br>• Task.CallObject—Call Object Identifier<br>• Task.CallType—Call Type<br>• Task.Custom_Picklist__c—Custom Picklist<br>• Task.Description—TEstActivityDEs<br>• Task.IsRecurrence—Create Recurring Series of Tasks<br>• Task.IsReminderSet—Reminder Set<br>• Task.OwnerId—Assigned To ID<br>• Task.Priority—Priority<br>• Task.RecurrenceDayOfMonth—Recurrence Day of Month<br>• Task.RecurrenceDayOfWeekMask—Recurrence Day of Week Mask |

| Field Name | Details |
| --- | --- |
| | • `Task.RecurrenceEndDateOnly`—Recurrence End<br>• `Task.RecurrenceInstance`—Recurrence Instance<br>• `Task.RecurrenceInterval`—Recurrence Interval<br>• `Task.RecurrenceMonthOfYear`—Recurrence Month of Year<br>• `Task.RecurrenceRegeneratedType`—Repeat This Task<br>• `Task.RecurrenceStartDateOnly`—Recurrence Start<br>• `Task.RecurrenceTimeZoneSidKey`—Recurrence Time Zone<br>• `Task.RecurrenceType`—Recurrence Type<br>• `Task.ReminderDateTime`—Reminder Date/Time<br>• `Task.Status`—Status<br>• `Task.Subject`—Subject<br>• `Task.TaskSubtype`—Task Subtype<br>• `Task.Type`—Type<br>• `Task.WhatId`—Related To ID<br>• `Task.WhoId`—Name ID<br>• `Task.test__c`—test<br>• `Task.text_3__c`—text 3 |
| `ItemEntityType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of action plan template item.<br>Possible values are:<br>• `Document Checklist Item`<br>• `Event`—Available in API version 63.0 and later with the Sales Action Plans add-on license and the Sales Action Plans default permission set.<br>• `RecordAction`<br>• `Task` |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The most recent date on which a user referenced this record. |

| Field Name | Details |
| --- | --- |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The most recent date on which a user viewed this record. |
| `MayEdit` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this action plan template item value can be edited or not. The default value is `false`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The unique identifier for this record. |
| `ValueFormula` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A formula used to calculate the value for this action plan template item. |
| `ValueLiteral` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The value for this action plan template item. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ActionPlanTemplateItemValueChangeEvent**
Change events are available for the object.

**ActionPlanTemplateItemValueFeed**
Feed tracking is available for the object.

**ActionPlanTemplateItemValueHistory**
History is available for tracked fields of the object.

**ActionPlanTemplateItemValueOwnerSharingRule**
Sharing rules are available for the object.

**ActionPlanTemplateItemValueShare**
Sharing is available for the object.

# ActionPlanTemplateVersion

Represents the version of an action plan template. This object is available in API version 44.0 and later.

## Supported Calls

`create()` `delete()` `describeLayout()` `describeSObjects()` `getDeleted()` `getUpdated()` `query()` `retrieve()` `search()` `undelete()` `update()` `upsert()`

## Fields

| Field Name | Details |
|---|---|
| `ActionPlanTemplateId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Filter, Group, Sort<br>**Description**<br>The ID of the action plan template this version represents. |
| `ActivationDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort,<br>**Description**<br>The date and time at which this version became active. |
| `InactivationDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The date and time at which this version became inactive. |
| `IsLocked` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this action plan template version is locked or not. The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort, , Sort<br>**Description**<br>The most recent date on which a user referenced this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The most recent date on which a user viewed this record. |
| `MayEdit` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this action plan template version can be edited. The default value is `false`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update,<br>**Description**<br>The name of this version item. |

| Field Name | Details |
| --- | --- |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The action plan template version's state. Possible values are:<br>• `Draft`<br>• `Final – Published`<br>• `Obsolete`<br>• `ReadOnly` |
| `Version` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>The index number of this action plan template version. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**ActionPlanTemplateVersionChangeEvent**
Change events are available for the object.

**ActionPlanTemplateVersionFeed**
Feed tracking is available for the object.

**ActionPlanTemplateVersionHistory**
History is available for tracked fields of the object.

**ActionPlanTemplateVersionOwnerSharingRule**
Sharing rules are available for the object.

**ActionPlanTemplateVersionShare**
Sharing is available for the object.

# ActiveFeatureLicenseMetric

Represents the number of active, assigned, and purchased feature licenses in the org. This object is available in API version 52.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `ActiveUserCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number of users assigned this feature license who have logged in within the last 30 days. |
| `AssignedUserCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number of users assigned this feature license. |
| `FeatureType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Type of feature license.<br>Possible values are:<br>• `AvantgoUser`—AvantGo User<br>• `ChatterAnswersUser`—Chatter Answers User<br>• `InteractionUser`—Flow User<br>• `JigsawProspectingUser`—Data.com User<br>• `KnowledgeUser`—Knowledge User<br>• `LiveAgentUser`—Chat User<br>• `MarketingUser`—Marketing User<br>• `MobileUser`—Apex Mobile User<br>• `OfflineUser`—Offline User<br>• `SFContentUser`—Salesforce CRM Content User<br>• `SiteforceContributorUser`—Site.com Contributor User<br>• `SiteforcePublisherUser`—Site.com Publisher User<br>• `SupportUser`—Service Cloud User |

| Field | Details |
| --- | --- |
| | • `WirelessUser`—Wireless User<br>• `WorkDotComUserFeature`—WDC User |
| `MetricsDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Date that feature license metrics were collected. |
| `TotalLicenseCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of feature licenses in the organization. |

# ActivePermSetLicenseMetric

Represents the number of active, assigned, and purchased permission set licenses in the org. This object is available in API version 52.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `ActiveUserCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number of users assigned this permission set license who have logged in within the last 30 days. |
| `AssignedUserCount` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number of users assigned this permission set license. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique name of this permission set license object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The label of the permission set license. |
| `MetricsDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Date that permission set license metrics were collected. |
| `PermissionSetLicenseId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the permission set license.<br>This is a relationship field.<br>**Relationship Name**<br>PermissionSetLicense<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>PermissionSetLicense |
| `TotalLicenses` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total number of this permission set licenses that are available to your org. |

# ActiveProfileMetric

Represents the profile associated with the active, assigned, and purchased user licenses. This object is available in API version 52.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `ActiveUserCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number of users assigned this profile who have logged in within the last 30 days. |
| `AssignedUserCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number of users assigned this profile. |
| `MetricsDate` | **Type**<br>date |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Sort<br>**Description**<br>Date that profile metrics were collected. |
| `ProfileId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the profile.<br>This is a relationship field.<br>**Relationship Name**<br>Profile<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Profile |
| `UserLicenseId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the user license.<br>This is a relationship field.<br>**Relationship Name**<br>UserLicense<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>UserLicense |

# ActiveScratchOrg

Represents an active scratch org. This object is available in API version 41.0 and later.

## Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

## Fields

| Field Name | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A description of this scratch org. |
| `Edition` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The org edition of this scratch org. Possible values are `Group`, `Developer`, `Enterprise`, and `Professional`. This field is read only. |
| `ExpirationDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Date when the scratch org expires. This field is read only. |
| `Features` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The features enabled in this scratch org, such as `MultiCurrency`. See the *Salesforce DX Developer Guide* for the full list of valid features. This field is read only. |
| `HasSampleData` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Specifies whether the scratch org contains sample data. If set to `true`, the sample data is similar to the data in a Salesforce free trial org. |
| `LastLoginDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The date of the last user login to the scratch org. This field is read only. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record. This field is read only. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, and `LastReferenceDate` isn't null, the user accessed this record or list view indirectly. This field is read only. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, Sort<br>**Description**<br>The auto-generated ID of this scratch org. This field is read only. |
| `Namespace` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace associated with this scratch org. This field is read only. |

| Field Name | Details |
| --- | --- |
| `OrgName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the scratch org. This field is read only. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who owns this scratch org. This field is read only. |
| `ScratchOrg` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The org ID of the scratch org. This field is read only. |
| `ScratchOrgInfoId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The id of the associated `ScratchOrgInfo` object. This field is read only. |
| `SignupEmail` | **Type**<br>email<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The email address of the Administration user. This field is read only. |
| `SignupInstance` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The Salesforce instance on which this scratch org resides. This field is read only. |

| Field Name | Details |
| --- | --- |
| `SignupTrialDays` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of days between the scratch org's creation and expiration. This field is read only. |
| `SignupUsername` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The username of the Administration user of the scratch org. This field is read only. |
| `Snapshot` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If this scratch org was created from a scratch org snapshot, then this field contains either the name or ID of the snapshot. Specifically, the name corresponds to the `Name` field of the snapshot's record in the OrgSnapshot standard object; the ID corresponds to the record ID.<br>If this scratch org wasn't created from a snapshot, this field is empty. This field is read only.<br>This field is available in API version 61.0 and later. |

## Usage

Salesforce automatically creates an instance of this object after a `ScratchOrgInfo` record moves to the Active state. The new `ActiveScratchOrg` gets many of its field values from the `ScratchOrgInfo` object with which it's associated.

When you delete an `ActiveScratchOrg` record, its associated scratch org is deleted and its associated `ScratchOrgInfo` record is moved to the Deleted state.

## Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

**ActiveScratchOrgFeed**
Feed tracking is available for the object.

**ActiveScratchOrgHistory**
History is available for tracked fields of the object.

**ActiveScratchOrgShare**
Sharing is available for the object.

# ActivityFieldHistory

Represents a change in a field value for a tracked object or field. This object is a big object. This object is available in API version 55.0 and later.

## Supported Calls

`delete()` `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

To see this object, users must have ViewAllData permissions.

## Fields

| Field | Details |
|---|---|
| `ActivityId` | **Type**<br>reference<br>**Properties**<br>Filter, Sort<br>**Description**<br>The ID of the task or event that changed.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Activity<br>**Refers To**<br>Event, Task |
| `ChangedById` | **Type**<br>reference<br>**Properties**<br>Filter, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the user who made the change.<br>This field is a relationship field.<br>**Relationship Name**<br>ChangedBy<br>**Refers To**<br>User |
| `ChangedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort<br>**Description**<br>The date the field value changed. |
| `DataType` | **Type**<br>picklist<br>**Properties**<br>Restricted picklist<br>**Description**<br>The type of the field with the changed value.<br>Possible values are:<br>• `Address`<br>• `AnyType`<br>• `AutoNumber`<br>• `Base64`<br>• `BitVector`<br>• `Boolean`<br>• `Content`<br>• `Currency`<br>• `DataCategoryGroupReference`<br>• `DateOnly`<br>• `DateTime`<br>• `Division`<br>• `Double`<br>• `DynamicEnum`<br>• `Email`<br>• `EncryptedBase64`<br>• `EncryptedText` |

| Field | Details |
| --- | --- |
| | • EntityId<br>• EnumOrId<br>• ExternalId<br>• Fax<br>• File<br>• HtmlMultiLineText<br>• HtmlStringPlusClob<br>• InetAddress<br>• Json<br>• Location<br>• MultiEnum<br>• MultiLineText<br>• Namespace<br>• Percent<br>• PersonName<br>• Phone<br>• Raw<br>• RecordType<br>• SfdcEncryptedText<br>• SimpleNamespace<br>• StringPlusClob<br>• Switchable_PersonName<br>• Text<br>• TimeOnly<br>• Url<br>• YearQuarter |
| FieldName | **Type**<br>string<br>**Properties**<br>Filter, Sort<br>**Description**<br>The name of the field changed. |
| IsDataAvailable | **Type**<br>boolean<br>**Properties**<br>Defaulted on create |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether valid data is available in the old and new value fields. This field is `false` if, for example, the fields are encrypted or the changed values are too large, such as for Description field types.<br>The default value is `false`. |
| `NewValueDateTime` | **Type**<br>dateTime<br>**Properties**<br>Nillable<br>**Description**<br>The new value for date type fields. |
| `NewValueNumber` | **Type**<br>double<br>**Properties**<br>Nillable<br>**Description**<br>The new value for number type fields. |
| `NewValueText` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The new value for all other field types that are not a date or number type. |
| `OldValueDateTime` | **Type**<br>dateTime<br>**Properties**<br>Nillable<br>**Description**<br>Old value for date type fields. |
| `OldValueNumber` | **Type**<br>double<br>**Properties**<br>Nillable<br>**Description**<br>Old value for number type fields. |

| Field | Details |
| --- | --- |
| `OldValueText` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The old value for all other field types that are not a date or number type. |
| `Operation` | **Type**<br>picklist<br>**Properties**<br>Restricted picklist<br>**Description**<br>The operation of the field value change.<br>Possible values are:<br>• `delete`<br>• `update` |

## Indexed Fields

When you're querying ActivityFieldHistory with SOQL, you must specify indexed fields in the `WHERE` clause filter starting from the first field defined in the index. If you specify a partial list of indexed fields, don't leave any gaps between indexed fields after the first field. Here are the indexed fields for ActivityFieldHistory, listed from first to last in the index order.

1. `ActivityId`
2. `ChangedDate`
3. `ChangedById`
4. `FieldName`
5. `ActivityFieldChange`

For example, this SOQL query succeeds because the first three indexed fields are in the `WHERE` clause.

```
SELECT ActivityId, OldValueText, NewValueText, FieldName, ChangedDate
FROM ActivityFieldHistory
WHERE ActivityId = 'SomeId' AND ChangedDate >= :startDate AND ChangedDate <= :endDate
ORDER BY ChangedDate
```

If you remove the `ActivityId` field from the `WHERE` clause, the query fails.

```
SELECT ActivityId, OldValueText, NewValueText, FieldName, ChangedDate
FROM ActivityFieldHistory
```

```
WHERE ChangedDate >= :startDate AND ChangedDate <= :endDate
ORDER BY ChangedDate
```

# ActivityHistory

This read-only object is displayed in a related list of closed activities—past events and closed tasks—related to an object. It includes activities for all contacts related to the object. ActivityHistory fields for phone calls are only available if your organization uses Salesforce CRM Call Center.

## Supported Calls

`describeSObjects()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

## Fields

| Field | Details |
|---|---|
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the ID of the related account, which is determined as follows:<br>• The account associated with the `WhatId`, if it exists; or<br>• The account associated with the `WhoId`, if it exists; otherwise<br>• `null`<br>For information on IDs, see ID Field Type.<br>This is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `ActivityDate` | **Type**<br>date |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates one of the following:<br>• The due date of a task<br>• The due date of an event if `IsAllDayEvent` is set to `true`<br>This field has a time stamp that is always set to midnight in the Universal Time Coordinated (UTC) time zone. The time stamp doesn't represent the time of the activity; don't attempt to alter it to accommodate time zone differences. Label is `Date`. |
| `ActivityDateTime` | **Type**<br>dateTime<br>**Properties**<br>Aggregate, Filter, Nillable, Sort<br>**Description**<br>Contains the event's due date if the `IsAllDayEvent` flag is set to `false`. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. Label is **Due Date Time**.<br>The value for this field and `StartDateTime` must match, or one of them must be `null`. |
| `ActivitySubtype` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Provides standard subtypes to facilitate creating and searching for specific activity subtypes. This field isn't updateable.<br>Possible values are:<br>• Task<br>• Email<br>• Call<br>• Event<br>• LinkedIn —Available in API version 56.0 and later.<br>• List Email |
| `ActivityType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Represents one of the following values: `Call`, `Email`, `Meeting`, or `Other`. Label is `Type`. These are default values, and can be changed.<br>`ActivityType` is the union of `TaskType` and `EventType`. If the same activity appears in both dynamic picklists, duplicate activities appear.<br>`TaskType` and `EventType` can each have a `Call` type. Internally, they are distinct from each other. |
| `AlternateDetailId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of a record the activity is related to which contains more details about the activity. For example, an activity can be related to an EmailMessage record.<br>This is a relationship field.<br>**Relationship Name**<br>AlternateDetail<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>EmailMessage |
| `CallDisposition` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Represents the result of a given call, for example, "we'll call back," or "call unsuccessful." Limit is 255 characters. |
| `CallDurationInSeconds` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Duration of the call in seconds. |
| `CallObject` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of a call center. Limit is 255 characters. |
| `CallType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of call being answered: Inbound, Internal, or Outbound. |
| `CompletedDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time the task was saved with a Closed status.<br>• For insert, if the task is saved with a Closed status the field is set. If the task is saved with an Open status the field is set to NULL.<br>• For update, if the task is saved with a new Closed status, the field is reset.<br>If the task is saved with a new non-closed status, the field is reset to NULL.<br>If the task is saved with the same closed status (that is, unchanged) there is no change to the field.<br>Note: The status is a dynamic enum. If the Closed mapping is changed it won't cause an update of existing tasks. Only new insert/update operations are affected. |
| `ConnectionReceivedId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the ID of the PartnerNetworkConnection that shared this record with your organization. This field is available only if your organization has enabled Salesforce to Salesforce and only in API versions 28.0 and later. |
| `ConnectionSentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates the ID of the PartnerNetworkConnection that your organization shared this record with. This field is available only if your organization has enabled Salesforce to Salesforce, and only in API versions 28.0 and later. The value is always `null`. You can use the PartnerNetworkRecordConnection object to forward records to connections. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>Contains a description of the event or task. Limit is 32 KB. |
| `Division` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled. |
| `DurationInMinutes` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the duration of the event or task. |
| `EndDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates the end date and time of the event or task. Available in versions 27.0 and later. This field is optional, depending on the following:<br>• If `IsAllDayEvent` is true, you can supply a value for either `DurationInMinutes` or `EndDateTime`. Supplying values in both fields is allowed if the values add up to the same amount of time. If both fields are `null`, the duration defaults to one day. |

| Field | Details |
| --- | --- |
| | • If `IsAllDayEvent` is false, a value must be supplied for either `DurationInMinutes` or `EndDateTime`. Supplying values in both fields is allowed if the values add up to the same amount of time. |
| `IsAllDayEvent` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If the value of this field is set to `true`, then the activity is an event spanning a full day, and the `ActivityDate` defines the date of the event. If the value of this field is set to `false`, then the activity may be an event spanning less than a full day, or it may be a task. The default value of this field is `false`. Label is `All-Day Event`. |
| `IsClosed` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a task is closed (`true`) or not closed (`false`). The default value of this field is `false`. This field is set indirectly by setting the `Status` field on the task—each picklist value has a corresponding `IsClosed` value. Label is `Closed`. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the activity has been moved to the Recycle Bin (`true`) or not (`false`). Label is `Deleted`. |
| `IsHighPriority` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates a high-priority task. This field is derived from the `Priority` field. The default value of this field is `false`. |
| `IsOnlineMeeting` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the activity represents an online meeting (`true`) or not (`false`).<br>Note: This field is not available in API version 16.0 or later. |
| `IsReminderSet` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a reminder is set for an activity (`true`) or not (`false`).The default value of this field is `false`. |
| `IsTask` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If the value of this field is set to `true`, then the activity is a task. If the value is set to `false`, then the activity is an event. The default value of this field is `false`. Label is `Task`. |
| `IsVisibleInSelfService` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If the value of this field is set to `true`, then the activity can be viewed in the self-service portal. The default value of this field is `false`. Label is `Visible in Self-Service`. |
| `Location` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If the activity is an event, then this field contains the location of the event. If the activity is a task, then the value is `null`. |
| `OwnerId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the ID of the user or group who owns the activity.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Calendar, Group, User |
| `PrimaryAccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Contains the `AccountId` value from the activity record. Available in API versions 30.0 and later to organizations that use Shared Activities. |
| `PrimaryWhoId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Contains the `WhoId` value from the activity record. Available in API versions 30.0 and later to organizations that have enabled Shared Activities. |
| `Priority` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the priority of a task, such as high, normal, or low. The default value of this field is `Normal`. |
| `ReminderDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Represents the time when the reminder is scheduled to fire, if `IsReminderSet` is set to `true`. If `IsReminderSet` is set to `false`, then the user may have deselected the reminder checkbox in the Salesforce user interface, or the reminder has already fired at the time indicated by the value. |
| `StartDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates the start date and time of the event.<br>Available in versions 29.0 and later.<br>If the event's `IsAllDayEvent` flag is set to true (indicating an all-day event), then the time stamp in `StartDateTime` is always set to midnight in the Coordinated Universal Time (UTC) time zone.<br>Note: Don't attempt to alter the time stamp to account for any time zone differences.<br>If the event's `IsAllDayEvent` flag is set to false, then you must translate the time portion of the time stamp in `StartDateTime` to or from a local time zone for the user or the application, as appropriate. The translation must be in the Coordinated Universal Time (UTC) time zone.<br>If this field has a value, then `ActivityDate` and `ActivityDateTime` either must be null or must match the value of this field.<br>If the activity is a task, `StartDateTime` is null |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the current status of a task,. The default value of this field is `Not Started`. Each predefined status field sets a value for `IsClosed`. To obtain picklist values, query TaskStatus.<br>Possible values are:<br>• Completed<br>• Deferred<br>• In Progress<br>• Not Started<br>• Waiting on someone else |

| Field | Details |
| --- | --- |
| `Subject` | **Type**<br>combobox<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Contains the subject of the task or event. |
| `WhatId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The `WhatId` represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. `WhatId`s are polymorphic. Polymorphic means a `WhatId` is equivalent to the ID of a related object. The label is `Related To ID`.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>What<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CommSubscriptionConsent, ContactEncounter, ContactEncounterParticipant, ContactRequest, Contract, CoverageBenefit, CoverageBenefitItem, CreditMemo, DelegatedAccount, DocumentChecklistItem, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, ListEmail, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PartyConsent, PersonLifeEvent, PlanBenefit, PlanBenefitItem, ProcessException, Product2, ProductItem, ProductRequest, ProductRequestLineItem, ProductTransfer, PurchaserPlan, |

| Field | Details |
| --- | --- |
| | ReceivedDocument, ResourceAbsence, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, Shift, Shipment, ShipmentItem, Solution, Visit, VisitedParty, VolunteerProject, WorkOrder, WorkOrderLineItem |
| `WhoId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The WhoId represents a human such as a lead or a contact. WhoIds are polymorphic. Polymorphic means a WhoId is equivalent to a contact's ID or a lead's ID. The label is `Name ID`.<br>If Shared Activities is enabled, the value of this field is the ID of the related lead or primary contact. If you add, update, or remove the WhoId field, you might encounter problems with triggers, workflows, and data validation rules that are associated with the record. The label is `Name ID`.<br>If your organization uses Shared Activities, when you query activities in API version 30.0 or later, the returned value of the `WhoId` field matches the value in the queried object, not necessarily in the activity record itself.<br>If Shared Activities is enabled, the value of this field is not populated and the field `PrimaryWhoId` should be queried instead.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Who<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact, Lead |

# Usage

**Query activities that are related to an object**

1. Optionally, issue a describe call against the object whose activities you wish to query, to get a suggestion of the correct SOQL to use.
2. Issue a SOQL relationship query with a main clause that references the object, and an inner clause that references the activity history; for example:

```
SELECT
   (SELECT ActivityDate, Description
    FROM ActivityHistories)
FROM Account
WHERE Name Like 'XYZ%'
```

The user interface enforces sharing rules, filtering out related-list items that a user doesn't have permission to see.

The following constraints on users who don't have the "View All Data" permission help prevent performance issues.

- In the main clause of the relationship query, you can reference only one record. For example, you can't filter on all records where the account name starts with "A." Instead, you must reference a single account record.

```
SELECT
   (SELECT ActivityDate, Description
    FROM ActivityHistories
    ORDER BY ActivityDate DESC NULLS LAST, LastModifiedDate DESC
    LIMIT 500)
FROM Account
WHERE Name = 'Acme'
LIMIT 1
```

- In the inner clause of the query, you can't use `WHERE`.
- In the inner clause of the query, you must specify a limit of 500 or fewer on the number of rows that are returned in the list.
- In the inner clause of the query, you must sort on `ActivityDate` in descending order and `LastModifiedDate` in descending order. You can optionally display nulls last. For example: `ORDER BY ActivityDate DESC NULLS LAST, LastModifiedDate DESC`.

SEE ALSO:

Task

# ActivityMetric

Represents activities that were added to Salesforce automatically by Einstein Activity Capture and manually by users.

This object is available in API version 45.0.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Unless otherwise noted, Einstein Activity Capture and Activity Metrics must be enabled.

## Fields

| Field | Details |
|---|---|
| `BaseId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, idLookup, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the record that the activities apply to. |
| `BaseType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The entity that corresponds to the BaseId |
| `FirstCallDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Indicates the date when the first call was made. This field is available only to Sales Engagement users. Einstein Activity Capture and Activity Metrics aren't required. |
| `FirstEmailDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Indicates the date when the first email was sent. This field is available only to Sales Engagement users. Einstein Activity Capture and Activity Metrics aren't required. |
| `InactiveDays` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the number of days since the most recent activity was completed. This field is derived from the Last Activity Date field. |
| `LastActivityDateLastModDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates when the LastActivityDateTime field was last modified. |

| Field | Details |
| --- | --- |
| `LastActivityDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Indicates the date when the most recent activity was completed. |
| `LastCallDateLastModDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates when the LastCallDateTime field was last modified. |
| `LastCallDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Indicates the date when the most recent call was made through Sales Dialer or Inbox. |
| `LastEmailDateLastModDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates when the LastEmailDateTime field was last modified. |
| `LastEmailDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Indicates the date when the most recent email was sent or received. |
| `LastEmailReceivedDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Indicates the date when the most recent email was received. |

| Field | Details |
| --- | --- |
| | Available in API version 54.0 and later. |
| `LastEmailSentDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Indicates the date when the most recent email was sent.<br>Available in API version 54.0 and later. |
| `LastEventDateLastModDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates when the LastEventDateTime field was last modified. |
| `LastEventDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Indicates the date when the most recent event was completed. |
| `LastTaskDateLastModDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates when the LastTaskDateTime field was last modified. |
| `LastTaskDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Indicates the date when the last task was completed. |
| `NextActivityDateLastModDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates when the NextActivityDateTime field was last modified. |
| `NextActivityDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Indicates the date of the next scheduled task or event. Only open tasks in the future are included. |

## Usage

Use this object to see data about sales activities that were added to Salesforce manually and by Einstein Activity Capture. Activity Metric fields are derived from your activity data. For example, the Inactive Days field indicates the number of days since the most recent activity was completed. Create a trigger that notifies a user when there isn't any activity on an account for a certain amount of time.

# ActivityUsrConnectionStatus

Represents the status of the email connections for Einstein Activity Capture users. You can also see whether users accepted the required terms of service to capture emails. This object is available in API version 54.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, enable Einstein Activity Capture in your org.

## Fields

| Field | Details |
| --- | --- |
| `ConfigurationName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the Einstein Activity Capture configuration that the user is assigned to. |

| Field | Details |
| --- | --- |
| `ConnectivityStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The status of the user's email connection.<br>Possible values are:<br>• `ACTIVE`<br>• `DISABLED`<br>• `INITIALIZING`<br>• `NEEDSATTENTION`<br>• `NEEDSATTENTIONGLOBAL` (used when an org-level connection isn't working)<br>• `NEEDSATTENTIONHYBRID` (used when both org-level and user-level connections aren't working)<br>• `PENDING`<br>• `PROCESSING` |
| `ContactsSynced` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of contacts synced after midnight between Salesforce and the user's Microsoft or Google email account. This field is available in API version 59.0 and later. |
| `EmailAddress` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The email address that's used to capture and sync data between Salesforce and the user's Microsoft or Google account. |
| `EventsSynced` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of events synced after midnight between Salesforce and the user's Microsoft or Google email account. This field is available in API version 59.0 and later. |

| Field | Details |
| --- | --- |
| `ExternalId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field is reserved for future use. |
| `GlobalOauthTermsState` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates the user's terms of service status. When emails are enabled for Einstein Activity Capture, each user must accept the terms of service.<br>Possible values are:<br>• `ACCEPTED`<br>• `DECLINED`<br>• `PENDING`<br>This field is available only if you use an org-level OAuth 2.0 or a service account authentication method. In connection report CSV files downloaded from Einstein Activity Capture Status & Metrics, this field is labeled Global Auth User Email Consent Status. |
| `IsTermsOfServiceAccepted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the user has accepted the Einstein Activity Capture terms of service or not. When emails are enabled for Einstein Activity Capture, each user must accept the terms of service.<br>The default value is `false`.<br>This field is available only if you use a user-level authentication method. In connection report CSV files downloaded from Einstein Activity Capture Status & Metrics, this field is labeled User Auth Terms of Service Accepted. |
| `RecommendedActionDescription` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Recommended action to take when the user's `ConnectivityStatus` is `NEEDSATTENTION`. Available in API version 58.0 and later. |
| `RecommendedActionTitle` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Reason for the user's `ConnectivityStatus` when the status is `NEEDSATTENTION`. Available in API version 58.0 and later. |
| `UserId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the user. |
| `UserName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The username of the Einstein Activity Capture user. |
| `UserOnboardingStatus` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The initial sync status when the user connects Salesforce with their external email account and syncs data for the first time. This field is available in API version 59.0 and later.<br>Possible values are:<br>• `NOT_STARTED`<br>• `IN_PROGRESS`<br>• `NOT_CONFIGURED`<br>• `COMPLETE`<br>• `FAILED` |

# AdditionalNumber

Represents an optional additional number for a call center. This additional number is visible in the call center's phone directory.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

| Field | Details |
|---|---|
| `CallCenterId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>System field that contains the ID of the user who created the call center associated with this additional number. If value is null, this additional number is displayed in every call center's phone directory. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the additional number, such as Conference Room B.<br>Limit: 255 characters. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the additional number.<br>Limit: 80 characters. |

| Field | Details |
| --- | --- |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Nillable, Group, Sort, Update<br>**Description**<br>The phone number that corresponds to this additional number. |

## Usage

Create an additional number for a call center directory. Use this object if the number is not easily categorized as a User, Contact, Lead, Account, or the other object. Examples include phone queues or conference rooms.

# Address

Represents a mailing, billing, or home address.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The following access checks must be enabled:

- Industries Insurance
- Retail Execution
- Industries Visit
- Field Service
- Order Management
  - Perms: FulfillmentOrder, OrderSummary,AdvancedOrderManagement, OrderCCS
  - Prefs: OrdersEnabled, EnhancedCommerceOrders
- Public Sector
- Employee Experience
- Contact Tracing For Employees

You can create an address only when creating a location.

# Fields

| Field Name | Details |
| --- | --- |
| `Address` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The full address. |
| `AddressType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Picklist of address types. The values are:<br>• Mailing<br>• Shipping<br>• Billing<br>• Home |
| `City` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The address city. |
| `Country` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The address country. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A brief description of the address. |

| Field Name | Details |
| --- | --- |
| `DrivingDirections` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Directions to the address. |
| `GeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The level of accuracy of a location's geographical coordinates compared with its physical address. A geocoding service typically provides this value based on the address's latitude and longitude coordinates. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The most recent date on which a user referenced this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The most recent date on which a user viewed this record. |
| `Latitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `Longitude` to specify the precise geolocation of the address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. |
| `LocationType` | **Type**<br>picklist |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Filter, Group, Sort, Update<br>**Description**<br>Picklist of location types. The available values are:<br>• Warehouse (default)<br>• Site<br>• Van<br>• Plant |
| `Longitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Used with `Latitude` to specify the precise geolocation of the address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Name of the address. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>A lookup field to the parent location.<br>This is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Location |
| `PostalCode` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The address postal code. |
| `State` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The address state. |
| `Street` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The address street. |
| `TimeZone` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Picklist of available time zones. |

## Usage

Important: "Address" in Salesforce can also refer to the Address compound field found on many standard objects. When referencing the Address object in your Apex code, always use `Schema.Address` instead of `Address` to prevent confusion with the standard Address compound field. If referencing both the address object and the Address field in the same snippet, you can differentiate between the two by using `System.Address` for the field and `Schema.Address` for the object.

## Associated Object

This object has the following associated object. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AddressHistory (API version 62.0)**
History is available for tracked fields of the object.

# AgentWork

Represents a work assignment that's been routed to an agent. If the work is transferred to another agent, a new AgentWork record is created. This object is available in API version 32.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access this object, Omni-Channel must be enabled.

## Fields

| Field | Details |
|---|---|
| `AcceptDateTime` | **TypedateTime**<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates when the work item was accepted. |
| `ActiveTime` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The amount of time an agent is actively working on a work item in their console. Active time is tracked only for tasks routed using the tab-based capacity model. It's tracked only when the work tab is open and in focus in the console. If the agent switches console tabs, the time spent on the other tabs isn't counted. Active time continues to count if you switch to a new browser tab or window. Active time stops when the agent closes the work item or the after conversation work time ends, whichever happens first. |
| `AcwExtensionCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of times that an agent extended the After Conversation Work (ACW) timer. This field is available in API version 55.0 and later. |

| Field | Details |
| --- | --- |
| `AcwExtensionDuration` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The length of time (in seconds) that the After Conversation Work (ACW) timer was extended each time that the agent extended the timer. This field is available in API version 55.0 and later.<br>To find the total extension duration, multiply this field by `AcwExtensionCount` or use `AfterConversationActualTime`. |
| `AfterConversationActualTime` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of seconds an agent spent on After Conversation Work (ACW) after customer contact ended. This field is available in API version 52.0 and later. |
| `AgentCapacityWhenDeclined` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The agent's capacity when declining work, either explicitly or through push timeout. |
| `AssignedDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates when the work item was assigned to an agent. This field is a calculated field. |
| `BotId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the Enhanced Einstein Bot or AI agent that performed the work. This is a relationship field. This field is available in API version 52.0 and later.<br>**Relationship Name**<br>Bot |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>BotDefinition |
| `BotType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates the type of bot. Valid values are:<br>• Bot. Refers to an Einstein bot.<br>• ExternalCopilot. Refers to an AI agent with whom your customers can interact.<br>The default value is Bot. This field is available in API version 63.0 and later. |
| `CancelDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates when the work item was canceled. |
| `CapacityModel` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates the capacity model used to determine agent capacity. Valid values are `StatusBased` and `TabBased`. This field is available in API version 50.0 and later.<br>A work item consumes agent capacity only if it was first assigned to the agent by Omni-Channel using queues or skills. |
| `CapacityPercentage` | **Type**<br>percent<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The percentage of an agent's capacity that's consumed when this work item is in progress. Valid values are from 0 to 100. |

| Field | Details |
| --- | --- |
| | The agent can receive a new work item only if they have enough available capacity for the item. Voice calls must have a capacity percentage of *100*, so an agent on a call doesn't receive new work items until the call ends. |
| `CapacityWeight` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The amount of an agent's capacity that's consumed when this work item is in progress.<br>For example, if cases are assigned a capacity weight of *2*, an agent with a capacity of *6* can accept up to 3 cases before the agent is at capacity and can't receive new work items.<br>Voice calls must use the entire capacity weight. |
| `CloseDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates when the work item was closed. |
| `DeclineDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date and time when the agent declined this record. |
| `DeclineReason` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The provided reason for why an agent declined the work request. |
| `ExternalBotId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the third-party bot that handles the work item. This is a relationship field. This field is available in API version 64.0 and later. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>ExternalBot<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ExternalConversationBotDef |
| `HandleTime` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The amount of time an agent had the work item open, calculated by `CloseDateTime – AcceptedDateTime`. Handle time stops when the agent closes the work item or the after conversation work time ends, whichever happens first. |
| `IsConference` | **Type**<br>boolean<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Indicates whether the agent was conferenced on the work item by another agent (`true`) or not (`false `). The default value is `false`. Available in API version 44.0 and later. This field is accessible in Reports, but not via the API. |
| `IsInterruptible` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a work item consumes interruptible or primary capacity. The default value is false. Available in API version 57.0 and later when the Interruptible Capacity feature is enabled. |
| `IsOwnerChangeInitiated` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a work item owner change triggered the direct assignment of the work item to the agent. The default value is `false`. Status-Based Capacity Model has to be turned on to use this field. This field is available in API version 50.0 and later. |

| Field | Details |
| --- | --- |
| `IsPreferredUserRequired` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a work item stays with the preferred user even when the user isn't available. The default value is false. This field is available in API version 50.0 and later. |
| `IsStatusChangeInitiated` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a work item status change triggered the direct assignment of the work item to the agent. The default value is false. Status-Based Capacity Model has to be turned on to use this field. This field is available in API version 50.0 and later. |
| `IsTransfer` | **Type**<br>boolean<br>**Properties**<br>Filter,Group, Sort<br>**Description**<br>Indicates whether the agent received the work item through transfer from another agent (`true`) or not (`false`). The default value is `false`. Available in API version 38.0 and later. This field is accesible in Reports, but not via the API. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>An automatically generated ID number that identifies the record. |
| `OriginalGroupId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the queue that the work assignment was originally routed to. This field is a relationship field.<br>**Relationship Name**<br>OriginalGroup |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Group |
| `OriginalQueueId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the queue that the work assignment was originally routed to. Due to API changes, `OriginalQueueId` is no longer recommended. Use `OriginalGroupId` instead. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner of the AgentWork. This field is a polymorphic relationship field. This field is available in API version 50.0 and later.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PausedCapacityPercentage` | **Type**<br>percent<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The percentage of an agent's capacity that's consumed when this work item is paused. The paused capacity feature is available with status-based capacity and Enhanced Omni-Channel only. This field is available in API version 62.0 and later. |
| `PausedCapacityWeight` | **Type**<br>double<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The amount of an agent's capacity that's consumed when this work item is paused. The paused capacity feature is available with status-based capacity and Enhanced Omni-Channel only. This field is available in API version 62.0 and later. |
| `PendingServiceRoutingId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the PendingServiceRouting on page 4062 from which the AgentWork was created. This field is a relationship field. This field is available in API version 50.0 and later.<br>**Relationship Name**<br>PendingServiceRouting<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PendingServiceRouting |
| `PreferredUserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the preferred user to handle the work. This field is a relationship field. This field is available in API v46.0 and later.<br>**Relationship Name**<br>PreferredUser<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `PushTimeout` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The time limit set for an agent to respond to an item before it's pushed to another agent. The time limit is measured in seconds. This field is available in API version 36.0 and later.<br>Effective API version 57.0, for inbound Voice calls, this field represents the time limit set for an agent to respond to a call before it's declined. The value must be between 0 and 20. The |

| Field | Details |
| --- | --- |
| | value is capped at 20, so any number greater than that is treated as 20 seconds. This applies to the following telephony models:<br>• Service Cloud Voice with Amazon Connect<br>• Service Cloud Voice with Partner Telephony from Amazon Connect |
| `PushTimeoutDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time (in UTC) when the push timeout event occurred. This field is available in API version 36.0 and later. |
| `RequestDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates when the work was requested. |
| `RoutingModel` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Determines how incoming work items are routed to agents assigned to a service channel. Possible values are:<br>• `ExternalRouting`<br>• `LeastActive`<br>• `MostAvailable` |
| `RoutingPriority` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The order in which work items from the queue that are associated with the routing configuration are routed to agents. |
| `RoutingType` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of Omni-Channel routing. Possible values are:<br>• `QueueBased`<br>• `SkillsBased` |
| `SecondaryRoutingPriority` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the secondary routing priority. |
| `ServiceChannelId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the service channel that's associated with the work assignment. This field is a relationship field.<br>**Relationship Name**<br>ServiceChannel<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ServiceChannel |
| `ShouldSkipCapacityCheck` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether to skip checking an agent's available capacity (`true`) or not (`false`) when an externally routed work item is created. This field is used when agents can simultaneously handle work from both Omni-Channel queues and queues using external routing.<br>When `true`, the receiving agent can exceed their set capacity to accept the item, but they don't receive more Omni-Channel routed work. When `false`, the receiving agent can't exceed their set capacity and must have enough open capacity to accept the item.<br>The default value is `false`. |

| Field | Details |
| --- | --- |
| `SpeedToAnswer` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The amount of time between when the work was requested and when an agent accepted it. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The working status of the work item. Valid values are:<br>• `Assigned` – The item is assigned to the agent but hasn't been opened.<br>• `Canceled` – The item no longer needs to be routed. For example: a chat visitor cancels their Omni-Channel routed chat request before it reaches an agent.<br>• `Closed` – The item is closed.<br>• `Declined` – The item was assigned to the agent but the agent explicitly declined it.<br>• `DeclinedOnPushTimeout` – The item was declined because push time-out is enabled and the item request timed out with the agent.<br>• `Opened` – The agent opened the item.<br>• `Transferred`–The item was transferred from an agent to another agent, queue, or skill.<br>• `Unavailable` – The item was assigned to the agent but the agent became unavailable (went offline or lost connection). |
| `TargetAcceptDateTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort, Update<br>**Description**<br>The date and time by when a rep must accept a work item. Influences backlog ordering by prioritizing work items with earlier target acceptance deadlines. The field can be dynamically set using Flow for each work item during the routing process. This allows for flexible prioritization based on case urgency, customer tier, or other business rules. Available in API version 65.0 and later. |
| `TransferRequesterId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The user ID of the rep who reassigned the work using the Reassign action. This field is populated in reassigned AgentWork records only, not the original AgentWork record. This is a relationship field. This field is available in API version 63.0 and later.<br>**Relationship Name**<br>TransferRequester<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the user that the work item was assigned to. This field is a relationship field.<br>**Relationship Name**<br>User<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `WorkItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the object that's routed to the agent through Omni-Channel.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>WorkItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Custom objects and these standard objects: Account, Activity, Case, Claim, ClaimCoverage, ClaimRecovery, Contact, ContactRequest, CustomEntityData, Incident, Lead, LiveChatTranscript, MessagingSession, Opportunity, Orchestration Work Items, Order, PaymentRequest, PersonTraining,Referral, SocialPost, SwarmMember, and VoiceCall. WorkOrder is available in version 58.0 and later. |

## Usage

`AgentWork` records can only be deleted if they have the status Closed, Declined, or Unavailable. They can't be deleted if their status is Assigned or Opened because they're active in Omni-Channel.

When `AgentWork` records are created, they have the status Assigned. After a record is created, it's automatically pushed to the assigned agent.

While the metadata for `AgentWork` indicates support for `upsert()` and `update()`, these calls aren't used with `AgentWork` because none of its fields can be updated.

Apex triggers are supported with `AgentWork`.

## Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

**AgentWorkChangeEvent (API version 63.0)**
Change events are available for the object.

**AgentWorkOwnerSharingRule**
Sharing rules are available for the object.

**AgentWorkShare**
Sharing is available for the object.

# AgentWorkSkill

Represents a skill used to route a work assignment to an agent. AgentWorkSkill is used for reporting and represents the result of a routing decision. This object is available in API version 42.0 and later.

## Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

## Special Access Rules

To access this object, Omni-Channel must be enabled.

## Fields

| Field | Details |
|---|---|
| `AgentWorkId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Sort<br>**Description**<br>The AgentWork object associated with this skill. |
| `IsAdditionalSkill` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>After a designated timeout period, a skill marked as additional is dropped from Omni-Channel routing. The case is then routed to the best-matched agent, even if the agent doesn't have all the skills. The default value is false. Available in API version 48.0 and later. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>An automatically generated ID number that identifies the record. |
| `SkillId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The skill that is required or additional. |
| `SkillLevel` | **Type**<br>double<br>**Properties**<br>Filter, Sort<br>**Description**<br>The level of the required or additional skill. Skill levels can range from 1 to 10. Depending on your business needs, you might want the skill level to reflect years of experience, certification levels, or license classes. |
| `SkillPriority` | **Type**<br>int<br>**Properties**<br>Aggregatable, Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>For additional skills, specifies the order in which skills are dropped if after the specified timeout no agent with that skill is available. Higher priority-value skills are dropped first. Lower priority-value skills, for example 0, are dropped last. Skills with the same priority value are dropped as a group. You can set skill priority using attribute setup for skills-based routing or Apex code. |
| `WasDropped` | **Type**<br>boolean<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>For skills marked as additional, indicates if the skill was dropped from Omni-Channel routing because an agent with this skill was not available. The default value is false. Available in API version 48.0 and later. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AgentWorkSkillChangeEvent (API version 62.0)**
Change events are available for the object.

# AIApplication

Represents an AI application such as Einstein Prediction Builder. This object is available in API version 50.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language of the application. Possible values are:<br>• `da`—Danish<br>• `de`—German<br>• `en_US`—English<br>• `es`—Spanish<br>• `es_MX`—Spanish (Mexico)<br>• `fi`—Finnish<br>• `fr`—French<br>• `it`—Italian<br>• `ja`—Japanese<br>• `ko`—Korean<br>• `nl_NL`—Dutch<br>• `no`—Norwegian<br>• `pt_BR`—Portuguese (Brazil)<br>• `ru`—Russian<br>• `sv`—Swedish<br>• `th`—Thai<br>• `zh_CN`—Chinese (Simplified)<br>• `zh_TW`—Chinese (Traditional) |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Label that identifies the AI application throughout the Salesforce user interface. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Specifies the namespace of the application if installed with a managed package. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Status of the AI application. Possible values are:<br>• `Disabled`<br>• `Enabled`<br>• `Migrated` |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of application. Possible values are:<br>• `PredictionBuilder` |

# AIApplicationConfig

Additional prediction information related to an AI application. This object is available in API version 50.0 and later.

## Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

# Fields

| Field | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language of the application. Possible values are:<br>• `da`—Danish<br>• `de`—German<br>• `en_US`—English<br>• `es`—Spanish<br>• `es_MX`—Spanish (Mexico)<br>• `fi`—Finnish<br>• `fr`—French<br>• `it`—Italian<br>• `ja`—Japanese<br>• `ko`—Korean<br>• `nl_NL`—Dutch<br>• `no`—Norwegian<br>• `pt_BR`—Portuguese (Brazil)<br>• `ru`—Russian<br>• `sv`—Swedish<br>• `th`—Thai<br>• `zh_CN`—Chinese (Simplified)<br>• `zh_TW`—Chinese (Traditional) |

| Field | Details |
| --- | --- |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Label that identifies the AI application throughout the Salesforce user interface. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Specifies the namespace of the application config, if installed with a managed package. |

# AiGenActionItem

Represents business actions suggested by generative AI. AI-generated action items are sent to either agents for automatic execution or human users for review, depending on org preference and if there are any errors in the process. This object is available in API version 64.0 and later.

## Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`

## Special Access Rules

Agentforce Pipeline Management must be enabled. Only the agent user can create AiGenActionItem records.

## Fields

| Field | Details |
| --- | --- |
| `ActionItemOwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID associated with the owner of the AI-generated action item. The owner can be an agent or human user, and can change during the review and execution process. By default, the owner is an agent or queue. |

| Field | Details |
| --- | --- |
| | This field is a polymorphic relationship field.<br>**Relationship Name**<br>ActionItemOwner<br>**Refers To**<br>Group, User |
| `ActionResult` | **Type**<br>textarea<br>**Properties**<br>Nillable, Update<br>**Description**<br>The result generated when the agent action is executed. |
| `AgentType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The specific agent that processes the AI-generated action item. |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The explanation of why the action item has been suggested. The description provides additional context to guide human users and agents in their decision-making. |
| `ExpirationDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort<br>**Description**<br>The date that the action item expires and is deleted. AI-generated action items are no longer visible to users after 14 days and removed from records after 30 days. |
| `GeneratedResponseIdRef` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of generated result in the GenAIGeneration DMO. This field can be used by human users to provide feedback on the AI-generated action item. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner of this object.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The status of the AI-generated action item. |
| `Subject` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The subject line that displays to users indicating what the action item is. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The category that the action item falls under. This field can be used to search for specific action items, such as field updates or follow-up sales emails. |
| `UnmodActionItemOutput` | **Type**<br>textarea |

| Field | Details |
| --- | --- |
| | **Properties**<br>Nillable<br>**Description**<br>The unmodified output for the action item produced by AI, whether from a prompt template or other generation method. |
| `WhatId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The record that the AI-generated action item is for.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>What<br>**Refers To**<br>Account, Opportunity |

# AIInsightAction

Represents an Einstein prediction insight action. This object is available in API version 47.0 and later.

An Einstein insight is created every time an Einstein feature, such as Prediction Builder, makes a prediction. An insight is represented by a root AIRecordInsight and the following child objects: AIInsightAction, AIInsightFeedback, AIInsightReason, and AIInsightValue.

AIInsightAction is a one-to-many child of AIRecordInsight. AIInsightAction contains information about predicted actions for this particular insight. AIInsightAction has one or more AIInsightValue children which contain predicted values for the action. For example, an AIInsightAction could represent a quick action, and have a child AIInsightValue with the recommended value used by the quick action.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Prediction insight objects are only available in orgs that have Einstein features, such as Prediction Builder or Case Classification, enabled.

# Fields

| Field | Details |
| --- | --- |
| `ActionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of the associated action, such as the ID of a Macro.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Action<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApexClass, AuraDefinitionBundle |
| `ActionName` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The ID of the action. For example, a value of "Case.SendEmail" indicates a send email quick action on Case. |
| `AiRecordInsightId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique ID of the associated AIRecordInsight.<br>This is a relationship field.<br>**Relationship Name**<br>AiRecordInsight<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AIRecordInsight |
| `Confidence` | **Type**<br>double |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Relative confidence strength of the generated prediction insight. Higher values (near 1.0) indicate stronger confidence. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the AIInsightAction. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of action. Possible values are:<br>• `InvocableAction`—Invocable Action<br>• `Macro`—Macro<br>• `QuickAction`—Quick action.<br>• `StandardAction`—Standard Action. An example standard action would be to update a record. |

## Usage

When an Einstein feature makes a prediction and saves the results, the following events happen in a single atomic operation:

- An AIRecordInsight record is created and populated with information about the prediction insight. AIInsightAction, AIInsightReason, and AIInsightValue records are also created and made children of the AIRecordInsight record.
- If the Einstein feature uses AI prediction fields, prediction result values are written to the target AI prediction field.
- An AIPredictionEvent platform event is created, and any subscriber to AIPredictionEvent is notified.

When Einstein writes prediction results back to AI prediction fields, record save custom logic, such as Apex triggers, workflow rules, and assignment rules, aren't run. To add custom logic based on Einstein prediction results, use a platform event subscriber, such as Process Builder, to get notifications for AIPredictionEvents that contain references to Einstein insight objects.

Custom fields can't be added to Einstein insight objects.

Einstein insights contain information about target fields and predicted value. Your org may have created Einstein predictions that are associated with target fields with field-level security restrictions. To control how users access Einstein insights records, use Salesforce data access features such as user profiles and permission sets.

# AIInsightFeedback

Represents an Einstein prediction insight feedback. This object is available in API version 47.0 and later.

An Einstein insight is created every time an Einstein feature, such as Prediction Builder, makes a prediction. An insight is represented by a root AIRecordInsight and the following child objects: AIInsightAction, AIInsightFeedback, AIInsightReason, and AIInsightValue.

AIInsightFeedback is a one-to-many child of AIRecordInsight. AIInsightFeedback contains information about explicit and implicit feedback collected from users for a particular insight.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Prediction insight objects are only available in orgs that have Einstein features, such as Prediction Builder or Case Classification, enabled.

## Fields

| Field | Details |
|---|---|
| `ActualValue` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The raw feedback value. This field is null when no recommendation is selected. |
| `AiFeedback` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The feedback user sentiment. Possible values are:<br>• `Negative`—Negative feedback<br>• `Neutral`—Neutral feedback<br>• `Positive`—Positive feedback |
| `AiInsightFeedbackType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The nature of the feedback. Possible values are: |

| Field | Details |
| --- | --- |
| | • `Explicit`—Explicit feedback. For example, a user applies and saves an Einstein recommendation on a case.<br>• `Implicit`—Implicit feedback. For example, a user edits or updates a case field without viewing or applying field recommendations from Einstein. |
| `AiRecordInsightId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique ID of the associated AIRecordInsight.<br>This is a relationship field.<br>**Relationship Name**<br>AiRecordInsight<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AIRecordInsight |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the AIInsightFeedback. |
| `Rank` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The feedback score. |
| `ValueId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of the associated AIInsightValue.<br>This is a polymorphic relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Value<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AIInsightAction, AIInsightValue |

## Usage

Salesforce creates AIInsightFeedback records based on user responses to predictions after the prediction has been created. User feedback, such as a thumbs up/down response or accepting a recommended value, results in the creation of a feedback record in which the feedback type is explicit. An implicit feedback record is created when Einstein makes a recommendation but the field is updated in another way, for example, by a process. Once the AIInsightFeedback record has been created, it's immutable.

Custom fields can't be added to Einstein insight objects.

# AIInsightReason

Represents an Einstein prediction insight reason. This object is available in API version 47.0 and later.

An Einstein insight is created every time an Einstein feature, such as Prediction Builder, makes a prediction. An insight is represented by a root AIRecordInsight and the following child objects: AIInsightAction, AIInsightFeedback, AIInsightReason, and AIInsightValue.

AIInsightReason is a one-to-many child of AIInsightValue. AIInsightReason contains details about how Einstein predicted an insight value.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Prediction insight objects are only available in orgs that have Einstein features, such as Prediction Builder or Case Classification, enabled.

## Fields

| Field | Details |
| --- | --- |
| `AiInsightValueId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique ID of the associated AIInsightValue. |

| Field | Details |
| --- | --- |
| | This is a relationship field.<br>**Relationship Name**<br>AiInsightValue<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AIInsightValue |
| `Contribution` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The contribution weight for this insight reason. |
| `FeatureType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of the feature, such as BOOL. |
| `FeatureValue` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The value of the feature, such as TRUE or FALSE. |
| `FieldName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the field the insight uses for its evaluation. |
| `FieldValue` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The value for the field the insight uses for its evaluation. |
| `Intensity` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The intensity weight for this insight reason. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the AIInsightReason. |
| `Operator` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The logical operator the insight uses to compare the field value with the expression value. For example, if the prediction evaluates whether the fieldValue for the field `bonus__c` is greater than $5,000, the logical operator is `greater than`. |
| `ReasonLabelKey (Beta)` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The key used to map an Einstein Key Accounts Identification (Beta) insight phrase or phrases to the correct messaging template. |
| `RelatedInsightReasonId (Beta)` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID used to relate multiple insights to a single model reason in the Einstein Key Accounts Identification (Beta) feature.<br>This is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>RelatedInsightReason<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AIInsightReason |
| `SortOrder (Beta)` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A number value used to organize the phrases in the model's insights message in the Einstein Key Accounts Identification (Beta) feature. |
| `Variance` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The variance weight for this insight reason. |

## Usage

When an Einstein feature makes a prediction and saves the results, the following events happen in a single atomic operation:

- An AIRecordInsight record is created and populated with information about the prediction insight. AIInsightAction, AIInsightReason, and AIInsightValue records are also created and made children of the AIRecordInsight record.
- If the Einstein feature uses AI prediction fields, prediction result values are written to the target AI prediction field.
- An AIPredictionEvent platform event is created, and any subscriber to AIPredictionEvent is notified.

When Einstein writes prediction results back to AI prediction fields, record save custom logic, such as Apex triggers, workflow rules, and assignment rules, aren't run. To add custom logic based on Einstein prediction results, use a platform event subscriber, such as Process Builder, to get notifications for AIPredictionEvents that contain references to Einstein insight objects.

Custom fields can't be added to Einstein insight objects.

Einstein insights contain information about target fields and predicted value. Your org may have created Einstein predictions that are associated with target fields with field-level security restrictions. To control how users access Einstein insights records, use Salesforce data access features such as user profiles and permission sets.

# AIInsightValue

Represents an Einstein prediction insight value. This object is available in API version 47.0 and later.

An Einstein insight is created every time an Einstein feature, such as Prediction Builder, makes a prediction. An insight is represented by a root AIRecordInsight and the following child objects: AIInsightAction, AIInsightFeedback, AIInsightReason, and AIInsightValue.

AIInsightValue is a one-to-many child of AIRecordInsight. AIInsightValue represents a predicted value of a predicted insight.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Available when Einstein features such as Prediction Builder or Case Classification are enabled. To access an AIInsightValue record, you must have access to the related AIRecordInsight record. To grant a user the right to create an AIInsightValue record, you can use the AICreateInsightObjects or the CreateAIInsights permission.

## Fields

| Field | Details |
| --- | --- |
| `AiInsightActionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of the associated AIInsightAction.<br>This is a relationship field.<br>**Relationship Name**<br>AiInsightAction<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AIInsightAction |
| `AiRecordInsightId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique ID of the associated AIRecordInsight.<br>This is a relationship field.<br>**Relationship Name**<br>AiRecordInsight<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>AIRecordInsight |
| `Confidence` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Relative confidence strength of the generated prediction insight. Higher values (near 1.0) indicate stronger confidence. |
| `Field` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The name of the target field Einstein is making predictions for, such as “AnnualRevenue”. |
| `FieldValueLowerBound` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The lower bound value. |
| `FieldValueUpperBound` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The upper bound value. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the AIInsightValue. |
| `SobjectLookupValueId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of the value object, if this insight value references an object.<br>This is a relationship field.<br>**Relationship Name**<br>SobjectLookupValue<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Accreditation, ActivationTarget, Address, AlternativePaymentMethod, ApiAnomalyEventStore, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskIndDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, AssociatedLocation, AuthorizationForm, AuthorizationFormConsent, AuthorizationFormDataUse, AuthorizationFormText, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CampaignMember, CardPaymentMethod, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CodeSet, CodeSetBundle, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, ConsumptionRate, ConsumptionSchedule, Contact, ContactEncounter, ContactEncounterParticipant, ContactPointAddress, ContactPointConsent, ContactPointEmail, ContactPointPhone, ContactPointTypeConsent, ContactRequest, ContentVersion, Contract, CoverageBenefit, CoverageBenefitItem, CredentialStuffingEventStore, CreditMemo, CreditMemoLine, DataUseLegalBasis, DataUsePurpose, DelegatedAccount, DigitalWallet, DocumentChecklistItem, DuplicateRecordItem, DuplicateRecordSet, EmailMessage, EngagementChannelType, EnrollmentEligibilityCriteria, Event, HealthCareDiagnosis, HealthCareProcedure, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, Idea, Identifier, IdentityDocument, Image, Individual, IndividualApplication, Invoice, InvoiceLine, Lead, Location, LocationTrustMeasure, MemberPlan, MessagingEndUser, OperatingHours, Opportunity, OpportunityContactRole, OpportunityLineItem, Order, OrderItem, OtherComponentTask, PartyConsent, Payment, PaymentAuthAdjustment, PaymentAuthorization, PaymentGateway, PaymentGroup, PaymentLineInvoice, PersonEducation, PersonLanguage, PersonLifeEvent, PersonName, PlanBenefit, PlanBenefitItem, Pricebook2, PricebookEntry, ProcessException, Product2, ProductConsumptionSchedule, ProductFulfillmentLocation, ProductItem, |

| Field | Details |
| --- | --- |
| | ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, PurchaserPlan, PurchaserPlanAssn, QuickText, ReceivedDocument, Recommendation, Refund, RefundLinePayment, ReportAnomalyEventStore, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderItemAdjustment, ReturnOrderItemTax, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SessionHijackingEventStore, SharingRecordCollection, Shift, Shipment, ShipmentItem, SkillRequirement, SocialPersona, SocialPost, Solution, Task, TimeSlot, UnitOfMeasure, UserProvisioningRequest, VideoCall, Visit, VisitedParty, Visitor, VoiceCall, VolunteerProject, WorkBadge, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkThanks, WorkType, WorkTypeGroup, WorkTypeGroupMember |
| `SobjectType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of the value object, such as Account or Case, if this insight value references an object. |
| `Value` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The prediction result insight value. |
| `ValueType` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The data type of the prediction result insight value. Possible values are:<br>• `Boolean`—Boolean<br>• `Currency`—Currency<br>• `DateTime`—DateTime<br>• `Enum`—Enum<br>• `Lookup`—Lookup<br>• `Number`—Number<br>• `String`—String |

## Usage

When an Einstein feature makes a prediction and saves the results, the following events happen in a single atomic operation:

- An AIRecordInsight record is created and populated with information about the prediction insight. AIInsightAction, AIInsightReason, and AIInsightValue records are also created and made children of the AIRecordInsight record.
- If the Einstein feature uses AI prediction fields, prediction result values are written to the target AI prediction field.
- An AIPredictionEvent platform event is created, and any subscriber to AIPredictionEvent is notified.

When Einstein writes prediction results back to AI prediction fields, record save custom logic, such as Apex triggers, workflow rules, and assignment rules, aren't run. To add custom logic based on Einstein prediction results, use a platform event subscriber, such as Process Builder, to get notifications for AIPredictionEvents that contain references to Einstein insight objects.

Custom fields can't be added to Einstein insight objects.

Einstein insights contain information about target fields and predicted value. Your org may have created Einstein predictions that are associated with target fields with field-level security restrictions. To control how users access Einstein insights records, use Salesforce data access features such as user profiles and permission sets.

# AiJobRun

Represents an execution instance of an AI job. This object tracks the overall status and manages the lifecycle of the job from initiation to completion. This object is available in API version 63.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `EndTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The time when the job run ends. |
| `ErrorCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If the job run fails, this field indicates the specific error that occurred. |

| Field | Details |
| --- | --- |
| `ErrorMessage` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Contains a detailed, human-readable message that explains the reason for the job run failure. |
| `JobType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Defines the job's logic.<br>Possible values are:<br>• `PromptTemplate` |
| `Label` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A user-defined name or label for the job run, which can be used for identification and tracking. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>A unique, system-generated identifier for the `AiJobRun` record. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The user group that owns the `AiJobRun` record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |

| Field | Details |
| --- | --- |
| `StartTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The time when the job run's status changes to `InProgress`. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Tracks the lifecycle of the job run. Valid values are:<br>• `New`: The job run has been created.<br>• `ReadyToStart`: The job run is ready for the user to initiate processing.<br>• `Queued`: The job run is queued to start.<br>• `InProgress`: The job run is currently processing.<br>• `Completed`: The job run completed.<br>• `Failed`: The job run failed.<br>• `Aborted`: The job run was aborted by the user.<br>• `Archived`: The job run was archived by the user. |
| `Target` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A metadata field used to specify job-specific details, such as a `PromptTemplateId`, `PromptTemplateName`, or `ModelId`. This provides further context for the job execution. |

# AiJobRunItem

Stores an individual item associated with a parent AiJobRun, including the inputs and resulting response. This object is available in API version 63.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

# Fields

| Field | Details |
| --- | --- |
| `AiJobRunId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>A required reference to the parent AiJobRun record that this item belongs to.<br>This field is a relationship field.<br>**Relationship Name**<br>AiJobRun<br>**Refers To**<br>AiJobRun |
| `ErrorCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If processing for this item fails, this field contains a numeric code indicating the error. |
| `ErrorMessage` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Contains a detailed, human-readable message that explains the reason for the job run item failure. |
| `Input` | **Type**<br>textarea<br>**Properties**<br>Create, Update<br>**Description**<br>Contains the input data for a single item within the job run. For example, in a PromptTemplate job, this is the JSON input for the prompt template. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>A unique, system-generated identifier for the AiJobRunItem record. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The user or group that owns the AiJobRunItem record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |
| `PreprocessedInput` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Stores an intermediate version of the input data after the preprocessing step. For example, this field could be a hydrated JSON prompt. |
| `Response` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Contains the generated response for the job item after processing is complete. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Tracks the status of the individual job item. Valid values are:<br>• `Ready`: The default value. The job run item is ready to start processing.<br>• `Completed`: Processing for the job run item is complete.<br>• `Failed`: Processing for the job run item failed. |

# AiModelLanguage

An object that stores language related information that is generated for each AI model. This object is available in API version 55.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

## Special Access Rules

For Einstein Reply Recommendations:

Requires the Einstein Reply Recommendations org permissions, Einstein Reply Recommendations org pref, and Admin user or user with Einstein Reply Manager permissions.

## Fields

| Field | Details |
|---|---|
| `ApplicationType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Type of application using the AI model.<br>Possible values are:<br>• `ARTICLE_RECOMMENDATION`<br>• `EAR_FOR_CONVERSATION`<br>• `EAR_FOR_VOICE`<br>• `FAQ`<br>• `REPLY_RECOMMENDATION`<br>• `USE_CASE_EXPLORER`<br>• `UTTERANCE_RECOMMENDATION` |
| `ExternalAiModelId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the AI model used to generate predictions.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>ExternalAiModel<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ExternalAIModel |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Languages supported by this AI model.<br>Possible values are:<br>• `Arabic`<br>• `Chinese-simplified`<br>• `Chinese-traditional`<br>• `Dutch`<br>• `English`<br>• `French`<br>• `German`<br>• `Italian`<br>• `Japanese`<br>• `Korean`<br>• `Polish`<br>• `Portuguese`<br>• `Russian`<br>• `Spanish`<br>• `Thai`<br>• `Turkish` |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>AI model name. |
| `ServingStatus` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Determines if the language is enabled or disabled for this AI model. |
| `TranscriptCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Transcript count detected for each language. |

# AIRecordInsight

Represents an Einstein prediction insight. This object is available in API version 47.0 and later.

An Einstein insight is created every time an Einstein feature, such as Prediction Builder, makes a prediction. An insight is represented by a root AIRecordInsight and the following child objects: AIInsightAction, AIInsightFeedback, AIInsightReason, and AIInsightValue.

AIRecordInsight contains information on the Einstein prediction, the AI prediction field where results were written, and other details such as the type of prediction.

## Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

## Special Access Rules

Prediction insight objects are available in orgs that have Einstein features, such as Prediction Builder or Case Classification, enabled.

## Fields

| Field | Details |
| --- | --- |
| `AiApplicationId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of the AiApplication that generated this prediction.<br>This is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>AiApplication<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AIApplication |
| `Confidence` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Relative confidence strength of the generated prediction insight, from 0.0 to 1.0. Higher values (near 1.0) indicate stronger confidence. |
| `MlPredictionDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field is a relationship field.<br>**Relationship Name**<br>MlPredictionDefinition<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MLPredictionDefinition |
| `ModelId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the model to use when generating the insight.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Model<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>MLModel |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the AIRecordInsight. |
| `PredictionField` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The label of the field that Einstein is making predictions for, such as “Case.IsEscalated”. |
| `RunGuid` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>A unique identifier for the Einstein process that made the prediction. |
| `RunStartTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time the Einstein prediction process was started. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The status of this insight. Possible values are:<br>• `Defunct`—The insight has been consumed by the Einstein feature that owns the prediction. For example, Case Classification marks an insight as defunct if a predicted recommendation was presented to a user and the user either accepted or ignored the recommendation. This behavior ensures that the same recommendation isn’t presented multiple times to the user.<br>• `New`—The insight hasn’t been consumed by the Einstein feature. |

| Field | Details |
| --- | --- |
| `TargetField` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The field to which prediction results are written. Case Classification doesn't use this field. |
| `TargetId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique ID of the record Einstein is making predictions for.<br>This is a relationship field.<br>**Relationship Name**<br>Target<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Accreditation, ActivationTarget, Address, AlternativePaymentMethod, ApiAnomalyEventStore, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskIndDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, AssociatedLocation, AuthorizationForm, AuthorizationFormConsent, AuthorizationFormDataUse, AuthorizationFormText, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CampaignMember, CardPaymentMethod, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CodeSet, CodeSetBundle, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, ConsumptionRate, ConsumptionSchedule, Contact, ContactEncounter, ContactEncounterParticipant, ContactPointAddress, ContactPointConsent, ContactPointEmail, ContactPointPhone, ContactPointTypeConsent, ContactRequest, ContentVersion, Contract, CoverageBenefit, CoverageBenefitItem, CredentialStuffingEventStore, CreditMemo, CreditMemoLine, DataUseLegalBasis, DataUsePurpose, DelegatedAccount, DigitalWallet, DocumentChecklistItem, DuplicateRecordItem, DuplicateRecordSet, EmailMessage, EngagementChannelType, EnrollmentEligibilityCriteria, Event, HealthCareDiagnosis, |

| Field | Details |
| --- | --- |
| | HealthCareProcedure, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, Idea, Identifier, IdentityDocument, Image, Individual, IndividualApplication, Invoice, InvoiceLine, Lead, Location, LocationTrustMeasure, MemberPlan, MessagingEndUser, OperatingHours, Opportunity, OpportunityContactRole, OpportunityLineItem, Order, OrderItem, OtherComponentTask, PartyConsent, Payment, PaymentAuthAdjustment, PaymentAuthorization, PaymentGateway, PaymentGroup, PaymentLineInvoice, PersonEducation, PersonLanguage, PersonLifeEvent, PersonName, PlanBenefit, PlanBenefitItem, Pricebook2, PricebookEntry, ProcessException, Product2, ProductConsumptionSchedule, ProductFulfillmentLocation, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, PurchaserPlan, PurchaserPlanAssn, QuickText, ReceivedDocument, Recommendation, Refund, RefundLinePayment, ReportAnomalyEventStore, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderItemAdjustment, ReturnOrderItemTax, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SessionHijackingEventStore, SharingRecordCollection, Shift, Shipment, ShipmentItem, SkillRequirement, SocialPersona, SocialPost, Solution, Task, TimeSlot, UnitOfMeasure, UserProvisioningRequest, VideoCall, Visit, VisitedParty, Visitor, VoiceCall, VolunteerProject, WorkBadge, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkThanks, WorkType, WorkTypeGroup, WorkTypeGroupMember |
| `TargetSobjectType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of the target object, such as Account or Case. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of insight. Possible values are:<br>• `Action`—An insight that indicates a suggested action, such as sending an email.<br>• `Lookup`—An insight that indicates a related value not directly related to the target object and field.<br>• `MultiValue`—An insight with multiple values, such as a multi-class classification.<br>• `SimilarRecord`—An insight that indicates similar or duplicate records.<br>• `SingleValue`—A single value insight, such as a regression number or a score. |
| `ValidUntil` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The day and time this insight is valid until. After this day and time, the insight might no longer be valid due to new prediction results from new or changed data. If this field is `null`, this insight never expires. |

## Usage

When an Einstein feature makes a prediction and saves the results, the following events happen in a single atomic operation:

- An AIRecordInsight record is created and populated with information about the prediction insight. AIInsightAction, AIInsightReason, and AIInsightValue records are also created and made children of the AIRecordInsight record.
- If the Einstein feature uses AI prediction fields, prediction result values are written to the target AI prediction field.
- An AIPredictionEvent platform event is created, and any subscriber to AIPredictionEvent is notified.

When Einstein writes prediction results back to AI prediction fields, record save custom logic, such as Apex triggers, workflow rules, and assignment rules, aren't run. To add custom logic based on Einstein prediction results, use a platform event subscriber, such as Process Builder, to get notifications for AIPredictionEvents that contain references to Einstein insight objects.

Custom fields can't be added to Einstein insight objects.

Einstein insights contain information about target fields and predicted value. Your org may have created Einstein predictions that are associated with target fields with field-level security restrictions. To control how users access Einstein insights records, use Salesforce data access features such as user profiles and permission sets.

## Considerations for Case Classification

To generate reports on the effectiveness of Einstein Case Classification predictions, use the root AIRecordInsight object and its child objects, AIInsightFeedback and AIInsightValue. For example, you can determine how many cases received predictions, or how often agents accepted or rejected them.

- To determine how many cases received recommendations, the AIRecordInsight table identifies the case and contains a row for each field and each recommendation. In AIRecordInsight, the TargetId field contains the case ID. The PredictionField indicates which case field is being predicted. Each field value recommendation is contained in a separate AIInsightValue object with AIRecordInsight as the parent. For a picklist field, Einstein creates AIInsightValue objects with up to 10 field value recommendations. However, just the top three predictions appear to agents in the Einstein Field Recommendations component.
- To learn whether agents acted on any of the top three predictions, use the AIInsightFeedback object. When an agent updates fields after viewing Einstein's recommendations, or when Einstein applies a recommendation automatically, the object's AiInsightFeedbackType field contains Explicit. If the agent updates fields without viewing the predictions, such as on the case details tab, AiInsightFeedbackType is set to Implicit. When the agent applies the recommended value, the object's AiFeedback field is set to Positive; if the agent applies a different value, AiFeedback is Negative.

# AIResearchPromptResult

Represents the research result generated by Einstein from a prompt template.  This object is available in API version 64.0 and later.

When an Einstein feature researches a record and saves the results, an AIResearchPromptResult record is created and populated with information about the researched record.

Note: Generative account research is available on a rolling basis after the Winter '26 release completes.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Research results are only available in orgs that have Einstein features with Einstein generative AI enabled.

## Fields

| Field | Details |
|---|---|
| IsToxicityDetected | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Specifies whether the generated response contains toxic language (`true`) or not (`false`). The default value is `false`. |
| `LatestErrorMessage` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The error message that displays if the result can't be generated. |
| `LatestGenResponseIdRef` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the most recently generated result in the GenAIGeneration object. The object is derived from the Data Cloud data model object (DMO). |
| `LatestGenerationDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time that the result was most recently generated. |
| `LatestResult` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The AI-generated result. |
| `LatestSafetyScore` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Overall safety score for the generated research. A higher value means the generated response is more likely to be safe. Minimum value of 0.0. Maximum value of 1.0. |
| `LatestStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The status of the generated result.<br>Possible values are:<br>• `Generating`<br>• `Success`<br>• `Failed` |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The owner of the generated research result.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Group, User |
| `ReferenceRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The record ID that the research result was generated for.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ReferenceRecord<br>**Refers To**<br>Account |
| `StandardPromptTemplate` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The standard prompt template used to generate the result. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AIResearchPromptResultFeed** **on page 55**
Feed tracking is available for the object.

**AIResearchPromptResultHistory** **on page 63**
History is available for tracked fields of the object.

**AIResearchPromptResultOwnerSharingRule** **on page 65**
Sharing rules are available for the object.

**AIResearchPromptResultShare** **on page 67**
Sharing is available for the object.

# AllowedEmailDomain

Represents an allowed email domain for users in your organization. You can define an allowlist to restrict the email domains allowed in a user's `Email` field. This object is available in API version 29.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

You must have the "Manage Internal Users" user permission to use this object.

Note: If you don't see this object, contact your Salesforce representative to enable it.

## Fields

| Field | Details |
|---|---|
| `Domain` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>An allowed email domain for users. |

# AlternativePaymentMethod

Represents a payment method that isn't cash, a debit card, or a credit card. This object defines methods that aren't defined by the CardPaymentMethod or DigitalWallet objects. Examples of alternative payment methods include CashOnDeliver, Klarna, and Direct Debit. `AlternativePaymentMethod` functions the same as any other type of payment method for processing transactions through a payment gateway. This object is available in API version 51.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

## Fields

| Field | Details |
|---|---|
| `AccountId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The account for the alternative payment method.<br>This field is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `AlternativePaymentMethodNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Salesforce ID number for the alternative payment method. |
| `AuditEmail` | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The email address of the payment owner where audit information about payments is sent. |
| `BankAccountHolderType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Determines if the bank account is held by a business or an individual.<br>Possible values are:<br>• `Business`<br>• `Individual` |
| `BankAccountType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Type of bank account such as a checking or savings account. |
| `BillingFirstName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The first name of the payment method owner, based on their billing address details.<br>This field is available in API version 58.0 and later. |
| `BillingLastName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The last name of the payment method owner, based on their billing address details.<br>This field is available in API version 58.0 and later. |
| `BillingName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The first and last name of the payment method owner, based on their billing address details.<br>This field is available in API version 58.0 and later. |
| `Comments` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Users can add comments to provide additional details about a record. Maximum of 1000 characters. |
| `CompanyName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Company name for this payment method. Part of the payment method's address. |

| Field | Details |
| --- | --- |
| `Email` | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Email address of the payment method holder. |
| `GatewayToken` | **Type**<br>encryptedstring<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Tokenized form of the alternative payment method, returned by the gateway. Stored as encrypted text. |
| `GatewayTokenDetails` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A unique tokenized ID generated by the payment gateway when this payment method first interacts with the gateway. Used to identify the payment method during future transactions. |
| `IpAddress` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>IP address for the payment method owner. |
| `IsAutoPayEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the payment method can be used for recurring payments (True) or not (False). The default value is False.<br>This field is available in API v55.0 and later. For orgs that upgraded from v54.0, you must add this field to the Alternative Payment Method page layout in the UI. It isn't automatically added. |

| Field | Details |
| --- | --- |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, it's possible the user only accessed this record or list view (LastReferencedDate) but not viewed it. |
| `MacAddress` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Mac Address of the payment method holder. |
| `NickName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>User-defined nickname for this payment method. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The user who owns the alternative payment method.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PaymentGatewayId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the payment gateway entity used to handle transactions from this payment method.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentGateway<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentGateway |
| `PaymentMethodAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>Full address associated with the alternative payment method. For more information about address fields, see Address Compound Fields. |
| `PaymentMethodCity` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Payment method address details. |
| `PaymentMethodCountry` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Payment method address details. |

| Field | Details |
| --- | --- |
| `PaymentMethodDetails` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Optional information about the payment method type. This field is available in API version 57.0 and later. |
| `PaymentMethodGeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Accuracy level of the geocode for the payment method address. An accuracy level contains information about the location of a latitude and longitude. For more information about geolocation fields, see Geolocation Compound Field.<br>Possible values are:<br>• `Address`<br>• `Block`<br>• `City`<br>• `County`<br>• `ExtendedZip`<br>• `NearAddress`<br>• `Neighborhood`<br>• `State`<br>• `Street`<br>• `Unknown`<br>• `Zip` |
| `PaymentMethodLatitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Latitude of the payment method address. Used with the PaymentMethodLongitude to specify the precise geolocation of the address. For details about geolocation compound fields, see Compound Field Considerations and Limitations. |
| `PaymentMethodLongitude` | **Type**<br>double |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Longitude of the payment method address. Used with the PaymentMethodLatitude to specify the precise geolocation of the address. For details about geolocation compound fields, see Compound Field Considerations and Limitations. |
| `PaymentMethodPostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details of the address for this payment method. |
| `PaymentMethodState` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details of the address for this payment method. |
| `PaymentMethodStreet` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Details of the address for this payment method. |
| `PaymentMethodSubType` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>More information about the payment method. For example, if the PaymentMethodType is Visa, this field can be a digital wallet. This field is available in API version 57.0 and later. |
| `PaymentMethodType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Payment method used for the transaction, such as Visa, Mastercard, EPS, SepaDebit, and Klarna. This field is available in API version 57.0 and later. |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Phone number of the payment method's owner. |
| `ProcessingMode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Indicates whether the payment method was created in Salesforce or externally. Required.<br>Possible values are:<br>• `External`: Select this value if you create the alternative payment method record through any method other than the Salesforce Payments Connect API.<br>• `Salesforce`: Select this value if you use Salesforce Payments Connect API to create the alternative payment method record. |
| `SavedPaymentMethodId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the saved payment method record.<br>**Relationship Name**<br>SavedPaymentMethod<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>SavedPaymentMethod |
| `StandardEntryClassCode` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>A three-letter code that indicates how a customer or a business initiated and authorized an ACH payment.<br>Possible values are:<br>• `CCD`—Corporate credit or debit entry<br>• `PPD`—Pre-arranged payment and deposit entry<br>• `TEL`—Telephone-initiated entry<br>• `WEB`—Internet or mobile-initiated entry |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The state of the payment method. Required.<br>Possible values are:<br>• `Active`—The Payments platform can use the alternative payment method to make payments. Active alternative payment methods can't be deleted.<br>• `Canceled`—The Payments platform can no longer use the payment method to make payments. A value of `Canceled` can't be changed back to `Active` or `Inactive`<br>• `InActive`—The Payment platform currently can't use the payment method to make payments. Admins can change this value to `Active` or `Canceled` when needed. |

# AnalyticsChangeEventLog

Analytics Change Event Logs represent route or page changes made in the CRM Analytics. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

# Fields

| Field | Details |
| --- | --- |
| `AnalyticsMode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The location where the dashboard is displayed. In the Salesforce mobile app, embedded dashboards are logged as embedded first. |
| `AnalyticsSessionIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of a particular session of CRM Analytics. Use this field to determine which log lines originated from a particular session. |
| `AnalyticsTimestamp` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The time when this log line was generated. |
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`. |
| `CpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |

| Field | Details |
| --- | --- |
| `IsMobile` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates that the dashboard is displayed in mobile (true) or not (false). |
| `IsNew` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>The field indicates that this action opens a new tab (`true`) or goes back to a previously opened tab (`false`).<br>The default value is `false`. |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`. |
| `PageContext` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the component hosting the main content of the page. For example: clients:cardsContainer. |
| `PageIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the CRM Analytics dashboard page. |
| `RecordIdentifier` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The Salesforce ID of the CRM Analytics object. |
| `ReopenCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If `IsNew` is `false`, the number of times that an existing page opens. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestIdentifier.` For example: 3nWgxWbDKWWDIk0FKfF5DV. |
| `RunTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of time that the request took in milliseconds. |
| `SavedViewIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the CRM Analytics dashboard saved view. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`. |
| `TabIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the particular Analytics tab in the user interface. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `Type` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of Apex callout. For example: REST or AJAX. |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URI of the page that's receiving the request. For example: `/home/home.jsp`. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character Identifier of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |

| Field | Details |
| --- | --- |
| `ViewMode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The view mode for the CRM Analytics asset. Possible values include `view`<br>• `edit`<br>• `present`<br>• `JSON`<br>• `print` |

# AnalyticsDashboard

Represents a Tableau Next dashboard. This object is available in API version 64.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`

## Special Access Rules

To access this object, you must have Tableau Next enabled in your org and a Tableau Next permission set.

## Fields

| Field | Details |
| --- | --- |
| `AnalyticsWorkspaceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the Tableau Next workspace the dashboard is associated with.<br>This field is a relationship field.<br>**Relationship Name**<br>AnalyticsWorkspace<br>**Refers To**<br>AnalyticsWorkspace |

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The description of the dashboard. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The API name of the dashboard. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The supported languages for the visualization. There are over 50+ supported language and dialect values. |
| `LastDraftModifiedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The last modified date for the dashboard in draft mode. |
| `LastPublishedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The last published date for the dashboard. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The label for the dashboard. |
| NamespacePrefix | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix for the dashboard. |
| OwnerId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The user ID of the user who created the dashboard.<br>This field is a relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>User |
| Style | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The widget style for the dashboard, represented as a JSON string. For example,<br>`{"widgetStyle":{"backgroundColor":"#ffffff","borderEdges":[],"borderColor":"#cccccc","borderWidth":1,"borderRadius":0}}` |
| TemplateAssetSourceName | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If the dashboard was created from a template, this is name of the asset source. |
| TemplateSource | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>If the dashboard was created from a template, this is name of the template. |
| `Version` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The API version for the dashboard. |

# AnalyticsDownloadEventLog

AnalyticsDownloadEventLog represent downloads made from lens and dashboard in the CRM Analytics. This object is available in API version 61.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `AnalyticsSessionIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of a particular session of CRM Analytics. Use this field to determine which log lines originated from a particular session. |
| `AnalyticsTimestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The time when this log line was generated. |

| Field | Details |
| --- | --- |
| `AssetIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The asset ID from the user download. |
| `AssetType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The asset type from the user download. |
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`. |
| `CpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DatasetIdentifiers` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A comma-separated list of used dataset IDs. |
| `DownloadFormat` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The format of the data for export. |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`. |
| `RecordCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of records exported. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Globally unique identifier for a given request. |
| `RunTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of time that the request took in milliseconds. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`. |

| Field | Details |
| --- | --- |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URI of the page that's receiving the request. For example: `/home/home.jsp`. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |
| `UserType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The category of user license.<br>Possible values are:<br>• `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.<br>• `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.<br>• `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.<br>• `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.<br>• `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a |

| Field | Details |
| --- | --- |
| | customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.<br>• `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.<br>• `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.<br>• `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org. |

# AnalyticsInteractEventLog

Analytics Interact Event Log represents route or page changes made in the CRM Analytic UI. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `AnalyticsSessionIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of a particular session of CRM Analytics. Use this field to determine which log lines originated from a particular session. |
| `AnalyticsTimestamp` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The time when this log line was generated. |
| `ClickCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of clicks performed on a page in the CRM Analytics UI. |
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`. |
| `CpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`. |
| `ReadTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of time a user spent on a particular tab. |

| Field | Details |
| --- | --- |
| `RecordIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of the CRM Analytics object. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestIdentifier.` For example: 3nWgxWbDKWWDIk0FKfF5DV. |
| `RunTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of time that the request took in milliseconds. |
| `SessionCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of times a user returned to a particular page. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`. |
| `TabIdentifier` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the particular Analytics tab in the UI. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `TotalTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total amount of time (in milliseconds) a tab is open. |
| `Type` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The CRM Analytics object type. |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URI of the page that's receiving the request. For example: `/home/home.jsp`. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |

| Field | Details |
| --- | --- |
| `ViewMode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The view mode for the CRM Analytics asset. Possible values include `view`<br>• `edit`<br>• `present`<br>• `JSON`<br>• `print` |

## Usage

This event type is captured when a tab is closed. It collates the interaction statistics over the life of the tab, including total open time, read time, and so on. These statistics are aggregated as you go to other tabs and then return, and logged only when the tab is closed.

# AnalyticsLicensedAsset

Represents a licensed Analytics asset. In this context, Analytics is CRM Analytics, Sonic, or Mulesoft Data Path. Available in API version 52.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `ConsumerNamespace` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The consumer namespace for the asset. The possible values are:<br>• `Industries` |
| `LicenseType` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The license type for the asset. The possible values are:<br>• `Aqs` (Analytics Query Service)<br>• `Cdp` (Data Cloud)<br>• `DataPipelineQuery` (Data Pipeline Query)<br>• `EinsteinAnalytics` (CRM Analytics)<br>• `MulesoftDataPath` (Mulesoft DataPath)<br>• `Sonic` (Salesforce Data Pipelines)<br>The default value is `EinsteinAnalytics`. |

# AnalyticsPerfEventLog

Analytics Perf Event Log helps track trends in your Analytics performance. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `AnalyticsSessionIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of a particular session of CRM Analytics. Use this field to determine which log lines originated from a particular session. |
| `AnalyticsTimestamp` | **Type**<br>datetime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The time when this log line is generated. |
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`. |
| `CpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `EffectivePageTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The experienced page time in milliseconds. |
| `IsInitialLoad` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the event is for the initial load of the Dashboard (`true`) or not (`false`).<br>The default value is `false`. |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`. |
| `QueriedName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The asset title or query string. |
| `RecordIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of the CRM Analytics object. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestIdentifier.` For example: 3nWgxWbDKWWDIk0FKfF5DV. |
| `RunTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of time that the request took in milliseconds. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`. |
| `TabIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the particular Analytics tab in the UI. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URI of the page that's receiving the request. For example: `/home/home.jsp`. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |
| `ViewMode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The view mode for the CRM Analytics asset. Possible values include `view`<br>• `edit` |

| Field | Details |
| --- | --- |
| | • present<br>• JSON<br>• print |

# AnalyticsVisualization

Represents a Tableau Next viusalization. This object is available in API version 64.0 and later.

## Supported Calls

create(), delete(), describeSObjects(), query(), retrieve(), search(), update(), upsert()

## Special Access Rules

To access this object, you must have Tableau Next enabled in your org and a Tableau Next permission set.

## Fields

| Field | Details |
| --- | --- |
| AnalyticsWorkspaceId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the Tableau Next workspace the visualization is associated with.<br>This field is a relationship field.<br>**Relationship Name**<br>AnalyticsWorkspace<br>**Refers To**<br>AnalyticsWorkspace |
| Description | **Type**<br>string<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The description of the visualization. |

| Field | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The API name of the visualization. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The supported languages for the visualization. There are over 50+ supported language and dialect values. |
| `LastDraftModifiedDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The last modified date for the visualization in draft mode. |
| `LastPublishedDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The last published date for the visualization. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The label for the visualization. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The namespace prefix for the visualization. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The user ID of the user who created the visualization.<br>This field is a relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>User |
| `TemplateAssetSourceName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If the visualization was created from a template, this is name of the asset source. |
| `TemplateSource` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If the visualization was created from a template, this is name of the template. |
| `Version` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The API version for the visualization. |

# AnalyticsVizField

Represents a Tableau Next viusalization field. This object is available in API version 65.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, you must have Tableau Next enabled in your org and a Tableau Next permission set.

## Fields

| Field | Details |
| --- | --- |
| `AdHocCalc` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>An ad-hoc calculation for the visualization field. |
| `DisplayCategory` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The display category for the visualization field.<br>Possible values are:<br>• `Continuous`—continuous<br>• `Discrete`—discrete |
| `FieldKey` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The key for for the visualization field. |
| `Function` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The function for the visualization field.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • Avg<br>• Count<br>• CountD<br>• DatePartDay<br>• DatePartMonth<br>• DatePartQuarter<br>• DatePartWeek<br>• DatePartWeekDay<br>• DatePartYear<br>• DateTruncDay<br>• DateTruncMonth<br>• DateTruncQuarter<br>• DateTruncWeek<br>• DateTruncYear<br>• FiscalDatePartMonth<br>• FiscalDatePartQuarter<br>• FiscalDatePartWeek<br>• FiscalDatePartYear<br>• FiscalDateTruncMonth<br>• FiscalDateTruncQuarter<br>• FiscalDateTruncWeek<br>• FiscalDateTruncYear<br>• Max<br>• Mdy<br>• Median<br>• Min<br>• My<br>• Stdev<br>• Stdevp<br>• Sum<br>• UserAgg<br>• Var<br>• Varp |
| `Label` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The label for the visualization field. |
| `Role` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The role for the visualization field.<br>Possible values are:<br>• `Dimension`<br>• `Measure` |
| `SemanticFieldApiName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The API for the field in the semantic model. |
| `SemanticObjectApiName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The API name for object the field belongs to in the semantic model. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type for the visualization field.<br>Possible values are:<br>• `Field`<br>• `MeasureNames`<br>• `MeasureValues` |
| `UniqueIndex` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>The unique index value for the visualization field.<br>This field is a calculated field. |
| `VisualizationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the visualization the field belongs to.<br>This field is a relationship field.<br>**Relationship Name**<br>Visualization<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>AnalyticsVisualization (the master object) |

# AnalyticsVizViewDef

Represents a Tableau Next viusalization view definition. This object is available in API version 64.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, you must have Tableau Next enabled in your org and a Tableau Next permission set.

## Fields

| Field | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The API name of the visualization view definition. |
| `IsOriginal` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the view definition is original (`true`) or not (`false`).<br>The default value is `false`. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The supported languages for the visualization view definition.<br>Possible values are:<br>• `da`—Danish<br>• `de`—German<br>• `en_US`—English<br>• `es`—Spanish<br>• `es_MX`—Spanish (Mexico)<br>• `fi`—Finnish<br>• `fr`—French<br>• `it`—Italian<br>• `ja`—Japanese<br>• `ko`—Korean<br>• `nl_NL`—Dutch<br>• `no`—Norwegian<br>• `pt_BR`—Portuguese (Brazil)<br>• `ru`—Russian<br>• `sv`—Swedish<br>• `th`—Thai<br>• `zh_CN`—Chinese (Simplified)<br>• `zh_TW`—Chinese (Traditional) |
| `MasterLabel` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The label for the visualization view definition. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix for the visualization view definition. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The user ID of the user who created the visualization view definition.<br>This field is a relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>User |
| `Version` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The API version for the visualization view definition. |
| `VisualizationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>This field is a relationship field.<br>**Relationship Name**<br>Visualization<br>**Refers To**<br>AnalyticsVisualization |

# AnalyticsWorkspace

Represents a Tableau Next workspace. This object is available in API version 54.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`

## Special Access Rules

To access this object, you must have Tableau Next enabled in your org and a Tableau Next permission set.

## Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The description for the workspace. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The API name for the workspace. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The supported languages for the workspace.<br>Possible values are:<br>• `da`—Danish<br>• `de`—German<br>• `en_US`—English<br>• `es`—Spanish<br>• `es_MX`—Spanish (Mexico) |

| Field | Details |
| --- | --- |
| | • `fi`—Finnish<br>• `fr`—French<br>• `it`—Italian<br>• `ja`—Japanese<br>• `ko`—Korean<br>• `nl_NL`—Dutch<br>• `no`—Norwegian<br>• `pt_BR`—Portuguese (Brazil)<br>• `ru`—Russian<br>• `sv`—Swedish<br>• `th`—Thai<br>• `zh_CN`—Chinese (Simplified)<br>• `zh_TW`—Chinese (Traditional) |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The label for the workspace. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix for the workspace. |

# AnalyticsWorkspaceAsset

Represents a Tableau Next asset in a workspace. This object is available in API version 54.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

To access this object, you must have Tableau Next enabled in your org and a Tableau Next permission set.

# Fields

| Field | Details |
| --- | --- |
| `ActivePromotionRequestId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the active promotion request for the workspace asset.<br>This field is a relationship field.<br>**Relationship Name**<br>ActivePromotionRequest<br>**Refers To**<br>DataAssetPromotionRequest |
| `AnalyticsWorkspaceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the Tableau Next workspace the asset is associated with.<br>This field is a relationship field.<br>**Relationship Name**<br>AnalyticsWorkspace<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>AnalyticsWorkspace (the master object) |
| `AssetId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the asset.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Asset<br>**Refers To**<br>AnalyticsDashboard, AnalyticsVisualization |

| Field | Details |
| --- | --- |
| `AssetType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of asset.<br>Possible values are:<br>• `AnalyticsDashboard`—Analytics Dashboard<br>• `AnalyticsVisualization`—Analytics Visualization<br>• `MktCalculatedInsightObject`—Calculated Insight Object<br>• `MktDataConnection`—Data Cloud Connection<br>• `MktDataLakeObject`—Data Lake Object<br>• `MktDataModelObject`—Data Model Object<br>• `SemanticModel`—Semantic Model |
| `AssetUsageType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of usage for the asset.<br>Possible values are:<br>• `Created`<br>• `Referenced` |
| `HistoricalPromotionStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The historical promotion status for the asset.<br>Possible values are:<br>• `pending`<br>• `promoted`<br>• `unpromoted` |
| `MetadataSourceType` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The source type of the asset metadata.<br>Possible values are:<br>• `Promoted`<br>• `Reused` |

# Announcement

Represents a Chatter group announcement. This object is available in API version 30.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
| --- | --- |
| `ExpirationDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Required. The date on which the announcement expires. Announcements display on the group UI until 11:59 p.m. local time on the selected date. |
| `FeedItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. The ID of the FeedItem that contains the content of the announcement. Announcements are stored as text posts.<br>This is a relationship field.<br>**Relationship Name**<br>FeedItem |

| Field Name | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>FeedItem |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the parent CollaborationGroup that the announcement belongs to. An announcement can belong only to a single Chatter group.<br>This is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CollaborationGroup |
| `SendEmails` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Set to `true` to email all group members when an announcement is posted to the group. The default is `false`. This requires the user to have the "Send announcement on email" permission.<br>This field is available in API version 36.0 and later.<br>Note: This field is currently available to select customers through a pilot program. To be nominated to join this pilot program, contact Salesforce. Additional terms and conditions may apply to participate in the pilot program. Please note that pilot programs are subject to change, and as such, we cannot guarantee acceptance into this pilot program or a particular time frame in which this feature can be enabled. Any unreleased services or features referenced in this document, press releases, or public statements are not currently available and may not be delivered on time or at all. Customers who purchase our services should make their purchase decisions based upon features that are currently available. |

## Usage

Group owners, managers, and users with the "Modify All Data" permission can use the Announcement object to create, edit, and delete group announcements. Creating a group announcement is a three-step process.

1. Use the FeedItem object to create a text post with the announcement's content. Use the CollaborationGroup record you want to post the announcement to as the parent of this feed item.
2. Next, use the feed item ID and an expiration date to create the announcement record.
3. Finally, update the `AnnouncementId` field in the CollaborationGroup record with the ID of the announcement you created.

To delete the group announcement, simply delete the `AnnouncementId` value in the CollaborationGroup record. To restore a group announcement, update the `AnnouncementId` field for a group with the announcement's ID. The expiration date for the announcement should be in the future and the feed item used to create the announcement should be parented by the same group.

# ApexCalloutEventLog

Apex Callout event logs contain details about callouts (external requests) during Apex code execution. This object is available in API version 55.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
|---|---|
| `BotIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the bot. |
| `BotSessionIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The bot session ID. |

| Field | Details |
| --- | --- |
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`. |
| `CpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `IsSuccess` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the callout request was successful. |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`. |
| `Method` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The HTTP method of the callout. For example: `GET`, `POST`, `PUT`, and so on. |
| `PlannerIdentifier` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the agent planner. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestId`. For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `RequestSize` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The size of the callout request body, in bytes. |
| `RequestTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of time that the request took in milliseconds. |
| `ResponseSize` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The size of the callout response, in bytes. |
| `RunTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Not used for this event type. Use the `RequestTime` field instead. |

| Field | Details |
| --- | --- |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`. |
| `StatusCode` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The returned status code of the request. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `Type` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of Apex callout. For example: `REST` or `AJAX`. |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URI of the page that's receiving the request. For example: `/home/home.jsp`. |
| `Url` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The callout endpoint URL. For example, `www.salesforce.com`. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |

# ApexClass

Represents an Apex class.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `ApiVersion` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The API version for this class. Every class has an API version specified at creation. |
| `Body` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The Apex class definition.<br>Limit: 1 million characters. |

| Field | Details |
| --- | --- |
| `BodyCrc` | **Type**<br>double<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort, Update<br>**Description**<br>The CRC (cyclic redundancy check) of the class or trigger file. |
| `IsValid` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether any dependent metadata has changed since the class was last compiled (`true`) or not (`false`). The default value is `false`. |
| `LengthWithoutComments` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Length of the class without comments. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the class.<br>Limit: 255 characters |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values. |

| Field | Details |
| --- | --- |
| | • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The current status of the Apex class. The following string values are valid:<br>• `Active`—The class is active.<br>• `Deleted`—The class is marked for deletion. This is useful for managed packages, because it allows a class to be deleted when a managed package is updated.<br>• `Inactive`—This option is unused and is only supported for ApexTrigger. For more information, see the Metadata API Developer Guide. |

## Usage

Although Apex classes and triggers have the Create and Update field properties, a runtime exception occurs if you try to create, update, or delete them using the API. Instead, use the Salesforce Extensions for Visual Studio Code or the Ant Migration Tool to create or update Apex classes or triggers. Apex classes and triggers can't be created, edited, or deleted in a production org. See Deploying Apex.

# ApexComponent

Represents a definition for a custom component that can be used in a Visualforce page alongside standard components such as `<apex:relatedList>` and `<apex:dataTable>`.

Represents a definition for a custom component that can be used in a Visualforce page alongside standard components such as `<apex:relatedList>` and `<apex:dataTable>`. For information, see the *Visualforce Developers Guide*.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

# Fields

| Field | Details |
|---|---|
| `ApiVersion` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The API version for this custom component. Every custom component has an API version specified at creation. If the API version is less than 15.0 and `ApiVersion` is not specified, `ApiVersion` defaults to 15.0. |
| `ControllerKey` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The identifier for the controller associated with this custom component:<br>• If the `ControllerType` parameter is set to `Standard` or `StandardSet`, this value is the name of the sObject that defines the controller.<br>• If the `ControllerType` parameter is set to `Custom`, this value is the name of the Apex class that defines the controller. |
| `ControllerType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of controller associated with this Visualforce custom component. Possible values include:<br>• `Not Specified`, for custom components defined without a value for the `controller` attribute on the `<apex:component>` tag<br>• `Standard`, a value that can't be used with custom components or errors may occur<br>• `StandardSet`, a value that can't be used with custom components or errors may occur<br>• `Custom`, for components that have a value for the `controller` attribute on the `<apex:component>` tag |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Description of the Visualforce custom component. |
| `Markup` | **Type**<br>textarea<br>**Properties**<br>Create, Update<br>**Description**<br>The Visualforce markup, HTML, Javascript, and any other Web-enabled code that defines the content of the custom component. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The text used to identify the Visualforce custom component in the Setup area of Salesforce. The Label for this field is **Label**. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. Name of this Visualforce custom component. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. |

| Field | Details |
| --- | --- |
| | • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |

## Usage

Use custom components to encapsulate a common design pattern and then reuse that pattern several times in one or more Visualforce pages. All users who can view Visualforce pages can view custom components, but the "Customize Application" permission is required to create or update custom components.

# ApexEmailNotification

Stores a Salesforce user ID or external email address to be notified when unhandled Apex exceptions occur. This object is available in API version 35.0 and later.

Note: Each ApexEmailNotification contains either an email or a user ID, but not both.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`,`upsert()`

## Fields

| Field | Details |
| --- | --- |
| `Email` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort, Update<br>**Description**<br>The external email address to which the notification is sent. Mutually exclusive with the `UserId` field. |
| `UserId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the user to which the notification is sent. Mutually exclusive with the `Email` field.<br>This is a relationship field.<br>**Relationship Name**<br>User<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

## Usage

To notify users of your org at the email addresses they have on record, use `UserId`. To notify external users or alternate email addresses, use `Email`.

# ApexExecutionEventLog

Apex Execution event logs contain details about Apex classes that are used. This object is available in API version 55.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `BotIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the bot. |

| Field | Details |
| --- | --- |
| `BotSessionIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The bot session ID. |
| `CalloutTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Time spent waiting on webservice callouts, in milliseconds. |
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". If the user's session context isn't available, this field returns a blank value. |
| `CpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DatabaseTotalTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to `CpuTime` to determine whether performance issues are occurring in the database layer or in your own code. |
| `EntryPoint` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The entry point for this Apex execution. For example, `GeneralCloner.cloneAndInsertRecords` or `VF- /apex/CloneUser`. |
| `ExecutionTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The end-to-end Apex execution time (in milliseconds). |
| `IsLongRunningRequest` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the request is counted against your org's concurrent long-running Apex request limit (`true`) or not (`false`).<br>Asynchronous Apex jobs (batch, queueable, scheduled, and future), background processes, and bulk API requests are not counted against the concurrent long-running limit. |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`. |
| `PlannerIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the agent planner. |
| `Quiddity` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of outer execution associated with this event. For example:<br>• `A`–ACS Batch Apex<br>• `C`–Scheduled Apex<br>• `E`–Inbound Email Service<br>• `F`–Future<br>• `H`–Apex REST<br>• `I`–Invocable Action<br>• `K`–Quick Action<br>• `L`–Lightning<br>• `M`–Remote Action<br>• `P`–Bulk Apex jobs running in parallel<br>• `Q`–Queueable<br>• `R`–Synchronous uncategorized (which is where all transactions not specified elsewhere end up)<br>• `S`–QueryLocator Batch Apex (Batch Apex jobs run faster when the start method returns a QueryLocator object that doesn't include related records via a subquery. See Batch Apex Best Practices in Using Batch Apex.)<br>• `T`–Tests Apex<br>• `V`–Visualforce<br>• `W`–SOAP Webservices<br>• `X`–Execute Anonymous<br>Implementations of the Process.Plugin interface use the quiddity value `R`. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestId`. For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `RunTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The amount of time the request took, as measured by SFDC code. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`. |
| `SoqlQueryCount` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The number of SOQL queries that were executed during the event.<br>This value is the aggregate across all namespaces, and can exceed the per-namespace limits. For test executions, the aggregate total value across all test methods executed in the request is used. If you are using this value to track limit consumption, consider filtering out test execution quiddities (indicated by the `Quiddity` field). |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URI of the page that's receiving the request. For example: `/home/home.jsp`. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |

# ApexExtlCalloutEventLog

Apex Extl Callout EventLog represent external data callouts via custom adapters for Salesforce Connect. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `Action` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Action performed by the callout. |
| `ExecutionTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The end-to-end Apex execution time in milliseconds. |
| `FetchTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Duration (in milliseconds) it takes to retrieve the query results from the external system. |
| `IsSuccess` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the query was successful (`true`) or not (`false`).<br>The default value is `false`. |
| `Message` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Error or warning message associated with the failed call. |
| `ObjectType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of event. The value is always BulkApi2. |
| `QueryFilter` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Field expressions to filter the rows to return. Corresponds to `WHERE` in SOQL queries. |
| `QueryLimit` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Maximum number of rows to return for a query. Corresponds to `LIMIT` in SOQL queries. |
| `QueryOffset` | **Type**<br>double |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Number of rows to skip when paging through a result set. Corresponds to `OFFSET` in SOQL queries. |
| `QueryOrderBy` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Field or column to use for sorting query results, and whether to sort the results in ascending (default) or descending order. Corresponds to `ORDER BY` in SOQL queries. |
| `QuerySelect` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Comma-delineated list of fields being queried. Corresponds to `SELECT` in SOQL queries. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestIdentifier.` For example: 3nWgxWbDKWWDIk0FKfF5DV. |
| `RowCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Total number of records in the result set. |
| `RowsFetched` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Number of rows fetched by the callout. |
| `Subqueries` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Number of subqueries this query has been split into. |
| `Throughput` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Number of records retrieved in one second. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `TotalTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>How long it takes (in milliseconds) to prepare and execute the query and to retrieve the query results. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |

# Apex Limit Event Object

`ApexLimitEvent` represents an Apex execution governor limit. This object is available in API version 36.0 and later.

When an Apex trigger, class, component, or Visualforce page produces non-zero governor limits, the results are stored in this object.

## Supported Calls

`query()`

## Fields

| Field | Details |
|---|---|
| `EntryPointId` | **Type**<br>reference<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The ID of the entity that set off the Apex event. See `EntryPointType`. |
| `EntryPointName` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The name of the Apex class, component, page, or trigger that set off the Apex event. |
| `EntryPointType` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of entity that set off the event. Possible values include:<br>• ApexClass<br>• ApexComponent<br>• ApexPage<br>• ApexTrigger |
| `EventDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The time of the specified event. For example, 2013-01-01T03:01:01Z. Seconds are the most granular setting. |
| `ExecutionIdentifier` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>Identifies each Apex limit event associated with a particular code execution. For example, if one Apex class triggers four Apex limit events, all four events have the same value for `ExecutionIdentifier`. |
| `LimitType` | **Type**<br>string<br>**Properties**<br>Nillable, Restricted picklist<br>**Description**<br>The Apex governor limit that was exceeded. Possible values are:<br>• *`DATABASE_TIME`*: Database time<br>• *`HEAP_CHECK_INTERVAL`*: Heap check interval<br>• *`MAX_CPU_MILLISECONDS`*: Maximum CPU time (in ms)<br>• *`MAX_HEAP_SIZE`*: Maximum heap size<br>• *`CALLOUT`*: Number of callouts<br>• *`DML_ROWS`*: Number of DML rows<br>• *`DML`*: Number of DML statements<br>• *`EMAIL_INVOCATIONS`*: Number of email invocations<br>• *`FUTURE`*: Number of future calls<br>• *`MOBILE_PUSHES`*: Number of Mobile Apex push calls<br>• *`QUERY_LOCATOR_SOQL_ROWS`*: Number of query locator rows<br>• *`SOQL_ROWS`*: Number of query rows<br>• *`APEX_CURSOR_SOQL_ROWS`*: Number of query rows in an APEX cursor<br>• *`QUEUEABLE`*: Number of queueable jobs added to the queue<br>• *`AGGS`*: Number of SOQL aggregate queries<br>• *`SOQL`*: Number of SOQL queries<br>• *`SOSL`*: Number of SOSL queries<br>• *`SOQL_BATCH_SIZE`*: Query batch size |
| `LimitValue` | **Type**<br>double |

| Field | Details |
| --- | --- |
| | **Properties**<br>Nillable<br>**Description**<br>Represents the percentage of the maximum allowed limit value. For example, a value of 1.01 indicates that a transaction exceeded the limit by 1%. A value of 0.01 indicates that a transaction only consumed 1% of the limit. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The namespace prefix for the executed Apex class, component, or trigger. See Namespace Prefix. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The 18-character ID of the user who hit the Apex governor limit. |
| `Username` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The username of the user who hit the Apex governor limit. |

## SOQL Usage

`WHERE` is the only supported SOQL function on Apex Limit Event Object, and you can use comparison operators (<, >, <=, and >=) only in the final expression of a `WHERE` clause. The != operator isn't supported.

Note: Date functions such as `convertTimeZone()` aren't supported—for example, `SELECT CALENDAR_YEAR(EventDate), Count(Id) FROM LoginEvent GROUP BY CALENDAR_YEAR(EventDate)` returns an error. You can use date literals in your queries and some date/time functions like `TODAY()`, `YESTERDAY()`, and `LAST_n_DAYS:1`. However, these functions use comparison operators behind the scenes. Therefore, you can use them only in the final expression of the `WHERE` clause.

Apex Limit Event Object allows filtering over five fields: `EventDate`, `UserId`, `EntryPointId`, `EntryPointType`, and `Id`. There's a catch here; your query won't work unless you use the correct order and combination of these fields. The following list provides some examples of valid and invalid queries:

- **Unfiltered**
  - **Valid**—Contains no `WHERE` clause, so no special rules apply.

```
SELECT EntryPointId, EntryPointName, EventDate, LimitType, Username
FROM ApexLimitEvent
```

- **Filtered on** `EventDate`—you can filter solely on `EventDate`, but single filters on other fields fail. You can also use a comparison operator in this query type.
  - **Valid**—you can filter solely on `EventDate`, but single filters on other fields fail. You can also use a comparison operator in this query type.

```
SELECT EntryPointId, EntryPointName, EventDate, LimitType, Username
FROM ApexLimitEvent
WHERE EventDate>=2014-11-27T14:54:16.000Z
```

- **Filtered on** `EventDate` **and** `UserId`
  - **Valid**—when filtering on `UserId`, also filter on `EventDate` and don't use any operator other than equals.

```
SELECT EntryPointId, EntryPointName, EventDate, LimitType, Username
FROM ApexLimitEvent
WHERE EventDate=2014-11-27T14:54:16.000Z and UserId='005D0000000nUP5IAM'
```

  - **Invalid**—filtering only on `UserId` produces an error.

```
SELECT EntryPointId, EntryPointName, EventDate, LimitType, Username
FROM ApexLimitEvent
WHERE UserId='005D0000000nUP5IAM'
```

  - **Invalid**—using a comparison operator or date function that uses a comparison operator on any field other than the last causes the query to fail.

```
SELECT EntryPointId, EntryPointName, EventDate, LimitType, Username
FROM ApexLimitEvent
WHERE EventDate<=DATETIMEVALUE(TODAY()) and UserId='005D0000000nUP5IAM'
```

- **Filtered on** `EventDate`, `UserId`, **and** `EntryPointId`
  - **Valid**—to filter on `EntryPointId`, you must first filter on `EventDate` and `UserId`.

```
SELECT EntryPointId, EntryPointName, EventDate, LimitType, Username
FROM ApexLimitEvent
WHERE EventDate=2014-11-27T14:54:16.000Z and UserId='005D0000000nUP5IAM' and
EntryPointId='01pR00000004HM9IAM'
```

  - **Invalid**—filtering only on the `EntryPointId` field or on the `EntryPointId` filed and one other field isn't supported.

```
SELECT EntryPointId, EntryPointName, EventDate, LimitType, Username
FROM ApexLimitEvent
WHERE EventDate=2014-11-27T14:54:16.000Z and EntryPointId='01pR00000004HM9IAM'
```

  - **Invalid**—the order of the fields you're filtering on matters as well. If the fields in your `WHERE` clause aren't in the correct order, your query will fail.

```
SELECT EntryPointId, EntryPointName, EventDate, LimitType, Username
FROM ApexLimitEvent
WHERE EntryPointId='' and UserId='005D0000000nUP5IAM' and
EventDate=2014-11-27T14:54:16.000Z
```

- **Filtered on `EventDate`, `UserId`, `EntryPointId`, and `EntryPointType`**
  - **Valid**—filtering on `EntryPointType` only works if you're also filtering over `EventDate`, `UserId`, and `EntryPointType`.

```
SELECT EntryPointId, EntryPointName, EventDate, LimitType, Username
FROM ApexLimitEvent
WHERE EventDate=2014-11-27T14:54:16.000Z and UserId='005D0000000nUP5IAM' and
EntryPointId='01pR00000004HM9IAM' and EntryPointType='ApexClass'
```

  - **Invalid**—if you don't filter on all the required fields, filtering over `EntryPointType` fails.

```
SELECT EntryPointId, EntryPointName, EventDate, LimitType, Username
FROM ApexLimitEvent
WHERE EventDate=2014-11-27T14:54:16.000Z and UserId='005D0000000nUP5IAM' and
EntryPointType='ApexClass'
```

- **Filtered on `EventDate`, `UserId`, `EntryPointId`, `EntryPointType`, and `Id`**
  - **Valid**—you can filter over the `Id` field only if you filter over all the four other valid fields as well.

```
SELECT EntryPointId, EntryPointName, EventDate, LimitType, Username
FROM ApexLimitEvent
WHERE EventDate=2014-11-27T14:54:16.000Z and UserId='005D0000000nUP5IAM' and
EntryPointId='01pR00000004HM9IAM' and EntryPointType='ApexClass' and
Id='1HDR00000004C93OAE'
```

  - **Invalid**—if you fail to include one or more of the fields preceding `Id` in the `WHERE` clause, the query fails.

```
SELECT EntryPointId, EntryPointName, EventDate, LimitType, Username
FROM ApexLimitEvent
WHERE EntryPointId='01pR00000004HM9IAM' and EntryPointType='ApexClass' and
Id='1HDR00000004C93OAE'
```

# ApexLog

Represents a debug log containing information about a transaction, including information about Apex, Visualforce, and workflow and validation rules. This object is available in API version 19.0 and later.

## Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `Application` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>This value depends on the client type that triggered the log.<br>• For API clients, this value is the client ID.<br>• For browser clients, this value is `Browser`. |
| `DurationMilliseconds` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Duration of the transaction in milliseconds. |
| `Location` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Specifies the location of the origin of the log. Values are:<br>• `Monitoring`—Log is generated as part of debug log monitoring. These types of logs are maintained for seven days or until a user deletes them.<br>• `SystemLog`—Log is generated from the Developer Console. These types of logs are maintained for 24 hours or until the user clears them. |
| `LogLength` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Length of the log in bytes. |
| `LogUserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the user whose actions triggered the debug log.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>LogUser<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `Operation` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Name of the operation that triggered the debug log, such as `APEXSOAP`, `Apex Sharing Recalculation`, and so on. |
| `Request` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Request type. Values are:<br>• `API`—Request came from the API<br>• `Application`—Request came from the Salesforce user interface |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique identifier of the request that triggered the debug log. Use this request identifier to correlate multiple debug logs triggered by the same request. |
| `StartTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort<br>**Description**<br>Start time of the transaction. |

| Field | Details |
| --- | --- |
| `Status` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Status of the transaction. This value is either `Success`, or the text of an unhandled Apex exception. |

## Usage

You can read information about this object, as well as delete it, but you can't update or insert it.

SEE ALSO:

- ApexClass
- ApexTrigger
- *Developer Guide*: Apex Developer Guide

# ApexPage

Represents a single Visualforce page.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `ApiVersion` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The API version for this page. Every page has an API version specified at creation. If the API version is less than 15.0 and `ApiVersion` is not specified, `ApiVersion` defaults to 15.0. |
| `ControllerKey` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The identifier for the controller associated with this page:<br>• If the `ControllerType` parameter is set to `Standard` or `StandardSet`, this value is the name of the sObject that defines the controller.<br>• If the `ControllerType` parameter is set to `Custom`, this value is the name of the Apex class that defines the controller. |
| `ControllerType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of controller associated with this Visualforce page. Possible values include:<br>• `Not Specified`, for pages defined with neither a `standardController` nor a `controller` attribute on the `<apex:page>` tag<br>• `Standard`, for pages defined with the `standardController` attribute on the `<apex:page>` tag<br>• `StandardSet`, for pages defined using the `standardController` and `recordSetVar` attribute on the `<apex:page>` tag<br>• `Custom`, for pages defined with the `controller` attribute on the `<apex:page>` tag |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Description of the Visualforce page. |
| `IsAvailableInTouch` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if Visualforce tabs associated with the Visualforce page can be used in the Salesforce mobile app (`true`) or not (`false`). (Use of this field for Salesforce Touch is deprecated.) This field is available in API version 27.0 and later.<br>Standard object tabs that are overridden with a Visualforce page aren't supported in the Salesforce mobile app, even if you set this field for the page. The default Salesforce app page for the object is displayed instead of the Visualforce page. |

| Field | Details |
| --- | --- |
| `IsConfirmationTokenRequired` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether `GET` requests for the page require a CSRF confirmation token (`true`) or not (`false`). This field is available in API version 28.0 and later.<br>If you change this field's value from `false` to `true`, links to the page require a CSRF token to be added to them, or the page will be inaccessible. |
| `Markup` | **Type**<br>textarea<br>**Properties**<br>Create, Update<br>**Description**<br>The Visualforce markup, HTML, Javascript, and any other Web-enabled code that defines the content of the page. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The text used to identify the Visualforce page in the Setup area of Salesforce. The Label is **Label**. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. Name of this Visualforce page. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation. |

| Field | Details |
| --- | --- |
| | The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |

## Usage

Use Visualforce pages to add custom content that extends the base Salesforce application functionality. All users in Visualforce-enabled organizations can view Visualforce pages, but the "Customize Application" permission is required to create or update them.

*Developer Guide*: Visualforce Developer Guide

# ApexPageInfo

Represents metadata about a single Visualforce page. This object is available in API version 48.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

As of Summer '20 and later, this object can only be accessed by users who can view a particular Visualforce page, and users with the View Setup and Configuration permission.

## Fields

| Field | Details |
| --- | --- |
| `ApexPageId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID for the Visualforce page. |
| `ApiVersion` | **Type**<br>double<br>**Properties**<br>Filter, Sort<br>**Description**<br>The API version for the page. Every page has an API version specified at creation. If the API version is less than `15.0` and `ApiVersion` is not specified, `ApiVersion` defaults to `15.0`. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Description of the Visualforce page. |
| `DurableId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>For internal use only. |
| `IsAvailableInTouch` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates if Visualforce tabs associated with the Visualforce page can be used in the Salesforce app (`true`) or not (`false`). The default value is `false`. |
| `IsShowHeader` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The `showHeader` value for the Visualforce page. This will be "unknown" if the Visualforce page uses an expression to compute `showHeader`. The default value is `true`. |

| Field | Details |
| --- | --- |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The text used to identify the Visualforce page in the Setup area of Salesforce. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Developer name of the Visualforce page. |
| `NameSpacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The namespace prefix associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the `namespacePrefix__componentName` notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, the namespace prefix is set to the namespace prefix of the org for all objects that support it.<br>Note: If an object is in an installed managed package, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In non-Developer Edition orgs, `NamespacePrefix` is only set for objects that are part of an installed managed package. Objects outside of an installed managed package do not have a namespace prefix. |

# Usage

Use `ApexPageInfo` to query limited metadata about Visualforce pages. Some of this metadata corresponds to settings for a Visualforce page available in Visualforce Pages. To access Visualforce Pages, from *Setup*, in the *Quick Find* box, enter *Custom Code*. Then, select Visualforce Pages. Other values are only available via API. Use `ApexPageInfo` in Visualforce pages to add custom content that extends the base Salesforce application functionality.

Users can only query `ApexPageInfo` records if they can display the associated Visualforce page, or if they have the View Setup & Configuration permission. Allow users to view Visualforce pages by modifying their user profile or assigning permission sets.

# ApexRestApiEventLog

Apex REST API event logs capture information about every Apex REST API request. This object is available in API version 55.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
|---|---|
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`. |
| `CpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DatabaseBlocks` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance. |
| `DatabaseCpuTime` | **Type**<br>double |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request. |
| `DatabaseTotalTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DatabaseCpuTime`. Compare this field to `CpuTime` to determine whether performance issues are occurring in the database layer or in your own code. |
| `ExceptionMessage` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The exception message for a SOAP API request. An exception message gives details about errors in handling an API request, such as why an API request failed. For example: common.exception.ApiException: startDate cannot be more than 30 days ago. |
| `FieldCount` | **Type**<br>int<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The number of fields or columns, where applicable. |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`. |

| Field | Details |
| --- | --- |
| `MediaType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The media type of the response. |
| `Method` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The apex method name. |
| `ObjectName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>API objects that are accessed. For example: `Account`, `Opportunity`, `Contact`, and so on. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestId`. For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `RequestSize` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The size of the callout request body, in bytes. |
| `RequestStatus` | **Type**<br>String<br>**Description**<br>The status of the request for a page view or user interface action. |

| Field | Details |
| --- | --- |
| | For example:<br>• `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.<br>• `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.<br>• `U`—Undefined<br>• `A`—Authorization Error<br>• `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.<br>• `N`—Not Found. 404 error.<br>This field can have a blank value. |
| `ResponseSize` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The size of the callout response, in bytes. |
| `RowsProcessed` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of rows that were processed in the request. For example: `150`. |
| `RunTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of time the request took, as measured by SFDC code. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`. |

| Field | Details |
| --- | --- |
| `StatusCode` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The HTTP status code for the response. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URI of the page that's receiving the request. For example: `/home/home.jsp`. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API.For example: `00530000009M943`. |
| `UserType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The category of user license.<br>Possible values are:<br>• `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. |

| Field | Details |
| --- | --- |
| | • `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.<br>• `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.<br>• `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.<br>• `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.<br>• `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.<br>• `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.<br>• `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org. |

# ApexSoapApiEventLog

Apex SOAP event logs contain details about custom SOAP web service calls. This object is available in API version 55.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `ClassName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The Apex class name. If the class is part of a managed package, this string includes the package namespace. |
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`. |
| `ClientName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the client that's using Salesforce services. This field is an optional parameter that can be passed in API calls. If blank, the caller didn't specify a client in the CallOptions header. |
| `CpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DatabaseTotalTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to `CpuTime` to determine whether performance issues are occurring in the database layer or in your own code. |
| `LimitUsagePercent` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The percentage of Apex SOAP calls that were made against the organization's limit. |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`. |
| `MethodName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the calling Apex method. |
| `QueryString` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The SOQL query, if one was performed. |
| `RateLimitUsage` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The percent of the current usage of your rate limit. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestIdentifier`. For example: `3nWgxWbDKWWDIk0FKfF5DV`. |

| Field | Details |
| --- | --- |
| `RequestStatus` | **Type**<br>String<br>**Description**<br>The status of the request for a page view or user interface action.<br>For example:<br>• `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.<br>• `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.<br>• `U`—Undefined<br>• `A`—Authorization Error<br>• `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.<br>• `N`—Not Found. 404 error.<br>This field can have a blank value. |
| `RunTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of time that the request took in milliseconds.<br>Requests with a value over five seconds are considered long-running requests for the purposes of the Concurrent Long-Running Apex Limit.<br>HTTP callout processing time isn't included when calculating the 5-second limit. We pause the timer for the callout and resume it when the callout completes. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URI of the page that's receiving the request. For example: `/home/home.jsp`. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |
| `UserType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The category of user license.<br>Possible values are:<br>• `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.<br>• `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.<br>• `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.<br>• `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.<br>• `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.<br>• `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. |

| Field | Details |
| --- | --- |
| | • `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.<br>• `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org. |

# ApexTestQueueItem

Represents a single Apex class in the Apex job queue. This object is available in API version 23.0 and later.

This object is available in API version 23.0 and later.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

In API version 49.0 and later, users must have the View Setup and Configuration permission to access this object.

## Fields

| Field Name | Description |
| --- | --- |
| `ApexClassId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The Apex class whose tests are to be executed.<br>This is a relationship field.<br>**Relationship Name**<br>ApexClass<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApexClass |
| `ExtendedStatus` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort |

| Field Name | Description |
| --- | --- |
| | **Description**<br>The pass rate of the test run.<br>For example: "(4/6)". This means that four out of a total of six tests passed.<br>If the class fails to execute, this field contains the cause of the failure. |
| `ParentJobId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Points to the AsyncApexJob that represents the entire test run.<br>If you insert multiple Apex test queue items in a single bulk operation, the queue items share the same parent job. This means that a test run can consist of the execution of the tests of several classes if all the test queue items are inserted in the same bulk operation. |
| `ShouldSkipCodeCoverage` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether to opt out of collecting code coverage information during Apex test runs. Available in API version 43.0 and later. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The status of the job. Valid values are:<br>• `Holding`[1]<br>• `Queued`<br>• `Preparing`<br>• `Processing`<br>• `Aborted`<br>• `Completed`<br>• `Failed`<br>[1] This status applies to batch jobs in the Apex flex queue. |

| Field Name | Description |
| --- | --- |
| `TestRunResultId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the associated ApexTestRunResult object. |

## Usage

Insert an `ApexTestQueueItem` object to place its corresponding Apex class in the Apex job queue for execution. The Apex job executes the test methods in the class.

To abort a class that is in the Apex job queue, perform an update operation on the ApexTestQueueItem object and set its `Status` field to *`Aborted`*.

If you insert multiple Apex test queue items in a single bulk operation, the queue items share the same parent job. This means that a test run can consist of the execution of the tests of several classes if all the test queue items are inserted in the same bulk operation.

# ApexTestResult

Represents the result of an Apex test method execution. This object is available in API version 23.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

In API version 49.0 and later, users must have the View Setup and Configuration permission to access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `ApexClassId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The Apex class whose test methods were executed.<br>This is a relationship field. |

| Field Name | Details |
| --- | --- |
| | **Relationship Name**<br>ApexClass<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApexClass |
| `ApexLogId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Points to the ApexLog for this test method execution if debug logging is enabled; otherwise, `null`.<br>This is a relationship field.<br>**Relationship Name**<br>ApexLog<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApexLog |
| `ApexTestRunResultId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the ApexTestRunResult that represents the entire test run.<br>This is a relationship field.<br>**Relationship Name**<br>ApexTestRunResult<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApexTestRunResult |
| `AsyncApexJobId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Points to the AsyncApexJob that represents the entire test run.<br>This field points to the same object as `ApexTestQueueItem.ParentJobId`.<br>This is a relationship field.<br>**Relationship Name**<br>AsyncApexJob<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AsyncApexJob |
| `IsTestSetup` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if the results are for a test setup method. The default is false. |
| `Message` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The exception error message if a test failure occurs; otherwise, `null`. |
| `MethodName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The test method name. |
| `Outcome` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The result of the test method execution. Can be one of these values: |

| Field Name | Details |
| --- | --- |
| | • Pass<br>• Fail<br>• CompileFail<br>• Skip |
| `QueueItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Points to the ApexTestQueueItem which is the class that this test method is part of.<br>This is a relationship field.<br>**Relationship Name**<br>QueueItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApexTestQueueItem |
| `RunTime` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The time it took the test method to run, in milliseconds. |
| `StackTrace` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The Apex stack trace if the test failed; otherwise, `null`. |
| `TestTimestamp` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The start time of the test method. |

## Usage

You can query the fields of the `ApexTestResult` record that corresponds to a test method executed as part of an Apex class execution.

Each test method execution is represented by a single `ApexTestResult` record. For example, if an Apex test class contains six test methods, six `ApexTestResult` records are created. These records are in addition to the `ApexTestQueueItem` record that represents the Apex class.

Each ApexTestResult record has an associated ApexTestResultLimits on page 607 record, which captures the Apex limits used during execution of the test method.

# ApexTestResultLimits

Captures the Apex test limits used for a particular test method execution. An instance of this object is associated with each ApexTestResult record. This object is available in API version 37.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

In API version 49.0 and later, users must have the View Setup and Configuration permission to access this object.

## Fields

| Field Name | Details |
|---|---|
| `ApexTestResultId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the associated ApexTestResult object.<br>This is a relationship field.<br>**Relationship Name**<br>ApexTestResult<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApexTestResult |
| `AsyncCalls` | **Type**<br>int |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The number of asynchronous calls made during the test run. |
| `Callouts` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The number of callouts made during the test run. |
| `Cpu` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The amount of CPU used during the test run, in milliseconds. |
| `Dml` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The number of DML statements made during the test run. |
| `DmlRows` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The number of rows accessed by DML statements during the test run. |
| `Email` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The number of email invocations made during the test run. |

| Field Name | Details |
| --- | --- |
| `LimitContext` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates whether the test run was synchronous or asynchronous. |
| `LimitExceptions` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates whether your org has any limits that differ from the default limits. |
| `MobilePush` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The number of mobile push calls made during the test run. |
| `QueryRows` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The number of rows queried during the test run. |
| `Soql` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The number of SOQL queries made during the test run. |
| `Sosl` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The number of SOSL queries made during the test run. |

## Usage

The ApexTestResultLimits object is populated for each test method execution, and it captures the limits used between the Test.startTest() and Test.stopTest() methods. If startTest() and stopTest() aren't called, limits usage isn't captured. Note the following:

- The associated test method must be run asynchronously.
- Limits for asynchronous Apex operations (batch, scheduled, future, and queueable) that are called within test methods aren't captured.
- Limits are captured only for the default namespace.

# ApexTestRunResult

Contains summary information about all the test methods that were run in a particular Apex job. This object is available in API version 37.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

In API version 49.0 and later, users must have the View Setup and Configuration permission to access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `AsyncApexJobId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The parent Apex job ID for the result.<br>This is a relationship field.<br>**Relationship Name**<br>AsyncApexJob<br>**Relationship Type**<br>Lookup |

| Field Name | Details |
| --- | --- |
| | **Refers To**<br>AsyncApexJob |
| `ClassesCompleted` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The total number of classes executed during the test run. |
| `ClassesEnqueued` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The total number of classes enqueued during the test run. |
| `EndTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The time at which the test run ended. |
| `IsAllTests` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether all Apex test classes were run. |
| `JobName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Reserved for future use. |
| `MethodsCompleted` | **Type**<br>int |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The total number of methods completed during the test run. This value is updated after each class is run. |
| `MethodsEnqueued` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The total number of methods enqueued for the test run. This value is initialized before the test runs. |
| `MethodsFailed` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The total number of methods that failed during this test run. This value is updated after each class is run. |
| `Source` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The source of the test run, such as the Developer Console. |
| `StartTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The time at which the test run started. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The status of the test run. Values include:<br>• Queued<br>• Preparing<br>• Processing<br>• Aborted<br>• Completed<br>• Failed |
| `TestSetupTime` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The time it took the setup methods to run, in milliseconds. |
| `TestTime` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The time it took the test to run, in milliseconds. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The user who ran the test run.<br>This is a relationship field.<br>**Relationship Name**<br>User<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

# ApexTestSuite

Represents a suite of Apex classes to include in a test run. A TestSuiteMembership object associates each class with the suite. This object is available in API version 36.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

In API version 49.0 and later, users must have the View Setup and Configuration permission to access this object.

## Fields

| Field Name | Description |
|---|---|
| `TestSuiteName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Unique, Update<br>**Description**<br>The name of the Apex test suite. This label appears in the user interface.<br>This value is case-sensitive and must be unique. |

## Usage

Insert a TestSuiteMembership object using an API call to associate an Apex class with an ApexTestSuite object. (ApexTestSuite and TestSuiteMembership aren't editable through Apex DML.) To remove the class from the test suite, delete the TestSuiteMembership object. If you delete an Apex test class or test suite, all TestSuiteMembership objects that contain that class or suite are deleted.

The following SOQL query returns the membership object that relates this Apex class to this test suite.

```
SELECT Id FROM TestSuiteMembership WHERE ApexClassId = '01pD0000000Fhy9IAC'
    AND ApexTestSuiteId = '05FD00000004CDBMA2'
```

SEE ALSO:

TestSuiteMembership

# ApexTrigger

Represents an Apex trigger.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `ApiVersion` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The API version for this trigger. Every trigger has an API version specified at creation. |
| `Body` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The Apex trigger definition.<br>Limit: 1 million characters. |
| BodyCrc | **Type**<br>double<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort, Update<br>**Description**<br>The CRC (cyclic redundancy check) of the class or trigger file. |
| `IsValid` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether any dependent metadata has changed since the trigger was last compiled (`true`) or not (`false`). |
| `LengthWithoutComments` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Length of the trigger without comments |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the trigger.<br>Limit: 255 characters |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The current status of the Apex trigger. The following string values are valid:<br>• `Active`—The trigger is active.<br>• `Inactive`—The trigger is inactive, but not deleted.<br>• `Deleted`—The trigger is marked for deletion. This is useful for managed packages, because it allows a class to be deleted when a managed package is updated. |

| Field | Details |
| --- | --- |
| | Note: `Inactive` is not valid for ApexClass. For more information, see the *Metadata API Developer Guide*. |
| `TableEnumOrId` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies the object associated with the trigger, such as Account or Contact. |
| `UsageAfterDelete` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Specifies whether the trigger is an `after delete` trigger (`true`) or not (`false`). |
| `UsageAfterInsert` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Specifies whether the trigger is an `after insert` trigger (`true`) or not (`false`). |
| `UsageAfterUndelete` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Specifies whether the trigger is an `after undelete` trigger (`true`) or not (`false`). |
| `UsageAfterUpdate` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Specifies whether the trigger is an `after update` trigger (`true`) or not (`false`). |
| `UsageBeforeDelete` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Specifies whether the trigger is a `before delete` trigger (`true`) or not (`false`). |
| `UsageBeforeInsert` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Specifies whether the trigger is a `before insert` trigger (`true`) or not (`false`). |
| `UsageBeforeUpdate` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Specifies whether the trigger is a `before update` trigger (`true`) or not (`false`). |
| `UsageIsBulk` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Specifies whether the trigger is defined as a bulk trigger (`true`) or not (`false`).<br>Note: This field is not used for Apex triggers saved using Salesforce API version 10.0 or higher: all triggers starting with that version are automatically considered bulk, and this field will always return `true`. |

## Usage

Although Apex classes and triggers have the Create and Update field properties, a runtime exception occurs if you try to create, update, or delete them using the API. Instead, use the Salesforce Extensions for Visual Studio Code or the Ant Migration Tool to create or update Apex classes or triggers. Apex classes and triggers can't be created, edited, or deleted in a production org. See Deploying Apex.

*Developer Guide*: Apex Developer Guide

# ApexTriggerEventLog

Apex Trigger event logs contain details about triggers that fire in an organization. This object is available in API version 55.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
|---|---|
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`. |
| `CpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DatabaseTotalTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to `CpuTime` to determine whether performance issues are occurring in the database layer or in your own code. |
| `ExecutionTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The end-to-end Apex execution time (in milliseconds). |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`. |
| `ObjectName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the object affected by the trigger. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`. |
| `RequestStatus` | **Type**<br>String<br>**Description**<br>The status of the request for a page view or user interface action.<br>For example:<br>• `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.<br>• `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.<br>• `U`—Undefined<br>• `A`—Authorization Error<br>• `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.<br>• `N`—Not Found. 404 error. |

| Field | Details |
| --- | --- |
| | This field can have a blank value. |
| `RunTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of time that the request took in milliseconds.<br>Requests with a value over five seconds are considered long-running requests for the purposes of the Concurrent Long-Running Apex Limit.<br>HTTP callout processing time isn't included when calculating the 5-second limit. We pause the timer for the callout and resume it when the callout completes. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `TriggerIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the trigger that was fired. |
| `TriggerName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>For triggers coming from managed packages, `TriggerName` includes a namespace prefix separated with a `.` character. If no namespace prefix is present, the trigger is from an unmanaged trigger. For example:<br>• `examplePackage.managedExampleTrigger`—Managed trigger from the examplePackage namespace<br>• `unmanagedExampleTrigger`—Unmanaged trigger |
| `TriggerType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of this trigger.<br>Possible values are:<br>• AfterInsert<br>• AfterUpdate<br>• BeforeInsert<br>• BeforeUpdate |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URI of the page that's receiving the request. For example: `/home/home.jsp`. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |
| `UserType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The category of user license. |

| Field | Details |
| --- | --- |
| | Possible values are:<br>• `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.<br>• `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.<br>• `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.<br>• `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.<br>• `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.<br>• `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.<br>• `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.<br>• `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org. |

# ApexTypeImplementor

Represents Apex classes that directly or indirectly implement an interface. Using a SOQL query, this object gets information about public or global classes and only global classes for installed managed packages. This object is available in API version 54.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

| Field | Details |
| --- | --- |
| `ApexClassId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The foreign key to the outer class that contains the Apex class implementing the interface. |

| Field | Details |
| --- | --- |
| | This is a relationship field.<br>**Relationship Name**<br>ApexClass<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApexClass |
| `ClassName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Apex class name that implements the interface. For an inner class that implements the interface, the outer class and inner name separated by a period. |
| `ClassNamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix of the class that implements the interface. |
| `DurableId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A unique identifier for the interface and implementor. |
| `InterfaceApexClassId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The foreign key to the outer class that contains the Apex class defining the interface. Null for built-in system interfaces, such as `System.Batchable`.<br>This is a relationship field.<br>**Relationship Name**<br>InterfaceApexClass |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>ApexClass |
| `InterfaceName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The interface name for which Apex class implementation is retrieved. For an inner interface, the outer Apex class name and the inner interface name separated by a period. |
| `InterfaceNamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix of the class that defines the interface. |
| `IsConcrete` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the implementing class is abstract (`false`) or not (`true`). |

## Usage

ApexTypeImplementor considers access modifiers based on the context, such as the namespace from which the ApexTypeImplementor entity is queried. These are additional usage considerations.

- In installed managed packages, you get information about all global implementors in the org, and public implementors from the managed package itself.
- ApexTypeImplementor appropriately filters classes that are annotated with `@Deprecated`. For example it respects the package version dependency settings of a class when queried from that class.
- ApexTypeImplementor returns implementors where `ApexClass.IsValid` is set to `False` (invalid classes) in addition to when it's set to `True`. Classes that don't compile or execute can be returned. An implementor class is only guaranteed to be usable if `ApexClass.IsValid` is set to `True` for the implementor.
- If a package is installed but not yet compiled because Compile on Deploy is disabled, ApexTypeImplementor returns no values until compilation is complete. In environments like sandboxes where Compile on Deploy can be disabled, you must perform a manual compilation to get complete results.

- To avoid cross-namespace collisions, always specify an InterfaceNamespacePrefix as a WHERE clause in SOQL queries for ApexTypeImplementor. Otherwise, the query includes all namespaces instead of only the current namespace. If a package contains an interface with the same name as an interface in a different namespace, a query without a specified InterfaceNamespacePrefix can return false implementors that can't be assigned to the interface.

  For example, say a managed package contains a global interface named `RoundingStrategy` and a global class named `HalfDown` that implements `RoundingStrategy`. If a subscriber org has an interface that's also named `RoundingStrategy`, then the query `[SELECT ApexClass.Id FROM ApexTypeImplementor WHERE InterfaceName = 'RoundingStrategy']`, if performed in the subscriber org, can return the ID of `HalfDown` instead of an implementor in the subscriber org. To avoid this issue, perform a query that specifies a InterfaceNamespacePrefix: `[SELECT ApexClass.Id FROM ApexTypeImplementor WHERE InterfaceName = 'RoundingStrategy' AND InterfaceNamespacePrefix = 'PackageNamespace']`.

## Example

This example demonstrates how an interface allows flexibility in a configuration, record, or user-driven selection of the rounding strategy to apply. The multiple implementations of the interface can be discovered using ApexTypeImplementor and the specific implementation chosen based on user requirements.

```
// Common interface that all rounding strategies will implement
public interface RoundingStrategy {
    Decimal round(Decimal toRound);
}

public abstract class RoundingStrategies {
    public class Ceiling implements RoundingStrategy {
        public Decimal round(Decimal toRound) {
            return toRound.round(System.RoundingMode.CEILING);
        }
    }

    public class HalfDown implements RoundingStrategy {
        public Decimal round(Decimal toRound) {
            return toRound.round(System.RoundingMode.HALF_DOWN);
        }
    }

    public class TwoDecimalPlaces implements RoundingStrategy {
        public Decimal round(Decimal toRound) {
            return toRound.setScale(2, System.RoundingMode.HALF_UP);
        }
    }
}

List<ApexTypeImplementor> interfaceImpls = [
            SELECT ClassName, ClassNamespacePrefix
            FROM ApexTypeImplementor
            WHERE InterfaceName = 'RoundingStrategy' and IsConcrete = true and
InterfaceNamespacePrefix = ''
            ORDER BY ClassName ASC NULLS LAST];

// For example, an admin can be presented with a list of Apex classes
// that can be applied. Simulated selection of 2 decimal places
```

```
ApexTypeImplementor selectedRoundingStrategy = interfaceImpls[2];
System.assertEquals('RoundingStrategies.TwoDecimalPlaces',
    selectedRoundingStrategy.ClassName);

// Create an instance of the class that implements the interface
RoundingStrategy rs = (RoundingStrategy)
Type.forName(selectedRoundingStrategy.ClassNamespacePrefix,
    selectedRoundingStrategy.ClassName).newInstance();

Decimal rounded = rs.round(7.1459);
System.assertEquals(7.15, rounded);
```

# ApexUnexpectedExcpEventLog

Apex Unexpected Excp Event Log captures information about unexpected exceptions in Apex code execution. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
|---|---|
| `ExceptionCategory` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The category of the unexpected Apex exception. For example, the LimitException exception type is split into subcategories that indicate if you exceeded a limit, such as the total heap size or CPU time. Possible values:<br>• Subcategories of LimitException that indicate the Apex limit you've exceeded. Examples:<br>• LimitException: CpuTime: Maximum CPU time on the Salesforce servers.<br>• LimitException: HeapSize: Total heap size<br>• LimitException: Queries: Total number of SOQL queries issued.<br>• LimitException: QueryRows: Total number of records retrieved by SOQL queries.<br>• LimitException: DmlStatements: Total number of DML statements issued. |

| Field | Details |
| --- | --- |
| | • LimitException: Callouts: Total number of callouts (HTTP requests or web services calls) in a transaction. |
| `ExceptionMessage` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The exception message for a SOAP API request. An exception message gives details about errors in handling an API request, such as why an API request failed. For example: common.exception.ApiException: startDate cannot be more than 30 days ago. |
| `ExceptionType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The class type of the unexpected exception. For example: System.MathException |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestIdentifier.` For example: 3nWgxWbDKWWDIk0FKfF5DV. |
| `StackTrace` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The stack trace for the exception. For example:<br>`Class.OpportunityUtility.insert: line 22, column 1`<br>`AnonymousBlock: line 1, column 1` |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |

# ApiTotalUsageEventLog

API Total Usage Event Log contains details about Platform SOAP API, Platform REST API, and Bulk API requests. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `ApiFamily` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API family. For example, REST, SOAP, or Bulk. |
| `ApiResource` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API method or resource. For example, `describeSObjects` for SOAP. |
| `BotIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the bot. |
| `BotSessionIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The bot session ID. |
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP, such as a login from AppExchange, is shown as "Salesforce.com IP". For example: 96.43.144.26. |
| `ClientName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the client making the API request. |
| `ConnectedAppIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the connected app making the API request. |
| `HttpMethod` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The HTTP method. For example, `GET`. |
| `IsApiLimitCounted` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Whether the request counted against the API limit (`true`) or not (`false`).<br>The default value is `false`. |
| `ObjectName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the object accessed by the API request. |
| `PlannerIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the agent planner. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestIdentifier.` For example: 3nWgxWbDKWWDIk0FKfF5DV. |
| `StatusCode` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The HTTP response status code for the request. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |

# AppAnalyticsQueryRequest

Represents a request for AppExchange App Analytics data.

AppExchange App Analytics is available for packages that passed security review and are registered to a License Management App (LMA). Usage data is provided as package usage logs, as month-based package usage summaries, or as point-in-time subscriber snapshots. Usage logs, monthly usage summaries, and subscriber snapshots are downloadable comma-separated value (.csv) files. For information on how to optimize your use of App Analytics, see AppExchange App Analytics Best Practices.

Note: Usage data from Government Cloud and Government Cloud Plus orgs isn't available in App Analytics.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

See Get Started with AppExchange App Analytics in the *Second-Generation Managed Packaging Developer Guide*.

## Fields

| Field Name | Details |
| --- | --- |
| `AvailableSince` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>An optional value used to limit the requested results file to data newly arrived in the data lake after the specified date and time. This field is always transferred in the Coordinated Universal Time (UTC) time zone. Use the `AvailableSince` field as part of your catch-up query strategy.<br>`AvailableSince` must be later than `StartTime` and `EndTime`, if specified. `AvailableSince` must be earlier than now. A query must include `StartTime`,`AvailableSince`, or both.<br>For example, to schedule a catch-up query on `2021-04-03T18:00:00Z` for this date range:<br>• `StartTime=2021-03-29T00:00:00Z`<br>• `EndTime=2021-03-30T00:00:00Z`<br>Valid `AvailableSince` values range from `2021-03-30T00:00:00Z to 2021-04-03T18:00:00Z`.<br>For more information on `AvailableSince` and catch-up queries, read AppExchange App Analytics Best Practices. |
| `DataType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of usage data being requested. Valid values include:<br>• `PackageUsageLog`<br>• `PackageUsageSummary`<br>• `SubscriberSnapshot`<br>Note: In Summer '20, we changed the enum names from `CustomObjectUsageSummary` and `CustomObjectUsageLog` to `PackageUsageSummary` and `PackageUsageLog`.<br>If you wrote integrations using `CustomObjectUsageSummary` or `CustomObjectUsageLog`, they continue to work only with v47 and earlier. After you upgrade to v48, you must update the `DataType` to `PackageUsageSummary` and `PackageUsageLog`. |
| `DownloadExpirationTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The time when the download URL is no longer valid. The expiration time is 60 minutes after the query is completed. |
| `DownloadSize` | **Type**<br>long<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The size of the AppExchange App Analytics results file available for download, in bytes. |
| `DownloadUrl` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>URL that the user can download data from. Populated after the request is completed. This URL expires and is removed after the expiration time is reached. |
| `EndTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>Enter end time in format yyyy-MM-ddTHH:mm:ss.<br>Example:<br>2019-04-15T12:00:00<br>For Package Usage Summaries, we recommend that StartTime corresponds to midnight UTC at beginning of the desired month and EndTime corresponds to midnight UTC at the beginning of the following month.<br>For example, to retrieve the Package Usage Summary for December 2024 specify:<br>• `StartTime=2024-12-01T00:00:00Z`<br>• `EndTime=2025-01-01T00:00:00Z` |
| `ErrorMessage` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Stores error message text that results from this query. |
| `FileCompression` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The file compression format of your requested results file. `FileCompression` and `FileType` must align. If `FileType` is `csv`, `FileCompression` defaults to `none` and can be `none` or `gzip`. If `FileType` is `parquet`, `FileCompression` is `snappy` by default and can be `snappy`, `gzip`, or `none`.<br>Valid values include:<br>• `gzip`<br>• `snappy`<br>• `none` |
| `FileType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The data format of your requested results file. The default is `csv`. `FileCompression` and `FileType` must align. If `FileType` is `csv`, `FileCompression` defaults to `none` and can be `none` or `gzip`. If `FileType` is `parquet`, `FileCompression` is `snappy` by default and can be `snappy`, `gzip`, or `none`.<br>Valid values include:<br>• `csv`<br>• `parquet` |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |

| Field Name | Details |
| --- | --- |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The auto-generated name of the App Analytics query request. |
| `OrganizationIds` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Optional. Enter up to 16 comma-separated org IDs without spaces between IDs. Or enter up to 15 comma-separated org IDs with spaces between the IDs.<br>To request data for all the orgs the package is installed in, leave the field blank. |
| `PackageIds` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Optional. Enter up to 16 comma-separated package IDs without spaces between IDs. Or enter up to 15 comma-separated package IDs with spaces between the IDs. Use the subscriber package ID that begins with `033`. To retrieve a list of your second-generation managed package IDs, run `sf package list --verbose` in Salesforce CLI.<br>To request data on all packages registered to this License Management App, leave the field blank. |
| `QuerySubmittedTime` | **Type**<br>dateTime |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time that the App Analytics query request was received for processing, in Coordinated Universal Time (UTC). `QuerySubmittedTime` is read only. |
| `RequestState` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Status of the query request. Valid values are:<br>• `New`<br>• `Pending`<br>• `Complete`<br>• `Expired`<br>• `Failed`<br>• `NoData` |
| `StartTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>Enter start time in format yyyy-MM-ddTHH:mm:ss. All App Analytics query requests must include `StartTime` or `AvailableSince` or both.<br>Example:<br>2019-04-14T12:00:00<br>For Package Usage Summaries, we recommend that StartTime corresponds to midnight UTC at beginning of the desired month and EndTime corresponds to midnight UTC at the beginning of the following month.<br>For example, to retrieve the Package Usage Summary for December 2024 specify:<br>• `StartTime=2024-12-01T00:00:00Z`<br>• `EndTime=2025-01-01T00:00:00Z` |

## Usage

To request usage data, log in to the License Management Org (LMO) that your package is registered to, and initiate the API request from the LMO. In a 24-hour period, you can download a maximum 20 GB of AppExchange App Analytics data.

See Download Package Usage Logs, Package Usage Summaries, and Subscriber Snapshots in the *Second Generation Managed Packaging Developer Guide*.

If requests to view package usage log or subscriber snapshot data are inactive for 90 days, we reserve the right to stop collecting this data. To resume data collection, log a support case in the Salesforce Partner Community. For product, specify **Partner Programs & Benefits**. For topic, specify **ISV Technology Request**.

# AppDefinition

Represents the metadata of an app and its navigation items. Metadata is returned only for apps that the current user can access. This object is available in API version 43.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

| Field Name | Details |
|---|---|
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The optional description of the application. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The developer name of the application. |
| `DurableId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A unique virtual Salesforce ID for the application. |

| Field Name | Details |
| --- | --- |
| `HeaderColor` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The header color in the application. Specify the color with a hexadecimal code, such as #0000FF for blue. |
| `Id` | **Type**<br>ID<br>**Properties**<br>Defaulted on create, Filter, Group, idLookup, Sort<br>**Description**<br>A default Salesforce ID. |
| `IsLargeFormFactorSupported` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the Large form factor is set in the `CustomApplication` metadata. |
| `IsMediumFormFactorSupported` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the Medium form factor is set in the `CustomApplication` metadata. |
| `IsNavAutoTempTabsDisabled` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the navigation automatically creates temporary tabs settings. |
| `IsNavPersonalizationDisabled` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Indicates whether navigation personalization is disabled. |
| `IsNavTabPersistenceDisabled` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether workspace tabs are cleared for each new console session. |
| `IsOmniPinnedViewEnabled` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the Omni-Channel component is enabled in sidebar view. The default is false. |
| `IsOverrideOrgTheme` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether to override the global theme for the org. When true, the color scheme and logo that the user has set are used. When false, the global theme for the org is used, even if the user has set a color scheme and logo. |
| `IsSmallFormFactorSupported` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the Small form factor is set in the `CustomApplication` metadata. |
| `Label` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The localized label value corresponding to the MasterLabel field. |

| Field Name | Details |
| --- | --- |
| `LogoUrl` | **Type**<br>url<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The logo URL of the application as selected by the admin. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The non-translated label entered when the application was created. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace of the application. |
| `NavType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of navigation for the application. The value `Standard` is for Lightning Experience. The value `Console` is for Salesforce console. A null value is for Salesforce Classic. |
| `UiType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates the type of custom application. The value `Aloha` is for Salesforce Classic, and `Lightning` is for Lightning Experience. |
| `UtilityBar` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The ID of the utility bar associated with this application. |

# AppExtension

Represents a connection between the Field Service mobile app and another app, typically for passing record data to the Salesforce mobile app or other apps. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Field Service must be enabled.

## Fields

| Field Name | Details |
| --- | --- |
| `AppExtensionLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The label in the UI for the app extension. |
| `AppExtensionName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The API name of the app extension. |
| `FieldServiceMobileSettingsId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of a set of field service mobile settings. |

| Field Name | Details |
| --- | --- |
| `InstallationUrl` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The URL that takes the user to the app install location, such as the App Store or Google Play. |
| `LaunchValue` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>A value directing the Field Service app to the appropriate app extension. The Launch Value can be a static URL or a dynamic value that you can represent with certain tokens. These tokens pass field information from the record that the user is currently viewing. The basic format for these tokens is based on the field names; for example: **{!$Name}**. |
| `ScopedToObjectTypes` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates the types of records from which the app extension can be activated. Scoping an app extension to an object lets users activate the app extension from records of the specified type. For example, to scope to both work orders and service appointments you would use the value `WorkOrder,ServiceAppointment`. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A picklist of types of app extensions: iOS, Android, Flow, and Lightning Apps |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AppExtensionChangeEvent**
Change events are available for the object. Available in API version 55.0 and later.

# ApplicationFormTemplate

Represents the fields to capture application metadata as a template which is used in application tracking and processing. This object is available in API version 59.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available only with the EAndU Cloud Program Access permission set.

## Fields

| Field | Details |
|---|---|
| `ApprovalFlowName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the flow that must be launched to approve the applications associated with the application form template. |
| `ApplicationType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies the type of application or template.<br>Possible values are:<br>• `Contractor`<br>• `EVCharger`—EV Charger<br>• `EnergyEfficiency`—Energy Efficiency<br>• `NewConnection`—New Connection<br>The default value is `NewConnection`. |

| Field | Details |
| --- | --- |
| `ApprovalLimitAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Amount up to which the approver has the authority to approve applications. |
| `ApprovalFlowName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the flow that must be launched to approve the applications associated with the application form template. |
| `ApproverId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The user who must approve the application payout.<br>This field is a relationship field.<br>**Relationship Name**<br>Approver<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The description of the application form template. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of the application form template. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ApplicationFormTemplateChangeEvent**
Change events are available for the object.

**ApplicationFormTemplateFeed**
Feed tracking is available for the object.

**ApplicationFormTemplateHistory**
History is available for tracked fields of the object.

**ApplicationFormTemplateOwnerSharingRule**
Sharing rules are available for the object.

**ApplicationFormTemplateShare**
Sharing is available for the object.

# AppMenuItem

Represents the organization's default settings for items in the app menu or App Launcher.

## Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

## Fields

| Field | Details |
| --- | --- |
| `ApplicationId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID for the menu item. |
| `CanvasAccessMethod` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The access method for the canvas app. Values can be:<br>• `Get`—OAuth Webflow<br>• `Post`—Signed Request |
| `CanvasEnabled` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates if the app menu item is a canvas app (`true`) or not (`false`). The default setting is `false`. |
| `CanvasOptions` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Represents the options enabled for a canvas connected app. The options are:<br>• `PersonalEnabled`—The app is enabled as a canvas personal app.<br>• `HideHeader`—The publisher header, which contains the "What are you working on?" text, is hidden.<br>• `HideShare`—The publisher **Share** button is hidden.<br>This field is available in API version 34.0 and later. |
| `CanvasReferenceId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The canvas app unique identifier. |
| `CanvasSelectedLocations` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The selected locations for the canvas app which define where the canvas app can appear in the user interface. For example:<br>`Chatter,ChatterFeed,Publisher,ServiceDesk` |
| `CanvasUrl` | **Type**<br>url<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URL of the canvas app. |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A description of this menu item. |
| `IconUrl` | **Type**<br>url<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The icon for the menu item's application. |
| `InfoUrl` | **Type**<br>url<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URL for more information about the application. |
| `IsAccessible` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `true`, the current user is authorized to use the app. The default setting is `false`. |

| Field | Details |
| --- | --- |
| `IsRegisteredDeviceOnly` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `true`, indicates that the app is available to registered devices only. The default setting is `false`. Available in API version 49.0 and later. |
| `IsUsingAdminAuthorization` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `true`, the app is pre-authorized for certain users by the administrator. The default setting is `false`. |
| `IsVisible` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If `true`, the app is visible to users of the organization. The default setting is `false`. |
| `Label` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The app's name. |
| `LogoUrl` | **Type**<br>url<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The logo for the menu item's application. The default is the initials of the `Label` value. |
| `MobileAppBinaryId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The URL for the Mobile App Binary file. |
| `MobileAppInstallUrl` | **Type**<br>url<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The location mobile users are directed to install the app. Available in API version 49.0 and later. |
| `MobileAppInstalledDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time that a user installed a mobile app. Available in API version 49.0 and later. |
| `MobileAppInstalledVersion` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The version of the user's installed mobile app. Available in API version 49.0 and later. |
| `MobileAppVer` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The version number of the mobile app. Available in API version 49.0 and later. |
| `MobileDeviceType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The supported device form factors for the mobile app. Available in API version 49.0 and later. |
| `MobileMinOsVer` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The minimum version required for the app. Available in API version 49.0 and later. |
| `MobilePlatform` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The mobile platform for the app. Possible values include:<br>• `android – Android`<br>• `ios – iOS`<br>Available in API version 49.0 and later. |
| `MobileStartUrl` | **Type**<br>url<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The location mobile users are directed to after they've authenticated. This field is used with connected apps and Experience Builder sites. For sites only, this location is a fully qualified domain name. For other apps, it's a relative URL. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API name of the item. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values: |

| Field | Details |
| --- | --- |
| | • In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The index value that controls where this item appears in the menu. For example, a menu item with a sort order of 5 appears between items with sort order values of 3 and 9. |
| `StartUrl` | **Type**<br>url<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>For a connected app, the location users are directed to after they've authenticated. Otherwise, the application's default start page. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of application represented by this item. The types are:<br>• `ConnectedApplication`<br>• `Network`<br>• `ServiceProvider`<br>• `TabSet` |
| `UserSortOrder` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The index value that represents where the user set this item in the menu (or App Launcher). For example, an item with a sort order value of 5 appears between items with sort order values of 3 and 9.<br>This value is separate from SortOrder so you can create logic incorporating both values. For example, if you want the user-sorted items to appear first, followed by the organization order for the rest, use:<br>`SELECT ApplicationId,SortOrder,UserSortOrder FROM AppMenuItem order by userSortOrder NULLS LAST, sortOrder NULLS LAST` |

## Usage

Use this read-only object to view an entry in the Lightning Platform app menu or the App Launcher. You can create a SOQL query to retrieve all items, even items the user does not see from the user interface.

There are many ways you can use AppMenuItem. Here are some examples:

- Build your own App Launcher or app menu in Salesforce. Create a custom page showing all the apps you have access to and that lets you run them using single sign-on.
- Build your own App Launcher or app menu on a tablet or mobile app. You can have your own app for launching applications on various mobile devices.
- Build an app launcher into your company's intranet. There's no need to have it run on Salesforce because Salesforce APIs let you integrate with Salesforce programmatically and build an app launcher.

Tip: To get metadata information about apps and their tabs, use the Apex `Schema.describeTabs()` method, REST API `/vXX.X/tabs/` resource, or SOAP API `describeTabs()` call.

# AppointmentAssignmentPolicy

Stores information about resource assignment rules. This object is available in API version 52.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `FullName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The API name of the AppointmentAssignmentPolicy object.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the appointment assignment policy.<br>Possible values are:<br>• `Possible` values are:<br>• `da` (Danish)<br>• `de` (German)<br>• `en_US` (English)<br>• `es` (Spanish)<br>• `es_MX` (Spanish - Mexican)<br>• `fi` (Finnish)<br>• `fr` (French)<br>• `it` (Italian)<br>• `ja` (Japanese)<br>• `ko` (Korean)<br>• `nl_NL` (Dutch)<br>• `no` (Norwegian)<br>• `pt_BR` (Portuguese - Brazilian)<br>• `ru` (Russian)<br>• `sv` (Swedish)<br>• `th` (Thai)<br>• `zh_CN` (Chinese - Simplified)<br>• `zh_TW` (Chinese - Traditional) |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The label for the appointment assignment policy. |

| Field | Details |
| --- | --- |
| `PolicyApplicableDuration` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The frequency at which the utilization of service resources is calculated. This field is available in API version 53.0 and later.<br>Possible values are:<br>• `Parameter-Based`<br>• `Monthly`<br>• `Weekly`<br>The default value is Parameter-Based. |
| `PolicyType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of appointment assignment policy.<br>Possible values are:<br>• `loadBalancing` |
| `UtilizationFactor` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Specifies the count type for the resource utilization. This field is available in API version 53.0 and later.<br>Possible values are:<br>• `NumberOfAppointments`<br>• `TotalAppointmentDuration`<br>The default value is TotalAppointmentDuration. |

# AppointmentScheduleAggr

Records the utilization of a service resource, by date, for the Load Balancing appointment assignment policy. This object is available in API version 52.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `AppointmentDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date of the appointment. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name or ID of the AppointmentScheduleAggr object. |
| `ResourceUtilizationCount` | **Type**<br>integer<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of appointments scheduled for a service resource. Available in API version 53.0 and later.<br>This is a calculated field. |
| `ServiceResourceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The service resource associated with the appointment scheduling aggregate.<br>This is a relationship field.<br>**Relationship Name**<br>ServiceResource<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>ServiceResource |
| `TotalResourceUtilization` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The number of minutes for which the service resource has scheduled appointments.<br>This is a calculated field. |
| `UsageType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Specify the usage type of the AppointmentScheduleAggr object.<br>Possible values are:<br>• `FSL_Daily`<br>• `FSL_Monthly`<br>• `FSL_Weekly`<br>• `LightningScheduler`<br>The default value is 'LightningScheduler'. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AppointmentScheduleAggrOwnerSharingRule on page 65**
Sharing rules are available for the object.

**AppointmentScheduleAggrShare on page 67**
Sharing is available for the object.

# AppointmentScheduleLog

Stores service appointments of each service Resource. This object is used to calculate the utilization of a service resource for the AppointmentScheduleAggr object. This object is available in API version 52.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `AppointmentDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date of the appointment. |
| `AppointmentScheduleAggrId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The appointment scheduling aggregate associated with the appointment scheduling log.<br>This is a relationship field.<br>**Relationship Name**<br>AppointmentScheduleAggr<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AppointmentScheduleAggr |
| `IsUsedForResourceUtilization` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the appointment scheduling log is used for deriving the appointment scheduling aggregate.<br>The default value is 'false'. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The name or ID of the AppointmentScheduleLog object. |
| `RelatedRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The service appointment, resource absence, event, or any other related record associated with the appointment scheduling log.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>RelatedRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Event, ServiceAppointment |
| `ResourceUtilization` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The number of minutes the service resource already has scheduled appointments for. |
| `ServiceResourceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The service resource associated with the appointment scheduling log.<br>This is a relationship field.<br>**Relationship Name**<br>ServiceResource<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ServiceResource |
| `UsageType` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Specify the product associated with the AppointmentScheduleLog object.<br>Possible values are:<br>• `FSL_Daily`—FSL - Daily<br>• `FSL_Monthly`—FSL - Monthly<br>• `FSL_Weekly`—FSL - Weekly<br>• `LightningScheduler`—Lightning Scheduler<br>The default value is 'LightningScheduler'. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AppointmentScheduleLogChangeEvent on page 68**
Change events are available for the object.

**AppointmentScheduleLogFeed on page 55**
Feed tracking is available for the object.

**AppointmentScheduleLogHistory on page 63**
History is available for tracked fields of the object.

**AppointmentScheduleLogOwnerSharingRule on page 65**
Sharing rules are available for the object.

**AppointmentScheduleLogShare on page 67**
Sharing is available for the object.

# AppointmentSchedulingPolicy

Represents a set of rules for scheduling appointments using Salesforce Scheduler. This object is available in API version 45.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `AppointmentAssignmentPolicyId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name or ID of the appointment assignment policy. This is a relationship field, available in version 52.0 and later.<br>**Relationship Name**<br>AppointmentAssignmentPolicy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AppointmentAssignmentPolicy |

| Field | Details |
| --- | --- |
| ShouldConsiderCalendarEvents | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this policy checks the Salesforce calendar for resource availability.<br>The default value is 'false'. |
| ShouldEnforceExcludedResource | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this appointment scheduling policy prevents excluded service resources from being assigned to appointments. |
| ShouldEnforceRequiredResource | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this appointment scheduling policy allows only required service resources to be assigned to appointments. |
| ShouldMatchSkill | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this appointment scheduling policy allows only required service resources who have certain skills to be assigned to appointments. |
| ShouldMatchSkillLevel | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this appointment scheduling policy allows only required service resources who have certain skills and skill levels to be assigned to appointments. |
| ShouldRespectVisitingHours | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this appointment scheduling policy prevents users from scheduling appointments outside of an account's visiting hours. |
| `ShouldUsePrimaryMembers` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this appointment scheduling policy allows only service resources who are primary members of a service territory to be assigned to appointments. |
| `ShouldUseSecondaryMembers` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this appointment scheduling policy allows service resources who are secondary members of a service territory to be assigned to appointments. |

# AppointmentTopicTimeSlot

Represents a lookup to a work type or a work type group for a time slot This object is available in API version 52.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `AppointmentTopicTimeSlotKey` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Non-editable validating field used to ensure no two rows have the same time slot and work type or work type group values in an instance. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Name or ID of the AppointmentTopicTimeSlot object. |
| `OperatingHoursId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The operating hours that contain the time slot.<br>This is a relationship field.<br>**Relationship Name**<br>OperatingHours<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OperatingHours |
| `TimeSlotId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the time slot.<br>This is a relationship field.<br>**Relationship Name**<br>TimeSlot<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>TimeSlot |
| `WorkTypeGroupId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The work type group associated with this time slot.<br>This is a relationship field.<br>**Relationship Name**<br>WorkTypeGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>WorkTypeGroup |
| `WorkTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The work type associated with this time slot.<br>This is a relationship field.<br>**Relationship Name**<br>WorkType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>WorkType |

# Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AppointmentTopicTimeSlotChangeEvent on page 68**
Change events are available for the object.

**AppointmentTopicTimeSlotFeed on page 55**
Feed tracking is available for the object.

**AppointmentTopicTimeSlotHistory on page 63**
History is available for tracked fields of the object.

**AppointmentTopicTimeSlotOwnerSharingRule on page 65**
Sharing rules are available for the object.

**AppointmentTopicTimeSlotShare on page 67**
Sharing is available for the object.

# Approval

Represents an approval request for a Contract.

Note: This object is read-only and is specific to approvals on the Contract object. It isn't equal to or involved in the approval processes represented by the ProcessInstance, which is more powerful.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

| Field | Details |
|---|---|
| `ApproveComment` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Text entered by the user when they approved or rejected this approval request. Required. Limit: 4,000 characters. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Required. ID of the User being asked to approve or reject the approval request. Must be a valid User ID. Required. |

| Field | Details |
| --- | --- |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Required. ID of the Contract associated with this approval request. Must be a valid contract ID. |
| `RequestComment` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Text entered by the User who created the approval request. Optional. This field can't be updated after the Approval has been created. Limit: 4,000 characters. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Required. Status of this approval request. One of the following picklist values:<br>• `Pending`—Specified only when the Approval request is created (`create()` call)<br>• `Approved`—Specified only when the Approval request is approved (`update()` call)<br>• `Rejected`—Specified when the Approval request is rejected (`update()` call) or when it is created (`create()` call) and immediately rejected for archival/historical purposes. |

## Usage

This object allows client applications to programmatically handle approval requests for a Contract. Initially, to request a Contract approval, a client application might create a new Approval request record, specifying the `ParentId`, OwnerId (user approving or rejecting the request), Status (Pending), and (optionally) RequestComment fields. Note that when a client application creates the first approval request, if the value of the Contract `Status` field is Draft, then the Approval `Status` for this record is automatically changed to In Approval Process (see ContractStatus for more information).

A client application might subsequently update an existing Approval request, specifying the `Status` (Approved or `Rejected`) and an `ApproveComment` (required); the `RequestComment` field can't be updated. Updating an Approval record (either to approve or reject) requires the client application to be logged in with "Approve Contract" permission. To update an Approval request, its `Status` must be Pending—a client application can't update an Approval that has already been Approved or Rejected. To re-submit an approval request for a given Contract, a client application must create a new, separate Approval record and repeat the approval process.

Once a Contract has been approved (not rejected), the Contract `LastApprovedDate` field is automatically updated, however the Contract `Status` field isn't updated, it keeps the value InApproval.

An approved Contract must be activated explicitly. Client applications can activate a Contract by setting the value in its `Status` field to Activated, or a User can activate a Contract via the Salesforce user interface.

A Contract can have multiple approval requests in various states (Pending, Approved, and Rejected). In addition, one User can have multiple approval requests associated with the same Contract.

Client applications can't explicitly deleteApproval records. Approval records are deleted automatically if the parent Contract is deleted.

Overview of Salesforce Objects and Fields

# ApprovalSubmission

Represents the instance of an approval request that's submitted for a record of the related object. This object is available in API version 62.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

This object is available for users with a Salesforce user license of type Salesforce in Enterprise, Unlimited, and Developer Editions.

## Fields

| Field | Details |
|---|---|
| `Comments` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The comments about the request that's submitted for approval. |
| `DoesSendApprovalEmail` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Required. Indicates whether approval request emails are sent to approvers and delegates (`true`) or not (`false`).<br>The default value is `false`. |

| Field | Details |
| --- | --- |
| `FlowOrchestrationInstanceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the flow orchestration instance record that's associated with the approval.<br>This field is a relationship field.<br>**Relationship Name**<br>FlowOrchestrationInstance<br>**Refers To**<br>FlowOrchestrationInstance |
| `IsEligibleForSmartApproval` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the approval submission is eligible for smart approval (`true`) or not (`false`).<br>The default value is `false`.<br>This field is only available with Advanced Approvals enabled. |
| `IsSmartApprovalRun` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this approval submission either is run in smart approval mode (`true`) or not (`false`).<br>The default value is `false`.<br>This field is only available with Advanced Approvals enabled. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The sequentially-generated name of the approval submission record, for example AS-000000001. |

| Field | Details |
| --- | --- |
| OwnerId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the user or the group that owns the approval submission record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>User |
| RelatedRecordId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Required. ## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ApprovalSubmissionShare on page 67**
Sharing is available for the object.

# ApprovalSubmissionDetail

ApprovalSubmissionDetail contains additional information about operations happening during the approval lifecycle. It will not hold any information that's already captured in the existing ApprovalSubmission and ApprovalWorkItem entities. This object is available in API version 62.0 and later.

**Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

This object is available in Enterprise, Unlimited, and Developer Editions for users with access to the Approval Submission object.

## Fields

| Field | Details |
|---|---|
| `ActionChannelName` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The name of the channel where the action was performed.<br>Valid values are:<br>• `ApprovalRecord`<br>• `Email`<br>• `InvocableAction`<br>• `ScreenFlow`<br>• `Slack`<br>• `System` |
| `ActionContext` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The context of the action taken for the item assigned for approval. For example, if the approval has been reassigned the string would be `Reassigned from User Id - <original_assignee_id>`. |

| Field | Details |
| --- | --- |
| `ActionName` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The action taken for the item assigned for approval.<br>Valid values are:<br>• `Cancel`<br>• `Override`<br>• `Reassign`<br>• `Recall`<br>• `Review` |
| `ActionPerformedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who performed the action on the item submitted for approval.<br>This field is a relationship field.<br>**Relationship Name**<br>ActionPerformedBy<br>**Refers To**<br>User |
| `ActionPerformerRole` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The role of the user who performed the action on the item submitted for approval.<br>Valid values are:<br>• `Admin`<br>• `Assignee`<br>• `Delegate`<br>• `Submitter`<br>• `System` |
| `ApprovalSubmissionId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Sort<br>**Description**<br>The approval submission that's associated with the detail record.<br>This field is a relationship field.<br>**Relationship Name**<br>ApprovalSubmission<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>ApprovalSubmission (the master object) |
| `ApprovalWorkItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The approval assignment associated with the detail record.<br>This field is a relationship field.<br>**Relationship Name**<br>ApprovalWorkItem<br>**Refers To**<br>ApprovalWorkItem |
| `Comments` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The comments added by the user who performed the action. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The sequentially-generated name of the approval submission detail record, for example ASD-000000026. |

# ApprovalWorkItem

Contains run-time information about each step in an approval workflow, such as assignees and their decisions regarding the object's approval. Has a master-detail relationship with ApprovalSubmission. This object is available in API version 61.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

This object is available in Enterprise, Unlimited, and Developer Editions for users with access to the Approval Submission object.

## Fields

| Field | Details |
|---|---|
| `ApprovalChainName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the related approval chain. This field is populated when there are multiple approval chains that are run in parallel. This field is only available with Advanced Approvals enabled. |
| `ApprovalConditionName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the condition that assigns the work item to a user or group for approval. |
| `ApprovalSubmissionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The approval submission that's associated with this item.<br>This field is a relationship field.<br>**Relationship Name**<br>ApprovalSubmission |

| | CaseComment, ChannelProgram, ChannelProgramLevel, ChannelProgramMember, CollaborationGroup, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, Contact, ContactPointAddress, ContactPointConsent, ContactPointEmail, ContactPointPhone, ContactPointTypeConsent, ContactRequest, ContextDefinitionSync, Contract, ContractItemPrice, ContractItemPriceAdjTier, CostBook, CostBookEntry, Customer, DTRecordsetReplica, DataAction, DataActionJobSummary, DataActionTarget, DataGraph, DataKitDeploymentLog, DataLakeObjectInstance, DataQueryWorkspace, DataQueryWorkspaceTab, DataSourceBundle, DataStream, DataUseLegalBasis, DataUsePurpose, DecisionTblFileImportData, DelegatedAccount, DocGenerationQueryResult, DocTemplateSectionCondition, DocumentEnvelope, DocumentGenerationProcess, DocumentRecipient, DocumentTemplate, DocumentTemplateContentDoc, DocumentTemplateSection, DocumentTemplateToken, DuplicateRecordItem, DuplicateRecordSet, EmailMessage, EmpUserProvisionProcessErr, EngagementAttendee, EngagementChannelType, EngagementInteraction, EngagementTopic, ExtDataShare, ExtDataShareTarget, ExternalEventMapping, FlowOrchestrationInstance, FulfillmentOrder, FulfillmentOrderItemAdjustment, FulfillmentOrderItemTax, FulfillmentOrderLineItem, GenOpPlan, GenOpPlanParam, GenOpPlanRequest, GeneratedDocument, GeneratedDocumentSection, Idea, IdentityResolution, Image, Individual, IntegrationProviderDcsnRqmt, IntegrationProviderExecution, Lead, Location, LocationTrustMeasure, ManagedContentVariant, MarketSegment, MarketSegmentActivation, MktCalculatedInsight, MktDataTransform, MktMLModel, MktMLPredictionJob, ObjectStateDefinition, ObjectStateTransition, ObjectStateValue, Obligation, Opportunity, OpportunityRelatedDeleteLog, Order, OrderAction, OrderAdjustmentGroup, OrderDeliveryGroup, OrderDeliveryMethod, OrderItem, OrderItemAdjustmentLineItem, OrderItemDetail, OrderItemRateAdjustment, OrderItemRateCardEntry, OrderItemRecipient, OrderItemRelationship, OrderItemTaxLineItem, OrgMetricScanResult, OrgMetricScanSummary, Organization, PartnerFundAllocation, PartnerFundClaim, PartnerFundRequest, PartnerMarketingBudget, PartyConsent, PriceBookEntryDerivedPrice, PriceBookRateCard, PricingAdjBatchJob, PricingAdjBatchJobLog, PricingApiExecution, PricingProcessExecution, ProcessException, Product2, ProductAttributeDefinition, ProductCatalog, ProductCategory, ProductCategoryDisqual, ProductCategoryProduct, ProductCategoryQualification, ProductClassification, ProductClassificationAttr, ProductComponentGroup, ProductComponentGrpOverride, ProductConfigFlowAssignment, ProductConfigurationFlow, ProductConfigurationRule, ProductDisqualification, ProductQualification, ProductRampSegment, ProductRelComponentOverride, ProductUsageGrant, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, PromptAction, PromptError, QuickText, QuickTextUsage, Quote, QuoteLineDetail, QuoteLineItem, QuoteLineItemRecipient, QuoteLineRateAdjustment, QuoteLineRateCardEntry, RateAdjustmentByAttribute, RateAdjustmentByTier, RateCard, RateCardEntry, RatingFrequencyPolicy, RecordActnSelItemExtrc, RecordAlert, RecordAlertActionableTarget, SalesTransactionType, Seller, SetupDataSynchronization, Shipment, ShipmentItem, Site, SocialPersona, SocialPost, Solution, StreamingChannel, TableauHostMapping, Topic, UnitOfMeasure, UnitOfMeasureClass, UsageGrantRenewalPolicy, UsageGrantRolloverPolicy, UsageResource, UsageResourceBillingPolicy, User, UserEsignVendorIdentifier, UserLicense, UserLocalWebServerIdentity, UserProvisioningRequest, WorkBadge, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkThanks |

| Field | Details |
| --- | --- |
| RelatedRecordObjectName | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the related record that's submitted for approval. |
| ReviewedById | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The identifier of the user that reviewed the work item.<br>This field is a relationship field.<br>**Relationship Name**<br>ReviewedBy<br>**Refers To**<br>User |
| ReviewedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the work item was reviewed. |
| SmartApprovalBasisWorkItemId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The work item on which the smart approval is based.<br>This field is a relationship field.<br>This field is only available with Advanced Approvals enabled.<br>**Relationship Name**<br>SmartApprovalBasisWorkItem<br>**Refers To**<br>ApprovalWorkItem |
| Status | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The status of the approval work item.<br>Possible values are:<br>• `Approved`<br>• `Assigned`<br>• `Canceled`<br>• `Errored`—Error<br>• `Recalled`<br>• `Rejected`<br>• `Withdrawn` |

# ApprovalWorkItemCondition

Represents a condition for starting and concluding an approval step that's evaluated as part of the smart approval process. This object is available in API version 64.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

This object is available in Enterprise, Unlimited, and Developer Editions where Advanced Approvals is enabled with the Modify All Data or the Approval Admin user permission.

## Fields

| Field | Details |
| --- | --- |
| `ApprovalWorkItemCriteriaId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The approval work item criteria associated with the approval work item condition. The approval work item criteria defines the logic by which the approval conditions are evaluated.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>ApprovalWorkItemCriteria<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>ApprovalWorkItemCriteria (the master object) |
| `ConditionSequencePosition` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The order in which the condition is evaluated relative to other conditions that are part of the requirement logic. |
| `HasEvaluationSucceeded` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the first value (left side) evaluates against the second value (right side) successfully (`true`) or not (`false`).<br>The default value is `false`. |
| `LeftValue` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The first value of the condition that's evaluated against the second value. |
| `LeftValueDataType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The data type of the first operand (left side) in this condition.<br>Possible values are:<br>• `Apex`<br>• `Boolean`<br>• `Currency` |

| Field | Details |
| --- | --- |
| | • `Date`<br>• `DateTime`—Date/Time<br>• `MultiSelectPicklist`—Multi-Select Picklist<br>• `Number`<br>• `Other`<br>• `Picklist`<br>• `Text`<br>• `Time` |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The sequentially-generated name of the approval work item condition record, for example AWCO-000000071. |
| `OperatorType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The operator for the condition.<br>Possible values are:<br>• `Contains`<br>• `EndsWith`—Ends With<br>• `Equal`<br>• `GreaterThan`—Greater Than<br>• `GreaterThanOrEqualTo`—Greater Than Or Equal<br>• `HasError`—Error<br>• `In`<br>• `IsBlank`—Blank<br>• `IsChanged`—Changed<br>• `IsEmpty`—Empty<br>• `IsNull`—Null<br>• `LessThan`—Less Than<br>• `LessThanOrEqualTo`—Less Than Or Equal<br>• `None`<br>• `NotEqualTo`—Does Not Equal |

| Field | Details |
| --- | --- |
| | • `NotIn`—Not In<br>• `StartsWith`—Starts With<br>• `WasSelected`—Was Selected<br>• `WasSet`—Was Set<br>• `WasVisited`—Was Visited |
| `RightValue` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The second value (right side) of the condition that's evaluated against the first value. |
| `RightValueDataType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The data type of the second operand for the condition.<br>Possible values are:<br>• `Apex`<br>• `Boolean`<br>• `Currency`<br>• `Date`<br>• `DateTime`—Date/Time<br>• `MultiSelectPicklist`—Multi-Select Picklist<br>• `Number`<br>• `Other`<br>• `Picklist`<br>• `Text`<br>• `Time` |

# ApprovalWorkItemCriteria

Represents the logic by which a smart approval request is evaluated. This object is available in API version 64.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

This object is available in Enterprise, Unlimited, and Developer Editions where Advanced Approvals is enabled with the Modify All Data or the Approval Admin user permission.

## Fields

| Field | Details |
|---|---|
| `ApprovalStepApiName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique API name of the approval step that uses the logic in the approval work item criteria. |
| `ApprovalWorkItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The parent approval work item associated with the approval work item criteria.<br>This field is a relationship field.<br>**Relationship Name**<br>ApprovalWorkItem<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>ApprovalWorkItem (the master object) |
| `CriteriaType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Specifies whether the requirement logic is for an entry or exit condition.<br>Possible values are:<br>• `Entry`<br>• `Exit` |
| `Name` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The sequentially-generated name of the approval work item criteria record, for example AWCR-000000071. |
| `RequirementLogic` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The requirement logic of all entry or exit conditions. |

# AppTabMember

Represents the list of tabs for each of the available apps. This object is available in API version 43.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

| Field Name | Details |
| --- | --- |
| `AppDefinitionId` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The ID of the `AppDefinition` object.<br>This is a relationship field.<br>**Relationship Name**<br>AppDefinition<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AppDefinition |

| Field Name | Details |
| --- | --- |
| `DurableId` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A unique virtual Salesforce ID for the color. |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number used to sort this tab in the application. |
| `TabDefinitionId` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The ID of the `TabDefinition` object.<br>This is a relationship field.<br>**Relationship Name**<br>TabDefinition<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>TabDefinition |
| `WorkspaceDriverField` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Refers to the workspace mapping in the `CustomApplication` Metadata API object. |

# ApptBundleAggrDurDnscale

Sums the duration of the bundle members, reduced by a predefined percentage. This object is available in API version 54.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

- Field Service must be enabled.
- Bundling must be enabled in the Field Service Settings.
- The Field Service Admin, Field Service Bundle for Dispatcher, and Field Service Integration permission sets must be enabled.

## Fields

| Field | Details |
|---|---|
| `BundleAggregationPolicyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the parent appointment bundle aggregation policy.<br>This is a relationship field.<br>**Relationship Name**<br>BundleAggregationPolicy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApptBundleAggrPolicy |
| `FromBundleMemberNumber` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of the first bundle member to which the downscale is applied. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |

| Field | Details |
| --- | --- |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `MaxReduction` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The maximum reduction that can be applied to a bundle member. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the appointment bundle aggregation downscale policy. |
| `PercentageOfReduction` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The percentage of duration reduction. |
| `ToBundleMemberNumber` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of the last bundle member to which the downscale is applied. |

# ApptBundleAggrPolicy

Policy that defines how the property values of the bundle members are aggregated and assigned to the bundle. This object is available in API version 54.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

- Field Service must be enabled.
- Bundling must be enabled in the Field Service Settings.
- The Field Service Admin, Field Service Bundle for Dispatcher, and Field Service Integration permission sets must be enabled.

## Fields

| Field | Details |
|---|---|
| `AggregationAction` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The aggregation action to be performed.<br>Possible values are: All default and custom Service Appointment fields. |
| `AggregationFieldType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The target field type in the bundle to which the aggregation is directed.<br>Possible values are:<br>• `Boolean`<br>• `Date`<br>• `Numeric`<br>• `Picklist`<br>• `Picklist-Multi`<br>• `Skills`<br>• `String` |
| `AggregationOrder` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, idLookup, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The order the aggregation is triggered. |
| `BundleFieldName` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Name of the target field in the bundle where the value is taken from the bundle member.<br>Possible values are: All default and custom Service Appointment fields. |
| `BundleMemberAddiFieldName` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Name of an additional source field that is connected to the initial source field in the bundle member from which the value is taken.<br>Possible values are: All default and custom Service Appointment fields. |
| `BundleMemberFieldName` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Name of the source field in the bundle member from which the value is taken.<br>Possible values are: All default and custom Service Appointment fields. |
| `BundlePolicyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the parent bundle policy.<br>This is a relationship field.<br>**Relationship Name**<br>BundlePolicy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApptBundlePolicy |

| Field | Details |
| --- | --- |
| `ConstantValue` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The constant value that is used in the aggregation. |
| `DateValue` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Represents how the date value will be determined.<br>Possible values are:<br>• `End of Day`<br>• `Now`<br>• `Null`<br>• `Start of Day` |
| `DoesAllowDuplicateStrings` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if you want to allow the same string to appear more than once when using the 'Sum based on Bundle Members' action type. |
| `DownscaleSortDirection` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Applies only if the Set Downscaled Duration action is set. The downscaling sorting direction of the bundle member service appointments, according to their duration.<br>Possible values are:<br>• `Ascending`<br>• `Descending` |
| `FilterCriteriaId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The active recordset filter criteria used for aggregating the bundle members.<br>This is a relationship field.<br>**Relationship Name**<br>FilterCriteria<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>RecordsetFilterCriteria |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `MaxBundleDuration` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The maximum bundle duration that can be accumulated from the bundle members (after downscaling). |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of the appointment bundle aggregation policy. |
| `ShouldUpdateOnCreationOnly` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if you want to update the field in the bundle only when it is created. |

# ApptBundleConfig

Represents the general parameters that define the behavior of the bundle. This object is available in API version 54.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

- Field Service must be enabled.
- Bundling must be enabled in the Field Service Settings.
- The Field Service Admin, Field Service Bundle for Dispatcher, and Field Service Integration permission sets must be enabled.

## Fields

| Field | Details |
| --- | --- |
| `AddToBundleStatuses` | **Type**<br>multipicklist<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Update<br>**Description**<br>The statuses of service appointment that are allowed to be bundled.<br>Possible values are:<br>• `Accepted`<br>• `Canceled`<br>• `Cannot Complete`<br>• `Completed` |

| Field | Details |
| --- | --- |
| | • `Dispatched`<br>• `In Progress`<br>• `None`<br>• `Rejected`<br>• `Scheduled`<br>The default value is None. |
| `BundleStatusesToPropagate` | **Type**<br>multipicklist<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Update<br>**Description**<br>The bundle statuses that when updated are inherited by the bundle members.<br>Possible values are:<br>• `Accepted`<br>• `Canceled`<br>• `Cannot Complete`<br>• `Completed`<br>• `Dispatched`<br>• `In Progress`<br>• `None`<br>• `Rejected`<br>• `Scheduled`<br>The default value is None. |
| `CriteriaForAutoUnbundlingId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The criteria that causes a bundle service appointment to be unbundled.<br>This is a relationship field.<br>**Relationship Name**<br>CriteriaForAutoUnbundling<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>RecordsetFilterCriteria |

| Field | Details |
| --- | --- |
| `DoesAddTravelTime` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If the bundle members aren't in the same location, add travel time between them to the bundle's duration according to their sort order. The default value is false. |
| `DoesDeleteEmptyBundles` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If the bundle has no remaining bundle members, the bundle is deleted. |
| `EmptyBundleStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The status from the Canceled category that a bundle service appointment changes to if it has no remaining bundle members, but still appears in the appointment list.<br>Possible values are determined by the org's statuses.<br>The default value is None. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |

| Field | Details |
| --- | --- |
| MemberStatusesNotToPropagate | **Type**<br>multipicklist<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Update<br>**Description**<br>The bundle member statuses that aren't overridden when the bundle's status is updated.<br>Possible values are:<br>• Accepted<br>• Canceled<br>• Cannot Complete<br>• Completed<br>• Dispatched<br>• In Progress<br>• None<br>• Rejected<br>• Scheduled<br>The default value is None. |
| Name | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the Appointment Bundle Config. |
| OwnerId | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the owner of this object.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

| Field | Details |
| --- | --- |
| RemoveFromBundleStatuses | **Type**<br>multipicklist<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Update<br>**Description**<br>The statuses of service appointments that are allowed to be removed from a bundle.<br>Possible values are:<br>• Accepted<br>• Canceled<br>• Cannot Complete<br>• Completed<br>• Dispatched<br>• In Progress<br>• None<br>• Rejected<br>• Scheduled<br>The default value is None. |
| StatusOnRemovalFromBundle | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The status that a service appointment is given when it's removed from a bundle.<br>Possible values are:<br>• Accepted<br>• Canceled<br>• Cannot Complete<br>• Completed<br>• Dispatched<br>• In Progress<br>• None<br>• Rejected<br>• Scheduled<br>The default value is None. |
| StatusesNotToUpdateOnUnbundle | **Type**<br>multipicklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Nillable, Update<br>**Description**<br>The statuses that aren't updated when a bundle is unbundled.<br>Possible values are:<br>• `Accepted`<br>• `Canceled`<br>• `Cannot Complete`<br>• `Completed`<br>• `Dispatched`<br>• `In Progress`<br>• `None`<br>• `Rejected`<br>• `Scheduled`<br>The default value is None. |

# ApptBundlePolicy

Policy that defines how the bundling of service appointments should be handled. This object is available in API version 54.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

- Field Service must be enabled.
- Bundling must be enabled in the Field Service Settings.
- The Field Service Admin, Field Service Bundle for Dispatcher, and Field Service Integration permission sets must be enabled.

## Fields

| Field | Details |
| --- | --- |
| `BundleEndTimeFieldName` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>If IsTimeCalcByBundleDurationField is true, this field represents the name of the field used for entering the end time of the bundle. |
| `BundleStartTimeFieldName` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>If IsTimeCalcByBundleDurationField is true, this field represents the name of the field used for entering the start time of the bundle. |
| `CanAllowSchleDepndInBundle` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>This field is reserved for future use. |
| `ConstantTimeValue` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If IsTimeCalcByBundleDurationField is true, this field represents the total time of the bundle as a preset constant value. |
| `FilterCriteriaId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The active recordset filter criteria used for the bundle members. Only service appointments that meet the criteria can be bundled.<br>This is a relationship field.<br>**Relationship Name**<br>FilterCriteria<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>RecordsetFilterCriteria |

| Field | Details |
| --- | --- |
| IsAutomaticBundling | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if the policy is relevant for automatic bundling. |
| IsManualBundling | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if the policy is relevant for manual bundling.<br>The default value is 'false'. |
| IsTimeCalcByBundleDurationFld | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if the bundle's duration is validated. If true, the bundle's start time is subtracted from the bundle's end time. If the result is a negative value, it uses ConstantTimeValue as the bundle's duration.<br>The default value is 'false'. |
| LastReferencedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| LastViewedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |

| Field | Details |
| --- | --- |
| LimitAmountOfBundleMembers | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The maximum number of bundle members that can be included in a bundle. |
| LimitDurationOfBundle | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The maximum duration of a bundle. |
| Name | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the bundle policy. |
| OwnerId | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the owner of this object.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| Priority | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The priority level that this bundle policy should be given when the bundle policies are analyzed using the automatic mode. |

# ApptBundlePolicySvcTerr

Represents a link between the BundlePolicy and the ServiceTerritory. This object is available in API version 54.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

- Field Service must be enabled.
- Bundling must be enabled in the Field Service Settings.
- The Field Service Admin, Field Service Bundle for Dispatcher, and Field Service Integration permission sets must be enabled.

## Fields

| Field | Details |
| --- | --- |
| `BundlePolicyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the parent bundle policy.<br>This is a relationship field.<br>**Relationship Name**<br>BundlePolicy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApptBundlePolicy |
| `LastReferencedDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the appointment bundle service territory. |
| `ServiceTerritoryId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the service territory.<br>This is a relationship field.<br>**Relationship Name**<br>ServiceTerritory<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ServiceTerritory |

# ApptBundlePropagatePolicy

Policy that defines which property values are inherited from the bundle to the bundle members or are assigned as constant values in the bundle members. This object is available in API version 55.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

- Field Service must be enabled.
- Bundling must be enabled in the Field Service Settings.
- The Field Service Admin, Field Service Bundle for Dispatcher, and Field Service Integration permission sets must be enabled.

## Fields

| Field | Details |
|---|---|
| `AdditionalConstantValue` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The additional constant value that is connected to the initial constant value to be added to the bundle members. |
| `BundleFieldName` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Name of the source field in the bundle from which the value is taken.<br>Possible values are: All default and custom Service Appointment fields. |
| `BundleMemberFieldName` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Name of the target field in the bundle member where the value is inherited from the bundle.<br>Possible values are: All default and custom Service Appointment fields. |
| `BundlePolicyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the parent bundle policy.<br>This field is a relationship field.<br>**Relationship Name**<br>BundlePolicy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApptBundlePolicy |
| `ConstantValue` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The constant value to be added to the bundle members. |
| `DateValue` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Represents how the date value is determined.<br>Possible values are:<br>• `End of Day`<br>• `Now`<br>• `Null`<br>• `Start of Day` |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the appointment bundle propagation policy. |
| `ShouldAddConstantValue` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if you want to enable adding a constant value to the bundle members. |
| `ShouldUpdateOnAdd` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if you want to enable updating the fields of the bundle members when they are added to the bundle. |
| `ShouldUpdateOnRemove` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if you want to enable updating the fields of the bundle members when they are removed from the bundle. |
| `ShouldUpdateOnUnbundle` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if you want to enable updating the fields of the bundle members when performing the Unbundle action. |

# ApptBundleRestrictPolicy

Policy that defines the restrictions that are considered while forming a bundle. This object is available in API version 54.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

- Field Service must be enabled.
- Bundling must be enabled in the Field Service Settings.
- The Field Service Admin, Field Service Bundle for Dispatcher, and Field Service Integration permission sets must be enabled.

## Fields

| Field | Details |
|---|---|
| `BundlePolicyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the parent bundle policy.<br>This is a relationship field.<br>**Relationship Name**<br>BundlePolicy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApptBundlePolicy |
| `DoesAllowEmpty` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Allows a bundle member service appointment with an empty Restriction Field Name to be bundled. |
| `DoesRestrictAutomaticMode` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if you want to apply this restriction when using the automatic mode. |
| `DoesRestrictManualMode` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if you want to apply this restriction when using the manual mode. |
| `IsRestrictByDateOnly` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if you want the bundle to be restricted according to the calendar date only, ignoring the time of day. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of the appointment bundle restriction policy. |
| `RestrictionFieldName` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Name of the field in the service appointment used for applying the restriction.<br>Possible values are: All default and custom Service Appointment fields. |

# ApptBundleSortPolicy

Policy that defines the properties by which the bundle members are sorted within the bundle. Can also be used in the automatic mode for determining the order of the automatic selection of bundle members. This object is available in API version 54.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

- Field Service must be enabled.
- Bundling must be enabled in the Field Service Settings.
- The Field Service Admin, Field Service Bundle for Dispatcher, and Field Service Integration permission sets must be enabled.

## Fields

| Field | Details |
| --- | --- |
| `BundlePolicyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the parent bundle policy.<br>This is a relationship field.<br>**Relationship Name**<br>BundlePolicy |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>ApptBundlePolicy |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the appointment bundle sort policy. |
| `SortDirection` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The order of the appointments in a bundle<br>Possible values are:<br>• `Ascending`<br>• `Descending` |
| `SortFieldName` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Name of the field in the service appointment used for sorting the bundle members.<br>Possible values are: All default and custom Service Appointment fields. |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, idLookup, Nillable, Sort, Update<br>**Description**<br>The order of fields used for sorting the bundle members. |
| `SortType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The applied sort type for arranging the bundle. Sort for Automatic Bundling defines the order that automated bundling uses to examine the candidate service appointments to be bundled. Sort Within a Bundle defines the order of bundle members. It's also used when you unbundle to define the order that the service appointments are scheduled on the Gantt.<br>Possible values are:<br>• `SortForAutomaticBundling`—Sort For Automatic Bundling<br>• `SortWithinaBundle`—Sort Within a Bundle |

# AppUsageAssignment

Provides application context for a record. A record can have different allowed actions or different related objects when it's created for different applications. For example, a Revenue Lifecycle Management order has a related `RevenueLifecycleManagement` AppUsageAssignment, so Salesforce knows it can create assets for that order.  Available in API version 50.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `AppUsageType` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The application context for the record. Allowed values are determined by the available licenses. For example, the `RevenueLifecycleManagement` and `BuyNow` AppUsageTypes are available with the Subscription Management license. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Autogenerated name for the AppUsageAssignment. |
| `RecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The record that the AppUsageAssignment provides context for. For example, the order record.<br>This is a relationship field.<br>**Relationship Name**<br>Record<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>• Order in API version 58.0 and later<br>• Asset, Contract, Quote in API version 59.0 and later<br>• WebCart in API version 60.0 and later<br>• OrderSummary in API version 61.0 and later |

# ArchiveActivity

Represents metadata retrieved for a single Archive process initiated by an action. Retrieved metadata can include status tracking, start and end times, record counts, and monitoring and auditing outcomes. This object is available in API version 65.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

This object is Read-Only and can't be deleted. Storage consumed by this object doesn't count toward your org's data storage limits.

## Fields

| Field | Details |
| --- | --- |
| `ArchivePolicyId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the associated policy that triggered the process. Links each execution back to its configuration. |
| `AttemptedRootRecordsCount` | **Type**<br>int<br>**Properties**<br>Filter, Sort<br>**Description**<br>The number of root records that the action tried to process. Excludes records that were filtered out before processing began. |
| `EndTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort<br>**Description**<br>The date and time that the process executed successfully, or was terminated due to error. |
| `FailedCount` | **Type**<br>int<br>**Properties**<br>Filter, Sort<br>**Description**<br>The number of records that failed to process due to errors such as validation failures, missing references, or system exceptions. |

| Field | Details |
| --- | --- |
| `FailureReason` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Description of why process failed or only partially completed. Can include system error messages or policy-level failures. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The autogenerated name of the action instance. |
| `ProgressPercentage` | **Type**<br>double<br>**Properties**<br>Filter, Sort<br>**Description**<br>The percentage of records that were successfully processed. |
| `RecordsSizeInMb` | **Type**<br>double<br>**Properties**<br>Filter, Sort<br>**Description**<br>Estimated total size, in megabytes (MB), of the records processed during an action, including metadata and payload. |
| `SkippedRootRecordsCount` | **Type**<br>int<br>**Properties**<br>Filter, Sort<br>**Description**<br>The number of root records skipped due to validation errors, exclusion filters, or data protection thresholds. |
| `StartTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The date and time that the action started. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Status of the current activity.<br>Valid values are:<br>• `Aborted`—Policy manually aborted during policy run.<br>• `Aborting`—`Aborted` process has started.<br>• `Archive Timeout`—Process automatically stopped because it took too long to execute a specific task, or the entire run.<br>• `Completed`—Process completed successfully, and all records were processed.<br>• `Ended with Delete Failures`—Process finished its run, but failed to delete one or more designated items.<br>• `Ended With Errors`—Process finished successfully, but some records weren't processed. A CSV of the failed records can be downloaded from the Execution Details page.<br>• `Failed`—Process failed, and no records were archived. A CSV of the failed records is available on the Activities tab.<br>• `No Records`—Process ran successfully but found no records matching the policy criteria.<br>• `Pending`—Process is in a queue waiting to be executed.<br>• `Process Exceeds 23h`—Activity started and ran successfully until it reached a time limit. When a policy is set to run daily, this status indicates partial success before exceeding the time limit.<br>• `Process Exceeds 120h`—Activity started and ran successfully until it reached a time limit. When a policy is set to run one time in a five-day period, this status indicates partial success before exceeding the time limit.<br>• `Process Exceeds 168h`—Activity started and ran successfully until it reached a time limit. When a policy is set to run weekly, this status indicates partial success before exceeding the time limit.<br>• `Query Timeout`—Process stopped because database query took too long to execute.<br>• `Running`—Process is actively executing its tasks.<br>• `Started`—Process has been initiated and is currently in progress.<br>• `Too Many Failures`—Process was abandoned after too many records failed to read or delete. |
| `SucceededCount` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Sort<br>**Description**<br>The number of records processed successfully. |
| `TotalRecordCount` | **Type**<br>int<br>**Properties**<br>Filter, Sort<br>**Description**<br>The total number of records initially selected for processing, including successful, failed, and skipped records. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Specifies the type of archive process to be executed. This static enum categorizes the purpose or mode of the run.<br>Valid values are:<br>• `Analyzer`<br>• `Archive`<br>• `Archive-fail-to-delete`<br>• `Estimate`<br>• `Export`<br>• `Export-and-download`<br>• `Export-to-external-bucket`<br>• `Import-data-archive`<br>• `Import-data-load`<br>• `Index-request`<br>• `None`<br>• `Purge`<br>• `Purge-by-retention`<br>• `Purge-estimation`<br>• `RTBF-SDK`<br>• `Unarchive`<br>• `Unarchive-retry`<br>• `Unarchive-sdk` |

# ArchivePolicyDefinition

Represents a data lifecycle policy that, in each row, defines the scope, frequency, and rules for automated archiving or purging of records from a root entity, such as Contact or Lead. This object is available in API version 65.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Create, Update, and Delete operations are restricted to the Archive Admin profile. All other profiles have Read-Only access.

## Fields

| Field | Details |
|---|---|
| `DataProtectionThreshold` | **Type**<br>int<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Specifies a retention buffer, in days, during which recently updated or sensitive records must not be archived or deleted. Enforces data protection compliance. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Update<br>**Description**<br>The purpose or scope of the policy. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the policy is active and eligible for execution. Only active policies can be executed by scheduled or manual processes. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The unique name assigned to the policy. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Process type that the policy executes.<br>Valid values are:<br>• `Archive`<br>• `Import`<br>• `Purge` |
| `Query` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>A complete SOQL or custom query defining the set of records to archive or purge, based on policy rules. Determines which records are eligible for processing. |
| `QueryLimit` | **Type**<br>int<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The maximum number of root records this policy can process in a single run. Used to throttle execution for scalability and control. |
| `RootEntityName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The API name of the Salesforce object targeted by the policy. Determines which object's records are queried and processed. |
| `RunFrequency` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Specifies how often the policy is executed—manually or on a regular interval. Enables automation for recurring data lifecycle operations.<br>Valid values are:<br>• `None`<br>This option is specifically for manual policy runs.<br>• `Daily`<br>• `Weekly`<br>• `Monthly` |

# *Article Type*__DataCategorySelection

A data category selection represents a data category that classifies an article. This object is available in API version 19.0 and later.

This object can be used to associate an article with data categories from a data category group or to query the category selections for an article.

The object name is variable and has a syntax of *Article Type*__DataCategorySelection, where *Article Type* is the `Object Name` for the article type associated with the article. For example, `Offer__DataCategorySelection` represents the association between the `Offer` article type and its data categories. Every article is associated with an article type.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `getDeleted()`, `retrieve()`

## Special Access Rules

Knowledge must be enabled in your org. Not available in Lightning Knowledge. Users can only access, create or delete data category selection visible to their role, permission set, or profile. If a user has partial visibility on an article's categorization, only the visible categories are returned.

## Fields

| Field Name | Details |
| --- | --- |
| `DataCategoryGroupName` | **Type**<br>DataCategoryGroupReference<br>**Properties**<br>Create |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Unique name of the data category group which has categories associated with the article. |
| `DataCategoryName` | **Type**<br>DataCategoryGroupReference<br>**Properties**<br>Create<br>**Description**<br>Unique name of the data category associated with the article. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter<br>**Description**<br>ID of the article associated with the data category selection. |

## Usage

Every article in Salesforce Knowledge can be categorized. A data category selection represents a category that has been selected to classify an article. You can use the *`Article Type`*__DataCategorySelection object to query and manage article categorization in your org. Client applications can create a categorization for an article with a Draft status. They can also delete and query article categorizations.

Note: When using *`Article Type`*__DataCategorySelection to classify an article, you can't select both a category (for example USA) and one of its descendants (California) or ascendant categories (North America). In this case, only the first category is selected.

Answers zones use QuestionDataCategorySelection to classify questions.

## SOQL Sample

The following SOQL query returns the data category selections used to classify the article whose ID is `ka0D000000005ApIAI`.

```
SELECT Id,DataCategoryName, ParentId
        FROM Offer__DataCategorySelection WHERE ParentId='ka0D000000005ApIAI'
```

This clause only returns category unique names. To retrieve category labels use the following clause:

```
SELECT Id,toLabel(DataCategoryName), ParentId
        FROM Offer__DataCategorySelection WHERE ParentId='ka0D000000005ApIAI'
```

Tip: You can also use relationship queries to retrieve categorizations from an article type.

QuestionDataCategorySelection

# Asset

Represents an item of commercial value, such as a product sold by your company or a competitor, that a customer has purchased.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>(Required) ID of the Account associated with this asset. Must be a valid account ID. Required if `ContactId` isn't specified.<br>This field is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `Address` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>Represents the physical address or geolocation of the asset. |
| `AssetLevel` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The asset's position in an asset hierarchy. If the asset has no parent or child assets, its level is 1. Assets that belong to a hierarchy have a level of 1 for the root asset, 2 for the child assets of the root asset, 3 for their children, and so forth. On assets created before the introduction |

| Field | Details |
| --- | --- |
| | of this field, the asset level defaults to –1. After the asset record is updated, the asset level is calculated and automatically updated. |
| `AssetProvidedById` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The account that provided the asset, typically a manufacturer.<br>This field is a relationship field.<br>**Relationship Name**<br>AssetProvidedBy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `AssetServicedById` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The account in charge of servicing the asset.<br>This field is a relationship field.<br>**Relationship Name**<br>AssetServicedBy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `AssetTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The asset type associated with the asset.<br>This field is a relationship field.<br>This field is available in API version 62.0 and later for users with the Health Cloud Appointment Management permission set. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>AssetType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AssetType |
| `Availability` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of expected uptime where the asset was available for use. |
| `AveragetimetoRepair` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Represents the number of hours it typically takes to repair an asset after a failure. |
| `AveragetimeBetweenFailure` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Represents the number of hours that typically elapses before the asset is likely to fail again. |
| `AverageUptimePerDay` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The average number of hours per day the asset is expected to be available for use. |
| `City` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The city detail for the address. |

| Field | Details |
| --- | --- |
| `ConsequenceOfFailure` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The business impact associated with the asset's failure. Using this field, you can address the asset's health and take action using Flows. To enable this field, use Object Manager to update the field availability. Make sure that the field is visible for field-level security and for page layout. To learn more, see What Determines Field Access. The picklist values aren't predefined in orgs created before Winter '22 that aren't Field Service enabled. This field is available in API version 53.0 and later.<br>Possible values are:<br>• `Insignificant`<br>• `Minor`<br>• `Moderate`<br>• `Major`<br>• `Critical` |
| `ContactId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required if `AccountId` isn't specified. ID of the Contact associated with this asset. Must be a valid contact ID that has an account parent (but doesn't need to match the asset's `AccountId`).<br>This field is a relationship field.<br>**Relationship Name**<br>Contact<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `Country` | **Type**<br>String<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The country detail for the address. |

| Field | Details |
| --- | --- |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Three-letter ISO 4217 currency code associated with the invoice. The default value is USD.<br>This field is available in API version 55.0 and later. This field is available when CPQ Plus, Salesforce Billing, or Subscription Management is enabled. |
| `CurrentAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Reserved for future use.<br>This field is available in API version 50.0 and later. This field is available when CPQ Plus, Salesforce Billing, or Subscription Management is enabled. |
| `CurrentLifecycleEndDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Represents the end of the period shown as current. System-populated field inherited from the end date of the current asset state period. If that field is empty, as with an evergreen subscription, the Current Lifecycle End Date field is also empty.<br>This field is available in API version 50.0 and later. This field is available when CPQ Plus, Salesforce Billing, or Subscription Management is enabled. |
| `CurrentMrr` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The asset's monthly recurring revenue during the current asset state period. System-populated field inherited from the monthly recurring revenue on the current asset state period. If no asset state period is current, the value is `0`. Label is Current Monthly Recurring Revenue.<br>This field is available in API version 50.0 and later. This field is available when CPQ Plus, Salesforce Billing, or Subscription Management is enabled. |
| `CurrentQuantity` | **Type**<br>double |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The asset's quantity during the current asset state period. System-populated field inherited from the quantity on the current asset state period. If no asset state period is current, the value is 0.<br>This field is available in API version 50.0 and later. This field is available when CPQ Plus, Salesforce Billing, or Subscription Management is enabled. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Description of the asset. |
| `DigitalAssetStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Status of digital tracking of the asset. The default picklist includes the following values:<br>• `On`<br>• `Off`<br>• `Warning`<br>• `Error` |
| `ExternalIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the matching record in an external system. This field is available in API version 49.0 and later. |
| `GeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Accuracy level of the geocode for the address. |

| Field | Details |
| --- | --- |
| `HasLifecycleManagement` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>True if this asset is a lifecycle-managed asset, otherwise false. You can't switch an asset to a lifecycle-managed asset or the reverse. This field is system populated.<br>The default value is *`false`*.<br>This field is available in API version 50.0 and later. This field is available when CPQ Plus, Salesforce Billing, or Subscription Management is enabled. |
| `InstallDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Date when the asset was installed. |
| `IsCompetitorProduct` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this Asset represents a product sold by a competitor (`true`) or not (`false`). The default value is `false`. Its UI label is Competitor Asset. |
| `IsInternal` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates that the asset is produced or used internally (`true`) or not (`false`). The default value is `false`. Its UI label is Internal Asset. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time that the asset was last modified. Its UI label is Last Modified Date. |

| Field | Details |
| --- | --- |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time that the asset was last viewed. |
| `Latitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Used with Longitude to specify the precise geolocation of the address. |
| `LifecycleEndDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Represents the end of the asset's lifecycle. System-populated field inherited from the end date of the final asset state period. If that field is empty, as with an evergreen subscription, the lifecycle has no end date. This field is available in API version 50.0 and later. This field is available when CPQ Plus, Salesforce Billing, or Subscription Management is enabled. |
| `LifecycleStartDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Represents the beginning of the asset's lifecycle. System-populated field inherited from the start date of the earliest asset state period. This field can't be edited. When a new asset action affects the start date of an asset state period, the period is deleted and a new one is generated. This field is available in API version 50.0 and later. This field is available when CPQ Plus, Salesforce Billing, or Subscription Management is enabled. |
| `LocationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The asset's location. Typically, this location is the place where the asset is stored, such as a warehouse or van. |

| Field | Details |
| --- | --- |
| | If you have access to the location entity, it doesn't necessarily mean you can access the location id field. To access the location, you must have `userHasLocation` user access. |
| `Longitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Used with Latitude to specify the precise geolocation of the address. |
| `ManufactureDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date when the asset was manufactured. This field is available from API version 49.0 and later. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>(Required) Name of the asset. Label is Asset Name. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The asset's owner. By default, the asset owner is the user who created the asset record. Its UI label is Asset Owner.<br>This field is a relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `ParentId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The asset's parent asset. Its UI label is Parent Asset.<br>This field is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Asset |
| `PostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The postal code for the address. |
| `Price` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Price paid for this asset. |
| `PricingSource` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Pricing source to use when amending or renewing an asset.<br>Valid values are:<br>• `LastTransaction`—Last Transaction<br>• `PriceBookListPrice`—Price Book or List Price<br>Available in API version 60.0 and later. |
| `Product2Id` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>(Optional) ID of the Product2 associated with this asset. Must be a valid Product2 ID. Its UI label is Product.<br>This field is a relationship field.<br>**Relationship Name**<br>Product2<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Product2 |
| `ProductCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The product code of the related product. |
| `ProductDescription` | **Type**<br>string<br>**Properties**<br>Filter, Sort, Nillable<br>**Description**<br>The product description of the related product. |
| `ProductFamily` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Sort, Nillable<br>**Description**<br>The product family of the related product. |
| `PurchaseDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Date on which this asset was purchased. |

| Field | Details |
| --- | --- |
| `Quantity` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Quantity purchased or installed. The Quantity field value isn't set by Customer Asset Lifecycle Management. Instead, you can populate the field as you need. |
| `QuantityIncreasePricingType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specify which pricing type to use when the quantity of this asset is increased. Its UI label is Pricing Type for Quantity Increase. This field is available in API version 56.0 and later. This field is available when Subscription Management is enabled.<br>Possible values are:<br>• `LastNegotiatedPrice`—Available in API version 58.0 and later.<br>• `ListPrice` |
| `RecordTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique identifier for the asset.<br>This field is a relationship field.<br>**Relationship Name**<br>RecordType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>RecordType |
| `Reliability` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The percentage of expected uptime where the asset wasn't subject to unplanned downtime. |

| Field | Details |
| --- | --- |
| `RenewalPricingType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The price used when renewing a subscription. Its UI label is Pricing Type for Renewal. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled.<br>Possible values are:<br>• `LastNegotiatedPrice`<br>• `ListPrice` |
| `RenewalTerm` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>With Renewal Term Unit, defines the default subscription term for renewal quotes. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled. |
| `RenewalTermUnit` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The unit of time for a subscription term. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled.<br>Possible values are:<br>• `Annual`—Available in API version 58.0 and later. —UI label is `Years`.<br>• `Months` |
| `RootAssetId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>(Read only) The top-level asset in an asset hierarchy. Depending on where an asset lies in the hierarchy, its root could be the same as its parent. Its UI label is Root Asset.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>RootAsset<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Asset |
| SalesStoreId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the RetailStore or WebStore associated with this Asset.<br>This field is a polymorphic relationship field.<br>To access this field, your org must have a Salesforce Order Management license or a B2B Commerce License.<br>This field is available in API v60.0 and later.<br>**Relationship Name**<br>SalesStore<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>RetailStore, WebStore |
| SerialNumber | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Serial number for this asset. |
| State | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The state detail for the address. |
| Status | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Customizable picklist of values. The default picklist includes the following values:<br>• `Purchased`<br>• `Shipped`<br>• `Installed`<br>• `Registered`<br>• `Obsolete` |
| `StatusReason` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The explanation of the device status. This field is available from API version 49.0 and later.<br>Possible values are:<br>• `Not Ready`<br>• `Off`<br>• `Offline`<br>• `Online`<br>• `Paused`<br>• `Standby` |
| `StockKeepingUnit` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The SKU assigned to the related product. |
| `Street` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The street detail for the address. |
| `SumDowntime` | **Type**<br>double |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Accumulated downtime (planned and unplanned), determined as follows:<br>• When only `UptimeRecordStart` is set, the sum of all downtime from `UptimeRecordStart`<br>• When `UptimeRecordStart` and `UptimeRecordEnd` are set, the sum of all downtime from `UptimeRecordStart` to `UptimeRecordEnd`<br>Otherwise, downtime isn't accumulated. |
| `SumUnplannedDowntime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Accumulated unplanned downtime, determined as follows:<br>• When only `UptimeRecordStart` is set, the sum of all unplanned downtime from `UptimeRecordStart`<br>• When `UptimeRecordStart` and `UptimeRecordEnd` are set, the sum of all unplanned downtime from `UptimeRecordStart` to `UptimeRecordEnd`<br>Otherwise, unplanned downtime isn't accumulated. |
| `TotalLifecycleAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total amount of revenue for the asset, including revenue from each stage in the asset lifecycle. This field is available when CPQ Plus, Salesforce Billing, or Subscription Management is enabled. |
| `UptimeRecordEnd` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date until which `SumDowntime` and `SumUnplannedDowntime` are accumulated. |
| `UptimeRecordStart` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date from which `SumDowntime` and `SumUnplannedDowntime` are accumulated. |
| `UsageEndDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Date when usage for this asset ends or expires. |
| `Uuid` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The unique ID for the asset. This field is available in API version 49.0 and later. |

## Usage

Use this object to track products sold to customers. With asset tracking, a client application can quickly determine which products were previously sold or are currently installed at a specific account. You can also create hierarchies of up to 10,000 assets.

For example, suppose that your company wants to renew and upsell opportunities on products sold in the past. Similarly, your company can track competitive products in a customer environment where products can be replaced or swapped out.

Asset tracking is also useful for product support, providing detailed information to assist with product-specific support issues. For example, the `PurchaseDate` or `SerialNumber` can indicate whether a given product has certain maintenance requirements, including product recalls. Similarly, the `UsageEndDate` can indicate when the asset was removed from service or when a license or warranty expires.

If an application creates an Asset record, it must specify a `Name` and either an `AccountId`, `ContactId`, or both.

With REST API, use the `getRelatedListInfo` function to get information about related lists on the asset. Note that when requesting information about *`PrimaryAssets`*, the response is labeled `Related Assets`, and the response for *`RelatedAssets`* is labeled `Primary Assets`.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, those objects are available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AssetChangeEvent (API version 44.0)**
Change events are available for the object.

**AssetFeed**
Feed tracking is available for the object.

**AssetHistory**
History is available for tracked fields of the object.

**AssetOwnerSharingRule**
Sharing rules are available for the object.

**AssetShare**
Sharing is available for the object.

Overview of Salesforce Objects and Fields

# AssetAction

Represents a change made to a lifecycle-managed asset. The fields can't be edited. This object is available in API version 50.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

## Special Access Rules

To use Customer Asset Lifecycle Management APIs, you must have the Access Customer Asset Lifecycle Management APIs permission and Read access to the Asset, Asset Action, Asset Action Source, and Asset State Period objects.

## Fields

| Field | Details |
|---|---|
| `ActionDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort<br>**Description**<br>The date when an asset action change is recorded. This date can differ from the start date of the related asset state period. For example, suppose that a customer cancels a subscription in June, and the subscription expires in October. The date the customer cancels the subscription (June) is the action date of the asset action. The cancellation's effective date (October) is the start date of the asset state period. |
| `ActualTaxChange` | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The rollup of actual tax from all asset action sources. This field is populated by the system. Label is **Change in Actual Tax**.<br>This field is a calculated field. |
| `AdjustmentAmountChange` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The rollup of adjustment amount from all asset action sources. This field is populated by the system. Label is **Change in Adjustment Amount**.<br>This field is a calculated field. |
| `Amount` | **Type**<br>currency<br>**Properties**<br>Filter, Sort<br>**Description**<br>The delta in the total asset amount resulting from an asset action. |
| `AssetActionNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The ID of the asset action. Label is **Name**. |
| `AssetId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the related lifecycle-managed asset. Label is **Asset**.<br>This field is a relationship field.<br>**Relationship Name**<br>Asset<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Asset |
| `CanRollBack` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the last asset action can be rolled back (`true`). If this property is set to `false`, the asset and the last asset action can't be rolled back.<br>The default value is `false`. This field is available in API version 65.0 and later. |
| `CategoryEnum` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The business category of the asset action, for use in reporting. Asset action totals are broken out by the picklist values on this required field, and those totals are in turn reflected on assets. The following categories are available. They aren't customizable. Label is **Business Category**.<br>Possible values are:<br>• `Cancellations`<br>• `Cross-Sells`<br>• `Downsells`<br>• `Initial Sale`<br>• `Other`<br>• `Renewals`<br>• `Terms And Conditions Changes`<br>• `Transfers`<br>• `Upsells` |
| `EstimatedTaxChange` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The rollup of estimated tax from all asset action sources. This field is populated by the system. Label is **Change in Estimated Tax**.<br>This field is a calculated field. |

| Field | Details |
| --- | --- |
| MrrChange | **Type**<br>currency<br>**Properties**<br>Filter, Sort<br>**Description**<br>The delta in the asset's monthly recurring revenue resulting from an asset action. For example, suppose that the MRR during an asset state period is $200 and the next asset action adds $100. Then this field's value is $100. Label is **Change in Monthly Recurring Revenue**. |
| ProductAmountChange | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The rollup of product amount from all asset action sources. This field is populated by the system. Label is **Change in Product Amount**.<br>This field is a calculated field. |
| QuantityChange | **Type**<br>double<br>**Properties**<br>Filter, Sort<br>**Description**<br>The delta in the asset quantity resulting from an asset action. For example, suppose that the asset quantity during an asset state period is 20 and the next asset action adds 10. Then this field's value is 10. Label is **Change in Quantity**. |
| RolledbackAssetAction | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The last asset action that was rolled back in the current rollback transaction. This field is available in API version 65.0 and later. |
| SubtotalChange | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The rollup of subtotal from all asset action sources. This field is populated by the system. Label is **Change in Subtotal**. |

| Field | Details |
| --- | --- |
| | This field is a calculated field. |
| `Subtype` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The subtype of the action on the asset.<br>Valid values are:<br>• `FieldAmendment`<br>• `Rollback`<br>• `StartDateAdjustment`<br>• `TransferFrom`<br>• `TransferTo`<br>This field is available in API version 65.0 and later. |
| `TotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of the current and previous asset action amount. This field is populated by the system.<br>This field is a calculated field. |
| `TotalCancellationsAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of current and previous asset action amounts categorized as `Cancellations`. This field is populated by the system. |
| `TotalCrossSellsAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of current and previous asset action amounts categorized as `Cross-Sells`. This field is populated by the system. |

| Field | Details |
| --- | --- |
| `TotalDownsellsAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of current and previous asset action amounts categorized as `Downsells`. This field is populated by the system. |
| `TotalInitialSaleAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of current and previous asset action amounts categorized as `Initial Sale`. This field is populated by the system. |
| `TotalMrr` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of the monthly recurring revenue for the current and previous asset action. This field is populated by the system. Label is **Total Monthly Recurring Revenue**. |
| `TotalOtherAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of current and previous asset action amounts categorized as `Other`. This field is populated by the system. |
| `TotalQuantity` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of the changes in quantity for the current and previous asset action. This field is populated by the system. |
| `TotalRenewalsAmount` | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of current and previous asset action amounts categorized as `Renewals`. This field is populated by the system. |
| `TotalTermsAndConditionsAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of current and previous asset action amounts categorized as `Terms and Conditions Changes`. This field is populated by the system. Label is **Total Terms and Conditions Changes Amount**. |
| `TotalTransfersAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of current and previous asset action amounts categorized as `Transfers`. This field is populated by the system. |
| `TotalUpsellsAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of current and previous asset action amounts categorized as `Upsells`. This field is populated by the system. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The REST API used to generate the asset action. This field is populated by the system.<br>Valid values are:<br>• `Cancel`<br>• `Change`<br>• `Convert` |

| Field | Details |
| --- | --- |
| | • `Generate` |

# AssetActionSource

Represents an optional way to record what transactions caused changes to lifecycle-managed assets. Use it to trace financial and other information about asset actions. This object supports Salesforce order products and work order line items, and transaction IDs from other systems. The fields can't be edited. This object is available in API version 50.0 and later.

## Supported Calls

`createable()`, `deletable()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undeletable()`, `updateable()`.

## Special Access Rules

To use Customer Asset Lifecycle Management APIs, you must have the Access Customer Asset Lifecycle Management APIs permission and Read access to the Asset, Asset Action, Asset Action Source, and Asset State Period objects.

## Fields

| Field | Details |
| --- | --- |
| `ActualTax` | **Type**<br>currency<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>The region-specific tax amount determined at time of the order.<br>This field is not used for price and tax calculations. |
| `AdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>An adjustment to the product amount, such as a discount. |
| `AssetActionId` | **Type**<br>reference<br>**Properties**<br>Createable, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The related asset action, that is, the change caused by an asset action source transaction.<br>This field is a relationship field.<br>**Relationship Name**<br>AssetAction<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AssetAction |
| `AssetActionSourceNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The ID of the asset action source. Label is **Name**. |
| `BillingReference` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the OrderItem or OrderItemDetail record that this AssetActionSource record is created for. |
| `Discount` | **Type**<br>percent<br>**Properties**<br>Createable, Filter, Group, Nillable, Sort, Updateable<br>**Description**<br>The discount, expressed as a percentage, that's applied to the asset.<br>This field is available in API version 62.0 and later. |
| `DiscountAmount` | **Type**<br>currency<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>The discount, expressed as currency, that's applied to the asset.<br>This field is available in API version 62.0 and later. |

| Field | Details |
| --- | --- |
| EffectiveGrantDate | **Type**<br>dateTime<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>The date when the resources associated with the asset were granted.<br>This field is available in orgs that have Revenue Cloud when Rate Management is enabled.<br>This field is available in API version 62.0 and later. |
| EndDate | **Type**<br>dateTime<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>The end date of the service or change. |
| EstimatedTax | **Type**<br>currency<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>The estimate of the region-specific tax amount made at time of the transaction. |
| ExternalReference | **Type**<br>string<br>**Properties**<br>Createable, Filter, Group, Nillable, Sort, Updateable<br>**Description**<br>The ID of an asset action source transaction originating in a system outside of Salesforce. |
| ExternalReferenceDataSource | **Type**<br>string<br>**Properties**<br>Createable, Filter, Group, Nillable, Sort, Updateable<br>**Description**<br>A system outside of Salesforce that contains asset action source transactions. |
| LegalEntityId | **Type**<br>reference<br>**Properties**<br>Createable, Filter, Group, Nillable, Sort, Updateable |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the legal entity record associated with the asset action source transaction.<br>This field is a relationship field.<br>This field is available in API version 62.0 and later.<br>**Relationship Name**<br>LegalEntity<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>LegalEntity |
| `ListPrice` | **Type**<br>currency<br>**Properties**<br>Creatable, Filter, Nillable, Sort, Updateable<br>**Description**<br>List price for the order product. Value is inherited from the associated PriceBookEntry upon order product creation. |
| `NetUnitPrice` | **Type**<br>currency<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>The final adjusted unit price, inclusive of all adjustments, but exclusive of tax. The unit price after all price adjustments are applied. |
| `ObligatedAmount` | **Type**<br>currency<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>When a line amount is prorated, this amount shows the service amount that's been consumed. |
| `OriginalLineNumber` | **Type**<br>int<br>**Properties**<br>Createable, Filter, Group, Nillable, Sort, Updateable |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of the original order item detail line. Salesforce uses this information to create a record to amend, renew, or cancel an order. This field is available in API version 64.0 and later.<br>**Relationship Name**<br>OrderItemDetail<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>LineNumber |
| `PeriodBoundary` | **Type**<br>picklist<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>Boundary delimiters for periods. It determines when a period starts and/or ends.<br>Valid values are:<br>• `AlignToCalendar`<br>• `Anniversary`<br>• `DayOfPeriod`<br>• `LastDayOfPeriod` |
| `PeriodBoundaryDay` | **Type**<br>int<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>The number specifying the day number when Period Boundary is a specific day in a week/month/year. It only applies when PeriodBoundary is set to "day of period." |
| `PeriodBoundaryStartMonth` | **Type**<br>picklist<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>Field is populated based on input in the StartDate, PeriodBoundary, and PeriodBoundaryDay when BillingFrequency2 is Annual or by manual user entry. Possible values are:<br>1-January<br>2-February<br>3-March |

| Field | Details |
| --- | --- |
| | 4-April<br>5-May<br>6-June<br>7-July<br>8-August<br>9-September<br>10-October<br>11-November<br>12-December |
| `PricebookEntryId` | **Type**<br>reference<br>**Properties**<br>Createable, Filter, Group, Nillable, Sort, Updateable<br>**Description**<br>PricebookEntry is used as a lookup for price information in order to pre-populate OrderItem's ListPrice and UnitPrice. |
| `PricingTermCount` | **Type**<br>double<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>Number of pricing terms is this subscription product. |
| `ProductAmount` | **Type**<br>currency<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>The product amount after the asset action source transaction. |
| `ProductSellingModelId` | **Type**<br>reference<br>**Properties**<br>Creatable, Filter, Group, Nillable, Sort, Updateable<br>**Description**<br>Specifies the product selling model type. Foreignkey to ProductSellingModel entity. |

| Field | Details |
| --- | --- |
| ProrationPolicyId | **Type**<br>reference<br>**Properties**<br>Creatable, Filter, Group, Nillable, Sort, Updateable<br>**Description**<br>The ID of the ProrationPolicy used for pricing. |
| Quantity | **Type**<br>double<br>**Properties**<br>Creatable, Filter, Nillable, Sort, Updateable<br>**Description**<br>The product quantity or the change in product quantity after the asset action source transaction. |
| ReferenceEntityItemId | **Type**<br>reference<br>**Properties**<br>Createable, Filter, Group, Nillable, Sort, Updateable<br>**Description**<br>The ID of an asset action source transaction originating in Salesforce. The transaction can be an order product or a work order line item.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ReferenceEntityItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderItem, WorkOrderLineItem |
| SegmentIdentifier | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the ramp segment associated with the asset action source transaction.<br>This field is available in API version 62.0 and later. |
| StartDate | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>The start date of the service or change. |
| `Subtotal` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of the product amount and the adjustment amount.<br>This field is a calculated field. |
| `TaxTreatmentId` | **Type**<br>reference<br>**Properties**<br>Createable, Filter, Group, Nillable, Sort, Updateable<br>**Description**<br>Lookup to Tax Treatment entity. It's used to calculate tax. |
| `TotalLineAmount` | **Type**<br>currency<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>The price of the line before any price adjustments were applied. SalesTransactionItem: ProratedStartingTotal / StartingPriceTotal. Note: TotalPrice is computed using the UnitPrice, which includes discounts (price adjustments), while TotalLineAmount doesn't include price adjustments. |
| `TotalPrice` | **Type**<br>currency<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>Calculated by the pricing engine for ARC. Summation of TotalAdjustmentAmount plus TotalLineAmount for this item. |
| `TransactionDate` | **Type**<br>dateTime<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable |

| Field | Details |
| --- | --- |
| | **Description**<br>The date of a source transaction, such as an order date. |
| `UnitPrice` | **Type**<br>currency<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>The unit price of the item before any discounts or tax calculation. |

# AssetAttribute

Stores asset attributes to track and analyze asset conditions to improve their uptime. This object is available in API version 57.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `update()`

## Special Access Rules

Field Service must be enabled.

## Fields

| Field | Details |
| --- | --- |
| `AssetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the asset.<br>This field is a relationship field.<br>**Relationship Name**<br>Asset<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Asset |

| Field | Details |
| --- | --- |
| `AttributeDefinitionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the attribute definition for this asset attribute.<br>This field is a relationship field.<br>**Relationship Name**<br>AttributeDefinition<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AttributeDefinition |
| `AttributeName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The name given to the asset attribute in the UI by the user. |
| `AttributePicklistValueId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the attribute picklist value if the attribute is a picklist type.<br>This field is a relationship field.<br>**Relationship Name**<br>AttributePicklistValue<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AttributePicklistValue |
| `AttributeValue` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Stores the value of an asset attribute, for example 5-TB storage . |

| Field | Details |
| --- | --- |
| `ExternalId` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An auto-generated ID of the attribute record saved in an external system (for example an HBase database). This field is reserved and used for internal purpose. |

## Usage

Add asset descriptors to the AssetAttribute object instead of creating multiple custom attributes on an asset. This helps scale to a high asset volume in the system.

# AssetContractRelationship

Represents a relationship between an asset and a contract. This object is available in API version 60.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

This object is available in Enterprise, Unlimited, and Developer Editions of Revenue Cloud.

## Fields

| Field | Details |
| --- | --- |
| `AssetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the asset related to the contract.<br>This field is a relationship field.<br>**Relationship Name**<br>Asset<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Asset |
| `ContractId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the contract related to the asset.<br>This field is a relationship field.<br>**Relationship Name**<br>Contract<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contract |
| `EndDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The end date and time of the relationship between contract and asset. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. The associated UI label is **Last Modified Date**. |
| `LastViewedDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user accessed this record or list view (`LastReferencedDate`) but didn't view it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The auto-generated number assigned to AssetContractRelationship. (Read Only) |
| `StartDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The start date and time of the relationship between contract and asset. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AssetContractRelationshipFeed**
Feed tracking is available for the object.

**AssetContractRelationshipHistory**
History is available for tracked fields of the object.

# AssetDowntimePeriod

Represents a period during which an asset is not able to perform as expected. Downtime periods include planned activities, such as maintenance, and unplanned events, such as mechanical breakdown. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

# Fields

| Field | Details |
|---|---|
| `AssetDowntimePeriodNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The unique number of this asset downtime period record. |
| `AssetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the asset this asset downtime period record is for. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The description of this asset downtime period. |
| `DowntimeType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of this asset downtime period. Possible values are:<br>• `Planned`<br>• `Unplanned` |
| `EndTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The time this asset downtime period ended. |
| `IsExcluded` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Whether this asset downtime period is excluded from the calculation of accumulated downtime and accumulated unplanned downtime, and therefore not included in availability and reliability calculations. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed. |
| `StartTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The time this asset downtime period started. |

# AssetOwnerSharingRule

Represents the rules for sharing an Asset with users other than the owner. This object is available in API version 33.0 and later.

Note: To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The SharingRules Metadata API type is enabled for all orgs.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

| Field | Details |
|---|---|
| `AssetAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A value that represents the type of sharing being allowed. The possible values are:<br>• `Read`<br>• `Edit` |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A description of the sharing rule. Maximum size is 1000 characters. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Rule Name** in the user interface.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. |
| `GroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID representing the source group. Cases owned by users in the source group trigger the rule to give access. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to **Label** on the user interface. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID representing the target user or group. Target users or groups are given access. |

## Usage

Use this object to manage the sharing rules for assets. General sharing uses this object.

SEE ALSO:

*Metadata API Developer Guide*: SharingRules

# AssetRateAdjustment

Stores the tier rate adjustments for the asset rate card entries. This object is available in API version 62.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

This object is available in orgs where Revenue Cloud is enabled.

# Fields

| Field | Details |
| --- | --- |
| `AdjustmentType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of rate adjustment.<br>Valid values are:<br>• `Amount`—Adjusts rate by using a specific amount.<br>• `Override`—Adjusts rate by using the override rate.<br>• `Percentage`—Adjusts rate by using a percentage. |
| `AdjustmentValue` | **Type**<br>double<br>**Properties**<br>Filter, Sort<br>**Description**<br>The value of the adjustment. |
| `AssetRateCardEntryId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the parent asset rate card entry record associated with the asset rate adjustment.<br>This field is a relationship field.<br>**Relationship Name**<br>AssetRateCardEntry<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>AssetRateCardEntry (the master object) |
| `LowerBound` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The minimum quantity for the adjustment to be applicable. |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The name of the asset rate adjustment. |
| `UpperBound` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The maximum quantity for the adjustment to be applicable. |

# AssetRateCardEntry

Stores the negotiated rate card entries that are associated with an asset in Revenue Cloud. This object is available in API version 62.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

This object is available in orgs where Revenue Cloud is enabled.

## Fields

| Field | Details |
| --- | --- |
| `AssetId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the asset rate card entry record.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Asset<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>Asset (the master object) |
| `BindingObjectFormula` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The formula that returns the ID of the associated binding object, if specified. If binding object isn't added, the formula returns the asset ID of the asset related to this asset rate card entry. This field is read-only. Available in API version 65.0 and later. |
| `BindingObjectId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the binding object associated with the asset rate card entry. Available in API version 65.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>BindingObject<br>**Refers To**<br>Asset |
| `BindingObjectRateOrder` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The order that determines the applicable binding object rate when multiple rates are defined for an Anchor binding object within a effective period. Available in API version 65.0 and later. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the binding object associated with the asset rate card entry.<br>Possible values are:<br>• AED - UAE Dirham<br>• AUD - Australian Dollar<br>• BRL - Brazilian Real<br>• CAD - Canadian Dollar<br>• EUR - Euro<br>• GBP - British Pound<br>• INR - Indian Rupee<br>• JPY - Japanese Yen<br>• SEK - Swedish Krona<br>• USD - U.S. Dollar<br>The default value is USD. Available in API version 65.0 and later. |
| `EndDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the rate card's time period becomes inactive. The rate card becomes inactive at 11:59:00 PM on the end date. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>An auto-generated number assigned to the asset rate card entry. Read-only. |
| `NegotiatedRate` | **Type**<br>double<br>**Properties**<br>Filter, Sort<br>**Description**<br>The base negotiated rate used to charge overage consumption. |
| `RateCardEntryId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the rate card entry record containing the catalog rates that's associated with the asset rate card entry.<br>This field is a relationship field.<br>**Relationship Name**<br>RateCardEntry<br>**Refers To**<br>RateCardEntry |
| `RateCardId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the rate card record that's associated with the asset rate card entry.<br>This field is a relationship field.<br>**Relationship Name**<br>RateCard<br>**Refers To**<br>RateCard |
| `RateUnitOfMeasureId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the unit of measure record that's associated with the asset rate card entry.<br>This field is a relationship field.<br>**Relationship Name**<br>RateUnitOfMeasure<br>**Refers To**<br>UnitOfMeasure |
| `StartDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The date when the rate card's time period becomes active. The rate card becomes active at 12:00:00 AM on the start date. |
| `UsageResourceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the usage resource record that's associated with the asset rate card entry.<br>This field is a relationship field.<br>**Relationship Name**<br>UsageResource<br>**Refers To**<br>UsageResource |

# AssetRelationship

Represents a non-hierarchical relationship between assets due to an asset modification; for example, a replacement, upgrade, or other circumstance. In Subscription Management and Revenue Lifecycle Management, this object represents an asset or assets grouped in a bundle or set. This object is available in API version 41.0 and later.

Asset relationships appear in the Primary Assets and Related Assets related lists on asset records in the UI.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Some fields are available only in Subscription Management and Revenue Cloud. Field availability is noted in the field detail column.

## Fields

| Field Name | Details |
| --- | --- |
| `AssetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The unique identifier of the new asset, which is the asset that is taking the place of the existing asset.<br>This field is a relationship field.<br>**Relationship Name**<br>Asset<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Asset |
| `AssetRelationshipNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>An auto-generated number identifying the asset relationship. |
| `AssetRole` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Describes the position of the main asset relative to the other assets in the relationship.<br>This field is available in API version 58.0 and later. This field is available in orgs with Subscription Management or Revenue Cloud.<br>Possible values are:<br>• `Add-on`—The main asset is an add-on.<br>• `Bundle`—The main asset is the bundle parent.<br>• `Set`—The asset is the main asset in the set. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Three-letter ISO 4217 currency code associated with the asset. The default value is USD. |

| Field Name | Details |
| --- | --- |
| FromDate | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date when the new asset was installed. |
| GroupingKey | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>Read-only field used to indicate the bundle that an asset belongs to. For example, if two assets have the same GroupingKey value, then it means that the assets are bundled together.<br>This field is available in API v.60.0 and later. This field is available in orgs with Subscription Management or Revenue Cloud. |
| ProductRelationshipTypeId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique identifier of the record that describes the relationship between the main and associated assets.<br>This field is available in API version 58.0 and later. This field is available in orgs with Subscription Management.<br>This field is a relationship field.<br>**Relationship Name**<br>ProductRelationshipType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ProductRelationshipType |
| ProductRelatedComponent | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The product related component that's associated with the asset relationship. |

| Field Name | Details |
| --- | --- |
| | This field is a relationship field.<br>This field is available in API 60.0 and later in Revenue Cloud.<br>**Relationship Name**<br>ProductRelatedComponent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ProductRelatedComponent |
| `RelatedAssetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The existing asset that is being modified.<br>This field is a relationship field.<br>**Relationship Name**<br>RelatedAsset<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Asset |
| `RelatedAssetPricing` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Specifies whether the price of the related asset is included in the bundle price. Valid values are:<br>• `IncludedInBundlePrice`<br>• `NotIncludedInBundlePrice`<br>This field is available in API version 59.0 and later in Revenue Cloud. |
| `RelatedAssetQtyScaleMethod` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Specifies how the quantity of the related asset changes relative to the quantity of the parent asset. Valid values are: |

| Field Name | Details |
| --- | --- |
| | • `Constant`<br>• `Proportional`<br>This field is available in API version 59.0 and later in Revenue Cloud. |
| `RelatedAssetRole` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Describes the position of the associated asset relative to other assets in the relationship.<br>This field is available in API version 58.0 and later. This field is available in orgs with Subscription Management or Revenue Cloud.<br>Valid values are:<br>• `Add-on`—The main asset is an add-on.<br>• `Bundle`—The main asset is the bundle parent.<br>• `Set`—The asset is the main asset in the set.<br>• `Simple`—The asset is purchased individually and isn't associated with variations.<br>• `Variation Parent`——The main asset is the variation parent. |
| `RelationshipType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The type of relationship between the existing asset and the new asset. This field comes with three values—Replacement, Upgrade, and Crossgrade—, but you can create more values in Setup.<br>Possible values are:<br>• `Crossgrade`—The new asset is a crossgrade of an existing asset. For example, changing a subscription to a plan with the same service, but that runs for a longer amount of time.<br>• `Replacement`—The new asset is replacing an existing asset. For example, a customer's faulty widget that was under warranty is being replaced with a new one.<br>• `Upgrade`—The new asset is an upgrade of an existing asset. For example, upgrading a customer's existing subscription plan to a new plan with more services.<br>The default value is `Replacement`. |

| Field Name | Details |
| --- | --- |
| `ToDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date when the modified asset is uninstalled. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AssetRelationshipChangeEvent (API version 62.0)**
Change events are available for the object.

**AssetRelationshipFeed**
Feed tracking is available for the object.

**AssetRelationshipHistory**
History is available for tracked fields of the object.

**AssetRelationshipOwnerSharingRule (API version 58.0)**
Sharing rules are available for the object.

**AssetRelationshipShare (API version 58.0)**
Sharing is available for the object.

# AssetShare

Represents a sharing entry on an Asset. This object is available in API version 33.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Customer Portal users can't access this object.

# Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

| Field | Details |
| --- | --- |
| `AssetAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Level of access that the User or Group has to the Asset. The possible values are:<br>• `Read`<br>• `Edit`<br>• `All` This value is not valid for creating or deleting records.<br>This field must be set to an access level that is higher than the organization's default access level for cases. |
| `AssetId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the Asset associated with this sharing entry. This field can't be updated.<br>This is a relationship field.<br>**Relationship Name**<br>Asset<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Asset |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `RowCause` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited.<br>Valid values include:<br>• `Manual`—The User or Group has access because a user with "All" access manually shared the Asset with them.<br>• `Owner`—The User is the owner of the Asset.<br>• `Rule`—The User or Group has access via an Asset sharing rule.<br>• `GuestRule`—The User or Group has access via an Asset guest user sharing rule.<br>• `LpuImplicit`—The User has access to records owned by high-volume Experience Cloud site users via a share group. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the User or Group that has been given access to the Asset. This field can't be updated.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>UserOrGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

## Usage

This object allows you to determine which users and groups can view and edit Asset records owned by other users.

If you attempt to create a new record that matches an existing record, request updates any modified fields and returns the existing record.

# AssetStatePeriod

Represents a time span when an asset has the same quantity, amount, and monthly recurring revenue (MRR). An asset has as many asset state periods as there are changes to it (asset actions) during its lifecycle. The dashboard and related pages show the current asset state period. The fields can't be edited. This object is available in API version 50.0 and later.

## Supported Calls

`createable()`, `deletable()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `updateable()`.

## Special Access Rules

To use Customer Asset Lifecycle Management APIs, you must have the Access Customer Asset Lifecycle Management APIs permission and Read access to the Asset, Asset Action, Asset Action Source, and Asset State Period objects.

## Fields

| Field | Details |
|---|---|
| `Amount` | **Type**<br>currency<br>**Properties**<br>Createable, Filter, Sort, Updateable<br>**Description**<br>An asset's total amount during an asset state period. Revenue Cloud doesn't set or use this field's value currently. |
| `AssetId` | **Type**<br>reference<br>**Properties**<br>Createable, Filter, Group, Sort<br>**Description**<br>The asset related to an asset state period. Label is **Asset**.<br>This field is a relationship field.<br>**Relationship Name**<br>Asset<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Asset |
| `AssetStatePeriodNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The ID of the asset state period. Label is **Name**. |

| Field | Details |
| --- | --- |
| `BillingFrequency` | **Type**<br>picklist<br>**Properties**<br>Createable, Filter, Group, Nillable, Restricted picklist, Sort, Updateable<br>**Description**<br>The time period that indicates how often the line item is billed.<br>Possible values are:<br>• `Annual`<br>• `Monthly`<br>• `Quarterly`<br>• `Semi-Annual`<br>Available in API version 65.0 and later. |
| `BindingInstanceTargetId` | **Type**<br>reference<br>**Properties**<br>Createable, Filter, Group, Nillable, Sort, Updateable<br>**Description**<br>The ID of a custom product target for a usage-based quote line item, order Item, or asset allocation.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>BindingInstanceTarget<br>**Refers To**<br>Account, Asset, BindingObjectCustomExt, Contract |
| `Discount` | **Type**<br>percent<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>Editable number from 0 to 100. Available in API version 65.0 and later. |
| `DiscountAmount` | **Type**<br>currency<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>The fixed amount discount to apply to the line item. Available in API version 65.0 and later. |

| Field | Details |
| --- | --- |
| EndDate | **Type**<br>dateTime<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>The end date and time of an asset state period. On an asset that is an evergreen subscription, the last asset state period has no end date. |
| LegalEntityId | **Type**<br>reference<br>**Properties**<br>Createable, Filter, Group, Nillable, Sort, Updateable<br>**Description**<br>The ID of the related legal entity.<br>This field is a relationship field.<br>**Relationship Name**<br>LegalEntity<br>**Refers To**<br>LegalEntity |
| Mrr | **Type**<br>currency<br>**Properties**<br>Createable, Filter, Sort, Updateable<br>**Description**<br>An asset's monthly recurring revenue during an asset state period. |
| PriceRevisionPolicy | **Type**<br>reference<br>**Properties**<br>Createable, Filter, Group, Sort, Updateable<br>**Description**<br>Specifies the price uplift policy associated with this asset state period.<br>This field is a relationship field.<br>This field is available in API version 65.0 and later.<br>**Relationship Name**<br>Price Revision Policy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PriceRevisionPolicy |

| Field | Details |
| --- | --- |
| `Quantity` | **Type**<br>double<br>**Properties**<br>Createable, Filter, Sort, Updateable<br>**Description**<br>The total quantity of an asset during an asset state period. |
| `RampIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ramp record used to group order item segments for this asset state period.<br>This field is available in orgs that have Revenue Cloud when the Ramp Deals setting is enabled.<br>This field is available in API version 62.0 and later. |
| `SegmentIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The order item segment for this asset state period.<br>This field is available in orgs that have Revenue Cloud when the Ramp Deals setting is enabled.<br>This field is available in API version 62.0 and later. |
| `SegmentName` | **Type**<br>string<br>**Properties**<br>Createable, Filter, Group, Nillable, Sort, Updateable<br>**Description**<br>The name of the order item segment for this asset state period.<br>This field is available in orgs that have Revenue Cloud when the Ramp Deals setting is enabled.<br>This field is available in API version 62.0 and later. |
| `SegmentType` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Updateable<br>**Description**<br>The period for the order item segment for this asset state period. Valid values are: |

| Field | Details |
| --- | --- |
| | • `Custom`<br>• `Free Trial`<br>• `Yearly`<br>The default value is `Yearly`.<br>This field is available in orgs that have Revenue Cloud when the Ramp Deals setting is enabled.<br>This field is available in API version 62.0 and later. |
| `StartDate` | **Type**<br>dateTime<br>**Properties**<br>Createable, Filter, Sort, Updateable<br>**Description**<br>The start date and time of an asset state period. |
| `UnitPrice` | **Type**<br>currency<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>The price per unit for the line item. Available in API version 65.0 and later. |
| `UnitPriceUplift` | **Type**<br>percent<br>**Properties**<br>Createable, Filter, Nillable, Sort, Updateable<br>**Description**<br>Indicates the percentage increase of a line item's unit price. Available in API version 65.0 and later. |

# AssetStatePeriodAttribute

Represents a virtual object that holds the key-value pair of the asset attribute in a specified asset state period. This object is a child object of AssetStatePeriod. This object is available in API version 60.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

This object is available in Enterprise, Unlimited, and Developer Editions of Revenue Cloud.

## Fields

| Field | Details |
| --- | --- |
| `AssetStatePeriodId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The asset state period that's associated with the asset attribute.<br>This field is a relationship field.<br>**Relationship Name**<br>AssetStatePeriod<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>AssetStatePeriod (the master object) |
| `AttributeDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The attribute definition that's associated with the asset state period attribute.<br>This field is a relationship field.<br>**Relationship Name**<br>AttributeDefinition<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AttributeDefinition |
| `AttributeName` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>The name of the asset attribute. |

| Field | Details |
| --- | --- |
| `AttributePicklistValueId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The value specified in the picklist type field that corresponds to the attribute in the AttributePicklistValue object.<br>This field is a relationship field.<br>**Relationship Name**<br>AttributePicklistValue<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AttributePicklistValue |
| `AttributeValue` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The value of the asset state period attribute. For example, a shirt can have the value of `blue`, which indicates the shirt's color, or it can have the value of `small`, which indicates the shirt's size.<br>You can use this field to filter records only if the DataType value in the related `AttributeDefinitionId` record is `Text`. If the DataType value is `Picklist`, use the value in the `AttributePicklistValueId` field for filtering. You can't use this field to filter records if the DataType value is `Checkbox`, `Currency`, `Date`, `Datetime`, `Multipicklist`, `Number`, or `Percent`. |

# AssetTag

Associates a word or short phrase with an Asset.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
|---|---|
| `ItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter<br>**Description**<br>ID of the tagged item. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter<br>**Description**<br>Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically. |
| `TagDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter<br>**Description**<br>ID of the parent TagDefinition object that owns the tag. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Restricted picklist<br>**Description**<br>Defines the visibility of a tag.<br>Valid values:<br>• `Public`—The tag can be viewed and manipulated by all users in an organization.<br>• `Personal`—The tag can be viewed or manipulated only by a user with a matching `OwnerId`. |

## Usage

AssetTag stores the relationship between its parent TagDefinition and the Asset being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

# AssetTokenEvent

The documentation has moved to AssetTokenEvent in the *Platform Events Developer Guide*.

# AssetWarranty

Defines the warranty terms applicable to an asset along with any exclusions and extensions. This object is available in API version 50.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `AssetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the asset this warranty term applies to. |
| `AssetWarrantyNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The identifier of the asset warranty record. |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date on which this warranty term expires. |

| Field | Details |
| --- | --- |
| ExchangeType | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The type of exchange offered by this warranty term. |
| Exclusions | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Description of any exclusions. |
| ExpensesCovered | **Type**<br>percent<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The percentage of expenses covered. |
| ExpensesCoveredEndDate | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date on which cover for expenses ends. |
| IsTransferable | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Defines whether the warranty term can be transferred to a new owner. |
| LaborCovered | **Type**<br>percent<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The percentage of labor covered. |

| Field | Details |
| --- | --- |
| `LaborCoveredEndDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date on which cover for labor ends. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the asset warranty term was last modified. Its label in the user interface is `Last Modified Date`. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the asset warranty term was last viewed. |
| `PartsCovered` | **Type**<br>percent<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The percentage of parts covered. |
| `PartsCoveredEndDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date on which cover for parts ends. |
| `Pricebook2Id` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the price book item associated with this asset warranty term. |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The date on which cover under this warranty term starts. |
| `WarrantyTermId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the warranty term this asset warranty term extends. |
| `WarrantyType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The type of the warranty. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AssetWarrantyChangeEvent**
Change events are available for the object.

# AssignedResource

Represents a service resource who is assigned to a service appointment in Field Service and Lightning Scheduler. Assigned resources appear in the Assigned Resources related list on service appointments. This object is available in API version 38.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

# Fields

| Field Name | Details |
| --- | --- |
| `ActualTravelTime` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The number of minutes that the service resource needs to travel to the assigned service appointment. You can enter a value with up to two decimal places. |
| `ApptAssistantInfoUrl` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The URL that contains the status of the mobile worker approaching the service appointment, the Community URL, and the expiry of the URL. Available in version 51.0 and later. |
| `AssignedResourceNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>An auto-generated number identifying the resource assignment. |
| `EstimatedTravelTime` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The estimated number of minutes needed for the service resource to travel to the service appointment they're assigned to. You can enter a value with up to two decimal places. |
| `LocationStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The status of the mobile worker approaching the service appointment. When the location status changes to one of these values, a status update containing |

| Field Name | Details |
| --- | --- |
| | `ApptAssistantInfoUrl` is sent to the customer. Available in version 51.0 and later.<br>Possible values are:<br>• `EnRoute`<br>• `LastMile` |
| `IsPrimaryResource` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the service resource is a primary resource or not. The default value is false. Available in API version 47.0 and later. |
| `ServiceAppointmentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The service appointment that the resource is assigned to.<br>This is a relationship field.<br>**Relationship Name**<br>ServiceAppointment<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ServiceAppointment |
| `ServiceCrewId` | **Type**<br>reference<br>**Properties**<br>Create, Update, Filter, Group, Sort, Nillable<br>**Description**<br>The service crew that the resource is assigned to.<br>Note: Since service resources can represent crews or individuals, appointments are typically assigned to crews in the following way:<br>1. Create a service resource of the Crew type that represent the crew.<br>2. Create an assigned resource on the service appointment and select the crew resource in the `ServiceResourceId` field. |

| Field Name | Details |
| --- | --- |
| | As an alternative, you can assign appointments to crew members separately. This lets you track each member's travel time and see a list of the crew members in the Assigned Resources related list. To take this approach, create an assigned resource for each crew member. List the crew member in the `ServiceResourceId` field and the crew they belong to in the `ServiceCrewId` field. |
| `ServiceResourceId` | **Type**<br>reference<br>**Properties**<br>Create, Update, Filter, Group, Sort<br>**Description**<br>The resource who is assigned to the service appointment.<br>This is a relationship field.<br>**Relationship Name**<br>ServiceResource<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ServiceResource |
| `Transaction` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The last transaction ID of the scheduling and optimization request that updated this object. The transaction ID is automatically generated and populated by the Enhanced Scheduling and Optimization engine. Available in API version 63.0 and later. |

# Usage

You can assign multiple service resources to a service appointment. Service resources who are assigned to service appointments cannot be deactivated until they are removed from the appointments.

# Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AssignedResourceChangeEvent (API version 48.0)**
Change events are available for the object.

**AssignedResourceHistory on page 63(API version 61.0)**
History is available for tracked fields of the object.

**AssignedResourceFeed**
Feed tracking is available for the object.

# AssignmentRule

Represents an assignment rule associated with a Case or Lead.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`

## Special Access Rules

- This object is read only. Assignment rules are created, configured, and deleted in the user interface.
- Customer Portal users can't access this object.

## Fields

| Field | Details |
|---|---|
| `Active` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this assignment rule is active (`true`) or not (`false`). |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of this assignment rule. |
| `SobjectType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Type of assignment rule—Case or Lead. |

## Usage

Before creating or updating a new Case or Lead, a client application can query (by name) the AssignmentRule to obtain the ID of the assignment rule to use, and then assign that ID to the `assignmentRuleId` field of the AssignmentRuleHeader. The AssignmentRuleHeader can be set using either SOAP API or REST API.

Assignment rules can also be specified when creating or upserting Case or Lead objects via the Bulk API or the Bulk 2.0 API.

Overview of Salesforce Objects and Fields

# AssociatedLocation

Represents a link between an account and a location in Field Service. You can associate multiple accounts with one location. For example, a shopping center location may have multiple customer accounts.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service must be enabled.

## Fields

| Field Name | Details |
|---|---|
| `ActiveFrom` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Date and time the associated location is active. |
| `ActiveTo` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Date and time the associated location stops being active. |
| `AssociatedLocationNumber` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Auto-generated number identifying the associated location. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date the associated location was last modified. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date the associated location was last viewed. |
| `LocationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The location associated with the address.<br>This is a relationship field.<br>**Relationship Name**<br>Location<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Location |
| `ParentRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The account associated with the location.<br>This is a relationship field. |

| Field Name | Details |
| --- | --- |
| | **Relationship Name**<br>ParentRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Picklist of address types. The values are:<br>• Bill To<br>• Ship To |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**AssociatedLocationChangeEvent (API version 62.0)**
Change events are available for the object.

**AssociatedLocationHistory**
History is available for tracked fields of the object.

# AsyncApexJob

Represents an individual Apex sharing recalculation job, a batch Apex job, a method with the `future` annotation, or a job that implements `Queueable` or `Schedulable`. Use this object to query Apex batch jobs in your organization.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

If Apex isn't running in system mode, users must have the View Setup and Configuration permission to access this object and to enqueue asynchronous Apex jobs.

# Fields

| Field Name | Details |
| --- | --- |
| `ApexClassId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the Apex class executing the job. Label is `Class ID`.<br>This is a relationship field.<br>**Relationship Name**<br>ApexClass<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ApexClass |
| `CompletedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the job was completed. |
| `CronTriggerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the CronTrigger for the AsyncApexJob. This field only applies to ScheduledApex job type. This field is available in API version 53.0 and later. For scheduled jobs created before version 53.0, this field is populated on subsequent execution.<br>This is a relationship field.<br>**Relationship Name**<br>CronTrigger<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CronTrigger |
| `ExtendedStatus` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If one or more errors occurred during the batch processing, this field contains a short description of the first error. A more detailed description of that error, along with any subsequent errors, is emailed to the last user who modified the batch class. This field is available in API version 19.0 and later. |
| `JobItemsProcessed` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Number of job items processed. Label is `Batches Processed`. |
| `JobType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of job being processed. Valid values are:<br>• `ApexToken`<br>• `BatchApex`<br>• `BatchApexWorker`<br>• `Future`<br>• `Queueable`<br>• `ScheduledApex`<br>• `SharingRecalculation`<br>• `TestRequest`<br>• `TestWorker` |
| `LastProcessed` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Last ID that was processed and committed. |
| `LastProcessedOffset` | **Type**<br>int |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Offset of the last ID that was processed and committed. |
| `MethodName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the Apex method being executed. Label is `Apex Method`. |
| `NumberOfErrors` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Total number of batches with a failure. A batch is considered transactional, so any unhandled exceptions constitute an entire failure of the batch. Label is `Failures`. |
| `ParentJobId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>For batch Apex jobs that run using chunking implementation, multiple child jobs of type `BatchApexWorker` are created. Each of these child job records contains the job Id of the parent Apex job that started their execution. For batch Apex jobs that run using a non-chunking implementation, child jobs aren't created. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The status of the job. Valid values are:<br>• `Aborted`<br>• `Completed`<br>• `Failed`<br>• `Holding`[1]<br>• `Preparing` |

| Field Name | Details |
| --- | --- |
| | • `Processing`<br>• `Queued`<br>[1] This status applies to batch jobs in the Apex flex queue. |
| `TotalJobItems` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Total number of batches processed. Each batch contains a set of records. Label is `Total Batches`. |

## Usage

Use this object to query Apex batch jobs in your organization.

# AsyncOperationLog

Represents an async operations log containing progress and status information about external synchronizations to the Omnichannel Inventory service. This object is available in API version 51.0 and later.

## Supported Calls

`delete()`,`describeLayout()`,`describeSObjects()`,`getDeleted()`,`getUpdated()`,`query()`,`retrieve()`, `search()`,`undelete()`

## Special Access Rules

This object is only available in Omnichannel Inventory orgs.

## Fields

| Field | Details |
| --- | --- |
| `AsyncOperationNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The auto-generated number assigned to the operation. |

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Description of the operation. |
| `Error` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The error message for the operation. Applies only if the operation has an error. |
| `ExternalReference` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>The unique external reference ID per type. |
| `FinishedAt` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time the operation finished. |
| `LastStatusUpdateAt` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time the status of the operation was last updated. |
| `RelatedRecordId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The related record ID for the async request. This field is available in API version 60.0 and later. |

| Field | Details |
| --- | --- |
| | This field is a polymorphic relationship field.<br>**Relationship Name**<br>RelatedRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Asset, OrderItemSummary |
| `Request` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The request sent to the external service. |
| `Response` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The full response from the external service. |
| `StartedAt` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time the operation started. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The status of the operation.<br>Possible values are:<br>• `Completed`<br>• `Error`<br>• `In Progress`<br>• `New` |

| Field | Details |
| --- | --- |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of operation that is being tracked.<br>Possible values are:<br>• `CancelAsset`—This value is available in API version 60.0 and later.<br>• `CreateAsset`—This value is available in API version 60.0 and later.<br>• `CancelOrderItemSummaries`<br>• `ImportInventory`<br>• `LocationManagement`<br>• `OrderSummaryAdjustmentAggregate` |

# AsyncOperationTracker

Represents the status of an asynchronous request initiated from the Quote, Order, and CreditMemo entities. This object is available in API version 61.0 and later.

## Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `AsyncOperationNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>A string that identifies the operation being tracked in AsyncOperationTracker. |
| `CorrelationIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>A string that identifies an operation across services. |
| `ExpiresAt` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp indicating when this record will be deleted. |
| `FailedJobItems` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of items within the job that have failed. |
| `FinishedAt` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp indicating when the asynchronous process completed. |
| `JobType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of job.<br>Possible values are:<br>• `AssetizationAsyncJob`<br>• `AutomatedNegativeInvoiceLineConversion`—Automated Negative Invoice Line Conversion<br>• `AutomaticRefunds`—Automatic Refunds<br>• `CommerceVariationsUpsert`<br>• `ContextPersistence`<br>• `CreateCPQContractsJob`<br>• `DeltaCatalogSyndicationAsyncJob`<br>• `FullCatalogSyndicationAsyncJob` |

| Field | Details |
| --- | --- |
| | • `InvoiceDocgenJob`<br>• `InvoiceDocgenPostProcessJob`<br>• `InvoiceDocgenRetryJob`<br>• `InvoiceDraftToPosted`<br>• `PearAmendQtyAssets`—Initiate Amend Quantity<br>• `PearCancelAssets`—Initiate Cancellation<br>• `PearRenewAssets`—Initiate Renewal<br>• `PlaceOrder`<br>• `PlaceOrderPersistSync`<br>• `PlaceOrderPriceAsync`<br>• `PlaceOrderTaxAsync`<br>• `PlaceQuote`—Place Quote<br>• `PlaceQuotePersistAndPriceSync`<br>• `PlaceQuotePersistSync`<br>• `PlaceQuotePriceAsync`<br>• `PlaceQuoteTaxAsync`<br>• `PriceRuleDeployment`—Price Rule Deployment<br>• `PriceSheetDeployJob`<br>• `QuoteToOrderJob`<br>• `RuleLibraryDeployment`<br>• `TransactionLineBom`—Create Material Lines |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it. |

| Field | Details |
| --- | --- |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the user or group that owns the job.,<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Refers To**<br>Group, User |
| `ParentOperationId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field is a relationship field.<br>**Relationship Name**<br>ParentOperation<br>**Refers To**<br>AsyncOperationTracker |
| `ReferenceEntityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Contains the ID of a record associated with the asynchronous request. For example, if the asynchronous request is associated with a credit memo, this field contains the ID of the credit memo.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ReferenceEntity<br>**Refers To**<br>CreditMemo, InvoiceBatchRun, Order, Product2, Quote |
| `StartedAt` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The timestamp indicating when Salesforce started the asynchronous process. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The status of the asynchronous request.<br>Possible values are:<br>• `Completed`<br>• `CompletedWithFailures`—Completed With Failures<br>• `Failure`<br>• `InProgress`—In Progress<br>• `Submitted` |
| `StepName` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Possible values are:<br>• `AssetizationAsyncJob`<br>• `AutomatedNegativeInvoiceLineConversion`—Automated Negative Invoice Line Conversion<br>• `AutomaticRefunds`—Automatic Refunds<br>• `CommerceVariationsUpsert`<br>• `ContextPersistence`<br>• `CreateCPQContractsJob`<br>• `DeltaCatalogSyndicationAsyncJob`<br>• `FullCatalogSyndicationAsyncJob`<br>• `InvoiceDocgenJob`<br>• `InvoiceDocgenPostProcessJob`<br>• `InvoiceDocgenRetryJob`<br>• `InvoiceDraftToPosted`<br>• `PSTCommonSyncStep`<br>• `PSTConfigAndPersist`<br>• `PSTOrderTaxAsync`<br>• `PSTPriceAndPersist` |

| Field | Details |
| --- | --- |
| | • `PSTQuoteTaxAsync`<br>• `PearAmendQtyAssets`—Initiate Amend Quantity<br>• `PearCancelAssets`—Initiate Cancellation<br>• `PearRenewAssets`—Initiate Renewal<br>• `PlaceOrder`<br>• `PlaceOrderPersistSync`<br>• `PlaceOrderPriceAsync`<br>• `PlaceOrderTaxAsync`<br>• `PlaceQuote`—Place Quote<br>• `PlaceQuotePersistAndPriceSync`<br>• `PlaceQuotePersistSync`<br>• `PlaceQuotePriceAsync`<br>• `PlaceQuoteTaxAsync`<br>• `PriceRuleDeployment`—Price Rule Deployment<br>• `PriceSheetDeployJob`<br>• `QuoteToOrderJob`<br>• `RuleLibraryDeployment`<br>• `TransactionLineBom`—Create Material Lines |
| `SubmittedAt` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp indicating when the asynchronous process was submitted by the REST request. |
| `SuccessfulJobItems` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of successful items in this job. |
| `TotalJobItems` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Total number of items in this job. |

# AsyncOpSyndicationFeedFile

Represents the sync status of file-related information shared with external channels such as Facebook and Instagram. This object is available in API version 64.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

This object is available only if the B2B Commerce or D2C Commerce license is enabled.

## Fields

| Field | Details |
|---|---|
| `AsyncOpSyndicationFeedFileNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>ID assigned to each syndication feed file record, and used for tracking and reference purposes. |
| `AsyncOperationTrackerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID assigned to the Async Operation Tracker record, which monitors and manages the lifecycle of the syndication process.<br>This field is a relationship field.<br>**Relationship Name**<br>AsyncOperationTracker<br>**Refers To**<br>AsyncOperationTracker |
| `FeedContentBody` | **Type**<br>base64<br>**Properties**<br>Nillable<br>**Description**<br>The content of the feed file that is syndicated to the external platform. |

| Field | Details |
| --- | --- |
| `FeedContentContentType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Specifies the format of the feed file to ensure proper processing. For example, CSV, JSON, or XML files. |
| `FeedContentLength` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The size of the feed file in bytes, which is used for validation and processing requirements. |
| `FeedContentName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the feed file, which includes identifiers like timestamp or sequence number. |
| `FeedScope` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Defines the scope or category of the feed. For example, if the feed applies to main, country-specific, or language-specific catalog segments.<br>Possible values are:<br>• `CountryFeed`<br>• `LanguageFeed`<br>• `MainFeed` |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>For internal use only. |

| Field | Details |
| --- | --- |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>For internal use only. |
| `PlatformConnections` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The external channel or destination for syndication.<br>Possible values are:<br>• `Meta` |
| `SyncMode` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Specifies the type of sync being performed.<br>Possible values are:<br>• `FullSync` |

# AttachedContentDocument

This read-only object contains all `ContentDocument` objects associated with an object.

## Supported Calls

`describeSObjects()`

## Fields

| Field Name | Details |
| --- | --- |
| `ContentDocumentId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the attached `ContentDocument`.<br>This is a relationship field.<br>**Relationship Name**<br>ContentDocument<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentDocument |
| `ContentSize` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Size of the document in bytes. |
| `ContentUrl` | **Type**<br>url<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL for links and Google Docs. This field is set only for links and Google Docs, and is one of the fields that determine the `FileType`.<br>This field is available in API version 31.0 and later. |
| `ExternalDataSourceName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of the external data source in which the document is stored. This field is set only for external documents that are connected to Salesforce.<br>This field is available in API version 32.0 and later. |
| `ExternalDataSourceType` | **Type**<br>picklist |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Type of external data source in which the document is stored. This field is set only for external documents that are connected to Salesforce.<br>This field is available in APIAPI version 35.0 and later. |
| `FileExtension` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>File extension of the attached `ContentDocument`.<br>This field is available in API version 31.0 and later. |
| `FileType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Type of document, determined by the file extension. |
| `LinkedEntityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the record the `ContentDocument` is attached to.<br>This is a relationship field.<br>**Relationship Name**<br>LinkedEntity<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Accreditation, ActivationTarget, ActivationTrgtIntOrgAccess, ApiAnomalyEventStore, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskIndDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, |

| Field Name | Details |

| | CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CodeSet, CollaborationGroup, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, ConsumptionSchedule, Contact, ContactEncounter, ContactEncounterParticipant, ContentWorkspace, Contract, ConversationEntry, CoverageBenefit, CoverageBenefitItem, CredentialStuffingEventStore, CreditMemo, CreditMemoLine, Dashboard, DashboardComponent, DataStream, DelegatedAccount, DocumentChecklistItem, EmailMessage, EmailTemplate, EngagementChannelType, EnhancedLetterhead, EnrollmentEligibilityCriteria, Event, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, Identifier, Image, IndividualApplication, Invoice, InvoiceLine, Lead, ListEmail, Location, MarketSegment, MarketSegmentActivation, MemberPlan, MessagingSession, MktCalculatedInsight, OperatingHours, Opportunity, Order, OrderItem, Organization, OtherComponentTask, PartyConsent, PersonEducation, PersonLanguage, PersonLifeEvent, PersonName, PlanBenefit, PlanBenefitItem, Product2, ProductFulfillmentLocation, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, ProviderSearchSyncLog, PurchaserPlan, PurchaserPlanAssn, ReceivedDocument, Report, ReportAnomalyEventStore, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SessionHijackingEventStore, Shift, Shipment, ShipmentItem, Site, SkillRequirement, SocialPost, Solution, Task, ThreatDetectionFeedback, User, Visit, VisitedParty, Visitor, VoiceCall, VolunteerProject, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup, WorkTypeGroupMember |
| `SharingOption` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Controls whether or not sharing is frozen for a file. Only administrators and file owners with Collaborator access to the file can modify this field. Default is `Allowed`, which means that new shares are allowed. When set to `Restricted`, new shares are prevented without affecting existing shares.<br>This field is available in API versions 35.0 and later. |

| Field Name | Details |
| --- | --- |
| `Title` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Title of the attached `ContentDocument`. |

## Usage

Use this object to list all `ContentDocument` objects attached to an object via a feed post.

To retrieve `ContentDocument` objects, issue a describe call on an object, which returns a query result for each activity since the record was created. You can't directly query this object.

# AttachedContentNote

This read-only object contains all ContentNote objects associated with an object. This object is available in API version 35.0 and later.

## Supported Calls

`describeSObjects()`

## Special Access Rules

- Notes must be enabled.
- Chatter must be enabled.

## Fields

| Field Name | Details |
| --- | --- |
| `ContentDocumentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the attached `ContentNote` |
| `ContentSize` | **Type**<br>int |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Size of the note in bytes. |
| `FileExtension` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>File extension of the attached `ContentNote`. |
| `FileType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Type of file for the note. All notes have a file type of `SNOTE`. |
| `LinkedEntityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the record the `ContentNote` is attached to. |
| `TextPreview` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A preview of the note, up to 255 characters. |
| `Title` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Title of the note. |

## Usage

Use this object to list all `ContentNote` objects attached to an object.

To retrieve `ContentNote` objects, issue a describe call on an object, which returns a describe result for each note created or attached. You can't directly query this object.

# Attachment

Represents a file that a User has uploaded and attached to a parent object.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `Body` | **Type**<br>base64<br>**Properties**<br>Create, Update<br>**Description**<br>Required. Encoded file data. |
| `BodyLength` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Size of the file (in bytes). |
| `ConnectionReceivedId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce. |
| `ConnectionSentId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections. |
| `ContentType` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The content type of the attachment.<br>If the `Don't allow HTML uploads as attachments or document records` security setting is enabled for your organization, you cannot upload files with the following file extensions: `.htm`, `.html`, `.htt`, `.htx`, `.mhtm`, `.mhtml`, `.shtm`, `.shtml`, `.acgi`, `.svg`.<br>When you insert a document or attachment through the API, make sure that this field is set to the appropriate MIME type. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Description of the attachment. Maximum size is 500 characters. This field is available in API version 18.0 and later. |
| `IsEncrypted` | This information is about Shield Platform Encryption and not Classic Encryption.<br>**Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the attachment is encrypted using Shield Platform Encryption (`true`) or not (`false`). This field is available in API version 34.0 and later. |
| `IsPartnerShared` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether this record is shared with a connection using Salesforce to Salesforce. Label is `Is Shared With Partner`. |
| `IsPrivate` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this record is viewable only by the owner and administrators (`true`) or viewable by all otherwise-allowed users (`false`). During a create or update call, it is possible to mark an Attachment record as private even if you are not the owner. This can result in a situation in which you can no longer access the record that you just inserted or updated. Label is **Private**.<br>Attachments on tasks or events can't be marked private. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. Name of the attached file. Maximum size is 255 characters. Label is **File Name**. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the User who owns the attachment. This field isn't required for API version 9.0 or later.<br>The owner of an attachment on a task or event must be the same as the owner of the task or event.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Calendar, User |
| `ParentId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the parent object of the attachment. The following objects are supported as parents of attachments:<br>• Account<br>• Asset<br>• Campaign<br>• Case<br>• Contact<br>• Contract<br>• Custom objects<br>• EmailMessage<br>• EmailTemplate<br>• Event<br>• Lead<br>• Opportunity<br>• Product2<br>• Solution<br>• Task<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareMetricTarget, CareObservationComponent, CarePgmProvHealthcareProvider, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareTaxonomy, Case, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, Contact, Contract, CreditMemo, DelegatedAccount, EmailMessage, EmailTemplate, EngagementChannelType, EnrollmentEligibilityCriteria, Event, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, |

| Field | Details |
| --- | --- |
| | HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, Lead, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PersonEducation, PersonLifeEvent, Product2, ProductRequest, ProductRequestLineItem, PurchaserPlan, ReceivedDocument, ServiceAppointment, ServiceResource, Shift, SocialPost, Solution, Task, Visit, VisitedParty, Visitor, VolunteerProject, WorkOrder, WorkOrderLineItem |

Note: If you are importing Attachment data and want to set the value for an audit field, such as `CreatedDate`, contact Salesforce. For example, for compliance reasons, you may prefer to set the `CreatedDate` to the date the record was originally created in your system, rather than the date it was imported into Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself.

## Usage

The API sends and receives the binary file attachment data encoded as a base64Binary data type. Before creating a record, client applications must encode the binary attachment data as base64. Upon receiving a response, client applications must decode the base64 data to binary (this conversion is usually handled for you by the SOAP client).

The create call restricts these files to a maximum size of 25 MB. For a file attached to a Solution, the limit is 1.5 MB. The maximum email attachment size is 3 MB.

The API supports attachments on email in create, delete, or update calls. The query call does not return attachments parented by email, unless the user performing the query has the "Modify All Data" permission.

Note:

- Attachment records are not searched during text searches.
- When issued by an administrator, the query results include Attachment records from the Recycle Bin.
- When issued by a non-administrator, the `queryAll()` call results do not include Attachment records from the Recycle Bin.

Access to fields depends on the method being used:

- All of the fields are accessible using the `describeSObjects()` and `query()` calls. With the `create()` call, you can insert the `Name`, `ParentId`, `Body`, `IsPrivate`, and `OwnerId` fields.
- To modify existing records, the `update()` call gives you access to change the `Name`, `Body`, `IsPrivate`, and `OwnerId` fields.
- You can access all of the fields using a `query()` call. However, you can't receive the `Body` field for multiple records in a single `query()` call. If your query returns the `Body` field, your client application must ensure that only one row with one Attachment is returned; otherwise, an error occurs. A more effective approach is to return IDs (but not Attachment records in the `Body` field) from a `query()` call and then pass them into `retrieve()` calls that return the `Body` field.
- For information about accessing the attachments of archived activities, see Archived Activities.

SEE ALSO:

Note

# AttachmentEventLog

Attachment event logs contain information about attachments. This object is available in API version 65.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `AttachmentIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the attachment. |
| `ContentType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The content type of the attachment. |
| `IsPrivateOn` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Whether the attachment is flagged as private or not.<br>The default value is `false`. |
| `OperationType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The operation type of the attachment. |
| `ParentIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the parent object of the attachment. For example, `a07EE00001LgsUH` |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |

# AttribModel

Represents an attribution model used with Personalization, Attribution, and Campaign Influence, including model weights and touch type. This object is available in API version 62.0 and later.

## Supported Calls

describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()

## Fields

| Field | Details |
|---|---|
| `AttribModelStatus` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates a model's current status. The default value is `Draft`, and accepted values are<br>• `Active`<br>• `Draft`<br>• `Inactive` |
| `AttributionModelType` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates the type of attribution model, which determines which touchpoints to evaluate. The default value is `LastTouch`, and accepted values are<br>• `First touch`<br>• `LastTouch` |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Three letter ISO currency codes for supported currencies. The default value is `USD`. This is an optional field. |
| `DataSpaceId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Unique identifier that refers to the data space where a model's resources originate. This is a required field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>DataSpace<br>**Refers To**<br>DataSpace |
| `Description` | **Type**<br>String<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Text description of the attribution model. Optional. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Auto-generated or user-generated API name for the attribution model. This is a required field. |
| `Error Code` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates the issue that's causing an error. The default value is `None`, and accepted values are<br>• `ConfigurationMissingError` indicates that a required configuration setting is missing.<br>• `DpcJobError` indicates a problem during processing.<br>• `InternalError` indicates an internal error during processing.<br>• `ModelValidationError` indicates that the model is invalid.<br>• None |
| `GlobalAttributionWindowDays` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Defines a timeframe for tracking attribution-related engagement. This is a required field. |

| Field | Details |
| --- | --- |
| `IdentityResolutionMode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Defines which identity resolution method to use when tracking engagement activities. Default value is `Individual`, and acceptable values are<br>• `Individual`<br>• `Unified` |
| `IsZeroDayLoadRequired` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Defines whether to sync data before the attribution window begins. The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp that indicates the last time the model was referenced by another resource. |
| `LastRefresh` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp that indicates the last time engagement data was refreshed and evaluated by the model. |
| `LastSuccessfulRefresh` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp that indicates the last time the model was successfully refreshed. |
| `LastViewedDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp that indicates the last time a user viewed the model. |
| `LatestRefreshedStatus` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Picklist value that indicates the status of last refresh process. The default value is `None`, and accepted values are<br>• `Canceled`<br>• `Complete`<br>• `Failure`<br>• `None`<br>• `Processing` |
| `ModelContext` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates the app or feature in which the attribution model is used. The default value is `Personalization`, and accepted values are<br>• `Attribution`: indicates the use with Attribution in Salesforce Personalization.<br>• `CampaignInfluence`: indicates the use with Campaign Influence in Unified Marketing Analytics.<br>• `Personalization`: indicates the use with Personalization in Salesforce Personalization. |
| `ModelRevision` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A version number that indicates the latest save of the model. |
| `Name` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Text label that identifies the attribution model. This is a required field. |
| `Partner` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates who's using the model. This field is required if the value of `ModelContext` is `Attribution`. |
| `ProfileDataGraphId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Unique identifier that refers to the profile data graph that's used with the model.<br>**Relationship Name**<br>ProfileDataGraph<br>**Refers To**<br>DataGraph |
| `ScheduledFrequencyMins` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The scheduled frequency (in minutes) at which the attribution model is processed. |
| `SyncStatus` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Indicates the current status of the attribution model while an action is being performed. The default value is `Processing`, and acceptable values are:<br>• `Active`<br>• `CreateError`<br>• `DeleteError` |

| Field | Details |
| --- | --- |
| | • `Deleting`<br>• `EditError`<br>• `Processing` |
| `Tags` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>User-generated strings that can be used to organize attribution models. |

## Usage

Use this object to get information about attribution models that are in use with personalization and influence features. For example, you can:

- Retrieve status and error details.
- Identify model settings such as type (first-touch, last-touch).
- Find out when the model was last used, refreshed, or synced.

## Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AttribModelChangeEvent**
Change events are available for the object.

**AttribModelFeed**
Feed tracking is available for the object.

**AttribModelHistory**
History is available for tracked fields of the object.

**AttribModelOwnerSharingRule**
Sharing rules are available for the object.

**AttribModelShare**
Sharing is available for the object.

# AttribModelStage

Represents a funnel stage that's used in a predefined or custom attribution configuration. Available in API version 62.0 and later.

## Supported Calls

describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()

# Fields

| Field | Details |
| --- | --- |
| `AttribModelId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Unique identifier that refers to the attribution configuration that uses this stage. This is a required field.<br>**Relationship Name**<br>AttribModel<br>**Relationship Type**<br>Master-detail<br>**Refers To**<br>AttribModel (the master object) |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Three letter ISO currency codes for supported currencies. The default value is `USD`. This is an optional field. |
| `EngagementSignalEnum` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Picklist value that indicates the engagement signal that's selected for an attribution stage. This value represents a step in a customer journey.<br>The accepted values are the engagement signals that are configured in the selected data space. |
| `IsContentMatchRequired` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether to link item attribution from one funnel stage to the next. The default value is `false`, meaning not required. If you set this value to `true`, only engagement with the same item from the previous stage is linkable. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Text label that identifies the attribution model stage. This is a required field. |
| `Sequence` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Indicates the position of a stage in its journey sequence, reflecting funnel engagement from start to finish. The funnel requires a minimum of two stages, with a maximum of four stages. Accepted values are `1`, `2`, `3`, or `4`. |
| `StageUnionGroupName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of a certain group of stages. It can be used to reference individual, consecutive stages as a combined group with a common name. |

## Usage

Use this object to create attribution funnel stages. The funnel mirrors key touchpoints of an individual's personalization journey, which you define by selecting an engagement signal and any relevant metrics. The order that you create stages in describes funnel engagement from start to finish.

For example, view a product, click the product, add it to cart, and submit the order. The funnel requires a minimum of two stages, with a maximum of four stages in a journey.

## Associated Objects

This object has the these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AttribModelStageChangeEvent**
Change events are available for the object.

**AttribModelStageFeed**
Feed tracking is available for the object.

**AttribModelStageHistory**
History is available for tracked fields of the object.

**AttribModelStageOwnerSharingRule**
Sharing rules are available for the object.

**AttribModelStageShare**
Sharing is available for the object.

# AttribModelStageMetric

Represents the engagement signal metrics that you select when you configure a funnel stage for an attribution configuration. Available in API version 63.0 and later.

## Supported Calls

describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()

## Fields

| Field | Details |
|---|---|
| `Alias` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Indicates the name of the output data metric. This name appears as the column name for the metric on the attribution output table. |
| `AttribModelStageId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Unique identifier that refers to the attribution configuration stage that uses this metric.<br>**Relationship Name**<br>AttribModelStage<br>**Relationship Type**<br>Primary-detail |

| Field | Details |
| --- | --- |
| | **Refers To**<br>AttribModelStage (the primary object) |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Three letter ISO currency codes for supported currencies. The default value is `USD`. This is an optional field. |
| `EngagementSignalMetricId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Unique identifier that refers to the engagement signal that defines this stage.<br>**Relationship Name**<br>EngagementSignalMetric<br>**Refers To**<br>EngagementSignalMetric |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The text label that identifies the attribution model stage metric. |

# Usage

An engagement signal metric is an aggregation of an engagement signal data field. These metrics are reported in the attribution model dashboard. For example, sum of clicks on a link, number of products added to a cart, email sends, or distinct article downloads.

# Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AttribModelStageMetricChangeEvent**
Change events are available for the object.

**AttribModelStageMetricFeed**
Feed tracking is available for the object.

**AttribModelStageMetricHistory**
History is available for tracked fields of the object.

**AttribModelStageMetricOwnerSharingRule**
Sharing rules are available for the object.

**AttribModelStageMetricShare**
Sharing is available for the object.

# AttributeDefinition

Represents a product, asset, or object attribute, for example, a hardward specification or software detail. This object is available in API version 57.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service must be enabled.

## Fields

| Field | Details |
|---|---|
| `DataType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The data type of the attribute definition.<br>Possible values are:<br>• `Checkbox`<br>• `Date`<br>• `Datetime`<br>• `Number`<br>• `Picklist`<br>• `Text` |

| Field | Details |
| --- | --- |
| `DefaultValue` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The default value for this attribute. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Description of this attribute. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The unique name of the attribute definition record.<br>This name must begin with a letter and use only alphanumeric characters and underscores. It can't include spaces, end with an underscore, or have two consecutive underscores.<br>The developer name is used for internal purpose and must be unique for all records (including deleted records). If the system doesn't find the name unique, it automatically overrides the user input and creates a unique name. For external use, the developer name need not be fixed. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates that the attribute definition is active. Active attributes definitions can be selected for assets.<br>The default value is `false`. |
| `IsRequired` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the attribute definition is required for an asset.<br>The default value is `false`. |
| `Label` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The label for the attribute. Displays a friendly name for the attribute, for example, threshold monitor lightning component and recordset filter criteria rule. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date the attribute definition was last referenced. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date the attribute definition was last viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the attribute. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The owner of the attribute definition.<br>This field is a polymorphic relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PicklistId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the attribute picklist with the valid values for this attribute.<br>This field is a relationship field.<br>**Relationship Name**<br>Picklist<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AttributePicklist |
| `SourceSystemIdentifier` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The identifier of the attribute definition in an external system. |
| `UnitOfMeasureId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the measurement unit for this attribute.<br>This field is a relationship field.<br>**Relationship Name**<br>UnitOfMeasure<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>UnitOfMeasure |

## Usage

Add asset descriptors to the Asset object instead of creating multiple custom attributes on an asset. This helps scale to a high volume of various assets in the system. When you create the AttributeDefinition, you can provide a unique API name. If the API name is not unique, the system appends a number to the end of the API name. The value of this number depends on how many times the same name has been used.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AttributeDefinitionHistory on page 63**
History is available for tracked fields of the object.

**AttributeDefinitionOwnerSharingRule on page 65**
Sharing rules are available for the object.

**AttributeDefinitionShare on page 67**
Sharing is available for the object.

# AttributePicklist

Represents a custom picklist for an asset attribute. This object is available in API version 57.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service must be enabled.

## Fields

| Field | Details |
|---|---|
| `DataType` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The data type of this picklist.<br>Possible values are:<br>• `Boolean`<br>• `Currency`<br>• `Date`<br>• `Datetime`<br>• `Number`<br>• `Percent`<br>• `Text`<br>The default value is `Boolean`. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A description of the picklist. Maximum size is 32000 alphanumeric characters. Can include the following special characters: @! - < > * ? + = % # ( ) / \ & ' £ € $ ". |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date the attribute picklist was last referenced. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date the attribute picklist was last viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of the picklist. Names must be unique. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner of the attribute picklist record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The status of the attribute picklist.<br>Possible values are:<br>• `Active`<br>• `Draft`<br>• `Inactive`<br>The default value is `Draft`. |
| `UnitOfMeasureId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the unit of measure associated with the product.<br>This field is a relationship field.<br>This field is available when Revenue Cloud is enabled.<br>This field is available in API version 63.0 and later.<br>**Relationship Name**<br>UnitOfMeasure |

| Field | Details |
| --- | --- |
| | **Refers To**<br>UnitOfMeasure |

## Usage

The AttributePicklist object is the parent object and the AttributePicklistValue object contains the picklist values. Let's say you need an asset attribute to track the T-shirt size, which can be small, medium, or large. Create an AttributePicklist parent record as a Text type for the T-shirt size attribute. Then create AttributePicklistValue records, one for each picklist value small, medium, and large, and associate them with the parent record.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AttributePicklistHistory on page 63**
History is available for tracked fields of the object.

**AttributePicklistOwnerSharingRule on page 65**
Sharing rules are available for the object.

**AttributePicklistShare on page 67**
Sharing is available for the object.

# AttributePicklistValue

Represents the values of an asset attribute picklist. This object is available in API version 57.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service must be enabled.

# Fields

| Field | Details |
| --- | --- |
| `Abbreviation` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A short name of the picklist value that's displayed at run time. Use up to 255 alphanumeric characters. Can include the following special characters: @ ! - < > * ? + = % # ( ) / \ & ' £ € $ ". |
| `Code` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>A picklist value code unique to the picklist. Maximum size is 80 alphanumeric characters. Can include the following special characters: @ ! - < > * ? + = % # ( ) / \ & ' £ € $ ". |
| `DisplayValue` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The displayed picklist value if it's different from the Name field. For example, the Name '5' could have a DisplayValue 'Five'. |
| `IsDefault` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the picklist value is the default for the associated picklist. Only one value can be the default for a picklist.<br>The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date the attribute picklist value was last referenced. |

| Field | Details |
| --- | --- |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date the attribute picklist value was last viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the attribute picklist value. |
| `PicklistId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the picklist that the value is associated with.<br>This field is a relationship field.<br>**Relationship Name**<br>Picklist<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AttributePicklist |
| `Sequence` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The order in which the picklist value appears in the picklist. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The status of the attribute picklist value. |

| Field | Details |
| --- | --- |
| | Possible values are:<br>• `Active`<br>• `Draft`<br>• `Inactive`<br>The default value is `Draft`. |
| `Value` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The text value for a picklist item if the picklist data type is text. This value must be unique within a picklist. Maximum size is 255 alphanumeric characters. Can include the following special characters: @ ! - < > * ? + = % # ( ) / \ & ' £ € $ ". |

## Usage

The AttributePicklistValue object is the child object and the AttributePicklist object contains the picklist. Let's say you need an asset attribute to track the T-shirt size, which can be small, medium, or large. Create an AttributePicklist parent record as a Text type for the T-shirt size attribute. Then create AttributePicklistValue records, one for each picklist value small, medium, and large, and associate them with the parent record..

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AttributePicklistValueHistory on page 63**
History is available for tracked fields of the object.

# AsyncReportRunEventLog

Async Report Run Event Log is used for reporting scheduled requests. This category includes dashboard refreshes, asynchronous reports, schedule reports, and analytics snapshots. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
|---|---|
| `AverageRowSize` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The average row size (in bytes) of all rows in the Asynchronous Report Run event. |
| `BucketCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of buckets used in the report. |
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`. |
| `ColumnCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of columns in the report. |
| `CpuTime` | **Type**<br>double |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DashboardIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the dashboard that was run. |
| `DatabaseBlocks` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>How much activity is occurring in the database. |
| `DatabaseCpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time (in milliseconds) to complete the request. |
| `DatabaseTotalTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total time spent in OracleJdbc calls, counting the Jdbc driver, Network, and Oracle time for execs, fetches, and get-connection. |
| `DisplayType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • D—Dashboard<br>• S—Show Details<br>• H—Hide Details |
| `ExceptionFilterCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of exception filters used in the report. |
| `IsPreview` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>This field is reserved for future use.<br>The default value is `false`. |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`. |
| `ObjectName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the object affected by the trigger. |
| `Origin` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Where the report is being executed, such as from a UI (Classic, Lightning, Mobile), through an API (synchronous, asynchronous, Apex), or through a dashboard. |

| Field | Details |
| --- | --- |
| `RenderingType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Describes the format of the report output in Salesforce Classic. If the report was exported in Lightning Experience, this field is blank. |
| `ReportIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The report's ID. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestIdentifier.` For example: 3nWgxWbDKWWDIk0FKfF5DV. |
| `RequestStatus` | **Type**<br>String<br>**Description**<br>The status of the request for a page view or user interface action.<br>For example:<br>• `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.<br>• `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.<br>• `U`—Undefined<br>• `A`—Authorization Error<br>• `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.<br>• `N`—Not Found. 404 error.<br>This field can have a blank value. |

| Field | Details |
| --- | --- |
| `RowCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of rows that were processed in the Asynchronous Report Run event. |
| `RunTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of time that the request took in milliseconds. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`. |
| `SortOrder` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The sort column and order that was used in the report. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The URI of the page that's receiving the request. For example: `/home/home.jsp`. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |
| `UserType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The category of user license. Possible values are:<br>• CsnOnly—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.<br>• CspLitePortal—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.<br>• CustomerSuccess—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal<br>• Guest—Users whose access is limited so that your customers can view and interact with your site without logging in.<br>• PowerCustomerSuccess—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.<br>• PowerPartner—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.<br>• SelfService—Users whose access is limited because they're organization customers and access the application through a self-service portal.<br>• Standard—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org. |

# Audience

Represents an audience that is defined by criteria and can be assigned and used for targeting in an Experience Cloud site. This object is available in API version 44.0 and later.

## Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

## Fields

| Field | Details |
| --- | --- |
| `AudienceName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>Name of the audience. |
| `ContainerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the site or org that contains the audience. ContainerId is nillable in API versions 47.0 and earlier. |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the audience. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>The unique name of the audience in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. This field is automatically generated, but you can supply your own value if you create the record using the API.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. |

| Field | Details |
| --- | --- |
| | Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `FormulaFilterType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Formula filter for the criteria used to define the audience. Valid values are:<br>• `AllCriteriaMatch`—Matching all the conditions (AND).<br>• `AnyCriterionMatches`—Matching at least one condition (OR).<br>• `CustomLogicMatches`—Matching condition logic (AND and OR) and numbered criteria groups. This value is available in API version 45.0 and later. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Language of the audience. Valid values are:<br>• Chinese (Simplified): `zh_CN`<br>• Chinese (Traditional): `zh_TW`<br>• Danish: `da`<br>• Dutch: `nl_NL`<br>• English: `en_US`<br>• Finnish: `fi`<br>• French: `fr`<br>• German: `de`<br>• Italian: `it`<br>• Japanese: `ja`<br>• Korean: `ko`<br>• Norwegian: `no`<br>• Portuguese (Brazil): `pt_BR`<br>• Russian: `ru`<br>• Spanish: `es`<br>• Spanish (Mexico): `es_MX` Spanish (Mexico) defaults to Spanish for customer-defined translations.<br>• Swedish: `sv`<br>• Thai: `th` The Salesforce user interface is fully translated to Thai, but Help is in English. |

| Field | Details |
| --- | --- |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>Master label for the audience. This internal name doesn't get translated. |

# AuraDefinition

Represents an Aura component definition, such as component markup, a client-side controller, or an event. This object is available in API version 32.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only your Salesforce org's internal users can access this object.

## Fields

| Field Name | Details |
| --- | --- |
| `AuraDefinitionBundleId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the bundle containing the definition. A bundle contains a Lightning definition and all its related resources.<br>This is a relationship field.<br>**Relationship Name**<br>AuraDefinitionBundle<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AuraDefinitionBundle |

| Field Name | Details |
| --- | --- |
| `DefType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The definition type. Valid values are:<br>• `APPLICATION` — Lightning Aura Components app<br>• `CONTROLLER` — client-side controller<br>• `COMPONENT` — component markup<br>• `EVENT` — event definition<br>• `HELPER` — client-side helper<br>• `INTERFACE` — interface definition<br>• `RENDERER` — client-side renderer<br>• `STYLE` — style (CSS) resource<br>• `PROVIDER` — reserved for future use<br>• `MODEL` — deprecated, do not use<br>• `TESTSUITE` — reserved for future use<br>• `DOCUMENTATION` — documentation markup<br>• `TOKENS` — tokens collection<br>• `DESIGN` — design definition<br>• `SVG` — SVG graphic resource<br>• `MODULE` — reserved for future use |
| `Format` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The format of the definition. Valid values are:<br>• `XML` for component markup<br>• `JS` for JavaScript code<br>• `CSS` for styles<br>• `TEMPLATE_CSS` reserved for future use<br>• `SVG` for an SVG graphic |
| `Source` | **Type**<br>textarea<br>**Properties**<br>Create, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The contents of the definition. This is all the markup or code for the definition. |

## Usage

For more information, see the Lightning Aura Components Developer Guide.

# AuraDefinitionBundle

Represents a Lightning Aura component definition bundle, such as a component or application bundle. A bundle contains a Lightning Aura component definition and all its related resources. This object is available in API version 32.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
| --- | --- |
| `ApiVersion` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The API version for this bundle. Every bundle has an API version specified at creation. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The text description of the bundle. Maximum size of 255 characters. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The unique name of the record in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. This field is automatically generated but you can supply your own value if you create the record using the API.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the `MasterLabel`. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Master label for the Lightning bundle. This internal label doesn't get translated. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. |

| Field Name | Details |
| --- | --- |
| | • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |

## Usage

For more information, see the Lightning Aura Components Developer Guide.

# AuraDefinitionBundleInfo

For internal use only.

# AuraDefinitionInfo

For internal use only.

# AuraRequestEventLog

Aura Request Event Log contains details of requests to Apex methods from Aura and Lightning web components. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `ActionMessage` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The action (Apex method) names and times for all the actions in the request in the format. For example: `action1Name=action1Time;action2Name=action2Time...` |
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`. |
| `CpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `DatabaseTotalTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and `DatabaseCpuTime`. Compare this field to `CpuTime` to determine whether performance issues are occurring in the database layer or in your own code. |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`. |
| `RequestIdentifier` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestIdentifier`. For example: 3nWgxWbDKWWDIk0FKfF5DV. |
| `RequestMethod` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The HTTP method of the request, such as `GET` or `POST`. |
| `RequestStatus` | **Type**<br>String<br>**Description**<br>The status of the request for a page view or user interface action.<br>For example:<br>• `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.<br>• `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.<br>• `U`—Undefined<br>• `A`—Authorization Error<br>• `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.<br>• `N`—Not Found. 404 error.<br>This field can have a blank value. |
| `RunTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of time that the request took in milliseconds. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URI of the page that's receiving the request. For example: `/home/home.jsp`. |
| `UserAgent` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The numeric code for the type of client used to make the request (for example, the browser, application, or API) as a string. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |
| `UserType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The category of user license. |

| Field | Details |
| --- | --- |
| | Possible values are:<br>• `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.<br>• `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.<br>• `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.<br>• `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.<br>• `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.<br>• `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.<br>• `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.<br>• `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org. |

# AuthConfig

Represents authentication options for My Domain and Experience Cloud site login pages. This object is available in API version 32.0 and later.

The fields for this object control the options that display on the login page of an org. By default, you have a My Domain and corresponding login page. If you use Digital Experiences, you can also set up a login page for each of your Experience Cloud sites.

- Logging in with a username and password
- Using SAML for single sign-on
- Authentication provider logins from a third-party service, such as Facebook or Twitter

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

You must have "View Setup and Configuration" permission to view the settings.

# Fields

| Field Name | Details |
| --- | --- |
| `AuthOptionsAuthProvider` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>If `true`, at least one Auth. Provider is selected to show up on the login page, and this object has child AuthConfigProvider objects for each provider. |
| `AuthOptionsCertificate` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>If `true`, certificate-based login displays on the My Domain login page. |
| `AuthOptionsSaml` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>If `true`, at least one SAML configuration is selected to show up on the login page. If the organization has only one SAML configuration, this value indicates whether that configuration is selected to show up on the login page. If the organization has multiple SAML configurations, see the child AuthConfigProvider objects for each configuration. |
| `AuthOptionsUsernamePassword` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>If `true`, the login option for a username and password appears on the login page. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The name of the domain created using My Domain or, for an Experience Cloud site, a concatenated string of *site name_site prefix*.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| IsActive | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Whether this configuration is in use. |
| Language | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language for the organization. |
| MasterLabel | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The text that's used to identify the Visualforce page in Setup. |
| NamespacePrefix | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the |

| Field Name | Details |
| --- | --- |
| | installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The organization type for this object.<br>• `Org` (includes custom domains)<br>• `Community`<br>• `Site`<br>• Portal |
| `Url` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The login URL of the organization for this AuthConfig object. Each URL has only one associated AuthConfig object. |

# AuthConfigProviders

Represents an authentication provider that's configured in an organization. AuthConfigProviders is a child of the AuthConfig object. This object is available in API version 32.0 and later.

This object links the authentication configuration for an organization to the Auth Provider through the `AuthOptionsAuthProvider` field of the AuthConfig object. The login page of a My Domain or Experience Cloud site can allow multiple SAML configurations and multiple authentication providers. These configurations can be set to show up as buttons on the login page. Each configuration has an AuthConfigProvider object. For more information about how to display these configurations on the login page, see these resources in Salesforce Help.

- My Domain: Add Identity Providers to the My Domain Login Page
- Experience Cloud: Configure Your Login Page

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

You must have "View Setup and Configuration" permission to view the settings.

## Fields

| Field Name | Details |
| --- | --- |
| `AuthConfigId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID for this configuration.<br>This is a relationship field.<br>**Relationship Name**<br>AuthConfig<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AuthConfig |
| `AuthProviderId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the Auth. Provider or SAML configuration.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>AuthProvider<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AuthProvider, SamlSsoConfig |

# AuthorizationForm

Represents the specific version and effective dates of a form that is associated with consent, such as a privacy policy or terms and conditions. This object is available in API version 46.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available if Data Protection and Privacy is enabled.

## Fields

| Field Name | Details |
|---|---|
| `DefaultAuthFormTextId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required. The ID of the default authorization form text to use if text isn't available for a specific language.<br>This is a relationship field.<br>**Relationship Name**<br>DefaultAuthFormText<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AuthorizationFormText |
| `EffectiveFromDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date when the authorization form takes effect. |
| `EffectiveToDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The date when the authorization form is no longer in effect. |
| `IsSignatureRequired` | **Type**<br>boolean |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the authorization form requires a signature. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. The name of the authorization form. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner of the account associated with this customer.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup |

| Field Name | Details |
| --- | --- |
| | **Refers To**<br>Group, User |
| `RevisionNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The revision number of the authorization form. For example, "rev1.21." |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**AuthorizationFormChangeEvent (API version 61.0)**
Change events are available for the object.

**AuthorizationFormHistory**
History is available for tracked fields of the object.

**AuthorizationFormOwnerSharingRule**
Sharing rules are available for the object.

**AuthorizationFormShare**
Sharing is available for the object.

# AuthorizationFormConsent

Represents the date and way in which a user consented to an authorization form. This object is available in API version 46.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available if Data Protection and Privacy is enabled.

## Fields

| Field Name | Details |
| --- | --- |
| `AuthorizationFormTextId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The authorization form text that the Individual consented to.<br>This is a relationship field.<br>**Relationship Name**<br>AuthorizationFormText<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AuthorizationFormText |
| `ConsentCapturedDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Required. The date and time that consent was given. |
| `ConsentCapturedSource` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable Sort, Update<br>**Description**<br>Required. The source through which consent was captured. For example, user@example.com, www.example.com. |
| `ConsentCapturedSourceType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Required. The source type through which consent was captured. For example, phone, email, or website. |
| `ConsentGiverId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The ID of the person consenting to the authorization form. |

| Field Name | Details |
| --- | --- |
| | This is a polymorphic relationship field.<br>**Relationship Name**<br>ConsentGiver<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, CareProgramEnrollee, Contact, Individual, User |
| `DocumentVersionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the document version for which consent is given.<br>This is a relationship field.<br>**Relationship Name**<br>DocumentVersion<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentVersion |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. The name of the authorization form consent. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Required. The ID of the owner of the account associated with this customer.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `RelatedRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of a record showing consent of an authorization form.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>RelatedRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Visit |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The status of the authorization form.<br>Possible values are: |

| Field Name | Details |
| --- | --- |
| | • `Rejected`<br>• `Seen`<br>• `Signed` |
| `PartyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>This field was removed in API version 47.0. Use `ConsentGiverId` instead. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AuthorizationFormConsentChangeEvent (API version 47.0)**
Change events are available for the object.

**AuthorizationFormConsentHistory**
History is available for tracked fields of the object.

**AuthorizationFormConsentOwnerSharingRule**
Sharing rules are available for the object.

**AuthorizationFormConsentShare**
Sharing is available for the object.

# AuthorizationFormDataUse

Represents the data use consented to in an authorization form. This object is available in API version 46.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available if Data Protection and Privacy is enabled.

# Fields

| Field Name | Details |
| --- | --- |
| `AuthorizationFormId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The ID of the associated authorization form record.<br>This is a relationship field.<br>**Relationship Name**<br>AuthorizationForm<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AuthorizationForm |
| `DataUsePurposeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. Identifies the data use purpose record associated with the authorization form.<br>This is a relationship field.<br>**Relationship Name**<br>DataUsePurpose<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>DataUsePurpose |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. The name of the authorization form data use. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the owner of the account associated with this customer.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

# Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**AuthorizationFormDataUseChangeEvent (API version 62.0)**
Change events are available for the object.

**AuthorizationFormDataUseHistory**
History is available for tracked fields of the object.

**AuthorizationFormDataUseOwnerSharingRule**
Sharing rules are available for the object.

**AuthorizationFormDataUseShare**
Sharing is available for the object.

# AuthorizationFormText

Represents an authorization form's text and language settings. This object is available in API version 46.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available if Data Protection and Privacy is enabled.

## Fields

| Field Name | Details |
|---|---|
| `AuthorizationFormId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. The ID of the associated authorization form record.<br>This is a relationship field.<br>**Relationship Name**<br>AuthorizationForm<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AuthorizationForm |
| `ContentDocumentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the ContentDocument that provides the authorization form's text.<br>This is a relationship field.<br>**Relationship Name**<br>ContentDocument<br>**Relationship Type**<br>Lookup |

| Field Name | Details |
| --- | --- |
| | **Refers To**<br>ContentDocument |
| `DetailAuthorizationFormText` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A detailed version of the authorization form. |
| `FullAuthorizationFormUrl` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The URL where the full text of the authorization form is located. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Locale` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The combined language and locale ISO code that control the language of the authorization form text. `Locale` and `LocaleSelection` have the same function. |

| Field Name | Details |
| --- | --- |
| | Note: `Locale` can contain custom values not included in the picklist if added before version 47.0. |
| `LocaleSelection` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The combined language and locale ISO code that control the language of the authorization form text. `Locale` and `LocaleSelection` have the same function. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. The name of the authorization form text. |
| `SummaryAuthFormText` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A shortened version of the authorization form that is displayed to the user. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**AuthorizationFormTextChangeEvent (API version 61.0)**
Change events are available for the object.

**AuthorizationFormTextHistory**
History is available for tracked fields of the object.

# AuthProvider

Represents an authentication provider (auth provider). An auth provider lets users log in to your Salesforce org from an external service provider, such as Facebook, Google, or GitHub. This object is available in API version 27.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Only users with Customize Application and Manage AuthProviders permissions can access this object.

## Fields

| Field Name | Details |
|---|---|
| `AppleTeam` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required when using Apple as a third-party authentication provider. A 10-character team ID, obtained from an Apple developer account. Available in API version 48.0 and later. |
| `AuthorizeUrl` | **Type**<br>url<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Required when creating an OpenID Connect authentication provider. The OAuth authorization endpoint URL. Available in API version 29.0 and later. In API version 33.0 and later, for Salesforce-managed auth providers, leave the field blank to let Salesforce supply and manage the value. |
| `ConsumerKey` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The app's key that is registered at the third-party (external) authentication provider. In API version 33.0 and later, for Salesforce-managed auth providers, leave the field blank to let Salesforce supply and manage the value. |
| `ConsumerSecret` | **Type**<br>string<br>**Properties**<br>Create, Nillable |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The consumer secret of the authentication provider that is registered at the third-party SSO provider. It's used by the consumer for identification to Salesforce. In API version 33.0 and later, for Salesforce-managed auth providers, leave the field blank to let Salesforce supply and manage the value. You can create your own consumer secret on `create()`. However, after you set it, you can't change the value. |
| `CustomMetadataTypeRecord` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required when creating a custom authentication provider plug-in. The API name of the custom authentication provider. Available in API version 36.0 and later. |
| `DefaultScopes` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>For OpenID Connect authentication providers, the scopes to send with the authorization request, if not specified when a flow starts. Available in API version 29.0 and later. In API version 33.0 and later, for Salesforce-managed auth providers, leave the field blank to let Salesforce supply and manage the value. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. Used when referring to the authentication provider from a program. |
| `EcKey` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required when using Apple as a third-party authentication provider. Available in API version 48.0 and later. |

| Field Name | Details |
| --- | --- |
| `ErrorUrl` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A custom error URL for the authentication provider to use to report errors. |
| `ExecutionUserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Required to specify a registration handler. The username of the Salesforce admin or system user who runs the Apex handler or flow. The execution user provides the context in which the registration handler runs. For example, if the handler creates a contact, the creation can be easily traced back to the registration process. In production, use a system user. The user must have the Manage Users permission. Available in API version 27.0 and later. |
| `FlowDefaultAccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>For authentication providers that use a flow registration handler, the default account that new external users are assigned to. If you include this field, Salesforce automatically uses it for the `defaultAccountId` variable in the Authentication Provider User Registration standard flow.<br>A default account is required to use a flow registration handler for external users. You can specify a default account here or in the flow itself. If you use both, the default account that's configured in the flow takes precedent.<br>Available in API version 64.0 and later. |
| `FlowDefaultProfileId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>For authentication providers that use a flow registration handler, the default profile that new users are assigned to. If you include this field, Salesforce automatically uses it for the `defaultProfileId` variable in the Authentication Provider User Registration standard flow. |

| Field Name | Details |
| --- | --- |
| | A default profile is required to use a flow registration handler. You can specify a default profile here or in the flow itself. If you use both, the default profile that's configured in the flow takes precedent.<br>Available in API version 64.0 and later. |
| `FriendlyName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. A user-friendly name for the authentication provider. |
| `IconUrl` | **Type**<br>url<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The path to an icon to use as a button on the login page. Users click the button to log in with the associated authentication provider, such as Twitter or Facebook. Available in API version 32.0 and later. |
| `IdTokenIssuer` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The source of the authentication token in `https:` URI format. This field is available when configuring an OpenID Connect or Microsoft authentication provider. If provided, Salesforce validates the returned `id_token` value. OpenID Connect requires returning an `id_token` value with the `access_token` value. Available in API version 30.0 and later. |
| `LinkKickoffUrl` | **Type**<br>url<br>**Properties**<br>Nillable<br>**Description**<br>The URL for linking existing Salesforce users to a third-party account. This field is read-only. Available in API version 43.0 and later. |
| `LogoutUrl` | **Type**<br>url |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The destination for users after they log out if they authenticated using single sign-on. The URL must be fully qualified with an http or https prefix, such as `https://acme.my.salesforce.com`. Available in API version 33.0 and later. |
| `OauthKickoffUrl` | **Type**<br>url<br>**Properties**<br>Nillable<br>**Description**<br>The URL for obtaining OAuth access tokens for a third party. This field is read-only. Available in API version 43.0 and later. |
| `OptionsIncludeOrgIdInId` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Used to differentiate between users with the same user ID from two sources (such as two sandboxes). If enabled (`true`), Salesforce stores the org ID of the third-party identity in addition to the user ID. After you enable this setting, you can't disable it. Applies only to a Salesforce-managed auth provider. Available in API version 32.0 and later. |
| `OptionsIsPkceEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>If set to `true`, the authentication provider uses the OAuth 2.0 Proof Key for Code Exchange (PKCE) extension, which improves the security of the provider's authorization flow. This field applies only to these `providerType` values:<br>• `Custom`<br>• `Facebook`<br>• `Google`<br>• `Microsoft`<br>• `OpenIdConnect`<br>• `Salesforce`. |

| Field Name | Details |
| --- | --- |
| | This field is available in API version 59.0 and later. |
| `OptionsRequireMfa` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Requires multi-factor authentication (MFA) for single sign-on with this auth provider based on the MFA status of each user. For this setting to trigger MFA, you must apply MFA directly to users via one of two methods. 1) Assign the user permission Multi-Factor Authentication for User Interface Logins. 2) Enable the org setting Require multi-factor authentication (MFA) for all direct UI logins to your Salesforce org. |
| `OptionsSendAccessTokenInHeader` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>If enabled (`true`), the access token is sent to the `UserInfoUrl` in a header instead of a query string. Available in API version 30.0 and later. |
| `OptionsSendClientCredentialsInHeader` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Required when creating an OpenID Connect authentication provider. If enabled (`true`), the client credentials are sent in a header to the `tokenUrl` instead of a query string. The credentials are in the standard OpenID Connect Basic Credentials header format, which is `Basic <token>`, where `<token>` is the base64-encoded string `"clientkey:clientsecret"`. Available in API version 30.0 and later. |
| `OptionsSendSecretInApis` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Determines whether the encrypted consumer secret appears in API responses. If enabled (default), the secret appears in the response. If disabled (`false`), |

| Field Name | Details |
| --- | --- |
| | responses don't include the consumer secret. For security, you can disable the setting. However, keep in mind that:<br>• By disabling this setting, the consumer secret is excluded from API responses in all API versions.<br>• Change sets and other metadata deployments break because both the consumer key and secret are expected. To fix this problem, insert the consumer key manually during deployment.<br>Available in API version 47.0 and later. |
| `PluginId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An existing Apex class that extends the `Auth.AuthProviderPluginClass` abstract class. Available in API version 39.0 and later. |
| `ProviderType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Required. The third-party authentication provider to use. Valid values include:<br>• `Apple`. Available in API version 48.0 and later.<br>• `Bitbucket`—Provides authentication for a `Bitbucket` provider. Enables you to connect to Bitbucket from a Lightning Platform application. When logged in to Bitbucket, the app can makes calls to Bitbucket APIs. The `Bitbucket` provider isn't available as an SSO provider, so users can't log in to a Salesforce org using their Bitbucket login credentials. Available in API version 61.0 and higher.<br>• `Custom`—A provider configured with a custom authentication provider plug-in. Available in API version 36.0 and later.<br>• `Facebook`.<br>• `GitHub`—Provides authentication for a `GitHub` provider. Used to log in users of your Lightning Platform app to GitHub using OAuth. When logged in to GitHub, your app can make calls to GitHub APIs. The `GitHub` provider isn't available as an SSO provider, so users can't log in to your Salesforce org using their GitHub login credentials. Available in API version 35.0 and later.<br>• `Google`.<br>• `Janrain`.<br>• `LinkedIn`. Available in API version 32.0 and later. |

| Field Name | Details |
| --- | --- |
| | • `Microsoft`. Provides authentication for all services that can be accessed via Microsoft Azure Active Directory. Available in API version 55.0 and later.<br>• `MicrosoftACS`—Microsoft Access Control Service provides authentication for a Microsoft Office 365 service, like SharePoint Online. The `MicrosoftACS` provider doesn't support SSO. Available in API version 31.0 and later.<br>• `OpenIdConnect`. Available in API version 29.0 and later.<br>• `Salesforce`.<br>• `Slack`. Available in API version 54.0 and later.<br>• `Twitter`. Available in API version 32.0 and later. |
| `RegistrationHandlerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An existing Apex class that implements the `Auth.RegistrationHandler` interface. |
| `SsoKickoffUrl` | **Type**<br>url<br>**Properties**<br>Nillable<br>**Description**<br>The URL for performing SSO into Salesforce from a third party by using its third-party credentials. This field is read-only. Available in API version 43.0 and later. |
| `TokenUrl` | **Type**<br>url<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The OAuth token endpoint URL of an OpenID Connect authentication provider. Available in API version 29.0 and later. In API version 33.0 and later, for Salesforce-managed auth providers for sandbox use cases only, leave the field blank to let Salesforce supply and manage the value. |
| `UserInfoUrl` | **Type**<br>url<br>**Properties**<br>Create, Filter, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The OpenID Connect endpoint URL of the OpenID Connect authentication provider. Available in API version 29.0 and later. In API version 33.0 and later, for Salesforce-managed auth providers, leave the field blank to let Salesforce supply and manage the value. |

# AuthProvParamFwdAllowlist

Represents an allowlisted URL parameter that can be forwarded from authentication provider client configuration URLs to the authorization URL. Use this type to add custom functionality to authentication providers. For example, allowlist a `ui_locales` parameter and use it to send a user's language preference from Salesforce to the third-party provider's login page. This object is available in API version 62..0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `AuthProviderId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the authentication provider associated with the allowlist.<br>This field is a relationship field.<br>**Relationship Name**<br>AuthProvider<br>**Refers To**<br>AuthProvider |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A description for the allowlisted URL parameter. |

| Field | Details |
| --- | --- |
| `Param` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the parameter, such as `ui_locales` or `login_hint`. |

# AuthSession

The AuthSession object represents an individual user session in your organization. This object is available in versions 29.0 and later.

## Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
| --- | --- |
| `CreatedDate` | **Type**<br>dateTime<br>**Properties**<br>Defaulted on create, Filter, Sort<br>**Description**<br>The date and time this session was created. This field is a standard system field. |
| `Id` | **Type**<br>id<br>**Properties**<br>Defaulted on create, Filter, Group, ID Lookup, Sort<br>**Description**<br>The current session's ID. |
| `IsAssociatedWithJwtAccessToken` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `true`, the session is associated with a JSON Web Token (JWT)-based access token. This field is available in API version 64.0 and later. |

| Field Name | Details |
| --- | --- |
| `IsCurrent` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If `true`, the session is a member of the user's current session family. This field is available in API version 37.0 and later. |
| `LastModifiedDate` | **Type**<br>dateTime<br>**Properties**<br>Defaulted on create, Filter, Sort<br>**Description**<br>The date and time this session was last updated. A session expires when the current date and time equals `LastModifiedDate` + `NumSecondsValid`. This field is a standard system field. |
| `LoginGeoId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 18-character ID for the record of the geographic location of the user for a login event. Due to the nature of geolocation technology, the accuracy of geolocation fields (for example, country, city, postal code) can vary. This field is available in API version 34.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>LoginGeo<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>LoginGeo |
| `LoginHistoryId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 18-character ID for a successful login event. When a session is reused, Salesforce updates the `LoginHistoryId` with the value from the most recent login. This field is available in API version 33.0 and later. |

| Field Name | Details |
| --- | --- |
| | This is a relationship field.<br>**Relationship Name**<br>LoginHistory<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>LoginHistory |
| `LoginType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of login used to access the session. Possible values are:<br>• `AJAX Toolkit`<br>• `Apex Office Toolkit`<br>• `AppExchange`<br>• `Application`<br>• `AppStore`<br>• `Certificate-based login`<br>• `Chatter Communities External User`<br>• `Chatter Communities External User Third Party SSO`<br>• `Community`<br>• `Customer Service Portal Third-Party SSO`<br>• `Customer Service Portal`<br>• `DataJunction`<br>• `DB Replication`<br>• `Employee Login to Community`<br>• `Excel Integration`<br>• `Help and Training`<br>• `HOTP YubiKey`<br>• `Lightning Login`<br>• `Networks Portal API Only`<br>• `Offline Client`<br>• `Order Center`<br>• `Other Apex API`<br>• `Outlook Integration`<br>• `Partner Portal Third-Party SSO`<br>• `Partner Portal` |

| Field Name | Details |
| --- | --- |
| | • Partner Product<br>• Passwordless Login<br>• Remote Access 2.0<br>• Remote Access Client<br>• Sales Anywhere<br>• Salesforce Outlook Integration<br>• Salesforce.com Website<br>• SAML Chatter Communities External User SSO<br>• SAML Customer Service Portal SSO<br>• SAML Idp Initiated SSO<br>• SAML Partner Portal SSO<br>• SAML Sfdc Initiated SSO<br>• SAML Site SSO<br>• Self-Service<br>• Signup<br>• Sync<br>• SysAdmin Switch<br>• Third Party SSO<br>• Unknown<br>• Validate |
| LogoutUrl | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The page or view to display after users log out of an Experience Cloud site, or an org if they authenticated using SAML. This field is available in API version 32.0 and later. |
| NumSecondsValid | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of seconds before the session expires, starting from the last update time. |
| ParentId | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 18-character ID for the parent session, if one exists (for example, if the current session is for a canvas app). If the current session doesn't have a parent, this value is the current session's own ID. |
| `SessionSecurityLevel` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Standard or High, depending upon the authentication method used. |
| `SessionType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of session. Common ones are UI, Content, API, and Visualforce.<br>For more information, see User Session Types in the *Object Reference Guide*. |
| `SourceIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>IP address of the end user's device from which the session started. This address can be an IPv4 or IPv6 address.<br>The `SourceIp` field doesn't support the `LIKE` comparison operator. |
| `UserType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The kind of user for this session. Types include Standard, Partner, Customer Portal Manager, High Volume Portal, and CSN Only. |
| `UsersId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's Salesforce user ID.<br>This is a relationship field.<br>**Relationship Name**<br>Users<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

## Usage

The AuthSession object exposes session data and enables read and delete operations on that data. For example, use this object to see who is signed in to your org. Or you can use this object to create a tool to delete a session, ending that user's session. For a user, only their own sessions are available, while administrators can see all sessions.

You can't change user sessions with this object. You can only read and delete them.

# AutomatedAction

Represents the configuration of an automated action, such as a workflow rule. This object is available in API version 57.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `ApiVersion` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Required. API version to use for executing the automated action. |

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Description of the automated action. |
| `ErrorDetail` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The source of the error encountered when executing the automated action.<br>Possible values are:<br>• `invalidCondition`<br>• `invalidConditionReference`<br>• `invalidConditionValue`<br>• `invalidInvocableAction`<br>• `invalidInvocableActionParam`<br>• `invalidReferenceEntity`<br>• `unknownError` |
| `ErrorMessage` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A description of the error encountered when executing the automated action. |
| `EvalType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>When the automated action runs.<br>Possible values are:<br>• `OnCreate`<br>• `OnCreateAndUpdate` |

| Field | Details |
| --- | --- |
| `ExecutionType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Whether the action runs automatically or generates a reminder.<br>Possible values are:<br>• `Automatic`<br>• `Reminder` |
| `ExtraFilterExpression` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Additional condition logic for cross-object filters. |
| `ExtraFilterType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Additional criteria for cross-object filters.<br>Possible values are:<br>• `Advanced`<br>• `And`<br>• `Or` |
| `FilterExpression` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If `FilterType` is `Advanced`, this field contains the condition logic. |
| `FilterType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Criteria for filters.<br>Possible values are:<br>• `Advanced`<br>• `And`<br>• `Or` |
| `InvocationName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Invocable action to execute. |
| `IsLocked` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the automated action record is locked or not.<br>The default value is `false`. |
| `LastEditedDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The timestamp when the automated action had a change that impacted rule evaluation. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record was likely referenced (`LastReferencedDate`) and not viewed. |
| `MayEdit` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the automated action record can be edited or not.<br>The default value is `false`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the automated action. |
| `ReferenceEntity` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Entity on which the automated action operates. |
| `RuleType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of workflow rule.<br>Possible values are:<br>• `ManagerAssigned`<br>• `ManagerSubscribed`<br>• `Personal` |
| `State` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The status of the alert.<br>Possible values are:<br>• `Active`<br>• `Error`<br>• `Inactive` |
| `SubscriptionState` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>For users who don't have an override, the default value of the subscription.<br>Possible values are:<br>• `Active`<br>• `Inactive` |
| `Summary` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>A human-readable explanation of the automated action, its conditions, and its parameters. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AutomatedActionOwnerSharingRule on page 65**
Sharing rules are available for the object.

**AutomatedActionShare on page 67**
Sharing is available for the object.

# AutomatedActionCondition

Represents the logical operator details for evaluating conditions in an automated action. This object is available in API version 57.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `AutomatedActionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the automated action.<br>This field is a relationship field.<br>**Relationship Name**<br>AutomatedAction<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AutomatedAction |
| `ConditionNumber` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Reference number of the condition containing advanced filter logic. |
| `IsLocked` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the automated action condition record is locked or not.<br>The default value is `false`. |
| `MayEdit` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the automated action condition record can be edited or not.<br>The default value is `false`. |
| `Operator` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The logical operator for this condition.<br>Possible values are:<br>• `Contains`<br>• `EndsWith`<br>• `Equal`<br>• `GreaterThan`<br>• `GreaterThanOrEqual`<br>• `IsChanged`<br>• `IsNull`<br>• `LessThan`<br>• `LessThanOrEqual`<br>• `NotEqual`<br>• `StartsWith` |
| `ReferenceField` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The field to use for this condition. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of condition.<br>Possible values are:<br>• `ExtraFilterCondition`<br>• `PrimaryFilterCondition` |

| Field | Details |
| --- | --- |
| `Value` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The value to compare to the `ReferenceField`. |

# AutomatedActionOverride

Represents a modified attribute of a shared automated action. For example, the modified attribute can contain customizations for your business. This object is available in API version 58.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `FieldName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The name of the field to override. |
| `IsLocked` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the automated action override record is locked or not.<br>The default value is `false`. |
| `IsRelatedRecordOverridable` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the parent automated action record can be overridden.<br>The default value is `false`. |
| `MayEdit` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the automated action override record can be edited or not.<br>The default value is `false`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Name of the automated action. |
| `RelatedRecordApiName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The object name of the `RelatedRecordId`.<br>This field is a calculated field. |
| `RelatedRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the automated action.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>RelatedRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AutomatedAction, FtestUser |

| Field | Details |
|---|---|
| `Value` | **Type**<br>textarea<br>**Properties**<br>Create, Update<br>**Description**<br>The overridden value used for `FieldName`. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AutomatedActionOverrideOwnerSharingRule on page 65**
Sharing rules are available for the object.

**AutomatedActionOverrideShare on page 67**
Sharing is available for the object.

# AutomatedActionParameter

Represents the values or field references evaluated by the automated action. This object is available in API version 57.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `AutomatedActionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the automated action.<br>This field is a relationship field.<br>**Relationship Name**<br>AutomatedAction<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>AutomatedAction |
| `DataType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The data type of the value or field reference value.<br>Possible values are:<br>• `Boolean`<br>• `Double`<br>• `Int`<br>• `None`<br>• `String`<br>• `ValueList` |
| `IsLocked` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the automated action parameter record is locked or not.<br>The default value is `false`. |
| `MayEdit` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the automated action parameter record can be edited or not.<br>The default value is `false`. |
| `ParameterName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The name of the invocable action parameter the value maps to. |

| Field | Details |
| --- | --- |
| `ReferenceField` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The reference to the field that's resolved at runtime. For example, LeadID. If `Value` has a value, this field is null. |
| `Value` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The value to be passed to the invocable action parameter at runtime. If `ReferenceField` has a value, this field is null. |

# AutomatedActionReminder

Represents a reminder to the end user to take an action in the future. This object is available in API version 58.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `ActionTakenDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Timestamp of when the user took the action suggested by the reminder. |
| `AutomatedActionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the automated action.<br>This field is a relationship field.<br>**Relationship Name**<br>AutomatedAction<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>AutomatedAction |
| `IsLocked` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the automated action reminder record is locked or not.<br>The default value is `false`. |
| `IsValidForUser` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the automated action is active and accessible to the user who owns the record (`true`) or not (`false`).<br>The default value is `false`. |
| `MayEdit` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the automated action reminder record can be edited or not.<br>The default value is `false`. |
| `ReferenceRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The record that triggered the reminder. For example, when a rule is set to Case, the value of this field is `CaseId`.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ReferenceRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Case, Contact, Invoice, Lead, Opportunity |
| `StartDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The date and time this reminder is scheduled to be displayed to the user. |
| `State` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The status of the reminder.<br>Possible values are:<br>• `Active`<br>• `Completed`<br>• `Disabled`<br>• `Dismissed`<br>• `Expired` |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of automated action reminder.<br>Possible values are:<br>• `Reminder` |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**AutomatedActionReminderOwnerSharingRule on page 65**
Sharing rules are available for the object.

**AutomatedActionReminderShare on page 67**
Sharing is available for the object.

# BackgroundOperation

Represents a background operation in an asynchronous job queue. This object is available in API version 35.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `retrieve()`

## Special Access Rules

- BackgroundOperation doesn't support search.

## Fields

| Field Name | Details |
|---|---|
| `Error` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The error message for the operation. Applies only if the operation has an error status. |
| `ExecutionGroup` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Applies only if the operation is merged with other operations into an execution group to be processed in bulk. Identifies the execution group. |
| `ExpiresAt` | **Type**<br>dateTime |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>After this time, the operation is removed from the asynchronous job queue. Applies only if the operation has a status of complete, canceled, error, or merged. |
| `FinishedAt` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>When the operation reached the status of completed or error. |
| `GroupLeaderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Applies only if the operation is merged with other operations into an execution group to be processed in bulk. Identifies the operation that's selected as the leader of the execution group.<br>This is a relationship field.<br>**Relationship Name**<br>GroupLeader<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BackgroundOperation |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Identifies the background operation. |
| `NumFollowers` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>Applies only if the operation is merged with other operations into an execution group to be processed in bulk. Number of other operations that are in the execution group. |
| `ParentKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>Tag that identifies related sets of operations, if any. |
| `ProcessAfter` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The operation is scheduled to be processed after this time. |
| `RetryBackoff` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Applies only if the operation has an error status. The first retry is attempted immediately. Each subsequent retry is increasingly delayed according to an exponential expression that's multiplied by the `RetryBackoff`, in milliseconds.<br>Specifically, the delay time is $(2^n-1)\times R$, where `n` is the `RetryCount`, and `R` is the `RetryBackoff`.<br>The default value for `RetryBackoff` depends on the type of operation. For example, the `RetryBackoff` default for write operations on external objects is 1,000 milliseconds. For write operations, retries are attempted immediately, after 3 seconds, after 7 seconds, after 15 seconds, and so on. |
| `RetryCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number of attempted retries. Applies only if the operation has an error status. |

| Field Name | Details |
| --- | --- |
| `RetryLimit` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Maximum number of retries to attempt. Applies only if the operation has an error status. |
| `SequenceGroup` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Identifies the sequence group. Applies only if the operation is merged with other operations into an execution group to be processed in bulk. Within an execution group, operations can be placed into a sequence group to be executed in a specific order. |
| `SequenceNumber` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Order position within the sequence group. Applies only if the operation is merged with other operations into an execution group to be processed in bulk. Within an execution group, operations can be placed into a sequence group to be executed in a specific order. |
| `StartedAt` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>When the operation started running. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Status of the background operation. The options are: |

| Field Name | Details |
| --- | --- |
| | • New<br>• Scheduled<br>• Canceled<br>• Merged<br>• Waiting<br>• Running<br>• Error<br>• Complete |
| SubmittedAt | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>When the operation was added to the job queue. |
| Timeout | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Maximum time in milliseconds to wait for results after the operation started running. |
| Type | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Type of the background operation. The options are:<br>• ApiCatalogPoller<br>• BlockchainEventPoller<br>• CdpMetadataDeploy<br>• ExternalChangeDataCapture<br>• ExternalConnectivityPoller<br>• ExternalObject<br>• ExternalObjectSync<br>• ExternalServiceCallback<br>• MetadataChangesetOperation<br>• MfgBulkUpdate |

| Field Name | Details |
| --- | --- |
| | • `SingularityAutoSync`<br>• `SingularityMDSSubsetSync`<br>• `SiteTaskCreate`<br>• `SiteTaskPublish`<br>• `Sweeper`<br>• `WebCart`<br>• `XClean` |
| `WorkerUri` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Nillable, Sort<br>**Description**<br>URI of the worker that performed the operation.<br>Example for a Salesforce Connect OData operation:<br>`services/data/v35.0/xds/upsert` |

## Usage

The BackgroundOperation object lets you:

- Monitor the job status of asynchronous operations.
- View errors that are related to the asynchronous operations.
- Extract statistics for the asynchronous job queue.

# BackgroundOperationResult

Stores error messages generated when or importing data into big objects using Bulk API. This is a big object, available in API version 37.0 and later.

Each instance of `BackgroundOperationResult` represents one error. The `Message` field stores the text of the error message. The `ParentID` field stores the:

- Batch ID for the data import, in case of Bulk API

Bulk API validates data at the time of import, and generates an error message for the first occurrence of invalid data in any row of the data file. The validation performed depends on the type of data being imported.

- **Text**—The length of the input string must be less than or equal to the length of the corresponding text field in the target object.
- **Number**—The input data must be a number, whose scale and precision are compatible with the corresponding number field in the target object.
- **ID—**The input data must be a valid 15- or 18-character ID.
- **DateTime**—The input data must be a valid dateTime value, in the approved format.

- **Lookup**—The lookup value must be a valid 15- or 18-character ID.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

| Field Name | Details |
| --- | --- |
| `CreatedById` | **Type**<br>ID<br>**Properties**<br>Nillable<br>**Description**<br>The user ID of the user initiating the Bulk API request. |
| `CreatedDate` | **Type**<br>dateTime<br>**Properties**<br>Defaulted on create<br>**Description**<br>The date and time at which the Bulk API request was made. |
| `Data` | **Type**<br>string<br>**Properties**<br>Nillable<br>**Description**<br>The data that generated the error message. The total length is limited to 2,000 characters, and each column can occupy a maximum of 50 characters. Any data exceeding those limits is truncated. |
| `Id` | **Type**<br>ID<br>**Properties**<br>Defaulted on create, idLookup<br>**Description**<br>The ID of the error message. |
| `Message` | **Type**<br>string<br>**Properties**<br>Nillable |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The text of the error message. |
| `MessageType` | **Type**<br>picklist<br>**Properties**<br>Nillable, Restricted picklist<br>**Description**<br>The type of error message. The possible values are: ERROR, WARNING, or INFO. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Filter, Sort<br>**Description**<br>The batch ID in Bulk API. |

## Usage

You can check for errors by querying the `BackgroundOperationResult` object. For example, this query returns details of all errors in a data file imported using Bulk API, whose batch ID is `751xx000000006OAAQ`.

```
SELECT CreatedbyId, CreatedDate, Id, Message, MessageType, ParentId FROM
BackgroundOperationResult WHERE ParentId = "751xx000000006OAAQ"
```

Note: You can only view errors resulting from Bulk API requests that you initiated, unless you have the global permission to view all data.

# BatchApexErrorEvent

The documentation has moved to BatchApexErrorEvent in the *Platform Events Developer Guide*.

# BillingBatchScheduler

Represents a scheduled processing job that triggers recurring invoice batch runs and payment batch runs in Subscription Management. This object is available in API version 55.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

## Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
|---|---|
| `BillingSchedulerName` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Name of the scheduler. |
| `Comments` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Optional field for comments about the scheduler. |
| `CronExpression` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Determines how often the scheduler recurs. |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The date when the scheduler stops triggering batch processing jobs. |
| `FrequencyCadence` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates how often the scheduler triggers the invoice batch run or the payment batch run.<br>Possible values are:<br>• `Daily`—The scheduled job recurs every day.<br>• `Monthly`—The scheduled job recurs every month.<br>• `Once`—The scheduled job occurs one time and doesn't recur.<br>• `Weekly`—The scheduled job recurs every week. |
| `FrequencyOptions` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>Derived field that stores the scheduler configuration. |
| `JobType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Indicates the type of batch processing job that the scheduler triggers.<br>Possible values are:<br>• `Invoice`—The scheduler starts a batch invoice run.<br>• `Payment`—The scheduler starts a batch payment run. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |

| Field | Details |
| --- | --- |
| `NextRunTime` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and timestamp of the next scheduled batch invoice run or batch payment run are shown in the user's time zone. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the user who created the scheduler.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `RecurringSubType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Specifies the frequency at which the batch processing job recurs when the `FrequencyCadence` is set to *Monthly*.<br>Possible values are:<br>• `Every`—The processing job recurs at every instance of the frequency of the value. For example, if the `RecurringSubType` is *`Every`* and the `FrequencyCadence` is *`Weekly`*, then the batch processing job recurs every week.<br>• `SpecificDate`—The scheduler triggers the batch processing job on the selected date. For example, if the selected date is *`5`*, and the `FrequencyCadence` is *`Monthly`*, then the job recurs on the fifth day of each month. |
| `RecurringType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Specifies the frequency at which the batch processing job is repeated when the `FrequencyCadence` is set to *Weekly*.<br>Possible values are:<br>• `Every` |
| `RecursOn` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Specifies the interval at which the scheduler triggers a batch processing job.<br>If the FrequencyCadence is *`Monthly`*, you must select either the specific date or the interval when the schedule triggers the job.<br>Possible values are:<br>• `First`<br>• `Fourth`<br>• `Last`<br>• `Second`<br>• `Third`<br>**Example:** To tell the scheduler to trigger the job on the first Monday of the month, set the following fields:<br>• `FrequencyCadence=`*`Monthly`*<br>• `RecursOn=`*`First`*<br>• `RecursOnDay=` *`Monday`* |
| `RecursOnDate` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Specifies the date on which the scheduler triggers a batch processing job.<br>**Example:** To tell the scheduler to trigger the job on the fifth day of the month, set the following fields:<br>• `FrequencyCadence=`*`Monthly`*<br>• `RecursOnDate=`*`5`*<br>**Example:** To tell the scheduler to trigger the job on the second to last day of the month, set the following fields:<br>• `FrequencyCadence=`*`Monthly`* |

| Field | Details |
| --- | --- |
| | • `RecursOnDate=SecondToLast`<br>If you select `Last`, `SecondToLast`, or `ThirdToLast`, the date of the batch processing job varies depending on the number of days in the month.<br>For example, suppose `SecondToLast` is selected. If the month has 30 days, such as June, then the batch processing job occurs on the 28th day. If the month has 31 days, such as July, then the batch processing job occurs on the 29th day. |
| `RecursOnDay` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Specifies the day on which the scheduler triggers a batch processing job.<br>If the `FrequencyCadence` field is set to `Weekly`, then you must select the day when the scheduler runs. The scheduler recurs every week on the selected day; for example, weekly on Monday.<br>Possible values are:<br>• `Sunday`<br>• `Monday`<br>• `Tuesday`<br>• `Wednesday`<br>• `Thursday`<br>• `Friday`<br>• `Saturday` |
| `RunCriteriaId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the filter criteria that's defined for the invoice batch run or the payment batch run.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>RunCriteria<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>InvoiceBatchRunCriteria, PaymentBatchRunCriteria |

| Field | Details |
| --- | --- |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The date when the scheduler triggers its first batch processing job. |
| `StartTime` | **Type**<br>time<br>**Properties**<br>Filter, Sort<br>**Description**<br>The time when the scheduler triggers the batch processing job. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The status of the scheduler. Only Active schedulers can trigger batch processing jobs.<br>Possible values are:<br>• `Active`<br>• `Canceled`<br>• `Draft`<br>• `Inactive` |
| `TimeZone` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The time zone is either the value selected when the run was configured, or it's the user's time zone. The time zone is shown in Greenwich Mean Time (GMT). |

# BillingPeriodItem

Represents one payment period for a subscription. The billing period item is used to pass billing information to an invoice line item in Subscription Management. This object is available in API version 55.0 and later.

When a billing schedule is invoiced, Subscription Management creates a billing period item to store the billing and payment information that's passed to an invoice line. Subscription Management next creates an invoice line for billing period items that match the invoice's

target date. One billing period item is created for each billing period in the billing schedule. For example, a one-year subscription that's billed quarterly creates a billing schedule with four billing period items.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

## Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
|---|---|
| `Amount` | **Type**<br>currency<br>**Properties**<br>Filter, Sort<br>**Description**<br>Price for the billing period item. Used to calculate the invoice line's Amount field. |
| `BillingPeriodEndDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Used to calculate the invoice line's end date. |
| `BillingPeriodItemNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>System-defined number that refers to the billing period item. |
| `BillingPeriodStartDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Used to calculate the invoice line's start date. |

| Field | Details |
| --- | --- |
| `BillingScheduleId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Parent billing schedule of the billing period item.<br>This field is a relationship field.<br>**Relationship Name**<br>BillingSchedule<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BillingSchedule |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Contains the ISO code for any currency allowed by the org. Available only for orgs with the multicurrency feature enabled. |
| `InvoiceBatchRunId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Parent invoice batch run of the billing period item.<br>This field is a relationship field.<br>**Relationship Name**<br>InvoiceBatchRun<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>InvoiceBatchRun |
| `InvoiceLineId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>This field looks up to the invoice line that's generated from the billing period item. This field is populated only when a billing period item is generated via an invoice batch run. Otherwise, this field is empty.<br>This field is a relationship field.<br>**Relationship Name**<br>InvoiceLine<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>InvoiceLine |
| `InvoiceStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Status of the invoice that contains the invoice line created from the billing period item.<br>Valid values are:<br>• `Canceled`—The invoice for this billing period item was canceled.<br>• `Draft`—The invoice has been created but hasn't been posted. Available in API version 60.0 and later.<br>• `DraftInProgress`—The invoice hasn't been created yet. When the invoice is created, the `InvoiceStatus` field value is changed to `Draft`. If the invoice generation process fails, the `InvoiceStatus` field value shows `DraftInProgress`. Available in API version 60.0 and later.<br>• `Error`—The invoice for this billing period item was generated in error.<br>• `Pending`—The invoice for this billing period item is being generated.<br>• `Posted`—An invoice line based on this billing period has been created and added successfully to the invoice.<br>• `PostingInProgress`—An invoice line based on this billing period has been created and is in the process of being added to the invoice. Available in API version 60.0 and later.<br>• `Voided`—An invoice line based on this billing period was voided.<br>• `VoidInProgress`—An invoice line based on this billing period is in the process of being voided. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Status of the billing period item. Draft billing period items aren't evaluated for invoice line creation.<br>Valid values are:<br>• `Canceled`<br>• `Draft`<br>• `Reviewed` |

# BillingPolicy

Represents a group of billing treatments, which define the rules for how to invoice a customer for an order item. This object is available in API version 55.0 and later.

Billing policies are related to products, which pass the policy on to the resulting order items. When an order is activated, Subscription Management assigns a billing treatment to each order item based on the values in the `BillingTreatmentSelection` field. Then Subscription Management uses the billing treatment to create billing schedules.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
| --- | --- |
| `BillingTreatmentSelection` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Defines how Subscription Management assigns billing treatments to order items and to assets related to the billing policy.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `Default`—The value specified in the DefaultBillingTreatmentId field is automatically applied to order items and assets.<br>• `Manual`—Users must specify the billing treatment that's applied to the order items and assets. |
| `DefaultBillingTreatmentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>When `BillingTreatmentSelection` has a value of `Default`, Subscription Management uses the selected billing treatment for all order items and assets related to the billing policy.<br>This field is a relationship field.<br>**Relationship Name**<br>DefaultBillingTreatment<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BillingTreatment |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Optional user-defined description that describes the billing policy. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Optional user-defined name for the billing policy. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The billing policy's status.<br>Possible values are:<br>• `Active`—Indicates that the billing policy is available for use on products.<br>• `Draft`—Indicates that the billing policy isn't available for use on products. Use this status when creating billing policies that aren't ready to be activated.<br>• `Inactive`—Indicates that the billing policy isn't available for use on products. |

# BillingSchedule

Stores the order item information used in the invoicing process. This object is available in API version 55.0 and later.

When you activate an order, Subscription Management creates one billing schedule for each order item in an order. For example, if an order contains 15 order items, Subscription Management creates 15 billing schedules, one billing schedule for each item. The invoice scheduler uses the information in the billing schedule to determine when it's time to invoice an order item.

Billing schedules for all order items that are generated from one asset are summarized in a billing schedule group.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

## Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

# Fields

| Field | Details |
| --- | --- |
| `BillDayOfMonth` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>An integer from 1 to 31 that indicates the day of the month. |
| `BilledAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total amount (excluding tax) that has been invoiced from the billing schedule.<br>This field is a calculated field. |
| `BillingAccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>This field is a relationship field.<br>**Relationship Name**<br>BillingAccount<br>**Refers To**<br>Account |
| `BillingPeriodAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount to be invoiced each billing period.<br>For example, if the billing period is monthly, this field shows the monthly amount that appears on the invoice line. |

| Field | Details |
| --- | --- |
| `BillingScheduleEndDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The last date that the billing schedule is available for invoicing. Inherited from the EndDate field on the order item. |
| `BillingScheduleGroupId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the billing schedule group that contains the billing schedule. Billing schedules are grouped when they have the same source order item. The source order item is the original order item that a customer bought. Afterwards, if the customer amends, cancels, or renews the order item, a new billing schedule is created with the BillingScheduleGroupId for the original order item.<br>This field is a relationship field.<br>**Relationship Name**<br>BillingScheduleGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BillingScheduleGroup |
| `BillingScheduleNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Autogenerated reference number for the billing schedule. |
| `BillingScheduleStartDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The date that the billing schedule is available for invoicing. Inherited from the ServiceDate on the order item. |

| Field | Details |
| --- | --- |
| `BilledThroughPeriod` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The last billing period that includes this date. |
| `BillingTreatmentItemId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The billing treatment item used to configure invoiceable amounts on the billing schedule.<br>This field is a relationship field.<br>**Relationship Name**<br>BillingTreatmentItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BillingTreatmentItem |
| `CancellationDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The date on which the subscriber can no longer access the service. For example, if a service ends on August 31, then the cancellation date is September 1, because that's the date when the subscriber can no longer use the service.<br>Subscription Management doesn't invoice billing schedules past their cancellation date. |
| `Category` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The business action represented by the billing schedule.<br>Possible values are:<br>• AmendQuantity—A billing schedule for an order that changes the quantity. This object is available in API version 56.0 and later.<br>• Cancellation—A billing schedule for an order that was canceled |

| Field | Details |
| --- | --- |
| | • Original—A billing schedule for the initial order<br>• Renewal—A billing schedule for an order that was renewed |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Three-letter ISO 4217 currency code associated with the invoice.<br>The default value is USD. |
| `InvoiceBatchRunId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The invoice batch run that evaluated this billing schedule and its billing period items to produce an invoice.<br>This field is a relationship field.<br>**Relationship Name**<br>InvoiceBatchRun<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>InvoiceBatchRun |
| `InvoiceRunBatch` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The batch value used by the invoice run that evaluated this billing schedule. During an invoice run, billing schedules with the same batch value (including null) are grouped to the same invoice run.<br>For example, create one batch of invoices for Premium Customers and another batch for Regular Customers.<br>Possible values are:<br>• Premium Customers<br>• Regular Customers |

| Field | Details |
| --- | --- |
| `NextBillingDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The date that the next billing period starts for the invoice. Used to calculate which invoice lines are included on an invoice. When an invoice scheduler or API evaluates an order for invoicing, billing schedules with a next billing date on or before the invoice's target date are included on the invoice. |
| `NextChargeFromDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The date that the billing schedule is invoiced in the upcoming billing period. For example, if you invoiced a customer for a billing period of 01/01/22 through 01/31/22, the billing schedule's `NextChargeFromDate` is 02/01/22. |
| `OriginalBillingScheduleId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If this billing schedule is an amended or canceled billing schedule, then this field shows the original billing schedule. Otherwise, this field is null.<br>This field is a relationship field.<br>**Relationship Name**<br>OriginalBillingSchedule<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BillingSchedule |
| `PendingAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount from the current billing term that hasn't been billed yet. For example, the unbilled amount for a month, quarter, or year, depending on this billing schedule's billing term. |

| Field | Details |
| --- | --- |
| Quantity | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The quantity of the order item that created the billing schedule. |
| ReferenceEntityId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The parent order of the order item that created the billing schedule.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ReferenceEntity<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Order |
| ReferenceEntityItemId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The order item or asset that created the billing schedule.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>ReferenceEntityItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderItem, OrderItemAdjustementLineTime, or OrderItemSummary |
| Status | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The state of the order item that the billing schedule represents. |

| Field | Details |
| --- | --- |
| | Possible values are:<br>• `CompletelyBilled`<br>• `Error`<br>• `Processing`<br>• `ReadyForInvoicing` |
| `TaxTreatmentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Shows the treatment used to calculate tax for the billing schedule. Defined based on the order item's tax policy.<br>This field is a relationship field.<br>**Relationship Name**<br>TaxTreatment<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>TaxTreatment |
| `TotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total amount of the order item represented by the billing schedule. |
| `UnitPrice` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The price for an individual unit of the billing schedule's parent order item, including charges, adjustments, and discounts. Inherited from the order item's `UnitPrice` field. |

# BillingScheduleGroup

Represents a consolidated view of all billing schedules related to the order items generated from one asset, including new orders and amendment orders. This object is available in API version 55.0 and later.

When an order is created, a billing schedule is generated for each order item. The billing schedule group summarizes fields from each billing schedule. For example, it summarizes financial fields such as Total Billed Amount and Total Pending Amount and billing fields such as Billing Day of Month and Billing Term.

The billing schedule group includes schedules generated from a new order item and schedules generated from amendment order items. The billing schedule group shows users the summarized financial data that includes any changes, such as new orders or amendments, made to the asset.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

## Special Access Rules

This object is available with Subscription Management, Commerce Subscriptions, and Billing (Revenue Cloud). If your org has both Subscription Management and Commerce Subscriptions, then Subscription Management takes precedence.

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
|---|---|
| `BillDayOfMonth` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The Billing Day of Month for the billing schedules that comprise the billing schedule group.<br>Subscription Management uses the order item's billing day of month to calculate the order item's next billing date, which the billing schedule then inherits. For example, an order item can be billed on the first day of the month. |
| `BillToContactId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The contact related to the billing schedule group.<br>This field can't be modified when related billing schedules are in processing.<br>This field is a relationship field.<br>**Relationship Name**<br>BillToContact |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `BillingAccountId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The Salesforce account for the billing schedule group.<br>This field is a relationship field.<br>**Relationship Name**<br>BillingAccount<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `BillingAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The compound form of the billing address. Read-only. See Address Compound Fields for details on compound address fields. |
| `BillingCity` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the billing address of this billing schedule group. Maximum size is 40 characters. |
| `BillingCountry` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the billing address of this billing schedule group. Maximum size is 80 characters. |

| Field | Details |
| --- | --- |
| `BillingGeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Accuracy level of the geocode for the billing address. See Compound Field Considerations and Limitations for details on geolocation compound fields. |
| `BillingLatitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Used with BillingLongitude to specify the precise geolocation of a billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields. |
| `BillingLongitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Used with BillingLatitude to specify the precise geolocation of a billing address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields. |
| `BillingMethod` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Shows the type of billing used for the source item.<br>Possible values are:<br>• `Evergreen`<br>• `OrderAmount` |
| `BillingPostalCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Details for the billing address of this billing schedule group. Maximum size is 20 characters. |
| `BillingScheduleGroupNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>System-generated reference number for the billing schedule group. |
| `BillingStartMonth` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Read-only field used with annual billing. The field shows the numbers from 1 to 12, which indicate the month when billing begins for an annual subscription. For example, if billing starts in January, the value is 1; if billing starts in June, the value is 6. This field is available in API version 58.0 and later. |
| `BillingState` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the billing address of this billing schedule group. Maximum size is 80 characters. |
| `BillingStreet` | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Street address for the billing address of this billing schedule group. |
| `BillingTerm` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Used with `BillingTermUnit` to define a billing cycle. For example, bill every 20 days or every two months. In this example, the `BillingTerm` is *`20`* and the `BillingTermUnit` is *`days`* |

| Field | Details |
| --- | --- |
| `BillingTermUnit` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The frequency with which the billing schedule is invoiced.<br>Possible values are:<br>• `Day`<br>• `Month`<br>• `OneTime`<br>• `Quarter`<br>• `Semi-Annual`<br>• `Year`<br>Used with `BillingTermUnit` to define a billing cycle. |
| `BillingType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Inherited from the shared value of each billing schedule in the billing schedule group. Defines when Subscription Management bills a product or service relative to when it's provided to the customer. Advance billing invoices a product or service before you provide it, while arrears billing invoices a product or service after you provide it. Subscription Management evaluates the billing type when it calculates an order's next billing date.<br>Possible values are:<br>• `Advance` – If the billing schedule is billed in advance, Subscription Management evaluates the order's billing day of month to choose the nearest date on or before the order product's start date. For example, if a monthly order product's start date is January 1, and the order's billing day of month is 15, the next billing date is December 15.<br>• `Arrears` – If the billing schedule is billed in arrears, Subscription Management evaluates the order's billing day of month to choose the nearest date after the order product's start date. For example, if a monthly order product's start date is January 1 and the order's billing day of month is 15, the order product's next billing date is January 15. |
| `CancellationDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The date that a cancellation was made against the billing schedule. Subscription Management doesn't invoice billing schedules past their cancellation date. |
| `Controller` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>During the invoicing process, this field determines which date is used when the billing schedule group and billing schedule have a related field with conflicting values.<br>For example, when `Controller` has a value of `BillingScheduleGroup`, if the billing schedule's billing day of month is 5 while the billing schedule group's billing day of month is 10, the invoice is sent on the 10th day of the month.<br>Possible values are:<br>• `BillingScheduleGroup`—The date on the billing schedule group controls. |
| `CurrentBillingPeriodAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>This field was removed in Subscription Management API version 55.0. |
| `CurrentQuantity` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>This field was removed in Subscription Management API version 55.0. |
| `EffectiveNextBillingDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The earliest `NextBillingDate` from all billing schedules in the billing schedule group. This field is a reference field that isn't used for any features or calculations.<br>This field is a calculated field. |

| Field | Details |
| --- | --- |
| EndDate | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The latest end date from all billing schedules in the billing schedule group. |
| LastReferencedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| LastViewedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it. |
| OwnerId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>The Salesforce user who owns the billing schedule group.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| PaymentTermId | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the payment term used in this billing schedule group.<br>This field can't be modified when related billing schedules are in processing.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentTerm<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentTerm |
| `PeriodBoundary` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Inherited from the order item's parent quote line item or sales transaction item. The period boundary helps determine the start and end date of the billing periods.<br>Possible values are:<br>• `AlignToCalendar`—the period starts on the first day of the term unit; for example, the first day of the month.<br>• `Anniversary`—The start date determines the boundary. For example, if a monthly subscription starts on September 13, the subscription starts on the 13th day of each month.<br>• `DayOfPeriod`—the period starts on the day indicated by `PeriodBoundaryDay`.<br>• `EndOfPeriod`—the period starts on the last day of the pricing term unit. |
| `Product2Id` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the product for the order item represented by each billing schedule in the billing schedule group.<br>This field is a relationship field.<br>**Relationship Name**<br>Product2 |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Product2 |
| `ProductName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the product for the order item represented by each billing schedule in the billing schedule group. |
| `ProrationPolicyId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Refers to the proration policy that applies to this billing schedule group. The proration policy defines how time periods are calculated for subscription orders. For example, whether partial periods are allowed.<br>Inherited from the shared proration policy for each billing schedule in the billing schedule group.<br>This field is a relationship field.<br>**Relationship Name**<br>ProrationPolicy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ProrationPolicy |
| `ReferenceEntityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The asset used to create the billing schedules in the billing schedule group.<br>This field is a relationship field.<br>**Relationship Name**<br>ReferenceEntity |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Asset |
| `ShippingAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The compound form of the shipping address. Read-only. See Address Compound Fields for details on compound address fields. |
| `ShippingCity` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the shipping address for this billing schedule group. City maximum size is 40 characters |
| `ShippingCountry` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the shipping address for this billing schedule group. Country maximum size is 80 characters. |
| `ShippingGeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Accuracy level of the geocode for the shipping address. See Compound Field Considerations and Limitations for details on geolocation compound fields. |
| `ShippingLatitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Used with ShippingLongitude to specify the precise geolocation of a shipping address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields. |
| `ShippingLongitude` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Used with ShippingLatitude to specify the precise geolocation of an address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields. |
| `ShippingPostalCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the shipping address for this billing schedule group. Postal code maximum size is 20 characters. |
| `ShippingState` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Details for the shipping address for this billing schedule group. State maximum size is 80 characters. |
| `ShippingStreet` | **Type**<br>textarea<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The street address of the shipping address for this billing schedule group. Maximum of 255 characters. |
| `StartDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The earliest start date from all billing schedules in the billing schedule group. |
| `TotalBilledAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount that has been invoiced for all billing schedules within the billing schedule group.<br>This field is a calculated field. |
| `TotalPendingAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount that hasn't yet been invoiced for all billing schedules within the billing schedule group.<br>This field is a calculated field. |

# BillingTreatment

Defines how Subscription Management bills an order item. The Exclude From Billing field controls whether the order item is invoiced. Child billing treatment items control how much of the order item's balance is invoiced for each invoice across the subscription's lifecycle. Billing treatments are assigned to order items based on the parent billing policy's Billing Treatment Selection field. This object is available in API version 55.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

# Fields

| Field | Details |
|---|---|
| `BillingPolicyId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the billing policy for the billing treatment.<br>This field is a relationship field.<br>**Relationship Name**<br>BillingPolicy<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BillingPolicy |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Optional user-defined description of the billing treatment. |
| `ExcludeFromBilling` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Excludes any order items assigned to the treatment from creating billing schedules.<br>Possible values are:<br>• `No`<br>• `Yes` |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |

| Field | Details |
| --- | --- |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it. |
| `LegalEntityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the legal entity used to assign the treatment to order items when the parent billing policy's `BillingTreatmentSelection` is `LegalEntity`.<br>This field is a relationship field.<br>**Relationship Name**<br>LegalEntity<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>LegalEntity |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Optional user-defined name for the billing treatment. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Draft or inactive billing treatments can't be assigned to order items.<br>Possible values are:<br>• `Active`<br>• `Draft`<br>• `Inactive` |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**BillingTreatmentHistory (API version 55.0)**
History is available for tracked fields of the object.

# BillingTreatmentItem

A billing treatment item defines how the order item's total amount is distributed into billing schedules over the course of the order item's lifecycle. In the Subscription Management pilot, billing treatments must have only one billing treatment item, so that the billing treatment item covers 100% of the order item's total value. This object is available in API version 55.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the Revenue Cloud Developer Guide.

## Fields

| Field | Details |
|---|---|
| `BillingTreatmentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The parent billing treatment for the billing treatment item.<br>This field is a relationship field.<br>**Relationship Name**<br>BillingTreatment<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BillingTreatment |
| `BillingType` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Defines when Subscription Management invoices a product or service relative to when it's provided to the customer. Advance billing invoices a product or service before it's provided, while arrears billing invoices a product or service after it has provided Subscription Management evaluates billing type when calculating an order product's next billing date.<br>Possible values are:<br>• `Advance` – If the order item is billed in advance, Subscription Management evaluates the order's billing day of month to choose the nearest date on or before the order product's start date. For example, if a monthly order product's start date is January 1, and the order's billing day of month is 15, the next billing date is December 15.<br>• `Arrears` – If the order item is billed in arrears, Subscription Management evaluates the order's billing day of month to choose the nearest date after the order product's start date. For example, if a monthly order product's start date is January 1 and the order's billing day of month is 15, the order product's next billing date is January 15.<br>Important: Arrears billing isn't available in Subscription Management API Version 54.0. |
| `Controller` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>During the invoicing process, this field determines which value Subscription Management uses when the billing schedule group and billing schedule have a shared field with different values. For example, when `Controller` has a value of `BillingScheduleGroup`, if the billing schedule's billing day of month is 5 while the billing schedule group's billing day of month is 10, Subscription Management uses the value of 10.<br>In the Subscription Management API version 54.0, only `BillingScheduleGroup` is supported.<br>Possible values are:<br>• `BillingScheduleGroup`— |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Three-letter ISO 4217 currency code associated with the billing treatment item. |

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Optional user-defined description for the billing treatment item. |
| `FlatAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The amount in terms of units of currency (such as $10 or $21.52) to invoice from the order item. Used only when `Type` has a value of `FlatAmount`. |
| `Handling0Amount` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Shows how Subscription Management invoices billing period items that have an amount of $0.<br>Possible values are:<br>• `CreateInvoice`—Create a $0 invoice line.<br>• Null —No invoice line is created. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. Default name of this record. |
| `Percentage` | **Type**<br>percent<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The percentage (such as 10% or 12.5%) to invoice from the order item. Used only when `Type` has a value of `Percentage`. |
| `ProcessingOrder` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Defines the order in which Subscription Management creates billing schedules based on each billing treatment item. Lower numbers are evaluated first. For example, if your billing treatment has a billing treatment item that invoices at 25 `Percentage` and a `ProcessingOrder` of 1, and another item that invoices at 75 `Percentage` and a `ProcessingOrder` of 2, your first billing schedule will be for 25 percent of the order item's total amount, and your second billing schedule will be for 75% of the order item's total amount. |
| `Sequencing` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Allows users to define the number used to start invoice numbers on invoices generated from this billing treatment item.<br>Subscription Management API Version 54.0 supports only manual sequencing.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `Manual`—Invoices created from this billing treatment item begin with an invoice number of 1. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Draft billing treatment items aren't evaluated for creating billing schedules.<br>Possible values are:<br>• `Active`<br>• `Draft` |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Defines whether billing schedules created from this billing treatment item are based on a flat amount or a percentage of the order item's total amount.<br>Possible values are:<br>• `FlatAmount`—The billing schedule is for a flat currency amount of the order item's total amount (for example, $50 or $200.50.)<br>• `Percentage`—The billing schedule is for a percentage of the order item's total amount (for example, 12.5% or 54%). |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**BillingTreatmentItemHistory (API version 55.0)**
History is available for tracked fields of the object.

# BlockedRedirectEventLog

Blocked Redirect events capture information about blocked redirections from Salesforce to untrusted and malformed URLs. This object is available in API version 65.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `BlockedUri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The full string of the target for the redirection. |
| `BlockedUriDomain` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If BLOCKED_URI is a URL, the domain for that URL. To allow future redirections to the BLOCKED_URI, BLOCKED_URI_DOMAIN is the value to add to RedirectWhitelistUrl. |
| `IsMalformedUrl` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this redirection was blocked because the target URL failed a syntax check or not.<br>The default value is `false`. |
| `Origin` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The origin that caused the request to the BLOCKED_URI. For example, if a form on an Experience Cloud Visualforce site page redirects a user to an untrusted URL via the saveURL parameter, ORIGIN contains the base URL of that site. |
| `Referrer` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The absolute or partial address from which the request to the BLOCKED_URI came. The `Referrer-Policy HTTP` Header of the request determines how much of the URL is shared. |
| `RemoteAddress` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Remote IP address of the client making the request. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |

# Bookmark

Represents a link between opportunities that share common information.

This object is available to organizations with the Similar Opportunities feature enabled.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

# Fields

| Field | Details |
|---|---|
| `ID` | **Type**<br>ID<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>ID of the bookmark. Label is **Bookmark ID**. |
| `FromId` | **Type**<br>ID<br>**Properties**<br>Filter<br>**Description**<br>The originating opportunity. Label is **Bookmarked From ID** |
| `ToId` | **Type**<br>ID<br>**Properties**<br>Filter<br>**Description**<br>The opportunity to which the originating opportunity is linked. Label is **Bookmarked To ID**. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |

# Usage

The Bookmark object works with the Opportunity object only.

Use this read-only object to query the bookmarks between opportunities in your organization. In the online application, users can search for opportunities that share attributes with their opportunity. The user can then bookmark the appropriate opportunities for future reference.

# BotDefinition

Represents a top level object for Einstein Bots or Agentforce Agents. This object is available in API version 60.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

To access this object, Agents must be enabled in your org.

## Fields

| Field | Details |
|---|---|
| `AgentTemplate` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If this BotDefinition represents an agent, this field represents the name of the agent template used to create it. |
| `AgentType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The agent type. For example, Agentforce Service Agent (ASA) or Agentforce Employee Agent (AEA). |
| `BotUserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user ID associated with the bot definition.<br>**Relationship Name**<br>BotUser<br>**Refers To**<br>User |

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>A description for the bot or agent. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique name for this object. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The master label of the bot. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>This field represents the configuration type of the bot. The default value is `Bot`.<br>Possible values are:<br>• `Bot`—Default Einstein Bot configuration.<br>• `ExternalCopilot`— An external-facing agent. For example, Agenforce Service Agent.<br>• `InternalCopilot`— An internal-facing agent. For example, Agentforce (Default). |

# BotVersion

Represents a version of a bot or agent defined by a BotDefinition record. This object is available in API version 63.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

# Fields

| Field | Details |
| --- | --- |
| `BotDefinitionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. This field relates a bot version to its parent BotDefinition record.<br>This field is a relationship field.<br>**Relationship Name**<br>BotDefinition<br>**Refers To**<br>BotDefinition |
| `CopilotPrimaryLanguage` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The primary language that the bot or agent communicates in. |
| `CopilotSecondaryLanguages` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A comma-separated list of additional languages that the bot or agent supports. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique name for this object. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Required. Indicates whether the bot version is active or inactive. Only one version for a related BotDefinition can be active at once.<br>Possible values are:<br>• `Active`<br>• `Inactive`<br>The default value is `Inactive`. |
| `ToneType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Defines the tone of the bot.<br>Possible values are:<br>• `Casual`—<br>• `Formal`—<br>• `Neutral`—<br>The default value is `Casual`. |
| `VersionNumber` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The number for this version of the bot or agent. |

# BrandingSet

Represents the definition of a set of branding properties for an Experience Builder site, as defined in the Theme panel in Experience Builder. This object is available in API version 40.0 and later.

## Supported Calls

create(), delete(), describeSObjects(), query(), retrieve(), update(), upsert()

## Special Access Rules

The BrandingSet type is available when at least one of the following is enabled in your org: Digital Experiences, Surveys, or Lightning Experience. All users, including unauthenticated guest users, can access this type.

# Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A description of the set of branding properties. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. API name of the BrandingSet object. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language used in the branding set. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. The user-facing label of the set of branding properties. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix with a 15 character limit. You can refer to a component in a managed package by using the `namespacePrefix__componentName` notation. The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. |

| Field | Details |
| --- | --- |
| | In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that aren't Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. `NamespacePrefix` is null if the publisher is Salesforce. |

# BrandTemplate

Letterhead for HTML EmailTemplate.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Description of the letterhead. Limited to 1000 characters. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is **Letterhead Unique Name**. |

| Field | Details |
| --- | --- |
| | Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the letterhead is available for use (`true`) or not (`false`). Label is **Active**. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Label of the template as it appears in the user interface. Limited to 255 characters. Label is **Brand Template Name**. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `Value` | **Type**<br>textarea<br>**Properties**<br>Create, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The contents of the letterhead, in HTML, including any logos. |

## Usage

Use this object to brand EmailTemplate records with your letterhead. You can also set a brand template to active or inactive. For example, if you have five different marketing brands, you can maintain each different brand in one template, and assign to the appropriate EmailTemplate.

SEE ALSO:

EmailTemplate

# Brief

Represents a marketing brief. A brief contains information that's used for positioning and grounding a marketing campaign. This object is available in API version 61.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The currency type for the brief.<br>Possible values are:<br>• `USD`—U.S. Dollar<br>The default value is `USD`. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>A description of the brief. |
| KeyMessage | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The main idea or message that you want to deliver to your customers through the campaign that's associated with the brief. |
| LastReferencedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the brief was last referenced by a campaign. |
| LastViewedDate | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the brief was last viewed. |
| Name | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the brief. |
| TargetAudience | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A description of the characteristics of the audience that you want to reach through the campaign that's associated with this brief. |

# BriefcaseAssignment

Represents the assignment of a briefcase definition to selected users and user groups. This object is available in API version 50.0 and later.

Use this object to assign selected records for users and groups to view offline. Briefcase objects are available in orgs that have Briefcase Builder and Field Service enabled.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `BriefcaseId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the briefcase definition. Label is **Briefcase Definition ID**. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the user or group requiring access to the briefcase. Label is **User or Group ID**. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**BriefcaseAssignmentChangeEvent (API version 55.0)**
Change events are available for the object.

# BriefcaseDefinition

Represents a briefcase definition. A briefcase makes selected records available for users to view when they're offline in the Salesforce Field Service mobile app for iOS and Android. This object is available in API version 50.0 and later.

## Special Access Rules

This object is read-only.

Briefcase objects are available in orgs that have Briefcase Builder and Field Service enabled.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Packaging Considerations

An org can have up to 5 briefcases. Installed briefcases are counted against this limit. You can't install a package that includes a briefcase if your org already has 5 briefcases. When a managed package includes a briefcase, the only changes allowed for the briefcase are activating or deactivating and assigning users or groups to the briefcase.

## Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Description of the briefcase definition. Limited to 1024 characters. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Limited to 80 characters. Label is **Name**.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the briefcase is available for use (`true`) or not (`false`). Label is **Active**. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language for the briefcase. This field defaults to the user's language unless the org is multi-language enabled. Specifies the language of the labels returned.<br>Possible values are:<br>• Chinese (Simplified): `zh_CN`<br>• Chinese (Traditional): `zh_TW`<br>• Danish: `da`<br>• Dutch: `nl_NL`<br>• English: `en_US`<br>• Finnish: `fi`<br>• French: `fr`<br>• German: `de`<br>• Italian: `it`<br>• Japanese: `ja`<br>• Korean: `ko`<br>• Norwegian: `no`<br>• Portuguese (Brazil): `pt_BR`<br>• Russian: `ru`<br>• Spanish: `es`<br>• Spanish (Mexico): `es_MX` Spanish (Mexico) defaults to Spanish for customer-defined translations.<br>• Swedish: `sv`<br>• Thai: `th` The Salesforce user interface is fully translated to Thai, but Help is in English. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The master label for the briefcase. This internal label doesn't get translated. Limited to 80 characters. |

| Field | Details |
| --- | --- |
| NamespacePrefix | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |

## Usage

Use this object to query a briefcase or a list of briefcases with selected records and user assignments. For example:

```
SELECT Id, Description FROM BriefcaseDefinition
WHERE Id in (SELECT BriefcaseId FROM BriefcaseRule
WHERE TargetEntity='Account')
AND Id in (SELECT BriefcaseId FROM BriefcaseAssignment where
UserOrGroupId='00GR0000000VtwUMAS')
```

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**BriefcaseDefinitionChangeEvent (API version 55.0)**
Change events are available for the object.

# BriefcaseRule

Represents a rule that specifies records for a briefcase definition. This object is available in API version 50.0 and later.

## Special Access Rules

This object is read-only.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `BriefcaseId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Required. ID of the briefcase definition. Label is **Briefcase Definition ID**.<br>This field is a relationship field.<br>**Relationship Name**<br>Briefcase<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BriefcaseDefinition |
| `FilterLogic` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The filter logic for record selection, for example, `1 AND 2` where 1 and 2 correspond to filter 1 and filter 2. Filter logic operators include `AND` and `OR`. Limited to 255 characters. Label is **Filter Logic**. |
| `IsAscendingOrder` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Required. Indicates whether the records should be sorted in ascending order. Label is **Ascending**. |

| Field | Details |
| --- | --- |
| `OptionsIsRelatedFilesRule` | **Type**<br>boolean<br>**Properties**<br>Filter<br>**Description**<br>Indicates whether the briefcase rule is part of a hierarchical set of rules that configure the offline priming of file attachments. Available only for the Offline App (Salesforce Mobile App Plus). |
| `OrderBy` | **Type**<br>picklist<br>**Properties**<br>Nillable, Restricted picklist<br>**Description**<br>The field to order the records by, which determines how the records can be sorted. For example, `AccountName` or `CreatedBy`. Label is **Order By**. |
| `ParentRuleId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the parent rule of this briefcase rule. This field is a relationship field.<br>**Relationship Name**<br>ParentRule<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BriefcaseRule |
| `QueryScope` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Required. A group of records to restrict the scope of this rule.<br>Possible values are:<br>• `assignedToMe`<br>• `everything`<br>• `mine` |

| Field | Details |
| --- | --- |
| | The default value is `everything` (All Records). The value `assignedToMe` is available only for the `ServiceAppointment` object. |
| `RecordLimit` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The record limit for the object. The recommended number for record limit is up to 500 records per object for optimal performance. The maximum number is 2000. Label is **Limit**. |
| `RelationshipField` | **Type**<br>picklist<br>**Properties**<br>Nillable, Restricted picklist<br>**Description**<br>The Salesforce object field that relates the briefcase rule to another briefcase rule. For example, an Account rule can be related to a Contact rule using the Account ID object field. In this example, the value for the briefcase rule's `RelationshipField` is `AccountID`. |
| `RelationshipType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The relationship of the briefcase rule to another briefcase rule. Possible values are:<br>• `ParentToChild`<br>• `ChildToParent` |
| `TargetEntity` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The standard object, custom object, or custom metadata type that the briefcase rule selects records from. The UI label is **Target Object**. |

# BriefcaseRuleFilter

Represents a filter criteria for a briefcase rule. This object is available in API version 50.0 and later.

## Special Access Rules

This object is read-only.

## Supported Calls

`describeSObjects(),query(),retrieve()`

## Fields

| Field | Details |
|---|---|
| `BriefcaseRuleId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Required. ID of the briefcase rule. |
| `FilterOperator` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Required. The comparison operator for this rule filter.<br>Possible values are:<br>• `d`—Ends with<br>• `e`— Equals<br>• `g`—Greater than<br>• `h`—Greater than or equal<br>• `i`—Like<br>• `l`—Less than<br>• `m`—Less than or equal<br>• `s`—Starts with |
| `FilterSeqNumber` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Required. The filter number. When you apply multiple filters, the filters are numbered sequentially, 1, 2, 3, and so on. |

| Field | Details |
| --- | --- |
| `FilterValue` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The value for the field and criteria. For example, `true` or `false` for a boolean field whose criteria or filter operator is Equals. Capitalization matters with date filter operators. Be sure to specify date literals in uppercase. Some valid date literals include TODAY, YESTERDAY and TOMORROW. |
| `TargetEntityField` | **Type**<br>picklist<br>**Properties**<br>Restricted picklist<br>**Description**<br>Required. The field to filter by. Compound fields and encrypted fields aren't supported. Label is **Field**. |

# BroadcastCommAudience

Represents the audience that the broadcast communication is sent to. This object is available in API version 56.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access this object with Service Cloud, enable Incident Management in Setup and set up Broadcast Communications.

## Fields

| Field | Details |
| --- | --- |
| `AudienceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the broadcast communication audience. |

| Field | Details |
| --- | --- |
| | • If `BroadcastType` is `Alert`, this value is the ID of the Group record where the message is sent to.<br>• If `BroadcastType` is `Email`, this value is the ID of the ListEmail record where the email is sent to.<br>• If `BroadcastType` is `ExperienceSiteBanner`, this value is the ID of the Network record where the banner is displayed at.<br>• If `BroadcastType` is `Slack`, this value is the ID of the CollaborationRoom record where the message is sent to.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Audience<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CollaborationRoom, Group, ListEmail, Network |
| `BroadcastCommAudienceNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Auto-generated number for the BroadcastCommAudience record. |
| `BroadcastCommunicationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the broadcast communication record.<br>This field is a relationship field.<br>**Relationship Name**<br>BroadcastCommunication<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BroadcastCommunication |
| `BroadcastFailureReason` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The reason the broadcast communication failed to send. |
| `BroadcastType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Medium used to distribute the message.<br>Possible values are:<br>• `Alert`<br>• `Email`<br>• `ExperienceSiteBanner`<br>• `Slack` |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, and `LastReferenceDate` is not null, the user accessed this record or list view indirectly. |
| `MessageTimeStamp` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>If `BroacastType` is `Slack`, this value is the timestamp when the broadcast Slack message was sent. |
| `OwnerId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the owner of this object.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `SiteBannerText` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable<br>**Description**<br>If `BroadcastType` is `ExperienceSiteBanner`, this field contains the banner text displayed on the associated site. |
| `SiteBannerVisibility` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>If `BroadcastType` is `ExperienceSiteBanner`, this field contains information about who can view the banner.<br>Possible values are:<br>• `AuthenticatedUsers`<br>• `GuestUsers` |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The status of the broadcast communication.<br>Possible values are:<br>• `Active`—The site banner is visible on the site. Only applies if `BroadcastType` is `ExperienceSiteBanner`. |

| Field | Details |
| --- | --- |
| | • `Deleted`—The message is successfully deleted and isn't visible anymore. Only applies if `BroadcastType` is `Slack`.<br>• `DeleteFailed`—The message failed to delete but is still visible. Only applies if `BroadcastType` is `Slack`.<br>• `Failed`—The message failed to send. Applies to any `BroadcastType`.<br>• `Inactive`—The site banner isn't visible on the site. Only applies if `BroadcastType` is `ExperienceSiteBanner`.<br>• `Sent`—The message is sent successfully. Only applies if the `BroadcastType` is `Email` or `Slack`.<br>• `Updated`—The message is successfully edited. Only applies if the `BroadcastType` is `Slack`.<br>• `UpdateFailed`—The message failed to edit and the update isn't visible. Only applies if the `BroadcastType` is `Slack`. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**BroadcastCommAudienceChangeEvent on page 68**
Change events are available for the object.

**BroadcastCommAudienceFeed on page 55**
Feed tracking is available for the object.

**BroadcastCommAudienceHistory on page 63**
History is available for tracked fields of the object.

**BroadcastCommAudienceOwnerSharingRule on page 65**
Sharing rules are available for the object.

**BroadcastCommAudienceShare on page 67**
Sharing is available for the object.

# BroadcastCommunication

Represents a broadcast communication related to an incident. This object is available in API version 56.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`

## Special Access Rules

To access this object with Service Cloud, enable Incident Management in setup and set up Broadcast Communications.

# Fields

| Field | Details |
| --- | --- |
| `Body` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable<br>**Description**<br>• If `BroadcastType` is `Alert`, this field contains the alert message.<br>• If `BroadcastType` is `Email`, this field contains the email body text.<br>• If `BroadcastType` is `ExperienceSiteBanner`, this field is empty.<br>• If `BroadcastType` is `Slack`, this field contains the Slack message. |
| `BroadcastCommunicationNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Auto-generated number for every BroadcastCommunication record. |
| `BroadcastType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Medium used to distribute the message.<br>Possible values are:<br>• `Alert`<br>• `Email`<br>• `ExperienceSiteBanner`<br>• `Slack` |
| `CustomNotificationTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the custom notification template used to frame the Slack message. Only applies if `BroadcastType` is `Slack`.<br>Available in API version 58.0 and later.<br>This field is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>CustomNotificationType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CustomNotificationType |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, and `LastReferenceDate` is not null, the user accessed this record or list view indirectly. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort<br>**Description**<br>ID of the owner of this object.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `RelatedRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the incident associated with the broadcast communication.<br>This field is a relationship field.<br>**Relationship Name**<br>RelatedRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Incident |
| `Subject` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable<br>**Description**<br>• If `BroadcastType` is `Alert`, this field is the alert message in the format "Incident Alert \| <Incident subject> \| <Incident Number>."<br>• If `BroadcastType` is `Email`, this field is the subject of the email sent.<br>• If `BroadcastType` is `ExperienceSiteBanner`, this field is empty.<br>• If `BroadcastType` is `Slack`, this field is in the format "Incident Alert \| <Incident Subject>." |

# Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**BroadcastCommunicationChangeEvent on page 68**
Change events are available for the object.

**BroadcastCommunicationFeed on page 55**
Feed tracking is available for the object.

**BroadcastCommunicationHistory on page 63**
History is available for tracked fields of the object.

**BroadcastCommunicationOwnerSharingRule on page 65**
Sharing rules are available for the object.

**BroadcastCommunicationShare on page 67**
Sharing is available for the object.

# BroadcastTopic

Represents a definition of a broadcast topic. A broadcast topic is associated with a list of Experience Cloud network sites for Service Cloud and collaboration rooms for Sales Cloud. The topic is created for a specific user role. Collaboration rooms are linked to Slack channels. This object is available in API version 55.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access this object with Sales Cloud, enable Slack Terms of Service and Sales Cloud for Slack App.

To access this object with Service Cloud, enable Incident Management in Setup and Broadcast Site Banner in the Incident Management setup.

## Fields

| Field | Details |
|---|---|
| `BroadcastReason` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Reason for the broadcast topic. This field differentiates between Service Cloud and Sales Cloud use cases.<br>Possible values are:<br>• `FeedChannels`—Used in Sales Cloud and associates the topic with collaboration rooms.<br>• `IncidentCommunication`—Used in Service Cloud for Customer Service Incident Management and associates the topic with networks.<br>The default value is `FeedChannels`. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the broadcast topic. |

| Field | Details |
| --- | --- |
| `IsFeatured` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the broadcast topic is featured (`true`) or not (`false`). This field is applicable only when BroadcastReason is FeedChannels. A featured topic displays the associated collaboration rooms to new users.<br>The default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the broadcast topic. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Owner of the broadcast topic.<br>This field is a polymorphic relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `TopicType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Category for the broadcast topic.<br>Possible values are:<br>• `DealsWon`—Feed of won deals to see your team's successes. This value appears when the Sales Cloud special access rules are enabled.<br>• `DealsToWatch`—Feed of deals that have an amount above a specified value and are likely to close. This value appears when the Sales Cloud special access rules are enabled.<br>• `Incident Communication`—This value appears when the Service Cloud special access rules are enabled. |

# BroadcastTopicGroup

Represents a junction object that relates a group to an alert type broadcast topic. The broadcast sends the alert to this group. This object is available in API version 57.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Enable Customer Service Incident Management and Broadcast Alert. To create a BroadcastTopicGroup record, set the BroadcastReason field of the associated BroadcastTopic to Incident Communication.

# Fields

| Field | Details |
| --- | --- |
| `BroadcastTopicId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the broadcast topic.<br>This field is a relationship field.<br>**Relationship Name**<br>BroadcastTopic<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BroadcastTopic |
| `GroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the group where the alert of the associated BroadcastTopic record with an `Alert BroadcastType` is sent to.<br>This field is a relationship field.<br>**Relationship Name**<br>Group<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort, Update<br>**Description**<br>Name of the broadcast topic group.<br>This field is optional. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**BroadcastTopicGroupChangeEvent on page 68**

Change events are available for the object.

Available in API version 58.0

# BroadcastTopicNetwork

Represents a link between a broadcast topic and the Experience Cloud network site for Service Cloud. This object is available in API version 56.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access this object with Service Cloud, enable Incident Management in Setup and Broadcast Site Banner in the Incident Management setup.

## Fields

| Field | Details |
|---|---|
| `BroadcastTopicId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The BroadcastTopic ID that's linked to the Network.<br>This field is a relationship field.<br>**Relationship Name**<br>BroadcastTopic<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BroadcastTopic |
| `Name` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, idLookup, Nillable, Sort, Update<br>**Description**<br>The name of the broadcast topic that's assigned to the network. |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The Network ID that's linked to the BroadcastTopic..<br>This field is a relationship field.<br>**Relationship Name**<br>Network<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Network |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**BroadcastTopicNetworkChangeEvent on page 68**
Change events are available for the object.

# BrowserPolicyViolation

Represents a violation that occurred within the last seven days related to the Trusted URLs and Trusted URLs for External Redirects allowlists. These violations include blocked resource requests based on your content security policy (CSP) and blocked redirections. This object is available in API version 61.0 and later.

We recommend that you manage this object through the Trusted URL and Browser Policy Violations list in Setup. See Manage Trusted URL and Browser Policy Violations in Salesforce Help.

Note: To help preserve performance, Salesforce uses throttling, a technique that limits the number of generated violations when the volume is exceptionally high. Therefore, if your org generates a high volume of violations over a short period of time, some of those violations can fail to generate a BrowserPolicyViolation.

To see detailed information about the captured CSP violations for your org, use the CSP Violation Event Type.

To understand when Salesforce captures blocked redirections, see External Redirection Restrictions in Salesforce in Salesforce Help. For detailed information about each blocked redirection, use the Blocked Redirect Event Type.

When you delete a BrowserPolicyViolation, only the logged event is removed. If your allowlists still block those requests, a new BrowserPolicyViolation is generated the next time a matching request occurs.

To help you manage the list, a daily process deletes violations that haven't occurred within the last seven days. To track browser policy violations over time, schedule daily queries of the Blocked Redirect and CSP Violations event types.

## Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Only users with the Customize Application and Modify All Data permissions can access this object.

## Fields

| Field | Details |
|---|---|
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The developer name of the violation.<br>Only users with View DeveloperName or View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language for the blocked request. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Master label for this violation. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Namespace prefix for this violation. |
| `UntrustedUrl` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The URL associated with the blocked request, without the path. For example, if a blocked requested resource is an image with the URL `https://www.example.com/images/image1.png`, the `UntrustedUrl` is `https://www.example.com`. |
| `ViolationContext` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>If the `ViolationType` is `img-src (image)`, `font-src (fonts)`, or `frame-src (iframe content)`, the content security policy (CSP) context for the request. The CSP context controls which pages can load content from a CspTrustedSite.<br>Possible values are:<br>• `Lightning`—The blocked request is related to a Lightning Experience page.<br>• `Not Applicable`—`ViolationContext` isn't applicable to this violation. For example, violations with a `ViolationType` of `Redirection`. |
| `ViolationType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The violation type. Possible values are:<br>• `img-src`–At least one request to load an image file from the URL was blocked because the `UntrustedUrl` isn't a CspTrustedSite object with this CSP directive.<br>• `font-src`–At least one request to load a font from the URL was blocked because the `UntrustedUrl` isn't a CspTrustedSite object with this CSP directive.<br>• `frame-src`–At least one request to load content in an iframe that originated from the URL was blocked because the `UntrustedUrl` isn't a CspTrustedSite object with this CSP directive.<br>• `MalformedUrl`–At least one redirection to this URL failed because the `UntrustedUrl` is malformed. |

| Field | Details |
| --- | --- |
| | • `Redirect`—At least one redirection to this URL was blocked because the `UntrustedUrl` isn't a RedirectWhitelistUrl object. |

# BulkApi2EventLog

Bulk API 2 event logs contain details about Bulk API 2.0 requests. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`. |
| `CpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `FailedRecordCount` | **Type**<br>int<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The total number of records that failed. For example: `150`. |
| `ErrorMessage` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The error message returned on failure. |
| `JobIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the Bulk API 2.0 job. |
| `JobStatus` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The job's current status. |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`. |
| `ObjectType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of event. The value is always `BulkApi2`. |
| `OperationType` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of Bulk API 2.0 operation that was performed. |
| `ProcessedRecordCount` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Number of records processed for this event. For example: `980`.The number of records processed is reported differently for ingest and query jobs.<br>For *ingest* jobs:<br>• Events with a status of `InProgress` report (if applicable) the number of records processed.<br>For *query* jobs:<br>• Events with a status of `JobComplete` or `InProgress` report (if applicable) the number of records processed. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestId`. For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `ResultSize` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Number of megabytes returned in query. Empty for ingest jobs. For example: `670`.<br>ResultSizeMb currently does not emit events, but is shown here as a placeholder for future enhancement. |
| `RunTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestId`. For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URI of the page that's receiving the request. For example: `/home/home.jsp`. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |

# BulkApiEventLog

Bulk API event logs contain details about Bulk API requests. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see EventLogFile.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
|---|---|
| `BatchIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the Bulk API batch. |
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: `96.43.144.26`. |
| `CpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `FailureCount` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The number of failures that were returned with the request. |

| Field | Details |
| --- | --- |
| `IsSuccess` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the callout request was successful. |
| `JobIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the Bulk API job. |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: `GeJCsym5eyvtEK2I`. |
| `Message` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Any success or error message that's associated with the request. |
| `ObjectType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of entity that the Bulk API used. |
| `OperationType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The type of Bulk API operation that was performed. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `RequestId`. For example: `3nWgxWbDKWWDIk0FKfF5DV`. |
| `RunTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of time that the request took in milliseconds. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: `d7DEq/ANa7nNZZVD`. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The access time of Salesforce services in GMT. For example, `2020-01-20T19:12:26.965Z`. Milliseconds are the most granular setting. |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The URI of the page that's receiving the request. For example: `/home/home.jsp`. |

| Field | Details |
| --- | --- |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |

# BulkApiRequestEventLog

The Bulk API request event captures when Bulk API requests are received to create a job, update a job, create a batch, update a batch, and when a job completes. This object is available in API version 65.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

## Fields

| Field | Details |
| --- | --- |
| `ApiVersion` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The API version. |
| `BatchIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the Bulk API batch. |
| `ClientIp` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". |
| `ClientName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the client making the request. |
| `ConcurrencyMode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The concurrency mode selected by the user. |
| `ConnectedAppIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the connected app making a request. |
| `CpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `ErrorMessage` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of entity that the Bulk API used. |

| Field | Details |
| --- | --- |
| `IsSuccess` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Whether the batch was successful. |
| `JobIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the Bulk API job |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The hash of the login id to allow click tracking across multiple transactions from login to action. |
| `OperationType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of Bulk API operation. |
| `RequestIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. |
| `RequestPath` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The path of the request. |
| `RunTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Amount of time the request took, as measured by SFDC code. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The hash of the sid to allow click tracking across multiple transactions after login to action. |
| `StatusCode` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The HTTP Status code indicating whether the batch was successful. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp at which the log event was generated. |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URI of the page receiving the request. |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |

# BusinessBrand

Represents a unique brand for a business that belongs to a parent entity. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. Name of this business brand. |

| Field | Details |
| --- | --- |
| `OrgId` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The Salesforce ID of the business brand. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the account owner associated with this business brand.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the parent entity that this business brand is a child of.<br>This is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BusinessBrand |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**BusinessBrandChangeEvent on page 68 (API version 62.0)**
Change events are available for the object.

# BusinessAlert

Represents information about insight notifications that Einstein Relationship Insights explores, such as news mentions, job updates, and relationships. This object is available in API version 57.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The BusinessAlert object is available only if the ERI Growth User or ERI Starter User license is enabled.

## Fields

| Field | Details |
|---|---|
| `AlertData` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Data associated with each alert. |
| `AlertRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The record that's referenced by the insight alert.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>AlertRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Asset, AuthorizationForm, AuthorizationFormConsent, AuthorizationFormDataUse, AuthorizationFormText, BusinessBrand, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, Contact, ContactPointAddress, ContactPointConsent, |

| Field | Details |
| --- | --- |
| | ContactPointEmail, ContactPointPhone, ContactPointTypeConsent, ContentVersion, Customer, DataUseLegalBasis, DataUsePurpose, EmailMessage, EngagementChannelType, Idea, Image, Individual, Lead, Location, Opportunity, PartyConsent, Pricebook2, Product2, ProfileSkill, QuickText, Recommendation, Scorecard, ScorecardMetric, Seller, SocialPersona, SocialPost, Solution, VideoCall, WorkBadgeDefinition<br>In addition to the listed standard object fields, this field can refer to custom objects as well, |
| `AlertType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Specifies the type of insight alert.<br>Possible values are:<br>• `JOB_CHANGE`<br>• `NEWS`<br>• `RELATIONSHIP`<br>The default value is `NEWS`. |
| `CurrentDesignation` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The current designation that's related to the job alert. |
| `CurrentEmployer` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the current employer that's related to the job alert. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed a record related to this alert record. |

| Field | Details |
| --- | --- |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this alert. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the alert record. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who owns the record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PreviousDesignation` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The previous designation that's related to the job alert. |
| `PreviousEmployer` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the previous employer that's related to the job alert. |

# BusinessAlertStatus

Represents information about the read status of an insight alert. This object is available in API version 57.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The BusinessAlertStatus object is available only if the ERI Growth User or ERI Starter User license is enabled.

## Fields

| Field | Details |
|---|---|
| `BusinessAlertId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The insight alert related to the status.<br>This field is a relationship field.<br>**Relationship Name**<br>BusinessAlert<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BusinessAlert |
| `IsAlertRead` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the insight alert is read by the user (true) or not (false).<br>The default value is `false`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Specifies the activation status of the insight alert. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who is associated with the alert.<br>This field is a relationship field.<br>**Relationship Name**<br>User<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

# BusinessHours

Specifies the business hours of your support organization. Escalation rules are run only during these hours.

Limit a list view to a maximum of 10,000 business hours.

If business hours are associated with any Holiday records, then business hours and escalation rules associated with business hours are suspended during the dates and times specified as holidays.

## Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

All users, even those without the "View Setup and Configuration" user permission, can view business hours via the API.

## Fields

| Field | Details |
| --- | --- |
| `BusinessHoursId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable,Sort<br>**Description**<br>ID of the BusinessHours associated with the SlaProcess. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the business hours is active (`true`) or not active (`false`). |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the business hours. |
| `IsDefault` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the business hours are set as the default business hours (`true`) or not (`false`). |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date when the business hours were last viewed. |
| `FridayEndTime` | **Type**<br>time<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Time that business closes. |

| Field | Details |
| --- | --- |
| FridayStartTime | **Type**<br>time<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Time that business opens. |
| MondayEndTime | **Type**<br>time<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Time that business closes. |
| MondayStartTime | **Type**<br>time<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Time that business opens. |
| SaturdayEndTime | **Type**<br>time<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Time that business closes. |

| `WednesdayEndTime` | **Type**<br>time<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Time that business closes. |
| `WednesdayStartTime` | **Type**<br>time<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Time that business opens. |

## Usage

Use this object to specify the business hours at which your support team operates. Escalation rules only run during the business hours with which they are associated. To set business hours to 24-hours a day, set the times from midnight to midnight (00:00:00 ~ 00:00:00) on each day.

By default, business hours are set from 12:00 AM to 12:00 AM in the default time zone specified in your organization's profile.

Overview of Salesforce Objects and Fields

# Business Process

Represents a business process. Business Processes track separate sales, lead, support, and solution lifecycles by displaying different picklist values according to each user's profile.

## Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Customer Portal users can't access this object.

# Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of this business process. Limit: 255 characters. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether this business process can be presented to users in the Salesforce user interface (`true`) or not (`false`) when creating a new record type or changing the business process of an existing record type. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Required. Name of this business process. Limit: 80 characters. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. |

| Field | Details |
| --- | --- |
| | • In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `TableEnumOrId` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Required. One of the following values: Case, Opportunity, or Solution. Label is **Entity Enumeration Or ID**. |

## Usage

Use the BusinessProcess object to offer different subsets of picklist values to different users for the LeadStatus, CaseStatus, and OpportunityStage fields. Similar to a RecordType, a BusinessProcess identifies the type of a row in a Case, Lead, or Opportunity and implies a subset of picklist values for these three fields. The values for the remaining picklist fields are driven by RecordType.

Overview of Salesforce Objects and Fields

# BusinessProcessDefinition

Setup object that stores information about stages in a customer lifecycle map. The stages are associated with surveys and questions created using Salesforce Surveys. This object is reserved for internal use, and is available in API version 49.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `BusinessProcessGroupId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Unique identifier of the customer lifecycle map associated with the stage. |

| Field | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Developer name of the stage. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language of the MasterLabel.<br>Possible values are:<br>• `da`—Danish<br>• `de`—German<br>• `en_US`—English<br>• `es`—Spanish<br>• `es_MX`—Spanish (Mexico)<br>• `fi`—Finnish<br>• `fr`—French<br>• `it`—Italian<br>• `ja`—Japanese<br>• `ko`—Korean<br>• `nl_NL`—Dutch<br>• `no`—Norwegian<br>• `pt_BR`—Portuguese (Brazil)<br>• `ru`—Russian<br>• `sv`—Swedish<br>• `th`—Thai<br>• `zh_CN`—Chinese (Simplified)<br>• `zh_TW`—Chinese (Traditional) |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Label of the stage. |

| Field | Details |
| --- | --- |
| `ProcessDescription` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>Description of the stage. |
| `SequenceNumber` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The position of the stage in the associated customer lifecycle map. |

# BusinessProcessFeedback

Setup object that stores information about the survey and the question associated with each stage in a customer lifecycle map. Customer lifecycle maps are used to track the scores provided by customers across their lifecycle using Salesforce Surveys. This object is reserved for internal use, and is available in API version 49.0 and later.

## Supported Calls

`describeSObjects(),query(),retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `ActionName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Name of the survey used to gather feedback. |
| `ActionParam` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Name of the question used to gather feedback. |
| `ActionType` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>Method of collecting feedback.<br>Possible value is:<br>• `PHONE_CALL`<br>• `SURVEY` |
| `BusinessProcessDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Unique identifier of the stage associated with the survey and question. |

# BusinessProcessGroup

Setup object that stores information about customer lifecycle maps. Customer lifecycle maps are used to track the scores provided by customers across their lifecycle using Salesforce Surveys. This object is reserved for internal use, and is available in API version 49.0 and later.

## Supported Calls

`describeSObjects()`,`query()`,`retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `CustomerSatisfactionMetric` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Represents the question type that measures the customers' Net Promote Score or satisfaction score across their lifecycle.<br>Possible values are:<br>• `NPS`<br>• `Rating` |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>Description of the customer lifecycle map. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Developer name the customer lifecycle map.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language of the MasterLabel.<br>Possible values are:<br>• `da`—Danish<br>• `de`—German<br>• `en_US`—English<br>• `es`—Spanish<br>• `es_MX`—Spanish (Mexico)<br>• `fi`—Finnish<br>• `fr`—French<br>• `it`—Italian<br>• `ja`—Japanese<br>• `ko`—Korean |

| Field | Details |
| --- | --- |
| | • nl_NL—Dutch<br>• no—Norwegian<br>• pt_BR—Portuguese (Brazil)<br>• ru—Russian<br>• sv—Swedish<br>• th—Thai<br>• zh_CN—Chinese (Simplified)<br>• zh_TW—Chinese (Traditional) |
| MasterLabel | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Label of the customer lifecycle map. |

# BuyerAccount

Represents an account that is enabled as a buyer for Lightning B2B Commerce. This object is available in API version 48.0 and later.

## Supported Calls

create(), delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(), undelete(), update(), upsert()

## Special Access Rules

The BuyerAccount object is available only if the B2B Commerce license is enabled.

## Fields

| Field | Details |
| --- | --- |
| AvailableCredit | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of credit available to a buyer account.<br>This is a calculated field. |

| Field | Details |
| --- | --- |
| `BuyerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the buyer account.<br>This is a relationship field.<br>**Relationship Name**<br>Buyer<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account<br>Note: This field is unique within your organization. |
| `BuyerStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Status of the buyer account.<br>Possible values are:<br>• `Active`<br>• `Inactive`<br>• `On Hold`<br>• `Pending`<br>The default value is 'Pending'. |
| `CommerceType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The type of commerce that the buyer account is conducting, using the Commerce app.<br>Possible values are:<br>• `Buyer`<br>• `Reseller`<br>• `Seller`<br>The default value is 'Buyer'. |

| Field | Details |
| --- | --- |
| `CreditLimit` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The limit of credit available to the buyer account. |
| `CreditStatus` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The type or status of the buyer account's credit ranking.<br>Possible values are:<br>• `Bad Credit`<br>• `Delinquent`<br>• `Good Credit`<br>• `On Hold`<br>The default value is 'Good Credit'. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Three-letter ISO currency code associated with the buyer account record.<br>Possible values are:<br>• `USD`—U.S. Dollar<br>The default value is 'USD'. |
| `CurrentBalance` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The balance carried by the buyer account. |
| `IsActive` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the buyer account is active (`true`) or not (`false`).<br>The default value is 'false'. |
| `MaximumOrderLimit` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The maximum number of orders that can be placed by the buyer account. |
| `MinimumOrderLimit` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The minimum number of orders that can be placed by the buyer account. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the buyer account. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the buyer account owner.<br>This is a relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

| Field | Details |
| --- | --- |
| PayerId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the buyer account payer.<br>This is a relationship field.<br>**Relationship Name**<br>Payer<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| SendToId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of account that an order is sent to.<br>This is a relationship field.<br>**Relationship Name**<br>SendTo<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |

# Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**BuyerAccountFeed on page 55**
Feed tracking is available for the object.

**BuyerAccountHistory on page 63**
History is available for tracked fields of the object.

**BuyerAccountShare on page 67**
Sharing is available for the object.

# BuyerCriteria

Represents the buyer context qualifier of locale for any buyer groups of type Market This object is available in API version 58.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `CriteriaKey` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Required. The label displayed to list supported markets with associated languages and currencies.<br>Possible values are:<br>• `Locale`<br>• `DataCloudSegment` |
| `CriteriaKeyType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Required. Defines the type of key.<br>Possible values are:<br>• `SessionAttributes` Session Attributes<br>• `DataCloudObjects` |
| `CriteriaValue` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update, Nillable<br>**Description**<br>Required. The value of a `Locale`. For example, `fr-FR`. |

| Field | Details |
| --- | --- |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Optional. Three letter ISO currency codes associated with the buyer account record or a locale. Auto populated if MultiCurrency is enabled in org. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The supported criteria in this record. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, and `LastReferenceDate` is not null, the user accessed this record or list view indirectly. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the buyer group the criteria apply to. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the member group or Admin/Merchandiser .<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

# Usage

BuyerCriteria is related to objects that enable a localized buyer experience. Together, these objects provide buyers with dynamic access to the qualifiers (entitlements, price books, and promotions) associated with their buyer group when they browse and shop in webstores with localized languages and currencies. The related objects are as follows:

- BuyerGroup - stores keys that link member entitlements, price books, promotions, and shipping methods to either a single currency and language or to multiple currencies and languages.
- BuyerCriteria - represents locales (languages and currencies) that are enabled for BuyerGroup members when they shop in webstores with localized currencies and languages.
- BuyerGroupBuyerCriteria - associates a buyer group that is enabled for webstores with multiple languages and currencies with BuyerCriteria that define those languages and currencies.
- BuyerGroupRelatedObject - allows BuyerGroup qualifiers (entitlements, price books, and promotions) to be available in multiple languages and currencies without duplicating the qualifiers for each language and currency.

# Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**BuyerCriteriaFeed on page 55**
Feed tracking is available for the object.

**BuyerCriteriaHistory on page 63**
History is available for tracked fields of the object.

**BuyerCriteriaOwnerSharingRule on page 65**
Sharing rules are available for the object.

**BuyerCriteriaShare on page 67**
Sharing is available for the object.

# BuyerGroup

Associates group qualifiers (entitlements, price books, promotions, and shipping methods) with buyer members based on buyer account ID or on the localized language and currency of the market browsed in a webstore. This object is available in API version 57.0; amended to support Market in version 58.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Buyer group details. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, and `LastReferenceDate` is not null, the user accessed this record or list view indirectly. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the buyer group. |

| Field | Details |
| --- | --- |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the creator of this object.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `RecordTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the record type of the version<br>This field is a relationship field.<br>**Relationship Name**<br>RecordType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>RecordType |
| `Role` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Determines a fixed or dynamic relationship to the language and currency that products, promotions, and entitlements are displayed in.<br>Possible values are:<br>• `AccountBased`<br>• `Market`<br>• `DataCloudSegments` |

| Field | Details |
| --- | --- |
| | The default value is `AccountBased`. When set to `Market`, and when the org has multiple locales, the currency and language for qualifiers (price books, promotions, entitlements) dynamically change as the buyer views different locale-based markets. |

## Usage

BuyerGroup is related to objects that enable a localized buyer experience. Together, these objects provide buyers with dynamic access to the qualifiers (entitlements, price books, and promotions) associated with their buyer group when they browse and shop in webstores with localized languages and currencies. The related objects are as follows:

- BuyerGroup - stores keys that link member entitlements, price books, promotions, and shipping methods to either a single currency and language or to multiple currencies and languages.
- BuyerCriteria - represents locales (languages and currencies) that are enabled for BuyerGroup members when they shop in webstores with localized currencies and languages.
- BuyerGroupBuyerCriteria - associates a buyer group that is enabled for webstores with multiple languages and currencies with BuyerCriteria that define those languages and currencies.
- BuyerGroupRelatedObject - allows BuyerGroup qualifiers (entitlements, price books, and promotions) to be available in multiple languages and currencies without duplicating the qualifiers for each language and currency.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**BuyerGroupChangeEvent on page 68**
Change events are available for the object.

**BuyerGroupFeed on page 55**
Feed tracking is available for the object.

**BuyerGroupHistory on page 63**
History is available for tracked fields of the object.

**BuyerGroupOwnerSharingRule on page 65**
Sharing rules are available for the object.

**BuyerGroupShare on page 67**
Sharing is available for the object.

# BuyerGroupBuyerCriteria

Associates a buyer group that is enabled for webstores supporting multiple languages and currencies with BuyerCriteria that define those languages and currencies. This object is available in API version 58.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

# Fields

| Field | Details |
|---|---|
| `BuyerCriteriaId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. ID of the buyer criteria this record is associated with.<br>This field is a relationship field.<br>**Relationship Name**<br>BuyerCriteria<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BuyerCriteria |
| `BuyerGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the buyer group this record is associated with.<br>This field is a relationship field.<br>**Relationship Name**<br>BuyerGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BuyerGroup |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Optional. Three letter ISO currency codes associated with the buyer account record or a locale. Auto populated if MultiCurrency is enabled in org. |
| `Name` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Name of this record. |

## Usage

BuyerGroupBuyerCriteria is related to objects that enable a localized buyer experience. Together, these objects provide buyers with dynamic access to the qualifiers (entitlements, price books, and promotions) associated with their buyer group when they browse and shop in webstores with localized languages and currencies. The related objects are as follows:

- BuyerGroup - stores keys that link member entitlements, price books, promotions, and shipping methods to either a single currency and language or to multiple currencies and languages.
- BuyerCriteria - represents locales (languages and currencies) that are enabled for BuyerGroup members when they shop in webstores with localized currencies and languages.
- BuyerGroupBuyerCriteria - associates a buyer group that is enabled for webstores with multiple languages and currencies with BuyerCriteria that define those languages and currencies.
- BuyerGroupRelatedObject - allows BuyerGroup qualifiers (entitlements, price books, and promotions) to be available in multiple languages and currencies without duplicating the qualifiers for each language and currency.

# BuyerGroupMember

Represents a member of a buyer group. This object is available in API version 55.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The BuyerGroupMember object is available only if the Commerce Buyer and Entitlements Integrator permission is granted.

## Fields

| Field | Details |
| --- | --- |
| `BuyerGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the buyer group to which the member belongs.<br>`BuyerGroupId` is a relationship field.<br>**Relationship Name**<br>BuyerGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BuyerGroup |
| `BuyerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the account or guest buyer profile.<br>`BuyerId` is a polymorphic relationship field.<br>**Relationship Name**<br>Buyer<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, GuestBuyerProfile |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the buyer group member. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The ID of the member group or user.<br>`OwnerId` is a polymorphic relationship field.<br>**Relationship Name**<br>Owner |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

# BuyerGroupPricebook

Represents a buyer group price book used in Lightning B2B Commerce. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The BuyerGroupPricebook object is available only if the B2B Commerce license is enabled.

## Fields

| Field | Details |
| --- | --- |
| `BuyerGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the buyer group that the price book record is assigned to. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether the BuyerGroupPricebook is active (`true`) or not (`false`). Default value is `false`. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the Buyer Group Price Book record. |
| `Pricebook2Id` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the price book assigned to the buyer group. |
| `Priority` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The sequential priority used to determine the price of a product. This field is only available for web stores that use the **Priority** pricing strategy. |

# Usage

Use the BuyerGroupPricebook object to assign a price book to a set of buyer users. Assigning a price book to a buyer group allows buyers within that buyer group to retrieve product prices from the price book. When a buyer has multiple price book assignments, including multiple prices for the same product, the store Pricing Strategy determines the price.

# BuyerGroupRelatedObject

Used to associate currencies and supported ship-to countries with a buyer group and its price books, promotions, and entitlements. Supports buyer experience when buyer group members shop in stores enabled for multiple locales. This object is available in API version 58.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

BuyerGroupRelatedObject is availble only if the org is Market Enabled (`Commerce.orgHasCommerceMarketEnabled`).

## Fields

| Field | Details |
|---|---|
| `BuyerGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. ID of the buyer group this record is associated with.<br>This field is a relationship field.<br>**Relationship Name**<br>BuyerGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>BuyerGroup |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record. |
| `LastViewedDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, and `LastReferenceDate` is not null, the user accessed this record or list view indirectly.. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Name of this record. |
| `ObjectType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Required. The names displayed in the picklist showing the ObjectValues - currency and ship-to countries.<br>Possible values are:<br>• `DefaultCurrency` - Default Currency<br>• `SupportedShipToCountries` - Supported Ship-to Countries |
| `ObjectValues` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Optional. Values for ObjectType. The actual currency and supported ship-to countries. Possible values are:<br>• Three-letter ISO currency code associated with the buyer account or a supported locale.<br>• ISO country code for supported ship-to countries. |

## Usage

BuyerGroupRelatedObject is related to objects that enable a localized buyer experience. Together, these objects provide buyers with dynamic access to the qualifiers (entitlements, price books, and promotions) associated with their buyer group when they browse and shop in webstores with localized languages and currencies. The related objects are as follows:

- BuyerGroup - stores keys that link member entitlements, price books, promotions, and shipping methods to either a single currency and language or to multiple currencies and languages.

- BuyerCriteria - represents locales (languages and currencies) that are enabled for BuyerGroup members when they shop in webstores with localized currencies and languages.
- BuyerGroupBuyerCriteria - associates a buyer group that is enabled for webstores with multiple languages and currencies with BuyerCriteria that define those languages and currencies.
- BuyerGroupRelatedObject - allows BuyerGroup qualifiers (entitlements, price books, and promotions) to be available in multiple languages and currencies without duplicating the qualifiers for each language and currency.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**BuyerGroupRelatedObjectChangeEvent on page 68**
Change events are available for the object.

**BuyerGroupRelatedObjectFeed on page 55**
Feed tracking is available for the object.

**BuyerGroupRelatedObjectHistory on page 63**
History is available for tracked fields of the object.

# CalcProcStepRelationship

Defines a parent-child relationship between two Expression Set Steps in an Expression Set Version. The label for this object is Expression Set Step Relationship. This object is available in API version 53.0 and later.

Note: This object has been deprecated as of API version 55.0. In API version 55.0 and later, use the new Expression Set objects in Business Rules Engine instead.

Parent-child step relationships collectively determine the step order.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Access to Expression Sets requires OmniStudio licenses.

## Fields

| Field | Details |
|---|---|
| `CalcProcStepId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the child Expression Set Step.<br>This is a relationship field.<br>**Relationship Name**<br>CalcProcStep<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CalculationProcedureStep |
| `CalcProcVersionId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the related Expression Set Version.<br>This is a relationship field.<br>**Relationship Name**<br>CalcProcVersion<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CalculationProcedureVersion |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The Expression Set Step Relationship name. |
| `ParentCalcProcStepId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the parent Expression Set Step.<br>This is a relationship field.<br>**Relationship Name**<br>ParentCalcProcStep |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>CalculationProcedureStep |
| `RelationshipType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of relationship between the parent and child steps.<br>Possible values are:<br>• `Bypass`—The parent is a condition step. If the condition is false, the child is the next step.<br>• `ParentChild`—The child is the next step after the parent. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CalcProcStepRelationshipFeed on page 55**
Feed tracking is available for the object.

**CalcProcStepRelationshipHistory on page 63**
History is available for tracked fields of the object.

# CalculatedInsightRangeBound

Stores the information required to calculate a range-bound data insight. This object is available in API version 59.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available only if a B2B Commerce or D2C Commerce license is enabled.

# Fields

| Field | Details |
| --- | --- |
| `InsightName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Name of the calculated insight. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it. |
| `LowerBoundRange` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>The lower limit of the calculated insight. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The autogenerated name of the insight. |
| `Operator` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Operation used to calculate the insight based on the upper bound range and lower bound range.<br>Possible values are:<br>• `EQUAL_TO`<br>• `GREATER_THAN`<br>• `GREATER_THAN_EQUAL_TO`<br>• `LESS_THAN`<br>• `LESS_THAN_EQUAL_TO` |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the contact who owns the insight.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `SalesStoreId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the webstore associated with the insight benchmarks.<br>This field is a relationship field.<br>**Relationship Name**<br>SalesStore<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>WebStore |

| Field | Details |
| --- | --- |
| UpperBoundRange | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The upper limit of the calculated insight. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CalculatedInsightRangeBoundOwnerSharingRule on page 65**
Sharing rules are available for the object.

**CalculatedInsightRangeBoundShare on page 67**
Sharing is available for the object.

# CalculationMatrix

Matches input values to a table row and returns the row's output values. The label for this object is Decision Matrix. This object is available in API version 53.0 and later.

Decision Matrices are useful for implementing complex rules in a systematic, readable way. There are two types: Standard and Grouped. A Grouped Decision Matrix groups rows in different versions by one or two keys such as geographic region or product code.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Access to Decision Matrices requires Omnistudio licenses.

## Fields

| Field | Details |
| --- | --- |
| DecisionMatrixDefinitionId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The decision matrix definition record associated with this calculation matrix.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>DecisionMatrixDefinition<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>DecisionMatrixDefinition, DecisionTable |
| `DecisionMatrixType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies the type of lookup table.<br>Possible values are:<br>• `DecisionMatrix`<br>• `DecisionTable`<br>The default value is `DecisionMatrix`. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A text description of the Decision Matrix. |
| `GroupKey` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A key for grouping matrix rows in different versions, such as geographic region or product code. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, it's possible the user only accessed this record or list view (`LastReferencedDate`) but didn't view it. |
| `MigrationStatus` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The status of migrating the data from the Calculation Matrix object to the Decision Matrix Definition object. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The Decision Matrix name. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who currently owns this matrix. Default value is the user logged in to the API to perform the create action.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

| Field | Details |
| --- | --- |
| `SubGroupKey` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A subkey for grouping matrix rows in different versions, such as geographic region or product code. For example, if the `GroupKey` is `Country`, the `SubGroupKey` can be `State` or `Province`. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The Decision Matrix type. A Standard Decision Matrix has no special features. A Grouped Decision Matrix groups rows by one or two keys (`GroupKey` and `SubGroupKey`) such as geographic region or product code.<br>Possible values are:<br>• `Grouped`<br>• `Standard` |
| `UniqueName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The unique identifier of the record, which is sourced from the value in the Name field of CalculationMatrix (decision matrix). For example, if the name of the calculation matrix is sample matrix, its UniqueName would be sample_matrix. |
| `UsageType` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>A decision matrix's usage type.<br>Available in API version 59.0 and later.<br>Possible value is:<br>• `Bre`-Default |

| Field | Details |
| --- | --- |
| | When Business Rules Engine is enabled on your Salesforce org, the default value is Bre. Other usage types may be available to you depending on your industry solution and permission sets. |

## Usage

Expression Sets, OmniScripts, and Integration Procedures can call Decision Matrices.

# CalculationMatrixColumn

Defines a column in a Decision Matrix. The label for this object is Decision Matrix Column. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Access to Decision Matrices requires Omnistudio licenses.

## Fields

| Field | Details |
| --- | --- |
| `ApiName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The API name of the column. |
| `CalculationMatrixId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the Decision Matrix to which this column belongs.<br>This is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>CalculationMatrix<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CalculationMatrix |
| `ColumnType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Specifies whether the column matches matrix input or is returned as output.<br>Possible values are:<br>• `Input`<br>• `Output` |
| `DataType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of data in the column.<br>Possible values are:<br>• `Boolean`<br>• `Currency`<br>• `Number`<br>• `NumberRange`<br>• `Percent`<br>• `Text`<br>• `TextRange` |
| `DisplaySequence` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The position of this column in the column order. |

| Field | Details |
| --- | --- |
| `IsWildcardColumn` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Specifies that this column can contain a wildcard value such as `ALL`.<br>The default value is `false`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The column name. |
| `RangeValues` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A list of values that define range boundaries. |
| `WildcardColumnValue` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The value that indicates a wildcard, for example `ALL`. Applicable if `IsWildcardColumn` is `true`. |

# CalculationMatrixRow

Defines a row in a Decision Matrix. The label for this object is Decision Matrix Row. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Access to Decision Matrices requires Omnistudio licenses.

## Fields

| Field | Details |
| --- | --- |
| `CalculationMatrixVersionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the Decision Matrix Version to which this row belongs.<br>This is a relationship field.<br>**Relationship Name**<br>CalculationMatrixVersion<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CalculationMatrixVersion |
| `EndDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The last date on which this row version is active. Applicable if `IsVersionEnabled` is `true`. |
| `InputData` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The input columns and associated values for this row of the matrix. |
| `IsVersionEnabled` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Specifies whether the associated matrix version is active. Derived from the associated Decision Matrix Version (CalculationMatrixVersion object).<br>The default value is `false`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The row name. |
| `OutputData` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The output columns and associated values for this row of the matrix. |
| `StartDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The first date on which this row version is active. Applicable if `IsVersionEnabled` is `true`. |

# CalculationMatrixVersion

Defines a version of a Decision Matrix. The label for this object is Decision Matrix Version. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Access to Decision Matrices requires Omnistudio licenses.

# Fields

| Field | Details |
| --- | --- |
| `ApiName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The API name of the decision matrix version. This field is available in API version 56.0 and later. |
| `CalculationMatrixId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the Decision Matrix to which this version belongs.<br>This is a relationship field.<br>**Relationship Name**<br>CalculationMatrix<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CalculationMatrix |
| `DecisionMatrixDefinitionVerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The decision matrix definition version associated with this calculation matrix version.<br>This field is a relationship field.<br>**Relationship Name**<br>DecisionMatrixDefinitionVer<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>DecisionMatrixDefinitionVersion |
| `DscnModelNoteExportStatus` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Indicates the export status of a decision matrix version in the Decision Model and Notation (DMN) format.<br>Possible values are:<br>• `Initiated`<br>• `InProgress`<br>• `Complete`<br>• `Failed` |
| `EndDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The last date on which this matrix version is active. |
| `GroupKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A key for grouping matrix rows in different versions, such as geographic region or product code. Derived from the associated Decision Matrix (CalculationMatrix object). |
| `GroupKeyValue` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The value of the `GroupKey` for this version. For example, if the `GroupKey` is `Country`, the `GroupKeyValue` can be `United States`. |
| `IsEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Specifies whether this version is active.<br>The default value is `false`. |

| Field | Details |
| --- | --- |
| `LoadProcessStatus` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The status of a data upload from a `.csv` file.<br>Possible values are:<br>• `Completed`<br>• `CompletedWithErrors`<br>• `Failed`<br>• `InProgress`<br>• `Pending` |
| `MatrixType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The matrix type, either `Standard` or `Grouped`. A Grouped Decision Matrix groups rows in different Decision Matrix Versions by one or two keys such as geographic region or product code. Derived from the associated Decision Matrix (CalculationMatrix object). |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The matrix version name. |
| `Rank` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>When the invocation time of a matrix call is between the `StartDateTime` and `EndDateTime` of more than one enabled matrix version, the version with the highest `Rank` is chosen. |
| `StartDateTime` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The first date on which this matrix version is active. |
| `SubGroupKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>A subkey for grouping matrix rows in different versions, such as geographic region or product code. For example, if the `GroupKey` is `Country`, the `SubGroupKey` can be `State or Province`. Derived from the associated Decision Matrix (CalculationMatrix object). |
| `SubGroupKeyValue` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The value of the `SubGroupKey` for this version. For example, if the `SubGroupKey` is `State or Province`, the `SubGroupKeyValue` can be `California`. |
| `VersionNumber` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The version number. |

# CalculationProcedure

Performs a series of calculations using matrix lookups and user-defined variables and constants. The label for this object is Expression Set. This object is available in API version 53.0 and later.

Note: This object has been deprecated as of API version 55.0. In API version 55.0 and later, use the new Expression Set objects in Business Rules Engine instead.

Expression Sets accept input variables and return output variables, both in JSON format. Expression Sets are especially useful for determining prices, rates, and quotes.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Access to Expression Sets requires OmniStudio licenses.

## Fields

| Field | Details |
|---|---|
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A text description of the Expression Set. |
| `InputVariablesMetadata` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Metadata for the Expression Set's input variables. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, it's possible the user only accessed this record or list view (`LastReferencedDate`) but didn't view it. |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The Expression Set name. |
| `OutputVariablesMetadata` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Metadata for the Expression Set's output variables. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the user who currently owns this Expression Set. Default value is the user logged in to the API to perform the create action.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

## Usage

OmniScripts and Integration Procedures can call Expression Sets. Expression Sets can call Decision Matrices.

# CalculationProcedureStep

Defines a step in an Expression Set. The label for this object is Expression Set Step. This object is available in API version 53.0 and later.

Note: This object has been deprecated as of API version 55.0. In API version 55.0 and later, use the new Expression Set objects in Business Rules Engine instead.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Access to Expression Sets requires OmniStudio licenses.

## Fields

| Field | Details |
|---|---|
| `CalculationMatrixId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the Decision Matrix this step calls. Applicable only if the `StepType` is `MatrixLookup`or `GroupMatrixLookup`.<br>This is a relationship field.<br>**Relationship Name**<br>CalculationMatrix<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CalculationMatrix |
| `CalculationMatrixType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The type of the Decision Matrix this step calls. Applicable only if this step calls a Decision Matrix. If the `StepType` is `MatrixLookup`, the value of this field is `Standard`. If the `StepType` is `GroupMatrixLookup`, the value of this field is `Grouped`. |
| `CalculationProcedure` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the Expression Set to which this step belongs. |

| Field | Details |
| --- | --- |
| `CalculationProcedureVersionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the Expression Set Version to which this step belongs.<br>This is a relationship field.<br>**Relationship Name**<br>CalculationProcedureVersion<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CalculationProcedureVersion |
| `ConditionsConvertedText` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The condition expression converted to postfix notation. Applicable only if the `StepType` is `Condition`. |
| `ConditionsExpressionText` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The condition expression as the user entered it. Applicable only if the `StepType` is `Condition`. |
| `ConditionsUiFormattedText` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The condition expression converted to JSON format for UI display. Applicable only if the `StepType` is `Condition`. |
| `Description` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A text description of the Expression Set Step. |
| `FormulaConvertedText` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The formula expression converted to postfix notation. Applicable only if the `StepType` is `Calculation`. |
| `FormulaExpressionText` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The formula expression as the user entered it. Applicable only if the `StepType` is `Calculation`. |
| `FormulaUiFormattedText` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The formula expression converted to JSON format for UI display. Applicable only if the `StepType` is `Calculation`. |
| `InputVariablesFormatText` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A list of the input matrix columns or procedure variables applicable to the step. |
| `IsConditionalStep` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Specifies that this step is conditional. |

| Field | Details |
| --- | --- |
| | The default value is `false`. |
| `IsResultIncluded` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Specifies that the result of this step is included in the Expression Set output.<br>The default value is `false`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The step name. |
| `OutputVariablesFormatText` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A list of the output matrix columns or procedure variables applicable to the step. Applicable only if the `StepType` is `MatrixLookup`, `GroupMatrixLookup`, or `ReferenceProcedure`. |
| `OutputVariablesMappingText` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Maps Decision Matrix output variables to Expression Set variables. Applicable only if the `StepType` is `MatrixLookup`or `GroupMatrixLookup`. |
| `ReferenceProcedureId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the child Expression Set this step calls. Applicable only if the `StepType` is `ReferenceProcedure`.<br>This is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>ReferenceProcedure<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CalculationProcedure |
| `ReturnMessageValueSet` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A set of messages to return based on the result of a step with a `StepType` of `Condition`. |
| `Stage` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The stage of Expression Set invocation. The `Aggregation` stage applies only to steps with a `StepType` of `Aggregation`.<br>Possible values are:<br>• `Aggregation`<br>• `Calculation` |
| `StageStepSequence` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Sequence order of the step within the Expression Set. Used only for Expression Sets migrated from a Salesforce Industries package. New Expression Sets use Expression Set Step Relationship objects to order their steps. |
| `StepType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of action this step performs.<br>Possible values are: |

| Field | Details |
| --- | --- |
| | • `Aggregation`—Returns an average, maximum, minimum, or sum of a list of values.<br>• `Calculation`—Performs a mathematical operation, which can include variables and constants.<br>• `Condition`—Defines a condition that determines whether other steps are invoked.<br>• `GroupMatrixLookup`—Calls a Grouped Decision Matrix.<br>• `MatrixLookup`—Calls a Standard Decision Matrix.<br>• `ReferenceProcedure`—Calls a child Expression Set. |

# CalculationProcedureVariable

Defines a variable in an Expression Set. The label for this object is Expression Set Variable. This object is available in API version 53.0 and later.

Note: This object has been deprecated as of API version 55.0. In API version 55.0 and later, use the new Expression Set objects in Business Rules Engine instead.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Access to Expression Sets requires OmniStudio licenses.

## Fields

| Field | Details |
| --- | --- |
| `ApiName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The API name of this variable. |
| `CalculationMatrixName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of the Decision Matrix to which this variable belongs. Applicable only if this variable references a Decision Matrix column. |
| `CalculationProcedureVersionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the Expression Set Version to which this variable belongs.<br>This is a relationship field.<br>**Relationship Name**<br>CalculationProcedureVersion<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CalculationProcedureVersion |
| `DataType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The data type of this variable.<br>Possible values are:<br>• `Boolean`<br>• `Currency`<br>• `Date`<br>• `Number`<br>• `Percent`<br>• `Text` |
| `DefaultValue` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The default value of this variable. |

| Field | Details |
| --- | --- |
| `DisplayName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The user-readable name of this variable. |
| `IsEditable` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If `true`, specifies that a variable is NOT auto-imported from a step that calls a Decision Matrix or a child Expression Set.<br>The default value is `false`. |
| `IsUserDefined` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Specifies whether a variable is defined by the user.<br>The default value is `false`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of this variable. |
| `Precision` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The number of decimal places. Applicable if the `DataType` is Currency, Number, or Percent. |
| `UiDisplayOrder` | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The display order of the variable in the UI. |

# CalculationProcedureVersion

Defines a version of an Expression Set. The label for this object is Expression Set Version. This object is available in API version 53.0 and later.

Note: This object has been deprecated as of API version 55.0. In API version 55.0 and later, use the new Expression Set objects in Business Rules Engine instead.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Access to Expression Sets requires OmniStudio licenses.

## Fields

| Field | Details |
| --- | --- |
| `CalculationProcedureId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the Expression Set to which this version belongs.<br>This is a relationship field.<br>**Relationship Name**<br>CalculationProcedure<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CalculationProcedure |

| Field | Details |
| --- | --- |
| `Constants` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A serialized JSON object containing information about each constant. This information includes the name, data type, alias, and precision. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>A text description of the Expression Set Version. |
| `EndDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The last date on which this Expression Set Version is active. |
| `IsEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Specifies whether this Expression Set Version is active.<br>The default value is `false`. |
| `IsLoopingEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Specifies whether looping is enabled in this Expression Set Version.<br>The default value is `false`. |
| `LastSimulatedVariablesInput` | **Type**<br>textarea |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Nillable, Update<br>**Description**<br>The input variables and results of the most recent simulation. |
| `LoopEnd` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the end variable for looping. |
| `LoopIncrement` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the interval variable for looping. |
| `LoopStart` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the start variable for looping. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The version name. |
| `Rank` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>When more than one enabled version matches an Expression Set call, and the `StartDateTime` to `EndDateTime` spans overlap, the version with the highest `Rank` is chosen. |

| Field | Details |
| --- | --- |
| `StartDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort, Update<br>**Description**<br>The first date on which this Expression Set Version is active. |
| `VersionNumber` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The version number. |

# Calendar

Represents a calendar. This can be a default user calendar, public calendar, resource calendar, or holiday calendar. This object is available in API version 45.0 and later.

Newly created users are assigned a default calendar automatically. Similarly, holiday calendars are created automatically for each organization.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`

## Special Access Rules

Users with "View Setup and Configuration" user permissions can create, edit, and delete public and resource calendars in the user interface. All users, even those without the “View Setup and Configuration” user permission, can view calendars via the API.

## Fields

All fields are readable only.

| Field | Details |
| --- | --- |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>This field indicates whether a user can save events to the calendar. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>A user provided name that identifies the calendar. It is text-indexed for searchability. Note that this is not an enumerated field; it can be any string to a maximum length of 80 characters. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of the calendar. Possible values are:<br>• `Holiday` (Holiday Calendar)<br>• `Public` (Public Calendar)<br>• `Resource` (Resource Calendar)<br>• `User` (User Calendar) |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the user that owns that calendar record. If Type=User, there's a UserID associated (foreign key reference to the user). Otherwise, the user field is null. |

# CalendarView

These calendars can be created and assigned to users other than the creator. Available calendars include object, shared, public, resource, and user list calendars. Object calendars represent a calendar based on a Salesforce object, either standard or custom. This object is available in API version 51.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

All fields and entities referenced by field values must be accessible by the CalendarView creator even if the creator isn't the CalendarView owner.

## Fields

| Field | Details |
|---|---|
| `Color` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort, Update<br>**Description**<br>Represents the color used in the background for records displayed in a user's calendar view within the user interface. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. |
| `DateHandlingType` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Determined by the data type of the `StartField`. Valid values include:<br>• `Date`<br>• `Datetime` |
| `DisplayField` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Represents the `SobjectType` field used as the subject for records displayed in a user's calendar view within the user interface. |
| `EndField` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An optional field that represents the sObjectType field used as the end time for records displayed in a user's calendar view within the user interface. Must be a date or dateTime field that matches the type in `StartField`. |
| `FillPattern` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Represents the pattern displayed as the background for records displayed in a user's calendar view within the user interface. Valid values include:<br>• `verticalStripes`<br>• `ascDiagonalStripes`<br>• `descDiagonalStripes` |
| `IsDisplayed` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Defines whether users can see a calendar's records in their calendar view in the user interface. When `true`, records are visible in the user's calendar view. When `false`, records are hidden from the user's calendar view. The default is `true`. `IsDisplayed` can be `true` for up to 50 calendars. |
| `ListViewFilterId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>References the ListView used to filter records represented by the CalendarView. ListView must have the same sObjectType. If no `ListViewFilterId` is defined, the calendar displays only records with the same owner as the CalendarView.<br>This is a relationship field.<br>**Relationship Name**<br>ListViewFilter<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>ListView |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>A user-provided name that identifies the calendar. This isn't an enumerated field; it can be any string to a maximum length of 80 characters. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Represents the owner of the CalendarView.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PublisherId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Represents the user, user list, public, or resource calendar from where event data is populated.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Publisher<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Calendar, ListView, User |
| `SobjectType` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of standard or custom Salesforce object that is used to create records for the CalendarView. Use the API name of the desired `SobjectType`. |
| `StartField` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Represents the `SobjectType` field used as the start time for records displayed in a user's calendar view within the user interface. Must be a date or dateTime field type. |

## Usage

To distribute a CalendarView to multiple users, IDs can be pulled from a group, user list, or profile. For this example, a CalendarView based on opportunity close dates is being distributed to a sales team in a public group, Sales Group:

```
Group userGroup = [SELECT Id FROM Group WHERE Name = 'Sales Group' LIMIT 1];
List<Id> groupId = new List<Id>();
groupId.add(userGroup.id);
List<GroupMember> groupMembers = [SELECT UserOrGroupId FROM GroupMember
   WHERE GroupId IN: groupId];

List<CalendarView> calendarViews = new List<CalendarView>();
for (GroupMember groupMember : groupMembers) {
   CalendarView calendarView = new CalendarView(name = 'Opportunity Close Dates',
    SobjectType = 'Opportunity', StartField = 'CloseDate', DisplayField =
    'Name', OwnerId = groupMember.UserOrGroupId);
   calendarViews.add(calendarView);
}
insert calendarViews;
```

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CalendarViewChangeEvent (API version 62.0)**
Change events are available for the object.

# CallCenter

Represents a call center, which is a logical representation of a single computer-telephony integration (CTI) system instance in an organization.

## Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

| Field | Details |
|---|---|
| `AdapterUrl` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>An optional field that specifies the location of where the CTI adapter is hosted. For example, `http://localhost:11000`.<br>This field is available in API version 23.0 or later. |
| `CustomSettings` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>Specifies settings in the call center definition file, such as whether the call center uses the Open CTI, and SoftPhone properties, such as height in pixels.<br>This field is available for Open CTI and in API version 25.0 or later. |
| `Id` | **Type**<br>ID<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>System field that uniquely identifies this call center. Label is **Call Center ID**. This ID is created automatically when the call center is created. |

| Field | Details |
| --- | --- |
| `InternalName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The internal name of the call center.<br>Limit is 80 characters. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort<br>**Description**<br>The name of the call center.<br>Limit is 80 characters. |
| `Version` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort<br>**Description**<br>The version of the CTI Toolkit used to create the call center (for versions 2.0 and later).<br>This field is available in API version 18.0 and later. |

## Usage

Create a call center or query an existing call center.

# CallCenterRoutingMap

Stores a mapping between a user or queue in a Salesforce org to a user or queue in an external system's call center. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Access to standard objects requires Salesforce admin privileges or the Customize Application permission.

Access to call center routing map records requires Contact Center Admin, Contact Center Admin (Partner Telephony), Contact Center Supervisor, or Manage Call Centers permission.

# Fields

| Field | Details |
|---|---|
| `CallCenterId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Reference to a call center.<br>This is a relationship field.<br>**Relationship Name**<br>CallCenter<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CallCenter |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The developer name is a combination of the Salesforce user ID or queue name, and the call center ID, with an underscore between these two values.<br>• `[SALESFORCE_USER_ID]_[CALL_CENTER_ID]`<br>• `[SALESFORCE_QUEUE_NAME]_[CALL_CENTER_ID]` |
| `ExternalId` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Unique identifier for the external system's user or queue. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The language of the MasterLabel. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The master label of the CallCenterRoutingMap. |
| `QuickConnect` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The Amazon Connect QuickConnectId ARN used to determine agent availability for Omni-Channel call transfers. Available in API version 56.0 and later.<br>This is a polymorphic relationship field. |
| `ReferenceRecordId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Lookup field to a Salesforce user or queue.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>ReferenceRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

# CallCoachingMediaProvider

Represents the media provider for call recordings. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Whether the connection with the provider is active or not. |
| `ProviderDescription` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The description of the media provider. |
| `ProviderName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort<br>**Description**<br>The name of the media provider. |

# CallCtrAgentFavTrfrDest

Represents a transfer destination that has been marked (starred) as a favorite in the Omni-Channel softphone by a contact center agent for voice call transfers. This object is available in API version 55.0 and later.

To see a list of transfer destinations that have been marked as favorites in the Omni-Channel softphone, add a participant to the call, click the Phone tab, and select **Favorite** from the Filter dropdown menu. Examples of transfer destination types include agents, contacts, directories, flows, and queues.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

# Fields

| Field | Details |
|---|---|
| `AgentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique ID of the contact center agent who marked the transfer destination as a favorite.<br>This field is a relationship field.<br>**Relationship Name**<br>Agent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `CallCenterId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique ID of the contact center from where the agent starred the transfer destination as a favorite.<br>This field is a relationship field.<br>**Relationship Name**<br>CallCenter<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CallCenter |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the transfer destination record that's marked as a favorite. |
| `OwnerId` | **Type**<br>reference |

| Field | Details |
|---|---|
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The unique ID of the user who owns this object.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `TransferDestination` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique ID of the transfer destination that's marked as a favorite. This is an external ID. |

# CallCtrAgentFavTrfrDestShare

Represents a sharing entry on a favorite transfer destination in the Omni-Channel softphone for voice call transfers. This object is available in API version 55.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `AccessLevel` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The level of access the User or Group has to the transfer destination that's marked as a favorite. Possible values are:<br>• `All` — Owner<br>• `Edit` — Read/Write<br>• `Read` — Read Only |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The unique ID of the parent object.<br>This field is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CallCtrAgentFavTrfrDest |
| `RowCause` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited.<br>Possible values are:<br>• `CompliantDataSharing` — Compliant Data Sharing<br>• `GuestParentImplicit` — Associated guest user sharing<br>• `GuestPersonImplicit` — Associated Guest User Sharing<br>• `GuestRule` — Guest User Sharing Rule<br>• `ImplicitChild` — Account Sharing<br>• `ImplicitParent` — Associated record owner or sharing<br>• `ImplicitPerson` — Person Contact<br>• `LearningAssignment` — Learning Assignment Share |

| Field | Details |
| --- | --- |
| | • `LearningAssignmentImplicit` — Learning Assignment Implicit Share<br>• `LearningItemAssignment` — Learning Item Assignment Share<br>• `Manual` — Manual Sharing<br>• `MfgTargetShare` — Manufacturing Target Sharing Rule<br>• `Owner`<br>• `Rule` — Sharing Rule<br>• `SharingRecordCollection` — Record Collection<br>• `SurveyShare` — Survey Sharing Rule<br>• `Team` — Sales Team<br>• `Territory` — Territory Assignment Rule<br>• `Territory2AssociationManual` — Territory Manual<br>• `Territory2Forecast` — Territory assignment for forecasting and reporting<br>• `TerritoryManual` — Territory Manual<br>• `TerritoryRule` — Territory Sharing Rule |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The unique ID of the User or Group that has been given access to the favorite transfer destination.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>UserOrGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

# CallDisposition

Represents a call result value that sales reps select when logging a call. This object is available in API version 47.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

## Fields

| Field | Details |
| --- | --- |
| `Disposition` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The result of a phone call, such as whether a call was connected or the rep left a voicemail. |
| `DispositionCategoryId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The related call outcome that is used in reports and branching criteria for cadences. |

# CallDispositionCategory

Represents the call outcome of a phone call that is used in reports and branching criteria for cadences. This object is available in API version 47.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

## Fields

| Field | Details |
| --- | --- |
| `Category` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of the call outcome. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language of the call category.<br>Possible values are:<br>• `da`—Danish<br>• `de`—German<br>• `en_US`—English<br>• `es`—Spanish<br>• `es_MX`—Spanish (Mexico)<br>• `fi`—Finnish<br>• `fr`—French<br>• `it`—Italian<br>• `ja`—Japanese<br>• `ko`—Korean<br>• `nl_NL`—Dutch<br>• `no`—Norwegian<br>• `pt_BR`—Portuguese (Brazil)<br>• `ru`—Russian<br>• `sv`—Swedish<br>• `th`—Thai |

| Field | Details |
| --- | --- |
| | • `zh_CN`—Chinese (Simplified)<br>• `zh_TW`—Chinese (Traditional) |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The static name of the call outcome. |

# CallTemplate

Represents a call script for users to read when making calls.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The description of the call script. |
| `HtmlBody` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The body content of the call script. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The time stamp that indicates when the current user last viewed a record that is related to this CallTemplate. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The time stamp that indicates when the current user last viewed this CallTemplate. If this value is null, this record might have been only referenced (`LastReferencedDate`) and not viewed. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>The name of the call script. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the user who owns the call script. |
| `TemplateType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The type of call template.<br>Possible values are:<br>• `Text` |
| `TotalCalls` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The total number of calls that use the CallTemplate. |
| `TotalCallsCallBackLater` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total Call Back Later call results that use the CallTemplate. |
| `TotalCallsLeftVoicemail` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total Left Voicemail call results that use the CallTemplate. |
| `TotalCallsMeaningfulConnect` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total Meaningful Connect call results that use the CallTemplate. |
| `TotalCallsNotInterested` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total Not Interested call results that use the CallTemplate. |
| `TotalCallsUncategorized` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The total uncategorized call results that use the CallTemplate. |
| `TotalCallsUnqualified` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The total Unqualified call results that use the CallTemplate. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CallTemplateChangeEvent (API version 48.0)**
Change events are available for the object.

# Campaign

Represents and tracks a marketing campaign, such as a direct mail promotion, webinar, or trade show.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

| Field | Details |
| --- | --- |
| `ActualCost` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of money spent to run the campaign. Label is Actual Cost in Campaign. |
| `AmountAllOpportunities` | **Type**<br>currency<br>**Properties**<br>Filter, Sort<br>**Description**<br>Amount of money in all opportunities associated with the campaign, including closed/won opportunities. Label is Value Opportunities in Campaign. |

| Field | Details |
| --- | --- |
| AmountWonOpportunities | **Type**<br>currency<br>**Properties**<br>Filter, Sort<br>**Description**<br>Amount of money in closed or won opportunities associated with the campaign. Label is Value Won Opportunities in Campaign. |
| BriefId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the brief that's associated with the campaign. A brief contains additional context about the goals and audience for the campaign. The label is Brief.<br>**Relationship Name**<br>Brief<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Record |
| BudgetedCost | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Amount of money budgeted for the campaign. Label is Budgeted Cost in Campaign. |
| CampaignImageId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the campaign image. Available in API version 42.0 and later. Only available to orgs with Partner Community licenses and Digital Experience enabled or orgs that have installed the Direct Marketing Managed package. |
| CampaignMemberRecordTypeId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The record type ID for CampaignMember records associated with the campaign.<br>This is a relationship field.<br>**Relationship Name**<br>CampaignMemberRecordType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>RecordType |
| `CampaignStage` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>This field is available with Marketing Cloud Growth and Advanced editions. The lifecycle stage of the campaign based on the status of all of its related flows. Possible values are:<br>• In Planning<br>• In Progress<br>• Completed<br>• Error<br>• Canceled<br>• Paused |
| `CreatedByID` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the user who created the campaign.<br>This is a relationship field.<br>**Relationship Name**<br>Creator<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `CurrencyIsoCode` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>Description of the campaign. Limit: 32 KB. Only the first 255 characters display in reports. |
| `EndDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Ending date for the campaign. Responses received after this date are still counted. |
| `ExpectedResponse` | **Type**<br>percent<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Percentage of responses you expect to receive for the campaign. |
| `ExpectedRevenue` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Amount of money you expect to generate from the campaign. |
| `HierarchyActualCost` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Calculated field for the total amount of money spent to run the campaigns in a campaign hierarchy. Label is Total Actual Cost in Hierarchy. |

| Field | Details |
| --- | --- |
| HierarchyAmountAllOpportunities | **Type**<br>currency<br>**Properties**<br>Filter, Sort<br>**Description**<br>Amount of money in all opportunities associated with the campaign in a campaign hierarchy, including closed/won opportunities. Label is Value Opportunities in Hierarchy. |
| HierarchyAmountWonOpportunities | **Type**<br>currency<br>**Properties**<br>Filter, Sort<br>**Description**<br>The amount of money in closed or won opportunities associated with the campaign in a campaign hierarchy. Label is Value Won Opportunities in Hierarchy. |
| HierarchyBudgetedCost | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Calculated field for the total amount of money budgeted for the campaigns in a campaign hierarchy. Label isTotal Budgeted Cost in Hierarchy. |
| HierarchyExpectedRevenue | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Calculated field for the total amount of money you expect to generate from the campaign in a campaign hierarchy. Label is Total Expected Revenue in Hierarchy. |
| HierarchyNumberOfContacts | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for the number of contacts associated with the campaign hierarchy. Label is Total Contacts in Hierarchy. |
| HierarchyNumberOfConvertedLeads | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Calculated field for the number of converted leads from the campaign in a campaign hierarchy. Label is Converted Leads in Hierarchy. |
| `HierarchyNumberOfLeads` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Calculated field for the number of leads from the campaign in a campaign hierarchy. Label is Leads in Hierarchy. |
| `HierarchyNumberOfOpportunities` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Calculated field for the number of opportunities related to the campaign in a campaign hierarchy. Label is Opportunities in Hierarchy. |
| `HierarchyNumberOfResponses` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Number of contacts and unconverted leads with a Member Status equivalent to "Responded" for the campaign in a campaign hierarchy. Label is **Responses in Hierarchy**. |
| `HierarchyNumberOfWonOpportunities` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of closed or won opportunities associated with the campaign. Label is Won Opportunities in Hierarchy. |
| `HierarchyNumberSent` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Calculated field for the total number of individuals targeted by the campaign in a campaign hierarchy. For example, the number of email messages sent. The label is Num Sent in Hierarchy. |
| HierarchyTotalEmailsDelivered | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for emails delivered related to the campaign in a campaign hierarchy. Label is Total Emails Delivered in Hierarchy. This field is available with Marketing Cloud Account Engagement. |
| HierarchyTotalFormSubmissions | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for form submissions related to the campaign in a campaign hierarchy. Label is Total Form Submissions in Hierarchy. This field is available with Marketing Cloud Account Engagement. |
| HierarchyTotalFormViews | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for form views related to the campaign in a campaign hierarchy. Label is Total Form Views in Hierarchy. This field is available with Marketing Cloud Account Engagement. |
| HierarchyTotalLandingPageFormSubmissions | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for form submissions from a landing page related to the campaign in a campaign hierarchy. Label is Total Landing Page Form Submissions in Hierarchy. This field is available with Marketing Cloud Account Engagement. |
| HierarchyTotalLandingPageViews | **Type**<br>int |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter<br>**Description**<br>Calculated field for landing page views related to the campaign in a campaign hierarchy. Label is Total Landing Page Views in Hierarchy. This field is available with Marketing Cloud Account Engagement. |
| `HierarchyUniqueEmailOpens` | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for email opens related to the campaign in a campaign hierarchy. Excludes repeat opens. Label is Unique Email Opens in Hierarchy. This field is available with Marketing Cloud Account Engagement. |
| `HierarchyUniqueEmailTrackedLinkClicks` | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for unique email link clicks related to the campaign in a campaign hierarchy. Excludes repeat clicks. Label is Unique Email Clicks in Hierarchy. This field is available with Marketing Cloud Account Engagement. |
| `HierarchyUniqueMarketingLinkClicks` | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for unique marketing link clicks related to the campaign in a campaign hierarchy. Excludes repeat clicks. Label is Unique Marketing Link Clicks in Hierarchy. This field is available with Marketing Cloud Account Engagement. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this campaign is active (`true`) or not (`false`). The default value is `false`. The label is **Active**. |

| Field | Details |
| --- | --- |
| `LastActivityDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Value is one of the following, whichever is the most recent:<br>• The due date of the most recent event logged against the record.<br>• The due date of the most recently closed task associated with the record. |
| `LastModifiedById` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the user who last updated the campaign.<br>This is a relationship field.<br>**Relationship Name**<br>Last Modified<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `LastReferencedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort,<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort,<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Required. Name of the campaign. Limit: is 80 characters. |
| `NumberOfContacts` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Number of contacts associated with the campaign. Label is Total Contacts. |
| `NumberOfConvertedLeads` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Number of leads that were converted to an account and contact due to the marketing efforts in the campaign. Label is Converted Leads. |
| `NumberOfLeads` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of leads associated with the campaign. Label is Leads in Campaign. |
| `NumberOfOpportunities` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of opportunities associated with the campaign. Label is Opportunities in Campaign. |
| `NumberOfResponses` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The number of contacts and unconverted leads with a Member Status equivalent to "Responded" for the campaign. Label is Responses in Campaign. |
| `NumberOfWonOpportunities` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of closed or won opportunities associated with the campaign. Label is Won Opportunities in Campaign. |
| `NumberSent` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The number of individuals targeted by the campaign. For example, the number of emails sent. Label is Num Sent. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the user who owns this campaign. Default value is the user logging in to the API to perform the create.<br>This is a relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `ParentCampaign` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The campaign above the selected campaign in the campaign hierarchy. |

| Field | Details |
| --- | --- |
| ParentId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the parent Campaign record, if any.<br>This is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Campaign |
| RecordTypeId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>ID of the record type assigned to this object. |
| StartDate | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Starting date for the campaign. |
| Status | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>Status of the campaign, for example, Planned, In Progress. Limit: 40 characters. |
| TenantId | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the associated Marketing Cloud Account Engagement business unit. Read-only. Available with Marketing Cloud Account Engagement in API version 51.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>Business Unit<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PardotTenant |
| `TotalAmountAllOpportunities` | **Type**<br>currency<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for total amount of all opportunities associated with the campaign hierarchy, including closed/won opportunities. Label is Total Value Opportunities in Hierarchy. |
| `TotalAmountAllWonOpportunities` | **Type**<br>currency<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for amount of all closed/won opportunities associated with the campaign hierarchy. Label is Total Value Won Opportunities in Hierarchy. |
| `TotalEmailsDelivered` | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for emails delivered related to the campaign. Label is Total Emails Delivered in Campaign. This field is available with Marketing Cloud Account Engagement. |
| `TotalFormSubmissions` | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for form submissions related to the campaign. Label is Total Form Submissions in Campaign. This field is available with Marketing Cloud Account Engagement. |

| Field | Details |
| --- | --- |
| TotalFormViews | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for form views related to the campaign. Label is Total Form Views in Campaign. This field is available with Marketing Cloud Account Engagement. |
| TotalLandingPageFormSubmissions | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for form submissions from a landing page related to the campaign. Label is Total Landing Page Form Submissions in Campaign. This field is available with Marketing Cloud Account Engagement. |
| TotalLandingPageViews | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for landing page views related to the campaign. Label is Total Landing Page Views in Campaign. This field is available with Marketing Cloud Account Engagement. |
| TotalNumberofLeads | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for total number of leads associated with the campaign hierarchy. This number also includes converted leads. Label is Total Leads in Hierarchy. |
| TotalNumberofOpportunities | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for the total number of opportunities associated with the campaign hierarchy. Label is Total Opportunities in Hierarchy. |

| Field | Details |

| `TotalNumberofResponses` | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for number of contacts and unconverted leads that have a `Member Status` equivalent to "Responded" for the campaign hierarchy. Label is Total Responses in Hierarchy. |
| `TotalNumberofWonOpportunities` | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for the total number of won opportunities associated with the campaign hierarchy. Label is Total Won Opportunities in Hierarchy. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Sort<br>**Description**<br>Type of campaign, for example, Direct Mail or Referral Program. Limit: 40 characters. |
| `UniqueEmailOpens` | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for email opens related to the campaign. Excludes repeat opens. Label is Unique Email Opens in Campaign. This field is available with Marketing Cloud Account Engagement. |
| `UniqueEmailTrackedLinkClicks` | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for unique email link clicks related to the campaign. Excludes repeat clicks. Label is Unique Email Clicks in Campaign. This field is available with Marketing Cloud Account Engagement. |

| Field | Details |
| --- | --- |
| `UniqueMarketingLinkClicks` | **Type**<br>int<br>**Properties**<br>Filter<br>**Description**<br>Calculated field for unique marketing link clicks related to the campaign. Excludes repeat clicks. Label is Unique Marketing Link Clicks in Campaign. This field is available with Marketing Cloud Account Engagement. |

## Usage

Client applications can create, update, delete, and query Attachment records associated with a campaign via the API.

The Campaign object is defined only for those organizations that have the marketing feature enabled and valid marketing licenses. In addition, it is accessible only to those users that are enabled as marketing users. If the organization does not have the marketing feature or valid marketing licenses, this object does not appear in the `describeGlobal()` call, and you can't use `describeSObjects()` or `query()` with the Campaign object.

Note: The main constituent of a campaign is a CampaignMember. You will commonly need to update campaigns with CampaignMember.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**CampaignChangeEvent (API version 44.0)**
Change events are available for the object.

**CampaignFeed (API version 18.0)**
Feed tracking is available for the object.

**CampaignHistory (API version 40.0)**
History is available for tracked fields of the object.

**CampaignOwnerSharingRule**
Sharing rules are available for the object.

**CampaignShare**
Sharing is available for the object.

Overview of Salesforce Objects and Fields

# CampaignInfluence

Represents the association between a campaign and an opportunity in Customizable Campaign Influence. This object is available in API version 37.0 and later.

Note: This information applies only to Customizable Campaign Influence and not to Campaign Influence 1.0 .

To ingest this object in Data Cloud, set up the Data Cloud Salesforce Connector permission set. See Enable Object and Field Permissions for CRM Connections.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, Customizable Campaign Influence must be enabled. Customer Portal users can't access this object.

## Fields

| Field Name | Details |
|---|---|
| `CampaignId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the campaign that's related to the opportunity. |
| `CampaignMemberId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the campaign member related to the opportunity. Not available in the UI. |
| `ContactId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the contact on the associated opportunity. |
| `Influence` | **Type**<br>percent<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort, Update |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The percentage of the Amount field for the related opportunity that's attributed to the campaign. |
| `ModelId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the campaign influence model that's related to the record. |
| `OpportunityContactRoleId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The opportunity contact role ID of the related opportunity. Not available in the UI. |
| `OpportunityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the related opportunity. |
| `RevenueShare` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of revenue from the related opportunity attributed to the campaign. |

## Usage

Use this object to create campaign influence records for your custom campaign influence models. Don't create campaign influence records for the Primary Campaign Source model. Records added to the Primary Campaign Source model via the API are deleted when the model is recalculated.

# CampaignInfluenceModel

This read-only object represents a campaign influence model in Customizable Campaign Influence. Use campaign influence models to group `CampaignInfluence` records created by a specific set of triggers and workflows that you define. The Primary Campaign Source influence model is the default model. This object is available in API version 37.0 and later.

Note: This information applies only to Customizable Campaign Influence and not to Campaign Influence 1.0.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

To access this object, Customizable Campaign Influence must be enabled. Customer Portal users can't access this object.

## Fields

| Field Name | Details |
|---|---|
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The API name of the influence model. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the model is active. Active models can generate campaign influence records. Deactivating a model deletes its campaign influence records. Custom models are always active and this field is ignored. |

| Field Name | Details |
| --- | --- |
| `IsDefaultModel` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the model is the default model (`true`) or not (`false`). `CampaignInfluence` records associated with the default model appear in 3 locations.<br>• The Campaign Influence related list on opportunities<br>• The Influenced Opportunities related list on campaigns<br>• The Campaign Statistics section on campaigns<br>The value of `IsDefaultModel` can only be true for 1 model at a time. |
| `IsModelLocked` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the model is locked (`true`) or not (`false`). Records for locked models can only be added, updated, or deleted via the API. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The language of the influence model. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The label for the influence model. |
| `ModelDescription` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The description of the influence model. |

| Field Name | Details |
| --- | --- |
| `ModelType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Indicates whether the model is the Primary Campaign Source influence model, or a custom model. These values are the allowed.<br>• 1: Primary Campaign Source Model<br>• 2: Custom Model<br>• 3: First Touch Model<br>• 4: Last Touch Model<br>• 5: Even Distribution Model<br>• 6: Data-Driven Model |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***`namespacePrefix__componentName`*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `RecordPreference` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The value of this field determines when to create campaign influence records.<br>• AllRecords: Creates records regardless of the revenue attribution percentage. |

| Field Name | Details |
| --- | --- |
| | • RecordsWithAttribution: Creates records only when the revenue attribution is greater than 0%. |

# CampaignMember

The CampaignMember object represents the relationship between a campaign and either a lead or a contact. If the Accounts as Campaign Members setting is enabled in an org, CampaignMember can also represent the relationship between a campaign and an account.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

| Field | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the account related to the campaign. This field is available only if the Accounts as Campaign Members setting is enabled in the org.<br>This field is a relationship field.<br>**Relationship Name**<br>Related Record ID<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `CampaignId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Required. The ID of the campaign related to the lead or contact.<br>This field is a relationship field.<br>**Relationship Name**<br>Campaign<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Campaign |
| `City` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The city for the address of the lead or contact. In orgs with the Accounts as Campaign Members setting enabled, this field can be the city for the account. |
| `CompanyOrAccount` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The company or account of the lead or contact. |
| `ContactId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Required. The ID of a contact that's related to the campaign.<br>This field is a relationship field.<br>**Relationship Name**<br>Contact<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `CurrencyIsoCode` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Available only for organizations with the multicurrency feature enabled. This field contains the ISO code for any currency allowed by the organization. |
| `Country` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The country for the address of the lead or contact. In orgs with the Accounts as Campaign Members setting enabled, this field can be the country for the account. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Nillable<br>**Description**<br>The description of the associated lead or contact. In orgs with the Accounts as Campaign Members setting enabled, this field can be the description of the account. |
| `DoNotCall` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates that the lead or contact doesn't want to be called. In orgs with the Accounts as Campaign Members setting enabled, this field can indicate the account doesn't want to be called. |
| `Email` | **Type**<br>email<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Email address for the lead or contact. In orgs with the Accounts as Campaign Members setting enabled, this field can be the email address for the account. |
| `Fax` | **Type**<br>phone |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Fax number for the lead or contact. In orgs with the Accounts as Campaign Members setting enabled, this field can be the fax number for the account. |
| `FirstName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The first name of the lead or contact. |
| `FirstRespondedDate` | **Type**<br>date<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>This field indicates the date that the campaign member received a status of Responded. |
| `HasOptedOutOfEmail` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>This field indicates the email opt-out preference for the lead or contact. A value of `false` indicates that the lead or contact is opted in to emails. A value of `true` indicates that they're opted out. In orgs with the Accounts as Campaign Members setting enabled, this field can be the opt-out preference for the account email address. |
| `HasOptedOutOfFax` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>This field indicates the fax opt-out preferences for the lead or contact. A value of false indicates that the lead or contact is opted in to receiving faxes. A value of true indicates that they're opted out. In orgs with the Accounts as Campaign Members setting enabled, this field can indicate the account has opted out of faxes. |
| `HasResponded` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>This field indicates whether the campaign member has responded to the campaign (`true`) or not (`false`). Label is **Responded**. |
| `LastName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The last name of the lead or contact. The limit is 80 characters. |
| `LeadId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Required. The ID of a lead that's related to the campaign.<br>This field is a relationship field.<br>**Relationship Name**<br>Lead<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Lead |
| `LeadOrContactId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of a lead or contact that's related to the campaign. In orgs with the Accounts as Campaign Members setting enabled, this field also accepts an account ID. |
| `LeadOrContactOwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the owner of the associated lead or contact owner. In orgs with the Accounts as Campaign Members setting enabled, this field can be the owner of the account.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>LeadOrContactOwner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `LeadSource` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The source where the lead was obtained. |
| `MobilePhone` | **Type**<br>phone<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The mobile phone number of the lead or contact. In orgs with the Accounts as Campaign Members setting enabled, this field can be the mobile phone number for the account. |
| `Name` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The first and last name of the lead or contact that's related to the campaign member. |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The phone number of the lead or contact. In orgs with the Accounts as Campaign Members setting enabled, this field can be the phone number for the account. |

| Field | Details |
| --- | --- |
| `PostalCode` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The postal code for the lead or contact. In orgs with the Accounts as Campaign Members setting enabled, this field can be the postal code for the account. |
| `RecordTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>ID of the record type assigned to this object. To change the record type, modify the `CampaignMemberRecordTypeId` field on the associated Campaign. |
| `Salutation` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Salutation for the lead or contact. |
| `State` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The state for the address of the lead or contact. The limit is 80 characters. In orgs with the Accounts as Campaign Members setting enabled, this field can be the state of the account address. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Controls the `HasResponded` flag on this object. You can't directly set the `HasResponded` flag, as it's read-only. You can set it indirectly by setting this field in a create or update call. Each predefined value implies a `HasResponded` flag value. Each time you update this field, you implicitly update the `HasResponded` flag. In the Salesforce user interface, Marketing users can define valid status values for the `Status` picklist. They |

| Field | Details |
| --- | --- |
| | can choose one status as the default status. For each `Status` field value, they can also select which values to count as "Responded," meaning that the `HasResponded` flag is set to `true` for those values. The limit is 40 characters.<br>When you create or update campaign members, use the text value for `Status` instead of the ID from the CampaignMemberStatus object. |
| `Street` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The street for the address of the lead or contact. In orgs with the Accounts as Campaign Members setting enabled, this field can be the street of the account address. |
| `Title` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Title for the lead or contact. |
| `Type` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Indicates if the campaign member is a lead or a contact. In orgs with the Accounts as Campaign Members setting enabled, this field can indicate an account. |

Note: If you're importing CampaignMember data into Salesforce and want to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself.

## Usage

Each record has a unique ID, and must contain either a `ContactId` or a `LeadId`, but can't contain both. Any attempt to create a single record with both results in a successful insert but only the `ContactId` is inserted. However, you can create two separate records on a Campaign—one for the Lead and one for the Contact.

In orgs with the Accounts as Campaign Members setting enabled, the unique ID can be an `AccountID`.

Standard fields from a lead or contact are associated with the CampaignMember object, but you can't query them directly. To include a `Phone` in your query, for example, query the field from the Lead object.

```
SELECT Id, (SELECT Phone FROM Lead)
FROM CampaignMember
```

This object is defined only for orgs that have the marketing feature and valid marketing licenses. If your org doesn't have the marketing feature or valid marketing licenses, this object doesn't appear in the `describeGlobal()` call, and you can't use `describeSObjects()` or `query()` with this object.

Note: If you want to track lead-based campaign members you convert to contacts, provide both a ContactId and a LeadId. Otherwise, only use one ID type.

To issue `create()` requests to the API, your account only requires read access to campaigns.

If the record doesn't exist for the specified `ContactId` or `LeadId`, then a new record is created. If the record exists, an error is returned and no update is made. To update an existing record, specify the ID of the CampaignMember record to update.

To delete a record, specify the ID of the CampaignMember record.

When creating or updating records, the `Status` field value specified in the call is verified as a valid status for the given Campaign:

- If the specified `Status` value is a valid status, the value is updated, and the `HasResponded` field is updated to either `true` or `false`, depending on the `Status` value association with `HasResponded`.
- If the specified `Status` value isn't a valid status, the API assigns the default status to the `Status` field and updates the `HasResponded` field with the associated value. However, if the given Campaign doesn't have a default status, the API assigns the value specified in the call to the `Status` field, and the `HasResponded` field is set to `false`.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CampaignMemberChangeEvent (API version 46.0)**
Change events are available for the object.

SEE ALSO:

Campaign

CampaignMemberStatus

# CampaignMemberStatus

One or more member status values defined for a campaign.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Customer Portal users can't access this object.

You can't delete a CampaignMemberStatus if that status is designated as the default status or if the status is currently used in a Campaign.

## Fields

| Field | Details |
|---|---|
| `CampaignId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the campaign associated with this member status. |
| `HasResponded` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this status is equivalent to "Responded" (`true`) or not (`false`). Beginning with API version 39.0, at least one `CampaignMemberStatus` on each campaign must have a `hasResponded` value of `true`. |
| `IsDefault` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this status is the default status (`true`) or not (`false`). Beginning with API version 39.0, there must be a default CampaignMemberStatus defined for every campaign. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `Label` | **Type**<br>string<br>**Properties**<br>Filter, Sort<br>**Description**<br>Label for the status in the picklist. Limited to 765 characters. |

| Field | Details |
| --- | --- |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort, Update<br>**Description**<br>Unique number order where this campaign member status appears in the picklist. |

## Usage

Use this object to create picklist items for the member status in a campaign.

This object is defined only for those organizations that have the marketing feature and valid marketing licenses. In addition, the object is accessible only to those users that are enabled as marketing users. If the organization does not have the marketing feature or valid marketing licenses, this object does not appear in a `describeGlobal()` call, and you can't use `describeSObjects()` or `query()` with the CampaignMember object.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CampaignMemberStatusChangeEvent (API version 46.0)**
Change events are available for the object.

Campaign

CampaignMember

# CampaignOwnerSharingRule

Represents the rules for sharing a campaign with User records other than the owner or anyone above the owner in the role hierarchy.

Note: To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The SharingRules Metadata API type is enabled for all orgs.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

# Fields

| Field | Details |
| --- | --- |
| `CampaignAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A value that represents the type of access granted to the target Group, or UserRole. The possible values are:<br>• `Read`<br>• `Edit`<br>• `All` |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Rule Name** in the user interface.<br>This field is available in API version 24.0 and later.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. |
| `GroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID representing the source group. A Campaign owned by a User in the source Group triggers the rule to give access. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to **Label** on the user interface. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID representing the User or Group being granted access. |

## Usage

Use this object to manage the sharing rules for campaigns.

SEE ALSO:

*Metadata API Developer Guide*: SharingRules

# CampaignShare

Represents a sharing entry on a Campaign.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only users with access to the Campaign object can access this object.

## Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

| Field | Details |
|---|---|
| `CampaignId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the Campaign associated with this sharing entry. This field can't be updated.<br>This is a relationship field.<br>**Relationship Name**<br>Campaign<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Campaign |
| `CampaignAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Level of access that the User or Group has to the Campaign. The possible values are:<br>• `Read`<br>• `Edit`<br>• `All` (This value is not valid for creating or updating records.)<br>This field must be set to an access level that is higher than the organization's default access level for Campaign. |
| `RowCause` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited.<br>Valid values:<br>• `Rule`—The User or Group has access via a Campaign sharing rule.<br>• `GuestRule`—The User or Group has access via a Campaign guest user sharing rule.<br>• `Manual`—The User or Group has access because a User with "`All`" access manually shared the Campaign with them.<br>• `Owner`—The User is the owner of the Campaign.<br>• `LpuImplicit`—The User has access to records owned by high-volume Experience Cloud site users via a share group.<br>• `ARImplicit`—The User, who belongs to a partner or customer account, has access to the Campaign via an account relationship data sharing rule. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the User or Group that has been given access to the Campaign. This field can't be updated.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>UserOrGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

## Usage

This object allows you to determine which users and groups can view or edit Campaign records owned by other users.

# CampaignTag

Associates a word or short phrase with a Campaign.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
| --- | --- |
| `ItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter<br>**Description**<br>ID of the tagged item. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter<br>**Description**<br>Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically. |
| `TagDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter<br>**Description**<br>ID of the parent TagDefinition object that owns the tag. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Restricted picklist<br>**Description**<br>Defines the visibility of a tag.<br>Valid values:<br>• `Public`—The tag can be viewed and manipulated by all users in an organization.<br>• `Personal`—The tag can be viewed or manipulated only by a user with a matching `OwnerId`. |

## Usage

CampaignTag stores the relationship between its parent TagDefinition and the Campaign being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

# CardPaymentMethod

Represents a credit card or debit card payment method, which implements the PaymentMethod object. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

## Fields

| Field | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Customer account for the payment method.<br>This field is a relationship field.<br>**Relationship Name**<br>Account<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `AuditEmail` | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Email address of the card owner where audit information about payments gets sent.<br>This field is available in API v49.0 and later. It doesn't appear in the UI by default for orgs that upgraded from v48.0. Users must add it to the CardPaymentMethod page layout on their own. |
| `AutoCardType` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Card network type, derived from the card number. |
| `CardBin` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>First six digits of the card number. |
| `CardCategory` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Defines whether the card is a credit card or debit card.<br>Possible values are:<br>• `CreditCard`<br>• `DebitCard` |
| `CardHolderFirstName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>First name of the cardholder. |
| `CardHolderLastName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Last name of the cardholder. |
| `CardHolderName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Full name of the cardholder. |
| `CardLastFour` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Last four digits of the credit card or debit card. |
| `CardPaymentMethodNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>System-defined unique ID for the card payment method. |
| `CardType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Identifies the credit card type.<br>Possible values are:<br>• `American Express`<br>• `Diners Club`<br>• `JCB`<br>• `Maestro`<br>• `Master Card`<br>• `Visa` |
| `CardTypeCategory` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Further identifies the credit card. Used for internal reference.<br>Possible values are:<br>• `AmericanExpress`<br>• `DinersClub`<br>• `Discover`<br>• `Jcb`<br>• `Maestro`<br>• `MasterCard`<br>• `UnionPay`<br>• `Visa` |
| `Comments` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Payment admin can add comments to provide additional details about a record. Maximum of 1000 characters. |
| `CompanyName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Company of the cardholder. |
| `DisplayCardNumber` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Masked digits for the full credit card number except the last four digits. |
| `Email` | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Email address of the payer. |
| `ExpiryMonth` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The card's expiration month. |
| `ExpiryYear` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The card's expiration year. |
| `GatewayDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date that the payment gateway logs a card activity. |
| `GatewayResultCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The result of the card payment method's interaction with the payment gateway during a transaction request. |
| `GatewayResultCodeDescription` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Additional information about the gateway result code. Descriptions vary between payment gateway providers. |
| `GatewayToken` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Unencrypted unique token ID generated by the payment gateway to represent the card payment method during transactions. `GatewayToken` is for use with APIs earlier than version 52.0. For version 53.0 and latter, use the GatewayTokenEncrypted field. To secure the token, use the `GatewayTokenEncrypted` field.<br>An error message appears if you try to record a `GatewayToken` for a card payment method that already has a `GatewayToken` or `GatewayTokenEncrypted` value. |
| `GatewayTokenDetails` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Additional information about the gateway token. |
| `GatewayTokenEncrypted` | **Type**<br>encryptedstring<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Encrypted unique token ID generated by the payment gateway to represent the card payment method during transactions. Encrypted using Salesforce Classic Encryption.<br>Available in API version 52.0 and later. |
| `InputCardNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Used by a payer to enter a credit card number when storing an external-type card payment method. After entry, the credit card number isn't saved, so the `InputCardNumber` value always appears blank. The credit card number appears as a masked value in `DisplayCardNumber`, which shows only the last four digits. |
| `IpAddress` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>IP address of the card payment method holder. |

| Field | Details |
| --- | --- |
| | This field is available in API version 49.0 and later. It doesn't appear in the UI by default for Salesforce orgs that upgraded from version 48.0. Users must add it to the CardPaymentMethod page layout on their own. |
| `IsAutoPayEnabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the payment method can be used for recurring payments (`True`) or not (`False`). The default value is `False`.<br>This field is available in API version 55.0 and later. For orgs that upgraded from version 54.0, you must add this field to the Card Payment Method page layout in the UI. It isn't automatically added. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record or list view related to this record, but didn't access it directly. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, it's possible the user referenced this record but didn't view it directly. |
| `MacAddress` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>MAC address of the card payment method holder.<br>This field is available in API version 49.0 and later. It doesn't appear in the UI by default for Salesforce orgs that upgraded from version 48.0. Users must add it to the CardPaymentMethod page layout on their own. |

| Field | Details |
| --- | --- |
| NickName | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Payer-defined nickname for the card payment method. |
| PaymentGatewayId | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>The payment gateway used to create a gateway token. For transactions with a saved payment method in Salesforce, this field stores the payment gateway ID used in the transaction.<br>This field is a relationship field.<br>**Relationship Name**<br>PaymentGateway<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>PaymentGateway |
| PaymentMethodAddress | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>Full address associated with the card payment method. |
| PaymentMethodCity | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>City of the address for the payment method. |
| PaymentMethodCountry | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Country of the address for the payment method. |
| `PaymentMethodDetails` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>Optional information about the payment method type. This field is available in API version 57.0 and later. |
| `PaymentMethodGeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Accuracy level of the geocode for the payment method address. An accuracy level contains information about the location of a latitude and longitude. For more information about geolocation fields, see Geolocation Compound Field.<br>Possible values are:<br>• `Address`<br>• `Block`<br>• `City`<br>• `County`<br>• `ExtendedZip`<br>• `NearAddress`<br>• `Neighborhood`<br>• `State`<br>• `Street`<br>• `Unknown`<br>• `Zip` |
| `PaymentMethodLatitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Latitude of the payment method address. Used with the PaymentMethodLongitude to specify the precise geolocation of the address. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |

| Field | Details |
| --- | --- |
| PaymentMethodLongitude | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Latitude of the payment method address. Used with the PaymentMethodLatitude to specify the precise geolocation of the address. For details on geolocation compound fields, see Compound Field Considerations and Limitations. |
| PaymentMethodPostalCode | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Postal Code of the address for the payment method. |
| PaymentMethodState | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>State of the address for the payment method. |
| PaymentMethodStreet | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Street of the address for the payment method. |
| PaymentMethodSubType | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>A payment method that exists as a subtype of a payment method type. For example, Visa, Mastercard, and American Express exist as subtypes of payment method types such as Apple Pay and Google Pay. This field is available in API version 57.0 and later. |
| PaymentMethodType | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Payment method used for the transaction. This field is available in API version 57.0 and later.<br>Possible values are:<br>• `AfterpayClearpay`<br>• `AmericanExpress`<br>• `ApplePay`<br>• `BanContact`<br>• `DinersClub`<br>• `Discover`<br>• `EPS`<br>• `GooglePay`<br>• `Jcb`<br>• `Klarna`<br>• `Maestro`<br>• `MasterCard`<br>• `Other`<br>• `PayPal`<br>• `SepaDebit`<br>• `UnionPay`<br>• `Venmo`<br>• `Visa`<br>• `iDeal` |
| `Phone` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Phone number of the payer.<br>This field is available in API version 49.0 and later. It doesn't appear in the UI by default for Salesforce orgs that upgraded from version 48.0. Users must add it to the CardPaymentMethod page layout on their own. |
| `ProcessingMode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>Defines whether the card payment method is used for transactions made by Salesforce Payments or by an external third-party payment provider.<br>Possible values are:<br>• `External`—Transactions happened outside of the Salesforce payments platform.<br>• `Salesforce`—Salesforce made and recorded an external call to the payment platform.<br>This field is available in API version 49.0 and later. It doesn't appear in the UI by default for Salesforce orgs that upgraded from version 48.0. Users must add it to the CardPaymentMethod page layout on their own.<br>You must enter a value for this field. |
| `SavedPaymentMethodId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the saved payment method record. This field is available in API version 60.0 and later.<br>**Relationship Name**<br>SavedPaymentMethod<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>SavedPaymentMethod |
| `SfResultCode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The results of the card payment method's interaction with the payment gateway.<br>Possible values are:<br>• `Decline`<br>• `Indeterminate`<br>• `PermanentFail`<br>• `RequiresReview`<br>• `Success`<br>• `SystemError`<br>• `ValidationError` |

| Field | Details |
| --- | --- |
| `StartMonth` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The month is activated. |
| `StartYear` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The year the card is activated. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The status of the payment method.<br>Possible values are:<br>• `Active`<br>• `Canceled`<br>• `InActive` |

## Usage

The following fields drop zeroes that appear at the beginning of the field value, and introduce commas for values with four or more digits:

- `CardLastFour`
- `CardBin`
- `ExpiryYear`

For example, a `CardLastFour` entered value of *`0004112233445566`* would appear as *`4,112,233,445,566`* on the record.

As a workaround, create a String-type custom formula field with the same label as the field that you want to replace, then hide the original field. Here are some examples for replacing `CardLastFour`, `CardBin`, and `ExpiryYear`.

**CardLastFour**

```
IF(ISBLANK(CardLastFour), NULL,RIGHT("0000" & TEXT(CardLastFour) , 4))
```

**CardBin**

```
IF(ISBLANK(CardBin), NULL,RIGHT("000000" & TEXT(CardBin) , 6))
```

**ExpiryYear**

```
IF(ISBLANK(ExpiryYear), NULL,TEXT(ExpiryYear)))
```

# CartCheckoutSession

Represents a checkout session used in Lightning B2B Commerce checkout. This object is available in API version 48.0 and later.

A checkout session is tied to a single web cart, but there can be multiple checkout sessions for a single cart.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available only if the B2B Commerce or D2C Commerce license is enabled.

## Fields

| Field | Details |
|---|---|
| `BackgroundOperationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the in progress background operation. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The currency used for the checkout session. Default value is `USD`.<br>Possible values are:<br>• `USD`—U.S. Dollar |
| `IsArchived` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether checkout processing is archived (`true`) or not (`false`). After a session is archived, it can't be unarchived. Default value is `false`. |
| `IsError` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the session is in error state (`true`) or not (`false`). Default value is `false`. |
| `IsProcessing` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether checkout processing is in progress (`true`) or not (`false`). Default value is `false`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the checkout session. |
| `NextState` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The next state of the checkout session. |
| `OrderId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of a created order after the checkout session has gone from cart to order. |

| Field | Details |
| --- | --- |
| `OrderReferenceNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Unique reference number the shopper can use to refer to the order. In API version 63.0 and later, LWR stores don't populate this field upon checkout. Instead, the `InitialOrderReferenceNumber` field on the WebCart object is populated. |
| `State` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The current state of the checkout session. |
| `WebCartId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the cart that is used to create the checkout session. |

# CartDeliveryGroup

Represents shipping information for the delivery of items in an order against a store built with B2B Commerce or D2C Commerce. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The CartDeliveryGroup object is available only if the B2B Commerce or D2C Commerce license is enabled.

# Fields

| Field | Details |
| --- | --- |
| `CartId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID the `WebCart on page 5725` that's associated with this delivery group.<br>This field is a relationship field.<br>**Relationship Name**<br>Cart<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>WebCart |
| `CompanyName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Company name associated with a delivery. This field is available in API version 59.0 and later. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The ISO code for the currency that's specified on the buyer's account. Default value is `USD`.<br>Possible values are:<br>• `USD`—U.S. Dollar |
| `DeliverToAddress` | **Type**<br>address<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The address to which a buyer order is delivered. |
| `DeliverToCity` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The city to which a buyer order is delivered. |
| `DeliverToCountry` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The country to which a buyer order is delivered. |
| `DeliverToFirstName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The first name of the person set to receive an order. This field is available in API version 57.0 and later. |
| `DeliverToGeocodeAccuracy` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The geocode location to which a buyer order is delivered. Possible values are:<br>• `Address`<br>• `Block`<br>• `City`<br>• `County`<br>• `ExtendedZip`<br>• `NearAddress`<br>• `Neighborhood`<br>• `State`<br>• `Street`<br>• `Unknown`<br>• `Zip` |
| `DeliverToLastName` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The last name of the person to whom a buyer order is delivered. This field is available in API version 57.0 and later. |
| `DeliverToLatitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The latitude of a buyer delivery location. |
| `DeliverToLongitude` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The longitude of a buyer delivery location. |
| `DeliverToName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the person to deliver a buyer order to. This field is set based on the `Name` field of the `ContactPointAddress` associated with this delivery group. `ContactPointAddress.Name` is generated by the system using the first and last names entered by a buyer during checkout. |
| `DeliverToPostalCode` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The postal code to which to deliver a buyer order. |
| `DeliverToState` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The state to which to deliver a buyer order. |
| `DeliverToStreet` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The street to which to deliver a buyer order. |
| `DeliveryMethodId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID for the delivery method to use to deliver a buyer order. Populated if the selected `CartDeliveryGroupMethod` only has the `ShippingFee` populated, but it has reference to an existing `DeliveryMethodId` which contains the fields `Carrier`, `ClassOfService`, and `ReferenceNumber`. If not, the `SelectedDeliveryMethod` field is used.<br>This field is a relationship field.<br>This field is deprecated in API version 64.0 and will be removed in API version 66.0. Instead, use the `DeliveryMethodId` field on the `CartDeliveryGroupMethod` object.<br>**Relationship Name**<br>DeliveryMethod<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>OrderDeliveryMethod |
| `DesiredDeliveryDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date that a buyer requests to have an order delivered. |
| `GiftMessage` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Personalized gift message for the order. This field is available in API version 64.0 and later. |
| `GiftToName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name of the recipient for a gift order. This field is available in API version 64.0 and later. |
| `GrandTotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Sum of all cart items' `TotalAmount`, or `CartDeliveryGroup` `TotalAmount` plus `CartDeliveryGroup` `TotalTaxAmount`. |
| `IsDefault` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if the delivery group is the default. This field is available in API version 59.0 and later.<br>The default value is `false`.<br>B2B and D2C stores create a default delivery group, along with a WebCart, when a customer adds an item to cart and doesn't have an existing cart. The default cart delivery group is needed to complete the checkout flow, and can't be replaced by a non-default cart delivery group. If you customize the standard checkout flow, make sure that you don't delete the default cart delivery group. |
| `IsGift` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates if the delivery group is a gift. This field is available in API version 64.0 and later.<br>The default value is `false`. |
| `Name` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of this `CartDeliveryGroup` record. `Name` can be up to 255 characters. In API version 62.0 and later, if `IsDefault` is `true`, the `Name` is `Shipment1`, a localized string. In prior API versions, the `Name` for a default delivery group was `Cart Delivery Group`. Due to this change, any queries intended to identify default delivery groups should use the `IsDefault` rather than `Name` field. |
| `SelectedDeliveryMethodId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the selected cart delivery group method. Populated if the selected `CartDeliveryGroupMethod` has the fields `Carrier`, `ClassOfService`, `ReferenceNumber`, and `ShippingFee`, but the `DeliveryMethodId` is null. If not, the `DeliveryMethodId` field is used. This field is available in API version 59.0 or later.<br>This field is a relationship field.<br>**Relationship Name**<br>SelectedDeliveryMethod<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CartDeliveryGroupMethod |
| `ShipToPhoneNumber` | **Type**<br>phone<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Phone number associated with a delivery. This field is available in API version 59.0 and later. |
| `ShippingInstructions` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Instructions for delivering an order. |

| Field | Details |
| --- | --- |
| `TotalAdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total amount of all promotional adjustments on the cart delivery group. This field is available in API version 54.0 and later.<br>For product bundles, this includes the aggregate adjustments of all child components. |
| `TotalAdjustmentTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total tax amount for all promotional adjustments on the cart delivery group. This field is available in API version 54.0 and later.<br>For product bundles, this includes the aggregate of the tax amounts for all child components' adjustments. |
| `TotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of all cart items `TotalPrice`, or `TotalProductAmount` plus `TotalChargeAmount`.<br>For product bundles, this includes the aggregate of all child component prices. |
| `TotalCartItemCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of cart items, including their quantities, of the type `PRODUCT` in the delivery group.<br>For product bundles, this count includes only the parent component.<br>If the total quantity of cart items of type `PRODUCT` in the delivery group exceeds the system-defined maximum (INT_MAX), this field is set to INT_MAX. |
| `TotalChargeAmount` | **Type**<br>currency |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of all the cart items `TotalPrice` for all cart items of type `CHARGE`. Cart items can be of type Product or Charge.<br>For product bundles, if a child component includes a cart item of type `CHARGE`, its amount is aggregated with the parent's cart item's total charge amount. |
| `TotalChargeTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of all the cart items `TotalTaxAmount` for all cart items of type `CHARGE`. Cart items can be of type Product or Charge.<br>For product bundles, this includes the aggregate of all tax amounts associated with bundle-level charges, including the taxes of individual child products. |
| `TotalProductAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of all the cart items `TotalPrice` for all cart items of type `PRODUCT`. Cart items can be of type Product or Charge.<br>For product bundles, this includes the aggregate of all child component prices. |
| `TotalProductTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The sum of all the cart items `TotalTaxAmount` for all cart items of type `PRODUCT`. Cart items can be of type Product or Charge.<br>For product bundles, this includes the aggregate of all child component taxes based on their individual prices. |
| `TotalTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
|---|---|
| | **Description**<br>The sum of all cart items `TotalTaxAmount`, or the combined value of `TotalProductTaxAmount` plus `TotalChargeTaxAmount`.<br>For product bundles, this includes the aggregate of all child component taxes based on their individual prices. |

## Associated Objects

**CartDeliveryGroupChangeEvent (API version 58.0)**
Change events are available for the object.

# CartDeliveryGroupMethod

Represents the selected delivery method for a cart delivery group used in Lightning B2B Commerce checkout. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The CartDeliveryGroupMethod object is available only if the B2B Commerce or D2C Commerce license is enabled.

## Fields

| Field | Details |
|---|---|
| `AdjustedShippingFee` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Shipping fee, including `TotalAdjustmentAmount`, for the delivery method. |
| `Carrier` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The carrier that the buyer chose for their delivery method. Values are defined based on the user's shipping service. This field is available in API version 59.0 or later. |
| `CartCheckoutSessionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The unique ID used to identify your cart checkout session. |
| `CartDeliveryGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the cart delivery group associated with the checkout session. |
| `ClassOfService` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The carrier class of service that the buyer chose for their delivery method. Values are defined based on the user's shipping service. This field is available in API version 59.0 or later. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The currency used for your shipping fee. Default value is `USD`.<br>Possible values are:<br>• `USD`—U.S. Dollar |
| `DeliveryMethodId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the selected order delivery method. |

| Field | Details |
| --- | --- |
| `ExternalProvider` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the external shipping method provider. Optional field. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Assign new delivery groups to active delivery methods. The default value is `False`. This field is available in API version 59.0 or later. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the delivery method. |
| `ProcessTime` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Merchant-specified process time for the delivery method. Process time includes the time between when an order is placed and when the shipment is given to the shipping carrier. |
| `ProcessTimeUnit` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Unit of time used to define `ProcessTime`.<br>Possible values are:<br>• `Days`<br>• `Hours`<br>• `Weeks` |

| Field | Details |
| --- | --- |
| `ProductId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Optional. This product represents a delivery charge order product for a delivery using this delivery method. For example, you could create a product that represents an overnight express charge and assign it to an overnight express delivery method. If your store uses Salesforce Native Shipping, the `ProductId` is selected from a non-variation product with `Shipping` in its name. The term `Shipping` in a product name isn't localized. If no matching product is found, a random non-variation product is used. This field is available in API version 59.0 or later. |
| `ReferenceNumber` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Reference number for an external delivery method. This field is available in API version 59.0 or later. |
| `ShippingFee` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Shipping fee associated with the delivery method. Required field. |
| `TotalAdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The adjustment amount of a promotion applicable to the delivery method. |
| `TransitTimeMax` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Maximum estimate of transit time for the delivery method. Transit time includes the time between when a shipping carrier receives a shipment and when the shipment arrives at the delivery address. |
| `TransitTimeMin` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Minimum estimate of transit time for the delivery method. Transit time includes the time between when a shipping carrier receives a shipment and when the shipment arrives at the delivery address. |
| `TransitTimeUnit` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Unit of time used to define `TransitTimeMax` and `TransitTimeMin`.<br>Possible values are:<br>• `Days`<br>• `Hours`<br>• `Weeks` |
| `WebCartId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the WebCart associated with the cart delivery group method. Required field. |

## Usage

Use the CartDeliveryGroupMethod object to give commerce buyers the ability to choose a delivery method for a cart delivery group. Shipping integrations populate the delivery options that are available for a cart delivery group.

# CartDeliveryGroupMethodAdj

Represents the shipping promotion discount for a shipping method. This object is available in API version 60.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The CartDeliveryGroupMethodAdj object is available only if the B2B Commerce or D2C Commerce license is enabled.

## Fields

| Field | Details |
|---|---|
| `AdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Amount subtracted from the price by the shipping promotion discount. |
| `AdjustmentBasisReferenceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the adjustment basis reference. This is the coupon that causes the adjustment. This field is a relationship field.<br>This field is available in API version 62.0 and later.<br>**Relationship Name**<br>AdjustmentBasisReference<br>**Refers To**<br>Coupon |
| `AdjustmentType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Type of shipping promotion discount.<br>Possible values are:<br>• `AdjustmentAmount`<br>• `AdjustmentPercentage`<br>• `OverrideAmount` |

| Field | Details |
| --- | --- |
| `AdjustmentValue` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Number representing the value of the price adjustment. For example, if the `AdjustmentType` is `AdjustmentPercentage`, a -10 `AdjustmentValue` means 10 percent off. If the `AdjustmentType` is `AdjustmentAmount`, a -10 `AdjustmentValue` means 10 dollars off. |
| `CartDeliveryGroupMethodId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the cart delivery group method.<br>This field is a relationship field.<br>**Relationship Name**<br>CartDeliveryGroupMethod<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CartDeliveryGroupMethod |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Currency ISO code of the cart.<br>Possible values are:<br>• `USD`—U.S. Dollar<br>The default value is `USD`. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the cart delivery group method adjustment. |

| Field | Details |
| --- | --- |
| `PriceAdjustmentCauseId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the price adjustment cause.<br>This field is a relationship field.<br>**Relationship Name**<br>PriceAdjustmentCause<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Promotion |
| `Priority` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If there are multiple promotional adjustments, the order in which the shipping promotion is applied. |

# CartItem

Represents an item in a `WebCart` that's active in a store built with B2B or D2C Commerce. Cart item can be of type `Product` or `Charge`. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The CartItem object is available only if the B2B Commerce or D2C Commerce license is enabled.

# Fields

| Field | Details |
| --- | --- |
| `AdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Non-itemized adjustments for this cart item. |
| `AdjustmentTaxAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The tax that's calculated on the `AdjustmentAmount`. |
| `AssociatedItemPricing` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Specifies how a child cart item is priced relative to its parent cart item within a product bundle. This field is `null` for standalone products that aren't part of a bundle. Available in API version 65.0 and later.<br>Possible values are:<br>• `IncludedInBundlePrice`—Indicates that the parent product's price includes the aggregated prices of its child components.<br>• `NotIncludedInBundlePrice`—Indicates that the parent product's price doesn't include the aggregated prices of its child components. |
| `CartDeliveryGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the `CartDeliveryGroup` that's associated with a cart item.<br>This field is a relationship field.<br>**Relationship Name**<br>CartDeliveryGroup<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>CartDeliveryGroup |
| `CartId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the `WebCart` that's associated with a cart item.<br>This field is a relationship field.<br>**Relationship Name**<br>Cart<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>WebCart |
| `ChildProductCount` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The total number of child products associated with this cart item. If a child product is a bundle, its own `ChildProductCount` is included in this total. For simple products that don't have any child products, the `ChildProductCount` value is zero. |
| `ConfigureDuringSale` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Specify whether a product bundle is configurable. Available in API version 65.0 and later.<br>Possible values are:<br>• `Allowed`<br>• `NotAllowed` |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The ISO code for the currency that's specified on the buyer's account. Default value is `USD`. Possible values are:<br>• `EUR`—Euro<br>• `USD`—U.S. Dollar |
| `DistributedAdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Defaulted on create, Filter, Nillable, Sort<br>**Description**<br>A calculated field that determines the amount of a cart-wide promotional adjustment when distributed across all items in the cart. This field is for display purposes only and is valid only during checkout. This field is available in API version 52.0 and later.<br>You receive $10 off, and there are 5 items in the cart. The distributed adjustment is (-$2). |
| `DistributedAdjustmentTaxAmount` | **Type**<br>currency<br>**Properties**<br>Defaulted on create, Filter, Nillable, Sort<br>**Description**<br>A calculated field that determines the amount of a cart-wide tax adjustment due to promotions when distributed across all items in the cart. This field is available in API version 52.0 and later.<br>EXAMPLE: Your discount causes a cart-wide tax reduction of (-$10), and there are 5 items in the cart. The distributed tax adjustment is (-$2). |
| `GrossAdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The gross amount of the price adjustment on the cart item (tax inclusive). This is available in API version 55.0 and later. |
| `GrossUnitPrice` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The gross amount of the unit price for a cart item (tax inclusive). This is available in API version 55.0 and later. |

| Field | Details |
| --- | --- |
| `IsShippingChargeNotApplicable` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether shipping charges are applicable (`true`) or not (`false`) to the cart item. The default value is `false`.<br>This field is available in API version 64.0 and later. |
| `ItemizedAdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Defaulted on create, Filter, Nillable, Sort<br>**Description**<br>A calculated field that determines the total amount of promotional adjustments that are specific to an item. This field is available in API version 52.0 and later.<br>EXAMPLE: One cart item has one discount code for $10 off. Your itemized adjustment amount is (-$10) for that item. |
| `ItemizedAdjustmentTaxAmount` | **Type**<br>currency<br>**Properties**<br>Defaulted on create, Filter, Nillable, Sort<br>**Description**<br>A calculated field that determines the total amount of promotion-related tax adjustments that are specific to an item. This field is available in API version 52.0 and later.<br>EXAMPLE: One cart item has one discount code for $10 off. This reduces the tax on that item by (-$2). Your itemized adjustment tax amount is (-$2) for that item. |
| `ListPrice` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The original price of the cart item. Typically shown with a line through it. List price is shown only when it's higher than the negotiated price. If the list price is the same or lower, it isn't shown to the buyer. This field is available in API version 52.0 and later. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The name of this `CartItem` record. `Name` can be up to 255 characters. |
| `NetAdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The net amount of the price adjustment made on the cart item (tax exclusive). This is available in API version 55.0 and later. |
| `NetUnitPrice` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The net amount of the unit price for the cart item (tax exclusive). This is available in API version 55.0 and later. |
| `ParentCartItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the cart item's parent `CartItem`. The value is empty if the item is a top-level cart item.<br>This field is a relationship field.<br>**Relationship Name**<br>CartItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CartItem |
| `PerUnitWeight` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Weight per unit of this cart item, in the unit specified by `WeightUnit`. This field is available in API version 62.0 and later. |

| Field | Details |
| --- | --- |
| `Product2Id` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of a product type cart item. Cart items can be of type `PRODUCT` or `CHARGE`.<br>This field is a relationship field.<br>**Relationship Name**<br>Product2<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Product2 |
| `ProductClass` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The product class of the cart item. Default value is `Simple`. Possible values are:<br>• `Bundle`<br>• `Set`<br>• `Simple`<br>• `Variation`<br>• `VariationParent` |
| `ProductRelatedComponentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the cart item's `ProductRelatedComponent`. The `ProductRelatedComponent` represents a product that is included in a product bundle, a set, or a product and an add-on. The `ProductRelatedComponent` is empty if the item is a top-level cart item.<br>This field is a relationship field.<br>**Relationship Name**<br>ProductRelatedComponent<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>ProductRelatedComponent |
| `ProductValidationKey` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The product validation key of the cart item. |
| `ProductRelationshipTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the product relationship type that defines the relationship between a product bundle and its child product. Available in API version 65.0 and later.<br>This field is a relationship field.<br>**Relationship Name**<br>ProductRelationshipType<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>https://developer.salesforce.com/docs/atlas.en-us.object_reference.meta/object_reference/sforce_api_objects_productrelationshiptype.htm ProductRelationshipType |
| `Quantity` | **Type**<br>double<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The number of a given cart item in a cart. |
| `QtyScaleMethod` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Determines how a child product's quantity scales when added to a cart or configured within a product bundle. Available in API version 65.0 and later. Possible values are:<br>• `Constant`—Represents a value that remains fixed relative to the parent bundle. |

| Field | Details |
| --- | --- |
| | • `Proportional`—Represents a value that varies in proportion to the parent bundle's price or quantity. |
| `SalesPrice` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The discounted price of a cart item. |
| `Sku` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The Shelf-Keeping Unit ID of a cart item. |
| `StockCheckMethod` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Determines how inventory is assessed for a cart item that's part of a bundle or set. Possible values are:<br>• `ChildProducts`—Inventory is assessed based on the child product or products.<br>• `ParentProduct`—Inventory is assessed based on the parent product. |
| `SubType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Specifies the subtype of the product. Possible values are:<br>• `Bonus`—Bonus product.<br>• `GiftWrap`—Gift wrapped product.<br>This field is available in API version 64.0 and later. |
| `TaxTreatmentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the related tax treatment for the cart item.<br>This field is available in API version 63.0 and later. This field is available with Subscription Management.<br>This field is a relationship field.<br>**Relationship Name**<br>TaxTreatment<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>TaxTreatment |
| `TotalAdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The total amount of all promotional adjustments on the item, both distributed and itemized. This field is available in API version 52.0 and later. |
| `TotalAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total cost of this cart item, including taxes and adjustments. |
| `TotalLineAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Total amount for this cart item, based on sales price and quantity. |
| `TotalLineGrossAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total gross amount of the line item (tax inclusive). This is available in API version 55.0 and later. |

| Field | Details |
| --- | --- |
| `TotalLineNetAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total net amount of the line item (tax exclusive). This is available in API version 55.0 and later. |
| `TotalLineTaxAmount` | **Type**<br>currency<br>**Properties**<br>Defaulted on create, Filter, Nillable, Sort<br>**Description**<br>Total tax amount for `TotalLineAmount`. |
| `TotalListPrice` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Total amount for this cart item, based on `ListPrice`. We provide this value for comparison. It's not the price that the buyer is paying. |
| `TotalPrice` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Total amount for this cart item, including adjustments but excluding taxes.<br>Note: Although this field is Nillable, if you want to use Commerce Webstore Cart Promotions, this field is required. |
| `TotalPriceAfterAll Adjustments` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Total price after all price adjustments are applied. This field is available in API version 52.0 and later.<br>Note: Although this field is Nillable, if you want to use Commerce Webstore Cart Promotions, this field is required. |

| Field | Details |
| --- | --- |
| `TotalPriceTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total tax amount for a cart item before promotional adjustments, including quantity-based adjustments. This field is available in API version 56.0 and later. |
| `TotalPromo AdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Create, Defaulted on create, Filter, Nillable, Sort, Update<br>**Description**<br>Total itemized and distributed adjustment amount in cart (only for promotions). This field is available in API version 52.0 and later. |
| `TotalPromoAdjustment TaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total itemized and distributed adjustment tax amount in cart (only for promotions). This field is available in API version 52.0 and later. |
| `TotalTaxAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total tax amount for this cart item. This value includes taxes for both `TotalLineAmount` and `AdjustmentAmount`. |
| `TotalWeight` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Total weight of this cart item, in the unit specified by `WeightUnit`. This field is available in API version 62.0 and later. |
| `Type` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The `CartItem` type. Possible values are:<br>• `Product`<br>• `Charge` |
| `UnitAdjustedPrice` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Price per quantity unit after a tier discount or surcharge is applied. This field is available in API version 50.0 and later. |
| `UnitAdjustedPrice WithItemAdj` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Unit price, including both tier and item level discounts, for the item. |
| `UnitAdjustmentAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Tier discount or surcharge to apply to a quantity unit. This amount is added to the `SalesPrice` to get the `UnitAdjustedPrice`. This field is available in API version 50.0 and later. |
| `UnitItemAdjustment Amount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Item level adjustments made to the unit price for the item. |
| `WeightUnit` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Unit of measurement for the weight of the cart item. This field is available in API version 62.0 and later.<br>Possible values are:<br>• `Grams`<br>• `Kilograms`<br>• `Ounces`<br>• `Pounds` |

## Associated Objects

This object has the following associated objects. Unless it's noted, associated objects are available in the same API version as this object.

**CartItemChangeEvent (API version 58.0)**
Change events are available for the object.

# CartItemPriceAdjustment

Price adjustment for a cart item. This object is available in API version 52.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The CartItemPriceAdjustment object is available only if the B2B Commerce or D2C Commerce license is enabled.

# Fields

| Field | Details |
| --- | --- |
| `AdjustmentAmountScope` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Scope of the adjustment amount for a promotion.<br>Possible values are:<br>• `Total`—The amount off the total price.<br>This field is available in API version 54.0 and later. |
| `AdjustmentBasisReferenceId` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Coupon code of the coupon associated with a promotion. This field is available in API version 54.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>AdjustmentBasisReference<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Coupon |
| `AdjustmentSource` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Price adjustment type.<br>Possible values are:<br>• `Discretionary`<br>• `Promotion`<br>• `System` |
| `AdjustmentTargetType` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Target for the price adjustment (the cart itself or individual items).<br>Possible values are:<br>• `Cart`<br>• `Item` |
| `AdjustmentType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Indicates if the price adjustment is applied as percentage or an absolute amount.<br>Possible values are:<br>• `AdjustmentAmount`<br>• `AdjustmentPercentage` |
| `AdjustmentValue` | **Type**<br>double<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Numeric value of the adjustment (for example, 10 if the price adjustment is either 10% off or $10 off). |
| `CartId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the WebCart that's associated with a cart item. This field is available in API version 55.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>Cart<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>WebCart |

| Field | Details |
| --- | --- |
| `CartItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the parent cart item to which this adjustment belongs.<br>This is a relationship field.<br>**Relationship Name**<br>CartItem<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CartItem |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The ISO code for the currency that's specified on the buyer's account. Default value is `USD`.<br>Possible values are:<br>• `EUR`—Euro<br>• `USD`—U.S. Dollar |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Description of the price adjustment. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the price adjustment. |
| `PriceAdjustmentCauseId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Nillable, Update<br>**Description**<br>ID of entity that caused this adjustment (for example, a promotion ID). If unspecified, then `Description` populates the display name.<br>This is a relationship field.<br>**Relationship Name**<br>PriceAdjustmentCause<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Promotion |
| `Priority` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>If there are multiple price adjustments, sequence in which the price adjustments are applied. |
| `TotalAmount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Total price after applying price adjustments. |
| `TotalGrossAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The total gross amount (tax inclusive) after applying price adjustments. This field is available in API version 55.0 and later. |
| `TotalNetAmount` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The total net amount (tax exclusive) after applying price adjustments. This field is available in API version 55.0 and later. |
| `TotalTax` | **Type**<br>currency<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Tax on the total adjusted price. |
| `WebCartAdjustmentGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the cart's adjustment group.<br>This is a relationship field.<br>**Relationship Name**<br>WebCartAdjustmentGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>WebCartAdjustmentGroup |

## Associated Objects

This object has the following associated objects. Unless it's noted, associated objects are available in the same API version as this object.

**CartItemPriceAdjustmentChangeEvent (API version 58.0)**
Change events are available for the object.

# CartTax

Represents taxes for a line item in a `WebCart` that's active in a store built with B2B Commerce or D2C Commerce. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The CartTax object is available only if the B2B Commerce or D2C Commerce license is enabled.

## Fields

| Field | Details |
| --- | --- |
| `AdjustmentTargetType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Target for the price adjustment (the cart itself or individual items). This field is available in API version 52.0 and later.<br>Possible values are:<br>• `Cart`<br>• `Item` |
| `Amount` | **Type**<br>currency<br>**Properties**<br>Create, Filter, Sort, Update<br>**Description**<br>Calculated tax amount. |
| `CartId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the `WebCart` being taxed. |
| `CartItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of a cart item being taxed. |
| `CartItemPriceAdjustmentId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of a price adjustment for a cart item being taxed. (This field is available in API version 52.0 and later.)<br>**Refers To**<br>CartItemPriceAdjustment |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The ISO code for the currency that's specified on the buyer's account. Default value is `USD`. Valid values include:<br>• `USD`—U.S. Dollar |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A description of the tax. Enter up to 2000 characters. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of this `CartTax` record. `Name` can be up to 255 characters. |
| `TaxCalculationDate` | **Type**<br>date<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The date this tax was calculated. |
| `TaxRate` | **Type**<br>percent |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The applied tax rate for this line of tax. |
| `TaxType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of tax for this line of tax. Possible values are:<br>• `Actual`<br>• `Estimated` |

## Associated Objects

This object has the following associated objects. Unless it's noted, associated objects are available in the same API version as this object.

**CartTaxChangeEvent (API version 58.0)**
Change events are available for the object.

# CartValidationOutput

Associate errors to cart entities, such as cart line items, delivery groups, and the like, in a store built with B2B Commerce or D2C Commerce. An example error is "Out of stock." Available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`,`describeLayout()` `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The CartValidationOutput object is available only if the B2B Commerce or D2C Commerce license is enabled.

# Fields

| Field | Details |
|---|---|
| `BackgroundOperationId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the background operation that ran the validation. |
| `CartId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the related `WebCart`. |
| `CurrencyIsoCode` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The ISO code for the currency that's specified on the buyer's account. Default value is `USD`.Possible values are:<br>• `EUR`—Euro<br>• `USD`—U.S. Dollar |
| `IsDismissed` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the validation process is finished. Default value is `false`. |
| `Level` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Describes the type of output resulting from the validation process. Possible values are:<br>• 0 (`Info`)<br>• 1 (`Error`) |

| Field | Details |
| --- | --- |
| | • 2 (`Warning`) |
| `Message` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Defines the message to show in the log when validation is complete. Message can be up to 255 characters. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of this `CartValidationOutput` record. `Name` can be up to 255 characters. |
| `RelatedEntityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Foreign key to `WebCart`, `CartItem`, and `CartDeliveryGroup`. |
| `RelatedEntityPrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Three-character prefix for the related entity. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The `CartValidationOutput` type. Possible values are:<br>• `CartSave` — Available in API version 64.0 and later.<br>• `Entitlement`<br>• `Inventory`<br>• `Other` |

| Field | Details |
| --- | --- |
| | • `Pricing`<br>• `Promotions`<br>• `Shipping`<br>• `ShippingPromotions`<br>• `SystemError`<br>• `Taxes` |

## Associated Objects

This object has the following associated objects. Unless it's noted, associated objects are available in the same API version as this object.

**CartValidationOutputChangeEvent (API version 58.0)**
Change events are available for the object.

# Case

Represents a case, which is a customer issue or problem.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `AccountId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the account associated with this case.<br>This is a relationship field.<br>**Relationship Name**<br>Account |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Account |
| `AssetWarrantyID` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Asset associated with the warranty. Must be a valid asset warranty ID. |
| `BusinessHoursId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the business hours associated with this case. |
| `Comments` | **Type**<br>textarea<br>**Properties**<br>Create, Delete, Layout, Nillable, Query, Retrieve, Search, Sort, Undelete, Update<br>**Description**<br>Used to insert a new CaseComment. Email textarea has a length of 4000 chars. |
| `CaseNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Assigned automatically when each case is inserted. It can't be set directly, and it can't be modified after the case is created. |
| `ClosedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the case was closed. |

| Field | Details |
| --- | --- |
| `CommunityId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the zone associated with this case.<br>This field is available in API version 24.0 and later. |
| `ConnectionReceivedId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce. |
| `ConnectionSentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections. |
| `ContactEmail` | **Type**<br>email<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Email address for the contact. The Case.ContactEmail field displays the Email field on the contact on page 1362 that is referenced by Case.ContactId. Label is `Contact Email`. This field is available in API version 38.0 and later. |
| `ContactFax` | **Type**<br>phone<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Fax number for the contact. Label is `Contact Fax`. This field is available in API version 38.0 and later. |

| Field | Details |
| --- | --- |
| `ContactId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the associated contact.<br>This is a relationship field.<br>**Relationship Name**<br>Contact<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `ContactMobile` | **Type**<br>phone<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Mobile telephone number for the contact. Label is `Contact Mobile`. This field is available in API version 38.0 and later. |
| `ContactPhone` | **Type**<br>phone<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Telephone number for the contact. Label is `Contact Phone`. This field is available in API version 38.0 and later. |
| `CreatorFullPhotoUrl` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL of the user's profile photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later. |
| `CreatorName` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of the user who posted the question or reply. Only the first name of internal users (agents) appears to portal users in the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later. |
| `CreatorSmallPhotoUrl` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL of the user's thumbnail photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A text description of the case. Limit: 32 KB. |
| `FeedItemId` | **Type**<br>reference<br>**Properties**<br>Create, Group, Nillable, Sort<br>**Description**<br>ID of the question in Chatter associated with the case. This field is available in API version 33.0 and later, and is only accessible in organizations where Question-to-Case is enabled. |
| `HasCommentsUnreadByOwner` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a case contains comments that the case owner hasn't read (`true`) or not (`false`). |
| `HasSelfServiceComments` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether a case has comments added by a Self-Service user (`true`) or not (`false`). Only visible when Customer Portal is enabled. |
| `IsClosed` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the case is closed (`true`) or open (`false`). This field is controlled by the `Status` field; it can't be set directly. Label is `Closed`. |
| `IsClosedOnCreate` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the case was closed at the same time that it was created (`true`) or not (`false`). This flag is read-only and is automatically set when a record is created. It can't be set to `true` unless the `IsClosed` flag is also `true`. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is `Deleted`. |
| `IsEscalated` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the case has been escalated (`true`) or not. A case's escalated state does not affect how you can use a case, or whether you can query, delete, or update it. You can set this flag via the API. Label is `Escalated`. |
| `IsSelfServiceClosed` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the case is closed for Self-Service users (`true`) or not (`false`). |
| `IsStopped` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether an entitlement process on a case is stopped (`true`) or not (`false`). |
| `IsVisibleInSelfService` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether the case can be viewed in the Customer Service Portal, Partner Service Portal, and Self-Service Portal (`true`) or not (`false`). This field is applied for case visibility in the Partner Relationship Management, Customer Service Portal, and the earlier version of Self Service Portal. The field does not alter sharing and will not prevent usage of a direct URL to a case if a portal user has read or write access. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the case. The Language field is available when you enable Einstein Case Classification in Enterprise, Performance, and Unlimited edition orgs with Service Cloud. By default, only Einstein classification apps use this field. |
| `LastReferencedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>datetime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `MasterRecordId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>If this object was deleted as the result of a merge, this field contains the ID of the record that was kept. If this object was deleted for any other reason, or has not been deleted, the value is `null`.<br>This is a relationship field.<br>**Relationship Name**<br>MasterRecord<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Case |
| `Origin` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable,Sort, Update<br>**Description**<br>The source of the case, such as `Email`, `Phone`, or `Web`. Label is `Case Origin`. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the contact who owns the case.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup |

| Field | Details |
| --- | --- |
| | **Refers To**<br>Group, User |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the parent case in the hierarchy. The label is `Parent Case`.<br>This is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Case |
| `Priority` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The importance or urgency of the case, such as `High`, `Medium`, or `Low`. |
| `QuestionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The question in the answers zone that is associated with the case. This field does not appear if you don't have an answers zone enabled. |
| `Reason` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The reason why the case was created, such as `Instructions not clear`, or `User didn't attend training`. |

| Field | Details |
| --- | --- |
| `RecordTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>ID of the record type assigned to this object. |
| `ServiceContractId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>Required. ID of the ServiceContract associated with the entitlement. Must be a valid ID. |
| `SlaStartDate` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Shows the time that the case entered an entitlement process. If you have the Edit permission on cases, you can update or reset the time.<br>This field is available in API version 18.0 and later. |
| `SourceId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the social post source. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The status of the case, such as New, Closed, or Escalated. This field directly controls the `IsClosed` flag. Each predefined `Status` value implies an `IsClosed` flag value. For more information, see CaseStatus. |
| `StopStartDate` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time an entitlement process was stopped on the case.<br>This field is available in API version 18.0 and later. |
| `Subject` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The subject of the case. Limit: 255 characters. |
| `SuppliedCompany` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The company name that was entered when the case was created. Label is `Company`. |
| `SuppliedEmail` | **Type**<br>email<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The email address that was entered when the case was created. Label is `Email`.<br>If your organization has an active auto-response rule, `SuppliedEmail` is required when creating a case via the API. Auto-response rules use the email in the contact specified by `ContactId`. If no email address is in the contact record, the email specified here is used. |
| `SuppliedName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The name that was entered when the case was created. Label is `Name`. |
| `SuppliedPhone` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The phone number that was entered when the case was created. Label is `Phone`. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The type of case, such as `Feature Request` or `Question`. |

Note: If you are importing Case data and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself.

## Usage

Use the Case object to manage cases for your organization. Client applications can query, update, and delete Attachment records associated with a case via the API.

## Assignment Rules

When you query or update a case, your client application can have the case automatically assigned to one or more User records based on assignment rules that have been configured in the user interface. To use this feature, your client application must set either of the following options (but not both) in the AssignmentRuleHeader used in the create or update:

| Field | Field Type | Details |
| --- | --- | --- |
| `assignmentRuleId` | reference | ID of the assignment rule to use. Can be an inactive assignment rule. If unspecified and `useDefaultRule` is `true`, then the default assignment rule is used. To find the ID for a given assignment rule, query the AssignmentRule object (specifying `RuleType="caseAssignment"`), iterate through the returned AssignmentRule objects, find the one you want to use, retrieve its ID, and then specify its ID in this field in the AssignmentRuleHeader. |
| `useDefaultRule` | boolean | Specifies whether to use the default rule for rule-based assignment (`true`) or not (`false`). The default rule is assigned by users in the Salesforce user interface. |

For a code example that shows setting the AssignmentRuleHeader for a Lead (which is similar to setting the AssignmentRuleHeader for a Case), see Lead.

## Separating Accounts from Contacts in Cases

In releases before 8.0, the `AccountId` could not be specified, it was derived from the contact's account. This behavior will continue to be supported in future releases, but you can also now specify an `AccountId`. If you do not specify the `AccountId` during the creation of a case, the value will default to the contact's `AccountId`.

Note: When a record is updated, if the `ContactId` has not changed, then the `AccountId` is not regenerated. This prevents the API from overwriting a value previously changed in the Salesforce user interface. However, if an API call changes the ContactId and the `AccountId` field is empty, then the `AccountId` is generated using the contact's account.

## Using `_case` with Java

Depending on the development tool you use, you might need to write your application using `_case` instead of `Case`, because `case` is a reserved word in Java.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CaseChangeEvent (API version 44.0)**
Change events are available for the object.

**CaseFeed (API version 18.0)**
Feed tracking is available for the object.

**CaseHistory**
History is available for tracked fields of the object.

**CaseOwnerSharingRule**
Sharing rules are available for the object.

**CaseShare**
Sharing is available for the object.

Account

CaseMilestone

# CaseArticle

Represents the association between a Case and a KnowledgeArticle. This object is available in API version 20.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Access to this object is controlled by the parent Case and KnowledgeArticle. However, when querying, access is only controlled by the parent Case.

Customer Portal users can't access this object.

## Fields

| Field | Details |
|---|---|
| `ArticleLanguage` | **Type**<br>picklist<br>**Properties**<br>Filter, Restricted picklist<br>**Description**<br>The language of the article associated with the case. |
| `ArticleVersionNumber` | **Type**<br>int<br>**Properties**<br>Create, Group, Nillable<br>**Description**<br>The number assigned to a version of an article. This field is available in API version 24.0 and later. |
| `CaseId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the Case associated with the KnowledgeArticle. |
| `IsSharedByEmail` | **Type**<br>int<br>**Properties**<br>Create, Group, Nillable<br>**Description**<br>Indicates that the article has been shared with the customer through an email. |
| `KnowledgeArticleId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the KnowledgeArticle associated with the Case. |

## Usage

This object represents the association of a knowledge article with a Case. An article is associated with a case when it's relevant to a specific issue, when it helps an agent solve the case, or when the agent sends the article to a customer.

You can use this object to include case-article associations in Apex and Visualforce.

You can't update this object via the API. If you attempt to create a record that matches an existing record, the create request simply returns the existing record.

SEE ALSO:

- Case
- KnowledgeArticle

# CaseComment

Represents a comment that provides additional information about the associated Case.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `CommentBody` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Text of the CaseComment. The maximum size of the comment body is 4,000 bytes. Label is **Body**. |
| `ConnectionReceivedId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce. |
| `ConnectionSentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections. |
| `CreatorFullPhotoUrl` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL of the user's profile photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later. |
| `CreatorName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Name of the user who posted the question or reply. Only the first name of internal users (agents) appears to portal users in the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later. |
| `CreatorSmallPhotoUrl` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URL of the user's thumbnail photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later. |
| `IsDeleted` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `IsNotificationSelected` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Update<br>**Description**<br>Indicates whether an email notification is sent to the case contact when a CaseComment is created or updated. When this field is queried, it always returns null.<br>This field is available only when the `Enable Case Comment Notification to Contacts` setting is enabled on the Support Settings page in Setup. To send email notifications for CaseComment, you must use the `EmailHeader triggerUserEmail`.<br>Available in API version 43.0 and later. |
| `IsPublished` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the CaseComment is visible to customers in the Self-Service portal (`true`) or not (`false`). Label is **Published**. This is the only CaseComment field that can be updated via the API. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort,<br>**Description**<br>Required. ID of the parent Case of the CaseComment.<br>This is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Case |

Note: If you're importing CaseComment data and must set the value for an audit field, such as `CreatedDate`, contact Salesforce. Record id's can't delete CaseComments entities when calling the Database.delete() Apex method or its analogous SOAP API. Audit fields are automatically updated during API operations unless you request to set these fields yourself.

## Usage

In the Salesforce user interface, comments are entered by a User working on a Case. All users have access to create and view CaseComment in the Salesforce user interface and when using the API. In the API, CaseComment records can't be modified after insertion unless the user has the "Modify All Records" object-level permission for Cases or the "Modify All Data" permission. If not, users can only update the `IsPublished` field, and can't delete CaseComment.

Overview of Salesforce Objects and Fields

# CaseContactRole

Represents the role that a given Contact plays on a Case.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `CasesId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the cases associated with this contact.<br>This is a relationship field.<br>**Relationship Name**<br>Cases<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Case |
| `ContactId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Required. ID of the contact.<br>This is a relationship field.<br>**Relationship Name**<br>Contact<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `Role` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Name of the role played by the contact on this case, such as Technical Contact, Business Contact, Decision Maker, and so on. Must be unique—there can't be multiple records in which the `CaseId`, `ContactId` , and `Role` values are identical. Different contacts can play the same role on the same case. A contact can play different roles on the same case. |

## Usage

Use this object to define the role that a given Case plays on a given Contact. For example, you can use this object to be able to see all contacts who are associated to a case, or, given a contact, be able to query all cases that they are associated with, even if they are not the primary contact on the case.

# CaseHistory

Represents historical information about changes that have been made to the associated Case.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See Enable delete of Field History and Field History Archive.

## Special Access Rules

This object is always read-only.

## Fields

| Field | Details |
|---|---|
| `CaseId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the Case associated with this record.<br>This is a relationship field.<br>**Relationship Name**<br>Case<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Case |
| `DataType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Data type of the field that was changed. |
| `Field` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Name of the case field that was modified, or a special value to indicate some other modification to the case. The possible values, in addition to the case field names, are:<br>• **ownerAssignment**—The owner of the case was changed.<br>• **ownerAccepted**—A user took ownership of a case from a queue. |

| Field | Details |
| --- | --- |
| | • **ownerEscalated**—The owner of the case was changed due to case escalation.<br>• **external**—A user made the case visible to customers in the Customer Self-Service Portal. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `NewValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>New value of the modified case field. Maximum of 255 characters. |
| `OldValue` | **Type**<br>anyType<br>**Properties**<br>Nillable, Sort<br>**Description**<br>Previous value of the modified case field. Maximum of 255 characters. |

## Usage

Case history entries are indirectly created each time a case is modified.

Two rows are added to this record when foreign key fields change. One row contains the foreign key object names that display in the online application. For example, `Jane Doe` is recorded as the name of a Contact. The other row contains the actual foreign key ID that is only returned to and visible from the API.

This object respects field level security on the parent object.

SEE ALSO:

Overview of Salesforce Objects and Fields

# CaseHistory2

Represents historical information about owner and status changes that have been made to the associated Case. This object is available in API version 59.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

This object is always read-only.

## Fields

| Field | Details |
| --- | --- |
| `CaseId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the Case associated with this record.<br>This is a relationship field.<br>**Relationship Name**<br>Case<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Case |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is `Deleted`. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the contact who owns the case.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Owner |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `PreviousUpdate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The date and time when the case was last updated. |
| `Status` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The status of the case, such as `New`, `Closed`, or `Escalated`. |

## Usage

CaseHistory2 entries are intended for case history reports.

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CaseHistory2ChangeEvent on page 68**
Change events are available for the object in API version 60.0 or later.

# CaseMilestone

Represents a milestone (required step in a customer support process) on a Case. This object is available in API version 18.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

# Fields

| Field | Details |
| --- | --- |
| `BusinessHoursId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the BusinessHours associated with the CaseMilestone. |
| `CaseId` | **Type**<br>reference<br>**Properties**<br>Filter<br>**Description**<br>ID of the case. |
| `CompletionDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The date and time the milestone was completed. |
| `ElapsedTimeInDays` | **Type**<br>double<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The time required to complete a milestone in days. |
| `ElapsedTimeInHrs` | **Type**<br>double<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The time required to complete a milestone in hours. |
| `ElapsedTimeInMins` | **Type**<br>int<br>**Properties**<br>Filter, Nillable |

| Field | Details |
| --- | --- |
| | **Description**<br>The time required to complete a milestone in minutes. |
| `IsCompleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the milestone is completed (`true`) or not (`false`). |
| `IsViolated` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the milestone is violated (`true`) or not (`false`). |
| `MilestoneTypeId` | **Type**<br>reference<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The ID of the milestone on the case. |
| `StartDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Update<br>**Description**<br>The date and time the milestone started on the case. |
| `TargetDate` | **Type**<br>dateTime<br>**Properties**<br>Filter<br>**Description**<br>The date and time the milestone must be completed. |
| `TargetResponseInDays` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The time to complete the milestone in days. |
| `TargetResponseInHrs` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The time to complete the milestone in hours. |
| `TargetResponseInMins` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The time to complete the milestone in minutes. |
| `TimeRemainingInDays` | **Type**<br>double<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>Time remaining to reach the milestone target, measured in days. |
| `TimeRemainingInHrs` | **Type**<br>text<br>**Properties**<br>Nillable<br>**Description**<br>Time remaining to reach the milestone target, measured in hours. |
| `TimeRemainingInMins` | **Type**<br>text<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>Time remaining to reach the milestone target. The format is minutes and seconds. |
| `TimeSinceTargetInDays` | **Type**<br>double<br>**Properties**<br>Nillable, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The time elapsed since the milestone target, measured in days. |
| `TimeSinceTargetInHrs` | **Type**<br>string<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>The time elapsed since the milestone target, measured in hours. |
| `TimeSinceTargetInMins` | **Type**<br>string<br>**Properties**<br>Group, Nillable, Sort<br>**Description**<br>The time elapsed since the milestone target. The format is minutes and seconds. |

## Usage

This object lets you view a milestone on a case. It also lets you view if the milestone was completed and when it must be completed.

SEE ALSO:

- Case
- MilestoneType
- SlaProcess

# CaseOwnerSharingRule

Represents the rules for sharing a case with users other than the owner.

Note: To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The SharingRules Metadata API type is enabled for all orgs.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Customer Portal users can't access this object.

# Fields

| Field | Details |
|---|---|
| `CaseAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A value that represents the type of sharing being allowed. The possible values are:<br>• `Read`<br>• `Edit` |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to **Rule Name** in the user interface.<br>This field is available in API version 24.0 and later.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record. |
| `GroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID representing the source group. Cases owned by users in the source group trigger the rule to give access. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to **Label** on the user interface. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID representing the target user or group. Target users or groups are given access. |

## Usage

Use this object to manage the sharing rules for cases. General sharing and territory management-related sharing use this object.

# CaseParticipant

Represents a junction between a case, and an account or a contact. This object stores the details of the participant associated with a case. This participant could be the applicant, co-applicant, a household, or even a business account. This object is available in API version 54.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Fields and values added in API version 58.0 are available if the add-on license for Financial Services Cloud is enabled.

## Fields

| Field | Details |
|---|---|
| `AuthorizationProof` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>How the participant communicated their consent. This field is available in API version 58.0 and later.<br>Possible values are:<br>• `Email Consent`<br>• `Joint Ownership`<br>• `Power of Attorney`<br>• `Verbal Consent` |
| `CaseId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The case associated with the case participant record.<br>This field is a relationship field.<br>**Relationship Name**<br>Case<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Case |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |

| Field | Details |
| --- | --- |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, possibly the user only accessed this record or list view (`LastReferencedDate`) but didn't view it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The name of the case participant record. |
| `ParticipantId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The participant associated with the case participant record.<br>This field is a polymorphic relationship field.<br>**Relationship Name**<br>Participant<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Account, Contact |
| `PreferredCallTimeFrom` | **Type**<br>time<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The start of the preferred time window for contacting the participant. This field is available in API version 58.0 and later. |
| `PreferredCallTimeTo` | **Type**<br>time |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The end of the preferred time window for contacting the participant. This field is available in API version 58.0 and later. |
| `PreferredCommunicationMode` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>How the participant prefers to receive messages. This field is available in API version 58.0 and later.<br>Possible values are:<br>• `Email`<br>• `Phone`<br>• `SMS` |
| `Role` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The role of the case participant.<br>Possible values are:<br>• `Applicant`<br>• `Complainant Representative` (Available in API version 58.0 and later.)<br>• `Inspection Officer`<br>• `Lawyer`<br>• `Observer`<br>• `Perpetrator`<br>• `Primary Caretaker`<br>• `Victim`<br>The default value is `Applicant`. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The status of the case participant.<br>Possible values are:<br>• `Active`<br>• `Inactive`<br>• `In Review` (Available in API version 58.0 and later.)<br>• `Pending` (Available in API version 58.0 and later.)<br>• `Submitted` (Available in API version 58.0 and later.) |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CaseParticipantFeed on page 55**
Feed tracking is available for the object.

**CaseParticipantHistory on page 63**
History is available for tracked fields of the object.

# CaseRelatedIssue

This object acts as a junction between a customer issue (Case) and the Incident or Problem that represents an associated service failure. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `CaseId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>A relationship field that represents the case you're linking a Problem or Incident to.<br>**Relationship Name**<br>Case |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Case |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>A brief description of the related case. |
| `RelatedEntityType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>Shows what type of object the related entity is.<br>Possible values are:<br>• `Incident`<br>• `Problem` |
| `RelatedIssueId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>A polymorphic relationship field that represents a related Problem or Incident.<br>**Relationship Name**<br>RelatedIssue<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Incident, Problem |
| `RelationshipType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Shows how two records relate to each other. |

| Field | Details |
| --- | --- |
| | Possible values are:<br>• `Root Cause`<br>• `Similar`<br>The default value is 'Root Cause'. |
| `UniqueKeyIndex` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>This field is unique within your organization. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**CaseRelatedIssueChangeEvent on page 68 (API version 59.0)**
Change events are available for the object.

**CaseRelatedIssueFeed on page 55**
Feed tracking is available for the object.

**CaseRelatedIssueHistory on page 63**
History is available for tracked fields of the object.

# CaseShare

Represents a sharing entry on a Case.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

## Supported Calls

`describeSObjects()`, `create()`, `delete()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only users with access to the Case object can access this object.

# Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

| Field | Details |
| --- | --- |
| `CaseAccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Level of access that the User or Group has to the Case. The possible values are:<br>• `Read`<br>• `Edit`<br>• `All` This value isn't valid for creating or deleting records.<br>This field must be set to an access level that is higher than the organization's default access level for cases. |
| `CaseId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the Case associated with this sharing entry. This field can't be updated.<br>This is a relationship field.<br>**Relationship Name**<br>Case<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Case |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `RowCause` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is `Manual`. If no value is specified, the field defaults to `Manual`. All other `RowCause` values are read-only. After the sharing entry is created, this field can't be edited.<br>Valid values include:<br>• `Manual`—The User or Group has access because a user with "All" access manually shared the Case with them.<br>• `Owner`—The User is the owner of the Case.<br>• `ImplicitChild`—The User or Group has access to the Case on the Account associated with this Case. After faster account sharing recalculation is enabled for your org, sharing entries with this value aren't returned in queries. Instead of storing implicit child shares, record access is determined dynamically.<br>• `RelatedPortalUser`—The portal user is the contact on the Case.<br>• `Rule`—The User or Group has access via a Case sharing rule.<br>• `GuestRule`—The User or Group has access via a Case guest user sharing rule.<br>• `Team`—The User or Group has team access.<br>• `LpuImplicit`—The User has access to records owned by high-volume Experience Cloud site users via a share group.<br>• `ARImplicit`—The User, who belongs to a partner or customer account, has access to the Case via an account relationship data sharing rule. |
| `UserOrGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the User or Group that has been given access to the Case. This field can't be updated.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>UserOrGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |

## Usage

This object allows you to determine which users and groups can view and edit Case records owned by other users. If you attempt to create a record that matches an existing record, request updates any modified fields and returns the existing record.

Note: After faster account sharing recalculation is enabled for your org, we no longer store implicit share records between accounts and their child case records. Sharing entries that have a value of `ImplicitChild` in the `RowCause` field aren't returned when you query this object. Instead, the system dynamically determines whether users can access child case records when they try to access them. This change speeds up ownership and sharing recalculation for accounts.

For more information, see the Faster Account Sharing Recalculation knowledge article.

# CaseSolution

Represents the association between a Case and a Solution.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `CaseId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the Case associated with the Solution.<br>This is a relationship field.<br>**Relationship Name**<br>Case<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Case |

| Field | Details |
| --- | --- |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter<br>**Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`).<br>Label is **Deleted**. |
| `SolutionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>Required. ID of the Solution associated with the case.<br>This is a relationship field.<br>**Relationship Name**<br>Solution<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Solution |

## Usage

You can't update this object via the API. If you attempt to create a record that matches an existing record, the request simply returns the existing record.

SEE ALSO:

- CaseShare
- SolutionStatus

# CaseStatus

Represents the status of a Case, such as New, On Hold, or In Process.

**Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

# Fields

| Field | Details |
|---|---|
| `ApiName` | **Type**<br>string<br>**Properties**<br>Filter, Group, idLookup, Sort<br>**Description**<br>Uniquely identifies a picklist value so it can be retrieved without using an id or primary label. |
| `IsClosed` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this case status value represents a closed Case (`true`) or not (`false`). Multiple case status values can represent a closed Case. |
| `IsDefault` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>Indicates whether this is the default case status value (`true`) or not (`false`) in the picklist. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Label for this case status value. This display value is the internal label that does not get translated. |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>Number used to sort this value in the case status picklist. These numbers are not guaranteed to be sequential, as some previous case status values might have been deleted. |

## Usage

This object represents a value in the case status picklist. The case status picklist provides additional information about the status of a Case, such as whether a given `Status` value represents an open or closed case. Query the CaseStatus object to retrieve the set of values in the case status picklist, and then use that information while processing Case records to determine more information about a given case. For example, the application could test whether a given case is open or closed based on its `Status` value and the value of the `IsClosed` property in the associated CaseStatus object.

Overview of Salesforce Objects and Fields

# CaseSubjectParticle

Represents the Social Business Rules custom format for the **Case Subject** field on cases created from inbound social posts. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name for the CaseSubjectParticle object.<br>This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. This field is automatically generated, but you can supply your own value if you create the record using the API.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `Index` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Required. The order in which the custom **Case Subject** is generated, meaning if the social network is 0 and the social message is 1, then the subject generates as `Twitter \| Tweet`. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language of the case subject field.<br>Possible values are:<br>• `ar`—Arabic<br>• `da`—Danish<br>• `de`—German<br>• `en_US`—English<br>• `es`—Spanish<br>• `es_MX`—Spanish (Mexico)<br>• `fi`—Finnish<br>• `fr`—French<br>• `it`—Italian<br>• `iw`—Hebrew<br>• `ja`—Japanese<br>• `ko`—Korean<br>• `nl_NL`—Dutch<br>• `no`—Norwegian<br>• `pt_BR`—Portuguese (Brazil)<br>• `ru`—Russian<br>• `sv`—Swedish<br>• `th`—Thai<br>• `zh_CN`—Chinese (Simplified)<br>• `zh_TW`—Chinese (Traditional) |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Label for the case subject field. |

| Field | Details |
| --- | --- |
| `TextField` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Specifies inbound social content added to **Case Subject** in case records. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Required. Specifies the custom **Case Subject** format from which inbound social content appears in case records.<br>Possible values are:<br>• `ColonSeparator`<br>• `Content`—Message<br>• `HyphenSeparator`<br>• `MessageType`<br>• `PipeSeparator`<br>• `ProvidedString`<br>• `RealName`<br>• `Sentiment`<br>• `SocialHandle`<br>• `SocialNetwork`<br>• `Source` |

## Usage

In the Salesforce UI, case subjects are brief descriptions of cases. They are what agents see on cases first. Social Business Rules specify the brief descriptions of cases created from social posts. Using CaseSubjectParticle objects you can build your own case subject format, where each object represents a social post's component. For example, combining CaseSubjectParticle objects with components for types `MessageType`, `RealName`, and `SocialNetwork` results in "Tweet Customer123 Twitter".

# CaseTag

Associates a word or short phrase with a Case

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
| --- | --- |
| `ItemId` | **Type**<br>reference<br>**Properties**<br>Create, Filter<br>**Description**<br>ID of the tagged item. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter<br>**Description**<br>Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically. |
| `TagDefinitionId` | **Type**<br>reference<br>**Properties**<br>Filter<br>**Description**<br>ID of the parent TagDefinition object that owns the tag. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Restricted picklist<br>**Description**<br>Defines the visibility of a tag.<br>Valid values:<br>• `Public`—The tag can be viewed and manipulated by all users in an organization.<br>• `Personal`—The tag can be viewed or manipulated only by a user with a matching `OwnerId`. |

## Usage

CaseTag stores the relationship between its parent TagDefinition and the Case being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

# CaseTeamMember

Represents a case team member, who works with a team of other users to help resolve a case.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Spring '20 and later, only users with read access to the Case object can access this object.

When accessing from Apex code, use the `WITH USER_MODE` clause to enable field-level and object-level security permissions checking for `SOQL SELECT` queries, including subqueries and cross-object relationships. See Enforce User Mode for Database Operations.

## Fields

| Field | Details |
|---|---|
| `MemberId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the user or contact who is a member on a case team.<br>This is a polymorphic relationship field.<br>**Relationship Name**<br>Member<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Contact, User |
| `ParentId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the case with which the case team member is associated.<br>This is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Case |
| `TeamRoleId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The ID of the case team role with which the case team member is associated.<br>This is a relationship field.<br>**Relationship Name**<br>TeamRole<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CaseTeamRole |
| `TeamTemplateId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the predefined team with which the case team member is associated.<br>This is a relationship field.<br>**Relationship Name**<br>TeamTemplate<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CaseTeamTemplate |

| Field | Details |
| --- | --- |
| `TeamTemplateMemberId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID of the team member included in a predefined case team.<br>This is a relationship field.<br>**Relationship Name**<br>TeamTemplateMember<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CaseTeamTemplateMember |

# CaseTeamRole

Represents a case team role. Every case team member has a role on a case, such as "Customer Contact" or "Case Manager."

## Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Spring '20 and later, only users with read access to the Case object can access this object.

## Fields

| Field | Details |
| --- | --- |
| `AccessLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>A value that represents the type of access granted to the target Group for cases. The possible values are:<br>• `None`<br>• `Read`<br>• `Edit` |

| Field | Details |
| --- | --- |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the case team role. |
| `PreferencesVisibleInCSP` | **Type**<br>boolean<br>**Properties**<br>Create, Filter, Update<br>**Description**<br>Indicates whether or not the case team role is visible to Customer Portal users. |

# CaseTeamTemplate

Represents a predefined case team, which is a group of users that helps resolve a case.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Spring '20 and later, only users with read access to the Case object can access this object.

## Fields

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>A text description of the predefined case team. |
| `Name` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of the predefined case team. |

# CaseTeamTemplateMember

Represents a member on a predefined case team, which is a group of users that helps resolve cases.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Spring '20 and later, only users with read access to the Case object can access this object.

## Fields

| Field | Details |
| --- | --- |
| `MemberId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the user or contact who is a team member on a predefined case team. |
| `TeamRoleId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the predefined case team member's case team role. |
| `TeamTemplateId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the predefined case team's template. |

# CaseTeamTemplateRecord

The CaseTeamTemplateRecord object is a linking object between the Case and CaseTeamTemplate objects. To assign a predefined case team to a case (customer inquiry), create a CaseTeamTemplateRecord record and point the `ParentId` to the case and the `TeamTemplateId` to the predefined case team.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

As of Spring '20 and later, only users with read access to the Case object can access this object.

## Fields

| Field | Details |
| --- | --- |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ID of the case with which the case team template record is associated.<br>This is a relationship field.<br>**Relationship Name**<br>Parent<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Case |
| `TeamTemplateId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The ID of the predefined case team with which the case team template record is associated.<br>This is a relationship field.<br>**Relationship Name**<br>TeamTemplate<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CaseTeamTemplate |

# CategoryData

Represents a logical grouping of Solution records.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

| Field | Details |
| --- | --- |
| `CategoryNodeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the CategoryNode associated with the solution. |
| `IsDeleted` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter |

| Field | Details |
| --- | --- |
| | **Description**<br>Indicates whether the object has been moved to the Recycle Bin (`true`) or not (`false`). Label is **Deleted**. |
| `RelatedSobjectId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the solution related to the category. |

## Usage

This object allows you to assign one or more categories to a Solution. It is an intermediate data table with two foreign keys that defines the relationship between a CategoryNode and a Solution record.

CategoryData has two foreign keys:

- The first foreign key, `CategoryNodeId`, refers to the ID of a CategoryNode.
- The other foreign key, `RelatedSobjectId`, refers to a Solution ID.

This is a many-to-many relationship, so there can be multiple rows returned with a `CategoryNodeId`. A Solution can be associated with multiple categories.

Overview of Salesforce Objects and Fields

# CategoryNode

Represents a tree of Solution categories.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

- Customer Portal users can't access this object.
- Attempting to delete a CategoryNode that has children (referred by CategoryNode.Parent), or is referred to elsewhere, causes a failure.

# Fields

| Field | Details |
| --- | --- |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Label for the category node. |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the parent of this node, if any. |
| `SortOrder` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Indicates the sort order of child CategoryNode objects. |
| `SortStyle` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Indicates whether the sort order is alphabetical or custom. |

# Usage

A CategoryNode defines a category of solutions. In the user interface, you can edit category definitions from Setup by entering *`Solution Categories`* in the `Quick Find` box, then selecting **Solution Categories**.

# CategoryNodeLocalization

When the Translation Workbench is enabled for your organization, the CategoryNodeLocalization object provides the translation of the label of a solution category.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

- Your organization must be using Professional, Enterprise, Developer, Unlimited, or Performance Edition and be enabled for the Translation Workbench.
- To view this object, you must have the "View Setup and Configuration" permission.

## Fields

| Field | Details |
|---|---|
| `CategoryNodeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Nillable<br>**Description**<br>The ID of the solution CategoryNode that is being translated. |

| Field | Details |
| --- | --- |
| | • Spanish (Venezuela): `es_VE`<br>• Swahili: `sw`<br>• Tagalog: `tl`<br>• Tamil: `ta`<br>• Te reo: `mi`<br>• Telugu: `te`<br>• Urdu: `ur`<br>• Welsh: `cy`<br>• Xhosa: `xh`<br>• Yiddish: `ji`<br>• Zulu: `zu`<br>The values in this field are not related to the default locale selection. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Nillable<br>**Description**<br>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation.<br>The namespace prefix can have one of the following values.<br>• In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.<br>• In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. |
| `Value` | **Type**<br>string<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>The actual translated label for the solution category. Label is **Translation**. |

## Usage

Use this object to translate the labels of your solution categories into a supported language. Users with the Translation Workbench enabled can view category node translations, but either the "Customize Application," "Manage Translation," or "Manage Categories" permission is required to create or update category node translations.

# ChangeRequest

Represents a decision to implement a formal request for a change (RFC). This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `BusinessJustification` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A description of the business reason to implement the change. This field can store up to 32 KB of data, but only the first 255 characters display in reports. |
| `BusinessReason` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The core reason for creating the change request.<br>Possible values are:<br>• `t2` |
| `Category` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The type of change request. Administrators set field values. |
| `ChangeRequestNumber` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The unique, system-generated change request number. |
| `ChangeType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The type of change request. Administrators set field values.<br>Possible values are:<br>• `Emergency`<br>• `Major`<br>• `Normal`<br>• `Standard` |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A description of the change request. This field can store up to 32 KB of data, but only the first 255 characters display in reports. |
| `EstimatedEndTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time (in UTC) when the change request is estimated to be implemented. |
| `EstimatedStartTime` | **Type**<br>dateTime |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The estimated date and time (in UTC) when the change request is implemented. |
| `FinalReviewDateTime` | **Type**<br>dateTime<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>The date and time (in UTC) when the change request was reviewed. |
| `FinalReviewNotes` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>Notes left by the change request reviewer. This field can store up to 32 KB of data, but only the first 255 characters display in reports. |
| `Impact` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Shows the impact of a requested change.<br>Possible values are:<br>• `High`<br>• `Low`<br>• `Medium`<br>The default value is 'High'. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |

| Field | Details |
| --- | --- |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>A polymorphic relationship field that represents the user or group assigned as the change reviewer.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Group, User |
| `Priority` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The impact and urgency of a requested change.<br>Possible values are:<br>• `Critical`<br>• `High`<br>• `Low`<br>• `Moderate`<br>The default value is 'Critical'. |
| `RemediationPlan` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>A description of the steps required to resolve the incident. This field can store up to 32 KB of data, but only the first 255 characters display in reports. |
| `ReviewerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the user who reviewed the change request.<br>This is a relationship field.<br>**Relationship Name**<br>Reviewer<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `RiskImpactAnalysis` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>An assessment of the risk involved with the implementation of the change request. Administrators set field values, and each value can have up to 20 characters. |
| `RiskLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>The risk level associated with adopting the requested change.<br>Possible values are:<br>• `High`<br>• `Low`<br>• `Medium`<br>The default value is 'High'. |
| `Status` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Represents any custom or granular stages a customer may want to track. This will be a dependent picklist.<br>Possible values are:<br>• `Approved`<br>• `Canceled`<br>• `Closed`<br>• `Implementing`<br>• `New`<br>• `Open`<br>• `Planning`<br>• `Rejected`<br>• `Reviewed`<br>• `Scheduled`<br>The default value is 'New'. |
| `StatusCode` | **Type**<br>picklist<br>**Properties**<br>Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort<br>**Description**<br>The status of the change.<br>Possible values are:<br>• `Approved`<br>• `Canceled`<br>• `Closed`<br>• `Implementing`<br>• `New`<br>• `Open`<br>• `Planning`<br>• `Rejected`<br>• `Reviewed`<br>• `Scheduled`<br>The default value is 'New'. |
| `Subject` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>A brief description of the requested change. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ChangeRequestChangeEvent on page 68 (API version 59.0)**
Change events are available for the object.

**ChangeRequestFeed on page 55**
Feed tracking is available for the object.

**ChangeRequestHistory on page 63**
History is available for tracked fields of the object.

**ChangeRequestOwnerSharingRule on page 65**
Sharing rules are available for the object.

**ChangeRequestShare on page 67**
Sharing is available for the object.

# ChangeRequestRelatedIssue

Represents a junction object that relates a ChangeRequest to an Incident or Problem due to a service failure. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `ChangeRequestId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ChangeRequest ID that's linked to the Problem or Incident. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>ChangeRequest<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ChangeRequest |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>A description of the change request as it relates to the problem or incident. |
| `RelatedEntityType` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort<br>**Description**<br>The name of the related object type.<br>Possible values are:<br>• `Incident`<br>• `Problem` |
| `RelatedIssueId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>A polymorphic relationship field that represents the related Problem or Incident.<br>**Relationship Name**<br>RelatedIssue<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Incident, Problem |
| `RelationshipType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>Shows how the ChangeRequest and Incident or Problem records relate to each other.<br>Possible values are:<br>• `Caused By`<br>• `Fixed By`<br>The default value is 'Caused By'. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ChangeRequestRelatedIssueChangeEvent on page 68**
Change events are available for the object.

**ChangeRequestRelatedIssueFeed on page 55**
Feed tracking is available for the object.

**ChangeRequestRelatedIssueHistory on page 63**
History is available for tracked fields of the object.

# ChangeRequestRelatedItem

Represents a junction object that relates a ChangeRequest to an Asset. This object is available in API version 53.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `AssetId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The Asset ID that's linked to the ChangeRequest.<br>This field is a relationship field.<br>**Relationship Name**<br>Asset |

| Field | Details |
| --- | --- |
| | **Relationship Type**<br>Lookup<br>**Refers To**<br>Asset |
| `ChangeRequestId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>The ChangeRequest ID that's linked to the Asset.<br>This field is a relationship field.<br>**Relationship Name**<br>ChangeRequest<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ChangeRequest |
| `Comment` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>A description of the change request as it relates to the item. |
| `ImpactLevel` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The related item's impact on the change request.<br>Possible values are:<br>• `High`<br>• `Low`<br>• `Medium`<br>The default value is `High`. |
| `Name` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>The auto-generated ID of the item that's related to the change request. |
| `RelationshipType` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Shows how the ChangeRequest and Asset records relate to each other.<br>Possible values are:<br>• `Broke Item`<br>• `Fixed Item`<br>The default value is `Broke Item`. |

## Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

**ChangeRequestRelatedItemChangeEvent on page 68**
Change events are available for the object.

**ChangeRequestRelatedItemFeed on page 55**
Feed tracking is available for the object.

**ChangeRequestRelatedItemHistory on page 63**
History is available for tracked fields of the object.

# ChangeSetOperationEventLog

Change Set Operation events contain information from change set migrations. This object is available in API version 65.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

# Fields

| Field | Details |
| --- | --- |
| `ChangeSetName` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The name of the change set. |
| `ClientIp` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". |
| `CpuTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer. |
| `LoginKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. |
| `OperationType` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The operation that's being performed. |
| `RequestIdentifier` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. |
| `RunTime` | **Type**<br>double<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The amount of time that the request took in milliseconds. |
| `SessionKey` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. |
| `TargetOrganizationIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the organization that's receiving the change set. |
| `Timestamp` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Timestamp at which the log event was generated. |
| `Uri` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>URI of the page receiving the request. |

| Field | Details |
| --- | --- |
| `UserIdentifier` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: `00530000009M943`. |

# ChannelObjectLinkingRule

Represents a rule for linking a channel interaction with an object (such as Lead or Contact). This object is available in API version 47.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `ActionForNoRecordFound` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Action to take when no matching records are found.<br>Possible values are:<br>• `CreateNewRecordAndLink`—Create Record and Link (Recommended)<br>• `PromptAgent`—Prompt Agent |
| `ActionForSingleRecordFound` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Action to take when one matching record is found.<br>Possible values are:<br>• `AutoLink`—Auto-Link Record (Recommended) |

| Field | Details |
| --- | --- |
| | • `PromptAgent`—Prompt Agent |
| `ChannelType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of channel used for this rule.<br>Possible values are:<br>• `FacebookMessenger`<br>• `Phone`<br>• `Text`<br>• `WeChat`<br>• `WhatsApp` |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update<br>**Description**<br>The description for this linking rule. |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.<br>Note: When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `IsLinkedRecordOpenedAsSubTab` | **Type**<br>boolean |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether to open the linked record as a subtab when the link is established. |
| `IsRuleActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the rule is active. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language for this linking rule.<br>Possible values are:<br>• `ar`—Arabic<br>• `bg`—Bulgarian<br>• `cs`—Czech<br>• `da`—Danish<br>• `de`—German<br>• `el`—Greek<br>• `en_GB`—English (UK)<br>• `en_US`—English<br>• `es`—Spanish<br>• `es_MX`—Spanish (Mexico)<br>• `fi`—Finnish<br>• `fr`—French<br>• `hr`—Croatian<br>• `hu`—Hungarian<br>• `in`—Indonesian<br>• `it`—Italian<br>• `iw`—Hebrew<br>• `ja`—Japanese<br>• `ko`—Korean<br>• `nl_NL`—Dutch |

| Field | Details |
| --- | --- |
| | • `no`—Norwegian<br>• `pl`—Polish<br>• `pt_BR`—Portuguese (Brazil)<br>• `pt_PT`—Portuguese (European)<br>• `ro`—Romanian<br>• `ru`—Russian<br>• `sk`—Slovak<br>• `sl`—Slovene<br>• `sv`—Swedish<br>• `th`—Thai<br>• `tr`—Turkish<br>• `uk`—Ukrainian<br>• `vi`—Vietnamese<br>• `zh_CN`—Chinese (Simplified)<br>• `zh_TW`—Chinese (Traditional) |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The unique label name for this rule. |
| `ObjectToLink` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort<br>**Description**<br>The type of object to link to the channel interaction.<br>Possible values are:<br>• `Contact` |
| `RuleName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Name of the rule as it appears in the UI. Maximum length is 80 characters. |

# ChannelProgram

Represents a channel program that vendors use to market and sell their products through channel partners. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
|---|---|
| `Category` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Category of the channel program. Categories group channel programs by type. For example, a reseller category would include all the different regional reseller channel programs. |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the channel program. |
| `IsActive` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the channel program is active. New channel programs are inactive by default. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort |

| Field Name | Details |
| --- | --- |
| | **Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Name of the channel program. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the owner of the channel program. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**ChannelProgramFeed**
Feed tracking is available for the object.

**ChannelProgramHistory**
History is available for tracked fields of the object.

**ChannelProgramOwnerSharingRule**
Sharing rules are available for the object.

**ChannelProgramShare**
Sharing is available for the object.

# ChannelProgramLevel

Represents a level, based on member experience, in a channel program. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
|---|---|
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Description of the channel program level. |
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last accessed this record, a record related to this record, or a list view. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (`LastReferencedDate`) but not viewed it. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the channel program level. |

| Field Name | Details |
| --- | --- |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Required. ID of the user who is the owner of the record. |
| `ProgramId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the channel program. |
| `Rank` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>An integer associated with the level. For example, 1 represents the lowest level, 2 the next level up, etc. |
| `RecordTypeId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Nillable, Update<br>**Description**<br>ID of the record type assigned to this object. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**ChannelProgramLevelFeed**
Feed tracking is available for the object.

**ChannelProgramLevelHistory**
History is available for tracked fields of the object.

**ChannelProgramLevelOwnerSharingRule**
Sharing rules are available for the object.

**ChannelProgramLevelShare (API version 43.0)**
Sharing is available for the object.

# ChannelProgramMember

Represents a partner who is a member of a channel program. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field Name | Details |
|---|---|
| `LastReferencedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Most recent date referenced. This field is available in API version 45.0 and later. |
| `LastViewedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Most recent date viewed. This field is available in API version 45.0 and later. |
| `LevelId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>ID of the channel program level. |
| `Name` | **Type**<br>string<br>**Properties**<br>Autonumber, Defaulted on create, Filter, idLookup, Sort<br>**Description**<br>Name of the channel program member. |
| `OwnerId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Required. ID of the user who is the owner of the record. |
| `PartnerId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>ID of the partner. |
| `ProgramId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the channel program. |

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**ChannelProgramMemberFeed (API version 46.0)**
Feed tracking is available for the object.

**ChannelProgramMemberHistory (API version 46.0)**
History is available for tracked fields of the object.

**ChannelProgramMemberOwnerSharingRule**
Sharing rules are available for the object.

**ChannelProgramMemberShare (API version 43.0)**
Sharing is available for the object.

# ChatterActivity

ChatterActivity represents the number of posts and comments made by a user and the number of comments and likes on posts and comments received by the same user. This object is available in API version 23.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

# Fields

| Field Name | Details |
| --- | --- |
| `CommentCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of FeedComments made by the ParentId. |
| `CommentReceivedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of FeedComments received by the ParentId. |
| `InfluenceRawRank` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>Number indicating the ParentId's Chatter influence rank, which is calculated based on the ParentId's ChatterActivity statistics, relative to the other users in the organization. This field is available in API version 26.0 and later. |
| `LikeReceivedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of FeedLikes received by the ParentId. |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Experience Cloud site to which the ChatterActivity belongs. This field is available only if digital experiences is enabled in your org. This field is available in API version 26.0 and later. |

| Field Name | Details |
| --- | --- |
| `ParentId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the object type to which the ChatterActivity is related. In API version 65.0, the `ParentId` must be a `UserId` or SelfServiceUser ID. |
| `PostCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The number of FeedItems made by the ParentId. |

## Usage

- Use this object to reference the Chatter activity statistics, which include the number of posts and comments made by a user and the number of comments and likes on posts and comments received by the same user.
- You can directly query for ChatterActivity.

```
SELECT Id, PostCount, LikeReceivedCount
FROM ChatterActivity
WHERE ParentId = UserId
```

Note: To query ChatterActivity, you must provide the `ParentId`. In API version 65.0, the `ParentId` must be a `UserId` or SelfServiceUser ID.

- A ChatterActivity record is created for users the first time they post or comment. Users who have never posted or commented don't have ChatterActivity records. If users make only one post and then delete it, they do have ChatterActivity records. In both cases, the user interface displays zeros for their Chatter activity.
- Use the `InfluenceRawRank` field to reference a user's Chatter influence rank. This field is available in API version 26.0 and later.

# ChatterAnswersActivity

Represents the reputation of a User in Chatter Answers zones.This object is available in API version 25.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
| --- | --- |
| `BestAnswerReceivedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of best answers the User has received from other users. |
| `BestAnswerSelectedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of best answers the User has selected. |
| `QuestionsCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of Question records posted by the User. |
| `QuestionSubscrCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of Question records the User has selected to follow. |
| `QuestionSubscrReceivedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of users following Question records posted by the User. |

| Field Name | Details |
| --- | --- |
| `QuestionUpVotesCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of up votes the User has marked on Question records posted by other users. |
| `QuestionUpVotesReceivedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of up votes the User has received from other users on the Question records he or she has posted. |
| `RepliesCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of Reply records posted by the User. |
| `ReplyDownVotesCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of down votes the User has marked on Reply records posted by other users. |
| `ReplyDownVotesReceivedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of down votes the User has received from other users on the Reply records he or she has posted. |
| `ReplyUpVotesCount` | **Type**<br>int |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of up votes the User has marked on the Reply records posted by other users. |
| `ReplyUpVotesReceivedCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of up votes the User has received from other users on the Reply records he or she has posted. |
| `ReportAbuseOnQuestionsCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of abuses that the User has reported on Question records posted by other users. |
| `ReportAbuseOnRepliesCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of abuses that the User has reported on Reply records posted by other users. |
| `ReportAbuseReceivedOnQnCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of abuses reported by other users on the Question records posted by the User. |
| `ReportAbuseReceivedOnReCount` | **Type**<br>int |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>the number of abuses reported by other users on the Reply records posted by the User. |
| `UserId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The User ID associated with this reputation. |
| `CommunityId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The ID for the zone associated with this reputation. |

## Usage

Use this object to view metrics on User activity in Chatter Answers. For example, you can use the ChatterAnswersActivity object to view the number of Question records a user is following in Chatter Answers zones.

- User

# ChatterAnswersReputationLevel

Represents a reputation level within a Chatter Answers zone. This object is available in API version 26.0 and later.

Note: With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

## Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`, `update()`

## Fields

| Field | Details |
| --- | --- |
| `CommunityID` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the zone for which you're creating the reputation level. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Name of the reputation level. |
| `Value` | **Type**<br>int<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>Minimum number of points for this level. |

## Usage

Use to create or edit reputation levels for the zone.

# ChatterConversation

Represents a private conversation in Chatter, consisting of messages that conversation members have sent or received. This object is available in API version 23.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
| --- | --- |
| `Id` | **Type**<br>ID<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>ID of the conversation. |

## Usage

Use this object to identify private conversations in Chatter. Users can access this object if they have the Manage Chatter Messages and Direct Messages permission. This object is read-only via the API and is provided only to allow administrators to view users' Chatter messages; for example, for compliance purposes.

SEE ALSO:

- ChatterConversationMember
- ChatterMessage

# ChatterConversationMember

Represents a member of a private conversation in Chatter. A member has either sent messages to or received messages from other conversation participants. This object is available in API version 23.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

| Field Name | Details |
| --- | --- |
| `ConversationId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the associated ChatterConversation. |
| `MemberId` | **Type**<br>reference |

| Field Name | Details |
| --- | --- |
| | **Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the conversation member. |

## Usage

Use this object to view members of private conversations in Chatter. Users can access this object if they have the Manage Chatter Messages and Direct Messages permission. This object is read-only via the API and is provided only to allow administrators to view users' Chatter messages; for example, for compliance purposes.

SEE ALSO:

- ChatterConversation
- ChatterMessage

# ChatterExtension

Represents a Rich Publisher App that's integrated with the Chatter publisher. This object is available in API version 41.0 and later.

## Supported Calls

`create(),delete(),describeSObjects(),query(),retrieve(),update(),upsert()`

## Fields

| Field | Details |
| --- | --- |
| `CompositionComponentEnumOrId` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The ID of the composition component for the Rich Publisher App. This field requires a value. |
| `Description` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The description of your custom Rich Publisher App. This field requires a value. |

| Field | Details |
| --- | --- |
| `DeveloperName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The name of the developer who is responsible for the app.<br>Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. |
| `ExtensionName` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>The name of your extension. This field requires a value. |
| `HeaderText` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The text to show in the header of your app composer. Header text is required for Lightning type extensions. |
| `HoverText` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The text to show when a user mouses over your extension's icon. Mouse-over text is required for Lightning type extensions. |
| `IconId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The icon to show in the Chatter publisher. Use an existing file asset ID from your org. This field requires a value.<br>This is a relationship field. |

| Field | Details |
| --- | --- |
| | **Relationship Name**<br>Icon<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ContentAsset |
| `IsProtected` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>An auto-generated value. It currently has no impact. |
| `Language` | **Type**<br>picklist<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The language used for this instance of the `ChatterExtension`. This field requires a value. |
| `MasterLabel` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Sort, Update<br>**Description**<br>The master label for the `ChatterExtension` object. This field requires a value. |
| `NamespacePrefix` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The prefix to use for the extension's namespace. |
| `RenderComponentEnumOrId` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The rendering component of the Rich Publisher App that you provide. It's comprised of the `lightning:availableForChatterExtensionRenderer` interface. This field requires a value. |
| `Type` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>Describes the type of the extension. Currently, the only value supported is *`Lightning`*. Included to allow for other possible types in the future. |

# ChatterExtensionConfig

Configuration for the Chatter extension for Experience Cloud sites. This object is available in API version 41.0 and later.

## Supported Calls

`create(),delete(),describeSObjects(),query(),retrieve(),update(),upsert()`

## Fields

| Field | Details |
| --- | --- |
| `CanCreate` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether the `ChatterExtension` can create an instance that appears by rendering. |
| `CanRead` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Determines whether the `ChatterExtension` can be viewed. |

| Field | Details |
| --- | --- |
| `ChatterExtensionId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the `ChatterExtension`.<br>This is a relationship field.<br>**Relationship Name**<br>ChatterExtension<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>ChatterExtension |
| `NetworkId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The ID of the Experience Cloud site where the `ChatterExtension` is deployed. |
| `Position` | **Type**<br>int<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The position of the `ChatterExtension` icon in the Chatter publisher. |

# ChatterMessage

Represents a message sent as part of a private conversation in Chatter. This object is available in API version 23.0 and later.

## Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

# Fields

| Field Name | Details |
| --- | --- |
| `Body` | **Type**<br>textarea<br>**Properties**<br>Update<br>**Description**<br>Text of the message. |
| `ConversationId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>ID of the conversation that the message is associated with. |
| `SenderId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the sender. |
| `SenderNetworkId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Experience Cloud site from which the message was sent. This field is available only if digital experiences is enabled in your org.<br>This field is available in API version 32.0 and later. |
| `SentDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort<br>**Description**<br>Date the message was sent. |

## Usage

Use this object to view and delete messages sent or received via private conversations in Chatter. Users can access this object if they have the Manage Chatter Messages and Direct Messages permission. Users with the Moderate Experiences Chatter Messages permission can access this object in Experience Cloud sites they're a member of, only if the message has been flagged as inappropriate. This object is provided to allow administrators to view and delete users' Chatter messages, for example, for compliance purposes.

Messages are hard deleted. That is, they're removed completely without a trip to the Recycle Bin.

Deleting a message that resulted from sharing a file with someone doesn't also delete the file.

- ChatterConversation
- ChatterConversationMember

# ClientBrowser

Represents a cookie added to the browser upon login, and also includes information about the browser application where the cookie was inserted. This object is available in version 28.0 and later.

## Supported Calls

`describeSObjects()`, `delete()`, `query()`, `retrieve()`

## Fields

| Field | Details |
|---|---|
| `FullUserAgent` | **Type**<br>string<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Detailed information about the client (browser). For example, `Mozilla/5.0 (Windows; U; Windows NT 5.1; en-US; rv:1.9.0.1) Gecko/2008070208 Firefox/3.0.1` |
| `LastUpdate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Represents the last time the cookie was changed. |
| `ProxyInfo` | **Type**<br>string |

| Field | Details |
| --- | --- |
| | **Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The browser's current proxy information. |
| `UsersId` | **Type**<br>reference<br>**Properties**<br>Filter, Group, Sort<br>**Description**<br>The ID of the user associated with this item.<br>This is a relationship field.<br>**Relationship Name**<br>Users<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |

## Usage

At every login, the device the login request is from is checked against the known devices using ClientBrowser. A match means a cookie was found on the browser that matches an entry in the ClientBrowser table, so the device is known. No match means that no matching cookie was found, so the device is unknown, and the user is asked to confirm their identity.

# CollaborationGroup

Represents a Chatter group. This object is available in API version 19.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

The visibility of information in groups depends on the type of group and the user's permissions.

- **Members**: Any user with the Create and Own New Chatter Groups permission can create public, private, and unlisted groups, including in any Experience Cloud sites they belong to.
- **Owners and managers**: Users can modify group details for any group they own or manage. Owners can also delete groups they own.

- **Nonmembers**: These user permissions allow group access regardless of group membership.
  - View All Data—Allows users to view all public and private groups across their org and its Experience Cloud sites. Users with this permission can't view unlisted group information, unless they have the Modify Unlisted Groups permission as well.
  - Modify All Data—Allows users to view, modify, and delete all public and private groups across their org and its Experience Cloud sites. Users with this permission can't view or modify unlisted group information, unless they have the Manage Unlisted Groups permission as well.
  - Create and Set Up Experiences—Allows users to view, modify, and delete all public and private groups in Experience Cloud sites.
  - Manage Unlisted Groups—Allows users to search for, access, and modify any unlisted group in an org and its Experience Cloud sites.
  - Data Export—Allows users to export any data from Salesforce, including private and unlisted group data from an org and its Experience Cloud sites.
- **Apex and Visualforce**: Apex code runs in system mode, which means that the permissions of the current user aren't taken into account.
  - Visualforce pages that display groups might expose unlisted or private group data to users who aren't members.
  - Because system mode disregards the user's permissions, all users who are accessing a Visualforce page that's showing a group can act as an owner of that group.
  - AppExchange apps that are written in Apex and that access all groups will expose unlisted groups to users who aren't members.

To limit and manage access to the unlisted and private groups in your org:

- Explicitly filter out unlisted and private group information from SOQL queries in all Apex code.
- Use permission sets, profile-level permissions, and sharing checks in your code to further limit group access.
- Use Apex triggers on the CollaborationGroup object to monitor and manage the creation of groups. In Setup, enter *`Group Triggers`* in the `Quick Find` box, then select **Group Triggers** to add triggers.

# Fields

| Field | Details |
|---|---|
| `AnnouncementId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>Contains the ID of the Announcement last associated with the group. This field is available in API version 30.0 and later.<br>This is a relationship field.<br>**Relationship Name**<br>Announcement<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>Announcement |

| Field | Details |
| --- | --- |
| `BannerPhotoUrl` | **Type**<br>url<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The URL for the group's banner photo.<br>The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo is not guaranteed to return a photo. Query this field for the URL of the most recent photo.<br>This field is available in API version 36.0 and later. |
| `CanHaveGuests` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>If set to `true`, indicates that a group allows customers. Chatter customers are people outside your company's email domains. Customers can see only the groups they're invited to. They can interact only with members of those groups. Customers can't see any Salesforce information.<br>This field is available starting in API version 23.0, but groups that allow customers are accessible from earlier API versions. However, when accessed from earlier API versions, groups that allow customers aren't distinguishable from private groups. We strongly recommend that you upgrade to the latest API version. If you must use an earlier version, name groups that allow customers to indicate that they include customers. |
| `CollaborationType` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The type of Chatter group. Available values are:<br>• `Public`—Anyone can see and post updates. Anyone can join a public group.<br>• `Private`—Only members can see the group feed and post updates. Non-members can only see the group name and a few other details in list views, search, and on the group page. The group's owner or managers must add members who request to join the group.<br>• `Unlisted`—Only members and users with the Manage Unlisted Groups permission can see the group and post updates. Other users can't access the group or see it in lists, search, and feeds. |

| Field | Details |
| --- | --- |
| `Description` | **Type**<br>textarea<br>**Properties**<br>Create, Filter, Nillable, Sort, Update<br>**Description**<br>Description of the group. |
| `FullPhotoUrl` | **Type**<br>url<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The URL for the group's profile photo.<br>The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo is not guaranteed to return a photo. Query this field for the URL of the most recent photo.<br>This field is available in API version 20.0 and later. |
| `GroupEmail` | **Type**<br>email<br>**Properties**<br>Nillable, Sort<br>**Description**<br>The email address for posting to the group. For private groups, only visible to members and users with Modify All Data or View All Data permissions.<br>This field is available in API version 29.0 and later. |
| `HasPrivateFieldsAccess` | **Type**<br>boolean<br>**Properties**<br>Defaulted on create, Filter, Group, Sort<br>**Description**<br>If set to `true`, indicates that a user can see the `InformationBody` and `InformationTitle` fields in a private group. This field is set to `true` for members of a private group and users with Modify All Data or View All Data permissions. |
| `InformationBody` | **Type**<br>textarea<br>**Properties**<br>Create, Nillable, Update |

| Field | Details |
| --- | --- |
| | **Description**<br>The text of the Information section. For private groups, only visible to members and users with Modify All Data or View All Data permissions. |
| `InformationTitle` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, Nillable, Sort, Update<br>**Description**<br>The title of the Information section. For private groups, only visible to members and users with Modify All Data or View All Data permissions. |
| `IsArchived` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the group is archived (`true`) or not (`false`).<br>This field is available in API version 28.0 and later. |
| `IsAutoArchiveDisabled` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether automatic archiving is disabled for the group (`true`) or not (`false`).<br>This field is available in API version 29.0 and later. |
| `IsBroadcast` | **Type**<br>boolean<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>Indicates whether the group is a broadcast group (`true`) or not (`false`).<br>This field is available in API version 36.0 and later. |
| `LastFeedModifiedDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>The date of the last post or comment on the group. |
| `LastReferencedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed a record related to this record. |
| `LastViewedDate` | **Type**<br>datetime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (`LastReferencedDate`) and not viewed. |
| `MediumPhotoUrl` | **Type**<br>url<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The URL for the larger, cropped photo size. |
| `MemberCount` | **Type**<br>int<br>**Properties**<br>Filter, Group, Nillable, Sort<br>**Description**<br>The number of members in the group. |
| `Name` | **Type**<br>string<br>**Properties**<br>Create, Filter, Group, idLookup, Sort, Update<br>**Description**<br>Name of the group. Group names must be unique across public and private groups. Unlisted groups don't require unique names. |
| `NetworkId` | **Type**<br>reference |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Filter, Group, Nillable, Sort<br>**Description**<br>ID of the Experience Cloud site that this group is part of. This field is available only if digital experiences is enabled in your org.<br>You can only add a `NetworkId` when creating a group. You can't change or add a `NetworkId` for an existing group. This field is available in API version 26.0 and later. |
| `OwnerId` | **Type**<br>reference<br>**Properties**<br>Create, Defaulted on create, Filter, Group, Sort, Update<br>**Description**<br>ID of the owner of the group. Only the current group owner or people with the Modify All Data permission can update the `OwnerId`.<br>This is a relationship field.<br>**Relationship Name**<br>Owner<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `SmallPhotoUrl` | **Type**<br>url<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>The URL for a thumbnail of the group's profile photo.<br>The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo is not guaranteed to return a photo. Query this field for the URL of the most recent photo.<br>This field is available in API version 20.0 and later. |

## Usage

Use this object to create, edit, or delete groups in an org or Experience Cloud site. Deleting a group permanently deletes all posts and comments to the group. It also deletes all files and links posted to the group and removes the files from other locations where they were shared.

As a Chatter group member, you can post to the group using the CollaborationGroupFeed object. As a Chatter group owner or manager, you can add or remove group members using the CollaborationGroupMember object, post announcements to the group using the

Announcement object, and accept or decline requests to join private groups using the CollaborationGroupMemberRequest object. Additionally, the group owner, manager, or your Salesforce system administrator can invite people to join the group using the CollaborationInvitation object.

The Salesforce system administrator doesn't need to be a member of the group in order to send invitations using the API.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**CollaborationGroupFeed**
Feed tracking is available for the object.

SEE ALSO:

CollaborationGroupMember

CollaborationGroupMemberRequest

# CollaborationGroupMember

Represents a member of a Chatter group. This object is available in API version 19.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
|---|---|
| `CollaborationGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the associated CollaborationGroup.<br>This is a relationship field.<br>**Relationship Name**<br>CollaborationGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CollaborationGroup |

| Field | Details |
| --- | --- |
| `CollaborationRole` | **Type**<br>picklist<br>**Properties**<br>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>The role of a group member. Group owners and managers can change roles for members of their groups. The valid values are:<br>• `Standard`—Indicates that a user is a group member. Members can post and comment in the group.<br>• `Admin`—Indicates that a user is a group manager. Managers can post and comment, change member roles, edit group settings, add and remove members, delete posts and comments, and edit the group information field.<br>Note: To change the group owner, use the `OwnerId` field on the CollaborationGroup object. |
| `LastFeedAccessDate` | **Type**<br>dateTime<br>**Properties**<br>Filter, Nillable, Sort<br>**Description**<br>Date and time when a group member last accessed the group's feed. The value is only updated when a member explicitly consumes the group's feed, not when the member sees group posts in other feeds, like the profile feed. |
| `MemberId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the group member.<br>This is a relationship field.<br>**Relationship Name**<br>Member<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `NotificationFrequency` | **Type**<br>picklist |

| Field | Details |
| --- | --- |
| | **Properties**<br>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update<br>**Description**<br>Required. The frequency at which Salesforce sends Chatter group email digests to this member. Can only be set by the member or users with the "Modify All Data" permission. The valid values are:<br>• `D`—Daily<br>• `W`—Weekly<br>• `N`—Never<br>• `P`—On every post<br>The default value is specified by the member in their Chatter email settings. In communities, the `Email on every post` option is disabled once more than 10,000 members choose this setting for the group. All members who had this option selected are automatically switched to `Daily digests`. |

## Usage

Use this object to view, create, and delete Chatter group members. You must be a group owner or manager to create members for private Chatter groups.

SEE ALSO:

CollaborationGroup

CollaborationGroupMemberRequest

# CollaborationGroupMemberRequest

Represents a request to join a private Chatter group. This object is available in API version 21.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

| Field | Details |
| --- | --- |
| `CollaborationGroupId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort |

| Field | Details |
| --- | --- |
| | **Description**<br>ID of the private Chatter group.<br>This is a relationship field.<br>**Relationship Name**<br>CollaborationGroup<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>CollaborationGroup |
| `RequesterId` | **Type**<br>reference<br>**Properties**<br>Create, Filter, Group, Sort<br>**Description**<br>ID of the user requesting to join the group; must be the ID of the context user.<br>This is a relationship field.<br>**Relationship Name**<br>Requester<br>**Relationship Type**<br>Lookup<br>**Refers To**<br>User |
| `ResponseMessage` | **Type**<br>string<br>**Properties**<br>Filter, Group, Nillable, Sort, Update<br>**Description**<br>Optional message to be included in the notification email when `Status` is `Declined`. |
| `Status` | **Type**<br>picklist<br>**Properties**<br>Filter, Group, Restricted picklist, Sort, Update<br>**Description**<br>The status of the request. Available values are:<br>• `Accepted`<br>• `Declined`<br>• `Pending` |

## Usage

This object represents a request to join a private Chatter group, and can be used to accept or decline requests to join private groups you own or manage. On create, an email is sent to the owner and managers of the private group to be accepted or declined. When the `Status` is `Accepted` or `Declined`, an email is sent to notify the requester. When the `Status` is `Declined`, a `ResponseMessage` is optionally included to provide additional details.

Note the following when working with requests:

- Users with the "Modify All Data" or "View All Data" permission can view records for all groups, regardless of membership.
- A user can be a member of 300 groups. Requests to join groups count against this limit.
